The Honorable Board of Supervisors
County of Los Angeles
383 Kenneth Hahn Hall of Administration
500 West Temple Street
Los Angeles, California 90012

Dear Supervisors:

ADOPTED

BOARD OF SUPERVISORS
COUNTY OF LOS ANGELES

36 October 4, 2016

LORI GLASGOW
EXECUTIVE OFFICER

**AGREEMENT FOR TRACT NO. 53138
RELATING TO THE ACQUISITION OF OFF-SITE REAL PROPERTY INTERESTS
UNINCORPORATED AREA OF THE COUNTY OF LOS ANGELES
(SUPERVISORIAL DISTRICT 5)
(3 VOTES)**

SUBJECT

This action will allow the County of Los Angeles to enter into an agreement with Forestar Chatsworth, LLC, establishing each party's respective financial and administrative responsibilities relating to the acquisition of easements for the construction of sewer infrastructure improvements within the community of Twin Lakes, located in the unincorporated area known as Chatsworth.

IT IS RECOMMENDED THAT THE BOARD:

1. Certify that the Third Addendum to the previously certified Environmental Impact Report has been completed in compliance with the California Environmental Quality Act and reflects the independent judgement and analysis of the Board and find that the Board has reviewed and considered the information contained in the Third Addendum, together with the previously certified Environmental Impact Report and First and Second Addenda, prior to approving the recommended action.
2. Authorize the Director of Public Works or her designee to execute an agreement between the County of Los Angeles and Forestar Chatsworth, LLC, establishing the respective financial and administrative responsibilities of the parties relating to the acquisition of easements for the construction of sewer infrastructure improvements within the community of Twin Lakes.

PURPOSE/JUSTIFICATION OF RECOMMENDED ACTION

The purpose of the recommended actions is to certify the Third Addendum (Enclosure A) to the previously certified Environmental Impact Report (EIR) for the Deerlake Ranch project and authorize the Director of Public Works or her designee to enter into an agreement with Forestar Chatsworth, LLC (Forestar), substantially similar to the enclosed agreement (Enclosure B), for Tract No. 53138 relating to the Acquisition of Off-site Real Property Interests (Agreement). The purpose of the Agreement is to establish the respective financial and administrative responsibilities of the County of Los Angeles and Forestar related to the acquisition of easements for construction of sewer infrastructure improvements within the community known as Twin Lakes (Project), located in the unincorporated area known as Chatsworth. The construction of the sewer infrastructure improvements is a previously approved condition of the County's approval of Vesting Tentative Tract Map No. 53138 (VTTM 53138), owned by Forestar.

Implementation of Strategic Plan Goals

The Countywide Strategic Plan directs the provision of Integrated Services Delivery (Goal 3). This transaction will allow for the construction of utilities, thereby improving the quality of life for the residents of the County.

FISCAL IMPACT/FINANCING

There will be no impact to the County General Fund.

Forestar will pay 100 percent of the costs associated with the acquisition of real property interests required for the Project. When payment is received, it will be deposited into the Public Works General Fund.

FACTS AND PROVISIONS/LEGAL REQUIREMENTS

On August 10, 2004, the Board of Supervisors approved certain land use entitlements, VTTM 53138, Conditional Use Permit No. 99-239-(5), and Oak Tree Permit No. 99-239-(5), authorizing the subdivision and development of a single-family residential community on approximately 230 acres of land commonly known as Deerlake Ranch, located in the unincorporated area known as Chatsworth.

The Deerlake Ranch's conditions of approval require Forestar to construct and install, at its own cost and expense, certain off-site improvements generally consisting of a sewer mainline, lateral stubs, and appurtenant structures within the neighboring Twin Lakes community.

The Project will be constructed within private streets in Twin Lakes. There are 162 easements required for this Project. Forestar has made a good-faith effort and acquired 127 easements. The County is prepared to assume responsibility for the acquisition of the remaining easements under the terms and conditions set forth in the Agreement.

Once constructed, the sewer mainline is proposed to be dedicated and/or transferred to the Los Angeles County Consolidated Sewer Maintenance District for operation and maintenance. The maintenance of the lateral stubs would be the responsibility of the individual lot owners.

ENVIRONMENTAL DOCUMENTATION

On August 10, 2004, the Board, acting as lead agency under the California Environmental Quality Act, certified the Final EIR (Enclosure C) and adopted the Mitigation Plan (Enclosure D) for the Deerlake Ranch project and approved the project. Subsequently, the First Addendum to the EIR was adopted by the County Regional Planning Commission on July 18, 2012 (Enclosure E), when amendments to the previously approved VTTM 53138 were approved. The Second Addendum (Enclosure F) was adopted on November 17, 2015, by the Department of Regional Planning Hearing Officer upon the approval of minor changes to the VTTM 53138.

The Third Addendum analyzes the environmental impacts associated with the installation of the previously approved Twin Lakes sewer infrastructure now that additional plans have been developed for the sewer. The Third Addendum also addresses proposed changes to the Oak Tree Permit No. 99-239-(5) for the previously approved Deerlake Ranch project, which will be the subject of a future recommended administrative determination by the Department of Regional Planning. The Third Addendum to the certified Final EIR demonstrates that environmental impacts resulting from the project refinements would not result in any new significant impacts beyond those existing at the time of certification of the Final EIR, and the adoption of the First and Second Addenda would not result in a substantial increase in the significant environmental impacts previously identified in the certified EIR. In addition, the analysis demonstrates that there would be no substantial changes with respect to the circumstances under which the previously approved project will take place and no new information of significance to the environmental analysis became known. The mitigation measures and related conditions of approval from the certified EIR have been reviewed and will be required as applicable and monitored for compliance.

Upon the Board's approval of the recommended actions, the Department of Public Works will file a Notice of Determination with the office of the Registrar-Recorder/County Clerk in accordance with Section 21152(a) of the California Public Resources Code.

IMPACT ON CURRENT SERVICES (OR PROJECTS)

There will be no impact or adverse effect to any current services or future County projects.

CONCLUSION

Please return one adopted copy of this letter to the Department of Public Works, Survey/Mapping & Property Management Division.

Respectfully submitted,

A handwritten signature in black ink that reads "Gail Farber". The signature is written in a cursive, flowing style.

I. PURPOSE OF ADDENDUM AND CEQA REQUIREMENTS

Deerlake Ranch is an approved residential subdivision consisting of 314 single family residential lots and related infrastructure and amenities (“Deerlake Ranch Project”). The Board of Supervisors (“Board”) of the County of Los Angeles (“County”) certified on August 10, 2004, the Deerlake Ranch Project Final Environmental Impact Report, State Clearinghouse Number 2000061049, which consists of the Draft Environmental Impact Report (“Draft EIR”) dated November 2001 and certified at the time of project approval, Technical Appendices to the Draft EIR dated November 2001, the Additional Environmental Information dated July 2002, the Revised Project Design Summary for Deerlake Ranch dated May 2003, and the Final Environmental Impact Report, including Responses to Comments dated December 2003, collectively referred to as the (“Final EIR,”) and found that the Final EIR was completed in compliance with the California Environmental Quality Act (Public Resources Code Section 21000, *et seq.*) (“CEQA”). The Board certified that it received, independently reviewed and considered the information contained in the Final EIR. Prior to the Board certification, the Final EIR was certified by the County Regional Planning Commission (“Commission”) on January 14, 2004. Having been certified by the Commission and the Board, the Final EIR is herein referred to as the “Certified EIR”.

This is a Third Addendum to the Certified EIR (State Clearinghouse No. 2000061049, herein referred to as the “Third Addendum”). The First Addendum to the Certified EIR was adopted by the Commission on July 18, 2012 (herein referred to as the “First Addendum”) at which time the Commission approved amendments to the Board-approved vesting tentative tract map, including the reduction in single-family lots from 375 to 314 and reduction in project grading from 2.2 million cubic yards to 1.8 million cubic yards, and Second Addendum to the Certified EIR was adopted by the Los Angeles County Hearing Officer on November 17, 2015 (herein referred to as the “Second Addendum”), at which time the hearing officer approved minor amendments to the vesting tentative tract map, including the addition of a recreational facility serving the Deerlake Ranch community, relocation of two entry gates, reconfiguration of some lots, and increase in the multi-use trail length. This introduction describes the purpose of an addendum and provides a summary of the background of the planning and environmental review process conducted by the County for the Deerlake Ranch Project, including previously approved project modifications.

The original Oak Tree Permit No. 99-239 to allow the removal of 61 oak trees and encroachment into the protected zone of 11 oak trees was approved along with the Deerlake Ranch Project entitlements on August 10, 2004. Oak Tree Permit No. 200500037 was subsequently approved by the Los Angeles County Hearing Officer (“Hearing Officer”) on September 6, 2005, to permit the removal of 47 oak trees and encroachment into the protected zones of ten oak trees, in addition to the removal of three dead oak trees. This permit superseded the original oak tree permit 99-239. Subsequently, Oak Tree Permit 201200001 (“ROAK 210200001”) was approved by the Planning Commission on July 18, 2012, for the reduction in the number of oak tree removals from 47 to 42, and increased the number of encroachments into the protected zone at 13 oak trees.

This Third Addendum is prepared to assess the potential environmental effects associated with further discretionary approvals being considered by the Board in connection with the implementation of a Deerlake Ranch Project condition of approval requiring construction of an off-site sewer improvement and the installation of the Twin Lakes sewer improvement. This Third Addendum is also prepared to assess the potential environmental effects associated with further discretionary oak tree permit approvals being considered by the County in connection with proposed oak tree encroachments related to the Twin Lakes

sewer improvement and adjustment of oak tree encroachments and removals within the Deerlake Ranch Project.

The Deerlake Ranch Project conditional use permit 99-239 (“CUP”), Condition No. 69 as well as Vesting Tentative Tract Map Condition No. 8 in the Department of Public Works, Land Development Division, Sewer condition letter dated March 25, 2004 (“Twin Lakes Sewer Condition”), require the Deerlake Ranch Project proponent to construct and install off-site mainline and lateral stub sewer improvements and appurtenant structures within private streets in the adjacent Twin Lakes community (“Twin Lakes Sewer”). The connection cost and maintenance of the lateral stubs will be the responsibility of the individual lot owners.

Because the Twin Lakes Sewer is to be located within private roads, property interests in the form of easements to the County of Los Angeles are needed to undertake the construction as well as future operation, maintenance and use of the facility. The Deerlake Ranch Project proponent, or its predecessor, have already obtained approximately 134 easements but approximately 29 additional easements (“Remainder Easements”) are needed which the Deerlake Ranch proponent is unable to obtain. Fewer than 29 additional easements may be needed at the time of the Third Addendum adoption since discussions are on-going with lot owners who have yet to grant sewer easements. Consequentially, the County will potentially undertake actions to obtain sufficient title and interest in the Remainder Easements to enable the Deerlake Ranch Project proponent to construct the Twin Lakes Sewer and enable the future operation, maintenance and use of the facility.

Installation of the Twin Lakes Sewer is planned for 2017 and has been designed as a gravity flow system, avoiding the need for pump stations. Installation will take place within the existing road with the sewer pipelines being buried from 5 to 20 feet below the ground surface. Excavation of approximately 40,000 cubic yards will be limited to temporary soil removal while the pipeline is installed and subsequent refilling of the excavation with the removed soils. Any excess excavated materials from the sewer pipeline installation would be incorporated into the Deerlake Ranch grading project. The diverse topography, and complexity and dimensions of the established Twin Lakes community roadway system, will require that only small equipment be used for sewer infrastructure installation, estimated to last from six to eight months.

The actions to be considered by the Board would include, but not be limited to, potential approval of an *Agreement for Tract 53138 Relating to the Acquisition of Offsite Real Property Interests* (the “Acquisition Agreement”) and potential approval of a Board Resolution finding and determining that the public interest, convenience and necessity require the acquisition of the Remainder Easements for public purposes (the “Eminent Domain Resolution”). The Acquisition Agreement sets forth the relative financial and administrative responsibilities between the County and the Deerlake Ranch Project proponent with respect to the potential acquisition by the County of the Remainder Easements and creates a funding mechanism to fund the County’s costs associated with such acquisition efforts. If adopted by the Board, the Eminent Domain Resolution would authorize the County to initiate legal proceeding to acquire the Remainder Easements through eminent domain. Together, the Acquisition Agreement and Eminent Domain Resolution are referred to as the proposed “Refined Sewer Implementation Project.” The construction of the Twin Lakes Sewer was approved by the Board in 2004 when it approved the Deerlake Ranch Project and certified the Final EIR.

With respect to oak trees, two recently acquired “Not a Part” (NAP) parcels¹ that include oak trees allow for more efficient, contour grading that will reduce hillside grading, eliminate the need for one large “Verdura” retaining wall located adjacent to the main drainage (Devil Canyon), and will significantly reduce the height and length of another large retaining wall located at the Canoga Avenue bridge entry point to the Deerlake Ranch subdivision. Implementation of these efficiencies would require removal of several oak trees. In addition, a number of oaks that were severely burned and defoliated in the 2008 Sesnon fire, and consequently considered to be dead in the 2012 Oak Tree Report, have recovered from the fire to various degrees. However, in other areas of Deerlake Ranch, changes in grading and roadway designs would reduce the number of previously authorized oak removals and would preserve an oak woodland habitat. Based on the changes described above, the Deerlake Ranch Project would remove 56 oak trees and encroach into the protected zone of 25 oak trees. The Refined Sewer Implementation Project would encroach into the protected zone of 15 oak trees with installation of the Twin Lakes sewer mainline.

The purpose of this Third Addendum is to assess whether the proposed Refined Sewer Implementation Project, inclusive of oak tree impact modifications, triggers any of the conditions described in *State CEQA Guidelines* Section 15162 calling for preparation of a subsequent or supplemental EIR.

This Addendum presents a comparison of the environmental impacts of the Refined Sewer Implementation Project with the impacts previously identified in the Certified EIR, as amended by the First and Second Addenda, followed by an analysis of whether there is a significant change in environmental impacts caused by the Refined Sewer Implementation Project with respect to the following environmental topics, as organized in the Certified EIR:

Aesthetics and Visual Resources, Air Quality, Biological Resources, Cultural Resources, Geology and Soils, Hydrology and Water Quality, Noise, Public Services - Fire Protection, Public Services - Police Protection, Public Services - Schools, Public Services - Libraries, Transportation/Traffic, Utilities and Service Systems - Water Supply, Utilities and Service Systems - Wastewater, Utilities and Service Systems - Solid Waste, Utilities and Service Systems - Electricity, and Utilities and Service Systems - Natural Gas.

The Board and Commission determined, based on the Certified EIR, that Deerlake Ranch Project design features, mitigation measures, and conditions of approval will reduce Deerlake Ranch Project-specific impacts on all of the above elements and/or services to be less than significant. Consequently, no Statement of Overriding Considerations was needed.

The purpose of this Addendum is to analyze the Refined Sewer Implementation Project to determine whether any significant environmental impacts that were not identified in the original Certified EIR would result, or whether previously identified significant impacts would be substantially more severe. This document has been prepared in accordance with *State CEQA Guidelines* (Title 14, California Code Regulations, 15000 *et seq.*) Sections 15162 and 15164.

State CEQA Guidelines Section 15164(a) requires a Lead Agency to prepare an Addendum to a previously Certified EIR if changes or additions to the document are necessary, but none of the conditions described in Section 15162 are present. Section 15162(a) of the *State CEQA Guidelines* provides that, for a project covered

¹ Not A Part (NAP) parcels are independently owned parcels within the Deerlake Ranch Project envelope consisting of existing Record of Survey lots, which have either existing single-family houses on them, or may be developed as additional single-family units in the future. These are not a part of the Deerlake Ranch Project but are located within the project development envelope.

by a Certified EIR or adopted negative declaration, preparation of a subsequent EIR or negative declaration is not required unless one or more of the following conditions occur:

- Substantial changes are proposed in the project which will require major revisions of the previous EIR due to the involvement of new significant environmental effects or a substantial increase in the severity of previously identified significant effects;
- Substantial changes have occurred with respect to the circumstances under which the project is undertaken which will require major revisions of the previous EIR due to the involvement of new significant environmental effects or a substantial increase the severity of previously identified significant effects; and
- New information of substantial importance, which was not known and could not have been known with the exercise of reasonable diligence at the time of the previous EIR was certified as complete or the negative declaration was adopted, shows any of the following:
 - The project will have one or more significant effects not discussed in the previous EIR or negative declaration;
 - Significant effects previously examined will be substantially more severe than shown in the previous EIR or negative declaration;
 - Mitigation measures or alternatives previously found not to be feasible would in fact be feasible and would substantially reduce one or more significant effects of the project, but the project proponents decline to adopt the mitigation measure or alternative; or
 - Mitigation measures or alternatives which are considerably different from those analyzed in the previous EIR or negative declaration would substantially reduce one or more significant effects on the environment, but the project proponents decline to adopt the mitigation measures or alternative.

Public circulation of an Addendum is not required by *State CEQA Guidelines* Section 15164. If new significant impacts or a substantial increase in the severity of significant impacts identified in the previous EIR would result, then preparation and circulation of a Subsequent or Supplemental EIR is required.

As discussed in this Addendum, the Refined Sewer Implementation Project, inclusive of the proposed oak tree impact assessment, does not propose substantial changes to the approved Deerlake Ranch Project, nor is there any new information of substantial importance that requires the preparation of a Subsequent or Supplemental EIR. The analyses of the subject areas listed above demonstrate that the proposed Project will not result in any new significant impacts, or any substantial increase in the severity of the impacts identified in the Certified EIR, as amended by the First and Second Addenda. In addition, no new information of substantial importance has been identified that indicates that the Refined Sewer Implementation Project would result in any new significant impacts or any substantial increase in the severity of the significant impacts identified in the Certified EIR, as amended by the previous Addenda.

A. Changed Circumstances

Section 15162 of the *State CEQA Guidelines* states that a Subsequent EIR would be required if (1) substantial changes are proposed in the project which will require major revisions of the previous EIR due to the involvement of new significant environmental effects or a substantial increase in the severity of previously

identified significant effects; (2) substantial changes occur with respect to the circumstances under which the project is undertaken which will require major revisions of the previous EIR due to the involvement of new significant environmental effects or a substantial increase in the severity of previously identified significant effects; or (3) new information of substantial importance, which was not known and could not have been known with the exercise of reasonable diligence at the time the previous EIR was certified, becomes available.

First, there are no changes to the Deerlake Ranch Project required for implementation of Board conditions of approval. The Twin Lakes Sewer Condition already requires the construction of the off-site main line sewer, with a sewer lateral "stubbed out" to the edge of the easement for the mainline sewer for each lot within the Twin Lakes community. The installation of the mainline sewer and laterals was part of the original Deerlake Ranch Project approval and the proposed Refined Sewer Implementation Project is in the same location as the approved mainline sewer construction with additional details with a refined design consistent with the 2004 Deerlake Ranch Project approval. There would be 15 oak tree encroachments for the Twin Lakes Refined Sewer Implementation Project resulting from the refinement to final mainline sewer design. However, the presence of oak trees within the Twin Lakes community is not new information as the same oak trees were growing in the same location within Twin Lakes adjacent to the roadway system as at the time of Deerlake Ranch Project approval in 2004. Thus, the construction of the Twin Lakes Sewer was part of the original approval. Previous Deerlake Ranch Project changes assessed in the First and Second Addenda have already reduced environmental impacts by reducing the number of residential units. Overall, the number of proposed residential units for the Deerlake Ranch Project site has been reduced from 375 single-family residences in the originally approved design to 314 single-family residences in the subsequently approved design.

The Deerlake Ranch Project has not been completed and is at the beginning of the construction phase. That change did not affect the original entitlement approvals or the requirement to construct the off-site sewer infrastructure. The Deerlake Ranch Project would require the removal of 56 oak trees and encroachments into the protected zone of 25 oak trees. This change is 14 more oak trees proposed for removal than currently approved and 14 more encroachments into the protected zone than are currently authorized. An additional 15 oak tree encroachments would result from the Refined Sewer Implementation Project Twin Lakes sewer mainline installation. However, the proposed change in oak tree impacts would result in a smaller impact area to oak woodland habitat. The currently proposed Project would result in the acquisition of up to 29 Remainder Easements within the Twin Lakes community. Fewer than 29 additional easements may be needed at the time of the Third Addendum adoption since discussions are ongoing with lot owners who have yet to grant sewer easements. The purpose of the Refined Sewer Implementation Project is to implement the Twin Lakes Sewer conditions of approval already authorized by the Board when it approved the Certified EIR and the Deerlake Ranch Project approvals. The Twin Lakes Sewer conditions are not being changed, and as demonstrated in this Third Addendum, implementation of the Refined Sewer Implementation Project to facilitate the already approved Twin Lakes Sewer conditions would not result in new significant environmental effects or a substantial increase in the severity of previously identified significant effects.

There have been no substantial changes in plans, policies, and regulations that would present new conflicts resulting in significant or substantially more severe physical impacts on the environment. Additionally, no substantial changes to the environmental setting in the Refined Sewer Implementation Project area have been identified since the approval of the Certified EIR. Overall, no substantial changes in circumstances have occurred since approval of the Certified EIR, including the Mitigation Monitoring Program (MMP) adopted at

the time of certification, that would result in new significant impacts or substantial increases in the severity of previously identified significant impacts. No new mitigation measures are required as a consequence of the project changes. Lastly, no other additional information of substantial importance has been found that would warrant preparation of a Subsequent EIR pursuant to Section 15162 of the *State CEQA Guidelines*.

Based on the analysis presented herein and with the implementation of applicable mitigation measures contained in the MMP adopted at the time of Deerlake Ranch Project approval, it has been determined that the Refined Sewer Implementation Project would not result in any new significant impacts or a substantial increase in the severity of an impact disclosed in the Certified EIR and amended by the previous Addenda or otherwise require preparation of a subsequent or supplemental EIR. If none of the conditions identified in *State CEQA Guidelines* section 15162 calling for the preparation of a subsequent EIR are triggered, then the lead agency “shall prepare an addendum.” Additional details about sewer implementation are now known, and the Addendum is the appropriate environmental document for disclosure. Therefore, this Third Addendum to the Certified EIR is the appropriate CEQA document for the Refined Sewer Implementation Project. The environmental analysis relies in part on the analyses completed in the Certified EIR, as amended by the previous Addenda and directly references these documents, where appropriate.

II. INTRODUCTION

A. Project Location

The Deerlake Ranch Project site is located in the Chatsworth community of the County of Los Angeles, north of the 118 Freeway between Canoga Avenue and Topanga Canyon Boulevard; refer to **Figure 1.0**, *Regional Location Map* and **Figure 2.0**, *Aerial Photograph*. The irregularly-shaped property is 230.58 gross acres in size with flat to hilly terrain. A large portion of the property is generally a plateau that is bordered to the west and south by Devil Canyon and to the east by Browns Canyon.

The Deerlake Ranch Project development will take access from Canoga Avenue, a variable width dedicated public street, and Poema Place, a 64-foot wide dedicated public street, via Topanga Canyon Boulevard. Internal access will be provided by 34-foot or 36-foot wide private driveways and fire lanes.

Domestic water service will be provided by Las Virgenes Municipal Water District (LVMWD). Domestic sewer service will also be provided through the LVMWD via a contractual agreement with the City of Los Angeles. The project is within the boundaries of the Los Angeles Unified School District (LAUSD).

The Refined Sewer Implementation Project would facilitate implementation of a previously approved off-site condition requiring sanitary sewer construction within the Twin Lakes community adjoining the Deerlake Ranch Project site.

The Twin Lakes community is a development between the southern boundary of the Deerlake Ranch Project site and State Route 118 (SR-118), consisting of approximately 100 existing single-family

units out of the 338 original Record of Survey subdivision; **Figure 3.0**, *Twin Lakes Community*. The Twin Lakes community was originally envisioned as a vacation community and subdivided in the 1920s. The roads within the Twin Lakes community are private with access to County maintained roads at Poema Place and Canoga Avenue. Wastewater disposal within the community occurs currently through individual on-site wastewater treatment systems (septic systems). The decision to hook up to the sewer mainline will be independently determined by individual homeowners.

B. Project Background

Pursuant to the provisions of CEQA, as discussed above, the County, serving as the Lead Agency, released the Draft EIR for the Deerlake Ranch Project on November 28, 2001 for public comment [County Project Number 99-239; State Clearinghouse #2000061049]. The comment period was 45 days, ending on January 11, 2002. An Additional Environmental Information document was made available for public review from July 22, 2002 until August 21, 2002. A Revised Project Summary Document was distributed for review June 10, 2003. The Commission approved the Certified EIR on January 14, 2004, while the Board approved the Certified EIR on August 10, 2004.

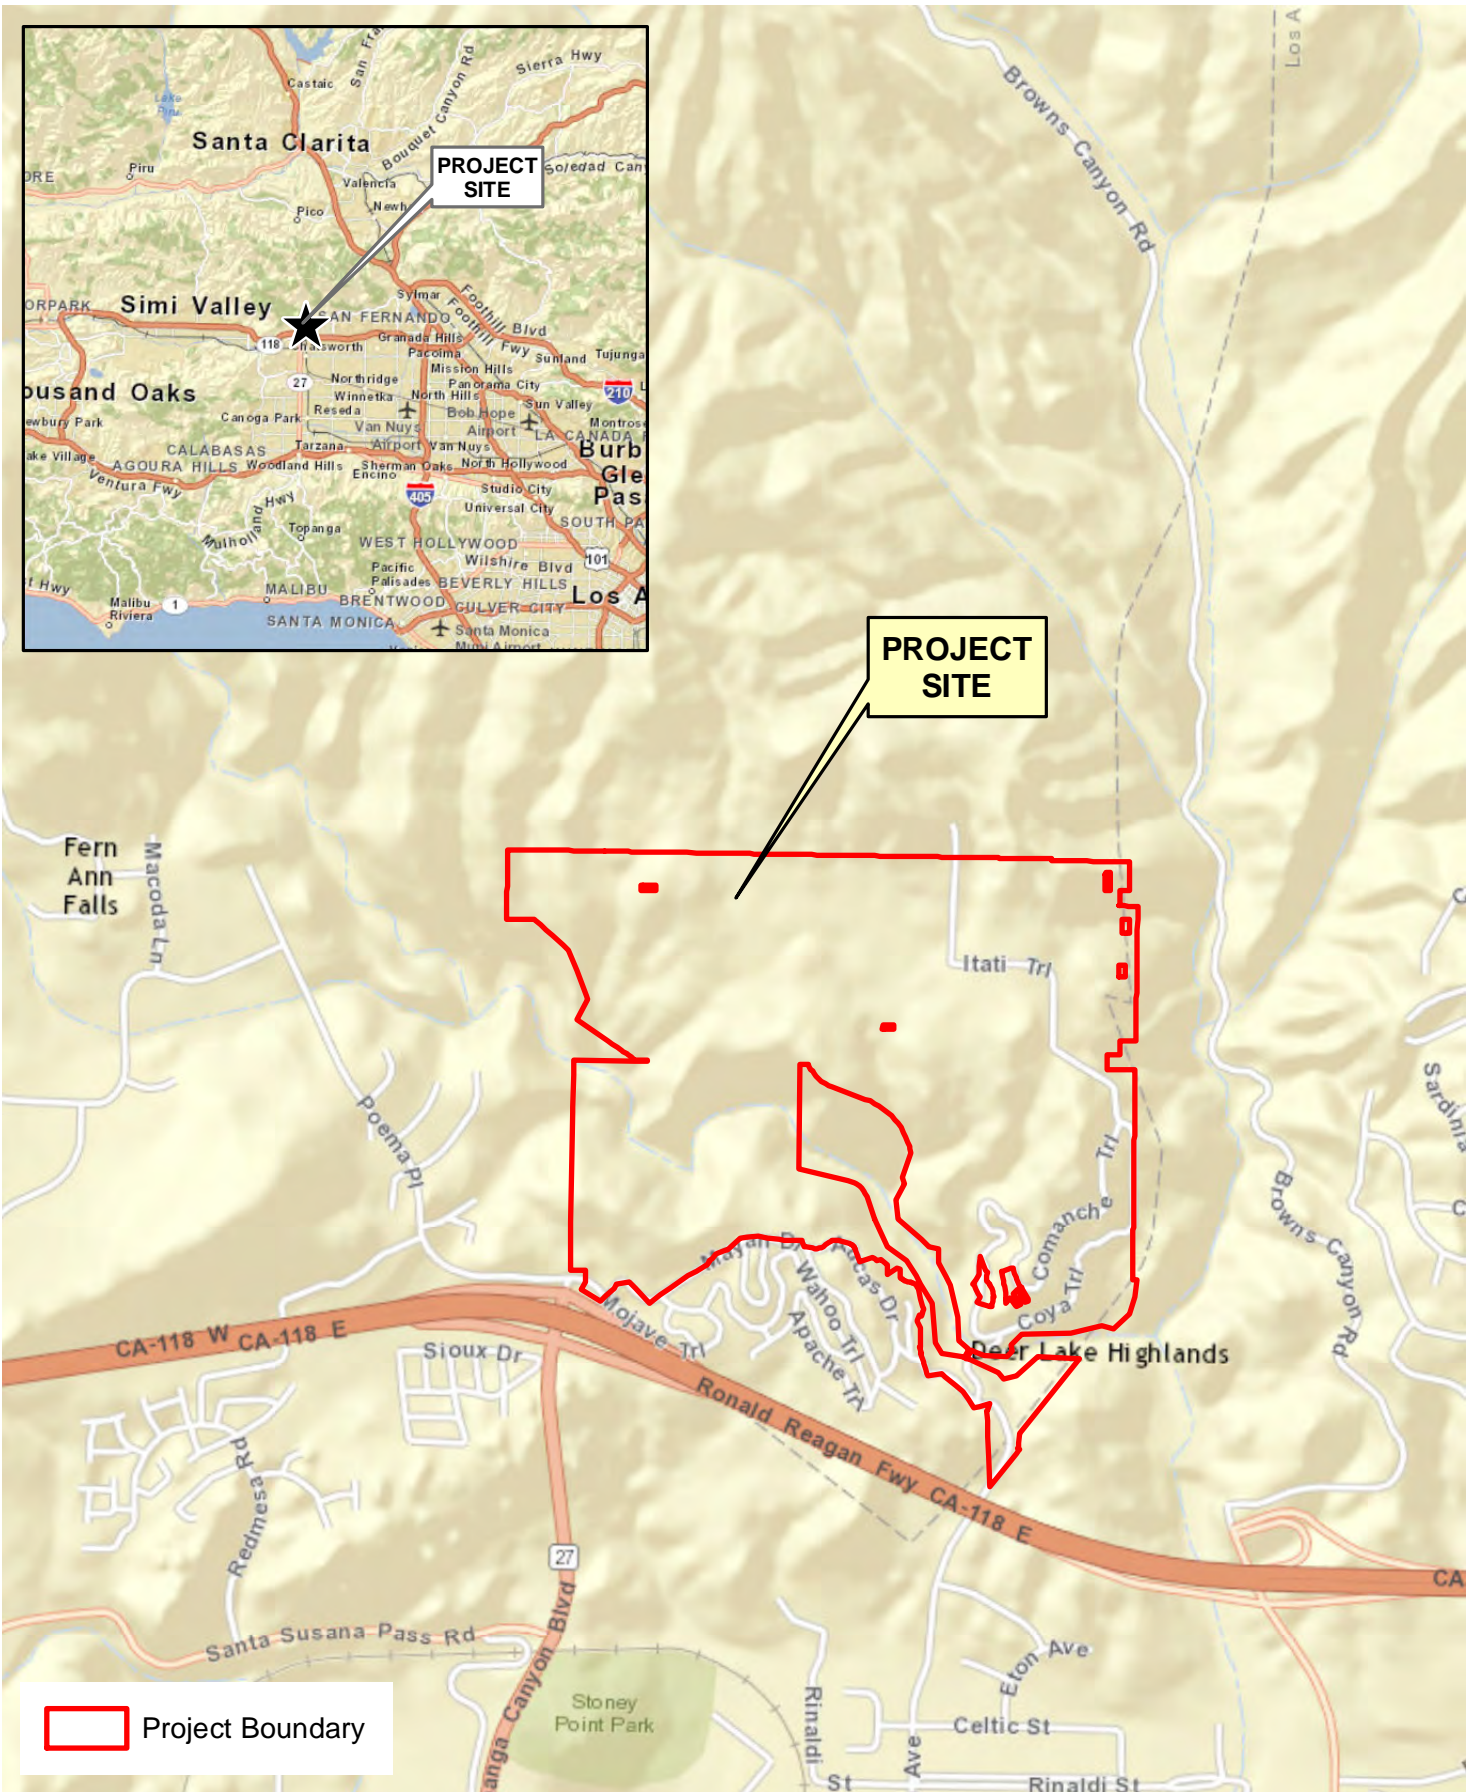

Vesting Tentative Tract Map 53138 (the "VTTM") was approved by the Board on August 10, 2004 to authorize the creation of 375 single-family lots, 21 open space lots, 14 private and future street lots, four debris basin lots, one helispot lot, one sheriff's storefront facility, and four designated remainder parcels, on approximately 230.58 acres. Grading consisted of 2.2 million cubic yards of cut and fill. Additional approvals included CUP Case No. 99-239-(5), to authorize a density controlled residential development in a non-urban hillside management area; and Oak Tree Permit Case No. 99-239-(5) to permit the removal of 61 oak trees and encroachment into the protected zone of 11 oak trees ("Original Project Approval").

Subsequent to the Original Project Approval, additional modifications to the VTTM and CUP were approved. Since approval of the Certified EIR by the County, the project applicant revised the project design to reduce the number of single-family residential lots to 314. Additional approved revisions to the Original Project, all of which have been discussed in the previous Addenda, include previous the reduction in grading to 1.8 million cubic yards, the reduction in the removal of oak trees to 42 removals but an increase of oak tree encroachments to 13, and modification to both map and CUP conditions. Overall, development impacts have been significantly reduced from the Original Project Approval.

To address the proposed Refined Sewer Implementation Project, inclusive of proposed oak tree impacts, a Third Addendum to the Certified EIR has been prepared. The County has determined that an addendum is the appropriate subsequent CEQA document to address the Refined Sewer Implementation Project pursuant to the *State CEQA Guidelines* Section 15164, as explained in more detail above in Section I, *Purpose of Addendum and CEQA Requirements*. Pursuant to *State CEQA Guidelines* Section 15164(c), this Addendum is not required to be circulated for public review, but will be attached to the Certified EIR.

Oak trees are protected under the Los Angeles County Oak Tree Ordinance (Ord. 82-0168 §2 (in part), 1982; Ord. 88-0157 §2, 1988) as outlined in Chapter 22.56.2050 et seq. of the Los Angeles County Code. The County's ordinance requires protection of all members of the genus *Quercus* (oaks) that measure 25 inches or more in circumference (eight inches in diameter) for trees with a single trunk and 38 inches of combined circumference (12 inches in diameter) for any two trunks of trees with multiple stems, as measured at breast

height, or 4.5 feet above natural grade (diameter at breast height, or "DBH"). The Oak Tree Ordinance defines the "protected zone" of the oak trees as extending to five feet outside of the dripline of the oak tree, or 15 feet from the trunk(s) of a tree, whichever distance is greater. Additionally, the Oak Tree Ordinance protects all qualifying oak trees that fall within 200-feet of project construction. An oak tree report is required to be prepared that map and document the coast live oak trees occurring within the project site and any of these trees that would be removed or would have impacts within the canopy or protected zones of qualifying oak trees (encroachment). Projects proposing impacts by removal or encroachment to oak tree require an oak tree permit approval prior to project implementation.

III. APPLICATION OF PREVIOUSLY CERTIFIED ENVIRONMENTAL DOCUMENTATION TO THE PROJECT

A. Deerlake Ranch Project

The Deerlake Ranch Project analyzed in the Certified EIR entailed site preparation and construction on the approximately 230.6 acres of the Deerlake Ranch Project site consisting of 375 single-family lots, 21 open space lots, 14 private and future street lots, four debris basin lots, one helispot lot, one sheriff's storefront facility, and four designated remainder parcels, on approximately 230.6 acres. Grading consisted of 2.2 million cubic yards of cut and fill. Additional approvals included CUP Case No. 99-239-(5), to authorize a density controlled residential development in a non-urban hillside management area; and Oak Tree Permit Case No. 99-239-(5) to permit the removal of 61 oak trees and encroachment into the protected zone of 11 oak trees.

The original Oak Tree Permit No. 99-239 to allow the removal of 61 oak trees and encroachment into the protected zone of 11 oak trees was approved along with the Deerlake Ranch Project entitlements on August 10, 2004. Oak Tree Permit No. 200500037 was subsequently approved by the Los Angeles County Hearing Officer on September 6, 2005, to permit the removal of 47 oak trees and encroachment into the protected zones of ten oak trees, in addition to the removal of three dead oak trees. This permit superseded the original oak tree permit 99-239. Subsequently, Oak Tree Permit 201200001 ("ROAK 210200001") was approved by the Planning Commission on July 18, 2012, for the reduction in the number of oak tree removals from 47 to 42, and increased the number of encroachments into the protected zone at 13 oak trees.

The total area of coast live oak woodland identified on the project site is approximately 5.73 acres. Coast live oak woodland is a native woodland community and is located adjacent to drainages or on shaded, north-facing slopes. The dominant species is coast live oak (*Quercus agrifolia*). Individual coast live oak trees are located in other plant communities on the site. The total area of oak/willow woodland on the project site is approximately 0.58 acre and is characterized by small stands dominated by coast live oaks and willows (*Salix* spp.) found on stream terraces above Devil Canyon Creek upstream from the Devil Canyon debris dam. Implementation of the original project design would result in the permanent loss of 0.68 acre of coast live oak woodland and another 0.62 acre from the implementation of fuel modification. The oak/willow woodland would not be impacted by the project.

Conditional Use Permit 99-239, Condition No. 69 requires the following:

"In the event that a Community Facilities District ("CFD") is proposed to fund public facilities for the project, prior to recordation of a final map for Tract Map No. 53138, the permittee shall request that the CFD include funding for the design and construction of public main-line sewers, including five foot lateral stubs in the public right-of-way, to serve the existing Twin Lakes community. To the extent authorized by law and subject to the County's sale of CFD bonds for that purpose, such CFD funding may be used to make a contribution to a County Improvement District ("CID") which may be formed by the Board, at the request of the Twin Lakes community, specifically for the design, acquisition of rights of way through grant or condemnation, and construction of main line sewers within that community. Alternatively, in the event a CID is not formed in a timely manner, or is deemed by the County to be an inappropriate means of implementation, the permittee may construct the public mainline

sewers under a private contract, subject to funding by the CFD and acquisition of right-of-way through grants of easements or condemnation by the County. Under either alternative, upon completion of construction to the satisfaction of the Department of Public Works, the mainline sewer shall be transferred for ownership and maintenance to the Los Angeles County Sewer Maintenance District. Performance of the permittee under this condition shall be subject to the following:

A. Upon expiration of all appeal periods, and statutes of limitation for legal challenges to the project, without the filing by any party of litigation challenging the project, the permittee shall prepare all necessary easement documents, including legal descriptions, for each easement required to construct the Twin Lakes sewer across applicable private parcels;

B. Prior to recordation of the first final map, the permittee shall request formation of the CFD to fund public facilities for Deerlake Ranch, and, subject to the County's sale of CFD bonds for that purpose, include funding for the complete design and construction of public main line sewers, including five foot lateral stubs in the public right of way, to serve the existing Twin Lakes Community;

C. Following the submission of an application for the formation of a CFD for this project that specifically lists the Twin Lakes sewer as an approved facility to receive funding, the permittee shall have 90 days to obtain all necessary grants of easements and consents;

D. At the end of the 90-day period, the permittee shall present the County with a list, including legal descriptions, of all parcels that have not voluntarily granted easements necessary to construct the Twin Lakes sewer. The County shall commence proceedings to acquire the remaining required sewer easements through eminent domain;

E. Permittee shall construct or cause to be constructed the sewer facilities for Twin Lakes regardless of the final cost and regardless of whether a CFD is approved by the County of Los Angeles. Upon recordation of all easements necessary to construct the Twin lakes sewer, the permittee shall commence construction in a timely manner, in coordination with the installation of the project sewer main to Canoga Avenue.

Prior to approval of the first final unit map, the permittee shall enter into an agreement with the County to thereafter complete the improvements at the permittee's sole expense. The permittee shall guarantee its performance of the agreement by furnishing cash, a certificate of deposit, a letter of credit, or other instrument acceptable to the Director of the Department of Public Works, which shall be returned to the permittee at such time as the sewer facilities are completed by the permittee and accepted by the Department of Public Works.

F. In addition to the construction of the main line sewer, permittee shall "stub out" the sewer lateral to the edge of the easement for the main line sewer for each lot in "old" Twin

Lakes. Property owners will be responsible for their own hookup fees (estimated in 2002 to cost \$3,900) and for the construction of their own private connections between their house and the main sewer line easement; and

G. Following the installation of the main line sewer, all roads disturbed by the trenching for the main line sewer shall be paved with an asphalt overlay of the existing road base. Any damage by permittee's sewer contractor to Twin Lakes community roads not disturbed by the sewer installation shall also be repaired to their prior state to the satisfaction of the Department of Public Works."

Consequently, CUP Condition No. 69 requires the Deerlake Ranch Project proponent to construct a mainline sewer with lateral stubs to the adjacent community of Twin Lakes.

Similarly, VTTM Condition No. 8 in the Department of Public Works, Land Development Division, Sewer condition letter dated March 25, 2004 states, "As directed by the Board of Supervisors (BOS), construct a mainline sanitary sewer system for the adjoining Twin Lakes community. The sewers in Twin Lakes shall be constructed and accepted by Public Works prior to the issuance of a final inspection for the 190th home."

B. Refined Sewer Implementation Project

Overview of the Refined Sewer Implementation Project

The proposed Refined Sewer Implementation Project involves the acquisition by the County of certain property interests to implement the Deerlake Ranch Project conditions of approval, including the previous approval for installation of a public mainline sewer as required under Condition 69 for Conditional Use Permit 99-239. The Board will be requested to consider the discretionary approval of the Acquisition Agreement and the Eminent Domain Resolution. The Acquisition Agreement sets forth the relative financial and administrative responsibilities between the County and the Deerlake Ranch Project proponent with respect to the potential acquisition by the County of the Remainder Easements and creates a funding mechanism to fund the County's costs associated with such acquisition efforts. If adopted by the Board, Eminent Domain Resolution would authorize the County to initiate legal proceedings to acquire the Remainder Easements through eminent domain property interests necessary to implement the Twin Lakes sewer off-site conditions. As stated above, the Deerlake Ranch Project entitlements authorize the subdivision and use of the Deerlake Ranch Project property for a single family residential uses and related infrastructure. As a condition of approval, the Board required the design, rights of way acquisition, and construction of the Twin Lakes mainline sewer and contemplated the acquisition of property by the County, through eminent domain if necessary, to ensure adequate title and interest in property to construct the sewer. The construction of the Twin Lakes Sewer was included in the approved Deerlake Ranch Project for which an EIR was certified by the Board in 2004.

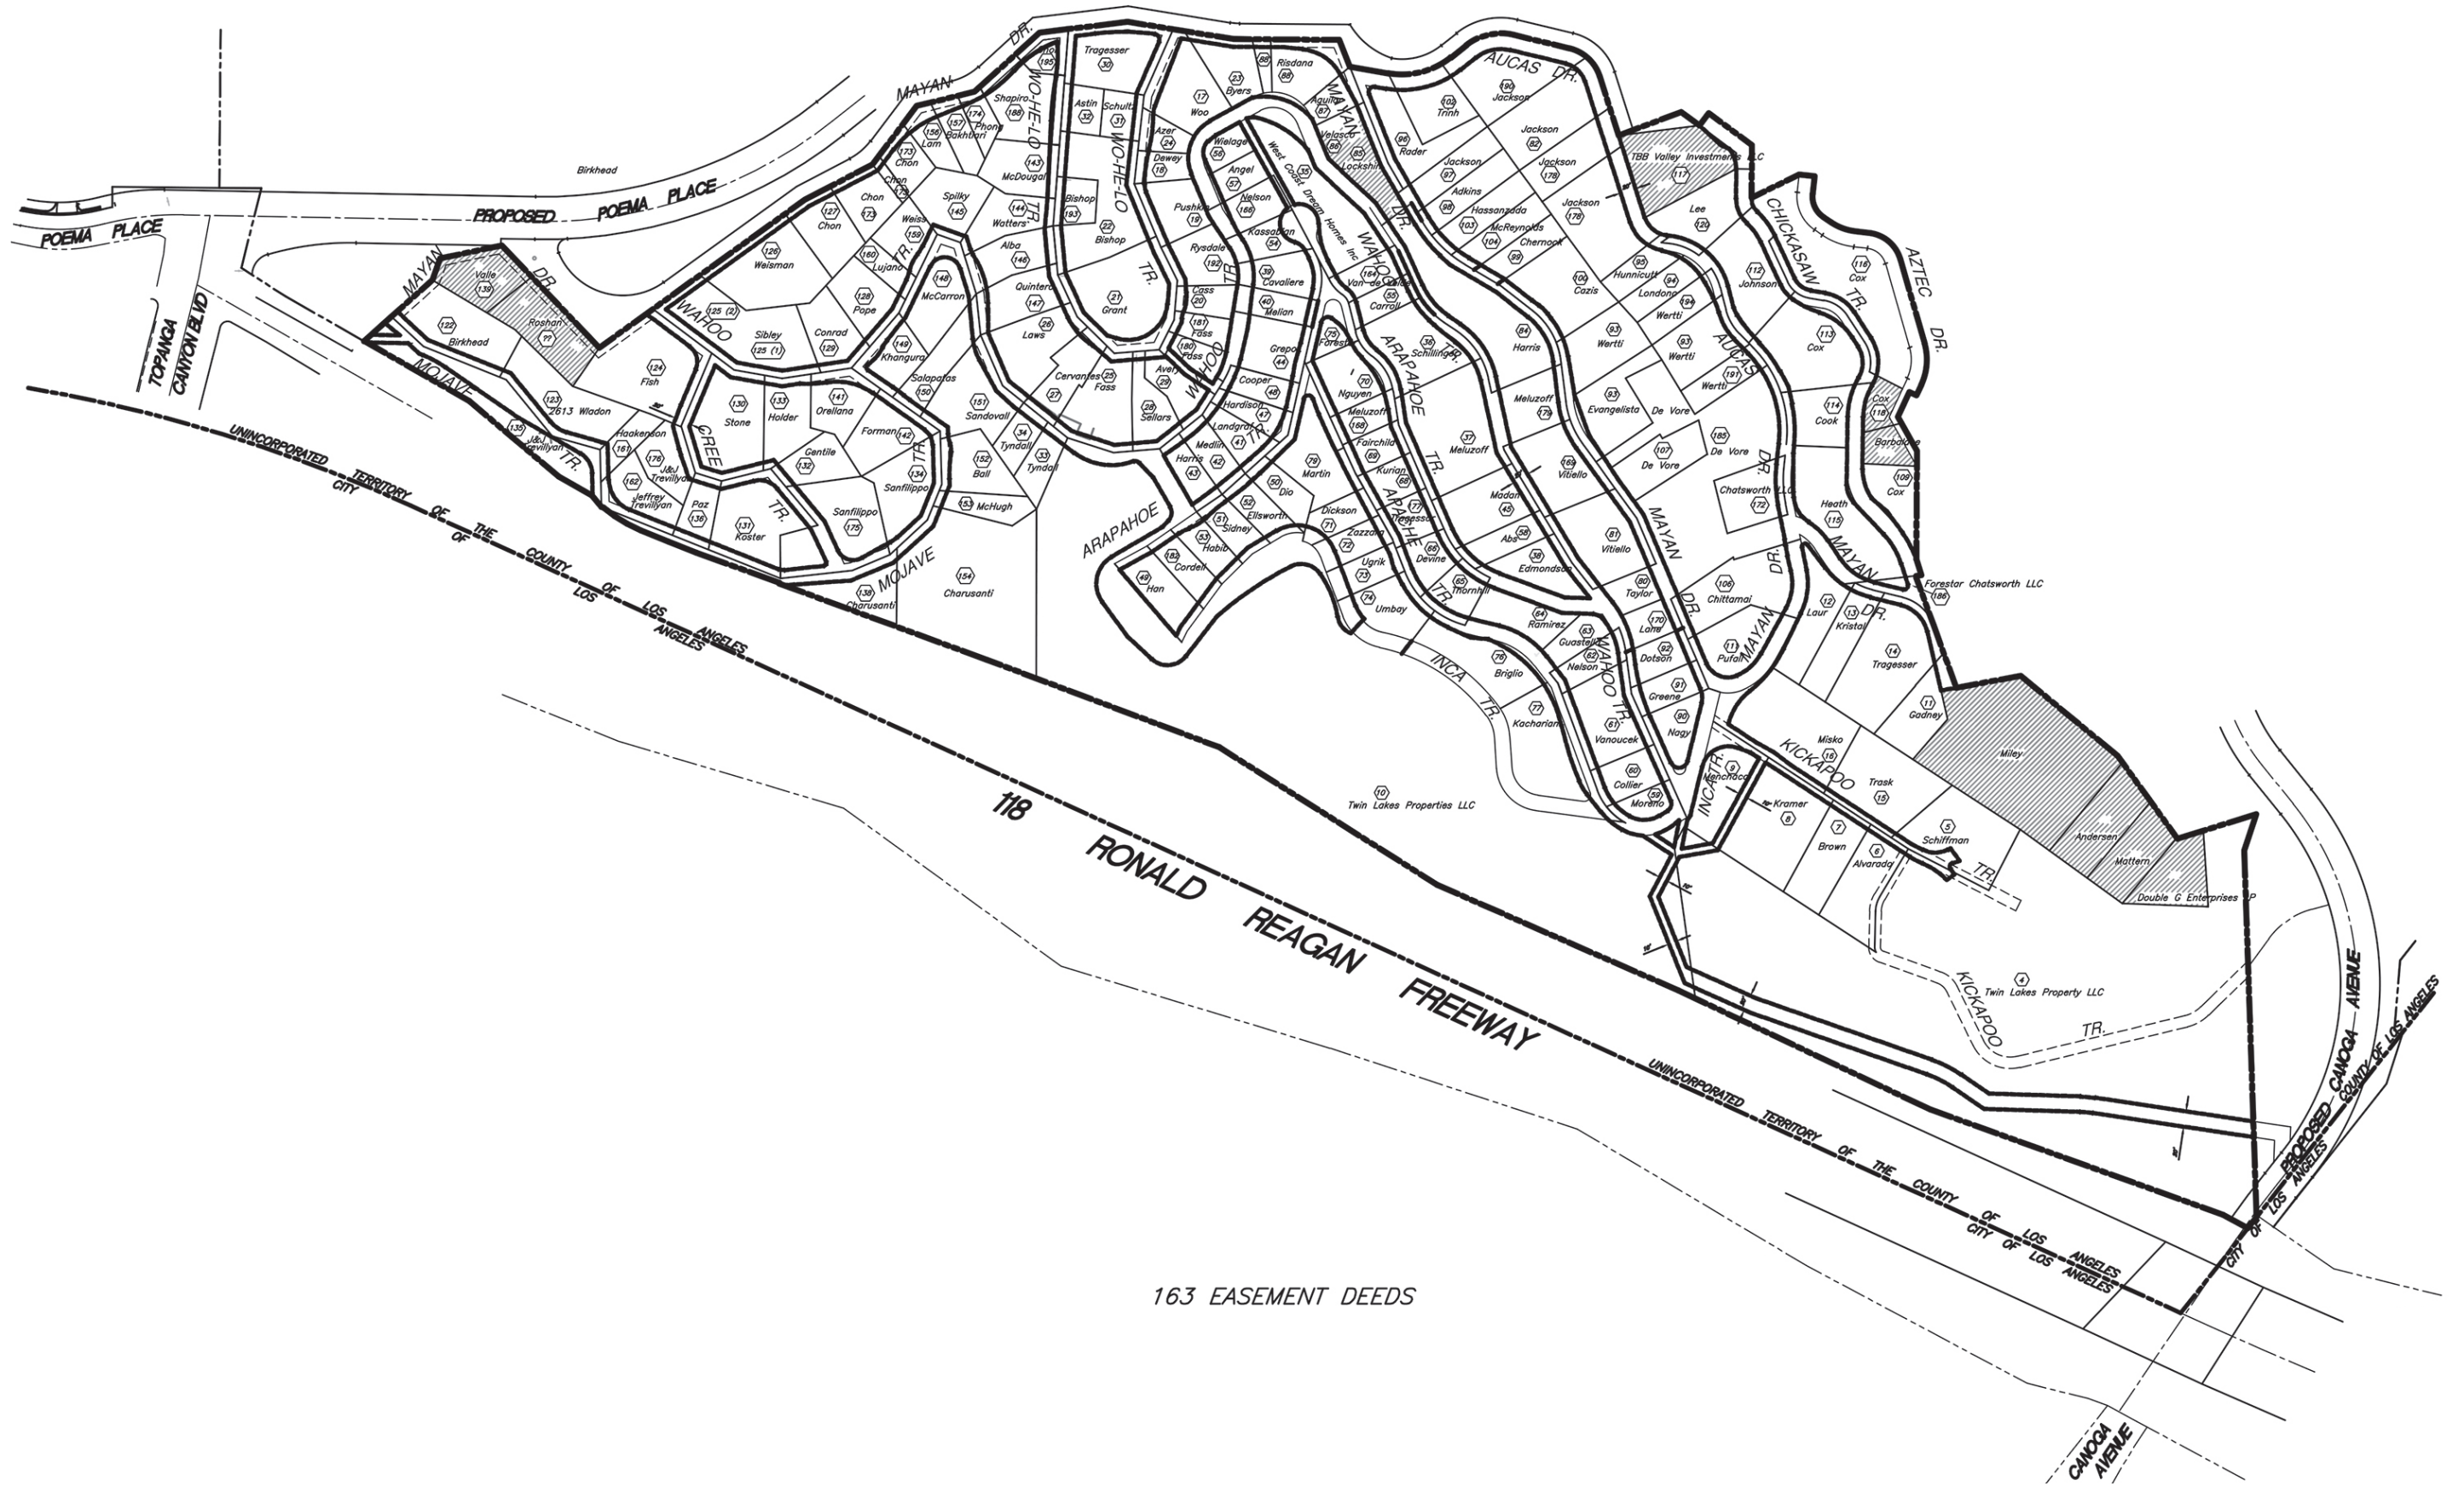

The Twin Lakes Sewer is to be constructed and/or installed within the private streets shown on **Figure 4** ("Offsite Properties"), as was included in the Certified EIR. Once constructed to the satisfaction of the County, the sewer mainline will be transferred to the Los Angeles County Consolidated Sewer Maintenance District for operation and maintenance. The connection cost and maintenance of the lateral stubs, including construction of their own private connections between the house and the mainline sewer, will be the responsibility of the individual property owners.

The Deerlake Ranch Project proponent has acquired approximately 134 easements in the Offsite Properties for the construction, operation, maintenance, and use of the Twin Lakes Sewer as depicted on **Figure 5** (“Acquired Easements”). However, in addition to the Acquired Easements, additional Offsite Properties are needed to fully construct the Twin Lakes Sewer. Neither the Deerlake Ranch Project proponent nor the County have sufficient title or property interest in the Remainder Easements depicted in **Figure 6** (“Remainder Easements”) needed to fully construct the Twin Lakes Sewer to satisfy of the requirements of the Twin Lakes Sewer Condition. In CUP Condition No. 69, the Board contemplated the use of eminent domain to acquire sufficient title and interest in the Remainder Properties to the extent the Deerlake Ranch Project proponent was unable to obtain all such interests itself. The Remainder Properties are those remaining easements which need to be acquired by the County to facilitate construction of the Offsite Improvements. For the purposes of this Third Addendum, the County will potentially acquire up to 29 Remainder Properties in order to facilitate complete construction of the Twin Lakes Sewer. However, fewer than 29 additional easements may be needed at the time of the Third Addendum adoption since discussions are on-going with lot owners who have yet to grant sewer easements.

Installation of the Twin Lakes Sewer is planned for 2017 during Phase 3 of the Deerlake Ranch Project construction. The Twin Lakes Sewer has been designed as a gravity flow system, avoiding the need for pump stations. Installation will take place within the existing road and the sewer pipelines will be buried from 5 to 20 feet below the ground surface. Excavation will be limited to temporary soil removal while the pipeline is installed and subsequent refilling of the excavation with the removed soils. Any excess excavated materials from the sewer pipeline installation would be incorporated into the Deerlake Ranch balanced grading project. A conservative estimate of excavated soil materials for sewer pipeline installation is approximately 40,000 cubic yards, an amount within the scope of impacts in the original total grading quantities of the Certified EIR Deerlake Ranch Project analysis of 2.2 million cubic yards, subsequently amended to 2.0 million cubic yards of cut and 2.2 million cubic yards of fill, but balanced within the project boundary. Because of the diverse topography, and the complexity and dimensions of the established Twin Lakes community roadway system, only small equipment will be used for sewer infrastructure installation. Installation activities are estimated to last from six to eight months.

As a consequence of the Refined Sewer Implementation Project, there would be 15 oak tree encroachments resulting from the final mainline sewer design. No oak trees are proposed for removal and the encroachments would occur within the existing paved roadways within the Twin Lakes community. A new oak tree permit would be needed in order to construct the Refined Sewer Implementation Project in compliance with the County Zoning Code. The presence of coast live oak trees overhanging the Twin Lakes sewer mainline alignment requires compliance with the County Oak Tree Ordinance for potential impacts. In addition, the Deerlake Ranch Project would require the removal of 56 oak trees and encroachments into the protected zone of 25 oak trees, as described below in Section 4.3 – Biological Resources.

In addition, the Project will not result in a substantial alteration or material deviation from the terms and conditions of the previously approved CUP.

IV. ENVIRONMENTAL IMPACT ANALYSIS

SUMMARY

This analysis section includes separate subsections for each environmental topic addressed in the Certified EIR, as amended by the previous Addenda. Each topical section first presents a summary of the information and conclusions of the analysis in the Certified EIR. For each topic a determination is also made whether the Refined Sewer Implementation Project would result in any new significant impacts or any substantial increase in the severity of the impacts identified in the Certified EIR, as amended by the previous Addenda. Impact analysis topics in this section are presented in the same order as in the Certified EIR.

The Certified EIR analyzed the following potential project impacts: Aesthetics and Visual Resources, Air Quality, Biological Resources, Cultural Resources, Geology and Soils, Hydrology and Water Quality, Noise, Public Services - Fire Protection, Public Services - Police Protection, Public Services - Schools, Public Services - Libraries, Transportation/Traffic, Utilities and Service Systems - Water Supply, Utilities and Service Systems - Wastewater, Utilities and Service Systems - Solid Waste, Utilities and Service Systems - Electricity and Utilities and Service Systems - Natural Gas. Impacts on all of these elements and/or services were found to be less than significant after appropriate mitigation, as identified in the Certified EIR and the MMP. Subsequently, the Commission, as analyzed in the First Addendum, found that impacts due to the Second Amended Map on all of the above-described elements and/or services were found to be less than significant with the mitigation identified in the Certified EIR and MMP. Similarly, the Hearing Officer found impacts due to the Fourth Amended Map on all of the above-described factors and/or services were found to be less than significant with the mitigation identified in the Certified EIR and MMP.

The *State CEQA Guidelines* Appendix G has been modified subsequent to the certification of the EIR to include the additional environmental factors of Agriculture/Forest, Energy, and Greenhouse Gas Emissions. The Deerlake Ranch Project, including the Refined Sewer Implementation Project, would have no impact on Agriculture/Forest because there are no agricultural operations within the Project site or on adjacent properties and the Project site is not designated as Prime Farmland, Unique Farmland or Farmland of Statewide Importance. The project would not convert Prime Farmland, Unique Farmland, or Farmland of Statewide Importance to non-agricultural use; would not conflict with existing zoning for agricultural use, with a designated Agricultural Opportunity Area, or with a Williamson Act contract; would not conflict with existing zoning for, or cause rezoning of, forest land (as defined in Public Resources Code § 12220 (g)), timberland (as defined in Public Resources Code § 4526), or timberland zoned Timberland Production (as defined in Government Code § 51104(g)); would not result in the loss of forest land or conversion of forest land to non-forest use; and would not involve other changes in the existing environment which, due to their location or nature, could result in conversion of Farmland to non-agricultural use, or conversion of forest land to non-forest use.

The Deerlake Ranch Project, including the Refined Sewer Implementation Project, would have a less than significant impact on Energy through compliance with Los Angeles County Green Building Standards Code (Title 31) and with efficient use of energy resources.

The Deerlake Ranch Project, including the Refined Sewer Implementation Project, is anticipated to have the same impact on Greenhouse Gas Emissions as the original approved Project because the project evaluated in

the Certified EIR has been reduced in size from the original Deerlake Ranch Project design and because the Refined Sewer Implementation Project would not appreciably generate greenhouse gas (GHGs) emissions.

The Deerlake Ranch Project Initial Study prepared for the original environmental determined that the environmental factors of Hazards/Hazardous Materials (Environmental Safety), Land Use/Planning, Mineral Resources, Population/Housing, and Recreation to have no or less than significant impacts. No further analysis of these factors was required in the EIR.

Certified EIR Section 4.1 - Aesthetic and Visual Resources

Summary of Analysis in Certified EIR

The Certified EIR states that implementation of the proposed project would result in a significant impact upon aesthetics and visual resources, as defined in *State CEQA Guidelines*, if any of the following occurs:

- The project would have a substantial adverse effect on a scenic vista;
- Project development would substantially damage scenic resources, including, but not limited to, trees, rock outcroppings, and historic buildings within a state scenic highway;
- The project would substantially degrade the existing visual character or quality of the site and its surroundings; and/or
- Create a new source of substantial light or glare which would adversely affect day or nighttime views in the area.

The County of Los Angeles criteria for significance include consideration of the following:

- Is the project site substantially visible from or will it obstruct views along a scenic highway (as shown on the Scenic Highway Element), or is it located within a scenic corridor or will it otherwise impact the viewshed?)
- Is the project substantially visible from or will it obstruct views from a regional riding or hiking trail?
- Is the proposed use out of character in comparison to adjacent uses because of height, bulk, or other features?
- Is the project site located in an undeveloped or undisturbed area that contains unique aesthetic features?
- Is the project likely to create substantial sun shadow, light or glare problems?

The Certified EIR concludes that implementation of the Deerlake Ranch Project would not exceed any of the identified *State CEQA Guidelines* or County criteria that establish a significant aesthetic impact. If a project meets one or more of the listed criteria to a substantial degree, it can be concluded that the project could result in a significant visual impact. The project will not introduce elements which will substantially detract from the existing aesthetic character or primary aesthetic resources of the area. The height and bulk of structural elements proposed by the project would be compatible, and create a visual relationship, with existing development in the project vicinity. The project would not obstruct views from County designated scenic highways. The primary natural topographic feature of the project site, Devil Canyon, would not be significantly impacted. The required perimeter and interior fuel modification zones would impact near

distant views of the project site on a temporary basis until planted materials become mature. Additionally, the project would contain landscaping that would blend in with the existing vegetation and terrain of the area. Further, the proposed project would not be visually inconsistent with the surrounding development and would not conflict with County goals or policies relating to visual resources.

Although significant impacts to aesthetic and/or visual resources would not result with implementation of the project, the following mitigation measures are proposed to further reduce insignificant impacts:

- 4.1-1. The primary east-west ridgeline along the northern project boundary shall be retained in undisturbed natural open space to provide for a natural viewshed backdrop;
- 4.1-2. Approximately 70 acres of the project site has been or is proposed to be dedicated to the Santa Monica Mountains Conservancy for preservation of significant aesthetic resources. Those portions not currently dedicated as undisturbed open space shall be dedicated prior to issuance of a grading or building permit, whichever occurs first; and
- 4.1-3. A comprehensive landscape plan shall be approved by the County, prior to the issuance of a grading permit or building permit, whichever occurs first.

No unavoidable significant impacts with regard to aesthetics and visual resources would result with the implementation of the project, as concluded in the Certified EIR.

Analysis of the Refined Sewer Implementation Project

The First and the Second Addenda each analyzed a modified development of 314 residential units, a reduction of 61 residential units from the Certified EIR (375 residential units), which reduced the overall impacts upon aesthetics and visual resources. Further, the approved Deerlake Ranch Project includes 82.7 acres of open space lots, an increase of 11.3 acres of open space from the Certified EIR (71.4 acres). Lastly, the First and Second Addenda analyzed a reduction in grading quantities from the Certified EIR (2.2 million cubic yards) to 1.8 million cubic yards. All grading limits and building envelopes will remain the same as those of the First and Second Addenda. However, more recent grading design calculations indicate that grading will consist of 2.0 million cubic yards of cut and 2.2 million cubic yards of fill, but balanced within the project boundary. Limited excavation will be needed to install the Twin Lakes Sewer.

The Refined Sewer Implementation Project involves only the acquisition of property interests for the purpose of implementing the Deerlake Ranch Project Twin Lakes Sewer Condition. As such, the Acquisition Agreement does not create any long term visual impacts. The Twin Lakes Sewer itself would be placed from 5 to 20 feet below the ground surface within an existing road easement. Consequently, neither the Refined Sewer Implementation Project nor the already approved construction it facilitates would result in any changes to visual impacts.

As such, the Refined Sewer Implementation Project impacts will not be significantly different (and in fact may be less) from the project analyzed in the Certified EIR, as amended by the previous Addenda, and the same mitigation measures (4.1-1 through 4.1-3) will be implemented as set forth in the Certified EIR and required by the MMP. Therefore, no new important information or substantial changes to visual impacts resulting from project circumstances or design revisions beyond those previously identified in the Certified

EIR as amended by the previous Addenda would occur as a result of the Refined Sewer Implementation Project. No additional mitigation measures are required.

Certified EIR Section 4.2 - Air Quality

Summary of Analysis in Certified EIR

The Certified EIR states that: construction and operation of the proposed project would generate pollutant emissions from the following activities: (1) grading operations/soil disturbance; (2) emissions from construction activity and vehicular trips; (3) fugitive dust emissions from construction activity; (4) erosion “spill-over” from construction activity; (5) application of architectural surface treatments; and (6) vehicular exhaust (traffic) from project operation.

Temporary grading and construction emissions would occur during project buildout and include on-site generation of dust and equipment exhaust, and off-site emissions from construction vehicular traffic and Twin Lakes Sewer installation.

Air pollution emissions associated with project occupancy and operation would be generated by the operation of motor vehicles traveling throughout Southern California. Secondary impact potential would be derived from energy consumption in power plants or on-site heaters, stoves, water heaters, etc.

The Certified EIR recommends several mitigation measures (4.2-1 through 4.2-3) to reduce air quality impacts associated with construction activities to less than significant (see Section 4.2.2 of the Certified EIR for a complete list of mitigation measures).

The Certified EIR further states that although all mobile source emissions are predicted to be at or below SCAQMD significance thresholds, the following mitigation is recommended:

4.2-1. Dust Control: The following dust control measures shall be implemented:

- Active construction areas shall be watered at least twice daily.
- All haul trucks shall be covered or shall maintain at least two feet of freeboard.
- All unpaved parking or staging areas shall be watered four times daily.
- Site access points shall be swept or washed within 30 minutes of any visible dirt deposition on any public roadway.
- On-site stockpiles of debris, dirt or other dusty material shall be covered or watered twice daily.
- Operations on any unpaved surface shall be suspended if winds exceed 25 miles per hour.
- Any cleared area, which is to remain inactive for more than 96 hours after clearing, shall be stabilized.
- Grading operations shall comply with Rule 403 of the SCAQMD pertaining to control of fugitive dust.

- 4.2-2. The following measures shall be implemented to control emissions related to construction activities:
- Off-road construction equipment built within the last ten years shall be utilized.
 - Off-road construction equipment shall have low-NOx tune-ups every 90 days.
 - Idling of trucks and heavy equipment shall be limited to 10 minutes.
- 4.2-3. The following measures shall be implemented to control emissions related to off-site impacts:
- Lane closures shall be limited to off-peak travel periods.
 - Construction vehicles shall not be parked on heavily traveled roadways.
 - Receipt of materials shall be encouraged during non-peak traffic hours.
 - Ride-share incentives shall be provided for contractor and subcontractor personnel.
- 4.2-4. Although all mobile source emissions are predicted to at or below SCAQMD significance thresholds, the following mitigation is recommended due to the non-attainment status of the Basin:
- Homes shall be built to meet minimum statewide energy conservation requirements.
- 4.2-5. Homes shall include as an option the following residential design features that encourage trip elimination or trip diversion to alternative transportation:
- Pre-wired for various telecommunications systems access for in-home offices
 - Pre-wired for 220V electric vehicle charging systems

The Certified EIR concludes that the proposed project would contribute to the continued regional air quality degradation by exceeding SCAQMD significance thresholds as construction activity related emissions would exceed significance thresholds. With incorporation of the recommended mitigation measures, short-term construction activity impacts would remain significant, but the number of days that thresholds would be exceeded would be reduced. Operational impacts would not be significant; however, mitigation measures are recommended due to the non-attainment status of the (South Coast Air) Basin.

Analysis of the Refined Sewer Implementation Project

Since approval of the Certified EIR, the Commission approved on July 18, 2012, the reduction to 314 residential units and reduced grading quantities from 2.2 million cubic yards to 1.8 million cubic yards without any corresponding reduction in the mitigation measures previously approved, as discussed in the First and Second Addenda. As such, the mitigation measures (4.2-1 through 4.2-5) originally approved exceed those that would be required for the modified approved Deerlake Ranch Project, inclusive of the Twin Lakes Sewer. However, more recent grading design calculations indicate that grading will consist of 2.0 million cubic yards of cut and 2.2 million cubic yards of fill, but balanced within the project boundary.

The Refined Sewer Implementation Project involves only the acquisition of property interests for the purpose of implementing the Deerlake Ranch Project Twin Lakes Sewer Condition. The Twin Lakes Sewer

itself would be placed under an existing road from 5 to 20 feet below the ground surface over an estimated six to eight month construction period during Phase 3, anticipate occurring in 2017. The Twin Lakes Sewer construction does not change the grading quantities, already approved by the Board in 2004 and discussed in the Certified EIR, as amended by the previous Addenda. Because of the dimensions and complexity of the established Twin Lakes community roadway system and the diverse topography, only small equipment will be used for sewer infrastructure installation and limited excavation will be needed. As such, the Refined Sewer Implementation Project results in no significant change to already approved physical improvements and would not increase construction or operational air quality impacts over those analyzed in the Certified EIR as amended by the previous Addenda, with the same mitigation measures to be implemented as stated in the Certified EIR and required by the MMP. No additional mitigation measures are required.

Certified EIR Section 4.3 - Biological Resources

Summary of Analysis in Certified EIR

The Certified EIR states that the Deerlake Ranch Project would result in direct impact on the initial loss of habitats by grading and construction, and indirect impact related to disturbance from construction, such as dust and noise, or from activities of future residents. There would be a total of 142 acres of permanent impact to on-site vegetation by project implementation, including a loss of 2.39 acres of coastal sage scrub/non-native grassland, a loss of 0.68 acres of coast live oak woodland, a loss of 0.02 acre of willow woodland, and a loss of 2.53 acres of non-native grassland.

The original Deerlake Ranch Project design required the removal of 61 of a total 353 oak trees (all of which are of the species *Quercus agrifolia*) in order to construct the Project. None of these oak trees are of heritage status. Project design would require the encroachment into the protected zone of 11 oak trees. Although impacts to specific oak trees may be significant, those impacts would be reduced to less than significant with the implementation of the required mitigation measures (Mitigation Measures 4.3-10 and 4.3-12).

Impacts to non-native annual grassland are considered to be below a level of significance. The removal of 0.01 acre of eucalyptus grove is considered to be beneficial and below a level of significance. Previously developed and graded areas provide little habitat for native species, thus a loss of approximately 11.19 acres would result with implementation of the project and is considered to be below a level of significance.

Regarding impact to wildlife, the EIR states: Implementation of the project would not result in an impact to any state or federally listed wildlife species. As indicated in Section 4.3.1, specific sensitive species surveys have been conducted for the coastal California gnatcatcher, least Bell's vireo, southwestern willow flycatcher and the California red-legged frog. None of these sensitive species were identified on-site, nor are they expected to occur on-site.

The following mitigation measures were recommended in the Certified EIR to ensure biological resource impacts would be less than significant. If sensitive plant and wildlife species are found on the additional 13 acres, additional mitigation measures shall be developed under approval of the appropriate agencies.

- 4.3-1. An off-site mitigation parcel shall be dedicated to Los Angeles County or a public conservation agency to the satisfaction of Los Angeles County Department of Regional Planning. The mitigation parcel shall be of a minimum size of the collective total of all on-site

project sensitive vegetation impacted (but not less than 68 acres) and shall be adjacent to or and contiguous with permanent open space of comparable size;

- 4.3-2. The applicant shall mitigate impacts to 0.03 acre of on-site willow woodland based on recommendations of the project biologist (see Appendix G of the Certified EIR) and to the satisfaction of the California Department of Fish and Game (“CDFG”, now California Department of Fish and Wildlife) and the Los Angeles County Department of Regional Planning. The mitigation plans shall be reviewed and approved by these agencies prior to the issuance of grading permits. This mitigation measure will be implemented on the mitigation parcel with 0.12 (Section 3.3.2, Revision C of Final EIR) acre (representing a minimum 4:1 ratio);
- 4.3-3. All eucalyptus shall be removed from open space portions of the project site to enhance the biological values of open space areas, reduce the risk of a canopy fire, and prevent further encroachment of eucalyptus into native habitats to the satisfaction of the Los Angeles County Department of Regional Planning prior to the issuance of grading permits. To avoid impacts to nesting birds such removal shall be implemented outside of the avian nesting season from March 15 to August 15;
- 4.3-4. Impacts to Plummer’s mariposa lily shall be mitigated through a 2:1 replacement of impacted individuals and an additional 2:1 replacement through preservation. Relocated Plummer's mariposa lily will be planted on the mitigation parcel. A qualified biologist/botanist shall oversee all aspects of this mitigation plan per the recommendations of the project biologist (included in Appendix G of the Certified EIR);
- 4.3-5. If earthmoving activities are scheduled to start at the site between April 10 and August 15 (the vireo nesting season) a qualified biologist will perform a one-day survey of the potential vireo habitat for the presence of nesting vireos not more than seven days prior to the start of such earthmoving activities. If any nesting vireos are observed, no work (vegetation clearing, earthmoving, or construction) may occur on the plateau above the riparian habitat within 150 feet of the nest, or in the riparian habitat within 500 feet of the nest. If any nesting vireos are observed, the qualified biologist will monitor activities occurring within 1,000 feet of the nest to ensure compliance with this condition;
- 4.3-6. If earthmoving activities start outside the vireo nesting season (August 16 through April 9), no additional vireo surveys will be required, unless (during the vireo nesting season) said work ceases for a period of more than 15 days before beginning again. In such case, the restart of earthmoving activities will be considered as a new start of earthmoving activities, subject to the condition above;
- 4.3-7. A storm water pollution prevention plan (SWPPP) shall be in place to direct prevention and/or minimization of storm water runoff from the work site during construction to prevent/minimize impacts to riparian/wetland vegetation and its associated species;
- 4.3-8. Special construction methods as recommended by the project bridge engineer (see Appendix D of the Certified EIR) shall be implemented to incorporate clear spans across Devil Canyon for the proposed bridges;

- 4.3-9. Coastal sage impacts of 2.39 acres will be mitigated to the satisfaction of the Los Angeles County Department of Regional Planning through the preservation of a minimum 4.78 acres of coastal sage scrub or coastal sage scrub/chaparral ecotone on the mitigation parcel;
- 4.3-10. Coast live oak woodland impacts of 1.3 acres will be mitigated to the satisfaction of the Los Angeles County Department of Regional Planning through the preservation of 2.6 acres (which represent a 2:1 mitigation ratio) on the project site and the mitigation parcel.
- 4.3-11. All manufactured slopes outside of the irrigated fuel modification zone shall be landscaped with locally indigenous plant materials in accordance with the landscape concept contained in Exhibit 2.9 and to the satisfaction of the Los Angeles County Department of Regional Planning.
- 4.3-12. All impacted oak trees, totaling 61, shall be mitigated (2:1 replacement with 15 gallon trees). All oak tree mitigation shall be monitored by a qualified arborist, in accordance with the established preservation program included in the Oak Tree Report (see Appendix H of the Certified EIR);
- 4.3-13. Copies of the final Oak Tree Report and the Los Angeles County approved Oak Tree Permit will be maintained on-site during construction. Implementation of work approved by the Oak Tree Permit shall not begin prior to issuance of a grading permit;
- 4.3-14. Prior to any construction activity, the applicant shall have a qualified biologist survey the project site for the presence of any occupied raptor nests, as protected by the Migratory Bird Treaty Act. If such a nest is found, it will be avoided and protected until nesting activity has ended to ensure compliance with Section 3503.5 of the California Fish and Game Code based on the recommendations of the project biologist (see Appendix G of the Certified EIR). During nesting (March 15th to August 15th) occupied nests shall be avoided through implementation of a 300 foot buffer zone for nesting bird and a 500 foot buffer zone for nesting raptors. Should construction activities encroach into these identified buffer zones, noise barriers shall be constructed to minimize noise impacts to the birds and ensure that noise levels do not exceed 65db CNEL;
- 4.3-15. Light poles shall be 14 feet high instead of 26 feet high and all streetlights potentially affecting open space areas shall be fitted with baffles to eliminate direct shine into open space areas. Security lighting shall be low intensity, shielded, directed downward and away from open space areas. Use of motion detectors shall be maximized for outdoor lighting; and
- 4.3-16. Mitigation required for impacts to areas identified within the jurisdiction of the Corps Clean Water Act Section 404 Permit and/or a CDFG Section 1603 Streambed Alteration Agreement shall be determined during agency permitting subsequent to EIR certification. The applicant shall be responsible for the development of a mitigation plan in accordance with the Corps' Mitigation and Monitoring Guidelines.

The Certified EIR concludes that with implementation of the recommended mitigation measures, no significant impacts to biological resources would occur.

Analysis of the Refined Sewer Implementation Project.

The Refined Sewer Implementation Project involves the acquisition of property interests for the purpose of implementing the Deerlake Ranch Project Twin Lakes Sewer Condition. Installation of the Twin Lakes Sewer would occur within an established residential community and be placed under an existing road in an already disturbed area where native plant communities have already been removed. The Refined Sewer Implementation Project would not result in any change to impacts on biological resources with the implementation of the same mitigation measures required by the MMP, especially Mitigation Measure 4.3-14 for the avoidance of disturbance for nesting birds, with the exception of potential impacts to native oak trees from encroachment during construction. No native oak trees are required to be removed for the Twin Lakes sewer construction.

The approved ROAK 201200001 authorizes the removal of 42 oak trees, and encroachment into the protective zones of 13 oak trees. Subsequent to project approval, two additional Not A Part (NAP) parcels occurring within the project envelope have been acquired by the project proponent. These NAP parcels consist of existing Record of Survey lots and are depicted in Figure 2.7, Potential Development of Not A Part (NAP) Areas, in the Draft EIR. The NAP parcels were evaluated in the environmental analysis of the DEIR as a cumulative impact. As a consequence of these NAP parcel acquisitions and a recent oak tree survey associated with the Deerlake Ranch grading plan², 59 additional oak trees were surveyed that had not previously been accounted in ROAK 201200001. The Deerlake Ranch Project would result in an overall change to the project impacts to coast live oak trees as compared to ROAK 201200001. The Deerlake Ranch Project would require the removal of 56 oak trees and encroachments into the protected zone of 25 oak trees, as depicted on **Figure 7** (“Deerlake Ranch Oak Tree Map”). The additional oak trees proposed for removal are not a component of an oak woodland habitat but are individual trees occurring in scrub or chaparral habitat. While the number of oak tree removals have increased by 14 as compared to the last approved oak tree permit (ROAK 201200001), the number of proposed removals would still be less than the original 61 oak trees approved for removal in 2004 and analyzed by the Final EIR. The proposed 25 oak tree encroachments within Deerlake Ranch are more than authorized under ROAK201200001 and more than analyzed by the Final EIR. However, oak tree encroachments are not considered to be a potentially significant impact since individual oak trees are avoided in project design with retention given priority. Moreover, with the proposed change in oak tree encroachments and removals, less Deerlake Ranch oak woodland habitat would be impacted and greater habitat value would be preserved. A new oak tree permit would be needed in order to construct the Deerlake Ranch Project in accordance with the County Zoning Code for the protection of oak trees.

The Refined Sewer Implementation Project would result in a change to the project impacts to coast live oak trees. The Refined Sewer Implementation Project would require encroachment into the protected zone of 15 ordinance-sized oak trees found within the Twin Lakes community, depicted on **Figure 8** (“Twin Lakes Community Oak Tree Map;” see Supplemental Oak Tree Report, Deerlake Ranch, Los Angeles County, VTTM 53138, CUP 99-239 and OTP 201200001, prepared by Carlberg Associates, July 2016).

There would be 15 oak tree encroachments for the Twin Lakes Refined Sewer Implementation Project not previously reported in the Certified EIR because the final mainline sewer design required further refinement. The presence of oak trees within the Twin Lakes community is not new information as the same oak trees

² Carlberg Associates. 2016. Supplemental Oak Tree Report, Deerlake Ranch, Los Angeles County, VTTM 53138, CUP 99-239 and OTP 201200001. Prepared for Forestar Chatsworth, LLC. July 22, 2016.

were growing in the same location within Twin Lakes adjacent to the roadway system at the time of Project approval in 2004. As indicated above, oak tree encroachments are not considered to be a potentially significant impact since no oak trees are proposed for removal and the encroachments would occur within the existing paved roadways within the Twin Lakes community. However, in cases where the oak tree encroachment results in damage in which an oak tree dies within the monitoring period of three (3) years, replacement oak trees would be required. A new oak tree permit would be needed in order to construct the Refined Sewer Implementation Project in accordance with the County Zoning Code.

The Refined Sewer Implementation Project area within Twin Lakes was surveyed in May and June, 2016.³ The results from those surveys found no special-status plant species in the survey area and no special-status wildlife species reported for the area. The report concluded that coast horned lizard (*Phrynosoma blainvillii*), has a low potential to occur within the survey area but is not expected to occur within the disturbance area of the paved roadways. The report states that no sensitive plant communities were observed within the survey area. However, the presence of coast live oak trees overhanging the Twin Lakes sewer mainline alignment requires compliance with the County Oak Tree Ordinance for potential impacts.

As such, the Refined Sewer Implementation Project results in no significant change to already approved physical improvements and would not result in an increased impact on biological resources from those analyzed in the Certified EIR as amended by the previous Addenda. On a cumulative basis, there would be no greater oak tree impacts than that proposed and approved in the Certified EIR, which concluded that there would be no cumulatively considerable impact to biological resources. All mitigation measures will be implemented as identified in the Certified EIR and required by the MMP. No additional mitigation measures are required. The Project proponent has initiated implementation of the oak tree mitigation measures consistent with the terms of Project approval. Implementation of Mitigation Measures 4.3-10 and 4.3-12 has been completed on the off-site Browns Canyon Resource property, dedicated to the Mountains Recreation and Conservation Authority (MRCA) in compliance with Mitigation Measure 4.3-1.

Certified EIR Section 4.4 - Cultural Resources

Summary of Analysis in Certified EIR

In accordance with CEQA Section 21083.2 and Appendices G and K of the *State CEQA Guidelines*, project impacts to archaeological resources are considered significant if project activities could cause the loss, destruction or other damage to a prehistoric or historic archaeological site that has been identified as unique or important. Further outlined in *State CEQA Guidelines* Appendix G, implementation of the proposed project would result in a significant impact upon cultural resources if the project:

- Causes a substantial adverse change in the significance of a historical or archaeological resource;
- Directly or indirectly destroys a unique paleontological resource or site or unique geologic feature; and
- Disturbs any human remains, including those interred outside of formal cemeteries.

FIGURE

8

The Deerlake Ranch Project site was intensively surveyed on two occasions. Initially, eight archaeological sites were recorded (Bissell and Becker, 1990). The following three sites were thought to be historical in nature: CA-LAN-1740, -1741H, and -1742H. The remaining five sites, (CA-LAN-209, -649, -1743, -1744, and -1745) are all prehistoric. A subsequent survey (W&S Consultants, 2000a) resulted in the identification and recording of two additional prehistoric archaeological sites as shown on Figure 4.4.1 of the Certified EIR: CA-LAN-2826 (W&S-1) and CA-LAN-2827 (W&S-2). In addition, a survey was completed in December 2000 on an additional 13 acres acquired by the applicant subsequent to the initial site surveys. No cultural resources of any kind were identified within this additional property (W&S Consultants, 2000c).

Preliminary assessments of these resources suggested that the seven prehistoric archaeological sites were all intact and had the potential to be significant. Two of the three previously recorded historical sites (CA-LAN-1741H and -1742H) were found to consist of the foundations of demolished structures that were associated with contemporary trash and debris. Although they appear to be post World War II and possibly may have met the minimum age requirement of 50 years for historical resources, they were found to be entirely lacking in integrity and thus have no significance from an archaeological perspective. Based on these considerations, they were not considered significant or unique cultural resources. The last historical site (CA-LAN-1740H) is a sandstone and mortar bridge that was thought to be potentially significant from historical, architectural and/or engineering perspectives.

Phase II fieldwork on the archaeological sites of the Deerlake Ranch project site and adjacent properties were completed in August 2000. It was apparent that the project development, inclusive of the Twin Lakes Sewer area, does not have a potential to result in adverse impacts to significant cultural resources (W&S Consultants, 2000b). The following mitigation measure was recommended in the Certified EIR to ensure cultural resource impacts would be less than significant.

- 4.4-1. A qualified archaeological monitor shall be present during grading in areas of the previously recorded and examined archaeological sites.

The Certified EIR concludes that the Deerlake Ranch Project would not result in significant adverse impacts to cultural resources.

Analysis of the Refined Sewer Implementation Project.

The Refined Sewer Implementation Project involves only the acquisition of property interests for the purpose of implementing the Deerlake Ranch Project Twin Lakes Sewer Condition. The Twin Lakes Sewer would be placed within the acquired sewer easements and would impact only the project areas previously approved for disturbance in the Certified EIR for the construction of the Twin Lakes Sewers, as approved by the Board in 2004.

As such, the Refined Sewer Implementation Project results in no significant change to already approved physical improvements and would not result in an increase in impacts on cultural resources from those analyzed in the Certified EIR as modified by the previous Addenda. Installation of the Twin Lakes Sewer will occur in the previously disturbed roadways for which no previously recorded cultural site locations have been identified. Mitigation Measure 4.4-1 will be implemented as stated in the Certified EIR and required by the MMP. No additional mitigation measures are required.

Certified EIR Section 4.5 - Geology and Soils

Summary of Analysis in Certified EIR

As defined in the *State CEQA Guidelines*, project impacts to geological resources are considered significant if any of the following occurred:

- The project would pose an increased risk, which is greater than average for the southern California region, to public safety or destruction of property by exposing people, property, or infrastructure to seismically-induced hazards such as; earthquakes, landslides, mudslides, ground failure and other similar hazards;
- The project results in substantial soil erosion or the loss of topsoil;
- The project is located on a geologic unit or soil that is unstable, or that would become unstable as a result of the project, and potentially result in on- or off-site landslide, lateral spreading, subsidence, liquefaction or collapse;
- The project is located on expansive soil, creating substantial risks to life or property; and
- Soils are incapable of adequately supporting the use of septic tanks or alternative waste water disposal systems where sewers are not available for the disposal of waste water.

The Certified EIR states that no observable Holocene Age faults occur on the project site. Older faulting does occur on-site as existing zones of weakness that may be susceptible to minor displacement as a secondary response to primary faulting along nearby active faults. However, the project has been designed to mitigate this condition through the construction of uniform, engineered fill cap in conjunction with stiffened foundation systems in these locations. The depth of removal and recompaction associated with the construction of these fill caps will be developed as part of the final project grading plans. Therefore, impacts would be less than significant.

Implementation of the Deerlake Ranch Project would involve a grading program to excavate an estimated 2.0 million cubic yards of earth with the majority of the cuts less than 40 feet deep. Soils within the Deerlake Ranch Project area would be subject to exposure to wind and water erosion during site preparation. However, erosion associated with site preparation would be temporary and would cease upon completion of construction activities. The potential for erosion also exists associated with the sandy terrace and crystalline bedrock materials that would be used to construct fill slopes and for natural slopes above the graded pad and parking areas. Where needed, appropriate slope stabilization would be implemented to mitigate these impacts. No significant erosion impacts would result from the project.

The Deerlake Ranch Project would not pose an increased risk, greater than generally accepted under current codes and standards for the southern California region, to public safety with regard to seismic hazards. Nor would the project result in the destruction of a unique geologic feature. The potential for slope instability and erosion does exist with implementation of the project; however adherence to applicable regulations, standards, and procedures would reduce these impacts to less than significant."

Specific Geology and Soils mitigation measures (4.5-1 through 4.5-15) are listed in Section 4.5.4 of the Certified EIR, in addition to below.

- 4.5-1. All grading shall be accomplished under the discretion of the project geotechnical engineer in accordance with the requirements of the County of Los Angeles.
- 4.5-2. A uniform, engineered fill cap shall be constructed in conjunction with stiffened foundation systems to manage ground rupture potential. The depth of removal and re-compaction associated with construction of these fill caps should be on the order of 5 to 10 feet to provide a homogenous buffer to the overlying foundations. These precise locations of these fill caps, including thickness shall be developed as a part of a detailed geotechnical report in conjunction with the final project grading plans.
- 4.5-3. Design of structures shall be based on the UBC (Uniform Building Code) 1997 seismic design methods incorporating the PGA values as computed in the geotechnical report.
- 4.5-4. Shallow soils shall be removed beneath structures and/or proposed fill.
- 4.5-5. Where development is proposed at the top and/or toe of slope and development and cannot be avoided within a 2:1 projection from the toe of the slope (i.e., an area within the northeasterly portion of the site), slope stabilization shall be completed, which may consist of dewatering, offloading, or supporting these slopes using conventional hillside development methods and shall be designed on the basis of a detailed slope stability analysis as part of the final project grading plan.
- 4.5-6. Proposed cut slopes and fill slopes shall be at a slope no steeper than 2:1. These slopes shall be constructed using typical slope drainage systems in accordance with 1997 UBC, including mid-slope drainage swales and brows ditches, and are subject to typical homeowners maintenance requirements.
- 4.5-7. Prior to grading, the project site shall be grubbed and cleared of all vegetation and debris. The vegetation and debris shall be properly disposed of off-site.
- 4.5-8. Site preparation and earthwork operations shall be performed in accordance with applicable provisions of the 1997 UBC unless specifically revised or amended by the geotechnical engineer, and in accordance with all applicable requirements.
- 4.5-9. On slopes flatter than 5:1 and in drainage swales, separate cleanout operations may be necessary. During benching colluvium shall be removed to firm material as evaluated by the geotechnical engineer. The overexcavated materials shall be moisture conditioned and recompacted as structural fill in accordance with the recommendations for engineered fill. The specific depth and extent of removals shall be evaluated during the actual earthwork operations, based on grading observations and testing.
- 4.5-10. Subsurface exploration, sampling and laboratory analysis shall be performed to provide shrink/bulk estimates to be used in conjunction with design civil and contractor information for similar projects in similar earth units.
- 4.5-11. All fill soils shall be compacted as engineered fill. Engineered fill shall be uniformly moisture-conditioned to near optimum moisture content, placed in horizontal lifts less than eight inches in loose thickness, and compacted to at least 90 percent relative compaction. All fill

placed at depths greater than 50 feet below final site grades shall be compacted to at least 95 percent relative compaction. Additional fill lifts shall not be placed if the previous lift did not meet the required dry density or if soil conditions are not stable.

- 4.5-12. The following measures shall be completed to reduce temporary cut slope failure during construction:
- Reducing the time between slope excavation and reconstruction operations to the extent possible.
 - Preventing water infiltration into slope materials prior to and during excavation.
 - Constructing slopes at inclinations no steeper than 1.5:1.
 - The project schedule shall be adjusted as needed so that temporary slopes are excavated and left exposed only during the dry months of the year.
- 4.5-13. In areas where steep slopes may be unstable and exist adjacent to proposed areas of development, stabilization can be accomplished by typical hillside methods. Such slope reinforcement methods range from revegetation to construction of mechanically stabilized earth (MSE) systems and retention systems.
- 4.5-14. Proposed structures maybe supported on shallow, reinforced concrete, spread footings founded entirely on engineered fill. Footings shall not transition from fill to bedrock conditions. Foundations shall have a minimum width of 24 inches and shall be placed at a minimum depth of 18 inches below the lowest adjacent grade or adjacent finish floor elevation, whichever is lower. An allowable pressure of 3,000 pounds per square foot (psf) for dead plus sustained live loading is suitable for preliminary design. Foundation preparation necessary to improve soils to provide this capacity shall be evaluated during the design.
- 4.5-15. A corrosion engineer shall be retained to evaluate the corrosion potential of the site to propose improvements, recommend further testing as required, and to provide specific corrosion tests as requested by the applicant.

The Geology and Soils mitigation measures reduce Deerlake Ranch Project impacts to less than significant.

Analysis of the Refined Sewer Implementation Project.

The modified approved Deerlake Ranch development proposes 82.7 acres of open space lots, an increase of 11.3 acres of open space from the Certified EIR (71.4 acres). The First and Second Addenda proposed a reduction in grading quantities from the Certified EIR (2.2 million cubic yards) to 1.8 million cubic yards. All grading limits and building envelopes of the approved development are those analyzed in the First and Second Addenda. However, more recent grading design calculations indicate that grading will consist of 2.0 million cubic yards of cut and 2.2 million cubic yards of fill, but balanced within the project boundary. The Refined Sewer Implementation Project actions by the Board would involve the acquisition of property interests for the purpose of implementing the Deerlake Ranch Project Twin Lakes Sewer Condition. The Twin Lakes Sewer would be placed under an existing road. The Twin Lakes community is underlain by the same Chatsworth Formation as the majority of the Deerlake Ranch project boundary. Soils are light gray to light brown, hard, thick-bedded sandstone with thin layers of micaceous siltstone, and generally non-

expansive with isolated layers of moderately expansive siltstone layers. Because of the dimensions and complexity of the established Twin Lakes community roadway system and the diverse topography, only small equipment will be used for sewer infrastructure installation and limited excavation will be needed. Consequently, the Refined Sewer Implementation Project would not change the grading quantities or areas of disturbance for construction of the Twin Lakes Sewer from what was approved by the Board in 2004. The potential for slope instability and erosion does exist with implementation of the proposed project; however adherence to applicable regulations, standards, and procedures would reduce these impacts to less than significant.

As such, the Refined Sewer Implementation Project results in no significant change to already approved physical improvements and would not result in an increase in impacts on site geology and soils from those analyzed in the Certified EIR as amended by the previous Addenda, with the same mitigation measures to be implemented as stated in the Certified EIR and required by MMP. No additional mitigation measures are required.

Certified EIR Section 4.6- Hydrology and Water Quality

Summary of Analysis in Certified EIR

The Deerlake Ranch Project site is located within the 1,608 square mile Los Angeles River Watershed, which is composed of five primary drainage basins, including the Upper Los Angeles River Basin, and discharges into the Pacific Ocean through the Los Angeles/Long Beach Harbor. This basin includes the San Fernando Hydrographic Unit, which in turn, is comprised of five tributary drainages, including Bell Canyon. The Bell Canyon drainage includes the Browns Canyon Wash, which is the receiving drainage for storm water runoff from the project site, via Devil Canyon.

The Deerlake Ranch Project site is located within a 325-acre sub-drainage area tributary to the Devil Canyon/Browns Canyon drainages. The site constitutes 235 acres of that sub-drainage area, of which 226.3 acres discharge into Devil Canyon, and 8.7 acres discharge through a 30-inch pipe into Caltrans (SR-118) right-of-way and into Brown Canyon.

The Deerlake Ranch Project site is subject to the following regulatory oversight with regard to hydrology and water quality.

- **Federal Clean Water Act (NPDES):** Established regulations for municipal and industrial storm water discharges under the National Pollutants Discharge Elimination System (NPDES) program, which requires NPDES permits for storm water discharges from storm drain systems⁵ to waters of the United States.
- **Standard Urban Storm Water Mitigation Plan:** The municipal storm water NPDES permit issued to Los Angeles County by the Los Angeles RWQCB requires the development and implementation of a program addressing storm water pollution issues in development planning for private projects. This requirement is based on federal and state statutes, including: Section 402 (p) of the Clean Water Act, Section 6217 of the Coastal Zone Act Reauthorization Amendments of 1990, and the California Water Code. The Standard Urban Water Mitigation Plan (SUSMP) was developed as part of the NPDES program to address storm water pollution from new development by the private sector. This SUSMP

contains a list of the minimum required Best Management Practices (BMPs) that must be used for a designated project.

As stated in the Certified EIR, a significant project impact would occur if one or more of the following were to occur:

- The peak storm water runoff from the site after development (Q50c) would exceed the existing peak runoff (Q50bb);
- Peak runoff from the site would exceed the capacities of existing storm drain structures and/or drainage courses;
- Peak runoff from the site would increase high water elevations within existing drainage courses;
- The project would cause flooding of adjacent or downstream properties;
- The project would increase existing storm water runoff pollutant loads, or introduce new pollutants, which would be discharged into existing drainage courses;
- The project would adversely impact those Total Maximum Daily Loads (TMDL) criteria within the Los Angeles River Watershed which are listed in the Unified Watershed Assessment (UWA); and
- The project failed to employ BMPs and otherwise not comply with the Urban Storm Water Mitigation Plan ("USWMP").

The Certified EIR further states that although peak storm water runoff from these pervious surfaces would increase during significant storm events, the total peak storm water runoff volume from the entire drainage area, including the site after development, would be reduced because of the removal of approximately 4,590 cubic yards of solid (bulk and burn) materials by four proposed debris basins (see Figure 4.6.2 of the Certified EIR), and the removal of 44.2 acres of vegetation for building and paving. Specifically, the total peak storm water runoff after development from the drainage area discharging through Location "A" will be reduced from Q50bb = 876.4 cubic feet per second (cfs) to Q50c = 458.0 cfs. In addition, peak storm water runoff after development discharging at Location "B" will be reduced from Q50bb = 61.5 cfs to Q50c = 48.2 cfs. Therefore, the existing 30-inch CMP will still be adequate to accommodate the storm water discharge after development.

As a result of this reduction in the volume of peak storm water runoff, downstream drainages would not be adversely impacted in regard to increased peak flow, velocity or water surface elevations.

The Certified EIR states that the project would be constructed to the standards and specifications of the Los Angeles County Flood Control District and the Department of Public Works. In addition, the project would be designed and constructed in compliance with the Standard Urban Storm Water Mitigation Plan for Los Angeles County and Cities in Los Angeles County (SUSMP), NPDES permit and all other applicable state regulations.

A Storm Water Pollution Prevention Plan (SWPPP) would be prepared, utilizing BMP's, as listed in the SUSMP, to ensure compliance with the above regulations both during and after construction. BMP's would include measures which would prevent or minimize storm water pollutants of concern, including the TMDL criteria specified in the Watershed Management Initiative as it pertains to the Los Angeles River Basin.

The Certified EIR concludes that implementation of the Deerlake Ranch Project would result in a decreased flow due to inclusion of four debris basins in the project design. The Deerlake Ranch Project would be constructed to the standards and specifications of the Los Angeles County Department of Public Works. In addition, a SUSMP would be developed for the project to further ensure impacts would be less than significant. The Deerlake Ranch Project is not anticipated to result in a significant adverse impact on the capacities of existing or proposed storm drain facilities, nor is it anticipated to adversely impact downstream hydrology or water quality.

Specific Hydrology and Water Quality mitigation measures (4.6-1 through 4.6-4) are listed in Section 4.6.4 of the Certified EIR, in addition to below.

- 4.6-1. The proposed project shall be designed and constructed in compliance with National Pollution Discharge Elimination System (NPDES) permit and all applicable state and local water quality requirements.
- 4.6-2. A Storm Water Pollution Prevention Plan (SWPPP) shall be developed for the project site which shall identify pollutant sources that may affect storm water quality discharges during construction. The SWPPP shall include various pollution prevention measures such as erosion control, dust control and will provide comprehensive Best Management Practices (BMPs) Guide to contractors during site construction, as contained in the Best Management Practice Handbook, California Stormwater Quality Task Force, Sacramento, CA 1993, or latest revised edition.
- 4.6-3. A Standard Urban Storm Water Mitigation Plan (SUSMP) shall be developed for the project site identifying any pollutant sources that may affect storm water quality after project completion. The following measures shall be included in the SUSMP:
 - Inserts shall be included in catch basins and continuous deflection units to filter storm water runoff prior to discharging to the ocean storm drain system, consistent with Compliance Strategies for trash reduction implementation measures of the Draft Basin Plan, Draft Trash Total Maximum Daily Loads for the Los Angeles River Watershed, dated January 22, 2001 (see Table 8 of the Plan).
 - Catch basins and storm drain inlets shall be labeled "No Dumping - Drains to Ocean" to discourage illegal dumping.
 - Streets within the proposed residential development shall be swept on a regular basis.
 - Signs shall be posted through the proposed development with prohibitive language and/or graphical icons to discourage illegal dumping.
 - Non-toxic pesticides and fertilizers shall be used in landscaped areas of the project.
 - All graded slopes shall be planted on a timely basis to prevent erosion.
 - Homeowners shall be provided with information from the County Department of Public Works (DPW) Environmental Planning Division's concerning recycling of household products, disposal of hazardous wastes, disposal of yard wastes, tire recycling, and preventing pollution of storm drain systems with trash (detailed information is available on the DPW website at: www.888cleanla.com or by telephone at 888CleanLA).

- Require developer-owners to execute and record the County DPW's Maintenance Covenant for Standard Urban Stormwater Mitigation (SUSMP) pursuant to Section 106.4.3 of the County Building Code and Title 12, Chapter 12.8 of the County Code.
- 4.6-4. Required project drainage facilities shall be constructed in compliance with the approved Drainage Concept Plan, which details the location and sizes of stormdrains, debris basins, and inlet/outlet structures.

The Hydrology and Water Quality mitigation measures reduce Deerlake Ranch Project impacts to less than significant.

Analysis of the Refined Sewer Implementation Project.

After approval of the Certified EIR, the previous Addenda were approved in conjunction with a reduction in the number of residential units from 375 to 314, a reduction in grading quantities from 2.2 million to 1.8 million cubic yards, an increase in open space lots from 71.4 acres to 82.7 acres. In addition, sections of four major drainage courses traversing the property were left in their natural state by the 2012 Amended Map assessed in the First Addendum and the Fourth Amendment Map assessed in the Second Addendum. All grading limits and building envelopes will remain the same as analyzed in these previous Addenda. However, more recent grading design calculations indicate that grading will consist of 2.0 million cubic yards of cut and 2.2 million cubic yards of fill, but balanced within the project boundary. The Refined Sewer Implementation Project actions by the Board would involve only the acquisition of property interests for the purpose of implementing the Deerlake Ranch Project Twin Lakes Sewer Condition. Installation of the Twin Lakes Sewer could improve overall water quality for the Refined Sewer Implementation Project area by providing an option to homeowners who may choose to remove an existing septic system from the Twin Lakes Community. Construction of the Twin Lakes Sewer requires limited excavation, which would not change the grading quantities already assessed in the Certified EIR as amended by the previous Addenda. Drainage patterns will not change since Twin Lakes Sewers would be placed under an existing road from 5 to 20 feet below the ground surface. Existing Deerlake Ranch Project mitigation measures (Mitigation Measures 4.6-1 and 4.6-2) required to address potential water quality impacts during construction will be implemented.

As such, the Refined Sewer Implementation Project results in no significant change to already approved physical improvements that would not result in a significant increase in hydrology or water quality impacts from that analyzed in the Certified EIR as amended by the previous Addenda with the same mitigation measures to be implemented as stated in the Certified EIR and required by the MMP including Mitigation Measures 4.6-1 and 4.6-2 specifically requiring compliance with NPDES and SWPPP water quality protections during construction. No additional mitigation measures are required.

Certified EIR Section 4.7 - Noise

Summary of Analysis in Certified EIR

The State Department of Health Services has prepared Land Use Compatibility Guidelines for evaluating community noise impacts. The County of Los Angeles has adopted local guidelines which are consistent with the state community noise guidelines for use in evaluating the compatibility of various land use types with a range of noise levels. A CNEL value of 65 dB(A) is considered the dividing line between clearly acceptable

and normally acceptable noise environments for many noise sensitive receptor land uses, including residential uses such as those within the project area.

An interior CNEL of 45 dB(A) is mandated by multiple family dwellings in Title 24 of the California Code of Regulations. In 1988, the State Building Standards Commission recommended that the 45 dB CNEL interior standards be expanded to include all habitable rooms for all residential occupancy, including single family. The County of Los Angeles has required a 45 dB(A) CNEL interior standard for all occupancies well before the adoption of the statewide guidelines. Since typical noise attenuation within residential structures with closed windows is about 20 dB, an exterior noise exposure of 65 dB CNEL is generally the noise land use compatibility guideline for new residential dwellings in threshold where noise begins to substantially interfere with enjoyment of any outdoor recreational amenity. Mitigation of exterior noise to at least 65 dB CNEL is normally required for residential projects in Los Angeles County for any usable outdoor space.

Construction noise sources are not strictly relatable to a 24-hour community noise standard, because they only occur during selected times and the source strength varies sharply with time. Further, construction activities would not represent a chronic permanent noise source. To abate the potential nuisance from construction noise, especially in very close proximity to any nearby noise-sensitive development, the Los Angeles County Noise Ordinance (Section 12.08.440) limits the hours of allowable construction activities and establishes noise performance standards at the nearest residential structures.

Varying levels of construction noise may be heard in different parts of the project site during the project's total construction period. The noise strength of construction equipment ranges widely as a function of the equipment used. Further, short-term variations are strongly influenced by topographical factors that may change during the course of the construction activities. As noise levels generated by heavy equipment can range from approximately 68 dB(A) to noise levels in excess of 100 dB(A) when measured at 50 feet. However, noise levels would diminish rapidly with distance from the construction area at a rate of approximately 6.0 dB(A) per doubling distance.

Noise levels generated during the construction of the Deerlake Ranch Project would primarily affect the off-site residents of the Twin Lakes community. Any locations with an uninterrupted line of sight to the construction noise sources could periodically be exposed to temporary noise levels which could exceed the County's Noise Ordinance standards for construction equipment. However, such events would be intermittent due to the intervening terrain. However, the terrain of the project site would shield nearby Twin Lakes residents. In addition, enforcement of the noise ordinance would provide a reasonable measure of protection for nearby residences in those localized instances where major earthwork would occur within close proximity.

With the combination of an adequate distance buffer for most major earthwork associated with the project, terrain shielding for many residential units adjacent to the site, and compliance with County ordinances, construction activities would not result in a significant noise impact on the project site or the adjacent Twin Lakes community.

The following mitigation measures were recommended in the Certified EIR to ensure noise impacts would be less than significant.

- 4.7-C1. All construction activity occurring on the project site shall adhere to the requirements of the County of Los Angeles Noise Ordinance, Title 12, Section 12.08.440;
- 4.7-02. Residential lot building pads that are subject to noise greater than the 65 dBA noise contour shall include the following features to reduce interior noise levels to acceptable County standards. These measures shall be completed prior to the issuance of the Certificate of Occupancy to ensure that the noise levels with the proposed mitigation features are within the adopted County standards:
- Solid cement block walls shall be placed between the rear yards. The wall shall be as high as eight feet, but not less than six feet;
 - Exterior walls shall be 2x4 feet wood frame construction, with 7/8 stucco (or similar material) on the exterior, ½ inch gypsum board on the interiors and R-13 cavity (minimum) in the cavity;
 - Minimal window surface facing SR-118 and windows shall be mounted with low air-infiltration rate frames (0.5 cfm/foot or less per ANSI specifications);
 - Sliding glass doors shall have minimum sound transmission class of 34;
 - Roof or attic vents shall be located away from SR-118 or baffled;
 - Second floor windows facing SR-118 shall be glazed with ¼ inch laminated glass; and
 - Central air conditioning shall be standard.
- 4.7-03. All stationary and point sources of noise occurring in the project site shall adhere to the requirements of the County of Los Angeles Ordinance No. 11743.

Without consideration of background freeway noise, the project would create a maximum off-site traffic noise impact of 6.9 dB above the future no project contribution along Mayan Drive east of Topanga Canyon Boulevard. However, this roadway has a high freeway background noise level that would mask any local roadway noise changes. When the background freeway noise is considered, the project increase would be less than 1.0 dB.

Per the *Land Use Compatibility Guidelines* utilized by the County, the project would result in a significant impact if it causes on-site exterior locations to be exposed to noise levels above County Noise Ordinance standards of 65 dB CNEL. Significant off-site noise impacts would occur when:

- An increase of 5.0 dB(A) or greater noise level occurs from project related activities if levels remain within the same land use compatibility classification; or
- An increase of 3.0 dB(A) or greater in noise level occurs from project related activities which results in a change in land use compatibility classification.

All construction activity occurring on the project site shall adhere to the requirements of the County of Los Angeles Noise Ordinance, Title 12, Section 12.08.440. All stationary and point sources of noise occurring in the project site shall adhere to the requirements of the County of Los Angeles Ordinance No. 11743. There would be no change to the mainline sewer implementation or operation from what was known at the time of the Certified EIR, as amended by the previous Addenda. There would be no new noise source as operational

noise of the Refined Sewer Implementation Project, including maintenance, would be the same as was known at the time of EIR certification.

Certified EIR concluded that implementation of the Deerlake Ranch Project would not result in significant short-term noise impacts associated with construction activities, due to the complex terrain and compliance with County noise ordinances. Construction traffic noise would not result in significant impact as construction staging would occur outside of the Twin Lakes community. On-site noise exposure associated with the project would not be significant with implementation of the above mitigation measures and the proposed project design.

Analysis of the Refined Sewer Implementation Project.

Since approval of the Certified EIR, the previous Addenda were certified with a reduction in the number of residential units from 375 to 314, a reduction in grading quantities from 2.2 million cubic yards to 1.8 million cubic yards, an increase in open space lots from 71.4 acres to 82.7 acres. However, more recent grading design calculations indicate that grading will consist of 2.0 million cubic yards of cut and 2.2 million cubic yards of fill, but balanced within the project boundary

The Deerlake Ranch Project as modified in 2012 and 2015 includes a slightly reduced amount of grading from the amount analyzed in the Certified EIR, but resulting in similar short term construction noise and long term traffic noise. The Refined Sewer Implementation Project actions by the Board would involve only the acquisition of property interests for the purpose of implementing the Deerlake Ranch Project Twin Lakes Sewer Condition. The established Twin Lakes community roadway system limits sewer infrastructure installation operations to the use of small equipment only. Limited excavation will be needed. Compliance with noise regulations in County Code 12.08.440, as required by Mitigation Measure 4.7-C1, restricts construction activities between the weekday hours of 7:00 a.m. and 7:00 p.m. Installation of the Twin Lakes Sewer does not change the grading quantities nor significantly increase noise impacts from that analyzed in the Certified EIR.

As such, the proposed Refined Sewer Implementation Project proposes no significant change in physical improvements that would increase impact on site-generated noise from that analyzed in the Certified EIR as amended by the previous Addenda, with the same mitigation measures (4.7-1 through 4.7-3) to be implemented as stated in the Certified EIR and required by MMP. No additional mitigation measures are required.

Certified EIR Section 4.8 – Public Services - Fire Protection

Summary of Analysis in Certified EIR

The Deerlake Ranch Project would receive fire protection services from County Fire Station No. 75, located at 23310 Lake Manor Drive in Chatsworth. The station is approximately 5.4 miles southwest of the project site and maintains a three-person engine company. Also, the County Fire Department has an automatic aid agreement with the City of Los Angeles in the event that additional services are needed during an incident. The first-due response unit to the project site would be City Station No. 96, located at 21800 Marilla Avenue in Chatsworth, approximately three miles south of the project site. In addition to Station No. 96, fire protection services would also be provided by City Station No. 28, located at 11641 Corbin Avenue in Porter Ranch, approximately two miles east of the project site.

The Deerlake Ranch Project is located within a Fire Zone 4, Very High Fire Hazard Severity Zone (VHFHSZ). The County of Los Angeles General Plan defines a Fire Zone 4 area as one which has the highest fire hazard potential. Such areas are susceptible to wildland fires because of the hilly terrain, dry weather conditions, and nature of plant cover. The Forester and Fire Warden of the County Fire Department has designated a variety of regulatory programs and standards including an approved fuel modification plan, directed toward the abatement of this fire hazard and reduction of risk to tolerable levels.

As defined in the *State CEQA Guidelines* the project would result in substantial adverse physical impacts associated with the provision of new or physically altered fire protection agencies, the construction of which could cause significant environmental impacts, in order to maintain acceptable service ratios, response times or other performance objectives.

The Deerlake Ranch Project would have additional significant impact on fire and emergency services if:

- It generates demand for additional fire protection or emergency medical service that substantially exceeds the staff and equipment capabilities of any County Fire Department stations serving the property;
- It does not comply with applicable County Fire Department Code and ordinance requirements or standards for construction, water mains, fire-flow and fire hydrants; or
- The proposed project would impair emergency access to the site or cause an increase in emergency response times.

Development of the Deerlake Ranch Project would result in the construction of residential uses in an area designated as Fire Zone 4 (Very High Fire Hazard Severity Zone). To mitigate the potential spread of dry brush or wildfire that could occur in this area, it is required that the project applicant implement a fuel modification plan to minimize or retard the spread of dry brush and wildfire into a development area. With implementation of the approved Fuel Modification Plan, wildfire impacts would be reduced to less than significant.

The County of Los Angeles Fire Department has determined that development of the Deerlake Ranch Project would require 44 new fire hydrants, located throughout the project site. As indicated, the minimum fire flow requirement is 1,250 gallons per minute (gpm) for two hours with a current required minimum residual pressure of 20 psi. It has been determined by the LACFD that the proposed system would be able to provide fire flow to all hydrants at pressures greater than this required minimum. No significant impacts on fire-flow requirements or fire regulations would occur with implementation of the project.

The Certified EIR noted that although no significant impacts are anticipated with regard to implementation of the Deerlake Ranch Project, the following mitigation measures have been recommended to ensure impacts are minimal.

- 4.8-1. The project shall incorporate the following County Fire Department requirements regarding access, water mains, fire flows, fire hydrants, and brush clearance into project design:
 - Every building constructed shall be accessible to fire department apparatus by way of access roadways, with an all weather surface of not less than the prescribed width, unobstructed,

- clear-to-sky. The roadway shall be extended within 150 feet of all portions of the exterior walls when measured by an unobstructed route around the exterior of the building.
- All bridges required to be used as part of a fire access road shall be constructed and maintained in accordance with nationally recognized standards and designed for a live load sufficient to carry a minimum of 75,000 pounds.
 - Access to existing fire fighting motorways shall be maintained.
 - Fire hydrant spacing shall be 600 feet and shall meet the following requirements:
 - No portion of lot frontage shall be more than 450 feet via vehicular access from a public fire hydrant.
 - No portion or structure should be placed on a lot where it exceeds 750 feet via vehicular access from a properly spaced public fire hydrant.
 - When cul-de-sac depth exceeds 450 feet on a residential street, hydrants shall be required at the corner and mid-block. Additional hydrants shall be required if hydrant spacing exceeds specified distances.
- 4.8-2. Streets or driveways within the development shall be provided with the following widths in accordance with County Fire Department and Department of Public Works standards:
- Provide 36 feet width on all collector streets and those streets where parking is allowed on both sides.
 - Provide 34 feet width on cul-de-sacs up to 700 feet in length. This allows parking on both sides of the street.
 - Provide 36 feet width on cul-de-sacs from 701 to 1,000 feet in length. This allows parking on both sides of the street.
- 4.8-3. All dwelling units shall be fully sprinkled per NFPA pamphlet 13 D to offset potential response time impacts.
- 4.8-4. The proposed project shall comply with the fuel modification plan, which has been approved by the Forestry Division of the Fire Department (see Appendix E of the Certified EIR).
- 4.8-5. The proposed project shall comply with all applicable County Fire Code and Ordinance requests including standards for construction, installation of sprinkler and alarm systems, fire extinguishers, and emergency exits.

As stated above, the Deerlake Ranch Project would not conflict with applicable County Fire Department Code and ordinance requirements or standards for construction, access, water mains, fire-flow and fire hydrants and would not impair emergency access to the site or cause an increase in emergency response times. Impacts on fire protection services would not be significant. Mitigation measures are recommended to ensure impacts would remain minimal.

Analysis of the Refined Sewer Implementation Project.

Since approval of the Certified EIR, as amended by the previous Addenda were approved in conjunction with a reduction in the number of residential units from 375 to 314. All mitigation measures (4.8-1 through 4.8-

5) previously identified within the Certified EIR, including fuel modification plans and requirements, will be implemented as part of the modified approved Deerlake Ranch Project.

As with the Certified EIR and the previous Addenda, the Deerlake Ranch Project as modified in 2012 and 2015, including the recreation center, would be subject to County Building and Safety and Fire Code requirements for Fire Zone 4, as well as conditions of approval specified by the Los Angeles County Fire Department. The Refined Sewer Implementation Project actions by the Board would involve only the acquisition of property interests for the purpose of implementing the Deerlake Ranch Project Twin Lakes Sewer Condition. The Twin Lakes would be placed under an existing road over an estimated six to eight month construction period. No permanent above ground structures will be constructed and no fire hazard results from the presence of the Twin Lakes Sewer under the roadway. The private streets within the Twin Lakes community will remain private streets and not subject to County Fire Department street standards required of the new Deerlake Ranch Project development.

As such, the proposed Refined Sewer Implementation Project propose no significant change in already approved physical improvements that would increase impact on fire protection services from those analyzed in the Certified EIR and the previous Addenda, with the same mitigation measures to be implemented as stated in the approved Certified EIR and required MMP. No additional mitigation measures are required.

Certified EIR Section 4.9 - Public Services - Police Protection

Summary of Analysis in Certified EIR

Police protection services within the County are provided by the Los Angeles County Sheriff's Department. The Deerlake Ranch Project would be served by the Lost Hills/Malibu Station which is located at 27050 Agoura Road in Calabasas, approximately 25 miles southwest of the project site.

As defined in the *State CEQA Guidelines* the proposed project would result in substantial adverse physical impacts associated with the provision of new or physically altered police protection agencies, the construction of which could cause significant environmental impacts, in order to maintain acceptable service ratios, response times or other performance objectives.

Additionally, Deerlake Ranch Project impacts on police protection services would be considered significant if either of the following would result:

- The population increase resulting from the project substantially reduces the standard officer to population ratio of the County (one officer per 1,000 populations) in which the project is located.
- Emergency response times are inhibited by increasing roadway congestion within an area either during construction or upon post-construction occupancy.

As stated in the Certified EIR, the addition of 538 residences would increase calls for police protection service to this area and may necessitate a change in the Lost Hills/Malibu Station's deployment of deputies. However, implementation of the Deerlake Ranch Project would serve to increase the existing funding mechanisms (i.e., property taxes) for any additional officers required to serve the project area. Therefore, impacts would not be considered significant.

Emergency access to the Deerlake Ranch Project would be provided by the existing and proposed street system. Further, implementation of the Deerlake Ranch Project would improve emergency access to the existing Twin Lakes community. The project would be designed in accordance with Los Angeles Municipal Code requirements, including regulation of street widths, street lighting, and street signage. Implementation of mitigation measures would reduce impacts on all affected intersections to less than significant. Therefore, no significant impact with regard to emergency access would result.

Although no significant impacts are anticipated, the following mitigation measures are recommended to ensure impacts upon police protection services remain less than significant:

- 4.9-1 Prior to recordation of the Final Tract map, the applicant shall provide the Los Angeles County Sheriff's Department's with a diagram of the project, including access routes, addresses, and any information that might facilitate police response.
- 4.9-2 Prior to recordation of the Final Tract map, the applicant shall provide the Los Angeles County Sheriff's Department's with building plans to ensure that the proposed project is designed so as to minimize crimes against property. Features may include, but are not limited to: good sight lines, exterior lighting, and strong exterior doors, windows and locks.
- 4.9-3 A facility suitable for use as a Sheriff's Department Substation to service the project area will be constructed near the Topanga Canyon Boulevard entrance to the project site (Figure 2.8 of Final EIR). The new facility would be approximately 800 square feet. (Note: Although not part of the original DEIR, the Certified EIR included the requirement to construct a Sheriff's Storefront Facility on the site)

Although this increase would not result in a significant change in the current officer to resident ratio, the Sheriff's Department indicated implementation of the project would require additional officers. However, the increase in existing funding mechanisms (i.e., property taxes) would provide for the additional personnel. Therefore, no significant impacts are anticipated.

Analysis of the Refined Sewer Implementation Project.

Since approval of the Certified EIR, the First and Second Addenda were certified in conjunction with a reduction in the number of residential units from 375 to 314. All mitigation measures (4.9-1 through 4.9-3) previously identified will be implemented as part of the modified approved Deerlake Ranch Project development, including the construction of a Sheriff's Storefront Facility in the southwesterly portion of the project to enhance police services for the project and the surrounding community. The Refined Sewer Implementation Project actions by the Board would involve only the acquisition of property interests for the purpose of implementing the Deerlake Ranch Project Twin Lakes Sewer Condition. The Twin Lakes Sewer would be placed under an existing road over an estimated six to eight month construction period and would not result in any greater impact on the police services.

As such, the proposed Refined Sewer Implementation Project results in no significant change to already approved physical improvements that would increase the impact on police protection services from those analyzed in the Certified EIR as amended by the previous Addenda, with the same mitigation measures to be implemented as stated in the Certified EIR and required MMP. No additional mitigation measures are required.

Certified EIR Section 4.10 - Public Services - Schools

Summary of Analysis in Certified EIR

The project site currently has no student population. LAUSD provides primary and secondary public education services for the project area. The Deerlake Ranch Project is located within the attendance boundaries of four public schools (see Figure 4.8.1 of the Certified EIR). These schools are: Chatsworth Elementary School (Grades K-5); Germain Elementary School (Grades K-5); Lawrence Middle School (Grades 6-8); and Chatsworth Senior High School (Grades 9-12).

In addition, two private schools serve the project area: Sierra Canyon School (K-12 grades), and Chatsworth Hills Academy (K-8 grades).

As defined in the *State CEQA Guidelines*, the proposed project would result in substantial adverse physical impacts associated with the provision of new or physically altered schools, the construction of which could cause significant environmental impacts, in order to maintain acceptable service ratios, or other performance objectives.

In addition, based on criteria established by the County and input from LAUSD, impacts associated with the Deerlake Ranch Project upon school facilities would be considered significant if any of the following occurred:

- The population increase resulting from the project, based on the increase in residential units, would create or exacerbate over capacity conditions at a school that serves the project or create capacity problems at the district level.
- Population increases from the project would result in construction of new school facilities, a major redistribution of students or classrooms, major revisions to the school calendar, or other capacity-accommodating actions.

There are two elementary schools which students from the project could attend. The project site is located within the existing boundaries for both Chatsworth Elementary School and Germain Elementary School. These schools, projected to have 125 and 228 student spaces available, respectively, would have sufficient space to accommodate all 231 elementary students generated by the project (see Table 4.10.3). Lawrence Middle School, which is projected to have space to accommodate 914 additional students, would have sufficient space for the 135 students generated by the project. Finally, Chatsworth Senior High School is projected to have space to accommodate an additional 1,291 students and would also have sufficient space for the 184 students generated by the project. Therefore, the estimated elementary, middle, and high school students generated as a result of the project are not anticipated to result in significant impacts to LAUSD elementary, middle, or high school services.

Section 65995 of the California Government Code requires developers to pay a one-time fee for capital acquisitions and improvements. Such fees are paid at the time building permits are issued. The fees are paid into a general fund and may or may not be used to offset the impacts of the development generating the fees. California Government Code Section 65995(b) establishes the maximum school impact fee at \$3.50 per square foot for new residential building space. Currently, specific designs and square footage for the single-family residences has not been developed. However upon issuance of a building permit, the developer would

pay the applicable fees to offset potential capacity deficits in local schools. Therefore, as stated in the EIR, no significant impact would result and no additional mitigation measures would be necessary.

- 4.10-1. The applicant shall pay developer fees, as required under Section 65995 of the California Code, for school improvements. The applicant will enter into discussions with LAUSD and the Porter Ranch master developer to investigate the possibility of accelerating the Porter Ranch elementary and middle school construction schedule.

Analysis of the Refined Sewer Implementation Project.

The Refined Sewer Implementation Project involves only the acquisition of property interests for the purpose of implementing the Deerlake Ranch Project Twin Lakes Sewer Condition. The acquisition of property interests and construction of the Twin Lakes Sewer in the already established Twin Lakes community would not result in an impact on schools.

As such, the proposed Refined Sewer Implementation Project proposes no significant change in already approved physical improvements and would not increase the impact on school services from those analyzed in the Certified EIR as amended by the previous Addenda. The Deerlake Ranch Project is still subject to the same mitigation measures to be implemented as stated in the Certified EIR and required MMP. No additional mitigation measures are required.

Certified EIR Section 4.11 - Public Services - Library Services

Summary of Analysis in Certified EIR

The Los Angeles County Public Library operates facilities and services Countywide in both unincorporated and incorporated areas of the County. The Chatsworth Branch Library is located at 21052 Devonshire Street, Chatsworth.

Significance threshold criteria for library services are not specified in the *State CEQA Guidelines*. Library facilities and materials are considered a part of the Development Monitoring System of Los Angeles County, which relies upon the service provider to determine the requirements of new development relative to the service provided. In keeping with this procedure, this impact analysis relies upon the County of Los Angeles Public Library standards for library service as a threshold of project significance. Therefore, impacts associated with the project upon library facilities would be considered significant if any of the following occurred:

- The population increase resulting from the project, based on the increase in residential units, would create or exacerbate over capacity conditions at a library that serves the project.

Development of the Deerlake Ranch Project would increase demand for library services, thereby increasing the need for additional facilities and materials (e.g., books, periodicals, audio tapes, videos, etc.).

To ensure sufficient library capacity is available for Deerlake Ranch Project generated students, Los Angeles County Ordinance (Section 22.72 Library Facilities Mitigation Fee) requires that new residential subdivisions pay a library fee in effect at the time, when permits are pulled, per residential unit for the project area) to ensure that new projects mitigate impacts to library facilities. As the developer would pay the applicable

fees to offset potential impacts, no significant impact is anticipated. In addition, no additional mitigation beyond that which is identified for the project is recommended for cumulative development projects, and cumulative impacts would be less than significant.

- 4.11-1. The applicant shall pay library fee, as required per Los Angeles County ordinance, of \$626 or the fee in effect at the time, where permits are pulled, per residential unit for the project area to ensure that new projects mitigate impacts to library facilities.

Analysis of the Refined Sewer Implementation Project.

Since approval of the Certified EIR, the First and Second Addenda were certified in conjunction with a reduction in the number of residential units from 375 to 314. The Refined Sewer Implementation Project actions by the Board would involve only the acquisition of property interests for the purpose of implementing the Deerlake Ranch Project Twin Lakes Sewer Condition. Construction of the Twin Lakes Sewer in the already established Twin Lakes community would not impact library services.

As such, the Refined Sewer Implementation Project proposes no significant change in already approved physical improvements and would not result in an increased impact on library services from those analyzed in the Certified EIR as modified by the previous Addenda. The Deerlake Ranch Project remains subject to the same mitigation measures to be implemented as stated in the Certified EIR and required by the MMP. No additional mitigation measures are required.

Certified EIR Section 4.12 – Transportation/Traffic

Summary of Analysis in Certified EIR

The Deerlake Ranch Project site is located in the unincorporated hillside area of Los Angeles County, north of SR-118 in between where Topanga Canyon Boulevard and Canoga Avenue currently terminate at SR-118. While the project site is located in an unincorporated area of Los Angeles County, some study intersections are located within the City of Los Angeles. Therefore, the traffic analysis follows County of Los Angeles and City of Los Angeles traffic study guidelines and has been approved by County of Los Angeles.

Traffic study application of the County's and City threshold criteria "with Proposed Project" scenario indicates at three study intersections are anticipated to be significantly impacts by the project during the A.M. and P.M. peak hours.

The study intersections were determined by LADOT staff, and confirmed with staff from the Los Angeles County Department of Public Works (LACDPW), Traffic and Lighting Division. While the project is located within an unincorporated area of Los Angeles County, 11 of the 13 study intersections are located within the City of Los Angeles.

A detailed evaluation of existing and future traffic conditions was completed for each of the following 13 study intersections:

- Topanga Canyon Boulevard & Poema Place/Mayan Drive (County)
- Topanga Canyon Boulevard & SR-118 WB On/Off Ramps (County and CMP monitoring station)

- Topanga Canyon Boulevard & SR-118 EB On/Off Ramps
- Topanga Canyon Boulevard & Santa Susana Pass Road
- Topanga Canyon Boulevard & Chatsworth Street
- Topanga Canyon Boulevard & Devonshire Street (CMP monitoring station)
- Canoga Avenue & Rinaldi Street
- Canoga Avenue & Chatsworth Street
- Canoga Avenue & Devonshire Street
- De Soto Avenue & SR-118 WB & EB On/Off Ramps
- De Soto Avenue & Chatsworth Street
- De Soto Avenue & Devonshire Street

The Deerlake Ranch Project is expected to create significant impacts because it exceeds the City's impact thresholds at the following intersections:

- Topanga Canyon Boulevard and SR-118 WB On/Off-ramps
- Topanga Canyon Boulevard and SR-118 EB On/Off-ramps
- De Soto Avenue and Chatsworth Street

The Certified EIR concluded that Project-related significant impact is anticipated at the intersection of Topanga Canyon Boulevard & SR-118 WB On/Off-ramps during the A.M. and P.M. peak hours. In addition, the project is expected to result in significant impacts at the three study intersections. The following mitigation measures are recommended to reduce impacts to less than significant levels:

- 4.12-1 The applicant shall install a traffic signal at the intersection of Topanga Canyon Boulevard and Poema Place/Mayan Drive. The traffic signal shall be interconnected and operated in conjunction with the existing traffic signal at the Topanga Canyon Boulevard & SR-118 WB On/Off-ramps.
- 4.12-2 The applicant shall widen and restripe the WB SR-118 off-ramp to provide exclusive right-turn lane. This would result in a left-turn lane, a shared through/left-turn lane, and a right-turn only lane in the westbound approach.
- 4.12-3 The applicant shall widen and restripe the westbound Mayan Drive approach to County Collector Street standards to provide a second left turn lane. This would result in a left-turn lane and a shared through/left-turn lane in the westbound Mayan Drive approach.
- 4.12-4 The applicant shall widen and restripe the EB Poema Place approach to provide a second right-turn lane. This would result in a right-turn lane and a shared through/right-turn lane in the eastbound Poema Place approach.
- 4.12-5 The applicant shall contribute to the City of Los Angeles' Automated Traffic Surveillance and Control (ATSAC) system for the following intersections:

- Topanga Canyon Boulevard and SR-118 EB On/Off-ramps.
 - De Soto Avenue and Chatsworth Street.
- 4.12-6 Prior to the recordation of the first final subdivision map for the project, not including large-lot parcel maps for sale purposes, the applicant's traffic engineer will submit to the City of Los Angeles Department of Transportation a study to assess the need for the following improvements:
- Left-turn traffic signal phasing shall be implemented related to eastbound Chatsworth Street traffic at DeSoto Avenue intersection. Additional paving shall be included along the northern edge of Chatsworth Street to lengthen the existing eastbound left-turn lane by approximately 100 feet.
 - Left-turn traffic signal phasing shall be completed related to southbound Canoga Avenue traffic at the Chatsworth Street intersection, and construction of approximately 100 feet of paving along the western edge of Canoga Avenue to provide for a left-turn lane onto eastbound Chatsworth Street. This paving would be considered temporary, pending a City of Los Angeles project to widen this portion of Canoga Avenue to City standards.
 - Subject to approval by the California Department of Transportation (Caltrans), City of Los Angeles, and County of Los Angeles, the existing pavement on southbound Topanga Canyon Boulevard shall be restriped to provide a second left-turn lane onto the eastbound SR-118 on-ramp.
- 4.12-7 The applicant shall request that the CFD, which is proposed to fund public facilities for Deerlake Ranch, contribute funds to construct the following safety-related improvements. These improvements are subject to City of Los Angeles 8-Permit(s), prior to obtaining any other construction permit for the project.
- Three-way stop signs shall be installed at the intersection of Canoga Avenue and Candice Place.
 - A "No Left Turn" sign shall be installed from southbound Canoga Avenue to Candice Place, prohibiting such movement between 6:00A.M. and 9:00 A.M.
 - Speed bumps shall be installed along Canoga Avenue between the SR-118 and Candice Place, and an additional speed bump shall be installed south of Candice Place.
 - A "No Left Turn" sign shall be installed at the intersection of Canoga Avenue and Celtic Place.
 - Self-actuated flashing lights shall be installed at the intersection of Canoga Avenue and Rinaldi Avenue for equestrian and pedestrian crossing, subject to approval by the City of Los Angeles.
 - A crosswalk shall be striped on Chatsworth Street east of the intersection with Independence Avenue.
 - Permanent signs shall be installed along Canoga Avenue displaying "Watch for Equestrians", or similar language.
 - Signs shall be installed during the project construction period displaying "Jake Braking Strictly Prohibited," or similar language.

- 4.12-8 As agreed, the subdivider shall be responsible for repairing damage to the existing pavement on Canoga Avenue between Chatsworth Street and SR-118 that is caused by project contractors during the course of construction.
- 4.12-9 The subdivider shall install three-way stop signs at the proposed intersection of Mayan Drive and "B" Street, subject to the approval of the County of Los Angeles.
- 4.12-10 The applicant shall widen and restripe the EB Poema Place approach to provide a second right-turn lane. This would result in a right-turn lane and a shared through/right-turn lane in the eastbound Poema Place approach.
- 4.12-11 Caltrans has requested additional mitigation measures to mitigate impacts of the project within the State right-of-way. The applicant will prepare, as a voluntary measure, a Project Study Report (PSR) to address long-term regional traffic operations at the Topanga Canyon Boulevard/SR-118 interchange. In addition, the applicant shall consider possible payment of fair-share fees as determined by the County.

Therefore, with implementation of the recommended mitigation measures (4.12-1 through 4.12-11), the project would not result in significant impacts to area traffic.

Analysis of the Refined Sewer Implementation Project.

Since certification of the EIR, the First and Second Addenda were certified with a reduction in the number of residential units from 375 to 314. Therefore, there has been a significant reduction in the density of this project, and corresponding reduction in the construction and operational traffic generation data used in the Certified EIR.

The modified approved Deerlake Ranch Project, as amended in the previous Addenda to the Final EIR, includes a recreation center to be located on a site previously approved for four single family residential lots and a short cul-de-sac street serving these lots. The building pad of the recreation center site will coincide with the combined building pads and cul-de-sac, resulting in no change in construction traffic.

The Project actions by the Board would involve only the acquisition of property interests for the purpose of implementing the Deerlake Ranch Project Twin Lakes Sewer Condition. The Twin Lakes Sewer would be placed within an existing road easement over an estimated six to eight month construction period and would inconvenience temporarily some residents during the installation period. A Construction Staging and Traffic Management Plan will be implemented during construction and be subject to final approval by the LACDPW. The Twin Lakes Sewer installation would not change the traffic impacts, which would remain the same as for the approved project, as the construction of the Twin Lakes Sewer was approved by the Board in 2004. The operation and maintenance of the Twin Lakes Sewer would remain the same as consider at the time of project approval in 2004.

As a component of a Construction Staging and Traffic Management Plan, the Deerlake Ranch Project proponent will use a certified traffic engineer to develop a traffic control pattern for implementation during the estimated six to eight month Twin Lakes Sewer installation. The traffic control pattern will be in place prior to commencement of construction. All road closure and detour signage will be posted prior to construction in clearly visible locations proximate to the work location. Installation notices and updates for

the Twin Lakes community residents will be available through the project website at www.deerlakeinfo.com. Flagmen will be used to direct and control traffic during construction hours. Affected homeowners will be provided a 5-day advance notice for any restricted access to residences during installation. Where necessary, a pilot car will be provided to safely move traffic through active construction areas. The Deerlake Ranch Project proponent will require the Twin Lakes Sewer subcontractor to use equipment that is scaled to fit the narrow road and working conditions within the Twin Lakes community.

As such, the proposed Refined Sewer Implementation Project proposes no significant change in the already approved Deerlake Ranch Project, which includes the Twin Lakes Sewer improvements, and would therefore not result in a significant increase in traffic impacts from those analyzed in the Certified EIR as amended by the previous Addenda, with the same mitigation measures to be implemented as stated in the Certified EIR and required by the MMP. No additional mitigation measures are required.

Certified EIR Section 4.13 – Utilities and Service Systems - Water Supply

Summary of Analysis in Certified EIR

This analysis summarizes the findings and conclusions of *Water System Design Report for Tentative Tract No. 53138, Deerlake Ranch*, prepared by the LVMWD. In addition, water supply and demand information was obtained from the Urban Service Analysis prepared by Los Angeles County Department of Regional Planning, the LVMWD *Population Growth, Residential Development and Employment Activity Report* (March 31, 1996), the *Potable Water System Master Plan for Las Virgenes Municipal Water District* (December 1999) and the *Las Virgenes Municipal Water District Urban Water Management Plan* (adopted December 12, 2000).

In accordance with the California Water Code, Division 6, Part 2.6, “every urban water supplier shall prepare and adopt an Urban Water Management Plan (UWMP)” to pursue to efficient use of available supplies and to ensure the appropriate level of reliability in water service to meet customers’ needs during normal, dry and multiple dry water years.

A key element of the UWMP is to determine future demands and the ability of the server to meet those demands. The projection data for future water demand in the LVMWD UWMP is based on the potential buildout or properties consistent with the land use elements of the Los Angeles County, and cities of Agoura Hills, Calabasas, Hidden Hills, and Westlake Villages General Plans; as well as the population, housing and employment forecasts of the Southern California Association of Governments (SCAG). Based on data generated from the above sources, which is presented in the LVMWD *Potable Water System Master Plan for Las Virgenes Municipal Water District* (December 1999), the LVMWD developed a management plan which provides for the continued service of potable water resources to its service area consistent with the California Water Code.

The Deerlake Ranch Project site is currently served by the Twin Lakes Subsystem which consists of existing water distribution pipelines; a pumping station; and two water tanks. This subsystem is currently connected to MWD’s transmission main, identified as the “SC LV-3 Turn Out” which is located just below the Twin Lakes Pump Station. The SC LV-3 Turn Out is, in turn, connected to the MWD’s West Valley Feeder pipeline.

The existing pipelines range in size from 6 to 18 inches and receive potable water from the Twin Lakes Tanks, which are located approximately one mile north of the Twin Lakes Pump Station. The pump station

maintains the gradient (water level) in the Twin Lakes Tanks of 1,584.75 feet with a combined capacity of 2.0 million gallons (mg). The Twin Lakes Subsystem has an existing pumping capacity of 2,050 gpm.

In assessing the significant impacts upon water resources for the project, the *State CEQA Guidelines* consider whether sufficient water supplies are available to serve the project from existing entitlements and resources, or if new or expanded entitlements are necessary. Adverse impacts on water availability could result when the project cannot be served by the existing water system facilities due to:

- Inadequate capacity in water lines, piping systems, water treatment and/or water storage facilities, and/or
- Inadequate water supplies to meet domestic and/or fire flow demands.

The Deerlake Ranch Project would receive its potable water from the District's existing 1,585-foot gradient Twin Lakes Subsystem via the existing Twin Lakes Pump Station and Twin Lakes Tanks. This would require the construction of a new 16-inch pipeline, connecting to the proposed water system directly to the Twin Lakes Tanks, with no connections in between. Such connection would require that the pipeline not exceed the bottom elevation of the smaller Twin Lakes Tank of 1,555 feet. Several additional pipelines ranging in size from six to 14 inches, would also be installed, underlying the project site at various locations.

The LVMWD recommends that a small pump station with a hydropneumatic tank be installed to provide an effective hydraulic gradient (pressure zone) of 1,656 feet to provide several proposed homes at the higher elevations with a minimum pressure of approximately 76 psi.

Although no significant impacts are anticipated with the Deerlake Ranch Project, the following mitigation measures are recommended to further reduce water consumption and ensure impacts would be less than significant:

- 4.13-1. Water system distribution facilities shall meet the LVMWD specifications and standards.
- 4.13-2. The project developer shall install low-flush toilets and low-flow showerheads, consistent with the LVMWD requirements.
- 4.13-3. The project shall comply with Water Conservation Ordinance Nos. 11-86-161 and 1-93-205.
- 4.13-4. Water conserving measures in landscape management shall include:
 - Use of drought-tolerant plantings.
 - Installation of efficient irrigation systems that minimize runoff and evaporation and maximize the water that will reach the plant roots. Setting of automatic irrigation systems to ensure irrigation during early morning or evening hours. Resetting of automatic irrigation system to water less often in cooler months and during the rainfall season so that water is not wasted by excessive landscape irrigation

The existing pump station and tanks have the capacity to accommodate the project potable water demand requirements. The Deerlake Ranch Project would not have a significant effect on LVMWD ability to meet demand for services prior to, or following, implementation of the recommended mitigation measures.

Therefore, implementation of the recommended mitigation measures would further reduce water consumption demands of the project and impacts would remain less than significant.

Analysis of the Refined Sewer Implementation Project.

Since approval of the Certified EIR, the First and Second Addenda were certified in conjunction with a reduction in the number of residential units from 375 to 314. Therefore, there has been a significant reduction in the residential density of this project and corresponding reduction in water demand.

The Refined Sewer Implementation Project actions by the Board would involve only the acquisition of property interests for the purpose of implementing the Deerlake Ranch Project Twin Lakes Sewer Condition. Installation of the Twin Lakes Sewer would be placed within an existing road easement and would not change the water supply or service as the construction of the Twin Lakes sewers was approved by the Board in 2004.

As such, the proposed actions of the Project propose no significant change in project improvements that would increase impact on water supply from those analyzed in the Certified EIR as amended by the previous Addenda, with the same mitigation measures to be implemented as stated in the Certified EIR and MMP. No additional mitigation measures are required.

Certified EIR Section 4.14 - Utilities and Service Systems - Wastewater

Summary of Analysis in Certified EIR

There is currently no sewage generation on the project site, and no portion of the property connects to any off-site sewer. Although the Deerlake Ranch Project is located within the LVMWD service area, the Deerlake Ranch Project site is not included within LVMWD Sanitation Improvement District (SID) "B," which presently covers only those areas west of Topanga Canyon Boulevard and south of SR-118. Annexation of the project site to SID "B" is currently underway. **(Note: The annexation to SID "B" was completed subsequent to certification of the EIR)**

There are no LVMWD-owned sewage treatment and disposal facilities available to serve SID "B". Therefore, LVMWD has a contractual agreement with the City of Los Angeles to accept SID "B" sewage, which will include the project site upon completion of the annexation proceedings. Sewage from SID "B" is treated at the Hyperion Facility in El Segundo or the Tillman Water Reclamation Plant in Van Nuys, which serves the San Fernando Valley and has a treatment capacity of 80 million gallons per day.

According to the *State CEQA Guidelines*, a proposed project is considered to have a significant environmental impact if:

- It does not meet wastewater treatment requirements of the applicable Regional Water Quality Control Board.
- The project includes features or elements that contribute to the construction of new water or wastewater treatment facilities or expansion of existing facilities, the construction of which could cause significant environmental effects.

- The project includes features or elements that contribute to the construction of new storm water drainage facilities or expansion of existing facilities, the construction of which could cause significant environmental effects.
- As a result of the project water supplies are not available to serve the project from existing entitlements and resources, new or expanded entitlements are needed.
- Project development results in a determination by the wastewater treatment provider which serves or may serve the project that it has inadequate capacity to serve the project's projected demand in addition to the provider's existing commitments.

The Deerlake Ranch Project would generate approximately 131,250 gallons of wastewater per day with an average daily discharge of 0.29 cfs. The sewage to be generated by the project would be discharged at connections to the following existing sewer mains: (1) approximately 0.04 cfs to the County of Los Angeles sewer main at the northern terminus of Topanga Canyon Boulevard; and (2) approximately 0.25 cfs to the City of Los Angeles sewer main within Canoga Avenue, approximately 150 feet south of SR-118. The County sewer main connects to the City sewer south of SR-118.

Due to a 1998 expansion of the City's treatment and disposal facility, sewage generation associated with the project would not result in over capacity of existing or planned wastewater treatment facilities.

The following mitigation measures shall be implemented to further reduce potential impacts associated with wastewater:

4.14-1. Annexation to LVMWD Sewer Improvement District "B"

4.14-2. Reconstruct portions of the City of Los Angeles sewer system as shown in Figure 4.14.3 of the Certified EIR

4.14-3. Install low-flow toilets and showers to minimize sewage generation from the proposed homes

This Deerlake Ranch Project would have no adverse cumulative impacts on existing sewage treatment and disposal facilities because it meets the criteria on which the capacities of these facilities have been constructed and/or expanded. With implementation of proposed mitigation measures, the project would not have an adverse cumulative impact on the sewage collection system.

Analysis of the Refined Sewer Implementation Project.

Since approval of the Certified EIR, the First and Second Addenda were certified in conjunction with a reduction in the number of residential units from 375 to 314. Therefore, there has been a significant reduction in the residential density of the Deerlake Ranch Project, and corresponding reduction in wastewater generation.

As mentioned above, the 375 lots analyzed in the Certified EIR would result in an estimated average daily wastewater generation of approximately 131,250 gallons per day (“gpd”).⁴ The First Addendum, which assessed a project reduced to 314 lots, showed an estimated average daily wastewater generation of approximately 109,900 gpd.⁵ The analysis in the Second Addendum showed that 314 lots would result in an estimated average daily wastewater generation of approximately 97,400 gpd.⁶ When including the wastewater generation of both the modified approved Deerlake Ranch Project and the Twin Lakes community, the estimated average daily wastewater generation would be approximately 154,210 gpd.⁷ The wastewater generation of the 314 lot modified Deerlake Ranch Project is lower than the estimate in the Certified EIR.

According to the City of Los Angeles, the sewer system infrastructure could accommodate the total flow for the approved Deerlake Ranch Project and Twin Lakes Sewer with implementation of the required 8-inch sewer line along Canoga Avenue, any necessary gauging equipment and pumping infrastructure. The proposed sewer infrastructure improvements for Canoga Avenue are consistent with the sewer area study prepared for the Certified EIR. Each Twin Lakes residential property would be responsible for individual connection to the Twin Lakes Sewer. Further detailed gauging and evaluation will be needed as part of the permit process to identify a specific sewer connection point. Maintenance of the sewer infrastructure within the Deerlake Ranch Project and Twin Lakes will be undertaken by the County. Prior to connection to any existing or proposed sewer, the LVWMD will require the applicant to complete a district sewer application for service and to make financial arrangements as set forth in Title 5 of the LVMWD Code, Ordinance No. 11-86-161.⁸

The sewage flow of the approved Deerlake Ranch Project and Twin Lakes will be conveyed to the Hyperion Treatment Plant, which has sufficient capacity for the Deerlake Ranch Project and Twin Lakes.⁹ The Hyperion Treatment Plant currently has a daily flow of 362 million gallons per day (“mgd”) with a 450 mgd capacity.¹⁰ The approved Deerlake Ranch Project is expected to result in an estimated average daily wastewater generation of approximately 97,400 gpd or 154,210 gpd including Twin Lakes. This number represents an increase of less than one percent of the daily flow and daily capacity at the Hyperion Treatment Plant. Thus, the capacity of the Hyperion Treatment would be able to accommodate the wastewater generated from operation of the approved Deerlake Ranch Project and Twin Lakes.¹¹ Therefore, wastewater generated

⁴ 375 residential units X 350 gpd = 131,250 gpd. Based on an estimated daily sewage generation rate of 350 gpd per unit per the Findings of Fact Regarding the Final Environmental Impact Report for the Deerlake Ranch Vesting Tentative Tract Map Number 53138-(5), Conditional Use Permit Number 99-239-(5), and Oak Tree Permit Number 99-239(5).⁵ 314 residential units X 350 gpd = 109,900 gpd. Based on an estimated daily sewage generation rate of 350 gpd per unit per the Findings of Fact Regarding the Final Environmental Impact Report for the Deerlake Ranch Vesting Tentative Tract Map Number 53138-(5), Conditional Use Permit Number 99-239-(5), and Oak Tree Permit Number 99-239(5).

⁵ 314 residential units X 350 gpd = 109,900 gpd. Based on an estimated daily sewage generation rate of 350 gpd per unit per the Findings of Fact Regarding the Final Environmental Impact Report for the Deerlake Ranch Vesting Tentative Tract Map Number 53138-(5), Conditional Use Permit Number 99-239-(5), and Oak Tree Permit Number 99-239(5).

⁶ Per Ali Poosti, Division Manager, Wastewater Engineering Services Division, LA Sanitation, City of Los Angeles, letter correspondence, dated June 18, 2015. Please note, while the Amended Project proposes a recreation center and the same residential units as the First Addendum, the Amended Project would result in less wastewater generation due to updated generation factors based on average daily flow per number of bedrooms within a single family home.

⁷ Per Ali Poosti, Division Manager, Wastewater Engineering Services Division, LA Sanitation, City of Los Angeles, letter correspondence, dated June 18, 2015.

⁸ Conditional Statement of Sewer Service, prepared by Phyllis Southard, Planning & New Development Technician, LVMWD, dated May 8, 2013.

⁹ Ali Poosti, Division Manager, Wastewater Engineering Services Division, LA Sanitation, City of Los Angeles, letter correspondence, dated June 18, 2015.

¹⁰ City of Los Angeles, LA Sanitation Environment, website: <http://san.lacity.org/wastewater/factsfigures.htm>, accessed May 2015.

¹¹ Ali Poosti, Division Manager, Wastewater Engineering Services Division, LA Sanitation, City of Los Angeles, letter correspondence, dated June 18, 2015

during operation of the approved Deerlake Ranch Project combined with Twin Lakes would result in a less than significant impact on wastewater treatment facilities. As such, the proposed Refined Sewer Implementation Project would not contribute to the construction of new water or wastewater treatment facilities or expansion of existing facilities, the construction of which could cause significant environmental effects nor result in a determination by the wastewater treatment provider which serves Twin Lakes that it has inadequate capacity to serve the Twin Lakes Sewer's projected demand in addition to the provider's existing commitments. Therefore, the Refined Sewer Implementation Project would not significantly increase the impact on wastewater facilities from those analyzed in the Certified EIR as amended by the previous Addenda, with the same mitigation measures to be implemented as stated in the Certified EIR and required MMP. No additional mitigation measures are required.

Certified EIR Section 4.15 - Utilities and Service Systems - Solid Waste

Summary of Analysis in Certified EIR

Solid waste management service for the project area is provided by the County Sanitation Districts of Los Angeles County. The Sanitation Districts maintain three active sanitary landfills: (1) Calabasas Landfill, (2) Scholl Canyon Landfill, and (3) Puente Hills Landfill. The Calabasas Landfill is the closest operating landfill to the project site. However, as of February 1991, a municipal ordinance restricted the use of the landfill to solid waste originating within an identified waste shed. This ordinance pertained to certain incorporated and unincorporated areas of Los Angeles County, including the project area. Therefore, solid waste originating from development of the project would be sent to the Puente Hills Landfill.

The California Integrated Waste Management Act of 1989 (AB 939) requires every city and county in the State to prepare a Source Reduction and Recycling Element (SRRE) to its Solid Waste Management Plan that identifies how each jurisdiction will meet the mandatory State waste diversion goals of 50 percent by the year 2000.

The term "integrated waste management" refers to the use of a variety of waste management practices to safely and effectively handle the municipal solid waste stream with the least adverse impact on human health and the environment. The Act has established waste management prioritization as follows:

- Source reduction
- Recycling
- Composting
- Energy recover
- Landfilling
- Household hazardous waste management

State CEQA Guidelines do not identify any quantitative standards for determining the significance of a new development project's solid waste generation. However, it does identify that a project is considered to have a significant environmental impact if:

- The project area is unable to be served by a landfill with sufficient permitted capacity to accommodate the project's solid waste disposal needs.
- Project Development does not comply with federal, state, and local statutes and regulations related to solid waste.

Additionally, adverse impacts could result to utilities/other services (other than water) when:

- The service to the project site is not presently available;
- The service facility requires considerable extension to the project site; or
- There exists an inadequate service supply

Disposal of grading and construction-related waste is anticipated to be limited and would not constitute a continuous generator of solid waste after construction activities are completed. Impacts stemming from the disposal of construction-related solid waste would be less than significant due to the limited disposal activity as well as the Sanitation Districts implementation and operation of a resource and recovery program.

Solid waste generated by the project was estimated using generation rates cited by the California Integrated Waste Management Board (CIWMB) in conjunction with the Districts. With implementation of the project, a total of 375 single-family residential units, it is estimated that the project would generate approximately 2.30 tons per day. This represents 0.017 percent of the authorized, maximum solid waste disposal rate for Puente Hills of 13,200 tons per day. However, Puente Hills Landfill is in the process of closing and will not be available for this project.

The Districts consider a new development that generates less than one percent of the authorized tons per day disposal rate as having a less than significant impact on landfill capacity. Based on this threshold criteria, the project would have a less than significant impact on solid waste generation and landfill capacity.

Although solid waste impacts are less than significant due to adequate landfill capacity serving the project, the following mitigation measures are recommended to assist in meeting the goals of the California Integrated Waste Management Act, AB 939:

- 4.15-1. The proposed project shall incorporate storage and collection of recyclables into each project design.
- 4.15-2. Refuse collection contracts shall include collection of recyclables.
- 4.15-3. All residents shall be encouraged to recycle, at a minimum, newspaper, glass, bottles, aluminum and bimetal cans and P.E.T. bottles.
- 4.15-4. Recycling shall be included in the design of the project by reserving space appropriate for the support of recycling, such as adequate storage areas and access for recycling vehicles.
- 4.15-5. All contractors shall be urged to recycle construction and demolition wastes to the extent feasible.

4.15-6. The project applicant shall provide homebuyers with the following information concerning:

- Participation in the County of Los Angeles Household Hazardous Waste Collection Program;
- City sponsored programs including curbside oil and filter recycling; and
- Information on the proper disposal of hazardous materials.

Given the past capacity of the Puente Hills Landfill that could have served the project site, the incremental increase in solid waste generation is considered less than significant with the knowledge that additional landfill capacity has been approved (e.g., Sunshine Canyon Landfill) since the certification of the EIR or is in the process of approval (e.g., Chiquita Canyon Landfill or Scholl Canyon Landfill) that may receive solid waste generated by this project. Further, implementation of the proposed mitigation measures would ensure that the amount of solid waste generated by residential households assist local efforts to reduce solid waste generation area-wide.

Analysis of the Refined Sewer Implementation Project.

The Refined Sewer Implementation Project actions by the Board would involve only the acquisition of property interests for the purpose of implementing the Deerlake Ranch Project Twin Lakes Sewer Condition. Installation of the Twin Lakes Sewer would not change the impact on solid waste since it would not contribute to operational solid waste at landfills and construction debris would be minimal because contractors are required to reuse or recycle construction supplies where practicable to achieve a 50 percent reduction in solid construction waste.

As such, the proposed actions of the Refined Sewer Implementation Project proposes no significant change in project improvements that would increase impact on solid waste service from those analyzed in the Certified EIR as amended by the previous Addenda, with the same mitigation measures to be implemented as stated in the Certified EIR. No additional mitigation measures are required.

Certified EIR Sections 4.16 and 4.17 - Utilities and Service Systems - Electricity and Natural Gas

Summary of Analysis in Certified EIR

The Deerlake Ranch Project site receives electrical service from Southern California Edison (SCE). Several existing overhead electrical facilities are located throughout the property. SCE currently maintains an existing overhead 16 Kilovolt (KV) primary power line that feeds into the project site. This line feeds into an existing pole top substation that serves an existing residential subdivision to the south with a 4KV primary voltage. The 16KV line also feeds various areas throughout the proposed subdivision.

Southern California Gas Company (The Gas Company) is the principal distributor of natural gas in Southern California. The Gas Company supplies natural gas to the project vicinity through a system of subsurface gas mains and pipelines. Existing natural gas lines in the vicinity of the project site include a six-inch medium pressure main located in Topanga Canyon Boulevard. The project site is currently vacant and there is no consumption of natural gas. There are no natural gas facilities located on the project site at this time.

State CEQA Guidelines Appendix G identifies criteria for determining whether a project's energy impacts are considered to have a significant effect on the environment. The Certified EIR included the following questions as significance thresholds. Implementation of the project would result in a significant impact upon energy resources, if project development includes features or elements that:

- Encourage activities which result in the use of large amounts of fuel, water, or energy:
- Use fuel, water, or energy in a wasteful manner.

Based on criteria established by the County, Deerlake Ranch Project impacts regarding energy consumption would not be considered significant because implementation and operation of the project would not exceed the electricity and/or natural gas facilities and/or supply furnished by existing or planned SCE and/or the Gas Company facilities.

As determined by SCE, the existing overhead 16 Kilovolt (KV) primary power line that feeds into the site has adequate capacity to serve the capacity ever occur, the utility will apportion its available supply of electricity among its customers as set forth in Rule No. 14, *Shortage of Supply and Interruption of Delivery*. Further, the project would be required to comply with the energy conservation standards set forth in Title 24, Part 6, Article 2 of the California Administrative Code, which would reduce the project's demand upon electricity resources.

SCE has indicated that several of the existing overhead facilities on the property would be replaced with a new underground system. It is not anticipated that development of the Deerlake Ranch Project would significantly impact the supply of electricity or exceed the planned capacity of existing electricity distribution systems. Therefore, no significant impact would occur.

Although no natural gas facilities are located on the project site at this time, The Gas Company has indicated that sufficient natural gas facilities exist in the project vicinity and gas service to the project site could be provided in accordance with the California Public Utilities Commission (CPUC) without any significant impacts. Recoverable reserves and resources of natural gas total more than a 70-year supply. Further, the Deerlake Ranch Project would be required to comply with State Energy Conservation Standards as stipulated in Title 24 of the California Administrative Code, which would further reduce impacts upon natural gas distribution facilities and supplies.

The Gas Company has designed the distribution pipeline system to meet the demand of total buildout in the project area. Gas facilities would be extended into the project property at the time of development.

Although energy consumption impacts are less than significant, the following mitigation measures are recommended to: (1) further reduce energy consumption impacts that may occur as a result of project implementation; and (2) assist in meeting the goals of the energy conservation standards set forth in Title 24, Part 6, Article 2 of the California Administrative Code which would reduce the project's demand upon electricity and natural gas resources.

- 4.16-1. Project built-in appliances, refrigerators, and space-conditioning equipment shall exceed the minimum efficiency levels mandated in the California Code of Regulations.

- 4.16-2. To reduce electricity consumption, fluorescent and high-intensity-discharge (HID) lamps shall be installed wherever possible, which give the highest light output per watt of electricity consumed, including all street lights consistent with the Los Angeles County of Public Works standards.
- 4.17-1. Project buildings shall be designed and constructed to be well-sealed to prevent outside air from infiltrating and increasing interior space-conditioning loads.
- 4.17-2. Thermal insulation, which exceeds requirements established by the California Code of Regulations, shall be installed in walls and ceilings.
- 4.17-3. Window systems shall be designed to reduce thermal loss, thus reducing heating loads during cool weather.
- 4.17-4. Project energy engineers and architects shall consult with The Gas Company for an energy analysis of the proposed dwellings regarding efficiency/conservation measures and up-to-date technology, manufacturing equipment, etc.

Although the Deerlake Ranch Project is not expected to result in significant impacts upon available energy supplies or distribution facilities, implementation of the recommended mitigation measures would further reduce project demands upon such resources. Energy consumption associated with the Deerlake Ranch Project would be considered less than significant.

Analysis of the Refined Sewer Implementation Project.

The Project actions by the Board would involve only the acquisition of property interests for the purpose of implementing the Deerlake Ranch Project Twin Lakes Sewer Condition. Installation of the Twin Lakes Sewer would not change the electricity and natural gas impacts already analyzed in the Certified EIR as amended by the previous Addenda.

As such, the Refined Sewer Implementation Project would not significantly change the already approved physical improvements and would not result in a substantially increased impact on electricity and natural gas consumption from that analyzed in the Certified EIR as amended by the previous Addenda. No additional mitigation measures are required.

V. CONCLUSION

Based on the information and analysis in this Third Addendum, the following findings can be made in accordance with *State CEQA Guidelines* Section 15164(a), which authorizes a Lead Agency to prepare an Addendum to a previously certified Environmental Impact Report if changes or additions to the document are necessary, but none of the conditions described in Section 15162(a) are present, as described below:

- No substantial changes are proposed in the project which will require major revisions of the previous EIR due to the involvement of new significant environmental effects or a substantial increase in the severity of previously identified significant effects
- No substantial changes have occurred with respect to the circumstances under which the project is undertaken which will require major revisions of the previous EIR due to the involvement of new

potentially significant environmental effects or a substantial increase the severity of previously identified potentially significant effects

- No new information of substantial importance, which was not known, and could not have been known with the exercise of reasonable diligence at the time the previous EIR was certified as complete, shows any of the following:
- The project will not have one or more significant effects not discussed in the previous EIR
- Potentially significant effects previously examined will not be substantially more severe than shown in the previous EIR
- No new mitigation measures or alternatives previously found to be infeasible have been found to be feasible but declined by the project proponent to be adopted
- No new mitigation measures or alternatives which are considerably different from those analyzed in the previous EIR, and that would substantially reduce one or more potentially significant effects on the environment, have been found and declined by the project proponent to be adopted

Mandatory Findings of Significance

As noted in Section 4.3 – Biological Resources, this Addendum concludes that the Refined Sewer Implementation Project would result in no significant change to already approved physical improvements and would not result in an increased impact on biological resources from those analyzed in the Certified EIR as amended by the previous Addenda. Similarly, Section 4.4 – Cultural Resources concludes that installation of the Refined Sewer Implementation Project would occur within previously disturbed roadways for which no previously recorded cultural site locations have been identified.

The Deerlake Ranch Project, including the Refined Sewer Implementation Project, does not have the potential to degrade the quality of the environment, substantially reduce the habitat of a fish or wildlife species, cause a fish or wildlife population to drop below self-sustaining levels, threaten to eliminate a plant or animal community, reduce the number or restrict the range of a rare or endangered plant or animal or eliminate important examples of the major periods of California history or prehistory. Additionally, the Project impacts are not cumulatively considerable when viewed in connection with the effects of past projects, the effects of other current projects, and the effects of probable future projects.¹² The Certified EIR concluded that there would be no cumulatively considerable impact resulting from the Deerlake Ranch Project. The project would not have environmental effects that will cause substantial adverse effects on human beings, either directly or indirectly.

Based on the analysis presented herein, pursuant to *State CEQA Guidelines* Section 15164(b), it has been determined that the Refined Sewer Implementation Project would not result in any new significant impacts or a substantial increase in the severity of an impact disclosed in the Certified EIR or otherwise require

¹² *Eleven related projects were analyzed in the Certified EIR, which concluded that no significant cumulative impacts would result from the Deerlake Ranch Project. Only the Hidden Creek Estates project (SCH No. 2006031049), a land division for 188 single-family residences adjacent to Porter Ranch, has been proposed subsequent to the original Deerlake Ranch approval. The Hidden Creeks Estate DEIR concluded that project construction emissions and traffic level of service at the intersection of Rinaldi Street and Mason Avenue would have cumulative significant impacts. The Deerlake Ranch Project would not contribute to the construction emissions of the Hidden Creeks Estates Project and the Rinaldi Street and Mason Avenue intersection was not analyzed in the Deerlake Ranch Project Certified DEIR.*

preparation of a subsequent or supplemental EIR. Therefore, preparation of this Third Addendum to the Certified EIR under CEQA is the appropriate document in support of the County's consideration of the Project. The environmental analysis relies in part on the analyses completed in the previous Certified EIR as amended by the previous Addenda, and directly references the EIR, where appropriate. This Third Addendum has appropriately disclosed the potential impacts from the Project and will be included as part of the CEQA record for the Project.

COUNTY OF LOS ANGELES
DEPARTMENT OF REGIONAL PLANNING
320 West Temple Street
Los Angeles, California 90012

Enclosure B

AGREEMENT FOR TRACT NO 53138

RELATING TO

THE ACQUISITION OF OFFSITE REAL PROPERTY INTERESTS

This Agreement, made and entered into on _____ 2016, is between the COUNTY OF LOS ANGELES (hereinafter referred to as County), and Forestar Chatsworth, LLC (hereinafter referred to as Subdivider), authorized to do business in the State of California and located at 4590 MacArthur Boulevard, Suite 600, Newport Beach, California 92660.

RECITALS:

1. On August 10, 2004, the County Board of Supervisors ("Board") approved entitlements authorizing construction of a single family residential community on approximately 230.58 acres of land commonly known as "Deerlake Ranch" located in the Chatsworth Zoned District. The Board approved Vesting Tentative Tract Map No. 53138 ("VTTM 53138"), Conditional Use Permit No. 99-239-(5) (the "CUP"), Oak Tree Permit No. 99239-(5), as well as findings and conditions and the Deerlake Ranch Mitigation Monitoring Program. The Board also certified the Deerlake Ranch Project Final Environmental Impact Report (State Clearinghouse No. 2000061049) ("FEIR"). Together these entitlements authorized the subdividing and use of the Deerlake Ranch property for a single family residential subdivision and related infrastructure. The Board also required and authorized the construction of certain off-site sewer infrastructure improvements within the neighboring community commonly known as Twin Lakes, and

contemplated the possible acquisition of property by the County through eminent domain, if necessary, to secure adequate property rights to construct the above-referenced sewer improvements.

2. The Deerlake Ranch conditions of approval require the Subdivider to construct and install, at its own cost and expense, certain off-site improvements consisting generally of a sewer mainline, and lateral stubs, and appurtenant structures (hereinafter referred to as the "Offsite Improvements") within the Twin Lakes community. These conditions are set forth in: (1) CUP Condition No. 69; and (2) Department of Public Works ("Public Works") Land Development – Sewer, Condition No. 8 set forth in the Public Works Condition letter dated April 26, 2004, attached to and a made a part of the VTTM 53138 approval.

3. The Offsite Improvements are to be constructed and/or installed on the parcels depicted on the map attached hereto as Exhibit A (hereinafter referred to as the "Offsite Properties").

4. Once constructed to the satisfaction of the County, the sewer mainline is proposed to be dedicated and/or transferred to the Los Angeles County Consolidated Sewer Maintenance District for operation and maintenance. After such dedication and/or transfer, Subdivider will have no further obligation to operate and maintain the same. The maintenance of the lateral stubs would be the responsibility of the individual lot owners.

5. In order to comply with CUP Condition No. 69 and Department of Public Works ("Public Works") Land Development – Sewer, Condition No. 8 set forth in the Public Works Condition letter dated April 26, 2004, the Subdivider, or its predecessor, for the benefit of the County and the Twin Lakes community, has acquired easements for the construction, operation,

maintenance, and use of the Offsite Improvements over some of the Offsite Properties, as depicted on Exhibit B (hereinafter referred to as the "Acquired Easements").

6. Neither the Subdivider nor the County have sufficient title or interest in the remainder of the Offsite Properties, as depicted on Exhibit C (hereinafter referred to as the "Remainder Properties"), for the construction, operation, maintenance, and use of the Offsite Improvements. In CUP Condition No. 69, the Board contemplated the possible use of eminent domain to acquire sufficient title and interest in the Remainder Properties to facilitate construction of the Offsite Improvements.

8. To carry out the intent of the Board as set forth in CUP Condition No. 69, the County and the Subdivider now desire to set forth their relative financial and administrative responsibilities with respect to potential acquisition by the County of the Remainder Properties and to create a funding mechanism to fund the County's costs associated with these efforts.

AGREEMENT

Now, therefore, County and Subdivider agree as follows:

A. Obligations of Subdivider

1. Subdivider shall provide County with Litigation Guarantees for each of the Remainder Properties.

2. Subdivider shall prepare or revise Easement Deeds, Subordination Agreements, appraisal maps, condemnation maps and legal descriptions for each of the Remainder Properties, as required by the County. To the extent Subdivider and the County agree that the County shall prepare or revise the above documents/maps, Subdivider agrees to reimburse the County for such reasonable costs to do so.

3. Subdivider shall procure title insurance in the name of the County in an aggregate amount of \$500,000 to insure the County's title to all the Acquired Easements. The insurance policy shall be subject to review and approval by the County to ensure adequate coverage, prior to the policy being issued to the County.

B. Acquisition By County

1. County shall use its best efforts to acquire, by negotiation, the necessary easements for the construction, operation, maintenance, and use of a sanitary sewer and appurtenant structures (hereinafter referred to as "Sewer Easements") over each of the Remainder Properties, as follows:

- a. Prior to making any offer, the County shall establish an amount which it believes to be just compensation for each Sewer Easement based on an appraisal performed by a real estate appraiser licensed by the State of California. In the County's sole discretion, the appraisal may be performed by a staff appraiser with Public Works or by an independent appraiser retained by the County. Once the appraisal(s) is/are completed, the County shall consult with the Subdivider in establishing the amount of the offers and shall provide written notice to Subdivider of the amount it intends to offer for each of the Remainder Properties (the "Initial Offer"). In no event shall the offer be less than fair market value as established by the appraiser. Subdivider shall, within ten (10) business days of the date of said notice from County, deposit the amount so established with County.

- b. After the appraisal(s) is/are completed, the County shall make an offer to purchase a Sewer Easement to the owner of each of the Remainder Properties. If any offer, is not accepted, County shall provide written notice to Subdivider of any counter-offer(s) that is received during the course of negotiations, together with the County's proposed response (e.g., accept, reject, make a counter-offer). County shall consider, in good faith, any written comments on or objections to the County's proposed response which are received from Subdivider no later than ten (10) business days after the date of the written notice. However, Subdivider acknowledges and agrees that the final decision regarding the County's response shall be made in the County's sole discretion; provided; however, that approval by the Subdivider is required for any agreement to pay any amount above the Initial Offer as follows: (i) for Initial Offers less than \$10,000, any amount which exceeds \$2,500 above the Initial Offer; (ii) for Initial Offers between \$10,000 and \$25,000, any amount which exceeds \$5,000 above the Initial Offer; (iii) for Initial Offers over \$25,000, any amount which exceeds \$10,000 above the Initial Offer.
- c. County shall use its best efforts to complete the above negotiations within 60 days from the date the offer was made.

2. Within 90 days of the completion of the negotiations described in paragraph B.1., Public Works shall request the Clerk of the Board to place an item on the Board's agenda for an upcoming Board meeting (the date of which shall be determined by the Clerk) requesting the

Board to determine whether or not to adopt a Resolution of Necessity, pursuant to California Code of Civil Procedure Section 1245.210 et seq., to commence an eminent domain proceeding to acquire any Sewer Easement which has not previously been acquired pursuant to paragraph B.1., above. Subdivider acknowledges that the determination as to whether or not to adopt the Resolution of Necessity is within the sole discretion of the Board and shall be made after the Board has conducted a hearing, pursuant to the California Code of Civil Procedure Section 1245.235, and that by entering into this Agreement, County is not agreeing that the Board will adopt a Resolution of Necessity. If (and only if) the Board determines to adopt the Resolution of Necessity, County will then file and prosecute a lawsuit (complaint in eminent domain) to acquire the necessary Sewer Easements through the power of eminent domain, subject to the conditions specified in section C, below.

3. If the Board determines not to adopt the Resolution of Necessity and/or not proceed with the filing of a complaint in eminent domain to acquire the Sewer Easements, Public Works shall request the Board to relieve Subdivider of the obligation to provide the Offsite Improvements to the Twin Lakes Community, per VTTM 53138 and the CUP.

4. If an eminent domain proceeding is commenced, the County may make a deposit, pursuant to Code of Procedure Section 1255.010 ,et seq., of the probable amount of compensation, based on an appraisal that will be awarded in the proceeding. Subdivider acknowledges that the County may, in determining the probable amount of compensation, either update its prior appraisal or obtain another appraisal. County shall use the fund previously deposited by Subdivider, pursuant to paragraph B.1.a., above, to make this deposit. If the probable amount of compensation exceeds the amount previously deposited by Subdivider

pursuant to paragraph B.1.a., above, the County shall provide written notice to Subdivider of the probable amount of compensation and Subdivider shall, within ten (10) business days of the date of said notice from County, submit the additional amount to County for deposit with the Superior Court. Once the deposit of compensation is made in the action, the County shall promptly apply to the Superior Court for an order for prejudgment possession of the Sewer Easements pursuant to Code of Civil Procedure, section 1255.410, et seq.

5. If an eminent domain proceeding is commenced, County shall comply with the settlement procedures required pursuant to Code of Civil Procedure, Title 7 (Sections 1230.010, et seq.) and by the Superior Court. County shall provide written notice to Subdivider of the amount of all appraisals prepared in connection with the eminent domain proceeding, any settlement offer(s) and/or counter-offers received by County, and prior written notice of any proposed settlement offer(s) and/or counter-offers by County. County shall consider, in good faith, any written comments on or objections to the County's proposed offers and/or counter-offers which are received from Subdivider no later than ten (10) business days after the date of the written notification. Subdivider acknowledges and agrees that the final decision regarding the County's offer(s) and/or counter-offer(s) shall be made in the County's sole discretion; provided; however, that approval by the Subdivider is required for any agreement to pay any amount above the deposit of compensation made pursuant to Code of Procedure Section 1255.010 ,et seq., as follows: (i) for deposit of compensation less than \$10,000, any amount which exceeds \$2,500 above the deposit of compensation; (ii) for deposit of compensation between \$10,000 and \$25,000, any amount which exceeds \$5,000 above the deposit of compensation; (iii) for deposit of compensation over \$25,000, any amount which exceeds

\$10,000 above the deposit of compensation.

6. Once a negotiated purchase price or a settlement amount has been agreed to by the County and the property owner(s) or once the amount of compensation has been determined by a jury and/or judge in an eminent domain proceeding, County shall provide written notification thereof to Subdivider. If this amount exceeds the amounts previously deposited by Subdivider pursuant to paragraphs B.1.a. and B.4., above, Subdivider shall, within ten (10) business days of the date of receipt of said notice from County, deposit the additional amount with County for payment into the Superior Court or to the appropriate defendants in the eminent domain proceeding(s).

C. Payment of Acquisition Costs by Subdivider

1. Subdivider shall pay all costs and expenses (hereinafter referred to as "Negotiation/Litigation Costs"), incurred by the County in connection with the acquisition of the Sewer Easements, either by negotiation or through proceedings pursuant to Title 7 (commencing with Section 1230.010) of Part 3 of the Code of Civil Procedure. The Negotiation/Litigation Costs shall include costs and expenses incurred for:

- Preparation of any necessary documentation to comply with the California Environmental Quality Act ("CEQA").
- Title examination and insurance, including the title reports and litigation guarantees.
- Right of way engineering, including legal descriptions and maps.
- Appraisal services, including real estate, improvements pertaining to realty, and goodwill, if necessary.

- Acquisition services, including the services of property agents, appraisers, and attorneys, and other services necessary to obtain documentation for the County to secure clear title.
- Reasonable temporary relocation assistance services and payments if deemed necessary during construction.
- Reasonable attorney's fees and litigation expenses, including expert witness fees and costs, deposition costs, exhibit costs and court costs.
- Payments to property owners for Sewer Easements.

Subdivider specifically agrees to pay all Negotiation/Litigation Costs incurred by the County, through the date of the hearing described in paragraph B.2. (if such hearing occurs), regardless of whether or not the Board adopts a Resolution of Necessity to commence an eminent domain proceeding to acquire any Sewer Easements.

2. The County shall provide the Subdivider with periodic phased requests for funding of the Negotiation/Litigation Costs described in paragraph C.1. The phased requests for funding shall itemize with particularity those Negotiation/Litigation Costs anticipated to be needed for the tasks and activities expected to occur during the identified period. The first phase funding request shall cover the County's costs for tasks and activities through the consideration by the Board of whether or not to adopt a Resolution of Necessity as described in paragraph B.2, above. Subsequent phases, if necessary, shall cover the costs associated with eminent domain litigation as described below. Within ten (10) business days of the date Subdivider receives the first funding request from the County, it shall deposit the amount of the request in an account identified by the County ("Deposit Account"). The County shall not be obligated to perform the

tasks and activities itemized in the funding request, until the funds for such request are deposited into the Deposit Account. In the event the Board adopts a Resolution of Necessity, within ten (10) days of such adoption, the County shall provide the Subdivider with a litigation budget. The County shall use the litigation budget to prepare funding requests for the following litigation phases ("Litigation Milestones"): i) case filing, motions for possession and orders, and deposits of probable compensation; ii) discovery, exchange of statements of valuation data and expert witness list designations; iii) mediation and settlement conferences; and iv) trial and post-trial proceedings. Within five (5) business days of the date Subdivider receives a funding request from the County for a Litigation Milestone, it shall deposit the amount of the request into the Deposit Account. The County shall not be obligated to perform the tasks and activities itemized in the funding request until the funds for such request are deposited into the Deposit Account. Any amount in the Deposit Account remaining after completion by the County of the acquisition of the Sewer Easements shall be returned to the Subdivider. . The County acknowledges receipt of \$[_____] toward the cost of appraisal and other acquisition services which shall not be included in the future funding requests.

3. In the event the Board adopts a Resolution of Necessity, Subdivider shall, within ten (10) business days of the date the County provides the litigation budget, submit a surety bond in an amount determined by the County in consultation with Subdivider, sufficient to guarantee payment of attorney's fees and litigation expenses, including expert witness fees and costs, deposition costs, exhibit costs and court costs, associated with the filing and prosecution of eminent domain proceedings as identified in the litigation budget described in C.2., above and the acquisition price of the Sewer Easements, as described in C.5, below. County shall not

be obligated to commence an eminent domain proceeding to acquire any Sewer Easement until the surety bond has been submitted by Subdivider.

4. The County shall submit monthly invoices to Subdivider as the Negotiation/Litigation Costs described in paragraph C.1. are incurred. Each statement shall itemize and describe, with reasonable particularity, the Negotiation/Litigation Costs that have been incurred by County during the period covered by the invoices. These invoices shall be paid out of the amounts deposited by Subdivider into the Deposit Account. In the event the anticipated Negotiation/Litigation Costs of any particular phase are expected to exceed the amount in the Deposit Account, the County shall notify the Subdivider in writing of the anticipated additional amount needed and shall itemize and describe, with reasonable particularity the Negotiation/Litigation Costs necessitating the additional deposit. The County and Subdivider shall meet and confer to discuss the necessity of the additional deposit. The Subdivider shall deposit the identified additional amount into the Deposit Account within five (5) business days of the conclusion of the meet and confer discussion. County shall not be obligated to perform any additional acquisition activities or to continue its prosecution of any eminent domain proceeding to acquire any Sewer Easement until the additional deposit has been made by Subdivider..

5. Subdivider shall pay the acquisition price of the Sewer Easements, i.e., the negotiated purchase price (if the Sewer Easements are acquired through negotiation) or the total amount of compensation, including any monetary interest on said amount, and all costs and fees, which may be awarded in any eminent domain proceeding, or the amount of any settlement of any eminent domain proceeding (if the eminent domain proceeding is settled prior

to judgment).

D. Miscellaneous Terms

1. Subdivider shall promptly provide all information reasonably required by the County in connection with performing the actions described in section B., above, including making available any of its employees, consultants and/or contractors which County determines are necessary or helpful to performing the actions described in section C., above.

2. This Agreement shall be binding upon the parties, their heirs, successors or assigns.

3. Subdivider agrees to indemnify, defend and hold harmless COUNTY, its special districts, and its elected and appointed officials from and against any and all claims, actions, or challenges, liability or damages, related to compliance with CEQA and any other applicable environmental regulations or statutes, arising out of or incurred in connection with the acquisition, of the Sewer Easements (or any of them) and/or the construction and/or installation of the Offsite Improvements. This agreement to indemnify includes payment of any legal fees and defense costs incurred by COUNTY arising out of or related to the litigation or defense of any claims or challenges against COUNTY arising out of or incurred in connection with the acquisition, of the Sewer Easements (or any of them) and/or the construction and/or installation of the Offsite Improvements.

4. Notices to be effective pursuant to this Agreement shall be in writing, given and addressed as follows:

Subdivider: Forestar Chatsworth, LLC a Delaware limited liability company

Attention: Steve Cameron
4590 MacArthur Boulevard, Suite 600
Newport Beach, California 92660

County: County of Los Angeles Department of Public Works
Attention: Assistant Deputy Director

Alhambra, CA 91803

AND

County of Los Angeles
Office of County Counsel
Attention: _____
Kenneth Hahn Hall of Administration
500 West Temple Street
Los Angeles, CA 90012

5. Subdivider and the County agree to use their best good faith efforts to cooperate in prosecuting/defending any condemnation action or other litigation related to or arising out of the acquisition of the Sewer Easements. Cooperation as outlined in this paragraph is not intended to create a joint prosecution or defense, as applicable, relationship between the parties and expressly is not intended to waive any privilege or right of confidentiality held by County. The County will provide periodic updates/status reports to the Subdivider, or its designated representative or legal counsel, of the non-confidential status of any such litigation, including but not limited to, the procedural status of any court filings, law and motion decisions, discovery

served, retention of experts after disclosure or exchange of expert list, final pretrial settlement (to the extent not confidential or otherwise protected by law) and results of any trial. The County also agrees, when reasonably possible, to consider Subdivider's input on case strategy, anticipated court filings, retention of experts, and trial preparation, but County has no obligation to conform to or follow any such input from Subdivider. Subject to the provisions of Sections B.1 and B.5, County shall have the sole authority to conduct and manage any action or litigation and decide whether to appropriately resolve same and the terms of any settlement.

1.1 INTRODUCTION

This Final Environmental Impact Report (EIR) has been prepared in accordance with the *Los Angeles County Environmental Document Reporting Procedures and Guidelines* and the California Environmental Quality Act (CEQA) as amended (Public Resources Code Section 21000 *et seq.*), and *CEQA Guidelines* (California Administrative Code Section 15000 *et seq.*). The Final EIR contains the following components:

- Draft Environmental Impact Report, Deerlake Ranch (November 2001) (SCH No. 200061049)
- Draft Additional Environmental Information for Deerlake Ranch (July 2002) (SCH No. 200061049)
- Revised Project Design Summary Document for Deerlake Ranch (May 2003) (SCH No. 200061049)
- Response to Comments on the Draft EIR (December 2003) (SCH No. 200061049)
- Mitigation Monitoring Program (August 2003)

The above-listed documents are incorporated by reference into the Final EIR. The Mitigation Monitoring Plan, Additional Environmental Information, and Revised Project Design Summary Document are included as appendices in this document (Appendices D, P, and Q, respectively). The Final EIR is available for review at the Los Angeles County Department of Regional Planning and the following Los Angeles County Public Library:

Los Angeles County Library – San Fernando Branch
1050 Library Street
San Fernando, CA 91340

The above-listed CEQA documents are collectively referred to as the Final EIR. Environmental Findings have been prepared for the proposed project in accordance with Section 15091 of the *CEQA Guidelines*, and are contained in a separate document.

This document contains: (1) a revised project description, (2) revisions to the Draft EIR, (3) responses to written comments received on the Draft EIR, Additional Environmental Information document and Revised Project Design Summary document, (4) responses to comments received at Planning Commission public hearings, and (5) a series of updated technical studies and project related information.

The Draft EIR was distributed to various public agencies, citizen groups and interested individuals on November 27, 2001, for a period of 45 days, as required by CEQA. Appendix A of this document includes a distribution list and the Notice of Completion for the Draft EIR. The comment period technically closed on January 10, 2002. However, five public hearings were held in which the public was invited to present testimony to the Los Angeles County Planning Commission (January 23, 2002, April 10, 2002, June 19, 2002, August 21, 2002, and September 3, 2003) and comment letters were accepted by the County through the last Planning Commission hearing. Therefore the comment period for the Draft EIR has greatly exceeded the 45-day requirement per CEQA. A total of 444 letters were received by the Los Angeles County Department of Regional Planning from responsible agencies and special interest groups (see Appendix B of this document). This document includes responses to

individuals comments received during the public review period, as well as those presented at Planning Commission hearings.

Subsequent to circulation of the Draft EIR, two additional documents were prepared to evaluate revised projects and distributed to those who commented on the Draft EIR:

- The Draft Additional Environmental Information for Deerlake Ranch was prepared and circulated for public review (July 19, 2002 – August 19, 2002) at the request of the Regional Planning Commission. The Draft Additional Environmental Information document provided additional information relative to (1) the relationship of the proposed project to the proposed Santa Susana Mountains/Simi Hills Significant Ecological Area; (2) Alternative 2 – Certificate of Compliance build-out; (3) Reduced Density / Equestrian Alternative – Additional Alternative 4 (424 residential units); and (4) growth-inducing impacts. This document is included in Appendix P.
- Revised Project Design Summary Document for Deerlake Ranch was prepared and circulated for review (June 16, 2003 – July 30, 2003) in response to information provided by the project applicant, as well as, comments and testimony received on the Draft EIR during the public review period. This document presented the environmental setting and impact analysis relative to a reduced density project design (388 residential units). This document is included in Appendix Q.

Responses to comments received on the Draft EIR, Additional Environmental Information document, and the Revised Project Design Summary Document are included in this Final EIR.

Due to the amount of form letters received during the public review process, comprehensive topical responses have been prepared for major comment areas (biology, urban runoff, noise/dust, fire services, police services, traffic, development issues and other non-traffic issues) and are included in Section 4.2 of this document. These topical responses provide a comprehensive discussion of the issue and are referred to throughout Sections 4.3 through 4.7 of this document.

In addition to the response to comments, this documents contains revisions and additions to the Draft EIR as well as a series of appendices containing additional information relative to the response to comments portion of the document. This information comprises:

- Mitigation Monitoring Program
- Draft Conditions of Approval, including the applicant's community commitments
- Updated biological resources Information
- Updated geologic information
- Updated hydrologic information
- Storm Water Quality Mitigation Plan
- School facilities impact analysis
- Updated traffic study
- Land use technical memorandum
- Northerly property access technical memorandum
- Alternative access technical memorandum
- Community meetings – questions and answer summary
- Additional environmental documentation

All comments and public hearing testimony have been retyped, are numbered in sequential order, and are followed by responses. Responses to topical environmental issue area comments have been included in order to comprehensively respond to identified issues (see Section 4.1 of this document). Copies of all comment letters are included in Appendix B of this document.

In accordance with Public Resources Code 21092.5 of the *CEQA Guidelines*, this Final EIR will be provided to commenting public agencies a minimum of 10 days prior to certification of the EIR and available to other commenters at the Los Angeles County Department of Regional Planning and the above-designated public library.

1.2 REVISED PROJECT DESCRIPTION

Pursuant to direction from the Los Angeles County Regional Planning Commission, the project applicant has revised the project description in response to issues raised during public review process.

The project has been revised to reduce the total number of single-family residential units from 484 to 388. This includes 155 minimum 15,000 square foot estate lots, of which 55 would be equestrian lots, as a result of their location adjacent to the existing and proposed equestrian trails. The revised project description has been accommodated within the existing development footprint associated with the 484-unit project evaluated in the Draft EIR. A revised Vesting Tentative Tract Map (VTTM) has been submitted that reflects the Revised Project Design (see Appendix C.1).

Comments contained in Draft EIR comment letters and public hearing testimony were directed at the 484-unit plan evaluated by the Draft EIR. However, responses to comments have been prepared based upon the context of the 388-unit revised project design.

1.3 SUMMARY OF IMPACTS

The analysis in the Draft EIR confirmed that, except for grading, the originally proposed project would have the same (or in most cases, reduced) impacts as it pertains to the project site. The reduction in the total number of single-family residential units from 484 to 388 is a 20% reduction in impacts based on the lot count, primarily as a result of incorporation of larger lot sizes. Acreage-based impacts remain the same as evaluated in the Draft EIR, as the development footprint has not changed. The proposed project would not result in any significant impacts that have not already been discussed in the Draft EIR, and would not increase the severity of any previously discussed significant impacts. A summary of impacts contained in the Draft EIR is included as Table 1.1. This table has not been updated to reflect the 388-unit plan, as all impacts remain the same or are reduced.

1.4 SUMMARY OF MITIGATION AND CONDITIONS OF APPROVAL

After distribution of the Draft EIR, the applicant agreed to various community commitments and additional mitigation measures. This was based on discussions with members of the adjacent community, the City of Los Angeles Department of Transportation, and the California Department of Transportation. In addition, approval of the proposed project includes conditions established by the County of Los Angeles through various permits that are required for the project. All proposed community commitments, mitigation measures, and conditions of approval shall be incorporated into project design and implementation and tracked for compliance through the Mitigation Monitoring Program (see Appendix D of this document).

A summary of mitigation measures and conditions of approval is included in Table 1.2 (Summary of Mitigation Measures and Conditions).

Table I.1. Summary of Impacts

Environmental Impact	Unavoidable Impact After Mitigation
<p>AESTHETICS AND VISUAL RESOURCES</p> <p>Implementation of the proposed project would not result in significant impacts related to aesthetics or visual resources. Project implementation would result in the development of 388 single-family residences, which would be in keeping with the existing development and natural character of the surrounding area.</p> <p>The proposed project site would require 2.24 million cubic yards of cut and fill grading for development, modifying its topography. However, the primary natural topographic feature of this site (i.e., Devil Canyon) would not be impacted.</p> <p><u>Views From Adjacent Residential Uses</u></p> <p>The proposed project would alter the views of the existing residential uses to the west and immediately south of the site, and modify the nighttime appearance of the area. The project would not conflict with County goals or policies and therefore, impacts to views from residential areas are considered adverse but not significant.</p> <p><u>Views From Recreational Uses</u></p> <p>The aesthetic environment and views from adjacent equestrian and hiking trails would be altered with implementation of the proposed project. Homes in the southern portion of the development would also be visible from trails located along the northwestern boundary of the project site. The addition of lighting for the proposed project would also be visible from nighttime recreational uses in the vicinity. The project would not be visually inconsistent with the surrounding development and would not conflict with County goals or policies and therefore, impacts to views from recreational areas are considered adverse but not significant.</p> <p><u>Views From Scenic Highway Routes</u></p> <p>The view of the proposed project would be limited from County designated first priority scenic highway routes, SR-118 and Topanga Canyon Boulevard, due to topography. Therefore, impacts would be considered significant.</p> <p><u>Views from Long Distance Areas</u></p> <p>Views of the project site from distant cross-valley vantage points would be distant and relatively obscure due to the intervening distance. Views of the project site from long distance vantage points are not considered significant impacts.</p> <p><u>Cumulative Impact</u></p> <p>The location of the eleven related projects identified in Section 3.0 are sufficiently distant and/or in isolated viewsheds, such that they would not contribute cumulatively with the proposed project to aesthetic and view impacts. Continued development and urbanization of the Chatsworth area of the San Fernando Valley over time is resulting in a more urban setting. Given the evolving developed nature of the project locale, the combined effect on the views in the vicinity are similar to the project's impacts themselves, therefore, cumulative impacts are not considered significant.</p>	<p>None.</p>

1.0 Summary

Table 1.1. Summary of Impacts (continued)

Environmental Impact	Unavoidable Impact After Mitigation
<p>AIR QUALITY</p> <p><u>Construction</u></p> <p>Grading emissions would be associated with dozer operations and water trucks for dust control and with construction workers commuting to and from the project site. Construction emissions would vary with the grading/excavation activities. With implementation of dust control and mitigation measures, peak grading activity days would experience PM₁₀ emissions that are below the identified significance threshold. Temporary construction emissions would occur during project buildout and include on-site generation of dust and equipment exhaust, and off-site emissions from construction vehicular traffic. NOx would exceed the SCAQMD thresholds prior to application of mitigation measures.</p> <p><u>Operation</u></p> <p>Air pollutant emissions associated with project operation would not exceed SCAQMD thresholds for criteria pollutants. Therefore, impacts associated with project operation would not be significant.</p> <p><u>CO Hot Spots</u></p> <p>Implementation of the proposed project would not create any new violation with regard to CO hot spots and would not violate the standard. No significant impacts would occur.</p> <p><u>Consistency with Regional Plans</u></p> <p>The proposed project would be consistent with the AQMP and would not jeopardize the attainment of air quality standards.</p> <p><u>Cumulative Impact</u></p> <p>A buildout year of emission generating projects within the South Coast Air Basin or within the local sub-basin within a similar timeframe as the proposed project would increase the short-term emissions for concurrent activities during any day of the construction period. Since the worst-case construction emissions for the project were identified to be less than significant with mitigation, any additional construction activities during this time and in the vicinity of the proposed project site would be adding additional air pollutant emission burden to these less than significant levels.</p> <p>Operational emissions associated with the buildout of the proposed project would occur with emissions from other development projects in the vicinity. All projects projected to be built and operational within the project's timeframe would likely have impacts similar to those of the proposed project. However, as the Basin is in non-attainment, cumulative air quality operational impacts would be considered significant.</p>	<p>None.</p>
<p>BIOLOGICAL RESOURCES</p> <p><u>Vegetation Impact</u></p> <p>A total of 176.44 acres (153.90 acres of permanent impact and 22.54 acres of partial fuel modification impact) of on-site vegetation would be impacted by project implementation. Sixty-five of the existing 353 oak trees located on the project site would be removed; however, none of these oak trees are of heritage status. Approximately 0.02 acre of willow woodland would be impacted under the proposed project.</p>	<p>None.</p>

Table 1.1. Summary of Impacts (continued)

Environmental Impact	Unavoidable Impact After Mitigation
<p>Implementation of the proposed project would result in the loss of approximately 61.02 acres and 1,800 individuals of Plummer's mariposa lily. However, measures have been included to mitigate these impacts to less than significant.</p> <p><u>Wildlife Impacts</u></p> <p>The project site does not represent an important wildlife movement corridor and implementation of the proposed project would not result in an impact to any state- or federally-listed wildlife species. There is, however, a potential for impacts to two pairs of ash y rufous-crowned sparrows and to migratory birds and/or raptors during breeding season.</p> <p><u>Jurisdictional Impact</u></p> <p>The proposed project would impact approximately 18,860 square feet (0.43 acre) of on-site Corps jurisdictional waters of the United States. None of the impacted areas constitute jurisdictional wetlands. The proposed project would impact approximately 59,805 square feet (1.37 acres) of on-site CDFG jurisdiction. Vegetated riparian habitat within the CDFG jurisdiction is approximately 42,095 square feet (0.97 acre). Two bridge crossings of Devil Canyon would span the drainage and avoid direct impacts to jurisdictional areas.</p> <p><u>Indirect Impacts</u></p> <p>Residential development encroachment into open space areas would increase wildlife disturbance through increased recreational use and household pets. Night light sources would likely have little impact on open space habitats, especially high-quality habitat in canyons below the development. However, proposed open space (including lands previously dedicated) have sufficient cover and isolation from indirect effects of development. The proposed project would impact surface water quality during the construction period. However, these impacts would be mitigated with the development of a Standard Urban Stormwater Mitigation Plan.</p> <p><u>Cumulative Impact</u></p> <p>Implementation of the proposed project would not contribute to a cumulative loss or degradation of Corps and CDFG jurisdiction, sensitive vegetation associations or habitats, and federally- and/or state-listed plants or animals. However, the proposed project would result in adverse, but not significant, impacts to common wildlife species and ash y rufous-crowned sparrow and adverse cumulative, but not significant, impacts to Plummer's mariposa lily. The applicant is proposing to dedicate a strip of land along the northern portion of the project site to the Santa Monica Mountains Conservancy, which will effectively restrict any future access to, and development of areas north of the project site.</p>	<p>None.</p>
<p>CULTURAL RESOURCES</p> <p><u>Project Impact</u></p> <p>Eight archaeological sites were recorded and had the potential to be significant. Three sites were thought to be historical and five sites either revealed small artifacts prehistoric in description or revealed no archaeological objects of any significance. As a result of fieldwork, implementation of the proposed project would not result in adverse impacts to significant cultural resources.</p> <p><u>Cumulative Impact</u></p> <p>Although the cumulative total of all related project development creates the potential for additional impact to archaeological resources, each project must develop adequate mitigation measures to substantially decrease or avoid impacts. As all archaeological resources on the project site have been recovered, no significant cumulative loss of cultural resources would occur and impacts would not be significant.</p>	<p>None.</p>

1.0 Summary

Table 1.1. Summary of Impacts (continued)

Environmental Impact	Unavoidable Impact After Mitigation
<p>GEOLOGY AND SOILS</p> <p><u>Project Impact</u></p> <p>No observable Holocene Age faults occur on the project site. Older faulting does occur on-site as existing zones of weakness that may be susceptible to minor displacement as a secondary response to primary faulting along nearby active faults. However, the proposed project has been designed to mitigate this condition through the construction of uniform, engineered fill cap in conjunction with stiffened foundation systems in these locations.</p> <p>Two landslides and several areas of superficial instability have been mapped near the project site. The area in the north portion of the project site would not be graded and capacity has been provided within a proposed debris basin. The landslide in Devil Canyon is considered potentially unstable where facing east, northeast or north, and seven proposed lots within that area would require mitigation. Implementation of the proposed project would involve excavating an estimated 2.24 million cubic yards of earth with the majority of the graded cuts less than 40 feet deep and the maximum cut slope at 100 feet. Erosion associated with site preparation would be temporary and would cease upon completion of construction activities. No significant erosion impacts would result from the proposed project.</p> <p><u>Cumulative Impact</u></p> <p>Impacts related to geology and soils are primarily based upon site-specific conditions. No soils would be moved off-site. All cumulative development would be subject to similar requirements to those imposed and implemented on the proposed project and would be required to adhere to applicable regulations, standards, and procedures. The proposed project would not result in significant cumulative impacts with regard to geology and soils.</p>	<p>None.</p>
<p>HYDROLOGY AND WATER QUALITY</p> <p><u>Project Impact</u></p> <p>Implementation of the proposed project would leave approximately 76 acres or 33 percent of the site undeveloped. Although peak storm water runoff from these pervious surfaces would increase during significant storm events, the total peak storm water runoff volume from the entire drainage area, including the site after development, would be reduced because of the removal of approximately 4,590 cubic yards of solid (bulk and burn) materials by four proposed debris basins, and the removal of 44.2 acres of vegetation for building and paving. Implementation of the proposed project would result in a decreased flow due to inclusion of four debris basins in the project design. The proposed project would be constructed to the standards and specifications of the Los Angeles County Department of Public Works. In addition, a SUSMP would be developed for the project to further ensure impacts would be less than significant. Impacts would not be significant.</p> <p><u>Cumulative Impact</u></p> <p>Under existing conditions, the peak storm water runoff from all areas tributary to Devil Canyon is 14,320 cfs, including bulk and debris matter carried by the runoff water. Of that volume, 876.4 cfs is attributable to runoff from areas within the project site. The future development of 12 lots which are currently not included in the project, but are located within the development "envelope" of the site (as shown on VTTM), would have no calculable effect on the volume of storm water runoff from the project site. After construction of four debris basins, which will remove approximately 4,590 cubic yards of debris, the peak storm water runoff from the project site would be</p>	<p>None.</p>

1.0 Summary

Table 1.1. Summary of Impacts (continued)

Environmental Impact	Unavoidable Impact After Mitigation
<p>reduced from 876.4 to 458.0 cfs. The cumulative impact of the proposed project on the Devil Canyon drainage course would be to reduce the peak storm water runoff from 14,320 to 13,901.6 cfs, and to reduce the total debris discharged into the canyon by approximately 4,590 cubic yards. Therefore, cumulative impacts would be less than significant.</p> <p>NOISE</p> <p><u>Construction</u></p> <p>Varying levels of construction noise may be heard in different parts of the project site during the project's total construction period. With the combination of an adequate distance buffer, terrain shielding, and compliance with County ordinances, construction activities would not result in a significant noise impact.</p> <p><u>Traffic Noise</u></p> <p>Without consideration of background freeway noise, the proposed project would create a maximum off-site noise impact of 6.9 dB above the future no project condition. However, when background freeway noise is considered, the greatest project increase would be 1.9 dB. All other roadway segments would experience a noise contribution of 2.0 dB or less. Off-site noise impacts would be less than significant.</p> <p><u>On-Site Noise</u></p> <p>Some lots would have a maximum noise exposure of 73 dB CNEL; Other lots would have an exterior loading of 65 to 72 dB CNEL. The remainder of the project site would have an exterior loading of less than 65 dB CNEL. However, with implementation of mitigation, impacts would not be significant.</p> <p><u>Cumulative Impact</u></p> <p>Increases in noise levels due to the proposed project would be less than 3 dB(A) and would not create a discernable change in noise levels. Implementation of the proposed project would not result in a significant cumulative adverse impact upon the environment.</p> <p>PUBLIC SERVICES - FIRE PROTECTION</p> <p><u>Project Impact</u></p> <p>The County Fire Department has indicated that the level of staff is adequate to meet fire suppression and emergency medical needs to the proposed project and that no additional staff or service would be required. However, the maximum distance criteria (three miles) would be exceeded. To ensure that fire protection and emergency needs are adequately met, the City of Los Angeles, under an automatic aid agreement with the County, would render primary services. The City Fire Department has indicated that the level of staff is adequate to meet the needs of the proposed project.</p> <p>The proposed project would not conflict with applicable County Fire Department Code and ordinance requirements or standards for construction, access, water mains, fire-flow and fire hydrants and would not impair emergency access to the site or cause an increase in emergency response times.</p> <p>The project site is located in an area designated as Fire Zone 4 (Very High Fire Hazard Severity Zone). However, with implementation of a Fuel Modification Plan, wildfire impacts would be less than significant.</p>	<p>None.</p>
<p>PUBLIC SERVICES - FIRE PROTECTION</p> <p><u>Project Impact</u></p> <p>The County Fire Department has indicated that the level of staff is adequate to meet fire suppression and emergency medical needs to the proposed project and that no additional staff or service would be required. However, the maximum distance criteria (three miles) would be exceeded. To ensure that fire protection and emergency needs are adequately met, the City of Los Angeles, under an automatic aid agreement with the County, would render primary services. The City Fire Department has indicated that the level of staff is adequate to meet the needs of the proposed project.</p> <p>The proposed project would not conflict with applicable County Fire Department Code and ordinance requirements or standards for construction, access, water mains, fire-flow and fire hydrants and would not impair emergency access to the site or cause an increase in emergency response times.</p> <p>The project site is located in an area designated as Fire Zone 4 (Very High Fire Hazard Severity Zone). However, with implementation of a Fuel Modification Plan, wildfire impacts would be less than significant.</p>	<p>None.</p>

Table 1.1. Summary of Impacts (continued)

Environmental Impact	Unavoidable Impact After Mitigation
<p><u>Cumulative Impact</u></p> <p>The cumulative residential population increase for the proposed project in conjunction with related projects is expected to collectively increase demand for the County's fire protection services. As with the proposed project, the related projects would contribute via property taxes to the County's funding for fire protection services, which would serve to offset these impacts. All projects would be subject to protection and safety measures to comply with the Department's development review criteria. Implementation of the proposed project would not result in a significant impact with regard to emergency access to the site.</p> <p>PUBLIC SERVICES - POLICE PROTECTION</p> <p><u>Project Impact</u></p> <p>Implementation of the proposed project would include physical changes to the environment and would increase resident population. Although this increase would not result in a significant change in the current officer to resident ratio, the Sheriff's Department indicated implementation of the project would require additional officers. The project applicant has agreed to contribute funds to construct a facility suitable for use as a Sheriff Department Substation to Service the project area. The new facility would be approximately 800 square feet in size and located near the Topanga Canyon Blvd. entrance to the project site. In addition, implementation of the proposed project would serve to increase the existing funding mechanisms (i.e., property taxes) for any additional officers required to serve the project area. Therefore, impacts would not be considered significant. Emergency access to the site would be improved and therefore associated impacts would not be significant.</p> <p><u>Cumulative Impact</u></p> <p>Cumulative increase in residential population would require approximately 1.15 additional police officers in order to maintain the current level of service. However, impacts would not be significant as the related projects would also serve to increase existing funding mechanisms for any additional officers to serve the area. Cumulative impacts would not be significant.</p>	<p>None.</p>
<p>PUBLIC SERVICES – SCHOOLS</p> <p><u>Project Impact</u></p> <p>Based on the current student generation factors for single-family residential uses an estimated 494 total students would be generated by the proposed project (208 elementary, 121 middle school, and 165 high school students). The estimated elementary and high school students generated as a result of the proposed project are anticipated to result in significant impacts to LAUSD elementary and high school services, while the estimated middle school students generated as a result of the proposed project are not anticipated to result in significant impacts to LAUSD middle school services.</p> <p><u>Cumulative Impact</u></p> <p>An estimated 3,834 total students would be cumulatively generated (1,616 elementary, 940 middle school, and 1,278 high school students). This would result in a deficit of elementary school space of 649 students, the majority associated with Porter Ranch, a deficit of space of 510 students at the middle school level and a deficit of space of 1,306 at the high school level. However, Porter Ranch has entered an agreement with LAUSD to provide capacity within the district to accommodate further growth in the area associated with Porter Ranch. In addition, as with the proposed project, all related projects would be required to pay applicable developer fees to offset these impacts. Therefore, cumulative impacts would not be significant.</p>	<p>None.</p>

1.0 Summary

Table 1.1. Summary of Impacts (continued)

Environmental Impact	Unavoidable Impact After Mitigation
<p>LIBRARIES</p> <p><u>Project Impact</u> Implementation of the proposed project would result in a total of 401 square feet of library space and 2,289 additional items. Los Angeles County Ordinance requires that new residential subdivisions pay a library fee to ensure that new projects mitigate impacts to library facilities. As the developer would pay the applicable fees to offset potential capacity deficits in local schools, no significant impacts are anticipated.</p> <p><u>Cumulative Impacts</u> Cumulative project impacts would include a total of 631 square feet of library space and 3,606 additional items. Applicable fees would be paid for new residential subdivisions as required by the Los Angeles County ordinance. Therefore, no significant impacts would occur.</p>	<p>None.</p>
<p>TRANSPORTATION/TRAFFIC</p> <p><u>Construction</u> Development of the project would have short-term effects on vehicular traffic during the grading and excavation phase. However, these impacts would be would not be significant.</p> <p><u>Operation</u> Implementation of the proposed project would generate approximately 3,608 daily trips and would result in significant impacts to three of the study intersections: Topanga Canyon Boulevard & SR-118 WB On/Off-ramps; Topanga Canyon Boulevard & SR-118 EB On/Off-ramps; and De Soto Avenue and Chatsworth Street. The remaining ten study intersections would have incremental, but not significant impacts.</p> <p><u>CMP</u> The proposed project would result in a project impact at one of the CMP monitoring stations (Topanga Canyon Boulevard & SR-118 WB On/Off-ramp) during the A.M. and P.M. peak hours. Based on the threshold criteria for a Traffic Impact Assessment for conducting impact evaluations on freeway segment monitoring locations, it was concluded that the proposed project would not add 150 or more trips, in either direction, at the CMP mainline freeway monitoring locations. Therefore, no impact would occur and further analysis is not required.</p> <p><u>Transit System</u> As a result of the proposed project, the existing transit demand would be increased by up to 19 to 24 persons during the A.M. and P.M. peak hours, respectively. In addition, a total of 239 daily person trips on public transit are forecasted. Additional ridership due to implementation of the proposed project would not have a significant impact on the public transit system.</p> <p><u>Cumulative Impact</u> The analysis for the proposed project is based on methodologies that incorporate the cumulative effects of traffic from general growth and anticipated nearby projects. Although project implementation would result in significant impacts, these impacts would be less than significant with mitigation.</p>	<p>None.</p>

1.0 Summary

Table 1.1. Summary of Impacts (continued)

Environmental Impact	Unavoidable Impact After Mitigation
<p>UTILITIES AND SERVICE SYSTEMS – WATER SUPPLY</p> <p><u>Consistency with Regulatory Plans and Projections</u></p> <p>The proposed project is consistent with the Los Angeles County General Plan Land Use element within the LVMWD service area. The proposed project is consistent with the LVMWD's Master Plan and UWMP and would not have a significant impact on the LVMWD's ability to meet its objectives as prescribed in the California water code.</p> <p><u>Project Impact</u></p> <p>Implementation of the proposed project would result an average daily water demand of approximately 393,558 gallons per day (441 acre feet/year). This represents less than three percent of LVMWD supply and would not result in a significant impact.</p> <p><u>Cumulative Impact</u></p> <p>The cumulative demand for water with implementation of the proposed project would result in approximately 24,603 acre feet per year in 2005. As previously mentioned, the LVMWD would be able to accommodate the required water supply demand of the proposed project and does not anticipate any water availability shortfalls which would affect the demands of the District, assuming cumulative growth.</p>	<p>None.</p>
<p>UTILITIES AND SERVICE SYSTEMS – WASTEWATER</p> <p><u>Project Impact</u></p> <p>The proposed project would generate approximately 135,800 gallons of wastewater per day. No metering station would be required. A portion of the City sewer main within Canoga Avenue (Outlet Point No. 2) would not have adequate capacity to accommodate sewage associated with the proposed project. Portions of the sewer main would be reconstructed or paralleled in order to provide adequate capacity for the proposed project, plus future demands. Adequate future capacity exists in the Hyperion Treatment Plant expansion project to serve the future needs of the LVMWD service area. The proposed project is consistent with the County's General Plan Land Use Element, and thus is consistent with population growth projections used by the LVMWD.</p> <p><u>Cumulative Impact</u></p> <p>The cumulative impact of the proposed project would not result in a significant impact.</p>	<p>None.</p>
<p>UTILITIES AND SERVICE SYSTEMS - SOLID WASTE</p> <p><u>Construction</u></p> <p>Impacts stemming from the disposal of construction-related solid waste would be less than significant due to the limited disposal activity as well as the Sanitation Districts implementation and operation of a resource and recovery program.</p> <p><u>Operations</u></p> <p>Implementation of the proposed project would result in the generation of approximately 4,745 pounds of solid waste per day (approximately 2.37 tpd). This represents 0.02 percent of the authorized, maximum solid waste disposal rate for Puente Hills Landfill, and no significant impact would occur with regard to solid waste generation and landfill capacity.</p>	<p>None.</p>

1.0 Summary

Table 1.1. Summary of Impacts (continued)

Environmental Impact	Unavoidable Impact After Mitigation
<p><u>Cumulative Impact</u> The proposed project and related projects would be expected to cumulatively generate approximately 36,818 pounds (18.4 tons) of solid waste per day. This is approximately 0.14 percent of the maximum disposal rate for Puente Hills Landfill, and no significant cumulative impacts would occur.</p>	
<p>UTILITIES AND SERVICE SYSTEMS – ELECTRICITY</p> <p><u>Project Impact</u> Implementation of the proposed project would result in the consumption of approximately 2,183,082 kWh of electricity per year. SCE has stated should a shortage of energy and/or generating capacity ever occur, the utility will apportion its available supply as set forth in Rule 14. It is not anticipated that development of the proposed project would significantly impact the supply of electricity or exceed the planned capacity of existing electricity distribution systems. No significant impacts would occur.</p> <p><u>Cumulative Impact</u> The proposed project and related projects would be expected to cumulatively consume approximately 2,308,792 kWh of electric power per year. No significant impacts would occur to electrical facilities or existing electrical supplies.</p>	None.
<p>UTILITIES AND SERVICE SYSTEMS – NATURAL GAS</p> <p><u>Project Impact</u> The proposed project would consume an estimated 31,032 Mcf of natural gas per year. Although no natural gas facilities are located on the project site at this time, The Gas Company has indicated that sufficient natural gas facilities exist in the project vicinity and gas service to the proposed project site could be provided. No significant impacts would occur.</p> <p><u>Cumulative Impact</u> The proposed project and related projects would cumulatively consume approximately 222,354 Mcf of natural gas per year. The Gas Company has indicated that sufficient natural gas facilities exist and gas service for cumulative projects could be provided. No significant cumulative impacts would occur.</p>	None.

1.0 Summary

Table 1.2. Summary of Mitigation Measures and Conditions

Issue Area	EIR Mitigation Measure	Condition of Approval		
		VTTM	CUP	Oak Tree Report
AESTHETICS AND VISUAL RESOURCES				
The primary east-west ridgeline along the northern project boundary shall be retained in undisturbed natural open space to provide a natural viewshed backdrop.	X			
Approximately 70 acres of the project site has been, or is proposed to be, dedicated to the SMMC for preservation of significant aesthetic resources. Those portions not currently dedicated as undisturbed open space shall be dedicated prior to issuance of a grading building permit	X			
A comprehensive landscape plan (as shown in Figure 2.10) shall be approved by the County, prior to the issuance of a grading permit	X			
AIR QUALITY				
<i>Dust Control:</i> The following dust control measures shall be implemented in accordance with South Coast Air Quality Management District (SCAQMD) Rule 403, <i>Fugitive Dust</i> , including:	X		X	
<ul style="list-style-type: none"> Active construction areas shall be watered at least three times daily, or four times daily if there is evidence of fugitive dust Apply water twice per hour on unpaved roads and restrict vehicle speeds to 15 mph All haul trucks shall be covered or shall maintain at least two feet of freeboard. All unpaved parking or staging areas shall be watered four times daily. Site access points shall be swept or washed within 30 minutes of any visible dirt deposition on any public roadway. On-site stockpiles of debris, dirt, or other dusty material shall be watered daily over 80 percent of their surface areas or covered Minimize the areas of brush clearance in advance of grading operations to minimize areas susceptible to fugitive dust 				
<i>Emissions:</i> The following measures shall be implemented to control emissions related to construction activities:	X			
<ul style="list-style-type: none"> Off-road construction equipment built within the last ten years shall be utilized. Off-road construction equipment shall have low-NO_x tune-ups every 90 days. Idling of trucks and heavy equipment shall be limited to 10 minutes. 				

Table I.2. Summary of Mitigation Measures and Conditions (continued)

Issue Area	EIR Mitigation Measure	Condition of Approval		
		VTTM	CUP	Oak Tree Report
<p><i>Off-site impacts:</i> The following measures shall be implemented to control emissions related to off-site impacts:</p> <ul style="list-style-type: none"> • Lane closures shall be limited to off-peak travel periods. • Construction vehicles shall not be parked on heavily traveled roadways. • Receipt of materials shall be encouraged during non-peak traffic hours. • Ride-share incentives shall be provided for contractor and subcontractor personnel. <p>Homes shall be built to meet minimum statewide energy conservation requirements.</p> <p>Homes shall include as an option the following residential design features that encourage trip elimination or trip diversion to alternative transportation:</p> <ul style="list-style-type: none"> • Prewiring for various telecommunications systems access for in-home offices. 	X		X	
BIOLOGICAL RESOURCES				
<p>An off-site mitigation parcel shall be dedicated to County or a public conservation agency to the satisfaction of the County Department of Regional Planning. The mitigation parcel shall be of a minimum size of the collective total of all on-site project-sensitive vegetation impacted (but not less than 68 acres) and shall be adjacent to or and contiguous with permanent open space of comparable size.</p> <p>The applicant shall mitigate impacts to 0.03 acre of on-site willow woodland based on recommendations of the project biologist (see Appendix G) and to the satisfaction of the CDFG and the County Department of Regional Planning. The mitigation plans shall be reviewed and approved by these agencies prior to the issuance of grading permits. This mitigation measure shall be implemented on the mitigation parcel with 0.12 acre (representing a 4:1 ratio).</p> <p>All eucalyptus shall be removed from open space portions of the project site to enhance the biological values of open space areas, reduce the risk of a canopy fire, and prevent further encroachment of eucalyptus into native habitats to the satisfaction of the County Department of Regional Planning prior to the issuance of grading permits. To avoid impacts on nesting birds, such removal shall be implemented outside of the avian nesting season from March 15 to August 15.</p>	X			
	X			

Table 1.2. Summary of Mitigation Measures and Conditions (continued)

Issue Area	EIR Mitigation Measure	Condition of Approval	
		VTTM	CUP Oak Tree Report
<p>Impacts on Plummer's mariposa lily shall be mitigated through a 2:1 replacement of impacted individuals for a total of 4,000 for an impact of 2,000 and an additional 1:1 replacement through preservation. Relocated Plummer's mariposa lily shall be planted on the mitigation parcel. A qualified biologist/botanist shall oversee all aspects of this mitigation plan, including bulb and seed collection and transplanting, per the recommendations of the project biologist (see Appendix G). Seed collection shall occur prior to collection of bulbs from all plants within the development envelope. The Plummer's mariposa lily mitigation plan shall be reviewed and approved by the Los Angeles County Department of Regional Planning, prior to issuance of grading permits. Maintenance of relocated Plummer's mariposa lilies shall be monitored for a period of five years. Annual monitoring reports shall be submitted to CDFG and the County Department of Regional Planning.</p> <p>The Plummer's mariposa lily salvage, propagation, and transplanting program is designed to retrieve a sizable portion of the on-site bulbs for use in both on-site and off-site habitat enhancement. Another component of this effort is researching and documenting methods that lead to successful long-term establishment of transplanted bulbs. This includes bulbs collected and transplanted directly to a site within the same year, stored bulbs, and bulbs grown from seed in a nursery.</p> <p>The salvage program shall consist of the following components:</p> <ul style="list-style-type: none"> • Prior to grading, seed shall be collected and all flagged/mapped bulbs and any bulbs uncovered during removal shall be salvaged. A minimum of 4,000 bulbs shall be collected (this represents a 2:1 replacement ratio). If 4,000 bulbs do not inhabit the project site, all bulbs found shall be collected. • All bulbs shall be stored at a qualified native plant nursery. • 40% of the bulbs shall be used for transplantation to on-site and off-site preserved habitat in the fall/winter immediately following salvage. • 20% of the bulbs shall be propagated at a qualified native plant nursery to collect seed for starting new plants for transplantation to preserved areas, both on-site and off-site. • 40% of bulbs shall be stored for a period of five years for annual or biannual planting in preserved areas, as determined by a qualified biologist. • All transplanted bulbs shall be maintained, including weed control. • Monitoring and reporting shall be conducted. 	X		

1.0 Summary

Table 1.2. Summary of Mitigation Measures and Conditions (continued)

Issue Area	EIR Mitigation Measure	Condition of Approval		
		VTTM	CUP	Oak Tree Report
A Standard Urban Storm Water Mitigation Plan (SUSMP) shall be in place to direct prevention and/or minimization of storm water runoff from the work site during construction to prevent or minimize impacts on riparian and wetland vegetation and its associated species. The SUSMP shall be subject to the approval and satisfaction of the County Department of Public Works.	X	X		
For the proposed bridges, special construction methods as recommended by the project bridge engineer and to the satisfaction of the County Department of Public Works shall be implemented to incorporate clear spans across Devil Canyon.	X			
Coastal sage impacts of 2.39 acres shall be mitigated to the satisfaction of the County Department of Regional Planning through the preservation of a minimum of 4.78 acres (which represent a 2:1 ratio) of coastal sage scrub or coastal sage scrub/chaparral ecotone on the mitigation parcel.	X			
Coast live oak woodland impacts of 1.3 acres shall be mitigated to the satisfaction of the County Department of Regional Planning through the preservation of 2.6 acres (which represent a 2:1 mitigation ratio) on the project site and the mitigation parcel.	X			
All manufactured slopes outside of the irrigated fuel modification zone shall be landscaped with locally indigenous plant materials in accordance with the conceptual landscape plan (see Figure 2.10) and to the satisfaction of the County Department of Regional Planning.	X		X	
All 61 impacted oak trees shall be mitigated (2:1 replacement with 15-gallon trees for removed trees). No heritage oaks shall be impacted by the proposed project. A minimum of 122 15-gallon oak trees shall be planted in appropriate habitat areas on the project site and/or within the mitigation parcel, as approved by the County Forester and Fire Warden. All oak tree mitigation shall be monitored by a qualified arborist, in accordance with the established preservation program included in the Oak Tree Report (see Appendix H of the Draft EIR).	X			X
Copies of the final Oak Tree Report shall be reviewed and approved by the Los Angeles County Forester and Fire Warden, and the County approved Oak Tree Permit shall be maintained on-site during construction. Implementation of work approved by the Oak Tree Permit shall not begin prior to issuance of a grading permit.	X		X	X

1.0 Summary

Table 1.2. Summary of Mitigation Measures and Conditions (continued)

Issue Area	EIR Mitigation Measure	Condition of Approval		
		VTTM	CUP	Oak Tree Report
<p>Prior to any construction activity, the applicant shall have a qualified biologist survey the project site for the presence of any occupied raptor nests, including Cooper's hawks, as protected by the Migratory Bird Treaty Act. If such a nest is found, it shall be avoided and protected until nesting activity has ended to ensure compliance with Section 3503.5 of the CDFG, based on the recommendations of the project biologist (see Appendix G). During nesting (March 15 to August 15), occupied nests shall be avoided through implementation of a 300-foot buffer zone for nesting birds and a 500-foot buffer zone for nesting raptors. Should construction activities encroach into these identified buffer zones, noise barriers shall be constructed to minimize noise impacts to the birds and ensure that noise levels do not exceed 65db CNEL.</p>	X			
<p>Light poles shall be 14 feet high instead of 26 feet high and all streetlights potentially affecting open space areas shall be fitted with baffles to eliminate direct shine into open space areas. Light standards shall be equipped with low-pressure sodium lamps to minimize nighttime glare. Security lighting shall be low-intensity, shielded, directed downward and away from open space areas.</p>	X			
<p>Mitigation required for impacts on areas identified within the jurisdiction of the Corps' CWA Section 404 Permit and/or a CDFG Section 1603 Streambed Alteration Agreement shall be determined during agency permitting subsequent to EIR certification. The applicant shall be responsible for the development of a mitigation plan in accordance with the Corps' Mitigation and Monitoring Guidelines and shall include those measures required by CDFG' Final Corps and CDFG mitigation plans shall be provided to the County Department of Regional Planning.</p>	X			
<p>If earthmoving activities are scheduled to start at the site between April 10 and August 15 (the vireo nesting season) a qualified biologist will perform a one-day survey of the potential vireo habitat for the presence of nesting vireos not more than seven days prior to the start of such earthmoving activities. If any nesting vireos are observed, no work (vegetation clearing, earthmoving, or construction) may occur on the plateau above the riparian habitat within 150 feet of the nest, or in the riparian habitat within 500 feet of the nest. If any nesting vireos are observed, the qualified biologist will monitor activities occurring with 1,000 feet of the nest to ensure compliance with this condition.</p>	X			

¹ On March 27, 2000, the Corps issued a provisional verification that the property complies with the terms of Nationwide Permit NW22.

1.0 Summary

Table 1.2. Summary of Mitigation Measures and Conditions (continued)

Issue Area	EIR Mitigation Measure	Condition of Approval		
		VTTM	CUP	Oak Tree Report
If earthmoving activities start outside the vireo nesting season (August 16 through April 9), no additional vireo surveys will be required, unless (during the vireo nesting season) said work ceases for a period of more than 15 days before beginning again. In such case, the restart of earthmoving activities will be considered as a new start of earthmoving activities, subject to the condition above.	X			
CULTURAL RESOURCES				
A qualified archaeological monitor shall be present during grading in areas of the previously recorded and examined archaeological sites.	X			
GEOLOGY & SOILS				
All grading shall be accomplished under the discretion of the project geotechnical engineer in accordance with the requirements of the County.	X	X		
A uniform, engineered fill cap shall be constructed in conjunction with stiffened foundation systems to manage ground rupture potential. The depth of removal and recompaction associated with construction of these fill caps shall be on the order of 5 to 10 feet to provide a homogenous buffer to the overlying foundations. These precise locations of these fill caps, including thickness, shall be developed as a part of a detailed geotechnical report in conjunction with the final project grading plans.	X			
Design of structures shall be based on the UBC (Uniform Building Code) 1997 seismic design methods incorporating the PGA values as computed in the geotechnical report found in Appendix G.	X			
Shallow soils shall be removed beneath structures and/or proposed fill.	X			
Where development is proposed at the top and/or toe of slope and development and cannot be avoided within a 2:1 projection from the toe of the slope (i.e., an area within the northeastern portion of the site), the slope shall be stabilized, which may consist of dewatering, offloading, or supporting these slopes using conventional hillside development methods and shall be designed on the basis of a detailed slope stability analysis as part of the final project grading plan.	X			
Proposed cut slopes and fill slopes shall be at a slope no steeper than 2:1. These slopes shall be constructed using typical slope drainage systems in accordance with the 1997 UBC, including mid-slope drainage swales and brow ditches, and are subject to typical homeowners maintenance requirements.	X			

1.0 Summary

Table 1.2. Summary of Mitigation Measures and Conditions (continued)

Issue Area	EIR Mitigation Measure	Condition of Approval		
		VTTM	CUP	Oak Tree Report
Prior to grading, the project site shall be grubbed and cleared of all vegetation and debris. The vegetation and debris shall be properly disposed of off-site, or it may be mulched on site and used for landscape cover as directed by the project landscape architect.	X			
Site preparation and earthwork operations shall be performed in accordance with applicable provisions of the 1997 UBC, unless specifically revised or amended by the geotechnical engineer, and in accordance with all applicable requirements.	X			
On slopes flatter than 5:1 and in drainage swales, separate cleanout operations may be necessary. During benching, colluvium shall be removed to firm material as evaluated by the geotechnical engineer. The overexcavated materials shall be moisture-conditioned and recompacted as structural fill in accordance with the recommendations for engineered fill. The specific depth and extent of removals shall be evaluated during the actual earthwork operations, based on grading observations and testing.	X			
Subsurface exploration, sampling, and laboratory analysis shall be performed to provide shrink/bulk estimates to be used in conjunction with design civil and contractor information for similar projects in similar earth units.	X			
All fill soils shall be compacted as engineered fill. Engineered fill shall be uniformly moisture-conditioned to near optimum moisture content, placed in horizontal lifts less than eight inches in loose thickness, and compacted to at least 90 percent relative compaction. All fill placed at depths greater than 50 feet below final site grades shall be compacted to at least 95 percent relative compaction. Additional fill lifts shall not be placed if the previous lift did not meet the required dry density or if soil conditions are not stable.	X			
The following measures shall be completed to reduce temporary cut slope failure during construction: <ul style="list-style-type: none"> • Reduce the time between slope excavation and reconstruction operations to the extent possible. • Prevent water infiltration into slope materials prior to and during excavation. • Construct slopes at inclinations no steeper than 1.5:1. • Adjust the project schedule as needed so that temporary slopes are excavated and left exposed only during the dry months of the year. 	X			

1.0 Summary

Table 1.2. Summary of Mitigation Measures and Conditions (continued)

Issue Area	EIR Mitigation Measure	Condition of Approval		
		VTTM	CUP	Oak Tree Report
In areas where steep slopes may be unstable and exist adjacent to proposed areas of development, stabilization can be accomplished by typical hillside methods. Such slope reinforcement methods range from revegetation to construction of mechanically stabilized earth (MSE) systems and retention systems.	X			
Proposed structures may be supported on shallow, reinforced concrete, spread footings founded entirely on engineered fill. Footings shall not transition from fill to bedrock conditions. Foundations shall have a minimum width of 24 inches and shall be placed at a minimum depth of 18 inches below the lowest adjacent grade or adjacent finish floor elevation, whichever is lower. An allowable pressure of 3,000 pounds per square foot (psf) for dead plus sustained live loading is suitable for preliminary design. Foundation preparation necessary to improve soils to provide this capacity shall be evaluated during the design.	X			
A soils engineer shall be retained to evaluate the corrosive potential of soil on concrete foundations, and to, recommend appropriate concrete specifications.	X			
HYDROLOGY AND WATER QUALITY				
The proposed project shall be designed and constructed in compliance with National Pollution Discharge Elimination System (NPDES) permit and all applicable state and local water quality requirements.	X		X	
A Standard Urban Storm Water Mitigation Plan (SUSMP) shall be developed for the project site that shall identify pollutant sources that may affect the quality of storm water discharges during construction (see Appendix I of the FEIR). The SUSMP shall include various pollution prevention measures such as erosion control, dust control, and will provide the comprehensive Best Management Practices (BMPs) Guide to contractors during site construction, as contained in the <i>Best Management Practice Handbook</i> , California Stormwater Quality Task Force, Sacramento, CA, 1993, or latest revised edition.	X		X	
A Standard Urban Storm Water Mitigation Plan (SUSMP) shall be developed for the project site identifying any pollutant sources that may affect storm water quality after project completion. The following measures shall be included in the SUSMP: <ul style="list-style-type: none"> Continuous Deflection System (CDS) filters shall be installed at each storm drain discharge location prior to clarify storm water runoff prior to discharging into Devil and Brown Canyons, consistent with compliance strategies for pollutant reduction implementation measures of the Draft Basin Plan, <i>Draft Trash Total Maximum Daily Loads for the Los Angeles River Watershed</i>, dated January 22, 2001 (see Table 8 of the Plan). 	X			

1.0 Summary

Table 1.2. Summary of Mitigation Measures and Conditions (continued)

Issue Area	EIR Mitigation Measure	Condition of Approval		
		VTTM	CUP	Oak Tree Report
<ul style="list-style-type: none"> Storm drain outlet structures shall include energy-dissipating devices to reduce storm water discharge velocities to less than corrosive levels Catch basins and storm drain inlets shall be labeled "No Dumping – Drains to Ocean" to discourage illegal dumping. Streets within the proposed residential development shall be swept as required by the County's Department of Public Works. Signs shall be posted through the proposed development with prohibitive language and/or graphical icons to discourage illegal dumping Nontoxic pesticides and fertilizers shall be used in landscaped areas of the project. All graded slopes shall be planted on a timely basis to prevent erosion. Homeowners shall be provided with information from the County Department of Public Works (LACDPW) Environmental Planning Division concerning recycling of household products, disposal of hazardous wastes, disposal of yard wastes, tire recycling, and preventing pollution of storm drain systems with trash (detailed information is available on the LACDPW website at www.888cleanla.com or by telephone at 888-CleanLA). Require developer-owners to execute and record the LACDPW's <i>Maintenance Covenant for Standard Urban Stormwater Mitigation (SUSMP)</i> pursuant to Section 106.4.3 of the County Building Code and Title 12, Chapter 12.8 of the County Code. 				
<p>Required project drainage facilities shall be constructed in compliance with the approved Drainage Concept Plan (see Appendix H of the FEIR), which details the location and sizes of stormdrains, debris basins, CDS filtration units, and inlet/outlet structures.</p> <p>NOISE</p> <p>All construction activity occurring on the project site shall adhere to the requirements of the County of Los Angeles Noise Ordinance, Title 12, Section 12.08.440.</p> <p>Residential lot building pads that are subject to noise greater than the 65 dBA noise contour shown on Figure 4.7.3 shall include the following features to reduce interior noise levels to acceptable County standards:</p> <ul style="list-style-type: none"> The materials and heights of rear yard on lots subject to noise greater than 65 dBA shall be approved by the County Department of Health Services. 	X

<ul style="list-style-type: none"> Exterior walls shall be wood frame construction, with 7/8 stucco (or similar material) on the exterior, ½ inch gypsum board on the interiors and R-13 cavity (minimum) in the cavity. Minimal window surface facing SR-118 and windows shall be mounted with low air-infiltration rate frames (0.5 cfm/foot or less per ANSI specifications). Sliding glass doors shall have minimum sound transmission class of 34. Roof or attic vents shall be located away from SR-118 or baffled. Second floor windows facing SR-118 shall be glazed with ¼ inch laminated glass. Central air conditioning shall be standard. <p>These measures shall be completed prior to the issuance of the Certificate of Occupancy to ensure that the noise levels with the proposed mitigation features are within the adopted County standards.</p>				
<p>All stationary and point sources of noise occurring in the project site shall adhere to the requirements of the County of Los Angeles Ordinance No. 11743.</p> <p>FIRE PROTECTION</p> <p>The project shall incorporate the following County Fire Department requirements regarding access, water mains, fire flows, fire hydrants, and brush clearance into project design:</p> <ul style="list-style-type: none"> Every building constructed shall be accessible to fire department apparatus by way of access roadways, with an all weather surface of not less than the prescribed width, unobstructed, clear-to-sky. The roadway shall be extended within 150 feet of all portions of the exterior walls when measured by an unobstructed route around the exterior of the building. All bridges required to be used as part of a fire access road shall be constructed and maintained in accordance with nationally recognized standards and designed for a live load sufficient to carry a minimum of 75,000 pounds. Access to existing fire fighting motorways shall be maintained. Fire hydrant spacing shall be as directed by the County Fire Department, but not less than 600 feet apart, and shall meet the following, minimum requirements: 	X			
	X			
		X		

1.0 Summary

Table 1.2. Summary of Mitigation Measures and Conditions (continued)

Issue Area	EIR Mitigation Measure	Condition of Approval		
		VTTM	CUP	Oak Tree Report
<ul style="list-style-type: none"> - No portion of lot frontage shall be more than 450 feet via vehicular access from a public fire hydrant. - No portion or structure should be placed on a lot where it exceeds 750 feet via vehicular access from a properly spaced public fire hydrant. - When cul-de-sac depth exceeds 450 feet on a residential street, hydrants shall be required at the corner and mid-block. Additional hydrants shall be required if hydrant spacing exceeds specified distances. 	X			
<p>Streets or driveways within the development shall be provided with the following widths in accordance with County Fire Department and Department of Public Works standards:</p> <ul style="list-style-type: none"> • Provide 36 feet width on all collector streets and those streets where parking is allowed on both sides. • Provide 34 feet width on cul-de-sacs up to 700 feet in length. This allows parking on both sides of the street. • Provide 36 feet width on cul-de-sacs from 701 to 1,000 feet in length. This allows parking on both sides of the street. 	X	X		
<p>If required by the County Fire Department as a condition of building permits, dwelling units shall be fully sprinkled per NFPA pamphlet 13 D to offset potential response time impacts</p>	X			
<p>The proposed project shall comply with the preliminary fuel modification plan, which has been approved by the Forestry Division of the Fire Department (see Appendix C.4).</p>	X			
<p>The proposed project shall comply with all applicable County Fire Code and Ordinance requests including standards for construction, installation of sprinkler and alarm systems, fire extinguishers, and emergency exits.</p>	X			
POLICE PROTECTION				
<p>Prior to recordation of the Final Tract map, the applicant shall provide the Los Angeles County Sheriff's Department's with a diagram of the project, including access routes, street names, addresses, and any information that might facilitate police response.</p>	X			

Table 1.2. Summary of Mitigation Measures and Conditions (continued)

Issue Area	EIR Mitigation Measure	Condition of Approval		
		VTTM	CUP	Oak Tree Report
Prior to recordation of the Final Tract map, the applicant shall provide the Los Angeles County Sheriff's Department's with building plans to ensure that the proposed project is designed so as to minimize crimes against property. Features may include, but are not limited to: good sight lines, exterior lighting, and strong exterior doors, windows and locks.	X			
The Subdivider shall construct a Sheriff's Storefront Facility, not to exceed 800 sq. ft. in size but no less than 600 sq. ft. in size, as depicted in Exhibit "A-1" of the Conditional Use (See Appendix C.2 of the FEIR)	X		X	
SCHOOLS				
The applicant shall pay developer fees, as required under Section 65995 of the California Code, for school impact mitigation. The applicant has indicated that it will enter into discussions with LAUSD and the Porter Ranch master developer to investigate the possibility of accelerating the Porter Ranch elementary and middle school construction schedule.	X		X	
LIBRARIES				
The applicant shall pay library fee, as required per Los Angeles County ordinance, of \$626, or the fee in effect at the time, per residential unit for the project to ensure that new projects mitigate impacts to County library facilities.	X		X	
The applicant shall pay an additional, voluntary fee to the City of Los Angeles Chatsworth Library, which is the closest public library to the project site	X		X	
TRAFFIC				
The applicant shall install a traffic signal at the intersection of Topanga Canyon Boulevard and Poema Place/Mayan Drive. The traffic signal shall be interconnected and operated in conjunction with the existing traffic signal at the Topanga Canyon Boulevard & SR-118 WB On/Off-ramps.	X		X	
The applicant shall widen and restripe the WB SR-118 off-ramp to provide exclusive right-turn lane. This would result in a left-turn lane, a shared through/left-turn lane, and a right-turn only lane in the westbound approach.	X		X	
The applicant shall widen and restripe the westbound Mayan Drive approach to County Collector Street standards to provide a second left turn lane. This would result in a left-turn lane and a shared through/left-turn lane in the westbound Mayan Drive approach.	X		X	

1.0 Summary

1.0 Summary

Table 1.2. Summary of Mitigation Measures and Conditions (continued)

Issue Area	EIR Mitigation Measure	Condition of Approval		
		VTTM	CUP	Oak Tree Report
Caltrans has requested additional mitigation measures to mitigate impacts of the project within the State right-of-way. The applicant will prepare, as a voluntary measure, a Project Study Report (PSR) to address long-term regional traffic operations at the Topanga Canyon Boulevard/SR-118 interchange. In addition, the applicant will consider possible payment of fair-share fees as determined by the County.	X			
WATER SUPPLY				
Water system distribution facilities shall meet the Las Virgenes Municipal Water District specifications and standards as shown in the <i>Preliminary Water Design Report For Tentative Tract No. 53138</i> in Appendix H.	X			
The project developer shall install low-flush toilets and low-flow showerheads, consistent with the LVMWD requirements.	X			
The project shall comply with Water Conservation Ordinance Nos. 11-86-161 and 1-93-205.	X			
Water conserving measures in landscape management shall include:	X			
<ul style="list-style-type: none"> • Use of drought-tolerant plantings. • Installation of efficient irrigation systems that minimize runoff and evaporation and maximize the water that will reach the plant roots. Setting of automatic irrigation systems to ensure irrigation during early morning or evening hours. Resetting of automatic irrigation system to water less often in cooler months and during the rainfall season so that water is not wasted by excessive landscape irrigation. 				
WASTEWATER				
The project site shall be Annexed to LVMWD Sewer Improvement District "B".	X	X		
Portions of the City of Los Angeles sewer system shall be constructed, as shown in Figure .14.3.	X	X		
Low-flow toilets and showers shall be installed to minimize sewage generation from the proposed homes.	X			
SOLID WASTE				
The proposed project shall incorporate storage and collection of recyclables into each project design.	X			
Refuse collection contracts shall include collection of recyclables.	X			

1.0 Summary

Table 1.2. Summary of Mitigation Measures and Conditions (continued)

Issue Area	EIR Mitigation Measure	Condition of Approval		
		VTTM	CUP	Oak Tree Report
All residents shall be encouraged to recycle, at a minimum, newspaper, glass, bottles, aluminum and bimetal cans and P.E.T. bottles.	X			
Recycling shall be included in the design of the project by reserving space appropriate for the support of recycling, such as adequate storage areas and access for recycling vehicles.	X			
All contractors shall be urged to recycle construction and demolitions wastes to the extent feasible.	X			
The project applicant shall provide homebuyers with the following information concerning:	X			
<ul style="list-style-type: none"> • Participation in the County of Los Angeles Household Hazardous Waste Collection Program. • City sponsored programs including curbside oil and filter recycling. • Information on the proper disposal of hazardous materials. 				
ELECTRICITY				
Project built-in appliances, refrigerators, and space-conditioning equipment shall exceed the minimum efficiency levels mandated in the California Code of Regulations.	X			
To reduce electricity consumption, fluorescent and high-intensity-discharge (HID) lamps shall be installed wherever possible, which give the highest light output per watt of electricity consumed, including all street lights consistent with the Los Angeles County Department of Public Works standards.	X			
NATURAL GAS				
Project buildings shall be designed and constructed to be well-sealed to prevent outside air from infiltrating and increasing interior space-conditioning loads.	X			
Thermal insulation, which exceeds requirements established by the California Code of Regulations, shall be installed in walls and ceilings.	X			
Window systems shall be designed to reduce thermal loss, thus reducing heating loads during cool weather.	X			
Project energy engineers and architects shall consult with The Gas Company for an energy analysis of the proposed dwellings regarding efficiency/conservation measures and up-to-date technology, manufacturing equipment, etc.	X			

1.0 Summary

Table 1.2. Summary of Mitigation Measures and Conditions (continued)

Issue Area	EIR Mitigation Measure	Condition of Approval		
		VTTM	CUP	Oak Tree Report
OTHER				
All grading and construction on the subject property and appurtenant activities, including engine warm-up, shall be restricted to the hours between 7:00 A.M. and 6:00 P.M. No grading or construction activities would occur on Saturday, Sunday or County-observed holiday.	X		X	
No access of heavy construction equipment or vehicles, nor delivery of construction materials would occur on the project site prior to 9:00 A.M. and after 2:00 P.M. Monday through Saturday. No such access or deliveries would occur on Sunday or holidays.	X		X	
Exterior building construction operations, such as framing, as well as landscaping and interior building construction operations shall be limited to Monday through Friday between the hours of 7:00 A.M. and 6:00 P.M. and on Saturday between the hours of 8:00 A.M. and 5:00 P.M. These activities would not be conducted on Sunday or County-observed holidays.	X		X	
The Twin Lakes Property Owners Association and the Chatsworth Neighborhood Council would be notified if any deviation from the above construction activity schedule were necessary. Notification would be at least five working days prior to any change in activity and the applicant would obtain written approval from the County.	X		X	
No construction equipment would be allowed within the Twin Lakes community and signs and/or personnel would be posted to ensure enforcement of this prohibition.	X		X	
Parking of construction vehicles would not be permitted along Mayan Drive, Canoga Avenue, or within any portion of the nearby communities. All construction vehicles would be parked within the project site boundaries.	X		X	
Water tanks and water trucks would be available on-site prior to commencing any grading operations to ensure that effective dust control measures can be implemented and sustained during these operations.	X		X	
All construction-related vehicles would be operated, either on-site or within the surrounding community, in strict compliance with the California Vehicle Code pertaining to maximum permitted noise generation.	X		X	
The names and contact numbers for the subdivider and general contract would be available and posted at entry points to the project site.	X		X	

1.0 Summary

Table 1.2. Summary of Mitigation Measures and Conditions (continued)

Issue Area	EIR Mitigation Measure	Condition of Approval		
		VTTM	CUP	Oak Tree Report
The applicant is proposing to construct public mainline sewers to serve the adjacent Twin Lakes Community, subject to obtaining necessary funding through a community facilities district (CFD).	X		X	
The project applicant shall grant to the Fire Department an easement over land in the northeast corner of the project site (see Figure 2.8) as a "heli-spot." Construction for the heli-spot would include site grading, paved access driveway, two concrete landing pads, and two fire hydrants.	X		X	
Installation of cable service would be provided for the proposed project. In addition, the applicant has agreed to work with the cable company franchisee in the project area for the cable operator to provide cable services to the existing Twin Lakes Community.	X		X	
In addition to the 31 acres of riparian habitat and project buffer areas already dedicated to the SMMC (see Section 2.2), approximately 49 acres of open space areas will be dedicated to the SMMC, as a result of the proposed project. These areas will be dedicated to the SMMC at the time the final maps are recorded.	X		X	
Open space lots subject to fuel modification will be deeded to the HOA, subject to a conservation easement to the SMMC. All other open space lots containing manufactured slopes of other improved features will be deeded to the HOA.	X		X	
In addition to the on-site open space, the applicant has acquired an approximate 159-acre parcel north of the project site for use as off-site mitigation for biological resources. The proposed mitigation parcel is located north of the community of Chatsworth, on the south flank of the Santa Susana Mountains in unincorporated Los Angeles County (see new Figure 2.13). This parcel will be dedicated to the SMMC, and in conjunction with the Biological Mitigation Plan, will mitigate all project related biological resource impacts to less than significant levels. Details of the off-site mitigation property are included in Appendix F.1 of this Final EIR.	X		X	
The proposed project includes three pocket parks and a natural park (see Figure 2.8). The pocket parks will be located within the project site boundaries and may include playground equipment and would be deeded to the HOA. The natural park area, known as Lima Rock, will be dedicated to SMMC. In addition to park funds provided pursuant to Government Code Section 66477 ("Quimby Act"), the applicant has contributed funding for the acquisition by the SMMC of a 13-acre parcel to be used for public park facilities. This public park is located adjacent to the easterly boundary of the project site, adjacent to the northerly right-of-way of SR-118 (see new Figure 2.8).	X		X	

1.0 Summary

Table 1.2. Summary of Mitigation Measures and Conditions (continued)

Issue Area	EIR Mitigation Measure	Condition of Approval		
		VTTM	CUP	Oak Tree Report
The applicant will construct approximately 4.3 miles of public trails on site (see Figure 2.8).	X	X	X	
Stop signs or other warning signals will be installed at locations where future trails will cross public roads and temporary trails will be constructed during construction activities. When possible, the temporary trails will connect to the existing trails from Devil and Brown's Canyons. These trails may be redirected depending on construction activities during development of the project site.	X		X

2.0 Revised Project Description

The project applicant has revised the proposed project in response to issues raised during public review of the Draft EIR and Regional Planning Commission public hearing testimonies. The project has been revised to reduce the total number of single-family residential units from 484 to 388. The Revised Project Design has been accommodated within the originally proposed development footprint associated with the 484-unit project evaluated in the Draft EIR. A revised VTTM has been submitted that reflects the Revised Project Design and environmental effects associated with the revised project have been evaluated in the Revised Project Design Summary Document (June 2003). As indicated in the Revised Project Design Summary Document, environmental effects associated with the revised project are less than or similar to those associated with the 484-unit project evaluated in the Draft EIR. All mitigation measures contained in the Draft EIR remain valid and applicable to the revised 388-unit project.

For purposes of clarity, the entire project description is included in this document, with revisions incorporated where applicable.

The purpose of the project description is to describe the project in a way that will be meaningful to the public, reviewing agencies, and decision-makers. Section 15124 of the *CEQA Guidelines* requires that a complete project description contain the following information: (1) the location and boundaries of the proposed project; (2) a statement of project objectives; (3) a general description of the project's technical, economic, and environmental characteristics; and (4) a statement briefly describing the intended uses of the EIR, including a list of the agencies that are expected to use the EIR in their decision-making process, and a list of the approvals for which the EIR will be used. According to CEQA, an adequate project description need not be exhaustive, but should supply the detail that is necessary for project evaluation.

2.1 PROJECT LOCATION AND SETTING

The proposed project site is located within the northwestern San Fernando Valley area of unincorporated Los Angeles County, adjacent to the City of Los Angeles (see Figures 2.1 and 2.2).

The site is located in the south-facing foothills of the Santa Susana Mountains in an area known as Chatsworth. Lands to the north and the canyon immediately east of the project site are undeveloped. Porter Ranch, a large mixed-use master-planned community, lies ½ mile to the east of the project site. Although the land immediately adjacent to the southwestern boundary of the site is currently vacant, a tentative tract map for 65 multifamily residential units has been filed with Los Angeles County (Tentative Tract No. 53235).

In addition, an existing multifamily residential complex is located approximately ¼ mile to the west, and two existing single-family detached residential communities are located approximately ½ mile west of the project site. Development between the southern boundary of the site and State Route 118 (SR-118) consists of approximately 98 single-family dwelling units in an older Record of Survey subdivision (the Twin Lakes Community).

2.1.1 Existing Site Characteristics

The proposed project site consists of 230.58 acres of mostly undeveloped land. Of the total area, 161 acres were previously divided by means of several Licensed Surveyor's Maps in 1927 and 1928 into approximately 2,575 Record of Survey lots (Figure 2.3). The lots were plotted with a series of easements for access and utility purposes to ensure that each lot had a legal means of access to a public road. However, there are no recorded or implied ingress, egress, or utility easements benefiting any land parcels north of the project site. Subsequently, in 2000 and 2001, a process was initiated to merge these Record of Survey lots into approximately 624 new lots, with each one having a minimum area of 6,000 square feet and a recorded Certificate of Compliance to establish that each lot is a legal lot (see Figure 2.4).

FIGURE 2.4
Certificate of Compliance Lots

Deerlake Ranch
 Final Environmental Impact Report

2.0 Revised Project Description

That process has been completed and all 624 Certificate of Compliance lots have been recorded. In addition, five existing single-family residences and the foundations of several previous homes are located on lots within the site. The remaining 74 acres of the site consist of vacant undivided land.

The site is located on an uplifted plateau at an average elevation of approximately 1,325 feet above sea level. The plateau has an undulating surface, generally slopes to the south, and is bordered on the north by west-trending hills that are increasingly steep to the north and reach elevations in excess of 1,770 feet. The hills are cut by south-draining canyons. The plateau is bordered to the west and south by Devil Canyon, which bisects the project site, and to the east by Browns Canyon. The bases of the canyons are at elevations of approximately 1,150 feet. Canyon sidewalls are generally steep, with natural slope gradients between 2:1 to 0.5:1 (horizontal to vertical). Devil Canyon has intermittent concrete groins or debris dams to control siltation and prevent erosion. The mouth of Devil Canyon has a concrete and rock dam with a culvert.

Plant communities within the project area include chamise chaparral, coastal sage scrub, non-native grassland, coast live oak woodland, eucalyptus, and willow woodland. Biological surveys performed during 1998, 1999, 2000, and 2001 identified no occurrences of federally or state-listed plant or animal species. Two sensitive plant species, Plummer's mariposa lily (*Calochortus plummerae*) and southern California black walnut (*Juglans californica*), have been identified over some limited portions of the site. The project site is not located within any of the Significant Ecological Areas (SEAs) identified by the County of Los Angeles, General Plan.

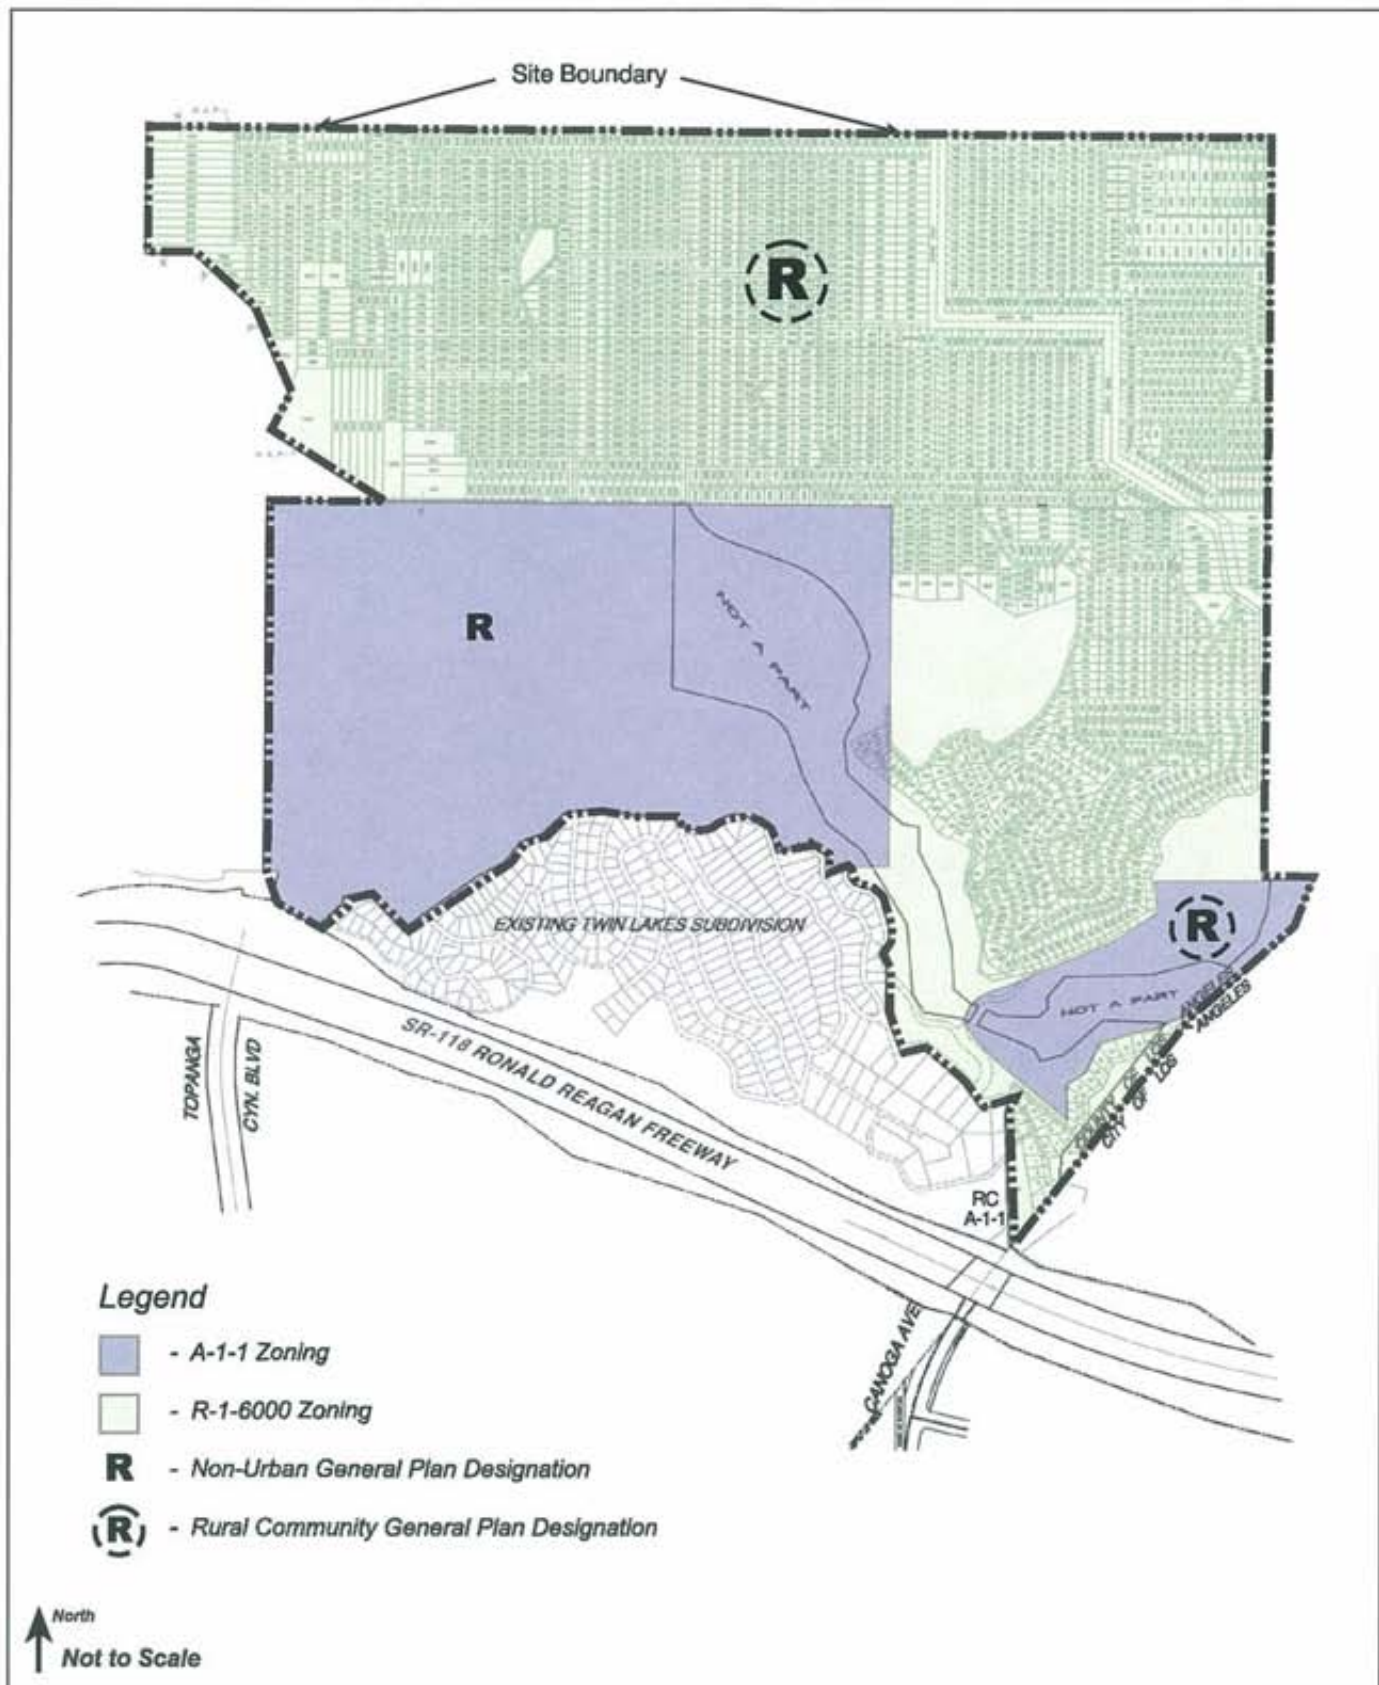

Common species that have the potential to occur on the project site include:

- **Large mammals:** mule deer, coyote, grey fox, mountain lion, and bobcat.
- **Medium mammals:** raccoon, opossum, striped skunk, California ground squirrel, and desert cottontail.
- **Small mammals:** pocket gopher, California mouse, and dusky-footed woodrat.
- **Reptiles:** western rattlesnake, western skink, southern alligator lizard, California kingsnake, and San Diego gopher snake.

Habitat variation on the project site provides potential nesting, roosting and foraging opportunities for numerous resident and migratory bird species. Special-status wildlife observed on the project site include Cooper's hawk (*Accipiter cooperii*), western yellow warbler (*Dendroica petchia brewsteri*), and ashy rufous-crowned sparrow (*Aimophila ruficeps canescens*).

2.1.2 Land Use Policy

The *Los Angeles County General Plan (General Plan)* specifies two separate land use designations for the project site: Non-Urban (R) and Rural Community (see Figure 2.5). The underlying zoning designation for the R General Plan land use designation is A-1-1 (light agriculture, one unit per acre). The zoning designation for the Rural Community land use designation is primarily R-1-6000 (low-density urban, one to six units per acre). Based on the General Plan land use designations, the low-density threshold for the project is 176 units and the high-density threshold is 1,052 units. The project site is not subject to a County-approved Local Area Plan.

HDR ONE COMPANY | Many Solutions[®]

FIGURE 2.5
**Los Angeles County General Plan/
Zoning Designations**

Deerlake Ranch
Final Environmental Impact Report

2.0 Revised Project Description

As shown on Figure 2.3, the project site that was originally divided by the Licensed Surveyor's Maps and later redivided onto merged lots with Certificates of Compliance (Figure 2.4) has the Rural Community General Plan land use designation and R-1-6000 zoning designations, while four large parcels within the southwestern portion of the site have the R and A-1-1 designations. Exceptions to this are:

1. A 6.75-acre parcel surrounded on three sides by the Licensed Surveyor's parcels with Rural Community General Plan land use and R-1-6000 zoning designations.
2. The two parcels previously mentioned that have Rural Community General Plan land use and A-1-1 zoning designations.

All of these exceptions qualify as "residential in-fill" areas as described in the General Plan, and therefore, their development to low urban densities would be consistent with the General Plan (see Table 2.1).

Table 2.1. Proposed Project Site General Plan Density Calculations

Slope and Classification	Area (acres)	Low-Density Threshold (Units)	High-Density Threshold (Units)	Proposed Units
Non-Urban (R):				
0-24.99% slope	18.23	3.65	18.23	--
25-50% slope	23.38	2.34	11.69	--
Greater than 50% slope	23.81	NA	1.19	--
Non-Urban Subtotal	65.42	5.99	31.11	52
Rural Community:				
(A-1-1)	12.04	12.04	72.24	30
(R-1-6000)	153.12	153.12	990.96	306
Rural Community Subtotal	165.16	165.16	1,063.2	336
Total	230.58	171.15	1,094.31	388

Source: B&E Engineers, 2003.

Specifically, General Plan policy supports a more concentrated form of development in localized areas where it can be demonstrated that such higher use is consistent with surrounding uses in terms of scale, intensity, and design, and is ensured through specific site plan review. In the case of the proposed project, this review mechanism will be a Conditional Use Permit (CUP) for Hillside Management.

Residential density determinations within Non-Urban (R) residential areas are subject to the density standards as specified in the Countywide Density Threshold outlined in the Land Use Element of the General Plan. The following are the parameters for these thresholds:

Low Density

0-24.99% slope	1 unit/5 acres
25-50% slope	1 unit/10 acres
Greater than 50% slope	1 unit/20 acres

High Density

0-24.99% slope	1 unit/acre
25-50% slope	1 unit/2 acres
Greater than 50% slope	1 unit/20 acres

2.0 Revised Project Description

For Rural Community land use designations, the General Plan specifies that densities ranging between High Density Rural and Low Density Urban may be permitted. It has been determined, by the Department of Regional Planning,² that a low-density urban density might be appropriate for the Rural Community General Plan land use portion of the project site, subject to the provisions of a CUP for Hillside Management (see Appendix B of the Draft EIR).

The General Plan density threshold for this site is between a minimum of 176 units and a maximum of 1,052 units. The County General Plan Land Use Policy permits the transfer of densities between urban and non-urban designations.³ The policy specifically states that units may be transferred internally in a project (regardless of urban or non-urban designation) when geological or topographical data support the need, the change is for the purpose of better design, and it does not increase the number of units or affect health and safety detrimentally. Therefore, as shown in Table 2.1, the proposed 388-unit revised project is below the midpoint (614 dwelling units) of the low- and high-density calculations that apply for the various slope and land use classifications for this project.

2.1.3 Surrounding Land Uses

Land uses in the vicinity of the project site include residential, educational, open space, undeveloped land, and recreational facilities. These nearby uses are illustrated in Figure 2.6. Single-family residences are located just south of the project site, as part of the existing Lower Twin Lakes community. In addition, there are several Not A Part (NAP) parcels within the project envelope consisting of existing Record of Survey lots, as shown on the project VTTM (see Appendix C.1 of this document). These have either existing single-family houses on them, or can be developed as additional single-family units in the future (see further discussion below). Areas along the immediate east, north, and west boundaries of the site are undeveloped.

The property immediately along the southwestern boundary of the site consists of a pending multifamily residential project (65 units), with an existing multifamily project located immediately to the west of the pending project. The large master-planned community of Porter Ranch is located ½ mile east of the project site. The 13-acre parcel immediately east of the project site and north of SR-118 has been acquired by the Mountains Recreation and Conservation Authority (MRCA) for an equestrian staging area and other recreation and conservation uses.

The areas to the north, northeast, and northwest consist of undeveloped, vacant land. However, there are no recorded or implied ingress, egress, or utility easements benefiting any land parcels north of the project site. Single-family residential uses are located south of the project site across SR-118. The Chatsworth Hills Academy is also located south of SR-118. Recreation uses in the project area include Stoney Point Park (south of SR-118) and various equestrian/hiking trails located throughout the surrounding neighborhoods. As shown in Figure 2.6, multifamily residential uses are located west and southwest of the project site.

² Memo from George Malone, Los Angeles County Department of Regional Planning, 2000 (DEIR, Appendix B).

³ Los Angeles County Streamlined General Plan, Sec. I.D., Land Use Policy, adopted in 1980, revised 1992.

2.2 PROJECT SITE HISTORY

The project site originally consisted of approximately 253 acres within the Upper Twin Lakes and Deerlake Highlands areas of Chatsworth. Of this area, approximately 161 acres were previously subdivided under various Records of Survey Maps in 1927 and 1928 into approximately 2,575 Record Survey lots (see Figure 2.3). Thirty-one of the 253 acres, including approximately 300 Record of Survey lots, have been dedicated previously to the MRCA, a designee of the Santa Monica Mountains Conservancy (SMMC) as part of an agreement titled *Agreement Re: Acquisition of Real Property* (Agreement), dated December 30, 1997, between the SMMC/MRCA and Chatsworth Ridge Estates (CRE), the project proponent at that time (see Appendix C of the Draft EIR). Of the total of 2,575 Record of Survey lots, 1,319 were owned by the Los Angeles County, which had acquired them as a result of tax defaults over a period of several years.

On September 15, 1997, prior to execution of the Agreement, the SMMC and MRCA boards of directors approved Resolution No. 97 (see Appendix C of the Draft EIR) which:

- Authorized the acquisition of the 1,319 County-owned Record of Survey lots
- Approved a land exchange agreement between the SMMC/MRCA, and the applicant, whereby the applicant would pay the acquisition cost to the County in exchange for acquiring title to approximately 2,275 of the Record of Survey lots from the SMMC/MRCA for the purpose of developing a residential project on the site (the SMMC/MRCA retained ownership of approximately 300 lots).
- Found that the proposed acquisition and exchange would not have a significant adverse impact on the environment.
- Approved the Negative Declaration (see Appendix C of the Draft EIR).

On December 9, 1997, the Los Angeles County Board of Supervisors (Board) approved the sale of the 1,319 Record of Survey lots to the MRCA, based on a County-appraised price. Further, the Board found that:

- These lots were not required for County use.
- The SMMC, pursuant to Public Resources Code Section 32207, had the first right of refusal to acquire any publicly owned property that may be declared excess by a public agency.
- The sale to the MRCA was exempt from CEQA.
- While most of this excess property would be developed with a residential project, the surrounding acreage would be dedicated to the SMMC for open space and wildlife corridor preservation.
- The exchange of the County's property by the SMMC with CRE would restore these lots to the tax rolls (see Appendix C of the Draft EIR).

In addition to the applicant paying the County the appraised acquisition price for all County-owned lots (31 acres), the Agreement provided for the following other considerations:

- Retention in fee by SMMC/MRCA of all or portions of approximately 300 lots (18 acres) to provide buffer areas along the northerly and easterly boundaries of the site.
- Dedication in fee to SMMC of 13 acres of sensitive riparian habitat, which was not part of the acquisition transaction.

2.0 Revised Project Description

- Monetary compensation to SMMC to be used for additional open space acquisitions by the SMMC within the Santa Susana Mountains.
- Provision of guaranteed annual funding of a Ranger position for the Santa Susana Mountain area.

Although the 31 acres (18 acres of Record of Survey lots and 13 acres of additional habitat area) was dedicated in fee to SMMC prior to the project application, the dedicated property is considered part of the project description because the transfer occurred expressly to mitigate potential impacts associated with anticipated future development of the project site. Subsequently, the project applicant, Presidio Chatsworth Partners, LLC, obtained the rights to develop the project site.

2.3 STATEMENT OF OBJECTIVES

CEQA, as amended, requires that an EIR include a statement of the objectives sought by a proposed project (Section 15124(b) of the *CEQA Guidelines*). The development activity proposed within the Deerlake Ranch project site is intended to provide housing opportunities within a planned residential community setting. The following represent the objectives for the revised project:

1. Land Use Planning Objectives

- Create a new planned community, while preserving significant natural resources and open space.
- Accommodate projected regional growth in a location that is adjacent to existing and planned infrastructure and transportation corridors, and is near urban services and major employment centers.
- Provide a homogeneous community to be developed under a master development plan and the County subdivision ordinance.
- Cluster development within the site to preserve regionally significant resource areas and sensitive habitat.
- Provide a project, which is consistent with the Goals, Policies and Land Use designations of the County General Plan, the County Zoning Ordinance, and the County subdivision ordinance by eliminating all existing substandard lots.

2. Economic Objectives

- Help alleviate current and future housing shortages by providing homes in a jobs-rich area.
- Earn a reasonable return on investment through the development of 388 homes.

3. Mobility Objectives

- Provide improvements to the on and offsite circulation system to ensure the safety of future project site and area residents.

4. Parks, Recreation, and Open Area Objectives

- Construct a system of publicly dedicated hiking and equestrian trails and parks that connect with existing regional trails and supporting recreational facilities.

2.4 PROJECT CHARACTERISTICS

The following discussions identify the specific details of the revised project as proposed by the applicant. The project applicant for the Deerlake Ranch project is:

2.0 Revised Project Description

Presidio Chatsworth Partners, LLC
595 Market Street, Suite 2400
San Francisco, CA 94105

Contact: Mr. Richard Garlinghouse
Telephone: (415) 356-7725

The applicant originally submitted to the County Department of Regional Planning a project design for 538-unit single-family residential dwellings on a 235.58-acre project site. This project was included in the Notice of Preparation (NOP) circulated for public agency review and comment (June, 2000). All of the environmental analysis encompasses the original 235.58-acre project site, including the areas designated as NAPs and four (R-1 through R-4) areas designated as remainder parcels. Although the existing and potential development of these areas was included in the environmental analysis as a cumulative impact (Section 3.0, Related Projects, Table 3.1 of the Draft EIR), they have been excluded from the VTTM for the following reasons:

- For the seven NAP areas, the project applicant has not acquired ownership of the Record of Survey lots, which comprise these areas.
- For lots R-1 through R-4, although they are legal parcels under the provisions of the Subdivision Map Act and owned by the applicant, they would be difficult to grade for suitable building pads. This is due to the existence of adjoining NAP areas 1 and 3 (see Appendix C.1 of this document). Since the applicant does not own these NAP areas, no grading can occur.

Collectively, these seven NAP areas comprise 22 existing, legal lots established by Record of Survey maps. NAP areas 5, 6, and 7 each have an existing single-family dwelling and a recorded covenant, which would prohibit the future development of more than one residential unit per area. The remaining four NAP areas are vacant, but are subject to future development in one of two scenarios:

- Separate from VTTM: NAP areas 1 through 4 contain a total of four legal Record of Survey lots created under Record of Survey maps. Therefore these four NAP areas would yield a total of four single-family residential units if their owners developed them separately from the VTTM, as summarized in the NAP Development Table on the project VTTM. Under this scenario, the development of each Record of Survey lot would be subject to an unconditional Certificate of Compliance and the County Zoning and Building Codes, but would not require any further discretionary action as a condition of development. If developed separately by persons other than the applicant, the development of these four NAP areas would not be subject to the project CUP conditions.
- As part of VTTM: If these four NAP areas, each containing one legal Record of Survey lot, were developed as part of the revision to the VTTM by the project applicant (as a result of future acquisition by the applicant or their successors in interest), they would add a maximum total of four legal lots. Under this scenario, it is anticipated that development of these lots would be subject to a CUP, thereby requiring the same development standards as the project, including minimum lot size under existing zoning.

2.0 Revised Project Description

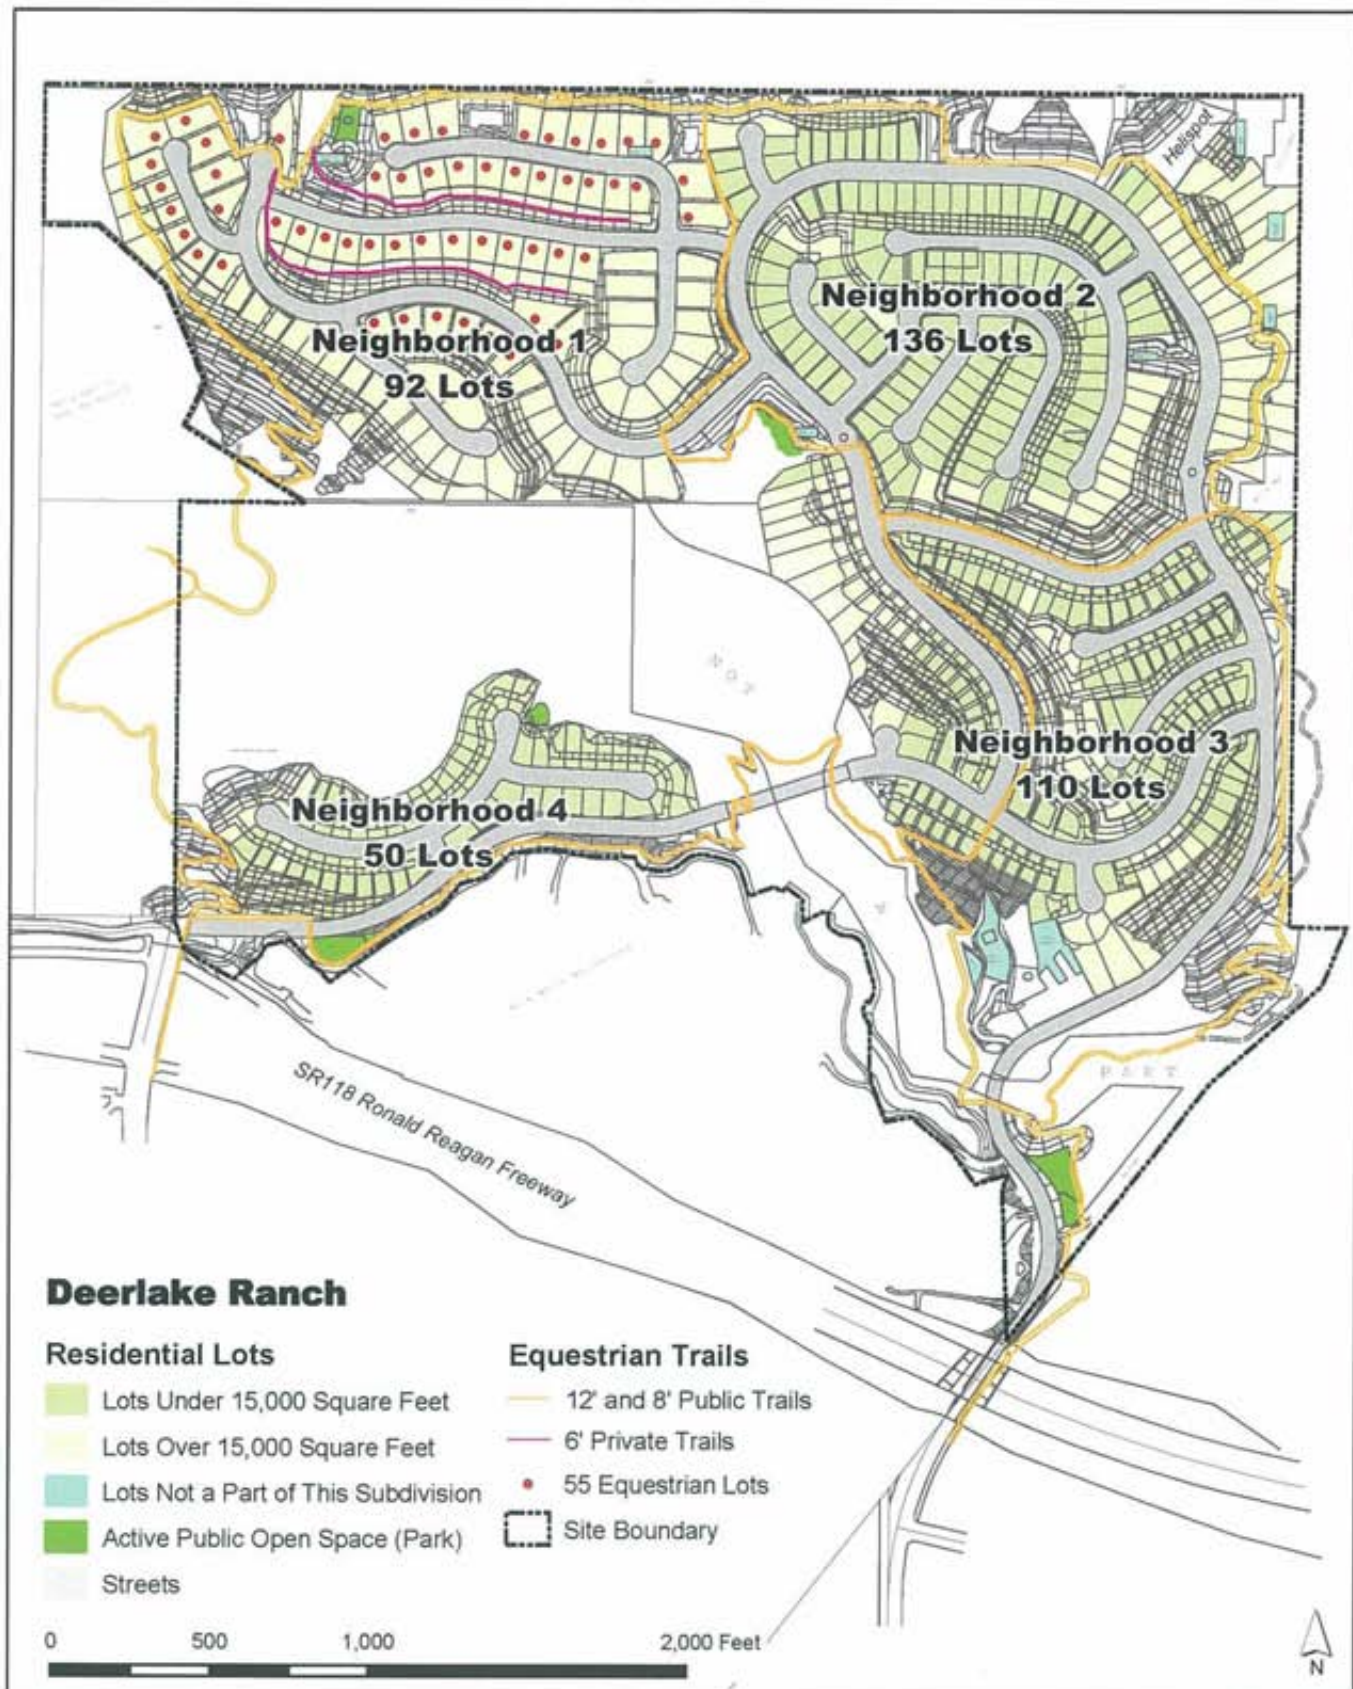

In order to achieve County-zoning standards and to comply with a CUP, a series of lot line adjustments would be required between the Record of Survey lots within the NAP areas. Each newly created lot would require a Certificate of Compliance as specific in the County Subdivision Code and the State Subdivision Map Act. Development on these lots would be subject to approval of individual plot plans by the County to ensure compliance. No additional discretionary action would be required for the above-described process.

Subsequent to the 538-unit project submittal, the project was reviewed by several public agencies including the County Department of Regional Planning Subdivision Review Committee, SMMC, and various other local, state, and federal agencies with regulatory authority over the project. As part of the review process, and based upon comments received from reviewing agencies, the applicant agreed to implement changes that would reduce environmental effects through a variety of design refinements. The Draft EIR reflected these changes and included a discussion of the 484-unit project. After the distribution of the Draft EIR, the applicant further reduced the project to include equestrian residential lots and additional onsite trails. This was based on issues raised during the public review of the Draft EIR. The Revised Project Design has been accommodated within the existing development footprint. These changes have resulted in a reduction to a current total of 388 single-family detached residential lots. Implementation of the Revised Project Design would result in the following:

- Reduced impacts on oak trees
- Reduced impacts on traffic and circulation systems and public services, including schools
- Reduced noise impacts, and
- Reduced visual impacts
- The addition of four pocket parks, more trails, a Sheriff substation, and a heli-spot.

This review process has resulted in a less impacting project and is consistent with the intent of CEQA and County Department of Regional Planning policy. The revised project reduces impacts on all environmental factors, as compared to the original project described in the Draft EIR (484 residential units).

The Revised Project Design includes the development of 388 single-family residential units, including 155 minimum 15,000 square foot estate lots, of which 55 will be equestrian lots (minimum 15,000 square feet), as a result of their location adjacent to the existing and proposed equestrian trails (see Figures 2.7 and 2.8). The internal circulation system has been modified and combined with landscape buffers to physically separate the project into four distinct neighborhoods. In addition, the design of the access roadway south of Devil Canyon has been modified to relocate all proposed residential lots on the north side of the street, which provides for an additional buffer to the existing homes in the Twin Lakes area. Each neighborhood also has a matrix of distinct lot sizes, configurations and housing types each providing a unique community. Revised Project Design is summarized in Table 2.2.

2.0 Revised Project Description

Table 2.2. Summary of Revised Project Design Land Uses

Land Use	Originally Proposed Project (484 single-family units)		Revised Project Design (388 single-family units)	
	Area (acres)	Percent of Site ^a	Area (acres)	Percent of Site
Single-family Residential Pads (Total)	61.71	27	62.20	27
<i>Building Footprints</i>	28.9	13	23.20	10
<i>Landscaped Yards</i>	32.8	14	39.0	17
Streets/Sidewalks	24.31	11	28.70	12.4
Undisturbed Open Space	76.67	33	73.50	32
Landscaped Slopes	60.72	26	58.70	25.4
Heli-spot	2.07	0.9	1.79	0.8
Parks	1.89	0.8	1.0	0.4
Trails	3.21	1.3	4.69	2
TOTAL	230.58	100	230.58	100
Pervious Area	179.42	77.81	178.7	77.49
Impervious Area	51.16	22.19	51.9	22.51

Source: B&E Engineering, 2003.

Note: Undisturbed open space acreage includes areas to be offered for dedication to the Santa Monica Mountains Conservancy.

a Percentage of site for originally proposed project have been corrected from those included in the Draft EIR. Acreages included in the Draft EIR for the originally proposed project did not change.

Total disturbance with implementation of the revised design would be 157.08 acres, not including fuel modification impacts. As indicated in Table 2.2, the single-family residential pads would occupy a total of 62.20 acres (27% of the project site). Undisturbed open space under the revised project would comprise 73.50 acres (32% of the project site).

Undisturbed open space does not include the graded slopes, parks, or trails located throughout the site. When added to the proposed 73.50 acres of undisturbed open space, the slopes, parks, and trails would result in a total open space of 137.89 acres (59.8% of the total project site).

As shown in Table 2.3, the 388-unit project has been physically divided into four distinct neighborhoods and provides a variety of lot, pad, and home sizes. Estate and equestrian lots, with a minimum area of 15,000 square feet, are situated predominantly on the plateau in the upper area of the project site (see Figure 2.7).

Table 2.3. Summary of Revised Project Design Residential Lots

Type of Lot	Minimum (sf)	Maximum (sf)	Average (sf)
Neighborhood I (92 units)			
Lot Area	15,009	24,113	16,788
Pad Area	5,168	14,833	9,993
Neighborhood II (136 units)			
Lot Area	6,003	43,408	6,999
Pad Area	4,802	10,330	5,500
Neighborhood III (110 units)			
Lot Area	6,000	29,425	11,518
Pad Area	4,012	8,608	5,714
Neighborhood IV (50 units)			
Lot Area	6,008	21,088	8,195
Pad Area	4,094	9,239	5,846
Total Number of Lots = 388			

Source: B&E Engineering, 2003

2.0 Revised Project Description

Most of the equestrian lots have access to either the public trails along the perimeter of the site or private trails within the project site. In addition, the revised design provides for a low-density buffer for Devil Canyon and the ridgeline to the north. The northwestern portion of the project site is entirely large lots averaging 11,168 square feet, compatible with the existing, rolling topography. Slightly smaller flat lots, averaging 11,581 and 8,195 square feet, respectively, are located in the lower, steeper areas in the southern portion of the site. These estate and equestrian lots would result in a less dense appearing viewshed from existing offsite vantage points. The remaining public views of the originally proposed project would remain unchanged.

Additional proposed land uses include four park sites and a heli-spot, which would be used by the County Fire Department on an emergency-only basis. The tentative tract map includes a total of 429 lots, with 388 dedicated to single-family residential land uses, 25 lots dedicated to open space, 14 lots dedicated to streets, one lot dedicated to future Los Angeles County Sheriff facility, and one lot dedicated to the heli-spot.

No building plans are proposed at this time. However, all building design and construction would fit with the existing character of southern California and comply with the requirements of Title 24 of the California Administrative Code. A preliminary landscape plan is shown in Figure 2.9.

2.4.1 Project Phasing

The entire project site has been master-planned as a unified residential community of 388 single-family residential lots and has been submitted to County for entitlement processing under VTTM 53138 and CUP No. 99-239.

2.4.2 Site Grading

Preliminary earthwork estimates indicate that the project site would require approximately 2.24 million cubic yards of excavation (cut) and an equal volume of fill, balanced onsite. The majority of the cuts would be less than 40 feet deep and fills would be of similar thickness, with the greatest cut being approximately 100 feet, located along the northerly property boundary, west of the heli-spot.

2.4.3 Transportation Improvements

Access to the project would be from Topanga Canyon Boulevard and Canoga Avenue (see Figure 2.7). Two bridges would be constructed spanning Devil Canyon (Street "A" and Street "B") to provide internal circulation.

In addition, several improvements would be made to existing, offsite streets and intersections, including Topanga Canyon Boulevard, Canoga Avenue, Rinaldi Avenue, Chatsworth Street, and DeSoto Avenue, as follows:

- To reduce the queuing on Poema Place/Mayan Drive and improve the overall operations at the Topanga Canyon Boulevard terminus area, a traffic signal would be installed at the intersection of Topanga Canyon Boulevard and Poema Place/Mayan Drive. The proposed traffic signal would be interconnected and operated in conjunction with the existing traffic signal at the intersection of Topanga Canyon Boulevard and SR-118 westbound on/off ramps such that the two traffic signals will essentially function as one single traffic signal with the following signal (green light) phases:
 - Phase 1: Northbound Topanga Canyon Boulevard
 - Phase 2: Southbound Topanga Canyon Boulevard/Westbound Mayan Drive
 - Phase 3: Southbound Topanga Canyon Boulevard/Eastbound Poema Place
 - Phase 4: Westbound SR-118 Off-ramp

| <i>Rhamnus ilicifolia</i> | Hollyleaf Redberry |
| <i>Rhaphtolpis spp.</i> | Indian Hawthorn |
| <i>Rhus integrifolia</i> | Leucosade Berry |
| <i>Salvia apiana</i> | California White Sage |
| <i>Salvia leucophylla</i> | Purple Sage |
| <i>Sambucus mexicana</i> | Elderberry |
| <i>Scabiosa caucasica</i> | Perennial Pincushion Flower |
| <i>Xylosma congestum</i> | Shiny Xylosma |

GROUNDCOVERS

- (for small slope areas and parkways)
- Rosmarinus officinalis*
 - Hypericum calycinum*
 - Myoporum parvifolium*
 - Gazania white (small drift)*
 - Grasses - *Curaç, Seseberia, Pasture grass, Stipa*

HYDROSEED MIX I

- Achillea millefolium*
- Eriophyllum confertiflorum*
- Eschscholia californica*
- Lotus scoparius*
- Lupinus nanus 'Cal. Native'*
- Mimulus longiflorus*
- Oenothera cheiranthifolia*
- Plantago insularis*
- Salvia columbariae*

HYDROSEED MIX II

- Phacelia campanularia*
- Lineria reticulata*
- Plantago sempervirens*
- Eschscholia caespitosa*
- Gilia capitata*
- Gazania dwf. Pixie White*

2.0 Revised Project Description

- Widen and restripe the westbound SR-118 off-ramp to provide an exclusive right-turn lane for traffic headed for either Mayan Drive or Poema Place, which would therefore not have to wait for traffic turning left onto southbound Topanga Canyon Boulevard.
- Widen and restripe the westbound Mayan Drive approach to County collector street standards (40-foot roadway width on a 64-foot right-of-way) to provide a second left-turn lane. This would result in two left-turn lanes (the north left-turn lane would also permit through traffic onto Poema Place), which would allow significantly more cars to turn southbound through the intersection during each green light phase.
- Widen and restripe the eastbound Poema Place approach to provide a second right-turn lane. This would result in two right-turn lanes (the north right turn lane would also permit through traffic onto Mayan Drive), which would allow significantly more cars to turn southbound through the intersection during each green light phase.
- Install left-turn traffic signal phasing related to eastbound Chatsworth Street traffic at the DeSoto Avenue intersection, and construct additional paving along both the northern and southern edges of Chatsworth Street adequate to lengthen the existing eastbound left-turn lane by approximately 100 feet.
- Install left-turn traffic signal phasing related to southbound Canoga Avenue traffic at the Chatsworth Street intersection, and construct approximately 100-feet of paving along the western edge of Canoga Avenue to provide for a left-turn lane onto eastbound Chatsworth Street. This paving would be considered temporary, pending a City of Los Angeles project to widen this portion of Canoga Avenue to City of Los Angeles standards.
- Install three-way stop signs at the intersection of Canoga Avenue and Candice Place and install a "No Left Turn" sign from southbound Canoga Avenue to Candice Place, prohibiting such movement between 6:00 A.M. and 9:00 A.M.
- Install speed bumps along Canoga Avenue between SR-118 and Candice Place, and an additional speed bump south of Candice Place.
- Install "No Left Turn" signage at the intersection of Canoga Avenue and Celtic Street.
- Install self-actuated flashing lights at the intersection of Canoga Avenue and Rinaldi Street for equestrian and pedestrian crossing.
- Paint a crosswalk on Chatsworth Street east of the intersection with Independence Avenue.
- Install permanent signs along Canoga Avenue displaying "Watch For Equestrians" or similar language.
- Install signs during the project construction period displaying "Jake Braking Strictly Prohibited" or similar language.
- Contribute fair share to the City of Los Angeles Department of Transportation for purposes of implementing the City's traffic signal enhancement program (known as ATSAC).

The improvements listed above, as deemed applicable by the City of Los Angeles, would be guaranteed through the City's B-Permit process of the Bureau of Engineering of the Department of Public Works of the City of Los Angeles and must be completed to the satisfaction of the appropriate City of Los Angeles agency within six months after the issuance of a B-Permit by the City of Los Angeles.

2.4.4 Drainage Improvements

Implementation of the revised design would include the construction of four debris and desilting basins. These basins would be located along the northern project site boundary and would intercept debris from the upstream watershed, thereby reducing the peak storm water runoff volume currently being discharged into Devil Canyon.

In addition, at each point of storm water discharge through a proposed storm drain, an energy-dissipating structure would be constructed in accordance with County Department of Public Works (LACDPW) standards to reduce discharge velocities to a non-erosive level. These facilities would be operated and maintained by LACDPW.

Also, at each point of storm water discharge into natural drainage courses, including Devil Canyon, a continuous deflective separation (CDS) unit with adsorbents would be constructed. These systems remove trash, soil, and other particles, and, with the use of adsorbents, oils and grease. These units would be contained in subsurface vaults, and will be operated and maintained by LACDPW.

2.4.5 Fuel Modification

The project site is located within an area designated as Fire Zone 4 (Very High Fire Hazard Severity Zone). Therefore, the project applicant has developed a fuel modification plan to minimize or retard the spread of brush and wildfire into the development area. As shown in Figure 2.10, the fuel modification plan includes:

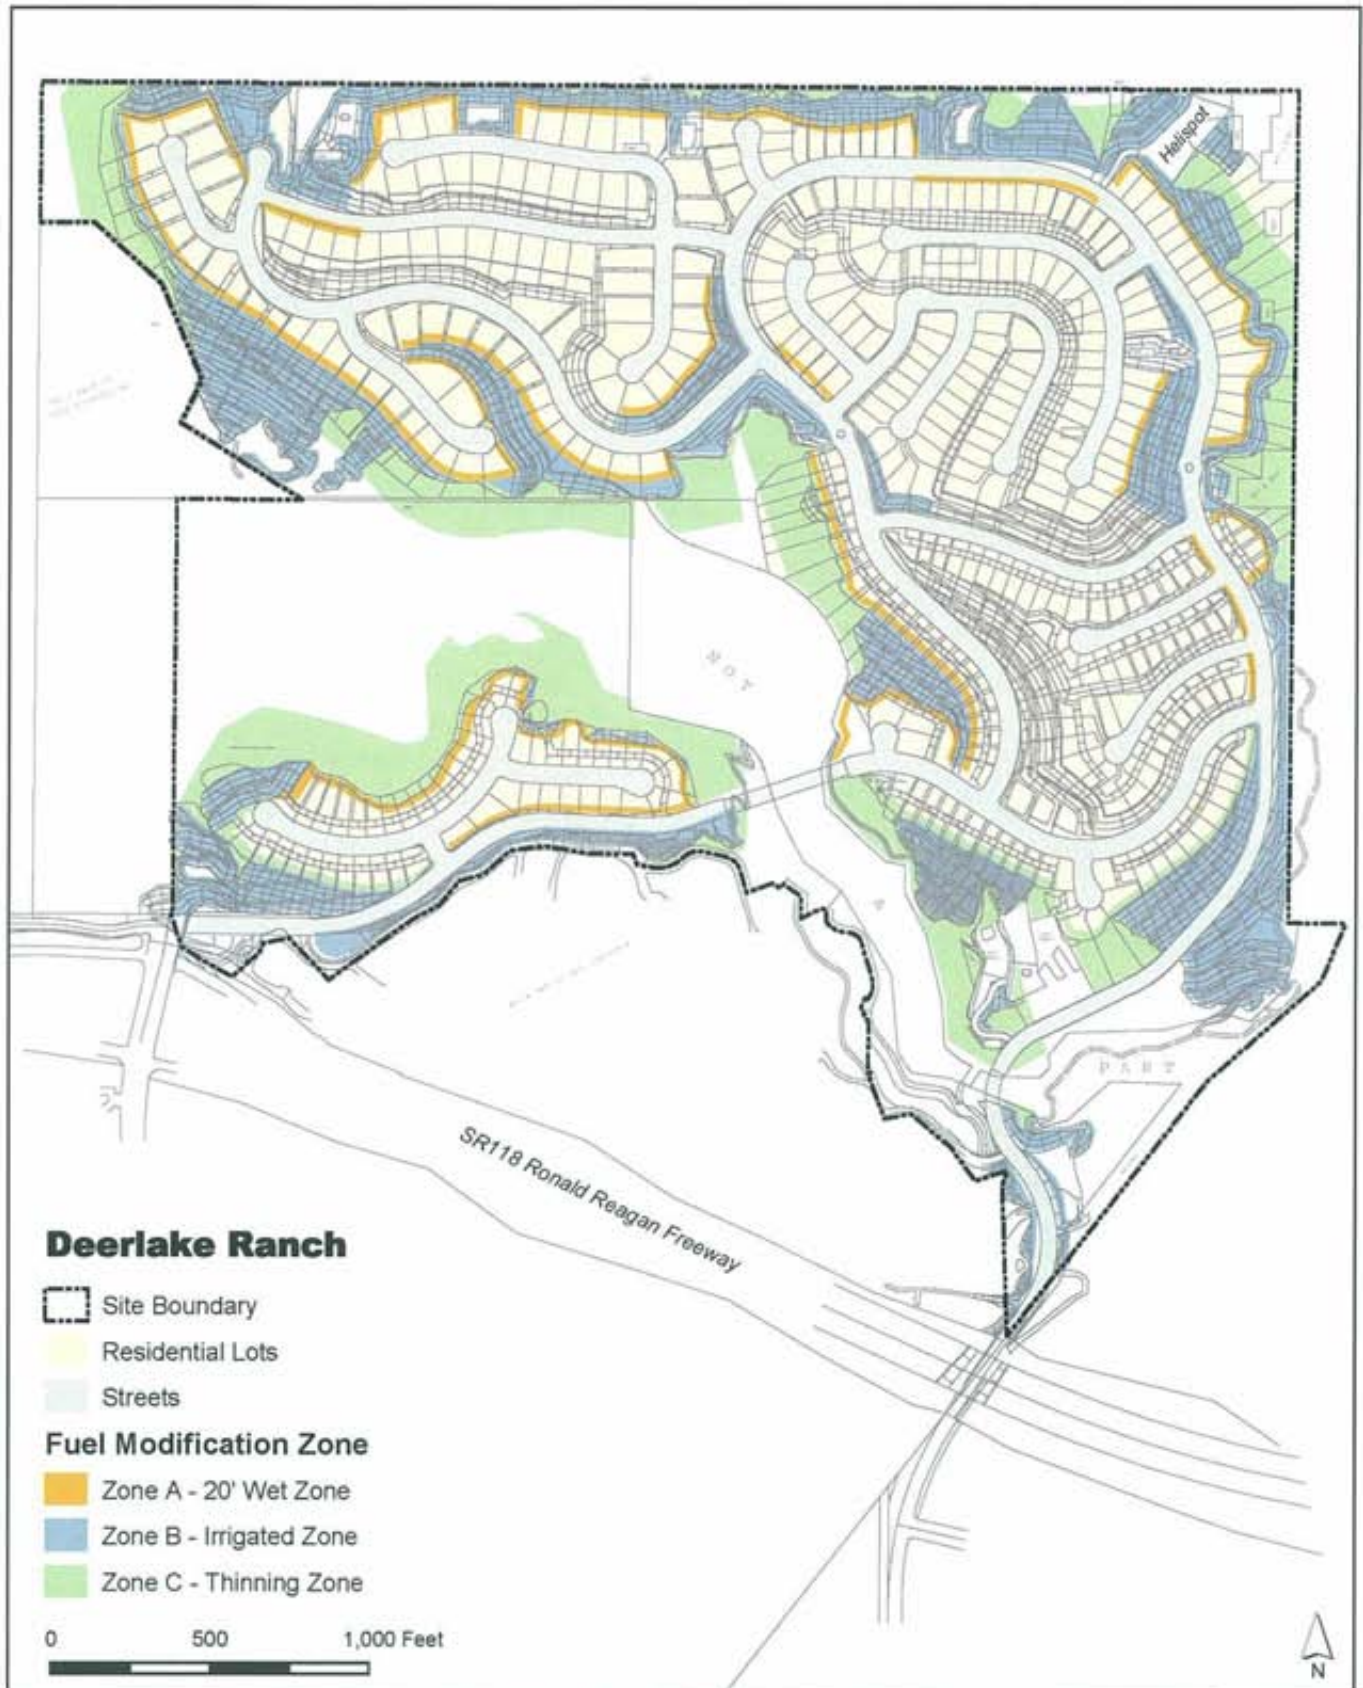

- A setback zone (wet zone)
- An irrigated zone
- A thinning zone
- Interface thinning zone standards

The plan provides zones of fire retardant, drought tolerant vegetation, and irrigation, which reduces fuel volumes and prevents rapid spread of fire from the natural area to the development area (see Appendix E of the Draft EIR).

2.4.6 Utilities and Public Services

Potable water would be provided to the project by the existing Twin Lakes Tanks and distribution system of the Las Virgenes Municipal Water District (LVMWD). Although this system currently serves the southern portion of the site, the applicant will be required to reconstruct portions of the existing distribution mains from the tanks to Topanga Canyon Boulevard to accommodate increased service.

Sanitary sewer service would be provided to the project by connecting to the existing County sewer line in Topanga Canyon Boulevard at Poema Way and to the City of Los Angeles sewer line in Canoga Avenue. Small portions of the City's existing sewer mains within Canoga Avenue would require reconstruction to provide additional capacity for the project. The LVMWD has a service agreement with the City to accept sewage for conveyance, treatment, and disposal from LVMWD's Chatsworth service area to the Hyperion Treatment Plant, and this agreement includes this project site. In addition, the applicant is proposing to contribute funds to construct public main sewers that serve the adjacent Twin Lakes Community.

HDR ONE COMPANY | Many Solutions[®]

FIGURE 2.10

Preliminary Fuel Modification Plan

Deerlake Ranch
Final Environmental Impact Report

2.0 Revised Project Description

Fire protection would be provided to the project site and vicinity by the County Fire Department. In addition, the project applicant has agreed to grant the Fire Department an easement over land in the northeastern corner of the project site as a "heli-spot" (see Figure 2.7). The heli-spot would be graded, and two small concrete pads for landing helicopters would be constructed along with two fire hydrants.

Law enforcement would be provided to the project site and vicinity by the County Sheriff's Department. In addition, the project applicant has agreed to construct a facility suitable for use as a Sheriff Department "storefront" facility to service the project area. As shown on Figure 2.7, the substation would be located near the Topanga Canyon Boulevard entrance to the project site.

Public school students would attend schools within the Los Angeles Unified School District (LAUSD), including Chatsworth Elementary School (grades K-5), Germain Elementary School (grades K-5); Lawrence Middle School (grades 6-8); and Chatsworth High School (grades 9-12).

Electrical service would be provided to the site by Southern California Edison (SCE), through several overhead facilities serving the property. With implementation of the revised design, existing overhead facilities would be replaced with an underground system. Southern California Gas Company (The Gas Company) supplies natural gas to the project vicinity through a system of subsurface gas mains and pipelines. Although currently there are no natural gas facilities on the project site, there is a six-inch gas main located at Topanga Canyon Boulevard near the project site. The revised design includes the construction of all related utility improvements.

Cable services would be provided to the project site by Time Warner Communications. In addition, the applicant has agreed to include the adjacent Twin Lakes Community within the application for cable services.

2.4.7 Open Space Characteristics

Open Space

In addition to the 31 acres of riparian habitat and project buffer areas already dedicated to the SMMC (see Section 2.2), approximately 19.2 acres of additional riparian and other open space areas, and 6 acres of additional buffer areas would be dedicated to the SMMC and 8.6 acres of other open space, as a result of development of the project. These lots would be dedicated to the SMMC at the time the final maps are recorded. In total, 73.50 acres of the project site is proposed for dedication as permanent undisturbed open space.

In addition, open space lots subject to fuel modification would be deeded to the homeowners' association (HOA), subject to an easement for SMMC. All other open space lots containing manufactured slopes or other improved features would be deeded to the HOA.

In addition to the onsite open space, the applicant has secured an option to purchase an approximate 159-acre parcel north of the project site for use as offsite mitigation for biological resources. As shown on Figure 2.6, the proposed mitigation parcel is located north of the community of Chatsworth, on the south flank of the Santa Susana Mountains in unincorporated Los Angeles County. This parcel would be dedicated to the SMMC and, in conjunction with the Biological Mitigation Plan, would mitigate project-related biological resource impacts to less than significant levels. Details of the offsite mitigation property are included in Appendix F.1 of this document.

Park Areas

The proposed project includes five active public park areas, which would be located within the project site boundaries and would be deeded to the HOA. In addition to the park funds that would be provided

pursuant to Government Code Section 66477 (I), the applicant has entered into an agreement with the SMMC and MRCA to provide funding for construction of improvements, as directed by the County, on a 13-acre parcel to be used for a community park.

Trails

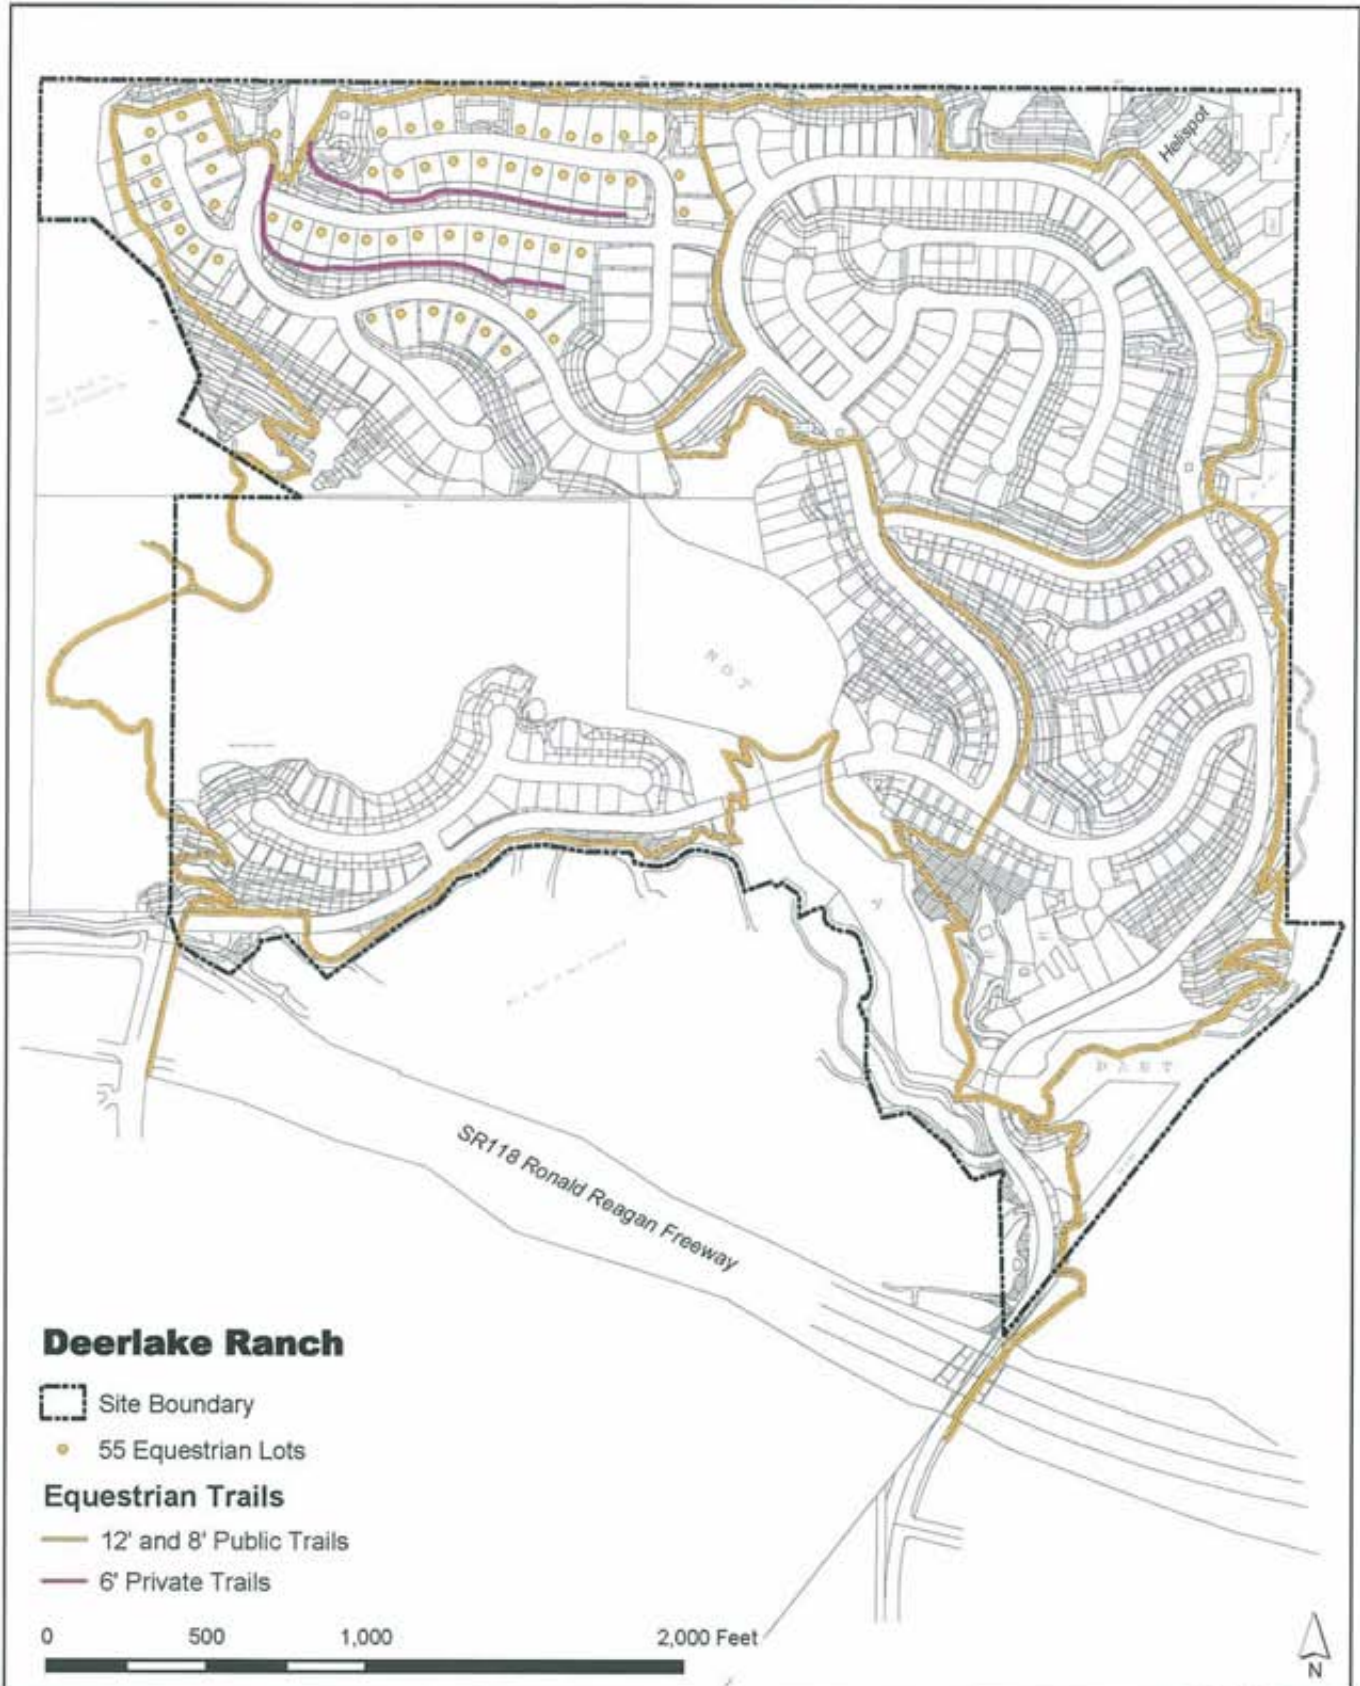

As shown in Figure 2.11, a proposed trail system, to be dedicated to the County, would loop the project site, connecting to existing trails at the terminus of Canoga Avenue and west of Topanga Canyon Boulevard, with existing trails to the east, north, and west of the site. In addition, the revised project includes shorter loop trails, both on the project site and on properties owned by other public agencies, which also will be dedicated to the County. Equestrian trail access would be provided to each of the 55 proposed equestrian lots.

In addition, stop signs or other warning signals would be installed at locations where future trails would cross public roads. Temporary trails would be constructed during construction activities in order for trails to remain open.

2.5 ENTITLEMENTS REQUIRED FOR THE PROPOSED PROJECT

Because the property is currently divided into 624 legal lots with Certificates of Compliance (not including the 300+ lots previously dedicated to SMMC), the eventual subdivision of the property could be accomplished by lot line adjustments, both as provided for by the State Subdivision Map Act, the County Subdivision Ordinance and the conditional use permit process. However, because the subdivision process provides a much more effective mechanism for ensuring implementation of public infrastructure and services, the County and the applicant have agreed that the project would be re-subdivided under a VTTM (see Appendix C.1 of this document). Final subdivision map(s) will be filed subsequent to the VTTM approval. In addition to the VTTM, the project is subject to a CUP (Chapter 22.56, Part 1 of the County Zoning Ordinance, including provisions of Section 22.56.205 [density control development] and Section 22.56.215 [hillside management]). Also, the project would require an Oak Tree Permit (Chapter 22.56, Part 16 of the County Zoning Ordinance). Along with the environmental review provided by this EIR, the above actions would be the primary discretionary procedures for this project.

In addition to the above-described County actions, the project would also require applicable permits from the U.S Army Corps of Engineers (Corps), the California Department of Fish and Game (CDFG), and the California Regional Water Quality Control Board (RWQCB).

 Deerlake Ranch
 Final Environmental Impact Report

3.1 INTRODUCTION

This section contains revisions to information contained in (1) Draft EIR, (2) Additional Environmental Information document, and (3) Revised Project Design Summary Document, based on:

- Additional or revised information required to prepare a response to a specific comment
- Updated information that has become out-of-date as a result of the passage of time and/or the revisions in the project as described in Section 2.0
- Community commitments agreed to by the applicant and additional conditions imposed by the County
- Typographical errors

Any changes to the Draft EIR are addressed in this section.

3.2 REVISIONS TO THE PROJECT DESCRIPTION

Revisions to the project description are discussed in detail in Section 2.0 (Revised Project Description).

3.3 REVISIONS TO SECTION 4.0 – DRAFT EIR IMPACT ANALYSIS

The following impact analysis sections have not changed since distribution of the Draft EIR: 4.2 (Air Quality), 4.4 (Cultural Resources), 4.7 (Noise), 4.8 (Public Services – Fire Protection), and 4.13 through 4.17 (Utilities and Services Systems [Water Supply, Wastewater, Solid Waste, Electricity, and Natural Gas]).

Revised or supplemental studies were completed to further explain the conclusions of no significant impact included in the Draft EIR. These studies have been completed for the following sections and are included as appendices to this document:

- 4.3 (Biological Resources) – Appendix F of this document includes updated biological studies.
- 4.5 (Geology and Soils) – Appendix G of this document includes an updated geologic report based on the revised project.
- 4.6 (Hydrology and Water Quality) – Appendix H and I of this document include an updated hydrology report (H.1), a preliminary water system design report (H.2), and the storm water mitigation plan (I).
- 4.10 (Public Services – Schools) – Appendix J of this document includes additional analysis of student generation factors.
- 4.12 (Transportation/Traffic) - Appendix K of this document includes an updated traffic study based on the revised project.

The following revisions to the remaining impact analysis sections of the Draft EIR are included in response to specific comments on the Draft EIR (see Section 4.0 and 5.0 of this document). These revisions reflect changes imposed by the County and, also, those changes, which the applicant has agreed to voluntarily complete.

None of the revisions to the Draft EIR impacts analysis change any of the conclusions of the Draft EIR. Specifically, the revised project will have impacts, which will be mitigated to a level which is less than significant.

In the following sections, text being added to the Draft EIR text is italicized; text being deleted is in ~~strikeout~~.

3.3.1 Aesthetics and Visual Resources (Section 4.1 of the Draft EIR)

Revision A:

Figure 4.1.5 (Section BB) of the Draft EIR has been revised to more accurately reflect the proposed project's single loaded street. Additional cross sections have also been included to illustrate views of the project site from adjacent trails. See revised figures that follow this section of the Final EIR.

3.3.2 Biological Resources (Section 4.3 of the Draft EIR)

Revision B:

The text on page 4.3-1, Section 4.3 of the Draft EIR has been revised as follows:

The applicant has conducted additional sensitive biological resource surveys and prepared biological resource mitigation program updates in 2003 to augment and update information contained in the Draft EIR. These biological resource surveys and updated mitigation plans include.

- *Sensitive Plant Surveys for the Deerlake Ranch Project, Los Angeles County, California – August 15, 2003, Glenn Lukos Associates.*
 - The sensitive plant survey did not identify the presence of any federally or state listed plant species which could occur on the project site, including the San Fernando Valley Spineflower, Santa Susana Tarplant, Brautin's Milk Vetch, Nevin's Barberry or Slender Homed Spine Flower. The sensitive plant survey did identify an expanded area of Plummer's Mariposa Lilly, which is not federally or state listed, but is listed by the CNPS as 1B, on the project site. An additional 19.97 acres of Mariposa Lily area, of which 15.0 acres will be impacted by the proposed project, has been identified onsite, for a total of 80.55 acres of onsite Plummer's Mariposa Lily area.. The Plummer's Mariposa Lily Mitigation Plan has been updated to reflect the additional bulb collection mitigation requirements. A portion of the 160-acre mitigation parcel previously described in the Plummer's Mariposa Lily Mitigation Plan provides for adequate mitigation for the additional identified impacts to the Plummer's Mariposa Lily and no additional mitigation measures beyond expanded bulb collection are necessary.
- *Updated Plummer's Mariposa Lily Mitigation Plan, Los Angeles County California, August, 2003, Envicom Corporation*
 - The Plummer's Mariposa Lily Mitigation Plan has been updated to reflect the current acreage of existing and impacts plants, based upon the findings contained in the Sensitive Species Survey. Although the 160 acre mitigation parcel remains adequate to fully mitigate the impacts of an additional 15.0 acres of impact to Plummer's Mariposa Lily, additional bulb collection within the additional 15.0 acre impact area and relocation will be required.
- *Submittal Requirements for the Coastal California Gnatcatcher Surveys for the Deerlake Ranch Project, Los Angeles County California – August 8, 2003, Glenn Lukos Associates*
 - The focused survey did not identify the presence of any Coastal California Gnatcatchers on the project site.

3.0 Revisions to Draft EIR

- Results of Focused Surveys Conducted for the Least Bell's Vireo on the Deerlake Ranch Project Site, Los Angeles County, California – August 15, 2003, Glenn Lukos Associates
 - The focused survey did not identify any Least Bell's Vireo on the project site, however a separate survey conducted for Southwestern Willow Flycatchers did observe one (1) male Least Bell's Vireo, on one occasion, in the proposed open space area, which will not be impacted by project implementation. It has been concluded that the bird was likely to be an unmated male unsuccessfully seeking a mate and a breeding location in the survey area by exploring riparian drainages. It was not detected on any other visits despite the fact that the species is normally very vocal and easy to detect when breeding or on territory.

The following additional mitigation measures are proposed to ensure that any potential noise related impact to least Bell's vireo is mitigated to less than significant levels:

- *If earthmoving activities are scheduled to start at the site between April 10 and August 15 (the vireo nesting season) a qualified biologist will perform a one-day survey of the potential vireo habitat for the presence of nesting vireos not more than seven days prior to the start of such earthmoving activities. If any nesting vireos are observed, no work (vegetation clearing, earthmoving, or construction) may occur on the plateau above the riparian habitat within 150 feet of the nest, or in the riparian habitat within 500 feet of the nest. If any nesting vireos are observed, the qualified biologist will monitor activities occurring within 1,000 feet of the nest to ensure compliance with this condition.*
- *If earthmoving activities start outside the vireo nesting season (August 16 through April 9), no additional vireo surveys will be required, unless (during the vireo nesting season) said work ceases for a period of more than 15 days before beginning again. In such case, the restart of earthmoving activities will be considered as a new start of earthmoving activities, subject to the condition above.*
- Focused Surveys for the California Red-Legged Frog on the Deerlake Ranch Project Site, Los Angeles County California – August 15, 2003, Glenn Lukos Associates
 - The focused survey did not identify any Red-Legged Frogs on the project site.
- Southwestern Willow Flycatcher Focused Survey for the Deerlake Ranch Project, Los Angeles County, California – August 18, 2003, Jones and Stokes
 - The focused survey did not identify any Southwestern Willow Flycatchers on the project site. The survey did identify a transient non-listed Western Flycatcher was observed onsite, which does not require mitigation.

These studies are included in their entirety in Appendix F of this Response to Comments/Final EIR document and do not change the conclusion of the Draft EIR regarding impacts to sensitive biological resources.

Revision C:

The text on page 4.3-23 under Section 4.3.4 (Mitigation Measures) of the Draft EIR has been revised as follows (new text is italicized):

The applicant has acquired a 160-acre parcel of undeveloped open space, located north of the community of Chatsworth, to mitigate all impacts on biological resources to less than significant levels. The applicant is proposing to mitigate all impacts to biological resources to less than significant levels through the acquisition of a minimum 60-acre parcel of undisturbed natural open space in the immediate vicinity of the project site. A portion of this parcel sufficient to mitigate all impacts to biological resources to less than significant levels will be dedicated to a public resource protection agency prior to initiation of project grading operations. The parcel *is located* ~~will be located either adjacent to the project site or adjacent to the existing Santa Monica Mountains Conservancy 2,000 acre + conservation area.~~ The biological composition of the parcel to be dedicated to the resource agency has, at a minimum, the required amount of high quality habitat to meet mitigation requirements as outlined in the updated Plummer's Mariposa Lily Mitigation Plan., and in many cases will provide in excess of required mitigation requirements.

The following revised mitigation measure will be implemented on the offsite mitigation parcel and are recommended to ensure biological resource impacts would be less than significant.

General Biological Resource Mitigation Measures

- 4.3-2 The applicant shall mitigate impacts to 0.03 acre of on-site willow woodland based on the requirements outline in the above referenced updated mitigation plan and to the satisfaction of the CDFG and the Los Angeles County Department of Regional Planning. The mitigation plans shall be reviewed and approved by these agencies prior to the issuance of grading permits. This mitigation measure will be implemented on the mitigation parcel with ~~0.15~~ 0.12-acre ~~(representing a 5:1 ratio)~~ *(representing a 4:1 ratio)*.

3.3.3 Public Services – Police Protection (Section 4.9 of the Draft EIR)

Revision C:

The following paragraph on Page 4.9-1 of the Draft EIR under “Environmental Setting” has been added (after paragraph 1) to reflect additional information received regarding police services:

Areas surrounding the project site, within the City of Los Angeles are served by the City of Los Angeles Police Department, Devonshire Community Police Station. This station is located at 10250 Etiwanda Avenue in Northridge, approximately two miles from the southeasterly portion of Porter Ranch (see Figure 4.8.1) and approximately 4 miles from the project site. The Devonshire Community Police Station serves an estimated 240,000 residents within approximately 53.9 square miles. The average emergency response time in 2001 was 10.1 minutes.

Revision D:

Figure 4.8.1 of the Draft EIR has been revised to more accurately reflect the locations of all public services (including the Devonshire Community Police Station).

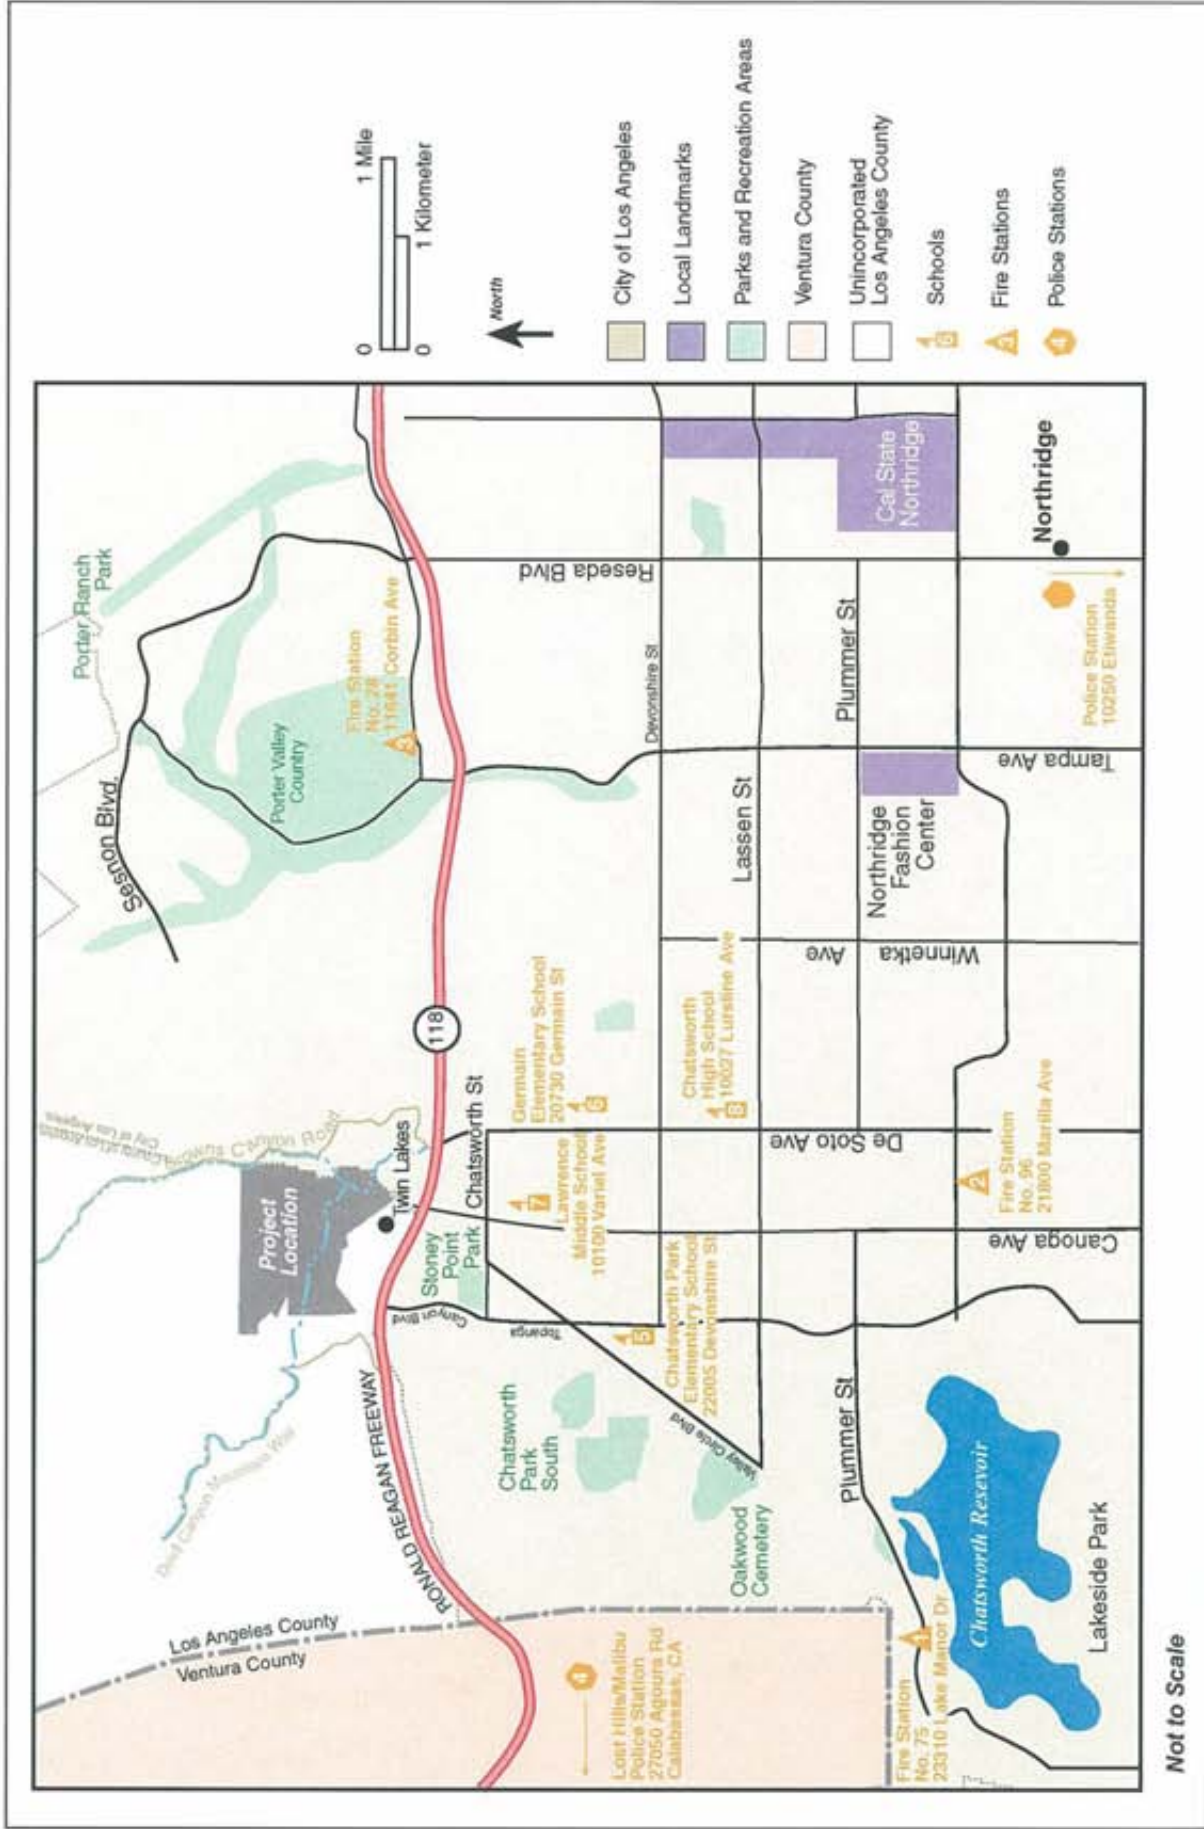

FIGURE 4.8.1
Public Services Locations
 Deerlake Ranch
 Final Environmental Impact Report

Not to Scale

Revision E:

The following paragraph on Page 4.9-2 of the Draft EIR under “Project Impacts” has been revised to reflect community commitments proposed by the applicant (new text is *italicized*):

The addition of 388 residences would increase calls for police protection service to this area and may necessitate a change in the Lost Hills/Malibu Station’s deployment of deputies. The proposed project would add an additional 1,145 residents to the service area of the Lost Hills/Malibu Station. Based on the standard provision of one officer per 1,000 residents, an additional 1.15 officers would be required. *However, the project applicant has agreed to construct a facility suitable for use as a Sheriff’s Department Substation to service the project area. The new facility would be approximately 800 square feet in size and located near the Topanga Canyon Boulevard entrance to the project site; see Figure 2.8 (Proposed Site Plan). In addition, however, implementation of the proposed project would serve to increase the existing funding mechanisms (i.e., property taxes) for any additional officers required to serve the project area. Therefore, impacts would not be considered significant.*

3.3.4 Public Services – Schools (Section 4.10 of the Draft EIR)

Revision F:

After distribution of the Draft EIR, additional updated data from the Los Angeles Unified School District (LAUSD) was made available regarding school capacity. Note that LAUSD has provided conflicting student generation rates, which yield widely ranging student generation results. However, this new data did not change the conclusions of the Draft EIR—that impacts would not be significant with implementation of mitigation measures. In addition, the applicant has indicated that it will enter into discussions with LAUSD and the Porter Ranch master developer to investigate the possibility of accelerating the Porter Ranch elementary and middle school construction. Please see Section 3.2.8 (LAUSD Responses) and Appendix J of this Final EIR for a detailed analysis of the information provided by LAUSD. Page 4.10-1 of the Draft EIR has been revised as follows (new text is *italicized*):

The proposed project site currently has no student population. The Los Angeles Unified School District (LAUSD) provides primary and secondary public education services for the project area. The capacity of public schools in the project vicinity to accommodate increases in student enrollment is assessed by comparing the existing enrollment capacity (the number of students for which a school has been designed) with current and projected enrollment levels. ~~The standard classroom ratios for schools that would serve the proposed project are 20:1 for kindergarten through third grades; 30:1 for grades fourth through fifth; and 35:1 for grades sixth through twelfth.~~ *The standard classroom ratios for schools that would serve the proposed project are 20:1 for kindergarten through third grades; 29:1 for fourth and fifth grades; 33:1 for grades sixth to eighth; and 35:1 for grades ninth through twelfth.*

The proposed project is located within the attendance boundaries of four public schools (see Figure 4.8.1). These schools are: Chatsworth Elementary School (Grades K-5); Germain Elementary School (Grades K-5); Lawrence Middle School (Grades 6-8); and Chatsworth Senior High School (Grades 9-12). Location, existing operating capacity and enrollment figures for these schools are provided in Table 4.10.1. As of October 2000/2002, there was a surplus capacity of ~~425~~ 63 student spaces at Chatsworth Park Elementary School, ~~228~~ 102 at Germain Elementary School, ~~944~~ 551 at Lawrence Middle School, and ~~4,294~~ 137 at Chatsworth Senior High School.

Revision G:

Table 4.10.1 on Page 4.10-1 of the Draft EIR has been replaced with the following updated data provided by LAUSD:

Revised Table 4.10.1. Existing School Capacity and Enrollment

School Facility	Operating Capacity ^a	Capped ^b	Actual Enrollment ^a	Resident Area (R2) Enrollment ^{a,c}	Existing Space Available/(Deficit)		Resident (R2) Enrollment Projections ^c
					Actual	R2	
Chatsworth Park Elementary	559	No	496	511	63	48	0
Germain Elementary	905	No	803	706	102	199	(20)
Lawrence Middle School	2,427	No	1,876	1,666	551	761	250
Chatsworth Senior High School	3,351	No	3,214	2,515	137	36	680
Total	7,242	--	6,389	5,398	853	1,044	910

Source: LAUSD, 2002.

NOTES:

- a Operating Capacity, actual enrollment and resident enrollment are current as of October 2001.
- b A "No" indicates that the school has not reached its enrollment capacity. A "Yes" indicates that the school has reached its enrollment capacity, and new enrollees are assigned and transported by the LAUSD to schools which can accommodate additional students.
- c This enrollment does not reflect actual enrollment at the above listed schools, however for purposes of impact analysis, it is necessary to use Resident Area (R2) enrollment statistics which reflect those students living within the attendance boundaries of the school. The resident enrollment projections are for five years out, beginning with the 2002-2003 school year, for the elementary and middle schools; the projections are for eight years for the senior high school.
- * Actual enrollment reflects the number of students in attendance at the above listed schools. Resident Area (R2) enrollment reflects the number of students living within the attendance boundaries of the school.

Revision H:

The text on page 4.10-3 under "Project Impacts" of the Draft EIR has been revised to read (new text is italicized):

There are two elementary schools which students from the proposed project could attend. The project site is located within the existing boundaries for both Chatsworth Elementary School and Germain Elementary School. These schools, projected to have ~~125~~ 63 and ~~228~~ 102 student spaces available, respectively, would not have sufficient space to accommodate all 208 elementary students generated by the project (see Table 4.10.3). *Implementation of the proposed project would result in a deficit of space of 43 students at the two elementary schools.* Lawrence Middle School, which is projected to have space to accommodate ~~914~~ 551 additional students, would have sufficient space for the 121 students generated by the proposed project. Finally, Chatsworth Senior High School is projected to have space to accommodate an additional ~~1,294~~ 137 students and would not have sufficient space to accommodate the 165 students generated by the proposed project. *Implementation of the proposed project would result in a deficit of space of 28 students at the high school.* ~~Therefore, the estimated elementary, middle, and high school students generated as a result of the proposed project are not anticipated to result in significant impacts to LAUSD elementary, middle, or high school services. Therefore, the estimated elementary and high school students generated as a result of the proposed project are anticipated to result in significant impacts on LAUSD elementary and high school services, while the estimated middle school students generated as a result of the proposed project are not anticipated to result in significant impacts on LAUSD middle school services.~~

Revision I:

Table 4.10.3 on Page 4.10-3 of the Draft EIR has been replaced with the following updated data provided by LAUSD:

Revised Table 4.10.3. Student Generation Impacts

School Facility	Operating Capacity ^a	Enrollment			Total Enrollment		Existing Space Available/(Deficit)		Resident Area (R2) Enrollment Projections
		Actual ^a	Resident Area (R2) ^{ab}	Proposed Project	Actual	R2	Actual	R2	
Elementary	1,464	1,299	1,217	208	1,507	1,425	(43)	39	(20)
Middle School	2,427	1,876	1,666	121	1,997	1,787	430	640	250
High School	3,351	3,214	2,515	165	3,379	2,680	(28)	671	680
Total	7,242	6,389	5,398	494	6,883	5,892	359	1350	910

Source: LAUSD, 2002.

- a. Operating capacity, actual enrollment, and resident enrollment are current as of October 2001.
- b. This enrollment does not reflect actual enrollment at the above listed schools, however for purposes of impact analysis, it is necessary to use Resident Area (R2) enrollment statistics which reflect those students living within the attendance boundaries of the school. The resident enrollment projections are for five years out, beginning with the 2002-2003 school year, for the elementary and middle schools; the projections are for eight years for the senior high school.

Revision K:

The last two paragraphs on Page 4.10-4 under Section 4.10.3 (Cumulative Impacts) of the Draft EIR has been revised as follows to reflect current student population information. (new text is *italicized*):

Related Projects No. 7 (Porter Ranch, which includes ~~1,698~~ *3,600* single-family residential units), No. 8 (which includes a total of 52 single-family residential units); No. 10 (which includes 159 multi-family dwelling units); and No 11 (which includes 12 single-family residential units) are located within the boundaries of the aforementioned schools. *Currently, all developed areas in Porter Ranch are assigned to Castlebay Lane Elementary, which is not within the boundaries of the proposed project or other related projects. However, Porter Ranch is also served by the Porter Ranch Elementary School, which is not within the boundaries of the proposed project and other related projects. Currently only Germain Elementary School accepts students from Porter Ranch without a permit, and Porter Ranch students account for only about two percent of the current student population. Most of the remaining Porter Ranch development area is within the Germain Elementary School attendance area. An evaluation of opportunities to reassign boundaries would be one of the steps taken to remedy enrollment impacts on Germain Elementary School. Growth in the District is experienced District-wide, and solutions to ease crowding in District schools are implemented District-wide.*

As shown in Table 4.10.4 this would result in an estimated additional ~~798~~ *1,616* elementary school students, ~~465-940~~ middle school students, and ~~634~~ *1,278* high school students for a total of ~~1,894~~ *3,834* students. As shown in Table 4.10.5, ~~all area schools, with the exception of the elementary schools,~~ would be *unable* to accommodate the additional students associated with the proposed and related projects.

Revision L:

Table 4.10.4 on Page 4.10-5 of the Draft EIR has been replaced with the following updated data provided by LAUSD:

Revised Table 4.10.4. Cumulative Student Generation

Project Use	Elementary (K-5)		Middle School (6-8)		High School (9-12)	
	Factor	Students	Factor	Students	Factor	Students
Porter Ranch – Single-family (3,600 units)	0.43	1548	0.25	900	0.34	1224
Single-family (52 units)	0.43	22	0.25	13	0.34	18
Multifamily (159 units)	0.26	41	0.15	24	0.20	32
Single-family (12 units)	0.43	5	0.25	3	0.34	4
Total Project Generation	--	1,616	--	940	--	1,278

Source: LAUSD, 2002.

Revision M:

Table 4.10.5 on Page 4.10-5 of the Draft EIR has been replaced with the following updated data provided by LAUSD:

Revised Table 4.10.5. Cumulative School Impacts

School Facility	Operating Capacity ^a	Proposed Project and Current Enrollment		Related Projects Enrollment	Cumulative Enrollment		Existing Space Available/(Deficit)		Resident (R2) Enrollment Projections
		Actual	R2		Actual	R2	Actual	R2	
Elementary	1,464	1,507	1,425	1,616	3,123	3,041	(1,659) ⁴	(1,577)	(20)
Middle School	2,427	1,997	1,787	940	2,937	2,727	(510)	(300)	250
High School	3,351	3,379	2,680	1,278	4,657	3,958	(1,306)	(607)	680
Total	7,242	6,883	5,892	3,834	10,717	9,726	(3,475)	(2,484)	910

Source: LAUSD, 2002.

a Operating Capacity, actual enrollment and resident enrollment are current as of October 2001.

Revision N:

The last paragraph on Page 4.10-5 of Section 4.10.3 (Cumulative Impacts) of the Draft EIR has been revised as follows (new text *italicized*):

As shown in Table 4.10.5, the cumulative impact of the proposed and related projects would result in a deficit of space of *653-1,659* students at the elementary level, mainly from Porter Ranch; *a deficit of space of 510* students at the middle school level; and *a deficit of space of 1,306* at the high school level. Environmental documentation for this related project indicates that the applicant for Porter Ranch and LAUSD have entered into an agreement to provide capacity within the district to accommodate further enrollment growth in the area associated with Porter Ranch. In addition, as with the proposed project, all related projects would be required to pay applicable developer fees to offset these impacts. Therefore, cumulative impacts would not be significant.

⁴ Per a Letter from Rena Perez, Director, Master Planning and Demographics, LAUSD, January 22, 2002, the cumulative school space deficit is listed as 1,699; however, this is a calculation error. The correct cumulative school space deficit is 1,659.

Revision O:

The text on Page 4.10-6 under Section 4.10.4 (Mitigation Measures) of the Draft EIR has been revised as follows (new text is *italicized*):

~~Although impacts associated with the proposed project would not be significant, the~~ *The following mitigation measure is recommended to ensure that project impacts to schools in the area would be less than significant:*

4.10-1 The applicant shall pay developer fees, as required under Section 65995 of the California Code, for school improvements. *The applicant has indicated that it will enter into discussions with LAUSD and the Porter Ranch master developer to investigate the possibility of accelerating the Porter Ranch elementary and middle school construction schedule.*

Revision P:

The text on Page 4.10-6 under Section 4.10.5 (Unavoidable Impact After Mitigation) of the Draft EIR has been revised as follows (new text is *italicized*):

The proposed project is expected to generate an additional 494 students. Based on LAUSD projections, all four schools serving the project area would not have adequate space to accommodate the additional students generated by the project. *However, payment of school fees would reduce these impacts to less than significant. Section 17620(a) of the California Education Code and Section 65995(b) of the California Government Code authorizes school districts to impose and collect school impact fees for all residential and nonresidential activities that occur within the jurisdictions to offset the costs associated with the generation of new students. Referencing Section 65995(h) of the Government Code, "the payment or satisfaction of a fee, charge, or other requirement levied or imposed pursuant to Section 17620 of the Education Code in the amount specified in Section 65995 and, if applicable, any amounts specified in Section 65995.5 or 65995.7 are hereby deemed to be full and complete mitigation of the impacts of any legislative or adjudicative act, or both, involving, but not limited to, the planning, use, or development of real property, or any change in governmental organization or reorganization as defined in Section 56021 or 56073, on the provision of adequate school facilities." Payment of applicable fees constitutes full mitigation of those impacts that are directly or indirectly caused by a proposed project upon those school districts potentially impacted by that project.* ~~Therefore, no significant impacts are anticipated.~~

3.3.5 Public Services – Libraries (Section 4.11 of the Draft EIR)

Revision Q:

The following paragraph on Page 4.11-1 of the Draft EIR under "Environmental Setting" has been revised as follows (new text is in *italics*):

The Los Angeles County Public Library operates facilities and services Countywide in both unincorporated and incorporated areas of the County. *The proposed project would be served by the Los Angeles County Las Virgenes Bookmobile, which provides service to the project area. The bookmobile has a collection of 8,521 library materials consisting of books, audio and video materials, DVD's, pamphlets, periodicals and government documents. The Las Virgenes Bookmobile serves an estimated 2,750 residents in the project area.* ~~The Chatsworth Branch Library, located at 21052 Devonshire Street, is within the attendance boundaries of all four schools serving the project site (see Figure 4.8.1). The Initial Study determined that additional~~

students could potentially impact this library facility. However, the library, which is 5,400-square feet in size, can currently accommodate the additional 494 students. In addition, the facility will undergo renovation within the next two years, expanding its size to 12,500 square feet.⁵ As of July 2001, the library maintains a staff of six full-time employees and five part-time employees.⁶ The library hours of operation are Monday and Wednesday 10:00 A.M. to 8:00 P.M., Tuesday and Thursday 12:00 P.M. to 8:00 P.M., Friday and Saturday 10:00 A.M. to 6:00 P.M. The library is closed on Sundays.

Revision R:

The following paragraph on Page 4.11-2 of the Draft EIR under "Project Impact" has been revised as follows (new text is in *italics*):

Development of the proposed project would increase demand for library services, thereby increasing the need for additional facilities and materials (e.g., books, periodicals, audio tapes, videos, etc.). The proposed project would result in an additional ~~4,428~~ *1,199* residents within the project area.⁷ Based on County Library planning guidelines of ~~0.35~~ *0.5* net square feet of library space per capita and ~~2.0~~ *2.75* library items per capita, it is anticipated that the proposed project would require a total of ~~500~~ *600* square feet of library space and ~~2,856~~ *3,297* additional items would be required.

Revision S:

The following paragraph on Page 4.11-2 of the Draft EIR under "Cumulative Impact" has been revised as follows (new text is in *italics*):

Continued development and urbanization of the Chatsworth area of the San Fernando Valley over time would increase the resident population. There are a total of 11 related projects which were identified for this analysis and which are described in Section 3.0 of this Draft EIR. Of the 11 related projects, three proposed projects (Nos. 8, 10 and 11) are located within the project area. Related Project No. 8, located to the immediate west of the proposed project site, would result in the addition of 52 single-family dwelling units; No. 10 would result in 159 dwelling units; and No 11 would result in 12 single-family dwelling units *for a total of 223 additional dwelling units for the related projects*. The cumulative population generated by these related projects would be approximately ~~658~~ *689* residents. Combined with the proposed project total population of ~~4,428~~ *1,199* residents, a cumulative generation of ~~2,086~~ *1,888* residents would be added to the area.

Based on County Library planning guidelines, it is anticipated that cumulatively, a total of ~~730~~ *944* square feet of library space and ~~4,172~~ *5,192* additional items would be required. Such development (e.g., single and multi-family residential projects, and mobile homes) would be subject to mitigation consistent with County guidelines on a project-by-project basis similar to that indicated for the proposed project. Applicable fees would be paid for new residential subdivisions as required by the Los Angeles County ordinance. Therefore, no additional mitigation beyond that which is identified for the proposed project is recommended for cumulative development projects, and cumulative impacts would be less than significant.

5 Telephone communication with Bruce Seidman, Supervisor, Chatsworth Branch Library, October 16, 2000.

6 Telephone conversation with Bruce Seidman, Supervisor, Chatsworth Branch Library, July 20, 2001.

7 A factor of 2.95 persons per dwelling unit is used to determine estimated resident population. This factor is based on information from the Water System Design Report for Tentative Tract No. 53138 Chatsworth Ridge, Boyle Engineering Corporation, August 2000, included in its entirety in Appendix H of this Draft EIR.

3.3.6 Transportation/Traffic (Section 4.12 of the Draft EIR)

Revision T:

After distribution of the Draft EIR, additional traffic analyses were completed. Page 4.12-1 of the Draft EIR has been revised as follows (new text is *italicized*).

The following information is based on *Traffic Impact Study, Chatsworth Ridge Estates Project, Chatsworth, California* (March 22, 2001, Revised November 15, 2001) ~~and; Chatsworth Ridge Estates Project Updated tables and exhibits based on 484 dwelling units~~ (October, 24, 2001); *Response to Traffic Comments Raised at the December 6, 2001 Community Meeting Regarding the Traffic Study Prepared for Tentative Tract No. 53138 (Chatsworth Ridge Estates)* (December 21, 2001, Revised January 9, 2002); *Discussion of the Congestion Management Program Roadway Impact Analysis* (January 7, 2002); *Response to Comments Submitted by the State of California Department of Transportation Related to Tentative Tract No. 53135 (Deerlake Ranch Project), Chatsworth Area of Unincorporated Los Angeles County; and the updated traffic study dated April 9, 2003*, all prepared by Linscott Law & Greenspan, Engineers, for the proposed project. The findings of these reports are summarized in this section and are presented in their entirety as Appendix M of this Draft EIR.

The traffic impact study analyzes existing conditions, as well as, projected traffic conditions following the development of the proposed Deerlake Ranch project. While the project site is located in an unincorporated area of Los Angeles County, some study intersections are located within the City of Los Angeles. Therefore, the updated traffic analysis (April 9, 2003) follows County of Los Angeles and City of Los Angeles traffic study guidelines and has been approved by both County of Los Angeles and the City of Los Angeles. This impact analysis portion of the updated traffic study is based upon ~~a worst case scenario~~ *the proposed development of 538 388 residential dwelling units*, although the mitigation measures are based on the original 538 unit project proposal.

Revision U:

Page 4.12-7 of the Draft EIR has been revised as follows (new text is *italicized*):

As shown on Table 4.12.2, ~~six~~ *seven* study intersections are currently operating at LOS E or F during the A.M. and/or P.M. peak hours. The remaining ~~seven~~ *six* study intersections are currently operating at acceptable LOS during both the A.M. and P.M. peak hours.

Revision V:

Table 4.12.2 on Page 4.12-10 of the Draft EIR has been revised per the new traffic analysis:

Revised Table 4.12.2. Summary of Existing Volume-to-Capacity (V/C) Ratios and Level of Service (LOS)

Notes:

- a Study intersections are located within the City of Los Angeles, unless otherwise indicated.
- b Study intersection is located within the County of Los Angeles.
- c This intersection is unsignalized. Because of its proximity to Topanga Canyon Boulevard and SR-118 WB On/Off ramps less than 50 feet apart, the two intersections are analyzed together as one.

Revision W:

Page 4.12-14 of the Draft EIR has been revised as follows (new text is *italicized*):

Ambient Growth

Growth with traffic due to the combined effects of continuing development, intensification of existing development and other factors were assumed to be two percent through 2005. This ambient growth incrementally increases V/C ratios at all of the study intersections. As shown in Tables 4.12.4 and 4.12.5, the following seven study intersections are expected to operate at LOS E or F during the A.M. and/or P.M. peak hours with the addition of ambient traffic growth:

- Topanga Canyon Boulevard and SR-118 WB On/Off-ramps (LOS E – A.M. peak hour, LOS F - P.M. peak hour).
- Topanga Canyon Boulevard and SR-118 EB On/Off-ramps (LOS F – A.M./P.M. peak hours).

3.0 Revisions to Draft EIR

- Topanga Canyon Boulevard and Santa Susana Pass Road (LOS F – A.M. peak hour, LOS E – P.M. peak hour).
- Topanga Canyon Boulevard and Chatsworth Street (~~LOS E – A.M./P.M. peak hours~~ LOS E – A.M. peak hour, LOS F – P.M. peak hour).
- Topanga Canyon Boulevard and Devonshire Street (~~LOS F – P.M. peak hour~~ LOS E – A.M. peak hour, LOS F – P.M. peak hour).
- De Soto Avenue and Chatsworth Street (LOS F – A.M./P.M. peak hours).
- De Soto Avenue and Devonshire Street (~~LOS F – P.M. peak hour~~ LOS E – A.M. peak hour, LOS F – P.M. peak hour).

Revision X:

Tables 4.12.4 and 4.12.5 on Pages 4.12-15 and 4.12-16 of the Draft EIR have been revised per the new traffic analysis:

Source: Linscott Law & Greenspan, Engineers, 2001. Source: Linscott Law & Greenspan, Engineers, 2003.

Notes:

- a. Intersection identified per the June 6, 2002 LADOT letter as a significant cumulative traffic impact.

Revision Y:

The text on Page 4.12-17 of the Draft EIR has been revised as follows (new text *italicized*):

With Related Projects

The City of Los Angeles analysis procedures require that consideration of traffic due to related projects be considered prior to consideration of traffic due to the proposed project. Table 4.12.5 shows that the LOS at the City of Los Angeles study intersections are incrementally increased by the addition of traffic generated by the related projects listed in Table 4.12.3. The following eight study intersections are anticipated to operate at LOS E or F during either the A.M. or P.M. peak hours with the addition of traffic expected to be generated by related projects:

- Topanga Canyon Boulevard and SR-118 EB On/Off-ramps (LOS F – A.M./P.M. peak hours).
- Topanga Canyon Boulevard and Santa Susana Pass Road (LOS F – A.M./P.M. peak hours; ~~LOS E – P.M. peak hour~~).
- Topanga Canyon Boulevard and Chatsworth Street (~~LOS E – A.M. peak hour~~; LOS F A.M./P.M. peak hours).
- Topanga Canyon Boulevard and Devonshire Street (LOS F – A.M./P.M. peak hours).
- ~~De Soto Avenue and SR-118 WB On/Off-ramps (LOS F – A.M. peak hour).~~
- ~~De Soto Avenue and SR-118 EB On/Off-ramps (LOS F – A.M. peak hour; LOS E – P.M. peak hour).~~
- De Soto Avenue and Chatsworth Street (LOS F – A.M./P.M. peak hours).
- De Soto Avenue and Devonshire Street (~~LOS E – A.M. peak hour~~; LOS F – A.M./P.M. peak hours).

Project Trip Generation

Traffic volumes expected to be generated by the proposed project were estimated using accepted generation rates published in the Institute of Transportation Engineers' (ITE) *Trip Generation Manual*, 6th Edition, 1997. Traffic volumes expected were based upon rates per single-family residential unit. ITE Land Use 210 (single-family detached housing) trip generation rates were used to forecast the traffic volumes expected to be generated by the proposed project.

The project is expected to generate ~~387~~ *411* vehicle trips (~~97~~ *103* inbound and ~~290~~ *308* outbound) during the A.M. peak hour and ~~489~~ *445* vehicle trips (~~313~~ *285* inbound and ~~176~~ *160* outbound) during the P.M. peak hour.

Revision Z:

Page 4.12-18 and 4.12-21 of the Draft EIR has been revised as follows (new text is *italicized*):

With Proposed Project

As shown in Tables 4.12.4 and 4.12.5, application of the County's and City threshold criteria "with Proposed Project" scenario indicates at three study intersections are anticipated to be significantly impacts by the proposed project during the A.M. and P.M. peak hours. The proposed project is expected to create significant impacts because it exceeds the City's impact thresholds at the following intersections:

- Topanga Canyon Boulevard and SR-118 WB On/Off-ramps
 - A.M. peak hour V/C ratio increase of ~~0.125~~ *0.106* – LOS E to LOS F
 - P.M. peak hour V/C ratio increase of ~~0.106~~ *0.079* – LOS F to LOS F
- Topanga Canyon Boulevard and SR-118 EB On/Off-ramps
 - A.M. peak hour V/C ratio increase of ~~0.072~~ *0.061* – LOS F to LOS F
 - P.M. peak hour V/C ratio increase of ~~0.052~~ *0.038* – LOS F to LOS F
- De Soto Avenue and Chatsworth Street
 - A.M. peak hour V/C ratio increase of ~~0.026~~ *0.123* – LOS F to LOS F
 - ~~P.M. peak hour V/C ratio increase of 0.013~~ *0.092* – LOS F to LOS F

In addition, the June 6th letter issued by the LADOT identified a significant cumulative traffic impact at a fourth intersection.

- Canoga Avenue and Chatsworth
 - A.M. peak hour V/C ratio increase of 0.033 – LOS B to LOS B
 - P.M. peak hour V/C ratio increase of 0.052 – LOS A to LOS A

Incremental, but not significant impacts would occur at the remaining ten study intersections. Figures 4.12.9 and 4.12.10 show the future with project (existing, ambient growth, related projects, and project) traffic volumes at the study intersections for the A.M. and P.M. peak hours, respectively.

It should be noted that all three study intersections located along Canoga Avenue (at Rinaldi Street, Chatsworth Street, and Devonshire Street) are projected to continue operating at good LOS (LOS A/B/C during the A.M. peak hour and LOS A/B during the P.M. peak hour), even with the addition of traffic generated by the proposed project.

Revision AA:

The text on Page 4.12-27 of the Draft EIR has been revised as follows (new text is *italicized*):

Impacts To Transit Systems

The traffic study also examined whether transit trips generated by the proposed project would affect the public transit system. As discussed above, the proposed project is expected to generate ~~4,874~~ *3,608* daily vehicle trips, ~~387-414~~ *332* A.M. peak hour trips and ~~489-445~~ *364* P.M. peak hour trips.

The following mitigation measures for traffic impacts have been added to page 4.12-28 of Section 4.12.4 Mitigation Measures of the Draft EIR per the request of the City of Los Angeles Department of Transportation:

- 4.12-6 In addition, prior to the recordation of the first final subdivision map for the project, not including large-lot parcel maps for sale purposes, the applicant's traffic engineer will submit to the City of Los Angeles Department of Transportation a study to assess the need for the following improvements:
- *Left-turn traffic signal phasing shall be implemented related to eastbound Chatsworth Street traffic at DeSoto Avenue intersection. Additional paving shall be included along the northern edge of Chatsworth Street to lengthen the existing eastbound left-turn lane by approximately 100 feet.*

- *Left-turn traffic signal phasing shall be completed related to southbound Canoga Avenue traffic at the Chatsworth Street intersection, and construction of approximately 100 feet of paving along the western edge of Canoga Avenue to provide for a left-turn lane onto eastbound Chatsworth Street. This paving would be considered temporary, pending a City of Los Angeles project to widen this portion of Canoga Avenue to City standards.*
- *Subject to approval by the California Department of Transportation (Caltrans), City of Los Angeles, and County of Los Angeles, the existing pavement on southbound Topanga Canyon Boulevard shall be restriped to provide a second left-turn lane onto the eastbound SR-118 on-ramp.*

If the City of Los Angeles, Department of Transportation determines that these improvements are warranted, design plans would be prepared for the appropriate modifications.

4.12-7 The applicant shall request that the CFD, which is proposed to fund public facilities for Deerlake Ranch, contribute funds to construct the following safety-related improvements. These improvements are subject to City of Los Angeles B-Permit(s), prior to obtaining any other construction permit for the project.

- *Three-way stop signs shall be installed at the intersection of Canoga Avenue and Candice Place.*
- *A "No Left Turn" sign shall be installed from southbound Canoga Avenue to Candice Place, prohibiting such movement between 6:00 A.M. and 9:00 A.M.*
- *Speed bumps shall be installed along Canoga Avenue between the SR-118 and Candice Place, and an additional speed bump shall be installed south of Candice Place.*
- *A "No Left Turn" sign shall be installed at the intersection of Canoga Avenue and Celtic Place.*
- *Self-actuated flashing lights shall be installed at the intersection of Canoga Avenue and Rinaldi Avenue for equestrian and pedestrian crossing, subject to approval by the City of Los Angeles.*
- *A crosswalk shall be striped on Chatsworth Street east of the intersection with Independence Avenue.*
- *Permanent signs shall be installed along Canoga Avenue displaying "Watch for Equestrians", or similar language.*
- *Signs shall be installed during the project construction period displaying "Jake Braking Strictly Prohibited," or similar language.*

4.12-8 As agreed, the subdivider shall be responsible for repairing damage to the existing pavement on Canoga Avenue between Chatsworth Street and SR-118 that is caused by project contractors during the course of construction.

4.12-9 The subdivider shall install three-way stop signs at the proposed intersection of Mayan Drive and "B" Street, subject to the approval of the County of Los Angeles.

4.12-10 The subdivider shall install all stop signs for equestrian crossings per the applicant's community commitments.

4.12-11 Caltrans has requested additional mitigation measures to mitigate impacts of the project within the State right-of-way. The applicant will prepare, as a voluntary measure, a Project Study Report (PSR) to address long-term regional traffic operations at the Topanga Canyon Boulevard/SR-118 interchange. In addition, the applicant shall consider possible payment of fair-share fees as determined by the County.

Revision BB:

Text on Page 4.12-29 of Section 4.12.5 (Unavoidable Impact After Mitigation) of the Draft EIR has been revised as follows (new text is *italicized*):

As shown in Tables 4.12.4 and 4.12.5, with implementation of mitigation measures, the project's impact on these three study intersections, based on City and County of Los Angeles V/C criteria for significance, would be reduced to less than significant as follows:

- Topanga Canyon Boulevard & SR-118 WB On/Off-ramps:
Project V/C Increase Criteria for Significance = 0.01
Project V/C Increase with Mitigation = ~~0.000~~ *-0.014* (A.M.)
= ~~0.021~~ *-0.033* (P.M.)
- Topanga Canyon Boulevard & SR-118 EB On/Off-ramps:
Project V/C Increase Criteria for Significance = 0.01
Project V/C Increase with Mitigation = ~~0.002~~ *-0.007* (A.M.)
= ~~-0.019~~ *-0.024* (P.M.)
- De Soto Avenue & Chatsworth Street:
Project V/C Increase Criteria for Significance = 0.01
Project V/C Increase With Mitigation = ~~-0.044~~ *-0.047* (A.M.)
= ~~-0.058~~ *-0.059* (P.M.)

Therefore, with implementation of the recommended mitigation measures, the proposed project would not result in significant impacts to area traffic.

4.0 Response to Written Comments

4.1 INTRODUCTION

In order to comprehensively respond to all letters received on the Draft EIR, Additional Environmental Information Document and Revised Project Design Summary Document, and address each CEQA issue raised, a summary matrix (Table 4.1) has been developed which lists the commenter and the corresponding issues raised. The matrix contains the names of all commenters, and has been apportioned into 22 major comment categories, outlined as follows:

- | | |
|----------------------------------|-------------------------------------|
| 1. Aesthetics & Visual Resources | 12. Transportation/Traffic |
| 2. Air Quality | 13. Water Supply |
| 3. Biological Resources | 14. Wastewater |
| 4. Cultural Resources | 15. Solid Waste |
| 5. Geology & Soils | 16. Electricity |
| 6. Hydrology & Water Quality | 17. Natural Gas |
| 7. Noise | 18. Procedural Issues |
| 8. Fire Protection | 19. Mitigation Issues |
| 9. Police Protection | 20. Alternatives |
| 10. Schools | 21. Other Concerns and Issues |
| 11. Libraries | 22. No Comment/No Response Required |

All comment letters have been reviewed and placed into one or more of the above-outlined comment categories. Each original comment letter can be found in Appendix B of this document. In total 444 comment letters were received during the Draft EIR comment period. Each comment letter has been retyped and divided into individual specific numbered comments. Each numbered comment is followed by a response. Multiple dated comment letters received from individuals were combined together under the author's name for Section 4.5.

All written comment letters are summarized in Table 4.1 and organized as follows:

- Section 4.2 Draft EIR Form Comments/Responses (137 letters)
- Section 4.3 Draft EIR Public Agency Comment/Responses (8 letters)
- Section 4.4 Draft EIR Organization/Businesses Comments/Responses (6 letters)
- Section 4.5 Draft EIR Individual Comments/Responses (180 letters)
- Section 4.6 Additional Environmental Information document Comments/Responses (10 letters)
- Section 4.7 Revised Project Design Summary Document Comments/Responses (6 letters)
- Section 5.5 Public Hearing Comments (97 letters)

4.2 FORM COMMENT LETTERS/RESPONSES

This section includes form comment letters, which were sent by multiple individuals for the following issue areas:

- Biology
- Urban Runoff
- Noise/Dust
- Fire Services
- Police Services
- Traffic
- Development Issues
- Non-traffic Issues

Individuals who submitted each form comment letter are identified in Table 4.1.

4.2.1 Form Comment Letter – Biology

Topical Response

As stated in the Draft EIR, regional wildlife movement studies have been prepared for The Nature Conservancy and the Santa Monica Mountains Conservancy (SMMC) and include the vicinity of the project site. No onsite regionally important wildlife movement corridors were identified in these studies. Implementation of the revised project would not prevent the regional movement of wildlife. Although many common animals would be adversely affected by direct impact and/or habitat loss associated with the implementation of the project, impacts to local wildlife populations are considered to be below a level of significance. Local onsite wildlife movement would be affected by the revised project, although these species are expected to move to the open space areas located north, west, and east of the project site and the onsite portions of Devil and Browns Canyons. Wildlife would likely continue to utilize open space portions of the project site via Browns Canyon, upper Devil Canyon and the open space to the north, which provide habitat for a variety of species.

Preservation and dedication of the corridor of willow woodland associated with Devil Canyon, which in some areas exceeds 220 feet in width, provides an important resource for avian species for both local and regional movement. Large blocks of riparian habitat (even when surrounded by development) may serve as islands, providing an archipelago effect, whereby migrating or dispersing birds can stop to forage, rest, or seek cover from predators as they move across the landscape. Regional and local wildlife movement for terrestrial species is constrained in the area by development, but the willow woodland is expected to continue to serve an important function for local and regional avian dispersal and migration.

In addition, the 14-acre Homer property located at the northeast corner of the intersection of Canoga Avenue and SR-118 has been purchased by the MRCA with funds provided by the applicant, the County of Los Angeles, and SMMC. This property would be maintained as permanent open space. This acquisition would allow the existing wildlife corridor through this property, between North Stoncy Point and Devil and Brown Canyons to be preserved.

The existing Canoga Avenue underpass of SR-118 is approximately 160 feet in length, and ranges from approximately 80 feet wide at road grade, to 130 to 160 feet wide at the top of the buttress slopes under

4.0 Response to Written Comments

the freeway bridge. The height of the bridge above the road grade is approximately 25 feet. The existing 16-foot wide Canoga Avenue is paved, with bare earth on both sides and extending up onto the slopes under the freeway bridge. Vegetation is sparse on the slopes on the south side of the freeway bridge buttresses, and virtually non-existent in the shaded areas under the bridge. The area under the bridge is also frequently used for illegal dumping of refuse. Conditions for movement of wildlife through the underpass are presently tenuous, especially during daylight hours.

The revised project would require roadway improvements of Canoga Avenue under SR-118 to 36 feet of paved width, and improvement of a 12-foot wide equestrian trail that would extend along the eastern side of the road. These improvements would leave an area approximately 32 feet wide for a wildlife corridor through the underpass. With growth of appropriate vegetation and placement of other screening improvements to provide cover for wildlife (see Appendix F.5 of this document), the potential adverse impact to wildlife through the underpass connection between North Stoney Point and Devil Canyon would be mitigated to a less than significant level, for this underpass.

As stated in Section 4.3 of the Draft EIR, with implementation of recommended mitigation measures, no significant impacts to biological resources would occur. Implementation of the project would not result in an impact to any state- or federally-listed wildlife species. Impacts to Plummer's mariposa lily are considered significant if left unmitigated, however with mitigation measures discussed below, the impacts would be reduced to less than significant. Impacts to the various vegetation communities other than oak resources are below a level of significance, as discussed below.

Sixty-one of the existing 353 oak trees would require removal in order to construct the revised project. None of these oak trees are of heritage status. Although specific impacts to oak trees and the oak woodland plant community would be significant, impacts would be reduced below a level of significance with mitigation measures (4.3.8, 4.3.10 and 4.3.11) as stated in Section 4.3 of the Draft EIR. As discussed in Section 4.6 of the Draft EIR, a storm water pollution prevention plan (SWPPP) would be in place to direct, prevent, and/or minimize storm runoff from the work site during construction and thereby mitigate stormwater quality impacts. After construction, sediment and other bulk material contained within storm water runoff from the site is expected to be less than pre-project conditions due to a reduction in erodible surfaces and removal of bulk materials by four debris basins on the project site. Storm water runoff is expected to undergo long-term quality changes following project buildout and transformation into an urban setting. As stated in Section 4.6 of the Draft EIR, a Standard Urban Stormwater Mitigation Plan (SUSMP) would be developed to ensure that pollutants from runoff would not lower the surface water quality of watercourses on the site and downstream. However, these impacts would only be expected infrequently during episodes of storm water runoff from the project site and are not likely to result in significant impacts to biological resources.

Impacts to Plummer's mariposa lily would be mitigated through a 2:1 replacement of impacted individuals, and planted on the mitigation parcel (minimum of 62 acres, 1:1 replacement). A total of 4,000 bulbs would be collected on the project site to be used for mitigation of impacts, per the Biological Resource Mitigation Plan (Appendix F.1 of this document). A qualified biologist would oversee all aspects of this mitigation plan including bulb and seed collection and transplanting. Seed collections would occur prior to collection of bulbs from all lilies within the development envelope. The Plummer's mariposa lily mitigation plan would be reviewed and approved by the County prior to issuance of grading permits. Maintenance of the lilies would be monitored for a period of five years, with annual monitoring reports to be submitted to CDFG and the County. The Plummer's mariposa lily salvage, propagation and transplanting program is designed to retrieve a sizable portion of the onsite bulbs for use in both onsite and offsite habitat enhancement. This includes bulbs collected and transplanted directly to a site within

4.0 Response to Written Comments

the same year, stored bulbs, and bulbs grown from seed in a nursery. The salvage program would consist of the following components:

- Prior to grading, seed will be collected and all flagged/mapped bulbs (and any uncovered during removal) will be salvaged. A minimum of 4,000 bulbs will be collected (this represents a 2:1 replacement ratio). If 4,000 bulbs do not inhabit the project site, all bulbs found shall be collected.
- All bulbs will be stored at a qualified native plant nursery.
- Forty percent of the bulbs will be used for transplantation to onsite and offsite preserved habitat in the fall/winter immediately following salvage.
- Twenty percent of the bulbs will be propagated at a qualified native plant nursery to collect seed for starting new plants for transplantation to preserved areas both onsite and offsite.
- Forty percent of bulbs will be stored for a period of five years for annual or bi-annual planting in preserved areas, as determined by a qualified biologist.
- All transplanted bulbs will be maintained, including weed control.
- Monitoring and reporting will be conducted.

As stated in Appendix F.1 of this document, the 159-acre mitigation parcel would provide suitable habitat for Plummer's mariposa lily and the species occurs on this parcel in moderate numbers. Much of the upland areas of the mitigation parcel are suitable for the lily and the species is widespread in moderate numbers. Ample area would be available for the relocation of this species from the project site. In addition, the mitigation parcel would provide mitigation for several biotic communities.

Elements of the mitigation parcel would be the inclusion of riparian willow, oak woodland and coastal sage scrub habitat to compensate for the loss of these habitats with project implementation. The revised project would remove a total of 2.39 acres of coastal sage scrub onsite. While the coastal sage scrub on the project site is degraded, a 2:1 offsite mitigation ratio (4.78 acres) would be implemented given the importance of this habitat to wildlife. The project site also supports 5.73 acres of coast live oak woodland, of which 1.30 acres would be impacted by the revised project. Using a 2:1 mitigation ratio, 2.60 acres of coast live oak woodland would be preserved offsite.

The revised project would impact 0.02 acre of the 9.88 acres of willow scrub/woodland located on the site from grading and 0.01 for fuel modification. Using a 4:1 mitigation ratio, a total of 0.12 acre would be preserved offsite as mitigation. In addition, a total of 353 oak trees and one heritage tree exist on the project site. With project implementation, 61 oak trees would be removed. As the oak trees function as woodland habitat, offsite preservation of 61 oak trees (1:1 ratio) would be implemented. This mitigation would be in addition to the County of Los Angeles Oak Tree Ordinance requirements in order to compensate for the loss of habitat values. In summary, the offsite mitigation property would support, at a minimum, the following habitat types:

- Plummer's mariposa lily - 62 acres (potential and/or occupied habitat).
- Coastal sage scrub - 4.78 acres (represents a 2:1 mitigation ratio).
- Coast live oak woodland - 2.60 acres (represents a 1:1 mitigation ratio).
- Oak trees - 61 trees (represents additional mitigation above that required by the County to account for impacts to biological functions of oak trees).
- Willow woodland - 0.12 acre (represents a 4:1 mitigation ratio).

4.0 Response to Written Comments

The preservation of the above offsite habitats, in the ratios specified, would effectively reduce impacts to these plant communities to less than significant.

Biology 1 – Comment

I understand that the Presidio Group has promised to dedicated [sic] 70 acres to the Santa Monica Mountains Conservancy, to the west of the Deer Lake Ranch Project. What is the exact location of this acreage? Does it border the Significant Environment Area #20 (Santa Susana Mountains) and will its preservation help to maintain the integrity of that area? In reading a letter from Elizabeth A. Cheadle of the Conservancy dated July 26, 2000, she expressed concern that 70 acres was not enough to meet the 50% dedication requirement of the total acreage that all large-scale mountain developments are normally required to make. She outlined some alternatives to mitigate this, and I would like to know if all of her recommendations are being implemented. I am aware of the off-site mitigation parcel that is being used to propagate the Plummer's Mariposa Lily – I hope that this parcel would not be expected to suffice for the off-site open space that she recommends should be provided to in her letter?

Biology 1 – Response

Approximately 49 acres of open space within the project site would be dedicated to the SMMC. The remaining open space would be owned by the Homeowners Association (HOA). In addition, a 159-acre mitigation parcel located north of the project site would be dedicated to the SMMC, for a total of 208 acres of dedicated open space (see F.1 of this document). The open space within the project site is not located within an existing SEA, whereas the 159-acre mitigation parcel is located within an existing SEA.

There is no County requirement to dedicate 50 percent of a project site for open space. The County Zoning Code only requires that a project within an Urban Hillside Management Area have no less than 25 percent of its net area as open space, and that a project within a Non-Urban Hillside Management Area have no less than 70 percent of its net area as open space. Open space, as defined by the Zoning Code, includes: undisturbed natural areas, open space for passive recreation, portions of private yards, parks and open space recreational areas, hiking and equestrian trails, landscaped areas adjacent to streets, and greenbelts (including landscaped manufactured slopes). Under these criteria, the revised project includes approximately 78 percent (176.89 acres) of its net area as open space (see Table 2.3 of this document), not including the 159-acre mitigation parcel. This is more than required under the Zoning Code.

Biology 2 – Comment

The Conservancy will retain 14 acres that create a band around the project (minimum width 10 feet). There are three exceptions to this – 1) Two 175 foot-wide and 4 approximately 90 foot-wide gaps along the 4,250 foot-wide northern subdivision boundary 2) An easement for the developer to put a two-lane access road into the southwestern corner of the subdivision area via a clear span bridge across Devil's Canyon and 3) a 2,125-foot gap along the southern boundary where the project contacts existing Twin Lakes. What are the gaps in this northern boundary that the developer will retain ownership of, referenced to in Appendix C, in the northern boundary for? All of the above is referenced in the Project Mitigation and Initial Study report on page 3.

Biology 2 – Response

Subsequent to public circulation of the Draft EIR, all 10-foot “strips” along the northerly site boundary were dedicated by the applicant to the SMMC. This eliminates the “gaps” referenced in the above comment, as the entire northerly boundary is covered by the 10 foot strip.

4.0 Response to Written Comments

Biology 3 – Comment

The developer maintains that the band that the Conservancy will own that will surround the project will keep further development from occurring to the north. Does the Conservancy affirm that they will not sell this property to another developer in the future? Would the trail, slopes, and parks be enough to off-set the less than 50% dedication of open space?

Biology 3 – Response

The 10-foot band, which the SMMC owns in fee, is not sufficiently wide to accommodate structural development under County standards. However, it could be used for trails or open space. Further supporting the limited use of the “band” is the following goal for SMMC, which states:⁸

“Through Direct action, alliances, partnerships, and joint powers authorities, the Conservancy’s mission is to strategically buy back, preserve, protect, restore, and enhance treasured pieces of Southern California to form an interlinking system of urban, rural, and river parks; open space; trails; and wildlife habitats that are easily accessible to the general public.”

Based on the above goal, it is unlikely that SMMC would propose to develop dedicated land. However, whether SMMC intends to develop the land dedicated as part of the project is beyond the scope of the EIR.

Please see Biology 1 – Response above regarding the 50 percent dedication of open space.

4.2.2 Form Comment Letter – Urban Runoff

Topical Response

All of the proposed storm water collection and discharge facilities would be constructed to County Department of Public Works standards and would be operated and maintained by that department’s Flood Control District (LACFD). The project site would become part of that District and pay its fair share of tax revenues to the LACFD. It would become the LACFD’s responsibility to ensure that the project’s post-development storm water facilities operate properly. However, it is the responsibility of the developer to design the storm drain water collection, sedimentation, and filtration system to achieve the SUSMP goals.

The drainage concept study for the Revised Project Design was approved by LACDPW in connection with the review of the VTTM. In addition, the developer retained the services of Ferro Engineering to prepare a more detailed storm water quality assessment, and that report has been submitted to some members of the community, as well as to the Planning Commission (see Appendix H of this document for a complete report).

In order to ensure that the storm water quality discharged from the project meets, or exceeds, the RWQCB’s standards for oils and hydrocarbons, continuous deflective separation (CDS) systems would be installed at each proposed storm drain outlet prior to discharge into the natural water courses. CDS systems, which have been approved by the LACDPW as “Best Management Practices” devices, would remove trash, soil and other particles, and oil and grease with the use of adsorbants. The removal of the oil and grease by the CDS would result in a storm water discharge quality, which is approximately 67 percent below the limits established by the RWQCB standards for these constituents (see Appendix I of this document). The entire project storm drain system, including the CDS devices, would be operated and maintained by the LACDPW upon completion of its installation.

⁸ Santa Monica Mountains Conservancy home page, <http://www.cees.ca.gov/smmc>.

4.0 Response to Written Comments

The project would construct debris basins along the northerly perimeter to remove approximately 4,590 cubic yards of debris from storm waters which discharge into Devil Canyon. Regarding the use of percolation ponds, the *Chatsworth Formation* bedrock that underlies the project site is considered to be essentially impermeable and non-water bearing. In order to be effective for storm water quality enhancement, percolation ponds must be founded on well draining soils, which provide sufficient depth for filtration to take place through a relatively deep blanket. Otherwise, with shallow soils underlain by deep bedrock formations, storm water constituents would clog the thin filtration blanket and the percolation pond effectively becomes a holding pond with increasingly more deleterious waters. Therefore, since this project site does not provide soil nor bedrock conditions favorable to constructing effective percolation ponds, the filtration systems would be utilized.

In addition, due to the construction of four debris basins, which would remove approximately 4,590 cubic yards of bulk matter from the peak storm water runoff volume traversing the project site, the peak runoff volume from the site into the creek would be reduced from 876 cubic yards per second (cfs) to 458 cfs, thereby reducing potential downstream flood hazards during peak storm events. This reduced runoff volume takes into consideration that there would be increased runoff from the impervious surfaces to be constructed (i.e., roads, roofs, driveways, etc.). Also, each of the post-development points of discharge from storm drains would include construction of "energy-dissipating" structures in accordance with LACDPW standards in order to reduce discharge velocities into Devil Canyon to a non-erosive level.

Urban Runoff 1 – Comment

As a resident of Twin Lakes, I am very concerned about the Deer Lake Ranch Project plan to divert all run-off water through storm drains into Devil's Canyon. Devil's Canyon has a very delicate eco-system that has basically never been disturbed. Currently, the area that runs off into that canyon has only 7 homes, 4 of which are occupied. If you add in 484 additional homes and the pollutants that go with that, all the natural habitat and wildlife will be threatened! I fail to see how removing natural vegetation, even if it reduced the run-off, and having polluting chemicals run through the basin instead, would be good for the creek bed's eco-system. There are currently storm drains that take the run-off from lower Twin Lakes into the Brown's Canyon wash. The run-off from the new project should be diverted through storm drains that hook up to these, bypassing the natural bed.

Urban Runoff 1 – Response

As stated in Appendix I of this document, the Clean Water Act (§303) requires states to develop water quality standards for all inland surface and ocean waters. In addition, the California Water Code (§13241) specifies that each RWQCB establish water quality objectives. The RWQCB – Los Angeles Region has developed a Basin Plan that designated beneficial uses for waters in the State of California to protect water quality. They also established water quality objectives that, along with the beneficial use designations, were used to form water quality standards for all surface water of the state.

Surface water runoff from the project would discharge into Devil Canyon which discharges into Browns Canyon Wash (Hydrologic Unit No. 405.21), which is part of the Los Angeles River basin within the Los Angeles Basin. The LACDPW collected samples from 27 different monitoring stations throughout the basin for a period from 1994 to 2000 to determine the quality of storm water runoff from various areas of land use. The land use areas evaluated included: high-density single-family residential, multi-family residential, and mixed residential. The water quality parameters analyzed included chemicals and metals of concern including oil, grease and pesticides.

The testing conducted by the LACDPW identified only Benzo(a)anthracene (primarily attached to particulates) and bacteria at concentrations of concern in storm water. No pesticides occurred at levels of concern. As stated above, the project proposes to use CDS systems. These systems remove trash, soil and other particles and, with the use of adsorbents, oil and grease. The systems, as

4.0 Response to Written Comments

proposed, would reportedly remove the Benzo(a)anthracene to below levels of concern, would remove 80 to 90 percent of the oil and grease using sorbents, and would remove all of the bacteria attached to the trash and particulates captured in the CDS. The LACDPW and RWQCB support the installations as acceptable BMPs for residential developments in Los Angeles County. The CDS also satisfies the State Resources Control Board Resolution No. 68-18 (Antidegradation Policy) as the best "practicable" treatment or control of the discharge necessary to assure that: (1) a pollution or nuisance will not occur; and (2) the highest water quality consistent with maximum benefit to the people of the State will be maintained. Further, the CDS system also satisfies the Clean Water Act requirement of, "Reduce the discharge of pollutants from storm water conveyance systems to the Maximum Extent Practicable." Therefore, as proposed, the storm water discharge system meets the requirements of the RWQCB Basin Plan.

As discussed in Section 4.6 and Appendix K of the Draft EIR, the Devil Canyon watershed area includes approximately 5,316 acres which discharge approximately 14,320 cfs of peak storm water runoff, including bulk materials, into that watercourse at its confluence with Browns Canyon. Of the total project area of 230 acres, 225 acres are tributary to Devil Canyon (the remaining 5 acres drain southerly under the SR-118 to a culvert) which represents approximately 4 percent of this tributary area of 5,316 acres. Approximately 179 acres of the total project area within the Devil Canyon drainage basin would be natural open space or planted areas (permeable surfaces), leaving approximately 51 acres, or one percent of the total drainage area, for impermeable surfaces.

The project is part of a 317-acre sub-drainage area of the Devil Canyon watershed. This 317-acre sub-drainage area generates approximately 876 cfs of peak storm water runoff, including bulk materials. However, with the project construction of four debris basins, which would remove approximately 4,590 cubic yards of bulk materials from the 876 cfs runoff volume, the peak storm water runoff after development from the project sub-drainage area would be reduced to approximately 458 cfs of peak runoff volume. Although the project's approximate 52 acres of impermeable surfaces would increase the amount of peak storm water runoff, the net effect of removing 4,590 cubic yards of debris would be to reduce the peak runoff volume by 418 cfs, or approximately three percent of the existing peak storm water runoff volume within Devil Canyon at its confluence with Browns Canyon. Therefore, the project would have no adverse impact on either the volume or the surface level of storm water within Devil Canyon.

Regarding diversion of project storm drain runoff from Devil Canyon directly to Browns Canyon, an engineering analysis has been conducted by B&E Engineers to evaluate the facilities required to implement such a proposal (see *Drainage Study, Diversion of Water Run-Off From Devil Canyon To Brown Canyon, Tract No. 53138*; B&E Engineers, included in Appendix I of this document). This analysis concludes that a system for such diversion of storm water runoff would consist of three large pump stations and approximately 3,200 feet of pressurized pipe (force main). In addition, approximately 1,500 feet of force main would have to be constructed across property, which the applicant does not own. In response to the B&E study, the LACDWP has stated:

*"Diversion is not acceptable. This may have possible/potential adverse effects to properties downstream of the discharge point and potential adverse effects to canyon habitat as a result of the alteration of the drainage pattern. Any alteration to the existing drainage pattern may require offsite drainage acceptance and possible letter of intent. The use of pump stations to convey diverted flows is not satisfactorily supported."*⁹

In addition, even if it were otherwise feasible to divert the project storm water runoff, the same stringent federal, state, and local water quality requirements, as discussed above, would have to be

⁹ E-mail memorandum, dated April 3, 2002 from Mo Kaybay, Department of Public Works.

4.0 Response to Written Comments

met. In addition, diversion of stormwater from Brown's Canyon (bypassing Devil Canyon) would impact the sustainability of riparian vegetation and habitat within Devil Canyon.

Urban Runoff 2 – Comment

The developer's plan to mitigate with a SUSMP (Standard Urban Storm Water Mitigation Plan) will not be sufficient- no matter how many signs you post or how much you try to educate people about the hazards of household products and yard wastes, these substances will continue to pollute the water run-off. The amount of polluted run-off from a building project of this scope will be enormous. Will the series of filtration points be adequate to remove all toxins? How will the use of non-toxic pesticides and fertilizers by the developer in landscaping the project be enforced?

Urban Runoff 2 – Response

Please see Urban Runoff 1 – Response of this document.

Urban Runoff 3 – Comment

I feel that the EIR deals with this matter in a totally inadequate manner. If we are to preserve the small amount of untouched areas that we have left amidst our increasing degree of urban development, we must be more creative in solutions to hazardous waste management.

Urban Runoff 3 – Response

The system proposed to storm water management is designed to meet the required SUSMP standards. Hazardous waste management is not considered to be part of these standards.

4.2.3 Form Comment Letter – Noise/Dust

Topical Response

As stated in the Draft EIR, implementation of the project would not result in significant short-term noise impacts associated with construction activities, due to intervening terrain and compliance with County noise ordinances. Traffic noise is also concluded to not result in significant impact. Onsite noise exposure associated with the project would not be significant with implementation of the associated mitigation measures.

Regarding impacts due to dust during construction operations, the developer shall comply with the South Coast Air Quality Management District (SCAQMD) Rule 403 at all times, which requires in part that:

"A person shall not cause or allow the emissions of fugitive dust from any active operation, open storage pile, or disturbed surface area such that the presence of such dust remains visible in the atmosphere beyond the property line of the emission source."

Mitigation to comply with this requirement includes having water tanks and water trucks available onsite 24 hours per day, 7 days per week prior to and during any grading operation. This would ensure that all disturbed soils can be kept at optimum moisture content in compliance with SCAQMD Rule 403. In addition, SCAQMD Rule 403, Section (f)(3), the applicant would be required to obtain an approved fugitive dust emissions control plan from the District's Executive Officer. This approved plan must "... demonstrate that the applicable best available control measures, or reasonably available control measures will be utilized and/or installed during all periods of active operation."

With incorporation of these mandated mitigation measures, dust emissions from short-term construction activities would not be significant.

Noise/Dust 1 – Comment

I live in the Twin Lakes area, and I am very concerned about the impact of construction from the Deer Lake Ranch development project.

4.0 Response to Written Comments

Regarding the impact of construction noise, Section 4.7, mitigation measures for the Twin Lakes area should include some way to assure us of the developer's compliance with County of Los Angeles Noise Ordinance, Title 12, Section 12.08.440. The time limits on construction work should be clearly defined, we need a hotline phone number for complaints, and there should be penalties for non-compliance. We should be advised on how many pieces of machinery can be operating at once and make sure that they are required to use newer equipment with noise-shielding devices. Many of our homes in Twin Lakes are older homes, with exterior walls and windows that were not designed to deflect sound, and many do not have central air conditioning. Will the County standard 45 dB(A) CNEL mandated for the interior of residences to be maintained? Are the typical structures used to determine that 20 dB is normal for indoors with window closed-are any of these older homes, without air conditioning, and located in the San Fernando Valley, which experiences extremely hot weather during the summer months?

Noise/Dust 1 – Response

As stated in Section 4.7 of the Draft EIR, the project shall adhere to the requirements of the County of Los Angeles Noise Ordinance to ensure that construction activities would not result in a significant impact, including to those older homes within the Twin Lakes community (with single-paned windows). In addition, Appendix E of this document includes additional measures to be implemented to further mitigate impacts from construction activities, including the following:

- No Saturday, Sunday or County-observed holiday grading operations shall be permitted.
- Offsite vehicular traffic through the Twin Lakes community by construction equipment and/or contractors vehicles shall be prohibited. In addition, the subdivider shall specify authorized routes for construction-related vehicles, including delivery and contractor employee vehicles, through the area bounded by DeSoto Avenue, Devonshire Street, Topanga Canyon Boulevard, and SR-118. Subdivider shall post necessary signs and/or personnel at all entries to Twin Lakes and streets not permitted as authorized routes to ensure enforcement of these prohibitions.
- No access of heavy construction equipment or vehicles, or delivery of construction materials shall be permitted onto the project site via Canoga Avenue prior to 9:00 A.M. and after 2:00 P.M., Monday through Friday.
- The subdivider shall make available to the Twin Lakes Property Owners Association, the Chatsworth Neighborhood Council, and other interested residential or equestrian groups, and post at the entry points to the project site, the name and 24-hour telephone number of the project's general contractor and the applicant's site representative (which may be the general contractor) to ensure a continuous line of communication between all parties. The telephone number shall be toll free. The representative of the subdivider who monitors the telephone line shall have a weekend/evening contact list for all contractors and subcontractors on the job site. The sign shall be in English and the predominant second language(s) in the area, and shall also include the phone number(s) of the Los Angeles County Regional Planning - Zoning and Enforcement Section, LACDPW - Building and Safety Division, and SCAQMD.

Noise/Dust 2 – Comment

How will the developer be monitored as to controlling dust levels, which will be significant, considering the amount of grading? Who will oversee the project and make sure that they are following through with section 4.2-1 (regarding dust control)? Where is the wind measured- wind levels vary greatly throughout the valley and our ridge is known for extremely gusty winds that some other portions of the valley may not experience? The wind must be measured on-site!

4.0 Response to Written Comments

Noise/Dust 2 – Response

Mitigation measures would be implemented in accordance with SCAQMD requirements under an approved fugitive dust emission control plan, as described above. In addition, under SCAQMD Rule 403 Section (d)(4), if sampling is conducted, samples shall be “reasonably placed upwind and downwind of key activity areas and as close to the property line as feasible, such that other sources of fugitive dust between the sampler and the property line are minimized.” It should be noted that under SCAQMD rules, it is not the velocity of the wind that necessarily determines if grading operations must cease, but instead it is the amount of particulate matter in the air downwind of the project site (i.e., particulate matter (PM₁₀) levels shall not exceed 50 micrograms per cubic meter) as determined by the sampler.

Also mitigation measures included in Section 4.2 of the Draft EIR would be implemented in accordance with the Mitigation Monitoring Plan (included in Appendix D of this document), including the following”

- In conjunction with grading activities, clearing of native vegetation shall be done over small areas sufficient to accommodate only short-term grading operations. This will ensure minimum exposure of unprotected soils at any one time.
- Each graded slope shall be mulched and hydroseeded as soon as practical after completed.
- Water tanks and water dispersal trucks shall be brought on site prior to start of grading to ensure that all exposed and/or graded areas are kept sufficiently moist to prevent airborne dust, in accordance with SCAQMD Rule 403.

In addition to monitoring by SCAQMD inspectors, the County grading inspector has legal authority at all times to shut down grading operations if dust is generated by graders due to high winds, and to order that immediate dust control measures be implemented over newly graded areas.

Noise/Dust 3 – Comment

What are the exact hours defined as “peak travel periods” and what are [sic] roads will be permissible for the construction vehicles to park on, per section 4.2-3? Will Canoga be used as a main thoroughfare for construction vehicles and construction worker traffic?

Noise/Dust 3 – Response

Peak travel periods, as applied to peak traffic generation data are defined in Section 4.12 of the Draft EIR as between the hours of 7:00 and 10:00 A.M. and between 3:00 and 6:00 P.M. Regarding permissible hours of travel for construction-related vehicles, no access of heavy construction equipment or vehicles, or delivery of construction materials, will be permitted onto the project site via Canoga Avenue prior to 9:00 A.M. and after 2:00 P.M., Monday through Friday. No such access or deliveries will be permitted on weekends or holidays.

Offsite vehicular traffic of construction equipment and/or contractor’s vehicles through the Twin Lakes Community will not be permitted. In addition, the subdivider will specify authorized routes for construction related vehicles, including delivery and contractor employee vehicles, through the area bounded by DeSoto Avenue, Devonshire Street, Topanga Canyon Boulevard and SR-118. The subdivider will post the necessary signs and/or personnel at all entries to the Twin Lakes Community and streets not permitted as authorized routes to ensure enforcement of these prohibitions.

All vehicles construction personnel vehicles (including those of outside suppliers and independent contractors) will be parked onsite. Parking of such vehicles will not be permitted along Mayan Drive, Canoga Avenue, or within any portion of the nearby communities.

Noise/Dust 4 – Comment

I feel that the Draft EIR is incomplete in addressing these areas and needs more study.

4.0 Response to Written Comments

Noise/Dust 4 – Response

The Draft EIR was prepared in accordance with the *CEQA Guidelines* and the County of Los Angeles Department of Regional Planning *Environmental Document Reporting and Procedures Guidelines*. In addition, copies of the Draft EIR were distributed to the SCAQMD for review. No additional analysis of noise and air quality issues is required, and the above responses are provided to answer specific comments submitted on these issues.

4.2.4 Form Comment Letter – Fire Services

Topical Response

The revised project would conform to applicable County Fire Department Code and ordinance requirements or standards for construction, access, water mains, fire-flow and fire hydrants and would not impair emergency access to the site or cause an increase in emergency response times. Impacts to fire protection services would not be significant. Mitigation measures are recommended to ensure impacts would remain minimal and would be consistent with County fire protection requirements.

Fire Services 1 - Comment

I live in the Twin Lakes area, and I am very concerned about adequate fire protection if the Deer Lake Ranch project is implemented.

Fire Services 1 - Response

As stated in Section 4.8 of the Draft EIR, the County Fire Department has indicated that the level of staff is adequate to meet fire suppression and emergency medical needs of the project and no additional staff or service would be required. Subsequent to distribution of the Draft EIR at a community meeting (August 1, 2002), Battalion Chief Michael J. Singer (from the County Fire Department Operations Bureau) discussed the fire protection and emergency medical services for the unincorporated area of Chatsworth, including the project site (service area). The following issues were addressed by Chief Singer and were also included in Section 4.8 of the Draft EIR:

County Fire Station

- The nearest County fire station is Station No.75, located on Lake Manor Drive in Chatsworth. It is approximately 5.4 miles from the service area.
- In addition to fire suppression services, Station No.75 provides emergency medical service (EMS) to the service area.

City of Los Angeles Services

- The County and the City of Los Angeles have an "automatic aid" agreement to provide both fire suppression and EMT services to the service area on an as needed basis. County Fire Station No. 75 would also provide such services within the City as needed.¹⁰
- The most likely City respondents to an emergency under the automatic aid agreement would be City Fire Station Nos. 28, 96, and 7, which are located approximately 2.8, 2.3 and 3.3 miles, respectively from the service area.

In addition to the above, all applicable fire code and ordinance requirements for construction, access, water mains, fire hydrants, fire flows, brush clearance and fuel modification plans would be fully enforced. The current fire protection services supplied to the Twin Lakes area would not be reduced. Further with implementation of the revised project, a large source of wild fires would be removed.

¹⁰ Note that under the automatic aid agreement, Ventura County Fire Station #43 would also be available for emergency service to the service area.

Fire Services 2 - Comment

A letter from Acting Chief, Forestry Division, Prevention Bureau, David R. Leininger, dated September 5, 2001, requested that a helispot be provided. This is not listed. I believe, in the mitigation measures in section 4.84 of the EIR. Will the county enforce this? Also, where are the other letters referenced by Mr. Leininger from the County of Los Angeles Fire Department? They do not appear to be in the NOP Appendix A.

Fire Services 2 - Response

Section 4.8.2 of the Draft EIR states that the project applicant has agreed to grant the Fire Department an easement over land in the northeast corner of the project site (see Figure 2.7 of this document) as a "heli-spot," as shown on the VTTM included in Appendix C.1 of this document. The construction of the heli-spot is not listed in the Draft EIR as a mitigation measure, as it is part of the project design. However, construction of the heli-spot will be made a condition of approval of the VTTM by the County (see Appendix E of this document).

A letter from David R. Leininger, Acting Chief Forestry Division, Prevention Bureau, County of Los Angeles Fire Department, dated August 28, 2001 and received September 5, 2001 is included in Appendix A.3 of the Draft EIR in response to the County Departmental review of the Draft EIR prior to public distribution. No letters were received from the County of Los Angeles Fire Department on the NOP. Other letters referenced in Section 4.8 of the Draft EIR were various communications (telephone conversations, etc.) used to provide analysis of impacts to fire services.

Fire Services 3 - Comment

Will the developer be required to improve roads within the existing Twin Lakes community, to assure that the fire department will be adequately able to protect these older homes in the event of a large fire and with so many more homes in the development project to service?

Fire Services 3 - Response

There is no requirement to improve the existing private drives (roads) within the Twin Lakes community. However, the applicant has agreed to provide a monetary grant to the Twin Lakes HOA, which could be used to make appropriate improvements to the Twin Lakes internal private road system.

As stated in Section 4.8.2 of the Draft EIR, construction of new or existing roadways to improve fire lane access to the site and to the main entry points of the existing Twin Lakes development would be included as part of the project. This would allow fire and emergency medical vehicles more rapid access to the Twin Lakes community when responding to neighborhood calls. Therefore, operation of the project would result in improved access to the project site and the adjacent Twin Lakes community.

Fire Services 4 - Comment

How will we be assured that the increase in property tax revenue for fire protection generated by the building of these homes will be ear-marked to pay for additional services needed in our own area?

Fire Services 4 - Response

As stated in Section 4.8.3 of the Draft EIR, the project would contribute via property taxes to the County's funding for fire protection services. Property tax revenues go directly to the County's general fund, which is designed to provide adequate County services including fire protection. In addition to property taxes, the developer is required to pay fees to the Fire Department as a condition of obtaining building permits.

4.0 Response to Written Comments

Fire Services 5 - Comment ¹¹

In the annexation [sic] of the Twin Lakes to the LVMWD it was said that in the future to develop [sic] the Deer Lake area they would require a tank be placed on the hill in that area.

Fire Services 5 - Response

As stated in Appendix K of the Draft EIR, sufficient capacity and water pressure is available in the existing LVMWD (Twin Lakes) tanks to accommodate the domestic and fire flows required for the project and the existing Twin Lakes community. Therefore, no new tanks would be required.

4.2.5 Form Comment Letter – Police Services

Topical Response

Implementation of the project would include physical changes to the environment and would increase resident population. Although this increase would not result in a significant change in the current officer to resident ratio, the Sheriff's Department indicated implementation of the project would require additional officers.

As stated in Section 4.9 of the Draft EIR, the project would contribute via property taxes to the County's funding for police protection services. Property tax revenues go directly to the County's general fund, which is designed to provide adequate County services including police services. Therefore, no significant impacts are anticipated.

Police Services 1 - Comment

I live in the Twin Lakes area, and I am very concerned about adequate sheriff's protection if the Deer Lake Ranch project is implemented.

Police Services 1 - Response

As stated in Section 4.9 of the Draft EIR, implementation of the project would provide an additional funding source for additional officers required to serve the project area as well as improving emergency access to the existing Twin Lakes community. Impacts would not be significant. In addition, subsequent to distribution of the Draft EIR, the applicant has agreed to construct a facility suitable for use as a Sheriff storefront facility to service the project area, as shown on the VTTM in Appendix C.1 of this document. The construction of this facility is included in an additional mitigation measure (see Appendix E of this document):

This would further mitigate impacts to less than significant.

Police Services 2 - Comment

Even though our area is rural in nature and the predominant crime has been determined to be burglary from vehicles, per section 4.9 of the EIR, 484 homes would add significantly to calls to the police. The Sheriff's Department acknowledges that additional deputies may be required. The developer has promised to provide a "storefront" station to house sheriff personnel and a park ranger. Can we be assured that the additional tax revenue collected from these additional 484 homes will go towards staffing this station? Will the providing of this station be detailed in the final EIR?

Police Services 2 - Response

The Sheriff's storefront station would be constructed by the developer as shown on the VTTM and the CUP Exhibit "A" (see Appendix C.2 of this document) (see Police Services 1 – Response). As presently proposed, the facility would be owned and maintained (exterior) by the HOA and provided for the Sheriff's use under a long-term leasing arrangement. The facility could also be dedicated to the County. Appendix E of this document contains additional information regarding the proposed

¹¹ This additional comment was handwritten on the bottom of the Form Letter submitted by Leonard Green.

4.0 Response to Written Comments

Sheriff's Department Substation. Tax revenue generated by the project would go into the general fund, a portion of which is allocated for Sheriff services. Exactly where funding is to be allocated is the responsibility of the Sheriff's Department and the County Board of Supervisors and is beyond the scope of the EIR.

Police Services 3 - Comment

Average response time currently to our area in the event of an emergency is 9.5 minutes. Nine and a half minutes is a long time if someone's life is in danger. I would like to know what average response times are in other areas such as Porter Ranch and the section of Chatsworth that is incorporated into the City.

Police Services 3 - Response

As stated in Section 4.9 of the Draft EIR, police protection services within the City of Los Angeles are provided by the City of Los Angeles Police Department. Areas surrounding the project site, within the City of Los Angeles (including Related Project No. 7, Porter Ranch) are served by the City of Los Angeles Police Department (Devonshire Community Police Station), which is located at 10250 Etiwanda Avenue in Northridge, approximately two miles from the southeasterly portion of Porter Ranch. The Devonshire Community Police Station serves an estimated 240,000 residents, which encompasses 53.9 square miles. The average emergency response time in 2001 was 10.1 minutes.¹² Figure 4.8.1 in the Draft EIR has been updated to show the locations of the nearest County facilities in relationship to the site (see Section 3.0 of this document).

Police Services 4 - Comment

I believe that measures need to be taken to ensure additional sheriff's protection if this project is implemented in its current form, or a reduction in size should be considered. Alternative #3 of 171 homes, outlined in Section 5, would help alleviate concerns about adequate protection.

Police Services 4 - Response

Please see Police Services 1 and 2 – Responses regarding adequacy of police services. Although Alternative No. 3 (described in Section 5.4.3 of the Draft EIR) would result in a decrease in demand for police protection services, the response time would be similar to those associated with the project since the physical distance would remain the same. In addition, implementation of Alternative No. 3 would result in less tax revenue that could be used by the Sheriff's Department for improvements.

Police Services 5 - Comment¹³

As a long time resident of the Twin Lakes area it is my considered opinion that in as much as the current protection [sic] afforded to our area is very sporadic at best, that an increase of at least 35 % more on site patrolling would be very much appreciated.

Police Services 5 - Response

The comment has been received and noted and will be forwarded to the decision makers. Although it is not required through implementation of the project to provide solutions to problems associated with existing developments, it is anticipated that the construction of the Sheriff's Facility (see Police Services 1 and 2 – Responses) would provide the basis for increased Sheriff patrols in the future.

4.2.6 Form Comment Letter – Traffic

Topical Response

Appendix K of this document includes the updated traffic study report by Linscott Law & Greenspan (dated April 9, 2003) for the Revised Project Design. The Revised Project Design with 388 residential

¹² Personal Communication with Police Officer Wong, Los Angeles Police Department, March 28, 2002.

¹³ This additional comment was handwritten on the bottom of the Form Letter submitted by William Griffin.

4.0 Response to Written Comments

units is expected to generate 332 vehicle trips during the A.M. peak hour, 364 vehicle trips during the P.M. peak hour, and 3,608 daily trips during a typical weekday over a 24-hour period. These traffic volumes constitute a 20 percent reduction from those identified for the 484-unit project described in the Draft EIR.

Project related impacts are anticipated at the following intersections:

- Topanga Canyon Boulevard and SR-118 westbound on/off ramps
- Topanga Canyon Boulevard and SR-118 eastbound on/off ramps
- DeSoto Avenue and Chatsworth Street
- Canoga Avenue and Chatsworth Street

However, implementation of the required traffic mitigation measures for the revised project (which will not be reduced from those identified in the Draft EIR) would improve operations at these intersections. The required mitigation measures would mitigate not only impacts associated with the project to a less than significant level, but will also mitigate a significant portion of existing and future traffic congestion not related to the project (see Appendix K of this document).

A Congestion Management Program (CMP) analysis was also prepared (see Appendix K of this document). The CMP is a state-mandated program intended to address the impact of local growth on the regional transportation system (i.e., SR-118). Traffic generated by the revised project would not surpass the minimum traffic thresholds for a freeway impact assessment and therefore, further study of the project's potential impact on SR-118 is not required.

Subsequent to distribution of the Draft EIR, the California Department of Transportation requested that the applicant provide a fair-share contribution toward the long-term traffic improvements at the Topanga Canyon Boulevard/SR-118 interchange within the right-of-way as determined by a Project Study Report (dated February 15, 2002).¹⁴

The applicant has agreed to contribute \$107,753. Caltrans has agreed that this voluntary contribution and the required mitigation (see Appendix K of this document), satisfies Caltrans' concerns regarding future long-term impacts on the state freeway system set forth in their letter.

Traffic 1 – Comment

I am concerned about the increase of traffic on Canoga Ave. and other adjacent streets that will surely take place if the Deer Lake Ranch project is implemented in its current form.

Traffic 1 – Response

The Draft EIR provides an evaluation of potential traffic impacts to Canoga Avenue due to the project (Section 4.12 of the Draft EIR). The forecasted project traffic volumes at key intersections along Canoga Avenue are shown in the Draft EIR on Figures 4.12.7 and 4.12.8 for the A.M. and P.M. peak hours, respectively. The Draft EIR concluded that the project would not create significant traffic impacts on Canoga Avenue, based on the significance thresholds adopted by the City of Los Angeles Department of Transportation (LADOT), which are identified in Section 4.2.12 of the Draft EIR. Therefore, no mitigation measures have been recommended for Canoga Avenue.

Subsequent to distribution of the Draft EIR, an updated traffic study report for the Revised Project Design (388-unit project) was prepared (see Appendix K of this document), which evaluated potential impacts along Canoga Avenue at three intersections: Rinaldi Street, Chatsworth Street, and Devonshire Street. The updated report concluded that the revised project would result in a reduction

¹⁴ This is not required per CEQA and is inconsistent with applicable requirements such as "nexus" and "rough proportionality."

4.0 Response to Written Comments

of 20 percent in peak-hour and average daily traffic generation as compared to the originally proposed project. The report further concludes that incremental, but not significant impacts would occur at these intersections. Although no mitigation measures are required based on the LADOT significance criteria, the applicant has proposed a list of voluntary traffic improvements, including improvements along Canoga Avenue (see Appendix E of this document). These improvements were approved by LADOT (see letter dated June 6, 2002 in CUP Exhibit A-2 in Appendix C.2 of this document).

Regarding other adjacent streets, it should be noted that mitigation measures were proposed at significantly impacted locations to mitigate all project related impacts to less than significant levels. The assignment of project trips provided in the traffic study was prepared based on the project site plan, existing traffic volumes and characteristics of the local roadway network, as well as regional origins and destinations. Regional traffic distributions (i.e., traffic assigned to the SR-118 freeway) also consider computer traffic model forecasts provided by the Metropolitan Transportation Authority as summarized in the *1999 Congestion Management Program for Los Angeles County*. The project trip distribution pattern was approved for use in the traffic study by the County's Traffic and Lighting Division, as well as LADOT.

Traffic 2 – Comment

I think that the draft EIR has not sufficiently studied the impact that 484 homes will have on all our streets – not just the streets that have 118 freeway access points. It is disturbing to me that the developer conducted a traffic study with not all schools in session and purportedly used incorrect tables to estimate the amount of trips by vehicles per day, given the nature of the houses to be built, and times of day at which these trips would be made. I understand a new study has been done, and feel that additional time should be allotted to review this new study and check it for accuracy.

Traffic 2 – Response

A list of the study intersections evaluated for potential project-related traffic impacts was provided in the Draft EIR as determined by County of Los Angeles Traffic and Lighting Division staff, with confirmation provided by the LADOT. The study intersections were selected based on the anticipated travel routes of project related vehicular trips. An updated list can be found in detailed discussion in Appendix K of this document.

Regarding the distribution of project traffic to the local street system, the methodology utilized for assigning the forecasted project trips to the local street system is described in the Draft EIR on page 4.12-18. Figure 4.12.6 of the Draft EIR provides the project traffic distribution pattern approved for use in the Draft EIR by the County's Traffic and Lighting Division and LADOT. The figure indicates that approximately 62 percent of the project trips are anticipated to use Topanga Canyon Boulevard (via "A" Street) for access with the remaining 38 percent utilizing Canoga Avenue. The project traffic distribution pattern provides a reasonable basis for assessing the traffic impacts associated with the project.

Observations were conducted of trip distribution activity associated with the existing Twin Lakes community located immediately south of the project site. Similar to the project, the Twin Lakes community is located north of SR-118 and has access to both Topanga Canyon Boulevard and Canoga Avenue. These observations concluded that approximately 75 percent of the Twin Lakes traffic utilized Topanga Canyon Boulevard while 25 percent utilized Canoga Avenue. These findings are summarized in a correspondence dated January 9, 2002 (from Linscott, Law and Greenspan) and has been provided to the County's Traffic and Lighting Division and LADOT. Therefore, the trip distribution observations conducted at the existing Twin Lakes community provide further support to the conclusion that the project traffic distribution pattern utilized in the Draft EIR provides a reasonable basis for assessing the traffic impacts of the project. As stated before, an updated traffic study report can be found in Appendix K of this document.

4.0 Response to Written Comments

The existing traffic counts used in the Draft EIR were collected in accordance to policies and procedures set forth by the County's Traffic and Lighting Division and LADOT. Upon additional review of the schedules of local schools, only one school (Chatsworth Hills Academy private school located on Rinaldi Street west of Canoga Avenue) was confirmed to not be in session at the time of the traffic counts. Local schools associated with the LAUSD, as well as the Sierra Canyon private school, were determined to be in session at the time of the traffic counts. Therefore, the traffic counts utilized in the Draft EIR traffic analysis provide a reasonable basis for assessing the traffic impacts of the project. Supplemental traffic counts were conducted at the study intersections in December 2001 and January 2002 when all local schools (public and private) were in session. It was concluded that based on a traffic impact analysis using these updated traffic counts that no changes occurred regarding the conclusions with respect to potential traffic impacts of the project and the recommended traffic mitigation measures. These findings are summarized in a correspondence dated January 9, 2002 and has been provided to the County's Traffic and Lighting Division and LADOT. The traffic analysis based on the updated traffic counts further support the conclusion that the traffic counts utilized in the Draft EIR traffic analysis provide a reasonable basis for assessing the traffic impacts of the project.

The trip generation forecast for the project is provided in the Draft EIR on page 4.12-17. The forecast was prepared based on generation rates provided in the *Trip Generation Manual* published by the Institute of Transportation Engineers (ITE). The ITE manual is required for use in preparing traffic studies by the County's Traffic and Lighting Division and LADOT.

The trip generation data provided in the ITE manual is based on traffic studies conducted at 300 existing residential developments. The residential developments evaluated by ITE vary in product size (i.e., number of square feet and bedrooms per unit). Although it is noted in the *Trip Generation Manual* that there is a tendency for developments with larger homes to produce a greater number of trips, these tendencies are not statistically significant and the *Trip Generation Manual* provides no recommendations or procedures for adjusting trip generation forecasts based on product type or size. Therefore, the ITE trip generation rates utilized in the Draft EIR traffic analysis provide a reasonable basis for assessing the traffic impacts of the project.

Observations were conducted of trip generation activity at a nearby existing residential development in Porter Ranch that features a product type similar to the project. It was concluded that trip generation activity at the existing development in Porter Ranch was somewhat higher than the ITE trip generation rates in the A.M. peak hour, but lower than the ITE trip generation rates in the P.M. peak hour. In combining the A.M. and P.M. peak hour data, the number of trips generated by the Porter Ranch development was nearly identical to the number of trips forecasted using the ITE trip generation rates. These findings are summarized in a correspondence dated January 9, 2002, and has been provided to the County's Traffic and Lighting Division and LADOT. Therefore, the trip generation observations conducted at the existing residential development in Porter Ranch provide further support to the conclusion that the trip generation forecast utilizing the trip generation rates from the ITE Trip Generation Manual provides a reasonable basis for assessing the traffic impacts of the project.

Additional studies and evaluations have been prepared in response to questions raised by members of the community. It was concluded that the supplemental studies further validate the data, assumptions, analyses, conclusions and recommendations provided in the Draft EIR with respect to the analysis of project traffic impacts and mitigation measures (see Appendices D, E and K of this document for mitigation).

4.0 Response to Written Comments

Per the requirements of CEQA, the Draft EIR was distributed for a 45-day review. However, because of several continued public hearings before the Regional Planning Commission, the additional time requested by this comment has been provided (see Section 1.1 of this document).

Traffic 3 – Comment

Many cars currently travel east primarily in the a.m.-not west- and therefore appropriate studies should be done for Canoga Ave. as to what additional traffic will be generated on this street and adjacent side streets when Topanga Canyon and DeSoto are overloaded. I feel that there is a very real possibility that "A" Street will become an alternate route for people trying to avoid congestion on Chatsworth Street, and that it will become heavily congested itself with people who do not even live in the project.

Traffic 3 – Response

Please refer to Traffic 1 – Response. Please refer to Traffic 2 - Response for a discussion of the distribution of project traffic to the local street system. Based on the circuitous and discontinuous nature of the proposed "A" Street within the project, it is highly unlikely that this roadway would be used to facilitate regional traffic not associated with the project, except in emergencies.

Traffic 4 – Comment

I am also concerned about the joining of Canoga with the existing Twin Lakes community and Deer Lake Ranch road "B". There needs to be a 3-way stop at Canoga, road "B" and Mayan Drive, to alleviate the possibility of accidents and gridlock at that junction.

Traffic 4 – Response

The appropriate measure of traffic control at the referenced intersection will be determined by the County of Los Angeles Traffic and Lighting Division at the time of final design of the project.

Traffic 5 – Comment ¹⁵

In the mornings and evenings the traffic at the 118 Frwy and Topanga is very heavy, I have waited several minutes to be able to enter onto the Frwy.

Traffic 5 – Response

The comment has been received and noted. It is anticipated that with the previously referenced project mitigation measures for these intersections, including synchronization of all traffic signals, such delays would be reduced (see Appendix K of this document).

4.2.7 Form Comment Letter – Development Issues

The following letter was received by various individuals (see Table 4.1) and entitled "Development Issues." The comments included in this letter include traffic, construction impacts, noise/dust, and additional time to comment on the Draft EIR.

Development Issues 1 – Comment

I am writing to express my objection to the proposed Deerlake Ranch development in Chatsworth (Project No. 99-239(5)) for which you have scheduled a January 23 hearing.

The proposed project is located close to my home, and I am particularly concerned about the following:

1 Environment

The developer promises to dedicate some land to the Santa Monica Mountain Conservancy. What assurance is there that this dedication will occur?

¹⁵ This additional comment was handwritten on the bottom of the Form Letter submitted by Joan Devore.

4.0 Response to Written Comments

Development Issues 1 – Response

See Section 4.2.1 (Biology 1 – Response) of this document. In addition, subsequent to distribution of the Draft EIR, the applicant agreed to various community commitments including the above-referenced dedications to SMMC. These commitments will be imposed as a condition of this project by the County (see Appendix E of this document).

Development Issues 2 – Comment

The developer is going to tear out areas of coastal sage and mature oaks. The tiny (15-gallon) proposed replacement saplings are inadequate compensation for this destruction. The developer should plant replacement trees that are substantially larger and more mature.

Development Issues 2 – Response

The commenter's concern for the potential loss of coastal sage scrub and mature oaks trees is noted. Impacts to vegetation are discussed in the Draft EIR on page 4.3-16. Implementation of the Revised Project Design would result in total site disturbance similar to that discussed in the Draft EIR (see Section 2.0 and Appendix Q of this document). Implementation of the revised project would result in impacts to 2.39 acres of coastal sage scrub and 1.30 acres of coast live oak woodland. In addition, 61 of the 353 oak trees onsite would be impacted. These impacts would not be significant with implementation of the recommended mitigation measures. Unavoidable biological impacts would be mitigated by the preservation of biological resources on the proposed 159-acre mitigation parcel (see Appendix F.1 of this document).

As stated in the Draft EIR, oak trees would be mitigated onsite at a 2:1 replacement with 15-gallon trees. This standard is per the County of Los Angeles Zoning Code. Implementation of the mitigation measures included in the Draft EIR, as recommended by the County Forester, would reduce impacts to biological resources, including oak trees, to less than significant.

To ensure survivability of oak trees, trees and acorns will be planted within one year of the permitted oak tree removals. Additional mitigation trees shall be planted within one year of the death of any tree resulting from permitted encroachment. Mitigation trees will be planted either onsite or at an offsite location as approved by the County Forester. The developer will properly maintain each mitigation tree and shall replace any tree failing to survive. A three-year maintenance period shall begin upon receipt of a letter of the developer or consulting arborist to the Director of Planning and the County Forester indicating that the mitigation trees have been planted. The maintenance period of the trees failing to survive two years will start anew with any replacement trees.

In addition subsequent to the distribution of the Draft EIR, the applicant has acquired property north of the project site to serve as mitigation for onsite biological resources (see Section 2.3 and Appendix D of this document). This will include the preservation of approximately 2.60 acres of oak woodland that will be preserved and further mitigate impacts to oak trees.

Development Issues 3 – Comment

The extensive paving inside the project will result in ambient heat gain, further aggravated by the removal of mature plants. How does the developer propose to mitigate this effect?

Development Issues 3 – Response

Any perceptible ambient heat gain through construction of paved surfaces as part of the project would only be noticed within a few feet of the paved area and not noticeable on a regional scale. In addition, irrigated landscaping within the development would adequately compensate for the removal of existing vegetation. Therefore, no ambient heat impacts would be perceptible to adjacent communities.

Development Issues 4 – Comment

2. Traffic

We already have several local intersections that get a failing grade for congestion. The increased traffic from a project of this density will make things worse, yet there will be no improvement of roads, signals or intersections south of the 118 freeway through which all this traffic must pass.

Development Issues 4 – Response

Please see Section 4.2.6 (Traffic 1 – Response) of this document.

Development Issues 5 – Comment

The developer's base traffic data gathering is flawed. The Environmental Impact Report traffic study utilizes traffic counts purportedly but not actually done and counts on days when schools were not in session. They represented otherwise at our community meeting and misled us to the point that we can't trust their study to evaluate the traffic impact of this project. They should do the study over.

The developer has grossly underestimated the total and peak-hour traffic volumes generated by the project. They ignored factors in the authoritative literature and arrived at illogical results. For example, nearly half the homes would have no outbound trips in the peak morning hour – not to work, not to school. We need to see – and have time to analyze – a realistic and honest traffic study.

The developer has virtually ignored all the cars that will travel through the local streets of our neighborhood. Besides projecting too few trips overall, the study assumes too few cars traveling east, taking the Canoga and adjacent streets as the most convenient route. As a result, the developer's study does not reflect likely future traffic flow.

The traffic from this development will further clog already bad intersections and degrade others. The only cure offered by the developer for roads south of the 118 freeway is to contribute money toward an signal-timing project (ATSAC) that's going to be completed anyway. That project won't physically improve any roads or intersections, and ATSAC's hoped-for 10% improvement in traffic flow won't be enough to offset the extra congestion the project will cause.

The developer avoided performing a required freeway impact study by selecting a measurement point at the Ventura County line, away from the main traffic flow. This sort of trickery casts suspicion on the entire traffic study, if not the entire Environmental Impact Report. You should make the developer do a new traffic study from scratch and give the public a chance to evaluate and comment on it.

Development Issues 5 – Response

Please see Section 4.2.6 (Traffic 1 and 2 – Responses) of this document. See also Section 4.3.2 (Caltrans responses), and Section 4.5.145 in this document.

In response to the comment regarding the CMP freeway segment analysis, additional review of the CMP document has been completed. The next closest freeway monitoring station is located on SR-118 east of Woodley Avenue, approximately seven miles east of the project site. Based on the approved methodology and parameters in the traffic impact study (Appendix K of the Draft EIR), the following project-related traffic was forecast at the two freeway monitoring stations closest to the project site:

SR-118 @ Los Angeles/Ventura County Line

A.M. peak hour: 19 trips eastbound/58 trips westbound

P.M. peak hour: 63 trips eastbound/35 trips westbound

SR-118 East of Woodley Avenue

A.M. peak hour: 131 trips eastbound/44 trips westbound

P.M. peak hour: 79 trips eastbound/141 trips westbound

4.0 Response to Written Comments

Based on the threshold criteria for conducting impact evaluations on freeway segment monitoring locations,¹⁶ it was concluded that the originally proposed project would not add 150 or more trips, in either direction during the weekday A.M. or P.M. peak hour at either of the two CMP mainline freeway-monitoring locations. As no impact would occur, no further analysis is required.

It should be noted that the above traffic forecasts were based on development of 538 dwelling units (to maintain consistency with the traffic report included in the Draft EIR). Under the revised design (388-units), the peak hour traffic volumes would be reduced by 20 percent, thereby resulting in reduced impacts.

Development Issues 6 – Comment

3. Construction Period

Construction will generate dust, fumes, noise and runoff in our neighborhood for up to five years! There is no enforcement mechanism to ensure either containment of these effects or the developer's compliance with related ordinances and their own proposed measures. There need to be more stringent limits on construction activity, a hot line for complaints, penalties for noncompliance, and public accountability.

Development Issues 6 – Response

Please see Section 4.2.3 (Noise/Dust 1 and 2 - Responses) and Appendix E of this document regarding additional community commitments regarding construction activities. In addition, it is anticipated that project grading and infrastructure construction would take place over an approximate two-year time period. Housing construction would continue for another two years following project grading and infrastructure construction.

Development Issues 7 – Comment

For 3 to 5 years many pieces of noisy construction machinery will be operating at the development site. The developer has not committed to limits on numbers of simultaneous machine operations, on the use of state-of-the-art noise shielding and muffling devices, or on measured noise limits. We want a way to insure that we won't be assaulted in our homes by all this noise.

Development Issues 7 – Response

Please see Development Issues 6 – Response of this document.

Development Issues 8 – Comment

Construction activity will require thousands upon thousands of truckloads of building and road materials to pass through our streets, including right past an elementary and middle school. There is inadequate control over delivery times, routes and frequency. These huge vehicles present not just an inconvenience but a hazard to local school children and residents. The developer should prepare a comprehensive plan to alleviate the effects of so much heavy truck traffic on our neighborhood and give us a chance to provide input to that plan before it is finalized.

The developer asserts that construction vehicles will avoid "peak travel periods" and parking on "heavily traveled roadways". These terms are vague and undefined, giving us no protection, recourse or opportunity to evaluate the conditions of the construction that will overwhelm our neighborhood. There is no assurance that our residential side streets will not have construction vehicles parked on them.

Development Issues 8 – Response

Please see Section 4.2.3 (Noise/Dust 1 - Response) of this document. In addition, construction activities such as deliveries would be controlled by both the developer and the County in accordance with the conditions of approval for the project and the Mitigation Monitoring Program.

¹⁶ Threshold criteria is from Traffic Impact Analysis in Appendix D of the 1997 Congestion Management Plan.

4.0 Response to Written Comments

Regarding access to the site by construction vehicles, the following is the estimated timeframe and itinerary for such vehicles and equipment:

- All grading equipment would be moved onto the site via Canoga Avenue within an estimated period of five working days during the grading and mobilization period. This would be subject to the daytime limitations (see Section 4.2.3, Noise/Dust 1 – Response). The equipment would stay onsite for the duration of the grading operations. Note: exceptions would include replacement of equipment for mechanical reasons, etc.
- Materials and supply delivery vehicles may use Canoga Avenue only during the construction of the first 150 units. Such deliveries would be intermittent (i.e., bulk deliveries stockpiled onsite) and the frequency is estimated as follows:
 - The delivery of materials such as water, sewer, and storm drain pipes is anticipated to occur at intervals of approximately once every three weeks. This would begin five months after the start of grading operations and last for approximately five months.
 - Delivery of concrete and asphalt would occur approximately once every two weeks. This would begin five months after the start of grading operations and last for approximately three months.
 - Delivery of lumber and other building materials would occur once every two weeks. This would begin nine months after the start of grading operations and last for approximately six months.
- All construction equipment, and material and supply delivery vehicles would use Topanga Canyon Boulevard and “A” Street after the construction of the first 150 units. No such traffic would be permitted on Canoga Avenue thereafter.
- Construction equipment, and material and supply delivery vehicles will be permitted to travel on Canoga Avenue and Topanga Canyon Boulevard only on Monday through Friday between 9:00 A.M. and 2:00 P.M. (i.e., not during peak hours).

Development Issues 9 – Comment

There is no protection against noisy or reckless driving by construction employees and subcontractors commuting to the project site on our local streets. You should require a specific plan approved by the neighbors and having enforcement mechanisms and penalties for noncompliance.

Development Issues 9 – Response

Please see Section 4.2.3 (Noise/Dust Responses) and Appendix E of this document regarding additional community commitments regarding construction activities.

Development Issues 10 – Comment

In light of the significant adverse impact this project would have on my neighborhood and the lack of meaningful measures to alleviate that impact, I request that you not approve the project as currently presented. Any further consideration of the project should be conditioned on:

- a substantial reduction in the size and scope of the project;*
- a more meaningful proposal for mitigation by the applicant; and*
- postponement of Commission recommendation in order to allow time for adequate public study and evaluation of the applicant's revised proposals*

Development Issues 10 – Response

As stated in the Draft EIR, implementation of the project would not result in significant impacts with implementation of mitigation measures. The commenter's objection to the project is noted and will be forwarded on to the decision makers.

4.0 Response to Written Comments

As discussed in Section 2.1.2 of the Draft EIR, the General Plan density threshold for the project site is between 176 and 1,052 units. The revised project (388 units) is well below the maximum density allowed for the project site and is a 20 percent reduction in density from the originally proposed project (484 units), as discussed in the Draft EIR.

Mitigation measures have been documented in the Draft EIR to mitigate all impacts to less than significant. The mitigation measures provided in the Draft EIR are applicable to the revised project. In addition, subsequent to distribution of the Draft EIR, additional mitigation and community commitments have been included to further reduce impacts associated with the revised project, which are outlined in Appendix E of this document.

The Draft EIR was distributed to various public agencies, citizen groups and interested individuals on November 27, 2002 for a period of 45 days, as required by CEQA. The comment period on the Draft EIR technically closed January 10, 2002. However, five public hearings were held in which the public was invited to present public testimony to the Los Angeles County Planning Commission (January 23, 2002, April 10, 2002, June 19, 2002, August 21, 2002, and September 3, 2003) and comment letters were accepted by the County through the last Planning Commission hearing. Therefore the comment period for the Draft EIR has greatly exceeded the 45-day requirement as required per CEQA.

In addition, in accordance with Public Resources Code 21092.5 of the *CEQA Guidelines*, this document will be provided to commenting public agencies, organizations, and individuals a minimum of 10 days prior to certification of the Final EIR. Adequate time has been allowed for review and comment on the environmental documentation for the project.

4.2.8 Form Comment Letter – Non-Traffic

The following letter was received by various individuals (see Table 4.1 of this document) and entitled “Observations on Non-Traffic Items.” The comments in this letter included land dedication to SMMC, noise/dust, the offsite mitigation parcel, land use and biological resources.

Non-traffic 1 - Comment

Is this ridgeline unsuitable for building such that they're giving up nothing?

Non-traffic 1 - Response

It is unclear as to what the commenter means by the “ridgeline” to be “given up.” No appropriate response can be provided. However, it should be mentioned that all appropriate geotechnical studies have been conducted.

Non-traffic 2 - Comment

How much of the 70 acres has been dedicated and how much is yet to be dedicated? What assurance is there that dedication will occur? Do we want land going to SMMC or to something we control?

Non-traffic 2 - Response

Please see Section 4.2.1 (Biology 1-Response) and Section 4.2.7 (Development Issues 1 - Response) of this document. It is the County’s opinion that dedicated open space is of the most benefit when held by a public conservation agency.

Non-traffic 3 - Comment

How will any of this be enforced? No County monitoring; need Hot Line for resident complaints. Response should be within 24 hours or less, and log of complaints and dispositions should be maintained and open for public inspection. Repeated noncompliance should result in financial penalties.

4.0 Response to Written Comments

Non-traffic 3 - Response

Mitigation measures listed for the project are considered part of the conditions of approval of CUP 99-239 and VTTM 53138. Compliance with these measures is required (see Appendix D of this document). The primary responsibility for the enforcement of the project conditions is the Department of Regional Planning (Subdivision and Zoning Enforcement sections) and the Department of Public Works, Building and Safety Division. In addition, it is the County Department of Regional Planning's responsibility to ensure that all mitigation is implemented under the Mitigation Monitoring Program, for which the developer agrees to provide additional funding. The Building and Safety Division will ensure that construction-related conditions are met. Violation of the Mitigation Monitoring Program would result in a suspension of project permits and/or criminal prosecution of the applicant (developer).

Compliance with some mitigation measures would be the responsibility of other agencies (i.e., air quality mitigation measures will be the responsibility of SCAQMD). See also Section 4.2.3 (Noise/Dust 1 – Response), and Appendices D and E of this document regarding resident complaint procedures, the mitigation monitoring plan and draft conditions of approval.

Non-traffic 4 - Comment

Where will wind be measured? Van Nuys Airport? Require recording anemometer(s) on site and require wind-caused dust control at all times (similar to requirement for other local projects).

Non-traffic 4 - Response

Please see Section 4.2.3 (Noise/Dust 2 – Response) of this document.

Non-traffic 5 - Comment

Objective standards for emissions (check with SCAQMD) should be imposed in addition to tune-ups, and results should be open for public inspection.

Non-traffic 5 - Response

The air quality analysis was completed per the requirements of SCAQMD and a copy of the Draft EIR was sent to SCAQMD for review. As stated in Section 4.2 of the Draft EIR, with implementation of mitigation measures, impacts regarding air quality impacts would be less than significant.

Non-traffic 6 - Comment

Define off-peak travel periods and heavily traveled roadways. Does this mean our residential side streets (less traveled) will have construction vehicles parked on them?

Non-traffic 6 - Response

Please see Section 4.2.3 (Noise/Dust 1 and 3 – Responses) of this document.

Non-traffic 7 - Comment

How will off-peak deliveries be "encouraged"? No teeth to this; they should be required.

Non-traffic 7 - Response

The requirement of off-peak deliveries (see Section 4.2.3, Noise/Dust 1 and 3 - Responses) would be part of the conditions of approval for the project. If the conditions of approval are not met, it is a violation of the CUP for the project. A violation of the CUP is subject to enforcement by Los Angeles County. Additional discussion regarding these conditions is found in Appendix E of this document.

Non-traffic 8 - Comment

How many truckloads will be involved in whole project? Can we limit the routes and hours?

Non-traffic 8 - Response

Please see Section 4.2.7 (Development Issues 8 – Response) of this document.

4.0 Response to Written Comments

Non-traffic 9 - Comment

Enforce rules for workers re. Use of local streets and back up with a fine system.

Non-traffic 9 - Response

Please see Non-traffic 7 – Response of this document.

Non-traffic 10 - Comment

Is this required for a permit anyway?

Non-traffic 10 - Response

The commenter's question is not specific and cannot be answered. No additional response is required.

Non-traffic 11 - Comment

Require compliance with LAMC Art. IX Ch. 1 Div. 70 due to proximity to City.

Non-traffic 11 - Response

The Los Angeles City Code cited by the commenter refers to noise abatement and compliance. As the project site is located within an unincorporated area of the County, adherence to City of Los Angeles standards is not required. However, any activities within the City of Los Angeles would be subject to and comply with the City code.

Non-traffic 12 - Comment

Will measures meet SCAQMD District Rule 403?

Non-traffic 12 - Response

Section 4.2.4 of the Draft EIR included mitigation measures for dust control. Mitigation measures have been designed to meet the requirements of SCAQMD, including Rule 403. Please see Section 4.2.3 (Topical Response and Noise/Dust 2 – Response) of this document.

Non-traffic 13 - Comment

Where is offsite mitigation parcel? Is this just a swap of unbuildable [sic]/undesirable land?

Non-traffic 13 - Response

The mitigation parcel is located north of the project site. Please see Section 2.3 and Appendix F.1 of this document for the location and a description of the biological resources located within the mitigation property. The public dedication of the 159-acre mitigation parcel is not a "swap" of land in the sense of development density transfers. No additional development units will be granted as a result of this dedication. Its sole purpose is to preserve a wide range of habitat areas as part of the biological mitigation for this project (see Section 4.2.1 of this document).

Non-traffic 14 - Comment

Is removal of all eucalyptus trees a good thing? Maybe not.

Non-traffic 14 - Response

As stated in Section 4.3.2 of the Draft EIR, implementation of the project would result in the removal of approximately five percent of the eucalyptus grove located within the site. This impact would result in a beneficial impact for biological resources and would not be significant. In addition, fuel modification requirements mandate that no eucalyptus trees be located within 100 feet of a residence.

Non-traffic 15 - Comment

Does this mean mitigation for destroying 1/3 of sage and oak consists of not destroying the other 2/3?

Non-traffic 15 - Response

It is unclear as to what the commenter is referring. No appropriate response can be provided.

4.0 Response to Written Comments

Non-traffic 16 - Comment

Check with nursery as to size and years to maturity of 15-gallon trees. These are wimpy- and cheap! Check relative cost and [sic] maturity of larger replacement trees and demand the big ones! Be prepared to demonstrate size at the hearing (such as with a 15" box).

Non-traffic 16 - Response

Please see Section 4.2.7 (Development Issues 2 – Response) of this document regarding the size and other aspects of replacement oak trees.

Non-traffic 17 - Comment

Will project have impact on wildlife resources subject to CQ [sic] Fish & Game code sec. 711.2?

Non-traffic 17 - Response

California Fish and Game Code Section 711.2 defines wildlife as “all wild animals, birds, plants, fish, amphibians, and related ecological communities including the habitat upon which the wildlife depends for its continued viability....” Section 4.3 of the Draft EIR includes analysis of all biological resources as defined by Section 711.2 of the Code. As concluded by the analysis, some impacts would occur to biological resources, but they would be less than significant with implementation of mitigation measures.

Non-traffic 18 - Comment

How is ambient heat from paving being mitigated?

Non-traffic 18 - Response

Please see Section 4.2.7 (Development Issues 3 – Response) of this document.

Non-traffic 19 - Comment

Check this ordinance for its requirements. Does it restrict hours acceptably? Does it restrict numbers of simultaneous machine operations? Does it require state-of-the-art noise shielding and muffling devices? If L.A. City rules are tougher, insist on them due to proximity to City.

Non-traffic 19 - Response

The commenter’s reference is to the Los Angeles City Code, pertaining to noise, referenced in Non-Traffic 11 – Comment above. Please see Non-traffic 11 – Response of this document.

Non-traffic 20 - Comment

How much is required under Sec. 65995 of CA gov’t code? How does this compare with per-student cost?

Non-traffic 20 - Response

As stated in Section 4.11 of the Draft EIR, Los Angeles County requires that new residential subdivisions pay a library fee to ensure that new projects mitigate impacts to library services. As the project site is located within unincorporated areas of the County, there is no requirement to pay library fees to the City of Los Angeles. This would require an agreement between the County of Los Angeles and the City of Los Angeles and is not within the scope of this EIR. Further, improvements to or construction of library facilities is under the direction of the County of Los Angeles Public Library and City of Los Angeles and not within the scope of this EIR.

As stated in Section 4.10 of the Draft EIR and Appendix E of this document, although implementation of the project would result in a deficit of space for local area schools, payment of development impact fees would mitigate impacts to less than significant. Please also see Section 4.3.7 of this document regarding student generation factors. The funding provided through these fees would be used by LAUSD to fund new school facilities according to its own planning program.

The requirement to pay developer fees and the amount of fees are derived from state law. Government Code Section 65996 expressly states that payment of mitigation fees is the exclusive

4.0 Response to Written Comments

method of considering and mitigating project impacts on school facilities. State law states that payment of such fees is deemed to provide full and complete mitigation of school facility impacts, notwithstanding any other provisions of local or state laws (see Appendices D and E of this document). Therefore, no additional mitigation is required.

Non-traffic 21 - Comment

What assumptions are used to determine number of residents (vs. number of dwelling units)?

Non-traffic 21 - Response

As stated in Sections 4.8, 4.9, and 4.11 of the Draft EIR, a factor of 2.95 persons per dwelling unit was used to determine the estimated resident population.

Non-traffic 22 - Comment

Require completion bonds for all promised mitigation measures and improvements.

Non-traffic 22 - Response

Implementation of mitigation measures and assurance of completion is tied to various aspect of development of the project site and is outlined in the Mitigation Monitoring Program (please see Appendix D of this document). In addition, performance bonds for construction of infrastructure improvements, as stated in the draft Conditions of Approval (see Appendix E of this document), is required by the County Department of Public Works.

4.3 AGENCY COMMENT LETTERS

The following public agencies submitted comments on the Draft EIR:

- a. State of California, Governor's Office of Planning and Research – State Clearinghouse (January 11, 2002)
- b. State of California, Business, Transportation and Housing Agency – Department of Transportation (February 15, 2002)
- c. State of California, The Resources Agency – Santa Monica Mountains Conservancy (January 18/22, 2002)
- d. Southern California Association of Governments (January 9, 2002)
- e. City of Los Angeles, City Council (January 22, 2002)
- f. City of Los Angeles, Department of Transportation (January 11, 2002)
- g. Los Angeles Unified School District (January 22/February 4, 2002)
- h. Las Virgenes Municipal Water District (January 16, 2002)

4.3.1 State of California, Governor's Office of Planning and Research – State Clearinghouse

Terry Roberts, Director, State Clearinghouse

January 11, 2002

SCH 1 – Comment

The State Clearinghouse submitted the above named Draft EIR to selected stated agencies for review. On the enclosed Document Details Report please note that the Clearinghouse has listed the state agencies that reviewed your document. The review period close on January 10, 2002, and the comments from the responding agency (ies) is (are) enclosed. If this comment package is not in order,

4.0 Response to Written Comments

please notify the State Clearinghouse immediately. Please refer to the project's ten-digit State Clearinghouse number in further correspondence so that we may respond promptly.

Please note that Section 21104(c) of the California Public Resource Code States that:

"A responsible or other public agency shall only make substantive comments regarding those activities involved in a project which are within an area of expertise of agency or which are required to be carried out or approved by the agency. Those comments shall be supported by specific documentation."

These comments are forwarded for use in preparing your final environmental document. Should you need more information or clarification of the enclosed comments, we recommend that you contact the commenting agency directly.

This letter acknowledges that you have complied with the State Clearinghouse review requirements for draft environmental documents, pursuant to the California Environmental Quality Act. Please contact the State Clearinghouse at (916) 445-0613 if you have any questions regarding the environmental review process.

SCH 1 – Response

The comment has been received and noted. No response is required.

4.3.2 State of California, Business, Transportation and Housing Agency – Department of Transportation

Stephen J. Buswell, Chief IGR/CEQA Branch

February 15, 2002

Caltrans 1 – Comment

Thank you for including the California Department of Transportation (Caltrans) in the environmental review process for the proposed development of 484 single-family residences in the Chatsworth area of Los Angeles County.

Please be advised that this letter supersedes our prior correspondence to your office dated January 10, 2002 regarding our comments on the DEIR.

Caltrans has the following comments:

- 1. The recommended traffic improvements within the State right-of-way as described in the DEIR are acceptable as partial traffic mitigation for the project. Final design and engineering issues of these improvements need to be addressed through the Caltrans Encroachment Permit process for all work within the State right-of-way.*

Caltrans 1 – Response

As agreed between the subdivider and the California Department of Transportation (Caltrans), the subdivider shall contribute to Caltrans \$441,000 as its fair-share contribution toward long-term traffic improvements within State rights-of-way at the Topanga Canyon Boulevard (SR-27) and SR-118 Freeway interchange. The contribution shall be made prior to recordation of the first final tract map for the Project. Caltrans has agreed that payment of this contribution, along with other improvements at this interchange that are the subject of separate conditions, will fully mitigate the Project's potential present or long-term traffic impacts at the Topanga Canyon Boulevard (SR-27) and SR-118 Freeway interchange.

The revised project now contains 388 residential lots and would generate approximately 20 percent less traffic than the original project evaluated in the Draft EIR. The revised traffic study is contained in Appendix K of this document. The comment documents the acceptability of the proposed improvements within the Caltrans right-of-way. The traffic mitigation measures for the project are

4.0 Response to Written Comments

summarized in Section 4.12.4 of the Draft EIR, and will not be changed although project traffic generation has been reduced by approximately 20 percent. It is concluded in the Draft EIR (page 4.12-29) that with implementation of the recommended mitigation measures, the revised project would not result in significant impacts to area traffic. The design plans for construction of the improvements within the state right-of-way have been submitted to Caltrans and will be processed through the standard Caltrans Encroachment Permit procedure. Additional discussion regarding traffic mitigation is found in Appendices D, E, and K of this document. Traffic related issues were also discussed at a community meeting on June 26, 2002 (see Appendix O of this document).

Caltrans 2 – Comment

- To provide complete mitigation, Caltrans requests the project be conditioned to contribute its ultimate fair-share for long-term traffic improvements within the State right-of-way as determined by a Project Study Report (PSR). The costs to prepare such a PSR, can be considered as a credit against the project's fair-share requirements for long-term mitigation. Caltrans recommends that the project's fair-share for long-term improvements be paid into a Bridge and Thoroughfare District, or other similar financial instrument established by the County for purposes of the determination, collection, and distribution of funds for regional traffic improvements.*

Caltrans 2 – Response

A CMP analysis was prepared and included in the Updated Traffic Impact Study (see Appendix K). The CMP is a state-mandated program intended to address the impact of local growth on the regional transportation system (i.e., SR-118). Traffic generated by the revised project would not surpass the minimum traffic thresholds for a freeway impact assessment and therefore, further study of the project's potential impact on SR-118 is not required. Therefore, according to the state mandated CMP, no impact is identified for the freeway monitoring locations in the vicinity of the Project, and no further analysis is required pursuant to the State mandated CMP.

Subsequent to distribution of the Draft EIR, Caltrans requested that the applicant provide a fair share contribution toward the long-term traffic improvements at the Topanga Canyon Boulevard/SR-118 interchange within the right-of-way, as determined by a project study report (PSR) (letter dated February 15, 2002).¹⁷

The applicant has agreed to contribute \$441,000. Caltrans has agreed that this voluntary contribution and the required mitigation (see Appendix K of this document), satisfies Caltrans' concerns regarding future long term impacts on the state freeway system set forth in their letter. Please refer to Caltrans 1-response.

Caltrans 3 – Comment

- We understand that project applicant made a voluntary offer, and will prepare, the PSR referenced above to address long-term regional traffic operations at the interchange of Topanga Canyon Boulevard (S.R. 27) and S.R. 118. The PSR will, in part, identify the scope, schedule, and estimated cost of potential future modifications at the interchange. It will also identify funding sources. Caltrans requests the project be conditioned by the County to prepare and submit the PSR to Caltrans prior to the release of Certificates of Occupancy for the 100th residential unit, with approval of the PSR by Caltrans required prior to the release of Certificates of Occupancy for the 200th residential unit. The PSR need not be completed prior to issuance of the Encroachment Permit for the improvements within the State right-of-way as described in the DEIR.*

¹⁷ This is not required per CEQA and is inconsistent with applicable requirements such as "nexus" and rough proportionality."

4.0 Response to Written Comments

Caltrans 3 – Response

See Caltrans 2 – Response. Preparation of the PSR is a voluntary measure and therefore, it is not required or recommended that occupancy of the project be subject to submittal and approval thresholds of the PSR as suggested by the commenter.

Caltrans 4 – Comment

4. *The County and the project developer should be notified that California statutes do not legally entitle property owners who are building adjacent to or near, freeways to any noise mitigation program funded by the State. The FEIR should contain a thorough analysis of potential noise impacts to the future residential units and provide recommended mitigation measures as needed.*

Caltrans 4 – Response

As stated in mitigation measures 4.7-1, 4.7-2 and 4.7-3 (see Section 4.7 of the Draft EIR), the project will provide mitigation for proposed housing due to the existing noise impacts associated with SR-118 traffic.

4.3.3 State of California, The Resources Agency – Santa Monica Mountains Conservancy

Michael Berger, Chairperson

January 22, 2002

SMMC 1 – Comment

The Santa Monica Mountains Conservancy and its joint powers entity, the Mountains Recreation and Conservation Authority (MRCA), have been involved in a cooperative fashion with the subject project for almost four years. The MRCA currently owns 31 acres internal to the project boundaries and is about to take title to 70 acres on the western project boundary from a 1980s project dedication. Both agencies continue to work with the applicant in regards to shaping the project and its mitigation measures. To date, the Draft Environmental Impact Report (DEIR) does not encompass the most substantive mitigation measures promised by the applicant. The applicant's representative has stated that they will be submitting comments on the DEIR that will introduce these absent mitigation measures into the record. This letter assumes that the following two mitigation measures to acquire offsite lands will be incorporated into the Final EIR (FEIR) mitigation measures.

1. *The applicant shall acquire in fee simple a specific 160-acre parcel located to the north in Browns Canyon as a mitigation parcel. The timely transfer of this parcel into public ownership is critical to mitigate the impacts of the proposed project. Its protection would mitigate the direct loss of habitat and cumulative loss of habitat in the Santa Susana Mountains and the loss of a major population of Plummer's Mariposa Lily. The FEIR must also state which entity will receive this offsite mitigation parcel and at what point in the project approval process. The transfer to a public park agency, preferably the MRCA, should occur as a condition of map recordation. The applicant could still conduct project related riparian and Plummer's Mariposa Lily mitigation on this 160-acre parcel.*
2. *The applicant has submitted an Agreement for Purchase and Sale and Escrow to the owners of APN 2818-021-002 (14-acre Horner Property) located directly adjacent to the project entrance at the northwest corner of the intersection of Canoga Avenue and 118 Freeway. Protection of this parcel is important to maintain wildlife movement conditions at the freeway underpass, to provide a public trail staging area, and to protect viewsheds from the 118 Freeway and public trails in the vicinity. This pre-approval action by the applicant reflects their commitment to a sound recreation, aesthetic and ecological project. Our hopes are that the owners will accept the applicant's offer and that the applicant, the MRCA, and the Board of Supervisors via the Los Angeles County Regional Park and Open Space District will all approve their required share of*

4.0 Response to Written Comments

the funding. The MRCA will take title to the property. However, if the Horner transaction fails, the FEIR must include a mitigation measure that requires the establishment of a land acquisition fund. The funds, in the amount of \$300,000 should be specifically tied to the acquisition of habitat in the Devil or Browns Canyon watershed. Minus such a fund, the project as proposed does not adequately mitigate habitat loss. The funds should be transferred in full to the MRCA as a condition of map recordation.

SMMC 1 – Response

The comment has been received and noted. Subsequent to distribution of the Draft EIR, the applicant secured an option to purchase the 159-acre mitigation parcel in Brown's Canyon to mitigate project impacts to onsite biological resources. The biological characteristics and suitability of this parcel is discussed in the Biological Resources Mitigation Plan (see Appendix F of this document). Upon project approval, the option will be exercised and transferred to a park agency, such as the SMMC/MRCA, as a condition of recordation of VTTM No. 53138, and subject to an agreement between the SMMC/MRCA and the applicant.

The 14-acre Horner property located along the northeast corner of the intersection of Canoga Avenue and SR-118 has been purchased by the MRCA with funds provided by the applicant, the County of Los Angeles, and the SMMC. The SMMC has indicated that this property would be preserved as open space. In addition, this acquisition allows preservation of the existing wildlife corridor through this property, between North Stoney Point, and Devil and Browns Canyon.

SMMC 2 – Comment

The FEIR must include a map showing the location of all surrounding public parkland and other public facilities—such as land owned by the Los Angeles Department of Public Works Flood Control Division. This information is all located on the map attached to the Conservancy's June 2000 comment letter.

SMMC 2 – Response

The comment has been received and noted. Please see Figure 2.6 of this document, which includes all surrounding public parkland and other public facilities.

SMMC 3 – Comment

The FEIR must include discussion and analysis addressing the cross-freeway habitat linkage through the Canoga Avenue underpass to Los Angeles City-owned Stoney Point Park. The FEIR must include a detailed landscape and mitigation plan to facilitate wildlife movement between Devil Creek and the freeway underpass. Such a plan is critical for decision makers to understand the capability of the wildlife corridor after project completion.

SMMC 3 – Response

Please see Section 4.2.1 (Topical Response 4.2.1 - Biology) and Appendix F.5 of this document.

SMMC 4 – Comment

The Conservancy urges that the project be conditioned to require only indigenous landscaping in broad areas. Such a requirement would be novel but is entirely warranted in such an ecologically important and visible area. Non-native species should only be allowed on the flat residential pads and the 20-foot Wet Zone (Zone A) areas demarcated on DEIR Figure 2.12 (Fuel Modification Plan). Internal landscape areas not defined on the Fuel Modification Plan need not require native species, but their use is encouraged. The Irrigated Zone (Zone B) in this figure should be restricted to only indigenous plants. We offer our staff's expertise in designing an indigenous plant palette that will succeed with irrigation, look attractive, and will not be a fire hazard. This landscape requirement will offset habitat loss, reduce visual impacts, and create at least one east-west wildlife movement

4.0 Response to Written Comments

corridor through the proposed Twin Lakes (lower) housing cluster. We specifically request the opportunity to review the landscape plans before the FEIR is prepared.

However, in order to achieve this east-west permeability to wildlife movement in the proposed Twin Lakes cluster, the FEIR must include permanently enforceable mitigation measures that provide for at least one specific non-fenced gap appropriately located between two houses in the portion of the project between lots 56 and 69.

SMMC 4 – Response

Locally indigenous plants would be used on all manufactured slopes outside of the irrigated zone of the fuel modification areas, and in other areas of the project wherever feasible. This is consistent with County requirements.

The suggestion to "create at least one east-west wildlife corridor through the proposed Twin Lakes (lower) housing cluster" is considered infeasible and impractical since limited habitat is available to the southwest of the project site. This corridor would necessarily consist of a narrow dual-purpose equestrian trail alignment through the tract, alongside "B" Street, which would have excessive length, and be adjacent to incompatible residential and transportation land uses. Such a corridor design would not be expected to be functional for wildlife, and worse, would only serve as a mortality sink - a place where animals are killed more often than not. Animals such as coyote, bobcat, mountain lion, gray fox, and mule deer should be discouraged from attempting to traverse such a long and tenuous narrow corridor for the sake of their own preservation. In particular, animals such as coyote and mountain lion, should they find themselves within such a corridor, and observed by humans, would likely be the object of extermination by animal control, game or law enforcement officers, for posing a potential risk to the human inhabitants.

SMMC 5 – Comment

The FEIR must clearly identify and show the specific open space lots that will be dedicated to a public agency and by when such transfers must occur. Such transfers must occur as a condition of map recordation or earlier.

SMMC 5 – Response

The project open space lots are shown on the revised VTTM (see Appendix C.1 of this document). Transfer of open space lots would occur as a condition of final tract map approval.

SMMC 6 – Comment

The FEIR must include more in-depth analysis regarding the visual impacts of the proposed brush clearance. The FEIR must also better define the allowable extent of clearance in "thinning zones." Our greatest concern with visual brush clearance impacts is in the area of proposed "A" and "E" Streets. The DEIR figures show the brush "thinning zone" extending to the edge the Devil Creek riparian corridor in several places. The ecological integrity of this key block of onsite riparian habitat requires a minimum 50-foot-wide buffer of unaltered, not thinned, chaparral or coastal sage scrub vegetation combined with the thinning zones as shown in the DEIR.

Other obvious avoidable impacts to the viewshed and ecology of this area of Devil Creek include the elimination of grading for the adjacent park site proposed at the terminus of "E" Street. The park site should be integrated into the adjacent open space lot and the MRCA, as the probably open space recipient, should be allowed to design an overlook or sitting area at a future date. It is appropriate that the applicant's cost savings be passed onto the MRCA to construct such a public facility. We recommend the requirement of a \$25,000 construction fund for the MRCA in the FEIR to be paid prior to the issuance of any building permits for houses on proposed "E" Street. The MRCA would document all costs to the County and construct the overlook within two years of the receipt of the funds or return them to the County. Accordingly, the length of the culdesac for proposed "E" Street

4.0 Response to Written Comments

should also be shortened to the maximum extent possible such as is achieved at the terminus of proposed "D" Street.

The DEIR visual cross section identified as BB shows the subject section of "D" street as being a double loaded with houses. The plans show a single loaded street. The FEIR must rectify this deficiency. The FEIR should also include at least three view cross sections from the existing and the proposed trail system in Devil Canyon.

SMMC 6 – Response

The extension of the fuel modification thinning zone to edge of portions of the Devil Creek riparian corridor is unavoidable, and imposed as a condition by the Los Angeles County Fire Department in order to provide adequate fire protection. However, all such thinning activity would be conducted under the supervision of a biologist to ensure that there is no significant impact to the riparian corridor.

Grading for the proposed park site adjacent to "E" Street, as identified on the previous project tentative tract map, has been eliminated. Under the revised project, the park site will be an integral part of the adjacent open space (see VTTM in Exhibit C.1 of this document).

See Section 2.4.2 (Grading) of this document for revised figures showing revised and additional cross sections.

SMMC 7 – Comment

We urge the County to make substantial exceptions for this project that require the least possible amount and intensity of street lighting, paving and street width, storm drain and debris basin capacity, and quantity of fill slope v-ditches and down drains.

The subject project, with the incorporation of all of the mitigation measures contained in this letter, represents a sound example of how to achieve orderly development within areas containing antiquated Record of Survey subdivisions.

SMMC 7 – Response

The comment has been received and noted. The project is currently designed to meet requested County Standards. However, the commenter's suggested exceptions regarding improvements will be forwarded to the decision makers.

4.3.4 Southern California Association of Governments

Jeffrey M. Smith, Senior Planner Intergovernmental Review

January 9, 2002

SCAG 1 - Comment

We have reviewed the above referenced document and determined that it is not regionally significant per Areawide Clearinghouse criteria. Therefore, the project does not warrant clearinghouse comments at this time. Should there be a change in the scope of the project, we would appreciate the opportunity to review and comment at that time

A description of the project was published in the November 30, 2001 Intergovernmental Review Report for public review and comment.

The project title and SCAG Clearinghouse number should be use in all correspondence with SCAG concerning this project. Correspondence should be sent to the attention of the Clearinghouse Coordinator. If you have any questions, please contact me at (213) 236-1867.

SCAG 1 - Response

The comment has been received and noted. No response is required.

4.3.5 City of Los Angeles, City Council

Hal Bernson, Councilman 12th district

January 22, 2002

City Council 1 – Comment

After review of the proposed Deerlake Ranch project, it is my opinion that this is virtually impossible to fully mitigate the traffic impacts of this project. The ingress/egress plan consisting of only two streets, Topanga Canyon Boulevard and Canoga Avenue, are woefully insufficient to handle the traffic in rush hours and in times of emergencies.

City Council 1 – Response

Section 3.3.6 and Appendix K of this document include revisions to the traffic analysis completed subsequent to distribution of the Draft EIR, reflecting an approximate 20 percent reduction in the number of residential units (i.e., from 484 units to 388 units), and a corresponding reduction in traffic generated by the project. Moreover, the revised traffic analysis states that all mitigation measures previously proposed in the Draft EIR will still be implemented, thereby making them even more effective in mitigating project impacts. Therefore, the conclusions included in the Draft EIR, that no significant traffic impact would result after implementation of mitigation measures, remains valid under the revised project.

City Council 2 – Comment

There is a lack of recognition that over 450 homes will create additional burdens on the Los Angeles Unified School District's local schools, which are already exceeding their capacities.

City Council 2 – Response

As included in Section 3.0 of this document, and subsequent to distribution of the Draft EIR, the project's anticipated student generation has been reduced by 20 percent, and additional enrollment information became available from LAUSD. However, this additional information did not change the conclusions included in the Draft EIR, that impacts to schools would be less than significant with mitigation. In addition, the applicant has indicated that they will enter into discussions with LAUSD and the Porter Ranch master developer to investigate the possibility of accelerating the Porter Ranch elementary and middle school construction schedule. Please see Sections 2.0, 4.2.8, 4.5.28, and Appendix J of this document for additional information regarding schools.

City Council 3 – Comment

And finally, this project will add burdens on the City of Los Angeles' infrastructure such as libraries, parks, and fire department (due to mutual aide) without compensation to the City. With these deficiencies in mind, I strongly recommend your disapproval

City Council 3 – Response

As stated in the Draft EIR, impacts to libraries, parks and fire department services would be mitigated through payment of fees and through the collection of property taxes. As the project site is located within unincorporated areas of the County, there is no direct requirement to pay fees to the City of Los Angeles. However, the applicant has voluntarily agreed to pay a special fee to the City's Chatsworth Library, as well as to pay a special fee to the City's Parks Department for construction of a child-care facility within Mason Park. Regarding impacts on City fire services, it is understood that the mutual aid agreement between the City and County incorporates appropriate funding arrangements. Therefore, with a 20 percent reduction in the number of units, implementation of these mitigation measures, and payment of voluntary fees, no significant impacts would occur on these facilities due to implementation of the project.

4.0 Response to Written Comments

City Council 4 – Comment

Should your honorable body choose otherwise you must take a number of actions to protect the nearby community of Chatsworth:

Rural Community and lifestyle -

This community enjoys a very unique lifestyle of mixed horse keeping and open space. The county must guarantee connections to the City's Equestrian Trail backbone system developed by my office over 20 years ago.

City Council 4 – Response

As stated in the Draft EIR (Section 2.4.3 and Figure 2.11), the project includes recreational trails that would connect to existing trail systems, including the one referenced by the commenter. No significant impacts to the trail system would occur. In addition, subsequent to distribution of the Draft EIR, the applicant has agreed to construct additional trails (Approximately of 4.3 miles) on the project site (see Appendices C.1 and E of this document). Additionally, the project design has been modified in large part to incorporate additional equestrian facilities.

City Council 5 – Comment

Density is also an issue that must be closely looked at to guarantee that the natural and open space qualities of the hillsides be protected.

City Council 5 – Response

Subsequent to the distribution of the Draft EIR, the project density has been reduced by approximately 20 percent, from 484 units to 388 units. This reduction has resulted in lowering the project density from 2.11 units per acre to 1.68 units per acre. This revised density is consistent with the density of the existing community south of the SR-118, and lower than the adjacent communities of Twin Lakes and Porter Ranch (see Appendix L of this document). As with the project described in the Draft EIR, the natural and open space qualities of the site and surrounding area would be protected under the revised project.

City Council 6 – Comment

Horse keeping is an important element of Chatsworth community. Sufficient horse keeping lots should be included in the project to keep alive this lifestyle. The size of the lots is important as well. Where necessary, lots should be combined in a way to reduce density and provide large enough lots for horse keeping.

City Council 6 – Response

In response to this comment, and similar comments from the community, the project has been revised so that it now provides 155 lots that are over 15,000 square feet, and 55 lots specifically designated for onsite horse-keeping (see Appendix C.1 of this document).

City Council 7 – Comment

Infrastructure -

The City has guaranteed the location of a new elementary and middle school site in the Porter Ranch area. Unfortunately, the LAUSD has chosen not to build those schools until 60% of the homes in Porter Ranch are built. In the meantime, the local schools are at double and triple their originally planned size. I suggest that you limit the number of homes developed until the LAUSD builds new schools.

City Council 7 – Response

Please see City Council 2 – Response. Because the proposed project will take several years to construct, limiting the development does not seem warranted.

4.0 Response to Written Comments

City Council 8 – Comment

Libraries are another valid concern. All those living in these homes will want to use the City of Los Angeles Library system. There are NO nearby county facilities. The Developer should be required to make sufficient payment, as deemed necessary by the LA City Library Department, to allow the residents of Deerlake to use our libraries.

City Council 8 – Response

As stated in Section 4.11 of the Draft EIR, the Los Angeles County Public Library operates facilities and services in both unincorporated and incorporated areas of the County. As the developer would pay fees to offset potential impacts, no significant impacts would occur. Under County ordinance, the developer will pay approximately \$250,000 (\$645/unit) to the County library system. In addition, although there is no provision under the law for the developer to provide funds for the City of Los Angeles library system (i.e., the Chatsworth Library), the developer has committed to voluntarily contribute approximately \$125,000 directly to the Chatsworth Library to help offset potential impacts on that facility. This will be in addition to the County fee. As a matter of City policy, future residents of Deerlake Ranch will be able to get "library cards" to use City library facilities, including the Chatsworth Library. Please see City Council 1 – Response regarding payment of fees to the City of Los Angeles.

City Council 9 – Comment

All Quimby funds accrue to the County, yet all park use will be in the City of Los Angeles. A sufficient amount of Quimby funds should be paid to the City of Los Angeles.

City Council 9 – Response

The revised project includes various park areas (see Section 2.0 of this document), including three neighborhood pocket parks and a nature park. The applicant also will provide approximately \$424,000 in parks fees to the County, \$130,000 to SMMC (for additional open space acquisition), and an additional \$300,000 which will be used to offset public funds used for the recent acquisition of a 13-acre community equestrian park at Canoga Avenue, north of the SR-118. In addition, please see City Council 1 - Response above regarding payment of fees to the City of Los Angeles.

City Council 10 – Comment

Traffic Mitigation -

Traffic is probably the biggest concern with this project. The City Department of Transportation has filed a request for certain mitigations, which I concur with and some of which I requested. In my original transmittal to DOT, and their subsequent letter to you of January 11, 2002, an error was made concerning my recommendations. Item #3 is incorrect and should read that we are requesting an "all way" stop sign with flashing lights at "Canoga Avenue" and Rinaldi Street.

In addition to my previous requests, my staff has worked with the community to determine adequate needs to protect the residential neighborhoods. We request the following additional mitigations:

- *Install a three-way stop sign at Canoga Avenue and Candice Place*
- *Install painted road markings and signs, or a special equestrian height push-button activated flashing light, at Candice Place and Canoga Avenue.*
- *Left turn improvements and phasing light at Canoga Avenue southbound onto Chatsworth Street eastbound*
- *Left turn improvements and phasing on Chatsworth Street eastbound onto DeSoto Avenue northbound*
- *Consideration of "No Left Turn" signs from Canoga Avenue southbound onto eastbound Candice Place, onto eastbound Celtic Street, from 7-9 A.M. on weekdays*

4.0 Response to Written Comments

City Council 10 – Response

All of the above measures requested by the commenter will be implemented - please see Sections 2.4.3, 3.3.6, and 4.2.6, and Appendix K, of this document for additions/revisions to the traffic analysis and implementation of mitigation measures.

City Council 11 – Comment

The community of Chatsworth and I would appreciate your vigilance in these matters. If the project must be approved by your honorable body, these mitigations are a necessity. If mitigations are not mandated, I shall be forced to ask the City of Los Angeles to file a lawsuit to stop the project. I am sure that those drastic measures will not be necessary.

City Council 11 – Response

The comment has been received and noted. Although the above requests by the commenter were not required for mitigating project impacts to a less than significant level (see the Draft EIR), the applicant has agreed to implement many of them voluntarily, and has requested that the County make them conditions of approval (see Appendix E of this document).

4.3.6 City of Los Angeles, Department of Transportation

Sergio D. Valdez, Transportation Engineer

June 6, 2002

LADOT 1 – Comment

This revised letter supersedes the previously issued DOT letter dated January 11, 2002. The Los Angeles City Department of Transportation (LADOT) has reviewed the Draft Environmental Impact Report (DEIR) for the proposed Deerlake Ranch/Chatsworth Ridge Estates which consists of a 484 single-family homes on a vacant 230.58 acre parcel of land. This project is located within an unincorporated area of Los Angeles County and is bounded by the 118 Freeway to south, Canoga Avenue to the east and Topanga canyon Boulevard to the west. However, the street system that provides access to the site is primarily located within the City of Los Angeles, and 11 of the 13 studied intersections are within the City of Los Angeles.

LADOT 1 - Response

The comment has been received and noted. No additional response is required, except to note that, subsequent to this letter, the project has been reduced in size from 484 to 388 units, a 20 percent reduction.

LADOT 2 – Comment

Discussion and Findings:

LADOT's comments are based upon review of the Draft Environmental Report and reports prepared by Linscott, Law and Greenspan Engineers. The project's size has been reduced from the original 538 single-family homes to a project size of 484 single-family homes, as reflected in the DEIR. The project will generate 363 trips in the a.m. peak hour, 489 peak hour and 4,422 daily trip ends. The trip generation rates are based on the 6th Edition Trip Generation Manual (1997) of the Institute of Transportation Engineers.

As stated below, the proposed project will have significant and cumulative traffic impacts at the following intersections:

- 1. Topanga Cyn Boulevard and 118 Freeway eastbound ramps*
- 2. Topanga Cyn Boulevard and 118 Freeway westbound ramps*
- 3. Chatsworth Street and Canoga Avenue*
- 4. Chatsworth Street and De Soto Avenue*

4.0 Response to Written Comments

LADOT 2 - Response

The comment has been received and noted. These intersections are consistent with the conclusions in the DEIR. No additional response is required, except to note that both average daily traffic volumes and A.M. and P.M. peak hour traffic volumes have been reduced by approximately 20 percent based on the corresponding reduction in the number of project units.

LADOT 3 - Comment

MITIGATION OF SIGNIFICANT AND CUMULATIVE IMPACTS

Topanga Cyn Boulevard and 118 Freeway Eastbound Ramps

Fund a proportionate share of the cost of the design and construction of the LADOT's 118 Freeway Corridor ATSAC/ATCS System, for the intersection of Topanga Canyon Boulevard & 118 Freeway Eastbound Ramps. This project's proportionate share of the cost of the ATSAC/ATCS System is equal to the number of significantly impacted intersections multiplied by the average ATSAC/ATCS System cost per intersection. The current cost of the Ronald Reagan Freeway Corridor ATSAC/ATCS System is \$102,000 per intersection. ATSAC/ATCS improvements shall be guaranteed through a cash payment prior to the issuance of any building permit. Since the cost of ATSAC/ATCS improvements is reviewed and adjusted periodically, the actual cost may change depending on when payment is made.

LADOT 3 - Response

The comment has been received and noted. The applicant will provide the proportionate share of fund for the above-stated transportation improvements. Please see Sections 2.4.3, 3.3.6 and 4.2.6, and Appendices E and K of this document for additions/revisions to the traffic analysis and mitigation measures.

LADOT 4 - Comment

Topanga Cyn Boulevard and 118 Freeway Westbound Ramps

Widen the westbound off-ramp of the Simi Valley Freeway at Topanga Canyon Boulevard by 9 feet from Topanga Canyon Boulevard to a point approximately 260 feet easterly as shown in attachment no. 1. This will be accomplished by widening the north side of the ramp by 5 feet and widening variably by 4 feet on the south side of the ramp to provide two left-turn-only lanes and an optional through-right-turn only lane. Relocate and modify the traffic signal equipment, street lights, curbs and gutters, trees, utilities, etc. as required. This mitigation needs to be approved by all affected municipalities or agencies, including the State of California Department of Transportation (Caltrans) through the Encroachment Permit process.

LADOT 4 - Response

The comment has been received and noted. The applicant will construct the above-stated transportation improvements. Please see Sections 2.4.3, 3.3.6 and 4.2.6, and Appendices E and K of this document for additions/revisions to the traffic analysis and mitigation measures.

LADOT 5 - Comment

Chatsworth Street and Canoga Avenue

Widen Canoga Avenue and Chatsworth Street, within the existing right-of-way to provide a left-turn-only lane and a shared through-right turn lane for southbound Canoga Avenue at Chatsworth Street as shown in attachment no. 2. Modify the signal phasing at this location to provide southbound to eastbound left-turn phase as well as a congruent right-turn arrow for vehicles traveling westbound to northbound at this intersection. Relocate and modify any existing traffic signal equipment, street lights, power poles, trees, signs, curb and gutters, utilities, etc. as required.

4.0 Response to Written Comments

LADOT 5 - Response

The comment has been received and noted. The applicant will construct the above-stated transportation improvements. Please see Sections 2.4.3, 3.3.6 and 4.2.6, and Appendices E and K of this document for additions/revisions to the traffic analysis and mitigation measures.

LADOT 6 - Comment

Chatsworth Street and De Soto Avenue

Widen Chatsworth Street at De Soto Avenue to provide dual left-turn-only lanes, a through lane, and a right-turn only lane for eastbound Chatsworth Street at De Soto Avenue as shown in attachment no. 3. Modify the signal phasing at this location to provide an eastbound to northbound left turn phase. Relocate and modify any existing traffic signal equipment, street lights, power poles, trees, signs, curb and gutter, utilities, etc. as required.

LADOT 6 - Response

The comment has been received and noted. The applicant will construct the above-stated transportation improvements. Please see Sections 2.4.3, 3.3.6 and 4.2.6, and Appendices E and K of this document for additions/revisions to the traffic analysis and mitigation measures.

LADOT 7 - Comment

Additional Requirements

Canoga Avenue between Candice Place and 118 Freeway

Widen Canoga Avenue to collector street standards, within the existing right-of-way from Candice Place to the County boundary line at the 118 Freeway including curb, gutter and sidewalks. In addition to these improvements extend the existing equestrian trail, located on the east side of Canoga Avenue, from its terminus located north of Candice Place to an existing dirt trail located just north of the 118 Ronald Reagan Freeway.

LADOT 7 - Response

The comment has been received and noted. The applicant will construct the above-stated transportation improvements. Please see Sections 2.4.3, 3.3.6 and 4.2.6, and Appendices E and K of this document for additions/revisions to the traffic analysis and mitigation measures.

LADOT 8 - Comment

Equestrian Crossing Signals on Canoga Avenue

Install two self actuated equestrian crossing signals on Canoga Avenue. The first location should be at the intersection of Canoga Avenue and Rinaldi Street. The second should be north of the 118 Ronald Reagan Freeway at or near the terminus of the equestrian trail located on the east side of Canoga Avenue.

LADOT 8 - Response

The comment has been received and noted. The applicant will construct the above-stated transportation improvements. Please see Sections 2.4.3, 3.3.6 and 4.2.6, and Appendices E and K of this document for additions/revisions to the traffic analysis and mitigation measures.

LADOT 9 - Comment

The above transportation improvements shall be guaranteed, before the issuance of any building permit for this project, through the B-Permit process of the Bureau of Engineering, Department of Public Works, and must be completed before the issuance of any certificated of occupancy to the satisfaction of LADOT and the Bureau of Engineering. Prior to setting the bond amount, the Bureau of Engineering shall require that the developer's engineer or contractor contact LADOT's B-Permit Coordinator at (213) 580-5320 to arrange a pre-design meeting to finalize the design for the required transportation improvements.

4.0 Response to Written Comments

LADOT 9 - Response

The comment has been received and noted. The applicant will comply with the above-stated permitting procedure (see Appendix E of this document).

LADOT 10 - Comment

Neighborhood Traffic Management Plan

Prior to the issuance of any building permit the applicant shall execute and record a covenant and agreement to mitigate cumulative traffic impacts in the residential neighborhoods adjacent to Canoga Avenue in the City of Los Angeles through the development of a Neighborhood Traffic Management Plan. This mitigation shall be guaranteed through either a cash deposit or irrevocable letter of credit or a cash certificate of deposit payable to LADOT in the amount of \$200,000 prior to the issuance of any building permit. Three years after the issuance of the final certificate of occupancy of the entire project, the applicant may request a refund of the unused money which shall only be granted if DOT and the 12th District Council Office determine that all of the provisions of the Neighborhood Traffic Management Plan have been fully complied with and no additional improvements are necessary.

LADOT 10 - Response

The comment has been received and noted. The applicant will comply with the above-stated mitigation for a Neighborhood Traffic Management Plan (see Appendix E of this document).

LADOT 11 - Comment

These measures are intended to control the volume of traffic along Canoga Avenue, as well as to restrict the use of local residential streets east of Canoga Avenue. Potential traffic calming measures may include, but are not limited to: the installation of speed bumps, diverters, turn restrictions, signing and marking as determined by LADOT.

LADOT 11 - Response

The comment has been received and noted. The applicant agrees to implementation of the above traffic-calming devices, subject to City approval (see Appendix E of this document).

LADOT 12 - Comment

The City of Los Angeles appreciates your cooperation and assistance in mitigating traffic impacts of the proposed project on City streets and neighborhoods. If you have any questions, you may contact me at (818) 756-9929.

LADOT 12 - Response

The comment has been received and noted. No additional response is required.

4.3.7 Los Angeles Unified School District

Raymond E. Dippel, Assistant Environmental Planning Specialist

February 4, 2002

LAUSD 1 - Comment

Thank you for giving the Los Angeles Unified School District (LAUSD) the opportunity to comment on Deerlake Ranch Draft Environmental Impact Report. The proposed project is located within the Germain Street Elementary School attendance area.

The District's Master Planning & Demographics section has reviewed the DEIR, and provides the attached assessment.

Thank you for your attention to this matter. If you need additional information please call me at (213) 633-3897.

4.0 Response to Written Comments

LAUSD 1 - Response

The comment has been received and noted. No additional response is required.

LAUSD 2 - Comment

In reviewing the information you provided to us regarding the Deerlake Ranch development, we saw some areas that we felt had not been properly addressed. What follows is our assessment of the information and any editing we felt might be necessary.

In section 4.10.1, please revise the average classroom loading for fourth – fifth grades to 29:1, sixth – eighth grades to 33:1, and ninth – twelfth grades to 35:1, add 'through third grade' to kindergarten classroom 'ratios'.

Table 4.10.1 – in order to adequately reflect the schools' enrollment profiles, columns with the schools' actual enrollment and resident enrollment projections should be added. The R2 resident enrollment projections are calculated without new housing impacts included. (R2 enrollment differs from R4 in that it 'returns' magnet students to their home school.)

School Facility	Operating Capacity	Capped	Actual Enrollment	Resident Area (R2) Enrollment	Existing Space Available/(Deficit)		Resident (R2) Enrollment Projections
					Actual	R2	
Chatsworth Park Elementary	559	No	496	511	63	48	0
Germain Street Elementary	905	No	803	706	102	199	(20)
Lawrence Middle School	2427	No	1876	1666	551	761	250
Chatsworth Senior High	3351	No	3214	2515	137	36	680
Total	7242		6389	5398	853	1044	910

The operating capacity, actual enrollment and resident enrollment are current as of October 5, 2001. The resident enrollment projections are for five years out, beginning with the 2002-03 school year, for the elementary and middle schools; the projections are for eight years for the senior high school.

LAUSD 2 - Response

The comment has been received and noted. The updated school capacity/enrollment information is hereby incorporated into Section 4.10 of the Draft EIR and is documented in Section 3.3.4 and Appendix J of this document.

LAUSD 3 - Comment

Section 4.10.2, project impact: the map is a little imprecise, but it appears that all of the proposed project will fall within the Germain Street attendance area. For the purpose of analyzing enrollment impacts, consideration should be given only to Germain Street. The appropriateness of a boundary change between Germain Street and Chatsworth Park has yet to be determined. Lawrence Middle School and Chatsworth Senior High School are in circumstances where resident enrollments are expected to increase, without factoring in the impact of new housing in the area. Additionally, any available space in these schools is needed to house students from areas of the District that are overcrowded: use of this space by an increased resident student population due to new housing will impact the District's ability to house students from currently overcrowded areas of the District.

Table 4.10.3 – again, the columns for actual enrollment and resident enrollment growth should be added:

4.0 Response to Written Comments

School Facility	Operating Capacity	Actual Enrollment	Resident Area Enrollment (R2)	Proposed Project Enrollment	Total Enrollment		Existing Space Available/ (Deficit)		Resident (R2) Enrollment Projections
					Actual	R2	Actual	R2	
Elementary	1464	1299	1217	208	1507	1425	(43)	39	(20)
Middle	2427	1876	1666	121	1997	1787	430	640	250
Senior High	3351	3214	2515	165	3379	2680	(28)	671	680
Total	7242	6389	5398	494	6883	5892	359	1350	910

LAUSD 3 - Response

The comment has been received and noted. The updated school impact information is hereby incorporated into Section 4.10 of the Draft EIR and is documented in Section 3.3.4 and Appendix J of this document. It should be noted that LAUSD has provided conflicting student generation rates, which yield widely ranging student generation results. The LAUSD Board approved a new School Facilities Needs Analysis (SNA) in 2000, which is the basis of LAUSD current Level 2 fees and student generation rates for residential development. The outdated 1998 Plan indicated a District-wide student generation rate of 0.43 students (K-12) per home. The student generation rates in the 2000 SNA were based upon new development built in the last five years within LAUSD (rather than district-wide rates in the 1998 Plan) by product type. The rates found in the Needs Analysis were significantly lower than the 1998 Plan. Please see Appendix J of this document for updated student generation and project impact analyses, based on both the lower student generation rates, and the reduction in the number of students for the revised project.

Section 17620(a) of the California Education Code and Section 65995(b) of the California Government Code, authorizes school districts to impose and collect school impact fees for all residential and non-residential activities that occur within the jurisdictions to offset the costs associated with the generation of new students. Referencing Section 65995(h) of the Government Code, "the payment or satisfaction of a fee, charge, or other requirement levied or imposed pursuant to Section 17620 of the Education Code in the amount specified in Section 65995 and, if applicable, any amounts specified in Section 65995.5 or 65995.7 are hereby deemed to be full and complete mitigation of the impacts of any legislative or adjudicative act, or both, involving, but not limited to, the planning, use, or development of real property, or any change in governmental organization or reorganization as defined in Section 56021 or 56073, on the provision of adequate school facilities." Payment of applicable fees constitutes full mitigation for those impacts that are directly or indirectly caused by a project upon those school districts potentially impacted by that project.

LAUSD 4 - Comment

Section 4.10.3, cumulative impacts: related project no. 7, Porter Ranch, has more than 1,698 residential units planned; a total of 3,600 units is planned, with 200 units completed to date. The developer estimates approximately 200 units available per year. A full assessment of the need and cost to build a new school(s) within the Porter Ranch development has not been completed, as yet, so no estimate of its capacity to house Porter Ranch students can be made at this time. Currently, all the developed areas in Porter Ranch are assigned to Castlebay Lane Elementary School, while most of the remaining development area is within Germain Street's attendance area. The Porter Ranch students in the most recently completed areas make up 13% of Castlebay Lane's students; the estimate of 2% of Germain's students being resident to Porter Ranch cannot be confirmed. An evaluation of opportunities to reassign boundaries would be one of the steps taken to remedy enrollment impacts to Germain Street. Again, growth in the District is experienced District-wide, and solutions to ease crowding in the District schools are implemented District-wide. The impact of housing growth in areas of the District where there is space to accommodate resident enrollment growth will be felt in

4.0 Response to Written Comments

areas that are overcrowded, as space in other District schools shrinks and students can no longer be transported to schools with space.

Table 4.10.4, Cumulative Project Student Generation, should be edited to acknowledge the greater number of Porter Ranch units:

Project Use	Elementary Factor	(K - 5) Students	Middle School Factor	(6 - 8) Students	Senior High Factor	(9 - 12) Students
Porter Ranch - Single-family (3,600 units)	0.43	1548	0.25	900	0.34	1224
Single-Family (52 units)	0.43	22	0.25	13	0.34	18
Multi-Family (159 units)	0.26	41	0.15	24	0.20	32
Single-family (12 units)	0.43	5	0.25	3	0.34	4
Total Project Generation		1616		940		1278

Table 4.10.5, Cumulative School Impacts, should be edited to acknowledge the changes in the previous tables:

School Facility	Operating Capacity	Proposed Project and Current Enrollment		Related Projects Enrollment	Cumulative Enrollment		Existing Space Available/(Deficit)		Resident (R2) Enrollment Projections
		Actual	R2		Actual	R2	Actual	R2	
Elementary	1464	1507	1425	1616	3123	3041	(1699)	(1577)	(20)
Middle	2427	1997	1787	940	2937	2727	(510)	(300)	250
Senior High	3351	3379	2680	1278	4657	3958	(1306)	(607)	680
Total	7242	6883	5892	3834	10717	9726	(3475)	(2484)	910

We have no comment on the mitigation measures; developers' fees will be assessed and paid by the development company.

Thank you for the opportunity to review and comment on this project.

LAUSD 4 - Response

The comment has been received and noted. Please see Section 3.3.4 and Appendix J of this document for revisions to the school analysis. Please also refer to LAUSD 3 - Response.

4.3.8 Las Virgenes Municipal Water District

C. Eugene Talmadge, Planning Administrator

January 16, 2002

LVWD 1 - Comment

We are in receipt of the Draft Environmental Impact Report on Tentative Tract No. 53138 also known as the Deerlake Ranch. The project calls for 484 unit single-family residential lots located on 230.58 acres. Of the total area, 161 acres were previously divided by means of several Licensed Surveyor's Maps in 1927 and 1928 into approximately 2,575 Record of Survey lots.

The district prepared a Water System Design Report (WSDR) for this project at the developer's expense in February of 2001. After comparing the WSDR criteria with the EIR, it appears that the Draft Environmental Impact Report has addressed all important issues, including the construction of a new pipeline from Twin Lakes Tanks to the project site. The potable water demand for this project as shown in our Water System Design Report is consistent with the Draft EIR.

The Draft Environmental Impact Report is consistent with the Los Angeles County General Plan's Land Use Element. The district's demand projections in its Potable Water System Master Plan and

4.0 Response to Written Comments

its Urban Water Management Plan (UWMP) are based on proposed development consistent with the County's General Plan land use designations within the LVMWD service area, the proposed project is consistent with the district's Master Plan and UWMP and would not have a significant impact on the LVMWD's ability to meet its objectives as prescribed in the California Water Code.

The Draft Environmental Impact Report has addressed the mitigated measures to the satisfaction of the district stating to build the proposed water supply system to district standards and to use water conservation measures such as low-flow toilets and show-heads to reduce water consumption.

If you have any questions concerning this matter, please feel free to contact me at any time. Thank you.

LVWD 1 – Response

The comment has been received and noted. No response is required.

4.4 ORGANIZATION/BUSINESS COMMENTS

The following organizations/businesses submitted comments on the Draft EIR:

- Chatsworth Equine Cultural Heritage Organization, Inc.
- Chatsworth Land Preservation Association
- Equestrian Trails, Inc.
- Recreation & Equestrian Coalition
- Santa Susana Mountain Park Association
- Twin Lakes Property Owners Association

4.4.1 Chatsworth Equine Cultural Heritage Organization, Inc.

Jerry England, Chatsworth ECHO

January 22, 2002

C ECHO 1 – Comment

In response to request for approval of Vesting Tentative Tract Map No. 53138 the Chatsworth Equine Cultural Heritage Organization, Inc. (Chatsworth ECHO) respectfully asks this Commission to send the project to Staff for restudy because:

- 1. The General Plan for the city of Los Angeles has a conservation element that requires the city to "retain, to the extent feasible, the last remaining agricultural features of the city as part of the city's heritage and economy." (City Plan Case No. 2001-0413-GPA, Council File No. 01-1094, Adopted by the city Council September 26, 2001, Approved by the City Planning Commission March 10, 2001)*

Since the project falls within the "sphere of influence" of the city, its small lot concept does not mesh with either the city's General Plan or Chatsworth's rural nature. Most of the homes in the city immediately south of this project exceed ½ acre.

C ECHO 1 – Response

The project site is located within an unincorporated area of the County of Los Angeles. As such it is not subject to the City of Los Angeles General Plan. As discussed in Section 2.1.2 of the Draft EIR, the project is consistent with the Los Angeles County General Plan Land Use Element and the County Zoning Code. The permitted density threshold for the project site is between 176 and 1,052 units.

4.0 Response to Written Comments

The proposed project has been redesigned to provide for larger lot sizes. The revised project (388-units) is well below the maximum density allowed for the site. See also Appendix L of this document.

C ECHO 2 – Comment

2. *Why was this project excluded from a Biological Resources Assessment prepared for the County Regional Planning Department in November 2000? The assessment indicates this project is within the proposed boundary of a Sensitive Ecological Area (SEA) that recommends housing density not exceed one dwelling unit per 10-acre parcel.*

C ECHO 2 – Response

The commenter references the document titled *Biological Resources Assessment of the Proposed Santa Susana Mountains/Simi Hills Significant Ecological Area* (PCR, 2000). This document is one of several that were produced pursuant to the Significant Ecological Area Update Study 2000, commissioned by the Los Angeles County Department of Regional Planning. As such, the County of Los Angeles has not adopted the Significant Ecological Area (SEA) boundary recommendations of the Update Study 2000 as land use policy overlays. The project site is not within an existing SEA, and the proposed development is consistent with both the General Plan and the existing zoning. In addition, the General Plan and Zoning Ordinance do not restrict proposed development within existing SEA's to one unit per 10 acres. The criteria for development is based on the General Plan land use designations, including hillside density determinations, and meeting the Burden of Proof within SEA's. Given these factors, there would be no legal basis for requiring the revised project to limit its density to one unit per 10 acres.

Further, the project site would not fit the draft criterion that has been developed for properties to be included within an SEA, as summarized and explained below.

Does the area being evaluated contain?

1. **The habitat of core populations of endangered or threatened plant or animal species?**
Numerous biological assessments have been completed for the project site and determined that no endangered or threatened plant or animal species occur.
2. **On a regional basis, biotic communities, vegetation associations and habitat of plant and animal species that are either unique or restricted in distribution?** Onsite vegetation and biotic communities primarily include chaparral with small areas of willow and oak woodland and are not unique or restricted in distribution. Further portions of the project site have been or will be dedicated to the SMMC.
3. **Within Los Angeles County, biotic communities, vegetation associations and habitat of plant and animal species that are either unique or are restricted in distribution?** Onsite vegetation and biotic communities primarily include chaparral with small areas of willow and oak woodland and are not unique or restricted in distribution. Further portions of the project site have been or will be dedicated to the SMMC.
4. **Habitat that at some point in the life cycle of a species or group of species serves as concentrated breeding, feeding, nesting or migrating grounds and is limited in availability either regionally or within Los Angeles County?** The project site does not serve as concentrated breeding, feeding, and/or migrating grounds. Several studies conducted on wildlife movement in the vicinity of the project site by various agencies (SMMC, California State University – Northridge and Los Angeles County) have determined that the project site and immediate vicinity is not a critical wildlife corridor. Devil Canyon has been dedicated to the SMMC and serves as a minor onsite wildlife corridor, but is restricted by existing urban development south of the project site and flood control structures.

4.0 Response to Written Comments

5. **Biotic resources that are of scientific interest because they are either an extreme in physical, geographical limitations, or represent unusual variation in a population or community?** As the Draft EIR correctly states, the project site does not contain biotic resources of scientific interest or unusual limitations or variations. The project site is currently affected by typical urban conditions including freeway noise, night lighting, domestic animals, and off-road vehicle use. Therefore, future sustainability of onsite biological resources would be severely limited.
6. **Areas that would provide for the preservation of relatively undisturbed examples of the original natural biotic communities of Los Angeles County?** The project site does not represent a relatively undisturbed example of a natural biotic community. The site has been subdivided since 1927 and several residential structures, roads, power lines and associated infrastructure including a dam and a bridge have been developed onsite.

The proposed SEA configuration in the vicinity of the project site does not appear to be based upon existing biological resource conditions. The proposed development is consistent with existing zoning and land use policy, and is not within an existing SEA.

C ECHO 3 – Comment

3. *The developer has promised the Chatsworth equestrian community it will create a Community Facilities District (CFD) to provide funds to build new equestrian trails, but their proposal is too non-specific:*
 - a. *Who will be responsible for building the trails and when will they be constructed?*
 - b. *Will new trails be at least 14 feet wide with guard rails on both sides?*
 - c. *Will guard rails have breaks at all intersecting trails and road crossings?*
 - d. *Will all new road crossings have a rubberized non-skid surface?*
 - e. *Will crossings have an equestrian-activated flashing red light for safety?*
 - f. *Will roadways have warning signs well in advance of the equestrian crossings?*
 - g. *Will signs warn truck drivers that "air brakes" ("jake brakes") are prohibited around equestrian trails?*
 - h. *Since the land is controlled by multiple land owners, details need to be worked out to secure maintenance agreements with those owners.*
 - i. *Will the County ultimately be responsible for trail maintenance on property owned by others?*

C ECHO 3 – Response

Details of a CFD, if requested by the applicant, will be determined and approved by the County Board of Supervisors after approval of the project. Regarding equestrian trail improvements, they would be constructed by the applicant in accordance with the VTTM (see Appendix C.) of this document) regardless of the formation of a CFD. Following are responses to specific comments pertaining to trails:

- a. Trails would be constructed by the applicant in conjunction with project grading.
- b. Trails will be between 8-feet and 12-feet wide and will have guard rails only at locations where mandated for public safety reasons.
- c. Yes, new trails will be at least 14 feet wide with guard rails on both sides.
- d. Road crossing materials will be subject to approval by the County Department of Public Works and Department of Parks and Recreation.
- e. Road crossings will have vehicular stop signs for safety.
- f. Yes, in accordance with County traffic standards.

4.0 Response to Written Comments

- g. Yes, along Canoga Avenue.
- h. The land that constitutes the project site is owned by the applicant, who will construct all trails shown on the VTTM in Appendix C.1 of this document.
- i. All trails shown on the VTTM will be dedicated to the County Department of Parks and Recreation, which will operate and maintain the trails.

C ECHO 4 – Comment

- 4. *The developer has promised to keep all equestrian trails open during the estimated five-year construction of improvements, but has not provided a detailed plan of how and when this will be accomplished.*
- 5. *Finally, the City of Los Angeles has not properly addressed traffic vs. equestrian concerns on Canoga Avenue between Chatsworth Street and the project. Equestrians need time to meet with the City to workout details to keep horses and riders safe.*

C ECHO 4 – Response

During grading and until completion of the permanent trails within the project site, the applicant will coordinate with representatives of the various local equestrian groups to locate and build temporary equestrian trails which, when physically possible, will connect to existing trails from Devil Canyon and Browns Canyon north of the site. These temporary trails may be redirected from time-to-time due to the need to accommodate construction activity. The County Trails Coordinator will review the proposed locations and construction of the temporary trails.

See Section 4.3.5 (City Council 8 – Response) of this document.

C ECHO 5 – Comment

Summary:

This project does not mesh with the existing rural nature of Chatsworth. It will further endanger a sensitive ecological area, it adds significant traffic to a neighborhood road system that is already failing, it generates more students for local schools that are already at capacity, and it creates additional public safety concerns for a community that has too few existing services.

C ECHO 5 – Response

Please see C ECHO 2 – Response and see Sections 3.3.4, 4.3.7, 4.5.28, and Appendix J of this document regarding revisions to the EIR analysis for school services. As stated in the Draft EIR, project impacts related to public services and safety would be mitigated to less than significant.

C ECHO 6 – Comment

The Chatsworth ECHO asks this Commission to consider our recommendation to help mitigate our neighborhood's concerns by reducing the density of the project.

We suggest increasing lot sizes to a minimum of 17,500 sq. ft and zoning them residential agriculture. This will allow the developer to recover additional income from the sale of larger tennis court or horse-keeping sized properties. This concept of horse-keeping lots is already planned for nearby Porter Ranch.

The addition of horse-keeping lots also helps eliminate a conflict between two cultures—our Rural Equine Culture and a new Suburban Culture that has not yet discovered the unpleasant aspects of living in a rural community populated with livestock—flies, dust, noise, manure, etc.

C ECHO 6 – Response

The applicant has redesigned the proposed project with a lower density, larger lot sizes, and has incorporated additional equestrian features into the revised project design. See Section 4.3.5 (City Council 3 – Response regarding project density, and City Council 4 – Response regarding horse-keeping lots) of this document.

C ECHO 7 – Comment

If the Commission allows this developer to create a CFD that requires future taxpayers to pay for trails they can't use because they don't own horses, it will only worsen the cultural conflict.

The Chatsworth ECHO asks that the Commission please require this project to include horse-keeping properties that will help save the rural nature of our town and allow our equestrian culture to thrive and expand, which is the intent of the conservation element of the city's General Plan.

C ECHO 7 – Response

See C ECHO 3 and C ECHO 6 – Responses regarding CFD and trails and Section 4.3.5 (City Council 4 -- Response) regarding horse-keeping lots.

4.4.2 Chatsworth Land Preservation Association

Eskander, S.J., Chatsworth Land Preservation Association

January 9, 2002

CLPA 1 - Comment

This letter is to express my concerns with regard to the Environmental Impact Report of the Deerlake Ranch project, CUP/Oak Tree Permit No. 99239, Tentative Tract Map 53138, as well as other concerns regarding the development in general and it's impact on the Chatsworth community and on unincorporated areas of Los Angeles County.

CLPA 1 - Response

The comment has been received and noted. No additional response is needed.

CLPA 2 - Comment

Environmental Impact Report is Inadequate

The Environmental Impact Report for this project is inadequate as it is incomplete in some areas and inaccurate in others. I am neither a biologist nor a botanist, but I do have more than 20 years of experience riding every inch of the project site by horseback. After reviewing the EIR, it is plain to see that there are many false and inaccurate statements contained in its pages.

CLPA 2 - Response

The commenter provides no specific examples of incompleteness, or of inaccurate or false statements in the Draft EIR, and provides no substantiation of the claim of inadequacy. The Draft EIR was prepared and the review of the document is conducted per the requirements of CEQA, the *CEQA Guidelines*, and the County of Los Angeles Department of Regional Planning *Environmental Document Reporting Procedures and Guidelines*. As discussed in the Draft EIR, analysis of impacts to various environmental elements indicated no significant impacts are anticipated. The comment has been received and noted. No additional response is needed.

CLPA 3 - Comment

Section 4.5-1 thru 4.5-3- Landslides

"A landslide mapped along the south side of Devil Canyon within the southwest portion of the project site is a large block failure (Yerkes, 1995). This landslide is indicative of the type of landsliding that occurs within the Chatsworth Formation and suggests that similar east-facing bluffs underlain by adversely oriented bedding may also be susceptible to landsliding (see Figure 4.5.2)."

I can tell you from personal observation that there are many such landslides throughout Devil's Canyon including some on the Westerly facing slopes just a bit northwest of the old bridge/dam. In fact, one of the slides was large enough to remove 20 feet of flat level trail that we used to traverse by horseback. We have now found another way through, but it is a matter of time before another large slide occurs in Devil's Canyon. Landslides happen quite frequently during the rainy season along

4.0 Response to Written Comments

this canyon, not just in the two spots that were identified in the report back in 1995 that is sited in the EIR. Perhaps a newer, more in-depth study would reflect the actual erosion that takes place in the area.

CLPA 3 - Response

As discussed in Section 4.5 of the Draft EIR, areas within Devil Canyon (including the side slopes) would be left in their natural state. In addition, adequate construction setbacks would be provided to ensure that the project has no impact on potential slide areas, and that the potential slide area would have no significant impact on the revised project.

CLPA 4 - Comment

Section 4.6-Hydrology

The EIR does not take into account the effect of storm water runoff from residential streets will have on Devil's Canyon. Many mammals including bobcats get their water during the summer months from this Canyon-I have seen it every year for the last five years. Bobcats, and other wildlife, that have been displaced from the Porter Ranch development are now using our creek beds as a summer habitat. Additionally, many horses drink from the creek bed during trail rides. Birds, such as the Cooper's Hawk, and also the homeless humans that camp in Devil's Canyon may also be harmed by drinking tainted water from this creek bed. There is absolutely no provision in this EIR on the environmental impact of oils, chemicals, soaps, antifreeze, animal feces, fertilizers, and other pollutants that might be present in water that is collected from the streets and drained into Devil's Canyon. The EIR only states that problems of this nature will only arise "infrequently during episodes of storm water runoff from the project site and are not likely to result in significant impacts to biological resources." This EIR assumes that pools will not be drained, that runoff will not occur from washing cars or landscaping or other occurrences that will wash high concentrations of chemicals into Devil's Canyon for animals and the homeless humans in the area to consume. Additionally, other eco systems that exist farther North of this development will be affected by the contaminants in the water, and this is not addressed.

CLPA 4 - Response

In response to this comment, a more detailed analysis has been prepared (see Appendix I of this document) to address surface water runoff quality from the project and its potential impact on Devil Canyon. Please also see Section 4.2.2 (Urban Runoff 1 - Response) of this document for a summary of the detailed analysis.

The commenter indicates that "many mammals including bobcats get their water during the summer months from [Devil] Canyon - I have seen it every year for the last five years." "Bobcats and other wildlife that have been displaced from the Porter Ranch development are now using our creek beds as the summer habitat." These comments are noted as informational, and not requiring a specific response. These comments also support the proposed open space dedication of Devil Canyon as wildlife habitat.

CLPA 5 - Comment

Additionally, the EIR does not adequately address the issue of flooding in the creek bed during the rainy season caused by channeling storm water directly into the natural canyon instead of directing it through storm drains to the flood control system. As it stands today, the creek over flows and changes dramatically every year that we have a heavy rainy season. At times, the bridge/dam and the creek bed cannot hold any more water and water nearly flows over the top of the bridge. As was demonstrated in the recent Porter Ranch stormwater catastrophe, channeling the water down city streets and into wildlife habitats and natural canyons is poor planning and results in environmental devastation. Add this together with the soil characteristics in the creekbed (and the fact that the

4.0 Response to Written Comments

landslide factor has not been adequately addressed) and major environmental impact can be foreseen. This EIR must address this issue in a more detailed fashion.

CLPA 5 - Response

Please see Section 4.2.2 (Urban Runoff 1 - Response) of this document.

CLPA6 - Comment

In conclusion, I ask that the County review the Limekiln Canyon catastrophe caused by the Porter Ranch development. Because the Environmental Impact Report did not sufficiently address the potential devastation of Limekiln Canyon due to the storm water run off from the streets, a city park and equestrian trail had to be closed forever due to the devastating effects of such poor planning. Limekiln Canyon has been destroyed due to a flaw in the EIR. I demand that the County request the developer to conduct further environmental review with regard to storm water run off. Untreated storm water must be channeled to a treatment center, such as the Donald C. Tillman Plant, via the County Flood Control System instead of draining it into Devil's Canyon.

CLPA 6 - Response

Please see Section 4.2.2 (Urban Runoff 1 - Response) of this document. In addition, currently, there are four natural points of discharge for storm water runoff from the sub-drainage area, including most of the project site, into Devil Canyon, and four natural points of discharge into the Browns Canyon watershed by way of existing watercourses easterly of the project site. After development, there would be three points of discharge from storm drains into Devil Canyon and four into the Browns Canyon watershed. Each of these points of discharge from storm drains would include construction of "energy-dissipating" structures in accordance with LACDPW standards in order to reduce discharge velocities to a non-erosive level.

CLPA 7 - Comment

Section 4.3-20-Wildlife Impacts

It appears that this EIR relies on wildlife movement studies conducted for the Nature Conservancy and the Santa Monica Mountains Conservancy. The EIR does not cite the dates of these studies or which specific areas were covered in the field studies. The EIR just states that the studies were in the "vicinity" of the project site. Were these studies conducted for Porter Ranch or for what purpose? When were they conducted? Where were they conducted? Who conducted them? There appears to be a serious conflict between the information in this EIR and in prior studies on the area that reflect a wildlife corridor that is contiguous from this project site to the Porter Ranch Development project site. Bearing this in mind, the County should exercise its authority in requesting a postponement of its decision until a complete, accurate, and current study that is more relevant to this project site is produced.

Since the development of Porter Ranch and the building of homes at the top of Mason Avenue, this area of the proposed project site has experienced a huge influx of displaced wildlife. An up-to-date report that takes into account the ACTUAL environmental impact of the development of Porter Ranch, and the future development of the Porter Ranch Flood Control System in Brown's Canyon, should be made to ensure that we are not displacing wildlife that has just been evicted from Porter Ranch. It is possible that the project site is now home to many new animals that have not lived there in the past due to the encroaching development in the area. This area needs to be studied further. I ask that the County request a supplemental environmental review so that we completely understand the ACTUAL impact on our wildlife.

CLPA 7 - Response

The Nature Conservancy and SMMC conducted the studies referenced in the Draft EIR (Edelman 1990). The study indicates that the study area includes the Santa Susana Mountains, the Simi Hills,

4.0 Response to Written Comments

and the Santa Monica Mountains. The area of Deer Lake Highlands (project site) was included in the study, as shown on Figure 3 of the report. Details of field studies, including dates or specific locations examined, are not included in the report. The report was not prepared in connection with the Porter Ranch Development, nor does the report identify onsite or nearby offsite regionally important wildlife corridors, as such corridors do not exist.

The commenter indicates "since the development of Porter Ranch and the building of homes at the top of Mason Avenue, this area of the proposed project site has experienced a huge influx of displaced wildlife." This is informational, and requires no specific response. Furthermore, the commenter requests "an up-to-date report that takes into account the actual environmental impact of the development of Porter Ranch, and the future development of the Porter Ranch Flood Control System in Brown's Canyon, should be made." The impacts of present and future Porter Ranch Developments were addressed in the EIR for that project and are not the subject of this EIR.

See also Section 4.3.1 (Topical Response) of this document.

CLPA 8 - Comment

Insects

The EIR does not address insects at all. There are species of insects including very rare tarantulas that live on the project site. Bees, fire ants, and many other insect species are observed all the time on the project site, but the EIR does not address this at all. In fact, no insect species at all are mentioned in the Environmental Impact Report. A supplemental environmental review must be conducted on insects that live in this area.

CLPA 8 - Response

An entomological field evaluation was conducted in March 2002 of the project site for potential species and habitat. A number of sensitive species are known to occur within the region, although no sensitive arthropod species have been identified onsite. The invertebrate fauna of the project site reflects the floral diversity. Species observed are those of the southern Coast Ranges, and the San Gabriel Mountain foothills and canyons. The report regarding the field survey for arthropods can be found in Appendix F.4 of this document. Additional studies are not required by CEQA.

CLPA 9 - Comment

Section 4.3.3 Cumulative Impacts

The subject site that the developer has purchased to mitigate the impacts on the Mariposa Lily is a commonly used horse trail that brings many equestrians from Brown's Canyon through to the back side of the project site. In order to preserve the equestrian trail and the Plummer's mariposa lily, a railed bridle trail must be constructed to keep the trail open and the equestrians off of the plants. It seems unfair to restrict all access from view of the Plummer's mariposa lily that we have enjoyed for generations on our visits to the project site. What good is a preservation plan that excludes the public from enjoying its fruits?

CLPA 9 - Response

The commenter indicates, "the subject site that the development has purchased to mitigate the impacts of the Mariposa lily is a commonly used horse trail." Furthermore, "in order to preserve the equestrian trail and the Plummer's mariposa lily, a railed bridle trail must be constructed to keep the trail open and the equestrians off of the plants." Mitigation of impacts to Plummer's mariposa lily is one of several purposes served by the proposed acquisition and dedication to the SMMC of the 159-acre parcel in Browns Canyon. According to the Draft EIR page 4.3-22, "the applicant is proposing to mitigate all impacts to biological resources to less than significant levels through acquisition of a minimum 60-acre parcel of undisturbed natural open space in the immediate vicinity of the project site." Thus, the site has been selected for the purpose of mitigation of adverse and unavoidable

4.0 Response to Written Comments

impacts to biological resources, and not, however, recreation. There is no proposal to construct a trail on the mitigation parcel.

The commenter questions, "what good is a preservation plan that excludes the public from enjoying its fruits?" Preservation of lands solely for their intrinsic biological properties and ecological services that they perform is a valid action when the preservation of biological resources is the primary objective, as in the case of this project. Also serving direct human purposes might be incompatible with the intended preservation.

CLPA 10 - Comment

Section 4.3.4 Mitigation Measures

Although it is commendable that the developer is turning over 60 acres of Devil's Canyon over the Santa Monica Mountains Conservancy, the developer is also planning on using the Canyon as a flood control channel and dump site for the disposal of construction dirt and debris. These actions circumvent the intention of "mitigation" and should not be allowed, as they will lead to the devastation of Devil's Canyon over time. Further environmental review must be conducted on the developer's intentions for use of the Canyon before this can be approved as a mitigating measure. The current EIR does not sufficiently address the community's concerns.

CLPA 10 - Response

Neither channelization nor any grading activities would take place within Devil Canyon as shown on the project's VTTM, Drainage Concept Study, and numerous related sections of the Draft EIR. The canyon within the project boundary is proposed for dedication as natural open space.

CLPA 11 - Comment

Animal Regulation

This Environmental Impact Report is insufficient in that it does not take into account the impact on Animal Control and Regulation offices in the City and County. What are the response times for animal control? Who will handle feral animals in the area? There are many concerns due to the nature of the impacts on wildlife in the area—including bobcats and coyotes. There will be incidents and confrontations with these animals and more review should be made as to which agency will respond to calls in the area and how those calls will be handled. There will be an impact and we need to know and understand the process before the County's approval process begins.

CLPA 11 - Response

Animal services within the County are provided by the Los Angeles County Animal Control. The project would be served by the Los Angeles County Agoura Shelter located at 29525 Agoura Road in Agoura. The average response time to the project area for emergency calls is under one hour. The average response time to the project area for non-emergency calls is under 24 hours. Officers often respond from the field and areas in and around the project vicinity. This can lead to quicker response times.

Feral animals (feral cats) will be retrieved as long as they are trapped. The Los Angeles County Animal Control will attempt retrieval of bobcats and coyotes, however the California Department of Fish and Game (CDFG) may be contacted for further assistance. . It is estimated that no increased "incidents and confrontation" with animals are likely to occur, although new residential areas may be exposed to encounters with wildlife

CLPA 12 - Comment

Schools

The Environmental Impact Report does not state which SPECIFIC schools these children will attend and if these SPECIFIC schools have stated that they have room for 494 students. As I understand it,

4.0 Response to Written Comments

our elementary schools are overcrowded and so are our middle schools and high school. So, I ask that the EIR be more specific in how it addresses school capacity.

CLPA 12 – Response

Section 4.10 of the Draft EIR stated that the project is located within the attendance boundaries of the following public schools: Chatsworth Park Elementary, Germain Elementary, Lawrence Middle School, and Chatsworth Senior High School. Please see Sections 3.3.4, 4.3.7, 4.5.28, and Appendix J of this document for additional information regarding school capacity

CLPA 13 - Comment

Libraries

The EIR is misleading in that it implies that the Chatsworth branch library is a county facility. It is a CITY LIBRARY and it belongs to the citizens of the City of Los Angeles, NOT THE COUNTY. There is NO COUNTY LIBRARY facility for these 500 new families in Chatsworth. The EIR needs to sufficiently address this fact. The library is going to be expanded to meet current demand for city residents. Funds collected from the developer will be applied to the COUNTY libraries, while the burden of this development is placed upon the CITY. The City should receive the \$626.00 per household, not the County OR a County library should be built to accommodate this development. It is unfair to ask the Citizens of LA City to pay for this burden.

CLPA 13 - Response

See Section 4.3.5 (City Council 6 – Response) of this document.

CLPA 14 - Comment

The General Plan

My other concerns regarding this development stem from the project's high density as compared to the rest of the Chatsworth community. Developments such as this have absolutely no place when compared to the rest of our community of large lots and horse keeping. As I understand it, the General Plan for this area of the County has not been reviewed or updated since the 1920's. Although the County Plan has been updated to reflect the affects of progress in other areas, this area of the Plan has remained unchanged since the lots were divided up into "postage stamp" sized lots intended as giveaway prizes in cereal boxes. Last year, the County conducted an environmental study in which it made some recommendations to limit the density of developments approved for Unincorporated areas of the County. This development is one of those that requires more scrutiny. When compared with the developments that surround this project, this project is obviously too dense for the area. Our schools, roads, fire, police, and other services must be sufficiently cultivated to support such a large impact on the community.

CLPA 14 - Response

See Section 4.3.5 (City Council 1 and 3 – Responses) of this document.

CLPA 15 - Comment

I urge the County to postpone its decision until the developer can produce an accurate and complete EIR. This EIR is filled with inaccuracies and relies on data that was not produced for this specific development. The County must require the developer to not only conduct the aforementioned supplemental environmental reviews, but to also require a less dense development in this area. Ideally, to support the Chatsworth community, an equestrian development would be built in these hills. Since that will most probably never come to pass, the best thing we can hope for is a development that fits in with the rest of the community in its density and scope.

CLPA 15 - Response

Please see CLPA 2 – Response regarding the adequacy of the EIR. Please see Section 4.3.5 (City Council 1 and 3 – Responses) of this document regarding the density of the project.

CLPA 16 - Comment

Additionally, on the subject site for the Plummer's Mariposa Lily sanctuary. I request that a railed bridle trail be constructed through this parcel so that continued equestrian access will be allowed without disrupting the endangered plants.

CLPA 16 - Response

Please see CLPA 9 – Response.

4.4.3 Equestrian Trails, Inc.

Charlotte Brodie, Trail Coordinator, Equestrian Trails, Inc.

January 8, 2002/April 10, 2002

ETI 1 – Comment

I would like to comment on several areas of this report starting with:

Plummer's Mariposa Lily. Figure 4.3.1 shows a widespread Lily population that is mostly in the flat land of the development with the most dense populations at the south western edge. The Lily is listed as a Sensitive Plant Species, page 4.3-6, paragraph 4, and reports the Lily is on 61.04 acres with approximately 400 to 1,800 individual plants, depending on the year, with the Lily being replaced at a 2:1 ratio in a mitigated parcel, page 4.3.23 paragraph 4.3-4 and page 4.3.24.

Specifically, where are these bulbs to be stored? Who is going to plant and maintain them. Where are the preserved planting areas located? I'd like to suggest that bulbs could also be planted along all equestrian/hiking trails throughout the development. Who will be monitoring this operation to see that is completed over a five year timeline? When will the planting start occurring? Will it be after all development is completed will it be after all development is completed which could be 2007 or later? If this is the case, then monitoring will go on to at least 2012. If planting is done during each phase of development, then the monitoring could start in 2003 and conceivable go on for 9 or more years. Who will this monitor be reporting to?

ETI 1 – Response

Please see Section 4.2.1 (Topical Response) of this document. Bulbs of Plummer's mariposa lily salvaged prior to grading would be stored at a qualified nursery, in this case, at "Tree of Life Nursery", in San Juan Capistrano, because they have direct experience with this species. A qualified horticulture contractor, overseen by the project biologist, would perform transplanting and maintenance for a period of not less than five years. The preserved areas would be located generally within areas of potential habitat (see Figure 7 of Appendix F.1 of this document).

The commenter's suggestion that "bulbs could also be planted along all equestrian and hiking trails throughout the development" is noted. The plan is to mitigate impacts on Plummer's mariposa lily in an area of preserved, intact habitat, and not to use them as urban landscape material.

An approved biological monitor shall report to the County of Los Angeles, which will be responsible to oversee and ensure compliance with the mitigation plan. The CDFG will also receive monitoring reports, for their concurrence with the County.

ETI 2 – Comment

Coastal Live Oak trees and heritage oak trees as defined on page 4.3-5, paragraph 3. It states that there is only one heritage oak on the property. There are many more that qualify as heritage. The developer wants to remove 65 oaks, page 4.3-18, paragraph 3, which is approximately 23% of the woodlands. Oak tree locations are shown on Figure 4.3.3. Today I, and several of my friends, rode through the some of woodlands to measure a few trees. We found that Oak #199 is over 80", #197 is 67", #196A is 39", #26 is 41", two Oaks near #24 measured 50" and 40". These are just a few of

4.0 Response to Written Comments

the trees that meet the requirements to be considered heritage Oaks. I'm sure these trees have not grown exceedingly fast in the last year or so to have the measurements be so different.

These Coastal Live Oaks are very special to all of us and took more years to get the way they are than you and I put together. What can we do to save these beautiful old trees? It is very easy to say. "Oh, we'll just replace two for every one we remove." Oak trees give so much character to the land.

ETI 2 – Response

As stated in the commentor's subsequent e-mail to the applicant, Oak Trees, dated January 16, 2002, it was acknowledged that the trees were measured incorrectly, in that the dimensions given above were tree circumferences, not diameters (see Appendix B.1 of this document). For heritage trees, the criteria per County ordinance is 36 inch diameter or greater. Therefore, the above trees are not considered heritage oak trees and the project Oak Tree Report included in Appendix H of the Draft EIR is correct and has been verified by the county forester.

ETI 3 – Comment

We need to work at saving our heritage, our land and the natures gifts to us. What is so wrong with saving our natural landscape as much as possible rather than rearranging and destroying it's beauty?

ETI 3 – Response

The sentiment to "work at saving our heritage, our land and the natures gifts to us" is noted. As the comment consists of a general statement, no specific response can be given.

ETI 4 – Comment

Killdeer. Many birds are listed as being within the development site, page 4.3-9 to 10 under the heading, Birds. However, there was no mention of the Killdeer that has been seen in and around the area

ETI 4 – Response

The observation of killdeer in the project area is noted. Killdeer, although not mentioned specifically in the text body of the Draft EIR, are included as an expected species in the faunal compendium included in Appendix G of the Draft EIR. Killdeer are not considered a sensitive species.

ETI 5 – Comment

Bears. Also not mentioned in the Mammals section, page 4.3-10, was no word of black bears. Occasionally, they are sighted in our area. I believe it was last spring that a baby bear was behind the homes that skirt the edge of Aliso Canyon about 4 miles to the east of this proposed development.

ETI 5 – Response

This information and the potential for the occurrence of black bear are acknowledged. It should be noted that black bear are an infrequent occurrence, and they are not indigenous to these mountains. According to McLaughlin (1959) "eleven black bears were introduced from Yosemite Park into the San Gabriel Mountains in 1933." They are now established in the San Gabriel and San Bernardino mountain ranges, mostly in forested habitats at the higher elevations. Occasional bears that wander to the foothill regions are considered "problem bears," presenting a risk to human safety, and are, therefore, usually tranquilized and relocated to remote mountain regions by game officials. The proposed development is not likely to have any direct impact on black bears.

ETI 6 – Comment

Wildlife Corridor. The EIR states there is no important wildlife movement corridor for landbound animals, page 4.3-12, paragraph 1 and page 4.3-20, paragraph 5. Many hikers and riders have seen the footprints of many animals coming up the trail from Devils Canyon just above the debris basin, so they can go across Deer Lake highlands is a major route of several trails to Browns Canyon, and visa versa. Deer Lake Highlands is a major route for animals to travel from one canyon to the other. Is it

4.0 Response to Written Comments

the need and right of humans to continue pushing wildlife farther and farther back until we drive them to extinction? Already the Coyotes are becoming urbanized to some extent, because we've taken so much of their hunting range. Bears, Mountain Lion, Bobcats and others are being killed because their wilderness and food source is disappearing at such a high rate because of development. We need to work with our environment to save it for our future.

ETI 6 – Response

The Draft EIR states (on page 4.3-10, not 4.3-12) that “the project site does not represent a regionally important [emphasis added] wildlife movement corridor for land bound animals due to the existing development to the south and west of the site and the impending development to the east.” The distinction is that a regionally important corridor would be one that is necessary to maintain as a linkage between core areas of habitat found in the mountain ranges, such as between the Santa Susana Mountains and the San Gabriel Mountains or the Simi Hills. The proposed project is not part of such a linkage. However, as stated previously (see Section 4.3.3, SMMC 3 – Response, of this document), mitigation measures will be implemented under SR-118 to ensure that a local wildlife corridor connection will be retained between North Stoney Point and the 13-acre Homer property.

The commenter indicates, “many hikers and riders have seen footprints of many animals coming up the trail from Devil Canyon just above the debris basin, so they can get across Deer Lake Highlands.” Furthermore, the commenter contends, “Deer Lake Highlands is a major route for animals to travel from one canyon to another.” The Draft EIR acknowledges “local wildlife movement does occur onsite and to the open space areas to the northeast of the project site” (page 4.3-10). Although animals may traverse the highlands between Browns Canyon and the upper reaches of Devil Canyon, the project would not preclude future movement between the canyons, as the entire Devil Canyon corridor will be preserved as permanent open space. Also, please see Section 4.3.1 (Topical Response) and Appendix F.5 of this document.

The commenter’s concern for continuing urban encroachment into wildlife habitats, and opinion to work with our environment to save it for our future is noted.

Also, see Section 4.4.2 (CLPA 7 – Response) of this document.

ETI 7 – Comment

Storm Drainage. I am very concerned about storm water and normal drainage from this proposed development. The developer is planning 4 debris basins to catch the solids and have filters so there will be less to go into the canyons, page 4.6-7, paragraphs 3, 4, 5, 6, 7, & 8, page 4.6-9, paragraphs 1, 2 & 3 and Figure 4.6.2. At present water is soaking into the ground over the entire area. Once the proposed development is in, the water will be all funneled into only a few places to enter the canyons. The water drainage will end up being more and faster at these places and ensuring faster erosion and destruction of the canyon, unless it is slowed down. This is visible in the Porter Ranch development (Moonshine Canon, Limekiln Canyon & the small canyon their trail ends up in west of Sesnon & Porter Ranch Rd.) where trails and canyons have been eroded and destroyed.

ETI 7 – Response

The debris basins would remove vegetation and other debris only. The quantity of actual storm water, which would be discharged into Devil Canyon, would remain the same.

As part of the proposed public storm drain system, which would be owned and operated by the Los Angeles County Flood Control District (LACFD), an outlet structure would be constructed at each proposed discharge point which would include energy dissipating devices. These devices will be engineered to LACFD standards to ensure that they reduce the velocity of storm water to less than erosive levels prior to discharge into Devil Canyon. In any event, none of the proposed discharge points would be upstream of any proposed trails.

4.0 Response to Written Comments

ETI 8 – Comment

The Mitigation Measures, page 4.6-9 to 4.6-10 all sound good, but in the end we are concerned that we will end up with and inundation of very fast water that will have erosion that will not allow plant life to grow. What is different about this system and Porter Ranch?

ETI 8 – Response

It is not known why there are alleged problems with the Porter Ranch system. However, with implementation of the mitigation described in ETI 7 – Response, the discharge velocities of storm water from the project site would not preclude propagation of plant life in areas where it currently propagates.

ETI 9 – Comment

Bees

There is a beehive in a eucalyptus tree on the western side of the property near the old fireplace/chimney. Can we save them by calling a bee keeper. Bee's don't care if you are encroaching with a bulldozer, they'll just go down with the tree.

ETI 9 – Response

Honeybees (*Apis mellifera*) originated in southern Asia (Hogue 1993), and are non-indigenous to Europe and the New World. The European honeybee is now considered to be at least partially "Africanized" throughout southern California. Three active hives of the European honeybee were noted on the project site during a field visit in March 2002. Impacts to the colony would not be considered a significant impact upon biological resources. Honeybees are non-native and are not considered a sensitive species at the state or federal level, nor is it a species of concern. Queens from these hives may be salvaged or extirpated by contracting with a licensed beekeeper or exterminator. The applicant will consult with a certified beekeeper to determine the feasibility of saving the colonies.

ETI 10 – Comment

Equestrian & Hiking Trails. The only reference to a trail is that there will be one. We need to have the trails listed showing route, with stop signs or signals (with rider high buttons) at each street crossing. Trails should be done prior to each development phase to ensure the riders/hikers safety by providing a route out of the immediate construction area. The trail needs to also connect with the existing trail that is next to the rental condos on Poema. This trail could join in just to the north of the grassy area to allow 90% use of the existing trail.

With trails converging at Topanga Canyon Blvd. & the 118 Freeway and Stoney Park trails to the south of the freeway, a trail needs to be dedicated under the freeway to connect these two trails. This route has been used long before the freeway was there.

ETI 10 – Response

Subsequent to distribution of the Draft EIR, the applicant agreed to various community commitments for the project, including additional trails and signage. The revised project design includes and depicts proposed trails. Please see the VTTM in Appendix C.1 of this document.

ETI 11 – Comment

Staging Area. This needs to be added to the EIR describing it's location with parking, turnaround, and amenities along with the conditions that will ensure that the equestrian community will not have to wait years for it's use. Note: An average equestrian event will have 25 fgs with varying lengths of trailers, with the shortest being about 25 feet.

ETI 11 – Response

This project will not provide an equestrian staging area.

ETI 12 – Comment

Traffic. Traffic problems will inevitably be increased. I understand no street improvements will be made on Canoga Ave. The evaluation study, page 4.2-6 & 6, under Study Intersections, did not take into account Rinaldi & Variel, Rinaldi & Independence, Chatsworth & Variel, Chatsworth & Independence, Tulsa & Independence, and Tulsa & DeSoto. This area is inundated every morning and afternoon because of the two schools to the east and west of Canoga on Rinaldi. The neighborhoods along Variel and Independence are already up in arms because of the speeding Mom's on these two routes. The traffic study that was done shows Canoga on A, page 4.12-21, paragraph 2, was done when the two schools were closed for the holidays, so is an inaccurate study.

At this point intersections along Topanga Canyon Blvd. from Devonshire north to the 118 are rated E or F, and the same for DeSoto from Devonshire to the 118, page 4.12-14. I truly question the expected trips to be generated from this proposed development. Most people must be at work between 8-9 in the morning. These homes will be costing between \$500-800,000, meaning most homes will probably be two income families. If there are 484 homes, how can there be only 290 outbound trips in the morning rush hour, page 4.12-17, last paragraph? Also, if Topanga Canyon and the 118 are already rated F, then we will be seeing a lot of drivers coming down Canoga Ave. With no improvements to Canoga, a signal at Rinaldi of widening between Rinaldi and Chatsworth, this will become a bottleneck. The drivers from the new development will also start using Variel, Independence and Tulsa.

ETI 12 – Response

The Draft EIR provides an evaluation of potential traffic impacts due to the project in Section 4.12. The definitions and existing Levels of Service (LOS) at the study intersections are shown in Table 4.12.1 and 4.12.2 of the Draft EIR, respectively. As shown in the table, LOS E and F conditions at an intersection is indicative of "severe congestion." Review of Table 4.12.2 indicates that six of the study intersections experience LOS E or F conditions during the A.M. and/or P.M. peak hours.

The trip generation forecast for the project is provided in the Draft EIR on page 4.12-17. The forecasted project traffic volumes at the study intersections are shown in the Draft EIR on Figures 4.12.7 and 4.12.8 for the A.M. and P.M. peaks hours, respectively. The addition of traffic due to the project may increase congestion at the study intersections. The Draft EIR provides a definition as to when the addition of traffic due to a project is deemed significant. The significance thresholds provided in the Draft EIR are based on standards published by the LACDPW Traffic and Lighting Division, as well as LADOT.

As shown in Tables 4.12.4 and 4.12.5 of the Draft EIR, application of the City's and County's significance thresholds indicates that three of the study intersections are anticipated to be significantly impacted by the project during the A.M. and P.M. peaks hours (prior to consideration of traffic mitigation measures). Incremental, but not significant impacts would occur at the remaining ten study intersections. The traffic mitigation measures for the project are summarized in the Draft EIR in Section 4.12.4. It is concluded in the Draft EIR that with implementation of the recommended mitigation measures, the project would not result in significant impacts to area traffic.

Subsequent to the distribution of the Draft EIR, an updated traffic study for the revised project (388 units) was prepared (see Appendix K of this document), which evaluated potential impacts along Canoga Avenue at three intersections: Rinaldi Street, Chatsworth Street, and Devonshire Street. The updated report concludes that the revised project would result in a 20-percent reduction in peak-hour and average daily traffic generation as compared to the original project analyzed in the Draft EIR. The report further concludes that incremental, but not significant, impacts would occur at these intersections. No mitigation measures were required based on LADOT impact significance criteria.

4.0 Response to Written Comments

However subsequent to the release of the Draft EIR, the project applicant proposed a list of voluntary traffic improvements, including improvements along Canoga Avenue (see Appendix K of this document), which were approved by the LADOT and incorporated into its letter, dated June 6, 2002. Please refer to Section 4.5.145 of this document for a discussion of the existing traffic counts, the project trip generation forecast and the distribution of project traffic to the local street system. As shown in the revised traffic study (Appendix K of this document), the study intersections of Canoga Avenue/Rinaldi Street and Canoga Avenue/Chatsworth Street are forecasted to operate at good levels of service (LOS A) during the A.M. and P.M. peaks hours following in the future build-out year with occupancy of the project. Based on the good levels of service provided at the Canoga Avenue intersections, it is not anticipated that project-related trips will divert to local streets such as Variel Avenue or Independence Avenue for alternative travel. Therefore, the analysis of intersections on Variel Avenue and Independence Avenue for project-related traffic impacts as suggested by the commenter is not required.

ETI 13 – Comment

Public Transportation. The EIR states that with public transportation we can eliminate 3.5 percent of the vehicle trips, page 4.12-18, paragraph 1 page 4.12-27, paragraphs 2& 3. The problem with this is, all public transportation is on Devonshire (bus & train) and Topanga Canyon & Chatsworth (bus), so how are the trips cut down on Topanga Canyon and Canoga. Also, there are no park & ride lots for car-poolers in the area other than at the train station on Devonshire. So how is public transportation going to be a help with these intersections that are E & F now, and will surely be F+ with the proposed development?

ETI 13 – Response

See ETI 12 - Response for a discussion of the analysis of potential traffic impacts.

The assumptions in the Draft EIR, and reiterated within the revised traffic study (Appendix K of this document) regarding the potential increase in the utilization of public transit due to the project are based on rates required for use by the Metropolitan Transportation Authority (MTA) in evaluating potential impacts to public transit. It is acknowledged that there are no public transit facilities in the immediate vicinity of the site; thus, most project-related users of public transit are assumed to drive, or be dropped-off at public transit bus stops or stations. Therefore, as noted on page 4.12-18 of the Draft EIR, and reiterated in the revised traffic study, the traffic analysis did not assume any reductions in potential vehicular trip generation due to the utilization of public transit by residents and/or visitors to the project, thus providing a conservative assessment of the potential traffic impacts related to the project. The traffic mitigation measures are based upon the trip generation estimates for the proposed project.

ETI 14 – Comment

I am, Charlotte Brodie, Trail Coordinator, representing Equestrian Trails, Inc. Corral 54 in Chatsworth. ETI has a total membership of 5700 with approximately 200 in Corral 54. Our area is unique and beautiful which draws many riders, and hikers, from countless other areas to enjoy it.

I would like to give the developer credit for having several meetings with the community to try to solve problems and provide things that were asked for. I have never experienced such willing involvement before.

We do however, have concerns about this project. The density gives rise to the issues of equestrian safety, traffic, schools, wildlife, plant life and drainage into Devils Canyon.

ETI 14 – Response

See Section 4.4.1 (C ECHO 3 – Response) of this document.

4.0 Response to Written Comments

ETI 15 – Comment

With the influx of "city folks" to a country/rural area, the equestrians have good reason to be concerned for their safety. These new folks do not understand the horse and it's fear of speed and noise. Many riders have been injured because of someone honking their horn or putting on their truck breaks to see the horse jump. Or not understanding that a horse has senses, unlike a car, and is very fearful when a vehicle passes close. These things and more have occurred to me many times and fortunately so far, I have survived all these helplessly feeble minded people. We need to have good trails with access through and beyond this proposed development that will be deeded to the County. This is horse country, but our trails and access are decreasing constantly. All trail routes that cross streets need to have safe footing with some type of traffic control with stop signs or on demand signals. The trail route from the proposed development at Topanga Canyon Blvd., needs to connect with Stoney Point Park and it's trails just south of the 118 Freeway and be dedicated as well. The realignment of the existing trail from Topanga and the 118 next to the condos in the Poema development eliminates access to the trail route by the condos and places it on the County Flood Control access road. Using the road is fine as an alternate, but access needs to be maintained next to the condos as well. There are many trails that will be lost with the proposed development; this dedicated trail cannot be lost.

ETI 15 – Response

Subsequent to release of the Draft EIR, the applicant has held numerous meetings with the equestrian community, including representatives of Equestrian Trails, Inc. and Corral 54. As a result, several revisions to the proposed trail system have been made which address the commenter's concerns. Please see the VTTM in Appendix C.1, the Draft Conditions of Approval in Appendix E, and Section 2.0 of this document regarding these trail revisions. Regional trail systems and improvements are a county-wide issue and not the sole responsibility of the project.

ETI 16 – Comment

A staging area is badly needed in the area and should be added to the final EIR describing it's location with parking, a turnaround, and any amenities along with conditions that will ensure its completion before turning the property over to another party.

ETI 16 – Response

Please see ETI 11 – Response. No staging area will be provided.

ETI 17 – Comment

With intersections having a falling grade on Topanga and DeSoto from Devonshire north, traffic is a major problem. If this development goes in, and the additional proposed development of 159 apartments at the north/west corner of Topanga and Poema, traffic could become a "Z" in the community's opinion. Canoga Avenue is already inundated in the morning and afternoon because of schools at each end of Rinaldi. The Mom's are also using Variel, Independence and Tulsa as alternate routes for short cuts at high speed, endangering the community. The two schools have tried to keep this from happening, but to no avail. We can see no way to stop the influx of sort cut speeders from this proposed development from taking the same alternate routes. We also feel there will be more traffic using Canoga than Topanga, due to fewer traffic lights. The city has asked the developer for no improvements to the roads, intersections, etc. We find this tragic in the face of an additional 2,000+ trips each morning and night.

ETI 17 – Response

Please see Section 4.4.1 (C ECHO 3 – Response), ETI 12 – Response, Section 4.2.6 (Topical Response), and Appendix H of this document. Traffic patterns associated with other neighborhoods are beyond the scope of analysis contained within the draft EIR.

4.0 Response to Written Comments

ETI 18 – Comment

The local schools are already at their capacity and are complaining about traffic issues. Where are the children going to go, and safely?

ETI 18 – Response

Please see Sections 4.4.2 (CLPA 12 – Response), 4.3.7, and Appendix J of this document regarding schools.

ETI 19 – Comment

The County has no schools, libraries, law enforcement, shopping etc. and only limited fire protection in this area of the County, so all the residents will be using city amenities. Will any monies be going to the City or will everything be going to the County.

ETI 19 – Response

See Section 4.3.5 (City Council 1, 6, 7 and 8 – Responses) of this document.

ETI 20– Comment

We are also concerned about the wildlife that lives in the area of the proposed development. There is a wildlife corridor area between Devils Canyon and Browns Canyon across Deer Lake Highlands. Is it our right as human beings to keep pushing wildlife farther and farther back until we drive them into extinction? We have fox, bobcat, mountain lions, deer, and even bear on occasion, in the area. It wasn't too long ago that a black bear was caught in Aliso Canyon a couple of miles to the east of Chatsworth. It is such a thrill to see any of these animals first hand.

ETI 20 – Response

Please see ETI 6 – Response concerning potential impacts to wildlife movement corridors.

ETI 21 – Comment

All the birds were mentioned in the EIR, except the Killdeer. This beautiful little bird nests on the ground in the fall of the year. You never see them unless you get near their nesting area, then Mom tries to run someplace else to divert your attention from the nest. These birds are around the area.

ETI 21 – Response

Please see ETI 4 – Response. The Killdeer is not considered a sensitive species.

ETI 22 – Comment

The plant life in the proposed development will obviously be decimated. The Mariposa Lily is to be moved to another area and will hopefully survive. Who will be monitoring this to see it is done? If the EIR states that there are 400 to 1800 plants there now – depending on the season. How will we ever know if the 4000 moved and/or replaced plants will have lived? The proposed development should have the same chaparral on its hillsides and along the trails to keep from irrevocably changing the Chatsworth environment. Some of these Lillie's could be planted along the equestrian trails.

ETI 22 – Response

Please see ETI 1 – Response.

ETI 23 – Comment

Okay trees are an important part of our environment. Sadly we know the developer is planning on removing 65 of these great trees. Where are the 130 going to be planted? Will someone be walking through the development when completed and count them? Who?

ETI 23 – Response

Oak trees would be mitigated onsite. Section 4.3 of the Draft EIR included mitigation measures for oak trees. The County Forester has the responsibility of ensuring that all oak tree mitigation measures

4.0 Response to Written Comments

have been implemented in accordance with the Oak Tree Report and the Oak Tree Permit. The oak tree report is included as Appendix F.3 in the Draft EIR. The County Forester is responsible for verifying that oak permit conditions are satisfied.

ETI 24 – Comment

Lastly, after knowing the destruction that has occurred in Limekiln, Moonshine and another unnamed canyon within the Porter Ranch development, we have good reason to be concerned about the runoff in Devils Canyon from this proposed development. Right now there are no hazardous materials going into the canyon from Deer Lake Highlands, but 484 homes will provide a plethora of opportunity for this type of destruction to our beautiful canyon. Supposedly, measures are to be taken that will clean up the water and slow it down before it reaches the canyon.

ETI 24 – Response

See Section 4.4.2 (CLPA 4, 5 and 6 – Responses) of this document.

ETI 25 – Comment

There are so many mitigating measures in the EIR that solve everyone's problems. However, many times mitigating means an excuse to get around something so the one mitigating can do precisely whatever they want. I believe you've heard the one about the mitigated homework – the dog ate it! Who will be the responsible party or parties to see that the proposed development is done according to plan. Does it ultimately fall on the community to watch dog it daily?

ETI 25 – Response

The County Department of Regional Planning has the overall responsibility to ensure that all mitigation has been effectively implemented in accordance with the approved EIR and the Conditions of Approval for this project. In addition, County inspectors will be onsite at all times during construction operations. Compliance with all County ordinances, as well as all conditions of approval is mandatory for the developer. Non-compliance can result in either a shutdown of the project until compliance is achieved, or in criminal prosecution to force compliance and/or to seek punitive actions.

The project site will be posted with, and the community will be made aware of, 24-hour-a-day, 7-days-a-week, emergency telephone numbers for the project superintendent, County personnel, as well as the Sheriff's office. See Appendices D and E of this document.

ETI 26 – Comment

We would like to see the development smaller with impacts minimal and land use in conformance with today's rural, housekeeping, and nature preserving environment.

ETI 26 – Response

Please see Sections 4.3.5 (City Council 3 and 4 – Responses) and 4.4.1 (C ECHO 3 – Response), and ETI 14 – Response.

ETI 27 – Comment

Equestrian Trails Inc., Corral 54 (ETI) represents over 200 members living in the communities of Chatsworth, San Fernando and Simi Valley. Our organization has been responsible for the construction and maintenance of many of the trails in this community. We promote the responsible use of public lands and trails, and we are very interested in assuring that the equestrian lifestyle in the Chatsworth area is maintained and expanded.

We would like to provide the following comments on the Presidio project proposed at Deerlake Highlands.

We recognize that this property has unique qualities and entitlements that make planning for development a very complex undertaking. We acknowledge the Presidio Partners team for making

4.0 Response to Written Comments

efforts to satisfy the often-competing interests and wishes of neighboring communities and organizations. Their efforts have resulted in project changes and amenities that will benefit existing, as well as future, residents. There are some elements of their proposal that we support. There are other provisions that we feel need further clarification; and there are some issues which are beyond the expertise of ETI, that we believe need careful study and examination by the Commission and their technical experts.

ETI 27 – Response

The comment has been received and noted. No additional response is necessary.

ETI 28 – Comment

ETI Corral 54 endorses the network of trails proposed for the Deerlake Ranch project. We believe that the developer has provided a reasonable network of trails and connector routes to replace the existing trails that traverse this private property. We also support the developer's proposal to work with the community to establish temporary trails connecting Devil's Canyon and Brown's Canyon during the period of construction. Most importantly, we want to encourage the establishment of a long sought equestrian staging area on the adjacent Horner property. We applaud the developer's efforts to facilitate the acquisition of this much-needed public facility. Our vision is of a primitive parking area with minimal improvements to avoid becoming an attractive nuisance.

We would like to see the applicant provide equestrian sized lots to allow some of these new residents to maintain horses on their property. Such a development will ensure that the equestrian lifestyle in the Chatsworth community will continue to grow and prosper.

We encourage the Commission to require that whatever signage and traffic improvements on Canoga, Rinaldi, Chatsworth, Topanga Canyon and Candice Place are adopted, be completed prior to commencement of construction. This will provide an additional margin of safety for pedestrians and equestrians as a result of the increased construction and residential traffic.

ETI 28 – Response

Please see Sections 4.4.1 (ETI-10 and 11 – Responses), 4.3.5 (City Council 2 – Response), and Appendix K of this document.

ETI 29 – Comment

ETI Corral 54 would like to seek clarification from the developer and the Commission on the following items. DOTTED LINE TRAILS – How are they going to be completed? What recourse is available to insure their construction and connection? Can a condition be drafted to give us that guarantee

ETI 29 – Response

Dotted line trails are existing trails which are not located within the project site, but which are an integral part of the area's trail system. In most cases, these existing trails are located on publicly-owned property within sensitive habitat areas, such as Devil Canyon, which is owned by the SMMC. Because of the sensitivity of the habitat, no improvements will be permitted. Please see Appendix E of this document regarding Draft Conditions of Approval. The Conditions of Approval state the following:

"As agreed, the subdivider will construct and offer to dedicate additional onsite loop trails in addition to those depicted on the approved tentative tract map on the subdivider's property. Such additional trails are depicted as a solid line designated "Project Trails" on Exhibit "A" to the Conditional Use Permit. As further agreed and subject to the approval of the appropriate agencies and property owners, the subdivider will construct additional portions of the loop trails on property owned or

4.0 Response to Written Comments

regulated by others. Such proposed trails are depicted as a dashed line designated "Proposed Trails" on Exhibit "A" of the Conditional Use Permit."

The proposed trails shown on the VTTM (Appendix C.1 of this document) would be constructed to County standards and dedicated to the County for public use. These are requirements imposed by the County as conditions of approval of the project. The dedication of the trails rights-of way will take place concurrently with the recordation of the final tract maps. This is standard procedure for all tract maps within the County.

ETI 30 – Comment

? OAK TREE MITIGATION – Can planting be required rather than payment "in lieu"? Can locations be selected where there is no future likelihood of removal? Can a monitoring program be developed to ensure proper watering and replacement of unhealthy trees for a three-year period?

ETI 30 – Response

Please see Section 4.2.1 (Topical Response) of this document regarding oak tree mitigation and mitigation for Plummer's mariposa lily.

ETI 31 – Comment

MARIPOSA LILY – What assurance is there that the replacement site is adequately protected and that continued propagation of the lilies is assured?

ETI 31 – Response

Please see Section 4.2.1 (Topical Response) of this document regarding oak tree mitigation and mitigation for Plummer's mariposa lily.

ETI 32 – Comment

TRAFFIC – What can be done to reduce the speed and the volume of vehicles using the intersection of Rinaldi and Canoga? Can additional measures be included to protect equestrians and pedestrians at this wide intersection?

ETI 32 – Response

Please see Section 4.3.6 and Appendices D and E of this document regarding traffic. The project applicant will work closely with LADOT to mitigate cumulative traffic impacts in the residential areas adjacent to Canoga Avenue (including the Canoga/Rinaldi intersection) through the development of a Neighborhood Traffic Management Plan. A self-actuated equestrian signal is proposed at Canoga/Rinaldi (i.e., will only flash when actuated by a person on horseback).

ETI 33 – Comment

ENVIRONMENTAL ANALYSIS – Can an independent consultant be retained to review the items identified as inadequate by the community? Shouldn't seasonal changes on the site have been examined more closely?

ETI 33 – Response

Technical studies regarding the project were conducted and the Draft EIR was prepared according to the requirements of CEQA. Reports for the technical studies were included in the Draft EIR as appendices and updated studies were conducted and are included as appendices in this document. These technical reports were reviewed by various county departments having expertise in these areas. Although an outside consultant could be retained to review these reports, it is the opinion of the county that this is not warranted.

ETI 34 – Comment

Finally there are potential project impacts which could have significant impact on the quality of life for both the existing and new residents. These are viewed by ETI as critical matters, beyond the scope of our equestrian focus, which must be satisfactorily resolved before any approval of this

4.0 Response to Written Comments

project is contemplated. We recognize that the amenities offered for the equestrian community are very beneficial, but they cannot supercede the potential negative environmental impacts that may be caused by traffic, school overcrowding, disruption of wildlife movement and increased stormwater runoff in Devils Canyon. We request that the Commission carefully review the EIR and its supporting documents and take appropriate actions to assure that this project will not negatively impact the mobility, safety, convenience and lifestyle currently enjoyed by the Chatsworth community. It is this lifestyle after all, that brought most of us to the community; and it is important that is not be disrupted or modified by incompatible development within and adjacent to the community.

ETI 34 – Response

The comment is noted and will be forwarded to the decision makers. A complete and appropriate environmental analysis is contained in the EIR for traffic, schools, wildlife movement and flood hazard factors.

ETI 35 – Comment

Specifically, we would like the Commission to examine the following. TOPANGA AND THE 118 FREEWAY – Did the traffic analysis accurately depict the current "level-of-service" and properly account for the future development activity and it's [sic] likely impact on the intersection? Are there improvements that need to be made for this future growth? Should the developer and subsequent developments be required to contribute to a fund for those future improvements? Can the developer assist in securing the dirt trail under the 118 and in gaining access through Cal-Trans' fences in to the North Stoney Point Park? Can the trail connections from Topanga to the Groupe' Project be completed prior to commencement of construction? (Please see the attached map for trail clarification.)

ETI 35 – Response

Please see Sections 4.3.2, 4.3.6 (LADOT responses), and Appendices D, E, N, and K of this document regarding traffic.

ETI 36 – Comment

WILDLIFE CORRIDOR – How will the wildlife movement between Devil's and Brown's Canyons be accommodated with this project design?

ETI 36 – Response

Please see Section 4.3.1 (Topical Response) of this document regarding wildlife corridors

ETI 37 – Comment

SCHOOLS – What mechanism can be developed to assure that the project will not overburden the local public schools, particularly Chatsworth Elementary? What can be done to correct the problem if there are project related impacts once the homes are completed?

ETI 37 – Response

Please see Sections 4.3.7 and 4.5.28 of this document regarding schools

ETI 38 – Comment

STORM WATER – How will the increased volume and speed be of the runoff be controlled to prevent erosion of Devil's Canyon and the Santa Monica Mountains Conservancy and City park lands? On behalf of ETI Carral 54 we would like to thank you for your attention to this matter, and for your willingness to visit our community and see first hand our lifestyle and the nature of our neighborhood. Our members are available for further discussions with your staff or Commission members.

ETI 38 – Response

Please see Sections 4.2.2 and 4.4.2 (CLPA 4, 5, & 6 -- Responses) of this document regarding stormwater.

4.0 Response to Written Comments

4.4.4 Recreation & Equestrian Coalition

Ruth Gerson, President Recreation & Equestrian Coalition

April 10, 2002

REC 1 – Comment

The Recreation and Equestrian Coalition (REC) represents the interests of over 10,000 outdoor enthusiasts throughout Southern California. REC was created to "inform the public and policy makers about access to and the use of diverse recreational opportunities available throughout Los Angeles County." We have been very active in promoting the development of appropriate public access to all publicly owned lands.

I am writing to express my support for the extensive recreation improvements proposed by the Presidio Partners for their Chatsworth project at Deerlake Highlands.

REC does not take positions on specific development proposals, however, we do monitor closely the impact those proposals will have on both the current and future use of publicly owned lands. We believe the amenities proposed by the Presidio: an extensive network of trails and trail connections with traffic control at road crossings; funds for ranger support; acquisition of additional open space in Brown's Canyon; and creation of an equestrian staging area at Canoga and the 118 Freeway will provide a significant benefit to the general public and should be clearly included as conditions in any approval you may grant the applicant.

We would also like to endorse the applicant's proposal to work with the equestrian community to establish temporary connector trails for use during the period of reconstruction.

Since Chatsworth is well known for a rural, equestrian lifestyle, we believe that the developer should be required to include some lots of sufficient size to allow the keeping of horses by the new homeowners. This would clearly signal the County's commitment to maintaining the equestrian culture and heritage of this community.

Finally, we would like to request that you pay particular attention to the comments and concerns raised by the local equestrian community and ETI Corral 54. Their familiarity with the local community is an important resource for identifying specific project issues and impacts.

REC 1 – Response

The comment has been received and noted. Draft conditions of approval for the project are included in Appendix E of this document.

4.4.5 Santa Susana Mountain Park Association

Dorian Keyser, Vice-president and Lands Committee Chair, SSMPA

January 11, 2002

SSMPA 1 – Comment

Under Mr. Garlinghouse's able leadership, the Presidio Group has prepared a very impressive DEIR. We await the final EIR, which, hopefully, will include revisions that reflect the written and oral comments of the public. Will full public comments to the EIR be allowed on all of it, not just those parts that have been changed from the DEIR?

SSMPA 1 - Response

All comments received and noted and any revisions/changes to the Draft EIR are included in this document.

4.0 Response to Written Comments

SSMPA 2 – Comment

We are concerned that the Presidio Group is planning to sell the property to one or more developers who will implement the approved plans. The latter will be responsible for the grading, the streets and sidewalks, plus the water, electricity, and natural gas to the entry of each lot so that its implementation will follow the requirements in the documentation regardless of who becomes responsible.

- 1. Can/will Mr. Garlinghouse supply us with detailed information one or more major projects in southern California where the Presidio Group did all of the planning, etc. and sold the property to another group that successfully carried it out with little change from the plans?*
- 2. Will Mr. Garlinghouse agree to remain as an advisor until the infrastructure of the project has been successfully completed? Will one of the conditions for the sale of the property by that Mr. Garlinghouse is reimbursed for his expenses?*

SSMPA 2 – Response

This comment is not a CEQA related issue. No additional response is required.

SSMPA 3 – Comment

We recommend that the size of each park be increased to be at least as big as the legal requirements.

SSMPA 3 - Response

There is no legal requirement regarding the minimum or maximum size of private parks.

SSMPA 4 – Comment

The July 26, 2000 comments from the Santa Monica Mountains Conservancy should be fully incorporated in Volume 1 of the DEIR. This should include an up to date version of the Conservancy's map with changes:

- 1. North of Stony Point is now owned by the L.A. City Dept. of Rec. and Parks. A part of its south border connects to L.A. City's Stoney Point Park. An exact map of this addition should be incorporated*
- 2. The railroad tracks and the railroad tunnel should be shown.*
- 3. The map should show the privately owned 14 acre Horner and 28 acre Smith properties which start on the east side of Browns Canyon Road (north of the 118 freeway) and Smith meets the L.A Flood Control District property.*
- 4. The map should show the Deyoung, Mineo, and Swertington properties that go from the west side of Topanga Canyon Blvd. Opposite North of Stoney Point to the Santa Monica Conservancy owned "Garden of the Gods" and from there via a public trail to Chatsworth Park South.*
- 5. Chatsworth Park South connects to publicly owned Corriganville Park which is part of the main wildlife corridor between the Santa Monica mountains and the Los Padres and Angeles National Forests via the Santa Susana Mountains and Simi Hills.*

SSMPA 4 – Response

Please see Section 4.3.3 of this document for the County's response to the Santa Monica Mountains Conservancy's January 22, 2002 comment letter. Publicly owned open space properties within the vicinity of the project site are depicted in Exhibit 2.6 of this document.

SSMPA 5 – Comment

Wildlife Corridors

The DEIR questions the significance of the wildlife corridors in the Deerlake Ranch and its environs. However, Browns Canyon is a very important wildlife corridor which is used by numerous species of animals. Mountain lions, bob cats, coyotes, eagles, hawks, etc. are not easily observed but they are there, especially at night!! Historically, this corridor has been especially critical during massive

4.0 Response to Written Comments

wildfires which prevent animals from escaping via other corridors. Wildlife presently reaches the Canoga Ave. underpass of the 118 Freeway via Browns and Devil Canyon. The importance of this corridor has been increased due gating of the privatized roads into Indian Falls and Indian Springs via Iverson Road and Poema Place.

SSMPA 5 – Response

See Section 4.2.1 (Topical Response) of this document.

SSMPA 6 – Comment

We are concerned about the response time of the distant Lost Hills L.A. County Sheriffs [sic] Sub-station. The plan to have a “kiosk” on-site with back-up from the nearby L.A. City Devonshire Division Sub-station is inferior to delegating the responsibility to the local Devonshire Station.

SSMPA 6 - Response

See Section 4.2.5 (Police Services 3 - Response) of this document.

SSMPA 7 – Comment

The L.A. City Fire Department should supply emergency services but the L.A. County Fire Department should be responsible for wildfires.

SSMPA 7 - Response

This determination of which two agencies would supply specific services to the site is not within the scope of this EIR. No additional response is required. Also see Section 4.2.4, Fire Services 1 – Response.

SSMPA 8 – Comment

The homeowners should pay taxes to pay for the costs of cleaning the catch basins. L.A. County is responsible for flood control.

SSMPA 8 - Response

The project will be a part of the Los Angeles County Flood Control District, which will maintain the project storm drain system. Therefore, each future property owner will pay his/her fair share of flood District taxes.

SSMPA 9 – Comment

The “N.A.P” on the maps need to be updated since many of these items have been acquired by the Presidio Group. Especially the N.A.P Table on street 1 or the 10-19-01 DEIR.

SSMPA 9 - Response

The revised VTTM in Appendix C.1 of this document reflects the updated status of the “NAP” lots.

SSMPA 10 – Comment

We assume that the 10 foot wide “NAP” which surrounds the entire property will be deeded to the Conservancy as per the agreement with them. I suggest that this be given a NAP number and its ownership be fully defined. The equestrian trails need to be more clearly defined. I think that L.A. County will maintain the equestrian trails but who will maintain the Conservancy's 10-foot easement?

SSMPA 10 - Response

The 10-foot strip along the perimeter of the project, as shown on the VTTM in Appendix C.1 of this document is owned, and will be maintained, by the MRCA.

SSMPA 11 – Comment

Who will make sure that the 353 oak trees are properly cared for after the development has been completed? The DEIR is inconsistent in that it stated in several places that the 130 replacement oak trees will be cared for the two years and other places say for five years. All places should say a minimum of five years.” An oak tree in a fifteen gallon container is small and many will die. How

4.0 Response to Written Comments

will they be replaced? What provisions will there be to prevent homeowners from damaging oak trees on their on their property?

SSMPA 11 - Response

The County Ordinance that covers replacement oak trees states they will be maintained for a minimum of two years. If any tree dies within the two-year period it must be replaced by the developer. The conditions of the oak tree permit will determine how many and what size trees shall be replaced. After completion of the project, the oaks will be maintained by the HOA within common areas, and their long-term preservation will be dependent on local climate conditions as the majority of trees will remain in open space areas.

SSMPA 12 - Comment

Volume II, Table 6.3 should be corrected to state that the total jurisdiction area for Devil Canyon is 353,443 sqft, not 6,575 sq ft.

SSMPA 12 - Response

The comment has been received and noted.

SSMPA 13 - Comment

All of the Arundo Donax should be completely removed from Devil Canyon before it takes over and spreads. It is very invasive!!

SSMPA 13 - Response

Complete removal of all the Arundo donax from Devil Canyon would not be considered feasible, as this invasive species is well established within the drainage, including upstream areas that are not within the control of the applicant. Effective control of Arundo must necessarily begin in the most upstream areas of infestation, and progress downstream from there. Such control efforts, if undertaken, would probably require the joint efforts of the SMMC and Los Angeles County Flood Control District.

SSMPA 14 - Comment

The trails will be used by equestrians, hikers, and, unfortunately, mountain bikers. Trails need to be wide enough to allow safe passage in the same direction and in opposite directions. They should also have numerous signs.

SSMPA 14 - Response

Trails included in the project have been designed per the requirements of the County of Los Angeles General Plan, Highway Plan. Since the trails will be dedicated to the County, their use will be subject to the regulations of the Department of Parks and Recreation, including the placement of appropriate signage.

SSMPA 15 - Comment

We are surprised by the comment by James F. Hartle in the August 28, 2000 DEJR that Browns Canyon Road is major highway in the L.A. highway plan which requires a 100 foot right of way plus necessary necessary [sic] slope easement. Implimentation [sic] of this would open up the entire region north of the Deerlake Highlands project to development, as has been the case with the Porter Ranch.

SSMPA 15 - Response

The designation of Browns Canyon Road is under the jurisdiction of the County of Los Angeles, and not within the scope of this EIR. The road does not, and would not, serve this project. However, the comment is noted and will be forwarded onto the decision makers.

4.0 Response to Written Comments

SSMPA 16 – Comment

Despite presentations by various people, the public believes that there will be serious traffic congestion at Topanga Canyon Blvd., Canoga Ave., and DeSoto which would cause significant delays during morning and evening rush hours. They also believe that three these streets and other major ones in the area will be heavily impacted. I suggest that a committee be formed consisting of interested people and public experts be tasked with fully exploring the situation. The experts should include both L.A. County and L.A. City people.

SSMPA 16 - Response

Please see Section 4.4.3 (ETI 12 – Response) of this document for a discussion of traffic impacts. Both County and City traffic experts have reviewed the traffic studies..

SSMPA 17 – Comment

Schools

The principal of the Chatsworth Park Elementary School testified that her school is already operating at capacity and that table 4.10.1 of Volume 1 of the DEIR which states that there are 125 available spaces at her school is not correct. She also stated that it is hazardous to be let out of cars at her school due to hazardous traffic. We suggest that the Germain Elementary School be investigated.

SSMPA 17 - Response

Please see Sections 2.0, 3.3.4, 4.3.7, 4.5.28 (Dixon-Davis -1 Response) and Appendix J of this document.

SSMPA 18 – Comment

Libraries

The DEIR requires a library facilities mitigation fee of \$626 per residential unit and states that a bookmobile from the Los Virgenes Public Library will provide library services. However, would be very inadequate for the children and the adults. The nearby Chatsworth Branch Library should receive this fee and any tax revenue since it is much more convenient and complete than a bookmobile.

SSMPA 18 - Response

See Section 4.3.5 (City Council 6 – Response) of this document.

SSMPA 19 – Comment

Fire Protection.

We suggest that the fire department be consulted to review the adequacy of the water supply and water pressure since all of the reserve will now available from the existing source will be used up. We think that some over capacity should be preserved for safety.

SSMPA 19 - Response

The Preliminary Water System Design Report, prepared by Boyle Engineering for the LVMWD (see Appendix N of the Draft EIR) states that the water consumption analysis prepared for this project took into account water storage requirements for both fire suppression needs and stand-by reserves for the entire water tank service area. As stated in Section 4.8 of the Draft EIR, the project would comply with all applicable County Fire Code and ordinance requirements. The revised project, with approximately 20 percent fewer units, would have even less demand on the LVMWD's facilities. The county fire department has reviewed the DEIR.

SSMPA 20 – Comment

In deference [sic] to those whose views will be degraded by the grading and construction and the dust, it is recommended that the developer be helped by prompt granting of permits, completion of inspections, and other support of public officials consistent [sic] with requirements.

4.0 Response to Written Comments

SSMPA 20 - Response

No specific environmental comment is made. The comment is noted and will be forwarded to the decision makers.

4.4.6 Twin Lakes Property Owners Association

Mark Watters, President, Twin Lakes Property Owners Association

March 20, 2002

TLPOA 1 – Comment

As we have been in communication over the last few months regarding certain community improvements, the Twin Lakes Property Owners Association would like to request that the following items be included in the conditional use permit and conditions of approval for the Deerlake Ranch development project:

- 1. Complete installation of mainline sewer within the Twin Lakes community if the community favors by 60 percent. The county would require 60 percent approval for the implementation of such a project. Subdivider will pay for installation costs of main line and house laterals. Residents will be responsible for the hook-up fee of \$3,900.00 and for construction of the private connection between their house and the mainline sewer. Following the installation of sewers, all roads affected in the community are to be paved. If the 60 percent approval is not given, a dollar amount will be negotiated to pay for the paving of the roads, based upon estimates obtained by the Twin Lakes Property Owners Association.*

TLPOA 1 – Response

Please see Appendix E of this document for a complete list of the project's Draft Conditions of Approval regarding sewers in Twin Lakes. It is inappropriate to require this applicant to be solely responsible for improvements to the existing Twin Lakes community.

TLPOA 2 - Comment

- 2. Provision for a sheriff's substation at the Topanga Canyon Blvd. entrance to Twin Lakes, to be paid for by the subdivider. This station is to be built when Road "A" is completed and Mayan Drive is relocated.*

TLPOA 2 – Response

Please see Section 4.2.5 and Appendix E of this document regarding the Sheriff's Storefront facility.

TLPOA 3 – Comment

- 3. Payment of the sum of \$230,000.00 to the Twin Lakes community, for paving remaining roads not covered in item 1, construction of signs, monuments, and any other community improvement that the Association deems appropriate. The developer or subdivider will pay this amount to Twin Lakes Property Owners Association.*

TLPOA 3 – Response

Please see Appendix E of this document for a complete list of the Draft Conditions of Approval regarding payment to the Twin Lakes community for paving.

TLPOA 4 – Comment

- 4. Construction activities shall adhere to the regulations outlined in the attached Revised Supplemental Conditions of Approval – Twin Lakes Community Suggestions.*

TLPOA 4 – Response

Please see Appendix E of this document for the draft Conditions of Approval pertaining to construction activities.

4.5 INDIVIDUAL COMMENTS/RESPONSES ON THE DRAFT EIR

This section includes individual comments on the Draft EIR and responses to the comments. Actual individual comment letters are included in Appendix B. It should be noted that the majority of these individual comment letters were prepared for the 484 unit project that was evaluated in the Draft EIR. Where applicable, responses to these comments have been prepared in the context of the Revised Project Design (388 units) evaluated in the Revised Project Design Summary Document (see Appendix Q of this document). Many of the responses refer the reader back to the Section 4.2 topical responses, where a comprehensive response has been prepared for specific issues of concern.

Individual comment letters received on the Draft EIR, have been retyped with the response immediately following each individual comment.

4.5.1 Ray Adams

March 11, 2002

Adams 1 – Comment

This is to advise you and the Regional Planning Commission that the Board of Directors of the Indian Falls Homeowners Association have no objections to the subject project.

Our support is based on several meetings with the applicants wherein they committed to implementing various project mitigation measures and voluntary community improvements to our satisfaction.

Adams 1 – Response

The comment has been received and noted and will be forwarded to the decision makers. No additional response is required.

4.5.2 Dieter and Margaret Asel

March 26, 2002

Asel 1 – Comment

We are writing today to voice our concern regarding the deer lake development planned for the area directly north of our Heritage neighborhood. We have lived here since the home was built in 1981 and are now retired. Four of our original neighbors are also still living here. As you can see, we really treasure this special part of Chatsworth. However, when the 118 freeway was completed, we seriously thought of moving because the quality of life had seriously decreased due to the increased noise level. With the planned expansion of Canoga Ave. to a 4-lane thoroughfare, the noise level will be intolerable. How will we be able to ever enjoy outdoor living again. In Simi Valley, just over the hill from us, expansion is carefully planned taking care to preserve the quality of life through limiting population density as well as preserving open spaces. Los Angeles has always profited from the citizens of the San Fernando Valley since our income structure supports the tax base of the larger, lower income city. We had to sacrifice a great deal to live here. We have very few entertainment or good dining facilities and long commutes to earn the income that supports the city. But we endured because we truly loved to live and retire here. Now this is all jeopardized, if our local representatives are unable to protect our established way of life. Instead of wilderness and hiking trails we will have urban sprawl, congestion and noise. Please don't let this happen. When you go to the south side of the valley you can already see what the Porter Ranch development has done to this last vestige of nature. It truly looks like a sore on the flesh of mother nature.

Asel 1 – Response

The comment has been received and noted. Please see Section 2.0 and Section 4.4.1 (C ECHO 1 and 2 - Responses) of this document. Noise mitigation is addressed under the noise analysis in

4.0 Response to Written Comments

Section 4.7 of the Draft EIR. Please refer to Section 4.2.3 of this document for a comprehensive response to noise comments.

Asel 2 – Comment

Mr. Members of the Planning Commission, we urge you to lend your support to preserve the serenity and flavor of this area of 1/2 acre home sites and help limit the density of the homes to be built. But most important, please don't widen Canogo [sic] Ave or make it an access road to the Deer Lake Development.

Asel 2 – Response

The project has been revised to reduce the total number of residential units from 484 to 388. This includes 155 minimum 15,000 square foot estate lots, of which 55 would be equestrian lots. Please see Section 2.0 of this document for further discussion of this issue. Please see Section 4.4.1 (C ECHO 1 and 2 - Responses) of this document. Please refer to Section 4.2.7 of this document for an additional discussion of land use issues.

4.5.3 Michael A. Augello

December 14, 2001/April 10, 2002

Augello 1 – Comment

Presidio Chatsworth Partners has presented a tentative tract map, which re-subdivides the Deer Lake Highlands subdivision of 1927 recorded book 22 page 3 record of surveys. A copy of this map exists in the draft EIR #99-239. This new subdivision provides access for most lots in the original subdivision units numbered on two and three. However the new subdivision (tentative tract map 53138) ignores the Deer Lake Highlands addition subdivided and recorded in 1934, (see exhibit #1). These lots would be completely cut off from their access if the tentative tract map is approved in its present form.

I have included an index map of the original Deer Lake Highlands subdivision as copied from the office of the county assessor, (exhibit #2). The index shows the county assessor's map book of 2816. The location of the southern border of the Deer Lake Highlands Addition begins at the northwest corner of the assessor's map and continues along the northern border 1314 ft. I have highlighted in yellow this zone. Clearly the assessor's map shows two points of access provided in the original map. The original subdivision clearly intended to provide access for the later addition.

Presently many retirees own the Deer Lake Highlands addition. Some owners are the original purchasers of these parcels. Most have been owned for many years. These landowners have faithfully paid their property taxes every year with the anticipation that one-day these properties would be worth something of value. I am writing this letter upon the direction of twelve of these landowners. If the tract map is approved without modification to add access for road and utilities, these properties will become worthless with the stroke of a pen.

As a remedy we suggest a simple modification of the northern border of the tentative tract map, i.e. "The Deerlake Ranch Project". This modification would consist of the granting of ingress and egress road and utility rights in at least two areas topographically suited for this purpose along the 1314 ft. connecting property line. These rights of way would naturally need to connect with the other proposed routes.

Augello 1 - Response

The applicant has aggregated numerous substandard parcels subdivided in 1927 and 1928 ("Old Lots") in the Deer Lake Highlands subdivision. Records of Survey were filed with the Los Angeles County Recorder for Deerlake. Record of Survey Book 24, Page 15 constitutes approximately the western third of the northern portion of the subdivision. Record of Survey Book 24, Page 15 is contiguous

4.0 Response to Written Comments

with Lot 5. Record of Survey Book 24, Page 15 reserves a network of private access easements, which were never dedicated to the public, which run in both the east-west and south-north directions. The easements reserved by the subdivider of Record of Survey Book 24, Page 15 terminate at separate lettered Parcels "A", "B", and "C." These lettered parcels are located between the northern terminus of south-to-north Easement Avenues "VV", "W", and "Y", respectively, and the northerly boundary of the Record of Survey.

The legal issue presented by the commenter is whether the current owners of any parcels in Lot 5 have any existing legal access rights which would either: (1) permit those owners to utilize the private easements reserved in Record of Survey Book 24, Page 15 for access across the subdivision to their lots; or (2) require the applicant to provide those owners with alternative access through the public and/or private streets in the subdivision.

An abstract of title confirms that "government lot" 5 ("boundary lot") was never under common ownership with the property comprising the subdivision during the relevant time period of 1925 to 1928. Security Title Insurance Co. was the record owner of the property comprising Record of Survey Book 24, Page 15, which was filed September 12, 1927. At no time were any of the boundary lots included in any of the Records of Survey comprising the Deerlake subdivision. The property comprising Lot 5 and Record of Survey Book 24, Page 15 were conveyed at different times to the commenter's predecessors in interest and security by different grantors. Security was conveyed the bulk of the property comprising Deerlake in a single transaction in a deed from Willard and Peggy Marble recorded on May 13, 1926 in Book 4646, Page 60, Official Records. Lot 5 and other property was conveyed to Jay J. Howell by Trustee's Deed Upon Sale, recorded March 25, 1920 in Book 7117, Page 237 of Deeds. The Howells were the record owners of Lot 5 until the Commissioner's Deed recorded March 25, 1933 (Book 12085, Page 190 of Official Records) vesting title in the Holcombs.

An easement can only be created by implication when the following four criteria coincide at the time of the conveyance: (1) the common ownership of the dominant and servient tenements; (2) the common owner's apparent and continuous use of one part of the commonly-owned parcel to benefit a different part of the larger parcel; (3) the transfer of one of the parcels or a portion of the parcel; and (4) the necessity, after the conveyance severing the parcels, for the pre-existing use to continue. Since there was no common ownership of Lot 5 and the Record of Survey Book 24, Page 15 parcel, there can be no implied easement.

There are two requirements for the creation of an easement by necessity: (1) the common ownership at the time of severance of ownership of two affected parcels such that the owners of the dominant and servient tenements stand in the relationship of grantor and grantee to one another; and (2) as a result of the conveyance, one of the two parcels becomes landlocked without other means of access. The facts set forth above establish that there was no common ownership of Lot 5 and the parcel comprising Record of Survey Book 24, Page 15, so the first legal test is failed and there can be no easement by necessity. The County of Los Angeles subdivision ordinance requires that the applicant provide an access easement to legal lots adjacent to the northern project boundary.

Augello 2 – Comment

Presidio Chatsworth Partners has presented a tentative tract map, which resubdivides the Deerlake Highlands subdivision of 1927. This new subdivision ignores the access necessities of nearly eighty small lot, (8,000 square foot average), landowners located in the Deerlake Highlands Addition of 1934, (see key map for location). I directly represent twelve of those landowners. If the proposed tract map were to be enacted in its present flawed form, then all eighty landowners would become landlocked. There is no other access for these lots.

4.0 Response to Written Comments

The original tract map created in 1927 clearly demarcates up to four access points along a 1.314 foot shared boundary. I have included a copy of the pertinent section of this map showing the original easements creating access to the Deerlake Highlands Addition of 1934. (Exhibit 1).

I have also included the identical portion of the newly proposed subdivision. (Exhibit 2). This flawed proposal eliminates the previous access points without creating any new ones.

The Presidio Group's response to my queries has been an attempt to foist the responsibility for our problem onto the back of the SMMC. The SMMC is NOT currently involved in filing for a new tract map. Therefore, the primary concern must be the proper creation of access leading directly to SMMC's ten-foot wide hiking/biking/equestrian trail. After this is assured we can discuss matters with the SMMC.

The Presidio Group has also claimed that their title search did not turn up a text version indicating an access easement granted to the Deerlake Highlands Addition of 1934. They choose to ignore the pictorial recordation of the easements in the original maps of 1927. It is obvious that at the creation of the subdivision in 1927 the surveyors who drew up the map made provisions for future expansion into the Deerlake Highlands Addition, by placing easements right to the edge of the then current subdivision.

Whether somebody forgot to properly record a written deed or the written portion has been misplaced cannot be determined. What can be determined is that the original map survives and the planning commission can prevent the permanent landlocking of nearly eighty small properties. Exhibit 3 shows two simple road modifications to the proposed tract map that would prevent the landlock of these parcels.

Augello 2 – Response

Please see Appendix M of this document regarding access to the north.

4.5.4 Debbie & Larry Belkin

April 2, 2002

Belkin, D & L 1 – Comment

We just wanted to take a minute and let you know how we feel about the Deerlake Development. To be blunt, we are vehemently opposed to it. We feel very strongly that it will negatively affect the quality of life that our family currently enjoys in this neighborhood.

We, as taxpayers, are asking you, our elected official, to take whatever steps necessary to halt this project. We do not have enough schools, teachers, police or firefighters as it is. This project will only place a greater burden on the city's meager resources. The traffic congestion alone is enough to send shivers down our collective spines. Although we are not horse owners, we are very concerned with the damage that the project will do to the environment and wildlife habitats that will be adversely affected.

If there is anything that we can do to assist you towards this goal, please feel free to contact us at any time.

Belkin, D & L 1 – Response

As stated in Section 4.10 of the Draft EIR, school impacts would not be significant with implementation of recommended mitigation measures. Please see Sections 3.3.4 and 4.3.7 and Appendix J of this document regarding additional discussion of schools and teachers.

As stated in Sections 4.8 and 4.9 of the Draft EIR, impacts regarding police and fire protection services would not be significant with implementation of recommended mitigation measures. Please see Sections 3.3.3 and 4.2.5 of this document for additional discussion of police protection impacts. Please see Section 4.2.4 of this document for additional discussion of fire protection impacts.

4.0 Response to Written Comments

As stated in Section 4.12 of the Draft EIR, traffic impacts would not be significant with implementation of recommended mitigation measures. Please see Sections 3.3.5 and 4.2.6 and Appendices K of this document regarding additional discussion of traffic impacts.

As stated in Section 4.3 of the Draft EIR, biological impacts would not be significant with implementation of recommended mitigation measures. Please see Section 4.2.1 and Appendix F of this document regarding additional discussion of biological resources.

4.5.5 Lawrence Belkin

January 7, 2002

Belkin, L 1 - Comment

I am writing to express my objection to the proposed Deerlake Ranch development in Chatsworth (Project No. 99-239(5)) for which you have scheduled a January 23 hearing.

The proposed project is located close to my home, and I am particularly concerned about the following: The lack of adequate street and traffic controls, increased traffic, also the lack of additional schools, fire stations and police facilities.

Belkin, L 1 – Response

The commenter's objection to the project is noted and will be forwarded on to the decision makers. As stated in the Draft EIR, project impacts to traffic, schools, and fire and police services would not be significant with implementation of mitigation measures. Please see Sections 3.0 and 4.2 and Appendices K, and J of this document for updated information regarding traffic and schools.

Belkin, L 2 - Comment

I am extremely disappointed in the lack of concern the the [sic] Board is displaying to the voters and taxpayers that put them in office.

Belkin, L 2 – Response

The comment has been noted and will be forwarded on to the decision makers. No additional response is needed.

Belkin, L 3 - Comment

In light of the significant adverse impact this project would have on my neighborhood and the lack of meaningful measures to alleviate that impact, I request that you not approve the project as currently presented. Any further consideration of the project should be conditioned on:

- *a substantial reduction in the size and scope of the project;*
- *a more meaningful proposal for mitigation by the applicant; and*
- *postponement of Commission recommendation in order to allow time for adequate public study and evaluation of the applicant's revised proposals.*

Belkin, L. 3 – Response

As stated in the Draft EIR, implementation of the project would not result in significant impacts with implementation of mitigation measures. The commenter's objection to the project is noted and will be forwarded on to the decision makers.

As discussed in Section 2.1.2 of the Draft EIR, the General Plan density threshold for the project site is between 176 and 1,052 units. The revised 388-unit project (as discussed in Section 2.0 of this document) is well below the maximum density allowed for the project site. A reduced density alternative was discussed in Section 5.4.3 of the Draft EIR (Alternative 3 – 171 residential units). However, this alternative would not meet all of the objectives of the project. When cost is factored with the already incurred land acquisition costs and market sales process, this alternative becomes economically unfeasible.

4.0 Response to Written Comments

Mitigation measures have been documented in the Draft EIR (see Appendix D of this document) to mitigate all impacts to less than significant. In addition, subsequent to distribution of the Draft EIR, additional mitigation has been included to further reduce impacts associated with the project, which are outlined in this document.

Please see Section 1.1 of this document regarding the comment period for the Draft EIR.

4.5.6 Richard and Donna Bersbach

January 7, 2002

Bersbach 1 – Comment

I have lived on Independence Ave since 1978. Our street is rural in nature, That is to say that it is dedicated but it is unimproved. It is a dirt road. I have been fighting for years to see traffic that comes off of Desoto on to Tulsa and then down Independence towards Chatsworth street as a bypass to Desoto Backups. This is a continual problem on week day mornings. In the afternoon the traffic created by the Private schools in the area clogs Chatsworth Street Already.

Bersbach 1 – Response

As shown on Table 4.12.5 of the Draft EIR, the intersections of Canoga Avenue/Rinaldi Street and Canoga Avenue/Chatsworth Street would operate at acceptable levels (LOS A) during the A.M. and P.M. peak hours with occupancy of the project. Based on the LOS provided at the Canoga Avenue intersections, it is not anticipated that project-related trips would divert to local streets such as Variel Avenue or Independence Avenue. Also see Section 4.2.6 (Traffic 1 and 2 – Responses) and Appendix K of this document for additional discussion of project traffic distribution to the local street system.

Bersbach 2 - Comment

The Housing development that is proposed is going to add to this problem. I am sure that as traffic coming south on Canoga, from the development backs up on Canoga, some will go east on Renaldi [sic] and then south on Variel, or Independence. This will compound an existing problem.

Bersbach 2 – Response

Please see Bersbach 1 - Response of this document. Also see Section 4.2.6 (Traffic 1 and 2 – Responses) and Appendix K of this document for additional discussion of project traffic distribution to the local street system.

Bersbach 3 - Comment

I'm sure you know that Sierra Canyon. [sic] School and its parents,students are banned from using Independence (its part of their C.U.Z Permit) some of their Parents use our street anyway. There really is no over sight. It is put on the people living in our neighbor hood to police it. And we have no authority, or time for such things.

Bersbach 3 – Response

The comment is not CEQA related and is out of the scope of the EIR. No response is required.

Bersbach 4 - Comment

Seriously the traffic on Chatsworth Street is already a serious problem. Unless the city widens Chatsworth to a four lane road from Topanga to Desoto, there is nothing you or I or any one else can do to create any thing but shear chaos during peak traffic in the mornings and afternoons.

Bersbach 4 – Response

See Section 3.3.5 of this document regarding project traffic and mitigation measures, which have been revised from those discussed in Section 4.12 of the Draft EIR. See also Appendices E and K of this document.

4.0 Response to Written Comments

Bersbach 5 - Comment

The number of trips a day from this new community has been way UNDER estimated. There are too few streets to come and go from the project area and so it will concentrate the traffic on the areas that are left.

The project should be scaled down to less homes on bigger lots. There should be another way for traffic to go besides towards Topanga and towards Canoga.

Bersbach 5 – Response

Please see Section 4.2.6 (Traffic 1 and 2 – Responses) and Appendix K of this document for a discussion of the project trip generation and traffic distribution forecasts provided in the Draft EIR. Additional vehicular access points as suggested by the commenter are not required to mitigate the traffic impacts related to the project (see Appendix N of this document). Additionally, there are no other north-south roads for access to this property. The revised project design has scaled down the number of lots which are larger in size.

4.5.7 Lesl Birkhead

January 7, 2002

Birkhead 1 – Comment

I am writing to express my objection to the proposed Deerlake Ranch development in Chatsworth (Project No. 99-239(5)) for which you have scheduled a January 23 hearing.

The proposed project is located close to my home, and I am particularly concerned about the following:

Illness producing agents becoming airborne during land disturbance (molds, fungus, spores etc.)

Birkhead 1 – Response

As stated in Section 4.2 of the draft EIR, all grading operations will be watered to keep fugitive dust to a minimum, thereby reducing the possibility of microscopic airborne contaminants.

Birkhead 2 – Comment

- carbon monoxide due to - traffic on 118 fwy and surrounding streets.

Birkhead 2 – Response

As stated in Section 4.2 of the Draft EIR, the project would not create new violations of the CO standard. Therefore, no significant impacts are anticipated.

Birkhead 3 – Comment

Damage to my home (settlement, cracks, dirt, NOISE) from equipment etc...

Birkhead 3 – Response

Implementation of the project would not result in settlement or cracks to occur to existing homes within the Twin Lakes Community, because construction vehicles would be prohibited from using the existing roads within the Twin Lakes community. As stated in Sections 4.2 and 4.7 of the Draft EIR, no significant impacts would occur with respect to dust and or noise with implementation of the recommended mitigation measures. See also and Section 4.2.3 of this document for additional discussion regarding noise and dust impacts.

Birkhead 4 – Comment

Drainage/runoff from storms etc. as the area around my residence already often floods.

4.0 Response to Written Comments

Birkhead 4 – Response

Please see Section 4.2.2 (Urban Runoff 1 – Response) and Section 4.4.2 (CLPA 4 and 5 – Responses) of this document. The majority of the project site drains directly into Devil Canyon, away from the Twin Lakes community.

Birkhead 5 – Comment

NOISE

Birkhead 5 – Response

As discussed in Section 4.7 of the Draft EIR, no significant noise impact would occur from the project with implementation of recommended mitigation measures. Please refer to Section 4.2.3 of this document for additional discussion of impacts and mitigation.

Birkhead 6 – Comment

Traffic- waiting time to merge into traffic from Mojave Trail; waiting time at lights for Topanga/or 118 Hwy.

Birkhead 6 – Response

The Draft EIR provides an evaluation of potential traffic impacts due to the project in Section 4.12. As shown on Table 4.12.5 of the Draft EIR, the project would result in a significant traffic impact at the intersection of Topanga Canyon Boulevard and the westbound SR-118 on/off ramps based on the significance thresholds adopted by the County's Traffic and Lighting Division. However with implementation of the recommended mitigation measures, the project would not result in significant impacts to area traffic. Please also refer to Appendix K and Section 4.2.6 of this document for additional discussion of traffic-related impacts.

The project proposes to realign Mojave Trail to intersect "A" Street east of Topanga Canyon Boulevard. The realigned Mojave Trail would provide vehicular access to four existing homes within the Twin Lakes community. Based on the relatively low volume of traffic generated by the homes on Mojave Trail, as well as the forecasted amount of traffic on "A" Street, residents along Mojave Trail are anticipated little or no delay in accessing "A" Street is anticipated.

Birkhead 7 – Comment

In light of the significant adverse impact this project would have on my neighborhood and the lack of meaningful measures to alleviate that impact, I request that you not approve the project as currently presented. Any further consideration of the project should be conditioned on:

- *a substantial reduction in the size and scope of the project;*
- *a more meaningful proposal for mitigation by the applicant; and*
- *postponement of Commission recommendation in order to allow time for adequate public study and evaluation of the applicant's revised proposals.*

Birkhead 7 – Response

Please see Section 4.5.5 (Belkin, L 3 – Response) of this document.

4.5.8 Laurie & Larry Borenstein

March 8, 2002

Borenstein 1 – Comment

I am writing to express my objection to the proposed Deerlake Ranch development in Chatsworth (Project No. 99-239(5)) for which you have continued the public hearing to April 10.

The proposed project is located close to my home, and I am particularly concerned about the following:

Traffic already too much with 2 private schools.

4.0 Response to Written Comments

Borenstein 1 – Response

As stated in Section 4.12 of the Draft EIR, traffic impacts would not be significant with implementation of recommended mitigation measures. Please see Sections 3.3.5 and 4.2.6, and Appendix K of this document for additional discussion of traffic impacts and mitigation measures.

Borenstein 2 – Comment

Are they going to build new parks – local parks are already crowded making Canoga (which is a quiet street) into a Highway.

Borenstein 2 – Response

Please see Section 2.0 of this document regarding private onsite parks and Appendix E of this document regarding contributions to existing public parks. Further, the construction of private onsite parks would help minimize park-related traffic on Canoga Avenue.

Borenstein 3 – Comment

In light of the significant adverse impact this project would have on my neighborhood and the lack of meaningful measures to alleviate that impact, I request that you do not approve the project as currently presented. Any further consideration of the project should be conditioned on:

- *a substantial reduction in the number of homes in the project;*
- *a more meaningful proposal for mitigation by the applicant; and*
- *opportunity for public study of and comment on the applicant's revised proposals.*

Borenstein 3 – Response

Please see Section 4.5.5 (Belkin, L 3 – Response) of this document.

4.5.9 Cheryl Bowman

March 8, 2002

Bowman 1 – Comment

I am writing to express my objection to the proposed Deerlake Ranch development in Chatsworth (Project No. 99-239(5)) for which you have continued the public hearing to April 10.

The proposed project is located close to my home, and I am particularly concerned about the following:

1. *excessive traffic on Canoga Ave and Chatsworth St. and De Soto which already backs up to Varial.*

Bowman 1 – Response

Please see Section 4.5.6 (Bersbach 1 – Response) of this document. Also see Section 4.2.6 (Traffic 1 and 2 – Responses) and Appendix K of this document for additional discussion of project traffic distribution to the local street system.

Bowman 2 – Comment

2. *Blowing dust, dirt, and diesel fumes on my neighborhood – our winds reach 60MPH here often.*

Bowman 2 – Response

As stated in Sections 4.2 and 4.7 of the Draft EIR, no significant impacts would occur with respect to dust or noise with implementation of mitigation measures. Please see Sections 4.2.3 (Noise/Dust 1 – Response) and 4.2.7 (Development Issues 8 – Response) of this document for additional discussion of these issues.

Bowman 3 – Comment

3. *noise pollution which is already increasing as more people are using the 118 Freeway, but especially having all that heavy construction equipment in use.*

4.0 Response to Written Comments

Bowman 3 – Response

As stated in Section 4.7 of the Draft EIR, no significant impacts would occur with respect to noise with implementation of mitigation measures. Please see Section 4.2.3 of this document for additional discussion of this issue.

Bowman 4 – Comment

In light of the significant adverse impact this project would have on my neighborhood and the lack of meaningful measures to alleviate that impact, I request that you do not approve the project as currently presented. Any further consideration of the project should be conditioned on:

- *a substantial reduction in the number of homes in the project;*
- *a more meaningful proposal for mitigation by the applicant; and*
- *opportunity for public study of and comment on the applicant's revised proposals.*

Bowman 4 – Response

Please see Section 4.5.5 (Belkin, L 3 – Response) of this document.

4.5.10 Gayle Braddock

January 7, 2002

Braddock 1 - Comment

I am writing to express my objection to the proposed Deerlake Ranch development in Chatsworth (Project No. 99-239(5)) for which you have scheduled a January 23 hearing.

The proposed project is located close to my home, and I am particularly concerned about the following:

Traffic on Canoga, Topanga Blvd, Chatsworth St.-DeSoto.

Braddock 1 - Response

As stated in Section 4.12 of the Draft EIR, traffic impacts would not be significant with implementation of recommended mitigation measures. Please see Sections 3.3.5, 4.2.6, 4.5.6 (Bersback 1- Response) and Appendix K of this document for additional discussion of traffic impacts and mitigation measures.

Braddock 2 - Comment

Horse Trails- horse and rider

Braddock 2 - Response

Please see Section 4.4.1 (C ECHO 3 and 4 – Responses) of this document.

Braddock 3 - Comment

Safety during construction due to increased traffic and large trucks (Noise)

Braddock 3 - Response

Please see Sections 4.2.3 (Noise/Dust 1 – Response) and 4.2.7 (Development Issues 8 – Response) of this document.

Braddock 4 - Comment

Dust

Braddock 4 - Response

As stated in Section 4.2 of the Draft EIR, dust impacts would not be significant with implementation of recommended mitigation measures. Please see Section 4.2.3 (Noise/Dust 1 – Response) of this document for additional discussion of this issue.

4.0 Response to Written Comments

Braddock 5 - Comment

In light of the significant adverse impact this project would have on my neighborhood and the lack of meaningful measures to alleviate that impact, I request that you not approve the project as currently presented. Any further consideration of the project should be conditioned on:

- *a substantial reduction in the size and scope of the project;*
- *a more meaningful proposal for mitigation by the applicant; and*
- *postponement of Commission recommendation in order to allow time for adequate public study and evaluation of the applicant's revised proposals.*

Braddock 5 - Response

Please see Section 4.5.5 (Belkin, L 3 – Response) of this document.

4.5.11 Theresa Brady

January 8, 2002/January 10, 2002

Brady 1 – Comment

I am concerned about the proposed Deerlake highlands estates. Project number 99-239. I have several questions after reading briefly through EIR section one.

This project appears to narrow the wildlife corridor to about 100 feet. Much more than this is needed. Biologist Ray Sauvajot has done research regarding wildlife migrations and has come to a conclusion regarding what the minimum contiguous area needed for wildlife to pass through an area. Have biologists with National Park Service been consulted regarding their evaluation of the impact of the project on wildlife migration?

Brady 1 – Response

It is presumed that the commenter is referring to "the corridor of willow woodland associated with Devil Canyon, which in some areas exceeds 110 feet in width," according to the discussion in Section 4.3 of the Draft EIR. To our knowledge, Mr. Sauvajot's conclusions have not been published, and Mr. Sauvajot (National Park Service) has not commented on the Draft EIR. Therefore, these comments are not project-specific and cannot be evaluated for further response. Please see Section 4.2.1 (Topical Response) of this document regarding additional discussion concerning wildlife corridors. These are the National Park Service areas within the project vicinity.

Brady 2 – Comment

Coyotes regularly pass through the yards of the current Twin Lakes residences. A friend of mine who lived up there lost several cats. Are the people who will want these homes prepared for coyotes passing through their yards?

Brady 2 – Response

The loss of domestic cats (or dogs or other pets) is not considered a significant impact on biological resources. However, the developer shall provide disclosure of these issues to potential buyers, and make recommendations to keep their pets indoors, in order to prevent them from becoming prey for coyotes.

Brady 3 – Comment

The EIR states that Coastal Sage Scrub supports several species of concern. They show CSS as previously disturbed but also state that "a diverse habitat supports numerous mammal species" and they note that mammals of every size from deer mouse to mountain lion have left evidence of their presence. There is very little of the CSS habitat on the site. However the predominant habitat type of the property is chaparral. They describe chaparral in this way "chaparral communities provide potential habitat for ... deer mouse ... mountain lion, and mule deer." Though they do not indicate if

4.0 Response to Written Comments

they have seen these species in this habitat or not. I would like to know have their biologists sought to observe whether wildlife evidence, similar to what they found in the CSS, is found in the chaparral? Some home owners in the area have seen mule deer in the chaparral. Since it is the majority of the site, I thought it should be clear whether the wildlife are using that habitat. To say they could, and not observe whether they are, seems like a major omission and an inadequacy in the EIR.

Brady 3 – Response

Section 4.3 of the Draft EIR discusses the observed and expected occurrence of vertebrate wildlife species. Comprehensive wildlife inventories are costly, require long periods to conduct, and are notoriously incomplete, and therefore, they not generally undertaken for the purposes of an EIR, unless listed species are potentially involved. The occurrence of many wildlife species on the project site, and including those utilizing chaparral habitat, if not actually seen, can be reasonably inferred on the basis of previous observation and experience, coupled with knowledge of the range and habitat preferences of the animals in the region. Numerous species known to use the coastal sage scrub are also likely to use the adjacent chaparral habitat. Appendix A of the Draft EIR includes a comprehensive faunal compendium of observed and expected species, using this reasoned approach. See also Section 4.2.1 and Appendix F.2 of this document.

Brady 4 – Comment

A misleading element of their map of Impacted Biologic features (4.3.2) is the color green being used for both the important Coastal sage scrub and for non native grasslands. The shades of green were so slightly different that only on Xeroxing them in black and white could I clearly tell which was which. Why were two such similar shades of green chosen for two such different areas in their importance to wildlife?

Brady 4 – Response

The contrast in color in Figure 4.3.2 of the Draft EIR was sufficient to distinguish between coastal sage scrub and non-native grasslands. The comment has been noted.

Brady 5 – Comment

The topographic map (geologic) shows that there are several steep slopes on the property. Most of the steep slopes they are avoiding, they are part of devil creek [sic]. The entire southern end of the project is steeply sloped and is slated for grading. This is esthetically [sic] displeasing as well as harmful to wildlife. Has it been considered whether these steep slopes are the result of centuries of seismic activities? We know that in the Northridge earthquake, the Santa Susana mountains [sic] rose, I believe by a foot or more. Is there knowledge of how this particular area fits into that? Furthermore, on the north east and southwest corners of the property there are also steeply sloped sections with housing planned on them. One was identified as an area of high possibility of landslide. Will these two areas at a minimum for human safety, be omitted from the proposed plan?

Brady 5 – Response

As discussed in Section 4.1 of the Draft EIR, impacts with regard to aesthetics/visual resources would not exceed significance criteria in accordance with the County's General Plan, and therefore, not result in a significant impact. Further, no significant impacts to wildlife would occur with implementation of mitigation measures (see Section 4.3 of the Draft EIR).

Section 4.5 of the Draft EIR stated that with compliance with all state and County of Los Angeles building and seismic regulations would ensure that no significant impacts related to earthquakes would occur.

Please see Section 4.4.2 (CLPA 3 – Response) of this document regarding additional discussion of potential landslides.

4.0 Response to Written Comments

Brady 6 – Comment

In the light of the mounting evidence of global warming, I thought another consideration should be made of protecting all existing trees especially oak trees. If the drainage into Devil Canyon is altered, as it appears it will be from comments at the hearing January 8, the oak trees that are to be saved there will be damaged or killed. Will the drainage into devil canyon change? Furthermore regarding oaks, redesigning the project around the oaks, designing them into yards as landscape, would increase property values as well as protecting the trees. Often trees slated for "protection" in a project are dug up and boxed to be replanted and then die elsewhere. What does "protecting" oak trees encompass in your plan?

Brady 6 – Response

Please see Section 4.4.2 (CLPA 4 – Response) regarding drainage into Devil Canyon, and Section 4.2.1 and Appendix F of this document regarding biological mitigation.

As stated in Section 4.3 of the Draft EIR, 65 existing oak trees would require removal in order to construct the project. However, the revised project (388 units) would preserve of an additional five oak trees. Appendix F.3 of the Draft EIR outlined the protection measures for other oak trees on the project site. None of these oak trees are of heritage status. Impacts would be reduced to less than significant with implementation of mitigation measures, which would be implemented under the review and approval of the County Forester and Fire Warden, and Los Angeles County (see Appendices E and F.3 of this document).

Brady 7 – Comment

Furthermore the entire north end of the project, the plateau, is covered with the rare "species of concern" plummer's [sic] lily. As Rosi Dagit says you can dig up the plant but you can't move with the intact ecosystem. Could avoidance be considered for the north end, where these lilies currently are?

The chaparral that contains the lilies, probably does more to protect us from climate change than does pavement. I know it is not currently considered, but believe it ought to be. I wondered if the county is considering the value of standing trees and wildplants as counter balance to the pavement and cars the county already contains.

Brady 7 – Response

See Section 4.2.1 and Appendix F.1 of this document.

Brady 8 – Comment

I have looked through the EIR and find no mention of low income housing. How was the requirement that each new housing development accommodate some low income housing satisfied for this project?

Brady 8 – Response

There is no requirement by the County of Los Angeles for low-income housing within the project site.

Brady 9 – Comment

I am writing regarding my concerns about Deerlake Highlands project #99-239. My concerns regarding oak trees are as follows: trees are only saved when they are left in place. How much water drains into Devil's canyon now? How will it change? Will you be adding more water? Do you expect more water drain into the canyon? Do you expect to have to irrigate adjacent slopes for fuel modification?

Again thank you for the opportunity to comment, and I hope to hear from your responses to these concerns.

4.0 Response to Written Comments

Brady 9 – Response

See Section 4.2.2 (Topical Response) and Appendix C.4 of this document regarding County fuel modification specifications and irrigation requirements.

4.5.12 Caren Bramhall

January 7, 2002

Bramhall 1 – Comment

I am writing to express my objection to the proposed Deerlake Ranch development in Chatsworth (Project No. 99-239(5)) for which you have scheduled a January 23 hearing.

The proposed project is located close to my home, and I am particularly concerned about the following:

Loss of use of the trails I have ridden the last 26 years,

Bramhall 1 – Response

Please see Section 4.4.1 (C ECHO 3 and 4 – Responses) of this document.

Bramhall 2 – Comment

increased traffic that will impact all adjoining streets

Bramhall 2 – Response

As stated in Section 4.12 of the Draft EIR, traffic impacts would not be significant with implementation of recommended mitigation measures. Please see Sections 4.5.6 (Bersbach 1 – Response) and 4.5.8 (Borenstein 1 – Response) of this document.

Bramhall 3 – Comment

removal of oak trees

Bramhall 3 – Response

As stated in Section 4.3 of the Draft EIR, impacts to biological resources including oak trees would not be significant with implementation of recommended mitigation measures. Please see Section 4.5.11 (Brady 6 – Response) of this document for additional discussion regarding oak trees.

Bramhall 4 – Comment

Environmental impact of Devils Canyon to be used as run off. (Can't you leave a beautiful place alone.)

Bramhall 4 – Response

Please see Section 4.2.2 (Urban Runoff Topical Response) and Appendices H and I of this document.

Bramhall 5 – Comment

In light of the significant adverse impact this project would have on my neighborhood and the lack of meaningful measures to alleviate that impact, I request that you not approve the project as currently presented. Any further consideration of the project should be conditioned on:

- *a substantial reduction in the size and scope of the project;*
- *a more meaningful proposal for mitigation by the applicant; and*
- *postponement of Commission recommendation in order to allow time for adequate public study and evaluation of the applicant's revised proposals.*

Bramhall 5 – Response

Please see Section 4.5.5 (Belkin, L 3 – Response) of this document.

4.0 Response to Written Comments

4.5.13 Robert Brigham

January 7, 2002

Attachment to this letter can be found in Appendix B.1 of this document.

Brigham 1 - Comment

I am writing to express my objection to the proposed Deerlake Ranch development in Chatsworth (Project No. 99-239(5)) for which you have scheduled a January 23 hearing.

The proposed project is located close to my home, and I am particularly concerned about the following:

I am concerned about 15 new homes that are North of Devils Cyn & south of the Big Bridge facing Twin Lakes Community regarding privacy & my view of the mountains & the lights shining through our windows.

Brigham 1 - Response

As stated in Section 4.1 of the Draft EIR, aesthetic and visual resource impacts would not be significant. Implementation of the project would not introduce new elements, which would substantially detract from the existing aesthetic character or primary aesthetic resources of the site. Further, lighting for the project would be low profile and designed so as to direct lighting away from roadways and structures.

Brigham 2 - Comment

In light of the significant adverse impact this project would have on my neighborhood and the lack of meaningful measures to alleviate that impact, I request that you not approve the project as currently presented. Any further consideration of the project should be conditioned on:

- *a substantial reduction in the size and scope of the project;*
- *a more meaningful proposal for mitigation by the applicant; and*
- *postponement of Commission recommendation in order to allow time for adequate public study and evaluation of the applicant's revised proposals.*

Brigham 2 - Response

Please see Section 4.5.5 (Belkin, L 3 – Response) of this document.

4.5.14 Fred Buraye Family

March 8, 2002

Buraye 1 – Comment

I am writing to express my objection to the proposed Deerlake Ranch development in Chatsworth (Project No. 99-239(5)) for which you have continued the public hearing to April 10.

The proposed project is located close to my home, and I am particularly concerned about the following:

We will loose [sic] the quiet privacy, secured and peacefull [sic] environment [sic], that I pay for, when I decided to move my family to this area.

Buraye 1 – Response

The comment has been received and noted. No additional response is necessary.

4.0 Response to Written Comments

Buraye 2 – Comment

In light of the significant adverse impact this project would have on my neighborhood and the lack of meaningful measures to alleviate that impact, I request that you do not approve the project as currently presented. Any further consideration of the project should be conditioned on:

- *a substantial reduction in the number of homes in the project;*
- *a more meaningful proposal for mitigation by the applicant; and*
- *opportunity for public study of and comment on the applicant's revised proposals.*

Buraye 2 – Response

Please see Section 4.5.5 (Belkin, L 3 – Response) of this document.

4.5.15 William Byers

January 9, 2002

Byers 1 - Comment

I am writing to express my objection to the proposed Deerlake Ranch development in Chatsworth as presently planned. I live in Twin Lakes and my property is adjacent to the proposed development and I am particularly concerned about the following:

Construction noise Section 4.7 of the DEIR, mitigation measures for the Twin Lakes area must include some way to assure the residents of the developer's compliance with County of Los Angeles Noise Ordinance, Title 12, Section 12.08.440. The time limits on the construction work should be clearly defined; we need a hotline phone number for complaints and there must be effective penalties for non-compliance, i.e. a halt to construction until the violation is stopped. Will the County standard +5dB(A) CNEL mandated for the interior of residences be maintained?

Byers 1 – Response

As discussed in Sections 4.2 and 4.7 of the Draft EIR, no significant noise or dust impact would occur from the project with implementation of recommended mitigation measures. Please refer to Sections 4.2.3 (Noise/Dust 1 – Response) and 4.2.7 (Development Issues 8 – Response) of this document for additional discussion of impacts and mitigation.

Byers 2 - Comment

Construction dust How will the developer be monitored as to controlling dust levels, which will be significant considering the amount of proposed grading? Who will oversee the project and make sure that they are following section 4.2-1? What will be the effective penalties for non-compliance? There must be a halt construction until violations are stopped. Where will the wind velocity be measured? It must be measured on site because of the known and frequent Santa Ana winds that blow down Oat Mountain and directly across the development and on to the Twin Lakes residences. Winds there have exceeded 75 mph. What will our homes and property look like down wind from all of that loose soil? Who will measure the solid particulates in the air that all of us must breath [sic] during the 5 plus years of construction? Who is going to pay for the resulting health problems? What are our immediate remedies for injury? Will Los Angeles County be liable for failure to enforce compliance with the law and/or permits?

Byers 2 – Response

Please see Section 4.2.3 (Topical Response and Noise /Dust 2 – Response) of this document.

Byers 3 - Comment

I suggest that all planned houses south of Devil's canyon be deleted from the proposed plan and that all land south of Devil's Canyon [sic] be left undisturbed with the exception of the bridge across the canyon.

4.0 Response to Written Comments

Byers 3 – Response

The commenter's suggestion is noted and will be forwarded to the decision makers.

Byers 4 - Comment

Traffic

I am concerned about the increase of traffic on Canoga Avenue, Topanga Canyon Boulevard and other adjacent streets that will surely take place if the proposed project is implemented in its current form.

The DEIR has not sufficiently studied the impact that 484 homes will have on our streets. It is disturbing to me that the developer conducted a traffic study with not all schools in session purportedly used incorrect tables to estimate the amount of trips by vehicles per day, given the nature of houses to be built and the times of day at which these trips would be made. If a new study has been done then additional time must be made to review it and further check for accuracy. I suggest that the amount of homes proposed for this project be reduced by one-half to avoid overloading already congested streets and intersections.

Byers 4 – Response

See Section 3.3.5 and 4.2.6, and Appendix K of this document for a discussion of traffic impacts associated with the revised project. As with the original project, traffic impacts associated with the revised project would not be significant with implementation of mitigation measures.

Byers 5 - Comment

I light of the significant adverse impact this project would have on my residence and my neighborhood and the lack of meaningful measures to alleviate that impact, I request that youi [sic] not approve the project as currently presented. Any further consideration of the project should be conditioned on:

- *a substantial reduction in the size and scope of the project;*
- *a more meaningful proposal for mitigation by the applicant; and*
- *postponement of Commission recommendation in order to allow time for adequate public study and evaluation or [SIC] the applicant's revised proposals.*

Byers 5 – Response

Please see Section 4.5 (Belkin, L 3 – Response) of this document.

4.5.16 Sally and Cal Cantwell

January 5, 2002/ January 7, 2002

Cantwell 1 – Comment

We have been residents of the Twin Lakes area for over 18 years. We are very disturbed over the proposed 484 home development project named Deer Lake Ranch.

We are especially concerned about the traffic situation and its potentially serious effects on our community. We already have several local intersections that get a failing grade for congestion. The increased traffic from a project of this density, with an estimated 1200 additional vehicles, will make things beyond absurd- yet there will be no improvement of roads, signals or intersections south of the 118 freeway through which all this traffic must pass.

Cantwell 1 – Response

See Section 3.3.5 and 4.2.6, and Appendix K of this document for a discussion of traffic impacts associated with the revised project. As with the original project, traffic impacts associated with the revised project would not be significant with implementation of mitigation measures.

4.0 Response to Written Comments

Cantwell 2 – Comment

The developer has grossly underestimated the total and peak-hour traffic volumes generated by this project. They have ignored all the cars that will travel through the local streets of our neighborhood. The roads and traffic will be terribly over-loaded, especially during prime morning and evenings, making it heavily congested not only with these vehicles but also, by people who do not even live in the project.

Cantwell 2 – Response

Please see Cantwell 1 – Response of this document. The traffic study has been carefully reviewed by both the Los Angeles County Department of Public Works and the City of Los Angeles Department of Transportation. Both reviews have found the study to be credible in the estimated traffic generation of the proposed project.

Cantwell 3 – Comment

This developer avoided performing a required freeway impact study by selecting a measurement point at the Ventura County line, away from the main traffic flow. This type of diversion has a tendency to make me question the entire traffic study, perhaps even the entire Environmental Impact Report.

Cantwell 3 – Response

See Section 4.2.6 (Topical Response) of this document.

Cantwell 4 – Comment

Our community and way of life is being threatened. Studies that are inaccurate and biased toward the Deer Park project have been submitted. We would like to have an accurate traffic study done that would also reflect future traffic flow, something else that was not done.

We have other concerns that have not been in the least satisfied by the developer, including water run-off and pollution.

Cantwell 4 – Response

See Section 3.3.5 and 4.2.6, and Appendix K of this document for a discussion of traffic impacts associated with the revised project. As with the original project, traffic impacts associated with the revised project would not be significant with implementation of mitigation measures.

Please see Section 4.2.2 and Appendix H and I of this document regarding impacts to Devil Canyon.

Cantwell 5 – Comment

I am writing to express my objection to the proposed Deerlake Ranch development in Chatsworth (Project No. 99-239(5)) for which you have scheduled a January 23 hearing.

The proposed project is located close to my home, and I am particularly concerned about the following:

Primarily-Traffic Flow-totally unacceptable

Cantwell 5 – Response

Please see Cantwell 1 – Response of this document.

Cantwell 6 – Comment

Increased Fire hazards

Cantwell 6 – Response

As stated in Section 4.8 of the Draft EIR, impacts to fire protection services would not be significant. See also Section 4.2.4 of this document for additional discussion of this issue.

Cantwell 7 – Comment

Pollution-uncontrollable

4.0 Response to Written Comments

Cantwell 7 – Response

It is unclear as to what the commenter is referring to regarding “pollution”. However, it is assumed that the reference is to storm water runoff. Please see Sections 4.2.2 and 4.4.2 (CLPA 4 – Response) and Appendix I of this document.

Cantwell 8 – Comment

Water- run-off

Cantwell 8 – Response

Please see Section 4.2.2 and Appendices H and I of this document.

Cantwell 9 – Comment

In light of the significant adverse impact this project would have on my neighborhood and the lack of meaningful measures to alleviate that impact, I request that you not approve the project as currently presented. Any further consideration of the project should be conditioned on:

- *a substantial reduction in the size and scope of the project;*
- *a more meaningful proposal for mitigation by the applicant; and*
- *postponement of Commission recommendation in order to allow time for adequate public study and evaluation of the applicant’s revised proposals.*

Cantwell 9 – Response

Please see Section 4.5 (Belkin, L 3 – Response) of this document.

4.5.17 E. Cervantes

January 7, 2002

Cervantes 1 - Comment

I am writing to express my objection to the proposed Deerlake Ranch development in Chatsworth (Project No. 99-239(5)) for which you have scheduled a January 23 hearing.

The proposed project is located close to my home school, and I am particularly concerned about the following:

Chatsworth Park Elementary is at near capacity enrollment already! Topanga and Devonshire traffic endangers our students and parents daily. Additional traffic near and/or to our school will exacerbate our safety problems and safe access to the school.

Cervantes 1 - Response

As stated in the Draft EIR, impacts to schools and traffic would not be significant with implementation of mitigation measures. Please see Sections 3.3.4 and 4.3.7 and Appendix J of this document for additional discussion of school impacts. Please see Section 3.3.5 and 4.2.6 and Appendix K of this document regarding additional discussion of traffic impacts.

Cervantes 2 - Comment

In light of the significant adverse impact this project would have on my neighborhood and the lack of meaningful measures to alleviate that impact, I request that you not approve the project as currently presented. Any further consideration of the project should be conditioned on:

- *a substantial reduction in the size and scope of the project;*
- *a more meaningful proposal for mitigation by the applicant; and*
- *postponement of Commission recommendation in order to allow time for adequate public study and evaluation of the applicant’s revised proposals.*

4.0 Response to Written Comments

Cervantes 2 - Response

Please see Section 4.5.5 (Belkin, L 3 – Response) of this document.

4.5.18 Leon Chernock

January 5, 2002/January 7, 2002/January 12, 2002

Chernock 1 – Comment

I am writing to express my objections to the proposed Deerlake Ranch development in Chatsworth. {Project No. 99-239{5}} for which you have scheduled a January 23 hearing.

Living Twinlakes [sic] for many years I am very much concerned about the impact that this project will have on this area.

The proposed project will have a VERY adverse impact on this neighborhood adequate measures have not been taken to preserve the integrity of this area.

Chernock 1 – Response

The Draft EIR documents impacts that would be expected to result from implementation of the proposed project. Please see Appendix E of this document regarding conditions of approval.

Chernock 2 – Comment

It is clear that EIR has not sufficiently studied the impact that 484 homes will have on this areas streets. The actual traffic flows and patterns have obviously not been taken into consideration. It dose [sic] not allow for the schools is [sic] session. The problems that will occur when parents try to drop off and pick up their children.

Chernock 2 – Response

As stated in Section 4.12 of the Draft EIR, traffic impacts would not be significant with implementation of recommended mitigation measures. Please see Sections 3.3.5 and 4.2.6, and Appendix K of this document for additional discussion of traffic impacts and mitigation measures.

Chernock 3 – Comment

Adequate studies haven't been taken for the additional traffic that will travel on Canoga Ave. People will just naturally use our community for short cuts to De Soto Ave. and Topanga Canyon on ramps to the 118 fry.

Twinlakes have privately owned and maintained streets and absolutely cannot handle additional traffic.

The gridlock situation that this project will incur will create a nightmare for everyone living in this area.

Mr. Chih, we need someone with your influence to take the right road to correcting this problem that this project will create.

Chernock 3 – Response

Please see Chernock 2 – Response of this document. Subsequent to the distribution of the Draft EIR, additional mitigation measures have been included (improvements at the Canoga Avenue/Chatsworth Street intersection) for traffic-related impacts (see Appendix E of this document) as well as an updated traffic study to analyze the revised project (see Appendix K of this document). Also see Section 4.2.6 (Traffic 1 & 2 – Responses) of this document.

Chernock 4 – Comment

I am writing to express my objection to the proposed Deerlake Ranch development in Chatsworth (Project No. 99-239(5)) for which you have scheduled a January 23 hearing.

The proposed project is located close to my home, and I am particularly concerned about the following:

4.0 Response to Written Comments

Traffic Gridlock. Dust and dirt, increased wind problems due to cutting down of existing surrounding hills. Water and sewage run off into our canyons and its effect on the existing eco system. Increase in crime due to higher population.

Chernock 4 – Response

Please see Chernock 2 and 3 – Responses of this document.

As stated in Section 4.2 of the Draft EIR, dust impacts would not be significant with implementation of recommended mitigation measures. Please see Section 4.2.3 of this document for additional discussion of this issue.

As stated in Section 4.6 of the Draft EIR, hydrology and water quality impacts would not be significant with implementation of recommended mitigation measures. Please see Sections 4.2.2 and 4.4.2 (CLPA 4 – Response) and Appendix I of this document for additional discussion of this issue.

As stated in Section 4.9 of the Draft EIR, impacts to police services would not be significant. Please see Sections 3.3.3 and 4.2.5 of this document for additional discussion of this issue.

Chernock 5 – Comment

In light of the significant adverse impact this project would have on my neighborhood and the lack of meaningful measures to alleviate that impact, I request that you not approve the project as currently presented. Any further consideration of the project should be conditioned on:

- *a substantial reduction in the size and scope of the project;*
- *a more meaningful proposal for mitigation by the applicant; and*
- *postponement of Commission recommendation in order to allow time for adequate public study and evaluation of the applicant's revised proposals.*

Chernock 5 – Response

Please see Section 4.5.5 (Belkin, L 3 – Response) of this document.

Chernock 6 – Comment

As a long time resident of the Twin Lakes area, I want to appeal to you to reconsider the plans now in place for the Deerlake Ranch Development. The impact that this project will have on our neighborhood will drastically effect our life style and be detrimental to your traffic situation which is already at a point where we, who live here, can hardly get in and out of our neighborhood at peak hours. The studies that have been taken, by an agency hired by the developer, do not represent the actual traffic flow. It is imparative [sic] that an agency, not paid by the developer, take a new study of the actual traffic patterns as they exist on normal usage days.

Chernock 6 – Response

Please see Chernock 2 and 3 – Responses of this document.

Chernock 7 – Comment

I am not sure if you agency is aware of the terrifically high wind condition that we experience here. There is no area in the San Fernando valley [sic] that has windier conditions then we experience here. When the developer cuts down the existing ridges that surround Twin Lakes, it will create a wind condition that is even heavier then we now experience. It will make it almost unlivable for the houses, like mine, that are at the top of the ridge on Mayan Rd. This situation must be considered by your agency. This doesn't even take in the added dust and dirt conditions that will occur during the wind season, while construction is under way, and this will be a condition that will continue for years.

Chernock 7 – Response

The Santa Ana winds in the San Fernando Valley are a well known climatic condition. As stated in Section 4.2 of the Draft EIR, dust impacts would not be significant with implementation of

4.0 Response to Written Comments

recommended mitigation measures. Please see Section 4.2.3 of this document for additional discussion of this issue.

Chernock 8 – Comment

In the area of ecology, we are now starting to see more and more of the wild life that exists in our area start to come down into our neighborhood because of projects like Porter Ranch that is encroaching more and more on the natural habitat of the wild life. This must be considered. This proposed project would exacerbate this condition even further.

Chernock 8 – Response

Section 4.3 of the Draft EIR included a discussion of impacts upon sensitive species, nesting birds and raptors, and wildlife movement. Impacts to biological resources would not be significant with implementation of recommended mitigation measures. See also Section 4.2.1 of this document for additional discussion of this issue.

Chernock 9 – Comment

Sir's, these are only a few of the concerns that I have for this proposed project. We here in Twin Lakes are at the mercy of agencies like yours and we have nowhere else to turn except to you. If, in fact, you are neutral and unbiased, we depend upon you to look after our interests.

Thank you for your considerations on this problem.

Chernock 9 – Response

The comment has been received and noted. No additional response is required.

4.5.19 Ramon Condo

January 7, 2002

Condo 1 - Comment

I am writing to express my objection to the proposed Deerlake Ranch development in Chatsworth (Project No. 99-239(5)) for which you have scheduled a January 23 hearing.

The proposed project is located close to my home, and I am particularly concerned about the following:

Traffic

Condo 1 - Response

As stated in Section 4.12 of the Draft EIR, traffic impacts would not be significant with implementation of recommended mitigation measures. Please see Sections 3.3.5 and 4.2.6, and Appendix K of this document for additional discussion of traffic impacts and mitigation measures.

Condo 2 - Comment

In light of the significant adverse impact this project would have on my neighborhood and the lack of meaningful measures to alleviate that impact. I request that you not approve the project as currently presented. Any further consideration of the project should be conditioned on:

- *a substantial reduction in the size and scope of the project;*
- *a more meaningful proposal for mitigation by the applicant; and*
- *postponement of Commission recommendation in order to allow time for adequate public study and evaluation of the applicant's revised proposals.*

Condo 2 - Response

Please see Section 4.5.5 (Belkin, I. 3 – Response) of this document.

4.5.20 Kris Cooper

January 7, 2002

Cooper 1 - Comment

I am writing to express my objection to the proposed Deerlake Ranch development in Chatsworth (Project No. 99-239(5)) for which you have scheduled a January 23 hearing.

The proposed project is located close to my home, and I am particularly concerned about the following:

Increased Traffic. Speed bumps have be [sic] placed on my street in an effort to control the current traffic. It's not working and any more traffic will destroy the quality of live [sic] in the neighborhood.

Cooper 1 - Response

As stated in Section 4.12 of the Draft EIR, traffic impacts would not be significant with implementation of recommended mitigation measures. Please see Sections 3.3.5 and 4.2.6, and Appendix K of this document for additional discussion of traffic impacts and mitigation measures.

Subsequent to the distribution of the Draft EIR, additional mitigation measures have been included (improvements at the Canoga Avenue/Chatsworth Street intersection) for traffic-related impacts (see Appendix E of this document) as well as an updated traffic study to analyze the revised project (see Appendix K of this document). Also see Section 4.2.6 (Traffic 1 & 2 – Responses) of this document.

Cooper 2 - Comment

In light of the significant adverse impact this project would have on my neighborhood and the lack of meaningful measures to alleviate that impact, I request that you not approve the project as currently presented. Any further consideration of the project should be conditioned on:

- *a substantial reduction in the size and scope of the project;*
- *a more meaningful proposal for mitigation by the applicant; and*
- *postponement of Commission recommendation in order to allow time for adequate public study and evaluation of the applicant's revised proposals.*

Cooper 2 - Response

Please see Section 4.5.5 (Belkin, L 3 – Response) of this document.

4.5.21 Susan Cordell

January 7, 2002

Cordell 1 – Comment

I live in the Twin Lakes area and I am very concerned about the environmental impacts the Deer Lake Ranch project will cause to the area. This project is bringing almost 500 homes to the area without adequate measures to compensate for the amount of people and the disruption that will take place with this large change in the area. This area has a very delicate eco-system that has basically never been disturbed.

Cordell 1 – Response

Section 4.3 of the Draft EIR included a discussion of impacts upon sensitive species, nesting birds and raptors, and wildlife movement. Impacts to biological resources would not be significant with implementation of recommended mitigation measures. See also Section 4.2.1 of this document for additional discussion of this issue.

Cordell 2 – Comment

The wildlife will be affected by the construction noise as well as movement within the area.

4.0 Response to Written Comments

Cordell 2 – Response

Please see Cordell 1 – Response of this document.

Cordell 3 – Comment

The runoff from the storm drains into the water supply will ultimately affect the animals. With that many homes it doesn't take that much to destroy the water supply and/or habitat of these animals, no matter how many signs are posted or people are educated about the hazards of household products and yard wastes.

The EIR deals with the Storm Water Mitigation Issue in a totally inadequate manner. If we are to preserve the small amount of untouched areas that we have left amidst our increasing degree of urban development, we must be more creative in our solutions to the problems.

Cordell 3 – Response

As stated in Section 4.6 of the Draft EIR, hydrology and water quality impacts would not be significant with implementation of recommended mitigation measures. Please see Section 4.2.2 (Urban Runoff 1- Response) and Appendices H and I of this document for additional discussion of this issue.

Cordell 4 – Comment

I moved to this area due to the landscape of the area and the many foot trails as well as horse trails that I can enjoy right outside my backyard. I fail to see how removing natural vegetation and having polluting chemicals run through the creek basin would be good for the ecosystem. Having a manmade park developed in the area by the developer does not compensate for the devastation of natural habitat. With this development going in, the natural beauty and the rural setting of the area will be damaged and destroyed for monetary gain!

I would hope that the City would look into assisting the taxpayers needs already in the city of Chatsworth and not just look at the taxes that 484 new homes would bring to the community.

Cordell 4 – Response

Please refer to section 2.4.7 (open space characteristics) for a discussion of the recreational opportunities that will be provided by the proposed project. The County's land use decisions are not based upon potential tax revenue benefits, but the policies and goals of the County's General Plan.

Cordell 5 – Comment

I am writing to express my objection to the proposed Deerlake Ranch development in Chatsworth (Project No. 99-239(5)) for which you have scheduled a January 23 hearing.

I live in the Twin Lakes area and I am particularly concerned with the impact 484 new homes will have on the already heavily trafficked streets of Chatsworth. There is daily gridlock and much congestion on the Desoto and Topanga Canyon on and off ramps to the 118. I sit at the traffic lights before 8am in the morning now for over 15 minutes just to get onto the 118 East. With almost 500 more homes coming into the area, the plans that the developer has to widen the road will not solve the problem that already exists. The problem will only get worse if the city does not force the developer to come up with solutions to this ongoing problem. More accidents will occur as all rush to get through the lights and onto the freeway from Mayan and the condominiums on the other side of Mayan. Both Topanga and Desoto streets are heavily trafficked throughout the day due to the many industrial areas and businesses on these streets.

The traffic problem in the area has never been addressed by the city and has only been getting worse as more and more people pour into the community. If this problem is not being addressed at this time by the City, how can I be confident that the County will do a better job?

4.0 Response to Written Comments

Cordell 5 – Response

As stated in Section 4.12 of the Draft EIR, traffic impacts would not be significant with implementation of recommended mitigation measures. Please see Sections 3.3.5 and 4.2.6, and Appendix K of this document for additional discussion of traffic impacts and mitigation measures.

Cordell 6 – Comment

The Deerlake Ranch development is adding almost 500 new homes to the Chatsworth area with no improvement of roads, signals or intersections planned. How can this be? The study that the developer utilizes is flawed and does not show the true impact of the traffic as it stands now. It was taken when schools were not in session and on holidays so the total number of cars passing through these intersections each hour is not a true and honest calculation of the traffic in the area. I understand a new survey has been done and feel that additional time should be allotted to review this new study and check it for accuracy.

Cordell 6 – Response

Please see Cordell 5 – Response of this document. Please see Section 1.1 of this document regarding review time of the Draft EIR. The traffic study prepared for the proposed project has been reviewed and deemed appropriate by the Los Angeles County Department of Public Works and the City of Los Angeles Department of Transportation.

Cordell 7 – Comment

In light of the significant adverse impacts this project would have on my neighborhood and the lack of meaningful measures to alleviate that impact, I request that you not approve the project as currently presented. Any further consideration of the project should be conditioned on:

- *a substantial reduction in the size and scope of the project;*
- *a more meaningful proposal for mitigation by the applicant; and*
- *postponement of Commission recommendation in order to allow time for adequate public study and evaluation of the applicant's revised proposals.*

Cordell 7 – Response

Please see Section 4.5.5 (Belkin, 1.3 – Response) of this document.

4.5.22 Doug Crawford

March 8, 2002

Crawford 1 – Comment

I am writing to express my objection to the proposed Deerlake Ranch development in Chatsworth (Project No. 99-239(5)) for which you have continued the public hearing to April 10.

The proposed project is located close to my home, and I am particularly concerned about the following:

Traffic on Canoga Ave. The two schools and children crossing Canoga Ave. in the AM and PM is a major concern. during the weekdays and weekends.

Crawford 1 – Response

As stated in Section 4.12 of the Draft EIR, traffic impacts would not be significant with implementation of recommended mitigation measures. Please see Sections 3.3.5 and 4.2.6, and Appendix K of this document for additional discussion of traffic impacts and mitigation measures.

Crawford 2 – Comment

In light of the significant adverse impact this project would have on my neighborhood and the lack of meaningful measures to alleviate that impact, I request that you do not approve the project as currently presented. Any further consideration of the project should be conditioned on:

4.0 Response to Written Comments

- a substantial reduction in the number of homes in the project;
- a more meaningful proposal for mitigation by the applicant; and
- opportunity for public study of and comment on the applicant's revised proposals.

Crawford 2 –Response

Please see Section 4.5.5 (Belkin, L 3 – Response) of this document.

4.5.23 Andrea Cree

March 8, 2002

Cree 1 – Comment

I am writing to express my objection to the proposed Deerlake Ranch development in Chatsworth (Project No. 99-239(5)) for which you have continued the public hearing to April 10.

The proposed project is located close to my home, and I am particularly concerned about the following:

1. *Increase in traffic, noise, pollution [sic], danger to children (2 schools in area) and horses on Canoga*
2. *Chatsworth St between DeSoto and Canoga is too narrow and traffic is already at a maximum during 'peak' hours 7-9am and 3-6pm especially on school days.*

Cree 1 – Response

As stated in Section 4.12 of the Draft EIR, traffic impacts would not be significant with implementation of recommended mitigation measures. Please see Sections 3.3.5 and 4.2.6, and Appendix K of this document for additional discussion of traffic impacts and mitigation measures. As shown on Table 4.12.5 of the Draft EIR, the intersections of Canoga Avenue/Rinaldi Street and Canoga Avenue/Chatsworth Street would operate at acceptable levels (LOS A) during the A.M. and P.M. peak hours with occupancy of the project. Based on the LOS provided at the Canoga Avenue intersections, it is not anticipated that project-related trips would divert to local streets such as Varic Avenue or Independence Avenue. Also see Section 4.2.6 (Traffic 1 and 2 – Responses) and Appendix K of this document for additional discussion of project traffic distribution to the local street system.

Cree 2 – Comment

In light of the significant adverse impact this project would have on my neighborhood and the lack of meaningful measures to alleviate that impact, I request that you do not approve the project as currently presented. Any further consideration of the project should be conditioned on:

- a substantial reduction in the number of homes in the project;
- a more meaningful proposal for mitigation by the applicant; and
- opportunity for public study of and comment on the applicant's revised proposals.

Cree 2 –Response

Please see Section 4.5.5 (Belkin, L 3 – Response) of this document.

4.5.24 James and Vera Cunningham

April 1, 2002

Cunningham 1 –Comment

I am writing to express my objection to the proposed Deerlake Ranch development in Chatsworth (Project No. 99-239(5)). For which you have continued the public hearing to April 10.

My wife and I are longtime residents of Chatsworth and we feel that the proposed Deerlake Ranch development will severely degrade our neighborhood environment and cause excessive traffic

4.0 Response to Written Comments

congestion on Canoga Avenue and Chatsworth Street. We have lived at our current residence for the past twelve years and moved here expressly for the quite [sic] environment. Our home is on the corner of Celtic and Willowbrae and our backyard runs adjacent to Canoga Avenue. Our master bedroom overlooks Canoga Avenue and this development would no doubt cause excessive noise during our hours of rest. An additional consideration of this development is reduced property value due to excessive traffic on Canoga Avenue. It is our feeling that the proposed development is an overall detriment to the Chatsworth area and serves no benefit except to increase the tax revenue of the county.

Cunningham 1 –Response

As stated in Section 4.12 of the Draft EIR, traffic impacts would not be significant with implementation of recommended mitigation measures. Please see Sections 3.3.5 and 4.2.6, and Appendix K of this document for additional discussion of traffic impacts and mitigation measures.

As shown on Table 4.12.5 of the Draft EIR, the intersections of Canoga Avenue/Rinaldi Street and Canoga Avenue/Chatsworth Street would operate at acceptable levels (LOS A) during the A.M. and P.M. peak hours with occupancy of the project. Based on the LOS provided at the Canoga Avenue intersections, it is not anticipated that project-related trips would divert to local streets such as Variel Avenue or Independence Avenue. Also see Section 4.2.6 (Traffic 1 and 2 – Responses) and Appendix K of this document for additional discussion of project traffic distribution to the local street system.

As stated in Sections 4.2 and 4.7 of the Draft EIR, dust and/or noise impacts would not be significant with implementation of recommended mitigation measures. See Section 4.2.3 of this document for additional discussion of this issue.

Cunningham 2 –Comment

If you as the individuals involved in the decision making process persist in this development, you need to seriously consider routing all traffic to Topanga Canyon Boulevard or Desoto Street and leave Canoga Avenue as is.

Cunningham 2 –Response

Please see Cunningham 1 – Response of this document. The comment has been received and noted.

4.5.25 Thomas De Long

January 7, 2002/March 8, 2002

De Long 1 - Comment

I am writing to express my objection to the proposed Deerlake Ranch development in Chatsworth (Project No. 99-239(5)) for which you have scheduled a January 23 hearing.

The proposed project is located only a few blocks from my home, and I am particularly concerned about the negative impact it will have on me and my neighbors due to the increase in traffic, noise, and crime.

De Long 1 - Response

As stated in Section 4.12 of the Draft EIR, traffic impacts would not be significant with implementation of recommended mitigation measures. Please see Sections 3.3.5 and 4.2.6, and Appendix K of this document for additional discussion of traffic impacts and mitigation measures.

As discussed in Sections 4.2 and 4.7 of the Draft EIR, no significant noise or dust impact would occur from the project with implementation of recommended mitigation measures. Please refer to Section 4.2.3 of this document for additional discussion of impacts and mitigation.

4.0 Response to Written Comments

As stated in Section 4.9 of the Draft EIR, impacts to police protection services would be less than significant with implementation of recommended mitigation measures. Please see Sections 3.3.3 and 4.2.5 of this document for additional discussion of this issue.

De Long 2 - Comment

In light of the significant adverse impact this project would have on my neighborhood and the lack of meaningful measures to alleviate that impact, I request that you not approve the project as currently presented. Any further consideration of the project should be conditioned on:

- *a substantial reduction in the size and scope of the project;*
- *a more meaningful proposal for mitigation by the applicant; and*
- *postponement of Commission recommendation in order to allow time for adequate public study and evaluation of the applicant's revised proposals.*

De Long 2 - Response

Please see Section 4.5.5 (Belkin, L 3 – Response) of this document.

De Long 3 - Comment

I am writing to express my objection to the proposed Deerlake Ranch development in Chatsworth (Project No. 99-239(5)) for which you have continued the public hearing to April 10, 2002.

I live within a few blocks of the proposed development and I am convinced, as is Councilman Hal Bernson per his letter to the Regional Planning Board dated January 22, 2002, that it will be virtually impossible to mitigate the traffic impacts this project will have on the surrounding community. The ingress/egress plan consisting of only two streets, Topanga Canyon and Canoga Avenue, is completely inadequate. These two streets cannot handle the traffic in rush hour and in other times of emergency that a project like this will create. The traffic from a project of this size will also spill over to the residential side streets in the neighborhood south of the 118 freeway along Canoga (such as Celtic, Renaldi, and Variel) as the commuters take alternate routes to reach the main streets of Desoto, Devonshire and Topanga. This will destroy the life style and standard of living that the current residents sought and acquired when they purchased their homes. These streets are in residential areas and are not suitable for the heavy traffic load this project would place on them.

De Long 3 – Response

As shown on Table 4.12.5 of the Draft EIR, the intersections of Canoga Avenue/Rinaldi Street and Canoga Avenue/Chatsworth Street would operate at acceptable levels (LOS A) during the A.M. and P.M. peak hours with occupancy of the project. Based on the LOS provided at the Canoga Avenue intersections, it is not anticipated that project-related trips would divert to local streets such as Variel Avenue or Independence Avenue. Also see Section 4.2.6 (Traffic 1 and 2 – Responses) and Appendix K of this document for additional discussion of project traffic distribution to the local street system.

De Long 4 – Comment

The traffic issues as well as the demands the project will place on the infrastructure of the City of Los Angeles, such as area schools, library and emergency facilities, requires that the proposed project be denied or, at a bare minimum, that it be significantly reduced in size and scope. In addition, if any development is approved for that area the traffic mitigation measures should include the requirement that it be connected to Desoto on the east, north of the 118 freeway and that this be a main point of entry and exit.

De Long 4 – Response

Impacts on schools, libraries and emergency facilities have all been addressed in the Draft EIR. Please see Sections 3.3.4 and 4.3.7 of this document regarding additional discussion of school and library services. Please see Sections 3.3.3, 4.2.4, and 4.2.5 of this document regarding additional discussion of emergency services. See also De Long 3 – Response of this document regarding traffic.

4.5.26 Carl & Janet Deierling

March 31, 2002

Deierling 1 –Comment

We moved to this Chatsworth community in 1980 because of the rural atmosphere. All the homes in the area are 1/3 acre and we anticipated that any new development in the area would continue to conform to this density. We were dismayed to learn that Deerlake has proposed a much higher density development north of us. We acknowledge the rights of others to use their property, but believe it should conform to the existing neighborhood.

For this reason we beseech you to reduce the proposed density so as to be similar to ours.

Deierling 1 –Response

See Section 4.2.7 (Development Issues 10 – Response) and Appendix L of this document.

Deierling 2 –Comment

We have also learned that the intended egress for Deerlake development is Canoga Ave. Canoga and Varial are the only streets going South from our tract. Neither of these streets is a through street, hence one must divert either east to Desoto or west to Topanga Canyon to continue south. Chatsworth, the most northerly street with access to Desoto is completely congested during rush hour, resulting in long traffic delays. I work in Woodland Hills and it takes me nearly as long to get to my office during rush hour as it does to get to Pasadena. I presently exit the tract via Canoga, but additional traffic on Canoga would severely limit access to that route.

For this reason, we beseech you to limit the egress to Deerlake to one of the through Avenues, either Desoto or Topanga Canyon.

Thank you for your consideration in this matter.

Deierling 2 –Response

As stated in Section 4.12 of the Draft EIR, traffic impacts would not be significant with implementation of recommended mitigation measures. Subsequent to the distribution of the Draft EIR, additional mitigation measures have been included (improvements at the Canoga Avenue/Chatsworth Street intersection) for traffic-related impacts (see Appendix E of this document) as well as an updated traffic study to analyze the revised project (see Appendix K of this document). Also see Section 4.2.6 (Traffic 1 & 2 – Responses) of this document.

See also Appendix N of this document regarding access to DeSoto Avenue.

4.5.27 Robert Dittmann

January 7, 2002

Dittmann 1 - Comment

I am writing to express my objection to the proposed Deerlake Ranch development in Chatsworth (Project No. 99-239(5)) for which you have scheduled a January 23 hearing.

The proposed project is located close to my home, and I am particularly concerned about the following:

Traffic on Chatsworth St and Independence. De Soto is too heavy now.

Dittman 1 - Response

As stated in Section 4.12 of the Draft EIR, traffic impacts would not be significant with implementation of recommended mitigation measures. Subsequent to the distribution of the Draft EIR, additional mitigation measures have been included (improvements at the Canoga Avenue/Chatsworth Street intersection) for traffic-related impacts (see Appendix E of this document)

4.0 Response to Written Comments

as well as an updated traffic study to analyze the revised project (see Appendix K of this document). Also see Section 4.2.6 (Traffic 1 & 2 - Responses) of this document.

Dittman 2 - Comment

In light of the significant adverse impact this project would have on my neighborhood and the lack of meaningful measures to alleviate that impact, I request that you not approve the project as currently presented. Any further consideration of the project should be conditioned on:

- *a substantial reduction in the size and scope of the project;*
- *a more meaningful proposal for mitigation by the applicant; and*
- *postponement of Commission recommendation in order to allow time for adequate public study and evaluation of the applicant's revised proposals.*

Dittman 2 - Response

Please see Section 4.5.5 (Belkin, L 3 - Response) of this document.

4.5.28 Diana Dixon-Davis

January 11, 2002

Dixon-Davis 1 - Comment

This letter is to dispute the finding of no effect on public schools and the public library as presented in these two sections of the above mentioned Draft EIR 4.10 Public Services Schools and 4.11 Public Services Libraries. Though the EIR does acknowledge a commutative negative effect on schools, it claims they are not serious enough to warrant mitigation measures.

The Deer Lake Ranch Project will have negative effects on the Chatsworth Library and all four of the public schools studied in the EIR. Please see the attached analysis as to why a negative declaration is incorrect in these two areas.

Though the developer claims that any negative effects will be mitigated by the payment of impact fees, the fees will not mitigate the negative effects on these services:

First, the library fee of \$626 is being paid to the Los Angeles County, but the Chatsworth Library is a City of Los Angeles facility.

Second, though the four Chatsworth Public schools are part of LAUSD, I have been informed that these fees will not be used to mitigate negative effects on Chatsworth schools (personal communication from LAUSD School Board Member Marlene Canter's aide).

Dixon-Davis 1 - Response

As stated in Section 4.11 of the Draft EIR, there would be no significant impact to libraries. See Section 4.1.2 (City Council 6 - Response) of this document for additional discussion of library impacts and mitigation.

The information provided in the Draft EIR regarding school capacity was provided by LAUSD through various written and telephone communication. Government Code Section 65996 provides for school impact mitigation. Please see Sections 3.3.4, 4.3.7 and 4.5.28 and Appendix J of this document for additional discussion of this issue.

Dixon-Davis 2 - Comment

Possible Solutions:

Pay library fee to the City of Los Angeles Library System not the County Library System

Provide land (several acres) for a small elementary school. Land, at this site, could be set aside for a bookmobile or a "mini-library" service module. The playground could also serve Fire, Rescue, and Police as a helicopter pad to mitigate the limited access for these other public service.

4.0 Response to Written Comments

Dixon-Davis 2 - Response

As stated in Section 4.11 of the Draft EIR, Los Angeles County requires that new residential subdivisions pay a library fee to ensure that new projects mitigate impacts to library services. As the project is located within unincorporated areas of the County, there is no legal mechanism to pay library fees to the City of Los Angeles, as the requirement is required by County ordinance. This would require an agreement between the County of Los Angeles and the City of Los Angeles and is not within the scope of this EIR. Further, improvements to or construction of library facilities is under the direction of the County of Los Angeles Public Library and City of Los Angeles and not within the scope of this EIR. However, commenter's suggestions will be forwarded on to the decision makers. See also Section 4.1.2 (City Council 6 – Response) of this document. The applicant has voluntarily agreed to contribute approximately \$125,000 directly to the Chatsworth Library.

The requirement to pay developer fees and the amount of fees are derived from state law. Government Code Section 65996 expressly states that payment of mitigation fees is the exclusive method of considering and mitigating project impacts on school facilities. State law states that payment of such fees is deemed to provide full and complete mitigation of school facility impacts, notwithstanding any other provisions of local or state laws. The funding provided through these fees would be used by LAUSD to fund new school facilities according to its own planning program. See Sections 3.3.4 and 4.3.8, and Appendix J of this document.

Dixon-Davis 3 - Comment

PUBLIC SERVICES SCHOOLS

As a demographic and education consultant I found the techniques for estimating capacity in the four local schools highly suspect. Basically, it ignored the existing situation in these schools and in the Los Angeles Unified School District (LAUSD).*

*The grudging acknowledgement of an eventual negative commutative effect of this and other development on the local public schools ignores the projected high levels of student population growth predicted for LAUSD in the next 5 years (Graph 1). [*Please see attached resume.]*

This technique is much like assuming that the 118 Freeway was empty and only had to be studied to see if this freeway could accommodate the current freeway users who live in Chatsworth and those added by Deer Lake Ranch; ignoring the thousands of cars contributed by the rest of Los Angeles; Simi Valley, Santa Clarita, and beyond who also have every right to use the freeway.

Dixon-Davis 3 - Response

Please see Dixon-Davis 1 – Response of this document.

Dixon-Davis 4 - Comment

SPACE PROJECTIONS BASED ON FLAWED ASSUMPTIONS: Though, technically, the 4 mentioned schools could currently accommodate the projected student population from Deer Lake Ranch. They can only do so by throwing out dozens of currently enrolled students. These four schools are part of LAUSD. According to LAUSD guidelines currently enrolled students have the right to stay in their school until graduation-not only at the elementary level, but through to the middle and high school level. Local residents can only enroll if enough of the current students (non-resident) leave. Since these two elementary schools have excellent academic reputations there is no anticipated departure of many of these non-resident students.

Dixon-Davis 4 - Response

Please see Dixon-Davis 1 – Response of this document. The local schools will not need to “throw out dozens” of currently enrolled students to accommodate the anticipated additional students from the Deerlake Ranch project.

4.0 Response to Written Comments

Dixon-Davis 5 - Comment

In addition, all four schools have been increasing enrollment almost every of the last 5 years. This implies that the resident population is growing and is putting more of its children into their local public schools. There has been a noticeable increase in elementary enrollment since the introduction of the new 20 students/1 teacher class size program for K-3. If the EIR school population projection is corrected for 2000 enrollment patterns as well as the policy of continuing non-resident student enrollment, Deer Lake Ranch will immediately produce a negative impact/shortage of 27 elementary seats.

If local enrollments continue to increase as they have the last 5 years (See graph 1 Table 2) there will be a shortage of 233 elementary seats (26 for local elementary students and all 208 seats projected needed for Deer Lake Ranch elementary students). At the secondary level, though Chatsworth High School can continue to accommodate local and Deer Lake Ranch projected enrollment, Lawrence M.S. will have a shortage of 330 seats for current students and all 121 of the projected Deer Lake Ranch students. (See Tables/Graphs) The EIR must be corrected in light of this current attendance policy, attendance patterns, and projected student enrollment growth.

Furthermore, LAUSD is very over-crowded. There is currently a shortage of school seats at all education levels. When students are told to go some other place—there is no place for them to go. Though LAUSD claims it will build itself out of this housing crisis, several major factors stand in their way.

- 1) Lack of funds- Proposition BB funds have been almost all used up with a projected plan deficit of \$600 million. The state requires a 50% percent local match to qualify for state school building funding. The likelihood of voter approval of another major LAUSD bond measure is very low.*
- 2) Lack of land- There is little undeveloped land anywhere in LAUSD. That which is available is often highly contaminated, industrial property. Other school sites often require condemnation of residential property which is difficult politically.*
- 3) Demographic Pressures—LAUSD enrollments will continue to grow at a high rate. LAUSD (2000) has 4.4 million people, with a very young age structure. The 2000 Census counted the population as 50% Hispanic, 11% African American, 27% White, and 12 % Asia/ Others. With the higher birth rates, and the high rate of family formation of our heavily immigrant population, we can anticipate far into the future continued and sustained high birth rates that will fill our schools with ever larger number of students.*

OPERATING CAPACITY VALUES ANTICIPATED TO DROP. Chatsworth Park Elementary and German Street Elementary Schools are almost fully enrolled (as of 2002). Lawrence Middle School and Chatsworth High School are just below their current capacity.

Operating capacities for LAUSD schools is recalculated every year. Operating capacity is a sum of the products of the number of classrooms per school, the composition of each classroom, and the maximum number of students allowed in each which changes year by year as new programs are started and stopped.

The 2000 (current capacities) are lower than the EIR's 1999 operating capacities because of several California Sated class size reduction programs (K-3 and 9th and 10th grade English and Math) where average class size is dropped from 35-45 down to 20 per classroom. There is the likelihood that these programs will be expanded. The number of special education classrooms is growing every year with class sizes of as few as 3-4 up to 10 students per classroom. The EIR must be corrected for these class size policy changes.

Many portable bungalows have been added at all four schools. The addition of more classrooms has reached logistical space limits at all four schools. Furthermore, the Rodriguez Consent Decree limits both the absolute enrollment size and dictates the minimum size of playground space that must be

4.0 Response to Written Comments

maintained. Though Rodriguez allowed more portables to be added to LAUSD schools to implement the initial StateK-3 Class Size Reduction Programs, it is not clear how many more bungalows will be allowed for growth purposes only. The EIR must account for this consent decree.

Once these corrections are made it will be obvious that the two mentioned elementary schools will quickly be over enrolled and forced to go multi-track year around (MTYR) in order to add additional student capacity. Year around schools are disliked by parents and will result in a decrease in local property values. MTYR schools are also associated with lower academic scores further negatively impacting the Chatsworth community.

Dixon-Davis 5 - Response

Please see Dixon-Davis 1 – Response of this document.

Dixon-Davis 6 - Comment

CHATSWORTH PARK ELEMENTARY SCHOOL'S SPECIAL PROBLEMS. Chatsworth Park Elementary School is especially impacted by this project because it can barely accommodate its current level of enrollment.

Chatsworth Park's main buildings are almost 70 years old. Its small playground cannot absorb more bungalows. Its auditorium is suitable for about 200-300(?) students. Bathroom and cafeteria facilities were designed for 200-300 students. Office and staff support facilities are sub-standard and also designed for a very small school, in a very different technological environment.

Dixon-Davis 6 - Response

As stated in Dixon Davis 2 – Response above regarding developer fees being used by LAUSD to fund school facilities, it is out of the scope of this EIR to determine improvements by LAUSD. However, the comment will be forwarded to the decision makers.

Dixon-Davis 7 - Comment

Since resident students do not receive transportation from LAUSD, and it is highly unlikely that elementary students will be able to walk from Deer Lake Ranch to Chatsworth Park Elementary, all students will have to be driven by their parents. Currently the traffic situation at Chatsworth Park Elementary is so dangerous and bad at the "F" level intersection of Topanga Canyon Blvd and Devonshire Street that the school qualifies for an unprecedented three crossing guards. Deer Lake ranch will only add to these negative conditions.

Dixon-Davis 7 - Response

As stated in Section 4.12 of the Draft EIR, traffic impacts would not be significant with implementation of recommended mitigation measures. Please see Sections 3.3.5 and 4.2.6, and Appendix K of this document for additional discussion of traffic impacts and mitigation measures.

Dixon-Davis 8 - Comment

A POSSIBLE SOLUTION: Though the developer will pay about \$13,000 per residence to LAUSD in school fees, I have learned that LAUSD will NOT USE THESE FUNDS TO MITIGATE IMPACTS ON THE LOCAL SCHOOLS. LAUSD will use these funds in other parts of the district-not in Chatsworth (personal communication from LAUSD School Board Member Marlene Canter's aide, Andrew W.) If the Deer Lake Ranch project were to provide land for a small elementary school/primary center) some of these transportation problems would be mitigated. This land could also be use for a bookmobile site, a helicopter pad for L.A. County Fire and Rescue, and L.A. County Police, etc. The county could also require school buses when the commute is deemed hazardous and/or when private automobiles are impossible for a school to accommodate.

Dixon-Davis 8 - Response

Please see Dixon-Davis 2 and 3 – Responses of this document.

4.0 Response to Written Comments

Dixon-Davis 9 - Comment

PUBLIC SERVICES-LIBRARIES

The Chatsworth Branch (CBLAPL) mentioned in the EIR is part of the L.A. City Library System. Yet the fees will be paid to the county and will not be available to mitigate the impacts on this library since it is not part of the L.A. County Library System. It is highly unlikely that the residents of this development will use a county library since the nearest county library is in Santa Clarita almost 18 miles away while the Chatsworth Branch of the LAPL which is only 2.5 miles south (on Canoga Avenue) from the southern boundary of Deer Lake Ranch.

Dixon-Davis 9 - Response

Please see Dixon-Davis 2 – Response of this document.

Dixon-Davis 10 - Comment

Furthermore, the current CBLAPL is extremely over crowded especially after school on public school days. There are usually no empty seats available between 3 p.m. and 6 p.m. because of the number of middle and high school students who use the library after school to study, do research, or a safe place to wait until parents can come and pick them up after work. Please speak to Mr. Bruce Seidman, CBLAPL Head Librarian, to confirm these details (818) 341-4276.

Dixon-Davis 10 - Response

This comment is out of the scope of the EIR. However, this comment will be forwarded to the decision makers.

Dixon-Davis 11 - Comment

Since transportation will not be provided for the future students living in Deer Lake Ranch most will either have a very long, steep and relatively dangerous walk to and from school, along busy highways/streets (Desoto Avenue, Canoga Avenue or Topanga Canyon Blvd., (State Highway Rte 27)) as well as needing to cross over or under the 118 freeway. Most will get to school by private automobile. Some teenagers can drive themselves, but the rest will need to wait for rides from their parents/friends. Many will wait at the Library.

The current Chatsworth Library will be torn down this year (2002) and will not reopen for 2-3 years. Even with an expanded facility, it is unlikely that it will be able to accommodate even the current demand level. The extra demands placed on this library by the Deer Lake Ranch development will only exasperate and already over-crowded and difficult situation.

Dixon-Davis 11 - Response

Please see Dixon-Davis 2 – Response of this document.

Dixon-Davis 12 - Comment

If true mitigation is to occur, the fees paid for library services should go to the Los Angeles Public Library System, and better yet, a bookmobile and site and/or an annex library should be provided for Deer Lake Ranch as a developer provided "turnkey" school and library site plus helicopter pad.

Dixon-Davis 12 - Response

Please see Dixon-Davis 2 – Response of this document.

4.5.29 Harvey Dlugatch

January 17, 2002

Dlugatch 1 - Comment

This letter is being sent in response to my being notified of the construction of some 484 homes of the Deerlake Ranch Development in Chatsworth (Project No. 99-239(5)). I am writing in opposition to this development for the following reasons:

4.0 Response to Written Comments

1. **TRAFFIC:** *There is no major ingress or egress from the project other than proceeding through present residential areas. Since 484 homes at two vehicles/home equals 1,000 vehicles, this is a lot of traffic for which there is no conceivable way of the present or any anticipated plan to handle. There will be major traffic jams in this neighborhood.*

Dlugatch 1 - Response

As stated in Section 4.12 of the Draft EIR, traffic impacts would not be significant with implementation of recommended mitigation measures. Subsequent to the distribution of the Draft EIR, additional mitigation measures have been included (improvements at the Canoga Avenuc/Chatsworth Street intersection) for traffic-related impacts (see Appendix E of this document) as well as an updated traffic study to analyze the revised project (see Appendix K of this document). Also see Section 4.2.6 (Traffic 1 & 2 – Responses) of this document.

Dlugatch 2 - Comment

The location of the project is in a high fire danger area. Any fire in this brush area is difficult to control and has a tendency to move rapidly. Should there be a fire in the hills surrounding the project there is no way for the project's residents to escape in a safe manner.

Dlugatch 2 - Response

As stated in Section 4.8 of the Draft EIR, impacts to fire protection services would not be significant. See Section 4.2.4 of this document for additional discussion of this issue.

Dlugatch 3 - Comment

Please also consider the dust, fumes and dangers associated with an increased traffic flow of that number.

Dlugatch 3 - Response

As stated in Section 4.2 of the Draft EIR, air quality impacts (including dust and CO hot spots), would not be significant with implementation of recommended mitigation measures. Please see Sections 4.2.3 (Noise/Dust 1 – Response) and 4.2.7 (Development Issues 8 – Response) of this document for additional discussion of this issue.

Dlugatch 4 - Comment

2. **ECOLOGICAL CONCERNS:** *I have lived on Independence Ave for the last 27 years. During that time it was extremely rare to notice raccoons, skunks or rattlesnakes in my neighborhood. Subsequent, to the development of the Porter Ranch area which is close by I have trapped numerous Raccoons, Skunks, snakes and Possums which as you know pose a threat of physical danger and disease. Now with 484 homes planned and further destruction of these animal's habitat I can anticipate even a further increase in numbers of the above animals causing problems with my domestic animals, my health and physical danger. Raccoons and skunks kill or injure without concern for animals or humans. I don't have to mention problems associated with rattlesnakes who are content to remain in the project area unless disturbed. Simply put, if you destroy the natural homes of skunks, rattlesnakes, skunks or possums they will migrate out of the area to neighboring homes (mine) or cause damage to the prospective project homeowners. What does the project developer have in mind as to a solution. I'll answer that one- Nothing.*

Dlugatch 4 - Response

Section 4.3 of the Draft EIR included a discussion of impacts upon sensitive species, nesting birds and raptors, and wildlife movement. Impacts to biological resources would not be significant with implementation of recommended mitigation measures. Please see also Section 4.2.1 of this document for additional discussion of this issue. Increased potential concern for public safety as a result of an incremental extension of the urban-wildland interface is not considered to be a significant impact.

4.0 Response to Written Comments

Dlugatch 5 - Comment

3. POLICE FORCE AND EMERGENCY SERVICES: 484 homes translate into approximately 2,000 new residents in the area. There will be increased crime and emergency medical issues for which at the present time there are not enough facilities or equipment for the proper handling of emergencies or enforcement.

I am deeply concerned for the above reasons and more that this proposed development constitutes more of a danger to the present ecological system and safety of the area than benefits the new homeowners or developers. The danger of fire in this brush area is extremely high and constitutes a distinct danger to the new purchasers of homes in the project.

Should you require any further comments from me feel free to contact me at the above number.

Dlugatch 5 - Response

As stated in Section 4.9 of the Draft EIR, annual crime statistics indicate that the areas, including that of the project, served by the Lost Hills/Malibu Station have a crime rate below the countywide average. Implementation of the project would serve to increase the existing funding mechanisms for any additional officers required to serve the project area. Impacts would not be significant with implementation of recommended mitigation measures. Please see Sections 3.3.3 and 4.2.5 of this document for additional discussion of this issue.

Please see Dlugatch 2 – Response of this document regarding impacts to fire protection services.

4.5.30 Margaret Dolan

Dolan 1 – Comment

I am writing to express my concerns on the Proposed Deerlake Ranch development in Chatsworth (Project # 99-239). I live in the area with my family. We are grateful [sic] to live in our working class neighborhood but fear that all of this could end is very upsetting. We strive for a good area and we seem to achieve it. To add 484 new homes not only affect our traffic, environment, our well being (building time 5 years of noise) it would affect our schools.

There needs to be accurate studys [sic] done. a [sic] huge reduction in size. We need to keep our area safe and clean.

Dolan 1 – Response

As stated in Section 4.12 of the Draft EIR, traffic impacts would not be significant with implementation of recommended mitigation measures. Please see Sections 3.3.5 and 4.2.6, and Appendix K of this document for additional discussion of traffic impacts and mitigation measures.

Please see Section 1.1 of this document regarding the adequacy of the EIR.

Subsequent to distribution of the Draft EIR, the project has been reduced to include 388 units. Please see Sections 2.0 and Appendix Q of this document regarding reduction of the project. See also Section 4.2.7 (Development Issues 10 – Response) and Appendix L of this document regarding project density.

4.5.31 Vincent Dyer, Architect

March 27, 2002

Dyer 1 –Comment

I am a licensed architect in the state of California (C12762) and have been a practicing architect for over twenty years. I have a prolific business and continue to produce new commercial and industrial projects throughout Los Angeles and Ventura Counties. I also happen to own and live in a home that backs up to Canoga Avenue just north of Chatsworth Street. I'm concerned.

4.0 Response to Written Comments

I have reviewed the Draft EIR prepared by HDR/Urban Vision and have several observations and comments. As with most EIR's the preparation is at the request of the applicant, in this case, Presidio Chatsworth Partners. I have worked with several of the firms cited in the consultant organization list and all are reputable and professional firms. They are however charged with one goal in the preparation of their materials and analysis and that is to paint this proposed project in the most favorable light. EIR's are notable for the inclusion of mass quantities of disparate statistics with the end result and conclusions to be derived from a synthesis of this comparative information. We all know how easy it is to manipulate statistics and to paraphrase Harry Truman there is no higher form of deception than statistics.

As required by CEQA Guidelines the EIR addresses an environmentally superior alternative and in this case alternate 1 "no project" and alternate 3 a project of 171 units were analyzed. The inclusion of alternate 2, "525 merged residential units" is more of a threat, than a realistic alternative. The applicant assumes that if we do not accept the project as proposed he will revert back to a higher density. Or perhaps we will view the proposed development as the superior alternative. We are not that naïve.

The inclusion and analysis of alternate 3 is interesting in that it has been determined to be infeasible due to economic factors, land acquisition cost and market. 171 home sites are too few to provide a reasonable return on investment, but 484 units are just right. I am sure that a number substantially less than 484 will still bring a reasonable return and the commissioners should be entitled to know what that number is and how it was derived. Since the EIR brings up economics I think a full disclosure of projected costs and profits should be provided to the Commission for inclusion in their review.

Dyer 1 –Response

The comment has been received and noted. The current project proposes 388 units, a lower number than proposed in the Draft EIR, and is further discussed in Section 2.0 and Appendix Q of this document.

Dyer 2 –Comment

Traffic analysis is always a part of environmental review and it is a sensitive and emotional issue for impacted areas and residents. The traffic report prepared by Lindscott, Law and Greenspan is thorough and comprehensive, but as is typical of this type of documentation and EIR's in general, it is the information that is not included that tells the real story. Daily trip projections and future impact on existing intersections and roadways can often be misleading in that real world conditions are not factored in, only car counts. The existing condition of Canoga Avenue and Chatsworth Streets has not been adequately addressed in the EIR traffic report or the mitigation measures. I suspect the reason for that is that these streets lie within the City of Los Angeles and outside the influence of the County and the developer. It is essential that the Commission on their site visit note the present width of Canoga both immediately north and south of Chatsworth Street and the entire length of Chatsworth between DeSoto and Topanga Canyon. The full design width of Canoga occurs along a portion between Tulsa and Rinaldi, a result of the small single-family development to the west of Canoga. The owners of the several residences that front onto Canoga adjacent to Chatsworth Street have chosen not to expand or remodel their homes to the extent that full design width street improvements would be required by the city as part of the construction permit approval. That is their choice, not the county's and not the developer of the proposed project. How does the developer expect these necessary improvements to occur without assistance and cooperation from the City of Los Angeles in exercising the right to the street widening easements? Has the developer approached the city for assistance? Without a full design width for Canoga, including necessary turn pockets, this intersection will experience major gridlock during peak hours. It should be noted that the northern

4.0 Response to Written Comments

portion of Canoga, from Celtic to the project could remain as a two-lane road as traffic there would be at a minimum and thus a small vestige of local street environment could be preserved. Please also note that East / West traffic will increase dramatically in Chatsworth also just a two-lane road for much of its length between DeSoto and Topanga. Rinaldi is also of concern, as it will soon connect from the east to DeSoto. Great pressure has occurred in past to connect the western section of Rinaldi to Desoto. That battle has been completed and no connection is going to be allowed. Thus forcing all traffic to the intersection of Chatsworth and Canoga. The essential realignment and reconstruction of the 118 / Topanga on and off ramps is within Caltrans jurisdiction, not the county. The developer should demonstrate a realistic committed timetable for these improvements with the written blessing and approval of Caltrans.

Dyer 2 –Response

As stated in Section 4.12 of the Draft EIR, traffic impacts would not be significant with implementation of recommended mitigation measures. As shown on Table 4.12.5 of the Draft EIR, the intersections of Canoga Avenue/Rinaldi Street and Canoga Avenue/Chatsworth Street would operate at acceptable levels (LOS A) during the A.M. and P.M. peak hours with occupancy of the project. Based on the LOS provided at the Canoga Avenue intersections, it is not anticipated that project-related trips would divert to local streets such as Variel Avenue or Independence Avenue. Subsequent to the distribution of the Draft EIR, additional mitigation measures have been included (improvements at the Canoga Avenue/Chatsworth Street intersection) for traffic-related impacts (see Appendix E of this document) as well as an updated traffic study to analyze the revised project (see Appendix K of this document). Also see Section 4.2.6 (Traffic 1 & 2 – Responses) of this document. The traffic study has been coordinated by the County with the City of Los Angeles.

Dyer 3 –Comment

An ancillary issue affecting Canoga is the rebuilding of the entire wastewater sewer line from the project boundary to some point south of Chatsworth Street. Again in the City of Los Angeles. If this work to occur during the initial stages it could conflict with the proposed grading, as Canoga is proposed to be the access point for most construction vehicles. One can easily imagine the parade of dirt haulers and D-8s making their way to and from the site traversing this narrow street with 10' wide trench down the middle. In spite of the developers insistence that grading equipment will be kept on the site during earth moving operations there is no definition of that time frame. Reference is made to Phasing of project, does that mean grading also? Will equipment remain on site for several years? The developer also states that earth balance if 1:1 will be achieved on site. I suggest that the Commission request a preliminary grading plan with proposed finish elevations for the entire project.

Dyer 3 –Response

As discussed in Sections 4.2 and 4.7 of the Draft EIR, the proposed project will be graded in one phase and unit construction will be phased over multiple years to meet market demand. . Any offsite construction will be completed in conformance with County and City of Los Angeles requirements. Please see Sections 4.2.3 4.2.7 (Development Issues 8 – Response) of this document for additional discussion of these issues.

Preliminary grading and the approximate finished elevations of lots and streets is included in the VTTM (see Appendix C.1 of this document), and has been reviewed by the County Department of Public Works.

Dyer 4 –Comment

The site line studies indicate a finished surface elevation if 1300 to 1330 for the new residence pads immediately adjacent to the existing Twin Lakes community. I could find no elevation information relating to the main project. Those proposed finish elevations are critical to determine site line visibility to the northern border pads and whether the existing ridgelines will be truly unaffected.

4.0 Response to Written Comments

Dyer 4 –Response

See Appendix C.1 of this document regarding the preliminary grading and the approximate finished elevations of lots and streets included in the VTTM. Section 4.1 of the DEIR discusses potential impacts to visual resources. No significant impact will result from the proposed project following implementation of mitigation measures.

Dyer 5 –Comment

I am also concerned that the archaeological analysis has not more specifically addressed the possibility of Native American artifacts and burial grounds. Chumash and Fernandeno tribes were known to have populated many areas of the north valley. The two investigations revealed some evidence, but all was dismissed as insignificant.

Dyer 5 –Response

Please see Section 4.4 and Appendix I of the Draft EIR for discussion of impacts to cultural resources.

Dyer 6 –Comment

Mitigation measures suggested for concerns raised have addressed the easy issues but have ignored the difficult (read costly or controversial) ones.

I fully expect this project to be approved in some form. It is after all an America of property rights and entrepreneurial spirit. Fervent NIMBYism should be tempered with reasoned analysis and acceptance of certain controlled levels of reasonable development. That is not what the Commission is reviewing here. This project is simply too large for the area considered and the access to it. I suggest the following:

- 1. The developer should design an access road to the east from Desoto to the proposed development and not use Canoga as an access roadway or enter into a written agreement with the city of Los Angeles outlining the extent and time frame for necessary street widening and intersection improvements to Canoga/Chatsworth and Chatsworth/Desoto.*
- 2. That proposed bridges be constructed at the outset of grading in order to provide necessary access for construction vehicles from Topanga Canyon.*
- 3. A Native American Monitor in addition to the archaeologist should be on site during grading and excavation work.*
- 4. All grading work for the entire project shall be completed in Phase I to minimize the impact of extended construction (perhaps over a 4 year period).*
- 5. The project shall be limited to 250 units with a minimum lot size of 10,000 sf and in order to provide a greater sense of open space a minimum of 20' side yards and 40' front yard setbacks.*
- 6. The developer shall endeavor to assist financially in the renovation and redevelopment of the deteriorating multi-family housing along Canoga between Devonshire and Chatsworth Street.*
- 7. The developer shall redesign the project to include equestrian and hiking trails that flow through the project, not just on the perimeter.*

I consider these items but a few that should be considered by the Commission. I, as a single voice do not have the resources or the time to examine and analyze each segment of this project. It is perhaps not ill conceived in its entirety but truly is far greater in scope that [sic] what this area and infrastructure can support. I stand adamantly opposed to the project as presented and would hope the Commission will take note of these significant issues and require the developer to take responsibility for the impact of this project on the existing community.

Dyer 6 –Response

Comments noted. However as stated in Section 4.12 of the Draft EIR, traffic impacts would not be significant with implementation of recommended mitigation measures. Please see Sections 3.3.5

4.0 Response to Written Comments

and 4.2.6, and Appendix K of this document for additional discussion of traffic impacts and mitigation measures.

As stated in Section 4.4 of the Draft EIR, impacts to cultural resources would not be significant. However, a mitigation measure requiring an archaeological monitor was included to ensure impacts would remain below a level of significance.

As stated in Section 4.5 of the Draft EIR, impacts associated with grading activities would not be significant with implementation of recommended mitigation measures. Further, grading of the entire site at one time would create more impacts, as graded areas would be subject to wind exposure and water erosion. Please see Sections 4.2.3 (Noise/Dust 1 -- Response) and 4.2.7 (Development Issues 8 -- Response) of this document for further discussion of construction impacts and mitigation measures.

Most of the suggestions of the commenter have been considered in the revised project design. The project has been revised to reduce the total number of residential units from 484 to 388. This includes 155 minimum 15,000 square foot estate lots, of which 55 would be equestrian lots. Please see Section 2.0 of this document for further discussion of this issue.

It is out of the scope of this project to assist in the renovation and redevelopment of existing multi-family units outside of the project boundaries.

The commenter's opposition to the project is noted and will be forwarded to the decision makers.

4.5.32 Alan and Lori Edwards

April 3, 2002

Edwards 1 – Comment

I had just received, [sic] the information about the "Deerlake Project." Its [sic] a shame that the future of our invironment [sic], especially close to home, focuses on progress, (which I am also in favor, to a point) and having no thought of the homes, people, schools, streets, and most important, the love of the surroundings. Horses, mountains, the lack of traffic, which made all of us move to this area, and our Environmant [sic]...if this project takes affect [sic] I hope all involved will take in account, all of these questions, and come to a solution that keeps chatsworth [sic] what it always was, a tranquil place to live full and healthy lives..

Thank you for you're [sic] time.

Edwards 1 – Response

The commenter's opposition to the project is noted and will be forwarded to the decision makers. No specific comment to the adequacy of the DEIR is provided.

4.5.33 Diane Embree

January 7, 2002

Embree 1 – Comment

As a resident of the Twin Lakes area of Chatsworth, I am extremely concerned about the impact the proposed Deer Lake Ranch development will have on my community.

Whoever conducted the traffic study obviously didn't monitor the area during normal business days. I leave my house anywhere from 7:30am-8:30am am Monday through Friday. Other than during school holidays, the intersection at Topanga Canyon and the 118 freeway is a complete mess. Cars exiting the westbound freeway completely block the intersection; oftentimes Twin Lakes residents have to wait for several traffic light changes before getting through. The intersection can't handle the traffic that currently exists. How will it handle more? Even if Canoga is opened, people will use Topanga for freeway access.

4.0 Response to Written Comments

Embree 1 - Response

As stated in Section 4.12 of the Draft EIR, traffic impacts would not be significant with implementation of recommended mitigation measures. Please see Section 4.2.6 (Traffic 2 – Response) and Appendix K of this document for additional discussion of traffic impacts and mitigation measures.

Embree 2 – Comment

While traffic is a major concern, I am also very upset about the impact Deer Lake Ranch will have on the environment and health of nearby residents. One of the last areas of unspoiled, open land will disappear. Many wild animals will be killed or displaced. And last, but certainly not least, our health will be put in jeopardy. This area has very strong winds for at least several months of the year. The amount of dust that will be generated will certainly cause respiratory problems for residents of all of Chatsworth- not only Twin Lakes.

Embree 2 - Response

Section 4.3 of the Draft EIR included a discussion of impacts upon sensitive species, nesting birds and raptors, and wildlife movement. Impacts to biological resources would not be significant with implementation of recommended mitigation measures. Please see Section 4.2.1 and Appendix F of this document for additional discussion of biological resources.

As discussed in Section 4.2 of the Draft EIR, no significant dust impact would occur from the project with implementation of recommended mitigation measures. Please refer to Section 4.2.3 of this document for additional discussion of impacts and mitigation.

Embree 3 – Comment

I understand that developers want to make money and that the county and city also benefit financially. But at some point someone has to draw the line and say, "enough is enough." Please save this on last area and protect the people who already live nearby!

Embree 3 - Response

The comment has been received and noted. No additional response is required.

4.5.34 Jerry England

January 7, 2002/January 10, 2002 (e-mail)/January 17, 2002 (e-mail)/April 2, 2002 (to type) (e-mail)/April 4, 2002 (to type) (e-mail)/April 11, 2002 (to type) (e-mail)/April 24, 2002 (e-mail)/May 25, 2002 (e-mail)/June 2, 2002 (e-mail)

England 1 – Comment

I would like you to consider the following concerns I have about the proposed Chatsworth Ridge Estates development:

I would like to begin by telling you that the EIR appears to be flawed incomplete, and inaccurate. It is clear that the consultants were hired by and work for the developer. I would like to see the county investigate areas that are flawed and unrealistic.

England 1 – Response

Please see Section 1.1 of this document regarding the adequacy of the Draft EIR.

England 2 – Comment

Cultural Conflict

Chatsworth has an [sic] large equestrian culture that has been under attack from corrupt politicians and greedy developers whose only interest is a quick buck. What they leave in their path is a conflict between two cultures. Those two cultures are a Rural Equine Culture and a Suburban Culture.

4.0 Response to Written Comments

The new comers are always the Suburban Culture and they have little or no knowledge of the existing Rural Equine Culture. The result of this clash of cultures is a constant harassment, whether intended or not, of the Rural Equine Culture from the Suburban Culture.

We think some of the harassment begins because of a lack of knowledge or understanding, but it escalates once the Suburban Culture comes to discover the unpleasant aspects of living in a rural community filled with livestock. e.g., flies, dust, noise, manure, etc.

The culture that suffers most is the Rural Equine Culture. Horses are flight animals that respond to a frightening situation by running from it. Equestrians are constantly on the defense from speeding vehicles, leaf blowers, chain saws, car alarms, automatic sprinklers, barking dogs, bouncing balls, tractors, noisy machinery, and a few dozen other things we've forgotten mention. We have several good friends that have been injured because of thoughtless members of the Suburban Culture. Sometimes they will cause noise and commotion just to see if they can get a reaction out of horses. Last year a truck driver jammed on his jake breaks to see if a horse would react. When the lady rider was dumped and the horse fled into busy traffic on Topanga Canyon Boulevard the trucker made a hasty retreat.

Today we are forced to ride several blocks through a mixture of homes owned by both cultures and never really feel safe until we reach the safety of Santa Susana Mountains. This proposed development will extend our route through several additional blocks of non horsekeeping homes. That means we can expect to be harassed from now on by folks who are annoyed because we are forced to ride through their neighborhood. Keep in mind that for over two hundred years, horsemen have roamed over the trails this project will eliminate.

A good compromise would be to require the developer to make at least fifty percent of the project horsekeeping homes.

At the very least we would ask that the county require the developer to install signs warning truck drivers not to use jake brakes adjacent to equestrian trails. Also, every horse crossing on any street needs to have a traffic light or stop sign depending on the volume of traffic.

The developer has promised to build and improve equestrian trails in and around the subdivision. We request that the county require the developer to post bonds for such trails so that our community may complete them if the developer fails to do so.

England 2 – Response

The commenter's concerns regarding conflicts between the "equestrian and suburban culture" are noted. However, the project includes a trail system to be dedicated to the County of Los Angeles (see Section 2.0 of this document). Further, additional mitigation measures have been included for traffic-related impacts (see Appendix E of this document). Please see Section 4.2.8 (Non-traffic 3 – Response) and Appendix D of this document regarding compliance with mitigation measures.

England 3 – Comment

Traffic Issues on Canoga Avenue

The developer says less than one third of the 1200 to 1500+ automobiles the project will generate will use Canoga Avenue. The rest, they say, will use Topanga Canyon Boulevard. That is an absolutely ridiculous statement. If I lived there and had a choice between Topanga Canyon Boulevard with four traffic signals between my home and Devonshire Street or Canoga Avenue with one signal between my home and Devonshire Street it would be no contest. I would use Canoga. The area south of this project, in the City of Los Angeles, already has a serious traffic congestion problem. There are two private schools just north of Chatsworth Street between Canoga and De Soto that generate 1000+ daily trips by people who do not live in our neighborhood. This project will double or triple the congestion.

4.0 Response to Written Comments

The developer admitted to doing his traffic study during a school holiday which greatly alters the results.

Speeding traffic on Canoga is another concern. Canoga Avenue has no houses fronting it between Rinaldi and the 118 freeway, so drivers feel comfortable racing downhill at breakneck speeds. The area of Canoga Avenue also has a bridle path that acts as a collector path to channel equine traffic into the nearby mountains.

At the very least you must require the developer to post signs demanding that trucks not to use truck air brakes (jake brakes) on Canoga, you must also require them to post the speed limit at 25mph on Canoga, you must require the developer to install an equestrian friendly four-way traffic signal at the intersection of Canoga and Rinaldi, and stop signs at each street between Rinaldi and the 118 freeway. Just south of the freeway overpass there needs to be an equestrian-activated light so riders can safely cross the street to enter the park. Also, the bridle path, which the builder proposes to extend under the freeway needs to have an opening so a rider can get out to cross the street there. There also needs to be adequate horse crossing signs at all road crossings throughout the project.

England 3 – Response

Please see Sections 4.2.6 and 4.4 (ETI 12 – Response) of this document concerning traffic issues.

England 4 – Comment

Wildlife Issues

I have enjoyed watching a huge variety of birds, reptiles and mammals that pass through or live on and around the proposed development site. I have seen mountain lions, bobcats, deer, coyotes, rabbits, squirrels, raccoons, quail, dozens of species of song birds, hawks, owls, and golden eagles on the project. The developer's consultant has only identified a few of these animals and does not make realistic recommendations to protect them and their environment.

England 4 – Response

A faunal compendium, including species observed or expected to occur on or in the immediate vicinity of the site is included in the Draft EIR (Appendix G). That list includes reported observations of sharp-shinned, Cooper's, red-shouldered, and red-tailed hawks, and of great horned owl. Golden eagle was inadvertently omitted from that list, however. Mountain lion and bobcat are also included as expected species, and mule deer is included as an observed species. Mitigation is included to ensure impacts would not be significant. Please see Section 4.2.1 and Appendices D and F for further discussion of biological impacts and mitigation.

England 5 – Comment

We are appalled at the developers plan to collect all storm water into the streets of the proposed project then to direct that dirty water into the pristine Devil's Canyon. I want to see a chemical analysis of storm water in other subdivisions. I am sure you will find petroleum, asbestos, pesticides, detergent, and many other harmful ingredients that cannot be filtered out without extraordinary means. The developer must provide scientific data that proves he can protect our wildlife. Please don't let this developer kill these beautiful animals just so they can make a few extra bucks. All storm water needs to be collected in pipes and carried out of the wildlife corridor.

England 5 – Response

Please see Section 4.2.2 (Urban Runoff 1 – Response) and Appendix I of this document for discussion of potential water quality impacts.

England 6 – Comment

Environment

4.0 Response to Written Comments

The developer promises to dedicate some land to the Santa Monica Mountain Conservancy. What assurance is there that this dedication will occur? What guarantee is there that the conservancy won't trade that land off for something better in the future?

England 6 – Response

The applicant has agreed to dedicate the 160-acre conservation area to the Santa Monica Mountains Conservancy, and this requirement will be made a condition of project approval.

England 7 – Comment

The developer is going to tear out areas of coastal sage and mature oaks. The tiny (15-gallon) proposed replacement saplings are inadequate compensation for this destruction. The developer should plant replacement trees that are substantially larger and more mature.

England 7 – Response

Replacement of oak trees would be per the requirements of the County of Los Angeles. As stated in Appendix H of the Draft EIR, replacement tree shall be properly maintained for a minimum period of two years and replaced by the project developer if fatality occurs during that period. See Section 4.2.1 and Appendices F.1 and F.3 of this document for further discussion of oak tree mitigation.

England 8 – Comment

The extensive paving inside the project will result in ambient heat gain, further aggravated by the removal of mature plants. How does the developer propose to mitigate this effect?

England 8 – Response

Please see Section 4.2.7 (Development Issues 3 – Response) to this document.

England 9 – Comment

Construction Period

Construction will generate dust, fumes, noise, and runoff in our neighborhood for up to five years. There is no enforcement mechanism to ensure either containment of these effects or the developer's compliance with related ordinances and their own proposed measures. There needs to be more stringent limits on construction activity, a hot line for complaints, penalties for noncompliance, and public accountability.

England 9 – Response

As discussed in Sections 4.2 and 4.7 of the Draft EIR, no significant noise or dust impact would occur from the project with implementation of recommended mitigation measures. Please see Sections 4.2.3 (Noise/Dust 1 – Response) and 4.2.7 (Development Issues 8 – Response) of this document for additional discussion of impacts and mitigation.

See also Sections 4.2.2 and 4.4.2 (CLPA 4 – Response), and Appendices H and I of this document regarding urban runoff.

See Appendices D and E of this document regarding compliance with mitigation and conditions for the project.

England 10 – Comment

For 3 to 5 years many pieces of noisy construction machinery will be operating at the development site. The developer has not committed to limits on numbers of simultaneous machine operations, on the use of state-of-the-art noise shielding and muffling devices, or on measured noise limits. We want a way to insure that we won't be assaulted in our homes by all this noise.

England 10 – Response

Please see England 9 – Response of this document.

England 11 – Comment

Construction activity will require thousands upon thousands of truckloads of building and road materials to pass through our streets, including right past an elementary school, middle school and a major equestrian collector trail. There is inadequate control over delivery times, routes and frequency. These huge vehicles present not just an inconvenience but a hazard to local school children, residents, and equestrians. The developer should prepare a comprehensive plan to alleviate the effects of so much heavy truck traffic on our neighborhood and give us a chance to provide input to that plan before it is finalized. The developer must be required to post signs advising construction workers that the use of truck air brakes (jake brakes) around bridle paths is unacceptable and can be dangerous to equestrians and their horses.

The developer asserts that construction vehicles will avoid "peak travel periods" and parking on "heavily traveled roadways." These terms are vague and undefined, giving us no protection, recourse or opportunity to evaluate the conditions of the construction that will overwhelm our neighborhood. There is no assurance that our residential side streets will have construction vehicles parked on them.

There is no protection against noisy or reckless driving by construction employees and subcontractors commuting to the project site on our local streets. You should require a specific plan approved by the neighbors and have enforcement mechanisms and penalties for noncompliance.

England 11 – Response

Please see Section 4.2.7 (Development Issues 8 – Response) of this document.

England 12 – Comment

Police and Fire Issues

The nearest LA County Sheriff's station is 40 minutes away in Lost Hills. There is already a serious criminal element in the remote areas around this project. I refer to evidence of teenage drinking, drug use, trash dumping, dumping and burning stolen cars, dumping human bodies, illegal campers with campfires and nudity, paint ball shooters, illegal off-road vehicles, and petty theft. Looking at a projected 5-year period of construction activity which brings in dozens of unknown folks into our neighborhood and no police. I can promise a significant increase in crime in my community. You need to make sure a Sheriff's substation is in place before construction is allowed to commence on this project.

England 12 – Response

As stated in Section 4.9 of the Draft EIR, annual crime statistics indicate that the areas, including the project, served by the Lost Hills/Malibu Station have a crime rate below the countywide average. Implementation of the project would serve to increase the existing funding mechanisms for any additional officers required to serve the project area. Please see Sections 3.3.3 and 4.2.5 for additional discussion of this issue.

England 13 – Comment

In addition, you need to convince me and my neighbors that the proposed project will have adequate fire protection from the present County Fire Station which 20 minutes away in Lake Manor. If the proposed project burns, our homes will be next.

England 13 – Response

As stated in Section 4.8 of the Draft EIR, the County Fire Department has indicated that the level of staff under these circumstances is adequate to meet fire suppression and emergency medical needs to the project and that no additional staff or service would be required. Please see Section 4.2.4 of this document for additional discussion of this issue.

4.0 Response to Written Comments

England 14 – Comment

The county is very aware of illegal campers all around the project that cannot be removed because of a present hands-off policy from the LAPD. You must require this developer to provide a safe non-combustible camping area complete with toilets and showers to help protect our neighborhood as well as he proposed new homes in this mountain fire district.

England 14 – Response

There is no requirement to provide camping areas as part of the project. However, this comment will be forwarded to the decision makers.

England 15 – Comment

Schools

All of the public and private schools in Chatsworth are at maximum capacity. You must require a new school to be built for this project. The statistics provided by the developer include local resident students and do not take into account students who are bused in (PWT students) and are therefore permanent (even though non-resident) students. The enrollment statistics in the EIR does not match the actual enrollment at the local schools.

England 15 – Response

As stated in Section 4.10 of the Draft EIR, impacts to schools would not be significant with implementation of recommended mitigation measures. Please see Sections 3.3.4, 4.3.7 and 4.5.28, and Appendix J of this document for additional discussion of this issue.

England 16 – Comment

Mitigation:

I would like to make two recommendations to mitigate some of the previously mentioned concerns. To help the equestrian issues and to help Chatsworth maintain its rural equine heritage you must require this developer to build at least 50 percent of the new homes so that they are zoned for horses.

England 16 – Response

Please see England 2 – Response of this document. The project has been redesigned to accommodate greater equestrian uses.

England 17 – Comment

The best way to mitigate traffic and school concerns and the general impact on our rural neighborhood is to cut the density in half and allow just 242 homes, not a ridiculous 484. After all, these are not the affordable houses this state is crying for, but rather expensive homes target at the top on percent of our population.

England 17 – Response

As stated in the Draft EIR, implementation of the recommended mitigation measures would reduce traffic and school impacts associated with the project to less than significant. Thus, the measures outlined by the commenter are not required.

England 18 – Comment

Please be advised that this developer and his engineer have promised our equestrian community (including ETI Corral 54 and Chatsworth ECHO, Inc.) that they will keep all equestrian trails and bridle paths open and safe during the entire construction period. They estimate that to be 5 years in a favorable economy.

Because this developer was honest enough to alert us to the fact that they intend to sell the project once the Tentative Map is approved we would like to see this as a Map Condition.

4.0 Response to Written Comments

Our community is aware that there are other projects in Los Angeles County that had map conditions to build and keep trails open, but the developer failed to fulfill his obligation. Now the only recourse for that equine community is to sue the developer. It's a shame the county didn't help them.

England 18 – Response

Comment noted. Please see Appendices D and E of this document regarding mitigation and Draft Conditions of Approval for the project.

England 19 – Comment

We just became aware of a document titled Biological Resources Assessment of the Proposed Santa Susana Mountains/Simi Hills Significant Ecological Area which includes existing SEA 13, 14, 20, 21, 63, 64.

The document recommends limiting development densities to one residential unit per ten acre parcel and goes on to discuss limiting grading, fencing, and other habitat disturbances.

You may download and view this document at http://planning.co.la.ca.us/gpd_SantaSusanaMountains.pdf

What we would like to know is – why is the County considering a 484 home residential project (Chatsworth Ridge Estates) in this area? This huge proposed development would allow grading to completely strip habitat off dwelling pads, and redirect contaminated storm water into Devils Canyon which is protected by the SEA.

Could you please address this document at the Planning Commission hearing on January 26, 2002? The project is identified as Project # 99-239(5).

England 19 – Response

Please see Section 4.4.1 (C ECHO 2 – Response) of this document.

England 20 – Comment

Because the above mentioned project is clearly within the 'sphere of influence' of the City of Los Angeles we would also request that you become aware of the Cities [sic] General Plan. Specifically, we that you look at the conservation element at http://www.ci.la.ca.us/pln/General_Plan.htm

You will see the City of Los Angeles proposes to protect and keep its last remaining animal keeping areas:

Objective: retain, to the extent feasible, the last remaining agricultural features of the city as part of the city's heritage and economy.

Policy: continue to encourage the retention of parcels in agricultural and low density land use and zoning categories that will encourage their retention in agricultural and related uses.

England 20 – Response

Please see Section 4.4.1 (C ECHO 1 – Response) of this document. There are no current agricultural land uses on the project site.

England 21 – Comment

We would like you to consider supporting this conservation effort to help us extend horsekeeping into the County rather than to allow us to be sealed-off by suburban development. Suburban and Rural Cultures are always in conflict with one another.

England 21 – Response

Please see England 2 – Response of this document. Equestrian uses will be allowed within the project site.

4.0 Response to Written Comments

4.5.35 Wayne and Jan Evanson

January 9, 2002

Evanson 1 – Comment

We would respectfully urge you to personally evaluate the EIR study for the Deerlake Development with respect to:

Devils Canyon:

The impact on Devils Canyon with regards to water runoff and drainage. We are very concerned that this beautiful canyon will be destroyed. We believe this EIR is inadequate! Please look further for the truth!

Evanson 1 – Response

As stated in Section 4.6 of the Draft EIR, impacts to hydrology and water quality would not be significant with implementation of recommended mitigation measures. Please see Section 4.2.2 (Urban Runoff 1 – Response) and Appendix I of this document.

Please see Section 4.4 (CLPA 2 – Response) of this document regarding the accuracy of the EIR.

Evanson 2 – Comment

Traffic:

The Development will contribute to the gridlock of traffic, which already exists in Chatsworth. The city has already graded at least four intersections an "F" already! We can't even pull out of our driveways in the morning as it is.

Evanson 2 – Response

As stated in Section 4.12 of the Draft EIR, traffic impacts would not be significant with implementation of recommended mitigation measures. Please see Sections 3.3.5 and 4.2.6, and Appendix K of this document for additional discussion of traffic impacts and mitigation measures.

Evanson 3 – Comment

This EIR has many faults, Please review it further, we are not Land Planning specialists but we can see the negative impact this will have on OUR community.

Evanson 3 – Response

Please see Section 4.4 (CLPA 2 – Response) of this document regarding the accuracy of the EIR. The commenter's opposition to the project is noted.

4.5.36 Casiomin Fileh and Anne Joelek

March 8, 2002

Fileh and Joelek 1 – Comment

I am writing to express my objection to the proposed Deerlake Ranch development in Chatsworth (Project No. 99-239(5)) for which you have continued public hearing to April 10.

The proposed project is located close to my home, and I am particularly concerned about the following:

- 1. Traffic on Canoga – Chatsworth St. which is already crowded with Siena Canyon and Chatsworth Hills academy traffic.*
- 2. Number of homes proposed*
- 3. Use of our city services – sewers schools – streets – maintenance.*

4.0 Response to Written Comments

Fileh and Joelek 1 – Response

As stated in Section 4.12 of the Draft EIR, traffic impacts would not be significant with implementation of recommended mitigation measures. Please see Sections 3.3.5 and 4.2.6, and Appendix K of this document for additional discussion of traffic impacts and mitigation measures. Subsequent to distribution of the Draft EIR, the project has been revised to reduce the total number of residential units from 484 to 388. Please see Section 2.0 of this document for further discussion of this issue.

As stated in Section 4.8 through 4.17 of the Draft EIR, impacts to public services and utilities would not be significant.

Fileh and Joelek 2 – Comment

In light of the significant adverse impact this project would have on my neighborhood and the lack of meaningful measures to alleviate that impact, I request that you not approve the project as currently presented. Any further consideration of the project should be conditioned on:

- *a substantial reduction in the number of homes in the project;*
- *a more meaningful proposal for mitigation by the applicant; and*
- *an opportunity for public study of and comment on the applicant's revised proposals.*

Fileh and Joelek 2 – Response

Please see Section 4.5.5 (Belkin, L 3 – Response) of this document.

4.5.37 Susan Gerke

January 9, 2002

Gerke 1 – Comment

I live in Chatsworth and have valid concerns about the above-referenced proposed project. The EIR covers many aspects of the environment that will be altered or mitigated by this development, but it falls short in explaining the justification of permanently altering a naturally perfect area that not only provides habitat for rapidly disappearing wildlife but is home to people whose quality of life is in jeopardy if this project goes forward. The current number of homes in the area—and the people and cars associated with them—is in a certain balance with the environment at present. There is no excess pollution, noise, traffic, water runoff or fire danger. The proposed addition of 484 homes will alter the environment in ways that have not been adequately addressed in the EIR.

Gerke 1 - Response

There is no requirement for an EIR to “justify” any particular environmental impacts, which can be mitigated to a less than significant level, only to disclose the nature and magnitude of those impacts. CEQA Section 15093 specifies that impacts that are found to be significant would require “justification,” by the issuance of a Statement of Overriding Consideration that the economic, legal, social, technological or other benefits of a project outweigh the unavoidable adverse environmental effects, and the adverse environmental effects may be considered “acceptable.” However, as project-related impacts would be less than significant with recommended mitigation measures, no such justification is required.

Subsequent to distribution of the Draft EIR, the project has been revised to reduce the total number of residential units from 484 to 388. Please see Section 2.0 of this document for further discussion of this issue.

Gerke 2 - Comment

Not only does the EIR fail to address the inevitable damage to the environment that will be caused because of the high density of this project, but the mitigation measures offered are not adequate to

4.0 Response to Written Comments

compensate for the damage, i.e., the destruction of 65 mature oak trees cannot be balanced with 15-gallon specimens which may or may not survive.

Gerke 2 - Response

As stated above, project-related impacts would not be significant with implementation of recommended mitigation measures.

Oak trees proposed for removal would be replaced per County ordinance. Please see Section 4.2.1 and Appendices F.1 and F.3 for additional discussion of this issue.

Gerke 3 - Comment

The EIR does not satisfactorily address the inevitable damage from contaminants to the ecosystems both north and south of the proposed development.

Gerke 3 - Response

Although the comment does not identify "contaminants," it is assumed that the reference is to storm water runoff. Please see Section 4.2.2 (Urban Runoff 1 – Response) and Appendix I of this document.

Gerke 4 - Comment

The EIR does not satisfactorily address the exacerbated flooding conditions that will occur during the rainy season when natural land is replaced with concrete. I suggest underground storm drains leading to a treatment center to prevent flooding problems such as that experienced in other developments (Porter Ranch-Limekiln Canyon) where water is channeled down city street surfaces and into natural canyons, contaminating the ecosystem.

Gerke 4 - Response

Please see Section 4.2.2 (Urban Runoff 1 – Response) and Appendix I of this document.

Gerke 5 - Comment

The EIR does not address impacts on wildlife in the precise area where the development is planned to be constructed. A more timely study needs to be done to take into consideration the new wildlife that now exists in the area as a result of being chased out of the Porter Ranch region.

Gerke 5 - Response

Section 4.3 of the Draft EIR included a discussion of impacts upon sensitive species, nesting birds and raptors, and wildlife movement. Impacts to biological resources would not be significant with implementation of recommended mitigation measures. Please see also Section 4.2.1 of this document for additional discussion of this issue.

Gerke 6 - Comment

Regarding the high density and scope of this project, the project is out of place in the environment and the equestrian community of Chatsworth. The addition 485 [sic] homes in this unincorporated area of LA county are simply too many for the amount of schools, roads and fire and police availability.

I strongly request your consideration of (1) no project or, alternatively, (2) a less dense project.

Gerke 6 - Response

Please see Section 4.5.5 (Belkin, L 3 – Response) of this document.

4.5.38 Charles and Sharon Goldstein

January 7, 2002

Goldstein 1 - Comment

I am writing to express my objection to the proposed Deerlake Ranch development in Chatsworth (Project No. 99-239(5)) for which you have scheduled a January 23 hearing.

4.0 Response to Written Comments

The proposed project is located close to my home, and I am particularly concerned about the following:

My community is not what it was - I live at Chatsworth and DeSoto and I can't even begin to explain how terrible the traffic is. I cannot get out of my own driveway due to the gridlock in front of my home. I would be happy to go into more detail at a later date - but I feel you must know that my daily activities have to be timed around the traffic in front of my home. HOW CAN IT GET WORSE!

P.S. It truly sickens us to see what greedy developers have done to this once rural part of the valley. We can know for sure that as long as Mr. Antonovich is in public office he will not ever receive our votes.

Goldstein 1 - Response

As stated in Section 4.12 of the Draft EIR, traffic impacts would not be significant with implementation of recommended mitigation measures. Please see Sections 3.3.5 and 4.2.6, and Appendix K of this document for additional discussion of traffic impacts and mitigation measures.

The commenter's opposition to the project is noted, no response is required.

Goldstein 2 - Comment

In light of the significant adverse impact this project would have on my neighborhood and the lack of meaningful measures to alleviate that impact, I request that you not approve the project as currently presented. Any further consideration of the project should be conditioned on:

- *a substantial reduction in the size and scope of the project;*
- *a more meaningful proposal for mitigation by the applicant; and*
- *postponement of Commission recommendation in order to allow time for adequate public study and evaluation of the applicant's revised proposals.*

Goldstein 2 - Response

Please see Section 4.5.5 (Belkin, L 3 – Response) of this document.

4.5.39 Sherry Gordon

January 7, 2002

Gordon 1 - Comment

I am writing to express my objection to the proposed Deerlake Ranch development in Chatsworth (Project No. 99-239(5)) for which you have scheduled a January 23 hearing.

The proposed project is located close to my home, and I am particularly concerned about the following: Increase in traffic in my neighborhood. With Siena Canyon and Chatsworth Hills Academy in my neighborhood each year we have an increase in traffic, plus they drive to [sic] fast and I am concerned about the safety of my children and the children in our neighborhood.

Gordon 1 - Response

As stated in Section 4.12 of the Draft EIR, traffic impacts would not be significant with implementation of recommended mitigation measures. Please see Sections 3.3.5 and 4.2.6, and Appendix K of this document for additional discussion of traffic impacts and mitigation measures.

Gordon 2 - Comment

In light of the significant adverse impact this project would have on my neighborhood and the lack of meaningful measures to alleviate that impact, I request that you not approve the project as currently presented. Any further consideration of the project should be conditioned on:

- *a substantial reduction in the size and scope of the project;*
- *a more meaningful proposal for mitigation by the applicant; and*

4.0 Response to Written Comments

- postponement of Commission recommendation in order to allow time for adequate public study and evaluation of the applicant's revised proposals.

Gordon 2 - Response

Please see Section 4.5.5 (Belkin, L 3 – Response) of this document.

4.5.40 Barry and Tammy Grant

January 7, 2002

Grant 1 – Comment

I am a resident in the Twin Lake area, and I am writing to you about the construction from the Deer Lake Ranch development project.

My wife/husband and I have lived in the area for 15 years, with three children. We are concerned about the impact that 484 homes will have on our homes, and all our streets - not just the streets that have 118 freeway access points. It is disturbing to me that the developer conducted a traffic study with not all schools in session and purportedly used incorrect tables to estimate the amount of trips by vehicles per day, given the nature of the houses to be built, and times of day at which these trips would be made. I drive during peak [sic] hours of the day, during the morning on Mayan and Topanga I cannot get on the 118 freeway going west to take my kids to school now. can you imagine when 484 homes go in, what a mess this is going to be. Prior to putting in the homes we will have to deal with all the construction going up and down our streets, especially since we do not have traffic signs and a lot of blind corners. with small children this is a big concern. Not just the traffic it will cause, the noise and the dust of the mass construction that will be going on.

Grant 1 – Response

As stated in Section 4.12 of the Draft EIR, traffic impacts would not be significant with implementation of recommended mitigation measures. See Section 4.2.6 (Traffic 1 & 2 – Responses) and Appendix K of this document for a discussion of the project trip generation and traffic distribution forecasts provided in the Draft EIR.

As discussed in Sections 4.2 and 4.7 of the Draft EIR, no significant noise or dust impact would occur from the project with implementation of recommended mitigation measures. See Sections 4.2.3 (Noise/Dust 1 – Response) and 4.2.7 (Development Issues 8 – Response) of this document for additional discussion of these issues.

Grant 2 – Comment

If the contractor was going to build homes that a middle class family or senior citizen could afford, I would say maybe a 100 homes, but for the contractor to build homes that are out of most common family's range. They're only there for profit and not for any other reason. So all rules will not apply and they will not abide by all ordinance that our [sic] set.

I feel that the draft EIR is incomplete in addressing these areas and needs more study.

Grant 2 – Response

Section 5.4.3 of the Draft EIR included a discussion of a reduced project alternative, per the requirements of CEQA. Although Alternative 3 would include a reduction in the density of the residential community, it would not meet project objectives. Further, as stated in the Draft EIR, implementation of the recommended mitigation measures would not result in significant project-related impacts.

The project has been revised to reduce the total number of residential units from 484 to 388. Please see Section 2.0 of this document for further discussion of this issue.

Please see Section 4.5.5 (Belkin, L 3 – Response) of this document regarding adequacy of the EIR.

4.5.41 Jonathan Green

March 8, 2002

Green 1 – Comment

I am writing to express my objection to the proposed Deerlake Ranch development in Chatsworth (Project No. 99-239(5)) for which you have continued the public hearing to April 10.

The proposed project is located close to my home, and I am particularly concerned about the following:

Increased noise, dust, pollution, and traffic on Canoga Ave., while decreasing the rural ambience that our neighborhood has been able to sustain. Also, its effect on the horses and trails.

Green 1 – Response

As discussed in Sections 4.2 and 4.7 of the Draft EIR, no significant noise or dust impact would occur from the project with implementation of recommended mitigation measures. See Sections 4.2.3 (Noise/Dust 1 – Response) and 4.2.7 (Development Issues 8 – Response) of this document for additional discussion of these issues.

As stated in Section 4.12 of the Draft EIR, traffic impacts would not be significant with implementation of recommended mitigation measures. See Section 4.2.6 (Traffic 1 & 2 – Responses) and Appendix K of this document for a discussion of the project trip generation and traffic distribution forecasts provided in the Draft EIR.

See Section 4.2.7 (Development Issue 10 – Response) and Appendix L of this document regarding land use density.

Green 2 – Comment

Chatsworth/DeSoto intersection already overburdened. Chatsworth St. cannot handle anymore traffic, whatsoever! Why widen Canoga when Topanga and DeSoto are already major streets that can fulfill the need, and it would completely change the atmosphere and safety of our community.

Green 2 – Response

Please see Grant 1 – Response of this document.

Green 3 – Comment

In light of the significant adverse impact this project would have on my neighborhood and the lack of meaningful measures to alleviate that impact, I request that you do not approve the project as currently presented. Any further consideration of the project should be conditioned on:

- *a substantial reduction in the number of homes in the project;*
- *a more meaningful proposal for mitigation by the applicant; and*
- *opportunity for public study of and comment on the applicant's revised proposals.*

Green 3 – Response

Please see Section 4.5.5 (Belkin, I. 3 – Response) of this document.

4.5.42 Ken and Nancy Gross

January 14, 2002/January 16, 2002

Gross N & K 1 - Comment

Project No. 99-329(5) as proposed will further impact our over-crowded schools. This area of the San Fernando Valley will suffer even worse if such a large project is allowed to proceed without being cut back - we mean way back to a fraction of that requested by the developers.

We are well informed about the crowding in the schools as we have two granddaughters attending Chatsworth High School and we live less than two miles from the school. I taught mathematics for

4.0 Response to Written Comments

the Los Angeles City Schools and have had some personal contacts with the schools in this immediate area so have first hand professional knowledge.

Gross N & K 1 – Response

As stated in Section 4.10 of the Draft EIR, impacts to schools would not be significant with implementation of recommended mitigation measures. Please see Sections 3.3.4, 4.3.7 and 4.5.28, and Appendix J of this document for additional discussion of this issue.

Gross N & K 2 - Comment

Another part of my background is as a real estate broker specializing in land sales and development. Invariably developers request more dwelling units than they expect to obtain and make a show of scaling down. But this project should not be just scaled down -- it should be cut to one-fourth the size!

Gross N & K 2 – Response

The Draft EIR included analysis of a reduced density alternative (a reduction of approximately 65 percent as compared to the project). However, as stated in Section 5.4 of the Draft EIR, implementation of Alternative 3 would not meet the project objectives. When cost of development is factored with already incurred land acquisition costs and market sales prices, Alternative 3 becomes economically infeasible. See Section 4.2.7 (Development Issue 10 – Response) and Appendix L of this document regarding land use density.

Gross N & K 3 - Comment

I've lived almost 50 years in the west San Fernando Valley including Chatsworth. Even at present, Chatsworth maintains a rural character and serves as a transition from a densely populated suburban area to open space. The density of the proposed Deerlake Ranch development is 50% higher than where I grew up in Northridge in the middle of a tract subdivision. The proposed development leapfrogs a high-density development across a lower density, semi-rural area.

Alternative 3 in the EIR comes closest to matching the existing density of the adjacent developed areas. Yet, this alternative is summarily dismissed with a few brief assertions and no supportive documentation. Considering the ruggedness of the terrain, even Alternative 3 represents a density in excess of what should be allowed.

Gross N & K 3 – Response

Please see Gross N & K 2 – Response of this document.

Gross N & K 4 - Comment

Furthermore, from what I have attempted to confirm, the EIR is riddled with errors, factual misrepresentations, and fabricated statistics.

Gross N & K 4 – Response

Please see Section 4.4.2 (CLPA 2 – Response) of this document regarding the adequacy of the EIR.

Gross N & K 5 - Comment

According to a neighbor, the traffic study did not utilize representative or appropriate monitoring stations, has fabricated figures, and was conducted while school was not in session.

Gross N & K 5 – Response

As stated in Section 4.12 of the Draft EIR, traffic impacts would not be significant with implementation of recommended mitigation measures. Please see Sections 3.3.5 and 4.2.6, and Appendix K of this document for additional discussion of traffic impacts and mitigation measures. See Section 4.2.6 (Traffic 1 and 2 – Responses) and Appendix K of this document for a discussion of the project trip generation and traffic distribution forecasts provided in the Draft EIR.

4.0 Response to Written Comments

Gross N & K 6 - Comment

The conclusion of no significant impact on local public schools is utterly absurd. The principal at Chatsworth Park Elementary School down the road from us disputes the enrollment figures for her school. A footnote in Tables 4.10.1 and 4.10.3 of the EIR acknowledges that these are not the actual enrollment figures. Yet, in Table 4.10.5 and throughout the text of section 4.10 of the EIR, these deflated figures are used as the actual figures, leading to the false conclusion of no significant impact on any of the local schools.

The principal of Lawrence Middle School told me on the phone today that his enrollment is about 2200, over 50% higher than the figure of 1416 in the EIR. Assuming we can trust the projected figures for Deerlake Ranch (121) and Porter Ranch (465) in section 4.10.5 on cumulative impacts and using the corrected enrollment of 2200, we have a projected cumulative enrollment of 2786. This exceeds the operating capacity of 2330 by 456, in direct contradiction of the no significant impact conclusion in the EIR.

They employed the same deception with their figures for Chatsworth High School. According to the Administration at the high school, the operating capacity is 3311, almost 200 less than 3502 given in the EIR. The actual current enrollment is 3175, almost 50% greater than the 2211 "Resident Area Enrollment" figure from Tables 4.10.1 and 4.10.3. Furthermore, in Table 4.10.5 and in document text, they cleverly substitute 2211 in their enrollment calculations as if it were the actual enrollment. This again leads to false conclusion of no significant impact.

Not only did they err in their conclusions based on faulty numbers, it's clear that they did this deliberately as noted earlier by changing the third column heading in Table 4.10.5 and dropping footnote b. Please don't ignore this intentional deception. Along with the previously noted problems with the traffic study, it adds up to a clear intent on the part of the applicant to provide false information to deceive decision makers and the public and to shove costs that should legally be born by the developers onto the taxpayers.

Gross N & K 6 – Response

Please see Gross N & K 1 – Response of this document. Please also see (Dixon-Davis 1 – Response), Section 4.5.28 of this document.

Gross N & K 7 - Comment

Due to the applicant's callous disregard for producing an honest, factual EIR and a demonstrated contempt for the EIR process, I urge you to throw out the entire EIR and deny any pending applications until the applicant produces legitimate EIR which is factual, honest, and which has been carefully scrutinized by the staff of the Regional Planning Department of LA County.

Gross N & K 7 – Response

Please see Section 4.4.2 (CLPA 2 – Response) of this document regarding the adequacy of the EIR.

Gross N & K 8 - Comment

Furthermore, this new EIR should consider more realistic and reasonable alternatives such as a project density of approximately 2/3 of Alternative 3. It's common knowledge that developers ask for more than they expect to get. Let's start the EIR process with a realistic number of projected residential dwellings.

Gross N & K 8 – Response

Please see Gross N & K 1 – Response of this document.

4.5.43 Pete Gross

January 15, 2002

Gross P 1 - Comment

The traffic portion of the EIR makes absolutely no mention of the impact on bicycle safety. The traffic study focuses on congestion at intersections, but most of the impact for cyclists is between intersections.

Gross P 1 - Response

LADOT is responsible for requesting improvements to Chatsworth Street, due to implementation of the project. No bike lane has been proposed. Please see Section 4.3.6 of this document regarding the improvements to Chatsworth Street.

Gross P 2 - Comment

The Old Santa Susana Pass Road between the San Fernando and Simi Valleys is arguably the premier and most popular road ride for cyclists in Chatsworth, Canoga Park, Granada Hills and Northridge. Besides the Pass Road itself, critical approach segments with no alternative routes will be adversely impacted by the Deerlake Ranch development. Mitigation measures to ensure continued safe access and passage for cyclists should be added to the Conditions of Approval.

Gross P 2 - Response

As stated in Section 4.12 of the Draft EIR, impacts to traffic would not be significant with implementation of recommended mitigation measures. Specifically, Table 4.12.5 of the Draft EIR shows that implementation of the project would not result in a significant impact to the intersection of Santa Susana Pass Road and Topanga Canyon Boulevard. No additional mitigation is required. Please see Sections 3.3.5 and 4.2.6, and Appendix K of this document for additional discussion of traffic impacts and mitigation measures.

Gross P 3 - Comment

Specifically, Topanga Canyon Blvd between Chatsworth St. and the T-intersection with the Old Santa Susana Pass Road should have a dedicated bike lane in both directions and a pedestrian/equestrian traffic light at the T-intersection similar to the one at DeSoto and Rinaldi.

Between Canoga Ave. and Topanga Canyon Blvd., the south side of Chatsworth St. and portions of the north side are not wide enough to safely accommodate bicycles and motor vehicles simultaneously. Currently, even at peak hours, this is a relatively safe bike route due to light traffic. Particularly since Canoga Ave. will be the primary, if not exclusive, access to the project site during the construction phase and will remain one of two access routes after completion, traffic along this segment will increase substantially. So, Chatsworth St. will need a dedicated bike lane in both directions along this segment. This will also help guarantee safe bicycle access to Chatsworth Park for residents on the east side of Topanga.

Gross P 3 - Response

Please see Gross P 1 – Response of this document.

Gross P 4 - Comment

P.S. Please scale down the project to about 2/3 the size of alternative 3.

Gross P 4 - Response

Please see Section 4.5.42 (Gross N & K 1 – Response) of this document.

4.5.44 Ubenberk and Jo Ann Grover

January 7, 2002

Grover 1 - Comment

I am writing to express my objection to the proposed Deerlake Ranch development in Chatsworth (Project No. 99-239(5)) for which you have scheduled a January 23 hearing.

The proposed project is located close to my home, and I am particularly concerned about the following:

We live [sic] in Chatsworth for thirty years and concerned about the negative impact that the large number of homes directly north of us and 118 freeway will have on our place to live.

Grover 1 - Response

As stated in Section 4.12 of the Draft EIR, traffic impacts would not be significant with implementation of recommended mitigation measures. Please see Sections 3.3.5 and 4.2.6, and Appendix K of this document for additional discussion of traffic impacts and mitigation measures.

Grover 2 - Comment

In light of the significant adverse impact this project would have on my neighborhood and the lack of meaningful measures to alleviate that impact, I request that you not approve the project as currently presented. Any further consideration of the project should be conditioned on:

- *a substantial reduction in the size and scope of the project;*
- *a more meaningful proposal for mitigation by the applicant; and*
- *postponement of Commission recommendation in order to allow time for adequate public study and evaluation of the applicant's revised proposals.*

Grover 2 - Response

Please see Section 4.5.5 (Belkin, L 3 -- Response) of this document.

4.5.45 Nicholas Habib

January 7, 2002

Habib 1 – Comment

I am writing to express my objection to the proposed Deerlake Ranch development in Chatsworth (Project No. 99-239(5)) for which you have scheduled a January 23 hearing.

The proposed project is located close to my home, and I am particularly concerned about the following:

Dust

Habib 1 – Response

As stated in Section 4.2 of the Draft EIR, air quality impacts associated with construction activities would be less than significant with implementation of recommended mitigation measures. Please see Section 4.2.3 and Appendix E of this document for additional discussion regarding this issue.

Habib 2 – Comment

Noise

Habib 2 – Response

As stated in Section 4.7 of the Draft EIR, noise impacts would be less than significant with implementation of recommended mitigation measures. Please see Section 4.2.3 and Appendix E of this Final EIR for additional discussion of this issue.

4.0 Response to Written Comments

Habib 3 – Comment

Danger to wildlife

Habib 3 – Response

Section 4.3 of the Draft EIR included a discussion of impacts upon sensitive species, nesting birds and raptors, and wildlife movement. Impacts to biological resources would not be significant with implementation of recommended mitigation measures. Please see also Section 4.2.1 of this document for additional discussion of this issue.

Habib 4 – Comment

Traffic!!

Habib 4 – Response

As stated in Section 4.12 of the Draft EIR, traffic impacts would not be significant with implementation of recommended mitigation measures. Please see Sections 3.3.5 and 4.2.6, and Appendix K of this document for additional discussion of traffic impacts and mitigation measures.

Habib 5 – Comment

In light of the significant adverse impact this project would have on my neighborhood and the lack of meaningful measures to alleviate that impact, I request that you not approve the project as currently presented. Any further consideration of the project should be conditioned on:

- *a substantial reduction in the size and scope of the project;*
- *a more meaningful proposal for mitigation by the applicant; and*
- *postponement of Commission recommendation in order to allow time for adequate public study and evaluation of the applicant's revised proposals.*

Habib 5 – Response

Please see Section 4.5.5 (Belkin, L 3 – Response) of this document.

4.5.46 Raid Haddad

January 7, 2002

Haddad 1 - Comment

I am writing to express my objection to the proposed Deerlake Ranch development in Chatsworth (Project No. 99-239(5)) for which you have scheduled a January 23 hearing.

The proposed project is located close to my home, and I am particularly concerned about the following:

Increase of traffic on Canoga Ave. and other streets, and the construction from the Deer Lake Ranch development project.

Haddad 1 - Response

As stated in Section 4.12 of the Draft EIR, traffic impacts would not be significant with implementation of recommended mitigation measures. Please see Sections 3.3.5 and 4.2.6, and Appendix K of this document for additional discussion of traffic impacts and mitigation measures.

As discussed in Sections 4.2 and 4.7 of the Draft EIR, no significant noise or dust impact would occur from the project with implementation of recommended mitigation measures. Please see Sections 4.2.3 (Noise/Dust 1 – Response) and 4.2.7 (Development Issues 8 – Response) of this document for additional discussion of construction impacts.

Haddad 2 - Comment

And also the adequate Sheriff's protection.

4.0 Response to Written Comments

Haddad 2 - Response

As stated in Section 4.9 of the Draft EIR, annual crime statistics indicate that the areas, including the project, served by the Lost Hills/Malibu Station have a crime rate below the countywide average. Implementation of the project would serve to increase the existing funding mechanisms for any additional officers required to serve the project area. Impacts would not be significant with implementation of recommended mitigation measures. Please see Sections 3.3.3 and 4.2.5, and Appendix E of this document for additional discussion of this issue.

Haddad 3 - Comment

In light of the significant adverse impact this project would have on my neighborhood and the lack of meaningful measures to alleviate that impact, I request that you not approve the project as currently presented. Any further consideration of the project should be conditioned on:

- *a substantial reduction in the size and scope of the project;*
- *a more meaningful proposal for mitigation by the applicant; and*
- *postponement of Commission recommendation in order to allow time for adequate public study and evaluation of the applicant's revised proposals.*

Haddad 3 - Response

Please see Section 4.5.5 (Belkin, L 3 – Response) of this document.

4.5.47 Barbara C. Hahn

March 8, 2002

Hahn 1 –Comment

I am writing to express my objection to the proposed Deerlake Ranch development in Chatsworth (Project No. 99-239(5)) for which you have continued the public hearing to April 10.

The proposed project is located close to my home, and I am particularly concerned about the following:

Greatly increased traffic – cars, trucks, residents – beyond what this residential area can safely and humanely [sic] handle. Development is much too large. Please scale down considerably.

Hahn 1 –Response

As stated in Section 4.12 of the Draft EIR, traffic impacts would not be significant with implementation of recommended mitigation measures. Please see Sections 3.3.5 and 4.2.6, and Appendix K of this document for additional discussion of traffic impacts and mitigation measures.

See Section 4.2.7 (Development Issue 10 – Response) and Appendix L of this document regarding land use density.

Hahn 2 –Comment

In light of the significant adverse impact this project would have on my neighborhood and the lack of meaningful measures to alleviate that impact, I request that you do not approve the project as currently presented. Any further consideration of the project should be conditioned on:

- *a substantial reduction in the number of homes in the project;*
- *a more meaningful proposal for mitigation by the applicant; and*
- *opportunity for public study of and comment on the applicant's revised proposals.*

Hahn 2 –Response

Please see Section 4.5.5 (Belkin, L 3 – Response) of this document.

4.0 Response to Written Comments

Hahn 3 – Comment

Also, this density of homes/people/vehicles is not in keeping with existing density of surrounding area and homeowners: present tax-payers (cannot read remaining comments)

Hahn 3 – Response

See Section 4.2.7 (Development Issue 10 – Response) and Appendix L of this document regarding land use density.

Hahn 4 – Comment

Would you want this added to your existing neighborhood and streets?

Hahn 4 – Response

The comment has been received and noted. No additional response is necessary.

4.5.48 Gloria Hawbler

January 7, 2002

Hawbler 1 - Comment

I am writing to express my objection to the proposed Deerlake Ranch development in Chatsworth (Project No. 99-239(5)) for which you have scheduled a January 23 hearing.

The proposed project is located close to my home, and I am particularly concerned about the following:

Traffic along Chatsworth St. --our stable teaches disabled riders. For access to riding trails crossing Chatsworth St. is going to become more and more dangerous with increased traffic.

Hawbler 1 - Response

As stated in Section 4.12 of the Draft EIR, impacts to traffic along Chatsworth Street would not be significant with implementation of recommended mitigation measures. Please see Sections 3.3.5 and 4.2.6, and Appendix K of this document for additional discussion of traffic impacts and mitigation measures.

Hawbler 2 - Comment

In light of the significant adverse impact this project would have on my neighborhood and the lack of meaningful measures to alleviate that impact, I request that you not approve the project as currently presented. Any further consideration of the project should be conditioned on:

- *a substantial reduction in the size and scope of the project;*
- *a more meaningful proposal for mitigation by the applicant; and*
- *postponement of Commission recommendation in order to allow time for adequate public study and evaluation of the applicant's revised proposals.*

Hawbler 2 - Response

Please see Section 4.5.5 (Belkin, L 3 -- Response) of this document.

4.5.49 Roger and Adrienne Heath

January 7, 2002

Heath 1 – Comment

I am writing to express my objection to the proposed Deerlake Ranch development in Chatsworth (Project No. 99-239(5)) for which you have scheduled a January 23 hearing.

The proposed project is located close to my home, and I am particularly concerned about the following:

4.0 Response to Written Comments

Destruction of environment including movement of land, destroying oak trees, destroying wildlife, upsetting the natural balance-resulting in pollution and flooding. I thought there was a law in effect to preserve oak trees.

Heath 1 – Response

This project's impacts on land alteration (grading), oak trees, wildlife, urban runoff and flooding have been discussed in various sections of the Draft EIR. With implementation of mitigation measures impacts would not be significant. Please see Appendix G of this document for additional discussion of grading. See Section 4.2.1 and Appendices F.1 and F.3 of this document for additional discussion of biological resources, including oak trees. See Section 4.2.2 and Appendices H and I of this document for additional discussion of urban runoff.

Heath 2 – Comment

All of this area was Chumash land. What is being done to ensure that sacred burial grounds are not being disturbed by this project and what efforts will be made to preserve Indian artifacts that could be in the area?

Heath 2 – Response

Both a Phase I and Phase II archaeology survey were conducted on the site (see Appendix I of the Draft EIR). As stated in Section 4.4 of the Draft EIR, based on the fieldwork completed on the archaeological sites within the project site, implementation of the project would not result in significant impacts to cultural resources.

Heath 3 – Comment

In light of the significant adverse impact this project would have on my neighborhood and the lack of meaningful measures to alleviate that impact, I request that you not approve the project as currently presented. Any further consideration of the project should be conditioned on:

- *a substantial reduction in the size and scope of the project;*
- *a more meaningful proposal for mitigation by the applicant; and*
- *postponement of Commission recommendation in order to allow time for adequate public study and evaluation of the applicant's revised proposals.*

Heath 3 – Response

Please see Section 4.5.5 (Belkin, L 3 – Response) of this document.

4.5.50 Bruce Herman

Herman B 1 – Comment

I am writing to express my objections to the proposed Deerlake Ranch development in Chatsworth. [Project No. 99-239{5}] for which you have scheduled a January 23 hearing.

I have lived in Twinlakes for thirteen years and am very much concerned about the impact that this project will have on this area.

I feel that the proposed project will have an adverse impact on my neighborhood and it is clear that adequate measures have not been taken to preserve the integrity of this area. We live in a very high wind area and cutting down of the surrounding hills will increase this problem considerably. The increase of the traffic volume will result in a major problem of entering and exiting Twinlakes.

Herman B 1 – Response

As stated in the Draft EIR, impacts associated with the project would not be significant with implementation of mitigation measures. Implementation of the project would not result in an increase of wind in the area. Please see Section 4.2.3 of this document regarding additional discussion of dust related impacts.

4.0 Response to Written Comments

As stated in Section 4.12 of the Draft EIR, traffic impacts would not be significant with implementation of recommended mitigation measures. Please see Sections 3.3.5 and 4.2.6, and Appendix K of this document for additional discussion of traffic impacts and mitigation measures.

Herman B 2 – Comment

The volume of heavy equipment using our privately owned and maintained streets will decimate our existing roads.

Herman B 2 – Response

See Section 4.2.3 (Noise/Dust 3 - Response) of this document.

Herman B 3 – Comment

The impact on the surrounding eco-system will be a disaster.

Herman B 3 – Response

Section 4.3 of the Draft EIR included a discussion of impacts upon sensitive species, nesting birds and raptors, and wildlife movement. Impacts to biological resources would not be significant with implementation of recommended mitigation measures. See also Section 4.2.1 of this document for additional discussion of this issue.

Herman, B. 4 – Comment

The developers have not taken any of our areas [sic] lifestyle into consideration in proposing this project. The runoff of water through Devil's Canyon will drastically effect [sic] the entire natural habitat in this area.

Herman B 4 – Response

Please see Section 4.2.2 (Urban Runoff 1 – Response) and Appendix I of this document.

Herman B 5 – Comment

This project, as proposed, must be radically altered to accommodate the unique problems in this location.

Please use the powers of your office to do something!

Herman B 5 – Response

The commenter's opposition to the project is noted and will be forwarded to the decision makers. No additional response is required.

4.5.51 Roger Herman

January 4, 2002

Herman R 1 – Comment

I am writing to express my objection to the proposed Deerlake Ranch development in Chatsworth (Project No. 99-239[5]) for which you have scheduled a January 23 hearing.

I have been living in Twinlakes for many years I am very much concerned about the Deer Lake Ranch project will have on this area.

The proposed project will have an adverse impact on this neighborhood and adequate measures have not been taken to preserve the integrity of this area.

Herman R 1 – Response

As stated in the Draft EIR, impacts from the project would not be significant with implementation of recommended mitigation measures. Please see Appendices D and E of this document for additional discussion of mitigation measures.

Herman R 2 – Comment

Some of my concerns are. Fire

4.0 Response to Written Comments

Herman R 2 – Response

As discussed in Section 4.8 of the Draft EIR, fire protection services would not be significant with implementation of recommended mitigation measures. See Section 4.2.4 of this document for additional discussion of this issue.

Herman R 3 – Comment

Schools

Herman R 3 – Response

As stated in Section 4.10 of the Draft EIR, impacts to schools would not be significant with implementation of recommended mitigation measures. Please see Sections 3.3.4, 4.3.7 and 4.5.28, and Appendix J of this document for additional discussion of this issue.

Herman R 4 – Comment

wind

Herman R 4 – Response

It is unclear what concern the commenter has regarding wind. No additional response is required.

Herman R 5 – Comment

traffic

Herman R 5 – Response

As stated in Section 4.12 of the Draft EIR, traffic impacts would not be significant with implementation of recommended mitigation measures. Please see Sections 3.3.5 and 4.2.6, and Appendix K of this document for additional discussion of traffic impacts and mitigation measures.

Herman R 6 – Comment

dust from construction

Herman R 6 – Response

As discussed in Section 4.2 of the Draft EIR, no significant dust impact would occur from the project with implementation of recommended mitigation measures. Please refer to Section 4.2.3 of this document for additional discussion of impacts and mitigation.

Herman R 7 – Comment

water pollution from run off

Herman R 7 – Response

As discussed in Section 4.6 of the Draft EIR, no significant water quality impact would occur from the project with implementation of recommended mitigation measures. See Section 4.2.2 (Urban Runoff – Response) and Appendix I of this document for additional discussion of this issue.

Herman R 8 – Comment

sewage

Herman R 8 – Response

Although the commenter does not specify his concern, the project would be served by a public sanitary sewer system that would discharge into the City of Los Angeles existing sewer system (see Section 4.14 of the Draft EIR). No significant impacts would occur.

Herman R 9 – Comment

crime

Herman R 9 – Response

As stated in Section 4.9 of the Draft EIR, annual crime statistics indicate that the areas, including the project, served by the Lost Hills/Malibu Station have a crime rate below the countywide average. Implementation of the project would serve to increase the existing funding mechanisms for any

4.0 Response to Written Comments

additional officers required to serve the project area. Impacts would not be significant with implementation of recommended mitigation measures. See Sections 3.3.3 and 4.2.5 of this document for additional discussion of this issue.

Herman R 10 – Comment

damage to our privately owned streets

Herman R 10 – Response

See Section 4.2.3 (Noise/Dust 3 – Response) of this document.

Herman R 11 – Comment

damage to our eco-system, just to name a few.

Herman R 11 – Response

Section 4.3 of the Draft EIR included a discussion of impacts upon sensitive species, nesting birds and raptors, and wildlife movement. Impacts to biological resources would not be significant with implementation of recommended mitigation measures. Please see also Section 4.2.1 of this document for additional discussion of this issue.

Herman R 12– Comment

Adequate studies haven't been taken for the additional traffic that will travel on Canoga Ave. Short cuts to De Soto Ave. and Topanga Canyon on ramps to the 118 fry [sic] will naturally be taken. We are currently experiencing this problem now and this project will only increase the problem.

Twinlakes have privately owned and maintained streets and absolutely cannot handle additional traffic.

The gridlock situation that this project will incur will become a nightmare for everyone living in this area.

We need someone with your influence to take the initiative to correcting this problem that this project will create.

Herman R 12 – Response

As stated in Section 4.12 of the Draft EIR, traffic impacts would not be significant with implementation of recommended mitigation measures. Please see Sections 3.3.5 and 4.2.6, and Appendix K of this document for additional discussion of traffic impacts and mitigation measures.

4.5.52 Carley Hermann

March 8, 2002

Hermann 1 –Comment

I am writing to express my objection to the proposed Deerlake Ranch development in Chatsworth (Project No. 99-239(5)) for which you have continued the public hearing to April 10.

The proposed project is located close to my home, and I am particularly concerned about the following:

The increase of traffic on Chatsworth and Canoga. My home backs up to Canoga and it is the only way out of our neighborhood. Chatsworth and/or Canoga are residential streets and not made for huge trucks and equipment and heavy traffic.

Hermann 1 –Response

As stated in Section 4.12 of the Draft EIR, traffic impacts would not be significant with implementation of recommended mitigation measures. Please see Sections 3.3.5 and 4.2.6, and Appendix K of this document for additional discussion of traffic impacts and mitigation measures.

4.0 Response to Written Comments

Hermann 2 –Comment

In light of the significant adverse impact this project would have on my neighborhood and the lack of meaningful measures to alleviate that impact, I request that you do not approve the project as currently presented. Any further consideration of the project should be conditioned on:

- *a substantial reduction in the number of homes in the project;*
- *a more meaningful proposal for mitigation by the applicant; and*
- *opportunity for public study of and comment on the applicant's revised proposals.*

Hermann 2 –Response

Please see Section 4.5.5 (Belkin, L 3 – Response) of this document.

4.5.53 Eugene Hernandez

January 7, 2002

Hernandez 1 - Comment

I am writing to express my objection to the proposed Deerlake Ranch development in Chatsworth (Project No. 99-239(5)) for which you have scheduled a January 23 hearing.

The proposed project is located close to my home, and I am particularly concerned about the following:

The harm and damage to the fauna and flora native to the region plus to [sic] increased traffic congestion and urban sprawl.

Hernandez 1 - Response

Section 4.3 of the Draft EIR included a discussion of impacts upon sensitive species, nesting birds and raptors, and wildlife movement. Impacts to biological resources would not be significant with implementation of recommended mitigation measures. Please see also Section 4.2.1 of this document for additional discussion of this issue.

As stated in Section 4.12 of the Draft EIR, traffic impacts would not be significant with implementation of recommended mitigation measures. Please see Sections 3.3.5 and 4.2.6, and Appendix K of this document for additional discussion of traffic impacts and mitigation measures.

Hernandez 2 - Comment

In light of the significant adverse impact this project would have on my neighborhood and the lack of meaningful measures to alleviate that impact, I request that you not approve the project as currently presented. Any further consideration of the project should be conditioned on:

- *a substantial reduction in the size and scope of the project;*
- *a more meaningful proposal for mitigation by the applicant; and*
- *postponement of Commission recommendation in order to allow time for adequate public study and evaluation of the applicant's revised proposals.*

Hernandez 2 – Response

Please see Section 4.5.5 (Belkin, L 3 – Response) of this document.

4.5.54 D. Higgiwin

January 7, 2002

Higgiwin 1 – Comment

I am writing to express my objection to the proposed Deerlake Ranch development in Chatsworth (Project No. 99-239(5)) for which you have scheduled a January 23 hearing.

4.0 Response to Written Comments

The proposed project is located close to my home, and I am particularly concerned about the following: The impact on the two elementary schools where local children attend: Chatsworth Elementary and Germaine Street School.

Higgiwin 1 – Response

As stated in Section 4.10 of the Draft EIR, impacts to schools would not be significant with implementation of recommended mitigation measures. Please see Sections 3.3.4, 4.3.7 and 4.5.28, and Appendix J of this document for additional discussion of this issue.

Higgiwin 2 – Comment

The wildlife and coyote habitat - as it already stands, we have a major coyote problem, without further impacting it.

Higgiwin 2 – Response

Section 4.3 of the Draft EIR included a discussion of impacts upon sensitive species, nesting birds and raptors, and wildlife movement. Impacts to biological resources would not be significant with implementation of recommended mitigation measures. Please see also Section 4.2.1 of this document for additional discussion of this issue.

Higgiwin 3 – Comment

The run-off of the water system into Devil's Canyon = The EIR report on this is very poorly thought out and should be redone.

Higgiwin 3 – Response

As stated in Section 4.6 of the Draft EIR, impacts with regard to urban runoff would not be significant with implementation of mitigation measures. See Section 4.2.2 (Urban Runoff 1 - Response) and Appendix I of this document for additional discussion of this issue.

Higgiwin 4 – Comment

In light of the significant adverse impact this project would have on my neighborhood and the lack of meaningful measures to alleviate that impact, I request that you not approve the project as currently presented. Any further consideration of the project should be conditioned on:

- *a substantial reduction in the size and scope of the project;*
- *a more meaningful proposal for mitigation by the applicant; and*
- *postponement of Commission recommendation in order to allow time for adequate public study and evaluation of the applicant's revised proposals.*

Higgiwin 4 – Response

Please see Section 4.5.5 (Belkin, I. 3 – Response) of this document.

4.5.55 Dan Huffman

January 7, 2002

Huffman 1 – Comment

I am writing to express my objection to the proposed Deerlake Ranch development in Chatsworth (Project No. 99-239(5)) for which you have scheduled a January 23 hearing.

The proposed project is located close to my home, and I am particularly concerned about the following:

The residential run off into Devil's Canyon.

4.0 Response to Written Comments

Huffman 1 – Response

As stated in Section 4.6 of the Draft EIR, impacts with regard to urban runoff would not be significant with implementation of mitigation measures. See Section 4.2.2 (Urban Runoff I – Response) and Appendix I of this document for additional discussion of this issue.

Huffman 2 – Comment

Present schools cannot accommodate estimated amts. of children - impact report on schools was fabricated!

Huffman 2 – Response

Information regarding school capacity and student generation was made available by LAUSD. As stated in Section 4.10 of the Draft EIR, impacts to schools would not be significant with implementation of recommended mitigation measures. Please see Sections 3.3.4, 4.3.7 and 4.5.28, and Appendix J of this document for additional discussion of this issue.

Huffman 3 – Comment

Traffic impact - area is already jammed - this will not help the area.

Huffman 3 – Response

As stated in Section 4.12 of the Draft EIR, traffic impacts would not be significant with implementation of recommended mitigation measures. Please see Sections 3.3.5 and 4.2.6, and Appendix K of this document for additional discussion of traffic impacts and mitigation measures.

Huffman 4 – Comment

In light of the significant adverse impact this project would have on my neighborhood and the lack of meaningful measures to alleviate that impact, I request that you not approve the project as currently presented. Any further consideration of the project should be conditioned on:

- *a substantial reduction in the size and scope of the project;*
- *a more meaningful proposal for mitigation by the applicant; and*
- *postponement of Commission recommendation in order to allow time for adequate public study and evaluation of the applicant's revised proposals.*

Huffman 4 – Response

Please see Section 4.5.5 (Belkin, L 3 – Response) of this document.

4.5.56 Jennifer Hughes

January 7, 2002

Hughes 1 – Comment

I am writing to express my objection to the proposed Deerlake Ranch development in Chatsworth (Project No. 99-239(5)) for which you have scheduled a January 23 hearing.

The proposed project is located close to my home, and I am particularly concerned about the following:

The traffic on Chatsworth Street as well as the possible dedication of my land to widen Chatsworth St.

Hughes 2 – Response

As stated in Section 4.12 of the Draft EIR, impacts to traffic would not be significant with implementation of recommended mitigation measures. Any potential improvements to Chatsworth Street would occur within the existing public right-of-way. No acquisition of private property would be required to implement the recommended traffic mitigation measures. See also Sections 3.3.5 and 4.2.6, and Appendix K of this document for additional discussion of traffic impacts and mitigation measures.

4.0 Response to Written Comments

Hughes 3 – Comment

Also the environmental impact as well as the impact caused by the increased population in the Chatsworth area.

Hughes 3 – Response

Increased population due to implementation of the project was addressed, where applicable in the Draft EIR. As stated in the Draft EIR, impacts from the project would not be significant with implementation of recommended mitigation measures.

Hughes 4 – Comment

In light of the significant adverse impact this project would have on my neighborhood and the lack of meaningful measures to alleviate that impact, I request that you not approve the project as currently presented. Any further consideration of the project should be conditioned on:

- *a substantial reduction in the size and scope of the project;*
- *a more meaningful proposal for mitigation by the applicant; and*
- *postponement of Commission recommendation in order to allow time for adequate public study and evaluation of the applicant's revised proposals.*

Hughes 4 – Response

Please see Section 4.5.5 (Belkin, L 3 – Response) of this document.

4.5.57 Deborah Jackson

January 10, 2002

Jackson D 1 – Comment

As a resident homeowner of Chatsworth, I request you consider the following concerns I have about the proposed Chatsworth Ridge Estates development:

I would like to begin by telling you that the EIR appears to be flawed, incomplete, and inaccurate. It is clear that the consultants were hired by and work for the developer. I would like to see the county investigate areas of the EIR that are flawed and unrealistic, and seriously consider the impact that the magnitude of the development proposed will have on the prevailing community infrastructure- an infrastructure that will be overwhelmed by these new homeowners.

Jackson D 1 – Response

Please see Section 4.4.2 (CLPA 2 – Response) of this document regarding the adequacy of the EIR.

Jackson D 2 – Comment

Chatsworth has an large equestrian community that has been forced over time to accommodate encroaching suburban development that, more often than not, does not take into consideration the unique concerns and requirements of the horse-keeping population. Horse-keeping property owners suffer most in the continued residential development of the land that serves the resident horse-owning community. Horses are flight animals that respond to a frightening situation by running from it. Equestrians are constantly on the defense from speeding vehicles, leaf blowers, chain saws, car alarms, automatic sprinklers, barking dogs, bouncing balls, tractors, and noisy machinery, to name a few dangers. Today we are forced to ride several blocks through a mixture of homes owned by both horse-owners and non-horse owners, and never really feel safe until we reach the Santa Susana mountains. This proposed development will extend our route through several additional blocks of non-horsekeeping homes. Keep in mind that for over two hundred years, horsemen have roamed over the trails this project will eliminate.

4.0 Response to Written Comments

Jackson D 2 – Response

The project has been revised to reduce the total number of residential units from 484 to 388. This includes 155 minimum 15,000 square foot estate lots, of which 55 would be equestrian lots. Please see Sections 2.0 and 4.4.1 of this document for further discussion of this issue.

Jackson D 3 – Comment

A good compromise would be to require the developer to make at least fifty percent of the project horsekeeping homes.

Jackson D 3 – Response

Please see Jackson D 2 – Response of this document.

Jackson D 4 – Comment

At the very least, the county must require the developer to install signs warning truck drivers not to use Jake brakes adjacent to equestrian trails. Also, every horse crossing on any street must have a traffic light or stop sign depending on the volume of traffic. The developer has promised to build and improve equestrian trails in and around the subdivision. We request that the county require the developer to post bonds for such trails so that our community may complete them if the developer fails to do so.

Jackson D 4 – Response

Please see Section 4.5.34 (England 2 – Response) of this document.

Jackson D 5 – Comment

Environmental risks are not adequately addressed in the EIR. I am appalled at the developer's plan to collect all storm water into the streets of the proposed project then to direct that dirty water into pristine Devil's Canyon. I want to see a chemical analysis of storm water in other subdivisions. I am sure you will find petroleum, asbestos, pesticides, detergent, and many other harmful ingredients that cannot be filtered out without extraordinary means. The developer must provide scientific data that proves he can protect our wildlife. Please don't let this developer kill the wildlife in the hill area just so they can make a few extra bucks. All storm water needs to be collected in pipes and carried out of the wildlife corridor.

Jackson D 5 – Response

The impact on the environment and effect on animals is discussed in Section 4.3 of the Draft EIR. The impacts of water quality on wildlife are considered in the water quality standards set in the Basin Plan of the Regional Water Quality Control Board, as discussed further in Section 4.2.2 (Urban Runoff 1 – Response) and Appendix I of this document. Since this project would meet the Basin Plan standards, there would be no adverse water quality impact on wildlife.

Jackson D 6 – Comment

The developer promises to dedicate some land to the Santa Monica Mountain Conservancy. What assurance is there that this dedication will occur? What guarantee is there the conservancy won't trade that land off for something better in the future? Additionally, the developer is going to tear out areas of coastal sage and mature oaks. The tiny (15-gallon) proposed replacement saplings are inadequate compensation for this destruction. The developer should plant replacement trees that are substantially larger and more mature. The extensive paving inside the project will result in ambient heat gain, further aggravated by the removal of mature plants. How does the developer propose to mitigate this effect?

Jackson D 6 – Response

Please see Section 4.2.1 of this document regarding land dedication to SMMC.

4.0 Response to Written Comments

Replacement of oak trees would be implemented per the County ordinance, which specifies that each tree replacement shall be at least 15 gallons. As stated in Section 4.3 of the Draft EIR, 65 existing oak trees would require removal in order to construct the project. However, the revised project (388 units) would preserve an additional four oak trees (for a total of 61). Appendix F.3 of the Draft EIR outlined the protection measures for other oak trees on the project site. None of these oak trees are of heritage status. Impacts would be reduced to less than significant with implementation of mitigation measures, which would be implemented under the review and approval of the County (see Appendices F.3 and E of this document).

Please see Section 4.2.7 (Development Issues 3 - Response) of this document regarding heat gain.

Jackson D 7 – Comment

The developer says less than one third of the 1200 to 1500+ automobiles the project generate will use Canoga Avenue. The rest, they say, will use Topanga Canyon Boulevard. That is an absolutely ridiculous statement. If I lived there and had a choice between Topanga Canyon Boulevard with four traffic signals between my home and Devonshire Street of Canoga Avenue with one signal between my home and Devonshire Street it would be no contest. I would use Canoga. The area south of this project, in the City of Los Angeles, already has a serious traffic congestion problem. There are two private schools just north of Chatsworth Street between Canoga and De Soto that generate 1000+ daily trips by people who do not live in our neighborhood. This project will double or triple the congestion.

Jackson D 7 – Response

As stated in Section 4.12 of the Draft EIR, traffic impacts would not be significant with implementation of recommended mitigation measures. Please see Sections 4.2.6 and 4.4 (ETI 12 – Response) of this document for additional discussion of this issue.

Jackson D 8 – Comment

All of the public and private schools in Chatsworth are at maximum capacity-I know-my daughter attends a private school in Chatsworth. The County must require a new school to be built for this project. The statistics provided by the developer include local resident students and do not take into account students who are bused in (PWT students) and are therefore permanent (even though non-resident) students. The enrollment statistics in the EIR does not match the actual enrollment at the local schools. The hardship placed on public schools in Chatsworth to accommodate the influx of students from a 484-housing development will significantly impact the resources of the community.

Jackson D 8 – Response

As stated in Section 4.10 of the Draft EIR, impacts to schools would not be significant with implementation of recommended mitigation measures. Please see Sections 3.3.4, 4.3.7 and 4.5.28, and Appendix J of this document for additional discussion of this issue.

Jackson D 9 – Comment

The developer admitted to doing his traffic study during a school holiday which greatly alters the results and paints an inaccurate picture of the actual current and customary use of the streets in Chatsworth.

Jackson D 9 – Response

Please see Section 4.2.6 (Traffic 2 – Response) of this document.

Jackson D 10 – Comment

Speeding traffic on Canoga is another concern. Canoga Avenue has no houses fronting it between Rinaldi and the 118 freeway, so drivers feel comfortable racing downhill at breakneck speeds. The area of Canoga Avenue also has a bridle path that acts as a collector path to channel equine traffic into the nearby mountains. At the very least you must require the developer to post signs demanding

4.0 Response to Written Comments

that trucks not to use truck air brakes (jake brakes) on Canoga, you must also require them to post the speed limit at 25 mph on Canoga, you must require the developer to install an equestrian friendly four-way traffic signal at the intersection of Canoga and Rinaldi, and stop signs at each street between Rinaldi and the 118 freeway. Just south of the freeway overpass there needs to be an equestrian-activated light so riders can safely cross the street to enter the park. Also, the bridle path, which the builder proposes to extend under the freeway needs to have an opening so a rider can get out to cross the street there. There also needs to be adequate horse crossing signs at all road crossings throughout the project.

Jackson D 10 – Response

As stated in Section 4.12 of the Draft EIR, impacts to traffic would not be significant with implementation of recommended mitigation measures. Please see Sections 3.3.5, 4.2.6 and Appendix K of this document regarding revised traffic information. Please see Section 4.4.3 (ETI 12 – Response) of this document regarding traffic on Canoga Avenue.

Please see Section 4.5.34 (England 2 – Response) of this document regarding equestrian conflicts.

Jackson D 11 – Comment

Construction will generate dust, fumes, noise and runoff in our neighborhood for up to five years. There is no enforcement mechanism to ensure either containment of these effects or the developer's compliance with related ordinances and their own proposed measures. There needs to be more stringent limits on construction activity, a hot line for complaints, penalties for noncompliance, and public accountability. For 3 to 5 years many pieces of noisy construction machinery will be operating at the development site. The developer has not committed to limits on numbers of simultaneous machine operations, on the use of state-of-the-art noise shielding and muffling devices, or on measured noise limits. We want a way to insure that we won't be assaulted in our homes by all this noise.

Jackson D 11 – Response

As discussed in Sections 4.2 and 4.7 of the Draft EIR, no significant noise or dust impact would occur from the project with implementation of recommended mitigation measures. Please refer to Section 4.2.3 of this document for additional discussion of impacts and mitigation.

As stated in Section 4.6 of the Draft EIR, impacts with regard to urban runoff would not be significant with implementation of mitigation measures. See Section 4.2.2 (Urban Runoff 1 – Response) and Appendix I of this document for additional discussion of this issue.

See Appendices D and E regarding implementation of mitigation measures and conditions of the project.

Jackson D 12 – Comment

Construction activity will require thousands upon thousands of truckloads of building and road materials to pass through our streets, including right past an elementary school, middle school and major equestrian collector trail. There is inadequate control over delivery times, routes and frequency. These huge vehicles present not just an inconvenience but a hazard to local school children, residents, and equestrians. The developer should prepare a comprehensive plan to alleviate the effects of so much heavy truck traffic on our neighborhood and give us a chance to provide input to that plan before it is finalized. The developer must be required to post signs advising construction workers that the use of truck air brakes (jake brakes) around bridle paths is unacceptable and can be dangerous to equestrians and their horses.

Jackson D 12 – Response

See Sections 4.2.3 and 4.2.6 of this document.

4.0 Response to Written Comments

Jackson D 13 – Comment

The developer asserts that construction vehicles will avoid “peak travel periods” and parking on heavily traveled roadways. These terms are vague and undefined, giving us no protection, recourse or opportunity to evaluate the conditions of the construction that will overwhelm our neighborhood. There is no assurance that our residential side streets will not have construction vehicles parked on them.

Jackson D 13 – Response

Please see Appendices D and E of this document.

Jackson D 14 – Comment

I bought my home on Canoga Avenue roughly 2-1/2 years ago with the specific intent of riding my horses, with my daughter, in the nearby hills and open areas. I am seriously concerned about the increase in noise this outrageous 484-home development will bring my street, and the raft of safety issues involved with increased urbanization of a quiet residential area. I bought here to provide a safe and congenial home for my daughter and our chosen lifestyle – a lifestyle that is consistent with the history and traditional land use of Chatsworth.

Jackson D 14 – Response

The comment has been received and noted. Please see section 4.7 (Noise) of the DEIR. No additional response is required.

Jackson D 15 – Comment

To help the equestrian issues and to help Chatsworth maintain its rural equine heritage you must require this developer to build at least 50 percent of the new homes so that they are zoned for horses. This requirement is in alignment with the Master Plan in place for the Chatsworth-Porter Ranch Area.

Jackson D 15 – Response

Please see Section 4.5.34 (England 2 – Response) of this document.

Jackson D 16 – Comment

The best way to mitigate traffic and school concerns and the general impact on our rural neighborhood is to cut the density in half and allow just 242 homes, not a ridiculous 484. After all, these are not the affordable houses this state is crying for, but rather expensive targeted at the top one percent of our population.

Jackson D 16 – Response

As stated in Section 5.1 of the Draft EIR, the CEQA Guidelines require an EIR to describe a range of reasonable alternatives to the project, which would feasibly attain the basis objectives of the project, but would avoid or substantially lessen significant impacts of the project. As stated in the Draft EIR, implementation of the project would not result in any significant project-related impacts that would not be mitigated to less than significant. Further, the range of alternatives required within an EIR by CEQA is governed by the “rule of reason” which requires an EIR to include only those alternatives necessary to permit a reasoned choice. The discussion of alternatives need not be exhaustive. As stated above, implementation of Alternative 3 (a 65 percent reduction in development) would not be economically feasible. Therefore, the analysis of a 242-unit project is not required.

4.5.58 Kathy Jackson

January 7, 2002

Jackson K 1 – Comment

I am writing to express my objection to the proposed Deerlake Ranch development in Chatsworth (Project No. 99-239(5)).

The project is located close to my home. My concerns are the following:

Traffic and congestion due to size and density

Jackson K 1 – Response

As stated in Section 4.12 of the Draft EIR, traffic impacts would not be significant with implementation of recommended mitigation measures. Please see Sections 3.3.5 and 4.2.6, and Appendix K of this document for additional discussion of traffic impacts and mitigation measures.

Jackson K 2 – Comment

Control of water runoffs [sic] and pollution to canyon

Jackson K 2 – Response

As stated in Section 4.6 of the Draft EIR, impacts with regard to urban runoff would not be significant with implementation of mitigation measures. See Section 4.2.2 (Urban Runoff 1 – Response) and Appendix I of this document for additional discussion of this issue.

Jackson K 3 – Comment

Impact of the construction process to existing residence, dust, construction vehicles.

Jackson K 3 – Response

As discussed in Sections 4.2 and 4.7 of the Draft EIR, no significant noise or dust impact would occur from the project with implementation of recommended mitigation measures. Please refer to Section 4.2.3 of this document for additional discussion of impacts and mitigation.

Jackson K 4 – Comment

Additional fire and police services.

Jackson K 4 – Response

As stated in Section 4.8 of the Draft EIR, no significant impacts would occur to fire protection services with implementation of the project. See Section 4.2.4 (Fire 1 and 4 – Responses) and Appendix E of this document for additional discussion regarding this issue.

As stated in Section 4.9 of the Draft EIR, no significant impacts would occur to fire protection services with implementation of the project. See Section 4.2.5 (Police Services 1 and 5 – Responses) and Appendix E of this document for additional discussion regarding this issue.

Jackson K 5 – Comment

Please do not approve this project.

Jackson K 5 – Response

The comment has been received and noted. No additional response is required.

4.5.59 Phil Jackson

January 7, 2002/January 8, 2002

Jackson P 1 – Comment

I am writing to express my objection to the proposed Deerlake Ranch development in Chatsworth (Project No. 99-239(5)) for which you have scheduled a January 23 hearing.

4.0 Response to Written Comments

The proposed project is located close to my home, and I am particularly concerned about the following:

Traffic and congestion due to size and density of project

Jackson P 1 – Response

As stated in Section 4.12 of the Draft EIR, traffic impacts would not be significant with implementation of recommended mitigation measures. Please see Sections 3.3.5 and 4.2.6, and Appendix K of this document for additional discussion of traffic impacts and mitigation measures.

Jackson P 2– Comment

Impact of construction process to existing residents- noise, wind blown dust and dirt, construction vehicles

Jackson P 2 – Response

As discussed in Sections 4.2 and 4.7 of the Draft EIR, no significant noise or dust impact would occur from the project with implementation of recommended mitigation measures. Please refer to Section 4.2.3 of this document for additional discussion of impacts and mitigation.

Jackson P 3 – Comment

Control of water run off and pollution to canyon.

Jackson P 3 – Response

As stated in Section 4.6 of the Draft EIR, impacts with regard to urban runoff would not be significant with implementation of mitigation measures. See Section 4.2.2 (Urban Runoff 1 – Response) and Appendix I of this document for additional discussion of this issue.

Jackson P 4 – Comment

Additional demand on county services (Police & fire) due to density

Jackson P 4 – Response

As stated in Section 4.8 of the Draft EIR, no significant impacts would occur to fire protection services with implementation of the project. See Section 4.2.4 (Fire 1 and 4 – Responses) and Appendix E of this document for additional discussion regarding this issue.

As stated in Section 4.9 of the Draft EIR, no significant impacts would occur to fire protection services with implementation of the project. See Section 4.2.5 (Police Services 1 and 5 – Responses) and Appendix E of this document for additional discussion regarding this issue.

Jackson P 5 – Comment

In light of the significant adverse impact this project would have on my neighborhood and the lack of meaningful measures to alleviate that impact, I request that you not approve the project as currently presented. Any further consideration of the project should be conditioned on:

- *a substantial reduction in the size and scope of the project;*
- *a more meaningful proposal for mitigation by the applicant; and*
- *postponement of a Commission recommendation in order to allow time for adequate public study and evaluation of the applicant's revised proposals.*

Jackson P 5 – Response

Please see Section 4.5.5 (Belkin, L 3 – Response) of this document.

Jackson P 6 – Comment

I request that you not approve this project until these objections have been considered. And the Developer has addressed them.

Jackson P 6 – Response

The comment has been received and noted. No additional response is required.

4.0 Response to Written Comments

4.5.60 Charles and Linda Jelloian

March 22, 2002

Jelloian 1 –Comment

We are writing to express our objection to the proposed Deerlake Ranch development in Chatsworth (Project # 99-239(5)) for which you have continued the public hearing to April 10.

Two and a half years ago my wife and I moved to Chatsworth from Porter Ranch, to enjoy less traffic, the equestrian trails, quieter streets and the beautiful hills. The impact of this development will destroy the quality of life in our community.

Jelloian 1 –Response

The commenter's objection to the project is noted and will be forwarded on to the decision makers.

Jelloian 2 –Comment

As parents of three small children, we are deeply concerned about safety. Canoga Avenue will become a busy, high traffic street. This is an area where our kids ride their bikes and take walks. People will cut through Celtic Street to try to "short-cut" their way to the East. With 4,000 to 6,000 additional car trips every day (along a few blocks) this is as significant to our community as the Ahmanson Ranch development is to the Southwest Valley neighborhoods.

Jelloian 2 –Response

As stated in Section 4.12 of the Draft EIR, traffic impacts would not be significant with implementation of recommended mitigation measures. Please see Sections 3.3.5 and 4.2.6, and Appendix K of this document for additional discussion of traffic impacts and mitigation measures.

Jelloian 3 –Comment

As a Commissioner on the Los Angeles Department of Transportation for the past eight years, I can assure you I have become very knowledgeable about traffic and safety issues throughout Los Angeles. This development will absolutely adversely impact all of our efforts we have been involved with to try to maintain a nice environment in our neighborhood.

Jelloian 3 –Response

See Jelloian. 2 – Response of this document.

Jelloian 4 –Comment

The developers [sic] mitigation measures aren't enough. As Councilman Bernson pointed out in his January 22 letter to your honorable board, "It is virtually impossible to fully mitigate the traffic impacts of this project. Topanga Canyon Blvd. and Canoga Avenue are woefully insufficient to handle the traffic in rush hours and emergencies. Four hundred and fifty homes will create additional burdens on the LAUSD's local schools. This project will add burdens on the City of Los Angeles' infrastructure such as libraries, parks, and the fire department." The good Councilman strongly recommends your disapproval, and respectfully, so do we.

Thank you for your valuable time and your consideration of this important matter.

Jelloian 4 –Response

See Jelloian. 2 – Response of this document.

As stated in Section 4.10 of the Draft EIR, school impacts would be less than significant with implementation of recommended mitigation measures. See also Sections 3.3.4 and 4.3.8 and Appendix J of this document for additional discussion regarding impacts to schools.

See Section 4.1.2 (City Council 6 – Response) of this document regarding mitigation of impacts on libraries.

4.0 Response to Written Comments

Please see Section 2.0 of this document regarding an updated project description concerning private onsite parks and Appendix E of this document concerning contributions to existing public parks.

As stated in Section 4.8 of the Draft EIR, no significant impacts would occur to fire protection services with implementation of the project. See Section 4.2.4 (Fire 1 and 4 – Responses) and Appendix E of this document for additional discussion regarding this issue.

4.5.61 Kjeisten Jeppson

January 7, 2002

Jeppson 1 - Comment

I am writing to express my objection to the proposed Deerlake Ranch development in Chatsworth (Project No. 99-239(5)) for which you have scheduled a January 23 hearing.

I am particularly concerned about the following:

Loss of Plummer's Mariposa Lily

Jeppson 1 – Response

Section 4.3 of the Draft EIR included a discussion of impacts upon sensitive species, nesting birds and raptors, and wildlife movement. Impacts to biological resources would not be significant with implementation of recommended mitigation measures. Please see also Section 4.2.1 and Appendix F.8 of this document for additional discussion of Plummer's mariposa lily.

Jeppson 2 - Comment

and endangerment of valuable oak trees

Loss of natural species is an endangerment to the entire planet. In addition, suburban sprawl is not only using up land, water, and species, it is contributing to the deterioration of the environment.

Jeppson 2 – Response

As stated in Section 4.3 of the Draft EIR, 65 existing oak trees would require removal in order to construct the project. However, the revised project (388 units) would preserve an additional four oak trees (for a total of 61). Appendix F.3 of the Draft EIR outlined the protection measures for other oak trees on the project site. None of these oak trees are of heritage status. Impacts would be reduced to less than significant with implementation of mitigation measures, which would be implemented under the review and approval of the County. See Appendices F.3 and E of this document for additional discussion of this issue.

Jeppson 3 - Comment

In light of the significant adverse impact this project would have on my neighborhood and the lack of meaningful measures to alleviate that impact, I request that you not approve the project as currently presented. Any further consideration of the project should be conditioned on:

- *a substantial reduction in the size and scope of the project;*
- *a more meaningful proposal for mitigation by the applicant; and*
- *postponement of a Commission recommendation in order to allow time for adequate public study and evaluation of the applicant's revised proposals.*

Jeppson 4 – Response

Please see Section 4.5.5 (Belkin, L 3 – Response) of this document.

4.5.62 Toni Jesso

January 7, 2002

Jesso 1 - Comment

I am writing to express my objection to the proposed Deerlake Ranch development in Chatsworth (Project No. 99-239(5)) for which you have scheduled a January 23 hearing.

The proposed project is located close to my home, and I am particularly concerned about the following:

Over crowding of schools

Jesso 1 - Response

As stated in Section 4.10 of the Draft EIR, impacts to schools would not be significant with implementation of recommended mitigation measures. Please see Sections 3.3.4, 4.3.7 and 4.5.28, and Appendix J of this document for additional discussion of this issue.

Jesso 2 - Comment

Traffic

Jesso 2 - Response

As stated in Section 4.12 of the Draft EIR, traffic impacts would not be significant with implementation of recommended mitigation measures. Please see Sections 3.3.5 and 4.2.6, and Appendix K of this document for additional discussion of traffic impacts and mitigation measures.

Jesso 3 - Comment

Distruction [sic] of Natural Beauty in our Mtns.

Jesso 3 - Response

As stated in Section 4.1 of the Draft EIR, impacts to aesthetic resources would not be significant.

Jesso 4 - Comment

Wildlife!

Jesso 4 - Response

Section 4.3 of the Draft EIR included a discussion of impacts upon sensitive species, nesting birds and raptors, and wildlife movement. Impacts to biological resources would not be significant with implementation of recommended mitigation measures. Please see also Section 4.2.1 of this document for additional discussion of this issue.

Jesso 5 - Comment

In light of the significant adverse impact this project would have on my neighborhood and the lack of meaningful measures to alleviate that impact, I request that you not approve the project as currently presented. Any further consideration of the project should be conditioned on:

- *a substantial reduction in the size and scope of the project;*
- *a more meaningful proposal for mitigation by the applicant; and*
- *postponement of a Commission recommendation in order to allow time for adequate public study and evaluation of the applicant's revised proposals.*

Jesso 5 - Response

Please see Section 4.5.5 (Belkin, I. 3 - Response) of this document.

4.5.63 Gertrude Jolicoeur

January 7, 2002

Jolicoeur 1 - Comment

I am writing to express my objection to the proposed Deerlake Ranch development in Chatsworth (Project No. 99-239(5)) for which you have scheduled a January 23 hearing.

The proposed project is located close to my home, and I am particularly concerned about the following:

Traffic- I can't get out my driveway now on Topanga and the 118. What will it be like after.

Jolicoeur 1 - Response

As stated in Section 4.12 of the Draft EIR, traffic impacts would not be significant with implementation of recommended mitigation measures. Please see Sections 3.3.5 and 4.2.6, and Appendix K of this document for additional discussion of traffic impacts and mitigation measures.

Jolicoeur 2 - Comment

It is going to destroy vegetation which has taken yrs to grow.

Jolicoeur 2 - Response

Section 4.3 of the Draft EIR included a discussion of impacts upon sensitive species, nesting birds and raptors, and wildlife movement. Impacts to biological resources would not be significant with implementation of recommended mitigation measures. Please see also Section 4.2.1 of this document for additional discussion of this issue.

Jolicoeur 3 - Comment

We don't need more people. Let's stop the building. Enough is enough. Let the animals have the hills that remain.

Jolicoeur 3 - Response

The comment has been received and noted. No additional response is required.

Jolicoeur 4 - Comment

In light of the significant adverse impact this project would have on my neighborhood and the lack of meaningful measures to alleviate that impact, I request that you not approve the project as currently presented. Any further consideration of the project should be conditioned on:

- *a substantial reduction in the size and scope of the project;*
- *a more meaningful proposal for mitigation by the applicant; and*
- *postponement of a Commission recommendation in order to allow time for adequate public study and evaluation of the applicant's revised proposals.*

Jolicoeur 4 - Response

Please see Section 4.5.5 (Belkin, L 3 – Response) of this document.

4.5.64 Phil Kent

December 22, 2001

Kent 1 - Comment

I am opposed to the housing development in Chatsworth (Deerlake Ranch, EIR Project 99-239(5)) primarily due to the increased traffic flow and congestion. I don't like the idea of adding additional traffic to Canoga Avenue.

4.0 Response to Written Comments

Kent 1 - Response

As stated in Section 4.12 of the Draft EIR, traffic impacts would not be significant with implementation of recommended mitigation measures. Please see Sections 3.3.5 and 4.2.6, and Appendix K of this document for additional discussion of traffic impacts and mitigation measures.

Kent 2 - Comment

I would like to see a "sound wall" built on the 118 freeway between Topanga and Desoto to shield the homes below the freeway from traffic noise. Do you know how to get this done?

Kent 2 - Response

As stated in Section 4.7 of the Draft EIR, noise impacts would not be significant with implementation of recommended mitigation measures. A sound wall would not be required. However, this comment will be forwarded on to the decision makers.

4.5.65 Dorian Keyser

January 11, 2002/June 19, 2002

Keyser 1 - Comment

Under Mr. Garlinghouse's able leadership, the Presidio Group has generated a very impressive DEIR. We await the final EIR, which, hopefully, will reflect the written and oral comments of the public. We strongly recommend that full public comments be allowed on all of the EIR, not only those parts that have been changed from the DEIR!!

Keyser 1 - Response

All comments received on the Draft EIR, Additional Environmental Information document and Revised Project Design Summary document are included in this document with responses.

Keyser 2 - Comment

I am concerned that the Presidio Groups [sic] is planning to sell the property to one or more developers who will impliment [sic] the approved plans. These latter [sic] will be responsible for all grading, streets, sidewalks, plus water, natural gas, electricity, telephone service to the entry of each home. Mr. Garlinghouse has stated to the public that that [sic] the project is being set up so that its implimentation [sic] will follow the requirements of the approved documentation, regardless of who is responsible for it.

- 1. Can Mr. Garlinghouse supply us with detailed information of one or more major projects in southern California where he was primarily responsible for all of the planning, etc. which was then sold for another entity that successfully carried it out with little or no changes to the approved plans?*
- 2. Will Mr. Garlinghouse agree to remain as an advisor until the infra-structure [sic] has been successfully completed? Will one of the conditions of the sale of the property be that Mr. Garlinghouse shall be reimbursed [sic] for his expenses in this capacity?*

Keyser 2 - Response

This comment is not CEQA related. No additional response is required.

Keyser 3 - Comment

I recommend that the size of each park be increased to be at least as big as the legal requirements for them.

Keyser 3 - Response

There is no legal requirement regarding the minimum or maximum size of private parks.

4.0 Response to Written Comments

Keyser 4 - Comment

The July 26, 2000 comments from the Santa Monica Mountains Conservancy should be fully incorporated in Volume 1 of the DEIR. This should include an up-to-date version of the Conservancy's map with changes:

- 1. North of Stoney Point and Stoney Point are now owned by the L.A. City Department of Recreation and Parks. An exact map of this 70 acre park should be incorporated.*
- 2. The S.P. railroad tracks and the railroad tunnel should be shown.*
- 3. The map should show the privately owned 14 acre Horner Property and the 28 acre Smith Property. Horner is on the east side of Road B where it starts immediately north of the 118 Freeway and Smith abuts the east side of Horner and the 118 Freeway. Horner is being purchased using Quimby Funds from the Deerlake Ranch, about \$230,000 additional funds from the Presidio Group, and about \$200,000 from the Santa Monica Mountains Conservancy.*
- 4. The map should show the 22 acre DeYoung property directly across Topanga Canyon Blvd. from "North of Stoney Point", [sic] 14 acre Mineo Property abutting [sic] the west side of DeYoung, and the 22 acre Garden of The Gods owned by the Conservancy. The trail easement that leads from the Garden of the Gods to Chatsworth Park South (81 acres plus plus [sic] the ? acre railroad property), the 24 acre Chatsworth Park North, the 4.5 acre Becker/Culbreth "sliver", to the 204 acre Corriganville Rancho Simi Recreation and Parks District Park which is part of the main wildlife corridor between the Santa Monica Mountains and the much larger Los Padres and Angeles National Forests via the Santa Mountains [sic] and the Simi Hills.*

Keyser 4 – Response

Please see Section 4.3.3 (SMMC responses) of this document for the County's response to the Santa Monica Mountains Conservancy's January 22, 2002 comment letter.

Keyser 5 – Comment

Wildlife Corridors/Habitat Linkages

The DEIR questions the significance of the wildlife corridors in the Deerlake Ranch and its environs. However, Road B is a very important corridor that is used by numerous species of animals. Mountain lions, bob cats, coyotes, raccoons, deer, eagles, hawks, etc. are not easily observed but they are there--especially at night!! Historically, this corridor has been especially critical during massive wildfires which prevent wildlife from escaping via other corridors. Wildlife presently reaches the Canoga Avenue underpass via Road B and Devil Canyon. The importance of this corridor has been increased since the gating of the privatized roads into Indian Falls and Indian Springs via Iverson Road and Poema Place.

Keyser 5 – Response

Section 4.3 of the Draft EIR included a discussion of impacts upon sensitive species, nesting birds and raptors, and wildlife movement. Impacts to biological resources would not be significant with implementation of recommended mitigation measures. Please see also Section 4.2.1 (Topical Response) of this document for additional discussion of this issue.

Keyser 6 - Comment

I am concerned about the response time of the personnel from the distant L.A. County Sheriff's Lost Hills Sub-station. The plan to have an 800 sqft "kiosk" on-site with back-up from the nearby L.A. City Police Department's Devonshire Division sub-station is significantly inferior to delegating the responsibility to the local Devonshire substation.

4.0 Response to Written Comments

Keyser 6 – Response

See Section 4.2.5 (Police Services 3 - Response) of this document.

Keyser 7 - Comment

The L.A. City Fire Department should supply emergency services but the L.A. County Fire Department should be responsible for wildfires.

Keyser 7 – Response

See Section 4.4.5 (SSMPA 7 – Response) of this document. Also see Section 4.2.4, Fire Services 1-Response.

Keyser 8 - Comment

The homeowners should pay taxes to cover the costs of cleaning the catch basins, even though the L.A. County Flood Control District is responsible for flood control.

Keyser 8 – Response

See Section 4.4.5 (SSMPA 8 – Response) of this document.

Keyser 9 - Comment

The “N.A.P.” on the maps need to be updated since many of these items have been acquired by the Presidio Group. The N.A.P. table of sheet 1 of the 10-19-01 DEIR is especially important.

Keyser 9 – Response

The revised VTTM in Appendix C-1 of this document reflects the updated status of the “NAP” lots.

Keyser 10 - Comment

I believe that the 10 foot wide N.A.P. which surrounds the entire property will be deeded to the Conservancy as per agreement with them. I suggest that it be given a N.A.P. number and that its ownership be fully defined. The equestrian trails need to be more clearly defined. I believe that L.A. County will maintain the equestrian trails which will be built to L.A. County standards. Who will maintain the Conservancy’s 10 foot easement?

Keyser 10 – Response

See Section 4.4.5 (SSMPA 11 – Response) of this document.

Keyser 11 - Comment

Who will make sure that the 353 oak trees are properly cared for after the development has been completed? The DEIR is [sic] inconsistent in that it states in several places that the 130 replacement oak trees will be cared for two years and in other places for five years. All places should say “a minimum of five years”. An oak tree in a fifteen gallon container is small and many will die. Who will replace the dead ones? What provisions will there be to prevent homeowners from damaging oak trees on or near their property? There needs to be some supervision by L.A. County in addition to the homeowners association.

Keyser 11 – Response

See Section 4.4.5 (SSMPA 12 – Response) of this document.

Keyser 12 - Comment

Volume II, Table 6.3 should be corrected to state that the total jurisdiction area for Devil Canyon is 353,443 sqft, not 6,575 sqft.

Keyser 12 – Response

The comment has been received and noted.

Keyser 13 - Comment

All of the Arundo Donax should be completely removed from Devil Canyon and kept removed. It is a very invasive, non-native plant.

4.0 Response to Written Comments

Keyser 13 – Response

See Section 4.4.5 (SSMPA 14 – Response) of this document.

Keyser 14 – Comment

The trails will be used by equestrians, hikers, and, unfortunately, bikers. Trails need to be wide enough to allow safe passage in the same direction and in opposite directions. They should also have numerous signs. They should be built to L.A. County standards.

Keyser 14 – Response

See Section 4.4.5 (SSMPA 15 – Response) of this document.

Keyser 15 - Comment

I am surprised by the comment by James Hartle in the August 28, 2000 DEIR that Browns Canyon Road is major highway in the L.A. Highway Plan and that Road B (Saugus) will be widened. According to this document, will be widened to 100 feet plus any necessary slope easement and Saugus will also be widened. Widening of these roads would open up the entire region west of Porter Ranch to development, I strongly oppose this. Moreover, Santa Monica Mountains Conservancy owned and L.A. City owned parklands along Saugus make it doubtful that any widening of Saugus will occur.

Keyser 15 – Response

See Section 4.4.5 (SSMPA 16 – Response) of this document

Keyser 16 - Comment

Despite presentations by various people, the public believes that there will be serious traffic congestion at Topanga Canyon Blvd., Canoga Ave., and DeSoto which would cause significant delays during morning and evening rush hours. They also believe that three these streets and other major ones in the area will [sic] be heavily impacted. I suggest that a committee be formed consisting of interested people and public experts to fully explore the situation. The experts should include L.A. County and L.A. City people.

Keyser 16 – Response

Please see Section 4.4.3 (ETI 12 – Response) of this document. for a discussion of traffic impacts.

Keyser 17 – Comment

Schools

The principle of the Chatsworth Park Elementary School testified that her school is already operating a [sic] capacity and that table 4.10.1 of Volume 1 of the DEIR which states that there are 125 available spaces at her school is not correct. She also stated that it is hazardous for children to be let out of cars at her school due to hazardous traffic. The Germain Elementary School is also at capacity. I do not recommend that an elementary school be located on the Deerlake Ranch. One of the problems is that the L.A. Unified School District, which will receive about \$6,200,000 (i.e., \$13,000 per house) from the Deerlake Ranch will use this money elsewhere in their district where schools are on all year round use. Another is that state law makes it mandatory that no kindergarden [sic], first, second, or third grade classes may have more than 20 pupils without losing it [sic] state funding. Another problem is that the L.A. Unified School District has not exercised its rights to land for an elementary school and an intermediate school on the Porter Ranch Development and is in danger of losing these rights. Please note that an element. [sic] school on the Porter Ranch would relieve the problem, as would a change in state law which allowed up to 25 public [sic] per class so long as the average [sic] per class was 20.

4.0 Response to Written Comments

Keyser 17 – Response

As stated in Section 4.10 of the Draft EIR, impacts to schools would not be significant with implementation of recommended mitigation measures. Please see Sections 3.3.4, 4.3.7 and 4.5.28 (Dixon Davis 1 - Response), and Appendix J of this document for additional discussion of this issue.

Keyser 18 – Comment

Libraries

The DEIR requires a library facilities [sic] mitigation fee of \$625 per residential unit and states that a bookmobile from the Los Virgenes Public Library will provide library services. However, this would be very inaddquate [sic] for the children and adults. The nearby L.A. City Chatsworth Branch Library, which would be used by those who live on the Deerlake Ranch, should receive this fee to be used th [sic] purchase books.

Keyser 18 – Response

Please see Section 4.3.5 (City Council 6 – Response) of this document.

Keyser 19 – Comment

Water

The existing water supply for Twin Lakes has sufficient capacity and pressure to supply the Deerlake Ranch. However, I recommend that the fire department be consulted to verify this information.

Keyser 19 – Response

Please see Section 4.4.5 (SSMPA 20 – Response) of this document.

Keyser 20 – Comment

In deference to those whose view will be degraded by the grading and construction and dust, I recommend that the developer be helped by prompt granting of permits, completions of inspections, and other support by public officials by the prompt granting of permits, completions of inspections, and other support consistent with requirements.

Keyser 20 – Response

No Specific environmental comment is made. The comment is noted and will be forwarded to the decision makers.

Keyser 21 – Comment

The L.A. County Department of Regional Planning is currently considering an application to build a 154 condominium project slightly to the west of the Deerlake Ranch project. I urge you to carefully consider the impact of both projects upon traffic, schools, libraries, and many other items on a regional basis, rather than evaluating each as a separate entity.

Keyser 21 – Response

The Draft EIR considered cumulative impacts, including the proposed 159-condominium project located west of the project site. The referenced project is now proposed for 65 condominium units. The comment is noted and will be forwarded on to the decision makers.

Keyser 22 – Comment

Although Dorian Keyser is the Vice-president and Lands Committee Chair of the Santa Susana Mountain Park Association, this submittal is own and not necessarily the official comments of the SSMPA.

- 1. The Deerlake Highlands, now called Deerlake Ranch, was subdivided into over 2000 25 by 60 foot lots in the mid-1920. Therefore, its development cannot legally be denied. In my opinion, the Presidio Group, under the leadership of Rich Garlinghouse, have worked hard and responsibly with the planning of the development and in communicating with the members of the Chatsworth Community. He has conscientiously modified his plans in response to community*

4.0 Response to Written Comments

comments and agreed to providing funds to mitigate the development. He has downsized the development by reducing the number of houses. Whether he can further downsize it and still make a reasonable profit is probably not realistic.

Keyser 22 – Response

The comment has been received and noted.

Keyser 23 – Comment

- 2. The Presidio Group has obtained loans from a source to help finance his operation. If the Deerlake Ranch development is denied unless further significant downsizing is required, I doubt that it can be financially [sic] succeed. Thus, since it already has been subdivided, a development cannot be stopped. Note that 50 by 60ft. lots [sic] would yield more than 1000 lots. This would increase traffic, school crowding, and other degradation [sic]. Would the equestrian trails, the financial help to Twin Lakes and other mitigations still occur?*

Keyser 23 – Response

If the revised project is not approved, the recommended mitigation would not be implemented.

Keyser 24 – Comment

- 3. The existing, but vacant and in need of refurbishing, Devonshire Elementary School, can be made useable with about \$2,000,000 of the \$6,000,000 that LAUSD will obtain from the Deerlake Ranch Development. However, the LAUSD has indicated that this money is needed more elsewhere. The Chatsworth and Northridge communities need to mount an aggressive program to refurbish this school. It is much needed in the area.*

Keyser 24 – Response

This is out of the scope of the EIR. However, the comment has been received and noted.

Keyser 25 – Comment

Jan Hinkston's Dream

Susana Mountain Park Association was created by founder Janice Hinkston and others in 1970 to bring about the Santa Susana State Park, a 50,000 acre "dream" shown in the attached map. This dream encompasses the Santa Susana Mountains from 15 on the east to Tapo Canyon in the Simi Valley to the west and from The Santa Clara River (State highway 126) in the north south to the 118 Freeway and extending through a "neck" to the 1094 acre China Flats in a portion of the former Jordan Ranch.

Through the years, a significant percentage of the 50,000 acres have been acquired for the public by the Santa Monica Mountains Conservancy, the U.S. National Parks Service, and local parks agencies and the 50,000 acres have been expanded to reach the Angeles and Los Padres National Forests and more of the Simi Hills and the SSMPA has supported public ownership of much of the Santa Monica mountains. the implementation [sic] of much of the Marge Feinberg Rim of the Valley Trail.

I am working on a complete definition of publicly and privately owned parklands in the Santa Susanas and Simi Hills, what lands have been developed, which proposed solid waste disposal sites have been implemented [sic] and which have been proposed but have been prevented from being implemented [sic], and what are SSMPA's hopes for the future.

Article I of the latest SSMPA Bylaws defines the SSMPA Mission Statement is as follows:

Section 1.

The primary purposes of [sic] of the Santa Susana Mountain Park Association are protection, preservation, restoration, and enhancement of the Santa Susana Mountains and Simi Hills:

4.0 Response to Written Comments

1. *As open space lands and wildlife corridors linking the Los Padres National Forest and the San Gabriel Mountains, including the Angeles National Forest, to the Santa Monica Mountains.*
2. *As locales of unique geological formations.*
3. *As sites of ethnological, archaeological, and historical interests.*
4. *To provide passive recreational opportunities and environmental educational opportunities.*
5. *To support the acquisition of new public parks, open spaces, and conservation easements, participate in the planning of park infrastructure and programs and support said programs.*

Please note that many SSMMPA members have interests that are not a part of the SSMMPA mission statement. Thus, SSMMPA members are free to advocate these interests so long as they do not represent them as being the position of SSMMPA without being authorized to do so by the SSMMPA Board of Directors. Of particular note is the present Deerlake Ranch situation which is very complex. Whereas my written and oral testimony has reflected SSMMPA's Mission Statement and has tried to establish [sic] the facts about schools, traffic, libraries, parks, equestrian trails, Levedia, etc. and I believe that the Presodio Group has the democratic right to present its case to the public and public officials, I have NEVER represented my position as that of SSMMPA on these matters. Moreover, I believe in the freedom of speech for other SSMMPA members and hope that each who testifies do not represent their testimony to be that of SSMMPA if it violates SSMMPA's Mission Statement.

Keyser 25 – Response

This is out of the scope of the EIR. However, the comment has been received and noted.

4.5.66 William J. Korek

January 28, 2002

Korek 1 –Comment

Some of the owners of land located north of the Deerlake project located at the 118 Freeway and Topanga Canyon feel they had an access from their property to Topanga Canyon via a dirt road until 1972 when the fire department closed the road. Do they still have this easement?

Korek 1 –Response

See Section 4.5.3 (Augello 1 & 2 - Responses) of this document.

4.5.67 Fred and Linda Krauser

March 8, 2002

Krauser 1 –Comment

I am writing to express my objection to the proposed Deerlake Ranch development in Chatsworth (Project No. 99-239(5)) for which you have continued the public hearing to April 10.

The proposed project is located close to my home, and I am particularly concerned about the following:

Canoga Ave. being congested [sic]. This will make our area dangerous to walk, ride our bikes, ride our horses, will cause serious health hazards. Also our air will be extremely polluted with extreme heavy traffic. This project is a political mess. This project should be aborted.

4.0 Response to Written Comments

Krauser 1 – Response

As stated in Section 4.12 of the Draft EIR, traffic impacts would not be significant with implementation of recommended mitigation measures. Please see Sections 3.3.5 and 4.2.6, and Appendix K of this document for additional discussion of traffic impacts and mitigation measures. The commenter's opposition to the project is noted and will be forwarded to the decision makers.

Krauser 2 – Comment

In light of the significant adverse impact this project would have on my neighborhood and the lack of meaningful measures to alleviate that impact. I request that you do not approve the project as currently presented. Any further consideration of the project should be conditioned on:

- *a substantial reduction in the number of homes in the project;*
- *a more meaningful proposal for mitigation by the applicant; and*
- *opportunity for public study of and comment on the applicant's revised proposals.*

Krauser 2 – Response

Please see Section 4.5.5 (Belkin, L 3 – Response) of this document.

4.5.68 Wen-Tar Kuo and Lih-Er Chang

April 4, 2002

Kuo and Chang 1 – Comment

We are writing to express our objection to the proposed Deerlake Ranch development in Chatsworth. This project is located close to our home and we are particularly concerned about the followings [sic]:

1. *The total number of the housing in this project:*

We strongly believe the lot size of this project is way too small. It should be consistent with the existing equestrian neighborhood, which requires half an acre lot.

2. *The access roads to this project:*

With Canoga Ave as the only access road for the phase I of this project, we feel it is grossly inadequate. We suggest to have at least three access roads established before any construction of this project can allow to begin.

Kuo and Chang 1 – Response

The project has been revised to reduce the total number of residential units from 484 to 388. This includes 155 minimum 15,000 square foot estate lots, of which 55 would be equestrian lots. Please see Section 2.0 of this document for further discussion of this issue.

As stated in Section 4.12 of the Draft EIR, traffic impacts would not be significant with implementation of recommended mitigation measures. Please see Sections 3.3.5 and 4.2.6, and Appendix K of this document for additional discussion of traffic impacts and mitigation measures.

4.5.69 Amarillys Ladette

January 7, 2002

Ladette 1 - Comment

I am writing to express my objection to the proposed Deerlake Ranch development in Chatsworth (Project No. 99-239(5)) for which you have scheduled a January 23 hearing.

The proposed project is located close to my home, and I am particularly concerned about the following:

How will the developer be monitored as to controlling dust levels

4.0 Response to Written Comments

Ladette 1 – Response

As discussed in Section 4.2 of the Draft EIR, no significant dust impact would occur from the project with implementation of recommended mitigation measures. Please refer to Section 4.2.3 of this document for additional discussion of impacts and mitigation.

Ladette 2 - Comment

Traffic what is going to be done

Ladette 2 – Response

As stated in Section 4.12 of the Draft EIR, traffic impacts would not be significant with implementation of recommended mitigation measures. Please see Sections 3.3.5 and 4.2.6, and Appendix K of this document for additional discussion of traffic impacts and mitigation measures.

Ladette 3 - Comment

New measures need to be taken to ensure additional Sheriff's protection what is going to be implemented

Ladette 3 – Response

As stated in Section 4.9 of the Draft EIR, no significant impacts would occur to police protection services with implementation of the project. See Section 4.2.5 (Police Services 1 and 5 – Responses) and Appendix E of this document for additional discussion regarding this issue.

Ladette 4 - Comment

What is being done by the developer to preserve natural habitat

Ladette 4 – Response

See Section 2.4.7 of this document.

Ladette 5 - Comment

In light of the significant adverse impact this project would have on my neighborhood and the lack of meaningful measures to alleviate that impact, I request that you not approve the project as currently presented. Any further consideration of the project should be conditioned on:

- *a substantial reduction in the size and scope of the project;*
- *a more meaningful proposal for mitigation by the applicant; and*
- *postponement of a Commission recommendation in order to allow time for adequate public study and evaluation of the applicant's revised proposals.*

Ladette 5 – Response

Please see Section 4.5.5 (Belkin, L 3 – Response) of this document.

4.5.70 Kendall Leigh

January 7, 2002

Leigh 1 – Comment

I am writing to express my objection to the proposed Deerlake Ranch development in Chatsworth (Project No. 99-239(5)) for which you have scheduled a January 23 hearing.

The proposed project is located close to my home, and I am particularly concerned about the following:

Over crowding of the schools in the neighbor.[sic]

Leigh 1 – Response

As stated in Section 4.10 of the Draft EIR, impacts to schools would not be significant with implementation of recommended mitigation measures. Please see Sections 3.3.4, 4.3.7 and 4.5.28, and Appendix J of this document for additional discussion of this issue.

4.0 Response to Written Comments

Leigh 2 – Comment

The animals that live in those hills.

Leigh 2 – Response

Section 4.3 of the Draft EIR included a discussion of impacts upon sensitive species, nesting birds and raptors, and wildlife movement. Impacts to biological resources would not be significant with implementation of recommended mitigation measures. Please see also Section 4.2.1 of this document for additional discussion of this issue.

Leigh 3 – Comment

The beautiful landscape and hiking trails.

Leigh 3 – Response

Please see Section 2.4.7 of this document.

Leigh 4 – Comment

In light of the significant adverse impact this project would have on my neighborhood and the lack of meaningful measures to alleviate that impact, I request that you not approve the project as currently presented. Any further consideration of the project should be conditioned on:

- *a substantial reduction in the size and scope of the project;*
- *a more meaningful proposal for mitigation by the applicant; and*
- *postponement of a Commission recommendation in order to allow time for adequate public study and evaluation of the applicant's revised proposals.*

Leigh 4 – Response

Please see Section 4.5.5 (Belkin, L 3 – Response) of this document.

4.5.71 Andrea and Joel Levine

March 8, 2002

Levine 1 – Comment

I am writing to express my objection to the proposed Deerlake Ranch development in Chatsworth (Project No. 99-239(5)) for which you have continued the public hearing to April 10.

The proposed project is located close to my home, and I am particularly concerned about the following:

The overload on the community infrastructure: roads, schools, hospitals, etc. There is little enough pristine land - why can't we preserve rather than destroy!!

This area simply does not have the capability of accommodating this vast number of people.

Levine 1 – Response

As stated in Section 4.12 of the Draft EIR, traffic impacts would not be significant with implementation of recommended mitigation measures. Please see Sections 3.3.5 and 4.2.6, and Appendix K of this document for additional discussion of traffic impacts and mitigation measures.

As stated in Section 4.10 of the Draft EIR, impacts to schools would not be significant with implementation of recommended mitigation measures. Please see Sections 3.3.4, 4.3.7 and 4.5.28, and Appendix J of this document for additional discussion of this issue.

Levine 2 – Comment

In light of the significant adverse impact this project would have on my neighborhood and the lack of meaningful measures to alleviate that impact, I request that you do not approve the project as currently presented. Any further consideration of the project should be conditioned on:

- *a substantial reduction in the number of homes in the project.*

4.0 Response to Written Comments

- a more meaningful proposal for mitigation by the applicant; and
- opportunity for public study of and comment on the applicant's revised proposals.

Levine 2 – Response

Please see Section 4.5.5 (Belkin, L 3 – Response) of this document.

4.5.72 Gary and Maureen Levitt

January 9, 2002

Levitt 1 – Comment

We are writing to express our objection to the proposed Deerlake Ranch development in Chatsworth (Project No. 99-239(5)) for which you have scheduled a January 23 hearing.

The proposed project is located close to our home, and we are particularly concerned about the following:

We believe that the EIR appears to be flawed, incomplete, and inaccurate. It is clear that the consultants were hired by and work for the developer. We would [sic] like to see the county investigate areas that are flawed and unrealistic.

Section 4.5-1 thru 4.5-3- Landslides

“A landslide mapped along the south side of Devil Canyon within the southwest portion of the project site is a large block failure (Yerkes, 1995). This landslide is indicative of the type of landsliding that occurs within the Chatsworth Formation and suggests that similar east-facing bluffs underlain by adversely oriented bedding may also be susceptible to landsliding (see Figure 4.5.2).”

There are many such landslides throughout Devil's Canyon including some on the Westerly facing slopes just a bit northwest of the old bridge/dam. In fact, one of the slides was large enough to remove 20 feet of flat level trail that was used to traverse by horseback. It is a matter of time before another large slide occurs in Devil's Canyon. Landslides happen quite frequently during the rainy season along this canyon, not just in the two spots that were identified in the report back in 1995 that is sited in the EIR. Perhaps a newer, more in-depth study would reflect the actual erosion that takes place in the area.

Levitt 1 – Response

Please see Section 4.4.2 (CLPA 2 – Response) of this document regarding the adequacy of the EIR.

As stated in Section 4.5 of the Draft EIR, two landslides and several areas of surficial instability have been mapped near the project site. Specific areas for such mitigation would be identified as part of the final project grading plans and no significant impacts would occur. See section 4.4.2 (CLPA 3 – Response) of this document for a discussion of Devil Canyon.

Levitt 2 – Comment

Section 4.6- Hydrology

The EIR does not take into account the effect of stormwater runoff from residential streets will have on Devil's Canyon. Many mammals including bobcats get their water during the summer months from this Canyon. Bobcats, and other wildlife, that have been displaced from the Porter Ranch development are now using our creek beds as a summer habitat. Additionally, many horses drink from the creek bed during trail rides. Birds, such as the Cooper's Hawk, and also the homeless humans that camp in Devil's Canyon may also be harmed by drinking tainted water from this creek bed. There is absolutely no provision in the EIR on the environmental impact of oils, chemicals, soaps, antifreeze, animal feces, fertilizers, and other pollutants that might be present in water that is collected from the streets and drained into Devil's Canyon. The EIR only states that problems of this nature will only arise “infrequently during episodes of storm water runoff from the project site and

4.0 Response to Written Comments

are not likely to result in significant impacts to biological resources." This EIR assumes that pools will not be drained, that runoff will not occur from washing cars or landscaping or other occurrences that will wash high concentrations of chemicals into Devil's Canyon for animals and the homeless humans in the area to consume. Additionally, other eco systems that exist father North of this development will be affected by the contaminants in the water, and this is not addressed

Levitt 2 – Response

As stated in Section 4.6 of the Draft EIR, impacts with regard to urban runoff would not be significant with implementation of mitigation measures. See Section 4.2.2 (Urban Runoff 1 – Response) and Appendix I of this document for additional discussion of this issue. See also Section 4.4.2 (CLPA 4 – Response).

Levitt 3 – Comment

Additionally, the EIR does not adequately address the issue of flooding in the creek bed during the rainy season caused by channeling storm water directly into the natural canyon instead of directing it through storm drains to the flood control system. As it stands today, the creek overflows and changes dramatically every year that we have a heavy rainy season. At times, the bridge/dam and the creek bed cannot hold any more water and water nearly flows over the top of the bridge. As was demonstrated in the recent Porter Ranch stormwater catastrophe, channeling the water down city streets and into wildlife habitats and natural canyons is poor planning and results in environmental devastation. Add this together with the soil characteristics in the creekbed (and the fact that the landslide factor has not been adequately addressed) and major environmental impact can be foreseen. This EIR must address this issue in a more detailed fashion.

Levitt 3 – Response

See Section 4.4.2 (CLPA 5 – Response) – Response of this document.

Levitt 4 – Comment

In conclusion, we ask that the County review the Limekiln Canyon catastrophe caused by the Porter Ranch development. Because the Environmental Impact Report did not sufficiently address the potential devastation of Limekiln Canyon due to the storm water run off from the streets, a city park and equestrian trail had to be closed forever due to the devastating effects of such poor planning. Limekiln Canyon has been destroyed due to a flaw in the EIR. We demand that the County request the developer to conduct further environmental review with regard to storm water run off. Untreated storm water must be channeled to a treatment center, such as the Donald C. Tillman Plant, via the County Flood Control System instead of draining it into Devil's Canyon.

Levitt 4 – Response

See Section 4.2.2 (Urban Runoff 1 Response) and 4.4.2 (CLPA 6 Response) – Response of this document.

Levitt 5 – Comment

Section 4.3.4 Mitigation Measures

Although it is commendable that the developer is turning over 60 acres of Devil's Canyon over the Santa Monica Mountains Conservancy, the developer is also planning on using the Canyon as a flood control channel and dump site for the disposal of construction dirt and debris. These actions circumvent the intention of "mitigation" and should not be allowed, as they will lead to the devastation of Devil's Canyon over time. Further environmental review must be conducted on the developer's intentions for use of the Canyon before this can be approved as a mitigation measure. The current EIR does not sufficiently address the community's concerns.

Levitt 5 – Response

See Section 4.4.2 (CLPA 10 Response) – Response of this document.

4.0 Response to Written Comments

Levitt 6 – Comment

Animal Regulation

This Environmental Impact Report is insufficient in that it does not take into account the impact on Animal Control and Regulation offices in the City and County. What are the response times for animal control? Who will handle feral animals in the area? There are many concerns due to the nature of the impacts on wildlife in the area – including bobcats and coyotes. There will be incidents and confrontations with these animals and more review should be made as to which agency will respond to calls in the area and how those calls will be handled. There will be an impact and we need to know and understand the process before the County's approval process begins.

Levitt 6 – Response

Please see Section 4.4.2 (CLPA 11 – Response) of this document.

Levitt 7 – Comment

Schools

The Environmental Impact Report does not state which SPECIFIC schools these children will attend and if these SPECIFIC schools have stated that they have room for 494 students. As we understand it, our elementary schools are overcrowded and so are our middle schools and high school. So, we ask that the EIR be more specific in how it addresses school capacity.

Levitt 7 – Response

As stated in Section 4.10 of the Draft EIR, impacts to schools would not be significant with implementation of recommended mitigation measures. Please see Sections 3.3.4, 4.3.7 and 4.5.28, and Appendix J of this document for additional discussion of this issue.

Levitt 8 – Comment

Libraries

The EIR is misleading in that it implies that the Chatsworth branch library is a county facility. It is a CITY LIBRARY and it belongs to the citizens of the City of Los Angeles, NOT THE COUNTY. There is NO COUNTY LIBRARY facility for these 500 new families in Chatsworth. The EIR needs to sufficiently address this fact. The library is going to be expanded to meet current demand for City residents. Funds collected from the developer will be applied to COUNTY libraries, while the burden of this development is placed upon the CITY. The City should receive the \$626.00 per household, not the County OR a County library should be built to accommodate this development. It is unfair to ask the citizens of LA City to pay for this burden.

Levitt 8 – Response

As stated in Section 4.11 of the Draft EIR, library impacts would be less than significant with implementation of recommended mitigation measures. See Section 4.3.5 (City Council 6 – Response) of this document regarding additional discussion of mitigation of impacts on libraries.

Levitt 9 – Comment

Police and Fire Issues

The nearest LA County Sheriff's station is 40 minutes away in Lost Hills. There is already a serious criminal element in the remote areas around this project. We refer to evidence of teenage drinking, drug use, trash dumping, dumping and burning stolen cars, dumping human bodies, illegal campers with campfires and nudity, paint ball shooters, illegal off-road vehicles, and petty theft. Looking at a projected 5-year period of construction activity which brings in dozens of unknown folks into our neighborhood and no police, there will be a significant increase in crime in our community. You need to make sure a Sheriff's substation is in place before construction is allowed to commence on this project.

4.0 Response to Written Comments

Levitt 9 – Response

As stated in Section 4.9 of the Draft EIR, no significant impacts would occur to police protection services with implementation of the project. See Section 4.2.5 (Police Services 1 and 5 – Responses) and Appendix E of this document for additional discussion regarding this issue.

Levitt 10 – Comment

In addition you need to insure that the proposed project will have adequate fire protection from the present County Fire Station which is 20 minutes away in Lake Manor. If the proposed project burns, our homes will be next.

Levitt 10 – Response

As stated in Section 4.8 of the Draft EIR, no significant impacts would occur to fire protection services with implementation of the project. See Section 4.2.4 (Fire 1 and 4 – Responses) and Appendix E of this document for additional discussion regarding this issue.

Levitt 11 – Comment

Traffic Issues on Canoga Avenue

The developer says less than one third of the 1200 to 1500+ automobiles the project will generate will use Canoga Avenue. The rest, they say, will use Topanga Canyon Boulevard. That is an absolutely ridiculous statement. If we lived there and had a choice between Topanga Canyon Boulevard with four traffic signals between our home and Devonshire Street or Canoga Avenue with one signal between our home and Devonshire Street it would be no contest. We would use Canoga. The area south of this project, in the City of Los Angeles, already has a serious traffic congestion problem. There are two private schools just north of Chatsworth Street between Canoga and DeSoto that generate 1000+ daily trips by people who do not live in our neighborhood. This project will double or triple the congestion.

The developer admitted to doing his traffic study during a school holiday which greatly alters the results.

Levitt 11 – Response

As stated in Section 4.12 of the Draft EIR, traffic impacts would not be significant with implementation of recommended mitigation measures. See Section 4.2.6 (Traffic 1 & 2 – Responses) and Appendix K of this document for a discussion of the project trip generation and traffic distribution forecasts provided in the Draft EIR.

Levitt 12 – Comment

Speeding traffic on Canoga is another concern. Canoga Avenue has no houses fronting it between Rinaldi and the 118 freeway, so drivers feel comfortable racing downhill at breakneck speeds. The area of Canoga Avenue also has a bridle path that acts as a collector path to channel equine traffic into the nearby mountains.

At the very least you must require the developer to post signs demanding that trucks not to use truck air brakes (jake brakes) on Canoga, you must also require them to post the speed limit at 25 mph on Canoga, you must require the developer to install an equestrian friendly four-way traffic signal at the intersection of Canoga and Rinaldi, and stop signs at each street between Rinaldi and the 118 freeway. Just south of the freeway overpass there needs to be an equestrian-activated light so riders can safely cross the street to enter the park. Also, the bridle path, which the builder proposes to extend under the freeway needs to have an opening so a rider can get out to cross the street there. There also needs to be adequate horse crossing signs at all road crossings throughout the project.

Levitt 12 – Response

Please see Section 4.5.34 (England 2 – Response) of this document regarding traffic and equestrian concerns.

4.0 Response to Written Comments

Levitt 13 – Comment

The General Plan

Our other concerns regarding this development stem from the project's high density as compared to the rest of the Chatsworth community. Developments such as this have absolutely no place when compared to the rest of our community of large lots and horse keeping. As we understand it, the General Plan for this area of the County has not been reviewed or updated since the 1920's. Although the County Plan has been updated to reflect the affects of progress in other areas, this area of the Plan has remained unchanged since the lots were divided up into "postage stamp" sized lots intended as giveaway prizes in cereal boxes. Last year, the County conducted an environmental study in which it made some recommendations to limit the density of developments approved for Unincorporated areas of the County. This development is one of those that requires more scrutiny. When compared with the developments that surround his project, this project is obviously too dense for the area. Our schools, roads, fire, police, and other services must be sufficiently cultivated to support such a large impact on the community.

Levitt 13 – Response

See Section 4.2.7 (Development Issue 10 – Response) and Appendix L of this document regarding land use density. Also see Section 4.3.5 (City Council 1 and 3 – Responses) of this document.

Levitt 14 – Comment

In the light of the significant adverse impact this project would have on our neighborhood and the lack of meaningful measures to alleviate that impact, we request that you not approve the project as currently presented. We urge the County to postpone its decision until the developer can produce an accurate and complete EIR. This EIR is filled with inaccuracies and relies on data that was not produced for this specific development. The County must require the developer to not only conduct the aforementioned supplemental environmental reviews, but to also require a less dense development in this area. To help the equestrian issues and to help Chatsworth maintain its rural equine heritage you must require this developer to build at least 50 percent of the now homes so that they are zoned for horses.

The best way to mitigate traffic and school concerns and the general impact on our rural neighborhood is to cut the density in half and allow just 242 homes, not a ridiculous 484. After all, these are not the affordable houses this state is crying for, but rather expensive homes targeted at the top one percent of our population.

Levitt 14 – Response

Please see Section 4.4 (CLPA 2 – Response) of this document regarding the adequacy of the EIR. See Section 4.2.7 (Development Issue 10 – Response), Section 4.3.5 (City Council 1 and 3 – Response) and Appendix L of this document regarding land use density.

4.5.73 Mr. And Mrs. Sam Licursi

January 9, 2002

Licursi 1 – Comment

We live in the area that will be impacted by the Deer Lake Ranch project and are very concerned about the increase in traffic on Canoga Avenue and other adjacent streets.

We believe that the draft EIR has not studied the effects of an additional 484 homes on local streets that are not access points to the 118 freeway. We live in this area and know that most local trips, for example trips to school, the grocery store, the bank, etc., do not involve travel on the 118 freeway. It is disturbing to us that the developer conducted a traffic study when not all schools were in session and used incorrect tables to estimate the amount of trips by vehicles per day, given the nature of the

4.0 Response to Written Comments

houses to be built. It is our understanding that a new study had been done that is more accurate, and feel that additional time should be allotted to review this new study and check it for accuracy. Many lives are at stake in this area including school children who attended two elementary schools in this area.

Licursi 1 – Response

As stated in Section 4.12 of the Draft EIR, traffic impacts would not be significant with implementation of recommended mitigation measures. Please see Sections 3.3.5 and 4.2.6, and Appendix K of this document for additional discussion of traffic impacts and mitigation measures.

Licursi 2 – Comment

Speed bumps have already been placed on many of the local residential streets as workers in the area attempt to find alternate access to the 118 freeway when major access streets, such as Topanga Canyon and De Soto are overloaded. This project will only worsen the already heavily congested areas in Chatsworth.

We respectfully request your attention to these matters that have not been addressed by the developers of the Deer Lake Ranch project.

Licursi 2 – Response

See Licursi 1 – Response of this document.

Licursi 3 – Comment

The Deer Lake Ranch project, the Porter Valley project, and the new project proposed for upper Topanga Canyon in Chatsworth, with their high density building, completely change the complexion of the Chatsworth/Northridge area. The rural designation used to describe Chatsworth/Northridge area will be ended, flora and fauna of the area will be destroyed, pollution will be overwhelming, and traditional rural views will be destroyed.

Licursi 3 – Response

As stated in the Draft EIR, impacts from the project would not be significant with implementation of recommended mitigation measures. The commenter's opposition to the project will be forwarded on to the decision makers.

Licursi 4 – Comment

In an effort to mitigate some of the circumstances, the Presidio Group has promised to dedicate 70 acres to the Santa Monica Mountain Conservancy. What is the exact location of this area? Does it border the Significant Environmental Area # 20 (Santa Susana Mountains) and will its preservation help to maintain the integrity of that area? In a letter from Ellizabeth [sic] A. Cheadle of the Conservancy dated July 26, 2000, concern was expressed that the 70 acres was not enough to meet the 50% dedication requirement of the total acreage that all large-scale developments are normally required to make. She outlined some alternatives to mitigate this circumstance, and I would like to know if all of her recommendations are being implemented.

Licursi 4 – Response

Please Section 4.2.1 (Biology 1 - Response) of this document.

Licursi 5 – Comment

The Conservancy will retain 14 acres that create a band around the project (minimum width 10 feet). This seems little enough land to create a border but there are even exceptions to this buffer band (exceptions noted in the Project Mitigation and Initial Study report on page 3). Why are there gaps in the northern boundary to which the developer will retain ownership? The developer maintains that the buffer owned by the Conservancy will keep further development from occurring in the north. Does the Conservancy affirm that they will not sell this property to another developer in the future?

4.0 Response to Written Comments

Would the trails, slopes and parks be enough to off-set the less that [sic] 50% dedication of open space?

Licursi 4 – Response

Please Section 4.2.1 (Biology 2 - Response) of this document.

4.5.74 Lindeson

January 7, 2002

Lindeson 1 - Comment

I am writing to express my objection to the proposed Deerlake Ranch development in Chatsworth (Project No. 99-239(5)) for which you have scheduled a January 23 hearing.

The proposed project is located close to my home, and I am particularly concerned about the following:

Traffic- many streets are overloaded now with no improvement in the situation it will only get worse.

Lindeson 1 - Response

As stated in Section 4.12 of the Draft EIR, traffic impacts would not be significant with implementation of recommended mitigation measures. Please see Sections 3.3.5 and 4.2.6, and Appendix K of this document for additional discussion of traffic impacts and mitigation measures.

Lindeson 2 - Comment

In light of the significant adverse impact this project would have on my neighborhood and the lack of meaningful measures to alleviate that impact, I request that you not approve the project as currently presented. Any further consideration of the project should be conditioned on:

- *a substantial reduction in the size and scope of the project;*
- *a more meaningful proposal for mitigation by the applicant; and*
- *postponement of a Commission recommendation in order to allow time for adequate public study and evaluation of the applicant's revised proposals.*

Lindeson 2 - Response

Please see Section 4.5.5 (Belkin, L 3 - Response) of this document.

4.5.75 Kathleen and Michael Malley

January 7, 2002

Malley 1 - Comment

I am writing to express my objection to the proposed Deerlake Ranch development in Chatsworth (Project No. 99-239(5)) for which you have scheduled a January 23 hearing.

The proposed project is located close to my home, and I am particularly concerned about the following:

Negative impact on our environment with additional pollution [sic] from added traffic. Negative impact on commutes from added traffic. Please do not take away our beautiful local hills and mountains.

Malley 1 – Response

As stated in Section 4.12 of the Draft EIR, traffic impacts would not be significant with implementation of recommended mitigation measures. Please see Sections 3.3.5 and 4.2.6, and Appendix K of this document for additional discussion of traffic impacts and mitigation measures.

4.0 Response to Written Comments

Malley 2 - Comment

In light of the significant adverse impact this project would have on my neighborhood and the lack of meaningful measures to alleviate that impact, I request that you not approve the project as currently presented. Any further consideration of the project should be conditioned on:

June 12, 2002

McCormick 1 –Comment

As the next hearing date – June 19 draws near, it is very important to us that we remind you how deeply we opposed the traffic of close to 5000 cars use our quiet street of Canoga Avenue. Please

4.0 Response to Written Comments

require the developer to hook the development to DeSoto and reduce the number of proposed homes to 150-200. Presidio has attempted to inform the neighborhood how wonderful the development will be for us all [sic]. We think that is all fine & dandy, but WE DON'T WANT MOST OF THE TRAFFIC ON CANOGA. Please!! Thank you for all your extra attention to this project. We so appreciate it.

McCormick 1 –Response

As stated in Section 4.12 of the Draft EIR, traffic impacts would not be significant with implementation of recommended mitigation measures. Please see Sections 3.3.5 and 4.2.6, and Appendix K of this document for additional discussion of traffic impacts and mitigation measures.

4.5.79 Laura and Steven McCormick

March 27, 2002

McCormick L & S 1 –Comment

We are writing you today to express our strong opposition to the proposed Deerlake Ranch development in Chatsworth. We have been residents on Celtic Street for seventeen and a half years. We moved here because of the rural atmosphere and large lots; an environment conducive to raising children. We are asking you to decline the Deerlake application as proposed.

McCormick L & S 1 –Response

The comment has been received and noted. No additional response is necessary.

McCormick L & S 2 –Comment

I attended the hearing on January 26th, and I was pleased to see that you so graciously listened to those that were in attendance. We are grateful to Commissioner Halsley for digging into the issues surrounding this proposal. We are encouraged by your decision to visit our neighborhood on April 6th. We know you are trying to make a good decision. Thank you for taking the extra time on this matter.

McCormick L & S 2 –Response

The comment of opposition has been received and noted. No additional response is necessary.

McCormick L & S 3 –Comment

We are extremely concerned about the density of this project. The volume of cars that will access Canoga and the loss of rock outcroppings and mountainous terrain will change our rural atmosphere forever.

McCormick L & S 3 –Response

As stated in Section 4.12 of the Draft EIR, traffic impacts would not be significant with implementation of recommended mitigation measures. Please see Sections 3.3.5 and 4.2.6, and Appendix K of this document for additional discussion of traffic impacts and mitigation measures. See Section 4.2.7 (Development Issue 10 – Response) and Appendix L of this document regarding land use density.

McCormick L & S 4 –Comment

The wildlife corridor runs through our neighborhood. Horse trails surround our neighborhood. Two dear friends have been involved in horse accidents. At twelve years old, my friend lost her life when her horse was spooked. Another friend suffered a broken neck when a loose horse was spooked and landed on top of her Mercedes (the reinforced sunroof saved her life). We do not own any horses, but horses and cars do not mix. Safety is of utmost concern for the neighbors. We are a young community. We are raising our three young daughters, and there are many new families who have moved in over the past two years with their young children. We enjoy walking and riding our bikes.

4.0 Response to Written Comments

McCormick L & S 4 –Response

The comment has been noted. No additional response is required.

McCormick L & S 5 –Comment

When we were new residents, we reviewed the Master Plan for the area. We were so happy to see that large lot sizes and equestrian preservation was to be protected for this area. We had no idea the end of the city was at the freeway. As we review the Chatsworth-Porter Ranch Community plan under Policies, we sincerely desire that you will help us continue our rural atmosphere up the hills when developers want to convert the hillsides (see attached).

Please do not approve the Deerlake project as proposed.

McCormick L & S 5 –Response

The project site is not within the City of Los Angeles, and therefore not within the Chatsworth-Porter Ranch Community Plan. See Section 4.2.7 (Development Issue 10 – Response) and Appendix L of this document regarding land use density.

The commenter's opposition to the project is noted and will be forwarded to the decision makers.

McCormick L & S 6 –Comment

Chatsworth-Porter Ranch Community Plan

Of particular interest are the words: "The Plan encourages the preservation of low density-single family residential areas, the conservation of open space lands, and the preservation and strengthening of the Chatsworth Community Business District. Much of the Chatsworth-Porter Ranch Community is hillside and mountainous terrain and as much of the remaining undeveloped lands as feasible is to be preserved for open space and recreational uses. The northwest border of the City of Los Angeles includes a wildlife migration corridor. The wildlife corridor through the Simi Valley and Santa Susana Mountains to the Santa Monica Mountains could be endangered by development and transportation arteries cutting through this vital link. The Plan encourages preservation by both public and private agencies of this critical natural feature..."

It is imperative that the development of these lands be compatible with that of Chatsworth-Porter Ranch, as proposed in this Plan, particularly with respect to land uses, circulation and open space, and their impact on drainage and sewerage. To help ensure compatible development of these lands, the County area north of the Simi Freeway to the Oat Mountain ridge should be considered for annexation.

It is desirable that development of these lands within Los Angeles County adjacent to the City of Los Angeles be compatible with the City's adopted General Plan. Therefore, it is recommended that no cluster of high-density urban activity, including commercial, residential, or any combination thereof should be located within the County west of the City's boundary to the Ventura County line."

Taken from page 3 and 4 of the Chatsworth-Porter Ranch Community Plan, a part of the City of Los Angeles General Plan.

The italicized (typed as plain text) words are for this writer's emphasis.

McCormick L & S 6 –Response

4.5.80 Bryan McQueeney

January 14, 2002

McQueeney 1 – Comment

TRAFFIC IMPACT: I live on Chatsworth Street between Canoga and Variel. Traffic on Chatsworth Street is bad and, because of recent planning decisions, going to get worse. In particular, the down-

4.0 Response to Written Comments

grading of Rinaldi as part of the Sierra Canyon School approval so that it will not go through to De Soto means all the traffic from this project, in reality, will come down Canoga and use Chatsworth Street to reach main arteries. As Porter Ranch builds out, Mason, De Soto and Topanga are all backed up at rush hour. This project will compound that.

Specifically, the light at De Soto and Chatsworth, the stop sign at Variel and Chatsworth are all under pressure and need additional specific mitigation efforts.

McQueeney 1 – Response

As shown on Table 4.12.5 of the Draft EIR, the intersections of Canoga Avenue/Rinaldi Street and Canoga Avenue/Chatsworth Street would operate at acceptable levels (LOS A) during the A.M. and P.M. peak hours with occupancy of the project. Based on the LOS provided at the Canoga Avenue intersections, it is not anticipated that project-related trips would divert to local streets such as Variel Avenue or Independence Avenue. Also see Section 4.2.6 (Traffic 1 and 2 – Responses) and Appendix K of this document for additional discussion of project traffic distribution to the local street system.

McQueeney 2 – Comment

TRAIL CROSSING ON CHATSWORTH STREET: This is a fatal accident waiting to happen. Recreational trail riders on horseback use this crossing at Brown's Creek and Chatsworth Street. Additional traffic on Chatsworth Street to slow or stop traffic and to warn vehicles of the equestrians, cyclists and pedestrians are vital to ensure community safety.

McQueeney 2 – Response

The trail crossing on Chatsworth Street is not a part of the project. As shown on Figure 2.11 of the Draft EIR, a proposed trail system would connect existing trails at the terminus of Canoga Avenue and westerly of Topanga Canyon Boulevard with existing trails to the east, north, and west of the site. See Section 2.4.7 of this document for additional discussion of this issue.

McQueeney 3 – Comment

This is a huge project for this site and, frankly, entirely out of scale with what should be done. The environmental impact on hillside, creekbeds, trail use and visual blight cannot be mitigated to insignificance. I request that you do not approve this project as currently conceived.

The environment and traffic cannot withstand such an inappropriate, intense development on this site. A dramatically scaled-back development is much more sensible and acceptable. The high infrastructure and development costs cannot be used as a justification for a project with so many fundamental, inescapable adverse impacts.

McQueeney 3 – Response

The project has been revised to reduce the total number of residential units from 484 to 388. This includes 155 minimum 15,000 square foot estate lots, of which 55 would be equestrian lots. Please see Section 2.0 of this document for further discussion of this issue. See Section 4.2.7 (Development Issue 10 – Response) and Appendix L of this document regarding land use density.

4.5.81 Florence and Antonio Mellone

January 7, 2002

Mellone 1 - Comment

I am writing to express my objection to the proposed Deerlake Ranch development in Chatsworth (Project No. 99-239(5)) for which you have scheduled a January 23 hearing.

The proposed project is located close to my home, and I am particularly concerned about the following:

4.0 Response to Written Comments

Too much Traffic in our small community. Also to [sic] much congestion.

Mellone 1 - Response

As stated in Section 4.12 of the Draft EIR, traffic impacts would not be significant with implementation of recommended mitigation measures. Please see Sections 3.3.5 and 4.2.6, and Appendix K of this document for additional discussion of traffic impacts and mitigation measures.

Mellone 2 - Comment

In light of the significant adverse impact this project would have on my neighborhood and the lack of meaningful measures to alleviate that impact, I request that you not approve the project as currently presented. Any further consideration of the project should be conditioned on:

- *a substantial reduction in the size and scope of the project;*
- *a more meaningful proposal for mitigation by the applicant; and*
- *postponement of a Commission recommendation in order to allow time for adequate public study and evaluation of the applicant's revised proposals.*

Mellone 2 - Response

Please see Section 4.5.5 (Belkin, L 3 – Response) of this document.

4.5.82 Jorg Michaels

January 7, 2002

Michaels 1 - Comment

I am writing to express my objection to the proposed Deerlake Ranch development in Chatsworth (Project No. 99-239(5)) for which you have scheduled a January 23 hearing.

The proposed project is located close to my home, and I am particularly concerned about the following: The traffic is horrible as it is, we don't need more. Let's keep Chatsworth the way it's intended. "Horse Property."

Michaels 1 - Response

As stated in Section 4.12 of the Draft EIR, traffic impacts would not be significant with implementation of recommended mitigation measures. Please see Sections 3.3.5 and 4.2.6, and Appendix K of this document for additional discussion of traffic impacts and mitigation measures. The project has been revised to reduce the total number of residential units from 484 to 388. This includes 155 minimum 15,000 square foot estate lots, of which 55 would be equestrian lots. Please see Section 2.0 of this document for further discussion of this issue.

Michaels 2 - Comment

In light of the significant adverse impact this project would have on my neighborhood and the lack of meaningful measures to alleviate that impact, I request that you not approve the project as currently presented. Any further consideration of the project should be conditioned on:

- *A substantial reduction in the size and scope of the project;*
- *A more meaningful proposal for mitigation by the applicant; and*
- *Postponement of a Commission recommendation in order to allow time for adequate public study and evaluation of the applicant's revised proposals.*

Michaels 2 - Response

Please see Section 4.5.5 (Belkin, L 3 – Response) of this document.

4.5.83 Dan and Doreen Miller

January 7, 2002

Miller 1 - Comment

I am writing to express my objection to the proposed Deerlake Ranch development in Chatsworth (Project No. 99-239(5)) for which you have scheduled a January 23 hearing.

The proposed project is located close to my home, and I am particularly concerned about the following:

First of all, the traffic from each household going up and down Canoga Ave. would greatly increase

Miller 1 - Response

As stated in Section 4.12 of the Draft EIR, traffic impacts would not be significant with implementation of recommended mitigation measures. Please see Sections 3.3.5 and 4.2.6, and Appendix K of this document for additional discussion of traffic impacts and mitigation measures.

Miller 2 - Comment

and we also would loose [sic] wonderful trails for mountain biking, hiking and for the horses!

Miller 2 - Response

The applicant is proposing a series of equestrian trails to connect the areas south of the project site to the existing trail system north of the project site..

Miller 3 - Comment

In light of the significant adverse impact this project would have on my neighborhood and the lack of meaningful measures to alleviate that impact, I request that you not approve the project as currently presented. Any further consideration of the project should be conditioned on:

- *a substantial reduction in the size and scope of the project;*
- *a more meaningful proposal for mitigation by the applicant; and*
- *postponement of a Commission recommendation in order to allow time for adequate public study and evaluation of the applicant's revised proposals.*

Miller 3 - Response

Please see Section 4.5.5 (Belkin, L 3 – Response) of this document.

4.5.84 Marcia Milo

January 7, 2002

Milo 1 – Comment

I am writing to express my objection to the proposed Deerlake Ranch development in Chatsworth (Project No. 99-239(5)) for which you have scheduled a January 23 hearing.

The proposed project is located close to my home, and I am particularly concerned about the following:

Traffic

Milo 1 – Response

As stated in Section 4.12 of the Draft EIR, traffic impacts would not be significant with implementation of recommended mitigation measures. Please see Sections 3.3.5 and 4.2.6, and Appendix K of this document for additional discussion of traffic impacts and mitigation measures.

Milo 2 – Comment

Schools

4.0 Response to Written Comments

Milo 2 – Response

As stated in Section 4.10 of the Draft EIR, impacts to schools would not be significant with implementation of recommended mitigation measures. Please see Sections 3.3.4, 4.3.7 and 4.5.28, and Appendix J of this document for additional discussion of this issue.

Milo 3 – Comment

animals that live in the hills.

Milo 3 – Response

Section 4.3 of the Draft EIR included a discussion of impacts upon sensitive species, nesting birds and raptors, and wildlife movement. Impacts to biological resources would not be significant with implementation of recommended mitigation measures. Please see also Section 4.2.1 of this document for additional discussion of this issue.

Milo 4 – Comment

Canoga Variel Chatsworth St. Topanga Gridlock.

Please help us

Milo 4 – Response

As shown on Table 4.12.5 of the Draft EIR, the intersections of Canoga Avenue/Rinaldi Street and Canoga Avenue/Chatsworth Street would operate at acceptable levels (LOS A) during the A.M. and P.M. peak hours with occupancy of the project. Based on the LOS provided at the Canoga Avenue intersections, it is not anticipated that project-related trips would divert to local streets such as Variel Avenue or Independence Avenue. Also see Section 4.2.6 (Traffic 1 and 2 – Responses) and Appendix K of this document for additional discussion of project traffic distribution to the local street system.

Milo 5 – Comment

In light of the significant adverse impact this project would have on my neighborhood and the lack of meaningful measures to alleviate that impact, I request that you not approve the project as currently presented. Any further consideration of the project should be conditioned on:

- *a substantial reduction in the size and scope of the project;*
- *a more meaningful proposal for mitigation by the applicant; and*
- *postponement of a Commission recommendation in order to allow time for adequate public study and evaluation of the applicant's revised proposals.*

Milo 5 – Response

Please see Section 4.5.5 (Belkin, L 3 – Response) of this document.

4.5.85 Carol Moran

January 7, 2002

Moran 1 – Comment

I am writing to express my objection to the proposed Deerlake Ranch development in Chatsworth (Project No. 99-239(5)) for which you have scheduled a January 23 hearing.

The proposed project is located close to my home, and I am particularly concerned about the following:

How are you planning to handle all of traffic out of these homes . . . Have you seen the increase in traffic along Mason Ave since they connected it to Porter Ranch . . . Multiply that by 448 since there is no access to the 118 fry [sic] off of Canoga- The people have no way out of the area other than Canoga- This area of Canoga Ave is not designed to hold this kind of traffic!!

4.0 Response to Written Comments

Moran 1 – Response

Subsequent to the distribution of the Draft EIR, additional mitigation measures have been included (improvements at the Canoga Avenue/Chatsworth Street intersection) for traffic-related impacts (see Appendix E of this document) as well as an updated traffic study to analyze the revised project (see Appendix K of this document). Also see Section 4.2.6 (Traffic 1 & 2 – Responses) of this document.

Moran 2 – Comment

In light of the significant adverse impact this project would have on my neighborhood and the lack of meaningful measures to alleviate that impact, I request that you not approve the project as currently presented. Any further consideration of the project should be conditioned on:

- *a substantial reduction in the size and scope of the project;*
- *a more meaningful proposal for mitigation by the applicant; and*
- *postponement of a Commission recommendation in order to allow time for adequate public study and evaluation of the applicant's revised proposals.*

Moran 2 – Response

Please see Section 4.5.5 (Belkin, L 3 – Response) of this document.

4.5.86 Faramarz Nabari

January 7, 2002

Nabari 1 – Comment

I am writing to express my objection to the proposed Deerlake Ranch development in Chatsworth (Project No. 99-239(5)) for which you have scheduled a January 23 hearing.

The proposed project is located close to my home, and I am particularly concerned about the following:

The loss of open space in a rural, horse trail area.

Nabari 1 – Response

Approximately 137.89 acres (59.8%) of the total project site would be open space under the revised project. See Section 2.4.7 of this document for additional discussion of open space areas.

See also Section 4.4.1 (C ECHO 3 – Response) of this document regarding trails.

Nabari 2 – Comment

The grading of an entire hillside.

Nabari 2 – Response

As stated in Section 4.5 of the Draft EIR, impacts due to grading activities would not be significant with implementation of recommended mitigation measures.

Nabari 3 – Comment

The threat the drainage poses to oak trees in the canyon.

Nabari 3 – Response

No oak trees are located directly in the bottom of the drainage channel. No additional response is required.

Nabari 4 – Comment

I will do everything in my ability to publicize and oppose approval of this project.

Nabari 3 – Response

The comment has been received and noted.

4.0 Response to Written Comments

Nabari 5 – Comment

In light of the significant adverse impact this project would have on my neighborhood and the lack of meaningful measures to alleviate that impact, I request that you not approve the project as currently presented. Any further consideration of the project should be conditioned on:

- *a substantial reduction in the size and scope of the project;*
- *a more meaningful proposal for mitigation by the applicant; and*
- *postponement of a Commission recommendation in order to allow time for adequate public study and evaluation of the applicant's revised proposals.*

Nabari 4 – Response

Please see Section 4.5.5 (Belkin, L 3 – Response) of this document.

4.5.87 John C. Nelson

January 18, 2002

Nelson 1 - Comment

I have built six houses in Chatsworth Twin Lakes since 1989. I currently own four houses in Twin Lakes and also manage my sister's house in the same neighborhood.

I am not opposed to the proposed development. While the new development would certainly alter the character of the Twin Lakes community, many of the proposed improvements would enhance Twin Lakes.

Nelson 1 - Response

The comment has been received and noted. No additional response is needed.

Nelson 2 - Comment

I would like to draw your attention to the issue of Twin Lakes' roads and legal implications thereof. The developers believe that the new project will have minimal impact on Twin Lakes traffic inside Twin Lakes. While I agree that most residents of the new project will not use Twin Lakes roads on a daily basis, I think that it is inevitable that the project will have a definite impact on our streets. Residents and visitors to the new project will want to "check out" our neighborhood. Perhaps more significantly, children in the new project will see our streets and roads as an "attractive nuisance" and will exploit them in trying out their motorized and non-motorized "wheels". I see potential legal liability for both Twin Lakes residents, as well as for the developers of the new project, if or when these children are injured by the dangerous conditions of sections of our roadways.

Thus, I am asking, for the sake of the developers as well as for the Twin Lakes residents, that as a condition for development, the requirement that the developer pave those portions of existing Twin Lakes roads that are currently unpaved or where the paving is badly deteriorated (they would not need to pave where the adjacent property owners wish to keep their graveled "country lane" look). Paving could meet existing standards: with our underlying bedrock, we have gotten good paving results from placing two inches of asphalt on top of compacted, existing roadway. I have roughly measured the amount of roadway in need of such improvement to total about one mile in length. Since our roadways do not exceed 20 feet in width, and in many places the grade cut is much less than 20 feet, the total square footage of paving should not exceed 100,000 square feet. I would think that a price in the \$1/sq.ft. range would be a reasonable projected cost. Thus, the over-all cost to the developers would be very modest compared to the benefits to both Twin Lakes and the new development.

4.0 Response to Written Comments

Nelson 2 - Response

Subsequent to the distribution of the Draft EIR, additional mitigation with regard to traffic impacts have been included in the revised project in response to LADOT (see Appendices E and K of this document.). However, paving of streets within the Twin Lakes Community has not been included. However, this suggestion will be forwarded on to the decision makers.

4.5.88 Lizzie Novotny

January 7, 2002

Novotny 1 - Comment

I am writing to express my objection to the proposed Deerlake Ranch development in Chatsworth (Project No. 99-239(5)) for which you have scheduled a January 23 hearing.

The proposed project is located close to my home, and I am particularly concerned about the following: increased traffic & congestion:

Novotny 1 – Response

As stated in Section 4.12 of the Draft EIR, traffic impacts would not be significant with implementation of recommended mitigation measures. Please see Sections 3.3.5 and 4.2.6, and Appendix K of this document for additional discussion of traffic impacts and mitigation measures.

Novotny 2 - Comment

impact on horse & hiking trails:

Novotny 2 – Response

See Section 4.4.1 (C ECHO 3 – Response) of this document.

Novotny 3 - Comment

impact on wildlife:

Novotny 3 – Response

Section 4.3 of the Draft EIR included a discussion of impacts upon sensitive species, nesting birds and raptors, and wildlife movement. Impacts to biological resources would not be significant with implementation of recommended mitigation measures. Please see also Section 4.2.1 of this document for additional discussion of this issue.

Novotny 4 - Comment

continuation of tract houses all north of 118.

Novotny 4 – Response

As stated in Section 2.1.2 of the Draft EIR, the project is consistent with the land use and zoning designations. The comment has been received and noted. No additional response is needed.

Novotny 5 - Comment

In light of the significant adverse impact this project would have on my neighborhood and the lack of meaningful measures to alleviate that impact, I request that you not approve the project as currently presented. Any further consideration of the project should be conditioned on:

- *A substantial reduction in the size and scope of the project;*
- *A more meaningful proposal for mitigation by the applicant; and*
- *Postponement of a Commission recommendation in order to allow time for adequate public study and evaluation of the applicant's revised proposals.*

Novotny 5 – Response

Please see Section 4.5.5 (Belkin, I. 3 – Response) of this document.

4.0 Response to Written Comments

Novotny 6 - Comment

As a (2) horse owner [sic], I feel this is the last hold out of rural property [sic]— please keep it that way.

Novotny 6 – Response

The comment has been received and noted. No additional response is required.

4.5.89 Rena Ovadia

January 7, 2002

Ovadia 1 – Comment

I am writing to express my objection to the proposed Deerlake Ranch development in Chatsworth (Project No. 99-239(5)) for which you have scheduled a January 23 hearing.

The proposed project is located close to my home, and I am particularly concerned about the following:

Traffic issues that will affect [sic] local streets. Congestion on the main routes leading south of the 118 fwy. at rush hours is heavy as is. The proposed corrole [sic] of traffic flow doesn't seem to be sufficient.

Ovadia 1 – Response

As stated in Section 4.12 of the Draft EIR, traffic impacts would not be significant with implementation of recommended mitigation measures. Please see Sections 3.3.5 and 4.2.6, and Appendix K of this document for additional discussion of traffic impacts and mitigation measures.

Ovadia 2 – Comment

Eco-Sociological Effects on the area. We like the "country" feel of the area. This project will take that away.

Ovadia 2 – Response

This comment is out of the scope of analysis of the EIR. It is not clear what is meant by "eco-sociological" effects. However, the commenter's opinion is noted and will be forwarded on to the decision makers.

Ovadia 3 – Comment

In light of the significant adverse impact this project would have on my neighborhood and the lack of meaningful measures to alleviate that impact, I request that you not approve the project as currently presented. Any further consideration of the project should be conditioned on:

- *a substantial reduction in the size and scope of the project;*
- *a more meaningful proposal for mitigation by the applicant; and*
- *postponement of a Commission recommendation in order to allow time for adequate public study and evaluation of the applicant's revised proposals.*

Ovadia 3 – Response

Please see Section 4.5.5 (Belkin, L 3 – Response) of this document.

4.5.90 Mr. and Mrs. Patel

January 7, 2002

Patel 1 - Comment

I am writing to express my objection to the proposed Deerlake Ranch development in Chatsworth (Project No. 99-239(5)) for which you have scheduled a January 23 hearing.

The proposed project is located close to my home, and I am particularly concerned about the following:

4.0 Response to Written Comments

Too much traffic: too much traffic – leads to pollution and public safety;

Patel 1 - Response

As stated in Section 4.12 of the Draft EIR, traffic impacts would not be significant with implementation of recommended mitigation measures. Please see Sections 3.3.5 and 4.2.6, and Appendix K of this document for additional discussion of traffic impacts and mitigation measures.

Patel 2 - Comment

Impact on the natural surroundings

Patel 2 - Response

Section 4.3 of the Draft EIR included a discussion of impacts upon sensitive species, nesting birds and raptors, and wildlife movement. Impacts to biological resources would not be significant with implementation of recommended mitigation measures. Please see also Section 4.2.1 of this document for additional discussion of this issue.

Patel 3 - Comment

congestion in public schools, libraries etc.

Patel 3 - Response

As stated in Section 4.10 of the Draft EIR, impacts to schools would not be significant with implementation of recommended mitigation measures. Please see Sections 3.3.4, 4.3.7 and 4.5.28, and Appendix J of this document for additional discussion of this issue.

As stated in Section 4.11 of the Draft EIR, library impacts would be less than significant with implementation of recommended mitigation measures. See Section 4.1.2 (City Council 6 – Response) of this document regarding additional discussion of mitigation of impacts on libraries.

Patel 4 - Comment

In light of the significant adverse impact this project would have on my neighborhood and the lack of meaningful measures to alleviate that impact, I request that you not approve the project as currently presented. Any further consideration of the project should be conditioned on:

- *A substantial reduction in the size and scope of the project;*
- *A more meaningful proposal for mitigation by the applicant; and*
- *Postponement of a Commission recommendation in order to allow time for adequate public study and evaluation of the applicant's revised proposals.*

Patel 4 - Response

Please see Section 4.5.5 (Belkin, L.3 -- Response) of this document.

4.5.91 Ricardo and Krystal Pauliano

March 8, 2002

Pauliano 1 --Comment

I am writing to express my objection to the proposed Deerlake Ranch development in Chatsworth (Project No. 99-239(5)) for which you have continued the public hearing to April 10.

The proposed project is located close to my home, and I am particularly concerned about the following:

Will create so much noise, dusts [sic] and fumes into our neighborhood.

Pauliano 1 --Response

As discussed in Sections 4.2 and 4.7 of the Draft EIR, no significant noise or dust impact would occur from the project with implementation of recommended mitigation measures. Please refer to Section 4.2.3 of this document for additional discussion of impacts and mitigation.

4.0 Response to Written Comments

Pauliano 2 –Comment

Children walking to elementary schools will no longer be safe due to heavy traffic coming from the hillside to Canoga.

Pauliano 2 –Response

As stated in Section 4.12 of the Draft EIR, traffic impacts would not be significant with implementation of recommended mitigation measures. Please see Sections 3.3.5 and 4.2.6, and Appendix K of this document for additional discussion of traffic impacts and mitigation measures.

Pauliano 3 –Comment

Also not safe for hiking and riding

Pauliano 3 –Response

The revised project would increase the number of trails in the area, and would not result in safety impacts. Please see Section 2.4.7 of this document for additional discussion of trails.

Pauliano 4 –Comment

The neighborhood will no longer be quiet and safe including the possibility of burglary.

Pauliano 4 –Response

As discussed in Section 4.7 of the Draft EIR, no significant noise impact would occur from the project with implementation of recommended mitigation measures. Please refer to Section 4.2.3 of this document for additional discussion of impacts and mitigation.

As stated in Section 4.9 of the Draft EIR, no significant impacts would occur to police protection services with implementation of the project. See Section 4.2.5 (Police Services 1 and 5 – Responses) and Appendix E of this document for additional discussion regarding this issue.

Pauliano 5 –Comment

In light of the significant adverse impact this project would have on my neighborhood and the lack of meaningful measures to alleviate that impact, I request that you do not approve the project as currently presented. Any further consideration of the project should be conditioned on:

- *a substantial reduction in the number of homes in the project;*
- *a more meaningful proposal for mitigation by the applicant; and*
- *opportunity for public study of and comment on the applicant's revised proposals.*

Pauliano 5 –Response

Please see Section 4.5.5 (Belkin, L 3 – Response) of this document.

4.5.92 William and Sherry Payne

January 10, 2002

Payne 1 - Comment

Please be advised that this developer and his engineer have promised our equestrian community that they will keep all equestrian trails and bridle paths open and safe during the entire construction period. They estimate that to be 5 years in a favorable economy.

Payne 1 - Response

Please see Appendices D and E of this document regarding mitigation measures for trails.

Payne 2 - Comment

The developer was honest enough to alert us to the fact that they intend to sell the project once the Tentative Map is approved we would like to see this in a Map Condition.

4.0 Response to Written Comments

Our community is aware that there are other projects in Los Angeles County that had map conditions to build and keep trails open, but the developer failed to fulfill his obligation. Now the only recourse for that equine community is to sue the developer. It's a shame the county didn't help them.

Payne 2 - Response

This comment is out of the scope of analysis of the EIR. However, the commenter's opinion is noted and will be forwarded on to the decision makers.

4.5.93 Andrea Pereson

March 8, 2002

Pereson 1 - Comment

I am writing to express my objection to the proposed Deerlake Ranch development in Chatsworth (Project No. 99-239(5)) for which you have continued public hearing to April 10.

The proposed project is located close to my home, and I am particularly concerned about the following:

Deerlake project - needs to be connected to Topanga and DeSoto Canoga is a quiet Rural Residential area. Deerlake Ranch proposed 480 homes are to be built on small lots. Chatsworth is a rural area of ½ acre & larger lots. There should be no more than 240 homes.

Pereson 1 - Response

As stated in Section 4.12 of the Draft EIR, traffic impacts would not be significant with implementation of recommended mitigation measures. See Appendix N of this document regarding access to or from DeSoto Avenue. Please also see Sections 3.3.5 and 4.2.6, and Appendix K of this document for additional discussion of traffic impacts and mitigation measures.

See Section 4.2.7 (Development Issue 10 - Response) and Appendix I of this document regarding land use density.

Pereson 2 - Comment

In light of the significant adverse impact this project would have on my neighborhood and the lack of meaningful measures to alleviate that impact, I request that you not approve the project as currently presented. Any further consideration of the project should be conditioned on:

- *a substantial reduction in the number of homes in the project;*
- *a more meaningful proposal for mitigation by the applicant; and*
- *an opportunity for public study of and comment on the applicant's revised proposals.*

Pereson 2 - Response

Please see Section 4.5.5 (Belkin, L 3 - Response) of this document.

4.5.94 Ernie Perlich

January 15, 2002

Perlich 1 - Comment

This letter is in regards to the proposed development in the Deer Lake Highlands area; C.U.P. #99-239-(5) tentative tract map # 53138.

I have half ownership (with Pat Mirabelli) in a 40 acre parcel (AP 2821-019-00) directly north and adjoining [sic] this proposed development.

My main objection and concerns are having a continuing access to this property, as we have had since our property was purchased in 1966, and having that access point at the location of the existing

4.0 Response to Written Comments

old fire road. That way the old road could be graded for much faster engine response in a fire situation. Also that road will give access to property owners behind us.

As well as discussing this with you I have discussed it with Captain Lecou and Janna Masi of the Land Development unit in the Los Angeles County Fire Department.

Perlich 1 – Response

See Section 4.5.3 (Augello 1 & 2 - Responses) of this document.

4.5.95 Ted Perlin

January 7, 2002

Perlin 1 – Comment

I am writing to express my objection to the proposed Deerlake Ranch development in Chatsworth (Project No. 99-239(5)) for which you have scheduled a January 23 hearing.

The proposed project is located close to my home, and I am particularly concerned about the following:

Traffic congestion, freeway on and offramp [sic] heavy with traffic.

Perlin 1 – Response

As stated in Section 4.12 of the Draft EIR, traffic impacts would not be significant with implementation of recommended mitigation measures. Please see Sections 3.3.5 and 4.2.6, and Appendix K of this document for additional discussion of traffic impacts and mitigation measures.

Perlin 2 – Comment

NOISE

Perlin 2 – Response

As stated in Section 4.7 of the Draft EIR, impacts regarding noise would be less than significant with implementation of recommended mitigation measures. Please refer to Section 4.2.3 of this document for additional discussion of impacts and mitigation.

Perlin 3 – Comment

In light of the significant adverse impact this project would have on my neighborhood and the lack of meaningful measures to alleviate that impact, I request that you not approve the project as currently presented. Any further consideration of the project should be conditioned on:

- *a substantial reduction in the size and scope of the project;*
- *a more meaningful proposal for mitigation by the applicant; and*
- *postponement of a Commission recommendation in order to allow time for adequate public study and evaluation of the applicant's revised proposals.*

Perlin 3 – Response

Please see Section 4.5.5 (Belkin, L 3 – Response) of this document.

4.5.96 Roberta M. Phillips

March 8, 2002

Phillips 1 – Comment

I am writing to express my objection to the proposed Deerlake Ranch development in Chatsworth (Project No. 99-239(5)) for which you have continued public hearing to April 10.

The proposed project is located close to my home, and I am particularly concerned about the following:

1. *Vastly increased traffic on my street.*

4.0 Response to Written Comments

2. *Noise & air pollution from construction vehicles every day.*
3. *Danger to the horseback riders and horses.*
4. *Overcrowded schools in Chatsworth*
5. *Complete negative change to the peace and serenity of the neighborhood, & consequently, vastly decreased property values.*

Phillips 1 – Response

As stated in Section 4.12 of the Draft EIR, traffic impacts would not be significant with implementation of recommended mitigation measures. Please see Sections 3.3.5 and 4.2.6, and Appendix K of this document for additional discussion of traffic impacts and mitigation measures.

As discussed in Sections 4.2 and 4.7 of the Draft EIR, no significant noise or dust impact would occur from the project with implementation of recommended mitigation measures. Please refer to Section 4.2.3 of this document for additional discussion of impacts and mitigation.

No significant impacts to horseback riders are anticipated with implementation of the project. Please see Appendices D and E of this document for mitigation measures regarding this issue.

As stated in Section 4.10 of the Draft EIR, impacts to schools would not be significant with implementation of recommended mitigation measures. Please see Sections 3.3.4, 4.3.7 and 4.5.28, and Appendix J of this document for additional discussion of this issue.

Phillips 2 – Comment

In light of the significant adverse impact this project would have on my neighborhood and the lack of meaningful measures to alleviate that impact, I request that you not approve the project as currently presented. Any further consideration of the project should be conditioned on:

- *a substantial reduction in the number of homes in the project;*
- *a more meaningful proposal for mitigation by the applicant; and*
- *an opportunity for public study of and comment on the applicant's revised proposals.*

Phillips 2 – Response

Please see Section 4.5.5 (Belkin, I. 3 – Response) of this document.

4.5.97 Karen Placek

March 13, 2002

Placek 1 – Comment

I am writing to express my objection to the proposed Deerlake Ranch development in Chatsworth (Project # 99-239(5)) for which you have continued the public hearing to April 10.

The proposed project is located close to my home, and I am particularly concerned about the traffic problem this project could or will have if allowed to proceed. The area in which I live in is a particularly lovely area where coming home from work you see people out riding there [sic] horse and all other types of wild animals roaming freely (foxes, raccoons, possums, squirrels, etc.). If this project is allowed to commence the horse back riding will surely [sic] stop. The tractors, all the other heavy equipment and traffic which it will create will not only impact the environment but our daily living. The traffic in the upper part of Canoga Avenue is impacted already, there are two private schools one East of Canoga Ave. and West of Canoga Ave. which contributes to a lot of the traffic already, the cross traffic from Topanga to Desoto on Chatsworth street is dangerous. There was a lady killed not too long ago on the corner of Chatsworth Street and Canoga Ave. Needless to say the traffic created by this project is a manager [sic] concern for all of us living off of Canoga Ave. Also, what about the children who live in this area the streets will become more unsafe to the additional traffic created the side streets off of Canoga are not travel by others expect [sic] for the people that

4.0 Response to Written Comments

live on these side streets. But if this project is allowed other people will be using a lot of these streets for short cuts. My other concern is the size lots that they are proposing is not consisted [sic] with the lot sizes in the upper portion of Chatsworth on Canoga Ave. This area was designed for horse property and horse trails the lot size the developer is proposing barely gives these homes a back yard needless to say there would be no place for horses if they so desired.

Placek 1 –Response

As stated in Section 4.12 of the Draft EIR, traffic impacts would not be significant with implementation of recommended mitigation measures. Please see Sections 3.3.5 and 4.2.6, and Appendix K of this document for additional discussion of traffic impacts and mitigation measures. The project has been revised to reduce the total number of residential units from 484 to 388. This includes 155 minimum 15,000 square foot estate lots, of which 55 would be equestrian lots. Please see Section 2.0 of this document for further discussion of this issue.

Placek 2 –Comment

In light of the significant adverse impact this project would have on my neighborhood and the lack of meaningful measures to alleviate that impact. I request that you do not approve the project as currently presented. Any further consideration of the project should be conditioned on:

- *A substantial reduction in the number of homes in the project*
- *A more meaningful proposal for mitigation by the applicant.*
- *And opportunity for public study of and comment on the applicant's revised proposals.*

Placek 2 –Response

Please see Section 4.5.5 (Belkin. L 3 – Response) of this document.

4.5.98 Larry Rader

January 10, 2002

Rader 1 - Comment

I am writing to express my objection to the proposed Deerlake Ranch development in Chatsworth (Project No. 99-239(5)) for which you have scheduled a January 23 hearing.

The proposed project is located close to my home, and I am particularly concerned about the following:

I'm a resident of the Twin Lakes community, a former Aerospace Engineer and now a high school math teacher in LAUSD.

From my experience in industry and education, I've learned that when two different parties are negotiating toward a resolution of contract- both parties always ask for more than they expect to get. I believe the Presidio Group has proposed to build more houses than they expect to get approved. The current proposal to build 484 homes is unrealistic and will create an unbearable impact on the surrounding community. I would like to see the Presidio Groups alternate plan to build fewer houses along with a revised EIR.

Rader 1 - Response

The project has been revised to reduce the total number of residential units from 484 to 388. This includes 155 minimum 15,000 square foot estate lots, of which 55 would be equestrian lots. Please see Section 2.0 of this document for further discussion of this issue.

Rader 2 - Comment

The Presidio Group has proposed to donate over \$6 million to add classroom space resulting from the impact of the development. LAUSD must be held accountable to spend these funds in the impacted community and not where they choose.

4.0 Response to Written Comments

Rader 2 - Response

This comment is out of the scope of analysis of the EIR. However, the commenter's opinion is noted and will be forwarded on to the decision makers.

Rader 3 - Comment

In light of the significant adverse impact this project would have on my neighborhood and the lack of meaningful measures to alleviate that impact, I request that you not approve the project as currently presented. Any further consideration of the project should be conditioned on:

- *a substantial reduction in the size and scope of the project;*
- *a more meaningful proposal for mitigation by the applicant; and*
- *postponement of a Commission recommendation in order to allow time for adequate public study and evaluation of the applicant's revised proposals.*

Rader 3 - Response

Please see Section 4.5.5 (Belkin, L 3 – Response) of this document.

4.5.99 Karen Randall

March 25, 2002

Randall 1 –Comment

I am writing to express my objection to the proposed Deerlake Ranch development in Chatsworth (Project No. 99-239(5)) for which you have continued the public hearing to April 10.

The proposed project is located close to my home, and I am particularly concerned about the following:

- *The proximity to schools*
- *The destruction of the environment in this beautiful rural area of Los Angeles*
- *The adverse impact on horse trails and equestrian facilities*

Randall 1 –Response

As stated in Section 4.10 of the Draft EIR, impacts to schools would not be significant with implementation of recommended mitigation measures. Please see Sections 3.3.4, 4.3.7 and 4.5.28, and Appendix J of this document for additional discussion of this issue.

As stated in Section 4.1 of the Draft EIR, impacts to aesthetic resources would not be significant. The project includes approximately 137.89 acres of open space (59.8% of the total project site).

The project also includes additional trails to be used by equestrians, see Section 2.4.7 of this document for additional discussion of this issue.

Randall 2 –Comment

In light of the significant adverse impact this project would have on my neighborhood and the lack of meaningful measures to alleviate that impact, I request that you do not approve the project as currently presented. Any further consideration should be conditioned on:

- *A substantial reduction in the number of homes in the project; and*
- *Opportunity for public study of and comment on the applicant's revised proposals.*

Randall 2 –Response

Please see (Section 4.5.5 Belkin, L 3 – Response) of this document.

4.5.100 Liz Ricci

March 13, 2001

Ricci 1 –Comment

We live on Chatsworth Street south of this proposed project. As it has been presented, It [sic] so devastating to us that we may actually have to leave Chatsworth after having been here since 1956, as there will be nothing left in this area that we came here for. The bottom line on this is that the project is in L.A. county (NOT city), but will rely on city (OUR) sewers, schools, streets and emergency services. Do you suppose that Las Virgenes water district will impose the same sewer fee on these new homes that we have to pay?? Can you imagine 60 MILLION cubic feet of dirt being moved and disturbed up wind of us during the next Santa Ana wind? Can you visualize 4,000 to 6,000 more cars on Canoga and Chatsworth St.? How long will the lines at the post office be then?? How crowded will our local schools be, given that our children have trouble getting their classes now?

Ultimately there is no way to "mitigate" 484 homes up there. Please do everything in your power to prevent this disaster to our neighborhood.

Ricci 1 –Response

As stated in Section 4.14 of the Draft EIR, the project would not have a significant impact on sewers.

As stated in Section 4.10 of the Draft EIR, impacts to schools would not be significant with implementation of recommended mitigation measures. Please see Sections 3.3.4, 4.3.7 and 4.5.28, and Appendix J of this document for additional discussion of this issue.

As discussed in Sections 4.2 and 4.7 of the Draft EIR, no significant noise or dust impact would occur from the project with implementation of recommended mitigation measures. Please refer to Section 4.2.3 of this document for additional discussion of impacts and mitigation.

As stated in Section 4.12 of the Draft EIR, traffic impacts would not be significant with implementation of recommended mitigation measures. Please see Sections 3.3.5 and 4.2.6, and Appendix K of this document for additional discussion of traffic impacts and mitigation measures.

As stated in Sections 4.8 and 4.9 of the Draft EIR, no significant impacts would occur to emergency services with implementation of the project. See Sections 4.2.4 (Fire 1 and 4 – Responses) and Section 4.2.5 (Police Services 1 and 5 – Responses), and Appendix E of this document for additional discussion regarding this issue.

Ricci 2 –Comment

- 1. In order to keep this new area consistent with the horse character of the Chatsworth general plan; the lot sizes should be held at least to the horse keeping legal size of 17,500 sq. ft.;*

Ricci 2 –Response

The project has been revised to reduce the total number of residential units from 484 to 388. This includes 155 minimum 15,000 square foot estate lots, of which 55 would be equestrian lots. Please see Section 2.0 of this document for further discussion of this issue.

Ricci 3 –Comment

- 2. That the ridge lines need to be preserved so that it doesn't become an eyesore from all over the valley;*

Ricci 3 –Response

As stated in Section 4.1 of the Draft EIR, impacts to visual resources would not be significant. Please see Section 2.4 of this document for further discussion of this issue.

Ricci 4 –Comment

- 3. That the open space set backs, stream runoff and ecology, and trail accesses be protected;*

4.0 Response to Written Comments

Ricci 4 –Response

See Section 2.4.7 of this document for additional discussion of open space.

As stated in Section 4.6 of the Draft EIR, impacts with regard to urban runoff would not be significant with implementation of mitigation measures. See Section 4.2.2 (Urban Runoff 1 – Response) and Appendix I of this document for additional discussion of this issue.

See Section 4.4.1 (C ECHO 3 & 4 – Responses) of this document for additional discussion of trails.

4.5.101 Liz and Richard Ricci

January 8, 2002

Ricci L & R 1 - Comment

We have owned the property on Chatsworth Street since 1983 and have lived there since 1984.

We live in Chatsworth specifically so that we can maintain and ride our horses at our home. We also have developed long standing and close neighborhood connections.

Ricci L & R 1 - Response

The comment has been received and noted. No additional response is needed.

Ricci L & R 2 - Comment

We are extremely concerned about the negative impact that the development of a large number of homes in the hills directly north of us and of the 118 freeway will have on our place to live.

Chatsworth Street is already very busy, to the extent that there are times of the day that we really can't drive out of our driveway to leave. In addition, Topanga is so impacted in the rush hour times, it is obvious [sic] to all of us who live here that nearly all of the traffic from those new homes is going to have to come down Canoga Avenue. Canoga Avenue is my route to ride into the hills, and I have to cross the corner of Rinaldi and Canoga to meet friends and to ride. Unless there is a light there, it will be completely impossible. Even with a light there, it won't be good.

And of course, a portion of the traffic coming down Canoga is going to go east on Chatsworth to get to the freeway, further jamming our own access to our own house.

Ricci L & R 2 - Response

As stated in Section 4.12 of the Draft EIR, traffic impacts would not be significant with implementation of recommended mitigation measures. Please see Sections 3.3.5 and 4.2.6, and Appendix K of this document for additional discussion of traffic impacts and mitigation measures.

Ricci L & R 3 - Comment

Please re consider [sic] this development, and scale it down to a more manageable size.

Ricci L & R 1 - Response

The project has been revised to reduce the total number of residential units from 484 to 388. This includes 155 minimum 15,000 square foot estate lots, of which 55 would be equestrian lots. Please see Section 2.0 of this document for further discussion of this issue.

4.5.102 Tony Rizzate

January 7, 2002

Rizzate 1 - Comment

I am writing to express my objection to the proposed Deerlake Ranch development in Chatsworth (Project No. 99-239(5)) for which you have scheduled a January 23 hearing.

The proposed project is located close to my home, and I am particularly concerned about the following:

4.0 Response to Written Comments

We are not allowed to put any checks in our mail box since we were robbed just recently. We are going to put our mail box next to our front door so the mail man will have to get out of his truck to deliver.

Rizzate 1 - Response

This comment is out of the scope of analysis of the EIR. However, the commenter's opinion is noted and will be forwarded on to the decision makers.

Rizzate 2 - Comment

In light of the significant adverse impact this project would have on my neighborhood and the lack of meaningful measures to alleviate that impact, I request that you not approve the project as currently presented. Any further consideration of the project should be conditioned on:

- *a substantial reduction in the size and scope of the project;*
- *a more meaningful proposal for mitigation by the applicant; and*
- *postponement of a Commission recommendation in order to allow time for adequate public study and evaluation of the applicant's revised proposals.*

Rizzate 2 - Response

Please see Section 4.5.5 (Belkin, L 3 – Response) of this document.

4.5.103 Allison Roberts

January 7, 2002

Roberts 1 – Comment

I am writing to express my objection to the proposed Deerlake Ranch development in Chatsworth (Project No. 99-239(5)) for which you have scheduled a January 23 hearing.

The proposed project is located close to my home, and I am particularly concerned about the following:

Loss of wildlife, natural environment and quiet neighborhood of 100 homes in the mountain side.

Roberts 1 – Response

Section 4.3 of the Draft EIR included a discussion of impacts upon sensitive species, nesting birds and raptors, and wildlife movement. Impacts to biological resources would not be significant with implementation of recommended mitigation measures. Please see also Section 4.2.1 of this document for additional discussion of this issue.

As discussed in Section 4.7 of the Draft EIR, no significant noise impact would occur from the project with implementation of recommended mitigation measures. Please refer to Section 4.2.3 of this document for additional discussion of impacts and mitigation.

Roberts 2 – Comment

Traffic

Roberts 2 – Response

As stated in Section 4.12 of the Draft EIR, traffic impacts would not be significant with implementation of recommended mitigation measures. Please see Sections 3.3.5 and 4.2.6, and Appendix K of this document for additional discussion of traffic impacts and mitigation measures.

Roberts 3 – Comment

Crime

Roberts 3 – Response

As stated in Section 4.9 of the Draft EIR, annual crime statistics indicate that the areas, including the project, served by the Lost Hills/Malibu Station have a crime rate below the countywide average.

4.0 Response to Written Comments

Implementation of the project would serve to increase the existing funding mechanisms for any additional officers required to serve the project area. Impacts would not be significant with implementation of recommended mitigation measures. See Section 4.2.5 (Police Services 1 and 5 – Responses) and Appendix E of this document for additional discussion regarding this issue.

Roberts 4 – Comment

pollution.

Roberts 4 – Response

It is unclear as to what pollution the commenter is referring. However as stated in Section 4.6 of the Draft EIR, impacts with regard to urban runoff would not be significant with implementation of mitigation measures. See Section 4.2.2 (Urban Runoff 1 – Response) and Appendix I of this document for additional discussion of this issue.

Roberts 5 – Comment

In light of the significant adverse impact this project would have on my neighborhood and the lack of meaningful measures to alleviate that impact, I request that you not approve the project as currently presented. Any further consideration of the project should be conditioned on:

- *a substantial reduction in the size and scope of the project;*
- *a more meaningful proposal for mitigation by the applicant; and*
- *postponement of a Commission recommendation in order to allow time for adequate public study and evaluation of the applicant's revised proposals.*

Roberts 5 – Response

Please see Section 4.5.5 (Belkin, L 3 – Response) of this document.

4.5.104 Karen Rogers

January 11, 2002

Rogers 1 – Comment

I am a constituent of yours and a resident of the Chatsworth area. I write to advise you I OPPOSE the Deerlake Ranch project (project no.99-239(5)). The proposed development of nearly 500 homes along Canoga Avenue just north of the 118 freeway would cause additional congestion on our already-crowded [sic] local streets (you should see the morning and evening traffic on DeSoto, Topanga Canyon, Chatsworth, Devonshire and Lassen Streets, just to name a few?) The numbers and information provided in an effort to gain approval of the development appear to be misleading. The true impact on our neighborhood requires that this proposal be rejected.

I am very concerned about both the increase in traffic on Canoga Avenue adjacent streets that this development will surely cause, and also the impact of construction from the project, including noise, traffic and the many large construction vehicles which I believe pose a significant risk to my small children. We are very near Canoga and, besides worrying about our children's safety while they are outside the house, we will have to suffer substantial noise pollution as the walls and windows of our house were not constructed to keep out such noises - which are expected to continue for over a year!

Rogers 1 – Response

The project has been revised to reduce the total number of residential units from 484 to 388. This includes 155 minimum 15,000 square foot estate lots, of which 55 would be equestrian lots. Please see Section 2.0 of this document for further discussion of this issue.

As stated in Section 4.12 of the Draft EIR, traffic impacts would not be significant with implementation of recommended mitigation measures. Please see Sections 3.3.5 and 4.2.6, and Appendix K of this document for additional discussion of traffic impacts and mitigation measures.

4.0 Response to Written Comments

As discussed in Section 4.7 of the Draft EIR, no significant noise impact would occur from the project with implementation of recommended mitigation measures. Please refer to Section 4.2.3 of this document for additional discussion of impacts and mitigation.

Rogers 2 – Comment

In light of the significant adverse impact this project would have on my neighborhood and the lack of meaningful measures to alleviate that impact, I request that you not approve the project as currently presented. Any further consideration of the project should be conditioned on:

- *a substantial reduction in the size and scope of the project;*
- *a more meaningful proposal for mitigation by the applicant; and*
- *postponement of a Commission recommendation in order to allow time for adequate public study and evaluation of the applicant's revised proposals.*

Rogers 2 – Response

Please see Section 4.5.5 (Belkin, L 3 – Response) of this document.

4.5.105 B.M. Schackel

January 7, 2002

Schackel B 1 - Comment

I am writing to express my objection to the proposed Deerlake Ranch development in Chatsworth (Project No. 99-239(5)) for which you have scheduled a January 23 hearing.

The proposed project is located close to my home, and I am particularly concerned about the following:

Impact on the traffic on Canoga Ave. We have two schools and heavy horse traffic on this street- no way should this development run the majority of its traffic down it- This is a major problem! People will be not only unconvinced but killed.

Schackel B 1 - Response

As stated in Section 4.12 of the Draft EIR, traffic impacts would not be significant with implementation of recommended mitigation measures. Please see Sections 3.3.5 and 4.2.6, and Appendix K of this document for additional discussion of traffic impacts and mitigation measures.

Schackel B 2 - Comment

In light of the significant adverse impact this project would have on my neighborhood and the lack of meaningful measures to alleviate that impact, I request that you not approve the project as currently presented. Any further consideration of the project should be conditioned on:

- *a substantial reduction in the size and scope of the project;*
- *a more meaningful proposal for mitigation by the applicant; and*
- *postponement of a Commission recommendation in order to allow time for adequate public study and evaluation of the applicant's revised proposals.*

February 14, 2002

Schwaegerle 1 –Comment

I need your help please.

There is a current plan being processed for Deer Lake Highlands.

This is north of the city of Chatsworth.

As a property owner in the area what affect [sic] will the plan have upon privately held property in this area.

What is past – current – and what will be future zoning?

Bottom Line: What's the affect [sic] on the remaining property owners?

Schwaegerle 1 –Response

See Section 4.5.3 (Augello 1 & 2 - Responses) and Appendix M of this document.

Schwaegerle 2 –Comment

Do you have an overlay map as to the new proposed subdivision will affect existing lots.

Schwaegerle 2 –Response

Please see Figure 2.7 of this document.

4.5.109 Harry and Terri Seidman

March 28, 2002

Seidman 1 –Comment

As neighbors of the proposed Deerlake Ranch Development, we are writing to express our opposition to the proposed Deerlake Ranch Development. We do not believe that the existing infrastructure can support this project or any projects that will result in a large number of residents being added to this part of Los Angeles County.

You will be receiving a large number of letters in opposition to this project and each of the impacted residents will express a list of the many reasons that this project is inconsistent with the residential areas adjoining the propose [sic] project. Of particular importance to us is the increased traffic that the new residential units will produce. With current traffic loads there are times during the day when it is very difficult to make the transition from Bermuda Street onto Canoga Avenue. Adding more traffic will exacerbate this problem.

Seidman 1 –Response

As stated in Section 4.12 of the Draft EIR, traffic impacts would not be significant with implementation of recommended mitigation measures. Please see Sections 3.3.5 and 4.2.6, and Appendix K of this document for additional discussion of traffic impacts and mitigation measures.

Seidman 2 –Comment

Over the last few years, there have been several accidents just in the stretch of Canoga Avenue between Bermuda Street and Chatsworth Ave (a distance of a few hundred feet.) This has included an accident that severed a light pole with the pole landing a few feet from our home, an accident that severed a telephone pole and damaging the rail along the horse trail, another accident that ended up with a car in the horse trail, and most recently an accident that resulted in a fatality and a young girl must now go through life without her mother.

We STRONGLY encourage you to recommend against this project.

4.0 Response to Written Comments

Seidman 2 –Response

This comment is out of the scope of the EIR. However, the commenter's opposition to the project will be forwarded on to the decision makers.

4.5.110 Linda G. Sheehan

March 8, 2002

Sheehan 1 –Comment

I am writing to express my objection to the proposed Deerlake Ranch development in Chatsworth (Project No. 99-239(5)) for which you have continued the public hearing to April 10.

The proposed project is located close to my home, and I am particularly concerned about the following:

Safety, increased traffic, environmental, equestrian, inconvenience of all that construction and dirt, decrease in property values, increased population will impact my local schools.

Sheehan 1 –Response

See Section 4.4.1 (C ECHO 4 – Response) of this document for discussion of equestrian issues.

As stated in Section 4.12 of the Draft EIR, traffic impacts would not be significant with implementation of recommended mitigation measures. Please see Sections 3.3.5 and 4.2.6, and Appendix K of this document for additional discussion of traffic impacts and mitigation measures.

As discussed in Section 4.2 of the Draft EIR, no significant dust impact would occur from the project with implementation of recommended mitigation measures. Please refer to Section 4.2.3 of this document for additional discussion of impacts and mitigation.

As stated in Section 4.10 of the Draft EIR, impacts to schools would not be significant with implementation of recommended mitigation measures. Please see Sections 3.3.4, 4.3.7 and 4.5.28, and Appendix J of this document for additional discussion of this issue.

Sheehan 2 –Comment

In light of the significant adverse impact this project would have on my neighborhood and the lack of meaningful measures to alleviate that impact, I request that you do not approve the project as currently presented. Any further consideration of the project should be conditioned on:

- *a substantial reduction in the number of homes in the project;*
- *a more meaningful proposal for mitigation by the applicant; and*
- *opportunity for public study of and comment on the applicant's revised proposals.*

Sheehan 2 –Response

Please see Section 4.5.5 (Belkin, L 3 – Response) of this document.

4.5.111 Steven C. Shuman

March 11, 2002

Shuman 1 –Comment

I am writing to express the opposition of myself and my wife to the proposed Deerlake Ranch development in Chatsworth. Project No. 99-239(5), the public hearing on which you have continued to April 10, 2002. We live on Celtic Street, three houses west of Variel.

I understand the development will encompass 484 new homes, which much translate to 400 morning rush hour trips, many of which will require access to the 118 freeway heading east. If the only freeway access is Topanga or De Soto, and for many Topanga will be backtracking, the traffic south on Canoga and east on Chatsworth will increase very substantially, probably beyond the ability of

4.0 Response to Written Comments

Chatsworth, which is only one lane each way between Variel and De Soto, to handle it. Moreover, people seeking shortcuts around the inevitable back-up at Canoga and Chatsworth may turn down Celtic to Variel, thereby increasing traffic in an otherwise quiet and safe residential street. I do not look forward to a time when I have to battle my way out of my driveway in the morning. The most obvious solutions to this problem are an on-ramp at Canoga, access from the development to De Soto, widening Chatsworth, reducing the density of the development, or the best of all, disallowing the development.

Shuman 1 –Response

As shown on Table 4.12.5 of the Draft EIR, the intersections of Canoga Avenue/Rinaldi Street and Canoga Avenue/Chatsworth Street would operate at acceptable levels (LOS A) during the A.M. and P.M. peak hours with occupancy of the project. Based on the LOS provided at the Canoga Avenue intersections, it is not anticipated that project-related trips would divert to local streets such as Variel Avenue or Independence Avenue. Also see Section 4.2.6 (Traffic 1 and 2 – Responses) and Appendix K of this document for additional discussion of project traffic distribution to the local street system.

The project has been revised to reduce the total number of residential units from 484 to 388. This includes 155 minimum 15,000 square foot estate lots, of which 55 would be equestrian lots. Please see Section 2.0 of this document for further discussion of this issue.

Shuman 2 –Comment

The construction process is also a serious concern. The heavy equipment and construction materials rolling through the one-lane (in each direction) streets of our neighborhood, and the de-nuding [sic] of the hillsides, will bring dust, fumes, noise, traffic snarls and probably accidents to the area. Keep in mind, the wind whips up very regularly in our area, and are worse in the hills being developed.

Shuman 2 –Response

As discussed in Sections 4.2 and 4.7 of the Draft EIR, no significant noise or dust impact would occur from the project with implementation of recommended mitigation measures. Please refer to Section 4.2.3 of this document for additional discussion of impacts and mitigation.

Shuman 3 –Comment

I am also a mountain bike rider, and I ride into the area of this development every two or three weeks on average, as do many other mountain bikers and horseback riders. I have not yet met anyone who engages in those activities who is not upset about the loss of this recreational land, to say nothing of the habitat for the animals. Before you vote on this development, please ask yourselves, what evidence have you seen that there is a need for it.

Shuman 3 –Response

See Section 4.4.1 (C ECHO 3 & 4 – Responses) of this document regarding trails.

Section 4.3 of the Draft EIR included a discussion of impacts upon sensitive species, nesting birds and raptors, and wildlife movement. Impacts to biological resources would not be significant with implementation of recommended mitigation measures. Please see also Section 4.2.1 of this document for additional discussion of this issue.

Shuman 4 –Comment

In light of the adverse impact this project will have on the entire Chatsworth area, particularly the traffic patterns, the project should be rejected. At a minimum, the size of the project should be reduced and the developer should provide more mitigation measures. Thank you for considering these issues.

Shuman 4 –Response

The commenter's opposition to the project is noted and will be forwarded to the decision makers.

January 7, 2002

Siegenthaler 1 – Comment

I am writing to express my objection to the proposed Deerlake Ranch development in Chatsworth (Project No. 99-239(5)) for which you have scheduled a January 23 hearing.

The proposed project is located close to my home, and I am particularly concerned about the following:

More non electric cars with their foul emissions, more babies in communities with no "Planned Parenthoods". The ruining of nature's plants but animals especially. We are not even allowed to walk the mountains n (none) of us but cows are; trampling the ground and causing ground shifts only by their weight.

Siegenthaler 1 – Response

This comment has been received and noted. No additional response is required.

Siegenthaler 2 – Comment

In light of the significant adverse impact this project would have on my neighborhood and the lack of meaningful measures to alleviate that impact, I request that you not approve the project as currently presented. Any further consideration of the project should be conditioned on:

- *a substantial reduction in the size and scope of the project;*
- *a more meaningful proposal for mitigation by the applicant; and*
- *postponement of Commission recommendation in order to allow time for adequate public study and evaluation of the applicant's revised proposals.*

Siegenthaler 2 – Response

Please see Section 4.5.5 (Belkin, L 3 – Response) of this document.

4.5.113 Ray Sipots

January 7, 2002

Sipots 1 – Comment

I am writing to express my objection to the proposed Deerlake Ranch development in Chatsworth (Project No. 99-239(5)) for which you have scheduled a January 23 hearing.

The proposed project is located close to my home, and I am particularly concerned about the following:

In the meetings, I haven't heard anything about subsiding the dust problem from construction.

Sipots 1 – Response

As discussed in Sections 4.2 of the Draft EIR, no significant dust impact would occur from the project with implementation of recommended mitigation measures. Please refer to Section 4.2.3 of this document for additional discussion of impacts and mitigation.

Sipots 2 – Comment

I also haven't heard of improved sewer systems availability to some.

Sipots 2 – Response

The developer has agreed to construct a complete main line sewer system for Twin Lakes, including portions of the house laterals. This would include all engineering, right-of-way acquisition, surveying, construction, and inspection. Since a private developer does not have the power of condemnation, it would be the responsibility of the County to acquire necessary sewer easement within existing roads in the event one or more property owners do not provide the easement willingly.

4.0 Response to Written Comments

However, the above presupposes that at least 70% of the Twin Lakes residents favor such a project, that the Board of Supervisors will institute the necessary improvement district, including the Community Facilities District for the project, and that the project is approved to the extent that such a sewer project is still financially feasible.

Sipots 3 – Comment

There needs to be a freeway entrance for Canoga (at the rear of Mayan Dr. on 118 fwy.

Sipots 3 – Response

As stated in Section 4.12 of the Draft EIR, traffic impacts would not be significant with implementation of recommended mitigation measures. Thus, the measure suggested by the commenter regarding freeway access at Canoga Avenue is not required to mitigate the traffic impacts associated with the project. Please see Sections 3.3.5 and 4.2.6, and Appendix K of this document for additional discussion of traffic impacts and mitigation measures.

Sipots 4 – Comment

In light of the significant adverse impact this project would have on my neighborhood and the lack of meaningful measures to alleviate that impact, I request that you not approve the project as currently presented. Any further consideration of the project should be conditioned on:

- *a substantial reduction in the size and scope of the project;*
- *a more meaningful proposal for mitigation by the applicant; and*
- *postponement of a Commission recommendation in order to allow time for adequate public study and evaluation of the applicant's revised proposals.*

Sipots 4 – Response

Please see Section 4.5.5 (Belkin, L 3 – Response) of this document.

4.5.114 David Sparhawk

January 7, 2002

Sparhawk 1 - Comment

I am writing to express my objection to the proposed Deerlake Ranch development in Chatsworth (Project No. 99-239(5)) for which you have scheduled a January 23 hearing.

The proposed project is located close to my home, and I am particularly concerned about the following:

Traffic flow on Canoga Ave. and Chatsworth Street.

Sparhawk 1 - Response

As stated in Section 4.12 of the Draft EIR, traffic impacts would not be significant with implementation of recommended mitigation measures. Please see Sections 3.3.5 and 4.2.6, and Appendix K of this document for additional discussion of traffic impacts and mitigation measures.

Sparhawk 2 - Comment

Small lots that are not compatible to the 1/2 acre lots zoned RA like the balance of property west of DeSoto.

Sparhawk 2 - Response

See Section 4.2.7 (Development Issue 10 – Response) and Appendix I. of this document regarding land use density.

In addition, the project has been revised to reduce the total number of residential units from 484 to 388. This includes 155 minimum 15,000 square foot estate lots, of which 55 would be equestrian lots. Please see Section 2.0 of this document for further discussion of this issue.

4.0 Response to Written Comments

Sparhawk 3 - Comment

In light of the significant adverse impact this project would have on my neighborhood and the lack of meaningful measures to alleviate that impact, I request that you not approve the project as currently presented. Any further consideration of the project should be conditioned on:

- *a substantial reduction in the size and scope of the project;*
- *a more meaningful proposal for mitigation by the applicant; and*
- *postponement of a Commission recommendation in order to allow time for adequate public study and evaluation of the applicant's revised proposals.*

Sparhawk 3 - Response

Please see Section 4.5.5 (Belkin, L 3 – Response) of this document.

4.5.115 Jerome Spilky

January 7, 2002

Spilky 1 – Comment

I am writing to express my objection to the proposed Deerlake Ranch development in Chatsworth (Project No. 99-239(5)) for which you have scheduled a January 23 hearing.

The proposed project is located close to my home, and I am particularly concerned about the following:

Environmental issues

Spilky 1 – Response

As stated in the Draft EIR, impacts from the project would not be significant with implementation of recommended mitigation measures.

Spilky 2 – Comment

Traffic issues

Spilky 2 – Response

As stated in Section 4.12 of the Draft EIR, traffic impacts would not be significant with implementation of recommended mitigation measures. Please see Sections 3.3.5 and 4.2.6, and Appendix K of this document for additional discussion of traffic impacts and mitigation measures.

Spilky 3 – Comment

Noise ordinance

Spilky 3 – Response

As discussed in Section 4.7 of the Draft EIR, no significant noise impact would occur from the project with implementation of recommended mitigation measures. Please refer to Section 4.2.3 of this document for additional discussion of impacts and mitigation.

Spilky 4 – Comment

Conservancy issues

Spilky 4 – Response

It is unclear as to what the commenter is referring to. No response is required.

Stevenson J & S 1 - Comment

I am writing to express my objection to the proposed Deerlake Ranch development in Chatsworth (Project No. 99-239(5)) for which you have scheduled a January 23 hearing.

The proposed project is located close to my home, and I am particularly concerned about the following:

Traffic, traffic, traffic

Topanga Cyn. Bl. is blocked at the 118 on and off ramps every morning and evening. We cannot allow anymore building in this area.

Stevenson J & S 1 - Response

As stated in Section 4.12 of the Draft EIR, traffic impacts would not be significant with implementation of recommended mitigation measures. Please see Sections 3.3.5 and 4.2.6, and Appendix K of this document for additional discussion of traffic impacts and mitigation measures.

Stevenson J & S 2 - Comment

In light of the significant adverse impact this project would have on my neighborhood and the lack of meaningful measures to alleviate that impact, I request that you not approve the project as currently presented. Any further consideration of the project should be conditioned on:

- *a substantial reduction in the size and scope of the project;*

4.0 Response to Written Comments

- a more meaningful proposal for mitigation by the applicant; and
- postponement of a Commission recommendation in order to allow time for adequate public study and evaluation of the applicant's revised proposals.

Stevenson J & S 2 - Response

Please see Section 4.5.5 (Belkin, L 3 – Response) of this document.

4.5.117 Warren Stone

January 3, 2002/January 13, 2002

Stone 1 – Comment

Traffic Item relating to the street interface within the Deerlake Ranch Project and the existing community of Twin Lakes.

Topanga Canyon, Mayan Drive and Poema Place intersection

Section 4.12.4 Item 4.12-2

The Deerlake Ranch Project will create a West Mayan Drive and Topanga Blvd. Intersection a road 'A' and a new Mayan drive that will be the main entrance to Twin Lakes community. A lesser-used road, Mojave Trail, will also intersect with a road 'A' between the intersection of Road 'A' /Mayan Drive intersection and the intersection of Road 'A' /Topanga Canyon. This all will be within ¼ mile of the new intersection of Road 'A'. Topanga Canyon and Poema Place. This intersection has been a problem to both the Summerset and Twin Lakes communities during the AM/PM rush hours. Traffic will enter the 118 freeway at Topanga Canon Blvd. going both east and west from the north side of the 118 freeway. People from the new Deerlake Ranch project and Summerset and Twin Lakes. It is highly conceivable people will come north on Canoga Avenue, cutting through the new Deerlake Ranch project trying to bypass the already extremely congested northbound traffic on Topanga Canyon Blvd. And De Soto Blvd. This traffic will back up on road 'A' blocking Mayan drive access in the AM rush hours. The same process will happen in the PM rush hour going the other way. A dedicated turn lane from Twin Lakes has been proposed. I believe that this will not work as the experience with the Topanga Canyon, Mayan and Poema Place intersection has shown that when the road backs up smaller less traveled roads will never get access to the heavier traveled road.

Stone 1 – Response

As stated in Section 4.12 of the Draft EIR, impacts to traffic would not be significant with implementation of recommended mitigation measures. The project proposes to align Mojave Trail to intersect "A" Street east of Topanga Canyon Boulevard. The realigned Mojave Trail would provide vehicular access to four existing homes within the Twin Lakes community. Based on the relatively low volume of traffic generated by the homes on Mojave Trail, as well as the forecasted amount of traffic on "A" Street, residents along Mojave Trail are anticipated little or no delay in accessing "A" Street.

Based on the circuitous and discontinuous nature of the proposed "A" Street within the project, it is highly unlikely that this roadway will be used to facilitate regional traffic not associated with the project. Please see Sections 3.3.5 and 4.2.6, and Appendix K of this document for additional discussion of traffic impacts and mitigation measures.

Stone 2 – Comment

A three way stop sign at the intersection of road 'A' and new Mayan Drive will assure our access to road 'A'. While not affecting the road 'A' /Topanga Canyon intersection, this will also help with the much less used road of Mojave Trail, approximately 30 feet to the south of the new Mayan Drive/road 'A' intersection, as all cars will stop at the sign at Mayan Drive. Also, this will help control speed of traffic on road 'A'.

4.0 Response to Written Comments

Stone 2 – Response

Please see Stone 1 -- Response of this document.

Stone 3 – Comment

The Canoga Avenue /East Mayan Drive Intersection will be changed by the Deerlake Ranch Project. Deerlake Ranch project will create a new road 'B' that will be the Twin Lakes access to the Canoga Ave. through the intersection of Canoga Ave. and the Mayan Drive. Traffic will not be as heavy as the intersection with Topanga Blvd., but I believe that a three way stop sign will help Twin Lakes residents gain access to then new section of road 'B.' Also, I contend this will help with the speed of traffic on road 'B'.

Stone 3 – Response

Please see Stone 1 -- Response of this document. Project mitigation includes the installation of three-way stop signs at the intersection of "B" Street and Mayan Drive, if approved by the County's Traffic and Lighting Division.

Stone 4 – Comment

Deerlake Ranch project plans to take all the rain and project run-off water from the streets and put it through a set of sand and rock filters. then dump it directly in to Devil canyon. I believe that this run off will pollute the canyon, killing whatever natural habitat and wild life is there.

I believe that the run-off should be directed through a channel or pipe to the entrance of the Browns Canyon wash, bypassing the natural creek bed.

Stone 4 – Response

As stated in Section 4.6 of the Draft EIR, impacts with regard to urban runoff would not be significant with implementation of mitigation measures. See Section 4.2.2 (Urban Runoff 1 – Response) and Appendix I of this document for additional discussion of this issue.

Stone 5 – Comment

Deerlake Ranch project claims that peak storm runoff from all areas tributary to Devil Canyon will be decreased by the four new debris basins and the removal of 4590 cubic yards of debris.

With the construction of 51.16 acres (22.19% of the project) in streets, building footprint (driveways, patios, etc.), Heli-spot and parks. Peak Storm runoff will increase not be reduced as claimed [sic] by this section of the EIR. The amount of runoff will uproot vegetation in the creek bed and will at times block the water flow port in the dam on Devil Canyon. This has happened several times in the past causing the water to pour over the top of the dam, which is a safety hazard.

The resolution of this problem is to channel or pipe the runoff directly to the entrance of the Browns canyon wash, bypassing the natural creek bed.

Stone 5 – Response

As stated in Section 4.6 of the Draft EIR, impacts with regard to urban runoff would not be significant with implementation of mitigation measures. See Section 4.2.2 (Urban Runoff 1 – Response) and Appendix I of this document for additional discussion of this issue.

Stone 6 – Comment

Captain James N. Glazer, in his letter, states the problem of distance and traffic with getting police emergency protection to The Deerlake Ranch Project, as well as, Twin Lakes and surrounding communities. His mitigation suggestions were to increase staffing and a crime prevention plan.

I believe that a Sheriff storefront station in the area would give this county area the protection that is needed. A 12' by 15' room in a building would provide a place for personal [sic] to have a desk, computer, phone, and bathroom. This would provide us with 24-hour protection with only a few minutes' response times when needed.

4.0 Response to Written Comments

It has been suggested placing for the storefront station would be on the parkland near Canoga Ave and 118 freeway under pass. This could be shared with a Park Ranger and Fire Department (for an office, not a station with fire fighting equipment). The region would generating [sic] millions in tax dollars and we need the protection that other communities are getting.

Stone 6 – Response

See Section 4.2.5 (Police Services 1 and 5 – Responses) and Appendix E of this document for additional discussion regarding this issue.

Stone 7 – Comment

The monies collected for County Schools under Section 65995 of the California Code, for school improvement and the County Library fee ordinance will not be used for the City Schools and the City Library that all the residents of this area use. It would seem to me at least the Public Schools and Public Library get some this money t [sic] help with the addition of 1428 residents and 494 students to be added. Schools are a major problem in this area and with some of this money given to City Schools and City Libraries mitigation's measure could be taken. There is no plan to add county schools or a county public library to this area of the county. I do not even know where the nearest county school is and the county public library is 17 miles away in Lost Hills.

Stone 7 – Response

As stated in Section 4.10 of the Draft EIR, impacts to schools would not be significant with implementation of recommended mitigation measures. Please see Sections 3.3.4, 4.3.7 and 4.5.28, and Appendix J of this document for additional discussion of this issue.

4.5.118 Teena A. Takata

April 3, 2002 (c-mail)/April 9, 2002

Takata 1 – Comment

The citation I was searching for is in Volume 1 of the Deerlake Draft EIR, on page 4.11-2, in the first paragraph under 4.11.3 "CUMULATIVE IMPACTS". (Referring to Section 3.0, the Summary and Map of Related Projects). "Of the 11 related projects, three proposed projects (nos. 8, 10 and 11) are located within the project area. Combined with the proposed project total population of 1,428 residents, a cumulative generation of 2,086 residents would be added to the area."

I had started searching for something like this, because the growth projections in traffic seemed way too low given Porter Ranch is just to the east of this project. Please also note that per a tiny footnote on the Related Projects table at 3.0, Porter Ranch is shown at a 50% buildout only, but it still generates 56,476 daily trips. At complete build-out, there will be 3400 homes here that have been totally excluded in the future projections on the traffic, which approximate 10,000 residents. Neighbors estimate Porter Ranch in 1/3 built now, but that building has occurred on the east side, now the west side is starting to be built. Figure 3.1 is also very misleading, because it shows Porter Ranch at Tampa Avenue. Porter Ranch runs from DeSoto to beyond Tampa. The area near DeSoto is just starting to be developed now. Maybe you could look at Porter Ranch a bit on the Saturday field tour? I will snail-mail you a package with these documents in one place to make it easier to understand. But, please, do not ignore Porter Ranch!

Takata 1 – Response

As stated in Section 4.12 of the Draft EIR, traffic impacts would not be significant with implementation of recommended mitigation measures. Please see Sections 3.3.5 and 4.2.6, and Appendix K of this document for additional discussion of traffic impacts and mitigation measures.

Takata 2 – Comment

I regret I cannot attend the April 10, 2002 meeting.

4.0 Response to Written Comments

Many, many issues have been raised. At a meeting with the County Supervisor's personnel, developer and some community members on April 1, 2002, we did find out the following items that continued to concern us greatly.

- 1. The developer apparently attempted to resolve the urban runoff issue by diverting the entire flow of the watershed of the Devil Canyon area (including flows from a huge area north, west and northeast of the project site into Brown's Canyon. Reportedly, this request was turned down. What would be left of the riparian beauty of Devil Canyon without the water flow to this blue-line stream? How many trees, and other plants and animals in the special watershed represented by Devil Canyon would die due to the change in their waterflow?*

Takata 2 – Response

As stated in Section 4.6 of the Draft EIR, impacts with regard to urban runoff would not be significant with implementation of mitigation measures. See Section 4.2.2 (Urban Runoff 1 – Response) and Appendix I of this document for additional discussion of this issue.

Takata 3 – Comment

- 2. The developer attempted to explain away certain problems with trail access at La Vina in Altadena by explaining that completion bonds ensure the development process is completed for publicly dedicated areas such as streets and equestrian trails. Upon focused questioning from audience members, they acknowledged that the completion bond would not cover off-site issues, such as public dedications for trails from adjacent landowners. Although La Vina reportedly had this problem, the identical issue exists for the equestrian trail at Deerlake. They did mention that strict and specific conditions could help that problem.*

Takata 3 – Response

The comment is not CEQA related. No response is required.

Takata 4 – Comment

- 1. Policing issues are unresolved. A resident stated at the April 1 meeting that City Police would not respond to a person shooting a gun for target practice until the Sheriff from the County was on site. Another resident confirmed a similar response to a different call.*

Takata 4 – Response

As stated in Section 4.9 of the Draft EIR, no significant impacts would occur to police protection services with implementation of the project. See Section 4.2.5 (Police Services 1 and 5 – Responses) and Appendix E of this document for additional discussion regarding this issue.

Takata 5 – Comment

- 1. Major issues with traffic remain unresolved.*

Takata 5 – Response

See Takata 1 – Response of this document.

Takata 6 – Comment

- 1. No revisions to the previously-proposed conditions have been circulated since the last meeting.*

Takata 6 – Response

Please see Appendix E of this document.

Takata 7 – Comment

I request that a revised draft EIR be issued and circulated, when the ACTUAL project is better understood.

4.0 Response to Written Comments

Alternatively, if the project is to be approved IN ANY FORM, please, provide the community an opportunity to read, review and comment on possible omissions in that approval before it becomes finalized and the project starts creeping up the appeal ladder.

For example, Porter Ranch, immediately to the east will generate 120,000 vehicle trips a day when completely built per this draft EIR, but is not included in related projects and future traffic growth projections. Or, that urban storm runoff is going into a pristine canyon, or that all traffic studies occur within two weeks of Christmas. The trail access needed on nearby parcels is not resolved, or addressed in a way that requires complete resolution before grading. The policing issue is a huge problem with [sic] when many additional residents come into the area.

Patti Friedman of Supervisor Antanovich's office has been very helpful, and has advised us the County will not approve this project without providing the public time (such as 30 to 45 days, such as CEQA document review periods) to review project changes. She advised the Supervisor's office would be confirming this public review period at the hearing.

We want the opportunity to see the County's, and the developer's, responses to the many, many comments that were made on the draft EIR, and we look forward to seeing meaningful responses that address the specific issues that were raised.

We asked the developer several times to post the draft EIR on the internet in accordance with the current CEQA recommendations. We note the City of Glendale has posted EIR's for controversial projects of similar size <http://www.ci.glendale.ca.us/oakmont/index.html>, as has Ventura County posted the majority of the supplemental EIR for Ahmanson Ranch http://www.ventura.org/vcrma/planning/Ahmanson_eir/ahmanson_eir.htm. Please consider doing this for the many concerned residents in the area, and especially post changes in the existing project, and the comment letters and the responses to those comments for our consideration and possible further comment if misleading or incomplete items recur.

Takata 7 – Response

Please see Section 1.1 of this document regarding the comment period for the Draft EIR.

The environmental documents for the project have been posted on the project website, www.deerlakeranch.com.

4.5.119 Donna and Manuel Talamantez

March 28, 2002

Talamantez 1 – Comment

We are writing to express our objection to the proposed Deerlake Ranch development in Chatsworth (Project No. 99-239(5)) for which you have continued the public hearing to April 10th.

We are extremely concerned about the use of Canoga Ave. as the entrance to the proposed project. Canoga Ave. is a [sic] very much a neighborhood street which is already over congested due to the two private schools feed [sic] by the Canoga and Rinaldi intersection and we also have a speeding situation from the 118 Freeway to Rinaldi with a steep hill that compounds the problem. There are also major traffic congestions on Chatsworth Street between Desoto and Topanga. This area cannot handle additional traffic to accommodate new homes or construction crews.

Talamantez 1 – Response

As stated in Section 4.12 of the Draft EIR, traffic impacts would not be significant with implementation of recommended mitigation measures. Please see Sections 3.3.5 and 4.2.6, and Appendix K of this document for additional discussion of traffic impacts and mitigation measures.

4.0 Response to Written Comments

Talamantez 2 –Comment

We also agree with all the issues that have been raised by the Chatsworth Equine Cultural Heritage Organization (ECHO). This project does not mesh with the existing rural nature of Chatsworth. We are concerned about the safety of the horse crossing at Canoga & Rinaldi, endangering a sensitive ecological area, the safety issue of our already overburdened LA City infrastructure supporting an LA County area. While we are opposed on many levels to this project, we agree with ECHO's suggestion that the properties be kept to ½ acre minimum horse keeping properties.

Talamantez 2 –Response

Please see Section 4.4.1 of this document.

Talamantez 3 –Comment

This project would negate all the reasons we enjoy living in Chatsworth. We love the ½ acre properties that afford us the peaceful rural atmosphere. We enjoy the beauty of the hillsides and sounds of wildlife. And while we do not own horses we are very supportive of ECHO's cause to keep an area of Chatsworth free of further suburban encroachment and retain an area with rural, agricultural features in order to preserve the city's heritage.

Talamantez 3 –Response

The comment is noted and forwarded to the decision makers.

Talamantez 4 –Comment

To reiterate our gravest concern, it would be a great detriment to our community to use Canoga Ave as the access to this area with its [sic] narrow width, existing traffic concerns, steep grade, and the horse trail that runs the length of the Avenue. De Soto and Topanga are established commuter two lane boulevards designed to handle higher volumes of traffic with far fewer homeowners affected [sic]. While we would prefer to keep the Deerlake property open land in order to preserve on the few areas left that allow horseback riding and hiking in a natural setting, any development plans must be greatly altered and reduced from the existing proposal.

Talamantez 4 –Response

The project has been revised to reduce the total number of residential units from 484 to 388. This includes 155 minimum 15,000 square foot estate lots, of which 55 would be equestrian lots. Please see Section 2.0 of this document for further discussion of this issue.

4.5.120 Lori Terpenny

January 1, 2002

Terpenny 1 - Comment

"No rendition of Metallica drowns out the constant clamoring of steel against rock. The rumble of the earth cries out every day. The continuous pounding of heavy equipment upon their pathways drives them to madness as they achingly succumb to the ever-present clamor. No silence is deep enough to drown out the outcry of this people forced to endure the insanity.

The dust-laden air proves too thick to be outdoors. By nightfall, the remains of the agitated air begin to settle upon every living and non-living being unfortunate enough to make its home in a once breathable atmosphere. Inch upon inch of dirt, dust, and debris cumulatively gather upon their outdoor surroundings. Being outside only proves perilous as the very thing that sustains life slowly poisons their lungs with toxins, spores, and airborne viruses.

Trying to escape is a fruitless endeavor as what they once called their kingdom has now befallen an unthinkable evil. It is where they lived and thrived in harmony with the earth and all God's creatures great and small. It is the kingdom they call home. It is the place where they chose to embrace life

4.0 Response to Written Comments

and to teach their children of all its mysteries and wonders. It is a place they love despite the horror. With their means of travel blocked in all directions, they are imprisoned within the tortuous downfall of their precious land."

Terpenny 1 – Response

This comment is out of the scope of analysis of the EIR. No response is required.

Terpenny 2 - Comment

This is not a storybook city or a legend of old. This is Twin Lakes as it will be when Presidio begins to break ground for its proposed project that will have, "no significant impact," on anything or anyone in its path. This company needs to rethink its impact, not only for Twin Lakes, but the entire community of Chatsworth.

Terpenny 2 – Response

As stated in the Draft EIR, impacts from the project would not be significant with implementation of recommended mitigation measures.

Terpenny 3 - Comment

We will all be forced to deal with dirt and dust as they bulldoze and dynamite the solid rock mountains.

Terpenny 3 – Response

As discussed in Section 4.2 of the Draft EIR, no significant dust impact would occur from the project with implementation of recommended mitigation measures. Please refer to Section 4.2.3 of this document for additional discussion of impacts and mitigation.

Traditional grading techniques would be used during construction of the project. However, other methods may be required. All construction activities would be conducted according to the requirements of the County of Los Angeles.

Terpenny 4 - Comment

the traffic along our tiny roads as well as the surrounding community.

Terpenny 4 – Response

As stated in Section 4.12 of the Draft EIR, traffic impacts would not be significant with implementation of recommended mitigation measures. Please see Sections 3.3.5 and 4.2.6, and Appendix K of this document for additional discussion of traffic impacts and mitigation measures.

Terpenny 5 - Comment

the safety and security of our homes and those of our neighbors below during construction.

Terpenny 5 – Response

Impacts associated with construction activities would not be significant with implementation of recommended mitigation measures.

Terpenny 6 - Comment

and most of all the raping and pillaging of the land and creek bed they propose to dump "clean" sewage into from 485 new homes. Isn't this an oxymoron? Is there anything such as "clean" sewage?

Terpenny 6 – Response

As stated in Section 4.6 of the Draft EIR, impacts with regard to urban runoff would not be significant with implementation of mitigation measures. See Section 4.2.2 (Urban Runoff 1 – Response) and Appendix I of this document for additional discussion of this issue.

4.0 Response to Written Comments

Terpenny 7 - Comment

I shudder to think that an entire ecosystem that has existed here for hundreds of years will be destroyed due to this enormous project. The wind patterns will change. The creek will suffer. The people here will experience their own piece of hell as they watch the mountains become leveled, they deal with the noise, traffic, air quality, and the safety of their families throughout this long, and laborious ordeal. Please look into studying the impact of this project responsibly. The lives of so many hang in the balance. It is a well-known fact that our city is growing and that people have a right to have a place to live, and that change is the one thing in life that we can be sure of; however, the magnitude and density of this project needs to be considered as too large for this area. Thank you for your careful consideration in this matter.

Terpenny 7 – Response

As stated in the Draft EIR, impacts from the project would not be significant with implementation of recommended mitigation measures.

The project has been revised to reduce the total number of residential units from 484 to 388. This includes 155 minimum 15,000 square foot estate lots, of which 55 would be equestrian lots. Please see Section 2.0 of this document for further discussion of this issue. See also Section 4.2.7 (Development Issue 10 – Response) and Appendix L of this document regarding land use density.

Terpenny 8 - Comment

In the EIR draft submitted to the public, the figures in Table 4.10.1 do not take into consideration the number of physical, hot bodies currently enrolled in the local schools based on norm day for the 2001-2002 school year. The report states that existing spaces are available for the proposed student enrollment created by this project when the true facts are that the elementary school population at this time is already at full capacity. The EIR based its findings on resident enrollment, negligently dismissing the fact that the figures did not include bussed in children, children with parent work-related permits, special education populations on the rise, and further assumed that resident children would take priority in the local schools. This would not be the case. Historically, children currently enrolled in these schools are never asked to leave as a practice to make room for new resident area children. These children who are bussed in, are at the Chatsworth area schools because their local schools are already overcrowded. Denying them return enrollment to our schools is illegal as every child is entitled to a free and public education. Once they are in, they are not asked to leave. This would deny them an education because the schools in their neighborhoods cannot accommodate them.

Terpenny 8 – Response

As stated in Section 4.10 of the Draft EIR, impacts to schools would not be significant with implementation of recommended mitigation measures. Please see Sections 3.3.4, 4.3.7 and 4.5.28, and Appendix J of this document for additional discussion of this issue.

Terpenny 9 - Comment

Along with the other projects to be built in the Northwest corner of Chatsworth, it does not take an engineer to figure out that the schools will be greatly impacted by the number of new residents. And we do need to consider all the projects that will be built in this area because every builder will assume their own project of apartments and homes will have little impact on local schools. The Presidio Project is entirely too dense a project for the area. It needs to be reduced to at least half its [sic] proposed size. The quality of education for our future generation is at stake here. We cannot be so irresponsible to our children and allow overcrowding of classrooms at this magnitude.

Terpenny 9 – Response

See Terpenny 8 – Response of this document regarding school impacts.

4.0 Response to Written Comments

See also Section 4.2.2 (Development Issue 10 – Response) and Appendix L of this document regarding land use density.

Terpenny 10 - Comment

This EIR has submitted to the public false figures on the number of students currently enrolled in local schools. These figures can be obtained by simply calling the local schools. Presidio was not accurate or honest about these numbers. This troubles me because I now need to question their entire EIR. Are any issues studied and taken into consideration accurate? Do they deserve to be dismissed with the simplistic phrase of: "the proposed project would not result in a significant impact", to any and all of the issues studied? This EIR needs to be redone by people who have the facts correct and are not afraid to speak the truth. Are there any of those people left today? God, I hope so, for all our sakes.

Terpenny 10 – Response

See Terpenny 8 – Response of this document regarding school impacts.

Please see Section 4.4.2 (CLPA 2 – Response) of this document regarding the adequacy of the EIR.

4.5.121 Marla Terrell

January 7, 2002

Terrell 1 – Comment

I am writing to express my objection to the proposed Deerlake Ranch development in Chatsworth (Project No. 99-239(5)) for which you have scheduled a January 23 hearing.

The proposed project is located close to my home, and I am particularly concerned about the following:

If you would monitor the existing traffic on Chatsworth Street between Variel Ave and DeSoto, during peak drive-time... 7:45am to 8:30 am and 2:30 pm to 5 pm, Monday thru Friday, you would see that the 2 private schools cause havoc [sic] in this area already. It can [sic] 15 to 20 minutes to go 2 blocks during those times. Increased traffic will completely stop any current resident of this neighborhood from being able to live and enjoy our area. If the city hadn't closed off Rinaldi St. access from De Soto, the private schools traffic could have used that street, since it is a direct route to both schools and thus opened up Chatsworth St. for the existing residents to use without the terrible traffic jams.

Terrell 1 – Response

As stated in Section 4.12 of the Draft EIR, traffic impacts would not be significant with implementation of recommended mitigation measures. Please see Sections 3.3.5 and 4.2.6, and Appendix K of this document for additional discussion of traffic impacts and mitigation measures.

Terrell 2 – Comment

In light of the significant adverse impact this project would have on my neighborhood and the lack of meaningful measures to alleviate that impact, I request that you not approve the project as currently presented. Any further consideration of the project should be conditioned on:

- *a substantial reduction in the size and scope of the project;*
- *a more meaningful proposal for mitigation by the applicant; and*
- *postponement of a Commission recommendation in order to allow time for adequate public study and evaluation of the applicant's revised proposals.*

Terrell 2 – Response

Please see Section 4.5.5 (Belkin, L 3 – Response) of this document.

4.5.122 Andrew Thomas

March 27, 2002

Thomas 1 –Comment

I am writing to express my objection to the proposed Deerlake Ranch development in Chatsworth (Project No. 99-239(5)) for which you have continued the public hearing to April 10, 2002.

The proposed project is located close to my home, near the corner of Celtic and Canoga. I am particularly concerned about the following:

1. Safety: Cars traveling down Canoga will turn left at Celtic to bypass any traffic control at the intersection of Canoga and Rinaldi. At present, Celtic is a quiet street where children play with little fear of cars. Introducing harried commuters is a recipe for disaster. The nearby opening of Mason to the Porter Ranch Development has resulted in Mason becoming a freeway of speeding commuters who have no attachment to the neighborhood. Unlike Mason, which is a wide four-lane street with no houses fronting it, Celtic is a small two-way street with houses facing it; there is not even a line on Celtic dividing the lanes of travel.

Thomas 1 –Response

As stated in Section 4.12 of the Draft EIR, traffic impacts would not be significant with implementation of recommended mitigation measures. Please see Sections 3.3.5 and 4.2.6, and Appendix K of this document for additional discussion of traffic impacts and mitigation measures.

Thomas 2 –Comment

2. Infrastructure Costs: The proposed development is situated in L.A. County, just outside the boundary of the City of Los Angeles – where my home is located. The 480 houses will undoubtedly use City of LA sewers that City residents pay for. The 480 houses will use City of LA services, such as local schools, libraries and parks, which are already congested. It seems unfair (and possibly actionable) that the County can foist massive costs on City taxpayers by approving a development located outside the City.

Thomas 2 –Response

See Section 4.3.5 (City Council 3 – Response) of this document.

Thomas 3 –Comment

3. Horse Trails/Neighborhood Character: Chatsworth is home to numerous horse trails, and the character of the community has a rural feel that is inextricably linked to horses. How many towns in LA County still have a livery store? The proposed houses will destroy open hill country where people ride. The impact of potentially thousands of cars on Canoga -- which has horse trails on both sides -- creates a real risk of eliminating or reducing one of the main land uses that for decades has defined Chatsworth.

Thomas 3 –Response

See Section 4.4.1 (C ECHO 3 & 4 - Responses) of this document.

Thomas 4 –Comment

4. Aesthetics/Ridgeline/Density: Is the ridgeline on the hills going to be graded into flat house pads? Development has turned the once scenic hills of Porter Ranch into an eyesore. The proposed density – 480 houses -- is inconsistent with the neighborhood between Canoga and Variel north of Chatsworth. Most of the houses sit on large lots, with stables, tennis courts and lots of land.

Thomas 4 –Response

The project has been revised to reduce the total number of residential units from 484 to 388. This includes 155 minimum 15,000 square foot estate lots, of which 55 would be equestrian lots. Please see Section 2.0 of this document for further discussion of this issue.

4.0 Response to Written Comments

See Section 4.2.7 (Development Issue 10 – Response) and Appendix L of this document regarding land use density.

Thomas 5 –Comment

5. *Zero Point Pollution: Any development, even one with environmental mitigation measures, adds to zero point pollution.*

Thomas 5 –Response

The comment is noted. No additional response is required.

Thomas 6 –Comment

6. *Fire: Let us not forget that the developer acquired the vacant land from the Santa Monica Mountain Conservancy, which got it from the County, which acquired it after a massive fire in the early 1900's destroyed the houses in the are. Anyone who has lived in the area can remember other major fires that the wind drives through the hills. The winds in the area are fierce and the area is already a fire hazard most of the year. Allowing houses in such an area will only increase the risk of fire and make it that much harder for residents to evacuate if there is another fire – how many thousands of people can Canoga handle in an emergency?*

Thomas 6 –Response

As stated in Section 4.8 of the Draft EIR, no significant impacts would occur to fire protection services with implementation of the project. See Section 4.2.4 (Fire 1 and 4 – Responses) and Appendix E of this document for additional discussion regarding this issue.

Thomas 7 –Comment

7. *Noise Dust and Traffic During Grading Operations: All vehicles have only one way to get to and from the site: Canoga Avenue. The proposed development will cause years of noise and dust – and you may remember the dust related health problems that followed the 1994 earthquake when dust rose from the very same hills. The dust from mass grading, even with water control during work hours, will rise when the frequent 20 to 50 mph winds blow at night or on weekends. The dust will settle on the houses downwind, causing health risks, not to mention dust in swimming pools, patios, barbecues and on windows. You simply cannot avoid this when you scrape off vegetation on a hill near the source of the Santa Ana winds.*

Thomas 7 –Response

As discussed in Sections 4.2 and 4.7 of the Draft EIR, no significant noise or dust impact would occur from the project with implementation of recommended mitigation measures. Please refer to Section 4.2.3 of this document for additional discussion of impacts and mitigation.

Thomas 8 –Comment

8. *Wildlife: The hills where the proposed development is located are home to mountain lions, coyotes, possums, birds, snakes and many other animals. The development will not only destroy valuable habitat, it will push at least some of the animals downhill where they will be a threat to small children and pets. It was just months ago that a mountain lion attacked a small child in the new Porter Ranch development.*

Thomas 8 –Response

Section 4.3 of the Draft EIR included a discussion of impacts upon sensitive species, nesting birds and raptors, and wildlife movement. Impacts to biological resources would not be significant with implementation of recommended mitigation measures. Please see also Section 4.2.1 of this document for additional discussion of this issue.

See Section 4.4.2 (CLPA 11 – Response) of this document regarding animal control.

4.0 Response to Written Comments

Thomas 9 –Comment

9. *Violation of General Plan: The General Plan for the City of Los Angeles has a conservation element that requires the city to "retain, to the extent feasible, the last remaining agricultural features of the city as part of the city's heritage and economy." Since this project falls within the "sphere of influence" of the city, its small lot concept does not mesh with either the city's General Plan or Chatsworth's rural nature. Most of the homes in the city immediately south of this project exceed 1/2 acre.*

Thomas 9 –Response

See Section 4.4.1 (C ECHO 1 – Response) of this document.

Thomas 10 –Comment

10. *Failure to Comply With County's Biological Resources Assessment: This project was excluded from a Biological Resources Assessment prepared for the County Regional Planning Department in November 2000. That study indicates this is a Sensitive Ecological Area (SEA) and recommends housing density not exceed one dwelling unit per 10-acre parcel.*

Thomas 10 –Response

This comment appears to reference the updated 2000 Significant Ecological Area report to the County. See Section 4.4.1 (C ECHO 2 – Response) of this document.

Thomas 11 –Comment

11. *Generalized Promises of Non-Specific Equestrian Preservation: The developer has promised it will create a Community of Facilities District (CFD) to provide funds to build new equestrian trails, but the proposal is too non-specific.*

Thomas 11 –Response

See Section 4.4.1 (C ECHO 3 – Response) of this document.

Thomas 12 –Comment

12. *No Plan for Horse Trails During Construction: The developer has promised to keep all equestrian trails open during the five-year construction period, but has not provided a detailed plan of how and when this will be accomplished.*

Thomas 12 –Response

See Section 4.4.1 (C ECHO 4 – Response) of this document.

Thomas 13 –Comment

13. *Time Needed to Develop Traffic Plan: The City of Los Angeles has not properly addressed traffic and equestrian concerns on Canoga Avenue south of the project. We need time to meet with the city to keep horses and riders safe.*

Thomas 13 –Response

See Section 4.4.1 (C ECHO 4 – Response) of this document.

Thomas 14 –Comment

14. *Why Perpetuate the Strip-Mallization [sic] of the Last Rural Community? As a law student, I had the privilege of studying comparative American and British Land Use Law at Oxford University. In the UK, land use law balances growth with what the British call "amenities," which can be anything from trees to a scenic vista. This concept is to build in away [sic] that keeps England looking like England. The concept is a socio-legal and political recognition that prohibiting certain types of growth or uses is as much of a land use planner's job as permitting development. The last century of urban spread and destruction of hillsides in LA County may have made sense back when there was abundant land for both rural and urban uses, but it is now a senseless perpetuation of why land use planners around the country regularly use the subdivisions and strip malls of Southern*

4.0 Response to Written Comments

California as a model of what modern land use planning should not look like. Here, the highest and best use of the land is not another sardine can of ugly, small lot tract houses in the middle of a chaparral biome, it is somewhere between preservation and a large-lot subdivision that blends-in and compliments existing uses in the area.

Thomas 14 –Response

The comment has been received and noted.

Thomas 15 –Comment

15. All Politics is [sic] Local – And Developers Don't Vote. We all know there is oil off the coast of Malibu, yet we have not allowed oil companies to sink offshore drilling rigs there. By the same token, we should not permit a developer from San Francisco to come to LA and destroy what little is left of a rural community in LA County. It is inconceivable to me that this project would fly in the City or in Marin, so why are we even considering it here? This is particularly true if the current developer merely plans to grade lot pads and sell the pads to other merchant builders, who are not part of the current approval process and may not keep promises made by the current developer. While your body does not consist of elected officials, those on the distribution list should bear in mind that multiple groups in Chatsworth, from horse owners to the residents in the Heritage area, are crystallizing into a cohesive block of single-issue voters over this development.

Thomas 15 –Response

The comment has been received and noted.

Thomas 16 –Comment

16. In light of the significant adverse impact this project would have on my neighborhood and the lack of meaningful measures to alleviate that impact, I request that you not approve the project. Any further consideration should be conditioned on:

- *A substantial reduction in the number of homes in the project with a large (1 to 3 acre) minimum lot size and zoning for horses;*
- *A more specific proposal for mitigation by the developer with a line item cost breakdown;*
- *Opportunity for public study of and comment on the developer's revised proposals;*
- *An independent study of environmental impact;*
- *All utilities buried underground;*
- *Special assessments on each house to cover usage of city sewers and other facilities;*
- *Requiring the developer to post completion and other surety bonds for all backbone infrastructure;*
- *Make the developer deposit cash collateral or a letter of credit to guaranty that any horse trails or other promised mitigation measures will be installed, regardless of the developer's future financial condition.*
- *Make the developer pay for a road connecting the development to Desoto (where the freeway is) instead of using the existing residential neighborhood as a route to the freeway;*
- *Require the developer to prepare a proposed greenspace plan that contains measures for integrating the development into the existing character of the hills and surrounding community;*
- *Require the developer to conduct seismic and engineering studies to determine if the supports for the 118 Freeway where it passes over Canoga are in jeopardy of collapse in a major earthquake. The road now turns to dirt under the freeway and is used by only a few cars and people on horses. If it is going to become a major artery for cars and pedestrians, those of us that live there need to know it is safe.*

4.0 Response to Written Comments

- *Require the developer to attend mediation with affected citizen groups that have and are forming to challenge the development. Without this, it is very likely that litigation will be filed to address myriad problems, such as the nuisance conditions that will result from mass-grading and other operations.*

Thomas 16 – Response

Please see Section 4.5.5 (Belkin 3 – Response), Appendices E and O of this document.

As stated in Section 2.4.6 of the Draft EIR and this document, all existing overhead facilities would be replaced with an underground system as part of the project.

Construction of public infrastructure systems, including trails, will be guaranteed by posting of surety bonds.

See Appendix N of this document regarding alternate access to De Soto Avenue.

As stated in Section 4.3 of the Draft EIR, the project has been designed to avoid major riparian areas.

The SR-118 Canoga Avenue overpass was constructed by Caltrans per state seismic standards and requirements.

See Appendix O of this document regarding the applicant's involvement with community representatives.

4.5.123 Rebecca Thompson

January 7, 2002

Thompson 1 – Comment

I am writing to express my objection to the proposed Deerlake Ranch development in Chatsworth (Project No. 99-239(5)) for which you have scheduled a January 23 hearing.

The proposed project is located close to my home, and I am particularly concerned about the following:

How it will impact our already diminishing environment.

Thompson 1 – Response

As discussed in the Draft EIR, the project would not result in significant impacts with implementation of recommended mitigation measures.

Thompson 2 – Comment

How it will further congest traffic in our neighborhood.

Thompson 2 – Response

As stated in Section 4.12 of the Draft EIR, traffic impacts would not be significant with implementation of recommended mitigation measures. Please see Sections 3.3.5 and 4.2.6, and Appendix K of this document for additional discussion of traffic impacts and mitigation measures.

Thompson 3 – Comment

In light of the significant adverse impact this project would have on my neighborhood and the lack of meaningful measures to alleviate that impact, I request that you not approve the project as currently presented. Any further consideration of the project should be conditioned on:

- *a substantial reduction in the size and scope of the project;*
- *a more meaningful proposal for mitigation by the applicant; and*
- *postponement of a Commission recommendation in order to allow time for adequate public study and evaluation of the applicant's revised proposals.*

Thompson 3 – Response

Please see Section 4.5.5 (Belkin, L 3 – Response) of this document.

4.0 Response to Written Comments

4.5.124 Cindy Todd

January 9, 2002/ January 10, 2002

Todd 1 – Comment

I am very concerned with the building of the Deer Lake Ranch Project and the impact this will have on the already overloaded streets in Chatsworth.

I do not think the EIR sufficiently addressed the impact 484 homes will have on all the streets, not just the main boulevards of Topanga and Desoto.

Todd 1 – Response

As stated in Section 4.12 of the Draft EIR, traffic impacts would not be significant with implementation of recommended mitigation measures. Please see Sections 3.3.5 and 4.2.6, and Appendix K of this document for additional discussion of traffic impacts and mitigation measures.

Todd 2 – Comment

I am rather upset that Presidio conducted a traffic study without having schools in session. This is not the first project that Presidio has done. Not to include the school traffic in their data was intentionally misleading- they know better.

Todd 2 – Response

See Section 4.2.6 (Traffic 1 and 2 – Responses) and Appendix K of this document for a discussion of the project trip generation and traffic distribution forecasts provided in the Draft EIR.

Todd 3 – Comment

Appropriate traffic studies need to be done not only on the Topanga and Desoto Boulevards, but also on Canoga Avenue, Owensmouth Avenue, and Variel Street. These studies need to be conducted while school is in session, and at peak drive times.

Todd 3 – Response

See Todd 1 and 2 – Responses of this document. As shown on Table 4.12.5 of the Draft EIR, the intersections of Canoga Avenue/Rinaldi Street and Canoga Avenue/Chatsworth Street would operate at acceptable levels (LOS A) during the A.M. and P.M. peak hours with occupancy of the project. Based on the LOS provided at the Canoga Avenue intersections, it is not anticipated that project-related trips would divert to local streets such as Variel Avenue or Independence Avenue. Also see Section 4.2.6 (Traffic 1 and 2 – Responses) and Appendix K of this document for additional discussion of project traffic distribution to the local street system.

Todd 4 – Comment

I am very concerned about the Deer Lake Ranch Project to divert all run-off water through storm drains into Devils Canyon. Currently there are 7 homes that have run-off into the canyon, and at this time only 4 homes are occupied. The developer is purposing to add 484 additional homes, the pollutants that go along with all that, and think this will not have a significant, major impact on the canyon?! Please take a good look at the Porter Ranch project and see what devastation that kind of thing did to Limekiln Canyon. Due to the water runoff from the streets of the Porter Ranch project, a city park and an equestrian trail are now closed down, most likely forever.

The run-off from the new project should be diverted through storm drains hook up to the Brown's Canyon wash. Currently there are storm drains that take run off from lower Twin Lakes into the Browns Canyon wash. Why cannot this new development do the same.

Please, I am asking the County to review the Limekiln [sic] Canyon catastrophe caused by the Porter Ranch project and review the EIR with regards to this.

4.0 Response to Written Comments

Todd 4 – Response

As stated in Section 4.6 of the Draft EIR, impacts with regard to urban runoff would not be significant with implementation of mitigation measures. See Section 4.2.2 (Urban Runoff 1 – Response) and Appendix I of this document for additional discussion of this issue.

Todd 5 – Comment

I am very concerned about the Deer Lake Ranch Project. I have attended several meetings and have repeatedly heard the current developer Presidio promise our equestrian community that trails and bridle paths will be open and safe during the entire construction period. I have also viewed projected maps of the finished track, and it has a trail/bridle path around it for equestrian access.

Because this developer has let us know that they intend to sell the project once the Tentative Map is approved, I would like to make sure this is also a condition of the final finished Map: that the equestrian access and bridle path, during and after the project is finished, stay with the Final Map plan no matter who is the owner.

How can we make sure this happens? Is this something that should be specifically addressed in the EIR?

Todd 5 – Response

See Appendix D of this document regarding implementation of mitigation measures.

4.5.125 Arthur Toga

January 7, 2002

Toga A 1 – Comment

I am writing to express my objection to the proposed Deerlake Ranch development in Chatsworth (Project No. 99-239(5)) for which you have scheduled a January 23 hearing.

The proposed project is located close to my home, and I am particularly concerned about the following:

Traffic congestion

Toga A 1 – Response

As stated in Section 4.12 of the Draft EIR, traffic impacts would not be significant with implementation of recommended mitigation measures. Please see Sections 3.3.5 and 4.2.6, and Appendix K of this document for additional discussion of traffic impacts and mitigation measures.

Toga A 2 – Comment

School

Toga A 2 – Response

As stated in Section 4.10 of the Draft EIR, impacts to schools would not be significant with implementation of recommended mitigation measures. Please see Sections 3.3.4, 4.3.7 and 4.5.28, and Appendix J of this document for additional discussion of this issue.

Toga A 3 – Comment

Crime

Toga A 3 – Response

As stated in Section 4.9 of the Draft EIR, annual crime statistics indicate that the areas, including the project site, served by the Lost Hills/Malibu Station have a crime rate below the countywide average. Implementation of the project would serve to increase the existing funding mechanisms for any additional officers required to serve the project area. Impacts would not be significant with implementation of recommended mitigation measures. See Section 4.2.5 (Police Services 1 and 5 – Responses) and Appendix E of this document for additional discussion regarding this issue.

4.0 Response to Written Comments

Toga A 4 – Comment

'urbanization'

Toga A 4 – Response

It is unclear as to what the commenter is referring regarding urbanization. No additional response is required.

Toga A 5 – Comment

In light of the significant adverse impact this project would have on my neighborhood and the lack of meaningful measures to alleviate that impact, I request that you not approve the project as currently presented. Any further consideration of the project should be conditioned on:

- *a substantial reduction in the size and scope of the project;*
- *a more meaningful proposal for mitigation by the applicant; and*
- *postponement of a Commission recommendation in order to allow time for adequate public study and evaluation of the applicant's revised proposals.*

Toga A 5 – Response

Please see Section 4.5.5 (Belkin, L 3 – Response) of this document.

4.5.130 Ana Urban

January 4, 2002/January 5, 2002/January 6, 2002

Urban A 1 – Comment

I am writing concerning the Deerlake Ranch development. I am specifically concerned that there be a "hotline" or someone to call if there is excessive noise, if there are traffic problems, trash problems, heat or dust problems, vandalism problems. Although the applicant has made statements with regard to things he will do to alleviate some of these issues, there is no accountability. Statements made for alleviation are vague and unsubstantiated. My community has long enjoyed a quiet and peaceful

4.0 Response to Written Comments

existence with children riding bikes, families riding horses and pets everywhere. The construction of 400 homes will be devastating to our neighborhood in a variety of ways. Please require and demand that the applicant put into place a hotline or office that will respond and alleviate any problems caused by said construction within 24 hours.

Urban A 1 – Response

Please see Appendix E of this document for a full list of conditions required for the project.

Please see Section 4.4.2 (CLPA 2 – Response) of this document regarding the adequacy of the EIR.

Urban A 2 – Comment

I am writing to let you know that I have several concerns about the Deerlake Ranch Development. One of my greatest concerns is the amount of dust that already exists due to high winds in our area and how that amount will be increased by the construction of this huge project. I would like to make sure that the increase is still within legal and environmental guidelines and ask that the applicant be required to show honest impact reports in this regard. I hope this development will not be allowed to proceed if the amount of dust is considered intolerable. The winds in our area can be, and often are, volatile and the construction of 400 almost 500 homes will effect not only our homes but the two schools in our area whose facilities include a pre-school, elementary school, middle school and will possibly soon have high schools.

Urban A 2 – Response

As discussed in Section 4.2 of the Draft EIR, no significant dust impact would occur from the project with implementation of recommended mitigation measures. Please refer to Section 4.2.3 of this document for additional discussion of impacts and mitigation.

Urban A 3 – Comment

I am writing concerning the Deerlake Ranch Development, specifically the increased heat in the area if construction proceeds. As you already know, Chatsworth is considered a fire zone and is extremely hot and dry during the summer months. We have indications that impact reports regarding increase in heat were not done accurately and would like to know, for a fact, that our homes will still be safe during and after the construction of this development. I would appreciate knowing that the applicant will be required to show that increased heat due to the incredible amount of pavement which will be necessary for this project is acceptable under the guidelines of an environmental impact report.

Urban A 3 – Response

Please see Section 4.2.7 (Development Issues 3 – Response) of this document.

Urban A 4 – Comment

The Deerlake Ranch project has presented many concerns for my husband and myself. Our first concern is the increase in traffic that the project would cause. We live just off of Canoga Boulevard and see a substantial increase in traffic flow when the two schools in the area, Sierra Canyon School and Chatsworth Hills Academy, have functions such as sports activities, annual fairs, and graduations to name a few. The parking for such events lines Chatsworth Avenue almost completely and fills the smaller residential streets. It is our understanding that these two schools whose facilities include preschools, elementary and middle schools, have possible plans for adding high schools to their facilities as well as making various other additions. Sierra Canyon is presently constructing athletic fields.

Has the applicant included in his reports, consideration for any traffic increase due to already scheduled construction being done during the same period of time he hopes to be in development? If this 500 home project were not enough to make traffic unbearable, how horrible will it be if there is already substantial construction in progress.

4.0 Response to Written Comments

Urban A 4 – Response

See Section 4.2.6 (Traffic 1 and 2 – Responses) and Appendix K of this document for a discussion of the project trip generation and traffic distribution forecasts provided in the Draft EIR. As stated in Section 4.12 of the Draft EIR, traffic impacts would not be significant with implementation of recommended mitigation measures. Please see Sections 3.3.5 and Appendix K of this document for additional discussion of traffic impacts and mitigation measures.

Urban A 5 – Comment

I would appreciate having the applicant show how many other construction sites are in the area during his proposed construction time.

Urban A 5 – Response

Section 3.0 of the Draft EIR discusses related projects within the project area.

Urban A 6 – Comment

Also, as a side note, apparently the applicant has done his traffic impact report in such a way that he implies that the people in our neighborhood never leave their homes. I am a wife and homemaker and I can assure you that I leave my home at least four times a day and return. Many times, because my children participate in sports activities at their school, because I volunteer at the school, because they were at two different schools and got out of school at different times, I left and leave my home more often than that. I don't believe there is any neighborhood where the residents, for the most part, do not leave their homes. Therefore, we should be included in a traffic impact report.

Urban A 6 – Response

See Section 4.2.6 (Traffic 1 and 2 – Responses) and Appendix K of this document for a discussion of the project trip generation and traffic distribution forecasts provided in the Draft EIR.

4.5.131 Bill Urban

January 4, 2002

Urban B 1 – Comment

I am concerned about the above-referenced matter. The Deerlake Ranch development is an incredibly large project that will severely effect [sic] our community. It is essential that a "hot line" be put into place and that there be immediate response to all non-compliance with vague promises to control traffic, noise, air pollution, etc. There must be monetary penalties for all non-compliance with a directive that specifically outlines permissible noise levels, air pollution levels, machinery operation hours to name a few.

Please help us in our attempt to keep some normalcy in our community during what appears to be a project of huge proportions and incredible duration.

Urban B 1 – Response

Please see Appendix D of this document regarding implementation of mitigation measures.

Urban B 2 – Comment

I am writing concerning the Deerlake Ranch development. I am specifically concerned with the increased heat in our area due to the construction of a project that requires so much pavement. As you know, Chatsworth is already considered a fire zone and is extremely hot during the summer and extremely windy during the winter. The increase in heat is particularly alarming. Can anything be done to enforce strict guidelines for temperature control including not allowing the removal of trees that are essential for cool the area?

Urban B 2 – Response

Please see Section 4.2.7 (Development Issues 3 – Response) of this document.

4.5.132 Joanna Urthank

March 8, 2002

Urthank J 1 - Comment

I am writing to express my objection to the proposed Deerlake Ranch development in Chatsworth (Project No. 99-239(5)) for which you have continued the public hearing to April 10.

The proposed project is located close to my home, and I am particularly concerned about the following:

Increased traffic on Canoga Ave.

Urthank J 1 - Response

As stated in Section 4.12 of the Draft EIR, traffic impacts would not be significant with implementation of recommended mitigation measures. Please see Sections 3.3.5 and 4.2.6, and Appendix K of this document for additional discussion of traffic impacts and mitigation measures.

Urthank J 2 - Comment

In light of the significant adverse impact this project would have on my neighborhood and the lack of meaningful measures to alleviate that impact, I request that you not approve the project as currently presented. Any further consideration of the project should be conditioned on:

- *a substantial reduction in the number of homes in the project;*
- *a more meaningful proposal for mitigation by the applicant; and*
- *opportunity for public study of and comment on the applicant's revised proposals.*

Urthank J 2 - Response

Please see Section 4.5.5 (Belkin, L 3 - Response) of this document.

4.5.133 Randy Urthank

April 8, 2002

Urthank 1 - Comment

As a property owner located at 10955 Canoga Ave., Chatsworth, I want to object to the Deerlake Ranch development in Chatsworth.

I am very concerned about the increased traffic this project will bring to the area, particularly on Canoga Ave. The streets in this area are already overloaded during peak hours. I don't believe the EIR provided by the developer accurately measures the traffic flow in the area, nor does it adequately provide for new roads to handle the increased amount of traffic this project will necessitate.

Additional concerns I have concerning this project are:

1. *Increased fire hazard to an already high fire-hazard area.*
2. *Increased response times for fire and health services because of inadequate roads.*
3. *The developer not paying enough for the infra structure [sic] costs to support a project of this size.*

I request that you do not approve this project. I think additional time is required for public study and evaluation. At the very least this project should be downsized from its present scope.

Urthank 1 - Response

As stated in Section 4.12 of the Draft EIR, traffic impacts would not be significant with implementation of recommended mitigation measures. Please see Sections 3.3.5 and 4.2.6, and Appendix K of this document for additional discussion of traffic impacts and mitigation measures.

4.5.134 Joanna and Randy Urthank

January 8, 2002

Urthank J & R 1 - Comment

As a property owner located at 10955 Canoga Ave., Chatsworth, I want to object to the Deerlake Ranch development in Chatsworth.

I am very concerned about the increased traffic this project will bring to this area. The streets in this area are already overloaded during peak hours. I don't believe the EIR provided by the developer accurately measures the traffic flow in the area, nor does it adequately provide new roads to handle the increased amount of traffic that this project will necessitate.

Urthank J & R 1 - Response

As stated in Section 4.12 of the Draft EIR, traffic impacts would not be significant with implementation of recommended mitigation measures. Please see Sections 3.3.5 and 4.2.6, and Appendix K of this document for additional discussion of traffic impacts and mitigation measures.

Urthank J & R 2 - Comment

*Additional concerns I have concerning this project are:
Increased fire hazard to an already high fire-hazard area.*

Urthank J & R 2 - Response

As stated in Section 4.8 of the Draft EIR, impacts to fire protection services would not be significant. Mitigation measures were recommended to ensure impacts would be further reduced. Further, all applicable fire code and ordinance requirements for construction, access, water mains, fire hydrants, fire flows, brush clearance and fuel modification plans would be fully enforced. No significant impacts would occur to fire protection services with implementation of the project.

Urthank J & R 3 - Comment

Increased response times for fire and health services because of inadequate roads.

Urthank J & R 3 - Response

As stated in Section 4.9 of the Draft EIR, emergency access to the project would be provided by the existing and proposed street system. Further, implementation of the project would improve emergency access to the existing Twin Lakes community. The project would be designed in accordance with Los Angeles Municipal Code requirements, including regulation of street widths, street lighting, and street signage.

Urthank J & R 4 - Comment

The developer not paying enough for infra structure [sic] costs to support the project of this size. I request that you do not approve this project. I think additional time is required for public study and evaluation. At the very least this project should be downsized from its present scope.

Urthank J & R 4 - Response

All development fees are based on the requirements of the County of Los Angeles and City of Los Angeles (traffic). The comment is noted.

The project has been revised to reduce the total number of residential units from 484 to 388. This includes 155 minimum 15,000 square foot estate lots, of which 55 would be equestrian lots. Please see Section 2.0 of this document for further discussion of this issue. See Section 4.2.7 (Development Issue 10 – Response) and Appendix L of this document regarding land use density.

4.0 Response to Written Comments

4.5.135 Evelyn Vadenois

March 8, 2002

Vadenois 1 –Comment

I am writing to express my objection to the proposed Deerlake Ranch development in Chatsworth (Project No. 99-239(5)) for which you have continued the public hearing to April 10.

The proposed project is located close to my home, and I am particularly concerned about the following:

Heavy traffic, more than now.

Vadenois 1 –Response

As stated in Section 4.12 of the Draft EIR, traffic impacts would not be significant with implementation of recommended mitigation measures. Please see Sections 3.3.5 and 4.2.6, and Appendix K of this document for additional discussion of traffic impacts and mitigation measures.

Vadenois 2 –Comment

In light of the significant adverse impact this project would have on my neighborhood and the lack of meaningful measures to alleviate that impact, I request that you do not approve the project as currently presented. Any further consideration of the project should be conditioned on:

- *a substantial reduction in the number of homes in the project;*

- *opportunity for public study of and comment on the applicant's revised proposals.*

Vadenois 2 –Response

Please see Section 4.5.5 (Belkin, L 3 – Response) of this document.

4.5.136 Jeff, Judith and Olivia Vergel de Dios

March 28, 2002

Vergel de Dios 1 –Comment

We are the current residents of 21127 Celtic Street in Chatsworth and vehemently oppose the proposed Deerlake Development and, in particular, the use of Canoga Avenue for ingress and egress to it.

We moved into this beautiful neighborhood approximately two years ago along with Olivia, our then 2 year old daughter. We moved here because of the neighborhood – its mature landscape, the wide streets, its residents who are oriented toward a relaxed family lifestyle, and especially its safety for children to grow up in. However, we did not anticipate nor do we approve of any further construction of new homes or street expansion/diversions near the area which would no doubt adversely affect our lifestyle with the additional street traffic and additional commuters, and would ultimately undermine the safety of our great neighborhood.

Vergel de Dios 1 –Response

Public safety is discussed in Sections 4.8 and 4.9 of the Draft EIR. As stated in Section 4.12 of the Draft EIR, traffic impacts would not be significant with implementation of recommended mitigation measures. Please see Sections 3.3.5 and 4.2.6, and Appendix K of this document for additional discussion of traffic impacts and mitigation measures.

Vergel de Dios 2 –Comment

Currently, with the two elementary schools situated in the immediate area -- namely Sierra Canyon School and Chatsworth Hills Academy, Canoga Avenue and Chatsworth Street are already severely overloaded with daily commuters. Canoga is simply not able to handle the additional volume of

4.0 Response to Written Comments

traffic that would come with the construction and completion of Deerlake. Therefore, we strongly oppose the use of Canoga Avenue in connection with the proposed development. We respectfully urge your assistance and support in protecting our interest in saving our established neighborhood. Thank you.

Vergel de Dios 2 – Response

The draft EIR evaluated traffic generation and distribution patterns associated with the proposed project. Please refer to Section 4.3.5 (Traffic – Topical Response) of this document.

4.5.137 Mark Watters

April 5, 2002/May 1, 2002

Attachments to this letter can be found in Appendix A.

Watters M 1 – Comment

The following is a letter which was sent to Presidio Chatsworth Partners, Ltd. From the Twin Lakes Property Owners regarding the community benefits proposed for the Twin Lakes Community in regards to the Deer Lake Ranch development project. Our letter outlines what we would like to see happen. We would like to request that all community conditions eventually agreed upon be placed in the conditional use permit and conditions of approval.

Watters M 1 – Response

The comment is noted. Please see Appendix E of this document for a complete list of the draft conditions of approval regarding community benefits.

Watters M 2 – Comment

Certain community benefits have been proposed to the Twin Lakes Property Owners Association, local equestrian organizations, and citizens of the city of Los Angeles who live south of the 118 Freeway by Presidio, the developer of the Deer Lake Ranch development project. The Twin Lakes community would like to know at what point the county will detail for us what they will and will not uphold and enforce. We feel that the wording of these conditions should be specific when they are submitted along with the project for Tentative Map approval. We are concerned that if these benefits are not specific and enforceable by the county in language at that time, they will be subject to exclusion by the time that it comes to the Final Map, and we as a community will have no input or control over what the final wording shall be. We are concerned that the audit of the La Vina project is not yet complete, and we feel that we should receive a full explanation of what transpired there. Whatever went wrong with that project, we would want to take great care not to repeat.

Watters M 2 – Response

Please see Appendix E of this document. The comment has been received and noted.

4.5.138 Vanessa Watters

January 1, 2002/January 11, 2002/January 23, 2002/April 5, 2002/June 19, 2002

Attachments to this letter can be found in Appendix A.

Watters V 1 – Comment

In Figure 4.71, included in the section discussing noise that would be generated by this development project, we see that there are 4 points at which the current noise level was monitored. All of these points are south of the single-lane bridge that currently separates the lower portion of Twin Lakes from the proposed development site. This study does not take into effect the 7 houses that currently exist north of the bridge, which are in closer proximity to the construction site. Four of these seven houses are currently occupied. I realize that this is a small amount of homes, but I would trust that

4.0 Response to Written Comments

we are entitled to the same amount of mitigation regarding the noise level that everyone else would be in Twin Lakes. And further, I would assume that our noise level would be a lot greater due to our proximity to the building site. I feel that a study must be done to accommodate those of us who live north of the bridge.

Also, the mitigation measures for the Twin Lakes area should include some way to assure us of the developer's compliance with County of Los Angeles Noise Ordinance, Title 12, Section 12.08.440. We need a clearer definition of time limits on construction work, an emergency phone number to call to report infractions, and there should be penalties for non-compliance. We should be advised on how many pieces of machinery can be operating at once and make sure that they are required to use newer equipment with noise-shielding devices. The developer has a list in 4.7-2 of mitigations for the project lots, themselves, which is all well and good. I feel that this does not adequately address the concerns of the existing homes in Twin Lakes. Most of the houses in Twin Lakes are older homes, with exterior walls and windows not at state-of-the-art level for deflecting sound, and many do not have central air conditioning. Subjectively, noise from construction, no matter how you measure it, is a lot different than roadway noise!

I feel that the EIR is incomplete in this regard and needs for further study.

Watters V 1 – Response

The noise monitoring locations shown in Figure 4.7.1 of the Draft EIR were chosen due to the proximity to SR-118. Noise monitoring was completed to determine the current noise environment of site. Homes located north of the bridge would be closer to the proposed construction activities associated with the project, but would not reflect the most sensitive receptors for current site conditions.

As stated in Section 4.7.2 of the Draft EIR, the combination of terrain shielding and compliance with County ordinances would not result in significant noise impacts on the adjacent Twin Lakes Community. In addition, subsequent to distribution of the Draft EIR, additional mitigation measures regarding grading and construction activities have been recommended that would further mitigate impacts, Appendix E of this document.

Watters V 2 – Comment

I am concerned about the removal of 65 oak trees for the purpose of the Deerlack [sic] Ranch Development Project. I understand that 130 mitigation oak trees will be required of the subdivider [sic], according to county regulation – but there are a couple of points that bother me about these mitigation trees.

First of all – they are very small. Oak trees are slow-growing trees, achieving growth of only 1 to 2 feet over the course of a couple of years. I also know that larger trees often do not transplant as well as smaller trees, and that the 15-gallon size is certainly the most cost-effective for the developer. I received information from a local nursery that contacted their supplier for me that lists 15-gallon oaks as costing approximately \$33.00 each wholesale. The next size up is the 24-gallon size, which costs about \$113.00 a tree.

Watters V 2 – Response

As stated in Section 4.3 of the Draft EIR, 65 existing oak trees would require removal in order to construct the project. However, the revised project (388 units) would preserve an additional four oak trees (for a total of 61). Appendix F.3 of the Draft EIR outlined the protection measures for other oak trees on the project site. None of these oak trees are of heritage status. Impacts would be reduced to less than significant with implementation of mitigation measures, which would be implemented under the review and approval of the County. See Appendices F.3 and E of this document for additional discussion of this issue.

4.0 Response to Written Comments

Watters V 3 – Comment

In addition, the Santa Monica Mountains Conservancy, in a letter dated July 26, 2000, found in Volume II of the EIR, under comments on the N.O.P, suggested this mitigation measure: to plant a staggered line of irrigated coastal live oak along: 1) the northern boundary of the Deerlake Ranch portion of the project, adjacent to the 10-ft. wide strip that will be dedicated to the Conservancy, and 2) the entire western boundary of the Deerlake Ranch portion of the project.

Watters 3 – Response

The comment is noted. However, the mitigation measure suggested by SMMC's letter is not included as part of the project. The applicant has secured the rights to a 160-acre biological mitigation parcel that serves to mitigate biological impacts on the site. Please see Appendix F.1 of this document for additional discussion of this issue.

Watters V 4 – Comment

It seems to me that since this is an environmentally sensitive area, that has been enjoyed in its natural state for many years, more appropriate measures of preservation should be considered, as opposed to the standard 2 to 1 ratio of 15-gallon cans. I feel that these borders of oaks should be planted, and that the size of the trees removed should be considered-for example, if the height of the tree to be removed exceeds 20 feet, a larger size of mitigation tree should be used.

Watters V 4 – Response

See Watters V 2 – Response of this document.

Watters V 5 – Comment

Second- in the Oak Tree Conditions of Approval, item #17, it is stated that the mitigation trees may be planted either on-site or at an off-site location to be approved by the County Forester. Where would these trees be planted, if not on the site? Does this mean that "our" trees could be used to mitigate an entirely different area of the county? It also very much disturbs me that instead of trees-the developer might instead just make a contribution to the county's Oak Forest Special Fund – with all due respect, how on earth do we know that we will see any of that money – and in the interim, we will have lost 65 oak trees!!! This not only disturbs me- it outrages me. I am angered that any mitigation such as this could be simply paid off with the right amount of dollars.

I must point out that if the County has any integrity at all in this matter, the planning commission must make the developer mitigate the loss of these oaks in a greater rather than lesser fashion.

Watters V 5 – Response

As stated in mitigation measure 4.3-10 of the Draft EIR, oak trees shall be planted in appropriate habitat areas on the project site and/or within the mitigation parcel as approved by the County Forester and Fire Warden. Priority is usually given to onsite planting. Implementation of mitigation for oak tree impacts would result in less than significant impacts. Compliance with oak tree mitigation will be the responsibility of the County of Los Angeles. See Appendices F.1 and F.3 of this document for additional discussion of this issue.

The commenter's objection to removal of oak trees is noted and will be forwarded to the decision makers.

Watters V 6 – Comment

Presidio Developers have presented the Twin Lakes Property Owners Association with a set of supplemental conditions of approval for the Deerlake Ranch Development Project. These conditions, as promised to the association, are detailed in the attached pages in a draft form.

I would like to request that these conditions, in their final form, be included in the conditions of approval for the Deerlake Ranch project. The Twin Lakes Property Owners Association needs to be

4.0 Response to Written Comments

assured of the county's support, protection, and enforcement of any agreement that the association enters into with the Presidio Group.

Watters V 6 – Response

Conditions of Approval for the project are included in Appendix E of this document.

Watters V 7 – Comment

Just a personal note to say thank you on behalf of the Twin Lakes Property Owners Association for attending our meeting January 8. We very much appreciated your giving of your valuable time to explain the EIR process to us. Your presentation was enlightening and informative.

It was a pleasure to meet you in person!

Watters V 7 – Response

The comment has been received and noted. No additional response is needed.

Watters V 8 – Comment

This is the most current set of Deerlake Ranch Supplemental Conditions, with community responses underlined, and strike-throughs indicating the original version, so that you may compare the two. We feel that these conditions are still a work-in-progress, and we need more time in which to decide upon a mutually agreeable set of conditions with the developer.

We request these conditions be attached to the Conditions of Approval.

Watters V 8 – Response

The commenter's edits to the conditions are noted. See Appendix E of this document for a full list of Conditions of Approval.

Watters V 9 – Comment

Since the January 23 initial hearing regarding the Deerlake Ranch Development Project, we have seen very little action on the part of the developer to respond to the community and the commissioners' questions. The effect on the environment and traffic and services are of great concern to me, and there seems to be no change in the developer's stance on these issues, despite repeated comments by the community:

The developer still plans to dump the storm drain water into Devil's Canyon. The filtration system that they propose still will dump a significant amount of untreated water into the creekbed. The developer maintains that the county will not let them pump the storm water into Brown's Canyon. We have not received an answer from the county as to whether or not this is true, and if so, why. Devil's Canyon has a very delicate eco-system that is untouched, and it makes no sense to destroy yet another pristine waterway. I am concerned that the long-term effectiveness of such a filtration system is not yet known.

Watters V 9 – Response

As stated in Section 4.6 of the Draft EIR, impacts with regard to urban runoff would not be significant with implementation of mitigation measures. See Section 4.2.2 (Urban Runoff I – Response) and Appendix I of this document for additional discussion of this issue.

Watters V 10 – Comment

The developer considers the small lot sizes prevalent in Twin Lakes to be a basis for determining the average lot size for the project. In reality, many of the residents of Twin Lakes occupy more than one lot. Also, it has been repeatedly pointed out that much larger lots are the standard in most of Chatsworth, and in adjacent communities. In addition, there is a 2000 study that has not been adopted as of yet regarding the designation of the Deer Lake Highlands area as a Significant Ecological Area (SEA). It seems to me that the potential that this study could be adopted has to be considered in determining how many houses can be built in Deerlake Ranch. In an SEA, there can be

4.0 Response to Written Comments

only 1 house per 10 acres. The very nature of Chatsworth will be compromised, if the developer is allowed to build a project of such density. I feel that the alternative presented in the DEIR of 171 homes, minimum lot size 20,000 square feet, is a project much more in keeping with our existing rural community. Equestrian properties must be included in this project, especially up at the top and at the front.

Watters V 10 – Response

See Section 4.2.7 (Development Issue 10 – Response) and Appendix L of this document regarding land use density.

See Section 4.4.1 (C ECHO 2 – Response) of this document regarding SEA boundary recommendations.

The project has been revised to reduce the total number of residential units from 484 to 388. This includes 155 minimum 15,000 square foot estate lots, of which 55 would be equestrian lots. Please see Section 2.0 of this document for further discussion of this issue.

Watters V 11 – Comment

This area simply cannot accommodate 484 homes for Deerlake Ranch, in addition to all the other projects under consideration or in process, such as a proposed condominium project and the build-out of Porter Ranch. Our main thoroughfares are already maddeningly over-crowded, our schools and libraries are over-taxed, and we have inadequate sheriff and fire protection as it is. The bottom line is that this is just too many houses, period. In this case, the best mitigation would be a reduction in density of significant proportions. The county General Plan itself states that new development cannot add to problems already in existence. I believe that these problems have been inadequately addressed, and the subject of density needs much further study.

Watters V 11 – Response

Please see Watters V 10 – Response) of this document. The Draft EIR adequately described the impacts associated with the project.

As stated in Section 4.10 of the Draft EIR, impacts to schools would not be significant with implementation of recommended mitigation measures. Please see Sections 3.3.4, 4.3.7 and 4.5.28, and Appendix J of this document for additional discussion of this issue.

As stated in Section 4.11 of the Draft EIR, library impacts would be less than significant with implementation of recommended mitigation measures. See Section 4.1.2 (City Council 6 – Response) of this document regarding additional discussion of mitigation of impacts on libraries.

As stated in Section 4.8 of the Draft EIR, no significant impacts would occur to fire protection services with implementation of the project. See Section 4.2.4 (Fire 1 and 4 – Responses) and Appendix E of this document for additional discussion regarding this issue.

As stated in Section 4.9 of the Draft EIR, no significant impacts would occur to police protection services with implementation of the project. See Section 4.2.5 (Police Services 1 and 5 – Responses) and Appendix E of this document for additional discussion regarding this issue.

Watters V 12 – Comment

On Monday, April 1, members of the Chatsworth community and representatives of Presidio Chatsworth Partners, Ltd. met downtown with Conal McNamara, Bob Haueter, and Patti Friedman from Supervisor Antonovich's office to discuss the Deerlake Ranch development project. This was a valuable meeting for our community, and many questions were raised that still need answers. The county has promised to get us those answers and proposed that we have subsequent meetings to further discuss the many issues that confront us in regards to this project. I feel that as a community, we need more time for these meetings to take place, and that the Deerlake Ranch project should not be approved until the questions and concerns raised on April 1 are answered.

4.0 Response to Written Comments

Watters V 12 – Response

Please see Appendix O of this document.

Watters V 13 – Comment

In addition, certain community benefits have been promised to the Twin Lakes community, local equestrian organizations, and citizens of the city of Los Angeles who live south of the 118 Freeway. Speaking for the Twin Lakes community, we have detailed to Presidio what we would like to see happen, but we have not received their response as of this date. We need these conditions to be specific, and we need to know that they are enforceable by the county and how they will be enforced. We are concerned that the audit of the La Vina project is not yet complete. Whatever went wrong with that project, we would take great care not to repeat. We need more time for adequate discussion of these proposed benefits, and we need a response from the county regarding ability to protect the community's rights in this matter. We also need to be assured that these conditions will be included in the conditional use permit and conditions of approval.

Watters V 13 – Response

Please see Appendix E of this document. Please see Section 1.1 of this document regarding the comment period for the Draft EIR.

Watters V 14 – Comment

OTHER COMMUNITY QUESTIONS:

PROCEDURE

When will there be an opportunity for the community to hear the responses of the developer to the commissioners' questions posed at the public hearings and if there is no such opportunity – why not?

Watters V 14 – Response

See Section 1.1 of this document

Watters V 15 – Comment

How will the recent Supreme Court ruling upholding the government's power to impose a temporary ban on development without compensating property owners if there are outstanding questions regarding the feasibility of the development affect the decision on this project?

Watters V 15 – Response

This is out of the scope of the EIR. No additional response is required.

Watters V 16 – Comment

Why is Porter Ranch not used as a related project in the tables in the Draft EIR?

Watters V 16 – Response

Porter Ranch was included in Table 3.1 (List of Related Projects) in the Draft EIR.

Watters V 17 – Comment

GENERAL PLAN AND SEA STATUS

Will the county wait to make a decision on this development until the update of the General Plan is completed?

Watters V 17 – Response

The County's decision on the project is not dependent on the General Plan update. A final decision on the updated general plan is still more than a year away.

Watters V 18 – Comment

The County General Plan summary calls for caution regarding development that would overly stress services that are already stressed. Quote: "Discourage the development of existing substandard parcels when it is determined that such development individually or in combination with adjacent

4.0 Response to Written Comments

existing and/or proposed development, will result in overburdening of existing and/or planned public services and facilities" (Page LU-3, Land Use Section) How is this statement taken into consideration?

Watters V 18 – Response

The project includes improvements and mitigation that would not result in significant impacts to area services.

Watters V 19 – Comment

Will the county wait to make a decision on this development until the new SEA study is complete? It seems that this is critical, since the SEA recommends only 1 house per 10 acres.

Watters V 19 – Response

The County's decision of the project is not dependent on completion of the SEA study. See Section 4.4.1 (C ECHO 2 – Response) of this document regarding SEA boundary recommendations. The County's policies do not prevent development within an SEA.

Watters V 20 – Comment

COORDINATION BETWEEN THE CITY AND COUNTY

Why is there no coordination of the City and County General Plans?

Watters V 20 – Response

This is out of the scope of the EIR. No additional response is required.

Watters V 21 – Comment

Greig Smith from Hal Bernson's office stated that the City would require more in traffic mitigation than a contribution to ATSA. What more will they require, and how will it be implemented? How will the City and the County coordinate to resolve the traffic issue?

Watters V 21 – Response

Please see Sections 3.3.5 and 4.2.6, and Appendix K of this document for additional discussion of traffic impacts and mitigation measures.

Watters V 22 – Comment

EIR QUESTIONS

How are mitigation fees utilized - are they earmarked for the area where the development is being put in? Such as in the case of the removal of the oak trees - will these be replanted on the development - or will the developer merely be required to make a contribution to the Oak Tree Fund?

Watters V 22 – Response

See Appendices F.3 and E of this document for additional discussion of this issue.

Watters V 23 – Comment

No animal control issues are addressed in the Draft EIR - why not?

Watters V 23 – Response

See Section 4.4.2 (CLPA 11 – Response) of this document.

Watters V 24 – Comment

Why is Porter Ranch not used as a related project in the tables in the Draft EIR?

Watters V 24 – Response

Porter Ranch is included as a related project in the Draft EIR. (See Table 3.1 of the Draft EIR). See Watters V 16 – Response of this document.

Watters V 25 – Comment

CONSTRUCTION ISSUES

4.0 Response to Written Comments

What is the risk of valley fever when the grading goes on for 2 - 3 years?

Watters V 25 – Response

Valley fever is caused by *Coccidioides immitis*, a fungus that grows naturally in soil in the southwestern United States. Valley fever is spread through the air due to land disturbing activities such as construction, natural disasters, or wind. Airborne dust associated with landslides triggered by the Northridge earthquake resulted in infections in Ventura County. Agricultural and construction workers are at an increased risk for the disease. However, dust control is recommended as the primary measure to reduce risk of exposure.¹⁸

As stated in Section 4.2 of the Draft EIR, with implementation of dust control and mitigation measures, impacts from dust would not be significant. In addition, planting of grass or paving roads in highly populated areas decrease the amount of airborne dust and lower the risk for Valley Fever.¹⁹ Further, the project includes measures to mitigate impacts from landslides, which would further reduce the risk. Therefore, implementation of the project would reduce the risk for Valley Fever within the project area.

Watters V 26 – Comment

How will dust be controlled when the Santa Ana's are blowing at 60+ miles an hour? Can we request 24-hour surveillance?

Watters V 26 – Response

Please see Sections 4.2.3 (Noise/Dust 1 – Response) and 4.2.7 (Development Issues 8 – Response) of this document.

Watters V 27 – Comment

How are the conditions pertaining to construction enforced? Will the county support what we are asking for?

Watters V 27 – Response

Please refer to Appendices D and E of this document.

Watters V 28 – Comment

Will new easements have to be created for the new access to vacant land that now has access to Mayan Drive?

Watters V 28 – Response

No new easements would have to be created and all existing easements to Mayan Drive would remain. The westerly end of Mayan Drive would be connected to the proposed public street identified as "A" Street (see Appendix C.1 of this document).

Watters V 29 – Comment

PROTECTIVE SERVICES

What will be the county's commitment to the Sheriff's storefront station? The Sheriff's Department states they do not have the manpower to staff it.

Watters V 29 – Response

As stated in Section 4.9 of the Draft EIR, no significant impacts would occur to police protection services with implementation of the project. See Section 4.2.5 (Police Services 1 and 5 – Responses) and Appendix E of this document for additional discussion regarding this issue.

¹⁸ www.cdc.gov.

¹⁹ Ibid.

Watters V 30 – Comment

LAPD states that its "Mutual Aid" policy with the Sheriff's Department is in cooperation with riots, fires, etc. but not for calls such as domestic violence. How will the community be protected with the closest Sheriff's Station in Lost Hills?

Watters V 30 – Response

See Watters V 29 – Response of this document.

Watters V 31 – Comment

COMMUNITY BENEFITS

Understanding that the County wants to see sewers installed in Twin Lakes, will the County require Presidio to pay condemnation costs that may be incurred in regards to the installation - or will the county pay the cost? We are in the process of gathering information as to the approval or disapproval of the Twin Lakes community of the proposed installation?

Watters V 31 – Response

See Appendix E of this document.

Watters V 32 – Comment

We are concerned that we have submitted responses to the developer's summary of community benefits, and we have no idea whether or not these benefits are enforceable. Many of the items say "subject to approval" of various county agencies. If this approval is not guaranteed before the Tentative Map is approved - how are we protected? Even if the developer pays for the improvement - what is the guarantee that it will be done - if we don't know the extent of the county's commitment?

Watters V 32 – Response

See Section 4.4.3 (ETI 25 – Response) of this document regarding enforcement of mitigation measures and conditions of approval.

Watters V 33 – Comment

Further, in their last letter to the Twin Lakes Property Owners Association, Presidio stated that they were concerned about promising conditions that could not be complied with - so why would it be premature to ask the county to give us answers as to what we can realistically ask for - so that we know that what we agree upon with Presidio can be complied with?

Watters V 33 – Response

See Section 4.4.3 (ETI 25 – Response) of this document regarding enforcement of mitigation measures and conditions of approval.

Watters V 34 – Comment

We feel that there is no point in responding to Presidio until we have the answers. If we submit a letter to Regional Planning with our requests, and our requests to include the community benefits in the Conditions of Approval and Conditional Use Permit, will they be considered, albeit they may be different from the list that Presidio will submit?

Watters V 34 – Response

See Appendices D and E of this document for the draft conditions of approval..

Watters V 35 – Comment

How will the proposed community benefits be enforced? If county agency approval is needed, even if the developer is paying for an improvement -when will it be given? If these conditions are not in their final form in the Tentative Map - if the wording is not agreed upon and considered by the county to be enforceable - how will the community be protected when the Final Map is drawn?

4.0 Response to Written Comments

Watters V 35 – Response

See Section 4.4.3 (ETI 25 – Response) of this document regarding enforcement of mitigation measures and conditions of approval.

Watters V 36 – Comment

Will the results of the La Vina audit be made public?

Watters V 36 – Response

This is out of the scope of this EIR. No additional response is required.

Watters V 37 – Comment

At the April 1 meeting downtown, Pike Oliver of Presidio made the comment that the reason some things happened the way they did in La Vina was because on any "offsite" improvements, other agencies (county, we are assuming) were involved. How can community conditions be drawn up between the developer and the community if this issue cannot be resolved before approval to the project is given?

Watters V 37 – Response

See Section 4.4.3 (ETI 25 – Response) of this document regarding enforcement of mitigation measures and conditions of approval.

Watters V 38 – Comment

OTHER SUBMITTED QUESTIONS

1) Is there a possibility that the ramp, lane and signalization changes for the Topanga / Mayan / 118 intersections proposed by the applicant will not be approved by CALTRANS? If any such possibility exists, approval of the project should be deferred until this uncertainty is completely resolved.

Watters V 38 – Response

See Section 4.3.2 of this document for the proposed improvements to this intersection.

Watters V 39 – Comment

2) Given that neither the applicant nor the eventual builder(s) can control the activities of unrelated construction suppliers, how will the safety of schoolchildren on Canoga Avenue be assured during years of construction if material deliveries and site workers use Canoga for access to the project?

Watters V 39 – Response

See Sections 4.2.3 (Noise/Dust 1 – Response) and 4.2.7 (Development Issues 8 – Response) of this document.

Watters V 40 – Comment

3) Why is the applicant being allowed to replace mature native oak trees with minimum-sized saplings rather than with the largest, most mature oaks available?

Watters V 40 – Response

See Section 4.2.1 (Topical Responses) and Appendices F.3 and E of this document for additional discussion of this issue.

Watters V 41 – Comment

4) Why has the applicant not prepared traffic projections including the fully-built-out adjacent Porter Ranch project?

Watters V 41 – Response

The Porter Ranch related project in the City of Los Angeles as referenced by the commenter is shown on Table 4.12.3 in the Draft EIR. It is also noted on the table that LADOT required that the traffic

4.0 Response to Written Comments

analysis include half the Porter Ranch related traffic in the 2005 traffic study horizon year. This assumption was also approved by the County's Traffic and Lighting Division. The inclusion of half of the Porter Ranch traffic provides for a highly conservative analysis of traffic conditions in 2005 as it is unlikely that the Porter Ranch project will be 50 percent complete by 2005.

Watters V 42 – Comment

5) *Why has the applicant not complied with the SCAG requirement to show project impacts under SCAG's 5% annual population growth rate assumption?*

Watters V 42 – Response

SCAG has determined that the project is not regionally significant. See Section 4.3.4 of this document.

Watters V 43 – Comment

6) *Why has the applicant's draft EIR not complied with the CALTRANS requirement to project traffic impacts through the year 2020?*

Watters V 43 – Response

The traffic analysis was completed per the requirements of the LACDWP, LADOT, and Caltrans. As requested by Caltrans and required by LACDWP, the applicant will pay its fair share for long-term (year 2020) improvements at the SR-118/Topanga Canyon Boulevard interchange.

Watters V 44 – Comment

7) *Why has the applicant been allowed to assume zero net cut / fill grading when significant soil loss from wind-blown dust is virtually certain in our arid, windy climate?*

Watters V 44 – Response

With implementation of recommended mitigation measures, no significant soil loss would occur.

Watters V 45 – Comment

8) *The applicant told the Commission on April 10 that they had put in an extended effort on the project redesign but told the community just a few days prior that they would not reduce the density or provide for horsekeeping. Which of the two audiences were they misleading?*

Watters V 45 – Response

This comment has been noted. No additional response is required and the project design recommended by the Planning Commission is discussed in Section 2.4 of this document.

Watters V 46 – Comment

9) *A commissioner commented on April 10 that a comprehensive development was preferable to [sic] haphazard individual building on the roughly 600 existing lots. Doesn't the fire code preclude building more than 150 homes in the area unless suitable bridges are constructed to provide additional access? If it does, 600 - or even 200 - individual building permits could not [sic] be issued for this area.*

Watters V 46 – Response

The development of the existing 624 Certificate of Compliance lots is described in Alternative No. 2 included in the Additional Environmental Information Document (see Appendix C of this document). Two means of access were provided including two bridges.

Watters V 47 – Comment

Why should Regional Planning Commission give more weight to a 50 year old General Plan that is hopelessly out of date, than a new, albeit proposed, SEA study that proposes one home on 10 acres to protect the environment? (partial duplicate) How can community equestrian trails be protected if nearby property owners must give up property rights to allow access by horses? Developer must be required to ensure all legal access entitlements are granted before dirt is graded or cleared. As

4.0 Response to Written Comments

developer said, bonds only protect the projects owned land; need condition to protect adjacent trails necessitated due to this development.

Watters V 47 – Response

The General Plan is a legal document by which the County evaluates land uses. Please refer to 4.4.1 (C ECHO 2 – Response). As stated in Section 2.4.3 of the Draft EIR, the project includes a trail system that would loop the site, connecting to existing trails east, north, and west of the project site. See also Section 4.4.1 (C ECHO 3 & 4 – Responses) of this document regarding trails.

Watters V 48 – Comment

What progress has developer made in securing the required trail easements since January 2002? What progress is expected during next three months?

Watters V 48 – Response

It is unclear as to what the commenter is referring. All trails included in the project would be located within the project site and dedicated to the County. No acquisition of trail easements outside the project boundary is proposed.

Watters V 49 – Comment

Given that the Stein project at Topanga and Chatsworth just obtained a legal ruling that an 11,000 square foot lot is too small for the Chatsworth Porter Ranch general plan, how can you justify a 6000 square foot lot here, based on 98 homes in Twin Lakes alone? You must consider all of Chatsworth, and its General Plan.

Watters V 49 – Response

See Section 4.2.7 (Development Issue 10 – Response) and Appendix L of this document regarding land use density.

Watters V 50 – Comment

If the conservation strip around the property is not respected, a) is that legal given the existing documents? b) if the conservation strip is broken, will all the related effects of development of the 12,800 acres of County land, the Ventura County land that may access through here, and the development of Porter Ranch be considered?

Watters V 50 – Response

See Section 4.4.5 (SSMP 11 – Response) and Appendix M of this document.

Watters V 51 – Comment

What additional infrastructure improvements are needed for larger bridges, sewers, storm water, urban pollution, schools, police, library, etc.?

Watters V 51 – Response

Improvements and mitigation for the above issues are discussed in the Draft EIR. Please also see Section 2.0 and Appendices D and E of this document.

Watters V 52 – Comment

How will Canoga Avenue and the residential neighborhood south of the 118 be affected? What additional street improvements can be made on Chatsworth street to accommodate [sic] 24,000 more homes (or more, if 6000 square foot lots are continued) that access their homes through this residential area?

Watters V 52 – Response

Please see Sections 3.3.5 and 4.2.6, and Appendix K of this document for additional discussion of traffic impacts and mitigation measures.

4.0 Response to Written Comments

Watters V 53 – Comment

What wildlife corridor and/or rare plant preservation is possible with this type of development?

Watters V 53 – Response

See Section 4.2.1 (Topical Response) of this document regarding wildlife corridors. See Section 4.2.1 (Topical Response) and Appendix F.8 of this document regarding mitigation for the lily.

Watters V 54 – Comment

Has the Regional Planning Commission considered the long term effect of allowing 6000 square foot lots? A lot this small, unavoidably will look like an even more dense Porter Ranch development that we are trying to avoid. A lot this size is incompatible with the existing community, the small Twin Lakes ares [sic] should not set the precedent for 12,800 acres. If this is approved, the next development and the next will justify tiny lots based on this project.

Watters V 54 – Response

See Section 4.2.7 (Development Issue 10 – Response) and Appendix L of this document regarding land use density.

Watters V 55 – Comment

Will the community be informed of additional developer proposals and have an opportunity to comment on them, after review for a period of at least a few days (not minutes or hours), as Patti Friedman of the Supervisors office has informed us will be the case? When will we receive anything? Nothing of substance has been received since the initial January hearing.

Watters V 55 – Response

See Section 1.1 and Section 4.5.5 (Belkin L 3 – Response) of this document regarding review periods.

Watters V 56 – Comment

We would ask that all community comments raised in the Supplemental Conditions submitted by the developer, as modified by the community, be addressed for our further review and comments.

Watters V 56 – Response

See Appendix E of this document for the draft Conditions of Approval.

Watters V 57 – Comment

1) I have been told the developer submitted comments/revisions prior to the January, 2002 meeting to the Regional Planning Commission, can those documents be made available to the public by posting them on a website that is publicly available, driving downtown is difficult?

Watters V 57 – Response

Documents regarding the project are available at www.deerlakeranch.com.

Watters V 58 – Comment

2) Can documents submitted by developer prior to the April 10 hearing be made available to the public by posting them on a website that is publicly available?

Watters V 58 – Response

See Watters V 57 – Response of this document.

Watters V 59 – Comment

3) Will the oak tree information in the EIR be updated for the parcel bought later by the developer? (I tried to find a total number of trees destroyed in the EIR, but the later-acquired parcel was not counted apparently)

4.0 Response to Written Comments

Watters V 59 – Response

As stated in Section 4.3 of the Draft EIR, 65 existing oak trees would require removal in order to construct the project. However, the revised project (388 units) would preserve an additional four oak trees (for a total of 61). Oak trees were counted in accordance with the County's Oak Tree Ordinance. Appendix F.3 of the Draft EIR outlined the protection measures for other oak trees on the project site. None of these oak trees are of heritage status. Impacts would be reduced to less than significant with implementation of mitigation measures, which would be implemented under the review and approval of the County. See Appendices F.3 and E of this document for additional discussion of this issue.

Watters V 60 – Comment

4) *Can the new County proposed rules on oak tree (and sycamore and California walnut, that require the replacement of destroyed trees with trees with equal total trunk diameter) be applied to this project?*

Watters V 60 – Response

The project will comply with all County ordinances.

Watters V 61 – Comment

5) *Can the County focus on developing a new general plan for this area, and integrate that plan with the SEA studies that are being prepared?*

Watters V 61 – Response

This is out of the scope of this EIR. No additional response is required. The County is in the process of updating its general plan.

Watters V 62 – Comment

6) *When can the new County general plan for this area be available?*

Watters V 62 – Response

This is out of the scope of this EIR. No additional response is required. The updated general plan is not likely to be adopted by the Board of Supervisors until 2005.

Watters V 63 – Comment

7) *What is the track record of applicant for completing grading on similar-sized projects in a three month period, is this realistic?*

Watters V 63 – Response

This is out of the scope of this EIR. No additional response is required.

Watters V 64 – Comment

8) *Can documents submitted by developer for future meetings be made available to the public?*

Watters V 64 – Response

See Sections 1.1 and 4.5.5 (Belkin I. 3 – Response), and Appendix A of this document regarding distribution of environmental documents for the project.

Watters V 65 – Comment

9) *Can the EIR be posted on the internet, in accordance with current CEQA recommendations?*

Watters V 65 – Response

The County does not currently have facilities to place the EIR on the internet, however, the applicant has placed information on the project on the internet. See Watters V 57 and 56 – Responses of this document.

Watters V 66 – Comment

10) *What can County do to enforce no Left signs that are proposed, they are not enforced in the City and vehicular traffic ignores them frequently.*

4.0 Response to Written Comments

Watters V 66 – Response

This comment is out of the scope of the EIR. Enforcement of traffic regulations is provided by local police services.

Watters V 67 – Comment

11) What local streets that go from north to south can be opened up for through traffic to facilitate through traffic and provide actual mitigation for traffic problems? Can this be done before approvals are put in for Deerlake, since proposed traffic mitigations are virtually useless because there is nowhere for existing traffic volume south of the study area to go due to excessive volume?

11a. Mason Avenue south of Lassen

11b. Canoga Avenue south of Lassen

11c. DeSoto Avenue to go through south from Porter Ranch

Watters V 67 – Response

See Sections 3.3.5 and 4.2.6, and Appendices D and K for project mitigation. However, this comment will be forwarded to the decision makers. Also see Section 4.2.6 (Traffic 1 and 2 – Responses) and Appendix K of this document for a discussion of the distribution of project traffic to the local street system.

Watters V 68 – Comment

12) Will the project's approval be delayed until it is known if Caltrans approves freeway offramp/onramp and road redesigns? What happens if project is approved, and roadway changes are not approved?

Watters V 68 – Response

The design and construction of the improvements within the state right-of-way will be processed through the standard Caltrans Encroachment Permit procedure and will be guaranteed by a surety bond. In addition, implementation of mitigation measures and assurance of completion is tied to various aspect of development of the project site and is outlined in the Mitigation Monitoring Program (see Appendix D of this document).

Watters V 69 – Comment

13) Why is the ATSAC system a mitigation to the traffic caused by Deerlake, if the improvements expected from this system (7% improvement) already offset by the growth expected before project is implemented?

Watters V 69 – Response

The amount of ATSAC mitigation fees (including impacted intersections) was determined by the LADOT based on its evaluation of the project's pro rata impact on the ATSAC system.

Watters V 70 – Comment

14) Why are lane increases, which would represent actual mitigation, not considered on intersection streets, such as Topanga Canyon and Desoto?

Watters V 70 – Response

See Section 4.3.6 (Traffic 1 and 2 – Responses) of this document.

Watters V 71 – Comment

15) What mitigations on Chatsworth Street will be implemented. the information provided has been conflicting?

15a. What mitigations at Chatsworth/Desoto?

15b. What mitigations at Chatsworth/Variel?

15c. What mitigations at Chatsworth/Canoga?

4.0 Response to Written Comments

15d. *What mitigations at Chatsworth/Owensmouth (look at the backup in the morning at this intersection, you will see it should be considered and not eliminated as per the draft EIR).*

Watters V 71 – Response

See Section 3.3.5 and Appendices D and K of this document regarding mitigation for Chatsworth Street/De Soto Avenue and Chatsworth Street/Canoga Avenue. No mitigation is required for the intersections of Chatsworth Street/Variel Avenue or Chatsworth Street/Owensmouth Avenue, which were not required to be analyzed by LADOT because of their proximity to other major intersections, which were analyzed.

Watters V 72 – Comment

16) *Local residents do not want flashing lights 24/7 at Rinaldi/Canoga intersections, has this been considered, and what present proposal does the County have?*

Watters V 72 – Response

The proposed signals at this intersection will be self-actuated by pedestrians and/or equestrians, not continuously flashing. The intersection is within the City of Los Angeles and therefore the signal will be under the jurisdiction of LADOT.

Watters V 73 – Comment

17) *Will the County's solution to the signal at Rinaldi/Canoga be respected by the City?*

Watters V 73 – Response

See Watters V 72 – Response.

Watters V 74 – Comment

18) *The increased traffic coming out of Canoga will increase the left turn lane burden from Lassen to southbound Topanga Canyon (since Canoga does not go through). What mitigations will occur here, there is a huge backup of traffic in the morning on Lassen turning left to Topanga?*

Watters V 74 – Response

The intersections of Canoga Avenue/Lassen Street and Lassen Street/Topanga Canyon Boulevard are outside of the study area requested by the City of Los Angeles, because their locations are too far from the project to determine any quantifiable project impact. Therefore, impacts were not analyzed and no mitigation is required.

Watters V 75 – Comment

19) *The increased traffic coming out of Canoga will increase the left turn lane burden from Lassen to southbound Owensmouth (since Canoga does not go through). What mitigations will occur here, there is a huge backup of traffic in the morning on Lassen turning left to Owensmouth?*

Watters V 75 – Response

See Watters V 74 – Response.

Watters V 76 – Comment

20) *What mitigations will occur on DeSoto to improve traffic on this street at*
(20a) Chatsworth and
(20b) Devonshire intersections, that operate at F LOS before Deerlake?

Watters V 76 – Response

See Section 3.3.5 of this document regarding mitigation of impacts at the De Soto Avenue and Chatsworth Street intersection. As shown on revised Table 4.12.5 (in Section 3.0 of this document), impacts to De Soto Avenue and Devonshire Street would not be significant and would not require mitigation.

4.0 Response to Written Comments

Watters V 77 – Comment

21) *What mitigations will occur on Topanga Canyon to improve traffic on this street at*

(21a) Devonshire

(21b) Lassen

(21c) Marilla

(21d) Plummer,

that backup regularly far beyond "F" levels, which therefore do not allow additional traffic to make it through Topanga Canyon?

Watters V 77 – Response

As shown on revised Table 4.12.5 (in Section 3.0 of this document), impacts to Topanga Canyon Boulevard and Devonshire Street would not be significant and would not require mitigation. The other intersections mentioned by the commenter are outside of the study area requested by the City of Los Angeles. Therefore, impacts were not analyzed and no mitigation is required.

Watters V 78 – Comment

22) *Has the decision-maker read the Proposed SEAs, even the Executive Summary?*

Watters V 78 – Response

This comment is beyond the scope of the EIR. No additional response is required.

Watters V 79 – Comment

23) *Why does the decision-maker state the area will be reduced, when the water sources that are so important to the wildlife are at the south edge of the SEA?*

Watters V 79 – Response

It is unclear as to what the commenter is referring. No additional response is required.

Watters V 80 – Comment

24) *Why would the Deerlake area be eliminated from the SEA when the SEA states that larger areas are necessary for SEAs than previously thought to ensure genetic diversity is maintained as best possible?*

Watters V 80 – Response

See Section 4.4.1 (C ECHO 2 – Response) of this document regarding SEA boundary recommendations. The Deerlake project area is not currently within an SEA and any new SEA boundary will be recommended by the Regional Planning Commission.

Watters V 81 – Comment

25) *What is proposed to resolve the urban runoff problem created by the proposed Deerlake development?*

Watters V 81 – Response

As stated in Section 4.6 of the Draft EIR, impacts with regard to urban runoff would not be significant with implementation of mitigation measures. See Section 4.2.2 (Urban Runoff 1 – Response) and Appendix I of this document for additional discussion of this issue.

Watters V 82 – Comment

26) *Will the existing level of water runoff from surrounding properties (ie. not Deerlake, but other properties in the watershed of Devil Canyon and Browns Canyon be retained, so the existing natural vegetation has a chance of survival?*

4.0 Response to Written Comments

Watters V 82 – Response

All runoff from surrounding properties, which are within the project's watershed area would continue to flow through the project area and would not be diverted. See Section 4.2.2 (Urban Runoff 1 – Response) and Appendix I of this document for additional discussion of this issue.

Watters V 83 – Comment

27) What resolution is there to providing police/sheriff protection to Deerlake residents? Will there be coverage by the City police, or is that to only continue on an major emergency basis like a riot?

Watters V 83 – Response

As stated in Section 4.9 of the Draft EIR, no significant impacts would occur to police protection services with implementation of the project. See Section 4.2.5 (Police Services 1 and 5 – Responses) and Appendix E of this document for additional discussion regarding this issue.

Watters V 84 – Comment

28) Is the developer actually going to put in a sheriff storefront, or is that not going to happen due to

28a) objection by an easement holder

28b) lack of funding 28c) lack of staffing available?

Watters V 84 – Response

Construction of the Sheriff's storefront facility is a condition of approval of the project (see Appendix E of this document).

Watters V 85 – Comment

29) Where is the 159 acre parcel proposed as a mitigation parcel?

Watters V 85 – Response

Please see also Section 4.2.1 and Appendix F.1 of this document for additional discussion of this issue.

Watters V 86 – Comment

30) Is the replacement of the oak trees to occur on site or on the mitigation parcel?

Watters V 86 – Response

Please see also Section 4.2.1 and Appendix F.3 of this document for additional discussion of this issue. The location of replacement trees will be determined by the County Forester. Watters V 87 – Comment

31) Given that the draft EIR indicates transplanted plants generally does not work and is not encouraged, why is the transplanted program proposed for the Plummers Mariposa Lily apparently being approved?

Watters V 87 – Response

Please see also Section 4.2.1 and Appendix F.8 of this document for additional discussion of this issue.

Watters V 88 – Comment

32) Does the area the Plummers Mariposa Lily is proposed to be transplanted to presently have that plant on site?

Watters V 88 – Response

See Watters V 87 – Response of this document.

Watters V 89 – Comment

33) What differences in environment exist between Deerlake and the mitigation parcel that affect the continued viability of the Plummers Mariposa Lily?

4.0 Response to Written Comments

Watters V 89 – Response

See Watters V 87 – Response of this document.

Watters V 90 – Comment

34) *What is the present development percentage of the 3,400 residences in Porter Ranch disclosed in the draft EIR?*

Watters V 90 – Response

As stated in the Draft EIR, the traffic analysis assumes a 50 % of Porter Ranch would be developed by 2005.

Watters V 91 – Comment

35) *What is the effect of the development there over the next (35a) five years (35b) ten years (35c) 20 years (as required by Caltrans)?*

Watters V 91 – Response

See Watters 43 – Response.

Watters V 92 – Comment

36) *What increases in traffic will occur during the traffic projection forecast period due to Porter Ranch, and how have they been reported in the traffic study?*

Watters V 92 – Response

The traffic study included related projects, such as Porter Ranch in the analysis for the project. See Appendix K of this document for additional discussion of this issue.

Watters V 93 – Comment

37) *How can the traffic study presently be approved, if Porter Ranch increases have not been considered?*

Watters V 93 – Response

See Watters V 92 and 93 – Responses of this document.

Watters V 94 – Comment

38) *Has the Regional Planning Commission noticed the physical development of Porter Ranch immediately to the east of Deerlake?*

Watters V 94 – Response

This is out of the scope of this EIR. No additional response is required.

Watters V 95 – Comment

39) *Will the EIR be revised to correct the figure showing the location of Porter Ranch as a related project to include areas near DeSoto as well as Tampa?*

Watters V 95 – Response

Figure 3.1 in the Draft EIR was intended to give a general location of related projects. See Figure 2.6 in this document for a more detailed view of surrounding land uses.

Watters V 96 – Comment

40) *Will an additional traffic study be done at a time when the local colleges are in session, as well as local schools?*

Watters V 96 – Response

See Section 4.2.6 (Traffic 1 and 2 – Responses) and Appendix K of this document for a discussion of the project trip generation and traffic distribution forecasts provided in the Draft EIR.

4.0 Response to Written Comments

Watters V 97 – Comment

41) What requirements will be placed on the project to ensure the trails shown on the project are accessible?

Watters V 97 – Response

See Section 4.4.1 (C ECHO 3 & 4 – Responses) of this document.

Watters V 98 – Comment

42) Will the County ensure required trail access easements are obtained prior to project approval?

Watters V 98 – Response

See Section 4.4.3 (ETI 25 – Response) of this document.

Watters V 99 – Comment

43) Can future public hearings be postponed if the developer does not provide any additional information by two weeks before the hearing, it is irritating to have hundreds of people keep coming downtown for multiple meetings with no responses from the developer, merely to show we still care?

Watters V 99 – Response

Public hearing procedures are established by state law, County ordinances and are at the discretion of the Regional Planning Commission. Responses to comments at public hearings and written comments are appropriately included in this document. Please see Section 1.1 of this document regarding the comment period for the Final EIR.

Watters V 100 – Comment

44) Can the EIR be posted on the internet in accordance with current CEQA recommendations?

Watters V 100 – Response

County staff does not currently have the resources to post a document as extensive as the Draft EIR and Response to Comments on the internet.

Watters V 101 – Comment

45) Can draft responses to our EIR comment letters be posted on the internet so we know if you have understood our comment letters and know if additional comments are needed on specific areas of concern?

Watters V 101 – Response

See Watters V 100 – Response of this document. Draft responses to the community concerns have been presented at a number of community meetings prior to the Planning Commission taking action. (See Appendix O of this document).

Watters V 102 – Comment

46) Can additional documents being used in the EIR, such as the updated traffic study from early January, 2002 be included in the public information that needs posted?

Watters V 102 – Response

A revised traffic study, as well as other revised studies and reports, are included in the Appendices of this document.

Watters V 103 – Comment

47) Can the EIR, revised traffic study, comments, etc., be posted at the temporary Chatsworth library (only open in the afternoons on weekdays) and at Porter Ranch library so evening and Saturday access is available?

4.0 Response to Written Comments

Watters V 103 – Response

As stated in Section 1.1 of this document, copies of the environmental reports are available at the Los Angeles County Library – San Fernando Branch and the Los Angeles County Department of Regional Planning and the project website (www.deerlakcranch.com), as well as the Chatsworth Library.

Watters V 104 – Comment

48) *Has any study been done to determine the accuracy of the traffic patterns listed in the traffic study? Specifically,*

(48a) can the southbound traffic percentage be justified, if so how?

(48b) Can the percentage of westbound freeway traffic be justified?

(48c) Can the percentage of use on Topanga Canyon vs. Canoga Avenue be justified?

Watters V 104 – Response

See Section 4.2.6 (Traffic 1 and 2 – Responses) and Appendix K of this document for a discussion of the project trip generation and traffic distribution forecasts provided in the Draft EIR.

Watters V 105 – Comment

49) *Is Porter Ranch included as a related project in the traffic study?*

Watters V 105 – Response

As shown on Table 4.12.3 of the Draft EIR, Porter Ranch was included in the traffic analysis.

Watters V 106 – Comment

50) *Can the EIR be revised to show what related projects are included in each area that is studied? The Related Projects table is not representative of what is included in each area, apparently, since page 4.11-2 says Porter Ranch is not within in the project area.*

Watters V 106 – Response

Each cumulative impact section in the Draft EIR included a description of related projects that were applicable to that particular environmental issue

Watters V 107 – Comment

51) *As to Porter Ranch, future traffic projections need to consider that the only southbound streets available from Porter Ranch are Mason (on the West side) and Tampa (on the East side), so these streets will carry all traffic from Porter Ranch that is going to the south. If DeSoto is opened to Porter Ranch, DeSoto may also be affected. Have the increases in traffic on*

(51a) Mason from Porter Ranch been considered?

(51b) have any expected increases in traffic on DeSoto from Porter Ranch been considered?

Watters V 107 – Response

See Watters V 105 – Response in this document.

Watters V 108 – Comment

52) *Has the increased traffic on Topanga Canyon from the condominium project that is expected near the 118 freeway and Topanga Canyon been incorporated in the traffic increases covered by the project?*

Watters V 108 – Response

As shown in Table 4.12.3 of the Draft EIR, the condominium project was included in the traffic analysis.

Watters V 109 – Comment

53) *Have population increases of 5% a year been considered (as required by SCAG) in the traffic study? If so, why does it appear the traffic only increases about 2% a year in the traffic study?*

4.0 Response to Written Comments

Watters V 109 – Response

The annual growth rate used in the traffic analysis is intended to forecast annual increases in traffic volumes in the study area based on historical patterns. As noted in the Draft EIR, the growth rate used in the traffic analysis was 2% per year (or approximately a 10% increase in the 2000 existing traffic volumes to the 2005 build-out year). The selection of the growth rate and traffic study horizon year by Los Angeles County is consistent with the methodology used by LADOT, as well as the CMP. By comparison, the CMP manual forecasts an annual increase in traffic of approximately 0.58% per year between 2000 and 2005. Therefore the 2% annual growth rate utilized in the Draft EIR is conservative.

Watters V 110 – Comment

54) How have major increases expected in traffic due to huge developments in Santa Clarita been handled in the traffic studies?

Watters V 110 – Response

Because of the distance of the project site and the City of Santa Clarita, any potential impact of future traffic from Santa Clarita on the project area would be regional in nature and is beyond the scope of this EIR. No additional response is required.

Watters V 111 – Comment

55) Why does James Noyes, Director of Public Works for the County of Los Angeles, recommend the intersection at Topanga/Mayan/Poema not be incorporated in the ATSAC system?

Watters V 111 – Response

The ATSAC system is used for intersections within the City of Los Angeles. The intersection included by the commenter is located within the County of Los Angeles.

Watters V 112 – Comment

56) What noise mitigations will be provided to existing homes that are impacted south of the 118 freeway?

Watters V 112 – Response

As stated in Section 4.7 of the Draft EIR, offsite noise impact would be 5.0 dB along Canoga Avenue from the project site to Rinaldi Street. Freeway background noise would substantially mask the project contribution. With incorporation of background effects, noise levels would change less than 1.0 dB near SR-118 and slightly over 1.0 dB near Rinaldi. As there were no significant impacts to residences south of SR-118, no mitigation measures are required.

Watters V 113 – Comment

57) How will a problem with compliance with construction conditions be handled during evening, night, weekend and holiday hours?

Watters V 113 – Response

See Sections 4.2.3 (Noise/Dust 1 – Response) and 4.2.7 (Development Issues 8 – Response) of this document.

Watters V 114 – Comment

58) What penalties will the developer or their successor be subject to for noncompliance with conditions?

Watters V 114 – Response

See Section 4.4.3 (ETI 25 – Response) of this document.

4.0 Response to Written Comments

Watters V 115 – Comment

59) *Why can't the development provide for acre or more lots to be consistent with Chatsworth lots, such as exist in other outlying areas of Chatsworth?*

Watters V 115 – Response

See Section 4.2.7 (Development Issue 10 – Response) and Appendix L of this document regarding land use density.

Watters V 116 – Comment

60) *Why can't the development provide for one house on 10 acres, to be consistent with the housing development standard set forth in the proposed SEA?*

Watters V 116 – Response

See Watters V 115 – Response of this document. See also Section 4.4.1 (C ECHO 2 – Response) of this document regarding SEA boundary recommendations and the proposed development standards.

Watters V 117 – Comment

61) *Why would a 50 year old general plan that was created when the north San Fernando Valley was farmland, be more respected in considering development standards than a proposed SEA dated in year 2000?*

Watters V 117 – Response

The County's General Plan dates from 1980 with numerous local amendments since its adoption. See Section 4.4.1 (C ECHO 2 – Response) of this document regarding SEA boundary recommendations.

Watters V 118 – Comment

62) *Is there any special geologic feature that has contributed to the success of the Plummers Mariposa Lily in the area?*

Watters V 118 – Response

Plummer's Mariposa Lily occurs on a variety of soils and there is no known specific geologic feature from the project site. See Section 4.2.1 and Appendix F.8 of this document regarding additional discussion of the lily.

Watters V 119 – Comment

63) *Has elimination of homes and grading over the Plummers Mariposa Lily area of intense populations been considered to allow this Federal Species of Concern to survive?*

Watters V 119 – Response

See Section 4.2.1 and Appendix F.8 of this document regarding additional discussion of the lily.

Watters V 120 – Comment

64) *Can an escrow or other type of bond be placed to ensure survival of the Plummers Mariposa Lily in the population presently identified on site?*

Watters V 120 – Response

See Section 4.2.1 and Appendix F.8 of this document regarding additional discussion of the lily.

Watters V 121 – Comment

65) (a) *Does the three months of grading allowed for the project in the EIR represent the actual amount of time the grading will occur?*

Watters V 121 – Response

See Section 4.2.7 (Development Issues 6 – Response) of this document.

Watters V 122 – Comment

(65b) *Can penalty provisions be placed for failure to complete in the specified period?*

4.0 Response to Written Comments

Watters V 122 – Response

Project construction schedules are normally not regulated by public agencies, providing that specific construction permits are kept in full force and effect.

Watters V 123 – Comment

66) If grading is truly expected to be completed in three months, can an appropriate time of year for grading be specified to reduce problems with fugitive dust that would occur if grading occurred in the fall while Santa Ana winds are prevalent?

Watters V 123 – Response

See Watters V 121 – Response. Mitigation measures have been included to reduce impacts from fugitive dust to less than significant. See Section 4.2.3 (Noise/Dust 2 – Response) of this document for further discussion of this issue.

Watters V 124 – Comment

67) Can the County call the principals of the local public schools to confirm date obtained by usual procedures is accurate?

(67b) If not, why not?

Watters V 124 – Response

Information regarding student population was obtained from LAUSD. Please see Sections 3.3.4, 4.3.7 and 4.5.28, and Appendix J of this document for additional discussion of this issue.

Watters V 125 – Comment

68) Can a condition be drafted that requires school fees to be used in the local area?

(68b) if not, why not?

Watters V 125 – Response

Please see Sections 3.3.4, 4.3.7 and 4.5.28, and Appendix J of this document for additional discussion of this issue.

Watters V 126 – Comment

69) Why are there sufficient utilities available, when we hear daily we must conserve power and water?

Watters V 126 – Response

As stated in the Draft EIR, no significant service or utility impacts would occur with implementation of recommended mitigation measures.

Watters V 127 – Comment

70) We have been told there are additional trails through the development, can information on this be provided to the community?

Watters V 127 – Response

See Section 4.4.1 (C ECHO 3 & 4 – Responses) of this document.

Watters V 128 – Comment

71) Can the trails have gaps in the outside fence periodically to enable access by equestrians to the outside areas such as Browns Canyon and Devil Canyon?

Watters V 128 – Response

Yes, gaps will be provided on the trails.

Watters V 129 – Comment

72) Will there be a fence around the development, if so, can it have similar gaps to enable equestrians to the outside areas?

4.0 Response to Written Comments

Watters V 129 – Response

Gaps in fences and/or walls will be provided where appropriate to provide continuity in the proposed trail system.

Watters V 130 – Comment

73) When will a revised drainage and runoff proposal be provided by the developer? Without this information, further questions on this area are not possible.

Watters V 130 – Response

See Section 4.2.2 (Urban Runoff I – Response) and Appendix I of this document for additional discussion of this issue.

Watters V 131 – Comment

74) What problems occurred at the La Vina project that was started by the same developers (currently under investigation by the Supervisors)?

Watters V 131 – Response

This is out of the scope of the EIR. No additional response is required.

Watters V 132 – Comment

74b) How can those problems be avoided at Deerlake?

Watters V 132 – Response

See Watters V 131 – Response and Section 4.4.3 (ETI 25 – Response) of this document.

Watters V 133 – Comment

75) Will the sewers for Twin Lakes proposed by the developer only be implemented if the CFD is formed, or will it be implemented in any case?

Watters V 133 – Response

As stated in the Draft Conditions of Approval (Appendix E of this document), the financing of the Twin Lakes sewer system is contingent on the County forming a CFD, which would include financing for the sewers.

Watters V 134 – Comment

76) Will the developer be required to actually make improvements (rather than propose study, recommend, etc.) to the

(76a) Topanga/118/Mayan Drive/Poema intersection

(76b) the offramps on Topanga Canyon to increase lanes

Watters V 134 – Response

Please see Sections 3.3.5 and 4.2.6, and Appendices E and K of this document for additional discussion of traffic impacts, conditions of approval and mitigation measures.

Watters V 135 – Comment

(76c) the various improvements mentioned by the developer for Chatsworth Street. (76d) the various no lefts and speed humps for Canoga near Celtic, Rinaldi, Candice.

Watters V 135 – Response

See Watters V 134 – Response.

Watters V 136 – Comment

77) What specific traffic improvements are being required to be made, to the extent not covered elsewhere?

Watters V 136 – Response

See Watters V 134 – Response.

4.0 Response to Written Comments

Watters V 137 – Comment

78) *Will damage on Canoga Avenue during construction period be repaired at the end of the project?*

Watters V 137 – Response

See mitigation measure 4.12-8 included in Section 3.0 and Appendix D of this document.

Watters V 138 – Comment

79) *Who pays for sewer expansion along Canoga Avenue?*

Watters V 138 – Response

The developer will be responsible for construction of the sewer system along Canoga Avenue.

Watters V 139 – Comment

80) *Will the proposed increase in the sewer main allow for further growth north of the project that could occur after the northerly property owners win an access lawsuit?*

Watters V 139 – Response

The sewer improvements included in the EIR are intended to mitigate impacts associated with the project. The potential for development north of the project site is speculative and out of the scope of the EIR. However, all new projects will have to similarly mitigate impacts to less than significant levels.

Watters V 140 – Comment

81) *Does the EIR accurately show the effect of this project on future development, or does it misstate the effect of the conservation easement?*

Watters V 140 – Response

See Section 4.5.3 (Augello 1 - Response) and Appendix M of this document.

Watters V 141 – Comment

82) *Will various community suggestions on the developers "Supplemental Conditions" be implemented?*

Watters V 141 – Response

See Appendix E of this document.

Watters V 142 – Comment

83) *Will developer be required to provide playground equipment in pocket parks instead of "may" provide?*

Watters V 142 – Response

There is no requirement to provide playground equipment.

Watters V 143 – Comment

84) *Will hours of deliveries during the construction and grading period be limited, to end by 2pm, due to school and summer camps that operate in the area?*

Watters V 143 – Response

See Section 4.2.3 (Noise/Dust 1 – Response) of this document.

Watters V 144 – Comment

85) *Will hours of deliveries and construction be limited to eliminate Saturday due to extensive equestrian use and recreational use during weekends?*

Watters V 144 – Response

See Section 4.2.3 (Noise/Dust 1 – Response) of this document.

4.0 Response to Written Comments

Watters V 145 – Comment

86) *Will construction and grading hours be limited to 8 to 5?*

Watters V 145 – Response

Construction hours will not be limited to 8 A.M. to 5 P.M. See Appendix E of this document.

Watters V 146 – Comment

87) *What are the limitations on "warm up" period?*

Watters V 146 – Response

See Watters V 145 – Response.

Watters V 147 – Comment

88) *What amount of time is allowed for developer/contractor to fix problems with non-compliance with conditions during grading and construction?*

Watters V 147 – Response

See Appendix E of this document regarding compliance issues.

Watters V 148 – Comment

89) *What penalties will be placed on developer/contractor for failure to comply with conditions?*

Watters V 148 – Response

See Section 4.4.3 (ETI 25 – Response) of this document.

Watters V 149 – Comment

90) *Who will enforce conditions and be familiar with them?*

Watters V 149 – Response

See Section 4.4.3 (ETI 25 – Response) and Appendix E of this document.

Watters V 150 – Comment

91) *Where will elementary school children be able to be enrolled, since Chatsworth Park Elementary School is completely full in certain grades?*

Watters V 150 – Response

Assignment of students to specific schools is the responsibility of LAUSD and is out of the scope of the EIR. As stated in Section 4.10 of the Draft EIR, impacts to schools would not be significant with implementation of recommended mitigation measures. Please see Sections 3.3.4, 4.3.7 and 4.5.28, and Appendix J of this document for additional discussion of this issue.

Watters V 151 – Comment

92) *Will this condition be implemented, from the Supplemental Conditions, "Off-site vehicular traffic through the Twin Lakes community by construction equipment and/or contractors' vehicles shall be prohibited. Subdivider will post necessary signs and/or personnel at all entries to Twin Lakes to insure enforcement of this prohibition."?*

Watters V 151 – Response

Yes. See Section 4.2.3 (Noise/Dust 1 – Response) of this document.

Watters V 152 – Comment

93) *Will this condition be implemented, from the Supplemental Conditions, "All vehicles belonging to construction personnel shall be parked on-site. Parking of such vehicles shall be not be permitted along Mayan Drive, Canoga Avenue, nor within any portion of the nearby communities."?*

Watters V 152 – Response

Yes. See Section 4.2.3 (Noise/Dust 1 – Response) of this document.

4.0 Response to Written Comments

Watters V 153 – Comment

94) *Will this condition be implemented, from the Supplemental Conditions, "Water tanks and water trucks shall be available on-site prior to commencing any grading operations to insure that effective dust control measures can be implemented and sustained during these operations."?*

Watters V 153 – Response

Yes. See Section 4.3.3 (Noise/Dust 2 – Response) of this document.

Watters V 154 – Comment

95) *Why doesn't the County require development compatible with other outlying areas of Chatsworth, and require at least acre lots?*

Watters V 154 – Response

See Section 4.2.7 (Development Issue 10 – Response) and Appendix L of this document regarding land use density.

Watters V 155 – Comment

96) *Why should a 50 year old County general plan, created when all was open space, be allowed to justify development when general plans are supposed to up updated every 20 years?*

Watters V 155 – Response

This is out of the scope of the EIR. No additional response is required. Please see Watters V 117 Response.

Watters V 156 – Comment

97) *Can proposed responses to EIR comment letters be posted on the internet, to make them available to the public, as they are processed?*

Watters V 156 – Response

See Watters 100 and 101 – Responses of this document..

Watters V 157 – Comment

98) *How can we get the decision-makers to acknowledge that Porter Ranch is currently in the process of being built, so ignoring the large increases in traffic at that project is inappropriate?*

Watters V 157 – Response

See Watters 105 – Response of this document.

Watters V 158 – Comment

Will County draft conditions, to require developer to actually achieve promises that are being made, or will County accept comments such as "developer to negotiate", "developer to prepare study", developer to build unless", that eliminate the necessity to accomplish the stated mitigation measure? (for example, to negotiate school fees benefiting local community, to prepare study for Chatsworth Street traffic issues, to build sheriff's substation unless an easement holder objects, etc., etc..)

Watters V 158 – Response

See Appendix E (Draft Conditions of Approval) of this document.

Watters V 159 – Comment

Log of Construction Concerns

April 2002

- 1) *There was damage to the asphalt road north of the old bridge – in bringing test drilling equipment over the bridge. The developer was contacted and promised to repair the damage. So far, nothing has been done.*

4.0 Response to Written Comments

Watters V 159 – Response

This is beyond the scope of the EIR. No additional response is required.

Watters V 160 – Comment

2) *We received no notification of this testing.*

Watters V 160 – Response

This is beyond the scope of the EIR. No additional response is required.

Watters V 161 – Comment

3) *There was drilling on a Saturday morning during the two-week period of testing.*

Watters V 161 – Response

This is beyond the scope of the EIR. No additional response is required.

Watters V 162 – Comment

4) *A horseback rider was thrown because of unexpected noise - can signs be posted in the future to notify riders that activity is going on?*

Watters V 162 – Response

This is beyond the scope of the EIR. No additional response is required.

Watters V 163 – Comment

5) *Notification was not properly given regarding resuming drilling in the vicinity of the owl's nest - neither in manner or in regards to time span to respond to the notice.*

Watters V 163 – Response

This is beyond the scope of the EIR. No additional response is required.

4.5.139 - Patrick Weir

March 26, 2002

Weir 1 –Comment

As I understand it, the referenced project will exempt the developer from taking responsibility for ingress/egress traffic resulting from this first of many planned developments.

Excuse me???? This development is not even in the city of Los Angeles, it is county land. And the county is being allowed to turn our residential streets into thoroughfares in order to make the development feasible enough for the developer to proceed with the project? Is the increase in property tax revenues already being counted?

Porter Ranch built commercial thoroughfares to route traffic so that our residential streets would not pay the price for the developer. It is not right that you can take part in approving a footprint of nearly five hundred houses and not require the developer to provide their own streets.

At present, this is an insult. If followed through, it will be tyranny. How dare you even think about approving this. Approval [sic] will ruin our neighborhood, reduce safety and destroy property values. The developer will get his money, the builder will get his money, the city and county will get their money and our neighborhood will get shafted.

We know that all of the open spaces we moved here for are scheduled for eventual slaughter and we would be naïve to think that we can preserve this land.

But, get your own streets.

Weir 1 –Response

This comment is not related to the EIR. The comment has been received and noted.

4.0 Response to Written Comments

4.5.140 Katherine Weisman

January 7, 2002

Weisman 1 - Comment

I am writing to express my objection to the proposed Deerlake Ranch development in Chatsworth (Project No. 99-239(5)) for which you have scheduled a January 23 hearing.

The proposed project is located close to my home, and I am particularly concerned about the following:

Impact on the environment, (size of the project, effect on the land, animals, health of the residents- i.e. Valley Fever).

Weisman 1 - Response

As stated in the Draft EIR, project impacts would not be significant with implementation of recommended mitigation measures.

Please see Section 4.5.136 (Watters V 25 – Response) of this document regarding Valley Fever.

Weisman 2 - Comment

Traffic is also a grave concern-already it backs up terribly at Topanga & the 118 fwy.

Weisman 2 - Response

As stated in Section 4.12 of the Draft EIR, traffic impacts would not be significant with implementation of recommended mitigation measures. Please see Sections 3.3.5 and 4.2.6, and Appendix K of this document for additional discussion of traffic impacts and mitigation measures.

Weisman 3 - Comment

The area to be developed is one of the very last open areas in the San Fernando Valley. The development of this area represents the death of the beauty and tranquility that brought people to settle the area in the first place. Please leave this small area intact!!

Weisman 3 - Response

The commenter's opposition to the project is noted and will be forwarded to the decision makers.

Weisman 4 - Comment

In light of the significant adverse impact this project would have on my neighborhood and the lack of meaningful measures to alleviate that impact, I request that you not approve the project as currently presented. Any further consideration of the project should be conditioned on:

- *a substantial reduction in the size and scope of the project;*
- *a more meaningful proposal for mitigation by the applicant; and*
- *postponement of a Commission recommendation in order to allow time for adequate public study and evaluation of the applicant's revised proposals.*

Weisman 4 - Response

Please see Section 4.5.5 (Belkin, L 3 – Response) of this document.

4.5.141 John and Shannon Wetzel

January 4, 2002/January 7, 2002

Wetzel 1 – Comment

As residents and horse-owners of Chatsworth, we are very concerned about the Deer Lake Ranch Project plan to divert all run-off water through storm drains into Devil's Canyon. Devil's Canyon has a very delicate eco-system that has basically never been disturbed – the beauty of which is enjoyed by many horse trail riders including us. Currently, the area that runs off into that canyon has

4.0 Response to Written Comments

only 7 homes, 4 of which are occupied. If you add 484 additional homes and the pollutants that go with them, all natural habitat and wildlife will be threatened! We do not see how removing natural vegetation, even if it reduces the run-off, and having polluting chemicals run through the basin instead, would be good for the creek bed's eco-system. There are currently storm drains that take the run-off from lower Twin Lakes into the Brown's Canyon wash. The run-off from the new project should be diverted through storm drains that hook-up to these, bypassing the natural creek bed.

Wetzel 1 – Response

As stated in Section 4.6 of the Draft EIR, impacts with regard to urban runoff would not be significant with implementation of mitigation measures. See Section 4.2.2 (Urban Runoff 1 – Response) and Appendix I of this document for additional discussion of this issue.

Wetzel 2 – Comment

The developer's plan to mitigate with a SUSMP (Standard Urban Storm-water Mitigation Plan) will not be sufficient. No matter how many signs are posted or how much you try to educate people about the hazards of household products and yard wastes, these substances will continue to pollute the water run-off. The amount of polluted run-off from a building project of this scope will be enormous. Will the series of filtration points be adequate to remove all toxins? How will the use of non-toxic pesticides and fertilizers by the developer in landscaping the project be enforced?

Wetzel 2 – Response

See Wetzel 1 – Response of this document.

Wetzel 3 – Comment

We feel that the EIR deals with this matter in a totally inadequate manner. If we are to preserve the small amount of untouched areas that we have left amidst our increasing degree of urban development, we must be more creative in solutions to hazardous waste management.

Wetzel 3 – Response

See Wetzel 1 – Response of this document.

Wetzel 4 – Comment

Additionally, the reduction of available, established horse trails in our beautiful backyard mountains would be a crime of our generation.

Wetzel 4 – Response

The comment has been noted. See Section 4.4.1 (C ECHO 3 & 4 – Responses) of this document regarding trails.

Wetzel 5 – Comment

I am writing to express my objection to the proposed Deerlake Ranch development in Chatsworth (Project No. 99-239(5)) for which you have scheduled a January 23 hearing.

The proposed project is located close to my home, and I am particularly concerned about the following:

The local ecology is in danger.

Wetzel 5 – Response

As stated in the Draft EIR, project impacts would be less than significant with implementation of recommended mitigation measures.

Wetzel 6 – Comment

Traffic will increase on Chatsworth St. at De Soto Blvd and Independence Ave.

4.0 Response to Written Comments

Wetzel 6 – Response

As stated in Section 4.12 of the Draft EIR, traffic impacts would not be significant with implementation of recommended mitigation measures. Please see Sections 3.3.5 and 4.2.6, and Appendix K of this document for additional discussion of traffic impacts and mitigation measures.

Wetzel 7 – Comment

In light of the significant adverse impact this project would have on my neighborhood and the lack of meaningful measures to alleviate that impact, I request that you not approve the project as currently presented. Any further consideration of the project should be conditioned on:

- *a substantial reduction in the size and scope of the project;*
- *a more meaningful proposal for mitigation by the applicant; and*
- *postponement of a Commission recommendation in order to allow time for adequate public study and evaluation of the applicant's revised proposals.*

Wetzel 7 – Response

Please see Section 4.5.5 (Belkin, L 3 – Response) of this document.

4.5.142 Mark and Karel Wild

January 7, 2002

Wild 1 – Comment

Wildlife, Wildlife, Wildlife, Wildlife, Wildlife, Wildlife, Wildlife, Wildlife. See Attached (Form Comment Letter - Biology, Form Comment Letter – Fire Services, Form Comment Letter – Police Services, and Form Comment Letter – Non-Traffic Issues).

Wild 1 – Response

Section 4.3 of the Draft EIR included a discussion of impacts upon sensitive species, nesting birds and raptors, and wildlife movement. Impacts to biological resources would not be significant with implementation of recommended mitigation measures. Please see also Section 4.2.1 of this document for additional discussion of this issue.

See Section 4.2 for response to form letters.

4.5.143 Heather Williams

January 12, 2002

Williams H 1 - Comment

I am a senior at Chatsworth High School and previously attended Lawrence Middle School. According to the EIR for the proposed Deerlake Ranch project, Chatsworth High School has adequate capacity to handle the anticipated enrollment increase from the project. I don't know where they got their information, but I find that hard to believe.

There are NO lockers available for any freshmen. I share a locker with my sister who is a freshman so that she doesn't have to carry two backpacks around all day. Sometimes I have to wait almost the entire lunch period to use the bathroom because the lines are so long. I sometimes wait in line 10 minutes to buy lunch, and sometimes when I get to the front of the line, they've run out of what I want. The EIR says that there's room for 1291 more area residents to enroll at Chatsworth High School. WOW! We're already bursting at the seams. We've added bungalows to try to accommodate all of the students. The halls are so crowded that I barely have time between periods to make it to class on time. I've had some classes where we didn't have enough textbooks to go around. In one English class, we couldn't take our textbooks home because we had to share them with another period.

4.0 Response to Written Comments

This semester, one of my classes has over 40 students. Some of the students have to sit off to the side because of the lack of space. Some of the students had to sit at the teacher's desk at the beginning of the semester until the counselor could find other classroom space for them. My teacher has difficulty physically moving about the classroom to help students because it's so crowded. My teacher doesn't have time to answer all the students' questions because there are just too many. In my painting and zoology classes, there are no empty seats.

When I was a sophomore, some teachers didn't have their own classroom. They had to move around every period to a classroom where the teacher had a conference period. In my science class, the teacher could hardly do any science demonstrations because he couldn't move all his materials from class to class.

Williams H 1 - Response

As stated in Section 4.10 of the Draft EIR, impacts to schools would not be significant with implementation of recommended mitigation measures. Please see Sections 3.3.4, 4.3.7 and 4.5.28, and Appendix J of this document for additional discussion of this issue.

Williams H 2 - Comment

In addition to the impact on schools, the project area is my favorite places [sic] to hike. I go at least twice a week, and I can walk there right from my front door. I've seen coyotes, bobcats, quail, snakes, red-tailed hawks, frogs and tadpoles. I'm concerned that the project will destroy the habitat for these animals.

Williams H 2 - Response

Section 4.3 of the Draft EIR included a discussion of impacts upon sensitive species, nesting birds and raptors, and wildlife movement. Impacts to biological resources would not be significant with implementation of recommended mitigation measures. Please see also Section 4.2.1 of this document for additional discussion of this issue.

Williams H 3 - Comment

Please don't approve the project unless they scale it way down.

Williams H 3 - Response

The project has been revised to reduce the total number of residential units from 484 to 388. This includes 155 minimum 15,000 square foot estate lots, of which 55 would be equestrian lots. Please see Section 2.0 of this document for further discussion of this issue.

See Section 4.2.7 (Development Issue 10 - Response) and Appendix L of this document regarding land use density.

4.5.144 Judy Williams

January 15, 2002

Williams J 1 - Comment

The Deerlake Ranch Project EIR does not address any impacts on mountain biking in the area. We have a group of up to 8 or 10 who ride together every Saturday morning including some who bike individually almost daily. I have no idea how many other mountain bikers frequent the area, but we see other bikers regularly. The area between Rocky Peak and Limekiln Canyon is extremely popular for mountain bikers throughout the West Valley.

One of our favorite rides goes right along the eastern boundary of the project area to access mountain bike routes north of the project area. The EIR does not address how continued safe access will be guaranteed for mountain bikers. As a mitigation measure, Presidio Development should

4.0 Response to Written Comments

provide a safe, designated bike route through the project area both during and after construction to permit access to the north of the project. This should be spelled out in the Conditions of Approval. Presidio Development may be tempted to assume this issue is already addressed with mitigation measures for equestrian access. This is definitely not the case. Not all equestrian trails are suitable for mountain bikers and vice versa. In particular, we favor the ridge routes and unpaved roads that avoid conflicts with equestrian riders or allow ample room to pass safely.

Williams J 1 - Response

The project includes a public hiking and equestrian trail system, to be constructed to County standards, that would loop the site, connecting to existing trails east, north, and west of the project site. Trails are proposed to be used by all in the area. There is no requirement for separate trails to be constructed for mountain bike riders. Please see Section 2.0 of this document regarding additional trails included in the project.

Williams J 2 - Comment

Besides riding routes north of the project area, mountain bikers frequently ride north on Canoga Ave. to Mayan Dr. to Poema Place to access the Johnson Trail through Indian Hills Estates and to access other routes from Santa Susana Pass Road such as Rocky Peak. Since the project will necessitate substantial alteration of Canoga and Topanga just north of SR 118 and will tremendously increase traffic along Canoga, the EIR needs to address how project developers will maintain safe access for mountain bikers from the intersection of Canoga and Chatsworth north to Mayan Drive and then west across the intersection with Topanga.

Williams J 2 - Response

As stated in Section 4.12 of the Draft EIR, traffic impacts would not be significant with implementation of recommended mitigation measures. Please see Sections 3.3.5 and 4.2.6, and Appendix K of this document for additional discussion of traffic impacts and mitigation measures, including safety measures for trail crossings.

Williams J 3 - Comment

Can we trust ANY findings in this EIR? I don't know anyone who has time to independently verify the entire document, but EVERY finding I attempted to verify either independently or through a third party was contradicted.

In Tables 4.10.1 and 4.10.3, the EIR utilizes the legitimate sounding "resident area enrollment" of 2211 at Chatsworth High School with an official capacity of 3502 to conclude that the projected addition of 165 students would have no significant impact and still leave space for 1126 more students. The only hint that these figures might not reflect reality is a vague footnote that does NOT state that they have conveniently ignored the non-resident enrollment. Throughout the text and in Table 4.10.5, they conveniently drop the caveat in the footnote of the previous tables and give the deflated figures as the ACTUAL enrollment.

These figures are extremely misleading, and they clearly use these figures to DELIBERATELY obscure the true situation. I don't make this accusation lightly. The true enrollment figures are easier to access than the "area resident enrollment" and are the obvious measure of available space. It is extremely unlikely they would have a sub-category figure like the "resident area enrollment" without also knowing the non-resident enrollment and actual total enrollment.

Even the misleading figures they have chosen to use are wrong. This MAY be explained if they got their figures from the LAUSD instead of from the high school. Regardless, one simple phone call would give them the correct figures. The administration of Chatsworth High School gives their capacity as 3311, almost 200 less than the 3502 in the EIR. Furthermore, the current enrollment is 3175, a far cry from 2211 "area resident enrollment" which they clearly intend the reader to infer

4.0 Response to Written Comments

reflects the actual enrollment. Even at 3175, slightly less than capacity, officials wish they could reduce the number of students to ease crowding.

Williams J 3 - Response

As stated in Section 4.10 of the Draft EIR, impacts to schools would not be significant with implementation of recommended mitigation measures. Please see Sections 3.3.4, 4.3.7 and 4.5.28, and Appendix J of this document for additional discussion of this issue.

Williams J 4 - Comment

The deliberate use of misleading facts (that upon investigation are incorrect anyway) calls into question the validity of the entire document. At the public meeting on January 8, the principal of Chatsworth Park Elementary School similarly contradicted their "facts" about her school. A neighbor down the street uncovered flaws and outright fabrication in the traffic study. Another neighbor identified a half dozen heritage oaks that were supposedly nonexistent on the property. The applicant demonstrates clear contempt for the EIR process and utter disregard for the impacted residents of Chatsworth. I urge you to throw out the entire document and recommend the NO ACTION alternative until the applicant produces a legitimate, factual, honest EIR. Furthermore, if the project goes forward in some form, I urge you to support a project of AT MOST one-fourth the size of the currently proposal [sic]. This would be more compatible with nearby neighborhoods and would lessen the impact on the infrastructure which is already at or near capacity.

Thank you for your time and consideration.

Williams J 4 - Response

Please see Section 4.4.2 (CLPA 2 - Response) of this document regarding the adequacy of the EIR. The commenter's opposition to the project is noted and will be forwarded on to the decision makers.

4.5.145 Marv Williams

January 16, 2002

Williams M 1 - Comment

I am writing to express my objection to the proposed Deerlake Ranch development in Chatsworth. The proposed project is located close to my home (I live in the City of Los Angeles), and I am particularly concerned about several items. During the construction phase all the heavy equipment and regular traffic will be through Canoga Avenue. This will drastically change the atmosphere of our quiet neighborhood. Not only will the noise increase, but also the dirt and debris from the construction will be horrendous.

Williams M 1 - Response

As discussed in Sections 4.2 and 4.7 of the Draft EIR, no significant noise or dust impact would occur from the project with implementation of recommended mitigation measures. Please refer to Section 4.2.3 of this document for additional discussion of impacts and mitigation.

Williams M 2 - Comment

Once the project is complete, Canoga Avenue and Topanga Canyon will be the only points of entrance and egress. With Topanga Canyon already crowded to capacity, Canoga will become the major thoroughfare for people going to work, school, grocery stores, and other shopping areas. Our once quiet community will be changed forever. One suggestion would be to build a road off of Brown's Canyon. This extra access road will diminish road traffic in all areas, and will not affect nearly as many homes as the original plan. Brown's Canyon has a direct link to the 118 Freeway and traffic would have an impact on only five or six homes.

4.0 Response to Written Comments

Williams M 2 – Response

See Appendix N of this document regarding alternate access to the project site.

Williams M 3 - Comment

Many of the facts mentioned in the EIR are inaccurate and misleading. The conclusion that there will be no impact on public schools is absurd. After contacting all three public schools, Chatsworth High School, Lawrence Middle School, and Chatsworth Park Elementary School, the actual enrollment figures far exceed those given in the EIR. The EIR speaks of "Resident Area Enrollment" but mentions nothing of the children being bused. Including these students in their calculations would surely put the schools in question over the allotted amount. This is in direct opposition to Governor Davis' plan of limiting the size of classrooms.

Williams M 3 – Response

As stated in Section 4.10 of the Draft EIR, impacts to schools would not be significant with implementation of recommended mitigation measures. Please see Sections 3.3.4, 4.3.7 and 4.5.28, and Appendix J of this document for additional discussion of this issue.

Williams M 4 - Comment

The beautiful scenery of the boulder-strewn hills of Chatsworth makes it such a wonderful area for equestrians, mountain bikers, hikers, and nature lovers. With this large development much of the scenery and many of the existing trails and paths would be destroyed and lost forever. I urge you to drastically reduce the size of this project so that the many who now live in this area can continue to enjoy the small amount of untouched land that remains.

Thank you for your consideration.

Williams M 4 – Response

The project has been revised to reduce the total number of residential units from 484 to 388. This includes 155 minimum 15,000 square foot estate lots, of which 55 would be equestrian lots. Please see Section 2.0 of this document for further discussion of this issue.

See Section 4.2.7 (Development Issue 10 – Response) and Appendix L of this document regarding land use density.

4.5.146 Martin Woll

December 20, 2001/January 15, 2002/January 16, 2002

Woll 1 – Comment

I recently sent you a comment letter addressing Section 4.12 Transportation/Traffic of the Draft Environmental Impact Report ("EIR") for Project No. 99-239(5), the proposed Deerlake Ranch development project ("Project"). In that letter I pointed out numerous gross inaccuracies that render the EIR useless for its intended purpose of evaluating the Project's impact on our Chatsworth neighborhood. Further to those comments, responsible CALTRANS personnel have advised me that the draft EIR does not adequately address their many concerns.

Woll 1 – Response

Responses have been prepared to all letters providing comments to the Draft EIR. Please see Appendix B and Section 4.0 of this document.

The commenter has not provided additional details regarding comments provided to him by representatives from Caltrans. However, Caltrans has issued a letter with comments to the Draft EIR, and those comments have been responded to in this document (see Section 4.3.2).

4.0 Response to Written Comments

Woll 2 – Comment

In light of the significant changes required in the EIR in order for it to be not misleading or materially deficient, I hereby request that:

the applicant be required to prepare a subsequent or supplemental EIR which corrects the deficiencies noted in my comment letter; and

Woll 2 – Response

Opinions expressed regarding the adequacy of the Draft EIR will be forwarded to the decision maker. No deficiencies have been identified that would require the need to prepare a subsequent or supplemental EIR.

Woll 3 – Comment

the public be given adequate time to study and comment on the revised data, analyses and proposed mitigation measures offered by the applicant.

Woll 3 – Response

Please see Sections 1.1 and 4.5.5 (Belkin L 3 – Response) of this document regarding the comment period for the Draft EIR.

Woll 4 – Comment

Accordingly, I ask that you extend the deadline for public comment on the EIR to a date at least 45 days after the date on which the applicant files the subsequent or supplemental EIR and makes it available to the affected community. Although I don't speak for CALTRANS, it is my understanding that it intends to send you a similar request.

I understand that it is common practice for developers to reply to public comments by simply stating that they will make corrections in the final EIR, after which they submit a final EIR that may or may not be adequately responsive to the concerns of the community. We do not want to be short-changed in this manner. Revisions to the EIR, especially such pervasive and substantial revisions as are clearly needed in this instance, should be subject to the same public and official scrutiny as was applied to the original document.

Woll 4 – Response

Please see Sections 1.1 and 4.5.5 (Belkin L 3 – Response) of this document regarding the comment period for the Draft EIR.

Woll 5 – Comment

I am writing to express my concern over inadequate, vague and unenforceable mitigating actions and conditions with respect to construction activities proposed by the applicant in the Draft Environmental Impact Report ("DEIR") for the proposed Deerlake Ranch development in Chatsworth (Project No. 99-239(5)). As currently presented in the DEIR and draft list of conditions, the neighborhood residents are left with inadequate protection from construction noise, dust and the hazards of large-vehicle operation.

Woll 5 – Response

See Sections 4.2.3 (Noise/Dust 1 – Response) and 4.2.7 (Development Issues 8 – Response) of this document. See also Appendix E of this document regarding the conditions of approval.

Woll 6 – Comment

The applicant proposes a "hot line" for community complaints and questions. This will be effective only if: a) response is made within 24 hours or less after a call is received, b) a log of complaints and dispositions is maintained locally and is open for a public inspection, c) repeated noncompliance results in financial penalties to the developer, and d) the call-in telephone number is toll free to area residents. All these provisions should be incorporated into the conditions of approval.

4.0 Response to Written Comments

Woll 6 – Response

See Appendix E of this document.

Woll 7 – Comment

The DEIR refers to dust control measures, but the conditions make only passing reference to the availability of water trucks for dust control. Conditions similar to those imposed on another current nearby project (City Plan Case No. 2000-3583-CU) should be imposed (see Attachment 1). Conditions should specify compliance with SCAQMD District Rule 403. Wind speed of 15 mph - not 25 mph - should trigger cessation of grading and excavating. Wind should be measured with an on-site anemometer, not by reference to an offsite location such as Van Nuys Airport where winds are typically weaker than the [sic] are in the foothills. All these provisions should be incorporated into the conditions of approval.

Woll 7 – Response

As discussed in Sections 4.2 and 4.7 of the Draft EIR, no significant noise or dust impact would occur from the project with implementation of recommended mitigation measures. See Sections 4.2.3 (Noise/Dust 1 – Response) and 4.2.7 (Development Issues 8 – Response) of this document. See also Appendix E of this document regarding conditions of approval.

Woll 8 – Comment

Because the proposed project borders on the City of Los Angeles incorporated area and because construction activity may be audible in homes within the City of Los Angeles, the conditions of approval should include: a) compliance with City Noise Ordinance No. 144.331 and 161.574 and any subsequent ordinances governing the emission or creation of noise, to the extent more stringent than state or county statutes; b) requirement to use of state-of-the-art noise muffling and shielding devices on all construction and grading equipment; and c) limits on the number of pieces of equipment that can be used simultaneously. Similar conditions have been imposed on another current nearby project (City Plan Case No. 2000-3583-CU).

Woll 8 – Response

See Section 4.3.5 (City Council 1 – Response) of this document.

Woll 9 – Comment

Because the proposed project borders on and drains into the City of Los Angeles incorporated area and because construction traffic will traverse Los Angeles City streets, the conditions of approval should require full compliance with Los Angeles Municipal Code Art. IX Ch. 1 Div. 70, covering grading and excavating activities.

Woll 9 – Response

See Section 4.3.5 (City Council 1 – Response) of this document.

Woll 10 – Comment

Construction equipment and heavy delivery vehicles are incompatible with equestrian, bicyclists [sic], joggers, hikers and other recreational users of the area surrounding the proposed project. Such use is heaviest on weekends; accordingly, the conditions of approval should prohibit ingress and egress of these vehicles all day on Saturdays as well as on Sundays.

The same incompatibility discussed in the preceding paragraph presents a hazard to all current users of Canoga Avenue. The developer should be required either to find an alternate route for the entire duration of the project or to discontinue the use of Canoga as a route for grading, construction and delivery vehicles by a firm date not later than 14 months from the commencement of the project.

Woll 10 – Response

See Section 4.2.3 (Noise/Dust 1 – Response) of this document.

4.0 Response to Written Comments

Woll 11 – Comment

Changes in economic conditions could cause grading or construction activities to be discontinued for the extended periods of time. Uncompleted such activities could pose a variety of threats including erosion, runoff, dust, earth movement, incomplete traffic control measures and pollution, among others. The conditions of approval should require completion bonds for all promised mitigation measures and improvements.

Because the measures described in this letter are important for the protection of local residents, I request that you not take action on the project until the conditions of approval are formalized so as to include all the appropriate safeguards related to the construction period.

Woll 11 – Response

See Appendix E of this document. Construction activities, such as grading, require that a surety bond be posted with the County to guarantee completion of the work.

Woll 12 – Comment

I am writing to advise you of another deficiency in the Draft Environmental Impact Report (“DEIR”) for the proposed Deerlake Ranch development in Chatsworth (Project No. 99-239(5)). This deficiency relates to the proposed mitigation measures at and near the intersections of SR-118 and Topanga Canyon Boulevard.

The applicant has touted the significance of two mitigation measures in connection with the severely impacted intersections mentioned above. One measure is contribution to Los Angeles City’s ATSAC project, which would add communication links and enhanced coordination among traffic signals at key intersections in the San Fernando Valley. The other is intersection modification, including coordination of traffic signals. However, there are two major obstacles to placing reliance on these measures.

First, James Noyes, County Director of Public Works, recommended in his March 29, 2001 letter to the applicant’s traffic consultants (Draft EIR Appendix A.3) that none of the traffic signals described above be connected to the ATSAC. This means that there can be no expectation of the ATSAC relief from the congestion on Topanga that often backs up the area of the intersection with SR-118.

Woll 12 – Response

The Draft EIR on page 4.12-28 specifies the recommended traffic mitigation measures for the intersection of Topanga Canyon Boulevard and the SR-118 westbound on/off ramps, which is located in unincorporated Los Angeles County. These measures (mitigation measures 4.12-1 through 4.12-4) do not include the installation of the ATSAC traffic signal system improvements at this location.

Mitigation measure 4.12-5 in the Draft EIR recommends the installation of the ATSAC traffic signal system improvements at the intersection of Topanga Canyon Boulevard and the SR-118 eastbound on/off ramps. This intersection is located in the City of Los Angeles, and therefore is under the jurisdiction of LADOT. This measure is consistent with the recommendations outlined in the LADOT correspondence dated January 11, 2002 which contains their comments to the Draft EIR. ATSAC will also be installed at intersections along Topanga Canyon Boulevard south of SR-118 by LADOT, which are under jurisdiction of the City and not the County.

The traffic signals at the Topanga Canyon Boulevard intersections with the SR-118 eastbound and westbound on/off ramps are maintained by Caltrans. Although the intersections are in separate jurisdictions (i.e., the County and the City), the timing of the traffic signals are coordinated. With the implementation of the recommended traffic mitigation measures outlined in the Draft EIR, Caltrans will continue to maintain and coordinate the traffic signal operations at the two intersections. Please see Sections 3.3.5 and 4.2.6, and Appendix K of this document for additional discussion of traffic impacts and mitigation measures.

4.0 Response to Written Comments

Woll 13 – Comment

Second, the proposed modifications to the Topanga/SR-118 area are subject to a formal project study by the California Department of Transportation ("CALTRANS"). I am advised by CALTRANS that this study can take several years and that approval is not assured. If you approve this development as currently proposed before the CALTRANS study is completed, there is a possibility that we in the neighborhood will be left with, literally, an unmitigated disaster in terms of local street impact and with no one to bear the financial responsibility for remedial action.

Woll 13 – Response

The commenter is referring to traffic mitigation measures 4.12-1 through 4.12-4 which are listed in the Draft EIR on page 4.12-28. The design and construction of the improvements within the state right-of-way will be processed through the standard Caltrans Encroachment Permit procedure. This is confirmed in the Caltrans correspondence dated February 15, 2002 (see Appendix K of this document).

Implementation of mitigation measures and assurance of completion is tied to various aspect of development of the project site and is outlined in the Mitigation Monitoring Program (see Appendix D of this document).

Woll 14 – Comment

In light of significant risk to area residents, I request that you not approve the project as currently presented and that you defer any decision at least until the uncertainty surrounding the final result of the CALTRANS study is completely resolved.

Woll 14 – Response

See Woll 13 – Response of this document.

Woll 15- Comment

I am writing to advise you of a further deficiency in the Draft Environmental Impact Report ("DEIR") for the proposed Deerlake Ranch development in Chatsworth (Project No. 99-239(5)) for which you have scheduled a January 23 hearing. This deficiency relates to the Los Angeles County Metropolitan Transportation Authority's ("MTA") requirement for a Traffic Impact Assessment ("TIA") on SR-118, the Ronald Reagan Freeway.

In my comment letter of December 17, 2001, I advised you that the DEIR was deficient in that it attempted to sidestep the TIA by utilizing a measurement point outside the normal flow of traffic from this development. The applicant's January 7, 2001 response to my comment claims that the project will generate fewer than the 150 freeway trips that trigger the requirement for a TIA. However, the applicant has conveniently juggled the numbers so as to come just under that threshold.

Woll 15 – Response

See Section 4.2.6 (Topical Response) of this document.

Woll 16 – Comment

A proper analysis (Attachment A) shows that 160 or more A.M. peak-hour freeway trips in the congestion-impacted direction are likely to be generated by this project. Accordingly, the TIA must be performed and subjected to review and evaluation by the MTA and by the public before you take action on this development project. It is important to note that traffic at the applicable monitoring station (Woodley Avenue at SR-118) is currently rated on the verge of a "Failing" level of service by the MTA. Project-generated traffic will push it over the edge, adding to already-unacceptable congestion.

In light of this serious defect in the analysis of environmental impact, I request that you not approve the project as currently presented.

4.0 Response to Written Comments

Woll 16 – Response

See Section 4.2.6 (Topical Response) of this document.

Woll 17– Comment

I am writing to object to the Draft Environmental Impact Report ("DEIR") for the proposed Deerlake Ranch development in Chatsworth (Project No. 99-239(5)) as it addresses "Related Projects" and underlying assumptions concerning population growth.

Section 3.0 of the DEIR includes a footnote stating that the traffic and other analyses therein consider only half of the 3,400 homes and less than half the 3 million square feet of commercial space now under construction in the mammoth adjacent Porter Ranch development. When evaluating the long-term impact of the proposed project on our neighborhood, it is wrong to ignore the effect of such a massive nearby development solely because it won't be completed when the subject project is finished.

Woll 17 – Response

The evaluation of cumulative traffic impacts in the Draft EIR is consistent with the requirements of CEQA. Section 15130 of CEQA requires that the lead agency (i.e., Los Angeles County) preparing the Draft EIR for the project evaluate potential cumulative impacts by considering the traffic effects of past, present and probable future projects (i.e., the related projects). The traffic analysis in the Draft EIR complies with the CEQA requirement (see the list of related projects provided in the Draft EIR on Table 4.12.3).

The LACDWP requires analysis of cumulative traffic impacts to the year of project build-out (estimated at the year 2005). This is also consistent with selection of the traffic study horizon year required by LADOT. The analysis and assessment of potential project-related traffic impacts based on an assumed build-out year of 2005 is reasonably foreseeable and therefore appropriate. Traffic conditions that may occur beyond 2005 becomes somewhat speculative and thus, would not yield any new meaningful information.

The Porter Ranch related project in the City of Los Angeles as referenced by the commenter is shown on Table 4.12.3 in the Draft EIR. It is also noted on the table that LADOT required that the traffic analysis include half the Porter Ranch related traffic in the 2005 traffic study horizon year. This assumption was also approved by the LACDWP. The inclusion of half of the Porter Ranch traffic provides for a highly conservative analysis of traffic conditions in 2005 as it is unlikely that the Porter Ranch project will be 50 percent complete by 2005. Further, while LADOT and LACDWP required inclusion of the Porter Ranch traffic, there is no "benefit" assumed in the Draft EIR traffic analysis for the traffic mitigation measures that the Porter Ranch project has been required to implement in the study area. Therefore, it is concluded that the traffic analysis in the Draft EIR provides a sufficiently conservative assessment of the cumulative traffic impacts associated with the Porter Ranch project and no further analysis is required.

Woll 18 – Comment

Appendix A.2 of the DEIR includes a comment letter from the Southern California Association of Governments. Page 2 of that comment letter contains a requirement that the DEIR reflect the most current SCAG population growth forecasts for unincorporated County areas. The accompanying table reflects a compound growth rate of 5.7% for years 2000 through 2005 and comparable rates through the year 2020. The applicant has used a rate of only 2%, thus grossly understating the load on the surrounding infrastructure and making the project's "fit" appear much better than it will actually be.

Woll 18 – Response

See Woll 17 – Response of this document for a discussion of the analysis of cumulative impacts.

4.0 Response to Written Comments

In addition to the analysis of related projects, the cumulative impacts in the Draft EIR are also evaluated through application of an annual traffic growth factor applied to the existing traffic counts. The purpose of this traffic growth factor (commonly called the ambient growth factor) is to account for future traffic that may be generated at the study locations by other development projects not included in the list of related projects (i.e., because they are located outside the geographic area considered in the search of related projects or they are unknown at the time the traffic analysis was prepared).

The County's Traffic and Lighting Division requires application of the annual traffic growth factor to the year of project build-out (estimated at the year 2005). The annual growth rate used in the traffic analysis is intended to forecast annual increases in traffic volumes in the study area based on historical patterns. As noted in the Draft EIR, the growth rate used in the traffic analysis is 2% per year (or approximately a 10% increase in the 2000 existing traffic volumes to the 2005 build-out year). The selection of the growth rate and traffic study horizon year by L.A. County is consistent with the methodology used by the LADOT, as well as the CMP for Los Angeles County, County of Los Angeles MTA, November, 1997 (the CMP manual). By comparison, the CMP manual forecasts an annual increase in traffic of approximately 0.58% per year between 2000 and 2005. Therefore, the 2% annual growth rate utilized in the Draft EIR is highly conservative.

The letter and data referenced by the commenter appears to be related to a relatively narrow forecast of population, households and employment in the "Los Angeles City Unincorporated County area." The letter from SCAG does not require that these forecasts be used as a basis for forecasting traffic volumes in the study area, as suggested by the commenter. By contrast, the forecasts provided in the CMP manual are specifically provided to address future traffic volume growth on streets and freeways in the project area. As previously noted, the annual ambient growth traffic factor utilized in the Draft EIR (2% per year) between 2000 and 2005 is significantly higher than the growth rate cited in the CMP manual (0.58% per year). Therefore, it is concluded that the traffic analysis in the Draft EIR provides a sufficiently conservative assessment of future traffic volumes using the 2% annual ambient growth factor (in addition to the analysis of related projects) and no further analysis is required.

Woll 19 – Comment

The applicant would like us to take this project out of the real context in which we will have to put up with it and has taken unwarranted liberties with numbers in order to fool us. The two gross errors noted above pervade not only DEIR Section 4.12 (Transportation/Traffic) but sections that purport to evaluate the impact on schools, fire protection, law enforcement and other shared services.

I request that you not take action on this project until all affected sections of the DEIR are prepared anew reflecting all known and reasonably foreseeable increases in occupancy and use of the neighboring area. When seen against a backdrop of overloading and overcrowding, this project will make even less sense at its currently proposed density!

Woll 19 – Response

See 4.5 Woll 17 and 18 – Responses of this document.

As stated in Section 4.10 of the Draft EIR, impacts to schools would not be significant with implementation of recommended mitigation measures. Please see Sections 3.3.4, 4.3.7 and 4.5.28, and Appendix J of this document for additional discussion of this issue.

As stated in Section 4.9 of the Draft EIR, annual crime statistics indicate that the areas, including the project site, served by the Lost Hills/Malibu Station have a crime rate below the countywide average. Implementation of the project would serve to increase the existing funding mechanisms for any additional officers required to serve the project area. Impacts would not be significant with implementation of recommended mitigation measures. See Section 4.2.5 (Police Services 1 and 5 – Responses) and Appendix E of this document for additional discussion regarding this issue.

4.0 Response to Written Comments

As stated in Section 4.8 of the Draft EIR, no significant impacts would occur to fire protection services with implementation of the project. See Section 4.2.4 (Fire 1 and 4 – Responses) and Appendix E of this document for additional discussion regarding this issue.

4.5.147 Martin Woll and David Tweet

December 17, 2001

Attachments to this letter can be found in Appendix A.

Woll/Tweet 1 – Comment

The accompanying comment letter addresses Section 4.12 Transportation/Traffic of the Draft Environmental Impact Report ("EIR") for Project No. 99-239(5), the proposed Deerlake Ranch development project ("Project"). The facts we have gathered and presented in our letter support our contentions that EIR is materially deficient in its assessment of the Project's impact on traffic and that the proposed mitigation measures are inadequate to alleviate the effects of the Project on local street traffic.

For your convenience we have summarized the key points of our comments:

Nearly half of the intersections addressed in the traffic study are already rated severely congested, and increased traffic from a project of this density will make things worse.

Woll/Tweet 1 – Response

As stated in Section 4.12 of the Draft EIR, traffic impacts would not be significant with implementation of recommended mitigation measures. Please see Sections 3.3.5 and 4.2.6, and Appendix K of this document for additional discussion of traffic impacts and mitigation measures.

Woll/Tweet 2 – Comment

Applicant's data gathering is flawed. The EIR traffic study utilizes traffic counts purportedly but not actually done and counts on days when schools were not in session.

Woll/Tweet 2 – Response

As stated in Section 4.12 of the Draft EIR, traffic impacts would not be significant with implementation of recommended mitigation measures. Please see Sections 3.3.5 and 4.2.6, and Appendix K of this document for additional discussion of traffic impacts and mitigation measures.

Woll/Tweet 3 – Comment

Applicant ignored factors cited in the Institute of Traffic Engineers' Trip Generation Manual, thus significantly underestimating Project-generated trips.

Woll/Tweet 3 – Response

As stated in Section 4.12 of the Draft EIR, traffic impacts would not be significant with implementation of recommended mitigation measures. Please see Sections 3.3.5 and 4.2.6, and Appendix K of this document for additional discussion of traffic impacts and mitigation measures.

Woll/Tweet 4 – Comment

Applicant assumed traffic patterns that do not reflect present or likely future traffic flow.

Woll/Tweet 4 – Response

Figure 4.12.6 of the Draft EIR provides the project traffic distribution pattern approved for use in the Draft EIR by the County's Traffic and Lighting Division and LADOT. The figure indicates that approximately 62% of the project trips are anticipated to use Topanga Canyon Boulevard (via "A" Street) for access with the remaining 38% utilizing Canoga Avenue. The project traffic distribution pattern provides a reasonable basis for assessing the traffic impacts of the project.

To address the concerns raised by the commenter, observations were conducted of trip distribution activity associated with the existing Twin Lakes community located immediately south of the project

4.0 Response to Written Comments

site. Similar to the project, the Twin Lakes community is located north of SR-118 and has access to both Topanga Canyon Boulevard and Canoga Avenue. These observations concluded that approximately 75 percent of the Twin Lakes traffic utilized Topanga Canyon Boulevard while 25 percent utilized Canoga Avenue. These findings are summarized in a correspondence dated January 9, 2002 and has been provided to the County's Traffic and Lighting Division and LADOT. Therefore, the trip distribution observations conducted at the existing Twin Lakes community provide further support to the conclusion that the project traffic distribution pattern utilized in the Draft EIR provides a reasonable basis for assessing the traffic impacts of the project.

Woll/Tweet 5 – Comment

Applicant avoided performing a required freeway impact study by selecting an inappropriately located monitoring station as their measurement point.

Woll/Tweet 5 – Response

See Section 4.2.6 (Topical Response) of this document.

Woll/Tweet 6 – Comment

There are no proposed mitigation efforts involving improvement of roads, signals or intersections south of SR-118.

Woll/Tweet 6 – Response

See Section 3.0 and Appendices D and K of this document for additional mitigation.

Woll/Tweet 7 – Comment

Please read and consider our comments as you evaluate the proposed project. We believe you will find the adverse effects of this project on our neighborhood are unacceptable and the EIR lacks the accuracy and completeness to address those effects adequately.

Woll/Tweet 7 – Response

Please see Section 4.4.2 (CLPA 2 - Response) of this document regarding the adequacy of the EIR.

Woll/Tweet 8 – Comment

This comment letter addresses Section 4.12 Transportation/Traffic of the Draft Environmental Impact Report ("EIR") for project No. 99-239(5), the proposed Deerlake Ranch development project ("Project"), formerly named Chatsworth Ridge Estates. The facts we have gathered and presented in this letter support our contention that:

(1) the EIR is materially deficient in its assessment of the Project's impact on local street, highway and freeway traffic; and

Woll/Tweet 8 – Response

Please see Section 4.4.2 (CLPA 2 - Response) of this document regarding the adequacy of the EIR.

Woll/Tweet 9 – Comment

(2) the proposed mitigation measures are inadequate to alleviate the effects of the Project on local street traffic.

Woll/Tweet 9 – Response

Recommended traffic mitigation would reduce impacts to less than significant. Please see Sections 3.3.5 and 4.2.6, and Appendix K of this document for additional discussion of traffic impacts and mitigation measures.

Woll/Tweet 10 – Comment

Status of Existing Intersections

The 13 intersections addressed in the traffic study include four presently rated "F" in level of service ("LOS") and two with an LOS rating of "E." (source: EIR Table 4.12.2) Because of the significant

4.0 Response to Written Comments

proportion of severely congested intersections (nearly half of those studied), any increase in traffic due to the project will exacerbate an already unacceptable situation. Further, the estimated severity of the Project's impact will vary significantly with the assumptions used to develop the projections of Project-generated trips. We have found, as detailed below, that many of the applicant's assumptions are flawed by faulty data gathering inconsistent with factors cited in the Institute of Traffic Engineers' Trip Generation Manual, 6th edition ("ITE Manual"), and unrealistic. Further, the applicant's specific mitigation efforts are virtually all directed at a few intersections near the junction of Topanga Canyon Boulevard and SR-118, to the near exclusion of the remaining intersections which serve a far greater number of local residents at present.

Woll/Tweet 10 – Response

See Woll/Tweet 1 – Response of this document for a discussion of the existing LOS at the study intersections, as well as for a discussion of significance thresholds used in the Draft EIR for the determination of significant traffic impacts.

See Section 4.2.6 (Traffic 1 and 2 – Responses) and Appendix K of this document for a discussion of the project trip generation and traffic distribution forecasts provided in the Draft EIR.

Woll/Tweet 11 – Comment

Data Gathering Methodology

The EIR traffic study utilizes traffic counts purportedly but not actually done and counts on non-representative days.

The applicant has admitted that several study intersections were not actually observed and counted for traffic flow. Other intersections were observed and traffic counts recorded on Jan 4, 2000, when some local schools were not in session.

Accordingly, the entire premise of the traffic study is invalid and, for this reason alone, the results of the EIR traffic study are of questionable value. (See also "Deficient Analysis of Freeway Impact" elsewhere in this comment letter.)

Woll/Tweet 11 – Response

See Section 4.2.6 (Traffic 1 and 2 – Responses) and Appendix K of this document for a discussion of the project trip generation and traffic distribution forecasts provided in the Draft EIR.

Woll/Tweet 12 – Comment

Trip Generation Methodology

The study names the ITE Manual as its source for the Project-generated trip assumptions. That manual summarizes several hundred development-related traffic studies made throughout the United States and Canada. Some of these studies are 30 to 40 years old, and none are more recent than five years old.

Section 210 of the ITE Manual states, "This land use [single-family detached housing] includes data from a wide variety of units with different sizes, price ranges, locations and ages. Consequently, there is a wide variation in trips generated within this category. [Ranges vary from 5:1 to over 7:1.] As expected, dwelling units that were larger in size, more expensive, or farther away from the central business district (CBD) had a higher rate of trip generation per unit than those that were smaller in size, less expensive, or closer to the CBD" [emphasis added]. In other words, the ITE study averages are not the appropriate benchmark for many developments, including this one.

The EIR assumes trip levels that are actually below the ITE study average of trips vs. dwelling units (Table 1), even though the Project contains all of the factors that the ITE Manual states lead to higher-than-average trip-generation rates:

4.0 Response to Written Comments

Woll/Tweet 12 – Response

See Section 4.2.6 (Traffic 1 and 2 – Responses) and Appendix K of this document for a discussion of the project trip generation and traffic distribution forecasts provided in the Draft EIR.

Woll/Tweet 13 – Comment

More expensive homes The Project includes homes with expected selling prices according to the developer, ranging from over \$500,000 to well over \$800,000. This range is roughly two to three times the San Fernando Valley median home price of \$270,500 (Note 1), and 2-1/2 to 4 times the Los Angeles County median home price of \$205,000 (Note 2).

Woll/Tweet 13 – Response

This comment is out of the scope of the EIR. No additional response is required.

Woll/Tweet 14 – Comment

Larger homes Although the applicant has not disclosed the planned dwelling unit sizes, such high-end homes must be substantially larger than the county mean in order to command multiples of the mean area selling price and in order to qualify for institutional financing.

Woll/Tweet 14 – Response

This comment is out of the scope of the EIR. No additional response is required.

Woll/Tweet 15 – Comment

Farther from CBD Located in the far northwest corner of Los Angeles County, the Project is approximately 30 miles driving distance from downtown Los Angeles and more than 20 miles driving distance from the nearest business district in the Los Angeles basin. Even the "local" Warner Center office complex is seven miles away. By any standard, these homes are not close to the central business district.

Woll/Tweet 15 – Response

This comment is out of the scope of the EIR. No additional response is required.

Woll/Tweet 16 – Comment

Add to these factors the fact that Los Angeles is one of the most automobile-dependent and traffic-congested locations in the United States. It is clear that the likely traffic impact of the Project will be not only well above the averages noted in the ITE Manual but close to the top end of the applicable study ranges.

We believe that the EIR should calculate Project-generated trips using ITE Manual data at least one standard deviation above the average. We have shown in Table 2 the effect of using this more realistic assumption. The result is a 46% increase in total Project-generated weekday trips and a more than doubling of the Project-generated peak-hour weekday trips from the numbers assumed in the EIR. It is apparent that the use of misleading averages in the EIR results in substantial underestimation of the Project's impact on traffic congestion.

To put the foregoing in concrete terms, the EIR assumes that, on average, nearly half (46%) of all Project households will have no outbound trips during the morning peak hour—no work commute, no school commute! Under our more realistic yet conservative assumptions, on average each Project household would have 1.25 outbound morning peak-hour trips. This more closely matches the typical pattern of at least one work commute per household and school commutes for at least some households.

As an additional reasonableness test of our suggested methodology, we used the analysis of Trips vs. Vehicles contained in Section 210 of the ITE Manual. As shown in Table 3, we found that even the study average number of trips, at 2.2-vehicles per household (note 3), was nearly identical to our projections in Table 2 and well above those assumed in the EIR.

Woll/Tweet 16 – Response

Through the speculations of the commenter, there is no evidence provided or cited by the commenter that the trip generation forecast provided in the Draft EIR provides an unreasonable or unrealistic forecast of the number of trips to be generated by the project during the A.M. and P.M. peak hours. See Section 4.2.6 (Traffic 1 and 2 – Responses) and Appendix K of this document for a discussion of the project trip generation and traffic distribution forecasts provided in the Draft EIR.

Woll/Tweet 17 – Comment

Trip Distribution Methodology

The assumed distribution of Project-generated trips also has a significant effect on the expected impact of the Project on local intersections. EIR page 4.12.18, states, "Project generated traffic was assigned to the local roadway system based on a traffic distribution pattern approved by LADOT staff." When we questioned the responsible staff of the Los Angeles City Department of Transportation, they could produce little factual basis for the approved patterns. We have found the assumed patterns to be unrealistic and contrary to current traffic patterns in several respects.

First, EIR Figure 4.12.6 shows that 65% of the outbound Project traffic entering SR-118 travels eastbound and 35% travels westbound. The applicant appears to be using current Topanga-to-118 distribution as a basis for this assumption. However, this ignores the huge eastbound component entering at DeSoto, the other freeway ramp serving this neighborhood. A more comprehensive analysis of current area traffic on EIR Figure 4.12.2 shows that over 80% of combined Topanga and De Soto entry to SR-118 is eastbound and less than 20% is westbound. Absent compelling evidence to the contrary, the applicant should assume the higher percentage of eastbound trips.

Woll/Tweet 17 – Response

See Section 4.2.6 (Traffic 1 and 2 – Responses) and Appendix K of this document for a discussion of the project trip generation and traffic distribution forecasts provided in the Draft EIR.

Woll/Tweet 18 – Comment

Next, the applicant assumes, as reflected on the EIR Figure 4.12.6, that 62% of peak morning Project traffic will exit the development to the West, onto Topanga. When we questioned LADOT as to this assumption, the response was that this is the "front entrance" and that "it's closer." In fact, based on the EIR Figure 2.10, the east exit to Canoga and SR-118 is about the same distance as or closer than the west exit to Topanga for most project residents. For those traveling to local schools, local grocery stores, the library, and points east in the San Fernando Valley, the Canoga exit is a shorter path. For those desiring to travel eastbound on SR-118, there is only about ½ mile difference between entering via Topanga and entering via Canoga/Chatsworth/De Soto, and the latter path bypasses ½ mile of morning freeway tie-up. It is much more reasonable to assume that many, if not most, Project commuters will take surface streets in their intended direction of travel rather than double back and endure an extra dose of freeway jam. The EIR should reflect this more logical and realistic assumption.

Woll/Tweet 18 – Response

See Section 4.2.6 (Traffic 1 and 2 – Responses) and Appendix K of this document for a discussion of the project trip generation and traffic distribution forecasts provided in the Draft EIR.

Woll/Tweet 19 – Comment

The Effect on Our Intersections

When a more reasonable number of Project-generated trips and more logical pattern of traffic distribution are assumed, the impact on several local intersections is much more pronounced. We do not have access to the traffic software used by the applicant and suggest that the EIR analyses be re-run using the assumptions contained in this response in order to more accurately estimate Project

4.0 Response to Written Comments

impact. However, we calculate that several study intersections will be impacted by the Project with an increase of more than 10% in the volume-to-capacity ratio ("V/C"), thus degrading the LOS rating of these intersections by at least one letter grade. The impact on Canoga Avenue and on morning eastbound travel over Chatsworth Street near De Soto will be severe.

Woll/Tweet 19 – Response

See Section 4.2.6 (Traffic 1 and 2 – Responses) and Appendix K of this document for a discussion of the project trip generation and traffic distribution forecasts provided in the Draft EIR.

Woll/Tweet 20 – Comment

Deficient Analysis of Freeway Impact

The state's Congestion Monitoring Program ("CMP") requires an analysis of the Project's potential impact at CMP monitoring stations. The applicant states on page 4.12.21 of the EIR that, "the closest CMP freeway monitoring station to the project site is located on SR-118 at the Los Angeles/Ventura County line (approximately 2.5 miles west of the project site)." This station is located before the point where Project-generated morning traffic would join the new town-bound morning commute and past the point at which Project residents returning from the business districts of Los Angeles in the evening would exit the freeway. SR-118 is lightly traveled westbound in the morning and lightly traveled eastbound in the evening at this station. Thus, the station selected by the applicant cannot measure the Project's potential impact on commuting traffic that is subject to morning and evening congestion. On the premise of this inappropriately selected monitoring station, the applicant concludes that "...no impact would occur and further analysis is not required." We beg to differ!

The applicant acknowledges on EIR page 4.12.21 and in EIR Figure 4.12.6 that the vast majority of Project traffic using SR-118 is expected to travel eastbound from the Project in the morning and westbound to the Project in the evening. The applicant also acknowledges in EIR Figures 4.12.2 and 4.12.3 that the vast majority of measured present traffic using SR-118 travel eastbound in the morning and westbound in the evening. This is consistent with what local residents and commuters already know all too well: that there is substantial morning congestion on SR-118 in the eastbound direction and substantial evening congestion in the westbound direction. The Project would add to the congestion in both directions.

A proper analysis of freeway traffic impact would require use of the closest CMP monitoring station east of the Project site; this would be the station at SR-118 and Wilbur Avenue (three miles east of the Project site). A proper analysis would also require use of more appropriate and realistic traffic generation assumptions as detailed elsewhere in this letter.

Woll/Tweet 20 – Response

See Section 4.2.6 (Topical Response) of this document.

Woll/Tweet 21 – Comment

Inadequate Mitigation Measures

Substantially all specific mitigating improvements proposed by the applicant are devoted to a few County-controlled intersections. Even these proposed measures must be subjected to the CALTRANS project review process, and it could be years before they are actually implemented, assuming they are allowed to proceed at all.

For City-controlled intersections, which impact far more local residents, proposed mitigation consists solely of contributing toward the "118 Corridor" portion of the Automated Traffic Surveillance and Control ("ATSAC") project slated for future implementation. However, the ATSAC project involves:

- no intersection modification,*
- no street widening,*
- no signal addition.*

4.0 Response to Written Comments

-no protection for residential streets

In fact, there is no assurance that ATSAC, with or without the applicant's financial contribution, will alleviate any of the burdens certain to be imposed on local residents by the Project. The problems caused by a project of this density cannot be solved without widening of several street segments, including Chatsworth Street and Canoga Avenue (for both of which the City already has rights-of-way), and enhancement of traffic signals at Chatsworth & De Soto and possibly other affected interactions.

As an aside, future ATSAC cost overruns which LADOT personnel say are likely, may not be recoverable from the applicant unless a letter of credit, surety bond or other form of future payment guarantee is provided by the applicant. The EIR contains no mention we could find of any such payment guarantee.

Woll/Tweet 21 – Response

Implementation of mitigation measures and assurance of completion is tied to various aspect of development of the project site and is outlined in the Mitigation Monitoring Program. Please see Appendix D of this document.

LADOT recommended in their January 11, 2002 correspondence that the project provide funding to the design and construction of the ATSAC and ATCS at two intersections in the City of Los Angeles. LADOT has recommended that funds be guaranteed through a cash payment prior to the issuance of any building permits related to the project. With payment of these funds, LADOT concluded that the project's traffic impacts in the City of Los Angeles would be mitigated. Therefore, no additional traffic mitigation measures are required or recommended.

Woll/Tweet 22 – Comment

Conclusion

As local residents, we know where Project-generated traffic is likely to flow: not on the already-congested highways but through our neighborhoods. Our streets lead to the schools, the stores, and the most desirable freeway entrances and exits. The EIR analysis does not reflect reality in either the volume or the distribution of Project-generated trips. It applies flawed logic to a base of flawed data: it is useless as currently presented.

As local residents, we also know where our traffic problems are and have a good idea what it will take to alleviate them. The mitigation measures proposed in the EIR will do nothing to solve the problems caused by the Project. The only ways to reduce the adverse effects of the Project in streets south of SR-118 are to make substantial improvements to intersections and adjacent roadways or to make a substantial reduction in the number of homes included in the Project.

Woll/Tweet 22 – Response

As stated in Section 4.12 of the Draft EIR, traffic impacts would not be significant with implementation of recommended mitigation measures. Please see Sections 3.3.5 and 4.2.6, and Appendix K of this document for additional discussion of traffic impacts and mitigation measures.

Woll/Tweet 23 – Comment

We are writing to alert you to a deficiency in the Draft Environmental Impact Report ("EIR") for Project No. 99-239(5), the proposed Deerlake Ranch development project ("Project"), formerly named Chatsworth Ridge Estates. This deficiency, one of many we have found in our review of the Traffic section of the EIR, concerns the analysis- or rather the lack thereof - of the Project's impact on traffic over SR-118, the Ronald Reagan Freeway, in the Chatsworth area. It is my understanding that you have jurisdiction over this issue.

Woll/Tweet 23 – Response

Comment noted.

4.0 Response to Written Comments

Woll/Tweet 24 – Comment

The state's Congestion Monitoring Program ("CMP") requires an analysis of the Project's potential impact at CMP monitoring stations. The applicant states on page 4.12.21 of the EIR that, "the closest CMP freeway monitoring station to the project site is located on SR-118 at the Los Angeles/Ventura County line (approximately 2.5 miles west of the project site)." This station is located before the point where Project-generated morning traffic would join the town-bound morning commute and past the point at which Project residents returning from the business districts of Los Angeles in the evening would exit the freeway. SR-118 is lightly traveled westbound in the morning and lightly traveled eastbound in the evening at this station. Thus, the station selected by the applicant cannot measure the Project's potential impact on commuting traffic that is subject to morning and evening congestion because it is not in the path of that traffic. On the premise of this inappropriately selected monitoring station, the applicant concludes that "... no impact would occur and further analysis is not required." We beg to differ!

The applicant acknowledges on EIR page 4.12.21 and in EIR Figure 4.12.6 that the vast majority of Project traffic using SR-118 is expected to travel eastbound from the Project in the morning and westbound to the Project in the evening. The applicant also acknowledges in EIR Figures 4.12.22 and 4.12.3 that the vast majority of measured present traffic using SR-118 travel eastbound in the morning and westbound in the evening. This is consistent with what local residents and commuters already know all too well: that there is substantial morning congestion on SR-118 in the eastbound direction and substantial evening congestion in the westbound direction. The Project would add to the congestion in both directions.

A proper analysis of freeway traffic impact would require use of the closest CMP monitoring station east of the Project site: this would be the station at SR-118 and Wilbur Avenue (three miles east of the Project site). The draft EIR also contains numerous flaws in data gathering, traffic generation assumptions and traffic distribution assumptions, all of which we have detailed in our comment letter on the draft EIR. The effect of these flaws is to understate both surface and freeway traffic by more than 50%. If corrected, the 150-vehicle reporting threshold would be exceeded.

If you agree with the foregoing, please advise Presidio Partners L.L.C., the applicant in this EIR, that they need to perform a proper freeway impact study using the CMP monitoring station at SR-118 and Wilbur and using corrected traffic volume and distribution assumptions. We would appreciate being kept informed of your actions in this matter and receiving copies of any related correspondence between your office and the applicant.

For your convenience we have enclosed a copy of EIR page 4.12.21 and a copy of our comment letter on the Traffic/Transportation section of the EIR. Please let us know if we can provide you with any additional information of clarification.

Woll/Tweet 24 – Response

4.5.148 Robin Wright

No date on letter, received by Regional Planning 4/15/2002

Wright 1 – Comment

I am writing this letter to express my concerns over the pending development at my doorstep. As a licensed general contractor with more than 20 years of building experience I know from the past that "the development" will occur as it has occurred so many times, and in so many places before.

If we take a moment to step back and look at the natural beauty of this area, the large rock formations that have stood for over 100,000 years, and the greenbelt valleys where the animals and birds find

4.0 Response to Written Comments

safe harbor and water, to the unassuming horny toad peeking out at the days sun... one might reconsider the magnitude of destruction. and negative effects that a development of this size will have. I have lived on Coya Trail for 10 years now. I have stopped my car to rescue baby quails which nest in the low lying brush, tarantulas which have found their way onto the road, not to mention rapid braking to miss a bobcat running down a hill to cross the road. It is all of our responsibilities to respect, cherish and protect the area. animals and their habitat, since they do not have a seat on the board.

I know it will happen one way or another. the homes will come. and in all fairness the developer has the right, as he has expended an enormous amount of money to own the land. in addition to meeting all the criterion imposed upon them.

Let us build responsibly, we need to look at the overall impact this development will have on everything as a whole: the area schools. area traffic. water supply. rain runoff and wildlife.

As I am only person, I am one of many that have deep concerns. It would be a shame to look into a Webster's dictionary 20 years from now and realize the word "foothill" no longer exists.

In closing I ask that you remember the beauty you saw when you passed through our neighborhood and keep this in mind when making a decision that will affect everything in this developments path, including ones conscience.

Thank you for your time and consideration on this matter.

Wright 1 – Response

The comment has been received and noted.

4.5.149 Lisa Ybarra

January 10, 2002

Ybarra 1 - Comment

I am writing to express my concerns regarding the Environmental Impact Report of the Deerlake Ranch project, CUP/Oak Tree Permit No. 99239, Tentative Tract Map 53138.

Evidently the EIR has not been thorough and is full of inconsistencies. I urge you to persist and ensure that this development does not destroy one of the remaining natural areas of our city and county.

As it stands this development will create a devastating impact on Chatsworth area and on unincorporated areas of Los Angeles County, as well as on our equine community (which co-exists with this natural environment).

Ybarra 1 – Response

Please see Section 4.4.2 (CLPA 2 - Response) of this document regarding the adequacy of the EIR.

Ybarra 2 - Comment

*As a Chatsworth homeowner and resident. I am very disturbed by the planning of this development project. The devastation will affect the following:
the overcrowded streets and schools*

Ybarra 2 – Response

As stated in Section 4.12 of the Draft EIR, traffic impacts would not be significant with implementation of recommended mitigation measures. Please see Sections 3.3.5 and 4.2.6, and Appendix K of this document for additional discussion of traffic impacts and mitigation measures.

As stated in Section 4.10 of the Draft EIR, impacts to schools would not be significant with implementation of recommended mitigation measures. Please see Sections 3.3.4, 4.3.7 and 4.5.28, and Appendix J of this document for additional discussion of this issue.

4.0 Response to Written Comments

Ybarra 3 - Comment

storm-water runoff will create a devastating affect on the natural environment, the disturbance of wildlife

Ybarra 3 – Response

As stated in Section 4.6 of the Draft EIR, impacts with regard to urban runoff would not be significant with implementation of mitigation measures. See Section 4.2.2 (Urban Runoff 1 – Response) and Appendix I of this document for additional discussion of this issue.

Section 4.3 of the Draft EIR included a discussion of impacts upon sensitive species, nesting birds and raptors, and wildlife movement. Impacts to biological resources would not be significant with implementation of recommended mitigation measures. Please see also Section 4.2.1 of this document for additional discussion of this issue.

Ybarra 4 - Comment

the disturbance of natural landscape

Ybarra 4 – Response

As stated in Section 4.1 of the Draft EIR, impacts to aesthetic resources would not be significant.

Ybarra 5 - Comment

the pollution in this very uncontaminated and natural environment

I am not opposed to development, but the destruction of nature as well as a valued and age old culture. There must be a better way to protect this beautiful place, the last area of uncontaminated nature left in the valley.

Ybarra 5 – Response

See Ybarra 3 – Response of this document.

Ybarra 6 - Comment

We need the horse trails provided and preserved. People from all over regularly trailer their horses here to ride our beautiful hills and canyons, probably because where they live, developers invaded and gave empty promises.

We bought real-estate in Chatsworth, horse property, so that we could live our dream. Live among other horse owners, live close to trails and wildlife.

Ybarra 6 – Response

As stated in Section 2.4.3 of the Draft EIR, the project includes a trail system that would loop the site, connecting to existing trails east, north, and west of the project site. See also Sections 2.4.7 and 4.4.1 (C ECHO 3 & 4 – Responses) of this document.

Ybarra 7 - Comment

Please protect this area from the destruction that is planned. Please take all the very needed steps and precautions necessary to preserve the last beautiful, uncontaminated, unpolluted area of Los Angeles.

Ybarra 7 – Response

The comment is noted. No additional response is required.

4.6 ADDITIONAL ENVIRONMENTAL INFORMATION DOCUMENT COMMENTS

4.6.1 State of California – Governor’s Office of Planning and Research - State Clearinghouse

Terry Roberts, Senior Planner, State Clearinghouse

May 28, 2003

SCH 1 - Comment

The enclosed comment(s) on your Supplemental EIR was (were) received by the State Clearinghouse after the end of the state review period, which closed on August 16, 2002. We are forwarding these comments to you because they provide information or raise issues that should be addressed in your final environmental document.

The California Environmental Quality Act does not require Lead Agencies to respond to late comments. However, we encourage you to incorporate these additional comments into your final environmental document and to consider them prior to taking final action the proposed project.

Please contact the State Clearinghouse at (916) 445-0613 if you have any questions concerning the environmental review process. If you have a question regarding the above-named project, please refer to the ten-digit State Clearinghouse number (2000061049) when contacting this office.

SCH 1 - Response

The comment has been received and noted. No response is required.

4.6.2 State of California, Business, Transportation and Housing Agency - Department of Transportation

Stephen J. Buswell, IGR/CEQA Branch Chief

May 22, 2003

Caltrans 1 - Comment

This letter supplements our tentative agreement on the traffic mitigation for this project. All traffic mitigation will equate to "C" in the Equitable Cost formula found in the appendix of the Caltrans Guide for the Preparation of Traffic Impact Studies. We have the following comments on the recent traffic report.

The results of traffic analysis shown in Tables 5 and 6 should include forecasts of future (year 2020) traffic volumes with and without improvements.

Please provide queue lengths and delays on both northbound and southbound Topanga Canyon Boulevard (SR-27) in Table 7. Analysis should include results for year 2020 with improvements for Topanga Canyon Boulevard and also other locations shown in Table 7.

The details of Synchro Analysis including worksheets and outputs should be presented.

Caltrans 1 - Response

As agreed between the subdivider and the California Department of Transportation (Caltrans), the subdivider shall contribute to Caltrans \$441,000 as its fair-share contribution toward long-term traffic improvements within State rights-of-way at the Topanga Canyon Boulevard (SR-27) and SR-118 Freeway interchange. The contribution shall be made prior to recordation of the first final tract map for the Project. Caltrans has agreed that payment of this contribution, along with other improvements at this interchange that are the subject of separate conditions, will fully mitigate the Project's potential present or long-term traffic impacts at the Topanga Canyon Boulevard (SR-27) and SR-118 Freeway interchange.

4.0 Response to Written Comments

Tables 5 and 6 of the traffic study (included in Appendix K of this document) summarize the LOS of the study intersections for 2025 conditions. The LOS analysis was prepared in compliance with County and City of Los Angeles analysis methodologies. Analysis for 2020 conditions is not required to satisfy CEQA requirements.

It should be noted that in compliance with Caltrans requirements, the Permit Engineering Evaluation Report (PEER) evaluates current and future (2020) operations at the interchange with and without the recommended improvements. The PEER has been submitted to the Caltrans Permit Office for review in conjunction with the Encroachment Permit application for the interchange improvements.

The January 2, 2002 PEER prepared by LLG includes detailed year 2020 queuing and delay analyses associated with the Topanga Canyon Boulevard and SR-118 westbound ramps intersection. The PEER was submitted as part of the encroachment permit application to Andy Still (Caltrans Office of Permits) on January 4, 2002 for distribution and review.

All synchro analysis worksheets are included in Appendix B of the PEER, which was submitted on January 4, 2002.

Caltrans 2 - Comment

As shown in Table 5, the Levels of Service (LOS) at the Topanga Canyon Boulevard (SR-27)/freeway SR-118 W/B on/off ramps and Mayan Drive/Poema Place at year 2005 with project mitigation are E and F, respectively. A Monitoring Program including future traffic counts taken and reported on a regular basis should be implemented. Once the Program shows LOS and queue lengths becoming worse, further mitigation should be provided.

Caltrans 2 - Response

The traffic study provides a highly conservative forecast of future traffic volumes at the study intersections. The traffic study evaluates potential cumulative traffic impacts consistent with the requirements of CEQA. Section 15130 of CEQA requires that the lead agency (i.e., Los Angeles County) preparing the Draft EIR for the project evaluate potential cumulative impacts by considering the traffic effects of past, present and probable future projects (i.e., the related projects). The project traffic study complies with the CEQA requirement (see the list of related projects provided in the traffic study on Table 3, page 22).

In addition to the analysis of related projects, the cumulative impacts in the project traffic study are also evaluated through application of an annual traffic growth factor applied to the existing traffic counts. The purpose of this traffic growth factor (commonly called the ambient growth factor) is to account for future traffic that may be generated at the study locations by other development projects not included in the list of related projects (i.e., located outside the geographic area or unknown at the time the traffic analysis was prepared). The selection of the growth rate and traffic study horizon year by the County is consistent with the methodology used by LADOT, as well as the CMP.

Of further note is the conservative forecast of trips related to the project at the Topanga Canyon Boulevard intersection with the SR-118 westbound on/off ramps. The Draft EIR traffic study evaluated the potential traffic impacts associated with the development of 484 single-family homes. However, the current project has been reduced to 388 single-family homes.

In summary, the traffic study provides a highly conservative (i.e., worst case) forecast of future traffic volumes at the Topanga Canyon Boulevard intersection with the SR-118 westbound on/off ramps. Thus, future monitoring of the intersection is not required.

Table 7 (page 43) in the traffic study was prepared to provide additional review and data with respect to existing and future operations on the key approaches to the Topanga Canyon Boulevard / SR-118 intersection. Key findings from this table are as follows:

4.0 Response to Written Comments

- The eastbound Poema Place, westbound Mayan Drive and the SR-118 westbound off-ramp primarily function at the LOS E and F ranges. Further, in the future condition without the project (and its associated interchange improvements), the interchange is forecast to operate primarily at an LOS F condition during the A.M. and P.M. peak hours.
- Implementation of the recommended mitigation measures will substantially improve operations at the interchange, with LOS D or better operations forecast for the three primary approaches during the A.M. and P.M. peak hours.

Therefore, the recommended mitigation measures will mitigate not only the project's traffic impacts, but also a significant portion of the existing and future traffic congestion not related to the project.

The suggestion in the comment to conduct follow-up counts and measurements at the interchange, as well as the potential need to implement additional improvements is inappropriate based on the following:

- Under CEQA (Section 15097), a Mitigation Monitoring Program is intended to ensure that the mitigation measures recommended in the EIR are implemented. The Mitigation Monitoring Program is not intended to ensure the effectiveness of the recommended mitigation measures.
- It is logical to conclude that following the implementation of any improvement at the interchange that traffic volume growth (and therefore delay) will gradually increase. It is not appropriate to require the implementation of new mitigation measures at the interchange on a continual basis due to local and regional traffic growth not related to the project.
- The traffic study utilizes traffic forecasting and analysis tools and methodologies that are widely accepted in the traffic engineering industry (e.g., by Caltrans, County of Los Angeles, City of Los Angeles, Institute of Transportation Engineers, etc.) in demonstrating the effectiveness of the proposed improvements at the interchange in mitigating the incremental traffic impacts of the project. Therefore, no additional traffic mitigation measures are required or recommended.

Caltrans 3 - Comment

Statement on page 42 (paragraphs 1 and 2) of the report is, that the significant impacts are expected to be fully mitigated. Further mitigation measures need to be proposed, however, to improve the level of service at the following intersections, which remains at LOS "F", even after the currently specified mitigation.

- *Topanga Canyon Boulevard and SR-118 E/B on/off ramps*
- *Topanga Canyon Boulevard and Santa Susana Pass Road*
- *Topanga Canyon Boulevard and Chatsworth Street*
- *Topanga Canyon Boulevard and Devonshire Street*

In the Project Mitigation section beginning on page 40 of the report, long-term facility improvements for mitigation should be addressed in regard to widening specific roads to provide three travel lanes in each direction. These roads are Topanga Canyon Boulevard (between SR-118 westbound ramps) and Chatsworth Street.

Caltrans 3 - Response

Based on the significant impact criteria set forth by the lead agency (i.e., Los Angeles County), all of the significant impacts are expected to be fully mitigated. Therefore, no further mitigation measures are required for this project to satisfy CEQA requirements. The suggestion in the comment to

4.0 Response to Written Comments

consider additional measures to mitigate current and/or future congestion not related to the project at the listed intersections is considered beyond the scope of the traffic impact study.

However, as a follow-up to a meeting on January 24, 2002 with representatives from Caltrans and LCDPW, the applicant has agreed to prepare a Caltrans PSR to address long-term traffic operations and potential improvements at the SR-118 interchange with Topanga Canyon Boulevard. The preparation of the PSR for long-term improvements would be in addition to the design and construction of the traffic improvements identified in the Draft EIR. The IGR/CEQA Branch at Caltrans agreed that the PSR is the appropriate document to review potential regional improvements on Topanga Canyon Boulevard in the vicinity of the SR-118 interchange in its letter dated February 15, 2002.

Caltrans 4 - Comment

We suggest further consideration of a "Roundabout" design option for the area of Topanga Canyon Boulevard at Poema Place / Mayan Drive and the State Route 118 W/B on/off ramps.

Caltrans 4 - Response

The concept of a roundabout design for the area of Topanga Canyon Boulevard at SR-118 westbound ramps and Poema Place/Mayan Drive was thoroughly studied in a technical report submitted to Caltrans on November 15, 2001. It was determined that the roundabout alternative is not feasible due to operational, safety, right-of-way, and cost constraints. A copy of this analysis is included in the PEER.

In addition, at a subsequent meeting with Caltrans, concurrence with our analysis of the roundabout design was indicated. Therefore, no further review of a roundabout design is required.

4.6.3 County of Los Angeles Fire Department

David R. Leninger, Acting Chief, Forestry Division Prevention Bureau

August 23, 2002

LACFD 1 - Comment

Planning Division: There appears to be some discrepancy between the mitigation measures proposed in this document and those specified by the Fire Department in previous correspondence. The description of the helispot required for fire protection and emergency medical service, on page 2-7, states: "Although the helispot would be graded, no pavement or other facilities would be constructed." Our August 28, 2002, letter setting forth the requirement for this facility (enclosed) specified, "The helispot shall have a 20' wide paved access and a fire hydrant on-site. . ."

Additionally, the Fire Department's requirements regarding helispots have been recently updated to accommodate the heavier Sikorsky Firehawks, which have been purchased to help wildland firefighting, especially in areas such as Chatsworth. The new specification includes a concrete pad, improved with a 60' by 60' concrete pad, 6" deep, reinforced 24" on center, #4 rebar, 3000 PSI concrete. The remaining graded area would be covered by #2 rock, 5" deep. Updating the mitigation requirements to this enhanced specification will greatly improve the versatility of this helispot in wildland firefighting.

LACFD 1 - Response

The proposed improvements to the helispot as described above will be implemented (see Appendix E of this document).

LACFD 2 - Comment

Land Development Unit - General Requirements: The Department may condition future development to provide additional means of access. The development of this project must comply with all

4.0 Response to Written Comments

applicable code and ordinance requirements for construction, access, water mains, fire flows and hydrants.

This property is located within the area described by the Forester and Fire Warden as Fire Zone 4, Very High Fire Hazard Severity Zone (VHFHSA). All applicable fire code and ordinance requirements for construction, access, water mains, fire hydrants, fire flows, brush clearance and fuel modification plans, must be met.

Specific fire and life safety requirements for the construction phase will be addressed at the building fire plan check. There may be additional fire and life safety requirements during this time.

Every building constructed shall be accessible to Fire Department apparatus by way of access roadways, with an all weather surface of not less than the prescribed width, unobstructed, clear-to-sky. The roadway shall be extended to within 150 feet of all portions of the exterior walls when measured by an unobstructed route around the exterior of the building.

When a bridge is required, to be used as part of a fire access road, it shall be constructed and maintained in accordance with nationally recognized standards and designed for a live load sufficient to carry a minimum of 75,000 pounds.

Helipad improvements are required, and an approved mechanism must be employed to ensure that the Helipad is maintained serviceable at all times. The maximum allowable grade shall not exceed 15% except where the topography makes it impractical to keep within such grade, and then an absolute maximum of 20% will be allowed for up to 150 feet in distance. The average maximum allowed grade, including topography difficulties, shall be no more than 17%. Grade breaks shall not exceed 10% in 10 feet.

When involved with a subdivision, Fire Department requirements for access, fire flows and hydrants are addressed at the Los Angeles County Subdivision Committee meeting, during the subdivision tentative map stage. The development of this project must comply with all conditions imposed during the subdivision tentative tract map review process.

Fire sprinkler systems are required in some residential and most commercial occupancies. For those occupancies not requiring fire sprinkler systems, it is strongly suggested that fire sprinkler systems be installed. This will reduce potential fire and life losses. Systems are now technically and economically feasible for residential use.

LACFD 2 - Response

The project will comply with all Fire Code requirements and other ordinances (see Appendix E of this document). In addition, the load bearing capacity of the proposed bridges will be verified by the Department of Public Works prior to issuance of a construction permit. The preliminary fuel modification plan for this project has been approved by the Fire Department (see Appendix C.4 of this document).

LACFD 3 - Comment

Single-Family Dwelling Units: Single-family detached homes shall require a fire flow of 1,250 gallons per minute at 20 pounds per square inch residual pressure for a two-hour duration. Fire hydrant spacing shall be 500 feet and shall meet the following requirements:

- 1. No portion of lot frontage shall be more than 450 feet via vehicular access from a public fire hydrant.*
- 2. No portion of a structure should be placed on a lot where it exceeds 750 feet via vehicular access from a properly spaced public fire hydrant.*
- 3. When cul-de-sac depth exceeds 450 feet on a residential street, hydrants shall be required at the corner and mid-block.*
- 4. Additional hydrants will be required if hydrant spacing exceeds specified distances.*

4.0 Response to Written Comments

LACFD 3 - Response

See Appendix H.2 of this document regarding fire flows for the project. Fire hydrants will be located as directed by the Fire Department.

LACFD 4 - Comment

Fire Department access shall be provided to within 150 feet of all portions of the exterior walls of the first story of any single unit. If exceeding 150 feet, provide 20-foot, paved width "Private Driveway/Fire Lane" to within 150 feet of all portions of the exterior walls of the unit. Fire Lanes serving 3-4 units shall be increased to 24 feet in width, and if serving 5 or more units, the fire lane shall be increased to 26 feet.

LACFD 4 - Response

All private driveways/fire lanes would meet the above requirements (see Appendix C.1 of this document).

LACFD 5 - Comment

A Fire Department approved turning area shall be provided for all driveways exceeding 150 feet in length and at the end of all cul-de-sacs. Streets or driveways within the development shall be provided with the following:

- 1. Provide 36 feet in width on all collector streets and those streets where parking is allowed on both sides.*
- 2. Provide 34 feet in width on cul-de-sacs up to 700 feet in length. This allows parking on both sides of the street.*
- 3. Provide 36 feet in width on cul-de-sacs from 701 to 1,000 feet in length. This allows parking on both sides of the street.*
- 4. For streets or driveways with parking restrictions: The entrance to the street/driveway and intermittent spacing distances of 150 feet shall be posted with Fire Department approved signs stating "NO PARKING - FIRE LANE" in three-inch high letters. Driveway labeling is necessary to ensure access for Fire Department use.*
- 5. Turning radii shall not be less than 32 feet. The measurement shall be determined at the centerline of the road.*
- 6. A Fire Department approved turning area shall be provided, at the end of a driveway of 300 feet or more in length.*

LACFD 5 - Response

All private and future streets would meet the above requirements (see Appendix C.1 of this document).

LACFD 6 - Comment

Limited Access Devices (Gates Etc.):

- 1. Any single gate used for ingress and egress shall be minimum of 26 feet in width, clear-to-sky.*
- 2. Any gate used for a single direction of travel, used in conjunction with another gate, used for travel in the opposite direction. (split gates) shall have a minimum width of 20 feet each, clear-to-sky.*
- 3. Gates and/or control devices shall be positioned a minimum of 50 feet from a public right-of-way, and shall be provided with a turnaround having a minimum of 32 feet of turning radius. If an intercom system is used, the 50 feet shall be measured from the right-of-way to the intercom control device.*
- 4. All limited access devices shall be of a type approved by the Fire Department.*

4.0 Response to Written Comments

5. *Gate plans shall be submitted to the Fire Department, prior to installation. These plans shall show all locations, widths and details of the proposed gates.*

LACFD 6 - Response

All proposed gates and gate approaches would meet the above requirements (see Appendix C.I of this document).

LACFD 7 - Comment

Traffic Calming Measures: All proposals for traffic calming measures (speed humps/bumps, traffic circles, roundabouts, etc.) shall be submitted to the Fire Department for review, prior to implementation/installation.

Should any questions arise regarding design and construction, and/or water and access, please contact Inspector Scott Greenelsh at (323) 890-4243.

LACFD 7 - Response

Comment is acknowledged.

LACFD 8 - Comment

Forestry Division - Other Environmental Concerns: The statutory responsibilities of the County of Los Angeles Fire Department, Forestry Division include erosion control, watershed management, rare and endangered species, vegetation, fuel modification for Very High Fire Hazard Severity Zones or Fire Zone 4, archeological and cultural resources and the County Oak Tree Ordinance.

The applicant has addressed most impacts in these area. However, our review and recommended conditions of approval for the project's Oak Tree Report (Oak Tree Report #99-239) are no longer valid. The Oak Tree Report and supporting maps are dated December 20, 2000, from L. Newman Design Group, Inc. which do not reflect the changes included within this document. The applicant must submit a new Oak Tree Report and maps for an accurate analysis by the Department's Environmental Review Unit.

LACFD 8 - Response

The revised Oak Tree Report has been submitted to and approved by LACFD (see Appendix F.3 of this document).

4.6.4 County of Los Angeles Public Library

Michele Mathieu, Administrative Assistant

August 14, 2002

LACPL 1 - Comment

This memo is in response to the additional environmental information on the above-referenced project. We have reviewed Section 3.0 regarding library services and request that the information be changed as follows:

Page 3-14, Section 3.0 - Public Services - Library

Second sentence, delete and change 1,430 to 1,496, 501 to 582, and 2,860 to 2,992.

In addition, attached is a response to a request for comments for Deerlake Ranch from Public Library addressed to Mr. Kerwin Chih of Regional Planning. The response was mailed in February 2002.

LACPL 1 - Response

Comment noted, the impacts to library services have been changed to reflect the revised project. Please see Section 3.3 of this document.

4.6.5 County of Los Angeles Department of Public Works

Rod Kubomoto, Watershed Management Division

October 24, 2002

LACDPW 1 – Comment

Environmental Programs

As projected in the Los Angeles County Countywide Siting Element, which was approved by a majority of the cities in the County of Los Angeles in late 1997 and by the County Board of Supervisors in January 1998, a shortfall in permitted daily landfill capacity may be experienced in the County within the next few years. The construction and predevelopment activities associated with the proposed construction of 484 resident units will increase the generation of solid waste. Therefore, the proposed environmental document must identify what measures the project proponent plans to implement to mitigate the impact. Otherwise, the cumulative impact of these development projects will negatively impact the solid waste management infrastructure in the County. Mitigation measures may include, but are not limited to, implementation of waste reduction and recycling programs to divert the solid waste, including construction and demolition waste, from the landfills.

LACDPW 1 - Response

Comment noted. As stated in Section 4.15 of the Draft EIR, solid waste impacts would be less than significant due to adequate landfill capacity in the project service area. The Draft EIR included mitigation measures that would reduce waste going to landfills (see Page 4.15-7 of the Draft EIR and Appendix D of this document).

LACDPW 2 - Comment

Flood Maintenance

The proposed Continuous Deflective Separation (CDS) units, described under the subsection titled, "Drainage Improvement," pages 2-6, will be subject to design review and approval by Public Works before they can be transferred to Public Works for future operation and maintenance.

Public Works has just recently begun maintenance of newly accepted CDS units. Our current technique to cleanse and maintain the CDS units is by periodic vacuuming of the entrapped trash and sediment from the subsurface vaults with "Vactor" trucks. Depending on the location and trash loading of the proposed CDS units, Public Works' future maintenance activities may contribute to degradation of noise to nearby residential dwellings, and increased traffic congestion in the vicinity of the CDS units, if no off-street staging area is provided for our vacuuming operations.

The document should analyze these issues and address the potential impacts.

LACDPW 2 - Response

CDS units will be located under the streets within the project site. Although maintenance of these units will require temporary traffic control measures around vacuum trucks, the volume of traffic generated within the project site is not sufficient to create significant congestion. In addition, it is anticipated that the short-term and infrequent noise associated with the vacuuming operations of the CDS units would not be significant and similar to other urban activities such as street sweeping and solid waste collection.

LACDPW 3 - Comment

Geotechnical and Materials Engineering

The proposed project will not have significant environmental effects from a geology and soils standpoint, provided the appropriate ordinances and codes are followed. Portions of the project are located within both mapped potentially liquefiable areas and seismically induced landslide areas, per the State of California Seismic Hazard Zone Map, Oat Mountain Quadrangle. However, liquefaction

4.0 Response to Written Comments

and seismic slope stability analyses are not warranted at this time. Detailed liquefaction and seismic stability analyses, conforming to the requirements of the State of California Division of Mines and Geology Special Publication 117, must be conducted at the tentative map and/or grading/building plan stages.

LACDPW 3 - Response

The comment is noted. Please see Appendix E of this document.

LACDPW 4 - Comment

Land Development (Grading and Drainage)

The Additional Environmental Information for the DEIR addresses the varying development alternatives proposed in response to comments received during the DEIR review period. The alternatives proposed in the Additional Environmental Information do not significantly affect drainage and water quality issues provided that proposed mitigation measures shown on the Drainage Concept approved by Public Works on March 6, 2001, are followed. We recommend that the approved Drainage Concept be included in the Environmental Impact Report.

LACDPW 4 - Response

The comment is noted. Please see Appendix H.1 of this document.

LACDPW 5 - Comment

Watershed Management (Los Angeles River and Malibu)

Since the project consists of single-family hillside residences, the project must comply with Standard Urban Stormwater Mitigation Plan requirements, as set forth by the Regional Water Quality Control Board.

It should be noted that Browns Sediment Placement Site is located southeast of the proposed developed area. Currently, it is an active flood control facility where Public Works places sediment as needed.

Water Resources Division should review this project to assess impacts to Browns Canyon.

LACDPW 5 - Response

The comment is noted. Please see Appendices H.1 and I of this document.

LACDPW 6 - Comment

Watershed Management

The proposed project should include investigation of watershed management opportunities to maximize capture of local rainfall on the project site, eliminate incremental increases in flows to the storm drain system, and provide filtering of flows to capture contaminants originating from the project site.

LACDPW 6 - Response

See Appendix I of this document regarding capturing rainfall onsite. See Appendices H.1 and I of this document regarding runoff flow reduction and Stormwater filtration.

4.6.6 Las Virgenes Waster District

C. Eugene Talmage, RA, Planning Administrator

August 13, 2002

LVWD 1 - Comment

We are in receipt of additional Environmental Information to the Draft Environmental Impact Report for Deerlake Ranch Development also known as Tentative Tract No. 53138. The project calls for 484

4.0 Response to Written Comments

unit single-family residential lots located on 230.58 acres. After reviewing the current document dated July 2002, the only notable change would be less water demand on our system with the reduced number of single-family units.

The following information was in our letter to Regional Planning dated January 16, 2002:

The district prepared a Water System Design Report (WSDR) for this project at the developer's expense in February of 2001. After comparing the WSDR criteria with the EIR, it appears that the Draft Environmental Impact Report has addressed all-important issues, including the construction of a new pipeline from Twin lakes Tanks to the project site. The potable water demand for this project as shown in our Water System Design Report is consistent with the Draft EIR.

The Draft Environmental Impact Report is consistent with the Los Angeles County General Plan's Land Use Element. The district's demand projections in its Potable Water System Master Plan and its Urban Water Management Plan (UWMP) are based on proposed development consistent with the County's General Plan land use designations within the LVMWD service area, the proposed project is consistent with the district's Master Plan and UWMP and would not have a significant impact on Las Virgenes Municipal Water District's ability to meet its objectives as prescribed in the California Water Code.

The Draft Environmental Impact Report has addressed the mitigated measures to the satisfaction of the district stating to build the proposed water supply system to district standards and to use water conservation measures such as low-flow toilets and show-heads to reduce water consumption.

LVWD 1 - Response

The comment is noted. Please see Appendix H.2 of this document.

4.6.7 Save Chatsworth, Inc., Philip J. Hess, Attorney

July 24, 2002

Hess 1 - Comment

I represent Save Chatsworth, Inc. (SCI), a nonprofit corporation organized to respond to development that threatens the rural, equestrian character of the Chatsworth area of the City and County of Los Angeles. On behalf of SCI I offer the following preliminary comments on the above-referenced Draft Additional Environmental Information document (DAEI) issued by your office on or about July 18, 2002.

As indicated in a Notice of Completion filed with the State Clearinghouse, this document will be circulated for comment for a period of only 30 days, ending on August 19, 2002. This is a violation of CEQA on one or two alternative grounds, discussed in detail below.

First, the document by its own terms is a recirculation, at least in part, of the Draft EIR for the Deerlake Ranch project. Paragraph 1.2, on page 1-2, refers to Section 15088.5(f)(2) of the CEQA Guidelines. That provision deals exclusively with "Recirculation of an EIR Prior to Certification." Your office has thereby acknowledged that by issuing the DAEI it is recirculating the Draft EIR. What your office has failed to recognize is that Section 15088.5(d) of the CEQA Guidelines states:

"Recirculation of an EIR requires notice pursuant to Section 15087 . . . "

Section 15087(e) in turn requires that "the review period for a draft EIR shall be as provided in Section 15105." and Section 15015(a) requires that "(w)hen a draft EIR is submitted to the State Clearinghouse for review by state agencies [as was the Deerlake Ranch EIR], the public review period shall not be less than 45 days . . . " There is no exception in Section 15088.5 for recirculation of an EIR in part.

4.0 Response to Written Comments

The review period for DAEI is accordingly insufficient under the CEQA Guidelines. It should be withdrawn and reissued with a revised notice advising members of the public that the review and comment period is the full 45 days required by CEQA.

Hess 1 - Response

The County recirculated the Draft Additional Environmental Information document, but not because recirculation was required. Instead, the County recirculated the document beginning on or about July 18, 2002, to encourage public participation and wide public involvement in the public hearing process. See Section 4.6.1 of this document concerning the close of the comment period.

Hess 2 - Comment

Second, if your office allowed a thirty day comment because it does not consider the DAEI a recirculation, that determination is a violation of CEQA. Section 15088.5 of the CEQA Guidelines requires recirculation whenever "significant new information" is incorporated into a draft EIR. Two examples of "significant information included by the Guidelines are:

"(1) A new significant environmental impact would result from the project or from a new mitigation measure proposed to be implemented.

(2) A substantial increase in the severity of an environmental impact would result unless mitigation measures are adopted that reduce the impact to a level of insignificance."

The DAEI circulated by your office meets both of these tests.

The DAEI discloses, in section 3.4 beginning at page 3-26, the addition of a new street connection between the Deerlake Ranch project and an area to the north. This street appears to have been added at the direction of the County as a new mitigation measure in response to complaints from property owners north of the project that their access or development rights would be impaired.

This new street is acknowledged to have a growth inducing impact, the magnitude of which is estimated on page 3-30 to be 137 single family residential units north of the project site. These additional units represent a twenty-eight percent increase in the potential development density of the area.

The DAEI acknowledges the need to review the potential impacts of this growth increment, but limits its analysis to water supply and sewer capacity. There is no discussion of how this increased density would affect traffic, air quality or the other impacts reviewed in the Draft EIR or in other portions of the DAEI for the other alternatives or project modifications presented.

One way to measure the potential significance of these unmentioned impacts is to utilize the direct proportionality methodology the DAEI applies when analyzing the effects of other project alternatives. The revised Certificate of Compliance buildout (revised Alternative 2), at 444 units, represents a reduction in density of fifteen percent from the 525 lot buildout initially presented, and reduction in density of eight percent from the 484 preferred alternative. The environmental impacts of revised Alternative 2 would, according to page 3-11 of the DAEI, be reduced by the identical fifteen and eight percent amounts, respectively. Additional Alternative 4, the Equestrian Alternative, is 60 lots or twelve percent smaller than the 484 preferred plan, and is projected on page 3-19 of the DAEI to result in an identical 12% drop in environmental effects.

By this reasoning, the induced growth from the new connection to the north will increase traffic in the area by twenty-eight percent above the impacts projected for the preferred 484 unit alternative. No mitigation measures of any kind are suggested for this significant increase in traffic. The County may wish to dispute the validity of a linear increase in traffic volumes identical to the growth in density, but that would require an analysis of what the appropriate traffic increase should be and an

4.0 Response to Written Comments

explanation of why the direct proportionality methodology is considered valid for every other component of the DAEI.

Hess 2 - Response

Recirculation of the Draft Additional Environmental Information document pursuant to state and County environmental procedures was not required, because the additional information was not "significant new information" as defined in Section 15088.5 of the CEQA Guidelines.

Section 3.4 of the Draft Additional Environmental Information document explains why the potential development of the northern properties is not considered a significant growth inducing impact of the project.

Hess 3 - Comment

The amount of growth induced by the new street may also be seriously underestimated. The DAEI acknowledges, on pages 3-29 and 3-30, that the projection of 137 units rests entirely on the assumption that "the county will not develop their [sic] holdings and will more than likely transfer ownership to the [Santa Monica Mountains Conservancy]. Since the Deerlake Ranch project site itself includes 1,319 Record of Survey lots that the County formerly owned, and chose to develop rather than to preserve as open space, the validity of this assumption is certainly open to question. At a minimum, the 137 unit growth projection is a 'best case' assumption, and CEQA requires discussion and analysis of less optimistic scenarios as well.

The new street connection required by the County should accordingly be considered either a new mitigation measure causing a significant impact, or the source of a substantial increase in the severity of impacts previously estimated. Under either characterization it requires recirculation under Section 15088.5 of the CEQA Guidelines.

Hess 3 - Response

It can be assumed that the County will not develop its own properties, situated in either the northern properties or in the Deerlake addition properties, which are described in Section 3.4, for the reasons described in the section and because any such development of the County properties is extremely remote, speculative and without any basis in fact.

Hess 4 - Comment

Since the DAEI triggers an obligation to recirculate the Draft EIR at least in part for a comment period of 45 days the County should, at a minimum, withdraw it and reissue it with a new notice of the proper comment period. Such an action would not, however, cure the failure of the DAEI to provide a full and accurate analysis of the induced growth impacts of the new street connection. The County should accordingly not reissue any portion of the Draft EIR unless and until its content, as well as its comment period, complies with CEQA.

Given the number of new alternatives, project modifications and other new information disclosed by the DAEI on July 18, 2002, the most appropriate course of action for the County to follow upon revision of that document would be to recirculate the entire Draft EIR for Deerlake Ranch. That is the only means of providing the public a meaningful opportunity to review, understand and comment on the project and its various alternatives as they now stand.

Thank you for your consideration of these comments. I will provide additional comments on the DEIR, and on the draft Additional Environmental Information document, as the public review process progresses.

Hess 4 - Response

Recirculation of either the Draft EIR or the Draft Additional Environmental Information document is not required, because recirculation is only required under the circumstances described in Section 15088.5 of the CEQA Guidelines, and those circumstances do not exist here.

4.0 Response to Written Comments

4.6.8 Twin Lakes Property Owners Association - Mark Watters, President

May 20, 2003

Watters 1 - Comment

This letter pertains to the Deerlake Ranch Development project that is currently before the Los Angeles Regional Planning Commission (Draft EIR 99-239-5).

A series of meetings organized by your deputy, Patti Friedman, has recently concluded and I felt that it was appropriate to contact you regarding results of those meetings. Totalling six in all, the meeting began in December of 2002 and were hosted by the developer, Presidio Chatsworth Partners, LLC. The purpose of the meetings was to provide the opportunity for various representatives of our community to work with the developer in the hope of coming to an agreement as to the size, design and impact of the proposed development. Thanks, in no small part, to your request that all lots be a minimum 15,000 square feet, the community had every reason to be optimistic that Presidio would see fit to reduce the density and redesign the project to lessen the impact on both the community and the environment.

Many positive changes have been presented over the course of the last six months. The development has been divided into four separate neighborhoods, each differing in style and personality. The equestrian trails have been redesigned to provide access to Devil's Canyon as well as keeping the perimeter trail that had existed in previous designs. Many of the streets are single-loaded and many of the lots feature a "terrace" design that we are told, will minimize the amount of grading needed to complete the project. Although traffic mitigation remains a concern, there has been improvement from the previous design. I feel the developer has worked hard to minimize the impact in most of the areas and it is my hope that they will continue to improve this situation.

Watters 1 - Response

The comment has been noted. No additional response is required.

Watters 2 - Comment

Unfortunately, two serious issues remains that have yet to be resolved. The first pertains to the current plan to allow all of storm drain runoff to flow into Devil's Canyon. Despite our community's plea to change this, there has been no change from the original proposal to run the water through an elaborate filtering system that apparently promise to remove "90% of all contaminants." We are very much concerned that this system has not been tested in Southern California, and furthermore that all tests that have been performed to date were paid for and conducted by the manufacturer. Even if the system proves to be effective, the amount of pollutants that would still pass through would be devastating to the unique ecosystem that exists in this beautiful canyon. The developer has stated that the cost of building a drainage system that would bypass building a drainage system that would bypass Devil's Canyon would be too expensive. I find this unacceptable. Do we permit other businesses to ignore the impact on our environment simply because they cannot afford it? Of course not. I urge you to insist that the developer be required to install the necessary system to protect the wildlife, water and plant life that currently exist in Devil's Canyon.

Watters 2 - Response

See Section 4.2.2 (Urban Runoff 1 – Response) and Appendix 1 of this document for additional discussion of this issue.

Watters 3 - Comment

The second issue that has yet to be resolved is the matter of density. In October of 2002, the Regional Planning Commission insisted that the developer "substantially reduce the density" of Deerlake Ranch and "work with the community to redesign the project." At that time, the project was 424 homes. We were very disappointed when Presidio unveiled their latest redesign at 388 homes – a

4.0 Response to Written Comments

mere 9% reduction! The current plan features numerous homes crowded together on highly visible ridgelines. Fewer than 150 homes would be built on lots of 15,000 square feet and only 53 homes would allow for private horse ownership. Again, financial hardship was the reason given by the developer for not reducing the density further. We feel that the burden of the developer's financial situation should not rest on the surrounding community – inadequate financial planning is not an excuse for building a project that is not properly suited for the chosen location.

Watters 3 - Response

See Appendix I of this document for additional discussion of this issue.

Watters 4 - Comment

Our response to both of these issues is the same. If Presidio cannot afford to develop this precious resource properly, then they should not be permitted to proceed. Their current plan would pollute a creek that runs as close as 150 feet to numerous homes as well as existing and planned for equestrian and hiking trails. Their current plan would transform these beautiful sequestered hills into another overcrowded "Porter Ranch" disaster. It is our hope that we can continue our discussions with representatives from Presidio Partners on these and other issues. We had hoped to propose specific areas where carefully chosen home sites could be eliminated but our numerous requests for the necessary topo maps were denied by the developer. We remain committed to pointing out these modest reductions and plan to prepare a proposal as to where they might be applied.

Watters 4 - Response

See Section 4.6.9 and Watters 2 and 3 – Responses of this document.

Watters 5 - Comment

One additional concern that we have as a community is the enforcement of numerous community benefits that have been offered to us by the developer. We appreciate the county's assistance in working out the specific wording of the special conditions document that will protect our community down the line and ensure that each and every one of these special conditions will be completed in a timely manner.

Watters 5 - Response

The applicant is required to comply with all Conditions of Approval, which include "community benefits." See Appendix E of this document.

4.6.9 Lorraine D. Deniz

August 2, 2002

Deniz 1 – Comment

I would appreciate it, if you could take a few minutes out of your busy day and consider a few of the concerns that I have regarding my community.

As a long time member of the Chatsworth community, I am very concerned with the ramifications of this extensive development project called Deerlake Highlands. Over the years, many residents have settled in our wonderful community because of the visual ambience of the easy, natural designs that Mother Nature has provided. Many have come here because this is one the last cities in the San Fernando Valley that has property zoned A-2 for agricultural keeping.

In my opinion, it is unfair to myself and other families that have settled here, while you allow this developer to come in and rob us blind and steal our communities Western and Native American history and untouched rural-ness away from us.

4.0 Response to Written Comments

Deniz 1 – Response

See Section 4.3.7 (Development Issue 10 – Response) and Appendix J of this document regarding land use density.

As stated in Section 4.4 of the Draft EIR, impacts to cultural and historic resources would not be significant.

Deniz 2 – Comment

I am not against growth, but I do feel there should be limits. Some of these are simple, as other developers had to comply with issues like this in the past. For example, the Heritage housing tract is comprised of nice 3-5 bedroom homes with large lots that are zoned A-2. The homeowners have different tastes and live very happily among one another in this housing tract. As some owners keep their horses, others have pools, some tennis courts and other have a beautiful landscaped oasis that they can relax in after a hard day at the office.

Deniz 2 – Response

See Section 4.3.7 (Development Issue 10 – Response) and Appendix L of this document regarding land use density.

Deniz 3 – Comment

Our community has rallied together and we have presented a solid argument pointing out flaws in the EIR. Even the County's own environmental habitat study found that the proposed development is in an ecologically sensitive area. According to the SEA the optimal density for this sensitive area is one dwelling unit per ten acres. Yet at the first public hearing, the LA County Regional Planning Staff Report listed several alternatives for this development. One of those alternatives being titled "Alternative 3." This should be closely examined and considered. As this alternative would be a decision made upon "smart growth" rather than poorly planned growth that would burden the local community socially and economically.

Deniz 3 – Response

See Section 4.4.1 (C ECHO 2 – Response) of this document regarding SEA boundary recommendations. See also Section 4.3.7 (Development Issue 10 – Response) and Appendix L of this document regarding land use density.

Deniz 4 – Comment

Other issues are community resources; fire stations, libraries, police department and schools. Will the above-mentioned resources be able to handle this inherited growth?

Deniz 4 – Response

As stated in Section 4.8 of the Draft EIR, no significant impacts would occur to fire protection services with implementation of the project. See Section 4.2.4 (Fire 1 and 4 – Responses) and Appendix E of this document for additional discussion regarding this issue.

As stated in Section 4.9 of the Draft EIR, no significant impacts would occur to police protection services with implementation of the project. See Section 4.2.5 (Police Services 1 and 5 – Responses) and Appendix E of this document for additional discussion regarding this issue.

As stated in Section 4.10 of the Draft EIR, impacts to schools would not be significant with implementation of recommended mitigation measures. Please see Sections 3.3.4, 4.3.7 and 4.5.28, and Appendix J of this document for additional discussion of this issue.

Deniz 5 – Comment

What about traffic impacts? Currently, traffic levels exceed levels predicted on DeSoto and Topanga at the 118 Freeway. Furthermore, the developers want to widen Canoga Ave using this as a main thoroughfare in the ingress/egress plan. The developer said it could support up to 10,000 vehicle trips

4.0 Response to Written Comments

per day. In my opinion, Canoga Ave. is insufficient and will not be able to handle this large increase of traffic during rush hours and in time of emergency assistance.

Deniz 5 – Response

As shown on Table 4.12.5 of the Draft EIR, the intersections of Canoga Avenue/Rinaldi Street and Canoga Avenue/Chatsworth Street would operate at acceptable levels (LOS A) during the A.M. and P.M. peak hours with occupancy of the project. Also see Section 4.2.6 (Traffic 1 and 2 – Responses) and Appendix K of this document for additional discussion of project traffic distribution to the local street system.

Deniz 6 – Comment

What about storm water run off and pollution that will be dumped into Devil and Browns Canyon?

Deniz 6 – Response

As stated in Section 4.6 of the Draft EIR, impacts with regard to urban runoff would not be significant with implementation of mitigation measures. See Section 4.2.2 (Urban Runoff 1 – Response) and Appendix I of this document for additional discussion of this issue.

Deniz 7 – Comment

These are some of the many questions that I have. I am hoping you will consider the above questions and have an open mind with visions of what our communities' future will be when it comes time for you to make your final decision. Please remember the plea of the local residents and there feelings and help our community preserve what is left of the wildlife, the natural beauty of our hills and stream lined valley and the small town feeling for future generations to come.

Deniz 7 – Response

The comment is noted and the commenter's opposition to the project will be forwarded on to the decision makers.

4.6.10 Gary Schwagerle

November 15, 2002

Schwagerle 1 - Comment

I was hoping to get an update report on the status of the Deerlake Ranch Development. Can you mail me the minutes from the last meetings. I believe there was a meeting August 21, 2002? Where's it at and where's it going? In particular is my interest in parcel APN #2819-009-001. Any new information would greatly be appreciated.

Schwagerle 1 - Response

The comment has been noted. No additional response is required.

4.7 REVISED PROJECT DESIGN SUMMARY DOCUMENT COMMENTS

4.7.1 Southern California Association of Governments

Jeffrey M. Smith, AICP, Senior Regional Planner, Intergovernmental Review

July 8, 2003

SCAG 1 - Comment

Thank you for submitting the Deerlake Ranch Project for review and comment. As areawide clearinghouse for regionally significant projects, SCAG reviews the consistency of local plans, projects and programs with regional plans. The activity is based on SCAG's responsibilities as a regional planning organization pursuant to state and federal laws and regulations. Guidance

4.0 Response to Written Comments

provided by these reviews is intended to assist local agencies and project sponsors to take actions that contribute to the attainment of regional goals and policies.

We have reviewed the Deerlake Ranch Project, and have determined that the proposed Project is not regionally significant per SCAG Intergovernmental Review (IGR) Criteria and California Environmental Quality Act (CEQA) Guidelines (Section 15206). The proposed project is not a residential development of more than 500 dwelling units. Therefore, the proposed Project does not warrant comments at this time. Should there be a change in the scope of the proposed Project, we would appreciate the opportunity to review and comment at that time.

A description of the proposed Project was published in SCAG's June 16-30, 2003 Intergovernmental Review Clearinghouse Report for public review and comment.

SCAG 1 - Response

This comment has been noted. No additional response is required.

4.7.2 County of Los Angeles Fire Department

David R. Leininger, Chief, Forestry Division Prevention Bureau

July 14, 2003

LACFD 1 - Comment

Land Development Unit – General Requirements:

The Department may condition future development to provide additional means of access. The development of this project must comply with all applicable code and ordinance requirements for construction, access, water mains, fire flows and hydrants.

This property is located within the area described by the Forester and Fire Warden as a Fire Zone 4, Very High Fire Hazard Severity Zone (VHFHSZ). All applicable fire code and ordinance requirements for construction, access, water mains, fire hydrants, fire flows, brush clearance and fuel modification plans, must be met.

Specific fire and life safety requirements for the construction phase will be addressed at the building fire plan check. There may be additional fire and life safety requirements during this time.

Every building constructed shall be accessible to Fire Department apparatus by way of access roadways, with an all-weather surface of not less than the prescribed width, unobstructed, clear-to-sky. The roadway shall be extended to within 150 feet of all portions of the exterior walls when measured by an unobstructed route around the exterior of the building.

When a bridge is required, to be used as part of a fire access road, it shall be constructed and maintained in accordance with nationally recognized standards and designed for a live load sufficient to carry a minimum of 75,000 pounds.

The maximum allowable grade shall not exceed 15% except where the topography makes it impractical to keep within such grade, and then an absolute maximum of 20% will be allowed for up to 150 feet distance. The average maximum allowed grade, including topography difficulties, shall be no more than 17%. Grade breaks shall not exceed 10% in 10 feet.

When involved with a subdivision in unincorporated areas within the County of Los Angeles, Fire Department requirements for access, fire flows and hydrants are addressed at the Los Angeles County Subdivision Committee meeting, during the subdivision tentative map stage.

Fire sprinkler systems are required in some residential and most commercial occupancies. For those occupancies not requiring fire sprinkler systems, it is strongly suggested that fire sprinkler systems be installed. This will reduce potential fire and life losses. Systems are now technically and economically feasible for residential use.

4.0 Response to Written Comments

LACFD 1 - Response

See Section 4.6.3 (LACFD 1 and 2 Responses) of this document.

LACFD 2 - Comment

Single-Family/Two-Family Dwelling Units

Single-family detached homes shall require a minimum fire flow of 1,250 gallons per minute at 20 pounds per square inch residual pressure for a two-hour duration. Two-family dwelling units (duplexes) shall require a fire flow of 1,500 gallons per minute at 20 pounds per square inch residual pressure for a two-hour duration. When there are five (5) or more units taking access on a single driveway, the minimum fire flow shall be increased to 1,500 gallons per minute at 20 pounds per square inch residual pressure for a two-hour duration. Fire hydrant spacing shall be 600 feet and shall meet the following requirements:

- 1. No portion of lot frontage shall be more than 450 feet via vehicular access from a public fire hydrant.*
- 2. No portion of a structure should be placed on a lot where it exceeds 750 feet via vehicular access from a properly spaced public fire hydrant.*
- 3. When cul-de-sac depth exceeds 450 feet on a residential street, hydrants shall be required at the corner and mid-block.*
- 4. Additional hydrants will be required if hydrant spacing exceeds specified distances.*

LACFD 2 - Response

See Section 4.6.3 (LACFD 3 Response) of this document.

LACFD 3 - Comment

Fire Department access shall be provided to within 150 feet of all portions of the exterior walls of the first story of any single unit. If exceeding 150 feet, provide 20 feet, paved width "Private Driveway/Fire Lane" to within 150 feet of all portions of the exterior walls of the unit. Fire Lanes serving 3-4 units shall be increased to 24 feet in width, and if serving 5 or more units, the Fire Lane shall be increased to 26 feet. A Fire Department approved turning area shall be provided for all driveways exceeding 150 feet in length and at the end of all cul-de-sacs. Streets or driveways within the development shall be provided with the following:

- 1. Provide 36 feet in width on all collector streets and those streets where parking is allowed on both sides.*
- 2. Provide 34 feet in width on cul-de-sacs up to 700 feet in length. This allows parking on both sides of the street.*
- 3. Provide 36 feet in width on cul-de-sacs from 701 to 1,000 feet in length. This allows parking on both sides of the street.*
- 4. For streets or driveways with parking restrictions: The entrance to the street/driveway and intermittent spacing distances of 150 feet shall be posted with Fire Department approved signs stating "NO PARKING - FIRE LANE" in three-inch high letters. Driveway labeling is necessary to ensure access for Fire Department use.*
- 5. Turning radii shall not be less than 32 feet. This measurement shall be determined at the centerline of the road.*
- 6. A Fire Department approved turning area shall be provided, at the end of a driveway of 300 feet or more in length.*

LACFD 3 - Response

See Section 4.6.3 (LACFD 5 - Response) of this document.

4.0 Response to Written Comments

LACFD 4 - Comment

Limited Access Devices (Gates etc.):

All access devices and gates shall meet the following requirements:

1. Any single gated opening used for ingress and egress shall be a minimum of 26 feet in width clear-to-sky.
2. Any divided gate opening (when each gate is used for a single direction of travel – i.e., ingress or egress) shall be a minimum width of 20 feet clear-to-sky.
3. Gates and/or control devices shall be positioned a minimum of 50 feet from a public right-of-way, and shall be provided with a turnaround having a minimum of 32 feet of turning radius. If an intercom system is used, the 50 feet shall be measured from the right-of-way to the intercom control device.
4. All limited access devices shall be of a type approved by the Fire Department.
5. Gate plans shall be submitted to the Fire Department, prior to installation. These plans shall show all locations, widths and details of the proposed gates.

LACFD 4 - Response

See Section 4.6.3 (LACFD 6 - Response) of this document.

LACFD 5 - Comment

Traffic Calming Measures:

All proposals for traffic calming measures (speed humps/bumps, traffic circles, roundabouts, etc.) shall be submitted to the Fire Department for review, prior to implementation.

LACFD 5 - Response

See Section 4.6.3 (LACFD 7 - Response) of this document.

LACFD 6 - Comment

Forestry Division – Other Environmental Concerns:

The statutory responsibilities of the County of Los Angeles Fire Department, Forestry Division include erosion control, watershed management, rare and endangered species, vegetation, fuel modification for Very High Fire Hazard Severity Zones or Fire Zone 4, archeological and cultural resources, and the County Oak Tree Ordinance. The applicant has addressed most impacts to the areas germane to the statutory responsibilities of the County of Los Angeles Fire Department, Forestry Division.

However, our Environmental Review Unit is currently reviewing the revised Oak Tree Report #99-239 recently received and will withhold further comment until that review is completed and submitted to the Los Angeles County Department of Regional Planning.

LACFD 6 - Response

Comment noted. This review has been completed (see Appendix E of this document).

4.7.3 County of Los Angeles - Department of Public Works

Rod Kubomoto

August 11, 2003

LACDWP 1 - Comment

Environmental Programs

As projected in the Los Angeles County Countywide Siting Element, which was approved by a majority of the cities in the County of Los Angeles in late 1997 and by the County Board of Supervisors in January 1998, a shortfall in permitted daily landfill capacity may be experienced in the

4.0 Response to Written Comments

County within the next few years. The construction and/or predevelopment activities and post development operation associated with the proposed project may increase the generation of solid waste and may negatively impact solid waste management infrastructure in the County. Therefore, the proposed environmental document must identify what measures the project proponent plans to implement to mitigate the impact. Mitigation measures may include, but are not limited to, implementation of waste reduction and recycling programs to divert the solid waste, including construction and demolition waste, from the landfills.

The California Solid Waste Reuse and Recycling Access Act of 1991, as amended, requires each development project to provide an adequate storage area for collection and removal of recyclable materials. The environmental document should include/discuss standards to provide adequate recyclable storage areas for collection/storage of recyclable and green waste materials for this project.

The existing hazardous waste management (HWM) facilities in this County are inadequate to handle the hazardous waste currently being generated. The proposed project may generate household hazardous waste which could adversely impact existing HWM facilities. This issue should be addressed and mitigation measures provided.

Should any operation within the subject project include the construction/installation, modification or removal of underground storage tanks, our Environmental Programs Division must be contacted for required approvals and operating permits.

LACDWP 1 - Response

See Section 4.6.5 (LACDWP 1 - Response) of this document.

LACDWP 2 - Comment

Geotechnical and Materials Engineering

The proposed project will not have significant environmental effects from a geology and soils standpoint, provided the appropriate ordinances and codes are followed. Portions of the project site are located within both mapped potentially liquefiable areas and mapped potential seismically induced landslide areas, per the State of California Seismic Hazard Zone Map, Oat Mountain Quadrangle. However, liquefaction analysis and seismic slope stability analysis are not warranted at this time. Detailed liquefaction and seismic stability analyses, conforming to the requirements of the State of California Division of Mines and Geology Special Publication 117, must be conducted at the tentative map and/or grading/building plan stages.

LACDWP 2 - Response

See Section 4.6.5 (LACDWP 3 - Response) of this document.

LACDWP 3 - Comment

Land Development

Grading and Drainage – Comply with the drainage concept/Standard Urban Storm Water Mitigation Plan which was conceptually approved on March 28, 2003, to the satisfaction of Public Works.

LACDWP 3 - Response

Comment is noted. No additional response is required.

LACDWP 4 - Comment

Traffic and Lighting

We agree with this document that the traffic generated by the project alone will significantly impact the following intersections. The proposed mitigation measures identified in the document will reduce the impacts to a level less than significant. These mitigation measures shall be made conditions of approval for this project and included in the Final Environmental Impact Report.

4.0 Response to Written Comments

County of Los Angeles

Topanga Canyon Boulevard at Mayan Drive/Poema Place

East Approach: One left-turn lane and one shared through/right-turn lane (add one left-turn lane).

South Approach: One left-turn lane and one exclusive right-turn lane (convert shared left-/right-turn lane to a left-turn lane and one exclusive right-turn lane).

West Approach: One share through/right-turn lane and one exclusive right-turn lane (add one exclusive right-turn lane).

Install Traffic Signals: Traffic signals shall be interconnected with the traffic signals at the intersection of Topanga Canyon Boulevard and the Ronald Reagan (SR-118) Freeway per the satisfaction of Caltrans and the County of Los Angeles Department of Public Works.

LACDWP 4 - Response

Comment noted. The requested mitigation measures have been included, see Appendices D and E of this document.

LACDWP 5 - Comment

Topanga Canyon Boulevard at SR-118 Westbound Ramps

North Approach: Two through lanes and one right-turn lane (add exclusive right-turn lane).

LACDWP 5 - Response

Comment noted. The requested mitigation measures have been included, see Appendices D and E of this document.

LACDWP 6 - Comment

City of Los Angeles

We have received a letter from the City of Los Angeles Department of Transportation dated June 6, 2002 (copy attached). The letter contains the City's recommendations of mitigation measures required to fully mitigate the project impacts to the intersections and roadways in the City. We reviewed the letter and the traffic study for the project and concur with their recommendations.

LACDWP 6 - Response

Comment noted. The requested mitigation measures have been included see Appendices D and E of this document.

LACDWP 7 - Comment

Freeways

We concur with the study and recommend that the project pay its fair share toward long-term traffic improvements to the Topanga Canyon Boulevard at SR-118 interchange. The long-term traffic improvements are needed at this interchange since the interchange is operating at its capacity and would need to be upgraded to accommodate additional traffic expected from the cumulative traffic of the proposed project and other related projects in the area. The project shall, prior to recordation of the first final map for this project, work with Caltrans to provide all necessary data and information pertaining to long-term improvements at the Topanga Canyon Boulevard at SR-118 interchange, in accordance with Caltrans Guide for the Preparation of a Project Study Report (PSR). The project shall determine and pay the project's equitable share toward the long-term traffic improvements to the satisfaction of Caltrans. During this period, the permittee shall proceed with diligence in these efforts and inform Public Works' Traffic and Lighting Division of its progress with Caltrans in meeting these requirements.

A Congestion Management Program (CMP) analysis has been conducted in the traffic study to evaluate the project impact on the regional transportation system. We agree with the analysis that no

4.0 Response to Written Comments

significant CMP-related traffic impacts will be caused by the project on the CMP monitored route or freeways. The project will have significant CMP traffic impacts to the Topanga Canyon Boulevard at SR-118 westbound and eastbound ramps; however, the proposed mitigation measures for the intersections will fully mitigate the project's impacts to a level less than significant.

LACDWP 7 - Response

Regarding potential CMP impacts, the comment has been noted and mitigation measures are included in Appendices D and E of this document.

LACDWP 8 - Comment

Waterworks and Sewer Maintenance

Sewer Maintenance

Waterworks and Sewer Maintenance Division is responsible for the operation and maintenance of local sewers within the unincorporated areas of the County of Los Angeles. Therefore, the entire project will be required to be annexed to the Consolidated Sewer Maintenance District. The applicant should contact the Land Development Division, Road/Sewer and Water Section at (626) 458-4910, for information regarding plan check procedures and sewer maintenance fees.

LACDWP 8 - Response

The comment is noted and the requested provisions have been included (see Appendix E of this document).

LACDWP 9 - Comment

Watershed Management

The proposed project should include investigation of watershed management opportunities to maximize capture of local rainfall on the project site, eliminate incremental increase in flows to the storm drain system, and provide filtering of flows to capture contaminants originating from the project site.

LACDWP 9 - Response

See Section 4.6.5 (LACDWP 6 - Response) of this document.

LACDWP 10 - Comment

FEMA Support

The project site is located in an area designated as Flood Zone C, which is not prone to major flooding hazards. This is an area of minimal flooding.

LACDWP 10 - Response

The comment is noted. No further response is required.

4.7.4 County of Los Angeles Sheriff's Department Headquarters

Leroy D. Baca, Sheriff

July 1, 2003

LACSD 1 - Comment

Please accept my sincerest appreciation for the opportunity to comment on the Revised Project Design Summary associated with the Draft Environmental Impact Record (DEIR) for the Deerlake Ranch proposal. The Los Angeles County Sheriff's Department, Malibu/Lost Hills Station, provides general law enforcement service to the area, while the California Highway Patrol (CHP) is responsible for the enforcement of traffic-related laws and regulations.

The proposed project site is located in an unincorporated area of Los Angeles County. While the number of residential units and expected residential population would decrease by approximately

4.0 Response to Written Comments

20% under the revised plan, it is reasonable to conclude an increased demand for law enforcement services may still occur. In addition, the location of the proposed project may result in extended response times to routine, priority, and emergency calls for service.

I sincerely appreciate the opportunity to comment on this development proposal and the opportunity it has afforded me in evaluating law enforcement service levels in the unincorporated community of Chatsworth.

LACSD 1 - Response

See Section 4.3.5 of this document for a discussion of impacts and updated mitigation measures.

4.7.5 Save Chatsworth

August 29, 2003

Note: Maps and other information referred to in this comment letter is included in Appendix B.3 of this document.

SC1 - Comment

This book is a compilation of the studies and opinions of members of Save Chatsworth, Inc.

We presented the bulk of this material to you at our meeting on Monday, August 18, but also included are documents addressing other remaining concerns.

We believe that we have clear and concise arguments for further reduction in the density of the Deerlake Ranch development project, and we hope that you will take our research under consideration.

Sincerely,

Save Chatsworth, Inc.

SC1 - Response

The document was received and comments have been noted.

SC2 - Comment

Presidio Project Proposed CDS Technologies System for Storm Water Runoff Treatment

History: The studies and experts cited in the CDS Continuous Deflectory Separation System booklet have been funded by the manufacturer. The filter changes have not been addressed or tested by the County Sanitation Department. There has been no research done when upstream from these devices, storm water runoff capacity is at maximum force. County Land Division engineers were not given a number for dwellings versus existing situation. There is no system currently in use for any length of time, in an area similar in geological, geographical, and density level as the site under discussion. Devil Canyon at flood stage is quite a different volume and flow speed than the testing done in the manual and laboratory. No other project in our area proposes such a system.

Currently: The City of Santa Monica has had an apparatus in use for about 2-3 years. Mr. Neil Shapiro of the Watershed Division, City of Santa Monica Storm Water Maintenance Division, reports to me that their unit does not remove all "solids" without additional attachments and filters put on during overflow. About 40 to 60% of the sediments are removed. About 75% of the "first flush" of pollutants are removed, and then there is no guarantee that any more will be removed with the conventional filter, so now filters must be obtained and added. This process has only been in place since July

4.0 Response to Written Comments

of 2001. Further, when the Santa Monica installation reaches a saturation level, it creates a vacuum that closes the separation units.²⁰

I believe this does not address the additional fluids from overflow of swimming pools and extra oils from construction equipment during any construction through the life of the project. In addition, the thousands of acres north of the project are not factored into the system. However, Presidio dismisses concerns with a 2-3-sentence response in the Cox, Castle & Nicholson document dated June 13, 2002 on Page 6, "Storm Water Runoff Issues". Note: Page 5 of the above document outlines mechanics and cost of a conventional tie-in to existing storm drains. B & E Engineers and Hans Giraud, both of whom are on the Presidio staff, dismiss this solution.

Conclusion: The Storm Water Runoff proposal is unacceptable to the community. After studying the book for CDS I found:

1. The experts' studies cite each other for research documentation. Their research is collusionary and self-funded.
2. Overflow capacity of the upstream is not treatable, since in the case of overflow, the mechanism triggers an automatic device to let the pollution bypass the treatment.
3. Who or what agency maintains the filters and catch basins? What is the cost? Will they be in place during all construction to prevent pollution of the creek? Is there "Hazardous Waste Disposal"?
4. Are there any CDS units in the Chatsworth area? Any record or history of this experimental system for any length of time, particularly in this area?
5. The estimate of efficiency drops as more water is let in (as in flood stage). This system does not lend itself to the project site or its surroundings.

I believe that the proposed CDS system to handle the storm water runoff is untested within the current project's concept and may be dangerous in setting a precedent for future upstream construction. According to Mo Kajibaf, Department of Public Works, the system is conceptual and experimental and does not remove 100% of contaminants. To my understanding, he has not had access to a tract map and has not based his opinions on the system in regards to a specific number of units.²¹

Questions to County and Developers

Tract #53138 has 42% of total acreage in hard surface and has received no improvement plans.

What adaptation does the proposed system advocate when:

- 1) Homeowners add swimming pools, extra vehicles, horses/other pets?
- 2) The parkland north of the site has storms of significant drainage to creek or additional development?

During potential blasting, which Presidio is now proposing in its April 4, 2003 document, fine particulates and sediments and dust will wash into Devil Canyon Creek, decimating the stream's delicate flora that float in the shallow rock beds. If blasting is permitted, how will the runoff be controlled over many years (seasons) of construction, and how will CDS filters put into place before construction ends be cleaned and maintained?

Will there be added County taxes for maintenance of the units to cover hazardous wastes and disposal costs?

²⁰ Don Peterson, Civil Engineer, Sr. Administrative Analyst, City of Santa Monica

²¹ Mo Kajibaf, Department of Public Works, Jr. Civil Engineer, Land Division

Bruce Hamamoto, Department of Public Works, Associate Civil Engineer, Land Division

4.0 Response to Written Comments

In conclusion, I strongly urge the Commission to reject the CDS proposal of storm water runoff and to require the project developer to follow the proposal for the Browns Canyon Diversion outlined on Page 5 of the Cox, Castle & Nicholson document of June 13, 2002.

SC2 - Response

Regarding the use of CDS units to filter the storm water runoff from the Project, and also the proposed diversion of runoff to the Browns Canyon Channel, the County Department of Public Works, in a memo, dated September 2, 2002, stated the following:

“The following is a clarification of Public Works’ review and approval of the Drainage Concept and Standard Urban Stormwater Mitigation Plan (SUSMP) prepared by the applicant for the proposed Deerlake Ranch project. The proposal includes drainage improvements such as storm drains, inlets, debris basins and water quality devices as well as an analysis of two community preferred options. During the review of the Drainage Concept/SUSMP, care was taken to ensure that existing and proposed improvements are not adversely impacted by storm run-off or debris. Public Works concurs with the applicant’s findings and has approved the Drainage Concept/SUSMP. Debris retaining inlets have been proposed upstream of the Deerlake project to remove sediment from tributary flows. Catch basins, water quality devices and storm drains intercept, treat and convey storm run-off, while energy dissipaters and riprap pads are used at the outlets of the storm drain system to reduce erosion.

“Drainage case law does not allow new development to divert flows to the detriment of a downstream property owner. Deerlake project engineers were required to show that the post-development Capital storm run-off discharging into Devils Canyon, Browns Creek and other adjacent drainage courses was less than or equal to the pre-developed condition. Capital storm run-off volume from a 50-year storm includes both storm water runoff and debris flow. Due to impervious surfaces created by the proposed project, storm water run-off increases; however, this increase is more than offset by the decrease in total run-off due to removal of debris captured in the debris retaining inlets.

“In regards to water quality, Public Works complies with terms set forth in the Municipal Stormwater Permit issued in 2001 by the California Regional Water Quality Control Board (RWQCB). The permit mandates that defined “priority projects” such as Deerlake use post-construction Best Management Practices (BMP) to address pollutants of concern. Primary pollutants of concern for a residential development include trash, suspended solids, and oil and grease. The Deerlake project contemplates the use of a BMP known as a Vortex Separation System (VSS). The California RWQCB recognizes the VSS as a full capture device and among the best alternatives to evaluate and remove trash generated in a particular drainage area. The proposed VSS for this project is the Continuous Deflection Separation (CDS) system. A full capture device must retain particles five millimeters and greater during a one-year storm without plugging or blocking. Although a one-year storm is defined as 0.6 inches of rain per hour, the CDS units for this project will have the capacity to treat run-off from a 0.75 inch per hour storm. The screen openings will be less than five millimeters (mm) but will not block due to the vortex forces of the storm water flow through the device. Floating absorbent cartridges will be used to trap oil and grease. Based on the Regional Water Quality Control Board’s evaluation of these types of devices, Public Works has approved approximately forty construction plans with CDS units. Five of these CDS units have been built and are being maintained and

4.0 Response to Written Comments

monitored by Public Works in the Sun Valley, Santa Clarita Valley and Calabasas areas.

"The developer submitted two community preferred alternative Drainage Concept/SUSMPs that proposed routing all storm flows to the upstream end of Browns Creek flood control channel. The first alternative concept required four pump stations and the acquisition of off site right-of-way. This alternative concept was not acceptable to Public Works due to the high maintenance of unnecessary pump stations. Pump stations are utilized for flood control only when there is not an adequate outlet for the storm drain. Devils Canyon is an acceptable storm drain outlet. The second alternative concept contemplates excavations up to 90 feet deep in order to install a gravity storm drain system to eliminate or minimize the use of pump stations. This concept was not acceptable due to constructability issues, utility conflicts and unfeasible future repairs due to the depth of the storm drain. In addition, these concepts would have drastically reduced stream flows in the riparian habitats of Devils and Browns Canyon, which would have been detrimental to wildlife and the natural environment."

Regarding the question about the addition by homeowners of swimming pools, extra vehicles, horses and other pets, the following response apply:

- **Swimming pools:** According to the Department of Public Works, there are three methods acceptable for discharge of swimming pool water, none of which will have an adverse impact on the quality of storm water runoff: 1) pump it and truck it off; 2) stabilize the water quality and get a permit to discharge into the street/storm drain 3) get permit to discharge to sewer/treatment plant during off peak hours.
- **Extra Vehicles:** The total number of on-site vehicles has been considered as part of the Revised Traffic Report (see Appendix K of this FEIR); therefore, it is not clear what the commenter means by "extra vehicles".
- **Horses and Other Pets:** All equestrian trails and horse keeping areas will consist of pervious surfaces, including natural ground and decomposed granite. Therefore, "first flush" storm water will percolate into the ground, and will not be conveyed to the storm drain system. Also, it is anticipated that wastes from household pets will be mostly confined to pervious areas, such as rear yards and planted parkways.

Regarding the comment about impact from potential development from properties to the north, should such development take place (see Appendix M of this FEIR), each development would be required to provide the same storm water runoff mitigation than this Project.

Regarding potential impact of blasting, if necessary, on storm water runoff and the CDS units, the following responses apply. Blasting, if required, would be a sub-surface activity designed to fracture buried rock formations. No above ground blasting would take place. Therefore, any blasting activity would have no impact on storm water runoff. In addition, CDS units would not be put into place prior to completion of grading. Storm water runoff during grading operations will be controlled by measures stated in the Storm Water Pollution Prevention Plan (SWPPP), using Best Management Practices (BMP's). The SWPPP must be approved by the Department of Public Works, and all mitigation measures must be in place on the site, prior to issuance of a grading permit.

Regarding County operating costs of storm water systems, the County Flood Control District has stated that adequate funds are available.

SC3 - Comment

Equestrian and Hiking Trails

As Regards Hiking Especially:

The hiking and equestrian community needs viable access, comparable to existing access which may be eliminated under the "Poema Condominium" project.

SC3 - Response

The project's proposed on-site Hiking and Equestrian Trails meet the standards of the Department of Parks & Recreation, and will be designed to connect to other, off-site trails.

SC4 - Comment

The hiking community needs access without significant elevation ups and downs to optimize use of this unique area, where an almost flat trail exists along the canyon floor.

SC4 - Response

See Section 4.7.5 of this FEIR, SC3 - Response

SC5 - Comment

The hiking community needs parking available for 20 autos along the street. Dawn to dusk weekends. 7 hours weekdays (from 7 a.m.), extended hours upon request via permits to be issued from 5th District Supervisors office.

SC5 - Response

Public parking along any portions of the Project's proposed public streets will be subject to approval of the Department of Public Works and the Fire Department and is beyond the scope of this FEIR

SC6 - Comment

Devil Canyon is a riparian area, blue-line stream, part of major watershed and a feeder into Brown's Canyon. It is deserving of protection, as both the old SEA and the proposed SEA (which extends the boundaries to incorporate almost all undeveloped areas) state.

SC6 - Response

Devil Canyon will be preserved in its natural habitat and will be dedicated to the SMMC

SC7 - Comment

The Effect of the Poema Condominium Project:

Although the Developer showed a switchback trail near the west side of their project (near the existing Mayan Drive Twin Lakes Community Information Board) since the beginning, the community did not realize this trail, and this trailhead was to replace the existing access point from the Poema Condominium project, shown on the ©2001 "Los Angeles County Riding and Hiking Trails" map as a dedicated trail. If the trail head moves to this area, key issues are the same as above: parking availability, and minimal grade access.

SC7 - Response

See Section 4.7.5 of this FEIR, SC3 and SC5 - Responses

SC8 - Comment

As Regards Equestrian Especially:

12 Foot Horse Trails vs. 8 Foot Project Trails

"Horse Trails" that are 12 feet wide are shown on the east, north, west boundaries. "Project Trails that are 8 feet wide are shown along the southerly perimeter and along interior areas of the project. The developer has represented 8 foot wide trails are equestrian. Please require a condition to (a) provide 12 foot trails around the entire perimeter, and (b) require County to accept 8 foot wide trails as "multi-use, including equestrian trails" to ensure Chatsworth does not further lose access in its

4.0 Response to Written Comments

prime equestrian trail access area. A major portion of the southern perimeter trail goes along new Mayan drive, which will have about 60% of the traffic per the developer's traffic study.

Other areas are a key part of the perimeter trail, so should be the standard width to improve safety and maneuverability issues. The Developer said Parks and Recreation has considered this issue and accepted use of 8 foot wide trails for equestrian use, please ensure this is correct, and will survive the sale of all or a part of the project by clarifying the use. Additionally, no standards of construction/fencing for the 8 foot wide trails have been specified, please specify standards for these trails, suitable for containment of horses and other expected users of these trails. Please provide draft conditions addressing these areas BEFORE any project approval is made; this is a key issue to the local area. Please note the equestrian community has no objection to designating the 12 foot wide trails as "multi-use, including equestrians", either.

SC8 - Response

The proposed 12-ft. wide and 8-ft. wide trails proposed for the project will meet the criteria stated by the commenter.

Also, specific locations and standards for trail fencing are typically designated by the Department of Parks & Recreation on the final construction plans, not at this stage of the entitlement process, and will be established to ensure public safety.

Proposed conditions of approval, which have been submitted previously to the community for comments and responses, are included in Appendix E of this FEIR.

SC9 - Comment

The Old Bridge:

An old bridge north of Canoga is to be used for trails. Please confirm in writing the bridge will be accepted for use as a part of the trail, even though it is old, surely not earthquake-reinforced, etc.

SC9 - Response

The bridge/dam will be owned and maintained by the Project's future Homeowners' Association (HOA). An easement across the bridge/dam will be granted to the Department of Parks & Recreation for public trail purposes to ensure the public's right to use this segment of the trail system.

SC10 - Comment

Dead Ends in Trails as Conservancy Areas:

The 8 foot trail (requested to be 12 foot) along the south side is interrupted by a "no trail" area across Devil Canyon. We first saw this in the new map. Please require grading of the Developer's parcels to match/tie into grade of the Conservancy land, so the equestrians and hikers can have a chance of linking the trail.

SC10 - Response

The grading of this portion of trail has been revised to meet the elevation of the SMMC's land within Devil Canyon.

SC11 - Comment

Equestrian/Multi-use Trail, East side of Topanga Canyon:

Shown on Exhibit A3 "Equestrian/Hiking Trail" is a proposed equestrian trail along the east side of Topanga Canyon Blvd. This has not been part of the proposed street improvements to the Topanga Canyon/118 Freeway intersection. Let's get this implemented now, if it is not done as part of the major improvement project underway with this development, it will not be done, and equestrian access to the north will be further impaired.

4.0 Response to Written Comments

SC11 - Response

That portion of future trail shown on Exhibit "A-3" is not part of the project site and is shown only to demonstrate how proposed project trails could be connected to other existing or future off-site trails.

SC12 - Comment

Mutual Letters of Intent to Protect Trail Access:

Doug Ring of the Poema Condominium project indicated there were Letters of Intent between Presidio and Sonderman/Ring to ensure the trail access was protected and available. We have not been able to obtain a copy of these documents to see if the representation was true, we were later told by Sonderman/Ring's representative he believed Public Works had them, but he didn't have a copy. Please require that these documents be provided to the community, if they are to be relied upon in any way in designing the trail access and trail.

SC12 - Response

See Section 4.7.5 of this FEIR, SC3 - Response. Also, any private agreement between property owners is beyond the scope of this FEIR.

SC13 - Comment

Trail Grade after Completion:

Presidio is making major changes to the elevation of their development envelope. We are concerned that a side effect may be to increase grade of various trails that link from the northwest property line down into Devil Canyon. Please condition trail links to adjacent lands to have elevation gains not more steep than is presently the case, and require the developer to match elevation of the off-site trails they link to as part of the grading process.

SC13 - Response

See Section 4.7.5 of this FEIR, SC3

SC14 - Comment

Issues Affecting All Trail Users:

Rim of The Valley Access

This is one of the best areas for a hiker to access the Rim of the Valley trail system that has gained great support as recreational hiking opportunities have gained more widespread support. Retention of access points is a key component to having a usable system.

SC14 - Response

See Section 4.7.5 of this FEIR, SC3

SC15 - Comment

Global Trail Solution/Supervisors Office:

Part of the complexity of the trail solution is that the Sonderman/Ring Poema Condominium Project is based on land that is to be acquired under an option, and is not owned by the proposed developer. Presidio owns the land they propose their project will be built on. We have been told for the last four weeks, a solution supervised by Mr. Antonovich's office is imminent, and a meeting of concerned community members will be happening to provide a solution to what will happen if either Ring goes forward. Presidio goes forward, or both projects are approved. Nothing has been shown to us yet, we ask that any approval be put off until the full effect of any modification of the "dedicated" trail is known, and reviewed by community members that are involved in the trail system in the area.

SC15 - Response

See Appendix R of this FEIR for proposed trail connections between these two properties.

4.0 Response to Written Comments

SC16 - Comment

Presidio's comparisons Deerlake to existing Chatsworth

In an effort to sway opinion to accept its project Presidio Partners, the developer, says Chatsworth's equestrian community is bounded by the 118 freeway to the north; De Soto Ave. to the east; Chatsworth St. to the south and Andora Ave. to the west. This study area they claim has 521 homes, but only 20 lots with horses.

As president of the Chatsworth liCHO, a local equestrian group, I knew there were more than 20 lots with horses in the area. And, having dealt with a few horse traders in the past I figured I ought to have a look in this horse's mouth for myself

Deerlake Ranch Comparison To Existing Chatsworth Neighborhood

	Chatsworth Neighborhood (118/DeSoto/Chatsworth/Andora)	Deerlake Ranch 388 Home Project
Acreage	328 acres	235 acres
Homes	521 dwelling units	388 dwelling units
DU/AC	1.6 du/ac	1.65 du/ac
Acreage With Resource Openspace	328 acres	395 acres
DU/AC With Resource Openspace	1.6 du/ac	0.98 du/ac
Average Lot Size	17,100 sq. ft.	12,492 sq. ft.
Average Lot Size With Adjacent Openspace	17,100 sq. ft.	21,200 sq. ft.
Lots Keeping Horses	20 (4%)	37 (Est.) (9%)
Miles of Dedicated & Private Trails	2.4 miles	5.3 miles
GP/Zoning Densities	Very low density 1 to 2 du/ac	Rural Community R-1-6000 2 to 6 du/ac

Aerial photo with dots

I went to the Internet and downloaded aerial photos of the area. With a good picture of the entire area I was able to actually count each house in the area. Next I interviewed many neighbors to ask them about their zoning and horse keeping.

Presidio vs. Echo slide

My ECHO study concluded that there are only 441 homes, not 521 in the area studied. I found 61 lots with horses in Presidio's study area not 20 they state are in the area. My finding showed serious deficiencies and inaccuracies in developer neighborhood comparisons.

441 homes in study area

Presidio chose not to discuss zoning in the study area, but I determined that roughly 69 percent of the study area is zoned RA-1 and will allow horse keeping.

Map of areas not surveyed by Presidio

Keep in mind I said the developer was trying to sway opinion to accept its project that's why they are trying to convince the public and government officials that Chatsworth's equestrian community is much smaller than it actually is.

Here is a comparison map of horse keeping areas as shown in the developer's study area and the real equestrian community in our immediate area.

4.0 Response to Written Comments

Pie chart of how few properties are horse property

In conclusion we find Presidio has yielded to pressure and in recent weeks added 53 horse keeping lots to its proposed 388 home subdivision. But, that still means 86 percent of the proposed Deerlake project will exclude horse keeping.

Presidio needs to honor Supervisor Antonovich's request and increase lot size to a minimum of 15,000 square feet so its project will be more compatible with our community.

SC16 - Response

The data presented in Appendix L of this FEIR was prepared to demonstrate reasonable compatibility of the Project with the existing neighborhood south of the 118 Freeway. It was not intended to serve as a specific planning tool to be used to make specific land use or zoning determinations. Therefore, although there appear to be reasonable differences between the data in Appendix L and that presented by the commenter, as shown in the Table below, the conclusions regarding reasonable compatibility between to Project and the existing community south of the 118 Freeway remain unchanged.

Description	Applicant's Chatsworth Neighborhood Data	ECHO Data	Deerlake Ranch Project Data
No. of Homes	521	441	388
No. of lots with horses	20	61	55
% of lots with horses	4%	14%	14%
Study area	328 ac.	328 ac. (assumed)	235
General Plan permitted densities	1 to 2 units/ac.	1 to 2 units/ac.	2 to 6 units/ac
Development density	1.60 units/ac.	1.34 units/ac	1.65 units/ac

Other ancillary comments, which do not address specific Project-related issues, have been noted.

SC17 - Comment

Project Comparisons to local area luxury homes and comparable properties

Supervisor Mike Antonovich

"His position is he would like to see equestrian/estate-sized lots for that project, minimum 15,000 square feet." said Patti Friedman, Antonovich's deputy. Los Angeles Daily News

In each and every plan that Presidio has presented the community they have failed to provide a community that even approaches Supervisor Antonovich's request. We examined the Los Angeles County tax rolls and found that by analyzing the average lot sizes of property from Topanga Blvd. on the West, De Soto Avenue on the East, Devonshire on the South and the 118 Freeway on the North that the properties average 15,999 Square Feet. This was the general area that Presidio determined was comparable property. We further found that if you expand the area of review to include numerous properties to the West of Topanga Blvd and to the North of the 118 freeway that a large number of properties are much larger than the 15,000 Square Feet. Quite a few of these properties are more than 100,000 Square Feet.

SC17 - Response

See this FEIR Section 4.7.5, SC 16 – Response; Section 3.4.1, C ECHO 1 – Response; and Section 4.1.2, City Council 3 - Response

4.0 Response to Written Comments

SC18 - Comment

Comparable Property

In reviewing the Deerlake project we took into account comparable properties and general property sizes and types in the comparable areas of Chatsworth. The developer, Presidio, has maintained, on numerous occasions, that they wanted to retain the unique character of the Chatsworth area. During numerous meetings with members of the community Presidio gave us a glimpse of the types of homes they wanted to build and the how they would go about maintaining the character of the neighborhood. The developer continuously explained to us that the type and density of the project was dictated by the studies they completed on property values in the area. Some of these studies were completed several years ago. With the type of development we were shown by Presidio it was more in line with comparable projects to the West (Indian Springs and Indian Hills). These comparable properties ranged in prices from \$1.1 million to over \$3.0 million.

Luxury Homes Get More Commonplace

An article in the San Fernando Daily Business Journal May 26, 2003 discussed how there is an extremely strong market for luxury homes in the area. The article stated that "Builders say they are limited in their luxury home efforts only by the availability of land". "Generally what we're seeing is a lack of supply in the marketplace" stated Tom Redwitz, President of John Laing Homes new luxury homes division.

SC18 - Response

Comparisons of area market prices and demands for residential houses are beyond the scope of this EIR. The comments have been noted.

SC19 - Comment

Horse Property requires 15,000 Square Feet Minimum

Under the County of Los Angeles zoning rules a property must be a minimum of 15,000 Square feet in order for it to house a horse. Presidio has repeatedly stated they desired to develop a project comparable to the area surrounding which is mostly zoned for horses.

In an effort to clarify it's position regarding the excessive density of the current 388-home plan of Deerlake Ranch, Save Chatsworth, Inc. has prepared the following suggestions as to how the project could and should be further reduced.

There are three objectives:

- 1. Increase the lots sizes*

In addition to requests from members of our community, Supervisor Mike Antonovich has also requested that all the lots in Deerlake Ranch be minimum 15,000 sq. feet. The current 388-home plan is well below that number. Many lots are as small as 6,000 sq. feet.

SC19 - Response

The Revised 388-unit Project has increased lot sizes significantly from previous proposals, including 155 lots which exceed 15,000 s.f. in size. Of these, 55 lots have been specifically designated for on-site equestrian use. Following is a compilation of lot sizes within the Project:

Lot Size Range	No. of Lots
6000-6500 s.f.	47
6500-7000 s.f.	18
7000-10,000 s.f.	122
10,000-15,000 s.f.	46
Over 15,000 s.f.	155

4.0 Response to Written Comments

Although many of these lots have been clustered into smaller to preserve open space and habitat areas, the overall density of the project of 1.68 units per acre is still consistent with the designated density of 1 to 2 units per acre under the City of Los Angeles' Chatsworth-Porter Ranch Community Plan for the existing neighborhood south of the 118 Freeway.

SC20 - Comment

2. *Reduce the density of the lots on the ridgelines*

These highly visible ridgelines are easily seen from the 118 Freeway to the south, from nearby Porter Ranch to the east and the communities of Twin Lakes, Indian Falls, Indian Springs and the Somerset condominiums to the west. We would like to see the beauty of these ridgelines maintained by building a development that is less dense.

SC20 - Response

The majority of the project is situated on an extensive plateau, commonly known as Deerlake Highlands. The remainder of the project is situated on varying terrain leading up to the plateau. It is not situated on a ridgelines (see Figure 2.8 of this FEIR).

Under the Performance Review Criteria of the County General Plan's Land Use Element for residential development within Hillside Management Areas, structures are to be sited so as to "achieve compatibility with established community character", "preserve significant views from major existing residential areas", "apply innovative approaches (to house placement) using techniques such as stepped multi-level design", and that "major ridgelines (should) be preserved wherever possible". The project site plan conforms to these criteria.

Also, as stated in Section 4.1 of the DEIR, views of the proposed project would be limited from County designated first priority scenic highway routes, SR-118 and Topanga Canyon Boulevard, due to topography, and because these views would be experienced for a short duration. Although some existing homes within the Lower Twin Lakes community are visible from SR-118, the developed portions of the project site would not be visible. The project site would also not be visible from Topanga Canyon Boulevard. Therefore, the proposed project would be consistent with the Scenic Highways Plan, and view impacts from SR-118 and Topanga Canyon Boulevard would be less than significant.

SC21 - Comment

3. *Lots that are adjacent to equestrian trails, should be equestrian properties.*

Part One:

The attached map will show that 13 equestrian lots have been added along the northern and eastern boarders of Neighborhood 2. These are all properties that will be adjacent to the "perimeter" equestrian trail that will border the eastern and northern rim of the development. This requires a reduction of only 13 homes and also reduces the density of the eastern ridgeline from 16 homes to 8.

SC21 - Response

Equestrian lots have been designated within the Project plan so as to preserve the "neighborhood" concepts inherent in the overall plan (see Exhibit A.4 in Appendix E of this FEIR). To add 13 equestrian lots within "Neighborhood 2" would be defeat the neighborhood concept and overall design character of the project.

SC22 - Comment

Part Two:

The attached map (see appendix B.3) will further show a dramatic reduction to Neighborhood 3. In the E.I.R. submitted for Deerlake Ranch, Alternative 3 displayed a plan for 171 homes. Neighborhood 3, because of its rugged topography, will require massive grading to allow for the density currently proposed. The attached map shows an easy solution would be to merely take the

4.0 Response to Written Comments

design of the 171-home plan from Alternative 3 in the E.I.R. and paste it over the current plan for this portion of Deerlake Ranch. This significantly reduces the density of the eastern, southern and western ridgelines. All lots in this plan are 20,000 sq. feet. Less grading will be required and it also provides for some much needed community open space at the crest of Neighborhood 3.

This map shows a total reduction in density from 388 homes to a much more sensible plan of 300.

SC22 - Response

The plan for Deerlake Ranch, as initially submitted, called for 538 homes and was reduced to 484 homes at the time the Notice of Preparation (NOP). The plan was further reduced to 424 homes during the course of review by the Regional Planning Commission in 2002. The purpose of numerous meeting with a community advisory committee, which led to further refinement of the plan for Deerlake Ranch, was not to simply reduce the density or yield. The additional purpose of the process with the committee was to develop a further revised plan to allow for a feasible project that addressed, and further resolved, issues of concern to various segments of the community, including community character, an extended trail system, and to provide as many 15,000 square feet lots as reasonably feasible, including lots designated specifically for horse-keeping. This effort led to the revised project of 388 homes, which represents a nearly 28% reduction from the initial 538-home design. The number of lots greater than 15,000 square feet have been increased from 24 to 155, and the number of lots suitable for horse keeping have been increased 12 from to 55.

Also, see Section 4.7.5 of this FEIR, SC17 through SC22 – Responses

Therefore, no further reduction in units is required to meet the requirements of the California Environmental Quality Act.

SC23 - Comment

Members of the Advisory Committee have gone back to the community for response, and the following is a compilation of community opinion and comments on the character statement (January 16, 2003)

We find the community plan concept design with its four separate neighborhood component, to be a good one in a general sense. We would like to see more specifics on how the design will work into the existing topography and more detail on what features of the natural landscape will be retained.

We are expecting a minimum of 15,000 square feet in lot size. Since we do not know at this time how many lots that equates, it would be helpful for us for you to provide us with the actual square footages of all the lots under the old design. We would like a detail of each lot, versus an average for the various sections.

We have concerns about the revision to the EIR, if the number of units has not yet been determined, since every study in the EIR is directly affected by the number of units. We have questions about the dollar amount requested for the CID, and the usage of said dollar amount. Is this figure intended to cover the infrastructure improvements, such as the bridges, streets and sewers, traffic mitigations for Los Angeles City streets, the child care center, library fees and school fees, as well as Twin Lakes improvements? In the absence of any financial disclosure, and considering the huge impact of this project on traffic and the environment, perhaps the use of the CID could be broadened to provide other community benefits, such as a community center, a better trail network and more stringent construction period controls.

The sphere of influence for the City of Los Angeles should be considered, and for horsekeeping properties, that mandates lot sizes of a minimum of 17,500 square feet. Throughout the remainder of the document, we have inserted our comments in italics with underlining.

SC23 - Response

Comments on the Community Character Statement for the project are included in Appendix B.3 of this document and are noted. Subsequent to these comments, several revisions in the Community

4.0 Response to Written Comments

Statement have been made, and are shown in final Community Character Statement included in Appendix C.3 of this document. However, these specific comments concerning design criteria do not relate to the environmental analysis of the project, and no additional response is required.

SC24 - Comment

Community Response to Proposed Community Benefits/Project Mitigation to be added to the Conditional Use Permit and the Conditions of Approval for the Deerlake Ranch Project
Attached is the community's response to the Special Conditions document dated April 4, 2003, presented to the community advisory committee by Presidio. Community comments are a response to what has been presented so far – there are additional items that will need to be addressed in this document in its final form.

In offering these comments the community is not taking a position on the merits of the Deerlake Ranch project as it has currently been proposed. The community is currently engaged in discussions with representatives of the Deerlake Ranch concerning the project, and in the course of those has not yet been provided with sufficient information to take a position on its merits. The community reserves the right to take a position in the future in favor of or opposed to the Deerlake Ranch project as a whole, or any aspect of the project, and to communicate that position at such times and in such manner as it considered to be appropriate. In addition, the community reserves the right at any time to modify, rescind, restate or revise these comments, or to offer additional comments on the special conditions of project approval proposed by the Deerlake Ranch project developer or any other party.

The proposed matrix for tracking the compliance of all Special Conditions should include every step or action required to complete each condition and mitigation, but in our opinion, this matrix cannot be finalized until there is agreement as to the wording of the Special Conditions document.

SC24 - Response

Comments on the Special Conditions for the project are included in Appendix B.3 of this document and are noted. The project Conditions of Approval, included in Appendix E of this FEIR, have been revised, where feasible, to reflect the community comments listed in Appendix B.3, based on meetings between the applicant and community representatives. Therefore, no additional, specific responses are required concerning this item. Use of the proposed matrix for tracking project compliance with all Conditions of Approval, as stated in the comment, has been made a Condition of the CUP (see Appendix E of this FEIR).

4.7.6 Santa Susana Mountain Park Association

Jan Miller, President; Nancy Razanski, Vice President
August 27, 2003

SSMPA1 – Comment

There is a serious inadequacy in the Draft Environmental Impact Report (E.I.R.), Volume I, Section 4.3 page 4.3-12. In reference to wildlife corridors the E.I.R. fails to mention Canoga Avenue which presently offers a very good, albeit impacted, animal crossing route.

Crossing south under the 118 Freeway at Canoga Avenue there is a continuous open space connection (wildlife corridor) all the way to the Santa Monica Mountains. This under crossing is the most easterly of a handful of wildlife crossing points between the San Fernando and Simi Valleys.

The Deerlake Ranch project plans to use Canoga Avenue as one of its two access routes. This will have a tremendously adverse effect on the wildlife crossing.

In Volume II of the Draft E.I.R., Appendix G, Page 4-6, Paul Edelman's 1990 Wildlife Corridor study is referenced. The E.I.R. states, "No on-site regionally important wildlife movement corridors were

4.0 Response to Written Comments

identified in these studies." No corridors were identified because Deerlake Ranch was not a part of that study. Edelman's study purposely focused on corridors to the west of this project.

We recommend that a study be undertaken which focuses on the Canoga Avenue underpass and any other potential wildlife crossing points between Topanga Canyon Boulevard and De Soto Avenue.

SSMPA1 -- Response

The comment has been received and noted. As stated in the Draft EIR, regional wildlife movement studies have been prepared for The Nature Conservancy and the Santa Monica Mountains Conservancy (SMMC) and include the vicinity of the project site. No onsite regionally important wildlife movement corridors were identified in these studies. Implementation of the revised project would not prevent the regional movement of wildlife. Although many common animals would be adversely affected by direct impact and/or habitat loss associated with the implementation of the project, impacts to local wildlife populations are considered to be below a level of significance. Local onsite wildlife movement would be affected by the revised project, although these species are expected to move to the open space areas located north, west, and east of the project site and the onsite portions of Devil and Browns Canyons. Wildlife would likely continue to utilize open space portions of the project site via Browns Canyon, upper Devil Canyon and the open space to the north, which provide habitat for a variety of species.

Preservation and dedication of the corridor of willow woodland associated with Devil Canyon, which in some areas exceeds 220 feet in width, provides an important resource for avian species for both local and regional movement. Large blocks of riparian habitat (even when surrounded by development) serve as islands, providing an archipelago effect, whereby migrating or dispersing birds can stop to forage, rest, or seek cover from predators as they move across the landscape. Regional and local wildlife movement for terrestrial species is constrained in the area by development, but the willow woodland is expected to continue to serve an important function for local and regional avian dispersal and migration.

In addition, the 14-acre Horner property located at the northeast corner of the intersection of Canoga Avenue and SR-118 has been purchased by the MRCA with funds provided by the applicant, the County of Los Angeles, and SMMC. This property would be maintained as permanent open space. This acquisition would allow the existing wildlife corridor through this property, between North Stoney Point and Devil and Brown Canyons to be preserved.

The existing Canoga Avenue underpass of SR-118 is approximately 160 feet in length, and ranges from approximately 80 feet wide at road grade, to 130 to 160 feet wide at the top of the buttress slopes under the freeway bridge. The height of the bridge above the road grade is approximately 25 feet. The existing 16-foot wide Canoga Avenue is paved, with bare earth on both sides and extending up onto the slopes under the freeway bridge. Vegetation is sparse on the slopes on the south side of the freeway bridge buttresses, and virtually non-existent in the shaded areas under the bridge. The area under the bridge is also frequently used for illegal dumping of refuse. Conditions for movement of wildlife through the underpass are presently tenuous, especially during daylight hours.

The revised project would require roadway improvements of Canoga Avenue under SR-118 to 36 feet of paved width, and improvement of a 12-foot wide equestrian trail that would extend along the eastern side of the road. These improvements would leave an area approximately 32 feet wide for a wildlife corridor through the underpass. With planting of appropriate vegetation and placement of other screening improvements to provide cover for wildlife (see Appendix F.5 of this document), the potential adverse impact to wildlife through the underpass connection between North Stoney Point and Devil Canyon would be mitigated to a less than significant level.

4.0 Response to Written Comments

SSMPA2 -- Comment

We have reviewed the current Deerlake Ranch project in light of the Significant Ecological Area Update dated November 2000. We especially noted the detailed narrative regarding the critical need to expand existing protected areas to preserve natural habitat. We note the recommendation in the report is to develop lands within Significant Ecological Areas (SEAs) at no more than one home per 10 acres (see page 30 of the Santa Susana Mountains/Simi Hills Significant Ecological Area Update Study). The Deerlake Ranch project is entirely within the proposed SEA boundaries.

The Association and the Foundation strongly recommend that development be curtailed to avoid housing density greater than one home per 10 acres, as recommended by the Los Angeles County SEA Study dated November, 2000.

SSMPA2 -- Response

The comment has been received and noted. Please see Section 4.4.1 (C ECHO 2 – Response) of this document.

5.0 Response to Comments Received at Public Hearings

5.1 INTRODUCTION

In order to comprehensively respond to all comments received at the Public Hearings and address each CEQA issue raised, a matrix has been developed which lists the commenter and the corresponding issues raised. The matrix contains the names and addresses of all commenters, and has been subdivided into 22 major comment categories, outlined as follows:

- | | |
|------------------------------------|-------------------------------------|
| 1. Aesthetics and Visual Resources | 12. Transportation/Traffic |
| 2. Air Quality | 13. Water Supply |
| 3. Biological Resources | 14. Wastewater |
| 4. Cultural Resources | 15. Solid Waste |
| 5. Geology & Soils | 16. Electricity |
| 6. Hydrology and Water Quality | 17. Natural Gas |
| 7. Noise | 18. Procedural Issues |
| 8. Fire Protection | 19. Mitigation Issues |
| 9. Police Protection | 20. Alternatives |
| 10. Schools | 21. Other Concerns and Issues |
| 11. Libraries | 22. No Comment/No Response Required |

The following is a summary of the Regional Planning Commission Hearings held on January 23, 2002, April 10, 2002, June 19, 2002 and September 3, 2003 for the Deerlake Ranch project. Each speaker was sworn in and testified. This summary is in the same order as was presented at the hearing. Many of the comments presented during the hearing were also submitted as written comments. A complete set of the public hearing transcripts is available for review at the Los Angeles County Department of Regional Planning.

All those who spoke at the Planning Commission Hearings are listed in chronological order in Table 5.1.

Table 5.1. List of Speakers

Comment No.	Speaker	Comment Category
January 23, 2002		
1-7	Dorian Keyser, Santa Susana Mountains Association	9, 12, 21
8-17	Jerry England, Chatsworth Equine Cultural Heritage Organization (ECHO)	3, 10, 21
18-20	Warren Stone, General Public	21
21-24	Greg Smith, Chief of Staff for City Councilman Hal Bernson	10, 11, 12, 21
25-30	Charles Smith, General Public	3, 8, 12, 21
31-32	John McNamara, General Public	10, 12, 21
33-38	Suzanne Eskander, General Public	3, 6, 11, 18, 21
39-41	Marty Woll, General Public	12
42-46	Diana Dixon Davis, General Public	10, 11, 12
47-48	Lynwood Cobley, General Public	3, 18, 21
49-50	Teena Takata, General Public	12, 21

5.2 SUMMARY OF HEARING TRANSCRIPTS – JANUARY 23, 2002

The January 23, 2002 Regional Planning Commission hearing was held to receive testimony on the Deerlake Ranch project and the following comments pertain to this development.

Commenter: Dorian Keyser

Comment 1: *Raised concern regarding the enforceability of the conditions.*

Response 1: Staff will recommend that the Planning Commission approve the project conditions pertaining to construction-related activities, as proposed in the draft Conditions of Approval (see Appendix E of this document). See Section 4.2.8 (Non-traffic 3 – Response) of this document.

Comment 2: *Stated that the developer's personal knowledge of the project would be lost when the project is sold.*

Response 2: The comment is not CEQA related. No response is required.

Comment 3: *Requested that Mr. Garlinghouse be involved as an advisor to the subsequent developer.*

Response 3: The comment is not CEQA related. No response is required.

Comment 4: *Stated concern regarding the neighboring 154-condominium project.*

5.0 Response to Comments Received at Public Hearings

- Response 4: A cumulative analysis discussion of the proposed project and related projects, including the 159-unit condominium project, which has since been reduced to 65 units, was included in Sections 3.0 and 4.0 of the Draft EIR. Individual impacts of the condominium project are not within the scope of the EIR. No additional response is required.
- Comment 5: *Stated that all projects in the area need to be looked at on a cumulative basis.*
- Response 5: Please see Hearing Response 4 of this document.
- Comment 6: *Stated that the Lost Hills Sheriff's Substation, combined with the proposed Sheriff Substation in the project, should be replaced with a subcontract to the City of Los Angeles Police Department.*
- Response 6: This comment is out of the scope of the EIR. However, the comment is noted and will be forwarded on to the decision makers.
- Comment 7: *Stated that it was not required that people go through the project site to access their parcels to the north. Stated there is road that would allow them to go around the project.*
- Response 7: Please see Section 4.2.6 (Topical Response – Traffic) of this document.
- Commenter: Jerry England**
- Comment 8: *Testified in opposition to the project and requested that the project be restudied for the following reasons: First, the General Plan of the City of Los Angeles requires the City to retain agricultural resources in the City. Stated that the project, which is in the sphere of influence of the City of Los Angeles, has small lots that do not mesh with the surrounding development.*
- Response 8: Please see Section 4.4.1 (C ECHO 1 – Response) of this document.
- Comment 9: *Second, the project was excluded from a biological resources assessment in November 2000, stating that the project was within a sensitive ecological area and that appropriate density should be one unit per ten acres.*
- Response 9: Please see Section 4.4.1 (C ECHO 2 – Response) of this document.
- Comment 10: *Third, the developer's commitment to create a community facilities district was non-specific.*
- Response 10: Please see Section 4.4.1 (C ECHO 3 – Response) of this document.
- Comment 11: *Fourth, a more detailed plan regarding trail access during construction needs to be provided.*
- Response 11: Please see Section 2.0 and Appendix E of this document regarding the applicant's commitments for trail access during construction.
- Comment 12: *Fifth, the project has not addressed the equestrian concerns and traffic on Canoga Avenue south of the project.*
- Response 12: Please see Section 4.4.3 (ETI 13 – Response) of this document.
- Comment 13: *Finally, the project does not mesh with the existing equestrian lifestyle in Chatsworth and adds additional traffic.*

5.0 Response to Comments Received at Public Hearings

- Response 13: Please see Section 4.5.34 (England 2 Response) of this document.
- Comment 14: *Mentioned schools and public safety concerns.*
- Response 14: Please see Sections 3.0, 4.3.7, 4.5.28, and Appendix J of this document regarding schools. It is unclear as to what the commenter is referring to regarding public safety. No additional response is required.
- Comment 15: *He stated that the project should reduce density and increase lot sizes to 17,500 square feet.*
- Response 15: Please see Section 4.4.1 (C ECHO 1 – Response) of this document.
- Comment 16: *Stated that horse keeping would enhance the value of the project. Stated that small lot sizes would pose a conflict between the suburban homeowners and the existing equestrian community.*
- Response 16: Please see Section 4.5.34 (England 2 – Response) of this document.
- Comment 17: *Requested that the project require horse-keeping properties so that project residents may use the trails.*
- Response 17: Please see Section 4.5.34 (England 2 – Response) of this document.
- Commenter: Warren Stone**
- Comment 18: *Quoted the staff report in support of the proposition that the non-urban designation requires one lot per acre and therefore the 6,000 square foot lots are inappropriate.*
- Response 18: Please see Section 4.4.1 (C ECHO 1 – Response) of this document.
- Comment 19: *Stated that the property north of the project is within an SEA that requires one unit per ten acres of property. Stated that Indian Springs area has one to two acres per unit.*
- Response 19: Please see Section 4.4.1 (C ECHO 1 and 2 – Responses) regarding the appropriateness of project density and SEAs.
- Comment 20: *Quoted from the Los Angeles County General Plan, which discusses Browns Canyon in terms of large lot equestrian development. Requested a lot size of one acre or larger. Requested that the project site remain non-urban and open to equestrian use.*
- Response 20: Please see Hearing Response 19 and Section 4.4.1 (C ECHO 1 – Response) of this document regarding the appropriateness of project density.
- Commenter: Greg Smith**
- Comment 21: *Stated that although some aspects of the project had been mitigated, he stated that the project is too large for the two main streets for ingress and egress, based on emergency concerns. He requested that the project be denied.*

5.0 Response to Comments Received at Public Hearings

- Response 21: As stated in the Draft EIR, all impacts from development of the project would be mitigated, with the exception of cumulative air quality. Further, emergency access to the site and adjacent communities (Twin Lakes) would be improved with implementation of the project (see Section 4.12 of the Draft EIR). Please see Sections 2.0 and 3.0, and Appendix K of this document regarding revisions to the traffic analysis. The commenter's opposition to the project is noted and will be forwarded on to the decision makers.
- Comment 22: *In the event that the project is to be approved, Mr. Smith recommended that the project be connected to the City of Los Angeles backbone trail system, requested that the size of lots be expanded, and to reduce the density to accommodate horse keeping lots.*
- Response 22: As stated in the Draft EIR (Section 2.4.3), the project includes connections to existing trails in the area. Please see Section 2.0 and Appendix K of this document for additional commitments by the applicant regarding trails.
- Please see Hearing Response 29 and Section 4.4.1 (C ECHO 1 – Response) of this document regarding the appropriateness of project density.
- Comment 23: *Stated that there would be a strain on city resources by this project because no revenues would be allowed to be transferred to the City of Los Angeles, including libraries, parks, and the school district. Stated that the Porter Ranch specific plan does not require construction of the school until 60 percent of buildout of the Porter Ranch. Stated that 60 percent buildout is ten years away. Stated that this project would decrease capacity on the existing schools. Requested that the developer negotiate with the Los Angeles Unified School District to phase the project to match the schools to be built in the Porter Ranch plan and to build a new elementary school.*
- Response 23: Please see Section 4.3.5 (City Council responses) of this document regarding fees to the City of Los Angeles.
- Please see Sections 2.0, 3.0, 4.3.7, 4.5.28, and Appendix J of this document regarding school capacity.
- Comment 24: *Stated that additional traffic mitigation is needed for the project. Asked for mitigation along Canoga and Chatsworth to help mitigate the project. Stated that if the Commission did not work with the city he stated that litigation would result.*
- Response 24: As shown on Table 4.12.5 of the Draft EIR, the project would result in incremental, but not significant impacts based on the significance thresholds adopted by LADOT. Therefore, no mitigation measure was recommended for the Canoga Avenue/Chatsworth Street intersection. However subsequent to the release of the Draft EIR, additional mitigation measures have been included as part of the project (including improvements at the Canoga Avenue/Chatsworth Street intersection) for traffic-related impacts at the request of LADOT. Please see Section 4.3.6 and Appendix K of this document.
- The comment regarding litigation has been received and noted. No response is required.

5.0 Response to Comments Received at Public Hearings

- Commenter:** Charles Smith
- Comment 25:** *Stated that the project would not address a long-standing problem of the Deerlake Ranch subdivision. Stated that there are no dedicated roads north of the 118 Freeway and that the project would not bring such roads. Stated that the proposed development ignores the regional plan for roads in place since 1950. Stated that north of the 118 Freeway not a single dedicated east-west road exists. Stated that the project would ignore access needs of certain property owners and avoids any dedicated properties to the north.*
- Response 25:** Please see Section 4.5.3 (Augello 1 and 2 – responses) of this document.
- Comment 26:** *Stated that fire concerns would be exacerbated without public access.*
- Response 26:** As stated in Section 4.8 of the Draft EIR, the County Fire Department has indicated that the level of staff under these circumstances is adequate to meet fire suppression and emergency medical needs to the project and that no additional staff or service would be required. In addition, the project would include the construction of a helipad for the County Fire Department's use during wild fire operations to serve the surrounding area. The project would also provide extensive fuel modification zones, providing significant buffer areas against wild fires for the existing communities southerly and westerly of the project. No significant impacts would occur.
- Comment 27:** *Stated that it would be expensive for him to develop his property and that he has endured eminent domain actions against his property.*
- Response 27:** This comment is out of the scope of the analysis contained in the Draft EIR. No response is required.
- Comment 28:** *Stated that at the end of Desoto the City Department of Water and Power as part of its debris basin has dumped hundreds of tons of debris, which makes the road extension infeasible.*
- Response 28:** This comment is out of the scope of the analysis contained in the Draft EIR. No response is required.
- Comment 29:** *Stated that the Santa Monica Mountains Conservancy and the 10 foot wide buffer strip would control access to the neighboring properties. Stated that the Santa Monica Mountains Conservancy should be required to do weed abatement control.*
- Response 29:** Please see Section 4.4.5 (SSMPA 11 – Response) of this document.
- Comment 30:** *Stated Browns Canyon Road is an easement, not a dedicated road, and that therefore many property owners have been thwarted in an attempt to develop their property.*
- Response 30:** This comment is out of the scope of the analysis contained in the Draft EIR. No response is required.
- Commenter:** John McNamara
- Comment 31:** *Concerned regarding traffic and schools.*
- Response 31:** As stated in the Draft EIR, impacts to schools and traffic would not be significant with implementation of mitigation measures. Subsequent to distribution of the

5.0 Response to Comments Received at Public Hearings

Draft EIR, additional information regarding school capacity was made available by LAUSD. However, these revisions did not change the conclusions included in the Draft EIR. Please see Sections 3.0, 4.3.7, and Appendix J of document regarding school impacts.

As stated in the Draft EIR, the project would not result in significant impacts to area traffic with implementation of recommended mitigation measures. Subsequent to the release of the Draft EIR, additional mitigation measures have been included for traffic-related impacts at the request of LADOT. Please see Section 4.3.6 and Appendix K of this document.

- Comment 32: *Requested that the Devil Canyon bridge be relocated to De Soto.*
- Response 32: The bridge for vehicular traffic connecting the project site to De Soto Avenue as suggested by the commenter is not proposed as part of the project. Further, the bridge suggested by the commenter is not required to mitigate the potential traffic impacts of the project. Therefore, no further analysis is required.
- Commenter:** **Suzanne Eskander**
- Comment 33: *Stated that the environmental impact report was flawed. Requested additional time to review the environmental impact report.*
- Response 33: Please see Section 4.4.2 (CLPA 2 – Response) of this document regarding the adequacy of the EIR. Please see Section 4.5.5 (Belkin, L3 – Response) of this document regarding additional review time.
- Comment 34: *Stated that the EIR does not consider animal control services.*
- Response 34: Please see Section 4.4.2 (CLPA 11 – Response) of this document.
- Comment 35: *Stated that golden eagles are located in the project site.*
- Response 35: Please see Section 4.5.34 (England 4 – Response) of this document.
- Comment 36: *Stated that the county library system requested that the county library fee in the EIR be raised to the new amount. In addition, stated that references to the City of Los Angeles library system were not removed in the EIR*
- Response 36: As stated in Section 4.11.4 of the Draft EIR, the applicant shall pay the library fee as required per the Los Angeles County Ordinance of \$626 or the fee in effect at the time when permits are pulled.
- Please see Section 3.0 of this document regarding revisions to the library services section of the Draft EIR.
- Comment 37: *Stated the Santa Susanna tar plant is located on the site.*
- Response 37: As stated in Section 4.3 of the Draft EIR, the Santa Susana tarplant was located outside of the project area, west of the project site.
- Comment 38: *Stated concern regarding Devil Canyon Creek and issues of water quality.*
- Response 38: Please see Sections 4.4.2 (CLPA 4 – Response) and 4.4.3 (ETI 7 – Response), and Appendix I of this document.

5.0 Response to Comments Received at Public Hearings

Commenter: Marty Woll

Comment 39: *Raised density concerns and its result on traffic on Canoga.*

Response 39: Section 4.12 of the Draft EIR discussed potential impacts along Canoga Avenue at three intersections: at Rinaldi Street, at Chatsworth Street and at Devonshire Street (see Figures 4.12.7 and 4.12.8). As shown on Table 4.12.5 of the Draft EIR, the project would result in incremental, but not significant impacts based on the significance thresholds adopted by LADOT. Therefore, the Draft EIR does not recommend traffic mitigation measure for Canoga Avenue. However, subsequent to the release of the Draft EIR, additional mitigation measures for traffic-related impacts have been included at the request of LADOT. Please see Section 4.3.6 and Appendix K of this document.

Comment 40: *Questioned the accuracy of the EIR. Questioned the assumptions approved by the LADOT.*

Response 40: Please see Section 4.2.6 and Hearing Response 39 of this document regarding the analysis of potential traffic impacts due to the project as provided in the Draft EIR. Additional studies and evaluations have been prepared in response to questions raised by members of the community. To address the concerns previously raised by the commenter, supplemental traffic counts were conducted at the study intersections in December 2001 and January 2002 when all local schools (public and private) were in session. It was concluded that based on a traffic impact analysis using these updated traffic counts that no changes occurred regarding the conclusions with respect to potential traffic impacts of the project and the recommended traffic mitigation measures. These findings are summarized in a correspondence dated January 9, 2002 and has been provided to the County's Traffic and Lighting Division and LADOT. The traffic analysis based on the updated traffic counts further support the conclusion that the traffic counts utilized in the Draft EIR traffic analysis provide a reasonable basis for assessing the traffic impacts of the proposed project.

The January 9, 2002 correspondence also summarizes supplemental traffic counts taken to support the assumptions of project trip generation and assignment of project trips to the local street system. It is concluded that the supplemental studies further validate the data, assumptions, analyses, conclusions and recommendations provided in the Draft EIR with respect to the analysis of project traffic impacts and mitigation measures. No changes to the traffic analysis provided in the Draft EIR are required.

Comment 41: *Stated that SCAG requires a five percent background growth rate and a 20-year growth horizon. Stated that the developer showed a growth rate of two percent for a five-year buildout period. Stated that the upscale nature of the homes would generate more trips than the number of trips for homes estimated by the EIR based on ITE numbers. Stated that the EIR should be redone so that the impacts are more accurately reflected. Requested a decrease in density based upon a reconsideration of the EIR.*

5.0 Response to Comments Received at Public Hearings

- Response 41: SCAG stated that this project is too small to fall under those guidelines. Please see Sections 4.3.4 and 4.5.148 (Woll/Tweet 3 – Response), and Hearing Response 40 of this document regarding additional supplemental studies prepared to address prior comments regarding the accuracy of the project’s trip generation forecast as provided in the Draft EIR.
- Please see Section 4.5.147 (Woll 18 – Response) of this document for a discussion of the assumptions for regional traffic growth utilized in the Draft EIR.
- The change in the density of the project as suggested by the commenter is not required to mitigate the potential traffic impacts of the project. Therefore, no further analysis is required of the commenter’s proposal.
- Commenter:** **Diana Dixon Davis**
- Comment 42: *Raised concern that county library fees will not support the City of Los Angeles Chatsworth Library. Stated that the Chatsworth Library is over capacity for school children during 3 to 7 P.M.*
- Response 42: Please see Section 4.5.28 (Dixon-Davis 10 – Response) of this document.
- Comment 43: *Raised concern regarding transportation from and to school. Stated that school related traffic was underestimated in the EIR. Stated that schools in the district are at capacity currently and overcrowding will result by the proposed project.*
- Response 43: The trip generation forecast included in the Draft EIR was prepared based on generation rates provided in the *Trip Generation* manual published by the ITE. The ITE manual is required for use in preparing traffic studies by the County’s Traffic and Lighting Division and the LADOT. The trip generation forecast includes trips for all project-related origins and destinations including trips to and from work, schools, shopping, recreations, etc. Please see Sections 4.3.6 and 4.5.145 (Woll/Tweet 3 – Response) of this document regarding additional supplemental studies prepared to address prior comments regarding the accuracy of the project’s trip generation forecast as provided in the Draft EIR.
- Please see Sections 3.0, 4.3.2, and 4.5.28 (Dixon-Davis 1 – Response), and Appendix J of this Document regarding school capacity.
- Comment 44: *Stated that payment of mitigation fees would not address the local need in Chatsworth. Suggested that the City of Los Angeles receive the County library fee.*
- Response 44: Please see Section 4.5.28 (Dixon-Davis 2 – Response) of this document.
- Comment 45: *In addition, stated that a school site should be incorporated into the project and that the developer should provide a turnkey school.*
- Response 45: Please see Section 4.5.28 (Dixon-Davis 2 – Response) of this document.
- Comment 46: *Stated that there is no transportation linked to the Porter Ranch schools.*
- Response 46: LAUSD has the responsibility of determining the need for student transportation. This comment is out of the scope of this EIR.

5.0 Response to Comments Received at Public Hearings

Commenter: Lynwood Cobley

Comment 47: *Stated that he owns five lots in Deerlake Ranch and that he had not been contacted by the developer. He explained the history of the development project area.*

Response 47: Public notice regarding the proposed project was provided according per the requirements of CEQA. The comment is noted and no response is required.

Comment 48: *Expressed concern regarding wildlife impacts created by the project.*

Response 48: As stated in Section 4.3 of the Draft EIR, no significant impacts to wildlife would occur with implementation of recommended mitigation measures.

Commenter: Teena Takata

Comment 49: *Indicated her appreciation for the rural environment and lifestyle in Chatsworth.*

Response 49: The comment has been received and noted. No additional response is required.

Comment 50: *Raised concern regarding traffic mitigation and suggested that the mitigation must be in place prior to construction being completed. Stated that the traffic study did not incorporate the Porter Ranch project.*

Response 50: The traffic mitigation measures for the project are summarized in the Draft EIR (Section 4.12.4). Implementation of mitigation measures and assurance of completion is tied to various aspect of development of the project site and is outlined in the Mitigation Monitoring Plan (see Appendix D of this document).

The Porter Ranch project was discussed in the Draft EIR (see Table 4.12.3). It is also noted on Table 4.12.3 that per LADOT, the traffic analysis include half the Porter Ranch related traffic in the 2005 traffic study horizon year. The County's Traffic and Lighting Division also approved this assumption. The inclusion of half of the Porter Ranch traffic provides for a highly conservative analysis of traffic conditions in 2005, as it is unlikely that the Porter Ranch project will be 50 percent complete at that time. Further, while LADOT and the County's Traffic and Lighting Division required inclusion of the Porter Ranch traffic, there is no "benefit" assumed in the Draft EIR traffic analysis for the traffic mitigation measures that the Porter Ranch project has been required to implement in the study area. Therefore, it is concluded that the traffic analysis in the Draft EIR provides a sufficiently conservative assessment of the cumulative traffic impacts associated with the Porter Ranch project and no further analysis is required.

Commenter: Pat (last name not discernable)

Comment 51: *Suggested minimizing density to minimize traffic impacts.*

Response 51: As stated in Section 4.12 of the Draft EIR, no significant impacts to traffic would occur with implementation of recommended mitigation measures. Therefore, the change in the density of the project is not required to mitigate the potential traffic impacts of the project.

5.0 Response to Comments Received at Public Hearings

Commenter: Dan Hoffman

Comment 52: *Raised concern regarding the current overcrowding of the local schools.*

Response 52: As stated in the Draft EIR, no significant impacts to schools would occur with implementation of recommended mitigation measures. Please see Sections 3.0, 4.3.7, 4.5.28, and Appendix J of this document.

Comment 53: *Requested additional time to review the EIR. Raised concern regarding ecological impacts.*

Response 53: Please see Section 4.5.5 (Belkin L3 – Response) of this document regarding review and comment on the Draft EIR.

As stated in the Draft EIR, impacts to biological resources would not be significant with implementation of recommended mitigation measures.

Comment 54: *In addition, stated that the school impact information is inaccurate.*

Response 54: Please see Sections 3.0, 4.3.7, 4.5.28 and Appendix J of this document.

Commenter: Susan Gerkes

Comment 55: *Questioned the mitigation plan for the Plummer's mariposa lily.*

Response 55: Please see Section 4.4.3 (ETI 1 – Response) of this document.

Comment 56: *Stated concern for the San Diego horned-lizard which has been identified in the project site.*

Response 56: Please see Section 4.5.34 (England 4 – Response) of this document.

Comment 57: *Expressed concern for the lily proposed to be replanted to the off site mitigation property.*

Response 57: Please see Section 4.4.3 (ETI 1 – Response) of this document.

Comment 58: *Discussed wildlife movement corridors and the impact of the project.*

Response 58: Please see Sections 4.4.3 (ETI 6 – Response) and 4.4.5 (SSMPA 5 – Response) of this document.

Comment 59: *Requested lower density and native landscaping to screen the animals.*

Response 59: Please see Section 4.2.7 of this document regarding density.

As stated in the Draft EIR, impacts to biological resources would not be significant with implementation of recommended mitigation measures. Native landscaping to screen wildlife would not be required. However, the comment will be forwarded to the decision makers.

Commenter: Robin Swanson

Comment 60: *Raised concern regarding traffic on Canoga and impacts on the schools. Requested speed bumps to slow traffic in response and the fire department representative indicated that speed bumps had negative impacts on response times for emergency services.*

5.0 Response to Comments Received at Public Hearings

- Response 60: Please see Section 4.3.6 and Appendix K of this document regarding additional traffic information.
- Commenter:** Vanessa Watters
- Comment 61: *Stated that the supplemental community conditions need to be more specific. Stated that specifics need to be worked out regarding the cost of the improvements as well as certainty that the developer would be required to complete the improvements. Raised concern regarding the enforcement of the supplemental conditions.*
- Response 61: Please see Hearing Response 1 of this document.
- Commenter:** Linda Stone
- Comment 62: *Raised concern regarding fire and sheriff protection. Was concerned regarding staffing of the proposed sheriff substation.*
- Response 62: As stated in the Draft EIR, impacts to fire and sheriff services would not be significant, with implementation of recommended mitigation measures. Please see Section 4.2.5 (Topical Response) of this document regarding staffing of the proposed Sheriff substation.
- Comment 63: *Requested a park ranger.*
- Response 63: A park ranger would not be required to mitigate impacts of the project. However, the comment will be forwarded on to the decision makers.
- Comment 64: *Based on the increase in population, requested additional patrolling of the area.*
- Response 64: Please see Hearing Response 62 of this document.
- Commenter:** Charlotte Brodie
- Comment 65: *Stated that the density of the project raised issues of public safety, school overcrowding, wildlife, plant life and drainage into Devil Canyon.*
- Response 65: As stated in the Draft EIR, no significant impacts with regard to public safety, schools, biology, or drainage would occur with implementation of recommended mitigation measures.
- Comment 66: *Stated that the Final EIR needs to include discussions of the impact of trails on the new urban residents and the existing equestrian community. Stated that all trails that cross streets should have some kind of traffic control devices. Asked for adequate trail connections from the project site.*
- Response 66: Please see Section 4.5.34 (England 2 – Response) of this document regarding conflicts between urban and equestrian cultures.

Please see Section 2.4.7 of this document regarding trails proposed as part of the project.
- Comment 67: *Stated that access needs to be maintained next to the proposed condominium development.*
- Response 67: The project would not limit access to the condominium development adjacent to the project site.

5.0 Response to Comments Received at Public Hearings

- Comment 68: *The County does not have adequate school, library and public safety facilities in these areas so residents would be forced to use City of Los Angeles facilities without any payment of money to the City of Los Angeles to pay for impact.*
- Response 68: Please see Sections 4.3.5 (City Council 1 – Response) and 4.5.28 (Dixon-Davis 2 – Response) of this document.
- Comment 69: *Raised concerns regarding wildlife corridor impact.*
- Response 69: Please see Sections 4.4.3 (ETI 6 – Response) and 4.4.5 (SSMPA 5 – Response) of this document.
- Commenter: Jeannie Plumb**
- Comment 70: *Raised concern regarding drainage. Stated that Devils Canyon would be negatively impacted by storm flows. Requested that the storm water should be pumped directly to a treatment facility.*
- Response 70: Please see Section 4.4.2 (CLPA 4 – Response) and Appendix I of this document.
- Comment 71: *Raised concern regarding the proposal to transfer the lily to the off site mitigation parcel.*
- Response 71: Please see Section 4.4.3 (ETI 1 – Response) of this document.
- Commenter: Margo Miller**
- Comment 72: *Requested speed bumps.*
- Response 72: Please see Hearing Response 60 of this document.
- Comment 73: *Requested that construction vehicles not be used on Chatsworth Avenue.*
- Response 73: Please see Section 4.2.3, and Appendices D and E of this document.
- Commenter: David Tweet**
- Comment 74: *Stated that two main streets, Chatsworth and De Soto, are failing currently and therefore the project will create negative impacts.*
- Response 74: The project is not required to mitigate an existing intersection, which is operating at poor LOS. Also, the project only represents a small percentage of existing and future traffic in the area and should not be responsible to add additional lanes on the said locations (i.e., Topanga Canyon Boulevard, De Soto Avenue). Also, in many cases, potential widening or lane additions are constraint by lack of public right-of-way. Note that all mitigation measures proposed in the traffic impact study were considered by all reviewing agencies including LACDPW, LADOT, and Caltrans as acceptable mitigation measures.
- Please see Sections 4.3.2, 4.3.6 and Appendix K of this document.
- Comment 75: *Complained about current traffic as well as traffic and school related impacts.*
- Response 75: As stated in the Draft EIR, impacts to traffic and schools would not be significant with implementation of recommended mitigation measures.

5.0 Response to Comments Received at Public Hearings

- Comment 76: *Requested that the hearing be continued to allow the public more time to consider the project.*
- Response 76: Please see Section 1.1 of this document regarding public hearings.
- Commenter: **Elizabeth Sellers**
- Comment 77: *Stated that she represented the community of rental condominiums to the west of the development. Stated that she had concern regarding traffic congestion. Stated that the traffic improvements were subject to the Caltrans approval process and therefore it was uncertain if the improvements would occur.*
- Response 77: The commenter is referring to traffic mitigation measures 4.12-1 through 4.12-4, which is listed in Section 4.12 of the Draft EIR. The design and construction of the improvements within the state right-of-way will be processed through the standard Caltrans Encroachment Permit procedure. This was confirmed in the Caltrans correspondence dated February 15, 2002, included in Appendix A.2 of the Draft EIR. The letter stated that the recommended traffic improvements within the state right-of-way as described in the Draft EIR are acceptable for the project.
- Please see Section 4.3.2 of this document.
- Commenter: **Mark Watters**
- Comment 78: *Lives in one of the three occupied homes north of the bridge through Devils Canyon. Stated that he is president of the Twin Lakes Property Owners Association. Requested a continuance to review documentation on the La Vina Development in Altadena. Raised concern regarding fulfillment of conditions relating to the La Vina Project.*
- Response 78: Please see Section 1.1 of this document regarding additional hearings.
- The fulfillment of conditions for the La Vina project is not within the scope of this EIR.
- Comment 79: *Requested additional time to review the environmental impact report.*
- Response 79: Please see Section 1.1 of this document.
- Comment 80: *Requested that the Commission take a tour of the subject property.*
- Response 80: Comment noted. The Planning Commissioners toured the proposed project site on April 6, 2002.
- Commenter: **Anna Cox**
- Comment 81: *Stated that wildlife exist in the area in addition to those discussed in the environmental report.*
- Response 81: Please see Section 4.5.34 (England 4 – Response) of this document.
- Comment 82: *Concerned regarding storm drains to the creek and the filtration system including the 80 percent clean estimate regarding cleaning up the subject creek. Stated that the storm drain pipe to the nearby treatment facility would be a more viable option.*
- Response 82: Please see Sections 4.4.2 (CLPA 4 – Response) and 4.4.3 (ETI 7 – Response) and Appendix I of this document.

5.0 Response to Comments Received at Public Hearings

- Comment 83: *Raised issues regarding the wind and the potential implication of valley fever and the earthquakes.*
- Response 83: See Section 4.5.139 (Watters V-25 Response)
- Comment 84: *Stated that residents of La Vina expressed concern regarding the performance of the developer.*
- Response 84: The comment is not CEQA related. No response is required.
- Commenter: **Laura McCormick**
- Comment 85: *Raised concern regarding density and traffic impacts.*
- Response 85: Please see Section 4.4.1 (C ECHO 1 – Response) of this document regarding density.
- As stated in Section 4.12 of the Draft EIR, no significant impacts to traffic would occur with implementation of recommended mitigation measures.
- Commenter: **Kathy Weisman**
- Comment 86: *Raised concern about possible dynamiting during grading. Requested a written condition that no dynamiting would be allowed.*
- Response 86: Traditional grading techniques would be used during construction of the project. However, other methods may be required. All construction activities would be conducted according to requirements of the County of Los Angeles.
- Commenter: **Kathleen Misko**
- Comment 87: *Testified that the project area should remain undeveloped.*
- Response 87: The comment has been received and noted. No additional response is required.
- Comment 88: *Stated that during the earthquake, she saw landslides within the mountains.*
- Response 88: Please see Section 4.4.2 (CLPA 3 – Response) of this document.
- Comment 89: *Stated that the wind study was incorrect and that high wind areas such as this suffer severe damage.*
- Response 89: Please see Section 4.2.3 (Noise/Dust 2 – Response) of this document.
- Comment 90: *Stated that the project would have significant impacts and requested a decrease in density.*
- Response 90: Please see 4.4.1 (C ECHO 1 – Response) of this document.
- Commenter: **Greg Smith**
- Comment 91: *Requested that the lots should be of larger size with an equestrian-orientation.*
- Response 91: Please see Section 4.4.1 (C ECHO 1 – Response) of this document.
- Comment 92: *Requested more time for review of the environmental impact report.*
- Response 92: Please see Section 1.1 of this document.

5.0 Response to Comments Received at Public Hearings

- Comment 93: *Requested limits on construction traffic.*
- Response 93: Please see Section 4.2.6 (Topical Response) and Appendix E of this document regarding restrictions on construction activities.
- Comment 94: *Requested information regarding who would repair city streets from construction impacts.*
- Response 94: Construction equipment would be off-loaded directly onto the project site, and therefore, would not impact surrounding streets. The City of Los Angeles is responsible for all repairs to City streets.
- Comment 95: *Questioned the aesthetic quality of the Porter Ranch project.*
- Response 95: As this comment is not within the scope of the EIR, no response is required.
- Comment 96: *Requested reduced density to alleviate the traffic.*
- Response 96: Please see Hearing Response 51 of this document.
- Commenter: Clara Wall**
- Comment 97: *Stated that the recreational activities in Browns Canyon and wildlife impact are significant. Worried about habitat destruction.*
- Response 97: The project would not impact recreational activities in Browns Canyon. The impact on the environment and effect on animals is discussed in Section 4.3 of the Draft EIR. The discussion includes impacts upon sensitive species, nesting birds and raptors, and wildlife movement. As stated in the Draft EIR, impacts would not be significant with implementation of recommended mitigation measures.
- Comment 98: *Stated that the safety on Canoga Avenue would be decreased. Stated that construction traffic would conflict with school children. Stated that the increased traffic would be a danger to the horse riders and their horses.*
- Response 98: Please see Section 4.3.7 of this document regarding traffic impacts to schools.
Please see Section 4.5 (England 2 – Response) of this document regarding equestrian/traffic conflicts.
- Comment 99: *Requested that lot sizes be increased.*
- Response 99: Please see Section 4.4.1 (C ECHO 1 – Response) of this document.
- Comment 100: *Stated that the project area is part of the proposed SEA.*
- Response 100: Please see Section 4.4.1 (C ECHO 2 – Response) of this document.
- Commenter: Michael Angello**
- Comment 101: *Testified regarding access to the north as a property owner in the area. Stated that the development of access as proposed ignores the northern property owners. Stated that lack of access would affect brush clearance activities.*
- Response 101: Please see Section 4.2.6 (Topical Response – Traffic) of this document.

5.0 Response to Comments Received at Public Hearings

Commenter: Adrian Gauthier

Comment 102: *Said that the project would decrease animal movement.*

Response 102: Please see Sections 4.4.2 (CLPA 7 – Response) and 4.4.3 (ETI 6 – Response) of this document.

Comment 103: *Stated that the Topanga Canyon off ramp at rush hour is extremely congested.*

Response 103: The comment has been received and noted. Table 4.12.2 of the Draft EIR included a summary of existing conditions at the Topanga Canyon Boulevard off-ramps, which indicate congestion during the peak hours. However, with implementation of the recommended mitigation measures, the project would not result in significant impacts to area traffic.

Comment 104: *Requested that the project lot sizes be increased.*

Response 104: Please see Section 4.4.1 (C ECHO 1 – Response) of this document.

Commenter: Walter Prince

Comment 105: *Commented on the supplemental conditions as being illusory. Stated that the developers are requesting that certain improvements be made without a requirement that the developer complete these improvements.*

Response 105: Please see Appendix E of this document.

Comment 106: *Requested that the traffic access for equestrian crossings be improved from merely stop signs to mechanized control.*

Response 106: Please see Section 4.5.34 (England 2 – Response) of this document.

Comment 107: *Stated that the traffic conditions were subject to a future study rather than requiring completion.*

Response 107: Additional studies and evaluations have been voluntarily commissioned by the project applicant prepared in response to questions raised by members of the community. The supplemental studies further validate the data, assumptions, analyses, conclusions and recommendations provided in the Draft EIR with respect to the analysis of project traffic impacts and mitigation measures. No additional traffic studies are required.

Comment 108: *Requested more specificity regarding the pocket parks.*

Response 108: Please see Section 2.0 of this document regarding the locations of park areas that are included as part of the revised project.

Comment 109: *Stated that there were contradictions in the construction conditions proposed in the supplemental conditions and approvals.*

Response 109: It is unclear as what conditions the commenter is referring. Please see Appendices D and E of this document regarding mitigation and conditions for the project.

Comment 110: *Stated that larger lots are needed in the San Fernando Valley. Requested a half acre minimum lot size.*

Response 110: Please see Section 4.4.1 (C ECHO 1 – Response) of this document.

5.0 Response to Comments Received at Public Hearings

Commenter: Deidra Robles

Comment 111: *Raised concern regarding police access, school overcrowding, and traffic. Raised concern regarding police response time.*

Response 111: As stated in Section 4.9 of the Draft EIR, no significant impacts to police services, schools or traffic would occur with implementation of mitigation measures.

Please see Sections 4.2.5, 4.3.7, 4.5.28, and Appendices J and K of this document.

5.3 SUMMARY OF HEARING TRANSCRIPTS – APRIL 10, 2002

The April 10, 2002 Regional Planning Commission hearing was held to receive additional testimony on the project.

Commenter: Mark Watters

Comment 112: *He thanked the Commission for the field trip. He stated that the new map was a step in the right direction, but that it was not enough.*

Response 112: The comment has been received and noted. No additional response is necessary.

Comment 113: *He stated that density needs to be further reduced.*

Response 113: Please see Section 2.0 of this document regarding the revised project.

Comment 114: *He stated that the developer was a good company and that they were ethical and sensible and listened to the community. He stated that he thinks they could get the density down significantly.*

Response 114: Comment noted. Please see Hearing Response 113.

Comment 115: *He stated that increasing density and use of the Topanga off-ramp that is already significantly crowded won't work and that increased left turn lanes will not mitigate impact of the Project.*

Response 115: Please see Section 4.2.6 and Appendix K regarding traffic issues.

Comment 116: *He requested a continuance of the public hearing to study reducing the density of the project.*

Response 116: Please see Section 1.1 of this document regarding the additional public hearings.

Commenter: Warren Stone

Comment 117: *He stated that the HOA has been in negotiation with the developer for over one year and indicated that the developer has demonstrated a willingness to help with existing problems within the community. He stated that the main infrastructure of the project will work for Twin Lakes.*

Response 117: Comment noted.

Comment 118: *He also stated that the applicant is going to give the HOA money to pave roads in the community.*

Response 118: Comment noted. Please see Appendix E of this document.

5.0 Response to Comments Received at Public Hearings

- Comment 119: *He stated that he did not have the technical expertise to review the water quality study.*
- Response 119: The comment has been received and noted.
- Comment 120: *He stated that the development was too large and indicated that a decrease would help solve the problem. He also stated that if we work together a good plan can be developed that will be a credit to the community of Chatsworth.*
- Response 120: Please Section 2.0 of this document regarding the revised project.
- Commenter: Ana Cox**
- Comment 121: *She stated that the EIR is inadequate and does not respond to concerns raised at the last hearing.*
- Response 121: The Draft EIR was prepared according to *CEQA Guidelines* and requirements. Concerns from the last hearing have been addressed in Section 5.2 of this document.
- Comment 122: *She raised issues of wildlife, oak trees, water, storm drainage, and animals.*
- Response 122: Please see Sections 4.2.1, and 4.2.2 of this document.
- Comment 123: *She compared the project to Porter Ranch.*
- Response 123: Comment does not provide specifics regarding the comparison to Porter Ranch. No additional response is needed.
- Comment 124: *She stated that the density affects personal safety, wildlife, rock formations, and other issues.*
- Response 124: As stated in the Draft EIR, impacts associated with the project would not be significant, with implementation of mitigation measures. Please see Section 2.0 of this document regarding the revised project.
- Comment 125: *She raised the issue of emergency access.*
- Response 125: Emergency access has been addressed in Sections 4.8 and 4.9 of the Draft EIR.
- Comment 126: *She raised the issue of La Vina.*
- Response 126: Comment does not provide specifics regarding the issue of La Vina. No additional response is required.
- Comment 127: *She indicated concerns regarding the enforceability of the conditions.*
- Response 127: Please see Hearing Response 1 of this document.
- Commenter: Charles W. Smith**
- Comment 128: *He abuts the development for several hundred feet on the east. He stated that he is pleased that development will go forward, but he stated that he could not develop his property due to the frontage road installed as part of the Porter Ranch project.*
- Response 128: Concerns regarding the Porter Ranch project are not relevant to this EIR. However, the comment is noted.

5.0 Response to Comments Received at Public Hearings

Comment 129: *He raised concern of access being cut off by the project and due to the Brown's Canyon watershed being inundated during a heavy rainstorm.*

Response 129: Please see Appendix M of this document.

Commenter: Gary Levitt

Comment 130: *He raised concern regarding affordable housing.*

Response 130: The comment has been received and noted. No additional response is necessary.

Comment 131: *He raised the issue that the project site is a proposed SEA.*

Response 131: Please see Sections 4.2.1 (Biology 1 – Response) and 4.4.1 (C ECHO 2 – Response), and Appendix F.4 of this document.

Comment 132: *He stated that low density housing should be considered.*

Response 132: Please see Section 2.1.2 of this document regarding density.

Comment 133: *He indicated that street closures already occur due increased traffic on Rinaldi.*

Response 133: It is unclear as to what the commenter is referring. Implementation of the project would not result in significant traffic impacts. Please see Sections 4.2.6, 4.3.2, 4.3.6, and Appendix K of this document.

Commenter: Dorian Keyser

Comment 134: *He stated that the current developer is not responsible for the lack of action at La Vina.*

Response 134: The comment has been received and noted. No additional response is necessary.

Comment 135: *He raised the issue of an abandoned school, which could be used if refurbished for approximately 2 million dollars.*

Response 135: The comment has been received and noted. No additional response is necessary. The comment will be forwarded on to the decision-makers.

Commenter: Marty Woll

Comment 136: *He raised the issue of school safety issues as a result of routing of construction traffic. He stated that construction access on Canoga will drive by the entrance to the school. He raised concern about enforceability of the construction access conditions.*

Response 136: Please see Section 4.2.6 (Topical Response) and Appendix E regarding construction traffic mitigation measures.

Comment 137: *He raised concern dust control measures during project grading.*

Response 137: Please see Section 4.2.3 of this document.

Comment 138: *He raised concern regarding Valley fever and impacts on school children.*

Response 138: Please see Hearing Response 83 and Section 4.5.136 (Watters V 24-Response).

5.0 Response to Comments Received at Public Hearings

Commenter: Jerry England

Comment 139: *He stated that he represents the Chatsworth ECHO. He stated that the County General Plan is being updated and that the biological resources assessment is being completed.*

Response 139: The comment has been received and noted. No additional response is needed.

Comment 140: *He suggested a dwelling unit density of 1 unit per 10 acres.*

Response 140: Please see Section 4.2.7 of this document regarding land use density for the project site.

Comment 141: *He stated that the City General Plan recommends low density development in the area.*

Response 141: The project is located within the County of Los Angeles. Please see Section 2.1.2 of this document regarding land use density for the project site.

Comment 142: *He stated that project development should wait until completion of the above-referenced plans. He suggested a moratorium on development until new studies have been completed.*

Response 142: The comment has been received and noted. No additional response is needed.

Commenter: Charlotte Brodie

Comment 143: *She stated that her trail organization supports some element of the proposal, but that some issues need clarification and others need additional study. She stated that she supports the network of trails. She requested additional clarification in numerous areas.*

Response 143: Comment does not provide specifications on what needed to be clarified and studied. The comment has been received and noted. No additional response is required.

Comment 144: *She also requested examination of schools, storm water, wildlife corridor, and Topanga and the 118 freeway connection.*

Response 144: Schools, storm water, wildlife corridor, and traffic were all adequately addressed in the Draft EIR.

Comment 145: *She recognized that the equestrian benefits are very beneficial, but do not supercede the environmental impacts of the project.*

Response 145: The comment has been received and noted. No additional response is needed.

Commenter: Terri Cunningham

Comment 146: *She requested that all of the lots be equestrian size. She raised the regional need for the equestrian-sized lots. She supported the moratorium.*

Response 146: Please see Section 2.0 of this document regarding the revised project and the additional equestrian lots.

5.0 Response to Comments Received at Public Hearings

Commenter: Suzanne Foss

Comment 147: *She said the traffic on Canoga makes access to her property difficult. She raised concern regarding widening of Canoga and the impact on her property.*

Response 147: Traffic concerns were addressed in the Draft EIR and updated analysis can be found in Section 4.2.6 and Appendix K of this document.

Commenter: Greg Smith

Comment 148: *He thanked the Commission for its field trip. He raised concern regarding Canoga Avenue. He stated that problems exist on Canoga Avenue. He stated that traffic needed to be eliminated on Canoga Avenue.*

Response 148: Traffic concerns were addressed in the Draft EIR and updated analysis can be found in Section 4.2.6 and Appendix K of this document.

Comment 149: *He stated that Los Angeles did not abandon extension of DeSoto on the westerly side. He questioned the dollar amount stated by the applicant for the extension of DeSoto.*

Response 149: Traffic concerns were addressed in the Draft EIR and updated analysis can be found in Section 4.2.6 and Appendix K of this document.

Comment 150: *He stated that the traffic signal money will be used in the community.*

Response 150: Comment noted.

Comment 151: *He questioned the traffic study and stated that the City of Los Angeles will ask for more mitigation.*

Response 151: Updated traffic analysis can be found in Appendix K of this document. Mitigation measures are provided in Appendix D and E of this document.

Comment 152: *He stated that the project needed to be scaled differently and the traffic needs to be directed in different ways.*

Response 152: Comment does not provide specifications on how the project needed to be scaled differently and how to direct the traffic needs in different ways. The comment has been received and noted. No additional response is required.

Commenter: Chuck Chewian

Comment 153: *He stated that he served on the Board of Transportation Commissioners for the City. He stated that the density is unreasonable. He raised the issue of safety on Canoga and the need for reduced density.*

Response 153: As stated in the Draft EIR, impacts related to project traffic would not be significant. Updated traffic analysis can be found in Appendix K of this document. Mitigation measures are provided in Appendix D and E of this document.

Please see Section 4.2.7 of this document regarding allowable land use density.

5.0 Response to Comments Received at Public Hearings

Commenter: Greg Smith

Comment 154: *He raised the issue of density, aesthetic compatibility with the community, and future growth impacts.*

Response 154: The Draft EIR discussed land use compatibility (including allowable density) and aesthetic compatibility. No significant impacts would occur.

Comment 155: *He stated that the lot widths are too narrow.*

Response 155: Please see Section 2.0 of this document regarding the revised project.

Comment 156: *He raised the issue of access to the north.*

Response 156: Please see Appendix M of this document.

Commenter: Robert Harrington

Comment 157: *He spoke on behalf of the Clara Schweitzer Trust. He stated the Clara Schweitzer Trust owns 325 acres north of the project. He stated that in 1958 the Schweitzer property had 2 means of access on Saugus Road and Brown's Canyon Road. He stated that these sources of access have been utilized for 44 years. He stated that Saugus Road was on the original 1920 map as a dedicated street, not an easement. He stated that the project would eliminate legal access to Saugus Road. He stated the Saugus Road access must be retained for emergency purposes.*

Response 157: Please see Section 4.5.3 (Augello 1 and 2 – responses) of this document.

Comment 158: *He stated that 10 foot ownership by the Santa Monica Mountain Conservancy would cut out legal access. He stated that the SMMC 10 foot strip is unfair.*

Response 158: Please see Appendix M of this document.

Comment 159: *In response to question from Commissioner Helsley, Harrington indicated that there's an indication of access in a title report for the Schweitzer Property for Saugus Road.*

Response 159: The Preliminary Title Reports for properties to the north have been furnished to staff by the applicant's title company.

Commenter: Susan Eskander

Comment 160: *She stated that there was significant interest in equestrian residential properties.*

Response 160: The comment has been received and noted.

Comment 161: *She requested a response from the developer on the following issues: wildlife corridor, libraries, turn key school, flood control, building on the ridgeline, parks, Mello Roos, landslides, and ridgeline effects.*

Response 161: Please see Appendix F.5 of this document regarding wildlife corridors.

Impacts to area libraries were discussed in the Draft EIR (4.11) and no significant impacts would occur. Under County ordinance, the developer will pay approximately \$275,000 to the County library system. In addition to the County fee, the developer to provide funds for the City of Los Angeles library system (i.e., approximately \$138,000 directly to the Chatsworth Library) to help offset potential impacts on that facility.

5.0 Response to Comments Received at Public Hearings

Please see Sections 3.3 and 4.3.7 of this document regarding schools.

Please see Appendix H.1 of this document regarding flood control.

Please see Section 2.0 of this document regarding ridgeline development and parks.

At the June 19th RPC hearing, Commissioner Helsley stated that, given the extent of public improvements proposed by this project, he could see that the use of Mello-Roos funds may be appropriate. Also, the developer has filed an application with the County requesting that a Community Facilities District be formed covering only the project site so that eligible portions of the proposed public infrastructure could be financed under Mello-Roos. The County has a CFD Committee, consisting of representatives from 12 County departments, which has the responsibility of reviewing the developer's application and making recommendations to the Board of Supervisors. The Committee cannot complete its work until the final project has been approved by the County.

Please see Section 4.5 of the Draft EIR and Section 4.4.2 (CLPA 3 – Response) of this document regarding landslides.

Comment 162: *She stated that the EIR was insufficient with regard to animal control efforts.*

Response 162: Please see Section 4.4.2 (CLPA 11 – Response) of this document.

Commenter: Jeannie Plumb

Comment 163: *She raised issues regarding compatibility of the existing nonconforming horse keeping lots with a modern subdivision.*

Response 163: Please see Section 2.0 of this document regarding the revised project.

Comment 164: *She also commented on the Fero water quality report.*

Response 164: It is unclear as to the specifics of the comments on the Fero water quality report. The comment has been received and noted. The Fero water quality report is provided in Appendix I of this document.

Comment 165: *She requested that the sewage control effort result in 100% clean water.*

Response 165: Wastewater is discussed in Section 4.14 of the Draft EIR.

Comment 166: *She requested that storm water runoff be piped underground through a gravity feed through the concrete channel.*

Response 166: Please see Section 4.2.2 of this document and Section 4.6 of the Draft EIR.

Commenter: Ernie Perlick

Comment 167: *He stated that he owns tract map number 2821-019-007. He stated that he owns the 40-acre parcel adjoining the north boundary of the property. He stated that he purchased his land in 1966. He stated that he used access through Deer Lake Highlands Road, a dedicated public road. He stated that the road for many years was maintained by the Los Angeles County Fire Department. In 1980, the Fire Department deemed the bridge across Devil's Canyon unsafe for their engines. He stated that he has used the road to access his property for 36 years. He requested continued access to his property. He stated that he no longer has the title policy and is unaware of whether he has a legal easement.*

5.0 Response to Comments Received at Public Hearings

Response 167: Please see Appendix M of this document.

Commenter: David Tweet

Comment 168: *He discussed the layout of the revised project. He suggested two gated communities.*

Response 168: Comment noted. Please see Section 2.0 of this document regarding the revised project.

Commenter: Janice Perlick

Comment 169: *She read minutes from the SMMC's regular meeting in December 1997 indicating that the approval of the agreement would limit inappropriate development north of the project. She stated that property owners to the north should not be denied access to their property.*

Response 169: Comment noted.

Commenter: Liz Ricci

Comment 170: *She stated that the developer has a poor record of keeping its promises. She stated that she has concerns regarding enforcement.*

Response 170: Please see Appendices D and E regarding implementation of mitigation measures and conditions of approval.

Commenter: Patrick Weir

Comment 171: *He stated that Canoga Avenue and Chatsworth Avenue will be overloaded by this development and later development.*

Response 171: Please see Sections 4.2.6 and Appendix K of this document for an updated traffic study.

Commenter: Michael Augello

Comment 172: *He stated that he owns vacant land north of the property. His land is located in the Deer Lake Highlands addition. He stated that 80 small lots of 8,000 square feet each are located in this area. He stated that in the original subdivision maps in 1927 legal access was intended for this area. He stated that the new maps cut off all access to this area. He stated that he spoke on behalf of 12 landowners including himself. He has proposed modifications to the maps to provide access to the north. He stated that the Saugus Avenue access should be maintained for emergency purposes.*

Response 172: Please see Appendix M of this document.

Commenter: Laura McCormick

Comment 173: *She raised traffic impact concerns on schools. She questioned the payment of mitigation fees to mitigate these impacts.*

5.0 Response to Comments Received at Public Hearings

Response 173: Requirements to construct offsite traffic improvements will be conditions which must be met prior to issuance of building permits and/or occupancy certificates for the project (see Appendix E of this document). In addition, all physical traffic improvements will require the developer to post performance bonds to guarantee completion.

Comment 174: *She questioned the density calculation for the project based upon non-developable areas.*

Response 174: Please see Section 2.0 of this document.

Commenter: Jan Evanston

Comment 175: *She raised concern about impacts to sensitive areas.*

Response 175: It is unclear as to what sensitive areas are in question. The comment has been received and noted.

Comment 176: *She stated that the applicant was already grading the project roads.*

Response 176: No grading of roads has occurred on the project site. A variety of onsite roadways have existed for years.

Comment 177: *She stated that the lots sizes should be increased.*

Response 177: Please see Section 2.0 of this document regarding the revised project.

Comment 178: *She requested development be stopped pending the hearing.*

Response 178: The comment has been received and noted.

Commenter: Maria Miralles

Comment 179: *She stated that she's a member of the Friends of La Vina. She stated that she opposed the density of the La Vina project for 10 years. She stated that the La Vina project has significant opposition and that the community is still suffering from the effects of that development.*

Response 179: The comment has been received and noted. Several procedures have been proposed for implementation for this project which were not done for the La Vina project, including the following:

Detailed Conditions of Approval:

This project has significantly more detailed conditions of approval, including special community conditions, than the La Vina project to ensure that all performance requirements by the developer are clearly stated for future compliance monitoring and enforcement.

Enhanced Monitoring:

In addition to the inspections otherwise required, subdivider will pay for monthly, unannounced site inspections by a Department representative for the first twenty-four months of grading and construction activities. The subdivider will deposit an additional \$2,400.00 with the Department of Regional Planning in advance to defray the costs associated with the unannounced monthly inspection in addition to the costs for the Department to monitor the mitigation measures. If any inspection discloses that the project site is being used in violation of any one of the conditions

5.0 Response to Comments Received at Public Hearings

of the County subdivision, CUP or other approvals, the subdivider will be financially responsible and shall reimburse the Department of Regional Planning for all additional enforcement efforts necessary to bring the project site into compliance.

Enhanced Enforcement

The subdivider will provide a toll-free telephone number to the community to facilitate communication twenty-four hours each day regarding any issues arising from operation of the facility. This telephone number shall be conspicuously posted in conjunction with the requirements above.

The subdivider will post a sign at the entrance of the subject site in English and the predominant second language(s) in the area, displaying contact telephone numbers for the facility site manager, the Department of Regional Planning Zoning Enforcement Section and South Coast Air Quality Management District for reporting any problems, which may occur during construction.

Comment 180: *She raised concern regarding the enforceability of the conditions of approval. She stated that the community is still attempting to obtain compliance with the conditions.*

Response 180: Please see Hearing Response 179.

Commenter: Charles Lee

Comment 181: *He stated that he owns 180 acres in Brown's Canyon. These ownerships consist of 4 parcels. He raised concern regarding access to his property. He stated he has a 60-acre, an 80-acre, a 10-acre and a 30-acre parcel. He raised the issue of land-locking the other property owners as a result of development.*

Response 181: Please see Appendix M of this document.

Comment 182: *He raised concern regarding the developer's purchase of the conservancy property.*

Response 182: This is out of the scope of the EIR. No additional response is required.

5.4 SUMMARY OF HEARING TRANSCRIPTS – JUNE 19, 2002

The June 19, 2002 Regional Planning Commission hearing was held to receive additional testimony on the Deerlake Ranch project and the following comments pertain to this development.

Commenter: Warren Stone

Comment 183: *He questions the enforceability of the conditions, saying that sewers, sheriff's sub station, moneys for completion of infrastructure and cable are reasonable, if ever really happen.*

Response 183: Please see Hearing Response 1.

Comment 184: *Storm water should be diverted to opening of Browns Canyon.*

Response 184: Please see Section 4.2.2 (Topical Response – Urban Runoff) of this document.

Comment 185: *Less density is necessary to address impacts to traffic, schools and fire department.*

5.0 Response to Comments Received at Public Hearings

Response 185: Please see Section 2.0 of this document regarding the revised project.

Commenter: Teena Takata

Comment 186: *The community was not provided with the applicant's materials and staff is not giving them accurate information.*

Response 186: It is not clear as to what the "applicant's materials" refers to nor is it clear what the specifics to the accurate information in question are as stated in the comment.

Comment 187: *At the June 6th community meeting, she learned that the approved traffic study does not include Porter Ranch and that the proposed SEA will be segmented. She thinks all of the project site will be in proposed SEA. There is a discrepancy in numbers regarding Porter Ranch, and she is not sure what the numbers are based on. Traffic issues.*

Response 187: Please see Appendix O of this document regarding the community meetings. The County has not adopted any changes to the General Plan SEA boundaries. Porter Ranch has been included in the updated traffic study.

Comment 188: *General plan is old and inadequate. Fewer homes and increased lot sizes are necessary.*

Response 188: This comment does not relate to the project. No response is required.

Commenter: Marty Woll

Comment 189: *Unanswered questions. The applicant promised to circulate white papers in the community. The applicant has only contacted a few neighbors, and only wanted one-on-one meetings. The applicant hired lobbyists, gave a telephone pitch disguised as survey, sent out a slick mailer.*

Response 189: Please see Appendix O of this document regarding community meetings.

Comment 190: *The project does not fit the neighborhood.*

Response 190: Please see Section 2.1.2 of this document regarding allowable land use and densities for the site.

Comment 191: *Cites Forester-Fire Warden as saying that no more than 150 homes could be built without providing secondary access, and doubts that the 600 home certificate of compliance build out could occur because individuals wouldn't have the resources.*

Response 191: Please see Section 4.2.4 of this document.

Commenter: Patrick Weir

Comment 192: *Price should not drive the development. Compatibility to the neighborhood is more important.*

Response 192: The comment has been received and noted. Please see Section 2.1.2 of this document regarding allowable land use densities for the project site.

Commenter: Dorian Keyser

Comment 193: *He is part of the Santa Susanna Mountain Parks Association, but is testifying as an individual.*

5.0 Response to Comments Received at Public Hearings

- Response 193: The comment has been received and noted. No additional response is required.
- Comment 194: *Developer needs reasonable profit. Afraid less friendly developer will take over.*
- Response 194: The comment has been received and noted. No additional response is required.
- Comment 195: *Complains about school district policies unrelated to the project.*
- Response 195: Comment does not specify unrelated school district policies. Comment has been received and noted.

Commenter: Diana Dixon-Davis

- Comment 196: *Both organizations passed a resolution stating that the fees for Deerlake Ranch should be spent in the affected community. She disputes the numbers in the EIR. Chatsworth elementary school has only one seat according to principle and the principle of Lawrence Middle School said the school is at capacity. The EIR is deficient. and should be corrected for district policies. For example, students enrolled can continue, there is some busing and special education classes have lower populations. We cannot ask special education students to leave.*
- Response 196: Please see Sections 4.3.7, 4.5.28, and Appendix J of this document.
- Comment 197: *She put together 5 different mitigation packages, including the following measures: (1) purchase 6.7 acres in Porter Ranch for school site. (2) rehabilitate Devonshire elementary school, (3) purchase lot near Chatsworth Park elementary for use as turnabout and parking lot (4) adjust attendance lines in the area-move some students to school further south.*
- Response 197: Comment is noted and will be forwarded onto the decision makers. Please see Sections 4.3.7, 4.5.28, and Appendix J of this document.

Commenter: Robert Harrington

- Comment 198: *He wants to know whether parcel number 282101907 has access to the north of the project. If it does has access, he would like to know where it is and how such access rights were determined. Staff explains that it performs title searches through the certificate of compliance process, and normally does not investigate access; however, staff has some information on these properties. County Counsel recommends that he speak with the applicant during the break.*
- Response 198: Please see Appendix M of this document.

Commenter: Suzanne Foss

- Comment 199: *She moved here because it was a country, quiet area, and has been horrified by the increase in traffic. Speed is a problem on Canoga. There was a terrible accident at intersection of Chatsworth and Canoga, and she has almost been hit by speeding car. To widen the street would open the floodgate and speeding would be worse.*
- Response 199: As stated in the Draft EIR, impacts to traffic would not be significant with implementation of mitigation measures. Please see Sections 4.2.6, 4.3.6, and Appendix K of this document regarding the revised traffic report.
- Comment 200: *\$2 million expense to developer is less expense than the devaluing of the residents property value.*

5.0 Response to Comments Received at Public Hearings

- Response 200: The comment is noted and will be forwarded onto the decision makers.
- Comment 201: *She wants a study on Canoga Avenue, not just Chatsworth Avenue, which has a stoplight. Tulsa should have a speed hump.*
- Response 201: Please see Sections 4.2.6, 4.3.6, and Appendix K of this document regarding the revised traffic report.

Commenter: Michael Augello

- Comment 202: *He knows nothing about proposals for driveway width or the applicant's materials and wants clarification from the applicant.*
- Response 202: Please see Appendix C.3 of this document.
- Comment 203: *He has received no communication from the applicant and does not believe the applicant's claim that he has reached out. He received one form letter from the applicant in the last 45 days, but it was not in reference to anything he said in testimony and did not think it made much sense.*
- Response 203: Four community meetings were held regarding the project, please see Appendix O of this document.
- Comment 204: *He also says that the area is bridge dependent and the bridges could go out in an earthquake.*
- Response 204: The bridge would be built to current building codes standards that include a margin of safety regarding seismic activity.
- Comment 205: *He suggests that emergency access should be provided through the Ziegler property.*
- Response 205: Comment noted. Please see Sections 4.8 and 4.9 of the Draft EIR regarding emergency access.

Commenter: Teresa Brown

- Comment 206: *De Soto Avenue has become an extension of the freeway. Speed is a problem and there are no guardrails for horses. Bridle trail is on Canoga.*
- Response 206: Please see Sections 2.0, 3.0, and 4.1 of this document.
- Comment 207: *Widening Canoga will make it just like De Soto Avenue. The traffic impact will be phenomenal.*
- Response 207: As stated in the Draft EIR, impacts related to traffic would be less than significant with implementation of mitigation measures. Please see Sections Appendices D and K of this document for updated mitigation measures.

Commenter: Susan Escandra

- Comment 208: *\$2.6 million to the developer is nothing compared to the drop in property values. Open space is not an open license to develop. She does not think that this decision should be driven by the threat that something worse will be developed in the alternative.*
- Response 208: The comment has been received and noted.

5.0 Response to Comments Received at Public Hearings

Comment 209: *Hitting the community and mitigating impacts are the important factors. Cost should not drive the choice of mitigation measures.*

Response 209: The comment has been received and noted.

Commenter: Janet Evanson

Comment 210: *She compares the project to Ahmanson Ranch's "mega-project." This would have just as bad an impact on Chatsworth as Ahmanson Ranch has on Los Angeles. Traffic is a major problem. There will be a standstill on our roads. Please reduce density and make it contiguous to Chatsworth.*

Response 210: As stated in the Draft EIR, impacts related to traffic would be less than significant with implementation of mitigation measures. Please see Sections Appendices D and K of this document for updated mitigation measures.

Commenter: Jeannie Plum

Comment 211: *The gridlock on De Soto Avenue will not be affected by this project, but the homes in the project will be affected by it. A moratorium in the area is appropriate because there is no acceptable access to the community. We need planning. Can the Commission request such a moratorium?*

Response 211: As stated in the Draft EIR, impacts related to traffic would be less than significant with implementation of mitigation measures. Please see Sections Appendices D and K of this document for updated mitigation measures.

Comment 212: *Staff told them that no new storm water runoff materials had been submitted to the County, as requested, and no new drainage proposal has passed through the planning process. She is assuming that we are still looking at the applicant's unacceptable process. Development above this project would be subjected to the same process.*

Response 212: Please see Appendix H of this document.

Comment 213: *Vesting should be removed from the map because this is virgin territory and vesting will not protect future concerns.*

Response 213: Comment is noted, but not CEQA related.

Comment 214: *Clustering is not always the best method of development. It indicates smaller lots and viable horse-keeping lots need distancing. We need to see the product and practical designs before the Commission can make an informed decision.*

Response 214: Please see Section 2.0 of this document regarding the revised project.

Comment 215: *She hopes a continuance will allow the applicant to provide the Commission and the community with the information necessary to make such an informed decision.*

Response 215: The comment has been received and noted. No additional response is required.

5.0 Response to Comments Received at Public Hearings

Commenter: Allan Glaser

Comment 216: *County budget troubles mean we have already have problems with County services. Project has severe impacts on these services.*

Response 216: It is unclear as to what specific services are in question. The comment has been received and noted. No additional response is required.

Comment 217: *He believes that the developer is not working with community organizations, as promised*

Response 217: Four community meetings were held, please see Appendix O of this document.

Comment 218: *Traffic.*

Response 218: It is unclear as to what the commenter is specifically referring to with regard to traffic. No response is required.

Comment 219: *We need more time needed to get the answers.*

Response 219: Please see Section 1.1 of this document regarding the comment period.

Commenter: Jed Levy

Comment 220: *Access to his property has been cut off by the three-way agreement between the developer, the Conservancy and the County. The deal effectively created a mote to allow no one beyond them to have access. He is confused because Saugus Road was on some map, but there is no reference to it in the current plan. Was Saugus Road dedicated?*

Response 220: Please see Appendix M of this document.

Commenter: Charles Lee

Comment 221: *He is concerned about agreement that created this mote. Was there ever public hearings on this? Legal rights are not always recorded for easements. Legal access rights are prescriptive. He believes that Mr. Garlinghouse cannot determine whether northern property owners have legal rights. Common ownership is only one requirement. Prescriptive rights have been well established on Saugus Road, which are being extinguished by this process. The Commission cannot extinguish a road that someone has used for 26 years. First American title does not want to insure anything so they do not want to find anything. He will find the legal rights and he does not want to be limited by laws put in place by the Commission. A small driveway will not serve his 700 acres. There should be a condition of approval, requiring the developer to provide whatever access is necessary for whatever development is proposed. The Conservancy is not above easement law.*

Response 221: Please see Section 1.1 of this document regarding the public review process associated with the project and Appendix M of this document regarding northerly access.

5.0 Response to Comments Received at Public Hearings

Commenter: Unidentified woman

Comment 222: *She wants to know the language that would guarantee the building of the dotted line trails that will provide the needed connecting routes to existing and planned trails and to the park to the south.*

Response 222: Please see Figure 2.11 this document.

Comment 223: *If the mitigated storm water plans do not work, and there is destruction to Devil's Canyon, can anything be done to reverse the devastation? Porter Ranch destroyed three canyons.*

Response 223: All of the proposed storm water collection and discharge facilities would be constructed to County Department of Public Works standards and will be operated and maintained by LACFD. The project site would become part of that District and pay its fair share of tax revenues to the LACFD. It will be the LACFD's responsibility to ensure that the project's storm water facilities operate properly. Please see Section 4.2.2 of this document.

Commenter: Charles Smith

Comment 224: *He is concerned about traffic. There is no access to the property from the east, west or north.*

Response 224: As stated in the Draft EIR, impacts related to traffic would be less than significant with implementation of mitigation measures. Please see Sections Appendices D and K of this document for updated mitigation measures.
Please see Appendix M of this document regarding northerly access.

Comment 225: *Brown's Canyon Road has special significance because a 30 foot right-of-way was given to the County by the Federal Government.*

Response 225: It is unclear what the commenter is referring. No additional response is required.

Comment 226: *The County must involve the City.*

Response 226: Various City of Los Angeles departments have been involved with review of the project. Please see Sections 4.3.5, 4.3.6, and 4.3.7 of this document.

Comment 227: *The County has the obligation to maintain the road and is not doing it. Porter Ranch has gotten by with only north/south roads. This is repeating the same problem.*

Response 227: The future growth of Porter Ranch was assessed appropriately in the Draft EIR traffic study. LADOT stated at the June 26th community meeting that this project has analyzed all relevant intersections within the City and that no additional analysis is appropriate for this project. Community meeting minutes are included in Appendix O of this document.

Comment 228: *A dedicated road at least 64 feet wide is needed.*

Response 228: It is unclear as to what the commenter is referring. No additional response is required.

5.0 Response to Comments Received at Public Hearings

Commenter: Robert Harrington

Comment 229: *He checked with the applicant and read the applicant's materials. The applicant claims that his property has access through the Ziegler property. He believes that is the Sweitzer Trust property. There is no easement to the east and or the north of the Mirabele Perlic property going across the Sweitzer Trust property. It appears that the property would be landlocked. The Commission should condition the project on granting access to the Mirable Perlic property on its southern property line.*

Response 229: Please see Appendix M of this document.

Commenter: David Tweet

Comment 230: *He would still like the developer to consider a gated, guarded community.*

Response 230: The comment has been received and noted. No additional response is needed.

Comment 231: *The current project involves 11,000 trips down Canoga Avenue.*

Response 231: Please see Section 4.2.6 and Appendix H of this document regarding the revised traffic analysis.

Comment 232: *If the project density is reduced to 100 homes, this would allow for the development of all horse properties and it would still be a profit-making venture for the developer.*

Response 232: The comment suggests a lower number of 100 homes and Alternative 3 in Section 5.0 of the Draft EIR, a reduction to 171 homes (71 more homes than what was suggested in the comment) was not economically feasible. Alternative 3 of the Draft EIR and the suggested density of 100 homes would not meet the economic objective of the applicant to earn a reasonable return on investment. When this cost is factored with already-incurred land acquisition costs and market sales prices, this alternative becomes economically infeasible.

Comment 233: *The dust factor has him concerned. Particulate matter is bad and the community has a valley fever problem, even without grading.*

Response 233: Please see Hearing Response 83.

Comment 234: *He wants the project either downsized or eliminated. The site should be open space.*

Response 234: Please see Section 2.0 of this document regarding the revised project.

Commenter: Ernie Perlick

Comment 235: *He wants the access that he has had to his property for 26 years to continue for himself and for Mr. Harrington. Saugus road is 60 feet wide. Mr. Harrington and his family have been using it for years. Access to dedicated road should not be blocked by the development and Conservancy.*

Response 235: Please see Appendix M of this document.

5.0 Response to Comments Received at Public Hearings

Commenter: Jerry England

Comment 236: *This is the 3rd meeting and many unanswered questions remain. Instead, the community gets slick telemarketers and mass mailings.*

Response 236: Four community meetings were held, please see Appendix O of this document.

Comment 237: *The staff report says that the area below this project only has horses on 4% of the property. If the area is extended, there are much larger properties and more horses.*

Response 237: The comment has been received and noted. No additional response is needed.

Comment 238: *The SEA process is meant to protect habitat and wildlife corridors and we must pay attention to it.*

Response 238: Please see Section 4.2.1 and Appendix F.4 of this document regarding SEAs.

Comment 239: *Unbelievable that the applicant claims that he can pull building permits tomorrow and construct 600 homes pursuant to the certificates of compliance. The project site is clearly within the sphere of influence. This involves 12,800 acres and a bigger picture is involved here. It is lawful for planners to put moratoriums on projects until they can do it the right way.*

Response 239: The County approved unconditional certificates of compliance for 624 resulting parcels within the project site, which were created by merging the antiquated Record of Survey lots into larger, more appropriate parcels. These certificates are final, effective and recorded. The unconditional certificates of compliance that create 624 legal lots comply with state and County subdivision laws and ordinances. No public hearing is required or appropriate because they are not subject to any discretionary action under the law. Discretionary approval is required only if the applicant proposes to simultaneously build on two or more contiguous lots.

5.5 SUMMARY OF HEARING TRANSCRIPTS – SEPTEMBER 3, 2003

The September 3, 2003 Regional Planning Commission hearing was held to receive additional testimony on the project.

Commenter: Kobe King

Comment 240: *He spoke in support of the project. due to the improvement of antiquated subdivisions, the provision of housing at a variety of income levels and benefits to business. On a personal note, he supports the project for its open space preservation.*

Response 240: Comment noted. No additional response required.

Commenter: Brendan Huffman

Comment 241: *He spoke in support of the project because it provides housing, open space and trails.*

Response 241: Comment noted. No additional response required.

5.0 Response to Comments Received at Public Hearings

Commenter: Ruth Gerson

Comment 242: *She spoke in support of the project because it is a good role model for equestrian use and the provision of trails.*

Response 242: Comment noted. No additional response required.

Commenter: Irwin Boychenko

Comment 243: *He spoke in support of the project, stating that when he moved to Chatsworth he knew that the make up of the community was good neighbors and horses. When he saw the original proposal, he was surprised that it did not address either of these. Subsequently, he is amazed that the project has done as much as it has for trails and safety, and will correct so many faults of Canoga Avenue and Chatsworth.*

Response 243: Comment noted. No additional response required.

Commenter: Paul Edelman

Comment 244: *He testified that he has cooperated with the applicant and prior property owner in getting certainty on the land use in Deerlake Highlands and they have a binding agreement with the applicant regarding the project site and surrounding areas. The agreement defines the urban limit and it would be very difficult to have accomplished this amount of open space preservation and maintenance funding on an owner-by-owner, lot-by-lot basis. The project is the reason why so much open space will be preserved and trails connected.*

Response 244: Comment noted. No additional response required.

Comment 245: *The proposed active park at the base is the only outstanding issue, as SMMC would like to be involved in its design. SMMC continues to negotiate additional maintenance funds with the applicant. He asked the County Counsel, if the project is not conditioned to provide a landscape maintenance district, whether such a condition can be added later if the applicant voluntarily agrees to provide such funding.*

Response 245: The Project Applicant has agreed to work with the SMMC in regard to design of the "proposed active park at the base" of the project.

Regarding the issue of voluntary landscape maintenance funding, that is beyond the scope of this FEIR. All project landscaping maintenance within common areas, including areas within fuel modification zones, will be the responsibility of the Project's future HOA.

Commenter: Charlotte Brodie

Comment 246: *She is saddened to see the land developed, but understands that her organization does not own the land. The proposed trail system is adequate to meet the needs of the equestrian community and the equestrian park is an added benefit. The six-foot wide internal trails should be at least eight-foot wide. Safety for the trails and equestrian users must be a priority during construction.*

Response 246: The proposed 6-ft. trails are private trails, located at the rear of certain equestrian lots, which will serve only those lots to gain access to the public trails. Because of their limited use and separation from streets, the 6-ft. width is considered adequate.

5.0 Response to Comments Received at Public Hearings

Comment 247: *There are four outstanding trail issues that must be resolved: (1) Corral 54 has been promised that the fourteen-foot drop at the Canyon's edge on the trail going north from Mayan and Street "A" that crosses Devil Canyon will be worked out by the applicant and SMMC; (2) a dedicated trail needs to be established under the 118 Freeway to connect the Deerlake Trail with Stony Point Park and the developer has indicated that Caltrans has not been receptive to the idea even though similar access trails exist under the freeways (She has contacted State Assemblyman Tony Strickland to assist with this matter); (3) the trail on the west side of Deerlake Ranch crosses a portion of Pepperdine property (she has written to the University, requesting that they dedicate an easement to the Department of Parks and Recreation to provide a continuous trail); and (4) we need to know how the trail going north from Topanga Canyon Boulevard and Mayan Drive will be connected safely to Devil Canyon if the Topanga Canyon condominium project is not developed.*

Response 247: See Section 4.7.5 (SCI 3, 8, 10 & 11 – Responses) of this document.

Comment 248: *She supports the addition of more equestrian lots within the project, and would like to see even more added. She encourages the Commission to require that all signage and traffic improvements on Canoga, Rinaldi, Chatsworth, Topanga and Candace be required to be completed prior to construction to provide additional safety for pedestrians and equestrians as a result of increased construction and residential traffic.*

Response 248: See Section 4.3.7 (Development Issue 10 – Response) and Appendix L of this document regarding land use density.
Please see Sections 3.3.5 and 4.2.6, and Appendices E and K of this document for additional discussion of traffic impacts and mitigation measures.

Comment 249: *Corral 54 would like to see written clarification from the Commission and the applicant on the following items: (1) can planting be required for oak tree mitigation rather than in-lieu payments; (2) can locations be selected for oak tree mitigation where there is no likelihood of future removal; (3) can a monitoring program be developed for oak tree mitigation for a three year period to assure proper watering and placement of unhealthy trees; (4) what conditions can be put on the project to rectify any damage that may occur if an increase volume and speed in stormwater runoff is not controlled by the plan measures to prevent erosion of Devil Canyon and SMMC parkland.*

Response 249: See Appendix E of this document regarding conditions of the proposed project pertaining to oak tree mitigation

Comment 250: *Overwhelming traffic and overwhelming schools are still an issue, but other residents are better able to address these issues.*

Response 250: As stated in Section 4.12 of the Draft EIR, traffic impacts would not be significant with implementation of recommended mitigation measures. Please see Sections 3.3.5 and 4.2.6, and Appendix K of this document for additional discussion of traffic impacts and mitigation measures.

As stated in Section 4.10 of the Draft EIR, impacts to schools would not be significant with implementation of recommended mitigation measures. Please see

5.0 Response to Comments Received at Public Hearings

Sections 3.3.4, 4.3.7 and 4.5.28, and Appendix J of this document for additional discussion of this issue.

Commenter: Linda Corbridge

Comment 251: *Chatsworth resident and owner of 40 acres to the north of the project site, the proposed horse trails with easement rights go right up to her property. She rides horses on her property. There are very few private property owners left in the area as the SMMC has purchased most of the property in the area. Specifically, SMMC has purchased property north of her and she cannot get out of her property to Brown's Canyon Road. Mr. Garlinghouse informed her that her property cannot get access through the project site because of the ten-foot strip that was previously deeded to the SMMC. SMMC will not return her phone calls. She wants to know how such a band can get approved without regard to her property. She claims that she has prescriptive easement and easement by necessity rights. She wants to know why there was not there a public meeting held when the ten-foot strip was deeded, why she was not notified, and how she can get access to her property. She wants to build a home. There are roads and horse trails on maps that go into her property.*

Response 251: See Section 4.5.3 of this FEIR, Augello 1 – Response, and Appendix M of this FEIR.

Commenter: Michael Augello

Comment 252: *He thanked staff and the applicant for the provision of a tap street; however, it is now servicing parkland. The original idea was to allow access. He would like to move the tap street to the west to avoid having them grade and pave parkland.*

Response 252: See Section 4.5.3 of this FEIR, Augello 1 – Response, and Appendix M of this FEIR.

Commenter: Charles Lee

Comment 253: *He indicated that an easement war is coming. The SMMC is putting up gates to block their easement rights and their prescriptive rights. He claimed that he has found after a one-hour search a common ownership and thus proved their right of an easement by necessity. He promised a full report by September 8, 2003, showing that the property owners to the north have all the elements for easement rights by necessity. He wants the gates and rocks and other obstacles removed and he is in favor of moving the tap street to the west.*

Response 253: See Section 4.5.3 of this FEIR, Augello 1 – Response, and Appendix M of this FEIR.

Commenter: Laura McCormick

Comment 254: *She indicated that the project must be reduced to provide 150 to 200 homes, with lots at least 18,000 square feet. The experience of Indian Falls, where all large mansions on large lots sold quickly, shows that there is a market for such homes.*

Response 254: See Section 4.3.7 (Development Issue 10 – Response) and Appendix L of this document regarding land use density.

5.0 Response to Comments Received at Public Hearings

Commenter: Jean Plumb

Comment 255: *The CDS system is based on the debris basins in Devil's Canyon being maintained. These debris basins are not being maintained at this time. The Supervisor of the Storm Drain Debris Clean Out Facility indicated to her, in the Supervisor's office, that there is no budget and no access to clean out the debris basins near the project site, and they have not been cleaned in recent years. The debris basins are at overflow, and the proposed CDS system will be clogged and will fail as a result. Dirty water will not be necessary if the project is connected to the existing Brown's Canyon flood control system. Cox, Castle & Nicholson LLP's June 2002 packet indicated that the applicant has designed and priced that system. The CDS system will not be up and ready by the rainy season if the project is built by separate builders at different times. She wonders whether the project will be grading during the rainy season. The CDS system shuts down during the rainy season. She is also concerned that the system will be built with a future tax assessment.*

Response 255: See Section 4.7.5 (SCI 2 – Response) of this document.

Commenter: Teena Takata

Comment 256: *She submitted materials. She discussed pedestrian and equestrian trails. She is a board member of the Santa Monica Mountains Park Preservation Association. She indicated that the hiking community needs viable access to all the open space areas. Hikers do not want tons of switchbacks and steep grades to access these areas. Hikers also need parking along Poema Place, with all day access ability. The Los Angeles County trail map depicts a dedicated trail over the Topanga Canyon condominium project site and she will be sorry to lose the flat access over that site.*

Response 256: See Section 4.7.5 (SCI 3, through 5 – Responses) of this document.

Comment 257: *For equestrians, she is concerned about the 8-foot trails in the internal areas of the project. She is worried that the trail map says "project trails" and wants a condition that all "project trails" will be accessible by equestrians. It is inappropriate to put an 8-foot wide trail next to new Mayan Drive for safety reasons. The community had been told that the trail was going along new Mayan Drive and the map shows it on old Mayan Drive. There used to be trails shown under the westerly bridge, but now no trails are shown on map as it goes across the SMMC land. She wonders if there is adequate grade separation under the bridge or if the horses are supposed to kneel. She was surprised to hear that there is a problem with the 14-foot drop.*

Response 257: See Section 4.7.5 (SCI 8 – Response) of this document.

Comment 258: *She wants an accurate, detailed, topographic map, showing the elevations after the project is done. She wants bridge elevations to be shown.*

Response 258: The topography and elevations shown on the project's VTTM (see Appendix C.1 of this FEIR, reflects the most current available data, and has been made available to the public.

5.0 Response to Comments Received at Public Hearings

- Comment 259: *The community has not seen what the applicant submitted again.*
- Response 259: The Revised Project Description described the changes to the project and was widely distributed to the community for review. See Appendix Q of this document.
- Comment 260: *She is worried about use of the Old Bridge in terms of using it as 8-foot project trail. The bridge is old and she is not sure the County will accept it. A proposed equestrian trail is shown on the east side of Topanga Canyon Boulevard as it goes under the 118 Freeway. That would be a great thing to do, and she wants assurances that it will really occur.*
- Response 260: See Section 4.7.5 (SCI 9 and 11 – Responses) of this document.
- Comment 261: *She recited numbers regarding lot sizes and indicated that there is something wrong with the numbers. She is worried that the houses might be small in proportion to the lot, and wants equestrian lots to be laid out so that they can actually be utilized as equestrian lots (i.e., the house should be to the side of the lot to provide adequate setbacks for horsekeeping). The applicant gave her a depiction of the equestrian lots one year ago. She would like a condition requiring the equestrian lots to be developed in accordance with those depictions (i.e., situated similarly and taking up a similar amount of space).*
- Response 262: The development of all equestrian lots must comply with Section 22.52.320 of the County Zoning Ordinance, and applicable sections of the County Health Code, pertaining to keeping of horses, prior to issuance of building permits
- Commenter: Jerry England**
- Comment 263: *He discussed his material comparing the applicant's analysis of the equestrian neighborhood and his analysis. His general point is that the applicant ignored a large equestrian area and underestimated the number of horses within the boundary actually chosen, as many of the homes are zoned for horse keeping. He wants the applicant to reconsider meeting Supervisor Antonovich's request for all horse keeping lots. He accused the applicant of attempting to make the project attractive for builders and not to be compatible with the community.*
- Response 263: See Section 4.7.5 (SCI 16 – Response) of this document.
- Commenter: Allan Glazer**
- Commenter 264: *He participated in community meetings where the applicant stated that it was proud of the development and did not want to develop another Porter Ranch. In light of Supervisor Antonovich's statements that he would like to see estate lots on the property, he analyzed the tax roles for the area below the development (bounded by Topanga Canyon on the west, De Soto on the east, Devonshire on the south and the 118 Freeway on the north, where the average lot sizes are 15,999 square feet. Further west of Topanga and north of the 118 Freeway, the average lot sizes are even larger. The average lot size, according to the developer, is 12,492 square feet for Deerlake Ranch. This sounds like another Porter Ranch to him, especially when so many of the lots are 6,000 square feet. Luxury homes are selling and can be absorbed. He requests that all the properties be 15,000 square feet*
- Response 264: See Section 4.7.5 (SCI 16 through 19 – Responses) of this document.

5.0 Response to Comments Received at Public Hearings

Commenter: Vanessa Watters

Comment 265: *SCI prepared a plan with specific suggestions to reduce the density by comparing the 388-unit plan with the 171-unit plan prepared by staff in the DEIR. SCI's plan does the following: (1) increases the lot sizes, as the current plan has too many lots under 15,000 square feet, as was requested by the Supervisor; (2) reduces the density of lots along the ridgelines; and (3) makes all lots adjacent to the equestrian trails capable of housing horses. She described SCI's alternative 300-unit plan.*

Response 265: See Section 4.7.5 (SCI 20 through 22 – Responses) of this document.

Commenter: Anna Cox

Comment 266: *The community is disappointed that the project's density was not further reduced. The applicant asked her if the community would support a density closer to 330 homes. She indicated that she cannot speak for the community. She disagrees with the applicant that Topanga Canyon Boulevard will be the primary access point because Canoga has additional amenities. She wants the ridgelines protected. The applicant has consistently disregarded these concerns, saying that the back ridgeline is the ridgeline for the project. Fire protection has never really been addressed. She understands that the helipad is a benefit, but there is only a one-truck fire station to service the entire area. She's also worried about traffic clogging Canoga Avenue in a fire.*

Response 266: See Section 4.7.5 (SCI 20 through 22 – Responses) of this document.

As stated in Section 4.8 of the Draft EIR, no significant impacts would occur to fire protection services with implementation of the project. See Section 4.2.4 (Fire 1 and 4 – Responses) and Appendix E of this document for additional discussion regarding this issue.

Commenter: Marty Woll

Comment 267: *Canoga Avenue will be the primary access. He participated in the community meetings. These meetings were an orchestrated attempt to create a feeling of consensus, just to slam the community at the end with a project density that is too high (hardly a reduction from the prior 424-unit project). The applicant would not budge on traffic improvements, or conditions with regards to a reasonable limit on the time frame for construction traffic, or a wind speed threshold for cessation of grading as the City already imposes. The applicant has repeatedly told the community that they cannot afford to reduce the density but other builders are doing what the community desires and the community should not be punished because the applicant has spent its way into a corner.*

Response 267: As shown on Table 4.12.5 of the Draft EIR, the intersections of Canoga Avenue/Rinaldi Street and Canoga Avenue/Chatsworth Street would operate at acceptable levels (LOS A) during the A.M. and P.M. peak hours with occupancy of the project. Also see Section 4.2.6 (Traffic 1 and 2 – Responses) and Appendix K of this document for additional discussion of project traffic distribution to the local street system.

5.0 Response to Comments Received at Public Hearings

Please see Sections 4.2.3 (Noise/Dust 1 – Response) and 4.2.7 (Development Issues 8 – Response) of this document.

See Section 4.3.7 (Development Issue 10 – Response) and Appendix L of this document regarding land use density.

Commenter: Jan Miller

Comment 268: *The EIR discussion of wildlife corridor is misleading and omits important facts. Canoga Avenue is a viable corridor. The EIR does not admit that Stony Point Park acts as open space access to the Santa Monica Mountains. The EIR mentions debris basin blockage, but trails bypass that basin. This is a significant impact on wildlife and should be mitigated. He suggests some mitigation on a tunnel under Topanga Canyon Boulevard at Santa Susanna Pass Road and that the land to the west of Topanga Canyon Boulevard could extend open space to connect that tunnel.*

Response 268: See Section 4.2.1 (Topical Response) of this document regarding wildlife corridors.

5.5.1 Presidio Chatsworth Partners LLC, Inc. – Richard E. Garlinghouse

Garlinghouse – Comment 1

The hearing on September 3, 2003, is a result of the Commission's direction to the applicant, at the last hearing on September 11, 2002, to further address outstanding issues pertaining to the project. Previous hearing were held on January 23, 2002, April 10, 2002, June 19, 2002, and August 21, 2002. At the hearing on August 21, 2002, the applicant presented a project for 428 residential units, which included 24 lots which were 15,000 square feet (s.f.), or larger, in size to accommodate horses under the County Zoning Code. After public testimony, the Commission directed the applicant re-position several of the 15,000-s.f. lots, and to increase their number.

Subsequently, at the continued hearing on September 11, 2002, the applicant was prepared to present a revise [sic] land use plan for 424 units, which showed an increase in the number of 15,000-s.f. lots to 32, and also reflected the re-positioning of these lots in accordance with the Commission's direction.

However, prior to that hearing, representatives from the 5th Supervisorial District had expressed publicly that the project should contain as many 15,000-s.f. lots as possible, consistent with topographical and other constraints. Therefore, the Commission directed the applicant to address the concerns of the 5th District, and to return to the Commission at an undetermined, future date.

Many important events have taken place since the September 11, 2002, hearing, which have resulted in significant modifications to the project design. The revised plan of 388 units reflects the comments from the 5th District, as well as further, extensive input from the community.

Following is a summary of these events and modifications. More detailed information and exhibits are contained under several "tabs" within this document.

Revised Project Description

- *The revised plan is a departure from the earlier plans for Deerlake Ranch because it breaks the project into four distinctive, smaller neighborhoods, and provides landscape demarcations and separations between neighborhoods, as well as a revised circulation system that provides greater neighborhood identity. These four-neighborhoods will provide features that will appeal to various segments of the market to broaden the appeal of the proposed community to potential homebuyers.*

5.0 Response to Comments Received at Public Hearings

- A comprehensive "Community Character Statement" report has been prepared to serve as the guiding principle for the development of Deerlake Ranch. It will become an integral part of the project CUP to ensure conformance with its design character concepts.
- Of the 388 residential lots, 155 will be 15,000 s.f. or greater, with 55 of these specifically designated for horse-keeping. This constitutes an increase of 123 lots which are 15,000 s.f. or greater, and an overall decrease of 36 lots from the previous submittal.
- 177 of the 388 lots, or 46%, are now "single-loaded" along various segments of the revised street layout, thereby creating significant stretches of streetscape which are more open and aesthetically pleasing.
- The proposed project "neighborhood" which is adjacent to the existing Twin Lakes community, including the access street, has been redesigned so that no future lots will abut existing Mayan Drive, thereby providing an extensive buffer area between Twin Lakes and Deerlake Ranch homes.
- An additional 2200± ft. of public equestrian trail have been added through the upper central portion of the project as a result of community requests. Also, over 2000 ft. of private trails have been added at the rear of the horse-keeping lots to provide them access to the project's public trail system.
- In addition, many of the trail segments have been redesigned so that they will traverse across more open space and landscaped areas instead of abutting the street rights-of-way.
- The project has been redesigned to preserve the upper reach of a tributary "draw" extending from Devil Canyon, thereby preserving four additional oak trees and other natural vegetation.
- Although the project has been further reduced by approximately 9 percent from the 424-unit proposal (and 20% from the original 484-unit proposal), the full extent of all mitigation measures originally identified for the 484-unit project, and subsequently the 424-unit project, will still be implemented. Therefore, the effectiveness of these mitigation measures will be significantly enhanced.
- In addition, the full extent of all community benefits identified for previous proposals, which are above and beyond required mitigation measures, will still be provided.

Community Participation

- Prior to starting any work on this revised plan, including the Community Character Statement, the applicant and the community agreed on the formation of a Citizens Advisory Committee (CAC) whose members would be representative of the various Chatsworth homeowners and equestrian organizations, as well as other residents having an interest in this project. As a result, representatives of 12 separate associations and groups formed the CAC. Over a period of 6 months, the applicant and the CAC held a total of 7 comprehensive planning sessions, including an additional site visit. All sessions were attended by representatives of the 5th Supervisorial District.
- In addition, the applicant has met on 4 separate occasions with representatives of the equestrian community to further address their specific requests.
- The applicant has also met with a sub-committee of the CAC for the specific purpose of coordinating the final, proposed community benefits provisions, as well as the final, proposed special project conditions which will be submitted to the Commission by staff for its consideration.

5.0 Response to Comments Received at Public Hearings

- *The revised plan before the Commission, including the Community Character Statement, evolved over that period of 6 months as a result of these applicant-CAC sessions and other meetings.*

Remaining Issues

Although there may not be a total community consensus on these matters, it is the applicant's opinion that all project issues which remained to be resolved at the last hearing on September 11, 2002, have been addressed in a reasonable and balanced manner. They include the following:

- *Project Density: The project has been further reduced by 9 percent (20 percent from the original application), to the extent that further reductions would render the project not economically viable. The revised project results in a site density of approximately 1.6 units/acre, which is the same as the existing community south of the 118 Freeway, less than adjacent development on Porter Ranch to the east, and considerably less than the adjacent existing and proposed multi-family residential developments to the west.*
- *15,000 sq. ft. Lots: As stated previously, the revised project reflects an increase in the number of lots which are 15,000 sq. ft. or great from 34 to 155, with 92 of these comprising "Neighborhood 1". The remaining 63 of these lots are interspersed throughout the remaining three "neighborhoods", as topographical constraints permitted.*

In the opinion of the applicant, providing more than 155 lots of this size is precluded by the following:

- *Topographical constraints with "Neighborhoods 3 and 4" do not present reasonable opportunities for additional lots of 15,000 sq. ft. or greater without sacrificing the minimal land use alteration techniques which have been incorporated into the land plans for these two neighborhoods.*
- *An increase in the number of such lots within "Neighborhood 2" would reduce the distinct market and physical differences between that neighborhood and Neighborhoods 1 and 3.*
- *Notwithstanding the above two constraints, the addition of more 15,000 sq. ft. lots would lessen, or eliminate, a wide range of housing opportunities for home buyers from both an economic and a personal choice standpoint. The mix of housing styles, amenities, and pricing proposed under the four neighborhood concept provides those opportunities for a wide spectrum of the home-buying public.*

Project Environment Impacts

- *During the course of the previous public hearings before the Commission, comments were made concerning various potential impacts that this project may have on the environment. In addition, written comments were received on the project Draft EIR as part of the public review period.*
- *The applicant has responded to many of these comments during the public hearings before the Commission, as well as during numerous community meetings. In addition, staff will be presenting to you the Final EIR document for your review and consideration, which will include responses to all public comments.*
- *As you may recall, the project Draft EIR found that the project, which was based on 484 units at the time, generated no impacts which would not be mitigated to a less-than-significant level. Subsequently, the project has been reduced in density by 20% although all mitigation measures proposed for the 484-unit project will remain unchanged. Therefore, proposed project mitigation will be even more effective in reducing impacts to less than significant levels.*

The project team looks forward to appearing before you to present the redesigned project and to answer any further questions that you may have.

5.0 Response to Comments Received at Public Hearings

Garlinghouse – Response 1

The comment has been prepared by the project applicant to further discuss the revised project. No additional response is required.

5.5.2 David Tweet

August 21, 2002

Tweet 1 - Comment

At the second Co. Commission Hearing I presented the idea of a gate guarded community at the bottom of the development (above Canoga) which would contain 50 homes and allows only those home access to Canoga (and to Topanga) making the impact of the traffic from the development into Canoga and the community below minimal –

The Commission (liking the idea) it was considered a major request for the developer to answer at the 3rd hearings –

They came back with the answer that they were still studying it.

What has happened -- concerning this idea.

Do you know anything – can you find something out.

Tweet 1 - Response

The comment has been received and is noted. The proposed project is not proposed as a gated community.

5.5.3 Chatsworth Homeowner

August 20, 2002

Chatsworth Homeowner 1 - Comment

I thought you may want to hear from someone other than a horseowner regarding the building of housing in my neighborhood. I like the idea. First of all – we who do not have a sacred cow (horse) look at horse owner as nuts. For those who cannot afford to have a vet in your back pocket for those of use [sic] who may have a dog, or a cat. For those of us who may like to drive a car – we look at horse owners who demand trails on the private property of others pushing things too far. Maybe there should be cat trails, or dog trails, or car trails. We have all these trails all over Chatsworth, but the horse owners don't use them anyway. I see horse manure on sidewalks, and streets all over. These people think they are doing use [sic] great favors by owning these fly machines.

I have walked along in the area where these homes are to be built. I cannot see that homes will hurt anything. Maybe having homes will discourage the paint ball people from coming in and spraying red and green paint all over rocks, and trees. Having home owners would discourage a lot of things. Maybe the homes will help buffer some of the wind in the area. I have lived in Chatsworth for 30 years. It is so disjointed – maybe new homes will centralize something for us. Maybe new homes will increase our property values.

Most of these horse people think we should stop building houses right now. If we had stopped building houses 20 or 30 years ago I wouldn't be here, and they wouldn't be here either.

I do not own land other than my house in Chatsworth, but if I did I would be very upset that some people who happen to have large pets would want me to change all my plans to accommodate their pet. Their pet would not be [sic] my priority. Their pet is their problem not mine.

Chatsworth Homeowner 1 - Response

The comment has been received and noted. No additional response is required.

5.0 Response to Comments Received at Public Hearings

5.5.4 Recreation & Equestrian Coalition – Ruth L. Gerson, President

August 20, 2002

Recreation & Equestrian Coalition 1 - Comment

I am writing to support and commend the efforts of ETI Corral 54 in crafting an agreement for significant equestrian improvements in the Presidio/Deerlake Ranch project in Chatsworth.

As much as any of us would like to see an end to the growth in this urban area, it is just not a realistic expectation. However, we can preserve important open space and provide expanded recreation opportunities if we are willing to cooperate and compromise with those who own private property.

ETI Corral 54 has crafted an agreement that will preserve the most significant riparian areas and will support constructing proper multi-use trails in an important equestrian area of this region. In addition, the developer has agreed to assist in off-site trail connections and has contributed funds for the acquisition of other property, which could be used for an equestrian staging area. Further, there will be 55 lots designed specifically to accommodate horse keeping; and there will be four neighborhoods designed to capture the character of Chatsworth. Although it has taken nearly a year and many, many meetings, all equestrians can be proud of the comprehensive set of improvements negotiated by the volunteers of ETI Corral 54.

I would hope that other developers will see this agreement as a model to be followed when working in areas throughout the County. The Recreation and Equestrian Coalition is proud of the thoughtful and precedent setting agreement reached by Presidio and ETI Corral 54. I hope the members of the Commission will support the hard work and efforts that have made this happen.

Recreation & Equestrian Coalition 1 - Response

The comment has been received and noted and will be forwarded to the decision makers. No additional response is required.

5.5.5 Equestrian Trails, Inc. – Charlotte Brodie, Trail Coordinator

July 16, 2002

Equestrian Trails, Inc. 1 - Comment

This property is very unique to Chatsworth and we are going to be saddened to see it developed. However, progress and the fact we do not own the land, requires us to do all we can to preserve as many trails and access points as possible. By working closely with the developers of Deerlake Ranch, this will hopefully assure that the equestrian lifestyle in Chatsworth area is maintained and expanded upon.

At this time, we find that the trail system being proposed will meet the needs of the equestrian community and allow continued access to existing trails around the perimeter of the project. We were pleasantly surprised that the developer also added an equestrian park near the north/western corner and will provide tie rails, tables, water and trees to the site.

We have been assured of continued access through the project to the existing trails around it's perimeter during development, on at times, temporary trails. Safety for equestrians and other trail users must always be considered of prime importance during construction.

Equestrian Trails, Inc. 1 - Response

The comment has been received and noted. No additional response is required.

Equestrian Trails, Inc. 2 - Comment

There are still three trail issues that are related to this project which we would like to see resolved for the safety of all trail users and continuity of the trail. I've included a map showing the following locations. #1 – The trail going north from Mayan and Street "A" that will cross Devil Canyon, has about a 14-foot drop at the canyons edge. We've been promised that this will be worked out between the

5.0 Response to Comments Received at Public Hearings

developer and the Santa Monica Mountains Conservancy (SMMC). #2 – A dedicated trail needs to be established under the 118 Freeway to connect the Deerlake trail with Stoney Point Park. The developer has said that Caltrans has not been very receptive to the idea, even though this same area under many freeways is used for public access routes (sidewalks). I have written to State Assemblymen Dr. Keith Richman and Tony Strickland asking for their assistance in this matter. #3 – The trail on the west side of Deerlake drops down into Devil Canyon and crosses a piece of property belonging to Pepperdine College. I've written to the college asking if they would grant an easement to the Department of Parks and Recreation across the eastern tip of this property in order to provide a continuous trail.

Equestrian Trails, Inc. 2 - Response

The comment has been received and noted and will be forwarded to the decision makers. No additional response is required.

Equestrian Trails, Inc. 3 - Comment

It has been very encouraging to see the developer include 55 equestrian size lots in the project. To see an additional 99, 15,000+ square foot lots is also commendable. Would we like to see more equestrian and large lots? Of course, if it would be at all possible.

Equestrian Trails, Inc. 3 - Response

The comment has been received and noted. No additional response is required.

Equestrian Trails, Inc. 4 - Comment

We encourage the Commission to require that whatever signage and traffic improvements on Canoga, Rinaldi, Chatsworth, Topanga Canyon and Candice Place are adopted, be completed prior to commencement of construction. This will provide an additional margin of safety for pedestrians and equestrians as a result of the increased construction and residential traffic.

Equestrian Trails, Inc. 4 - Response

The comment has been received and noted and will be forwarded to the decision makers. No additional response is required.

Equestrian Trails, Inc. 5 - Comment

ETI Corral 54 would like to seek written clarification from the developer and the Commission on the following items. OAK TREE MITIGATION – Can planting be required rather than payment "in lieu." Can locations be selected where there is no future likelihood of removal? Can a monitoring program be developed to assure proper watering and replacement of unhealthy trees for a three-year period? STORM WATER – If the increased volume and speed of the runoff is not controlled by the planned measures to prevent erosion of Devil Canyon and the SMMC park lands, what can be done to rectify the damage that may occur?

Equestrian Trails, Inc. 5 - Response

The comment regarding oak tree mitigation has been received and noted. As stated in the Draft EIR, oak trees would be mitigated onsite at a minimum 2:1 replacement with 15-gallon trees. This standard is per the County of Los Angeles Zoning Code. Implementation of the mitigation measures included in the Draft EIR, as recommended by the County Forester, would reduce impacts to biological resources, including oak trees, to less than significant.

To ensure survivability of oak trees, trees and acorns will be planted within one year of the permitted oak tree removals. Additional mitigation trees shall be planted within one year of the death of any tree resulting from permitted encroachment. Mitigation trees will be planted either onsite or at an offsite location as approved by the County Forester. The developer will properly maintain each mitigation tree and shall replace any tree failing to survive. A three-year maintenance period shall begin upon receipt of a letter of the developer or consulting arborist to the Director of Planning and the County Forester

5.0 Response to Comments Received at Public Hearings

indicating that the mitigation trees have been planted. The maintenance period of the trees failing to survive two years will start anew with any replacement trees.

In addition subsequent to the distribution of the Draft EIR, the applicant has acquired property north of the project site to serve as mitigation for onsite biological resources (see Section 2.3 and Appendix D of this document). This will include the preservation of approximately 2.60 acres of oak woodland that will be preserved and further mitigate impacts to oak trees.

The comment regarding stormwater has been received and noted. Please see Section 4.2.2 (Urban Runoff 1 – Response) of this document.

5.5.6 Chatsworth Historical Society – Linda Van der Valk, Co-President

August 25, 2002

Chatsworth Historical Society 1 - Comment

The Chatsworth Historical Society is concerned with the potential damage to Devil's Canyon due to the Deerlake Ranch Project. Devil's Canyon is a popular hiking spot in the Chatsworth area and one that is rich in history. Devil's Canyon is a designated trail by the county of Los Angeles and one of the few trails that only elevates three hundred feet in a three mile hike. This fact makes it an easier hike for the elderly and school age children.

Chatsworth Historical Society 1 - Response

The comment has been received and noted. No development is proposed in Devil Canyon. No additional response is required.

Chatsworth Historical Society 2 - Comment

We are concerned about the run-off that will be entering the canyon because of the Deerlake Ranch project. It is our understanding that the clarifying system that the developer wants to use will only filter a certain portion of the run-off leaving the rest to go into the canyon. That run-off will endanger not only the wildlife in the area but the native plants to the area such as The Santa Susanna Tar Weed. We understand that the developer could have the run-off diverted to the city flood control system that is already in place. We know that it would add approximately five million dollars to the project but with all the other negative impacts that this project has on the community, such as traffic, overcrowding local schools and just devastating our hills in general, we feel that at least making an attempt to save Devil's Canyon would be a small concession to the community.

We hope you will consider this alternative of the run-off for the community now and the community of the future.

Chatsworth Historical Society 2 - Response

The comment has been received and noted and will be forwarded to the decision makers. Please see Section 4.2.2 (Urban Runoff 1 – Response) of this document.

5.5.7 Chatsworth Historical Society – Linda Van der Valk, Co-President

August 28, 2002

Charles and Linda Jolloian 1 - Comment

This is to once again voice our huge opposition to the DeerLake Development Project. [Tract #52138] As you know, Supervisor Antonovich has indicated he thinks this project is much too dense. We agree. We want to see under 200 homes.

We are also very concerned about the additional traffic and safety concerns on Canoga Ave. This is a residential community with two schools, many equestrians and many neighborhood children.

5.0 Response to Comments Received at Public Hearings

Please let my family's concerns be expressed. I will be unable to attend the hearing because of work commitments.

Charles and Linda Jolloian 1 - Response

The comment has been received and noted. The proposed project has been designed to reflect the rural character of the area. Please see Section 4.3.5 (City Council 2 – Response) regarding equestrian trails and also see Section 4.7.5 (SC16 and SC19 – Response) of this document regarding land use and density requirements. In addition, stated in Section 4.12 of the Draft EIR, traffic impacts would not be significant with implementation of recommended mitigation measures. Please see Sections 2.4.3, 3.3.5, 4.2.6, 4.3.5 (City Council 1 and 8 – Response) and Appendix K of this document for additional discussion of traffic impacts and mitigation measures.

5.5.8 Chatsworth Community Coordinating Council – Linda Van der Valk, Board Member

August 25, 2002

Chatsworth Community Coordinating Council 1 - Comment

I am writing on behalf of the Chatsworth Community Coordinating Council and our concern for the development of the Deerlake Ranch project in Chatsworth. We realize that progress can not be stopped in areas such as Chatsworth but we are concerned about the environmental impact to Devil's Canyon. Devil's Canyon is a designated trail and one of the few trails that is easily accessible to the elderly as well as the school age children.

Our concern is with the clarifying system that is proposed for the development and the run off that will damage the creek and the canyon. From our understanding the clarifying system is only able to remove a portion of the run off so our canyon will be filled with anti freeze, oil, gasoline and all residue that is accumulated in a neighborhood on a normal basis. We understand that the developer could direct the run off to the concrete wash that is already there but the cost would be approximately five million dollars more to the project. We realize that five million dollars is a lot of money but the damage to the canyon and the creek would be permanent and the loss of the wildlife and fauna has no price.

Chatsworth is a community rich in history and unique in it's mountain formations. Our community is proud of it's heritage and the mountains surrounding us.

Please consider investigating more into the possibility of the run off going somewhere else besides Devil's Canyon.

Chatsworth Community Coordinating Council 1 - Response

The comment has been received and noted and will be forwarded to the decision makers. Please see Section 4.2.2 (Urban Runoff 1 – Response) of this document. Please see Section 4.3.5 (City Council 2 – Response) regarding trails.

5.5.9 Irene J. Draghi (sp?)

August 25, 2002

Irene J. Draghi 1 - Comment

Enclosed a sheet with "Thoughts for Postcards" it reflects our strong sentiments. We have lived in Chatsworth since July 1980. We did this because this area was emphasized as Horse Country with its trails and views and half 1/2 acre tracts were minimum. Traffic was reasonable. It isn't now and is getting worse with cars bumper to bumper now on Chatsworth St. from Topanga to DeSoto.

Most developers do not live in this area, many of them investing from foreign countries and out of states. Their only interests are profits and jamming as many houses as they can and turning the beautiful hills into shopping malls. Our opinion.

5.0 Response to Comments Received at Public Hearings

Irene J. Draghi 1 - Response

The comment has been received and noted. No additional response is required.

5.5.10 Santa Susana Mountain Park Association – Jan Miller, President

August 27, 2002

Santa Susana Mountain Park Association 1 - Comment

There is a serious inadequacy in the Draft Environmental Impact Report (E.I.R.), Volume 1, Section 4.3 page 4.3-12. In reference to wildlife corridors the E.I.R. fails to mention Canoga Avenue which presently offers a very good, albeit impacted, animal crossing route.

Crossing south under the 118 Freeway at Canoga Avenue there is a continuous open space connection (wildlife corridor) all the way to the Santa Monica Mountains. This under crossing is the most easterly of a handful of wildlife crossing points between the San Fernando and Simi Valleys.

The Deerlake Ranch project plans to use Canoga Avenue as one of its two access routes. This will have a tremendously adverse effect on the wildlife crossing.

In Volume II of the Draft E.I.R., Appendix G, Page 4-6, Paul Edelman's 1990 Wildlife Corridor study is referenced. The E.I.R. states, "No on-site regionally important wildlife movement corridors were identified in these studies." No corridors were identified because Deerlake Ranch was not a part of that study. Edelman's study purposely focused on corridors to the west of this project.

We recommend that a study be undertaken which focuses on the Canoga Avenue underpass and any other potential wildlife crossing points between Topanga Canyon Boulevard and De Soto Avenue.

Santa Susana Mountain Park Association 1 - Response

The comment has been received and noted. As stated in the Draft EIR, regional wildlife movement studies have been prepared for The Nature Conservancy and the Santa Monica Mountains Conservancy (SMMC) and include the vicinity of the project site. No onsite regionally important wildlife movement corridors were identified in these studies. Implementation of the revised project would not prevent the regional movement of wildlife. Although many common animals would be adversely affected by direct impact and/or habitat loss associated with the implementation of the project, impacts to local wildlife populations are considered to be below a level of significance. Local onsite wildlife movement would be affected by the revised project, although these species are expected to move to the open space areas located north, west, and east of the project site and the onsite portions of Devil and Browns Canyons. Wildlife would likely continue to utilize open space portions of the project site via Browns Canyon, upper Devil Canyon and the open space to the north, which provide habitat for a variety of species.

Preservation and dedication of the corridor of willow woodland associated with Devil Canyon, which in some areas exceeds 220 feet in width, provides an important resource for avian species for both local and regional movement. Large blocks of riparian habitat (even when surrounded by development) serve as islands, providing an archipelago effect, whereby migrating or dispersing birds can stop to forage, rest, or seek cover from predators as they move across the landscape. Regional and local wildlife movement for terrestrial species is constrained in the area by development, but the willow woodland is expected to continue to serve an important function for local and regional avian dispersal and migration.

In addition, the 14-acre Homer property located at the northeast corner of the intersection of Canoga Avenue and SR-118 has been purchased by the MRCA with funds provided by the applicant, the County of Los Angeles, and SMMC. This property would be maintained as permanent open space. This acquisition would allow the existing wildlife corridor through this property, between North Stoney Point and Devil and Brown Canyons to be preserved.

5.0 Response to Comments Received at Public Hearings

The existing Canoga Avenue underpass of SR-118 is approximately 160 feet in length, and ranges from approximately 80 feet wide at road grade, to 130 to 160 feet wide at the top of the buttress slopes under the freeway bridge. The height of the bridge above the road grade is approximately 25 feet. The existing 16-foot wide Canoga Avenue is paved, with bare earth on both sides and extending up onto the slopes under the freeway bridge. Vegetation is sparse on the slopes on the south side of the freeway bridge buttresses, and virtually non-existent in the shaded areas under the bridge. The area under the bridge is also frequently used for illegal dumping of refuse. Conditions for movement of wildlife through the underpass are presently tenuous, especially during daylight hours.

The revised project would require roadway improvements of Canoga Avenue under SR-118 to 36 feet of paved width, and improvement of a 12-foot wide equestrian trail that would extend along the eastern side of the road. These improvements would leave an area approximately 32 feet wide for a wildlife corridor through the underpass. With planting of appropriate vegetation and placement of other screening improvements to provide cover for wildlife (see Appendix F.5 of this document), the potential adverse impact to wildlife through the underpass connection between North Stoney Point and Devil Canyon would be mitigated to a less than significant level.

Santa Susana Mountain Park Association 2 - Comment

The Santa Susana Mountain Park Association (the Association) and the Foundation for Preservation of the Santa Susana Mountains (the Foundation) were formed in the early 1970's to protect and preserve the Santa Susana Mountains and the Simi Hills.

We have reviewed the current Deerlake Ranch project in light of the Significant Ecological Area Update dated November 2000. We especially noted the detailed narrative regarding the critical need to expand existing protected areas to preserve natural habitat. We note the recommendation in the report is to develop lands within Significant Ecological Areas (SEAs) at no more than one home per 10 acres (see page 30 of the Santa Susana Mountains/Simi Hills Significant Ecological Area Update Study). The Deerlake Ranch project is entirely within the proposed SEA boundaries.

The Association and the Foundation strongly recommend that development be curtailed to avoid housing density greater than one home per 10 acres, as recommended by the Los Angeles County SEA Study dated November, 2000.

Santa Susana Mountain Park Association 2 - Response

The comment has been received and noted. Please see Section 4.4.1 (C ECHO 2 – Response) of this document.

5.5.11 Liz Ricci/Richard Ricci

August 18, 2002

Ricci 1 - Comment

We live on Chatsworth Street south of the proposed development.

We bought our lot and built our home 18 years ago for the specific purpose of being "near the hills", and Devil and Brown's Canyons for riding and hiking. We do realize that the owner of the Deerlake Ranch property has the right to use it.

However, the developer could develop the property with 171 homes on larger estate/equestrian properties that would be much more in keeping with the developments already existing to the west. The developer could then make his profit without so completely destroying our community.

At the present time there are portions of the morning and evening when we literally cannot get in or out of our own driveway because of traffic backed up from the intersections on either side of us. Our local schools and other public facilities are already overloaded. Our recreational hiking and riding area will

5.0 Response to Comments Received at Public Hearings

be really destroyed with a huge number of homes on that hill behind the freeway. The runoff from large numbers of streets and roves and driveways will severly [sic] impact the 2 canyons on either side. The grading and mountain moving necessary for a large number of homes will be really devastating during the construction and in appearance afterwards.

Supervisor Antonovich has recommended a minimum of 15,000 sq ft lot sizes for this development. PLEASE STICK TO THIS SIZE. ENLARGING THE LOTS AND REDUCING THE NUMBER WILL "FIX" MOST OF THE PROBLEMS.

Thank-you for your consideration of our existing community.

Ricci 1 - Response

The comment has been received and is noted. As stated in Section 4.12 of the Draft EIR, traffic impacts would not be significant with implementation of recommended mitigation measures. Please see Sections 3.3.5, 4.2.6, 4.3.5 (City Council 1 and 8 – Response) and Appendix K of this document for additional discussion of traffic impacts and mitigation measures. Please see Section 4.7.5 (SC16 and SC19 – Response) of this document regarding land use and density requirements. Please see Section 4.2.2 (Topical Response and Urban Runoff 1 – Response) regarding runoff issues. In addition, please see Section 4.3.5 (City Council 2 – Response) regarding trails.

5.5.12 Save Chatsworth

September 18, 2003

Save Chatsworth – Comment 1

Members of Save Chatsworth, Inc. were extremely disappointed Wednesday, September 4, when the Los Angeles County Regional Planning tentatively approved the Deerlake Ranch Development Project. Save Chatsworth's supporters include members of the Twin Lakes Property Owners Association, Chatsworth E.C.H.O., the Chatsworth Neighborhood Council, the Chatsworth/Porter Ranch Chamber of Commerce and the Santa Susana Mountain Park Association, as well as many other community members.

The comment has been received and is noted. No additional response is required.

The community of Chatsworth has worked long and hard in offering suggestions for reducing the density of the proposed Presidio project. On August 10, 2002, the Daily News quoted your Deputy Patti Friedman, stating that you would like to see 15,000 minimum square foot estate/equestrian lots for this project, which pleased the community. She also stated that your Regional Planning Commission appointee and Presidio has been advised of your position. With the current plan of 388 homes less than half will be 15,000 square feet or more with far fewer than that being suitable for horses.

The comment has been received and is noted.

We were also disturbed that in addition to concerns raised in public testimony, the Commissioners themselves raised many questions that we believe are still unresolved. Very valid questions were raised regarding:

- 1) the proposed storm drain system*
- 2) trail access that would be equivalent to existing trails*
- 3) alternate ingress/egress from De Soto Ave.*

The comment is received and is noted. As stated in Section 4.12 of the Draft EIR, traffic impacts would not be significant with implementation of recommended mitigation measures. Please see Sections 2.4.3, 3.3.5, 4.2.6 (Traffic 1 & 2 - Responses), 4.3.5 (City Council 1 and 8 – Response), and Appendices E and K of this document for additions/revisions to the traffic analysis and mitigation measures. Please also see Appendix N of this document regarding alternate access to De Soto Avenue. Please see Section 4.2.2 (Urban Runoff 1 – Response) of this document. In addition, please see Section 4.3.5 (City Council 2 – Response) regarding trails.

5.0 Response to Comments Received at Public Hearings

Additionally, many community benefits have been offered as part of the conditional use permit, and the community remains concerned as to whether or not the wording of the conditions that govern those benefits will be enforceable by the County as promised. We are awaiting the completion of the Final EIR to see if the above concerns are addressed. Any help that your office can extend to us to further reduce the impacts of this project on Twin Lakes and the area south of the 118 freeway under the jurisdiction of the City of Los Angeles, will be greatly appreciated.

Save Chadsworth – Response 1

The comment is received and is noted.

5.5.13 Michael A. Augello

September 3, 2003

Augello – Comment 1

I am writing this letter on behalf of over a dozen small property owners located along the northern border of the tract map in question. As requested by the county and acknowledged in the staff analysis for the for the August 21, 2002 hearing, the applicant has shown a future "tap" street to provide access for the properties north of the site. This has put many minds at ease.

The comment has been received and is noted. No additional response is required.

What I am here today for is to request that the location of the "tap" street be moved approximately 1400 feet to the west. The original location served the largest single landowner (344 acres) first and then served the rest of the landowners who would access through this first property. During the past year the 344-acre parcel has been purchased for parkland.

The comment has been received and is noted and will be forwarded to the decision makers. No additional response is required.

Moving the location of the "tap" street 1400 feet to the west would avoid needlessly paving over parkland while also providing a more direct access route for the remaining property owners.

The comment has been received and is noted and will be forwarded to the decision makers. No additional response is required.

I thank you for your consideration.

Augello – Response 1

The comment has been received and is noted. No additional response is required.

5.5.14 Teena Takata

September 3, 2003

Note: Information referred to in this comment letter is included in Appendix B.4 of this document.

Takata – Comment 1

Trails

As Regards Hiking Especially:

The hiking and equestrian community needs viable access, comparable to existing access which may be eliminated under the "Poema Condominium" project.

Takata – Response 1

The comment has been received and is noted. The issue regarding blocked trail access as a result of the Poema Condominium Project is not associated with this project, therefore no response is required.

5.0 Response to Comments Received at Public Hearings

Takata – Comment 2

The hiking community needs access without significant elevation ups and downs to optimize use of this unique area, where an almost flat trail exists along the canyon floor.

Takata – Response 2

The comment has been received and is noted and will be forwarded to the decision makers.

Takata – Comment 3

The hiking community needs parking available for 20 autos along the street. Dawn to dusk weekends, 7 hours weekdays (from 7am). extended hours upon request via permits to be issued from 5th District Supervisors office.

Takata – Response 3

The comment has been received and is noted and will be forwarded to the decision makers.

Takata – Comment 4

Devil Canyon is a riparian area, blue-line stream, part of major watershed and a feeder into Brown's Canyon. It is deserving of protection, as both the old SEA and the proposed SIA (which extends the boundaries to incorporate almost all undeveloped areas) state.

Takata – Response 4

The comment has been received and is noted. Please see Section 4.2.1 (Topical Response and Biology 1 – Response) regarding preservation issues. In addition, please see Section 4.4.1 (C ECHO 2 – Response) regarding SEA issues.

Takata – Comment 5

The Effect of the Poema Condominium Project

Although the Developer showed a switchback trail near the west side of their project near west side of the project [sic] (near the existing Mayan Drive TwinLakes Community Information Board) since the beginning, the community did not realize this trail, and this trailhead was to replace the existing access point from the Poema Condominium project, shown on the © 2001 "Los Angeles County Riding and Hiking Trails" map as a dedicated trail. If the trail head moves to this area, key issues are the same as above: parking availability, and minimal grade access.

Takata – Response 5

The comment has been received and is noted. The Poema Condominium project is not associated with the proposed project, therefore no response is required.

Takata – Comment 6

As Regards Equestrian Especially:

12 Foot Horse Trails vs. 8 Foot Project Trails

"Horse Trails" that are 12 feet wide are shown on the east, north, west boundaries. "Project Trails that are 8 feet wide are shown along the southerly perimeter and along interior areas of the project. The developer has represented 8 foot wide trails are equestrian. Please require a condition to a) provide 12 foot trails around the entire perimeter, and b) require County to accept 8 foot wide trails as "multi-use, including equestrian trails" to ensure Chatsworth does not further lose access in its prime equestrian trail access area. A major portion of the southern perimeter trail goes along new Mayan drive, which will have about 60% of the traffic per the developer's traffic study. Other areas are a key part of the perimeter trail, so should be the standard width to improve safety and maneuverability issues. The Developer said Parks and Recreation has considered this issue and accepted use of 8 foot wide trails for equestrian use. please ensure this is correct, and will survive the sale of all or a part of the project by clarifying the use. Additionally, no standards of construction/fencing for the 8 foot wide trails have been

5.0 Response to Comments Received at Public Hearings

specified. please specify standards for these trails, suitable for containment of horses and other expected users of these trails. Please provide draft conditions addressing these areas BEFORE any project approval is made; this is a key issue to the local area. Please note the equestrian community has no objection to designating the 12 foot wide trails as "multi-use, including equestrians", either.

Takata – Response 6

The comment has been received and is noted and will be forwarded to the decision makers. Please see Section 2.4.7 (Open Space Characteristics) and Section 4.3.5 (City Council 2 – Response) regarding trails.

Takata – Comment 7

The Old Bridge

An old bridge north of Canoga is to be used for trails. Please confirm in writing the bridge will be accepted for use as part of the trail, even though it is old, surely not earthquake-reinforced, etc.

Takata – Response 7

The comment has been received and is noted. As stated in the Draft EIR (Section 2.4.3 and Figure 2.11), the project includes recreational trails that would connect to existing trail systems.

Takata – Comment 8

Dead Ends in Trails at Conservancy Areas

The 8 foot trail (requested to be 12 foot) along the south side is interrupted by a "no trail" area across Devil Canyon. We first saw this in the new map. Please require grading of the Developer's parcels to match/tie into grade of the Conservancy land, so the equestrians and hikers can have a chance of linking the trail.

Takata – Response 8

The comment has been received and is noted and will be forwarded to the decision makers.

Takata – Comment 9

Equestrian/Multi-use Trail, East side of Topanga Canyon

Shown on Exhibit A3 "Equestrian/Hiking Trail" is a proposed equestrian trail along the east side of Topanga Canyon Blvd. This has not been part of the proposed street improvements to the Topanga Canyon/118 Freeway intersection. Let's get this implemented now, if it is not done as part of the major improvement project underway with this development, it will not be done, and equestrian access to the north will be further impaired.

Takata – Response 9

The comment has been received and is noted. Subsequent to distribution of the Draft EIR, the applicant agreed to various community commitments for the project, including additional trails and signage. Please see the VTTM in Appendix C.1 and Appendix E of this document.

Takata – Comment 10

Mutual Letters of Intent to Protect Trail Access

Doug Ring of the Poema Condominium project indicated there were Letters of Intent between Presidio and Sonderman/Ring to ensure the trail access was protected and available. We have not been able to obtain a copy of these documents to see if the representation was true, we were later told by Sonderman/Ring's representative he believed Public Works has them, but he didn't have a copy. Please require that these documents be provided to the community, if they are to be relied upon in any way in designing the trail access and trail.

5.0 Response to Comments Received at Public Hearings

Takata – Response 10

The comment has been received and is noted and will be forwarded to the decision makers.

Takata – Comment 11

Trail Grade after Completion

Presidio is making major changes to the elevation of their development envelope. We are concerned that a side effect may be to increase grade of various trails that link from the northwest property line down into Devil Canyon. Please condition trail links to adjacent lands to have elevation gains not more steep than is presently the case, and require the developer to match elevations of the off-site trails they link to as part of the grading process.

Takata – Response 11

The comment has been received and is noted and will be forwarded to the decision makers. Please see the VTTM in Appendix C.1 and Appendix E of this document regarding community commitments for the project.

Takata – Comment 12

Issues Affecting All Trail Users:

Rim of the Valley Access

This is one of the best areas for a hiker to access the Rim of the Valley trail system that has gained great support as recreational hiking opportunities have gained more widespread support. Retention of access points is a key component to having a usable system.

Takata – Response 12

The comment has been received and is noted. No additional response is required.

Takata – Comment 13

Global Trail Solution/Supervisors Office

Part of the complexity of the trail solution is that the Sonderman/Ring Poema Condominium Project is based on land that is to be acquired under an option, and is not owned by the proposed developer. Presidio owns the land they propose their project will be built on. We have been told for the last four weeks, a solution supervised by Mr. Antonovich's office is imminent, and a meeting of concerned community members will be happening to provide a solution to what will happen if either Ring goes forward, Presidio goes forward, or both projects are approved. Nothing has been shown to us yet, we ask that any approval be put off until the full effect of any modification of the "dedicated" trail is known, and reviewed by community members that are involved in the trail system in the area.

Takata – Response 13

The comment has been received and is noted and will be forwarded to the decision makers.

Takata – Comment 14

We are pleased to see the Staff Report acknowledges that one of the directives from the last hearing on this project was to work toward a project design that incorporates community requests.

Takata – Response 14

The comment has been received and is noted. No additional response is required.

Takata – Comment 15

When Presidio representatives began to meet with community representatives in December, 2002, they initially presented a "Community Character Statement" Preliminary Draft – December 17, 2002 to the Community Representatives who were allowed by the Supervisor's office to attend the meeting.

5.0 Response to Comments Received at Public Hearings

Takata – Response 15

The comment has been received and is noted.

Takata – Comment 16

At the second meeting of Presidio and the Community, the Community responded via document dated January 16, 2003, and requested the various items, including the following. Months later, the community was presented, without material discussion, a revised Community Character Statement, dated April 7, 2003. That Community Character Statement appears to have substantially the same text as the June, 2003 Community Character Statement dated June 2003, that is the only bit of new information Deerlake Ranch, County Supervisor Staff, or Planning Staff has provided to the community as part of this hearing. Commissioners may recall providing instructions to Presidio to provide information that they submit to the Commission to the community, but NONE has been provided this time at all, by anyone.

Community Requested (Page 1)	Presidio Response
...see more specifics on how the design will work into the existing topography...	Ignored
...see... more detail on what features of the natural landscape will be retained...	Ignored
We are expecting a minimum of 15,000 square feet in lot size.	Somewhat improved
Use of CFD funds for community center, better trails, more stringent construction controls	Generally ignored
Consider City sphere of influence, 17,500 minimum lot size, horsekeeping	Generally ignored
Page 3	
15,000 square foot lots, retain natural flow of landscape/topography, reduce grading and removal of significant features	Generally ignored
Page 4	
Revised circulation system	Nothing provided
Change Street layout to minimize impacts on Canoga Avenue, an established residential street.	Ignored
Page 5	
Retention of existing major rocks, outcroppings, protection for Plummers Mariposa Lily areas	Ignored
Retention of more oaks	Most ignored
Provide true contour grading, build homes into existing site	Ignored
Do not build homes on ridgelines	Ignored
Page 6	
Place homes on lots to optimize equestrian uses	Ignored
Make one park an equestrian arena [very needed with small lot horsekeeping]	A rest stop was created, no exercise possible there

Retain rock outcroppings and significant hills and valleys	Ignored
Page 8 (and 10)	
Use landscaping of native plants	Ignored
Page 9	
Do not cover ridgelines visible from Conservancy property and other riparian areas (Brown's, Devils Canyon)	Ignored
Provide product type and acceptable colors of Roofing material -- red tile is not compatible, need Neutral colors	Ignored
... Page 12	
Provide horsekeeping in Neighborhood 2	Ignored
Further Analysis not provide, we believe you will see the pattern here	Community was ignored

5.0 Response to Comments Received at Public Hearings

Takata – Response 16

The comment has been received and is noted. Please see Section 2.0 of this document regarding the revised project description based upon comments received from the public, regulatory agencies, and local government. Please see the VTTM in Appendix C.1 and Appendix E of this document regarding community commitments for the project. In addition please see Section 5.5.1 (Presidio Chatsworth Partners LLC, Inc -Comment Letter) of this document for further discussion of the revised project.

Takata – Comment 17

Surely Presidio will advise you they cannot make profit, and thereby "force" your hand to approve their project. Based on the recent Sonderman Ring case, TTM 53235, you don't ask for any details and you simply accept that representation as justification for a density that is over 2 to 3 times that allowed on adjacent projects.

We don't want that to happen here.

Takata – Response 17

The comment has been received and is noted. No additional response is required.

Takata – Comment 18

The draft EIR indicates there was a deal with the Conservancy and the County in 1997 that really got this project moving.

Please find attached the Median Sales Prices for homes in the San Fernando Valley from 1987 to 2003, per the Southland Regional Association of Realtors.

Takata – Response 18

The comment has been received and is noted. No additional response is required.

Takata – Comment 19

This table indicated that from 1991 to 1996, home prices dropped a cumulative amount of 35.1%. From 1997 through 2002, home prices have increased 69.4%.

Takata – Response 19

The comment has been received and is noted. No additional response is required.

Takata – Comment 20

This trend continues in 2003 (not included above since it is a partial year), where median sales prices were \$395,000 for July 2003, as compared to December 2002 that was \$332,000, an increase of over 18.9% for the seven months then ended.

Takata – Response 20

The comment has been received and is noted. No additional response is required.

Takata – Comment 21

Surely, with this type of historical background, a profit can be made, with even ½ the number of homes the developer initially proposed. The cumulative rise in home prices is unprecedented in recent years.

Takata – Response 21

The comment has been received and is noted and will be forwarded to the decision makers.

Takata – Comment 22

A significant question on the staff report –

"The density of the redesigned project is 1.6 units per acre, consistent with... the overall density of the residential development nearby". There are 155 lots 15,000 square feet or greater.

5.0 Response to Comments Received at Public Hearings

My math tells me if the data in the draft EIR is still correct, the developed lots comprise 61.71 acres. (Table 2.3 "Summary of Proposed Land Uses", Section 2.0, volume 1, Page 2-17).

Applying my calculator to this, 388 homes/61.71 acres is 6.287 homes per acre. Mathematically [sic], there are 43,560 square feet in an acre. $43,560/6.287$ homes per acre is an average lot size of 6928.6, or just under 7,000 square feet.

This is a LARGE difference from the 1.6 units per acres, per the staff report.

Takata – Response 22

The comment has been received and is noted. The proposed project has been revised from the project proposed in the Draft EIR. Please see Section 2.0 of this document regarding the revised project description based upon comments received from the public, regulatory agencies, and local government. In addition, please see Section 4.7.5 (SC16 and SC19 – Response) of this document regarding land use and density requirements.

Takata – Comment 23

Looking at these numbers in an alternative way, there are 155 lots of 15,000 square feet or more. $155 \text{ lots} \times 15,000 \text{ square feet}$ is 2,325,000 square feet of development in over 15,000 square foot lots (this is the minimum square feet, based on 100% 15,000 square foot lot size for every lot). Divide that number of square feet by 43,560, the number of square feet in an acre, and the result is 53.375 acres used (minimum) for these 155 lots.

That leaves (388 lots – 155 lots) 233 residential lots with only (61.71 – 53.375 acres) 8.335 acres, an average lot size of $(8.335 \times 43,560) = 363,073$ square feet/233 homes, or an average lot size of 1,558 square feet.

Takata – Response 23

The comment has been received and is noted. The proposed project has been revised from the project proposed in the Draft EIR. Please see Section 2.0 of this document regarding the revised project description based upon comments received from the public, regulatory agencies, and local government. In addition, please see Section 4.7.5 (SC16 and SC19 – Response) of this document regarding land use and density requirements.

Takata – Comment 24

The last County-approved project in this area was to the west, the Indian Falls and Indian Springs projects, where the homes are all built on one acre plus sites. Yes, Twin Lakes is immediately to the south of the site, but everyone was stuck with the old small lots there. Chatsworth, immediately to the south, in the City, is generally developed with 15,5000 square foot lots.

Takata – Response 24

The comment has been received and is noted. No additional response is required.

Takata – Comment 25

The data provided for the Presidio development needs improved for accuracy and lot sizes need to be compatible [sic] with the surrounding community. I know in past situation where I had to access data, average sizes of the lots in the high and low ends of certain groups were used to look like they were average lot sizes (but they were merely the mid point of the arbitrary categories see attached).

Possibly another misleading table has been provided to staff, I don't know where the error is here, but it is significant.

Takata – Response 25

The comment has been received and is noted. The proposed project has been revised from the project proposed in the Draft EIR. The proposed project has been designed to reflect the rural character of the

5.0 Response to Comments Received at Public Hearings

project area. Please see Section 2.0 of this document regarding the revised project description based upon comments received from the public, regulatory agencies, and local government. In addition, please see Section 4.7.5 (SC16 and SC19 – Response) of this document regarding land use and density requirements.

Takata – Comment 26

In the Summer of 2002, Presidio representatives provided community members with the attached sheet, depicting “normal” or “proposed” layouts of homes on lots that allowed horsekeeping.

Takata – Response 26

The comment has been received and is noted. No additional response is required.

Takata – Comment 27

Although the community is pleased with this type of layout for horsekeeping purposes, we have concerns that it actually will be implemented, and we ask the County to condition the attached concept of home layout to the project's lots that allow horsekeeping.

Takata – Response 27

The comment has been received and is noted. Please see Section 2.0 of this document regarding the revised project description based upon comments received from the public, regulatory agencies, and local government. Please see the VTTM in Appendix C.1 and Appendix E of this document regarding community commitments for the project.

Takata – Comment 28

The community has noted two things about the homes depicted on the maps in the draft EIR. One, when these diagrams are measured at a larger scale, the homes appear to be five feet from the side lot line. Two, the homes shown in the original draft EIR appear to be similar in footprint to the mobile homes at the southwest corner of Topanga Canyon and the 118 freeway, which normally would be expected to occupy a much smaller footprint than a modern single family home.

Neither of the above concepts would provide horsekeeping on the 15,000 foot and higher lots. Home layout is a key issue to providing the ability to keep horses, and/or to provide other large-scale estate uses, such as tennis courts and large yards.

Takata – Response 28

The comment has been received and is noted. Please see Section 2.0 of this document regarding the revised project description based upon comments received from the public, regulatory agencies, and local government. Please see the VTTM in Appendix C.1 and Appendix E of this document regarding community commitments for the project.

Takata – Comment 29

We ask the Regional Planning Commission, and the County Planning staff, to incorporate the attached design, as a concept statement by Presidio as to the layout of all equestrian-type lots of 15,000 feet and larger.

Takata – Response 29

The comment has been received and is noted and will be forwarded to the decision makers.

Takata – Comment 30

Design of equestrian homes should be consistent as to the amount of the lot covered by the home's footprint, the placement of the homes near one corner of the lots, and adjacent to neighboring homes.

Takata – Response 30

The comment has been received and is noted. No additional response is required.

5.0 Response to Comments Received at Public Hearings

5.5.15 Casimir A. Filek

September 8, 2003

Filek – Comment 1

For some reason or other, the Los Angeles County Planning group continues to sell out to developers. We are in a rural area and would like it to remain so. We live in two school areas, Sierra Canyon and Chatsworth Academy. Both of these schools bring an enormous amount of traffic into our area. Many of the drivers are inconsiderate of the families who live around the school. They either speed or go so slow while talking on the phone that they create potential problems. It is almost impossible for us to turn from Nashville onto Vartel because of the traffic or people have parked up to and around the sidewalks. The traffic on Chatsworth St. is like a parking lot during the morning and evening hours. The development will only add to this congestion. The developers love the regional planning office because they always seem to get what they want. I can't imagine building two huge bridges over such beautiful canyons . . . only to satisfy the developers with more profit. Once they build, they move on to other lucrative areas and leave us with dealing with the mess that they have created. Hikers and horses are on the trails daily . . . the only open spaces left in this area. Why ruin it with more homes. Why should we suffer so that this developer can make more money. Three hundred and eighty eight homes are just too many.

Filek – Response 1

The comment has been received and is noted. No additional response is required.

Filek – Comment 1

This area must be preserved as open space. We do not want another Porter Ranch where they have desecrated the beautiful hills that made this area so attractive.

Filek – Response 1

The comment has been received and is noted. Please see Section 3.3.2 (Revision C) regarding open space conservation and dedications.

Filek – Comment 1

The development project must be designed so as to reflect and respect the nature of the existing community. The rural character of Chatsworth must be preserved and the equestrian lifestyle must be allowed to continue.

Filek – Response 1

The comment has been received and is noted. The proposed project has been designed to reflect the rural character of the community. Please see Sections 1.2 and 2.1.2 regarding land use and densities. In addition, please see Section 4.3.5 (City Council 2 – Response) regarding trails.

Filek – Comment 1

We in the Valley continue to get short changed by the politicians in Los Angeles and this is another example. Just today, I read in the paper where there were plans for this wonderful park between City Hall and the Music Center. It is time that the Valley got some of the money that we continue to ply into downtown.

Filek – Response 1

The comment has been received and is noted. No additional response is required.

5.0 Response to Comments Received at Public Hearings

5.5.16 Collette M. Bertrand

September 1, 2003

Bertrand – Comment 1

I am writing this letter to you to forward to each Commissioner regarding easy trail access to Devil Canyon, currently being proposed for re-routing as part of the Deerlake Ranch Project.

Bertrand – Response 1

The comment has been received and is noted. No additional response is required.

Devil Canyon, in my opinion, is probably one of the most beautiful canyons in the San Fernando Valley. Walking through this canyon is like walking through a forest most resident [sic] of the San Fernando Valley would think could only exist in Northern California. The beautiful oaks, sycamores and other trees in this canyon shelters the hiker from the Valley heat. Small streams follow the easy walking path one takes along the canyon. Some of the most beautiful flowers, shrubs and rock formations exist in this canyon and can be enjoyed by all levels of hikers. Unlike most of the other hiking trails and canyons in this area, Devil Canyon consists of only a small gain in elevation (I believe 300 feet) and many hikers, particularly inexperienced hikers and the elderly hikers, can complete this hike with little or no difficulty. I wish to particularly stress this point since over the years, I have seen many elderly hikers who have been forced to turn around and go back and not complete a hike in the Santa Susana Mountain area because the climb and the heat become too much for them. Devil Canyon is the only canyon in this area that elderly hikers have no difficulty in walking and are able to enjoy the beautiful scenery nature has provided. Walking through this forest-like canyon, wit the beautiful flowers, animals and streams make one feel that they are far away from the Valley and in a whole other world. It is truly an experience that leaves one feeling peaceful and happy. And to think it is only a few minutes away from home!!! I just recently took a hiking group to this canyon and the beauty and ease of this hiking trail is such an incredible surprise to Valley residents that many continue to come back. Devil Canyon is without a doubt the greatest surprise any Valley resident can encounter.

Bertrand – Response 1

The comment has been received and is noted. No additional response is required.

Current access to the canyon is a short and easy walk for all levels of hikers. However, the Deerlake Ranch Project is proposing to close the current access and re-route the entry to this canyon along the east end, requiring hikers to hike a much longer and more difficult road just to get to the entrance of the canyon. This would make the canyon basically inaccessible to many inexperienced and elderly hikers [sic]. Even experienced hikers would be affected by having to add another mile or so of a difficult trail just to gain entry into the canyon. Therefore, I am taking this time to write to the Commission to please be aware that the proposed access by the Deerlake Ranch Project is basically no access at all but to a few of the more hardy hikers. Just thinking that access to this beautiful canyon could be jeopardized is upsetting as many Valley resident [sic] would not have had the opportunity to see this canyon and many will never be able to walk along this canyon again. I strongly urge the Commission to consider this when making their decision, since this is not merely a proposal to move access from one side to another, but will be an extreme change in access to the canyon and many people would be effectively banned from this canyon.

Bertrand – Response 1

The comment has been received and is noted and will be forwarded to the decision makers. Please see Section 3.3.2 (Revision C) regarding open space conservation and dedications. In addition, please see Section 4.3.5 (City Council 2 – Response) regarding trails.

5.0 Response to Comments Received at Public Hearings

Parking is also critical to the hikers enjoyment. We need to have parking available from dawn to dusk and not restricted as proposed. This is particularly important to many of us who hold jobs during the day and can not start a hike until 5:00 pm. Limited parking would basically make this canyon unavailable to many working people who need to "get away from it all" after a hard days work and relax in the surrounding beauty of this canyon. Also, the current parking along Poema Street is not troublesome to any of the residents in the area and there is currently no conflict between the residents in the area (the Townhouse project to the West and Twin Lakes to the east) and hikers. I wish to stress that not only should the trail [sic] access be unchanged, but parking along Poema street, with no restrictions on public parking, is also critical to the enjoyment of this canyon and should remain unchanged.

Bertrand – Response 1

The comment has been received and is noted and will be forwarded to the decision makers. Please see Section 3.3.2 (Revision C) regarding open space conservation and dedications. In addition, please see Section 4.3.5 (City Council 2 – Response) regarding trails.

Thank you for consideration of these points in your next meeting and please, if you have time, come on down here and take a look at this beautiful canyon. You will be able to better appreciate the reasons many of us wish to keep the current access unchanged.

Bertrand – Response 1

The comment has been received and is noted. No additional response is required.

5.5.17 Dorian Keyser

August 27, 2003

Keyser – Comment 1

I will be unable to attend the September 3, 2003 hearing concerning the proposed Deerlake Ranch Development due to major surgery on September 2. Accordingly, I have submitted this letter and request that each commissioner and appropriate staff members be given a copy to review.

Keyser – Response 1

The comment has been received and is noted. No additional response is required.

Keyser – Comment 2

My comments are:

1. The property which the Presidio Group proposes to develop should be called the Deerlake Ranch since it is composed of parts of Twin Lakes as well as most of Deerlake Highlands. Deerlake Highlands was subdivided into 1923-25 foot by 60 foot lots in the mid-1920's. The Presidio Group claims to have the development rights to build more than 600 houses but it proposes to build 388 houses. The "Save Chatsworth" citizens group advocates that L.A. County permit 300 much larger houses. A survey by a member of this group concludes that the 300 houses would sell very rapidly. However, the developer has a different survey which refutes this contention. The developer points out that their development costs will include the costs of grading streets, sidewalks and flood control as well as water, natural gas, electrical, sewers, and telephone facilities and questions whether most of the property of the "Save Chatsworth" study already has most of their facilities which were built when costs were much lower (e.g. Indian Falls was subdivided well before 1990, but most of its lots remained vacant of houses until recently).

Keyser – Response 2

The comment has been received and is noted. No additional response is required.

5.0 Response to Comments Received at Public Hearings

Keyser – Comment 3

2. Wildlife Corridors

- a. *Studies by biologists have revealed that mountain lions require huge areas. This can be accomplished by connecting undeveloped areas via wildlife corridors/ habitat linkages. Thus, the Santa Monica Mountains are connected to the much larger Los Padres and Angeles National Forests via the Santa Susana Mountains and Simi Hills. Unfortunately, the 118, 110, and I-5 Freeways were constructed without considering how wildlife can safely get past these "choke points". The existing 118 Freeway overpass between the Runkle Ranch Park and the Santa Susana Pass Road is presently used by mountain lions, deer bobcats, raccoons, and other animals to safely get by this Freeway. This is the most important safe passage of the 118 Freeway for wildlife.*
- b. *The Canoga Ave. underpass of the 118 Freeway North of this Freeway wildlife reach Canoga Ave. via Browns Canyon Road and via Devil's Canyon which will remain undeveloped. They travel underneath Canoga North of Stoney Point Park. From here they must cross heavily traveled, unsafe Topanga Canyon Blvd., then the private, undeveloped De Young and Mineo properties followed by the S.M.M. Conservancy's owned "Garden of The Gods, then a dedicated trail to Chatsworth Park South; the Santa Susana Pass State Historic Park; and via the Santa Susana Pass Road to the main overpass.*
- c. *Gated and developed Indian Falls and Indian Springs.*
 - 1) *Via Falls Creek in Indian Falls to Devil's Canyon to reach the Canoga Ave. 118 Freeway underpass (via land owned by the SMCC).*
 - 2) *"Via Iverson Road beneath the 118 Freeway, across the Santa Susana Pass Road to undeveloped Church property to Chatsworth Park South where it joins item 2-b."*
 - 3) *Rocky Peak Park to Corriganville. There is a 15 foot high by 12 foot wide rectangular cross section equestrian undercrossing of the 118 Freeway which is available for wildlife. While this tunnel is safe for mountain lions to use since they are the top predator, they make it unsafe to use by deer and smaller animals, and perhaps for mounted equestrians.*

Keyser – Response 3

The comment has been received and is noted. Please see Section 4.2.1 (Topical Response – Biology) and Section 4.7.9 (Santa Susana Mountain Park Association 1 – Response) of this document regarding wildlife corridors.

Keyser – Comment 4

3. Save Chatsworth

Deerlake Ranch is North of the 118 Freeway and wholly in L.A. County whereas Chatsworth is south of the 118 Freeway and wholly in L.A. City. Chatsworth was subdivided with large lots and zoned as an equestrian community. However, recent actions of some L.A. City officials and of some Chatsworth Property owners appear to endanger this zoning. Thus, in my opinion, rezoning portions of Chatsworth to reduce the number of equestrian size lots are a greater threat to the equestrian nature of Chatsworth than does the subdividing the Deerlake Ranch to 388 lots some of which would be equestrian size. Likewise, the proposed equestrian trails on the Deerlake Ranch perimeter and insides help preserve the equestrian character of the development.

A few years ago, Mr. Stein, a developer, with the support of former City Councilman Hal Bernson, succeeded in having his horse properties in Chatsworth rezoned for condominiums, with a unanimous vote of the L.A. City Council. As a result, several other nearby property owners applied for rezoning their property. Lawsuits are in progress. Although "Save Chatsworth" is opposing these rezonings, they

5.0 Response to Comments Received at Public Hearings

need to greatly increase their efforts. I believe this is significantly more important than their efforts to downsize the Deerlake Ranch Development.

Keyser – Response 4

The comment has been received and is noted. No additional response is required.

Keyser – Comment 5

4. When evaluating any proposed development it is important to include regional factors and who have been major players. Unfortunately, the supporters of "Save Chatsworth" lack the vision to consider the Santa Susanas from Rocky Peak Park in Ventura County to Balboa Blvd. in L.A. County.

a. Developers and their supporters

- 1) Porter Ranch Developer has ambitions to extend his development west of Brown's Canyon Road and North.*
- 2) Former L.A. City Councilman Hal Bernson was very instrumental in obtaining approvals of the Porter Ranch Development from the City of Los Angeles. Bernson also insisted that Sesnon Blvd., eventually be widened to four lanes and extended from Balboa Blvd. on the east to Brown's Canyon Road on the west. Presently Sesnon Blvd. has a 0.5 mile gap east of Porter Ranch and a 0.6 mile gap immediately prior to Browns Canyon Road. Some of it has not yet been widened. I strongly urge that this road be left in its present condition.*

Keyser – Response 5

The comment has been received and is noted. No additional response is required.

Keyser – Comment 6

b. The Santa Monica Mountains Conservancy, with the help of L.A. County Supervisor Mike Antonovich and former state senator Ed Davis and private groups such as the Santa Susana Mountain Park Association and the Sierra Club, has been the primary reason why large sections of the Santa Susanas from the 118 Freeway to the 126 highway and from the 4369 acre Rocky Peak Park to Balboa Blvd. properties are now in public ownership.

- 1) 282.5 acres of 348 acre Indian Springs Phase II and two conservation easements will soon be deeded to the MRCA a joint powers agency of the SMMC and Rancho Conejo and Rancho Simi Recreation and Parks agencies).*
- 2) 238 acre former Young Property now owned by the SMMC which they bought to prevent its use as a trash dump.*
- 3) 170 acre SMMC owned Davidson Property.*
- 4) 3500 acre Newhall Ranch Open Space which is/will be publicly owned. It connects the west border of the Santa Clarita Woodland to Highway 126.*
- 5) 4000 acre SMMC owned Santa Clarity Woodlands Park.*
- 6) 70 acre SMMC owned Devils Canyon open space which effectively prevents the extension of Topanga canyon blvd. into the Santa Susanas.*
- 7) 16.5 and 14 acres deeded to the SMCC by the Deerlake Ranch developer.*
- 8) 14 acre former Harry Horner Property north of the 118 Freeway on the east side of Canoga Ave. which is owned by the SMCC.*
- 9) A 10 foot wide band entirely surrounding the Deerlake Ranch Development. This is owned by the SMCC. It prevents entry into the back country from the Deerlake Ranch.*
- 10) 159 acres in Browns Canyon that the Deerlake Ranch Developers will deed to the SMMC for the planting of Plummers Mariposa Lillies from the Deerlake Ranch.*

5.0 Response to Comments Received at Public Hearings

- 11) *The 1734 acre Joughen Ranch purchased by the SMCC with funds supplied by three sources, including money from L.A. County Supervisor Mike Antonovich's L.A. County Proposition A funds.*
- 12) *A total of more than 400 acres of the Schweitzer and Webb Properties north of the Deerlake Ranch which are now owned by the SMCC.*
- 13) *L.A. city owns O'Melvary Park which connects to the southeast border of the Santa Clarita Woodlands Park.*
- 14) *135 acres in Browns and Mormon Canyon (in three parcels) which were deeded to the SMCC from the Porter Ranch developer as required by the U.S. Army Corps of Engineers.*

Keyser – Response 6

The comment has been received and is noted. No additional response is required.

Keyser – Comment 7

c. Recommended Properties to be acquired by the SMCC in the Santa Susanas.

- 1) *448 acre Southport Property between Young and Indian Springs Phase II which is owned by L.A. County for non-payment of property taxes.*
- 2) *1556 acres Dale Poe Cockie Bull Ranch is directly north of Rocky Peak in Ventura County.*
- 3) *To be determined properties to complete the connection of the wildlife corridor to the Los Padres and Angeles National Forest.*

Keyser – Response 7

The comment has been received and is noted. No additional response is required.

Keyser – Comment 8

d. Properties in the Simi Valley (in the Santa Susanas).

- 1) *Marr Ranch Open Space (publicly owned).*
- 2) *Whiteface Open Space (publicly owned).*
- 3) *Happy Camp Regional Park (publicly owned).*
- 4) *Connection between d-1) and d-2) and between d-2) and d-3) which need to be acquired.*

Keyser – Response 8

The comment has been received and is noted. No additional response is required.

5.5.18 Various Postcards

2002

Postcard 1 - Comment

We don't understand why an adequate "mitigation" to the Deerlake Ranch project would be to make our schools multi-track. Why do my children need to go to school on staggered schedules so a developer can make more profit?

Postcard 1 – Response

The comment has been received and is noted. As included in Section 3.0 of this document, subsequent to distribution of the Draft EIR, the project's anticipated student generation has been reduced by 20 percent, and additional enrollment information became available from LAUSD. However, this additional information did not change the conclusions included in the Draft EIR, that impacts to schools would be less than significant with mitigation. In addition, the applicant has indicated that they will enter into discussions with LAUSD and the Porter Ranch master developer to investigate the possibility of

5.0 Response to Comments Received at Public Hearings

accelerating the Porter Ranch elementary and middle school construction schedule. Please see Sections 2.0, 4.2.8, 4.5.28, and Appendix J of this document for additional information regarding schools.

Postcard 2 - Comment

The traffic studies make no sense. Although some intersection improvements are being made, Chatsworth Street, west of DeSoto Avenue, still will be a two lane street! Have you seen what it looks like between 8 and 8:30 am when school is in session? With a project of this size, nothing will "mitigate" the resulting traffic jam.

Postcard 2 - Response

The comment has been received and is noted. As stated in Section 4.12 of the Draft EIR, traffic impacts would not be significant with implementation of recommended mitigation measures. Please see Sections 3.3.5, 4.2.6, 4.3.5 (City Council 1 and 8 – Response) and Appendix K of this document for additional discussion of traffic impacts and mitigation measures.

Postcard 3 - Comment

Alternative #3 (a 171 unit alternate project) makes the most sense, if development is to occur. Lots in this alternative plan would be slightly larger than the average lot size just south of the freeway, which makes sense, as this project is more in the outskirts of the City than elsewhere. Larger lot sizes are more compatible with the single-family homes already approved in Indian Falls and Indian Springs.

Postcard 3 - Response

The comment has been received and is noted. No additional response is required.

Postcard 4 - Comment

Our local streets are in terrible shape, traffic wise. We live in a world of F intersections. They will get worse with commuter traffic from Simi Valley, Newhall Ranch, Stevenson Ranch, etc., all large projects that will have many commuters to this area. It makes no sense to add to the traffic without a long-term plan for the future.

Postcard 4 - Response

The comment has been received and is noted. As stated in Section 4.12 of the Draft EIR, traffic impacts would not be significant with implementation of recommended mitigation measures. Please see Sections 3.3.5, 4.2.6, 4.3.5 (City Council 1 and 8 – Response) and Appendix K of this document for additional discussion of traffic impacts and mitigation measures.

Postcard 5 - Comment

This area needs to be preserved as open space. Glendale, along with the Santa Monica Mountains Conservancy, has recently preserved Oakmont V; a similar-sized development. Can't that be done here? Why would you build two huge bridges over such beautiful canyons? The westerly area of the Santa Susana Mountains in Chatsworth makes a beautiful visual image, and should not be cut up by a ton of homes.

Postcard 5 - Response

The comment has been received and is noted. Please see Section 3.3.2 (Revision C) regarding open space conservation and dedications. The bridges are needed to provide safe and reliable internal traffic movement through the project area. Please see Section 2.4.3 regarding traffic improvements.

Postcard 6 - Comment

The developer is planning to make flatland of beautiful low-lying hills; please stop this! Existing development has largely been made so the homes lie with the land and retain the natural terrain. This will just look like another Porter Ranch.

Postcard 6 - Response

The commenter's objection to the project is noted and will be forwarded on to the decision makers.

5.0 Response to Comments Received at Public Hearings

Postcard 7 - Comment

The westerly area of the Santa Susana Mountains in Chatsworth makes a beautiful visual image, and should not be ruined by flat-graded lots in the low-lying hillsides.

Postcard 7 - Response

The comment has been received and is noted. Please see Section 3.3.2 (Revision C) regarding open space conservation and dedications.

Postcard 8 - Comment

Traffic impacts on Canoga have not been adequately considered. Based on the street design and traffic on Topanga Canyon, the Canoga Avenue traffic will be much more than projected.

Postcard 8 - Response

The comment has been received and is noted. As stated in Section 4.12 of the Draft EIR, traffic impacts would not be significant with implementation of recommended mitigation measures. Please see Sections 2.4.3, 3.3.5, 4.2.6, 4.3.5 (City Council 1 and 8 – Response) and Appendix K of this document for additional discussion of traffic impacts and mitigation measures.

Postcard 9 - Comment

Other projects continue to impact the area. The trails on the west side of the project were fine until the Poema condominium project blocked access to Devil Canyon. This needs reviewed, and good access with reasonable elevations, and adequate parking needs to be provided for.

Postcard 9 - Response

The comment has been received and is noted. The issue regarding blocked trail access to Devil's Canyon as a result of the Poema Condominium Project is not associated with this project, therefore no response is required.

Postcard 10 - Comment

This development project must be designed so as to reflect and respect the nature of the existing community. The rural character of Chatsworth must be preserved, and the equestrian lifestyle must be allowed to continue.

Postcard 10 - Response

The comment has been received and is noted. The proposed project has been designed to reflect the rural character of the community. Please see Sections 1.2 and 2.1.2 regarding land use and densities. In addition, please see Section 4.3.5 (City Council 2 – Response) regarding trails.

Postcard 11 - Comment

People hike and ride the canyon and hills here every day – it's important to the quality of life. Ranch-style houses on more spacious lots would sell in this area.

Postcard 11 - Response

The comment has been received and is noted and will be forwarded to the decision makers. No additional response is required.

Postcard 12 - Comment

The developers claim they cannot make a profit if they reduce the number of homes in Deerlake Ranch. Our community should not suffer so that this developer can make more money. 388 homes is simply too many!

Postcard 12 - Response

The comment has been received and is noted and will be forwarded to the decision makers. No additional response is required.

5.0 Response to Comments Received at Public Hearings

Postcard 13 - Comment

Devil Canyon is a favorite recreation area enjoyed by many, many people throughout the year. The current plan for allowing a storm drain system that claims to filter only 90% or less, of all contaminants is unacceptable to our community. Please help us protect this natural treasure and insist that the storm drain run-off be diverted all the way to the city flood control system.

Postcard 13 - Response

The comment has been received and is noted. Please see Section 4.2.2 (Topical Response and Urban Runoff 1 – Response) regarding runoff issues.

Postcard 14 - Comment

8 foot wide trails make no sense, since 12 feet is required for an equestrian trail by the County. This is the last remaining major trail access point, we must preserve equestrian use of all trails in the area.

Postcard 14 - Response

The comment has been received and is noted. Please see Section 4.3.5 (City Council 2 – Response) regarding equestrian trails.

5.5.19 Susan Condel

Postcard 15 - Comment

I have lived in Chatsworth over 6 yrs and the reason I moved here was due to the quaint rural, small town atmosphere. With the Deerlake Ranch project, as well as several other devlpmts [sic] pushing to develop in the area, getting to and from my home is going to be a chore. The area is hardly able to deal w/the number of people in the area now. With no upgrades/additions to the roads or new on ramps · we will not be able to deal w/the density of traffic. Please revisit the traffic plan.

Thank you.

Postcard 15 - Response

The comment has been received and is noted. As stated in Section 4.12 of the Draft EIR, traffic impacts would not be significant with implementation of recommended mitigation measures. Please see Sections 2.4.3, 3.3.5, 4.2.6, 4.3.5 (City Council 1 and 8 – Response) and Appendix K of this document for additional discussion of traffic impacts and mitigation measures.

5.5.20 [Illegible name] – 20935 Francine Cn., Chatsworth

Postcard 16 - Comment

The storm drainage system will only filter less than 90% of contaminants · this is unacceptable.

Postcard 16 - Response

The comment has been received and is noted. Please see Section 4.2.2 (Urban Runoff 1 – Response) regarding runoff issues.

5.5.21 Christine Behling

Postcard 17 - Comment

Chatsworth is one of the few remaining rural communities left in the L.A. area. This project it seems would completely destroy the beauty and peacefulness of our community · which is why we all moved here. The project would cause huge traffic problems – none of which have been studied or addressed properly. We already have too much traffic on Variel, Canoga, and Chatsworth Streets at peak hours. This project would make it nearly impossible to navigate the streets at certain times of the day. Mere access to our community will bring more crime – and none of us want that! To allow a developer cause MEGA negative changes in our schools – all for the sake of PROFIT is ridiculous and unfair. It seems

5.0 Response to Comments Received at Public Hearings

every issue you look at has a negative impact this project produces - and all because a big developer wants to make a profit - that's SHAMEFUL! Tell him to go elsewhere!

Postcard 17 - Response

The commenter's objection to the project is noted and will be forwarded on to the decision makers.

5.5.22 Susan Jones

Postcard 18 - Comment

I can't believe you're allowing this to be done to the Wildlife and Streams in the area. I will be getting Sierra Club to look into the matter.

Thank you.

Horse Property not counted by the developers purposely overlooked and not counted.

There is horse property, over 17,500 sq ft south of Chatsworth St.

Postcard 18 - Response

The comment has been received and is noted and will be forwarded on to the decision makers.

5.5.23 Rosemarie White, Ph.D. – Chatsworth Nature Preserve, Sierra Club

Postcard 19 - Comment

I am a stakeholder in this area – 16 Chatsworth area. I am tremendously concerned about the traffic as well as other issue. But traffic on Canoga Park Blvd would be severely impacted by this development. I do not agree that this project should go forward as currently planned.

Postcard 19 - Response

The comment has been received and is noted. As stated in Section 4.12 of the Draft EIR, traffic impacts would not be significant with implementation of recommended mitigation measures. Please see Sections 2.4.3, 3.3.5, 4.2.6, 4.3.5 (City Council 1 and 8 – Response) and Appendix K of this document for additional discussion of traffic impacts and mitigation measures.

5.5.24 Jan Miller

Postcard 20 - Comment

The only thing that makes sense, development wise, for Deerlake Ranch are small 10 acre mini horse ranch properties.

Postcard 20 - Response

The comment has been received and is noted and will be forwarded on to the decision makers.

5.5.25 Laura McCormick

Postcard 21 - Comment

We are opposed to the size of this project. Please make the developer reduce it to under 200 homes. The traffic impact to our neighborhood has not adequately been addressed. We do not want to see our rural specialness of Chatsworth turned into Porter Ranch. Please make this a beautiful addition not a negative.

Postcard 21 - Response

The comment has been received and is noted and will be forwarded on to the decision makers. As stated in Section 4.12 of the Draft EIR, traffic impacts would not be significant with implementation of recommended mitigation measures. Please see Sections 2.4.3, 3.3.5, 4.2.6, 4.3.5 (City Council 1 and 8 –

5.0 Response to Comments Received at Public Hearings

Response) and Appendix K of this document for additional discussion of traffic impacts and mitigation measures.

5.5.26 Illegible Name

Postcard 22 - Comment

I am concerned of the impact on traffic from this project on the community. We need to look at this before approving massive projects like this and get community response not just "local" north of the 118.

Postcard 22 - Response

The comment has been received and is noted. As stated in Section 4.12 of the Draft EIR, traffic impacts would not be significant with implementation of recommended mitigation measures. Please see Sections 2.4.3, 3.3.5, 4.2.6, 4.3.5 (City Council 1 and 8 – Response) and Appendix K of this document for additional discussion of traffic impacts and mitigation measures.

5.5.27 Carl & Janel Deierling

Postcard 23 - Comment

We are concerned residents of Chatsworth. The developer is planning to build 388 homes. The impact on our area would be extremely negative. Traffic on our local streets is presently problematic the additional cars will only exacerbate [sic] a serious situation. In addition the developer is planning to level the low lying hills changing the nature of our area.

Please consider these as well as the many other reasons to limit density.

Postcard 22 - Response

The comment has been received and is noted. As stated in Section 4.12 of the Draft EIR, traffic impacts would not be significant with implementation of recommended mitigation measures. Please see Sections 2.4.3, 3.3.5, 4.2.6, 4.3.5 (City Council 1 and 8 – Response) and Appendix K of this document for additional discussion of traffic impacts and mitigation measures. In addition, please see Section 4.7.5 (SC16 and SC19 – Response) of this document regarding land use and density requirements.

5.5.28 B. Hahn

Postcard 24 - Comment

20% reduction in something completely inappropriate is still 80% inappropriate.

Postcard 24 - Response

The comment has been received and is noted and will be forwarded on to the decision makers.

5.5.29 unknown

Postcard 25 - Comment

Is the lower crime rate in equestrian community(s) less desirable to extra cash in the developers pockets?

Postcard 25 - Response

The commenter's question is not specific and cannot be answered. No additional response is required.

5.5.30 unknown

Postcard 26 - Comment

We already have a problem with coyotes who have lost their natural habitat coming into our neighborhoods and killing our domestic pets what provisions will be made for the displaced wildlife?

5.0 Response to Comments Received at Public Hearings

Postcard 26 - Response

The comment has been received and is noted. Please see Section 4.4.2 (CLPA 7 – Response) and also Section 4.2.1 of this document.

5.5.31 unknown

Postcard 27 - Comment

Please leave our hills. Growth is one thing, but destruction of the natural beauty of the land is unacceptable. People will buy homes in a natural setting without hesitation.

Postcard 27 - Response

The comment has been received and is noted and will be forwarded on to the decision makers.

5.5.32 unknown

Postcard 28 - Comment

Please do not allow developers to compromise quality for quantity, it has never been the better choice.

Postcard 28 - Response

The comment has been received and is noted and will be forwarded on to the decision makers.

5.5.33 unknown

Postcard 29 - Comment

Will all this development eventually lead to the end of the equestrian life style in the valley, despite the benefit to humanity and animal life? Please don't allow it!

Postcard 29 - Response

The comment has been received and is noted. The proposed project cannot foresee the outcome of future developments in the area. That decision will be made by the appropriate decision makers. The proposed project has been designed to reflect the rural character of the area. Please see Section 4.3.5 (City Council 2 – Response) regarding equestrian trails and also see Section 4.7.5 (SC16 and SC19 – Response) of this document regarding land use and density requirements.

5.5.34 unknown

Postcard 30 - Comment

The developers need to preserve the character of the existing community and the equestrian life style. Larger lots, respect for the terrain must be a priority.

Postcard 30 - Response

The comment has been received and is noted. The proposed project has been designed to reflect the rural character of the area. Please see Section 4.3.5 (City Council 2 – Response) regarding equestrian trails and also see Section 4.7.5 (SC16 and SC19 – Response) of this document regarding land use and density requirements.

5.5.35 unknown

Postcard 31 - Comment

Considering the decline of the Los Angeles school system already facing the community, what sense does it make to add pupils to the overcrowded conditions already faced by local campuses?

5.0 Response to Comments Received at Public Hearings

Postcard 31 - Response

The comment has been received and is noted. As included in Section 3.0 of this document, subsequent to distribution of the Draft EIR, the project's anticipated student generation has been reduced by 20 percent, and additional enrollment information became available from LAUSD. However, this additional information did not change the conclusions included in the Draft EIR, that impacts to schools would be less than significant with mitigation. In addition, the applicant has indicated that they will enter into discussions with LAUSD and the Porter Ranch master developer to investigate the possibility of accelerating the Porter Ranch elementary and middle school construction schedule. Please see Sections 2.0, 4.2.8, 4.5.28, and Appendix J of this document for additional information regarding schools.

5.5.36 Linda Van der Valk

Postcard 32 - Comment

Chatsworth is a rural area and that is why people move here.

Development should be done with that in mind. Ranch homes in this area are more conducive to Chatsworth life style.

Soon people in these developments will be complaining about the wildlife encroaching into their neighborhoods, but the wildlife was here first.

Please consider approving a plan with less homes than 388.

Postcard 32 - Response

The comment has been received and is noted and will be forwarded on to the decision makers. The proposed project has been designed to reflect the rural character of the area. Please see Section 4.3.5 (City Council 2 – Response) regarding equestrian trails and also see Section 4.7.5 (SC16 and SC19 – Response) of this document regarding land use and density requirements. Please also see Section 4.5.11 (Brady 2 – Response).

5.5.37 Allen Welbourn

Postcard 33 - Comment

My family and I feel the proposed project is much too large and dense. It is in a rural equestrian area and should be developed accordingly. Hiking and bridal trails need to be retained and stormwater should go to concrete channel, not a natural creek. The impacts on traffic do not address the fact that each household could have 3 separate trucks for solid waste (trash, green waste, and recyclables). The unincorporated area trash service is free market, so each household chooses their own company.

Thank you.

Postcard 33 - Response

The comment has been received and is noted and will be forwarded on to the decision makers. The proposed project has been designed to reflect the rural character of the area. Please see Section 4.3.5 (City Council 2 – Response) regarding equestrian trails and also see Section 4.7.5 (SC16 and SC19 – Response) of this document regarding land use and density requirements. Traffic studies do not need to address trash removal operations.

5.5.38 Maureen L. Leuitt

Postcard 34 - Comment

Devil's Canyon is a favorite recreation area enjoyed by many people all year. The current plan for allowing a storm drain system that claims to filter, at best, 90% or less of all contaminants is unacceptable to our community.

5.0 Response to Comments Received at Public Hearings

Please protect this natural treasure and insist that the storm drain run-off be diverted all the way to the city flood control system.

The city flood control system is the proper place for all storm drain run-off.

Thank you for your attention in this important matter.

Postcard 34 - Response

The comment has been received and is noted. Please see Section 4.2.2 (Topical Response and Urban Runoff 1 – Response) regarding runoff issues.

5.5.39 unknown

Postcard 35 - Comment

Have you tried to drive a child to school here? Our neighborhood streets are at capacity. Topanga and DeSoto are main thruways and they too are at capacity.

Postcard 35 - Response

The comment has been received and is noted and will be forwarded on to the decision makers.

5.5.40 unknown

Postcard 36 - Comment

Even with extra traffic lanes, and left-hand turn lanes, and extra stop signs and traffic signals, the traffic congestion will destroy the Chatsworth way of life!

Postcard 36 - Response

The comment has been received and is noted and will be forwarded on to the decision makers.

5.5.41 unknown

Postcard 37 - Comment

The developers say they cannot "make a profit" unless they build a lot of homes on small lots. Is their profit more important than a whole communities way of life?

Please restrict the density of this development.

Postcard 37 - Response

The commenter's question is not specific and cannot be answered. Please see Section 4.7.5 (SC16 and SC19 – Response) of this document regarding land use and density requirements.

5.5.42 Patricia A. Miller

Postcard 38 - Comment

Roads, schools, library, public services and public safety will all be adversely impacted by this irresponsible, expansive development. The Chatsworth area is already straining to maintain a healthful quality of life for its residents.

Postcard 38 - Response

The comment has been received and is noted. Please see Section 4.3.5 (City Council 1 – Response) of this document.

5.5.43 Jan Miller

Postcard 39 - Comment

Just what we need, another completely inappropriate modern development.

5.5.53 unknown

Postcard 49 - Comment

Can't you re-route traffic from Canoga Ave. to De Soto Ave.? All that traffic and dust is so unhealthy for our children!!

Postcard 49 - Response

The comment has been received and is noted. Please see Section 4.2.7 (Development Issues 8 – Response) in this document

5.5.54 Rosemarie S. White

Postcard 50 - Comment

I am a stakeholder in the area of this development. I believe this development is much too large and requires, as planned, an unnecessary amount of grading and destruction to the natural environment. I suggest the developer work with the Chatsworth Neighborhood Council to come to an acceptable modification of this design.

Postcard 50 - Response

The comment has been received and is noted and will be forwarded on to the decision makers.

5.5.55 Rosemarie S. White, Ph.D.

Postcard 51 - Comment

I am a stakeholder in the area of the development. I disagree with the development as planned because of increased traffic congestion, unnecessary grading and destruction of the natural environment and the taking of open space areas which have been enjoyed for years as recreation areas in the form of trails. There are wild life corridors nearby which are important.

Postcard 51 - Response

The comment has been received and is noted. No additional response is required.

5.5.56 Caren Bromhall

Postcard 52 - Comment

I live on Chatsworth St. west of DeSoto. I have a conditional use COZ permit to board 21 horses. My problem with this project is the density. 388 homes will impact my stable with over use of the street to get horses up into the hills. I keep this stable to service the community. Stop by and see it please – 21119 Chatsworth St. You then will see what the problem will be. Thank you.

Postcard 52 - Response

The comment has been received and is noted and will be forwarded on to the decision makers.

5.5.57 unknown

Postcard 53 - Comment

Please approve the density proposal made by Mark Watters. It will fit the community, and keep the rural and equestrian nature of Chatsworth.

Postcard 53 - Response

The comment has been received and is noted and will be forwarded on to the decision makers. The proposed project has been designed to reflect the rural character of the area. Please see Section 4.3.5 (City Council 2 – Response) regarding equestrian trails and also see Section 4.7.5 (SC16 and SC19 – Response) of this document regarding land use and density requirements.

5.0 Response to Comments Received at Public Hearings

5.5.58 Z. Schutz

Postcard 54 - Comment

I would like to express concern over the storm draining issue surrounding the Deerlake project. Please do not allow the storm runoff to enter into our live creek, when conventional methods of storm draining is available and feasible. There is a concreted riverbed already built in Chatsworth for this purpose. Thank you for your consideration.

Postcard 54 - Response

The comment has been received and is noted and will be forwarded on to the decision makers. Please see Section 4.2.2 (Topical Response and Urban Runoff I – Response) of this document.

5.5.59 Diane Embree

Postcard 55 - Comment

There are a myriad of reasons to halt the Deerlake Ranch project, but not much room on this postcard. Traffic is already a major problem and building more houses will make it unbearable. The traffic studies are a scam. Live here to know the truth.

Postcard 55 - Response

Please refer to Topical Response – Traffic – Section 4.2.6 of this document.

5.5.60 Z. Schultz

Postcard 56 - Comment

The landscape of this area is unique and should be preserved as open space. The developer will flatten and destroy the hills and deprive our citizens of one of the last places with unobstructed access to hiking and equestrian trails and dramatic scenery. Porter Ranch is an eyesore and Deerlake will make Chatsworth [sic] just as ugly. Wildlife will suffer and people will suffer. Just so a handful of people can make more money. Please, please, please save one of the last unspoiled places of beauty in our area. Doesn't nature count for something?

Postcard 56 - Response

The comment has been received and is noted and will be forwarded on to the decision makers.

5.5.61 Z. Schultz

Postcard 57 - Comment

I would like to express concern over preserving the lifestyle of Chatsworth. Our community is a predominantly horse-keeping community with large lots. Chatsworth population is low density with lots of open spaces. Please do not allow the same level of urbanization here as can be seen in Northridge. Your consideration is very much appreciated.

Postcard 57 - Response

The comment has been received and is noted and will be forwarded on to the decision makers.

5.5.62 unknown

Postcard 58 - Comment

While I understand that one cannot stop a city from growing, I hope you can understand the concern of a small community whose people are about to face a dramatic change in their landscape. We, in Twin Lakes, have been living in the shadows of a hillside, which, I fear, will be completely uncovered or

5.0 Response to Comments Received at Public Hearings

reshaped. Is it possible to minimize the grading of our hillside, and preserve as much of what's there as possible?

Postcard 58 - Response

The comment has been received and is noted. Please see Section 4.2.1 (Topical Response and Biology 1 – Response) regarding preservation issues.

5.5.63 unknown

Postcard 59 - Comment

I am opposed to this development at any size. Chatsworth deserves to have the option of preserving its equestrian and rural nature what's left of it. Porter Ranch is ruinous enough.

Postcard 59 - Response

The comment has been received and is noted. No additional response is required.

5.5.64 unknown

Postcard 60 - Comment

This is not a simple matter of property rights. This is a commercial venture. A business, and I believe that residents should have the power to veto.

Postcard 60 - Response

The comment has been received and is noted and will be forwarded on to the decision makers.

5.5.65 unknown

Postcard 61 - Comment

I believe trails to enjoy an expensive love or hobby [sic] of riding horse back with a young family should be wide enough to side by side ride for a great outing with conversation with the young, or old. Thank you.

Postcard 61 - Response

The comment has been received and is noted. No additional response is required.

5.5.66 unknown

Postcard 62 - Comment

The traffic from the 118 Freeway off of Topanga and DeSoto can be so stressful to commuters now, that I can foresee [sic] more road rage among those traveling our road systems. Canoga Ave. between Rinaldi and Chatsworth St. can be very jammed at the rush hour times, these roads are also used for hiking, horseback riding, jogging, and walking – a tragedy can occur who will be responsible. Thank you.

Postcard 62 - Response

The comment has been received and is noted and will be forwarded on to the decision makers.

5.5.67 unknown

Postcard 63 - Comment

I will be paying close attention to the decisions being made and my future voting will reflect my observations. Who are our elected officials serving?

Postcard 63 - Response

The commenter's question is not specific to the project and cannot be answered.

5.0 Response to Comments Received at Public Hearings

5.5.68 unknown

Postcard 64 - Comment

There is no excuse in this day and age, to propose any system that allows for 10% pollution. The technology is available to avoid any pollution whatsoever and if the developer can't afford it, they should abandon the project.

Postcard 64 - Response

The comment has been received and is noted and will be forwarded on to the decision makers. Please see Section 4.2.2 (Topical Response and Urban Runoff 1 – Response) of this document.

5.5.69 Dorothy Ferningham

Postcard 65 - Comment

A 171 unit project makes the most sense. Larger average lot sizes are more compatible with single family homes in this area.

Postcard 65 - Response

The comment has been received and is noted and will be forwarded on to the decision makers.

5.5.70 Eric Zentner

Postcard 66 - Comment

Regarding the Deerlake Ranch Tentative Tract, this is a request for the preservation of the hiking trails and open spaces. With the valley becoming ever more congested and built up, it is necessary to have access to nature in order for the residents to maintain a sense of well being. This area is one of the few remaining wild areas. Please limit the development there for the sake of all current and future generations.

Postcard 66 - Response

The comment has been received and is noted. Please see Section 4.2.1 (Biology 1 – Response) regarding preservation issues.

5.5.71 unknown

Postcard 67 - Comment

It is ludicrous to require residents and their children to accept multi-track schools in order to increase profits to a business that isn't wanted here to begin with.

Postcard 67 - Response

The comment has been received and is noted and will be forwarded on to the decision makers.

5.5.72 unknown

Postcard 68 - Comment

More development without adequate planning for the future. We are heading for disaster.

Postcard 68 - Response

The comment has been received and is noted. No additional response is required.

5.0 Response to Comments Received at Public Hearings

5.5.73 Dori Daniels

Postcard 69 - Comment

I am a student at Chatsworth High School. Just this past year the school was so crowded that I had to sit on the floor of my classrooms. I wouldn't even want to imagine what the schools will be like when you've finished your development.

Postcard 69 - Response

The comment has been received and is noted and will be forwarded on to the decision makers. As included in Section 3.0 of this document, subsequent to distribution of the Draft EIR, the project's anticipated student generation has been reduced by 20 percent, and additional enrollment information became available from LAUSD. However, this additional information did not change the conclusions included in the Draft EIR, that impacts to schools would be less than significant with mitigation. In addition, the applicant has indicated that they will enter into discussions with LAUSD and the Porter Ranch master developer to investigate the possibility of accelerating the Porter Ranch elementary and middle school construction schedule. Please see Sections 2.0, 4.2.8, 4.5.28, and Appendix J of this document for additional information regarding schools.

5.5.74 Susan Cordell

Postcard 70 - Comment

Alternative #3 (a 171 unit alternate project) will make the most sense if this development is to occur. Not 388 homes larger lot sizes are more compatible w/ the homes already approved in the Indian Hills and Indian Springs areas as larger lots are predominant in this area and there is no reason to crowd in hundreds of people to make \$ w/ smaller lots.

Postcard 70 - Response

The comment has been received and is noted and will be forwarded on to the decision makers.

5.5.75 James Ferningham

Postcard 71 - Comment

Devil Canyon is a favorite recreation area enjoyed by many residents of the northwest SFV. The proposed storm drainage system has not been tested in a project this size.

Postcard 71 - Response

The comment has been received and is noted and will be forwarded on to the decision makers. Please see Section 4.2.2 (Urban Runoff 1 – Response) of this document.

5.5.76 Judy Lucas

Postcard 72 - Comment

The developers claim they cannot make a profit if they reduce the number of homes. 388 is too much. The community should not suffer so the developer can profit.

Postcard 72 - Response

The comment has been received and is noted and will be forwarded to the decision makers. No additional response is required.

5.0 Response to Comments Received at Public Hearings

5.5.77 unknown

Postcard 73 - Comment

Deerlake Ranch is only one of the many developments slated for the Chatsworth area. These projected developments would bring tax revenue into the city but at what cost to the residents already living there. We understand that there is no plan to add to the resources already in place to handle the 600-1000 more people who will be coming into the area. The residents of Chatsworth will have to deal with the traffic gridlock, overcrowded schools and lack of adequate sheriff/fire/police coverage. The density of the area will affect the wildlife we now enjoy and access to several of the trails the community has been enjoying for many years. We ask that the city work with the residents to allow them to preserve the rural character of Chatsworth and allow the equestrian lifestyle to continue.

Postcard 73 - Response

The comment has been received and is noted and will be forwarded on to the decision makers. The proposed project has been designed to reflect the rural character of the area. Please see Section 4.3.5 (City Council 2 - Response) regarding equestrian trails and also see Section 4.7.5 (SC16 and SC19 - Response) of this document regarding land use and density requirements.

5.5.78 Mark Watters

Postcard 74 - Comment

Devil's Canyon is a beautiful and popular recreation area. The current plan that will allow the storm drain runoff to filter into the canyon could potentially ruin this natural haven. Please insist that the developer be forced to build a system that will divert the storm drain runoff all the way to the city flood control system.

Postcard 74 - Response

The comment has been received and is noted and will be forwarded on to the decision makers. Please see Section 4.2.2 (Topical Response and Urban Runoff 1 - Response) of this document.

5.5.79 Mark Watters

Postcard 75 - Comment

The developers (Presidio) claims it cannot make a profit unless it builds upwards to 388 homes. The community should not suffer so that this company can prosper. 388 is simply too many homes.

Postcard 75 - Response

The comment has been received and is noted and will be forwarded to the decision makers. No additional response is required.

5.5.80 Hollie Meyer and Jerry Weiss

Postcard 80 - Comment

With all of the extra houses being considered, this will become another Porter Ranch and destroy the rural character of Chatsworth and the equestrian lifestyle must be allowed to continue.

Postcard 80 - Response

The comment has been received and is noted. No additional response is required.

5.0 Response to Comments Received at Public Hearings

5.5.81 J. Weiss and H. Meyer

Postcard 81 - Comment

388 homes in the Devils Canyon Area is too many. They should have no problem selling more expensive houses on larger lots. 91311 is a well-respected zip in the valley area.

Postcard 81 - Response

The comment has been received and is noted. No additional response is required.

5.5.82 Jerry Weiss and Hollie Meyer

Postcard 82 - Comment

Traffic impacts on Canoga and Topanga have not been adequately considered. Have you seen the traffic coming off the 118 in the morning and going back in the afternoon. An extra bunch of homes will make the traffic intolerable on both Topanga and Canoga.

Postcard 82 - Response

The comment has been received and is noted. As stated in Section 4.12 of the Draft EIR, traffic impacts would not be significant with implementation of recommended mitigation measures. Please see Sections 2.4.3, 3.3.5, 4.2.6, 4.3.5 (City Council 1 and 8 – Response), and Appendix K of this document for additional discussion of traffic impacts and mitigation measures.

5.5.83 Don Devore

Postcard 83 - Comment

The traffic is a problem for people who have already spent big money for homes on half acre lots south of 188 freeway on Canoga Ave. Where traffic from 2 growing schools have already made a big difference since Larwin cut the groves down and built these homes. Half of 388 would still make profit.

Postcard 83 - Response

The comment has been received and is noted. As stated in Section 4.12 of the Draft EIR, traffic impacts would not be significant with implementation of recommended mitigation measures. Please see Sections 2.4.3, 3.3.5, 4.2.6, 4.3.5 (City Council 1 and 8 – Response), and Appendix K of this document for additional discussion of traffic impacts and mitigation measures.

Project Description

The proposed project is a request for a tentative tract map, Oak Tree Permit and Conditional Use Permit to authorize the development of 150 single family residential lots on a 96 acre site. The CUP is needed for density controlled development and hillside management. The Oak Tree Permit is required for the removal of 16 oaks. The environmental assessment for this project will also include evaluation of potential impacts for the future development of 300 single family residential units on an additional 126 acre site adjacent to the northerly boundary of the project.

NOTE: Clearinghouse will assign identification numbers for all new projects. If a SCH number already exists for a project (e.g., from a Notice of Preparation or previous draft document), please fill it in.

**CHATSWORTH RIDGE
PROJECT DESCRIPTION
LOS ANGELES COUNTY CASE NUMBER 99 – 239 (5)**

A. Existing Site

The site, which is the subject of this environmental assessment, consists of 222± acres of mostly undeveloped land in the unincorporated area of Chatsworth, more commonly referred to as Twin Lakes and Deerlake Highlands. Of the total area, 163± acres were previously divided by means of several Licensed Surveyor's (L.S.) Maps in 1927 and 1928 into over 2,500 lots. The remaining 59± acres consist of vacant undivided land (see Exhibit A).

The L.S. lots were platted with a series of easements for access and utility purposes to insure that each lot had a legal means of access to a public road. Five existing single family residences and the foundations of several previous homes are located over the site.

The project site is located in the south-facing foothills of Santa Susana Mountains. It is on an uplifted plateau at an average elevation of approximately 1,325 above sea level. The plateau is generally flat with rolling hills, and is bordered on the north by west trending hills that are steep and rugged and reach elevations in excess of 1,770 feet. The hills are cut by south draining canyons. The plateau is bordered to the west and south by Devil Canyon, and to the east by Browns Canyon. The bases of the canyons are at elevations of approximately 1,150 feet. Canyon sidewalls are generally steep with natural slope gradients between 2:1 to 0.5:1 (horizontal to vertical). Devil Canyon has intermittent concrete groins or debris dams to control siltation and prevent erosion. The mouth of Devil Canyon has a concrete rock dam with a culvert.

Plant communities within the project area include chaparral, coastal sage scrub, riparian woodland, eucalyptus, and oak woodland. Biological surveys performed during 1998 and 1999 identified no occurrences of federally- or state-listed plant or animal species. One sensitive plant species, Plummer's mariposa lily, (*Calochortus plummerae*) has been identified over some of the southwesterly portion of the site.

Common large mammal species that are expected to occur on the project site include mule deer, coyote, common grey fox, and bobcat. Other common mammals expected to occur include common raccoon, opossum, striped skunk, California ground squirrel, and desert cottontail. Small mammals expected to occur included pocket gopher, California mouse, and dusky-footed woodrat. Common reptile species expect to occur include rattlesnake, western skink, southern alligator lizard, California kingsnake, and San Diego gopher snake. Habitat

variation on the project site provides nesting, roosting and foraging opportunities for numerous resident and migratory bird species.

Devil Canyon bisects the southern portion of the site and Browns Canyon runs near the eastern border. Lands to the north and immediate east of the site are undeveloped and similar in topography and biological resources. Lands to the south have been developed into single family and multi-family neighborhoods. State Route 118 is located immediately south of the site.

B. Existing Land Use and Zoning Designations

The Los Angeles County General Plan specifies two separate land use designations for the subject site: (1) Non-Urban Hillside Development (NU) and (2), Rural Community (RC). The underlying zoning designation for NU is A-1-1 (light agriculture, one unit per acre). The zoning designation for the RC land use is R-1-6,000, with the exception of two parcels on the southern portion of the site, which are zoned A-1-1 within the RC designation. The project is not subject to an Area Plan..

C. Project Description

As stated, the environmental assessment for this project will address a 222+ acre site which is commonly referred to as Twin Lakes (the southerly portion) and Deerlake Highlands (the northerly portion). The actual project application for a Tentative Tract Map (TTM), a Hillside Conditional Use Permit (HCUP), and an Oak Tree Permit (OTP) will be restricted to the Twin Lakes area at this time, with future TTM, HCUP & OTP applications for one or more phases of Deerlake Highlands expected to follow. However, since future development of the Deerlake Highlands area is dependent on future extension of roads and other infrastructure proposed for the Twin Lakes project, and that the future development of Deerlake Highlands will have potential impacts on the proposed Twin Lakes project, the environmental assessment will be made for both areas on a cumulative basis.

In order to assess the potential environmental impacts which would be generated by the future development of the 126-acre Deerlake Highlands area, several factors have been considered:

- Los Angeles County General Plan Land Use designations and constraints
- Los Angeles County Zoning Ordinance designations and constraints
- Geotechnical, biotic, archaeological, and other environmental constraints
- Topographical and other physical constraints
- Constraints on available infrastructure (i.e., water service elevation limitation)

- Access, circulation and fire protection constraints

It is anticipated that the 2000± existing lots within the Deerlake Highlands area, which were created under Licensed Surveyors Maps, can be developed into approximately 325 single-family residential lots (see Exhibit B). These lots, and corresponding infrastructure, can be developed consistent with the above designations and constraints. This will be the basis for evaluating potential, cumulative impacts from future Deerlake Highlands development in preparing the environmental documentation for the Twin Lakes project.

The proposed 96± acre Twin Lakes project will be divided into 150 single family residential lots and 11 open space lots under Tentative Tract # 53138 and Conditional Use Permit # 99-239 (see Exhibit C). This project will be consistent with the County General Plan Land Use Policy and the existing zoning for this area.

Access to the project will be via extension of Canoga Avenue and connection to Topanga Canyon Boulevard. Two proposed bridges across Devil Canyon will be constructed so as to avoid impact on the jurisdictional portion of this watercourse.

Water will be provided by the Las Virgenes Municipal Water District's (LVMWD's) existing Twin Lakes Reservoir and distribution system. Although this system currently serves the southerly portion of the site, the project will be required to reconstruct portions of the existing distribution mains from the reservoir to Topanga Canyon Boulevard. A Preliminary Water Design Report, to be prepared by LVMWD, will provide specific design parameters for this parallel system.

Sanitary sewer system will be provided to the project by connecting to the existing County of Los Angeles sewer line in Topanga Canyon Boulevard at Poema Way and to the City of Los Angeles sewer line in Canoga Avenue. Small portions of the City's existing sewer mains within Canoga Avenue will require reconstruction to provide additional capacity for the project. The LVMWD has a service agreement with the City to accept sewage for conveyance, treatment, and disposal from LVMWD's Chatsworth service area, which includes this project site.

Approximately 0.41 acres of jurisdictional water courses would be impacted by both the Twin Lakes and Deerlake Highlands projects, and 1.21 acres of jurisdictional water courses would be avoided. The Twin Lakes project will avoid

all jurisdictional water courses. The entire project avoids impact on both the Brown and Devil Canyons. There are 294 coast live oak trees on the total site, of which 272 qualify as regulated trees under the County of Los Angeles Oak Tree Ordinance. Of the 272 regulated oak trees, 216 would be preserved for both the Twin Lakes and Deerlake Highlands projects. Of that total, the Twin Lakes project has 40 regulated oak trees, with 24 being preserved.

D. Actions Required

Since the total project site currently is divided into over 2,500 Licensed Surveyor's lots and 7 other legal parcels, the eventual subdivision of the property, consistent with the General Plan and existing zoning, will be accomplished by Final Subdivision Maps as provided for by the State Subdivision Map Act and the Los Angeles County Subdivision Ordinance. In addition, the project is subject to a Hillside Conditional Use Permit and a Density Control Development Permit, as provided for by the County Zoning Ordinance. No General Plan amendment or zone change will be required. Also, the project will require an Oak Tree Permit. Along with review under the California Environmental Quality Act (CEQA), the above actions will be the primary discretionary procedures for this project.

In addition to the above-described County and CEQA actions, the project may also require applicable permits from the U.S Army Corps of Engineers, the U.S. Fish & Wildlife Service, the State of California Department of Fish & Game, and the State Regional Water Quality Control Board.

E. Project Phasing

It is anticipated that the total project will be developed in phases. Phase I, the Twin Lakes area (Tentative Tract # 53138 & CUP # 99-239), will consist of 150 single family residential units and will construct the initial infrastructure systems. The remaining phases, within in the Deerlake Highlands area, will consist of approximately 325 single family residential units and will extend the infrastructure from Phase I. The CEQA review, however, will assess the potential impacts for the entire project.

F. Environmental Review

The Los Angeles County Department of Regional Planning has prepared an Initial Study to identify the environmental elements capable of being significantly impacted by the proposed project. Based on the results of the Initial Study, County staff determined that an Environmental Impact Report (EIR) will be prepared to assess the potential impacts of the project on the local and regional

environment. The environmental topics that will be addressed in the EIR are as follows:

- Geotechnical and Soil Resources
- Flood
- Water Quality
- Biota
- Visual Qualities
- Traffic/Access
- Noise
- Air Quality
- Cultural/Paleontological Resources
- Wastewater Disposal
- Solid Waste Disposal
- Education
- Police Services
- Fire Hazards and Services
- Libraries
- Parks, Recreation and Trails

The EIR will also identify alternatives to the proposed project that would be capable of reducing or eliminating one or more of the significant environmental effects of the proposed project.

I.A. Map Date: 11/29/99

Staff Member: Tabitha Lam

Thomas Guide: 500 A1, B1

USGS Quad: Oat Mountain

Location: north of State Route 118, between Topanga Canyon Blvd. & Canoga Ave.,
Chatsworth

Description of Project: The proposed project is a request for a Conditional Use Permit, Oak Tree Permit, and tract map to authorize the development of 150 single family residential lots on a 96 acre site. The CUP is needed for density controlled development and hillside management. The Oak Tree Permit is required for the removal of 16 oaks. The environmental assessment for this project will also include evaluation of potential impacts for the future development of 300 single family residential units on an additional 126 acre site adjacent to the northerly boundary of the project. Gross Area: 222 acres

Environmental Setting: The project site currently contains five single family residences and undeveloped land. Elevation on the site ranges from 1200 to 1718 feet above sea level. Plant communities within the project area include chaparral, coastal sage scrub, riparian woodland, eucalyptus, and oak woodland. Plummer's mariposa lily has been identified over some of the northern portion of the site. The Devil Canyon drainage adjoins the southern portion of the site. Additionally, archaeological and historic resources have been located onsite as well.

Zoning: A-1-1 (Light Agric. - one acre lot size), R-1-6000 (Single Family Resid. - 6,000 s.f. lot size)

General Plan: Non-Urban

Community/Areawide Plan: n/a

IMPACT ANALYSIS MATRIX

ANALYSIS SUMMARY (See individual pages for details)

CATEGORY	FACTOR	Pg	Less than Significant Impact/No Impact	
			Less than Significant Impact with Project Mitigatic	
			Potentially Significant Impact	
			Potential Concern	
HAZARDS	1. Geotechnical	5	x	Northridge Hills Fault, landslide, grading
	2. Flood	6	x	ephemeral drainage, mudflow, erosion
	3. Fire	7	x	Fire Zone 4, water & pressure for fire flow
	4. Noise	8	x	State Route 118
RESOURCES	1. Water Quality	9	x	groundwater & stormwater degradation
	2. Air Quality	10	x	exceeds AQMD threshold
	3. Biota	11	x	oaks, coastal sage scrub, wetland
	4. Cultural Resources	12	x	resources have been identified onsite
	5. Mineral Resources	13	x	
	6. Agriculture Resources	14	x	
	7. Visual Qualities	15	x	1 st priority scenic route, trails
SERVICES	1. Traffic/Access	16	x	exceeds CMP threshold, increased traffic
	2. Sewage Disposal	17	x	capacity problems
	3. Education	18	x	capacity problems at schools, library impact
	4. Fire/Sheriff	19	x	staffing & equipment problems
	5. Utilities	20	x	solid waste
OTHER	1. General	21	x	
	2. Environmental Safety	22	x	
	3. Land Use	23	x	
	4. Pop./Hous./Emp./Rec.	24	x	
	Mandatory Findings	25	x	biota, cultural, air & water quality, cumulativ

DEVELOPMENT MONITORING SYSTEM (DMS)

As required by the Los Angeles County General Plan, DMS shall be employed in the Initial Study phase of the environmental review procedure as prescribed by state law.

- Development Policy Map Designation: _____
- Yes No Is the project located in the Antelope Valley, East San Gabriel Valley, Malibu/Santa Monica Mountains or Santa Clarita Valley planning area?
- Yes No Is the project at urban density and located within, or proposes a plan amendment to, an urban expansion designation?

If both of the above questions are answered "yes", the project is subject to a County DMS analysis.

Check if DMS printout generated (attached)

Date of printout: _____

Check if DMS overview worksheet completed (attached)

EIRs and/or staff reports shall utilize the most current DMS information available.

Environmental Finding:

FINAL DETERMINATION: On the basis of this Initial Study, the Department of Regional Planning finds that this project qualifies for the following environmental document:

NEGATIVE DECLARATION, inasmuch as the proposed project will not have a significant effect on the environment.

An Initial Study was prepared on this project in compliance with the State CEQA Guidelines and the environmental reporting procedures of the County of Los Angeles. It was determined that this project will not exceed the established threshold criteria for any environmental/service factor and as a result, will not have a significant effect on the physical environment.

MITIGATED NEGATIVE DECLARATION, inasmuch as the changes required for the project will reduce impacts to insignificant levels (see attached discussion and/or conditions).

An Initial Study was prepared on this project in compliance with the State CEQA Guidelines and the environmental reporting procedures of the County of Los Angeles. It was originally determined that the proposed project may exceed established threshold criteria. The applicant has agreed to modification of the project so that it can now be determined that the project will not have a significant effect on the physical environment. The modification to mitigate this impact(s) is identified on the Project Changes/Conditions Form included as part of this Initial Study.

ENVIRONMENTAL IMPACT REPORT*, inasmuch as there is substantial evidence that the project may have a significant impact due to factors listed above as "significant".

At least one factor has been adequately analyzed in an earlier document pursuant to legal standards, and has been addressed by mitigation measures based on the earlier analysis as described on the attached sheets (see attached Form DRP/IA 101). The EIR is required to analyze only the factors not previously addressed.

Reviewed by: _____ Date: 12/7/99
Approved by: _____ Date: 12/8/99

Determination appealed — see attached sheet.

NOTE: Findings for Environmental Impact Reports will be prepared as a separate document following the public hearing on the project.

HAZARDS - 1. Geotechnical

SETTING/IMPACTS

- Yes No Maybe
- a. Is the project site located in an active or potentially active fault zone, Seismic Hazards Zone, or Alquist-Priolo Earthquake Fault Zone?
Main trace of northwest-southeast trending Northridge Hills Fault
- b. Is the project site located in an area containing a major landslide(s)?
Large bedrock landslide at east margin of site
- c. Is the project site located in an area having high slope instability?

- d. Is the project site subject to high subsidence, high groundwater level, liquefaction, or hydrocompaction?
High groundwater, liquefaction
- e. Is the proposed project considered a sensitive use (school, hospital, public assembly site) located in close proximity to a significant geotechnical hazard?

- f. Will the project entail substantial grading and/or alteration of topography including slopes of over 25%?
Approximately 2 million cubic yards to be balanced onsite
- g. Would the project be located on expansive soil, as defined in Table 18-1-B of the Uniform Building Code (1994), creating substantial risks to life or property?

- h. Other factors? _____

STANDARD MITIGATION MEASURES

- Building Ordinance No. 2225 — Sections 308B, 309, 310 and 311 and Chapters 29 and 70.

OTHER CONSIDERATIONS/MITIGATIONS

- Lot Size Project Design Approval of Geotechnical Report by DPW
- _____
- _____

CONCLUSION

Considering the above information, could the project have a significant impact (individually or cumulatively) on, or be impacted by, **geotechnical** factors?

- Potentially significant Less than significant with project mitigation Less than significant/No impact

HAZARDS - 2. Flood

SETTING/IMPACTS

- Yes No Maybe
- a. Is a major drainage course, as identified on USGS quad sheets by a dashed line, located on the project site?
Ephemeral drainage
- b. Is the project site located within or does it contain a floodway, floodplain, or designated flood hazard zone?

- c. Is the project site located in or subject to high mudflow conditions?

- d. Could the project contribute or be subject to high erosion and debris deposition from run-off?

- e. Would the project substantially alter the existing drainage pattern of the site or area?

- f. Other factors (e.g., dam failure)? _____

STANDARD MITIGATION MEASURES

- Building Ordinance No. 2225 — Section 308A Ordinance No. 12,114 (Floodways)
- Approval of Drainage Concept by DPW

OTHER CONSIDERATIONS/MITIGATIONS

- Lot Size Project Design
- _____
- _____

CONCLUSION

Considering the above information, could the project have a significant impact (individually or cumulatively) on, or be impacted by **flood (hydrological)** factors?

- Potentially significant Less than significant with project mitigation Less than significant/No impact

HAZARDS - 3. Fire

SETTING/IMPACTS

Yes No Maybe

- a. Is the project site located in a high fire hazard area (Fire Zone 4)?

- b. Is the project site in a high fire hazard area and served by inadequate access due to lengths, widths, surface materials, turnarounds or grade?

- c. Does the project site have more than 75 dwelling units on a single access in a high fire hazard area? _____
- d. Is the project site located in an area having inadequate water and pressure to meet fire flow standards? _____
- e. Is the project site located in close proximity to potential dangerous fire hazard conditions/uses (such as refineries, flammables, explosives manufacturing)?

- f. Does the proposed use constitute a potentially dangerous fire hazard?

- g. Other factors? _____

STANDARD MITIGATION MEASURES

Water Ordinance No. 7834 Fire Ordinance No. 2947 Fire Prevention Guide No. 46

OTHER CONSIDERATIONS/MITIGATIONS

Project Design Compatible Use

CONCLUSION

Considering the above information, could the project have a significant impact (individually or cumulatively) on, or be impacted by **fire hazard** factors?

- Potentially significant** Less than significant with project mitigation Less than significant/No impact

HAZARDS - 4. Noise

SETTING/IMPACTS

Yes No Maybe

- a. Is the project site located near a high noise source (airports, railroads, freeways, industry)?

State Route 118

- b. Is the proposed use considered sensitive (school, hospital, senior citizen facility) or are there other sensitive uses in close proximity?

- c. Could the project substantially increase ambient noise levels including those associated with special equipment (such as amplified sound systems) or parking areas associated with the project?

- d. Would the project result in a substantial temporary or periodic increase in ambient noise levels in the project vicinity above levels without the project?

- e. Other factors? _____

STANDARD MITIGATION MEASURES

- Noise Ordinance No. 11,778 Building Ordinance No. 2225--Chapter 35

OTHER CONSIDERATIONS/MITIGATIONS

- Lot Size Project Design Compatible Use

CONCLUSION

Considering the above information, could the project have a significant impact (individually or cumulatively) on, or be adversely impacted by **noise**?

- Potentially significant Less than significant with project mitigation Less than significant/No impact

RESOURCES - 1. Water Quality

SETTING/IMPACTS

Yes No Maybe

- a. Is the project site located in an area having known water quality problems and proposing the use of individual water wells?

- b. Will the proposed project require the use of a private sewage disposal system?

- If the answer is yes, is the project site located in an area having known septic tank limitations due to high groundwater or other geotechnical limitations or is the project proposing on-site systems located in close proximity to a drainage course?

- c. Could the project's associated construction activities significantly impact the quality of groundwater and/or stormwater runoff to the stormwater conveyance system and/or receiving water bodies?

- d. Could the project's post-development activities potentially degrade the quality of stormwater runoff and/or could post-development non-stormwater discharges contribute potential pollutants to the stormwater conveyance system and/or receiving bodies?

- e. Other factors? _____

STANDARD MITIGATION MEASURES

- Industrial Waste Permit Health Code — Ordinance No. 7583, Chapter 5
- Plumbing Code — Ordinance No. 2269 NPDES Permit CAS614001 Compliance (DPW)

OTHER CONSIDERATIONS/MITIGATIONS

- Lot Size Project Design
- _____
- _____

CONCLUSION

Considering the above information, could the project have a significant impact (individually or cumulatively) on, or be impacted by, **water quality** problems?

- Potentially significant Less than significant with project mitigation Less than significant/No impact

RESOURCES - 2. Air Quality

SETTING/IMPACTS

- Yes No Maybe
- a. Will the proposed project exceed the State's criteria for regional significance (generally (a) 500 dwelling units for residential uses or (b) 40 gross acre 650,000 square feet of floor area or 1,000 employees for non-residential uses)?
- b. Is the proposal considered a sensitive use (schools, hospitals, parks) and located near a freeway or heavy industrial use?
- c. Will the project increase local emissions to a significant extent due to increase traffic congestion or use of a parking structure or exceed AQMD thresholds (potential significance per Screening Tables of the CEQA Air Quality Handbook)?
Exceeds AQMD threshold
- d. Will the project generate or is the site in close proximity to sources which create obnoxious odors, dust, and/or hazardous emissions?
- e. Would the project conflict with or obstruct implementation of the applicable air quality plan?
- f. Would the project violate any air quality standard or contribute substantially to an existing or projected air quality violation?
- g. Would the project result in a cumulatively considerable net increase of any criteria pollutant for which the project region is non-attainment under an applicable federal or state ambient air quality standard (including releasing emissions which exceed quantitative thresholds for ozone precursors)?
- h. Other factors: _____

STANDARD MITIGATION MEASURES

Health and Safety Code — Section 40506

OTHER CONSIDERATIONS/MITIGATIONS

Project Design Air Quality Report

CONCLUSION

Considering the above information, could the project have a significant impact (individually or cumulatively) on, or be impacted by, **air quality**?

Potentially significant Less than significant with project mitigation Less than significant/No impact

RESOURCES - 3. Biota

SETTING/IMPACTS

Yes No Maybe

- a. Is the project site located within a Significant Ecological Area (SEA), SEA Buffer, or coastal Sensitive Environmental Resource (ESHA, etc.), or is the site relatively undisturbed and natural?

- b. Will grading, fire clearance, or flood related improvements remove substantial natural habitat areas?

- c. Is a major drainage course, as identified on USGS quad sheets by a blue, dashed line, located on the project site?

- d. Does the project site contain a major riparian or other sensitive habitat (e.g., coastal sage scrub, oak woodland, sycamore riparian woodland, wetland, etc.)?
Willow woodland, oak woodland, coastal sage scrub, wetland
- e. Does the project site contain oak or other unique native trees (specify kinds of trees)?
Coast live oaks
- f. Is the project site habitat for any known sensitive species (federal or state listed endangered, etc.)?
Plummer's mariposa lily, Santa Susana Mountains tarweed
- g. Other factors (e.g., wildlife corridor, adjacent open space linkage)? _____
Cooper's Hawk, Ashy Rufous-crowned sparrow

MITIGATION MEASURES/OTHER CONSIDERATIONS

- Lot Size Project Design Oak Tree Permit ERB/SEATAC Review
- _____
- _____

CONCLUSION

Considering the above information, could the project have a significant impact (individually or cumulatively) on **biotic resources**?

- Potentially significant Less than significant with project mitigation Less than significant/No impact

RESOURCES - 4. Archaeological/Historical/Palaeontological

SETTING/IMPACTS

Yes No Maybe

- a. Is the project site in or near an area containing known archaeological resources or containing features (drainage course, spring, knoll, rock outcroppings, or oak trees) which indicate potential archaeological sensitivity?

Drainage, oaks

- b. Does the project site contain rock formations indicating potential palaeontological resources?

- c. Does the project site contain known historic structures or sites?

Cultural resources have been identified onsite

- d. Would the project cause a substantial adverse change in the significance of a historical or archaeological resource as defined in 15064.5?

- e. Would the project directly or indirectly destroy a unique paleontological resource or site or unique geologic feature?

- f. Other factors? _____

MITIGATION MEASURES/OTHER CONSIDERATIONS

- Lot Size Project Design Archaeology Report

CONCLUSION

Considering the, above information, could the project leave a significant impact (individually or cumulatively) on **archaeological, historical, or palaeontological** resources?

- Potentially significant** Less than significant with project mitigation Less than significant/No impact

RESOURCES - 5. Mineral Resources

SETTING/IMPACTS

- Yes No Maybe
- a. Would the project result in the loss of availability of a known mineral resource that would be of value to the region and the residents of the state?

- b. Would the project result in the loss of availability of a locally-important mineral resource discovery site delineated on a local general plan, specific plan or other land use plan?

- c. Other factors? _____

MITIGATION MEASURES/OTHER CONSIDERATIONS

- Lot Size Project Design

CONCLUSION

Considering the, above information, could the project leave a significant impact (individually or cumulatively) on **mineral** resources?

- Potentially significant Less than significant with project mitigation Less than significant/No impact

RESOURCES - 6. Agriculture Resources

SETTING/IMPACTS

- Yes No Maybe
- a. Would the project convert Prime Farmland, Unique Farmland, or Farmland of Statewide Importance (Farmland), as shown on the maps prepared pursuant to the Farmland Mapping and Monitoring Program of the California Resources Agency, to non-agricultural use?

- b. Would the project conflict with existing zoning for agricultural use, or a Williamson Act contract?

- c. Would the project involve other changes in the existing environment which, due to their location or nature, could result in conversion of Farmland, to non-agricultural use?

- d. Other factors? _____

MITIGATION MEASURES/OTHER CONSIDERATIONS

- Lot Size Project Design
- _____

CONCLUSION

Considering the, above information, could the project leave a significant impact (individually or cumulatively) on **agriculture** resources?

- Potentially significant Less than significant with project mitigation Less than significant/No impact

RESOURCES - 7. Visual Qualities

SETTING/IMPACTS

Yes No Maybe

- a. Is the project site substantially visible from or will it obstruct views along a scenic highway (as shown on the Scenic Highway Element), or is it located within a scenic corridor or will it otherwise impact the viewshed?

Topanga Cyn. Blvd. & Simi-San Fernando Valley Fwy are 1st priority scenic routes

- b. Is the project substantially visible from or will it obstruct views from a regional riding or hiking trail?

Rim of the Valley & Santa Susana Mountains trails

- c. Is the project site located in an undeveloped or undisturbed area which contains unique aesthetic features?

- d. Is the proposed use out-of-character in comparison to adjacent uses because of height, bulk, or other features?

- e. Is the project likely to obstruct unique views from surrounding residential uses?

- f. Is the project likely to create substantial sun shadow, light or glare problems?

- g. Other factors (e.g., grading or landform alteration): substantial grading

MITIGATION MEASURES/OTHER CONSIDERATIONS

Lot Size Project Design Visual Report Compatible Use

CONCLUSION

Considering the above information, could the project have a significant impact (individually or cumulatively) on scenic qualities?

Potentially significant Less than significant with project mitigation Less than significant/No impact

SERVICES - 1. Traffic/Access

SETTING/IMPACTS

Yes No Maybe

- a. Does the project contain 25 dwelling units, or more and is it located in an area with known congestion problems (mid-block or intersections)?

- b. Will the project result in any hazardous traffic conditions?

- c. Will the project result in parking problems with a subsequent impact on traffic conditions?

- d. Will inadequate access during an emergency (other than fire hazards) result in problems for emergency vehicles or residents/employees in the area?

- e. Will the congestion management program (CMP) Transportation Impact Analysis thresholds of 50 peak hour vehicles added by project traffic to a CMP highway system intersection or 150 peak hour trips added by project traffic to a mainline freeway link be exceeded?
Exceeds CMP threshold

- f. Would the project conflict with adopted policies, plans, or programs supporting alternative transportation (e.g., bus turnouts, bicycle racks)?

- g. Other factors? _____

MITIGATION MEASURES/OTHER CONSIDERATIONS

- Project Design Traffic Report Consultation with Traffic & Lighting Division
- _____
- _____

CONCLUSION

Considering the above information, could the project have a significant impact (individually or cumulatively) on the physical environment due to **traffic/access** factors?

- Potentially significant Less than significant with project mitigation Less than significant/No impact

SERVICES - 2. Sewage Disposal

SETTING/IMPACTS

- Yes No Maybe
- a. If served by a community sewage system, could the project create capacity problems at the treatment plant?

- b. Could the project create capacity problems in the sewer lines serving the project site?

- c. Other factors? _____

STANDARD MITIGATION MEASURES

- Sanitary Sewers and Industrial Waste — Ordinance No. 6130
- Plumbing Code — Ordinance No. 2269

OTHER CONSIDERATIONS/MITIGATIONS

CONCLUSION

Considering the above information, could the project have a significant impact (individually or cumulatively) on the physical environment due to **sewage disposal** facilities?

- Potentially significant Less than significant with project mitigation Less than significant/No impact

SERVICES - 3. Education

SETTING/IMPACTS

- Yes No Maybe
- a. Could the project create capacity problems at the district level?

- b. Could the project create capacity problems at individual schools which will serve the project site?

- c. Could the project create student transportation problems?

- d. Could the project create substantial library impacts due to increased population and demand?

- e. Other factors? _____

MITIGATION MEASURES/OTHER CONSIDERATIONS

- Site Dedication Government Code Section 65995 Library Facilities Mitigation Fee
- _____

CONCLUSION

Considering the above information, could the project have a significant impact (individually or cumulatively) relative to **educational** facilities/services?

- Potentially significant Less than significant with project mitigation Less than significant/No impact

SERVICES - 4. Fire/Sheriff Services

SETTING/IMPACTS

Yes No Maybe

- a. Could the project create staffing or response time problems at the fire station or sheriff's substation serving the project site?

Additional manpower and equipment may be needed

- b. Are there any special fire or law enforcement problems associated with the project or the general area?

Area has a history of inadequate water & pressure to meet fire flow standards

- c. Other factors? _____

MITIGATION MEASURES/OTHER CONSIDERATIONS

Fire Mitigation Fees

CONCLUSION

Considering the above information, could the project have a significant impact (individually or cumulatively) relative to **fire/sheriff** services?

~~Potentially significant~~ Less than significant with project mitigation Less than significant/No impact

SERVICES - 5. Utilities/Other Services

SETTING/IMPACTS

- Yes No Maybe
- a. Is the project site in an area known to have an inadequate public water supply to meet domestic needs or to have an inadequate ground water supply and proposes water wells?

 - b. Is the project site in an area known to have an inadequate water supply and/or pressure to meet fire fighting needs?

 - c. Could the project create problems with providing utility services, such as electricity, gas, or propane?

 - d. Are there any other known service problem areas (e.g., solid waste)?
Solid waste

 - e. Would the project result in substantial adverse physical impacts associated with the provision of new or physically altered governmental facilities, need for new or physically altered governmental facilities, the construction of which could cause significant environmental impacts, in order to maintain acceptable service ratios, response times or other performance objectives for any of the public services or facilities (e.g., fire protection, police protection, schools, parks, roads)?

 - f. Other factors? _____

STANDARD MITIGATION MEASURES

- Plumbing Code — Ordinance No. 2269 Water Code — Ordinance No. 7834

OTHER CONSIDERATIONS/MITIGATIONS

- Lot Size Project Design
- _____
- _____

CONCLUSION

Considering the above information, could the project have a significant impact (individually or cumulatively) relative to **utilities/services**?

- Potentially significant Less than significant with project mitigation Less than significant/No impact

OTHER FACTORS - 1. General

SETTING/IMPACTS

Yes No Maybe

- a. Will the project result in an inefficient use of energy resources?

- b. Will the project result in a major change in the patterns, scale, or character of the general area or community?

- c. Will the project result in a significant reduction in the amount of agricultural land?

- d. Other factors? _____

STANDARD MITIGATION MEASURES

State Administrative Code, Title 24, Part 5, T-20 (Energy Conservation)

OTHER CONSIDERATIONS/MITIGATIONS

Lot size Project Design Compatible Use

CONCLUSION

Considering the above information, could the project have a significant impact (individually or cumulatively) on the physical environment due to any of the above factors? _____

Potentially significant Less than significant with project mitigation Less than significant/No impact

OTHER FACTORS - 2. Environmental Safety

SETTING/IMPACTS

- Yes No Maybe
- a. Are any hazardous materials used, transported, produced, handled, or stored on site?

- b. Are any pressurized tanks to be used or any hazardous wastes stored on-site?

- c. Are any residential units, schools, or hospitals located within 500 feet and potentially adversely affected?

- d. Have there been previous uses which indicate residual soil toxicity of the site?

- e. Would the project create a significant hazard to the public or the environment involving the accidental release of hazardous materials into the environment?

- f. Would the project emit hazardous emissions or handle hazardous materials or waste within one-quarter mile of an existing or proposed school?

- g. Would the project be located on a site which is included on a list of hazardous materials sites compiled pursuant to Government Code Section 65962.5 and, as a result, would create a significant hazard to the public or environment?

- h. Would the project result in a safety hazard for people in a project area located within an airport land use plan, within two miles of a public or public use airport or within the vicinity of a private airstrip?

- i. Would the project impair implementation of or physically interfere with an adopted emergency response plan or emergency evacuation plan?

- j. Other factors? _____

MITIGATION MEASURES/OTHER CONSIDERATIONS

Toxic Clean-up Plan

CONCLUSION

Considering the above information, could the project have a significant impact relative to **public safety**?

- Potentially significant Less than significant with project mitigation Less than significant/No impact.

OTHER FACTORS - 3. Land Use

SETTING/IMPACTS

Yes No Maybe

a. Can the project be found to be inconsistent with the plan designation(s) of the subject property?

b. Can the project be found to be inconsistent with the zoning designation of the subject property?

c. Can the project be found to be inconsistent with the following applicable land use criteria:

Hillside Management Criteria?

SEA Conformance Criteria?

Other? _____

d. Would the project physically divide an established community?

e. Other factors? _____

MITIGATION MEASURES/OTHER CONSIDERATIONS

CONCLUSION

Considering the above information, could the project have a significant impact (individually or cumulatively) on the physical environment due to **land use** factors?

Potentially significant Less than significant with project mitigation Less than significant/No impact

OTHER FACTORS - 4. Population/Housing/Employment/Recreation

SETTING/IMPACTS

- | | Yes | No | Maybe | |
|----|--------------------------|-------------------------------------|--------------------------|--|
| a. | <input type="checkbox"/> | <input checked="" type="checkbox"/> | <input type="checkbox"/> | Could the project cumulatively exceed official regional or local population projections?
_____ |
| b. | <input type="checkbox"/> | <input checked="" type="checkbox"/> | <input type="checkbox"/> | Could the project induce substantial direct or indirect growth in an area (e.g., through projects in an undeveloped area or extension of major infrastructure)?
_____ |
| c. | <input type="checkbox"/> | <input checked="" type="checkbox"/> | <input type="checkbox"/> | Could the project displace existing housing, especially affordable housing?
_____ |
| d. | <input type="checkbox"/> | <input checked="" type="checkbox"/> | <input type="checkbox"/> | Could the project result in substantial job/housing imbalance or substantial increase in Vehicle Miles Traveled (VMT)?
_____ |
| e. | <input type="checkbox"/> | <input checked="" type="checkbox"/> | <input type="checkbox"/> | Could the project require new or expanded recreational facilities for future residents?

| f. | <input type="checkbox"/> | <input checked="" type="checkbox"/> | <input type="checkbox"/> | Would the project displace substantial numbers of people, necessitating the construction of replacement housing elsewhere?
_____ |
| g. | <input type="checkbox"/> | <input checked="" type="checkbox"/> | <input type="checkbox"/> | Other factors? _____
_____ |

MITIGATION MEASURES/OTHER CONSIDERATIONS

CONCLUSION

Considering the above information, could the project have a significant impact (individually or cumulatively) on the physical environment due to **population, housing, employment, or recreational** factors?

- Potentially significant Less than significant with project mitigation Less than significant/No impact

MANDATORY FINDINGS OF SIGNIFICANCE

Based on this Initial Study, the following findings are made:

Yes No Maybe

- a. Does the project have the potential to substantially degrade the quality of the environment, substantially reduce the habitat of a fish or wildlife species, cause a fish or wildlife population to drop below self-sustaining levels, threaten to eliminate a plant or animal community, reduce the number or restrict the range of a rare or endangered plant or animal, or eliminate important examples of the major periods of California history or prehistory?

Biota, cultural, air & water quality impacts

- b. Does the project have possible environmental effects which are individually limited but cumulatively considerable? "Cumulatively considerable" means that the incremental effects of an individual project are considerable when viewed in connection with the effects of past projects, the effects of other current projects, and the effects of probable future projects.

Resources & public services impacts

- c. Will the environmental effects of the project cause substantial adverse effects on human beings, either directly or indirectly?

CONCLUSION

Considering the above information, could the project have a significant impact (individually or cumulatively) on the environment?

Potentially significant Less than significant with project mitigation Less than significant/No impact

1. The first part of the document discusses the importance of maintaining accurate records of all transactions and activities. It emphasizes the need for transparency and accountability in financial reporting.

2. The second part of the document outlines the various methods used to collect and analyze data. It includes a detailed description of the sampling process and the statistical techniques employed to ensure the reliability of the results.

3. The third part of the document presents the findings of the study. It shows that there is a significant correlation between the variables being studied, and that the results are consistent across different groups and time periods.

4. The fourth part of the document discusses the implications of the findings and offers suggestions for further research. It highlights the need for continued monitoring and evaluation of the system to ensure its effectiveness and efficiency.

5. The fifth part of the document provides a summary of the key points and conclusions. It reiterates the importance of the findings and the need for continued attention to the issues discussed.

6. The sixth part of the document includes a list of references and a list of figures and tables. It provides a comprehensive overview of the sources used in the study and the visual representation of the data.

7. The seventh part of the document is a conclusion. It summarizes the main findings and offers a final thought on the importance of the research and the need for continued effort in this field.

8. The eighth part of the document is a list of appendices. It includes additional information that supports the main text, such as raw data, detailed calculations, and supplementary figures.

9. The ninth part of the document is a list of footnotes. It provides additional information on specific points mentioned in the text, such as the methodology used for data collection and the statistical tests performed.

10. The tenth part of the document is a list of page numbers. It provides a quick reference for the location of each section in the document.

RE: SCH # 2000061049— Cnatsworth Ridge—Conditional Use Permit/Oak Tree Permit 99239, Tentative Tract Map 53138

Dear Ms. Lam:

The Native American Heritage Commission has reviewed the above mentioned NOP. To adequately assess the project-related impact on archaeological resources, the Commission recommends the following action be required:

1. Contact the appropriate Information Center for a records search. The record search will determine:
 - Whether a part or all of the project area has been previously surveyed for cultural resources.
 - Whether any known cultural resources have already been recorded on or adjacent to the project area.
 - Whether the probability is low, moderate, or high that cultural resources are located within the project area.
 - Whether a survey is required to determine whether previously unrecorded cultural resources are present.
2. The final stage of the archaeological inventory survey is the preparation of a professional report detailing the findings and recommendations of the records search and field survey.
 - Required the report containing site significance and mitigation be submitted immediately to the planning department.
 - Required site forms and final written report be submitted within 3 months after work has been completed to the Information Center.
3. Contact the Native American Heritage Commission for:
 - A Sacred Lands File Check.
 - A list of appropriate Native American Contacts for consultation concerning the project site and assist in the mitigation measures.

Lack of surface evidence of archeological resources does not preclude the existence of archeological resources. Lead agencies should include provisions for accidentally discovered archeological resources during construction per California Environmental Quality Act (CEQA) §15064.5 (f). Health and Safety Code §7050.5 and Public Resources Code §5097.98 mandates the process to be followed in the event of an accidental discovery of any human remains in a location other than a dedicated cemetery and should be included in all environmental documents. If you have any questions, please contact me at (916) 653-4038.

Sincerely,

Debbie Plas-Treadway
 Debbie Plas-Treadway

FAX (858) 487-4239

June 27, 2000

Ms. Tabitha Lam
Los Angeles County
Department of Regional Planning
320 West Temple
Los Angeles, California 90012

Dear Ms. Lam:

**Notice of Preparation of a Environmental Impact Report
for Chatsworth Ridge Residential Development
SCH # 2000061049, County of Los Angeles**

The Department of Fish and Game (Department) appreciates this opportunity to comment on the above-referenced project, relative to impacts to biological resources. The 222 acre undeveloped site referred to as the Twin Lakes and Deorlake Highland sites is proposed for the eventual construction of 525 single family residences and associated infrastructure. The proposed site is located within the foothills of the Santa Susanna Mountains on the western edge of Los Angeles County above Devil's Canyon and Brown Canyon, tributaries to the Los Angeles River, and north of the 118 Freeway and the terminus of Topanga Canyon Boulevard.

According to the initial study, Plummer's Mariposa Lily (*Calochortus Plummerace*), a California listed rare plant species exist on portions of the site and the site also provides habitat for the California listed rare Santa Susana tarplant (*Hemizonia minthornii*).

To enable Department staff to adequately review and comment on the proposed environmental document, we recommend the following information, be evaluated and included in the document:

1. A complete, recent assessment of flora and fauna within and adjacent to the project area, with particular emphasis upon identifying endangered, threatened, and locally unique species and sensitive habitats.
 - a. A thorough recent assessment of rare plants and rare natural communities, following the Department's May 1984 Guidelines for Assessing Impacts to Rare Plants and Rare Natural Communities (Attachment 1).
 - b. A complete recent assessment of sensitive fish, wildlife, reptile, and amphibian species. Seasonal variations in use of the project area should also be

Ms. Tabitha Lam
June 27, 2000
Page Two

- addressed. Recent, focused, species-specific surveys, conducted at the appropriate time of year and time of day when the sensitive species are active or otherwise identifiable, are required. Acceptable species-specific survey procedures should be developed in consultation with the Department and U.S. Fish and Wildlife Service.
- c. **Rare, threatened, and endangered species to be addressed should include all those which meet the California Environmental Quality Act (CEQA) definition (see CEQA Guidelines, § 15380). For example, a Coast Horned lizard, a California Species of Special Concern, was observed on June 18, 2000 by Department staff near the project site. In addition an abundance of frog and/or toad larva were also observed within the waters of Devils's canyon. Adverse impacts to these species and associated water quality may be considered significant under CEQA. The EIR should address avoidance and mitigation measures to reduce significant direct and indirect adverse project impacts to sensitive species.**
 - d. **The Department's California Natural Diversity Data Base in Sacramento should be contacted at (916) 327-5960 to obtain current information on any previously reported sensitive species and habitats, including Significant Natural Areas identified under Chapter 12 of the Fish and Game Code. Also, any Significant Ecological Areas (SEAs) or environmentally Sensitive Habitat Area (ESHAs) that have been identified by the County of Los Angeles or any areas that are considered sensitive by the local jurisdiction that are located in or adjacent to the project area must be addressed.**
2. **A thorough discussion of direct, indirect, and cumulative impacts expected to adversely affect biological resources, with specific measures to offset such impacts.**
- a. **CEQA Guidelines, § 15125(a), direct that knowledge of the regional setting is critical to an assessment of environmental impacts and that special emphasis should be placed on resources that are rare or unique to the region.**
 - b. **Project impacts should also be analyzed relative to their effects on off-site habitats and populations. Specifically, this should include nearby public lands, open space, adjacent natural habitats, and riparian ecosystems. Impacts to and maintenance of wildlife corridor/movement areas, including access to undisturbed habitat in adjacent areas, should be fully evaluated and provided.**
 - c. **A cumulative effects analysis should be developed as described under CEQA Guidelines, § 15130. General and specific plans, as well as past, present, and anticipated future projects, should be analyzed relative to their impacts on similar plant communities and wildlife habitats.**

Ms. Tabitha Lam
June 27, 2000
Page Three

- d. All migratory nongame native bird species are protected by international treaty under the Federal Migratory Bird Treaty Act (MBTA) of 1918 (50 C.F.R. Section 10.13). Sections 3503, 3503.5 and 3513 of the California Fish and Game Code prohibit take of all birds and their active nests including raptors and other migratory nongame birds (as listed under the Federal MBTA).
 1. Proposed project activities (including disturbances to vegetation) should take place outside of the breeding bird season (March 1- Aug 31) to avoid take (including disturbances which would cause abandonment of active nests containing eggs and/or young). If project activities cannot avoid the breeding bird season, active nests shall be avoided and provided with a minimum buffer as determined by a biological monitor (the Department recommends a minimum 500 foot buffer for all active raptor nests.)
3. A range of alternatives should be analyzed to ensure that alternatives to the proposed project are fully considered and evaluated. A range of alternatives which avoid or otherwise minimize impacts to sensitive biological resources including wetlands/ riparian habitats, alluvial scrub, coastal sage scrub, native woodlands, etc. should be included. Specific alternative locations should also be evaluated in areas with lower resource sensitivity where appropriate.
 - a. Mitigation measures for project impacts to sensitive plants, animals, and habitats should emphasize evaluation and selection of alternatives which avoid or otherwise minimize project impacts. Compensation for unavoidable impacts through acquisition and protection of high quality habitat elsewhere should be addressed.
 - b. The Department considers Rare Natural Communities as threatened habitats having both regional and local significance. Thus, these communities should be fully avoided and otherwise protected from project-related impacts (Attachment 2).
 - c. The Department generally does not support the use of relocation, salvage, and/or transplantation as mitigation for impacts to rare, threatened, or endangered species. Department studies have shown that these efforts are experimental in nature and largely unsuccessful. Please contact Ms. Mary Mier, Plant Ecologist at (805) 640-8019 to discuss project related impacts to sensitive plant species.
 - d. The Department requires all mitigation areas to be excluded from County or City required Fuel Modification Zones (FMZ). Acreage intended to satisfy either habitat buffer or mitigation requirements will not be considered to have value if included in a FMZ or planted with species consistent with FMZ requirements,

Ms. Tabitha Lam
June 27, 2000
Page Three

rather than habitat restoration requirements.

4. A California Endangered Species Act (CESA) Permit must be obtained, if the project has the potential to result in "take" of species of plants or animals listed under CESA, either during construction or over the life of the project. CESA Permits are issued to conserve, protect, enhance, and restore State-listed threatened or endangered species and their habitats. Early consultation is encouraged, as significant modification to the proposed project and mitigation measures may be required in order to obtain a CESA Permit. Revisions to the Fish and Game Code, effective January 1998, require that the Department issue a separate CEQA document for the issuance of a CESA permit unless the project CEQA document addresses all project impacts to listed species and specifies a mitigation monitoring and reporting program that will meet the requirements of a CESA permit. For these reasons, the following information is requested:
 - a. Biological mitigation monitoring and reporting proposals should be of sufficient detail and resolution to satisfy the requirements for a CESA Permit.
 - b. A Department-approved Mitigation Agreement and Mitigation Plan are required for plants listed as rare under the Native Plant Protection Act.
5. The Department opposes the elimination of watercourses and/or their channelization or conversion to subsurface drains. All wetlands and watercourses, whether intermittent or perennial, must be retained and provided with substantial setbacks which preserve the riparian and aquatic habitat values and maintain their value to on-site and off-site wildlife populations.
 - a. The Department requires a streambed agreement, pursuant to Section 1600 et seq. of the Fish and Game Code, with the applicant prior to any direct or indirect impact of a lake or stream bed, bank or channel or associated riparian resources.

The Department's issuance of a stream bed alteration agreement is considered a project that is subject to CEQA. To facilitate our issuance of the agreement, the Department as a responsible agency under CEQA may consider the local jurisdiction's (lead agency) document for the project. To minimize additional requirements by the Department under CEQA the document should fully identify the potential impacts to the lake, stream or riparian resources and provide adequate avoidance, mitigation, monitoring and reporting commitments for issuance of the agreement. Early consultation is recommended, since modification of the proposed project may be required to avoid or reduce impacts to fish and wildlife resources. Please contact Ms. Betty Courtney, Environmental Specialists III, at (661) 263-8306 to discuss this further.

Ms. Tabitha Lam
June 27, 2000

Re: Chatsworth Ridge Residential Project, SCH #2000061049

Dear Ms. Lam:

Thank you for the opportunity to comment on the Notice of Preparation for the Chatsworth Ridge Residential Project, SCH # 2000061049. The Angeles District of the California State Parks would like the following concerns addressed in the Environmental Impact Report.

Resources – 1. Water Quality

How will the post-development runoff from the subject property differ from predevelopment runoff with respect to quality, quantity and rate? How will increased runoff be mitigated to prevent accelerated erosion, loss of topsoil and increased sedimentation? How will changes in these parameters affect the downstream habitat of Devil Canyon Creek and Brown Canyon Creek? What measures will be taken to contain petroleum products, detergents and pesticides on the project site?

Resources – 2. Biota

Wildlife corridor

What will be the impacts be on the overall biological diversity from disturbing and degrading the regional habitat linkage connecting the Los Padres National Forest with the Santa Susana Mountains, with the Simi Hills and the Santa Monica Mountains. Does the subject property play a role in this habitat linkage? Will invasive, non-native landscaping be able to escape from this project site into natural areas? If yes, what impacts will this have on biotic resources? How will the project affect Santa Susanna State Historic Park, which connects north and south to other core habitat areas in the Simi Hills?

Tabitha Lam
July 19, 2000
Page 2

How will brush clearance affect vegetation density in the area? How will the overall survival of the ecosystem be protected if required fuel modification eliminates cover, food sources and disrupt the normal animal foraging activities associated with the area? What will be the long-term affect on the habitats of the remaining wildlife species in the area?

How will the open space adjacent to the development area be impacted by edge effects, including lights, smell, sounds, domestic pets, horse corrals and other human-generated activities? What measures will be taken to reduce these impacts to the open space areas and prevent further intrusion upon habitat linkages?

How will these edge effects affect the habitat linkage for large predators in the Santa Susana Mountains and the Simi Hills? What measures will be taken to percent a restructuring of the faunal community to one dominated by herbivores, particularly rodents?

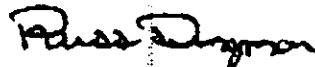

Resources - 7. Visual

Is the project site substantially visible form public parkland? Is the project site substantially visible from regional hiking trails? Is the project visible from major travel routes? How will the altered views from the Ronald Reagan Freeway affect visitors' perception of the Santa Susana Mountains and the Simi Hills? How will the extension of Topanga Canyon Road reduce impacts to the habitat linkages?

Thank you for considering our comments.

Sincerely,

For:

RE: IGR/CEQA No. 000625/NG
NOP, Chatsworth Ridge-conditional use Permit
County of Los Angeles
Vic. LA / 118 / 1.80

Dear Ms. Lam:

Thank you for including the California Department of Transportation (Caltrans) in the environmental review process for a tentative tract map, Oak Tree Permit and Conditional Use Permit to authorize the development of 150 single family residential lots on a 96 acre site. This project will also include evaluation of potential impacts for the future development of 375 single-family residential units on an additional 126-acre site adjacent to the northerly boundary of the project.

To assist us in our efforts to evaluate the impacts of this project on State transportation facilities, a traffic study in advance of the DEIR, should be prepared to analyze the following information.

1. Assumptions and methods used to develop trip generation/distribution, percentages and assignments.
2. An analysis of ADT, AM, and PM peak-hour volumes for both the existing and future (year 2020) conditions. This should include State Route 118 and affected ramps, streets, crossroads, and controlling intersections.
3. This analysis should include project traffic, cumulative traffic generated for all approved developments in the area, Interchange utilization (I.C.U.) and Level of Service (LOS) of affected freeway ramp intersections on the State Highway indicating existing project plus other projects' LOS (existing and future).
4. Discussion of mitigation measures appropriate to alleviate anticipated traffic impacts. These mitigation discussions should include, but not be limited to, the following:
 - Financing
 - Scheduling considerations

- Implementation responsibilities
- Monitoring plan

5. Developer's percent share of the cost, as well as, a plan of realistic mitigation measures under the control of the developer should be addressed. Any assessment fees for mitigation should be of such proportion as to cover mainline highway deficiencies that occur as a result of the additional traffic generated by the project.

In all instances where the proposed work falls within or affects the State right-of-way such as constructions, grading, changes to hydraulic run-off, etc., a Caltrans encroachment permit will be needed. Please have the applicant submit six (6) complete sets of engineering plans, showing exact location of State right-of-way and grading contours, to Caltrans for our review.

Residential construction next to freeways is an incompatible land use and local jurisdictions need to require soundwalls. To insure compliance with established noise standards and guidelines, and to protect future occupants from potential adverse effects associated with traffic noise levels exceeding these standards, soundwalls need to be implemented in the zoning, architectural design, and construction of units. Otherwise, future traffic noise controversy can be expected.

Caltrans policy does not legally entitle owners of property who are building adjacent to or near freeways to any noise mitigation program funded by the State. We request that prospective owners/occupants be made aware of Caltrans policy, and that the County exercise its powers and responsibility to minimize the impacts of freeway vehicle noise.

We look forward to reviewing the DEIR. We expect to receive a copy from the State Clearinghouse; however, to expedite the review process, you may send two copies in advance to the undersigned at the following address:

Stephen Buswell
IGR/CEQA Program Manager
Transportation Planning Office 1-10C
120 S. Spring Street, Los Angeles, CA 90012

If you have any questions regarding this response, you can reach me at (213) 897-4429 and refer to IGR/CEQA No. 000625 EA.

Sincerely,

STEPHEN J. BUSWELL
IGR/CEQA Program Manager

Chatsworth Ridge Notice of Preparation Comments
Tentative Tract No. 53138 - PN 99-239

Dear Ms. Lam:

The Santa Monica Mountains Conservancy (Conservancy) offers the following comments on the proposed Chatsworth Ridge development encompassing both the Twin Lakes and Deerlake Highlands areas. In 1998, the Conservancy and its joint powers authority, the Mountains Recreation and Conservation Authority (MRCA), entered into a complex agreement with Chatsworth Ridge Estates, the former majority owner of the subject property. This agreement is still binding with the current owner and applicant, Presidio Chatsworth Partners, LLC.

The agreement provided the MRCA with fee title ownership of several parkland areas within and surrounding the proposed development. The MRCA now manages this collection of park areas with funding generated by the applicant via the above referenced agreement.

The attached map shows all known parkland in the immediate project vicinity. The Draft Environmental Impact Report (DEIR) should include a detailed exhibit showing the relationship of the project to all surrounding public lands. This map shows a 70-acre block of parkland in Devil Canyon that abuts the western boundary of the Deerlake Highlands portion of the proposed project. The Conservancy does not have title to this property yet, but our agency is the named party on an offer to dedicate the land.

This collection of public lands shown in the DEIR must also include all lands owned by the Los Angeles County Department of Public Works, all other County departments, and the City of Los Angeles. In particular the exhibit must show the mosaic of County-owned lands located directly north of the Deerlake Highlands subdivision. Finally the DEIR must also

Ms. Tabitha Lam
Los Angeles County Regional Planning Department
Chatsworth Ridge NOP Comments - PN 99-239
July 26, 2000
Page 2

show the MRCA's conservation easement on the Horner property located on the northeast corner of Canoga Avenue and the 118 Freeway. The Vesting Tentative Tract Map submitted with the Notice of Preparation documents shows the basic outline of this easement referenced as item No. 80.

The following mitigation measures should be required for any project phase on either the Twin Lakes or Deerlake Highlands portions of the proposed project.

1. Conservation easements granted in favor of both Los Angeles County and the Mountains Recreation and Conservation Authority over all of Lots 151 and 153-156.
2. Only permit planting of irrigated native plants in Lots 151 and 153-156.
3. Dedicate Lots 152 and 157 in fee to the MRCA and grant a conservation easement in favor of the County.
4. Require no street lighting whatsoever within 200 feet of the centerline of Devil Creek, particularly on the two proposed bridges.
5. Require both the detailed depiction, and implementation, of a landscape and lighting plan to facilitate wildlife movement from the southern tip of the project area in Twin Lakes under the Canoga Avenue freeway undercrossing to City of Los Angeles-owned North Stoney Point Park. The plan should encompass all land (including easements) under the applicant's control from a distance of 300 feet north of the Caltrans right-of-way on the north side of the freeway. The plan should also include the subject area within the Caltrans right-of-way even if the applicant currently does not have the permission of Caltrans to implement it.
6. All manufactured slopes (housing pads obviously excepted) shall only be planted with indigenous native plants—such as coast live oak, California bay laurel, coffee berry, toyon, giant wildrye, Fremont's cottonwood, yucca, twinberry, and virgin's bower. All of these species can tolerate substantive summer irrigation, and each is not particularly conducive to fire hazard when irrigated.
7. Require, where physically possible, all debris and catchment basins to include permanent pockets of wetland vegetation both to provide habitat and to filter runoff.

Ms. Tabitha Lam
Los Angeles County Regional Planning Department
Chatsworth Ridge NOP Comments - PN 99-239
July 26, 2000
Page 3

8. To mitigate light and noise spill, as well as habitat loss, plant a staggered line of irrigated coast live oak trees along: 1) the entire northern boundary of the Deerlake Highlands portion of the project adjacent to the 10-foot-wide strip owned by the MRCA and 2) the entire western boundary of the Deerlake Highlands portion of the project.

The aesthetics or visual impacts section must include extensive analysis on how fire brushing would affect views from public lands.

The DEIR must address and make final conclusions on whether a water tank will be needed to implement the Deerlake Highlands phase of the project. If such a tank is needed, its location and access should reflect the limitations in the Conservancy's binding agreement with landowner.

In general, as of the past few years, all large scale mountain development projects in the Santa Monica Mountains and Rim of the Valley Trail Corridor zones have provided no less than a fee title dedication of 50 percent of the project area. The proposed Twin Lakes phase (VTT Map No. 53138) appears to be below this ratio. For the purposes of submitting these NOP comments, because of the absence of a proposed project area, one is best to assume that the grading footprint for the Deerlake Highlands phase will encompass the whole area.

To address this inadequate ratio of proposed public open space and Deerlake Highlands project description, we recommend that the DEIR include the following project alternatives.

- 1) An alternative that includes at least 20 acres of permanently protected, ungraded, undisturbed open space in the Deerlake Highlands phase of the project. Offsite land acquisition could be an option to reach this number of protected (Phase 2) acres.
- 2) An alternative that configures the Deerlake Highlands pads such that no offsite brush clearance (including on MRCA land) is required.
- 3) An alternative that entirely eliminates grading in the area occupied by lots 25-31 and 37-50 and the right-of-way for "A" Street as shown from lot 2 to 25. The alignment of "A" street and the newly configured pads should be distributed in the remaining allowable grading areas. This project modification is critical to maintain the

Ms. Tabitha Lam
Los Angeles County Regional Planning Department
Chatsworth Ridge NOP Comments - PN 99-239
July 26, 2000
Page 4

viewshed integrity of Devil Creek and to adequately minimize fuel modification along the rim and upper slopes of the subject reach of the creek. In addition, State-listed Santa Susana tarplant has previously occurred in the area between the proposed freeway offramp alignment and lot 6.

Please contact Paul Edelman of our staff at (310) 589-3200 ext. 128 with any questions.

Sincerely

RE: **Comments on the Notice of Preparation for a Draft Environmental Impact Report for the Chatsworth Ridge Project - SCAG No. I 20000300**

Dear Ms. Lam:

Thank you for submitting the Notice of Preparation for a Draft Environmental Impact Report for the Chatsworth Ridge Project to SCAG for review and comment. As areawide clearinghouse for regionally significant projects, SCAG assists cities, counties and other agencies in reviewing projects and plans for consistency with regional plans.

In addition, The California Environmental Quality Act requires that EIRs discuss any inconsistencies between the proposed project and the applicable general plans and regional plans (Section 15125 [d]). If there are inconsistencies, an explanation and rationalization for such inconsistencies should be provided.

Policies of SCAG's Regional Comprehensive Plan and Guide and Regional Transportation Plan, which may be applicable to your project, are outlined in the attachment. We expect the DEIR to specifically cite the appropriate SCAG policies and address the manner in which the Project is consistent with applicable core policies or supportive of applicable ancillary policies. Please use our policy numbers to refer to them in your DEIR. Also, we would encourage you to use a side-by-side comparison of SCAG policies with a discussion of the consistency or support of the policy with the Proposed Project.

Please provide a minimum of 45 days for SCAG to review the DEIR when this document is available. If you have any questions regarding the attached comments, please contact Jeffrey Smith, Senior Planner at (213) 236-1867. Thank you.

Sincerely,

J. DAVID STEIN
Manager, Performance Assessment and Implementation

June 13, 2000
 Ms. Tabitha Lam
 Page 2

**COMMENTS ON THE PROPOSAL TO DEVELOP A
 DRAFT ENVIRONMENTAL IMPACT REPORT
 FOR THE
 CHATSWORTH RIDGE PROJECT
 SCAG NO. 1 20000300**

PROJECT DESCRIPTION

The proposed Project considers a request for a tentative tract map, oak tree permit and conditional use permit to authorize the development of 150 single-family residential lots on a 96-acre site. The conditional use permit is needed for density-controlled development and hillside management. The oak tree permit is required for the removal of 16 oak trees. In addition, the environmental assessment for this project will also include evaluation of potential impacts for the future development of 375 single-family homes on an additional site adjacent to the northerly boundary of the project site.

CONSISTENCY WITH REGIONAL COMPREHENSIVE PLAN AND GUIDE POLICIES

The **Growth Management Chapter (GMC)** of the Regional Comprehensive Plan and Guide (RCPG) contains the following policies that are particularly applicable and should be addressed in the Draft EIR for the Project.

3.01 The population, housing, and jobs forecasts, which are adopted by SCAG's Regional Council and that reflect local plans and policies, shall be used by SCAG in all phases of implementation and review.

Regional Growth Forecasts

The Draft EIR should reflect the most current SCAG forecasts which are the 1998 RTP (April 1998) Population, Household and Employment forecasts for Los Angeles City Unincorporated County area. These forecasts follow:

Unincorp.

LA City

County

Forecasts

	<u>2000</u>	<u>2005</u>	<u>2010</u>	<u>2015</u>	<u>2020</u>
Population	12,900	17,000	22,000	26,900	32,400
Households	3,600	4,500	6,200	7,600	9,900
Employment	13,900	16,100	17,900	19,600	21,400

June 13, 2000
Ms. Tabitha Lam
Page 3

3.03 *The timing, financing, and location of public facilities, utility systems, and transportation systems shall be used by SCAG to implement the region's growth policies.*

The **Regional Transportation Plan (RTP)** also has goals, objectives, policies and actions pertinent to this proposed project. This RTP links the goal of sustaining mobility with the goals of fostering economic development, enhancing the environment, reducing energy consumption, promoting transportation-friendly development patterns, and encouraging fair and equitable access to residents affected by socio-economic, geographic and commercial limitations. Among the relevant goals, objectives, policies and actions of the RTP are the following:

Core Regional Transportation Plan Policies

4.01 *Transportation investments shall be based on SCAG's adopted Regional Performance Indicators.*

Mobility - Transportation Systems should meet the public need for improved access, and for safe, comfortable, convenient and economical movements of people and goods.

- *Average Work Trip Travel Time in Minutes – 22 minutes*
- *PM Peak Highway Speed – 33 mph*
- *Percent of PM Peak Travel in Delay (All Trips) – 33%*

Accessibility - Transportation Systems should ensure the ease with which opportunities are reached. Transportation and land use measures should be employed to ensure minimal time and cost.

- *Work Opportunities within 25 Minutes – 88%*

Environment - Transportation Systems should sustain development and preservation of the existing system and the environment. (All Trips)

- *Meeting Federal and State Standards – Meet Air Plan Emission Budgets*

Reliability - Reasonable and dependable levels of service by mode. (All Trips)

- *Transit – 63%*
- *Highway – 76%*

Safety - Transportation Systems should provide minimal, risk, accident, death and injury. (All Trips)

- *Fatalities Per Million Passenger Miles – 0.008*
- *Injury Accidents – 0.929*

June 13, 2000
Ms. Tabitha Lam
Page 4

Livable Communities - Transportation Systems should facilitate Livable Communities in which all residents have access to all opportunities with minimal travel time. (All Trips)

- *Vehicle Trip Reduction - 1.5%*
- *Vehicle Miles Traveled Reduction - 10.0%*

Equity - The benefits of transportation investments should be equitably distributed among all ethnic, age and income groups. (All trips)

- *Low-Income (Household Income \$12,000) Share of Net Benefits - Equitable Distribution of Benefits*

Cost-Effectiveness - Maximize return on transportation investment. (All Trips)

- *Net Present Value - Maximum Return on Transportation Investment*
- *Value of a Dollar Invested - Maximum Return on Transportation Investment*

- 4.02 *Transportation investments shall mitigate environmental impacts to an acceptable level.*
- 4.04 *Transportation Control Measures shall be a priority.*
- 4.16 *Maintaining and operating the existing transportation system will be a priority over expanding capacity.*

GMC POLICIES RELATED TO THE RCPG GOAL TO IMPROVE THE REGIONAL STANDARD OF LIVING

The Growth Management goals to develop urban forms that enable individuals to spend less income on housing cost, that minimize public and private development costs, and that enable firms to be more competitive, strengthen the regional strategic goal to stimulate the regional economy. The evaluation of the proposed project in relation to the following policies would be intended to guide efforts toward achievement of such goals and does not infer regional interference with local land use powers.

- 3.04 *Encourage local jurisdictions' efforts to achieve a balance between the types of jobs they seek to attract and housing prices.*
- 3.05 *Encourage patterns of urban development and land use which reduce costs on infrastructure construction and make better use of existing facilities.*
- 3.08 *Encourage subregions to define an economic strategy to maintain the economic*

June 13, 2000
Ms. Tabitha Lam
Page 5

vitality of the subregion, including the development and use of marketing programs, and other economic incentives, which support attainment of subregional goals and policies.

- 3.09 *Support local jurisdictions' efforts to minimize the cost of infrastructure and public service delivery, and efforts to seek new sources of funding for development and the provision of services.*
- 3.10 *Support local jurisdictions' actions to minimize red tape and expedite the permitting process to maintain economic vitality and competitiveness.*

GMC POLICIES RELATED TO THE RCPG GOAL TO IMPROVE THE REGIONAL QUALITY OF LIFE

The Growth Management goals to attain mobility and clean air goals and to develop urban forms that enhance quality of life, that accommodate a diversity of life styles, that preserve open space and natural resources, and that are aesthetically pleasing and preserve the character of communities, enhance the regional strategic goal of maintaining the regional quality of life. The evaluation of the proposed project in relation to the following policies would be intended to provide direction for plan implementation, and does not allude to regional mandates.

- 3.11 *Support provisions and incentives created by local jurisdictions to attract housing growth in job rich subregions and job growth in housing rich subregions.*
- 3.12 *Encourage existing or proposed local jurisdictions' programs aimed at designing land uses which encourage the use of transit and thus reduce the need for roadway expansion, reduce the number of auto trips and vehicle miles traveled, and create opportunities for residents to walk and bike.*
- 3.13 *Encourage local jurisdictions' plans that maximize the use of existing urbanized areas accessible to transit through infill and redevelopment.*
- 3.14 *Support local plans to increase density of future development located at strategic points along the regional commuter rail, transit systems, and activity centers.*
- 3.15 *Support local jurisdictions strategies to establish mixed-use clusters and other transit-oriented developments around transit stations and along transit corridors.*
- 3.16 *Encourage developments in and around activity centers, transportation corridors, underutilized infrastructure systems, and areas needing recycling and*

June 13, 2000
Ms. Tabitha Lam
Page 6

redevelopment.

- 3.17 *Support and encourage settlement patterns which contain a range of urban densities.*
- 3.18 *Encourage planned development in locations least likely to cause environmental impact.*
- 3.21 *Encourage the implementation of measures aimed at the preservation and protection of recorded and unrecorded cultural resources and archaeological sites.*
- 3.22 *Discourage development, or encourage the use of special design requirements, in areas with steep slopes, high fire, flood, and seismic hazards.*
- 3.23 *Encourage mitigation measures that reduce noise in certain locations, measures aimed at preservation of biological and ecological resources, measures that would reduce exposure to seismic hazards, minimize earthquake damage, and to develop emergency response and recovery plans.*

GMC POLICIES RELATED TO THE RCPG GOAL TO PROVIDE SOCIAL, POLITICAL, AND CULTURAL EQUITY

The Growth Management Goal to develop urban forms that avoid economic and social polarization promotes the regional strategic goal of minimizing social and geographic disparities and of reaching equity among all segments of society. The evaluation of the proposed project in relation to the policy stated below is intended guide direction for the accomplishment of this goal, and does not infer regional mandates and interference with local land use powers.

- 3.24 *Encourage efforts of local jurisdictions in the implementation of programs that increase the supply and quality of housing and provide affordable housing as evaluated in the Regional Housing Needs Assessment.*
- 3.25 *Encourage the efforts of local jurisdictions, employers and service agencies to provide adequate training and retraining of workers, and prepare the labor force to meet the challenges of the regional economy.*
- 3.26 *Encourage employment development in job-poor localities through support of labor force retraining programs and other economic development measures.*
- 3.27 *Support local jurisdictions and other service providers in their efforts to develop*

June 13, 2000
Ms. Tabitha Lam
Page 7

sustainable communities and provide, equally to all members of society, accessible and effective services such as: public education, housing, health care, social services, recreational facilities, law enforcement, and fire protection.

AIR QUALITY CHAPTER CORE ACTIONS

The Air Quality Chapter core actions related to the proposed project include:

- 5.07 *Determine specific programs and associated actions needed (e.g., indirect source rules, enhanced use of telecommunications, provision of community based shuttle services, provision of demand management based programs, or vehicle-miles-traveled/emission fees) so that options to command and control regulations can be assessed.*
- 5.11 *Through the environmental document review process, ensure that plans at all levels of government (regional, air basin, county, subregional and local) consider air quality, land use, transportation and economic relationships to ensure consistency and minimize conflicts.*

WATER QUALITY CHAPTER RECOMMENDATIONS AND POLICY OPTIONS

The Water Quality Chapter core recommendations and policy options relate to the two water quality goals: to restore and maintain the chemical, physical and biological integrity of the nation's water; and, to achieve and maintain water quality objectives that are necessary to protect all beneficial uses of all waters.

- 11.02 *Encourage "watershed management" programs and strategies, recognizing the primary role of local governments in such efforts.*
- 11.03 *Coordinate watershed management planning at the subregional level by (1) providing consistent regional data; (2) serving as a liaison between affected local, state, and federal watershed management agencies; and (3) ensuring that watershed planning is consistent with other planning objectives (e.g., transportation, air quality, water supply).*
- 11.05 *Support regional efforts to identify and cooperatively plan for wetlands to facilitate both sustaining the amount and quality of wetlands in the region and expediting the process for obtaining wetlands permits.*
- 11.06 *Clean up the contamination in the region's major groundwater aquifers since its*

water supply is critical to the long-term economic and environmental health of the region. The financing of such clean-ups should leverage state and federal resources and minimize significant impacts on the local economy.

- 11.07 Encourage water reclamation throughout the region where it is cost-effective, feasible, and appropriate to reduce reliance on imported water and wastewater discharges. Current administrative impediments to increased use of wastewater should be addressed.*

OPEN SPACE CHAPTER ANCILLARY GOALS

Outdoor Recreation

- 9.01 Provide adequate land resources to meet the outdoor recreation needs of the present and future residents in the region and to promote tourism in the region.*
- 9.02 Increase the accessibility to open space lands for outdoor recreation.*
- 9.03 Promote self-sustaining regional recreation resources and facilities.*

Public Health and Safety

- 9.04 Maintain open space for adequate protection of lives and properties against natural and man-made hazards.*
- 9.05 Minimize potentially hazardous developments in hillsides, canyons, areas susceptible to flooding, earthquakes, wildfire and other known hazards, and areas with limited access for emergency equipment.*
- 9.06 Minimize public expenditure for infrastructure and facilities to support urban type uses in areas where public health and safety could not be guaranteed.*

Resource Production

- 9.07 Maintain adequate viable resource production lands, particularly lands devoted to commercial agriculture and mining operations.*

Resource Protection

- 9.08 Develop well-managed viable ecosystems or known habitats of rare, threatened and endangered species, including wetlands.*

June 13, 2000
Ms. Tabitha Lam
Page 9

CONCLUSIONS

All feasible measures needed to mitigate any potentially negative regional impacts associated with the proposed project should be implemented and monitored, as required by CEQA.

June 13, 2000
Ms. Tabitha Lam
Page 10

ENDNOTE

SOUTHERN CALIFORNIA ASSOCIATION OF GOVERNMENTS

Roles and Authorities

SCAG is a *Joint Powers Agency* established under California Government Code Section 6502 et seq. Under federal and state law, SCAG is designated as a Council of Governments (COG), a Regional Transportation Planning Agency (RTPA), and a Metropolitan Planning Organization (MPO). SCAG's mandated roles and responsibilities include the following:

SCAG is designated by the federal government as the Region's *Metropolitan Planning Organization* and mandated to maintain a continuing, cooperative, and comprehensive transportation planning process resulting in a Regional Transportation Plan and a Regional Transportation Improvement Program pursuant to 23 U.S.C. '134(g)-(h), 49 U.S.C. '1807(f)-(g) et seq., 23 C.F.R. '450, and 49 C.F.R. '613. SCAG is also the designated *Regional Transportation Planning Agency*, and as such is responsible for both preparation of the Regional Transportation Plan (RTP) and Regional Transportation Improvement Program (RTIP) under California Government Code Section 65080.

SCAG is responsible for developing the demographic projections and the integrated land use, housing, employment, and transportation programs, measures, and strategies portions of the *South Coast Air Quality Management Plan*, pursuant to California Health and Safety Code Section 40460(b)-(c). SCAG is also designated under 42 U.S.C. '7504(a) as a *Co-Lead Agency* for air quality planning for the Central Coast and Southeast Desert Air Basin District.

SCAG is responsible under the Federal Clean Air Act for determining *Conformity* of Projects, Plans and Programs to the Air Plan, pursuant to 42 U.S.C. '7506.

Pursuant to California Government Code Section 65089.2, SCAG is responsible for *reviewing all Congestion Management Plans (CMPs) for consistency with regional transportation plans* required by Section 65080 of the Government Code. SCAG must also evaluate the consistency and compatibility of such programs within the region.

SCAG is the authorized regional agency for *Inter-Governmental Review* of Programs proposed for federal financial assistance and direct development activities, pursuant to Presidential Executive Order 12,372 (replacing A-95 Review).

SCAG reviews, pursuant to Public Resources Code Sections 21083 and 21087, *Environmental Impact Reports* of projects of regional significance for consistency with regional plans [California Environmental Quality Act Guidelines Sections 15206 and 15125(b)].

Los Angeles, CA 90012

Attention: **Tabitha Lam**

Subject: **Notice of Completion and Initial Study on
Tentative Tract Map 53138**

Dear Ms. Lam:

We are in receipt of a Notice of Completion and Initial Study concerning Tentative Tract No. 53138. The project is located in the Twin Lakes area of Chatsworth north of the 118 freeway between Topanga Canyon Boulevard and Canoga Avenue. The project consists of 222 acres to be done in several phases. The Twin Lakes project will consist of 150 homes, while the Deer Lake phases will encompass 375 homes. There would be a total build out of 525 units. As stated in the report, Las Virgenes Municipal Water District will be the purveyor of potable water to this project. Our distribution system currently serves the southerly portion of the site and that the project will be required to reconstruct portions of the existing distribution mains from the Twin Lakes tanks to Topanga Canyon Boulevard. A Preliminary Water System Design Report must be prepared by LVMWD, at developer expense, to provide specific design parameters for this new system.

The EIR should address in detail the total water demand of the project and the resultant impact on the District's ability to serve the project. This impact should address the following:

- 1.) Planned water demand based on the current County Land Use versus what is prepared by this development.
- 2.) A comparison of this project's water demand with the District's Potable Water Master Plan.
- 3.) Impact on the District's ability to purchase additional water from Imported sources (Metropolitan Water District of Southern California).

The District would advocate strict water conservation measures as a condition of project approval. This would include, but not be limited to, fixture design and installation (use of low flow toilets and showerheads),

use of drought tolerant plantings and efficient irrigation systems and techniques.

The developer must also pay the appropriate connection fees for the subject tract and any other related fees.

Los Angeles County sewers would collect sewage for ultimate treatment by the City of Los Angeles. However, the developer would be required to pay sewer connection fees to the District since the tract lies within district boundaries

If you have any questions concerning this matter, please feel free to contact me at any time. Thank you.

Very truly yours,

C. Eugene Talmadge, RA
Planning Administrator

NLC:nlc

Bcc: Jim Colbaugh

South Coast Air Quality Management District

(909) 396-2000 • <http://www.aqmd.gov>

June 20, 2000

Ms. Tabitha Lam
Los Angeles County Department of Regional Planning
320 W. Temple Street
Los Angeles, CA 90012

Dear Ms. Lam:

Notice of Preparation of an Environmental Impact Report Chatsworth Ridge

The South Coast Air Quality Management District (AQMD) appreciates the opportunity to comment on the above-mentioned document. The AQMD's comments are recommendations regarding the analysis of potential air quality impacts from the proposed project that should be included in the Draft Environmental Impact Report (EIR).

Air Quality Analysis

The AQMD adopted its California Environmental Quality Act (CEQA) Air Quality Handbook in 1993 to assist other public agencies with the preparation of air quality analyses. The AQMD recommends that the Lead Agency use this Handbook as guidance when preparing its air quality analysis. Copies of the Handbook are available from the AQMD's Subscription Services Department by calling (909) 396-3720.

The Lead Agency should identify any potential adverse air quality impacts that could occur from all phases of the project and all air pollutant sources related to the project. Air quality impacts from both construction and operations should be considered. Construction-related air quality impacts typically include, but are not limited to, emissions from the use of heavy-duty equipment from grading, earth-loading/unloading, paving, architectural coatings, off-road mobile sources (e.g., heavy-duty construction equipment) and on-road mobile sources (e.g., construction worker vehicle trips, material transport trips). Operation-related air quality impacts may include, but are not limited to, emissions from stationary sources (e.g., boilers), area sources (e.g., solvents and coatings), and vehicular trips (e.g., on- and off-road tailpipe emissions and entrained dust). Air quality impacts from indirect sources, that is, sources that generate or attract vehicular trips should be included in the evaluation. An analysis of all toxic air contaminant impacts due to the decommissioning or use of equipment potentially generating such air pollutants should also be included.

Ms. Tabitha Lam

-2-

June 20, 2000

Mitigation Measures

In the event that the project generates significant adverse air quality impacts, CEQA requires that all feasible mitigation measures be utilized during project construction and operation to minimize or eliminate significant adverse air quality impacts. To assist the Lead Agency with identifying possible mitigation measures for the project, please refer to Chapter 11 of the AQMD CEQA Air Quality Handbook for sample air quality mitigation measures. Additionally, AQMD's Rule 403 - Fugitive Dust, and the Implementation Handbook contain numerous measures for controlling construction-related emissions that should be considered for use as CEQA mitigation if not otherwise required. Pursuant to state CEQA Guidelines Section 15126 (c), any impacts resulting from mitigation measures must also be discussed.

Data Sources

AQMD rules and relevant air quality reports and data are available by calling the AQMD's Public Information Center at (909) 396-3600. Much of the information available through the Public Information Center is also available via the AQMD's World Wide Web Homepage (<http://www.aqmd.gov>).

The AQMD is willing to work with the Lead Agency to ensure that project-related emissions are accurately identified, categorized, and evaluated. Please call Dr. Charles Blankson, Transportation Specialist, CEQA Section, at (909) 396-3304 if you have any questions regarding this letter.

Sincerely,

Steve Smith, Ph.D.
Program Supervisor, CEQA Section

RE: Review of Environmental Impact Report 99 - 239

Dear Mr. Chih:

This is to inform you that upon review of all documents forwarded to our program by you and investigation of the proposed project location, Chatsworth Ridge States, it appears that the project will not have a significant noise impact upon surrounding properties, however lots 1 thru 11 and 61 - 69 will be impacted by their proximity to the SR-118. These lots will be exposed to noise levels above the 65 dB-A exterior noise standard. The following recommendations and comments are therefore presented to minimize noise exposure to the future tenants at the above location:

The topography, location and heavy vegetation of the lots away from the SR-118 are factors that contribute to the natural attenuation properties of the site.

Compliance with the Los Angeles County Noise Ordinance Section 12.08.440 will limit noise exposure to the surrounding residential dwellings.

A solid cement block wall shall be placed between the rear yards of lots 1 - 11 and 61 - 69 and the SR-118. The wall shall be as high as 8 feet but not less than 6 feet.

Exterior walls would be 2x4 feet wood frame construction, with 7/8 stucco on the exterior.

Sent By: ENVIRONMENTAL HYGIENE;

Page 3/3

Page 2

Environmental Hygiene, EIR 99-239

½ inch gypsum board on the interiors, and R-13 (minimum) in the cavity for lots 1-11 and 61-69.

Residential units located with exposure to SR-118 would have minimal window surface area. All windows would be mounted with low air-infiltration rate frames (0.5 cfm / foot or less per ANSI specifications).

Sliding glass doors on lots 1-11 and 61-69 would have a minimum sound transmission class of 34.

Roof or attic vents for lots 1 - 11 and 61-69 would be located away from the SR-118 or baffled.

All second floor windows in lots exposed to more than 65 dBA and facing the SR-113 shall be glazed with 1/4" laminated glass.

Second floor balconies are not recommended for structures with line of sight to the SR-118.

Air conditioning should be standard for the 1-11 and 61-69 lots.

All recommendations are based on the acoustical analysis prepared by Giroux and Associates and by the Environmental Hygiene Program own observations and measurements.

If you have any further questions, please contact Evenor Masis at (213) 739 - 6232.

RESPONSE TO AN ENVIRONMENTAL IMPACT REPORT CHATSWORTH RIDGE PROJECT NO. 99-239(5) CITY OF CHATSWORTH

Thank you for the opportunity to provide comments on an Environmental Impact Report for the proposed Chatsworth Ridge Project No. 99-239(5). We have reviewed the submittal and offer the following comments:

Environmental Programs

The existing hazardous waste management (HWM) facilities in this County are inadequate to handle the hazardous waste currently being generated. The proposed project may generate household hazardous waste that could adversely impact existing HWM facilities. This issue should be addressed and mitigation measures provided.

Should any operation within the subject project include the construction/installation, modification or removal of underground storage tanks, industrial waste control or disposal facilities, and/or stormwater treatment facilities, our Environmental Programs Division must be contacted for required approvals and operating permits.

James E. Hartl
 August 28, 2001
 Page 2

Land Development (Geology and Soils)

The proposed project will not have significant environmental effects from a geology and soils standpoint. The project is located within a mapped potentially liquefiable area, per the State of California Seismic Hazard Zone Map, Oat Mountain Quadrangle. However, liquefaction analysis is not warranted at this time. Detailed liquefaction analyses, conforming to the requirements of the State of California Division of Mines and Geology, Special Publication 117, must be conducted at the tentative map and/or grading/building plans stages.

If you have any questions, please contact Mr. Amir Alz m at (626) 458-3883.

Land Development (Grading and Drainage)

The applicant shall comply with the requirements of the Standard Urban Stormwater Mitigation Plan which was approved on March 6, 2001, to the satisfaction of Public Works.

If you have any questions, you may contact Mr. Perfecto Tobias at (626) 458-4921.

Land Development (Transportation Planning)

The proposed project may impact Canoga Avenue, a second highway, and Browns Canyon Road; a major highway on the County Highway Plan requiring 80 feet of right of way (40 feet from the centerline) and 100 feet of right of way (50 feet from the centerline) plus necessary slope easements, respectively.

If you have any questions, please contact Mr. Hubert Seto at (626) 458-4349.

Waterworks and Sewer Maintenance

The Consolidated Sewer Maintenance District is responsible for the operation and maintenance of the local sewers within the project area. The proposed project is subject to annexation to the Consolidated Sewer Maintenance District.

James E. Hartl
August 28, 2001
Page 3

Watershed Management

The proposed project should include investigation of watershed management opportunities to maximize capture of local rainfall on the project site, minimize or eliminate incremental flows to the storm drain system, and provide filtering of flows to capture contaminants originating from the project site.

If you have any questions regarding these comments or the environmental reviewing process, please contact Ms. Massie Munroe at the address on the first page or at (626) 458-4359.

Watershed Management Division

FROM: John T. Walker
Traffic and Lighting Division

**DRAFT ENVIRONMENTAL IMPACT REPORT
TRAFFIC IMPACT STUDY (MARCH 22, 2001)
CHATSWORTH RIDGE ESTATES
TENTATIVE TRACT 53138
CHATSWORTH AREA**

As requested, we have reviewed the transportation/traffic section of the above-mentioned document. The proposed project is located north of the Ronald Reagan (SR-118) Freeway, between Topanga Canyon Boulevard and Canoga Avenue, in the Chatsworth area of unincorporated County of Los Angeles.

The proposed project is for 538 single-family residential units. The project at its build-out in the Year 2005 is estimated to generate approximately 4,874 vehicle trips daily with 387 and 40 vehicle trips during the a.m. and p.m. peak hours, respectively.

This study assumes a revised build-out year of 2005. Our previous comments, dated March 29, 2001 (copy attached), are still valid and applicable with the following additional comments to the unsigned and undated signing and striping plan titled Topanga Canyon Boulevard/Poema Place at Westbound SR-118 On/Off Ramps submitted on March 26, 2001.

- Show jurisdictional boundary lines and signature blocks for all required agencies involved.
- Exclude contour lines. Clearly show and label all signs to be removed, installed, or relocated. Clearly show and label all existing striping and markings to be removed. Show all existing striping as dashed. Show and label all existing and proposed striping and markings.
- East approach of Topanga Canyon Boulevard at SR-118 westbound ramps should show lane configurations as two left-turn lanes and one shared through/right-turn lane.

Rod Kubomoto
August 15, 2001
Page 2

- The proposed striping of the median for the south approach of Topanga Canyon Boulevard at SR-118 westbound ramps does not provide adequate turning radius from the inner left-turn lane onto the westbound on-ramp. A 45-foot turning radius is required.
- Provide crosswalks across east and west approaches of Topanga Canyon Boulevard at Mayan Drive and Poema Place, since pedestrian crosswalk was provided across the ramps.

We have the following comments to the concept traffic signal plan title Topanga Canyon Boulevard/Poema Place at Westbound SR-118 On/Off Ramps and the Synchro 5 analysis submitted on June 14, 2001.

- The proposed signal phase diagram should be modified as shown in red on the submitted plan (copy picked up by consultant). The current proposed signal phase diagram shows the northbound left-turn and westbound through movements occurring concurrently at Topanga Canyon Road/SR-118 Freeway westbound ramps. Our proposal eliminates this conflict. In addition, as previously mentioned for the striping plan above, provide crosswalks across east and west approaches of Topanga Canyon Boulevard at Mayan Drive and Poema Place, since a pedestrian crosswalk was provided across the ramps.
- Due to the close proximity of the two intersections, they will be required to be controlled by one traffic signal controller. Based on the predicted volumes and the Synchro 5 analysis, we concur that the intersection will be able to operate with a 90 second cycle. However, the 90 second cycle length is at capacity with the predicted p.m. peak hour volumes. An increase in future traffic volume at the intersection will cause significant delays and longer vehicle queues. As previously recommended, Mayan Drive and Poema Place should be relocated at least 350 feet, from centerline to centerline, from the SR-118 Freeway westbound ramps to handle any future increase in traffic volume and allow a cycle length less than 90 seconds. A smaller cycle length would reduce the overall intersection delays and vehicle queues.

We recommend the City of Los Angeles and the State of California Department of Transportation review this document for impacts/mitigations within their jurisdictions.

234 East Colorado Boulevard, Suite 400
Pasadena, CA 91101-2212

Attention Mr. Alfred Ying

Dear Mr. Shender:

**TRAFFIC IMPACT STUDY (NOVEMBER 20, 2000)
CHATSWORTH RIDGE ESTATES
TENTATIVE TRACT 53138
CHATSWORTH AREA**

We have reviewed the above-mentioned document. The proposed project is located north of the Ronald Reagan (SR-118) Freeway between Topanga Canyon Boulevard and Canoga Avenue in the Chatsworth area of unincorporated Los Angeles County.

The proposed project is for 538 single family residential units. The project at its build out in the Year 2003 is estimated to generate approximately 4,874 vehicle trips daily with 387 and 490 vehicle trips during the a.m. and p.m. peak hours, respectively.

We agree with the report the traffic generated by the project alone will significantly impact the following County intersections. We recommend the following mitigation measures be the sole responsibility of the project.

Topanga Canyon Boulevard at Mayan Drive/Poema Place

East Approach: One left-turn lane and one shared through/left-turn lane (add one left-turn lane).

South Approach: One left-turn lane and one exclusive right-turn lane (convert shared left-/right-turn lane to a left-turn lane and add one exclusive right-turn lane).

Alfred Ying

Mr. David S. Shender
March 29, 2001
Page 2

Install traffic signals.

We do not recommend the traffic signals be connected to the City of Los Angeles Department of Transportation Automated Traffic Surveillance and Control System (ATSAC)

Topanga Canyon Boulevard/SR-118 Westbound Ramps

North Approach: Two through lanes and one right-turn lane (add exclusive right-turn lane).

East Approach: Two left-turn lanes and one shared through/right-turn lane (add second left-turn lane and convert shared left/through/right-turn lane to shared through/right-turn lane).

Install traffic signals.

We do not recommend the traffic signals be connected to the City of Los Angeles Department of Transportation ATSAC.

We have the following comments to the unsigned and undated signing and striping plan for Topanga Canyon Boulevard/Poema Place at the westbound SR-118 on/off ramps submitted on December 13, 2000:

- We recommend Poema Place/Mayan Drive be moved northerly so that the spacing between SR 118 westbound on-off ramps and Poema Place/Mayan Drive intersection be at least 350 feet from centerline to centerline. The plan as submitted requires a long signal operation cycle length and the State of California Department of Transportation (Caltrans) would not allow a cycle length longer than 90 seconds because the delays would result in traffic backing up on the off ramp.
- Label the east approach of the intersection as Mayan Drive.
- Submit revised signing and striping plans along with detailed signal plans to Public Works for review and approval. If the relocation is not feasible or not adopted then traffic signal plans for the two intersections as shown in the current signing and striping plan should be prepared and submitted to Public Works and Caltrans for review and approval. The two traffic signals should be coordinated to facilitate the continuous movement of traffic and minimize vehicle queues on the SR-118 westbound off-ramp.

Mr. David S. Shender
March 29, 2001
Page 3

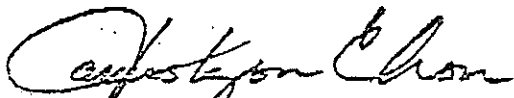

The May 4, 2000, Tract Map shows the SR-118 off-ramp at Topanga Canyon Boulevard realigned to connect with Mayan Drive. We have been informed that this proposal is no longer being considered. A new proposal as of February 15, 2001, was submitted for review. Our Traffic Design Section will be providing review and comments on the new proposal as soon as they become available.

We recommend Caltrans and the City of Los Angeles review this document for impacts/mitigations within their jurisdictions.

If you have any questions, please contact Mr. Suen Fei Lau of our Traffic Studies Section at (626) 300-4820; for questions regarding geometric design, please contact Mr. Rick Diaz of our Traffic Design I Section at (626) 300-4786.

SCREENCHECK EIR AND REQUEST FOR COMMENTS

Chatsworth Ridge
 Project No. 99-239 (5)
 SCH. No. 2000061049

This letter is in response to the request for comments on the above-referenced project. We have reviewed the documents, and following is our assessment of the impact of this proposed project with regard to library services.

The project area would be primarily served by the County of Los Angeles Las Virgenes Bookmobile, which is part of the County's Las Virgenes Library, located at 29130 West Roadside Drive, Agoura Hills, CA 91301. The Las Virgenes Bookmobile has a collection of 8,521 items consisting of books, audio/video recordings, software, magazines, and periodicals. The Bookmobile serves an estimated 2,750 residents in the Chatsworth Ridge area.

The Las Virgenes Library is a 7,523 square foot building that serves an estimated population of 27,508 residents. It has a collection of 107,624 items consisting of books, pamphlets, audio/video recordings, software, magazines, periodicals, books on tape, reference materials, and laser discs.

In addition, we recommend the following changes to the Draft EIR:

Page S-17

Table / Environmental Impact / Libraries

First paragraph, please change to read as follows:

Los Angeles County Ordinance requires that new residential subdivisions pay a Library Facilities Mitigation Fee to ensure that new projects mitigate impacts to library facilities in unincorporated areas. The developer would pay the applicable fee to offset potential impacts to area libraries.

Serving the unincorporated areas of Los Angeles County and the cities of: Agoura Hills • Artesia • Avalon • Baldwin Park • Bell • Bell Gardens • Bellflower • Bradbury • Carson • Claremont • Compton • Cudahy • Culver City • Diamond Bar • Duarte • El Monte • Gardena • Hawaiian Gardens • Hawthorne • Hermosa Beach • Hidden Hills • Huntington Park • La Canada Flintridge • La Habra • Highways • Lakewood • La Mirada • Lancaster • La Puente • La Verne • Lawndale • Lomita • Lynwood • Palmdale • Manhattan Beach • Maywood • Montebello • Norwalk • Paramount • Pico Rivera • Rosemead • San Dimas • San Fernando • San Gabriel • Santa Clarita • South El Monte • South Gate • Temple City • Walnut • West Covina • West Hollywood • Westlake Village

August 17, 2001

Mr. Kerwin Chib
August 28, 2001
Page 2

It may be appropriate to have the Los Angeles (City) Fire Department review this document for accuracy and completeness.

GENERAL REQUIREMENTS:

The projected use of the proposed development may necessitate multiple ingress/egress access for the circulation of traffic, and emergency response issues.

The Department may condition future development to provide additional means of access.

The development of this project must comply with all applicable code and ordinance requirements for construction, access, water mains, fire flows and hydrants.

This property is located within the area described by the Forester and Fire Warden as a Fire Zone 4, Very High Fire Hazard Severity Zone (VHFHSZ). All applicable fire code and ordinance requirements for construction, access, water mains, fire hydrants, fire flows, brush clearance and fuel modification plans, must be met.

Specific fire and life safety requirements for the construction phase will be addressed at the building fire plan check. There may be additional fire and life safety requirements during this time.

Every building constructed shall be accessible to Fire Department apparatus by way of access roadways with an all weather surface of not less than the prescribed width, unobstructed, clear-to-sky. The roadway shall be extended to within 150 feet of all portions of the exterior walls when measured by an unobstructed route around the exterior of the building.

When a bridge is required to be used as part of a fire access road, it shall be constructed and maintained in accordance with nationally recognized standards and designed for a live load sufficient to carry a minimum of 75,000 pounds.

The maximum allowable grade shall not exceed 15% except where the topography makes it impractical to keep within such grade, and then an absolute maximum of 20% will be allowed for up to 150 feet in distance. The average maximum allowed grade, including topography difficulties, shall be no more than 17%. Grade breaks shall not exceed 10% in ten (10) feet.

When involved with subdivision, Fire Department requirements for access, fire flows and hydrants are addressed at the Los Angeles County Subdivision Committee meeting during the subdivision tentative map stage.

Fire sprinkler systems are required in some residential and most commercial occupancies. For those occupancies not requiring fire sprinkler systems, it is strongly suggested that fire sprinkler systems be installed. This will reduce potential fire and life losses. Systems are now technically and economically feasible for residential use.

SINGLE-FAMILY DWELLING UNITS:

Single-family detached homes shall require a fire flow of 1,250 gallons per minute at 20 pounds per square inch residual pressure for a two-hour duration.

Mr. Kerwin Chih
 August 28, 2001
 Page 3

Fire hydrant spacing shall be 600 feet and shall meet the following requirements:

1. No portion of lot frontage shall be more than 450 feet via vehicular access from a public fire hydrant.
2. When cul-de-sac depth exceeds 450 feet on a residential street, hydrants shall be required at the corner and mid-block.
3. Additional hydrants will be required if hydrant spacing exceeds specified distances.

Fire Department access shall be provided to within 150 feet of all portions of the exterior walls of the first story of any single-unit. If exceeding 150 feet, provide 20 foot, paved width "Private Driveway/Fire Lane" to within 150 feet of all portions of the exterior walls of the unit

A Fire Department approved turning area shall be provided for all driveways exceeding 150 feet in length and at the end of all cul-de-sacs.

Streets or driveways within the development shall be provided with the following:

1. Thirty-six (36) feet in width on all collector streets and those streets where parking is allowed on both sides.
2. Thirty-four (34) feet in width on cul-de-sacs up to 700 feet in length. This allows parking on both sides of the street.
3. Thirty-six (36) feet in width on cul-de-sacs from 701 to 1,000 feet in length. This allows parking on both sides of the street.
4. For streets or driveways with parking restrictions: The entrance to the street/driveway and intermittent spacing distances of 150 feet shall be posted with Fire Department approved signs stating "NO PARKING - FIRE LANE" in three inch high letters. Driveway labeling is necessary to ensure access for Fire Department use.
5. Turning radii shall not be less than thirty-two (32) feet. This measurement shall be determined at the centerline of the road.
6. A Fire Department approved turning area shall be provided at the end of a driveway of 300 feet or more in length.

LIMITED ACCESS DEVICES (GATES, ETC.):

1. Any single gate used for ingress and egress shall be a minimum of twenty-six (26) feet in width, clear-to-sky.
2. Any gate used for a single direction of travel, used in conjunction with another gate, used for travel in the opposite direction, (split gates) shall have a minimum width of 20 feet each, clear-to-sky.
3. Gates and/or control devices shall be positioned a minimum of 50 feet from a public right of way, and shall be provided with a turnaround having a minimum of 32 feet of turning radius. If an intercom system is used, the 50 feet shall be measured from the right of way to the intercom control device.
4. All limited access devices shall be of a type approved by the Fire Department.
5. Gate plans shall be submitted to the Fire Department prior to installation. These plans shall show all locations, widths, and details of the proposed gates.

Mr. Kerwin Chih
August 28, 2001
Page 4

TRAFFIC CALMING MEASURES:

All proposals for traffic calming measures (speed humps/bumps, traffic circles, roundabouts, etc.) shall be submitted to the Fire Department for review, prior to implementation.

Should any questions arise regarding design and construction, and/or water and access, please contact Inspector Mike McHargue at (323) 890-4243.

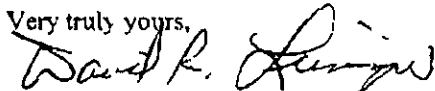

OTHER ENVIRONMENTAL CONCERNS:

The statutory responsibilities of the County of Los Angeles Fire Department Forestry Division includes erosion control, watershed management, rare and endangered species, vegetation, fuel modification for Very High Fire Hazard Severity Zones or Fire Zone 4, archeological and cultural resources and the County Oak Tree Ordinance.

The areas germane to the statutory responsibilities of the County of Los Angeles Fire Department have been addressed. However, the Department is still in the process of reviewing the Oak Tree Report for this project. This process is being delayed since the application was submitted without an accurate map. The County Forester and the Consulting Arborist were unable to determine specific impacts to the Oak resource within the project boundaries. Upon receipt of an accurate map, our response will be completed.

This project will require an EIR fee deposit of \$1,000 payable to the Los Angeles County Fire Department at the time the DEIR is submitted for review (see enclosed). If you have any additional questions, please contact this office at (323) 890-4330.

Very truly yours,

DAVID R. LEININGER, ACTING CHIEF, FORESTRY DIVISION
PREVENTION BUREAU

DRL:sc

Enclosure

LOS ANGELES COUNTY FIRE DEPARTMENT ENVIRONMENTAL REVIEW FEES & DEPOSITS

Effective September 11, 1991, whenever a review for Impact on the fire prevention, natural resources, and/or fire resource allocation responsibilities of the Fire Department is required, as part of the environmental review process, the applicant shall pay a minimum deposit fee of \$1,000 from which actual costs shall be billed and deducted. Additional deposits may have to be made if actual review costs exceed 80% of deposited funds. A larger deposit may be made for more complex projects to ensure prompt continuation of environmental review efforts. All unused funds shall be refunded to the applicant.

All Environmental Review Deposits should be made payable and sent to:

Los Angeles County Fire Department
1320 North Eastern Avenue
Los Angeles, CA 90063-3294
Attn: Fiscal Services Division, Room 225

If you have any questions regarding the Environmental Review Fee or Deposit amount, please call the Forestry Division at (213) 881-2481.

If you have any questions regarding your Environmental Review Deposit status, please contact the Fiscal Services Division at (213) 881-2322.

COUNTY OF LOS ANGELES
DEPARTMENT OF PARKS AND RECREATION

DATE: September 13, 2001

TO: Kerwin Chih
Department of Regional Planning
Impact Analysis Section

FROM: Mr. Larry R. Hensley
County of Los Angeles
Department of Parks and Recreation

SUBJECT: Second Screencheck Draft Environmental Impact Report
Chatsworth Ridge
Project No. 99-239 (5)
Conditional Use Permit/Oak Tree Permit No. 99239
Tentative Tract Map No. 53138
SCH. No. 2000061049

The Department of Parks and Recreation has reviewed the Second Screencheck Draft Environmental Impact Report For the proposed Chatsworth Ridge and hereby provides the following comments:

- Page 1-1: The project description states, there are 538 single family units and the Tract Map indicates there are 485 units. Please verify and correct this discrepancy.
- Page S-2: The first sentence states the four alternatives to the proposed project have been evaluated for environmental impacts section 5.0 including: Alternative 1 - No Project (No Construction), Alternative 2 - No Project (Certificate of Compliance Build-out), and Alternative 3 - Reduced Density. What is the fourth alternative?
- Page S-2: The fourth Sentence in the first paragraph under Alternative 3- Reduced Density, "re" = "be"?
- Page S-3: Summary of Environmental Impacts - states that as shown in Table S-1, implementation of the proposed project would

Kerwin Chih
September 13, 2001
Page 2

not result in significant impacts. Do you mean that the proposed project would not result in unavoidable significant impacts because the project does result in significant impacts, however with the implementation of mitigation measures, the significance decreases to a less significant impact.

- Page S-4 The last sentence of mitigation measure 4.1-2 does not make sense.
- Page S-4 Unavoidable Impacts after mitigation - for all statements that state "no unavoidable significant impacts with the implementation of the proposed project". Include which specific impact area you are discussing. For example, "No unavoidable significant impacts to **Aesthetics/Visual** would result with the implementation of the proposed project"
- Page S-5 The last sentence of mitigation measure 4.2-2.. should say "trucks", not "tricks."
- Page 1-4 The Population/Housing/Employment/Recreation component of Section 1.0 Project Description (Year 2001), should disclose that the county of Los Angeles is currently experiencing a deficit in regional park acreage as documented in *A Parks and Recreation Strategic Plan for 2010* (May 1992). As indicated in the Park Obligation Reports for Tentative Map # 53138, the Proposed project fulfills the requirement for the local parks through a payment of in-lieu fees. However the *County of Los Angeles General Plan* (1980) also requires 6 acres of regional park facilities for every 1,000 residents. Therefore, the project will contribute to the significant cumulative deficit of regional park acreage, thus requiring mitigation. The dedication of the required trail easement (a regional facility will lessen the impacts of the cumulative deficit to a less than significant level.).
- Section 4: It is necessary to include more specific details in all of the prescribed mitigation measures. Each mitigation measure should include the following information: (1) the party of agency responsible for the implementation of the measure, (2) the agency that is responsible for enforcing the measure, (3) the agency that is responsible for the monitoring of the

Kerwin Chih
September 13, 2001
Page 3

activity described in the measure, and (4) the starting point and complete period of time that is required for the monitoring of each measure.

If you have any questions or comments regarding this matter, Please contact Ms. Lillie Lowery, Departmental facility Planner at (213) 738-2977

Sincerely,

Larry Hensley
Acting Chief of Planning

c: Mark Melinkoff
Frank Gonzalez, DPR

1. The first part of the document discusses the importance of maintaining accurate records of all transactions and activities. It emphasizes the need for transparency and accountability in financial reporting.

October 10, 2001

Kerwin Chih, Impact Analysis Section Head
 Los Angeles County Department of Regional Planning
 380 West Temple Street, Room 1348
 Los Angeles, CA 90012

Dear Mr. Chih:

Re: Second Screen Check, Draft EIR for Chatsworth Ridge, Project #99-239(5)

We have reviewed the draft Environmental Impact Report (EIR) submitted for the above project. Chatsworth Ridge is a proposed residential development of five hundred thirty-eight (538) single-family homes in currently rural terrain in unincorporated Los Angeles County. As the report suggests, this project and other projects in the area will necessitate the deployment of additional law enforcement personnel to service the area.

The use of ratios of peace officers to population is a simplistic means of determining staffing levels and works best in an urban environment where there are multiple officers on duty in an area and available to respond to calls. This is clearly not the case with this location. Due to the distance of this location from the other areas served by the Malibu/Lost Hills Sheriff's Station, even with the additional staffing suggested in the EIR, there will probably be some degradation in response times upon build-out of all the projects in the area. This is a result of the distance to be traveled from other areas served by Malibu/Lost Hills Sheriff's Station and the ever increasing traffic delays on the major arterial roadways in the City of Los Angeles needed to access this site. The traffic report which is part of this EIR concedes many of the intersections used to access this project will be gridlocked (Level of Service F) by the time this project is completed.

Mitigation measures that may be considered for this project include:

- 1) Crime prevention by design. The residences should be designed so as to minimize opportunistic crimes against property. Good sight lines; exterior lighting; sound landscape design; and strong exterior doors, windows, and locks all contribute to this end. This may entail a review of building plans by a crime prevention deputy as part of the plan check process.

Kerwin Chih, Section Head

- 2 -

October 8, 2001

- 2) Since one of the largest wastes of law enforcement time involves responding to false residential burglary alarms, it may be appropriate to consider having all the residential alarms in this project serviced by one company (perhaps through the HOA). Many alarm companies fail to properly maintain their systems since they do not fear losing a lone account. Given this would be a 538 unit account contract, there would be greater leverage on the company to take the elimination of false alarms seriously.
- 3) Design culverts, channels, debris basins and other public works-type facilities to minimize their attractiveness as places for youth to congregate. This may include fencing, lighting, and designing the facilities to make them less desirable (i.e. using rough concrete to discourage skateboards.)
- 4) Those items listed in mitigation measure 4.9 -1 of the draft EIR should include a review of street names for duplications, similar names, etc. . . to avoid confusion in dispatching emergency calls to public safety agencies.

Implementation of these measures, coupled with additional staffing, will help to mitigate the impacts this project will present for law enforcement agencies.

I appreciate the opportunity to participate in this process and hope that it may result in an even better project than first suggested. If you have any questions, please contact me or Sergeant Kevin Mauch at (818) 878-1808.

Sincerely,

LEROY D. BACA, SHERIFF

James N. Glazar, Captain
Malibu/Lost Hills Station

APPENDIX B

LAND USE INTERPRETATION MEMORANDUM

Hartman, John

From: Malone, George
Sent: Monday, January 24, 2000 6:35 PM
To: Sanabria, Jon; Holt, Pam; Culbertson, Don
Cc: Hartman, John
Subject: Chatsworth Ridge Estates: Land Use Interpretation

In response to a directive from Mr. Sanabria, I have reviewed the General Plan policy regarding Rural Communities with respect to a proposed development within the Deerlake Highlands Rural Community and submit the following comments.

The issue regarding the Chatsworth Ridge Estates, the name of the proposed development, is over whether the Rural Community land use designation would allow infill densities at low Urban 1 densities. The most relevant passages from the Land Use Element is found on page LU-17 (Background Report) and reads as follows:

"In most instances, the Rural Communities depicted will experience little significant growth by the year 2000. Where further development does occur, it should be of an "infill" nature, consistent with existing community character and service levels. The intent of plan policy is to permit such future development at non-urban, and in some instances, low urban intensities...."

"Review and approval of a specific site plan shall be required within these special Rural Communities to assure the appropriateness of a development proposal in terms of its character, scale and design. Part of this design review shall include an evaluation of fire protection since some of these communities are located in high fire hazard areas and are remote from urban-type services...."

Based on the foregoing, I recommend that staff determine that a proposal in the Rural Community land use category at low urban densities (up to 6 units per acre) could be found consistent with the General Plan, and that the most appropriate form of case review is the filing of a new subdivision and conditional use permit which would allow compliance with the General Plan requirement to ensure adequate hazard mitigation in such areas and the provision of appropriate services and infrastructure requirements.

In do not plan any further write-up of this position.

I was informed by Chuck Moore today that the property owner/potential applicant is anxious to hear from us regarding our position.

George Malone

The remaining two legend items (i.e., Rural Communities and Significant Ecological Areas) reflect key land development and management concepts of the Plan, and directly influence future land use and development activities within the areas covered. They are identified on the Land Use Policy Map to graphically link selected general development, conservation, open space and land use policies, and to illustrate areas in which various conditions and standards for development will apply. Due to graphic limitations, the various types of Special Management Areas identified in the Conservation and Open Space Element are not reflected on the Land Use Policy Map. They are however, addressed in later sections of this chapter (see General Conditions and Standards for Development).

J. Rural Communities

As described in the General Goals and Policies Chapter, Rural Communities are essentially clustered non-urban settlements served by a non-urban level of commercial and public facilities. These communities vary in terms of size and intensity of development, and range in function from rustic bedroom communities within or near highly urbanized communities, to focal points or activity nodes serving more dispersed non-urban areas.

In most instances, the Rural Communities depicted will experience little significant growth by the year 2000. Where further development does occur, it should be of an "infill" nature, consistent with existing community character and service levels. The intent of Plan policy is to permit such future development at non-urban, and in some instances, low urban intensities.

There are instances, however, where identified Rural Communities are associated with existing or emerging regional recreational areas (Gorman, Wrightwood, Mount Baldy Village, and the Santa Catalina Island Two Harbors areas are prime examples⁵). In these cases, provision of visitor accommodations and services may accelerate normal community growth. Such development may be appropriate within the Rural Community classification, providing that it is compatible with the recreational and natural resource assets of the area, and does not create a demand for public investment in major urban service systems.

Review and approval of a specific site plan shall be required within these special Rural Communities to assure the appropriateness of a development proposal in terms of its character, scale and design. Part of this design review shall include an evaluation of fire protection since some of these communities are located in high fire hazard areas and are remote from urban-type services. Special design and development standards need to be included in the planning and construction phases. In reviewing and approving such projects, the County shall consider the fire standards set forth in the "Fire Safe Guides for Residential Development in California."

⁵ The Two Harbors area will be the subject of a detailed plan, to be included as part of the Local Coastal Program for Santa Catalina Island.

prepared by the California Department of Forestry. The specific standards will be recommended by the Los Angeles County Forester and Fire Warden. Consideration shall be given to access/traffic conditions, street and building identification, roadside vegetation, water supply, roofing, building construction standards, vegetation clearance, and building spacing and densities.

K. Significant Ecological Areas

The Significant Ecological Areas classification (SEA) identifies lands having important biological resources. This classification, as set forth in the Conservation and Open Space Element, includes habitats of rare and endangered species, sites with critical fish and wildlife values, relatively undisturbed areas of typical natural habitat and regionally scarce biotic resources.⁶ The intent of the countywide General Plan is to preserve and enhance, to the extent possible, SEAs for the benefit of present and future County residents.

In addition to regulated scientific study and limited recreational activities, a range of more intensive uses may be permitted within SEAs where it can be demonstrated by a detailed biotic survey and project analysis that the proposed development is highly compatible with the resource values present. In the absence of specific project proposals and detailed biotic data, the countywide Land Use Element has not attempted to identify, in other than the most general terms, appropriate use types and intensities within significant ecological areas. The Element does however set forth the general process and criteria for evaluating specific use proposals as they arise (see General Conditions and Standards for Development).

⁶ The Significant Ecological Area/Habitat Management classification includes Buffer Areas depicted on the Special Management Areas Policy Map of the Conservation and Open Space Element.

Dear Mr. Edelman:

SALE OF COUNTY-OWNED DEERLAKE HIGHLANDS PROPERTY

On December 9, 1997, the County Board of Supervisors approved the sale of the County-owned lots located in the Deerlake Highlands area to the Mountains Recreation and Conservation Authority as designee of the Santa Monica Mountains Conservancy.

We are prepared to issue a quitclaim deed to complete this transaction at such time as a check in the amount of \$1,150,00 is received made payable to the County of Los Angeles.

We also request that you advise us in writing as to how title to this property shall be vested on the deed.

If you have any questions, please call me at (213) 738-2319.

Very truly yours,

Greg Merrel
Real Property Agent

c. Hans Giraud

County of Los Angeles
383 Kenneth Hahn Hall of Administration
500 West Temple Street
Los Angeles, CA 90012

Dear Supervisors:

**CONVEYANCE OF COUNTY SURPLUS REAL PROPERTY TO THE
STATE OF CALIFORNIA SANTA MONICA MOUNTAINS CONSERVANCY
DEERLAKE HIGHLANDS AREA (FIFTH DISTRICT) (4 VOTES)**

IT IS RECOMMENDED THAT YOUR BOARD:

1. Make a finding that all County-owned lots located in the DeerlakeHighlands area, shown on the attached map and legally described in Exhibit "A", are not required for County use.
 2. Make a finding that the sale of this property to the Santa Monica Mountains Conservancy is exempt under CEQA.
 3. Approve the sale of this property to the Santa Monica Mountains Conservancy for the sum of \$1,150,000.
 4. Instruct the Chairman to execute the quitclaim deed upon presentation by the Chief Administrative Office, and execute any other such deeds as may be necessary to convey all of the County's ownership in this area.
 5. Authorize the Chief Administrative Office to execute all documents necessary to complete the sale transaction, upon approval by County Counsel.
 6. Instruct the Auditor-Controller to deposit the net proceeds in the appropriate fund(s) as directed by the Chief Administrative Office.
-

PURPOSE OF RECOMMENDED ACTION:

During the 1950s and 1960s, the County acquired, through tax defaults, a large number of substandard subdivided lots in the Deerlake Highlands area. This holding now consists of approximately 1300 lots, which due to their location and physical characteristics, have been designated for Mountain Preserve purposes. As shown on the attached map, these properties are located northerly of the Simi Valley-San Fernando Valley (118) Freeway, in the foothills of the Santa Susana Mountains, west of the Brown's Canyon area. These lots exist as vacant, raw land without any infrastructure. The County's property has limited access, and is interspersed with privately owned lots.

Deerlake Highlands is within the Santa Monica Mountains zone, and the Conservancy, pursuant to Public Resources Code Section 32207, has the first right of refusal to acquire any publicly owned property that may be declared excess by a public agency. The Conservancy has approached the County and expressed its interest in acquiring this property in order to effect an exchange with a private developer. This transaction will enable the Conservancy to gain ownership and control of other ecologically sensitive acreage in the area.

JUSTIFICATION:

This Office has evaluated the County's Mountain Preserve Program, and has determined that this conveyance to the Conservancy is consistent with the Program's original intended purpose. While the majority of the County property would eventually be developed with residential estates, the surrounding acreage acquired by the Conservancy in exchange with the developer, would be dedicated to the preservation of mountainous open space for continued wildlife use as a corridor to the Browns Canyon area. The Conservancy would retain some of the County lots totaling approximately 14 acres, which would connect the City of Los Angeles's open space in the Brown's Canyon area with that open space dedicated by the Porter Ranch development. In addition, the Conservancy will obtain ownership of 16 acres, which will provide a habitat linkage for maintaining the wildlife movement into the Stoney Point habitat area.

The Honorable Board of Supervisors

Date

Page 3

FISCAL IMPACT:

The Conservancy has agreed to pay the County the sum of \$1,150,000. The exchange of the County's property by the Conservancy with a developer will restore these lots to the tax rolls. In addition, the tax values of all the property in this area will be enhanced when the developer consolidates all these substandard lots into residential estate parcels.

FACTS AND PROVISIONS:

The Santa Monica Mountains Conservancy, at its meeting of September 15, 1997, adopted Resolution No. 97 which; 1) found that the proposed acquisition and exchange will not have a significant adverse impact on the environment; 2) approved the Negative Declaration; 3) authorized the acquisition of the County lots in the Deerlake Highlands subdivision; and 4) approved a land exchange agreement between the Conservancy, Mountains Recreation and Conservation Authority, and the developer, Chatsworth Ridge Estates, Inc.

The value of \$1,150,000 for the County's property was negotiated based on two separate appraisals. These valuations, one by an independent appraiser, and the other by the Valuation staff of the Department of Public Works, resulted in significantly lower value conclusions than the negotiated amount. This sum is full consideration for the conveyance of all County owned lots in this area, as set forth in Exhibit "A".

Public Resources Code Section 33207 grants the Conservancy the right of first refusal on any property within the Santa Monica Mountains zone presently owned by a public agency and scheduled for disposal as excess lands. The Code stipulates the Conservancy may purchase the property at the agency's original acquisition price plus any administrative and managements costs incurred by that agency.

The County acquired all these lots by various Tax Deeds which required the payment of one dollar plus advertising costs. The Conservancy is exercising its right of first refusal, but has agreed to pay the County fair market value to be funded by the private developer.

The sale of this property by the County is authorized by California Government Code Section 25365.

County Counsel has reviewed the proposed transaction, and approved all documents as to form.

The Honorable Board of Supervisors

Date

Page 4

IMPACT ON CURRENT SERVICES (OR PROJECTS):

There will be no impact on County services.

ENVIRONMENTAL IMPACT:

The sale of this property is categorically exempt under Class 12 of the State CEQA and the revised Environmental Document Reporting Procedures and guidelines adopted by your Board. However, the Conservancy prepared an environmental impact report for the acquisition of this property, and a Negative Declaration was approved at its Board meeting of September 15, 1997.

CONCLUSION:

The Executive Officer/Clerk of the Board is requested to return to the Chief Administrative Office, Leasing and Space Management, one copy of this stamped adopted Board letter, and the original quitclaim deed when executed by the Chairman upon preparation by the Chief Administrative Office and approval by County Counsel.

Respectfully submitted,

DAVID E. JANSSEN
Chief Administrative Officer

Deerlake Highlands Subdivision Surplus Property Sale

Dear Mr. Merrel:

On September 15, 1997 the Conservancy adopted a resolution approving the purchase of the subject County-owned lots in the Deerlake Highlands Subdivision (attached). Both because it is the Conservancy that statutorily has the first right of refusal, and because it is more advantageous for the Conservancy, rather than our joint powers entity the Mountains Recreation and Conservation Authority (MRCA), it is the Conservancy that will take title to all of the subject lots.

Because of the complexity of this agency's proposed transaction with Chatsworth Ridge Estates, it appears that our payment to the County and the transfer of the grant deeds would best be tied into an escrow. In addition, a condition for the close of that escrow shall be approval of the transfer by the State Public Works Board. That could extend the escrow period significantly depending on the date the item is considered by the Board.

If need be, we could explore the possibility of the MRCA being the Conservancy's designee for the transfer. I will research the practicability of that route on our end. Please call me at (310) 589-3200 if you can provide any additional information.

Sincerely,

A handwritten signature in black ink, appearing to read "Paul Edelman".

Paul Edelman
Northern Division Deputy Chief

September 15, 1997 - Item No. 12
Resolution No. 97

RESOLUTION OF THE SANTA MONICA MOUNTAINS CONSERVANCY
TO APPROVE: (1) NEGATIVE DECLARATION FOR PROPOSED DEERLAKE
HIGHLANDS SUBDIVISION LAND EXCHANGE WITH CHATSWORTH RIDGE
ESTATES, INC.; (2) PURCHASE OF LOS ANGELES COUNTY SURPLUS LAND IN
DEERLAKE HIGHLANDS SUBDIVISION; (3) LAND EXCHANGE AGREEMENT WITH
CHATSWORTH RIDGE ESTATES, INC., AND THE MOUNTAINS RECREATION AND
CONSERVATION AUTHORITY, AND (4) ACQUISITION OF CONSERVATION
EASEMENT ON APN: 2818-021-002, LOS ANGELES COUNTY

- WHEREAS, The Deerlake Highlands Subdivision in Devil and Browns Canyons of the Santa Susana Mountains is composed of numerous substandard lots and streets; and
- WHEREAS, Los Angeles County has become the primary landowner in the subdivision as a result of property tax default; and
- WHEREAS, The Conservancy has the first right of refusal on any property within the Santa Monica Mountains zone that is scheduled for disposal as excess land; and
- WHEREAS, The Conservancy is authorized to restore areas which, because of scattered ownerships, poor lot layout, inadequate lot size, and other conditions impeding orderly development, adversely affect the environment; and
- WHEREAS, The County of Los Angeles' Chief Administrative Office has agreed to sell 1,304 lots in the Deerlake Highlands Subdivision to the Conservancy at a specific appraised value;
- WHEREAS, Chatsworth Ridge Estates, Inc. (CRE) has agreed to provide all funds to the Conservancy for the purchase of said County surplus lots; and
- WHEREAS, A draft land exchange agreement between CRE, the Mountains Recreation and Conservation Authority (MRCA), and the Conservancy for the exchange of specific portions of the County surplus lots, additional open space, and monetary compensation has been prepared; and
- WHEREAS, The subject draft land exchange agreement between the Conservancy, the MRCA, and CRE (Agreement) contains provisions that significantly remedy both existing and potential problems with the disorderly development of land in the Deerlake Highlands Subdivision; and

WHEREAS, The Agreement also significantly reduces the potential threat of inappropriate development to the north of this subdivision area, provides a minimum of 31 acres of fee title open space area to the Conservancy, and provides substantial immediate and long-term monetary benefits for park operations and improvements to the MRCA; and

WHEREAS, The Conservancy has requested additional modifications and assurances the Agreement to further limit potential road access north of the Deerlake Highland Subdivision; and

WHEREAS, Permanent protection of the western portion of APN 2818-021-002, the Horner property, would significantly enhance existing, and any future, wildlife movement capability through the Canoga Avenue-118 Freeway underpass; and

WHEREAS, The Horner property, as a subset of the Brown's Canyon project (Resolution number 97-36), is a high priority on the Conservancy's adopted Workprogram for the Safe Neighborhood Parks Act of 1996 that was approved by the Los Angeles County Board of Supervisors; and

WHEREAS, A Negative Declaration has been prepared that addresses the potential environmental impacts of the Conservancy purchasing the subject County-owned parcels, of the draft land exchange agreement between the Conservancy, MRCA and CRE, and of acquisition of the Horner property; and

WHEREAS, No comments were received regarding the Negative Declaration and a Notice of Determination has been filed that the subject actions will not result in any significant adverse impacts to the environment; and

WHEREAS, The proposed actions are consistent with the Rim of the Valley Trail Corridor Plan; and

WHEREAS, The staff report and staff report addendum, both dated September 15, 1997, provide further information and recommend adoption of said actions; NOW

THEREFORE BE IT RESOLVED, That the Santa Monica Mountains Conservancy hereby:

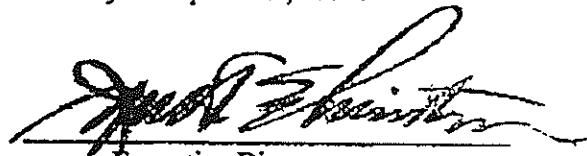

1. FINDS that the proposed actions will not have a significant adverse impact on the environment.

2. APPROVES the Negative Declaration, entitled, "Deerlake Highlands Subdivision Surplus Land Acquisition and Partial Transfer."
3. AUTHORIZES the acquisition of 1,304 lots in the Deerlake Highlands Subdivision from Los Angeles County using funds provided by CRE.
4. APPROVES the draft land exchange agreement between the Conservancy, the MRCA and CRE, subscript dated September 12, 1997.
5. AUTHORIZES the acceptance of approximately 17 acres of land in Devil Canyon from CRE.
6. AUTHORIZES the acquisition of a conservation easement over APN 2818-021-002 using funds provided in part from CRE and through the land exchange agreement or from Section 3(c)(2)(FF)(xiii) of the Los Angeles County Safe Neighborhood Parks Act of 1996.
7. REQUIRES that staff negotiate additional protections to limit road access across the northern boundary of the Deerlake Highlands Subdivision.
8. ADOPTS the staff report and recommendation dated September 15, 1997.
9. AUTHORIZES the Executive Director of the Santa Monica Mountains Conservancy, in accordance with Division 23 of the Public Resources Code, to take such steps as necessary to ensure execution and completion of the aforementioned project as specified in the staff report dated September 15, 1997 or by other conditions as he may deem necessary to safeguard the expenditure of funds or to otherwise comply with the law.
10. FINDS that the project is consistent with the Rim of the Valley Trail Corridor Master Plan.

-End of Resolution-

I HEREBY CERTIFY that the foregoing resolution was adopted at a regular meeting of the Santa Monica Mountains Conservancy held on the 15th day of September, 1997.

Dated: **SEP 15 1997**

**NOTICE OF AVAILABILITY FOR PUBLIC REVIEW
MITIGATED NEGATIVE DECLARATION**

- Date:** August 13, 1997
- To:** All Interested Parties
- From:** Santa Monica Mountains Conservancy
- Project Name:** Deerlake Highlands Subdivision Surplus Land Acquisition and Partial Transfer
- Applicant:** Santa Monica Mountains Conservancy (Lead Agency)
- Project Location:** The project is located in an unincorporated portion of Los Angeles County immediately north of the Chatsworth District of the City of Los Angeles. The property is accessed from the northern terminus of Canoga Avenue just north of the Simi Valley (118) Freeway. All of the subject areas falls within the Brown's and Devil Canyon watersheds which join just east of the project area. Both of these canyons are located on the portion of the south-facing slope of the Santa Susana Mountains that drains into the San Fernando Valley and the Los Angeles River. The project area includes a portion of the historic Twin Lakes subdivision area and the majority of the historic Deerlake Highlands subdivision.
- Project Description:** The Santa Monica Mountains Conservancy (SMMC) proposes to exercise its first right of refusal to purchase 71.02 acres composed of 1,304 substandard lots in the 1927 Deerlake Highlands subdivision from Los Angeles County as surplus property with funding from Chatsworth Ridge Estates, Inc. (CRE). CRE receives 57 acres. SMMC receives 14 acres plus an additional 16.5 adjacent acres and immediate and long-term monetary compensation from CRE for local park improvements and to fund one local park ranger position.
- Effects of Project:** The Lead Agency found that there is no substantial evidence that there will be significant adverse environmental impacts associated with this project with the incorporation of specifically identified mitigation measures.

This is to advise that Santa Monica Mountains Conservancy has prepared a Mitigated Negative Declaration for the project identified above. As mandated by State law, the minimum public review period for this document is thirty (30) days. The 30-day comment period for this document closes on September 15, 1997.

Notice of Availability

Deerlake Highlands Subdivision Surplus Land Acquisition and Partial Transfer
SMMC

August 13, 1997

Page 2

The document, and supporting information, are available for review at the headquarters of the Santa Monica Mountains Conservancy, 5750 Ramirez Canyon Road, Malibu, CA 90265. Anyone interested in the matter is invited to comment on the Mitigated Negative Declaration by written response. Written responses should be sent to the above address, attention Paul Edelman, and faxed responses should be sent to (310) 589-3207. Testimony at future public hearings may be limited to those issues raised during the public review period. Calls regarding the project, the date and place of any public hearings, and the Mitigated Negative Declaration should be directed to Paul Edelman at (310) 589-3200 ext. 128.

A public hearing has been scheduled to consider comments on the document and the proposed project at the regularly scheduled meeting of the Santa Monica Mountains Conservancy on September 15, 1997 beginning at 7:30 pm. Please call the Conservancy's Board Secretary at (310) 589-3200 ext. 118 for information regarding the location of the public hearing. The meeting is tentatively scheduled to occur in the City of Simi Valley at the headquarters of the Rancho Simi Recreation and Park District at 1692 Sycamore Drive.

Paul Edelman
Deputy Division Chief

PROJECT INFORMATION AND INITIAL STUDY

Deerlake Highlands Subdivision Surplus Land Acquisition and Partial Transfer

Applicant: Santa Monica Mountains Conservancy

Lead

Agency: Santa Monica Mountains Conservancy

Project

Location: The project is located in an unincorporated portion of Los Angeles County immediately north of the Chatsworth District of the City of Los Angeles. The property is accessed from the northern terminus of Canoga Avenue just north of the Simi Valley (118) Freeway. All of the subject areas falls within the Brown's and Devil Canyon watersheds which join just east of the project area. Both of these canyons are located on the portion of the south-facing slope of the Santa Susana Mountains that drains into the San Fernando Valley and the Los Angeles River. The project area includes a portion of the historic Twin Lakes subdivision area and the majority of the historic Deerlake Highlands subdivision. A vicinity map and a project boundary are attached.

Project

Description: The subject project is comprised of four main parts as follows:

- 1] The Santa Monica Mountains Conservancy (Conservancy) purchases 71.02 surplus acres from Los Angeles County in the Deerlake Highland subdivision using funds from Chatsworth Ridge Estates, Inc.
- 2] The Conservancy transfers approximately 57 of those 71 acres to Chatsworth Ridge Estates, Inc. and retains approximately 14 acres in fee.
- 3] Simultaneous with the escrow which transfers the 57 acres to Chatsworth Ridge Estates, Inc., the Santa Monica Mountains Conservancy, or its designee, would receive an additional 16.5 acres just south of the Deerlake Highlands Subdivision.
- 4] In the same simultaneous escrow CRE would pay, the Conservancy, or its designee, \$165,000 to build related trail staging areas, trail connectors, to purchase trail or conservation easements, or to acquire additional related property in fee. Of this amount, \$15,000 would be directed to related ranger services and maintenance.

For the first, second, and third years from the date of escrow closure (1998-2000), Chatsworth Ridge Estates, Inc. (CRE) or its successor, shall pay the

Deerlake Highlands Subdivision
Project Information- Mitigated Negative Declaration
Page 2

For the first, second, and third years from the date of escrow closure (1998-2000), Chatsworth Ridge Estates, Inc. (CRE) or its successor, shall pay the Conservancy, or its designee, \$24,000, \$30,000, and \$45,000, respectively, to pay for related ranger services and maintenance. For all subsequent years, in perpetuity or for the life of the proposed development, CRE, or its successor, shall pay the Conservancy, or its designee, \$60,000 on the anniversary date of the escrow closure. A trust fund in the name of the Conservancy, or its designee, shall be set up by the anniversary date in 2001 that guarantees such payments to the Conservancy.

Attached maps show the relationships and boundaries of these properties.

Detail on Project Part One: The Deerlake Highlands subdivision, which is composed of 1,923 recorded lots, was created in 1927. The majority of this small lot subdivision is located on a natural bench to the north of Devil Canyon Creek. At some point, virtually all of the flat area on this bench was scraped clear and a road system and an above ground water system were installed. A minimum of several dozen dwellings were occupied in a resort type community. The total acreage of the Deerlake Highlands subdivision is 125.75 acres. The dimension of the subdivision area is approximately 4,500-feet by 1,500-feet.

To date, Los Angeles County has assumed ownership of 1,304 of these 1,923 lots through property tax default. These 1,304 County-owned lots occupy an area of 71.02 acres. The remaining 619 lots are owned by multiple private parties including CRE and potential related business entities. Only two of these private lots currently contain inhabited houses. Several old foundations, much of the old internal road system, and multiple old water pipes are evident across the property. The only vehicular access to the area is via unimproved Saugus Road that originates from the terminus of Canoga Avenue and crosses Devil Canyon on a one lane bridge. The only existing services are phone and electricity.

The project entails the County declaring the subject 1,304 lots surplus and the Conservancy exercising its first right of refusal [Public Resources Code Section 33207(b)] to purchase the lots. The Conservancy would acquire the lots (71.02 acres) with funds from CRE. The purchase price for the 1,304 lots has been determined by an appraisal agreed upon by the County and CRE. CRE also owns an unspecified number of additional lots within the subdivision.

Detail on Project Part Two: In a simultaneous escrow with the Conservancy's purchase of the land from the County, the Conservancy would transfer an approximately 57-acre portion of the 71.02 acres to CRE. Approximately 14 acres

would remain in fee to the Conservancy.

Of the 1,304 County-owned lots, the Conservancy would retain 215 whole lots and portions of 175 lots that make up the 14 acre total. A considerable portion of this acreage is located in the Brown's Canyon watershed with a few lots on the east side of Brown's Canyon Road. With the following exceptions, the 14 acres would give the Conservancy a contiguous band (minimum width of 10 feet) of fee ownership around the subject portion of the Deerlake Highlands subdivision:

- 1] Two 175-foot-wide and four approximately 90-foot wide gaps along the 4,250-foot-wide northern subdivision boundary.
- 2] An easement for CRE to put a two-lane access road into the southwestern corner of the subdivision area via a clear span bridge across Devil Creek
- 3] A 2,125-foot gap along the southern boundary where the project area contacts the Twin Lakes subdivision.

Detail on Project Part Three: In the same simultaneous escrow, the Conservancy would receive a minimum of 16.5 additional contiguous acres from CRE that are located immediately south of Deerlake Highlands along Devil Creek. These 16.5 acres currently function as a wildlife movement corridor to Brown's Canyon. A minimum 60-foot-wide strip of land would provide a habitat linkage to the Canoga Avenue undercrossing beneath the 118 Freeway for the purpose of maintaining wildlife movement into the Stoney Point habitat area. This 60-foot-wide strip would be broken by the existing access road to the Twin Lakes community from Canoga Avenue. The 16.5 acres also connect to City of Los Angeles open space in Brown's Canyon that leads to the Brown's Canyon open space dedication from the Porter Ranch Specific Plan.

In combination with this City of Los Angeles property, a contiguous ring of public fee ownership would surround all of the undeveloped portion of the Twin Lakes subdivision located north of Devil Creek. CRE would retain two easements to put two-lane roads across Devil Creek via clear span bridges to connect to Saugus Road or Mayan Drive. CRE intends to file a tract map to develop unsubdivided portions of the Twin Lakes area in combination with a series of existing recorded lots. Access would come over one or two of these bridges depending on whether or not another secondary access is developed. An attached map shows the relationships and boundaries of these described properties.

Detail on Project Part Four: Also as part of the same escrow, CRE will provide the Conservancy, or its designee, \$165,000 to build related trail staging areas, trail connectors, to purchase trail or conservation easements, or to acquire additional related property in fee. Of this amount, \$15,000 would be directed to related ranger services and maintenance.

Two related areas that could benefit greatly from trail construction and construction of a staging area, are the Conservancy's existing Devil Canyon open space and the proposed northern addition to Stoney Point park by the City of Los Angeles. However, separate documentation under the California Environmental Quality Act would be required for each of these projects.

The principal payment to the Conservancy would be for CRE to fund the establishment of a special endowment to fund one Mountains Recreation and Conservation Authority ranger position for the southern Santa Susana Mountains and the northern Simi Hills. The proposed mechanisms and safe guards to develop such an endowment have not been finalized.

In the time period prior to the completion of the endowment, CRE must make the following payments to the Conservancy, or its, designee. For the first, second, and third years from the date of escrow closure (1998-2000), CRE or its successor(s), shall pay the Conservancy, or its designee, \$24,000, \$30,000, and \$45,000, respectively, to pay for related ranger services and maintenance. For all subsequent years, in perpetuity or for the life of the proposed development, CRE, or its successor(s), shall pay the Conservancy, or its designee, \$60,000 on the anniversary date of the escrow closure. The said endowment to generate such funding shall be set up by the escrow closure anniversary date in 2001.

General Plan Designation:	Rural Residential
Current Zoning:	R-1-6000 in Deerlake Highlands, A-1-1 in Twin Lakes area
Existing Use:	Public (County) and private open space.
Proposed Use:	Public parkland and potential residential development.
Surrounding Land Uses:	Public parkland, County-owned open space and flood control easements, private undeveloped land, high and low density residential.

Environmental
Setting:

The south facing slope of the Santa Susana Mountains support a variety of scrub and annual grassland vegetation communities with deeply incised drainages that support extensive oak woodland and riparian plant assemblages. Both Brown's and Devil Canyon contain extensive riparian vegetation and periodic stretches of perennial surface water even in the driest years. Deerlake Highlands occupies a broad sandstone bench between these two drainages. Chaparral plant communities dominated by chamise (*Adenostoma fasciculatum*) cover most of the more level areas that were repeatedly disturbed between 1927 and the 1960s. Most of the bench sits at approximately 1,450 above sea level. The habitat to the north of the subdivision can be characterized as part of the core habitat of the central Santa Susana Mountains ecosystem. Much of the habitat south of the subdivision is of excellent quality also and remains remote because of topographic isolation. Los Angeles County Significant Ecological Area Number 21 lies several thousand feet to the west. The Conservancy's 70-acre Devil Canyon open space abuts the western end of the subdivision.

Project Background and Purpose

Public Resources Code Section 33204 states, in part, as follows:

The conservancy may, in accordance with the priorities of the plan, do the following:

(a) Award grants or make interest-free loans to cities, counties, and recreation and park districts for the purpose of restoring areas which, because of scattered ownerships, poor lot layout, inadequate lot size, inadequate park and open space, incompatible land uses, or other conditions, are adversely affecting the Santa Monica Mountains environment or are impeding orderly development.

The Deerlake Highlands subdivision is composed of 1,923 lots of substandard size, that are poorly laid out and poorly accessed. Ownership is highly scattered. Los Angeles County is by far the largest land owner and owns 1,304 of these lots. The County has no purpose for these lots and desires to sell them to generate much needed revenue. If the County were to declare the lots surplus, the Conservancy would statutorily have the first right of refusal. The location, past land use, scattered ownership pattern, and costs of acquiring such lots make it improbable that the Conservancy would acquire a sufficient number of lots to eliminate development over large areas of the subdivision.

Over time, additional residences would be constructed in the subdivision. The pattern, nature and rate of such development cannot be accurately surmised.

In addition, over 100 acres of additional, undeveloped but highly subdivided land is situated immediately north of the Deerlake Highlands subdivision.

The proposed project provides an opportunity to favorably shape future growth within the Deerlake Highlands subdivision and to limit future inappropriate growth in surrounding open space areas. Simultaneous with these balanced, but not optimal, effects on potential land use (within areas that were subdivided to a level exceeding landscape constraints) this project provides a set of substantial, related public benefits.

CRE controls approximately 90% of the undeveloped, subdivided property in the adjacent Twin Lakes community and another 50+ acres that are part of Tentative Tract Map No. 49163.

This immediate area near the confluence of Devil and Brown's Creeks represents both an important ecological and recreational hub. The attached maps show a significant ring of existing public ownership around this area. Destination parkland exists immediately upstream from this hub in both Devil and Brown's Canyons. The potential for additional future contiguous public open space up each drainage is vast. City of Los Angeles Trail Plans reflect these connections.

Given CRE's substantial interest and control in this area, the opportunity exists to "lock in" substantial trail and open space connections that otherwise could not be made without an

aggregated ownership. The potential also exists to develop a comprehensive plan that mitigates future problems associated with a mass block of substandard lots and to contain such an area with a perimeter of fee title parkland or green belt. This project provides over 31 acres of open space, several trail connections, a full time funded ranger position, and \$125,000 for further enhancement to this immediate area.

Any comprehensive development of the areas addressed in this document would require a Conditional Use Permit for development in a Hillside Management which in turn triggers extensive review under the CEQA process. The proposed project involves no development. This Negative Declaration only addresses the impacts of transferring land to CRE and receiving land and other compensation in return.

In any case, all of the raw land discussed in this proposal was surveyed by one of the most respected biologists in Los Angeles County. The result was that no state or federally listed plant or animal species reside with the Deerlake Highlands subdivision. See attached letter from Envicom Corporation dated November 11, 1996 regarding the presence of some unlisted but sensitive species.

Mitigation Measures

To further mitigate any potential impacts associated with the Conservancy transferring approximately 57 acres of ownership in the Deerlake Highlands subdivision to CRE, CRE agrees to provide the following measures to be recorded in a written agreement with the Conservancy.

1. Any bridges over Devil Creek will be of clear span design that avoids impacts within the stream bed.
2. Any post-project undeveloped land between developed areas and Conservancy property shall be offered to the Conservancy as a conservation easement area.
3. No structures or appurtenant facilities shall be sited such that any brush clearance is required on the Conservancy's existing 70-acre Devil Canyon open space parcel (APN 2821-024-007). Hence a minimum 100-foot-wide setback area will be required in the northwest corner of the land transfer area.

Attn.: Doug Riley

Subj.: Preliminary Biological Site Assessment
Chatsworth Ridge Estates

Dear Mr. Riley:

The purpose of this letter is to apprise you of the results of our field investigation of the subject property to the existence of any listed rare, threatened, or endangered plants and animals thereon. Envicom Corporation's onsite surveys were conducted by Mr. Carl Wishner, Principal Biologist. Our observations indicate that no state or federally threatened or endangered plant or animal species currently reside on the site. In addition to general observations, the survey consisted of a focused search for the Santa Susana tarplant, a state-listed rare species. No individuals of this species were found within the project site, although several were noted on an adjacent property. Literature review of the California Department of Fish and Game's Natural Diversity Data Base (CNDDDB) also showed that no state or federally listed species have been previously observed or mapped on the project site. Several sensitive, but non-listed plant and animal species are present, however, impacts to these species are not presently regulated under state or federal Endangered Species Acts. In addition, our review of the County of Los Angeles Significant Ecological Areas (SEA) map indicates that Phase I is clearly outside any designated SEA.

Regarding wetland resources on the project site, we understand that two span-type bridges are proposed. In light of the regulatory requirements for the alteration of, or disturbance to wetland habitat, use of the bridge type will eliminate time-consuming and costly regulatory processes. The California Department of Fish and Game (CDFG), under Fish and Game Code 1600-1603, is authorized to review all projects that would alter any bed, bank, or channel of a watercourse, including riparian habitat. If impacts are proposed to any watercourse, the applicant must apply for a Section 1603 Agreement and must comply with all of its terms and conditions. Such terms and conditions could involve expensive mitigation requirements and time delays. The same is true for the US Army Corps of Engineers, the federal agency with jurisdiction over waters of the U.S. and wetlands. Section 404 of the Clean Water Act requires that disturbances to streamcourses must be avoided, minimized, or compensated. In conjunction with the Section 404 permit, an applicant is also required to obtain 401 Water Quality Certification from the Regional Water Quality Control Board. In light of these layers of regulatory control, the best and most efficient alternative is to completely avoid impacts to wetlands. Under those circumstances the applicant need only notify the agencies of the work and ensure that all construction avoids these regulated areas.

If you would like further information regarding our work, please do not hesitate to call.

Sincerely,

Katherine Patey

ENVIRONMENTAL INITIAL STUDY CHECKLIST FORM

Project Name: **Deerlake Highlands Subdivision Surplus Land Acquisition and Partial Transfer**

Applicant: **Santa Monica Mountains Conservancy - Lead Agency
5750 Ramirez Canyon Road
Malibu, CA 90265
(310) 589-3200 ext. 128**

Environmental Impacts

Checklist categories reflect an evaluation of the likelihood of potential significant, adverse environmental impact. An asterisked (*) item indicates that an explanation or discussion is provided in the Checklist Addendum Sheet, as well as a mandatory explanation of all "yes" and "maybe" answers.

	<u>YES</u>	<u>MAYBE</u>	<u>NO</u>
I. LAND USE AND PLANNING. Would the proposal:			
(a) Conflict with general plan designation or zoning?			X
(b) Conflict with applicable environmental plans or policies adopted by agencies with jurisdiction over the project?			X
(c) Be incompatible with existing land use in the vicinity?			X
(d) Affect agricultural resources or operations (e.g. impacts to soils or farmlands, or impacts from incompatible land uses)?			X
*(e) Disrupt or divide the physical arrangement of an established community (including a low-income or minority community)?			X
II. POPULATION AND HOUSING. Would the proposal:			
(a) Cumulatively exceed official regional or local population projections?			X
*(b) Induce substantial growth in an area either directly or indirectly (e.g. through projects in an undeveloped area or extension of major infrastructure)?			X
(c) Displace existing housing, especially affordable housing?			X

	<u>YES</u>	<u>MAYBE</u>	<u>NO</u>
III. GEOLOGIC PROBLEMS. Would the proposal result in or expose people to potential impacts involving:			
(a) Fault rupture?			X
(b) Seismic ground shaking?			X
(c) Seismic ground failure, including liquefaction?			X
(d) Seiche, tsunami, or volcanic hazard?			X
(e) Landslides or mudflows?			X
(f) Erosion, changes in topography or unstable soil conditions from excavation, grading, or fill?			X
(g) Subsidence of the land?			X
(h) Expansive soils?			X
(i) Unique geologic or physical features?			X
IV. WATER. Would the proposal result in:			
(a) Changes in absorption rates, drainage patterns, or the rate and amount of surface runoff?			X
(b) Exposure of people or property to water related hazards such as flooding?			X
(c) Discharge into surface waters or other alteration of surface water quality (e.g. temperature, dissolved oxygen or turbidity)?			X
(d) Changes in the amount of surface water in any body of water?			X
(e) Changes in currents, or the course or direction of water movements?			X
(f) Change in the quantity of ground waters, either through direct additions or withdrawals,			X

	<u>YES</u>	<u>MAYBE</u>	<u>NO</u>
or through interception of an aquifer by cuts or excavations or through substantial loss of groundwater recharge capability?			X
(g) Altered direction or rate of flow of groundwater?			X
(h) Impacts to groundwater quality?			X
(i) Substantial reduction in the amount of groundwater otherwise available for public water supplies?			X
V. AIR QUALITY. Would the proposal:			
(a) Violate any air quality standard or contribute to an existing or projected air quality violation?			X
(b) Expose sensitive receptors to pollutants?			X
(c) Alter air movement, moisture, or temperature, or cause any change in climate?			X
(d) Create objectional odors?			X
VI. TRANSPORTATION/CIRCULATION. Would the proposal result in:			
(a) Increased vehicle trips or traffic congestion?			X
(b) Hazards to safety from design features (e.g. sharp curves or dangerous intersections) or incompatible uses (e.g. farm equipment)?			X
(c) Inadequate emergency access or access to nearby uses?			X
(d) Insufficient parking capacity on-site, or off-site?			X
(e) Hazards or barriers for pedestrians or bicyclists?			X
(f) Conflicts with adopted policies supporting alternative transportation (e.g. bus turnouts, bicycle racks)?			X

	<u>YES</u>	<u>MAYBE</u>	<u>NO</u>
(g) Rail, waterborne or air traffic impacts?			X
VII. BIOLOGICAL RESOURCES. Would the proposal result in impacts to:			
(a) Endangered, threatened or rare species or their habitats (including but not limited to plants, fish, insects, animals and birds)?			X
(b) Locally designated species (e.g. heritage trees)?			X
(c) Locally designated natural communities (e.g. oak forest, coastal habitat, etc.)?			X
(d) Wetland habitat (e.g. march, riparian and vernal pool)?			X
(e) Wildlife dispersal or migration corridors?			X
VIII. ENERGY AND MINERAL RESOURCES. Would the proposal:			
(a) Conflict with adopted energy conservation plans?			X
(b) Use non-renewable resources in a wasteful and inefficient manner?			X
(c) Result in the loss of availability of a known mineral resource that would be of future value to the region and the residents of the state?			X
IX. HAZARDS. Would the proposal involve:			
(a) A risk of accidental explosion or release of hazardous substances (including, but not limited to: oil, pesticides, chemicals or radiation)?			X
(b) Possible interference with an emergency response plan or emergency evacuation plan?			X

YES

MAYBE

NO

- (c) The creation of any health hazard or potential health hazard?
- (d) Exposure of people to existing sources of potential health hazards?
- (e) Increased fire hazard in areas with flammable brush, grass or trees?

X

X

X

X. **NOISE.** Would the proposal result in:

- (a) Increases in existing noise levels?
- (b) Exposure of people to severe noise levels?

X

X

XI. **PUBLIC SERVICES.** Would the proposal have and effect upon, or result in a need for new or altered government services in any of the following areas?

- (a) Fire protection?
- (b) Police protection?
- (c) Schools?
- (d) Maintenance of public facilities, including roads?
- * (e) Other governmental services?

X

X

X

X

X

X

XII. **UTILITIES AND SERVICE SYSTEMS.** Would the proposal result in a a need for new systems or supplies, or substantial alterations to the following utilities?

- (a) Power or natural gas?
- (b) Communications systems?
- (c) Local or regional water treatment or distribution facilities?
- (e) Storm water drainage ?

X

X

X

X

X

	<u>YES</u>	<u>MAYBE</u>	<u>NO</u>
(f) Solid waste disposal?			X
(g) Local or regional water supplies?			X
XIII. AESTHETICS. Would the proposal:			
(a) Affect a scenic vista or scenic highway?			X
(b) Have a demonstrable negative aesthetic effect?			X
(c) Create light or glare?			X
XIV. CULTURAL RESOURCES. Would the proposal:			
(a) Disturb paleontological resources?			X
(b) Disturb archaeological resources?			X
(c) Affect historical resources?			X
(d) Have the potential to cause a physical change which would affect unique ethnic cultural values?			X
(e) Restrict existing religious or sacred uses within the potential impact area?			X
XV. RECREATION. Would the proposal:			
(a) Increase the demand for neighborhood or regional parks or other recreational facilities?			X
*(b) Affect existing recreational opportunities?			X
XVI. MANDATORY FINDINGS OF SIGNIFICANCE.			
(a) Does the project have the potential to degrade the quality of the environment, substantially reduce the habitat of a fish or wildlife species, cause a fish or wildlife population to drop below self-sustaining levels, threaten to eliminate a plant or animal			

	<u>YES</u>	<u>MAYBE</u>	<u>NO</u>
community, reduce the number or restrict the range of a rare or endangered plant or animal or eliminate important examples of the major periods of California history or prehistory?			X
(b) Does the project have the potential to achieve short-term, to the disadvantage of long-term, environmental goals?			X
(c) Does the project have environmental effects which are individually limited but cumulatively considerable?			X
(d) Does the project have environmental effects which will cause substantial adverse effects on human beings, either directly or indirectly?			X

DISCUSSION OF ENVIRONMENTAL EVALUATION

See attached Initial Study Addendum.

DETERMINATION

(To be completed by the Lead Agency's decision-making body.)

On the basis of this evaluation:

I find the proposed project could NOT have a significant adverse effect, and a **NEGATIVE DECLARATION** will be prepared.

8/13/97
Date

Paul Edelman
Deputy Division Chief

For: Santa Monica Mountains Conservancy

INITIAL STUDY CHECKLIST ADDENDUM

Item 1(a) Land Use and Planning. Would the proposal (a) disrupt or divide the physical arrangement of an established community (including a low-income or minority community)?

The proposal increases the potential for the orderly development of portions of the Deerlake Highland subdivision. The existing, adjacent Twin Lakes small lot subdivision would contrast with such potential orderliness with its lack of sewers and substandard streets. The proposal does not have any potential disrupt or divide the Twin Lakes community.

Item 2(b) Population and Housing. Would the proposal (b) induce substantial growth in an area either directly or indirectly (e.g. through projects in an undeveloped area or extension of major infrastructure)?

By aggregating ownership of public land into a single private entity, to some extent, the proposal indirectly increases the economic and land use potential both for development in a predominantly undeveloped area (the Deerlake Highlands subdivision) and for the extension of substantial infrastructure to this area.

Simultaneously, the proposal indirectly decreases the potential of the subject area to be degraded overtime by dispersed and poorly controlled land uses that could have a greater detrimental effect on surrounding wild lands. The proposal also indirectly decreases the longterm potential maximum number of units to potentially be constructed within the subject portion of the Deerlake Highlands subdivision. The proposal also guarantees that over 15 acres of the 126 acre subdivision will never be graded.

In addition, the proposal would have a significant direct effect on reducing the potential for growth in surrounding undeveloped private areas by limiting both the width and the depth of the intrusion of road access from Topanga Canyon Boulevard and road width along lower Brown's Canyon Road. It also retards existing potential for road access north out of the Deerlake Highland subdivision. These suppressions of growth affect a far larger and more ecologically sensitive area than the area where growth is potentially induced by the proposal indirectly.

Item 11(e) Public Services. Would the proposal have an effect upon, or result in a need for new or altered government services?

The proposal calls for a minimum net gain of 31 acres of public parkland and \$125,000 of additional park improvements, easements or fee title property. These public assets cost money to maintain and secure. The proposal thoroughly covers any added costs by providing both immediate funds, \$15,000 to \$45,000 for the first four years, and \$60,000 a year in perpetuity

for ranger services and maintenance. The proposal also makes incumbent upon CRE and all successors to pay, in perpetuity, for all fuel modification on the Conservancy's newly acquired 31+ acres of open space.

Item 15(b) Recreation. Would the proposal (b) affect existing recreational opportunities?

The proposal will have no negative effects on recreational opportunities.

The proposal is guaranteed to improve conditions for protected public trail access into the Santa Susana Mountains from the end of Canoga Avenue. This guarantee shall be secured in a written agreement between CRE and the Conservancy. That agreement shall require a permanent (floating) trail easement from the 118 freeway to the area of the existing Saugus Road crossing of Devil Creek and two attached easements. One would course up the west side of the sparsely developed portion of the Twin lakes subdivision into to Deerlake Highlands. The other easement would course along the east side. CRE cannot guarantee contiguous extended trails easement to the northern border of Deerlake Highlands, however said written agreement will provide for such connections if CRE or its successor develops the area. If CRE does seek development approvals from Los Angeles County in either the Twin Lakes or Deerlake Highlands, said agreement will also bind CRE to offer permanent fixed trail easements serving these purposes to the County or other park agencies.

By providing contiguous public open space connections, the proposal increases the potential for a publically dedicated trail from Canoga Avenue into Brown's Canyon. The current prescribed trail uses private land.

The proposal guarantees the acquisition or development of \$125,000 worth of trail or open space benefits in the immediate area.

AGREEMENT RE ACQUISITION OF REAL PROPERTY

This AGREEMENT RE ACQUISITION OF REAL PROPERTY ("Agreement") is made as of this 30th day of December, 1997, by and between THE SANTA MONICA MOUNTAINS CONSERVANCY ("Conservancy"), the Conservancy's Designee MOUNTAINS RECREATION CONSERVATION AUTHORITY ("Designee"), CHATSWORTH RIDGE ESTATES, LLC, a California limited liability company ("CRE LLC"); CHATSWORTH RIDGE ESTATES, a California Corporation ("CRE Corp.") ("CRE LLC" and "CRE Corp." are collectively referred to as "CRE") and CALMONT PROPERTIES, INC. a California Corporation ("Calmont"), with respect to the following:

RECITALS

- A. Whereas, the County of Los Angeles currently owns certain real property, shown and described in Exhibit "A" attached hereto and incorporated herein by this reference (the "County Lots"); and
- B. Whereas, the "County Lots" are inadequate in size and are located within an area which has additional lots with scattered ownerships, thereby impeding orderly development; and
- C. Whereas, Designee is a joint powers agency and the Conservancy a resource agency of the State of California, and both are responsible for acquiring, maintaining and preserving portions of the Santa Monica Mountains and related area as open space wilderness reserves for the public benefit; and
- D. Whereas, the Conservancy has the authority under §33204(a) of the Public Resources Code to award grants or make interest-free loans to cities, counties, and recreation and park districts for the purpose of restoring areas which, because of scattered ownerships, poor lot layout, inadequate lot size, inadequate park and open space, incompatible land uses, or other conditions that adversely affect the environment or impede orderly development; and
- E. Whereas, the Conservancy has the authority under §33204(b) of the Public Resources Code to undertake, award grants or make interest-free loans to any state agency, city, county or recreation and park district for the purposes of undertaking the acquisition of critically needs buffer zones to ensure that the character and intensity of development surrounding public lands do not adversely impact natural resources; and
- F. Whereas, CRE owns certain rural wilderness real property in the mountain area of Chatsworth, California; and
- G. Whereas, CRE is interested in acquiring certain real property, shown and described in

Exhibit "B" attached hereto and incorporated herein by this reference (the "CRE Lots"), for residential development, which CRE Lots are located in the general area of other CRE holdings in Chatsworth, California; and

- H. Whereas, the County Lots are currently owned by the County of Los Angeles and the Conservancy has the ability to purchase the County Lots from the County; and
- I. Whereas, CRE has proposed to the Conservancy that the Conservancy or Designee purchase the County Lots retain certain lots and portions of lots as described in Exhibit B-I ("Conservancy/Designee Lots") and convey to CRE the CRE Lots as in exchange for that certain rural wilderness real property owned by CRE as described in Exhibit C (Devils Canyon Habitat) together with certain other consideration and inducements; and
- J. Whereas said exchange and other consideration and inducements will be consistent with the provisions of §33204(a) and (b) of the Public Resources Code and with the Santa Monica Mountains Conservancy Act; and
- K. Whereas, CRE will provide, through an escrow to be established for the purpose of facilitating the intent and purpose of this Agreement, the sum of One Million One Hundred Fifty Thousand Dollars (\$1,150,000.00) required for the purchase of the County Lots from the County of Los Angeles, said sum having been determined independently by appraisals conducted by the County of Los Angeles; and
- L. Whereas, CRE and the Conservancy have agreed that the Conservancy or Designee will obtain title to the County Lots from the County of Los Angeles and then convey the CRE Lots to CRE as further provided herein; and
- M. Whereas, i CRE Corp. is a California Corporation in good standing and wholly owned by Colleen C. Welter, ii and Calmont Properties, Inc. is a California Corporation in good standing which is also wholly owned by Colleen C. Welter, and iii for good and valuable consideration pursuant to corporate resolution Calmont has agreed to be jointly and severally liable with CRE Corp. and CRE LLC on the \$1,000,000 recourse promissory note secured by a first deed of trust on real property owned by Calmont as described in Section 6 f of this Agreement; and
- N. Whereas, in consideration thereof CRE has agreed to convey specifically identified real property to the Conservancy or Designee, and CRE and Calmont have agreed to pay certain sums of money specified hereinbelow to Designee, and to perform certain other obligations, all upon the terms and conditions hereinafter provided, and consistent with the provisions of §33204(a) and (b) and 33203 of the Public Resources Code and the Rim of the Valley Trail Corridor Plan.

W.E

NOW, THEREFORE, the Parties enter into this Agreement, for good and valuable consideration, the receipt and sufficiency of which is hereby acknowledged.

TERMS AND CONDITIONS

Section 1. Recitals. The hereinabove Recitals are true and correct and are hereby incorporated into this Agreement by this reference.

Section 2. Acquisition and Sale of County Lots. The Conservancy and Designee hereby agrees to purchase from the County of Los Angeles the County Lots, and further agree to convey title to CRE to the CRE Lots. Ownership of the Conservancy/Designee Lots as set forth on Exhibit B-1, shall be retained by Conservancy or Designee. The purchase price to be paid to the County of Los Angeles for the County Lots shall be the sum of not to exceed \$1,150,000.00, which sum shall be provided by CRE to the Conservancy or Designee through the escrow to be established, for delivery to the County of Los Angeles in exchange for the County's quit claim deed for the County Lots. Upon receipt of title to the County Lots by the Conservancy or Designee, the Conservancy or Designee shall convey the CRE Lots to CRE by quit claim deed through said escrow. The foregoing transactions shall be consummated through an escrow to be established by the parties and conducted by First American Title Company of Los Angeles (FATCOLA)("Escrow"). Upon execution and delivery of this Agreement the parties shall cause to be prepared mutually acceptable written escrow instructions for the consummation of the transactions contemplated by this Agreement. It is the intent of the parties that said Escrow shall be opened within thirty (30) days after the date hereof and shall close on or about January 9, 1998, or as extended by mutual agreement of the parties ("Close of Escrow"). The Conservancy shall be solely responsible for obtaining the approval and firm commitment of the County of Los Angeles to participate in this transaction, to sell the County Lots to the Conservancy or Designee for the sum of not to exceed \$1,150,000.00, and to execute and deliver into Escrow in a timely manner the County's quit claim deed(s) conveying the County Lots to Conservancy or Designee.

Section 3. CRE Lots to be Purchased "AS IS". CRE hereby acknowledges, represents, warrants and agrees to and with Conservancy and Designee that:

- a. CRE is purchasing the CRE Lots in an "AS IS" condition as of the date of the Close of Escrow, subject to all then existing facts, circumstances, conditions and defects, and in its unimproved, ungraded condition;

CONSERVANCY: DESIGNEE: CRE, LLC: CRE, CORP: CALMONT:

BF BF _____ _____

- b. CRE is assuming the risk, based upon its own due diligence investigations of the CRE Lots and their condition, of the presence or absence of any chemicals or

W.E

other materials which are the subject of any Federal, State or local regulations relating to contaminants or hazardous materials or substances; and

- c. CRE agrees to indemnify, hold harmless and defend the Conservancy and Designee with respect to any and all damages, judgments claims, fines, penalties, costs, expenses, attorney fees that may arise out of any claims or lawsuits, or any other actions based upon the existence of contaminants or hazardous materials on or in the CRE Lots.

Section 4. Condition of Title. The Parties hereto agree that the preliminary title reports prepared by FATCOLA, described on Exhibit "A" attached hereto, and dated February through November 1997, shall satisfy the preliminary title requirements for the purchase of the County Lots by the Conservancy or Designee from the County of Los Angeles, and the purchase of said CRE Lots by CRE from the Conservancy or Designee.

The Conservancy or Designee shall review and approve the above-referenced preliminary title reports which pertain to the Conservancy/Designee Lots within seven (7) days after the Conservancy's or Designee's execution of an agreement to purchase the County Lots from the County of Los Angeles, CRE shall review and approve the above-referenced preliminary title reports which pertain to the CRE Lots within seven (7) days after CRE's execution of an agreement to purchase the CRE Lots from Conservancy or Designee. CRE's approval of the condition of title to the CRE Lots shall be a contingency which must be met before CRE is obligated to purchase the CRE Lots. Conservancy or Designee shall deliver title to the CRE Lots to CRE through Escrow subject only to:

- a. Covenants, conditions, restrictions, reservations, easements, rights and rights of way of record or to be recorded in connection with development of the CRE Lots; and
- b. Any encumbrance or other matter recorded in connection with any financing obtained by CRE to finance the purchase price of the CRE Lots.
- c. Any other matter approved by CRE in its sole and absolute discretion.
- d. The Memorandum of Agreement in the form of Exhibit F which Memorandum shall be recorded prior in any other encumbrance notwithstanding Section 4(2).

Section 5. Condition Precedent. The obligations of the parties contained in this Agreement, including, but not limited to the obligation to purchase and sell the County Lots, and to convey the real property described on Exhibit "C" hereto, shall be subject to the prior adoption by the County of Los Angeles of a resolution, or the taking of other appropriate official action, approving the sale by the County of Los Angeles to the Conservancy and/or Designee of the County Lots upon the terms and conditions contained in this Agreement.

Section 6. Obligation of CRE. In consideration of the Conservancy's purchase of the County Lots and sale of the CRE Lots to CRE as herein provided, CRE shall perform the following for the benefit of the Conservancy, Designee, the City of Los Angeles, and/or the County of Los Angeles:

a. Conveyance of Real Property.

i. The Conservancy or Designee intends to retain the Conservancy/Designee Lots or portions of lots described in Exhibit B-1 to provide a buffer zone around the Deerlake Highlands area and along the western edge of Brown Canyon, and to provide an equestrian trail linkage between the Deerlake Highlands and the Brown Canyon Park land of the City of Los Angeles Department of Recreation and Parks.

In order to limit the further extension of access roads northward from the Deerlake Highlands subdivision, CRE, and any and all successors or related business entities, agree to the following conditions:

- (1) That any road, or proposed road, in any development application after the date of this Agreement which concerns area shown and described on Exhibit "B" or properties controlled by CRE, its successors in interest, or any related business entities, shall terminate no less than 50 feet from the northern boundary of the Deerlake Highlands Subdivision.
- (2) Once grading plans are approved for such roads, CRE, and any and all successors, shall offer to dedicate to the Conservancy or Designee a minimum 10-foot-wide strip of east west trending land across the full right-of-way width of the road terminus.
- (3) The only exception to this road termination shall be that an access road to a proposed water tank site shall not be restricted as to its proximity to the northern boundary of the Deerlake Highlands Subdivision. This access road, which shall be dedicated to the Las Virgenes Municipal Water District for the sole purpose of providing access to the future water tank site, shall not exceed the minimum paved width required by the District. In addition, this access road may traverse the Conservancy's/Designee's 10 foot-buffer zone if required by the District to meet its water service standards for the Deerlake Highlands Subdivision. The one exception to the road termination condition is that CRE shall have the right to acquire property for a single water tank, the center point of which is not

to be located more than 500 feet north of the center line of Section 6, Township 2 North, Range 16 West, S.B.B.M (hereafter "Section 6"). The use of that water tank shall be forever limited and connected to the Deerlake Highlands Subdivision (area south of the centerline of Section 6). Said water tank shall also only be accessed via a road that crosses the Conservancy/Designee's 10-foot-wide fee title buffer strip as it is configured at that point in time. Prior to the Conservancy/Designee granting this above described water tank easement to CRE or the Las Virgenes Municipal Water District, CRE, and any and all successors must meet the following conditions:

- (a) The Conservancy/Designee, must be the owner of a minimum 25-foot-wide fee title strip of land that forms a contiguous band around the proposed water tank facility and its one access road that originates south of the center line of Section 6. This contiguous band of fee title property must tie into the MRCA's minimum 10-foot-wide, fee title, northern boundary buffer strip on both the east and west sides of the described water tank access road. Said fee title property must be free of all liens, encumbrances, and tax liability. No other uses other than water storage and distribution may occur on any CRE land located north of the center line of Section 6.
 - (b) CRE and its successors shall pay for all real estate costs associated with the Conservancy/Designee granting an access road easement and for CRE providing the Conservancy/Designee with the said fee title strip. The Conservancy/Designee, must also be provided with a \$100,000 title insurance policy against any recorded or, to the extent insurable, unrecorded easements across said fee title strip.
 - (c) At no cost to the Conservancy/Designee CRE and its successors shall provide to the Conservancy/Designee, or its successors, an irrevocable offer to dedicate either in fee title, or in a conservation easement, any and all land not related to said water tank, or access thereto, that CRE, its successors or related business entities, ever acquire within two miles north of the center line of Section 6. Said land shall be free of all encumbrances, liens and tax liability prior to transfer to the Conservancy/Designee.
- (4) The limitations to the use of the clear span bridges as described

in Section 6 (a)(v)

In order to maximize the amount of permanently protected open space in the Devil and Brown's Canyon Watershed, CRE, and any and all successors and related business entities, agree to dedicate a conservation easement over any and all remaining project related open space within the area addressed in the Agreement which is contiguous with existing, or future Conservancy fee title owned open space. It is agreed that such an offer will be extended as a condition to obtain approved grading plans. The definition of open space in this case shall not include any land within proposed lots to be developed, along with access road, utility right of ways, bridges and related graded slopes and fuel modification areas as designated by Los Angeles County Fires Code. This portion of the Agreement coincides with the mitigation measure two in the Conservancy's Negative Declaration dated 08/13/97.

ii. Simultaneously with the conveyance of the CRE Lots to CRE, CRE shall convey to the Conservancy or Designee, through such Escrow, that certain real property shown and described in Exhibit "C" attached hereto and incorporated herein by this reference. The Conservancy or Designee intends to acquire such property in order to provide an addition to the Devil Creek Wildlife corridor and a Conservancy owned buffer zone along such portion of Devil Canyon. Said real property to be conveyed to Conservancy or Designee shall not include a certain parcel of land, shown and described in Exhibit "C-1" which contains the existing Twin Lakes Dam structure. The area occupied by Exhibit C-1 shall never be improved to carry more than one lane of vehicular traffic as it exists at the time this Agreement is signed unless such road is subject to the same restrictions as the clear span bridges.

iii. CRE shall, as its sole cost and expense, obtain for and provide to Conservancy or Designee a title company's standard CLTA Owners Policy of title insurance, insuring title to the Conservancy/Designee Lots (Exhibit B-1) and the Devil's Basin Habitat real property described in Exhibit "C" the Canoga Avenue property (Exhibit G) provided that no insurance shall be required if the Horner easement is first recorded in favor of the Conservancy/Designee and is insured in a manner satisfactory to the Conservancy/Designee, and insuring the Conservancy/Designee's non-fee interest in the area adjacent to the Twin Lakes Dam (Exhibit C-1) the Twin Lakes property (Exhibit D), and the Deerlake Highland Property (Exhibit B). The policies on the Conservancy/Designee's fee interest rights shall be free and clear of deeds of trusts and liens including property tax liens. The policies of insurance on the Conservancy's non-fee interest shall, as to Exhibit B, be prior in time to any deeds of trust and shall, as to the Twin Lakes Property (Exhibit D), not be prior in time to existing deeds of trust. The policy of title insurance as to the Devil's Basin Habitat Property

(Exhibit C) shall be in the amount of \$500,000 and the Canoga Avenue Property (Exhibit G) shall be in the amount of \$50,000. The amount of the policy of title insurance on the Conservancy/Designee lots (Exhibit B-1) and the Conservancy/Designee non-fee rights in the CRE Lots described in Exhibit B shall be \$50,000. The policy of title insurance amounts on the Conservancy/Designees right in the Exhibit C-1 property area adjacent to (Twin Lakes Dam) shall be \$50,000 and the rights to the Twin Lakes Property shall be insured in the amount of \$50,000. CRE further agrees to pay for a lender's policy of title insurance in the amount of \$1,000,000.00 to insure title to the first deed of trust described in Section 6f. below.

iv. CRE shall pay all costs of Escrow and of closing the purchase and sale transactions described herein, including, but not limited to, escrow fees, transfer taxes (if any), recording fees, and premiums for title insurance.

v. Subject to the terms of this Agreement the Conservancy/Designee agree to provide easements for CRE to construct at its sole expense and liability a maximum of three (3) clear-span bridges across Devil Canyon after conveyance of title of said canyon as shown and described in Exhibit "C" and Exhibit "B-1". The parties agree that the precise alignment of said bridges cannot be determined at present. The construction of said bridges shall conform with respective Federal, State and Local agency requirements, shall accommodate a maximum of two (2) vehicular travel lanes (one in each direction), and not exceed forty feet (40') in width for that portion of the structure required for vehicular traffic. Additional structural requirements for pedestrian traffic shall add no more than seven feet (7') to the forty foot (40') vehicular structure. All utilities shall be underground and/or attached under the bridge structures. The future use of all such bridges shall be restricted to property owners within the South ½ of Section 6, Township 2 North, Range 16 West, S.B.B.M., and that portion of the North ½ of Section 7, Township 2 North, Range 16 West, S.B.B.M. lying between the southerly line of said Section 6 and the Simi Valley (118) Freeway, as shown in Exhibit D-1.

Prior to the Conservancy/Designee granting an easement to CRE for a bridge that ties back to Topanga Canyon Boulevard, but that does not directly tie to Mayan Drive, the Conservancy/Designee must receive \$60,000.00 from CRE. That \$60,000.00 amount must be expended by the Conservancy/Designee, only for open space purchases in Section 6 of the U.S.G.S. Oat Mountain Quadrangle. The full sum must be expended within 2 years of receipt by the MRCA provided there are willing sellers. Up to 20 percent of the amount can be used for project planning and design expenses by the Conservancy/Designee.

W.E.

Prior to the Conservancy/Designee granting an easement to CRE for a bridge that ties back to Topanga Canyon Boulevard or Canoga Avenue via Mayan Drive, the Conservancy/Designee must receive \$25,000.00 from CRE. That \$25,000.00 amount must be expended by the Conservancy/Designee, only for open space purchases in Section 6 of the U.S.G.S. Oat Mountain Quadrangle provided there are willing sellers. The full sum must be expended within two years of receipt by the Conservancy/Designee. Up to twenty percent (20%) of the amount can be used for project planning and design expenses by the Conservancy/Designee.

Prior to the Conservancy/Designee granting an easement to CRE for a bridge that will carry Saugus Road traffic across Devil Canyon to Canoga Avenue, the Conservancy/Designee must receive \$75,000.00 from CRE. That \$75,000.00 amount must be expended by the Conservancy/Designee, only for open space purchases in Section 6 of the U.S.G.S. Oat Mountain Quadrangle provided there is a willing seller. A \$50,000 portion of that sum shall be spent to acquire property or conservation easements that abut the west side of Brown's Canyon Road within the Deerlake Highlands Subdivision. The full sum must be expended within 2 years of receipt by the Conservancy/Designee provided there is a willing seller. Up to twenty percent (20%) of the amount can be used for project planning and design expenses by the Conservancy/Designee.

vi. Conservancy/Designee and CRE hereby agree that minor adjustments in the boundaries of that certain real property shown and described in Exhibit "B", attached hereto, may be necessary after precise Topographical surveys have been made in conjunction with proposed development of properties adjoining said properties described in said Exhibits. If necessary, such minor adjustments shall be made with consent of both parties, hereto, and shall not adversely affect the objectives of either party as stated in this Agreement.

vii. In order to allow for adequate wildlife movement up and down Devil Creek and around the existing Twin Lakes Dam as described in Exhibit C-1, by July 1, 1998 CRE, and any and all successors, agree to provide a natural surfaced by-pass on the south side of the dam. The bypass must provide the following characteristics:

- (1) Possess a minimum width of thirty (30') of native soil surface free of any concrete infrastructure, fencing, above ground utilities, or direct lighting.
- (2) On its upstream end, the width of land interface of the by-pass linkage with Conservancy or Designee fee title open space shall be no less than one hundred feet (100').

W.E

- (3) On its downstream end, the by-pass shall tie back into the Conservancy's or Designee's fee title open space between the dam and the proposed new Saugus Road bridge and shall include all available open space between the dam and new bridge.

All parties agree that the existing equestrian trail, and any future, native-soil-surfaced trails proposed within this easement area, are compatible with its wildlife corridor purposes.

By July 1, 1998 CRE, and any and all of its successors, agree to convey an offer to dedicate a conservation easement for the by-pass, as described above, to the Conservancy or Designee. Such rights as described in this paragraph as they relate to Exhibit C-1 shall be included in the recorded Memorandum of Agreement set forth in Exhibit F.

viii. Concurrently with the close of escrow CRE shall grant the Conservancy/Designee that 0.8 acres near Canoga Avenue as set forth in Exhibit G and a diagram of which is included as Exhibit G-1 subject to being reconveyed as provided in Section 7 below but at no cost to the Conservancy/Designee.

b. Funding for Trail Related Improvements or Land Acquisition. CRE hereby agrees to pay for Conservancy/Designee \$150,000.00 as a condition of Escrow closure to be used only for the following purposes: 1) the acquisition of property either in fee, or through easement, for trail or habitat purposes, (2) the construction of new trails or the repair of existing trails, or (3) the construction of trailhead/staging area facilities. The expenditure of the money must occur on the south facing slopes of the Santa Susana Mountains between the Santa Susana Pass and the eastern edge of the Brown's Canyon watershed. Two projects under consideration include a trail head facility at the southwest corner of 118 Freeway and Canoga Avenue and a Hiking trail from Poema Place into Devil Canyon.

c. Dedication or Conveyance of Trail System. It is the intention of the parties that, at some future date, CRE shall convey to the Conservancy or Designee or to the County of Los Angeles Department of Parks and Recreation, permanent easements on, over, under and across that certain proposed hiking trail system shown and described on Exhibit "D-1" attached hereto and incorporated herein by this reference, as such trail system may subsequently be realigned (subject to approval by the County of Los Angeles) in connection with the completion of design of CRE's adjacent project. Such dedication or conveyance (of the eventual realigned trail system) is anticipated to be required by the County of Los Angeles as a condition of its granting of certain development entitlement to CRE and will be performed by CRE in due course as required. If CRE, or any of its successors, files a map to develop the Deerlake

Highlands Subdivision area as shown generally by Exhibit "B", that map will include the extension of the two northward headed trail stubs shown in Exhibit "D-1" to join Conservancy-owned property on either the west, north, or east boundary of the Deerlake Highlands subdivision area. CRE shall convey to the Conservancy or Designee, or to the County of Los Angeles Department of Parks and Recreation, permanent easements over the final County-approved alignment of these two trail extensions. CRE shall construct both such trail extensions to either Conservancy or County standards prior to the construction of any homes in the area represented by Exhibit "A".

Pending the completion of CRE's development design, the realignment of such trail system, and the granting of entitlements requiring such dedication or conveyance, CRE agrees to permit the general public a temporary right of access and use of the trail system aligned as depicted on Exhibit "D-1" hereto, which right shall expire upon recordation of the eventual conveyance or dedication of such trail system as permanently aligned, as contemplated by this paragraph. Such rights as to Exhibit D-1 shall be included in the recorded Memorandum of Agreement described in Exhibit E.

d. Memorandum of Understanding. CRE shall execute and deposit into Escrow, for delivery to the Santa Susana Mountains Park Association and recording upon Close of Escrow, that certain Memorandum of Understanding attached hereto as Exhibit "E" and incorporated herein by this reference, which document requires CRE to dedicate to the Conservancy or Designee approximately 275 acres of Tract No.44327 as open space, as shown and described in Exhibit "E". No escrow shall be opened until the parties have agreed upon the form and substance of said Exhibit "E" hereto but such agreement shall be recorded concurrently with all other documents in this transaction.

e. Weed Abatement. It is the intention of the parties that the cost of weed abatement by the Los Angeles County Fire Department or City of Los Angeles Fire Department on the Conservancy/Designee Lots and that certain real property to be owned by the Conservancy or Designee and shown in Exhibit "C", hereto, will for in perpetuity be borne by the homeowners' association(s) to be established prior to establishment by CRE or any and all of its successor in connection with its adjacent residential development(s). Therefore, CRE shall deposit into Escrow a covenant and agreement or other appropriate obligation, in form to be negotiated by the parties, to assure performance of CRE's obligations under this paragraph to include such an obligation in the Covenants, Conditions and Restrictions for such future homeowners' association(s), and/or to bind successor owners of the affected real property, to bear such costs. No escrow shall be opened until the parties have agreed upon the form and substance of such document. In addition, CRE hereby represents and warrants that it will design and develop its residential development adjacent to Devil Canyon, as shown in Exhibit "C", and adjacent to the buffer areas, as shown in Exhibit "B-1", in such a manner that minimal weed abatement activity will be required therein by the

Los Angeles County Fire Department, which representation and warranty shall survive the Close of Escrow. Both parties hereto agree that maintaining said areas in a natural condition provides a significant inducement for the Conservancy and Designee to enter into this Agreement. Until such time as such homeowner's associations are created, CRE shall be responsible for such weed abatement should weed abatement be required. In addition CRE hereby represents and warrants that it will design and develop its project on the west side of Deerlake Highlands such that absolutely no form of fuel modification shall be required on APN 2821-024-007 which the Conservancy shall soon acquire in fee title.

f. Santa Susana Mountains Ranger Position. It is the intention of the parties hereto that CRE shall provide for the funding in perpetuity, of \$60,000.00 per year, to fund the costs of a ranger position for the Santa Susana Mountains area to have specific responsibility for the publicly owned open space real properties that are the subject of this Agreement. The mechanism for the funding of such annual \$60,000 amount for such purpose shall be as follows:

i. CRE and Calmont shall deposit in Escrow a promissory note secured by a full recourse First Trust Deed in a form acceptable to and which names as beneficiary the Mountains Recreation and Conservation Authority (Designee) which note shall be in the principal amount of \$1,000,000 encumbering Calmont's 15-acre real property located at Mulholland Highway and Valmar Street in Calabasas (APN 2080-014-004)(the "Deed of Trust") to protect the Designee's interest until the earlier of (a) the date on which, an endowment fund of \$1,000,000 in a Conservancy/Designee account is set up by CRE within four (4) years after signing of this Agreement or (b) the date within four (4) years after the signing of this Agreement that an annuity is established with an established insurance carrier admitted in California and acceptable to Conservancy or Designee to provide the specified payments required under this Section. (That first Trust Deed can be reduced proportionately as the endowment is assembled). The First Trust Deed shall be prior in time to all tax liens or judgement liens. Prior to the Close of Escrow Calmont shall provide Escrow and the Conservancy/Designee the following:

- (1) A current certificate of Corporate Status showing that Calmont Properties is a corporation in good standing in the State of California
- (2) A letter from Calmont, CRE Corp, Colleen C. Welter, the wife of Douglas Riley, and Douglas Riley representing and warranting that Colleen C. Welter is the sole shareholder of Calmont and CRE Corp.

W.E.

- (3) A duly authorized corporate resolution authorizing Calmont for valid corporate purposes, to execute such promissory note and deed of trust as a primary obligor and that Calmont is not considered a guarantor and acknowledges that the beneficiary under that deed of trust may elect to proceed first against Calmont and the Mulholland property as opposed to CRE.

ii. The parties agree that CRE shall not initially be required to fund such full \$60,000 annual amount. In lieu of such full initial funding, the parties agree that CRE shall pay the following annual amounts to cover portions of the cost of such ranger, which payment obligation shall be secured by the Deed of Trust described above:

- (1) \$15,000 for the initial year, to be paid through Escrow upon close of escrow.
- (2) \$24,000 no later than one year after the Close of Escrow.
- (3) \$30,000 no later than two years after the Close of Escrow.
- (4) \$45,000 no later than three years after the Close of Escrow.
- (5) \$60,000 no later than four years after the Close of Escrow, and an equal sum thereafter, in accordance with Section 6 (f)(l).

iii. Even in the event the Conservancy/Designee elects not to fund such ranger position in whole or in part for any reason including but not limited to the failure of CRE and/or Calmont to comply with the terms and conditions of the promissory note or this Agreement, or a decision by the Conservancy/Designee that such a ranger position is not warranted or for any other reason, then the obligations of CRE and Calmont under the endowment fund or annuity or promissory note shall remain in full force and effect.

g. Additional Attorney Fees and Miscellaneous Expenses. As an additional condition to the close of escrow CRE shall pay to the Conservancy/Designee an additional \$3,000 for attorney fees for outside counsel over and above the \$7,000 previously paid. The Conservancy or Designee must refund to CRE any portion of the attorney fees to outside counsel which are less than \$10,000. Such refund shall occur within thirty days from the close of escrow.

Additionally at the close of escrow CRE shall pay to the Conservancy/Designee the sum of \$750 to reimburse its staff time for conducting an in-house Phase One

W.E.

Environmental Assessment on the acreage to be retained by the Conservancy/Designee.

h. Property North of Deerlake Highlands. By the signing of this agreement, CRE represents and warrants that neither it nor its officers, directors, shareholders, employees, agents or related business entities ("Related Parties") have a vested interest in real property, including options or easements, in the northern half of Section 6 of the U.S.G.S. Oat Mountain Quadrangle. CRE and related parties, and their successors, hereby agree that if such interest existed prior to the execution date of this Agreement that the Conservancy/Designee, is under no obligation to grant bridge or water tank related easements as defined in this Agreement and may, if previously granted, revoke, such easements.

By the signing of this Agreement, CRE, Related Parties, and their successors, also agree not to enter into any agreements related to any real property interests in the northern half of Section 6 of the U.S.G.S. Oat Mountain Quadrangle. CRE, the Related Parties, and any and all of their successors, hereby agree that if such interest exists at any time subsequent to the execution date of this agreement, that the Conservancy/Designee, is under no obligation to grant bridge or water tank related easements as defined in this document and may, if previously granted revoke such easements.

If it is demonstrated to the sole satisfaction of the Conservancy/Designee any CRE or related parties interest in property in the north half of Section 6 is immaterial to any access or utility related connection between the Deerlake Highlands Subdivision, or Topanga Canyon Boulevard, and the northern half of Section 6, then the Conservancy/Designee must grant such bridge easements and/or may not revoke such bridge easements as the case may be.

i. Additional Property along Northern Boundary of Exhibit B. If CRE or a Related Party and any and all of its successors acquire, or have acquired, any additional properties along the northern boundary of the area defined by Exhibit B, all such parties must provide a written offer to the Conservancy/Designee, to dedicate, in fee title, at no cost to the Conservancy/Designee, a minimum 10 foot-wide strip of east-west trending land along the entire northern boundary of all such properties. For each subject parcel the Conservancy/Designee must receive an offer to dedicate via registered mail within 90 days after any close of escrow. The Conservancy/Designee must also be provided a minimum of \$25,000 of title insurance and title must be free from recorded or unrecorded easements over the dedicated property.

Section 7. Agreement with Horner. If by June 1, 1998 the parties shall complete the agreement to acquire the Conservation Easement from Mr. and Mrs. Horner as contemplated by the parties hereto, then the property described in Exhibit C shall be redeeded by Designee to the entity from which it was acquired. Additionally CRE shall remove all trash and organic

W.E.

debris from all portions of a conservation easement that is to be acquired by the Designee as a portion of APN 2818-021-002 along its western boundary. Such clean-up required by this Agreement shall not occur until the Designee indicates to CRE that sufficient barriers are in place to reduce further dumping.

Section 8. Memorandum of Agreement. Concurrently with the execution of this Agreement, the parties shall execute and record a "Memorandum of Agreement Re Acquisition of Real Property" (the "Memorandum of Agreement"), in the form of Exhibit "F" attached hereto and incorporated herein by this reference.

Section 9. Governing Law. This Agreement shall be governed by, and construed and enforced in accordance with, the laws of the State of California.

Section 10. Entire Agreement. This Agreement constitutes the entire understanding and supersedes any and all other prior agreements, whether written or oral, among the parties regarding the subject hereto. This Agreement shall not be amended or modified except by a writing signed by the parties hereto which specifies that it is an amendment to this Agreement, or as otherwise contemplated by this Agreement for the negotiation and development of the additional documents necessary to consummate the transactions described herein.

Section 11. Further Assurances. Each of the parties hereto agrees to execute and deliver, in recordable form (if applicable), any and all additional papers, documents, and other assurances, and shall do any and all acts and things reasonably necessary in connection with the performance of their obligations hereunder, and to carry out the intent of the parties hereto.

Section 12. Arbitration of Disputes. IN THE EVENT OF ANY DISPUTE ARISING UNDER THIS AGREEMENT THE PARTIES AGREE TO SUBMIT SUCH DISPUTES FOR BINDING ARBITRATION TO J.A.M.S /ENDISPUTE ("JAMS"), 350 SOUTH FIGUEROA STREET, SUITE 990, LOS ANGELES, CALIFORNIA, 90071, WHICH ENTITY OR ANY SUCCESSOR THERETO SHALL HAVE EXCLUSIVE JURISDICTION TO RESOLVE SUCH DISPUTES. SHOULD JAMS NO LONGER BE ENGAGED IN BUSINESS OR FOR ANY REASON DECLINE OR REFUSE TO DETERMINE A SUBMITTED DISPUTE, THE PARTIES AGREE TO SUBMIT THE DISPUTE TO THE AMERICAN ARBITRATION ASSOCIATION ("AAA"), FOR ARBITRATION IN THE PLACE OF JAMS. WITHIN TEN (10) DAYS AFTER EITHER PARTY GIVES NOTICE OF ITS INTENT TO ARBITRATE A DISPUTE UNDER THIS SECTION, THE PARTIES SHALL AGREE UPON ONE (1) JUDGE WHO SHALL BE THE ARBITRATION PANEL. IN THE EVENT THAT THE PARTIES ARE UNABLE TO AGREE UPON ONE (1) JUDGE WITHIN SUCH TIME PERIOD, THEN A THREE JUDGE PANEL WILL BE SELECTED TO ARBITRATE THE DISPUTE. JAMS OR THE AAA, WHICHEVER ARBITRATES THE DISPUTE, WILL PROVIDE THE NAMES OF FIVE POTENTIAL ARBITRATORS, GIVING EACH PARTY THE OPPORTUNITY TO STRIKE ONE NAME. THE REMAINING THREE JUDGES WILL SERVE AS THE ARBITRATION PANEL. THE PARTIES AGREE THAT THE ARBITRATION ORDER SHALL BE ENFORCEABLE IN ANY

COURT OF COMPETENT JURISDICTION. ARBITRATION FEES AND EXPENSES SHALL BE PAID BY THE PARTY AGAINST WHOSE POSITION SUCH DISPUTE SHALL BE FINALLY DECIDED. THE PARTIES AGREE THAT ANY ARBITRATION HEARINGS SHALL BE HELD WITHIN THE CITY OF LOS ANGELES. THE PARTIES HERETO SHALL HAVE THE RIGHT TO CONDUCT DISCOVERY IN ANY DISPUTE SUBMITTED OR ARBITRATION MEDIATION IN ACCORDANCE WITH CALIFORNIA CODE OF CIVIL PROCEDURE §1283.05. THE DECISION OF THE ARBITRATION PANEL SHALL BE APPEALABLE ACCORDANCE WITH THE APPLICABLE LAWS OF THE STATE OF CALIFORNIA. NOTHING HEREIN SHALL REQUIRE THE HOLDER OF THE PROMISSORY NOTE SECURED BY A FIRST DEED OF TRUSTS DESCRIBED IN SECTION 6(F) TO SEEK ARBITRATION PRIOR TO COMMENCING FORECLOSURE UNDER THE POWER OF SALE.

NOTICE: BY INITIALING IN THE SPACE BELOW YOU ARE AGREEING TO HAVE ANY DISPUTE ARISING OUT OF THE MATTERS INCLUDED IN THE "ARBITRATION OF DISPUTES" PROVISION DECIDED BY MUTUAL ARBITRATION AS PROVIDED BY CALIFORNIA LAW AND YOU ARE GIVING UP ANY RIGHTS YOU MIGHT POSSESS TO HAVE THE DISPUTE LITIGATED IN A COURT OR JURY TRIAL. BY INITIALING IN THE SPACE BELOW, YOU ARE GIVING UP YOUR JUDICIAL RIGHTS TO DISCOVERY AND APPEAL, UNLESS THOSE RIGHTS ARE SPECIFICALLY INCLUDED IN THE "ARBITRATION OF DISPUTES" PROVISION. IF YOU REFUSE TO SUBMIT TO ARBITRATION AFTER AGREEING TO THIS PROVISION, YOU MAY BE COMPELLED TO ARBITRATE UNDER THE AUTHORITY OF THE CALIFORNIA CODE OF CIVIL PROCEDURE. YOUR AGREEMENT TO THIS ARBITRATION PROVISION IS VOLUNTARY. WE HAVE READ AND UNDERSTAND THE FOREGOING AND AGREE TO SUBMIT DISPUTES ARISING OUT OF THE MATTERS INCLUDED IN THE "ARBITRATION OF DISPUTES" PROVISION TO NEUTRAL ARBITRATION.

Section 14 Attorney Fees: Costs. In any action, mediation, arbitration or other proceeding between the parties to and arising out of this Agreement, the prevailing party in such action shall be entitled to recover its reasonable attorney's fees and costs.

Section 15. Severability. If any term, provision, condition or covenant of this Agreement or its application to any party or circumstance shall be held, to any extent, invalid or unenforceable, the remainder of this Agreement, or the application of the terms, provisions, conditions or covenants to persons or circumstances other than those to whom or for which it is held invalid and unenforceable, shall not be affected, and shall be valid and enforceable to the fullest extent permitted by law; provided, such invalidation or unenforceability does not materially adversely affect the receipt of any essential material benefit of this Agreement in favor of any of the parties.

Section 16. Successors and Assigns. All of the terms and provisions of this Agreement shall be binding upon and inure to the benefit of and be enforceable by the parties and each of their respective successors and assigns.

Section 17. Counterparts. The Agreement may be executed in one or more counterparts, each of which shall be deemed an original, and all of which together shall constitute one and the same instrument.

IN WITNESS WHEREOF, the parties have executed this Agreement as of the date stated above.

LEGAL DESCRIPTION

THOSE PORTIONS OF LOTS 1 AND 2 OF SECTION 7 AND PORTIONS OF THE SOUTHWEST QUARTER OF THE SOUTHEAST QUARTER OF SECTION 6 AND THE SOUTHEAST QUARTER OF THE SOUTHWEST QUARTER OF SECTION 6, ALL IN TOWNSHIP 2 NORTH, RANGE 16 WEST, SAN BERNARDINO BASE AND MERIDIAN AND PORTIONS OF PARCELS 7, 8, 9, 10, 19, 20, 21, 22, 23, AND 24 AS SHOWN ON LICENSED SURVEYORS MAP FILED IN BOOK 28 PAGE 39, RECORD OF SURVEY IN THE OFFICE OF THE COUNTY RECORDER OF THE COUNTY OF LOS ANGELES, ALL IN THE COUNTY OF LOS ANGELES, STATE OF CALIFORNIA, DESCRIBED AS PARCELS 1, 2 AND 3 AS FOLLOWS:

PARCEL 1

BEGINNING AT A POINT ON THE NORTHERLY LINE OF SAID LOT 1, SAID POINT DISTANT THEREON 150.00 FEET WESTERLY OF THE NORTHWESTERLY LINE OF RANCHO EX MISSION DE SAN FERNANDO AS SHOWN ON R/S 119-24; THENCE ALONG SAID LINE SOUTH 89 DEGREES 53 MINUTES 05 SECONDS EAST, 150.00 FEET TO SAID RANCHO LINE; THENCE SOUTHWESTERLY ALONG SAID RANCHO LINE SOUTH 22 DEGREES 34 MINUTES 52 SECONDS WEST, 199.82 FEET TO AN ANGLE POINT IN SAID LINE; THENCE SOUTHWESTERLY ALONG SAID LINE SOUTH 48 DEGREES 14 MINUTES 42 SECONDS WEST, 466.30 FEET TO AN ANGLE POINT IN SAID LINE; THENCE LEAVING SAID LINE SOUTH 80 DEGREES 56 MINUTES 30 SECONDS WEST, 88.68 FEET; THENCE NORTH 88 DEGREES 13 MINUTES 00 SECONDS WEST, 224.00 FEET; THENCE SOUTH 47 DEGREES 49 MINUTES 00 SECONDS WEST, 183.00 FEET; THENCE SOUTH 75 DEGREES 09 MINUTES 00 SECONDS WEST, 83.00 FEET; THENCE NORTH 32 DEGREES 12 MINUTES 00 SECONDS WEST, 52.00 FEET; THENCE NORTH 67 DEGREES 58 MINUTES 00 SECONDS WEST, 216.00 FEET; THENCE NORTH 32 DEGREES 01 MINUTES

00 SECONDS EAST, 62.73 FEET; THENCE SOUTH 66 DEGREES 42 MINUTES 00 SECONDS EAST, 51.01 FEET; THENCE SOUTH 88 DEGREES 49 MINUTES 00 SECONDS EAST, 140.00 FEET; THENCE NORTH 45 DEGREES 40 MINUTES 00 SECONDS EAST, 44.00 FEET; THENCE NORTH 05 DEGREES 17 MINUTES 00 SECONDS WEST, 40.00 FEET; THENCE NORTH 40 DEGREES 52 MINUTES 00 SECONDS EAST, 93.00 FEET; THENCE NORTH 87 DEGREES 45 MINUTES 00 SECONDS EAST, 309.00 FEET; THENCE NORTH 75 DEGREES 26 MINUTES 00 SECONDS EAST, 199.00 FEET; THENCE SOUTH 73 DEGREES 07 MINUTES 00 SECONDS EAST, 76.00 FEET; THENCE NORTH 46 DEGREES 31 MINUTES 00 SECONDS EAST, 134.00 FEET; THENCE NORTH 19 DEGREES 19 MINUTES 00 SECONDS EAST, 114.00 FEET; THENCE NORTH 06 DEGREES 14 MINUTES 15 SECONDS EAST, 111.17 FEET TO THE POINT OF BEGINNING

SEE EXHIBIT "C" ATTACHED

THE ABOVE DESCRIBED PARCEL CONTAINS 4.01 ACRES OF LAND

PARCEL 2

BEGINNING AT THAT CERTAIN ANGLE POINT IN THE NORTHWESTERLY LINE OF RANCHO EX-MISSION DE SAN FERNANDO, SAID POINT BEING THE SOUTHWESTERLY TERMINUS OF THAT CERTAIN COURSE DESCRIBED IN PARCEL 1, HEREIN ABOVE AS BEARING SOUTH 48 DEGREES 14 MINUTES 42 SECONDS WEST AND HAVING A LENGTH OF 466.30 FEET; THENCE SOUTHWESTERLY ALONG SAID RANCHO LINE SOUTH 37 DEGREES 57 MINUTES 41 SECONDS WEST, 729.00 FEET; THENCE LEAVING SAID RANCHO LINE NORTH 52 DEGREES 09 MINUTES 19 SECONDS WEST, 10.00 FEET; THENCE NORTH 04 DEGREES 16 MINUTES 17 SECONDS EAST, 90.14 FEET TO A POINT IN A LINE PARALLEL AND DISTANT 60.00 FEET NORTHWESTERLY AT RIGHT ANGLES TO THAT CERTAIN COURSE DESCRIBED ABOVE AS BEARING SOUTH 37 DEGREES 57 MINUTES 41 SECONDS WEST HAVING A LENGTH OF 729.00 FEET; THENCE NORTHEASTERLY ALONG SAID PARALLEL LINE, NORTH 37 DEGREES 57 MINUTES 41 SECONDS EAST, 589.61 FEET TO A POINT IN A LINE WHICH BEARS NORTH 80 DEGREES 56 MINUTES 30 SECONDS EAST AND PASSES THROUGH THE POINT OF BEGINNING; THENCE NORTH 80 DEGREES 56 MINUTES 30 SECONDS EAST, 88.01 FEET TO THE POINT OF BEGINNING.

SEE EXHIBIT "c" ATTACHED.

THE ABOVE DESCRIBED PARCEL CONTAINS 0.92 ACRES OF LAND

PARCEL 3

COMMENCING AT THE NORTHWESTERLY TERMINUS OF THAT CERTAIN COURSE DESCRIBED IN PARCEL 1, HEREIN ABOVE AS BEARING NORTH 67 DEGREES 58 MINUTES 00 SECONDS WEST AND HAVING A LENGTH OF 216.00 FEET; THENCE NORTH 67 DEGREES 58 MINUTES 00 SECONDS WEST, 30.46 FEET TO THE TRUE POINT OF BEGINNING; THENCE NORTH 67 DEGREES 58 MINUTES 00 SECONDS WEST, 36.54 FEET; THENCE NORTH 81 DEGREES 50 MINUTES 00 SECONDS WEST, 126.00 FEET; THENCE NORTH 32 DEGREES 32 MINUTES 00 SECONDS WEST, 75.00 FEET; THENCE NORTH 05 DEGREES 20 MINUTES 00 SECONDS WEST, 248.00 FEET; THENCE NORTH 31 DEGREES 20 MINUTES 00 SECONDS WEST, 138.09 FEET TO A POINT IN THE WESTERLY LINE OF SAID LOT 1, SAID POINT DISTANT THEREON 53.03 FEET SOUTHERLY OF THE NORTHWEST CORNER OF SAID LOT; THENCE NORTH 31 DEGREES 20 MINUTES 00 SECONDS WEST, 62.15 FEET TO A POINT IN THE NORTHERLY LINE OF SAID LOT 2, SAID POINT DISTANT ALONG SAID LINE 32.34 FEET WESTERLY OF THE NORTHWEST CORNER OF SAID LOT; THENCE NORTH 31 DEGREES 20 MINUTES 00 SECONDS WEST, 107.76 FEET; THENCE NORTH 53 DEGREES 16 MINUTES 00 SECONDS WEST, 152.00 FEET; THENCE NORTH 27 DEGREES 06 MINUTES 00 SECONDS WEST, 193.00 FEET; THENCE NORTH 18 DEGREES 06 MINUTES 00 SECONDS WEST, 126.89 FEET TO THE BEGINNING OF A TANGENT CURVE, CONCAVE SOUTHWESTERLY HAVING A RADIUS OF 175.00 FEET; THENCE NORTHWESTERLY ALONG SAID CURVE THROUGH A CENTRAL ANGLE OF 58 DEGREES 52 MINUTES 00 SECONDS AN ARC DISTANCE OF 179.80 FEET; THENCE TANGENT TO SAID CURVE NORTH 76 DEGREES 58 MINUTES 00 SECONDS WEST, 309.37 FEET TO A POINT ON THE EASTERLY LINE OF THE WESTERLY 550.00 FEET OF SAID SOUTHEAST QUARTER OF SOUTHWEST QUARTER OF SECTION 6, SAID POINT LYING NORTHERLY THERON NORTH 00 DEGREES 01 MINUTE 22 SECONDS EAST, 660.00 FEET FROM THE SOUTHERLY LINE OF SAID SOUTHEAST

QUARTER OF SOUTHWEST QUARTER SECTION 6; THENCE NORTHERLY ALONG SAID
EASTERLY LINE NORTH 00 DEGREES 01 MINUTES 22 SECONDS EAST, 646.89 FEET TO
THE NORTHERLY LINE OF SAID SOUTHEAST QUARTER OF SOUTHWEST QUARTER OF
SECTION 6; THENCE EASTERLY ALONG SAID NORTHERLY LINE SOUTH 89 DEGREES 47
MINUTES 22 SECONDS EAST, 48.55 FEET TO THE BEGINNING OF A NON-TANGENT
CURVE CONCAVE NORTHEASTERLY HAVING A RADIUS OF 250.00 FEET, A RADIAL
LINE OF SAID CURVE THROUGH SAID POINT BEARS SOUTH 65 DEGREES 41 MINUTES
17 SECONDS WEST; THENCE SOUTHEASTERLY ALONG SAID CURVE THROUGH A
CENTRAL ANGLE OF 46 DEGREES 23 MINUTES 17 SECONDS AN ARC DISTANCE OF
202.41 FEET; THENCE TANGENT TO SAID CURVE SOUTH 70 DEGREES 42 MINUTES 00
SECONDS EAST, 220.00 FEET TO THE BEGINNING OF A TANGENT CURVE CONCAVE
SOUTHWESTERLY HAVING A RADIUS OF 450.00 FEET; THENCE SOUTHEASTERLY
ALONG SAID CURVE THROUGH A CENTRAL ANGLE OF 55 DEGREES 46 MINUTES 00
SECONDS AN ARC DISTANCE OF 437.99 FEET; THENCE TANGENT TO SAID CURVE
SOUTH 14 DEGREES 56 MINUTES 00 SECONDS EAST, 22.67 FEET; THENCE SOUTH 19
DEGREES 13 MINUTES 00 SECONDS WEST, 163.68 FEET; THENCE SOUTH 21 DEGREES
12 MINUTES 00 SECONDS EAST, 44.00 FEET; THENCE SOUTH 26 DEGREES 45
MINUTES 00 SECONDS WEST, 111.00 FEET; THENCE SOUTH 06 DEGREES 39 MINUTES
00 SECONDS EAST, 121.00 FEET; THENCE SOUTH 48 DEGREES 46 MINUTES 00
SECONDS EAST, 194.18 FEET TO THE WESTERLY LINE OF SAID SOUTHWEST QUARTER
OF SOUTHEAST QUARTER OF SECTION 6, SAID POINT LYING DISTANT NORTHERLY
THERON NORTH 00 DEGREES 02 MINUTES 08 SECONDS WEST, 228.77 FEET FROM THE
SOUTHWEST CORNER OF SAID SOUTHWEST QUARTER OF SOUTHEAST QUARTER OF
SECTION 6; THENCE SOUTH 48 DEGREES 46 MINUTES 00 SECONDS EAST, 66.82 FEET;
THENCE SOUTH 79 DEGREES 47 MINUTES 00 SECONDS EAST, 61.00 FEET; THENCE

SOUTH 01 DEGREES 06 MINUTES 00 SECONDS EAST, 87.00 FEET; THENCE SOUTH 26 DEGREES 54 MINUTES 00 SECONDS EAST, 97.83 FEET TO A POINT IN THE SOUTH LINE OF SAID SOUTHWEST QUARTER OF SOUTHEAST QUARTER OF SECTION 6, SAID POINT DISTANT THEREON 156.07 FEET EASTERLY OF THE SOUTHWEST CORNER OF SAID SOUTHWEST QUARTER OF SOUTHEAST QUARTER OF SECTION 6; THENCE SOUTH 26 DEGREES 54 MINUTES 00 SECONDS EAST, 57.17 FEET; THENCE SOUTH 13 DEGREES 37 MINUTES 00 SECONDS EAST, 208.00 FEET; THENCE SOUTH 03 DEGREES 32 MINUTES 00 SECONDS EAST, 145.00 FEET; THENCE SOUTH 49 DEGREES 34 MINUTES 00 SECONDS EAST, 72.00 FEET; THENCE SOUTH 66 DEGREES 42 MINUTES 00 SECONDS EAST, 35.65 FEET; THENCE SOUTH 32 DEGREES 01 MINUTES 00 SECONDS WEST, 63.42 FEET TO THE TRUE POINT OF BEGINNING.

SEE EXHIBIT "C" ATTACHED.

THE ABOVE DESCRIBED PARCEL CONTAINS 12.56 ACRES OF LAND.

EXHIBIT C-1

LEGAL DESCRIPTION

THAT PORTION OF LOT 1 OF SECTION 7, TOWNSHIP 2 NORTH, RANGE 16 WEST, SAN BERNARDINO BASE AND MERIDIAN IN THE COUNTY OF LOS ANGELES, STATE OF CALIFORNIA, DESCRIBED AS FOLLOWS:

BEGINNING AT THE TRUE POINT OF BEGINNING OF PARCEL 3 OF THE LEGAL DESCRIPTION CONTAINED IN INSTRUMENT NO. _____ RECORDED _____ IN THE OFFICE OF THE COUNTY RECORDER OF LOS ANGELES COUNTY; THENCE NORTH 32 DEGREES 01 MINUTES 00 SECONDS EAST 63.42 FEET; THENCE SOUTH 66 DEGREES 42 MINUTES 00 SECONDS EAST 30.35 FEET; THENCE SOUTH 32 DEGREES 01 MINUTES 00 SECONDS WEST 62.73 FEET; THENCE NORTH 67 DEGREES 58 MINUTES 00 SECONDS WEST 30.46 FEET TO THE POINT OF BEGINNING.

THE ABOVE DESCRIBED PARCEL CONTAINS 0.04 ACRES OF LAND

MEMORANDUM OF UNDERSTANDING

This Agreement is executed this _____ day of _____, 1998 by and among the following: Chatsworth Ridge Estates, Inc. (CRE) and successors and assignees ("Developer"), and Santa Susana Mountain Park Association ("SSMPA"). This Agreement shall be recorded with the Los Angeles County Recorder in the chain of title by CRE, after which it shall constitute an Amendment to the Agreement executed on October 6, 1993, between David A. Gill, the Chapter 11 Trustee for the Estate of Indian Wells Estates, Inc., and the Santa Susana Mountain Park Association, and shall supersede all provisions of said Agreement executed on October 6, 1993. The Developer and the SSMPA hereby express their mutual and individual intent that this Agreement be binding upon all successive owners of the Conservation Easements and, in furtherance thereof, and in satisfaction of California Civil Code Section 815.5, agree that this Agreement shall be recorded in the offices of the County Recorder of Los Angeles County upon execution by the parties hereto. Any notice, demand, request, consent, approval or communication that either party desires or is required to give to the other shall be in writing and delivered by personal, overnight express or courier service, with a written receipt, or sent by registered or certified mail in a sealed envelope, postage prepaid, return receipt requested and addressed to the respective parties to this Agreement.

Recitals:

a. Developer is the owner of the property which is subject to Los Angeles County Tentative Tract Map Number 44327 and certain other entitlements for Project 86-070, sometimes referred to as "Indian Springs Phase II" (the "Project").

b. SSMPA objected to the original Tentative Tract Map and proposed numerous changes to that Map.

c. Developer has revised the original Tentative Tract Map to accommodate the objections of the SSMPA.

d. In consideration for such changes, all parties have agreed to support the processing of a vesting tentative tract map for the Project and a development agreement to be submitted in connection therewith pursuant to the terms and conditions of this Agreement.

Now, therefore, in consideration of the Agreements contained herein, the parties do hereby agree as follows:

1.0 SSMPA, its counsel, and any of its members speaking on behalf of or as representatives of SSMPA, shall support the administrative processing of Vesting Tentative Tract Map number 44327 and its corresponding Oak Tree Report, attached hereto as Exhibit "A" and Exhibit "B," respectively, and made a part hereof (the "Tract Map" and "Report", respectively). SSMPA shall support the processing of the Tract Map as a vesting tentative tract map and any agreed to extension of such Tract Map, and shall support any development agreement submitted to the appropriate governmental authorities in connection with the Project so long as such development agreement conforms to the provisions of the Tract Map and other terms of this Agreement.

2.0 In furtherance of the terms set forth in paragraph 1 above, SSMPA, its counsel, and any of its members speaking on behalf of or as representatives of SSMPA, agree that it shall not file any comments on the Environmental Impact Report, the relationship of the Project to the

general plan, a development agreement or other permit applications or processing documents so long as such documents are consistent with the provisions of the Tract Map and the terms of this Agreement.

3.0 Developer shall process the Tract Map as a vesting tentative tract map and shall apply for all extensions or renewals of that map, or process a substantially identical tract map, for a period of at least ten (10) years, where the ten-year review shall start upon approval of the vesting tentative tract map.

4.0 Upon recordation of the final Tract Map, Developer shall deed to the Santa Monica Mountains Conservancy (the "Conservancy") or its designee, the open space lot shown as Lot 53 ("open space lot") on the Tract Map without cost or obligation on the part of the public entity subject to the conditions described below. If the open space lot is refused by the Conservancy, it shall be offered to other relevant governmental agencies that are willing to accept the deed under the terms and conditions of this agreement. After recordation of the Project entitlements, including the vesting tentative tract map, Developer shall offer to the Conservancy, SSMIPA, or such other public entity described above, the right to lease the open space lot for a nominal sum, consistent with the provisions of this Agreement, until the final tract map is recorded using vesting title to such open space lot in some other entity or for a period of ten (10) years, whichever shall occur first. Such public entity, or the Conservancy, SSMIPA, or its designee, shall assume all liability for the use of the open space lot during such rental period and indemnify Developer from same. The developer shall survey the top northwestern corner of Lot 53 (northwest corner of Section 1) and the northeastern corner of Lot 53. Each corner shall be permanently marked with a heavy duty metal stake prior to map recordation. Each metal stake

shall be cemented no less than 2 feet into the ground with minimum of 3 feet above ground level.

5.0 Developer shall prepare conditions, covenants, and restrictions ("CC&R") applicable to the Project, which upon approval by the SSMPA shall be enforceable by lot owners and SSMPA, which shall provide, among other things:

5.1 The open space lot, whether held in title by the Conservancy or any other entity, shall be maintained in perpetuity as open space, subject to the provisions of these CC&R's. No structure, permanent recreational facilities, parking areas, infrastructure (including water tanks, pumps, and utility lines) or other improvements of any kind shall be permitted on the open space lot, other than trail-related signage and improvements. The one exception to this condition is the allowance, or provision for, the water tank, access road, and appurtenant under grounded utilities shown in Exhibit "C" attached hereto and made a part hereof.

5.2 The conveyance of the open space lot shall be subject to the right of access to the open space lot by Developers and subsequent owners of Tract 44327 for development and maintenance of their property including, but not limited to, encroachments for the stabilization of hillsides, placing of fencing, demarcation of boundaries, brush clearance, and other entries for purposes of repair and maintenance. Motorized vehicles shall not be permitted within any portion of the open space without prior approval from the Santa Monica Mountains Conservancy or its designee. Such rights shall include a right of access for persons and nonvehicular equipment through the open space lot in the area adjacent to the exterior boundaries of any lot as necessary for the maintenance and safety of such lots. Developers and subsequent owners shall have 24 hour administrative access to the open space parcel for such purposes, subject to notification of the Conservancy, SSMPA, or designees. Such access shall be done in a manner reasonably

calculated to avoid or minimize any degradation of the open space character of the parcel, including sensitive plant species or their habitat; intact predominantly native vegetation communities; and basic soil integrity and stability.

5.2 a. The conveyance of the open space lot shall be subject to the transfer of title to the Las Virgenes Municipal Water District (LVMWD) of the water tank site and access road as a separate parcel of land as shown in Exhibit "C" attached hereto. The LVMWD shall have access to the water tank via said access road over Indian Springs roads via Iverson Road.

5.3 The homeowners association created for Tract 44327 or owners of specified lots shall be obligated to pay for all permitted and required brush clearance and fuel modification in both the conservation easements and the open space to the extent that brush clearance is required by government regulations or orders in connection with houses or other structures abutting said open space area. It is contemplated that county fire officials shall require brush clearance on various portions of the open space lot.

5.4 Prior to any development of the Tract, an architectural review committee composed of five members, which shall include a representative of SSMPA, shall formulate, record in appropriate CC&Rs and apply architectural standards for all homes, fences, bridges and other structures to be developed on Tract 44327 so as to provide for compatibility between the design of the structures and the natural terrain and open space character of the property. Details concerning the standards to be applied by the architectural committee in this connection shall be included in the CC&Rs.

5.5 Lots 31 to 37 and Lots 11 to 19 as shown on the Tract Map [those lots adjacent to Fern Ann Falls Creek and Hialeah Springs Creek] shall have a recorded 100-foot

conservation easement ("conservation easement"), measured from the water surface elevation for a 50 year frequency storm, to be held by the public entity with title to the open space lot. The exact boundaries of the conservation easements shall be surveyed and marked with metal stakes, and given a legal description prior to map recordation. The conservation easements will transfer to the new owner of the open space lot upon map recordation. Each intersection point between the inner (closest to the proposed development) easement boundary and the lines dividing lots 11-19 and 30-37 shall be permanently marked with a metal stake cemented no less than 2 feet into the ground with minimum of 3 feet above ground level. Where such conservation easement as specified would result in small remainder areas between the outside boundary of a lot and the easement boundary, separated from the principal unburdened portion of the lot, the 100-foot boundary of the easement shall be expanded to coincide with the outside boundary of the lot. The holder of the easement shall be empowered to enforce the following easement restrictions as stipulated in this Agreement and provided in the CC&R's: (1) the fuel modification plan as approved by the Santa Monica Mountains Conservancy, its designee, or other public agency holding the easement, and by Los Angeles County; (2) the defined fence location limits. For these purposes, the definition of a non-native, or non-locally indigenous plant is a species, or hybrid, that did not occur in the Santa Susana Mountains, the Simi Hills, or the Santa Monica Mountains prior to the occupation of people of European origin. Any reputable, up to date, published flora that includes these three mountain ranges would include all relevant native plant species. (3) no planting of non-locally indigenous plants within the easement; (4) no allowance of drainage infrastructure which directs flows from any portion of the lots into the easement area; (5) no locating of any structures of any type other than fencing as defined; (6) no cutting of

access pathways or installation of stairs; (7) the capability to eliminate any non-locally indigenous (non-native) plants and to leave any cut plant materials in place. For these purposes, the definition of a non-native, or non-locally indigenous plant is a species, or hybrid, that did not occur in the Santa Susana Mountains, the Simi Hills, or the Santa Monica Mountains prior to the occupation of people of European origin. Any reputable, up to date, published flora that includes these three mountain ranges would include all relevant native plant species. (8) no placement of organic or inorganic material of any nature; (9) no violations of Fuel Modification Plan.

5.5.1 The only development or other land alteration permissible within this conservation easement area shall be:

a. reasonable non-flammable fencing located 25 feet or more from the 50 year floor water surface elevation for Lots 11 to 19 [Hialeah Springs Creek] and 90 feet or more for Lots 31 to 37 [Fern Ann Falls Creek] and reasonable unpaved, ungraded access ways to construct and maintain such fencing; and

b. stabilization measures to preserve the structural integrity of any adjacent structure with approval of the Conservancy, which shall not be unreasonably withheld; and

c. brush clearance or other safety measures as ordered in writing by any public regulatory body with jurisdiction over the Project, or as explicitly defined in the Fuel Modification Plan as approved by the Santa Monica Mountains Conservancy, its designee, or other public agency holding the easement, and by Los Angeles County. Guest houses, garages, and other structures ancillary to the residences or main houses shall be sited so as to insure that no additional brush clearance or fuel modification practices required by the Fire

Department or other regulatory agency shall be required beyond what is defined in the aforementioned Fuel Modification Plan. The remedy for any such conflict must be geographically located outside of the two conservation easements and the open space lot.

The following absolute limits to any brush clearance, fuel modification, and irrigation (Absolute Fuel Modification Limits) override any interpretation of the Fuel Modification Plan or order by any public agency with jurisdiction over the project. The remedy for any perceived conflict to violate these limits must be geographically located outside of the open space lot, unless otherwise permitted in writing by the Executive Director of the Santa Monica Mountains Conservancy, his or her designee, or the assigned person of another public agency holding the two easements or title to the open space lot.

Absolute Fuel Modification Limits

All lot numbers, lines and markings referred to are as they are shown on the vesting tentative tract map.

1. The 50-years storm water mark line for lots 11-19. This line is also defined by the limits of the conservation easement furthest from the proposed development.
2. The 50-years storm water mark line lots 31-37. This line is also defined by the limits of the conservation easement furthest from the proposed development.
3. 100 feet from the edge of the flat pads for the northern and western sides of lot 11 and the western side of lot 10.
4. No brush clearance or fuel modification allowed

within 20 feet of Hialeah Spring in any direction.

5. The boundary of the open space lot for lots 4, 5, 6, 8 and 9.

6. 125 feet from the edge of the flat pad for lots 37 and 38, or where more restrictive the limits of number 1 above apply to lot 37.

7. The boundary of the open space lot for lots 44 and 45.

The fifty years storm water mark line associated with each easement shall be surveyed and permanently marked with metal stakes at a maximum interval of 75 feet between stakes prior to map recordation. Each heavy duty metal stake shall be cemented no less than 2 feet into the ground with minimum of 3 feet above ground level.

d. Irrigation equipment within the 50-foot-wide portion closest to the proposed development areas.

5.5.2 No development or land alteration of any kind shall take place on Lot 11 until a supplemental report is prepared concerning underground hydrology for that area, and distributed, and is approved by Los Angeles County. Notwithstanding any other provisions of this Agreement, SSMPA reserves the right to comment on or object in public to development of Lot 11 if, in its discretion, it determines the hydrological conditions present a danger to public health or safety or would potentially lead to degradation of Hialeah Springs.

5.5.3 An access easement through the street network of the tract and for foot travel off the western portion of Zaltana Avenue shall be provided to the public entity holding title to the open space lot, in order to access the open space lot for essential maintenance

and supervision, not to exceed four times per month, or for normal, maintenance, monitoring, enforcement, and supervision or emergency purposes.

5.5.4 Other than as provided above, any alteration of the easement area shall be prohibited, including, without limitation, drainage to the creek from pools, patios, driveways, and structures; structures of any kind; and stairs, paths, or other access ways to the creeks.
