SUBJECT: STATUS OF ADULT DAY HEALTH CARE IN LOS ANGELES COUNTY -
FINAL REPORT

On August 12, 2003, the Board approved a motion by Supervisor Yaroslavsky, instructing the Department of Health Services to prepare a final report on the status of Adult Day Health Care in Los Angeles County. This request came as a result of the State bill SBX1 24 which amended the Health and Safety Code to repeal the statutory authority and designation of duties for the Adult Day Health Care Planning Councils.

As instructed, in preparing the report we consulted with the Adult Day Health Care Planning Council and staff from the Department of Community and Senior Services. Attached is the requested report.

If you have any questions or need additional information, please let me know.

FINAL REPORT TO BOARD OF SUPERVISORS - ADULT DAY HEALTH CARE

December 2003

INTRODUCTION

In August 2003, the Los Angeles County Board of Supervisors directed the Department of Health Services to prepare a final report on the status of adult day health care (ADHC) in Los Angeles County. This request was made after the governor signed legislation – SBX1 24 – repealing the statutory authority of adult day health care planning councils. Prior to the legislation, the Los Angeles County Adult Day Health Care Planning Council reviewed applications from potential ADHC providers and made recommendations to the California Department of Aging (CDA) regarding their approval. Under the new legislation, CDA reviews all applications without County input.

The purpose of this report is to review current issues regarding adult day health care in Los Angeles County; assess the distribution of ADHC centers countywide and identify gaps in service; describe quality assurance systems currently in place; and apprise the Board of areas of concern.

BACKGROUND

Adult day health care is a community based day program providing a variety of health, therapeutic, and social services for frail elderly and functionally impaired adults at risk of being placed in a nursing home. The primary objectives of the program are to restore or maintain optimal capacity for self-care and to prevent inappropriate institutionalization. Generally, participants attend 3 -5 days a week. Adult day health care is funded by Medi-Cal and is administered by the California Department of Aging under an interagency agreement with the California Department of Health Services.

Planning Council

Prior to May 2003, the California Health and Safety Code permitted counties to establish local adult day health care planning councils; as a permissive requirement, no funding was allocated by the state for this purpose. The Health and Safety Code mandated that councils adopt a plan for their county based on community need and required that applications for licensure of ADHC centers be forwarded to the planning council for its review and recommendations.

The Los Angeles County Board of Supervisors created a planning council in January 1979 with members appointed by each Board office. The council has been operational since that time, adopting a plan in 1981 and amending it in 1989. This goal of the plan was to create a comprehensive, coordinated, and equitable system of adult day health care services in the county. The council has served as an ongoing resource and public forum for providers; has reviewed applications and conducted site inspections of new applicants; has routinely made recommendations to CDA regarding the placement of new centers; and has alerted CDA when concerns of fraud have arisen¹.

¹ Sunset Review Evaluation Form for Use by Commissions, Committees and Task Forces, Adult Day Health Care Planning Council, August 2003

Senate Bill 24

In May of this year, new legislation eliminated statutory authority for the establishment of ADHC planning councils and amended the Health and Safety Code to repeal the existing requirements related to the councils. SBX1 24 was passed as a result of mid-year budget cuts sought by Grey Davis in response to the state's budget crisis. Subsequent staffing reductions within CDA led to the elimination of "permissive" programs such as the planning councils. According to staff at CDA, this decision was also based upon the fact that only a few counties statewide had active, viable planning councils and as such were not an effective way for CDA to get input from counties statewide.

The elimination of the planning councils may also have resulted from their lack of real authority. In recent years, the number of ADHC centers has grown astronomically, from 37 centers in 1999 to 178 in 2003. Along with the proliferation of centers has grown a concern that certain areas are becoming oversaturated, with new centers opening in close proximity to already established centers. However, there are no accepted guidelines or statutes at either the state or local level that delineate an acceptable density of ADHC centers. When providers submit an application in areas that are already heavily saturated, the planning council advises CDA that there are already other centers in the area and recommends that the provider consider areas of greater need. Such applications are routinely accepted by CDA however, as there is no legislation upon which to deny them. This lack of authority has frustrated planning council members and providers alike.

New approval process

The CDA is currently revising the ADHC application review process and states "the new process is designed to have greater communication directly between CDA and the applicant to ensure that the provider understands program requirements and the local demographic need for the services to be provided."² Information regarding the new process is not yet available from CDA because it incorporates elements from legislation that was vetoed by Grey Davis on October 9, 2003. This bill will probably be reintroduced in January 2004. If the bill passes it would create an application fee of \$5000 to be used by CDA and DHS for increased assistance to and monitoring of facilities. The bill would institute a new pre-application process including an 8-hour provider orientation, a written proposal, operational policies and procedures, a marketing plan etc. New providers would be allowed to apply for licensure and certification as a Medi-Cal provider *after* the pre-application process is complete, greatly facilitating the process for applicants.

REQUIRED SERVICES

Each ADHC center has a multidisciplinary team of health professionals that conducts a comprehensive assessment of each potential participant to determine which ADHC services meet the individual's specific health and social needs. If the participant meets the eligibility criteria, this team develops an individualized plan of care, which may include any of the following required services:

- *Medical services.* These services are supervised by the staff physician or personal physician and emphasize prevention, treatment, rehabilitation, and continuity of care.

² Letter to Planning Councils from California Department of Aging, Adult Day Health Care Branch, July 10, 2003

- *Nursing services.* These services include on-going evaluation of the nursing needs of each participant; provision of skilled nursing care and treatment; assistance with feeding, bathing, toileting, and grooming; as well as monitoring, recording, and administration of prescribed medication.
- *Rehabilitation services.* These services include physical, occupational, and speech therapy and are designed to improve or maintain abilities for independent functioning.
- *Transportation services.* Centers must provide participants with transportation to and from their homes, as needed.
- *Nutrition services.* Centers must provide one meal per day; special diets, additional snacks and meals, and dietary counseling are provided as needed.
- *Psychiatric and psychological services.* These services include assessments, treatment, and follow-up treatment as necessary.
- *Social work services.* These services include group or individual discussion of problems, counseling, and referral to community resources and aim to promote maintenance of physical and mental health by alleviating personal and social problems.
- *Recreation and social activities.* Centers must provide planned recreational and social activities suited to the needs of participants and designed to encourage physical exercise, to prevent deterioration, and to stimulate social interaction.

QUALITY ASSURANCE PROGRAM

Like the application process, the California Department of Aging's quality assurance program is evolving. According to CDA staff, the process used to be more administrative, but has recently become more "outcomes-based" by focusing on how things have changed for participants. The quality assurance program centers on a Medi-Cal certification survey³. This unannounced inspection visit evaluates participant outcomes based on the center's compliance with the required services described above. The survey team determines if the center is appropriately assessing participants' needs and developing, implementing, and monitoring a needs-based individual plan of care. The team also evaluates the center's administrative organization to determine if overall center operations result in effective program development, implementation, evaluation, and supervision.

The frequency of survey visits varies depending upon the center's performance and history of complaints. At a minimum, centers are surveyed once in the first year of operation and then every two years after that. Prior to the survey, the survey team reviews information regarding the center's compliance history and any ongoing areas of concern. During the survey, the team selects a random sample of participants for a comprehensive review to include observation, participant interviews, and review of records. The sample size is 10% of participants scheduled, with a minimum sample size of four. In addition to assessing participant outcomes, the survey team conducts a review of the center's administration and organization to assess the capacity of

³ Adult Day Health Care Center Medi-Cal Certification Survey Protocol, Staff Procedure Manual, California Department of Aging, November 2002

the center to deliver required services and maintain participant health and safety. A partial list of critical indicators assessed by surveyors follows.

Critical indicators - Observation

- Observable participant needs are addressed.
- Participants are involved in offered therapies and activities.
- Sufficient numbers of staff are present to meet the needs of the participant population.

Critical indicators – Participant Interviews

- Participants express overall satisfaction with center services.
- Participants indicate that they feel safe.
- Participants indicate that needed services are consistently provided.
- Participants indicate that their health and psychosocial needs are addressed.

Critical indicators - Review of Participant Records

- Each participant's individual plan of care is based on assessed needs.
- There is evidence that planned interventions have been consistently delivered.
- Optimal functioning is restored or further loss of function is prevented.

Critical indicators – Administration and Organization

- Staff has the training and competencies necessary to provide services to participants.
- The center has a system for monitoring service delivery to assure participants receive needed/planned services.
- Policies and procedures are developed and implemented.
- Participant health and safety is maintained.

When deficient practices are found in the course of a survey, the surveyor is asked to carefully document the findings. A survey report of deficient findings is prepared, identifying the deficiencies and explaining why the findings are a violation of Medi-Cal certification requirements. The agency must respond with a plan of corrective action, describing what they will do to address the problems identified. Survey staff then visits the site to verify that the plan of corrective action has been implemented. When survey findings indicate that a center is not delivering one or more of the required services, or when other serious deficiencies are identified, the survey report issues adverse action recommendations, up to and including decertification. Fraudulent practices – such as billing for social work services without having a social worker on staff – are referred to Audits and Investigations for further review.

DATA ANALYSIS

General Description

The California Department of Aging recently developed a database to collect statewide data on adult day health care centers. According to CDA data⁴, there are currently 178 licensed centers in Los Angeles County. Of these, 81% provide services to the frail elderly, 5% serve the developmentally disabled, 4% provide mental health services and 10% fall into more than one of these categories. Countywide, these centers serve an average of approximately 60 clients per day. Centers serving the frail elderly have a higher average attendance (64 clients/day) than those specializing in developmental delay and mental health (53 clients/day and 32 clients/day respectively).

⁴ Licensed Adult Day Health Care Centers by County and City Location Report, California Department of Aging, October 2003

Medi-Cal Expenditures

In fiscal year 2002-2003, Medi-Cal expenditures for ADHC centers in LA County totaled \$157,194,404. Centers serving frail elderly clients or multiple populations had the highest expenditures, with an average of \$1,067,559 and \$1,102,812 respectively, per center, while expenditures at centers serving clients with developmental delay or mental health needs averaged \$415,782 and \$341,737 respectively.

Medi-Cal reimbursement rates per participant are summarized in the table below:

Adult Day Health Care Medi-Cal Reimbursement Rates⁵	
Type of Service	Amount of Reimbursement Per Participant Per Day
Daily Rate	\$69.58
Assessment Rate	\$73.06
Transition Rate	\$59.14

ADHC expenses can be reimbursed by either Medi-Cal or private payment, so Medi-Cal expenditures at a given facility do not necessarily represent total client reimbursement at that facility. For a list of Medi-Cal expenditures at all centers in Los Angeles County, see Table 1. The Daily Rate includes all of the services provided by the ADHC. The Assessment Rate is used for the multidisciplinary team to come up with an Individual Plan of Care for the participant. The evaluation can take up to three days. The Transition Rate is used for participants that come from nursing facilities or acute hospitals. The objective of these visits is to facilitate the transfer of institutionalized patients back into the community through the use of the ADHC services.

Needs Analysis

Map A shows the distribution of ADHC centers in the county compared to the percent of population 65 years and older below the poverty level. Map B shows ADHC centers compared to the population 65 and older with a disability. Zip codes with the greatest percentage of ADHC-eligible older adults are shown in red (the darkest color on photocopies). There are 174 zip codes in the county with no ADHC centers. In SPAs 4, 6, and 7 – representing a large number of eligible clients – 21%, 55% and 56% of zip codes respectively have no ADHC centers. Map C shows the distribution of ADHC centers by type of population served; this map highlights the fact that there are relatively few centers serving individuals with developmental delay or mental health needs.

The licensed capacity of centers in the county varies considerably, ranging from 5 to 310. The total licensed capacity of centers in the county is 21,061 clients. With an average daily attendance countywide of 10,646, only about half of this capacity is currently being utilized. However, the extent to which centers are operating at capacity also varies considerably, from centers that served no clients to centers operating at nearly double their capacity (173%).

In order to assess how well the current capacity and distribution of centers meets the needs of eligible clients in LA County, we assessed licensed capacity in proportion to the population

⁵ California Department of Aging, "A Brief Overview of Requirements to Become an Adult Day Health Care (ADHC) Provider." Revised August 2003.

eligible for ADHC services for each zip code in the county (See Table 2). In other words, how many clients within a given zip code might be “competing” for ADHC services within that zip code? Again, the results varied widely. In zip code 90745, less than 1% of the 8505 eligible clients could be accommodated in an ADHC facility given the zip code’s current licensed capacity of 60 clients. At the other end of the scale, more than 4 out of 5 eligible clients could be accommodated at a facility in zip code 91204 given its licensed capacity of 610 clients and its eligible population of 744 clients. In the vast majority of zip codes, fewer than 30% of eligible clients could be accommodated by the available ADHC capacity in that zip code.

Over-Saturation Issue

Planning council members and providers feel that there is a serious problem with over-saturation of centers in certain areas of the county leading to competition for clients. In order to assess whether density of centers is associated with how likely these centers are to operate at capacity, for each zip code in LA County we analyzed average daily attendance as a proportion of licensed capacity. We found that in zip codes with three or more centers, the average daily attendance was 46.6% of capacity, while in zip codes with two or fewer centers, the average daily attendance was 52.3% of capacity; this difference was not statistically significant.

ISSUES OF CONCERN

Over-saturation

At ADHC planning council meetings community advocates, providers, and council members have all expressed concern regarding the over-saturation of centers. New centers have reportedly opened right next door to already established centers; in one case, two centers actually share a common wall. Operating at partial capacity creates financial hardship for providers because the costs of running a center and providing all required services are similar whether the center operates at full capacity or not. This can take its toll in the quality of care that centers are able to provide their clients. While it is clear that providers and advocates feel strongly about the importance of this issue, the data analysis conducted for this report is inconclusive on this point; additional analyses could provide more definitive information.

Quality of care

Many planning council attendees express concerns regarding the impact of over-saturation on quality of care. Unfortunately, no data is available at either the local or state level on the quality of care provided at ADHC centers. This problem is not limited to the ADHC program – a 2001 Medi-Cal Policy Institute report on ADHC and other long term care services states that “there is an absence of standardized quality measurement occurring in home and community-based settings, and a lack of accepted quality measures for long-term care services in general”⁶. One of the key issues related to the ADHC program mentioned in the report is that the rapid expansion of ADHC centers has resulted in an increase in the number of providers without a background in health or social services. Adult day health care is really a health service – a nursing home for the day – and providers must understand the health issues involved in providing ADHC services, as well as the business aspects of running a center.

Fraud

Planning council attendees also feel that there are problems with fraud in the ADHC system. In particular, they cite the use of incentives by providers to lure clients to their centers, a practice expressly prohibited by Medi-Cal regulations. Another fraud-related concern is that some

⁶ Understanding Medi-Cal: Long Term Care, Medi-Cal Policy Institute, September 2001

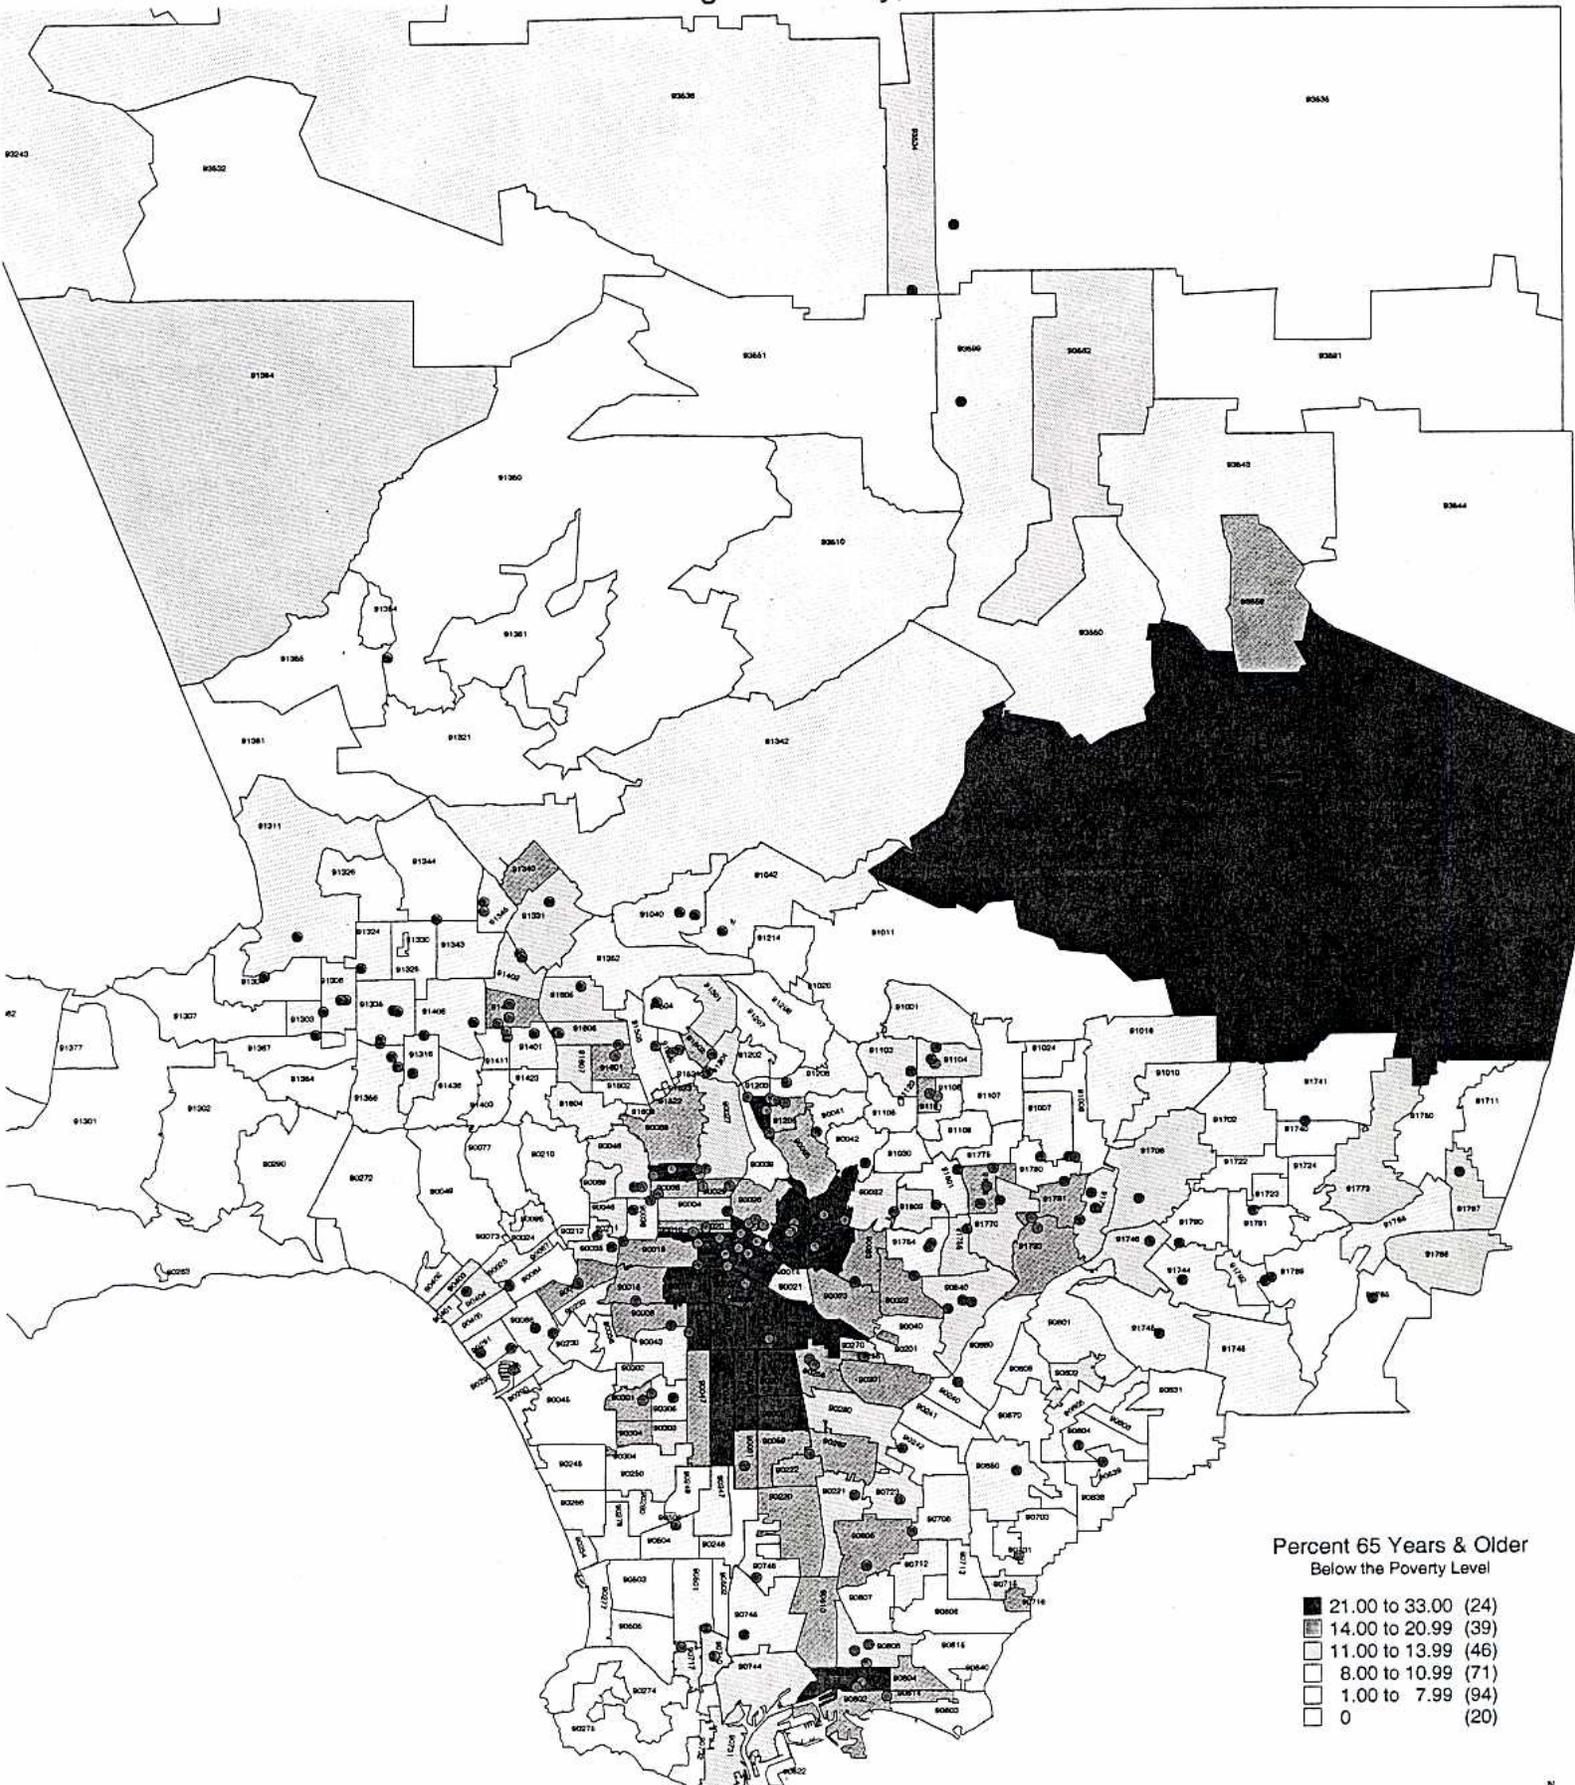

centers provide social activities only, even though the California Code of Regulations states that adult day health care consists of “diagnostic and treatment services” that prevent premature institutionalization. In other words, Medi-Cal may be paying for social services for clients that are supposed to be getting medical services. Again, data supporting allegations of fraud are not readily available.

RECOMMENDATIONS

After careful consideration, we recommend that the Board of Supervisors discontinue the Los Angeles County Adult Day Health Care Planning Council. Since its inception, the council has played an extremely important role in advocating for high quality and equitable adult day health care services in the county. Its members have graciously volunteered their time, providing dedicated and caring service to the population in need of adult day health care. However, recent legislation (SBX1 24) eliminated the statutory authority of planning councils and repealed the Health and Safety Code requirements related to the councils. This legislative action codified the actual lack of authority experienced by the planning council for some time. Finally, despite the fact that members of the public have continued to attend council meetings, council members’ attendance has dwindled from seven members in September to four and three in October and November.

If the problem of over-saturation continues to grow and/or if evidence of an association with lack of quality or fraud is established, the Board of Supervisors could promote legislation at the state level to establish a minimum allowable distance between centers. There is some precedence for this. State of California Health and Safety code regulations (1267.9; licensing provisions) state that “it is the policy of the state to prevent overconcentrations of intermediate care facilities/developmentally disabled habilitative, . . . congregate living health facilities or pediatric day health and respite care facilities . . . which impair the integrity of residential neighborhoods”. A distance of no less than 300 feet must separate such facilities, unless a waiver is granted.
