The Honorable Board of Supervisors
County of Los Angeles
383 Kenneth Hahn Hall of Administration
500 West Temple Street
Los Angeles, California 90012

Dear Supervisors:

ADOPTED

BOARD OF SUPERVISORS
COUNTY OF LOS ANGELES

22 October 25, 2016

LORI GLASGOW
EXECUTIVE OFFICER

**CONSTRUCTION-RELATED CONTRACT
PUBLIC BUILDING CORE SERVICES AREA
PROPOSED MIRA LOMA WOMEN'S DETENTION CENTER PROJECT
CERTIFY THE FINAL ENVIRONMENTAL IMPACT REPORT
ADOPT THE MITIGATION MONITORING AND REPORTING PROGRAM
APPROVE THE PROJECT
DELEGATE AUTHORITY TO SIGN AGREEMENTS WITH THE STATE
AWARD CONSULTANT AGREEMENTS
SPECS. 7266; CAPITAL PROJECT NO. 69719
(SUPERVISORIAL DISTRICT 5)
(3 VOTES)**

SUBJECT

Approval of the recommended actions will certify the final Environmental Impact Report for the proposed Mira Loma Women's Detention Center project in Lancaster; adopt the Mitigation Monitoring and Reporting program and environmental findings; approve the project; authorize the Chief Executive Officer or her designee to execute agreements related to the State grant for the proposed project; authorize the Director of Public Works or her designee to execute easements, permits, and utility agreements for the proposed project; and authorize the award of consultant services relating to project management/construction management and project controls/support services.

IT IS RECOMMENDED THAT THE BOARD:

1. Certify that the final Environmental Impact Report for the proposed Mira Loma Women's Detention Center project has been completed in compliance with the California Environmental Quality Act and reflects the independent judgment and analysis of the County; find that the

Board has reviewed and considered the information contained in the final Environmental Impact Report prior to approving the project; adopt the Mitigation Monitoring and Reporting program, finding that the Mitigation Monitoring and Reporting program is adequately designed to ensure compliance with the mitigation measures during project implementation; and determine that the significant adverse effects of the project have been reduced to an acceptable level as outlined in the Environmental Findings of Fact, which findings are adopted and incorporated by reference.

2. Approve the Mira Loma Women's Detention Center project; authorize the Chief Executive Officer or her designee to execute the agreements required to obtain the grant funds from the Local Jail Construction Financing Program (State Assembly Bill 900, Statutes of 2007) in substantially the same form as the draft agreements, with modifications necessary to conform these form agreements to the Mira Loma Women's Detention Center project.
3. Delegate authority to the Director of Public Works or her designee to execute any easements, permits, and utility connection agreements necessary for the completion of the project or for the execution of the State grant funding agreements.
4. Award a consultant services agreement to Building Mira Loma Joint Venture to provide project management/construction management services for the Mira Loma Women's Detention Center project for a \$4 million not-to-exceed amount, and authorize the Director of Public Works or her designee to execute the agreement. The term of this agreement will commence upon the full execution of the agreement and shall terminate upon final acceptance by the County.
5. Award a consultant services agreement to Mira Loma Project Controls, LLC, to provide project controls/support services for the Mira Loma Women's Detention Center project for a \$2 million not-to-exceed amount, and authorize the Director of Public Works or her designee to execute the agreement. The term of this agreement will commence upon the full execution of the agreement and shall terminate upon final acceptance by the County.

PURPOSE/JUSTIFICATION OF RECOMMENDED ACTION

Approval of the recommended actions will certify the final Environmental Impact Report (EIR) for the Mira Loma Women's Detention Center (MLWDC) project; adopt the Mitigation Monitoring and Reporting Program (MMRP) environmental findings; approve the MLWDC project; authorize the Chief Executive Officer (CEO) or her designee to execute the agreements required under the State grant guidelines for the MLWDC project; enable the Director of Public Works or her designee to execute easements, permits, and utility agreements for the proposed project; and award consultant services agreements for project management/construction management and project controls/support services. The recommended actions are consistent with the AB 900 Grant requirements applicable to the proposed MLWDC project in Lancaster and the Board direction on this proposed project. Once the design-build contractor procurement process has been completed pursuant to the design-build policy previously adopted by the Board, we will return to the Board with a recommendation to award a design-build contract to the selected design-builder.

MLWDC Project Background

In March 2012, the Board of State and Community Corrections (BSCC) conditionally awarded

\$100 million in AB 900 Grant funds to the County to develop a 1,156-bed female detention facility at Pitchess Detention Center in Castaic.

On November 14, 2013, the BSCC approved the County's request to relocate the proposed 1,156-bed female detention facility from Pitchess Detention Center to the existing detention facility at Mira Loma in Lancaster. On January 16, 2014, the BSCC approved the revised project scope, budget, and schedule, which included the addition of 448 transitional housing beds to yield a higher total bed capacity of 1,604 beds.

The County has since been working to meet the milestone requirements for the AB 900 Grant funding program, which includes the development of the program, scoping documents, a conceptual site plan, a project cost estimate, and a schedule. On August 17, 2015, the State approved the County's submission to establish the project under the AB 900 guidelines, effectively enabling project costs to be eligible for future reimbursement.

MLWDC Scope

The repair and refurbishment of the existing Mira Loma detention facility for housing eligible low and medium security female inmates will include renovation of the existing campus and buildings, including refurbishment of the housing units, kitchen, administrative buildings, and site infrastructure including code compliance upgrades required by the AB 900 Grant program. New construction will consist of a medical clinic, inmate processing area, visitor reception building, transitional housing, and warehouse storage.

During the project scoping process, items were included in the project to address jurisdictional agencies requirements and help facilitate operational, programmatic services, and gender responsive elements. These items include a dedicated building with contact and non-contact visiting; modernization of facility technology (including video visitation, perimeter security, and surveillance systems); replacement of kitchen equipment; connection to the County water services; and emergency power backup capacity to cover 100 percent of the facility.

State Agreements

In order to proceed through the State's grant funding process, the County must complete specific State required tasks. As part of these tasks, AB 900 Capital Outlay and State Public Works Board Guidelines require six agreements (Enclosures A through F) to be executed between the State and the County:

- BSCC Jail Construction Agreements (Design-Build) – sets forth the roles, responsibilities, and performance expectations of the parties for the construction of the jail facility.
- Project Delivery and Construction Agreement (Design-Build) – to establish the project and obtain the resolution authorizing interim financing of the project from the State Public Works Board.
- Ground Lease – to establish the legal metes and bounds of the project, and lease the site to the State.
- Easement Agreement – to grant access for utilities and repair.
- Right of Entry for Construction – to allow the State to give the County the right to enter the site to construct the facility.
- Facility Sublease - to establish the conditions of the sublease of the facility back to the County.

Approval of the recommended actions will allow the County to conduct discussions with the State to negotiate and modify the agreements to reflect the Mira Loma site, execute the resulting final agreements, and seek the State's concurrence to release the design build Request for Proposals Part B: Technical and Cost Proposal. The Part A Request for Statement of Qualifications Questionnaire does not require State concurrence and will proceed pursuant to the design-build policy previously approved by the Board.

Proposed Design and Construction Method

The proposed delivery method for the MLWDC project is design-build. Pursuant to the design-build policy previously adopted by the Board, a design-build request for proposals will be developed for solicitation of proposals for design and construction of the project and will be released in two parts, Part A, Statement of Qualifications and Part B, Technical and Price proposal. Part B will be released upon determination of qualifying Part A proposers and upon compliance with AB 900 guidelines required by the State. The Department of Public Works will then seek the Board's approval to execute a design-build agreement with the selected design builder. Consistent with the Board-adopted design-build policy, stipends of \$150,000 will be provided to the second and third highest ranked qualified proposers that are not selected as the best-value design-builder (or top three highest ranking qualified proposers if no design-build contract is awarded) via consultant services agreements, giving the County the right to use the information and ideas submitted by the proposers.

Due to the size, duration, and complexity of the MLWDC project, project management/construction management and project controls/support services consultants were selected to assist the County with managing the project and achieving the desired project budget, schedule, and quality objectives. The consultants will provide specialized staff who will provide the required consultant services under the direction of County staff. Public Works conducted negotiations with Building Mira Loma Joint Venture, which is a joint venture team consisting of: Kitchell CEM, Inc.; APSI Construction Management; and the Casamar Group, a Local Small Business Enterprise, resulting in a recommended not-to-exceed amount of \$4 million, including contingency, for project management/construction management services, and conducted negotiations with Mira Loma Project Controls, LLC, a joint venture team consisting of: Gafcon, Inc.; AIM Consulting Services, a Local Small Business Enterprise; and TEC Management Consultants, LLC, resulting in a recommended not-to-exceed amount of \$2 million, including contingency, for project controls/support services.

Implementation of Strategic Plan Goals

The Countywide Strategic Plan directs the provision of Operational Effectiveness/Fiscal Sustainability (Goal 1) by maximizing the effectiveness of process, structure, and operations to support timely delivery of customer-oriented and efficient public services. It also directs that we ensure Community Support and Responsiveness (Goal 2) by enriching lives of Los Angeles County residents by providing enhanced services, and effectively planning and responding to economic, social and environmental challenges; and Integrated Services Delivery (Goal 3) by maximizing opportunities to measurably improve client and community outcomes and leverages resources through continuous integration of health, community, and public safety services. The Mira Loma Women's Detention Center will support these goals by renovating the facilities to provide enhanced operational efficiency, deliver medical services, and gender responsive programs to the County's female inmate population, and thereby enhancing community and public safety services.

FISCAL IMPACT/FINANCING

The County was awarded \$100 million in AB 900 State grant funding for the proposed project. Approximately \$23.4 million in prior year net County cost is currently appropriated within the MLWDC project, Capital Project No. 69719. Public Works estimates that the current total project cost is approximately \$136.6 million which is inclusive of the \$100 million AB 900 Grant. However, a final project cost will be determined when design build proposals are received at the conclusion of the Part B: Technical and Cost Proposal, component of the solicitation. We will return to the Board with recommendations to award a design-build contract to the selected design-builder and, based on the total contract award, to approve a revised project budget and associated budgetary adjustment to fully fund the proposed project.

The total estimated cost for the project management/construction management and project controls/support services is \$6 million, which includes agreements for Building Mira Loma Joint Venture and Mira Loma Project Controls, LLC. The recommended contract awards will be funded by prior year net County cost currently appropriated in the Fiscal Year 2016-17, Capital Projects/Refurbishments Budget under Capital Project No. 69719.

FACTS AND PROVISIONS/LEGAL REQUIREMENTS

Funding conditions of the AB 900 (Statutes of 2007) guidelines requires the County to execute the identified list of agreements with the State. Public Works, in conjunction with CEO, Sheriff, and County Counsel, will participate in discussions and negotiations with the State to modify the template agreements to reflect the unique conditions of the Mira Loma site and project boundary, including any necessary easement requests by the State to service the project site. Execution of the agreements will enable the County to move forward with releasing Part B: Technical and Price Proposal, portion of the design-build solicitation to select a recommended design-builder for the project for the Board's consideration.

The County has consulted with the City of Lancaster on consistency with the City's General Plan, and the project has been deemed to conform to the City's General Plan pursuant to Government Code Section 65402.

A standard consultant services agreement, in the form previously approved by County Counsel, will be used for the project management/construction management and project controls/support services agreements. These consultant services agreements will contain terms and conditions in compliance with the Chief Executive Office's and the Board's requirements. These agreements will also include a provision requiring the consultant firms to track subcontractor's utilization of Local Small Business Enterprise (LSBE), Disabled Veterans Business Enterprise, and Social Enterprise businesses.

The consultants were selected upon final analysis and consideration without regard to race, creed, gender, or color.

ENVIRONMENTAL DOCUMENTATION

Pursuant to the California Environmental Quality Act (CEQA), the potential environmental effects of the proposed project have been analyzed in a draft EIR and circulated for public review and comment. A final EIR (Enclosure G) has subsequently been prepared that includes the comments received, responses to the comments, and the Mitigation Monitoring and Reporting Program (Enclosure H) for the project. The final EIR is now ready for certification. Environmental findings of fact (Enclosure I) are also provided to the Board.

EIR Process

An Initial Study and Notice of Preparation of an EIR was made available for public review between September 5, 2014, and October 6, 2014. The initial study identified potentially significant effects from the project on the environment in the areas of aesthetics, air quality, biological resources, cultural resources, geology and soils, greenhouse gas emissions, hazards and hazardous materials, hydrology and water quality, land use and planning, noise, population and housing, public services, recreation, transportation and traffic, utilities and service systems, and energy. The County held a scoping meeting for the development of the draft EIR on September 18, 2014, and received comments from agencies as well as individuals.

Public notice of the draft EIR was provided pursuant to CEQA Public Resources Code, Section 21092, and posted pursuant to Section 21092.3. CEQA requires a minimum 45-day public review period; however, the draft EIR was made available for an extended 62-day period from November 9, 2015, to January 12, 2016, to provide additional public comment time during the end of year holiday season. Additionally, a public meeting was conducted on December 8, 2015, at the James C. Gilley Lancaster National Soccer Center Eastside Activity Center, in the City of Lancaster. Comments received during the public review period requested translation of the document in Spanish. Thus, the County provided a Spanish translation of the executive summary, re-noticed the document review in English and Spanish, re-opened the public review period for an additional 30 days from February 1, 2016, to March 2, 2016, and conducted an additional public meeting on February 9, 2016, with available Spanish translation services, at the Lancaster Library.

The draft EIR was made available for review at the Lancaster Library located at 601 Lancaster Boulevard, Lancaster, California 93534; Quartz Hill Library located at 42018 North 50th Street West, Quartz Hill, California 93536; the Public Information Office located at 358 Kenneth Hahn Hall of Administration, 500 West Temple Street, Los Angeles, California 90012 during normal business hours; and was made available online at <ftp://dpwftp.co.la.ca.us/pub/PMD/MiraLomaWomenFacility>. A total of 295 comment letters were received in response to the draft EIR, including 5 letters from public agencies, 7 letters from organizations, and 283 letters from individuals. The most frequently raised concerns in the comments received by the County are: (1) opposition to the expansion of any jail facilities and opposition to incarceration in general; (2) decreased accessibility for some families/visitors due to distance from the urban Los Angeles area; and (3) opposition to placement of inmates at the Lancaster project site based on concerns about potential exposure to Valley Fever (Coccidioidomycosis) due to existing soil conditions in the Antelope Valley. The environmental issues and concerns raised through the CEQA process are addressed in detail in the final EIR. Comments on policy issues and on the merits of the project, which do not address environmental impacts, are also presented to the Board in the final EIR for the Board's consideration.

All comments have been reviewed and found to present no new substantial environmental issues and all issues raised in the comments have been adequately addressed in the draft EIR and/or in the Responses to Comments, Mitigation Monitoring and Reporting Program (MMRP) and Revisions, Clarifications, and Corrections to the draft EIR. All potential impacts associated with the proposed project were found to be less than significant with incorporation of mitigation measures, where applicable. Therefore, the EIR concludes that the proposed project would not result in any significant environmental impacts. An MMRP consistent with the conclusions and recommendations of the final EIR has been prepared and is enclosed and will be incorporated into the construction documents to ensure compliance with mitigation measures.

Responses to public agencies that submitted comment letters, were sent pursuant to Section 21092.5 of the California Public Resources Code.

The location of the documents and other materials constituting the record of the proceedings upon which the Board's decision is based in this matter is the County of Los Angeles, CEO, located at the Kenneth Hahn Hall of Administration, Room 754, 7th Floor, Capital Programs/Property Development and Financing Section.

The proposed project is not exempt from payment of a fee to the California Department of Fish and Wildlife pursuant to Section 711.4 of the Fish and Game Code to defray the costs of fish and wildlife protection and management incurred by the California Department of Fish and Wildlife. Upon the Board's certification of the final EIR and approval of the recommendations, Public Works will file a Notice of Determination in accordance with Section 21152(a) of the California Public Resources Code and pay the required filing and processing fees with the Registrar-Recorder/County Clerk in the amount of \$3,070.

Upon completion of the final project design and prior to project construction, the certified EIR will be reviewed to determine whether further documentation under CEQA is required.

CONTRACTING PROCESS

On October 20, 2015, Public Works issued a Request for Proposals and advertised these contracting opportunities on the County's "Doing Business with Us" website, Public Works Business Opportunities website, and Twitter for project management/construction management and project controls/support services. On November 3, 2015, a mandatory pre-proposal's conference was held to discuss the extent of services and provide small business outreach opportunities, 79 firms attended the conference and of these, 46 were small business firms. Public Works reached out to non-LSBE and/or Small Business Enterprises firms to inform them and their subconsultants of the benefits of being a certified LSBE and to encourage them to become an LSBE, if eligible. Enclosure J reflects the selected joint venture teams' utilization participation. In addition, to encourage equity participation by small business, these solicitations provided incentives for a minimum of 20 percent equity partnership with small businesses.

On December 17, 2015, five joint venture teams submitted proposals for the project management/construction management services, and two joint venture teams submitted proposals for the project controls/support services and on February 9, 2016, Evaluation committees composed of staff from Public Works, Chief Executive Office, Sheriff, Mental Health, and

Public Health evaluated each proposal on the proposed staff qualification and experience, the firm's qualifications and experience, expertise in providing specific services, work plan and understanding of the work requirements in the Request for Proposals. Upon review and evaluations of each firm's proposal, in-person interviews were conducted and evaluated to complete the process. These evaluations were completed without regard to race, creed, color or gender. Based on the review and evaluation of these proposals and interviews, Building Mira Loma Joint Venture was selected as the most-qualified firm to provide the project management/construction management services, and Mira Loma Project Controls, LLC, as the most qualified firm to provide the project controls/support services.

Both Building Mira Loma Joint Venture and Mira Loma Project Controls, LLC, provided 35 percent Small Business Partnership.

The negotiated fees for both consultants have been reviewed by Public Works and were found to be reasonable for the respective scopes of work.

It is recommended that a consultant services agreement for a \$4 million not-to-exceed amount be executed with Building Mira Loma Joint Venture, and a consultant services agreement for a \$2 million not-to-exceed amount be executed with Mira Loma Project Controls, LLC.

The consultant services agreements include a cost-of-living adjustment provision in accordance with the Board Policy No. 5.070.

IMPACT ON CURRENT SERVICES (OR PROJECTS)

There will be no impact on current County services or projects during the performance of the recommended actions.

CONCLUSION

Please return one adopted copy of this letter to the Chief Executive Office, Capital Programs Division and the Department of Public Works, Project Management Division II.

Respectfully submitted,

A handwritten signature in cursive script that reads "Gail Farber".

STATE OF CALIFORNIA

BOARD OF STATE AND COMMUNITY CORRECTIONS

JAIL CONSTRUCTION AGREEMENT

FOR _____

This Board of State and Community Corrections Jail Construction Agreement (“**Agreement**”) is entered into as of _____, 20__ (“**Effective Date**”), by and between the Board of State and Community Corrections (“**BSCC**”), an entity of the state government of the State of California (“**State**”), and _____ (“**Participating County**”), a Political Subdivision of the State. BSCC and Participating County are referred to collectively herein as the “**Parties**,” and individually as a “**Party**.”

RECITALS

WHEREAS, Participating County has proposed to build a jail facility as more particularly described in Exhibit B attached hereto (“**Project**”) located at _____ (“**Site**”) under Chapter 3.12, Part 10b of Division 3 of Title 2 of the California Government Code and the corresponding regulations set forth in Title 15, Division 1, Chapter 1, Subchapter 6 of the California Code of Regulations (collectively, the “**AB 900 Jail Financing Program**”).

WHEREAS, this Agreement is being executed concurrently with the execution of the Project Delivery and Construction Agreement (“**PDCA**”) entered into between the Participating County, BSCC, the State Public Works Board of the State of California (“**Board**”) and the Department of Corrections and Rehabilitation (“**Department**”). The Department, the Board and BSCC are referred to collectively herein as “**Agencies**.”

WHEREAS, the purpose of this Agreement is to set forth the roles, responsibilities and performance expectations of the Parties with respect to the Participating County’s construction of the Project under the authority of the BSCC and the procedures for reimbursement by the State of those Participating County costs eligible for reimbursement as provided for under the AB 900 Jail Financing Program. This Agreement is intended to be read in conjunction with the other agreements necessary for the construction and financing of the Project under the AB 900 Jail Financing Program including, without limitation, the PDCA and the other agreements described in the PDCA recitals. Nothing in this Agreement is intended to amend or modify the rights and obligations of the Parties under those other agreements including, without limitation, the PDCA.

WHEREAS, the Total Project Costs for the Project shall be defined in Article 3, Section 3.1(a) of the PDCA. The State will provide financing (“**State Financing**”) (up to a maximum of _____ dollars (\$_____) (“**Maximum State Financing**”)) and the Participating County will provide the Cash (hard) Match (as defined in Article 6(C) below) and the In-Kind (soft) Match (as defined in Article 6(C) below) (with the Cash (hard) Match and the In-kind (soft) Match collectively referred to as “**Participating County Funding**” and together with the Maximum State Financing, the “**Total Eligible Project Costs**”.) Total Eligible Project Costs shall be used in determining Cash (hard) Match credit and In-kind (soft) Match credit to the Participating Counties as specified in Exhibit A to this Agreement. As stated in Article 1, Section 1.3 of the PDCA, the AB 900 Jail Financing Program is predicated on the Board’s ability

to issue Bonds for the Project.

NOW, THEREFORE, in consideration of the promises and of the mutual agreements, provisions and covenants contained in this Agreement, and for other good and valuable consideration, the receipt and sufficiency of which is hereby acknowledged, the Parties agree as follows:

ARTICLE 1. TERM AND TERMINATION

A. Term. This Agreement shall commence on the Effective Date and shall terminate upon the completion and State acceptance of the Final Audit (as defined below in Article 4(C)) unless terminated earlier as provided in Article 1(C) below.

B. Survival. The provisions of Articles 1(C)(3), 1(C)(4), 3(D), 4(C), 4(D), 6(B)(5), 6(B)(6), 9, 10 and 11, and Articles 3, 4, 5, 6, 7, 8, and 10, 11 of Exhibit A shall survive termination of the Agreement.

C. Termination.

1. BSCC in consultation with the other Agencies may terminate this Agreement in the event any of the following events or conditions occurs:

(a) Participating County's breach of a material term of this Agreement, any Project Document or any Applicable Laws provided Participating County has not cured such breach in all respects within such thirty (30) day period, which cure period may be extended for a reasonable time with the consent of BSCC if the Participating County demonstrates that such additional time is required to cure such breach in a diligent and commercially reasonable manner;

(b) Termination of the PDCA as provided for in Article 2, Section 2.2(a)(i)-(v) and (b) of the PDCA;

(c) Substantive alteration of the scope, cost or schedule of the Project without the prior written approval of BSCC and the Board as required under this Agreement and the PDCA; or

(d) Participating County's refusal or inability to complete the Project in a manner consistent with the Agreement, and the other Project Documents (as defined below in Article 3) including all timelines, plans, and specifications as approved by BSCC, or refusal or inability to comply with any Applicable Law.

2. The Participating County may, prior to the State providing any amount of financing, terminate this Agreement in the event any of the following occurs:

(a) The State's breach of a material term of this Agreement, any Project Document or any Applicable Laws provided the State has not cured such breach in all respects within thirty (30) days from notice of said breach, which cure period may be extended for a reasonable time with the consent of the Participating County if the State demonstrates that

such additional time is required to cure such breach in a diligent and commercially reasonable manner;

(b) Termination of the PDCA as provided for in Article 2, Section 2.2(a)(i)–(v) and (b) of the PDCA;

(c) Failure of the State to execute the Ground Lease or the Right of Entry for Construction and Operation; or

(d) In the event the Board determines the Participating County is no longer eligible for Project financing under the AB 900 Jail Financing Program as set forth in Article 1, Section 1.2 of the PDCA.

3. In the event of termination as provided in Article 1(C)(1), and unless the Parties agree in writing otherwise, Participating County shall, upon notification, refund to the Agencies an amount equal to all State Financing previously disbursed to the Participating County. Any State Financing so remitted to the Agencies may be subject to interest equal to the rate earned by the State Pooled Money Investment Account. Participating County shall not be required to refund any State Financing in the event of termination solely because, through no fault of Participating County, the Board determines it is not feasible or appropriate to issue bonds or is unable to issue bonds to finance the Participating County's Project.

4. Nothing in this Article 1 in any way alters or limits the authority of BSCC or the Agencies to withhold State Financing in accordance with Applicable Laws (as defined below) or any other right or remedy available to the State at law or in equity for breach of the Agreement.

ARTICLE 2. PROJECT OFFICIALS

A. BSCC Representative. The BSCC Executive Director or his or her designee shall be the State's representative ("**Agency Representative**") for administration of this Agreement. Any amendment to this Agreement, including any exhibit, schedule or attachment hereto, shall be binding on the State only if signed by the Agency Representative. This Article 2(A) shall not limit any requirements for amendment of any other agreement that is a Project Document.

B. Participating County Construction Administrator. The Participating County has appointed a County Construction Administrator as identified below. Participating County agrees that its County Construction Administrator shall be its representative for the administration of the Agreement and shall have full authority to act on behalf of the Participating County. Participating County agrees that all communications given to its County Construction Administrator shall be binding as if given to the Participating County. Participating County agrees that any documents required to be submitted to the Agencies, including but not limited to, quarterly progress reports and final project summary reports, shall be certified for accuracy by its County Construction Administrator in form reasonably acceptable to BSCC. Any Amendment to this Agreement and any other Project Document shall be binding on the Participating County only if signed or certified in form reasonably acceptable to BSCC by the County Construction Administrator.

County Construction Administrator: _____
Title: _____
Address: _____
City, State, Zip: _____
Telephone: _____
Facsimile: _____
Email: _____

C. Participating County Project Financial Officer. The Participating County has appointed a Project Financial Officer as identified below. Participating County agrees that its Project Financial Officer shall be responsible for establishing an official project file and a separate account for depositing of funds paid under this Agreement, and ensuring that project accounting procedures and practices are in accordance with generally accepted government accounting principles and practices (see Accounting Standards and Procedures for Counties, California State Controller, Division of Local Government Fiscal Affairs) with adequate supporting documentation maintained in such detail so as to provide an audit trail which will permit tracing transactions from support documentation, to the accounting records, to the financial reports and billings. Participating County agrees that all fiscal documents, including all invoices and expenditure statements, required to be submitted to BSCC shall be certified for accuracy by its Project Financial Officer.

Project Financial Officer: _____
Title: _____
Address: _____
City, State, Zip: _____
Telephone: _____
Facsimile: _____
Email: _____

D. Participating County Project Contact Person. The Participating County has appointed a County Project Contact Person as identified below. Participating County agrees that its County Project Contact Person shall be responsible for coordinating and transmitting information to BSCC and receiving and disseminating information from BSCC. Participating County agrees that all communications given to its County Project Contact Person shall be binding as if given to the Participating County.

County Project Contact Person: _____
Title: _____
Address: _____
City, State, Zip: _____
Telephone: _____
Facsimile: _____
Email: _____

Either Party may change its Project representatives upon written notice to the other Party.

ARTICLE 3. PROJECT DOCUMENTS AND APPLICABLE LAWS.

A. Project Documents. The Participating County agrees to construct the Project in accordance with the following agreements and documents each as may be amended in accordance with its terms and which, together with the Agreement, shall be referred to herein as the “**Project Documents**”: (1) BSCC Jail Construction Agreement Standard Conditions attached hereto as Exhibit A; (2) Participating County’s Project Proposal [Insert Name and Date of Participating County’s Bid Proposal] (“**County Project Proposal**”); (3) County Project Description Detail and Budget (“**Project Description**”) in the form attached hereto as Exhibit B; (4) Ground Lease, Right of Entry for Construction and Operation, Facility Lease and the Facility Sublease as those terms are defined in the PDCA; and (5) the PDCA .

B. Applicable Laws. The Participating County agrees to comply with all federal, state or local laws, regulations, rules, ordinances and guidelines applicable to the construction of the Project including, without limitation the following (collectively “**Applicable Laws**”):

1. The Minimum Standards for Local Detention Facilities and Local Jail Construction Financing Program regulations contained in Title 15, Division 1, Chapter 1, Subchapters 4 and 6 of the California Code of Regulations (“**CCR**”).
2. The Minimum Standards for Local Detention Facilities and the fire and life safety regulations contained in Title 24 of the CCR.
3. California Public Contract Code.
4. California Environmental Quality Act (CEQA) contained in Section 21000 *et seq.* of the California Public Resources Code and Title 14, Division 6, Chapter 3, Sections 15000 *et seq.* of the CCR.
5. Accounting Standards and Procedures for Counties, California State Controller, Division of Local Fiscal Affairs.
6. Construction Financing Agreement Administration and Audit Guide.

C. Incorporation of Approved Changes. Upon their completion, all Participating County assurances and submittals, submitted to and approved in writing by BSCC are incorporated herein by reference and made a part of this Agreement.

D. Precedence. In the event of any inconsistency in the Project Documents, except as otherwise provided herein, the inconsistency shall be resolved by giving precedence in the following order: 1) PDCA; 2) the Ground Lease (as defined in the PDCA); 3) this Agreement including the BSCC Jail Construction Agreement Standard Conditions attached hereto as Exhibit A; 4) the Right of Entry for Construction and Operation (as defined in the PDCA); 5) Participating County’s Project Proposal; 6) Participating County Project Description Detail and Budget; and 7) the Participating County’s proposal(s), modification(s), and submittals. In the event the Bonds are issued, any inconsistency between the Project Documents and the Bond Documents shall be resolved by giving precedence to the Bond Documents. To the extent the Parties mutually agree that a provision of a particular document should control with respect to an

inconsistency between that document and another document or documents, notwithstanding the other provisions of this Section, such provision shall control.

ARTICLE 4. PARTICIPATING COUNTY OBLIGATIONS

Participating County agrees to the following covenants, assurances and submittals:

A. Participating County's Construction of Jail. The Participating County shall construct the Project to ensure and enable compliance with all Applicable Laws, and Participating County agrees that State Financing and Cash (hard) Match funds shall not supplant funds otherwise dedicated or appropriated for construction activities. No review or approval provided by the State, the Agencies or the State Fire Marshal of documents or submittals shall relieve Participating County of its obligation to design and construct the Project in accordance with this Agreement and all Applicable Laws including, without limitation environmental, procurement, safety and health, the AB 900 Jail Financing Program, and Titles 15 and 24 of the CCR. The Agencies' review and approval of any Project Document is for the Agencies' purposes only. No alleged failure or oversight related to the Agencies' review of the Project or the Project Documents shall be construed as a waiver of any rights of the Agencies or the State of California, or construed as an excuse to performance by Participating County under this Agreement or any other agreement. All Plans (as defined below) prepared by the Participating County shall be consistent with the Participating County Project Proposal.

B. Valley Fever. California is one of several states in the country with soils that may contain spores known to cause the disease *Coccidioidomycosis* (sometimes called "Valley Fever"), which spores may be transmitted through contact with dirt and fugitive dust associated with construction activities. The Participating County shall disclose this information to contractor in or prior to execution of a Construction Agreement. The Participating County, its contractor and any lower-tier subcontractors shall take appropriate precautionary measures designed to minimize the exposure of their respective employees and other workers, Agencies' employees, and other individuals or personnel who may be present during construction activities.

C. Record Keeping and Audit Requirements. Participating County shall keep such full and detailed account records as are necessary for proper financial management of the Project. Participating County shall maintain a complete and current set of all books and records relating to the design and construction of the Project. Agencies shall be entitled, upon forty-eight (48) hour written notice, to inspect all books, records, and accounts kept by Participating County relating to the work contemplated by this Agreement. Within ninety (90) calendar days after Final Completion (as defined below), Participating County shall deliver to Agencies a financial audit of the Project ("**Final Audit**"). The Final Audit shall be performed by a Certified Public Accountant or a Participating County auditor that is organizationally independent from the Participating County's project financial management functions. Nothing in this Article 4(C) shall limit the Participating County's record retention obligations as set forth in Article 7 of the PDCA. For purposes of this Agreement, "**Final Completion**" shall mean completion of the Project.

D. Compliance with Project Documents and Applicable Laws. Participating County agrees to comply with all terms and conditions of this Agreement, the other Project Documents

and all exhibits and schedules attached hereto or thereto and all Applicable Laws.

E. Project Plans. In addition to all submission requirements under the PDCA, the Participating County shall submit to BSCC the architectural and design documents, drawings, specifications, calculations, general and special conditions, submittals, Project budgets, schedules and contracts (collectively, “Plans”) within the time frames as specifically set forth in Exhibit B and as otherwise may be required by the Project Documents and Applicable Laws. As a condition to the financing to be provided by the State through interim financing or the sale of bonds, Participating County shall cause to be prepared all required Plans and documents necessary to solicit design-build bids or proposals, and complete the Project on time and within budget. Participating County is solely responsible for preparing all Plans and other documents for the design-build solicitation process, as provided by Applicable Law. In addition, Participating County is solely responsible for ensuring the final construction documents and specifications are approved by both the BSCC and the State Fire Marshal before issuance and sale of State lease revenue bonds for the Project as set forth in Article 1, Section 1.2 of the PDCA.

F. Construction. Participating County shall be responsible to contract for all design and construction services, and shall manage the day-to-day design and construction of the Project. Participating County shall cause the design and construction of the Project to be consistent with the requirements, limitations, and other terms of this Agreement, the Project Documents, all Applicable Laws, as well as all other agreements between the Agencies and Participating County.

G. Operation of Jail. Participating County shall be responsible to maintain the jail upon Final Completion and staff and operate the jail no later than ninety (90) days after Final Completion.

H. Professional Services. Participating County shall be responsible for providing all necessary professional services in order to carry out the design and construction of the Project. Participating County shall obtain all professional services from properly licensed design professionals. All Plans prepared by such design professionals shall bear the signature and seal of the design professional. All construction work on the Project shall be performed by properly licensed contractors and subcontractors. Participating County is encouraged to utilize a qualified construction manager and claims avoidance experts to facilitate timely and efficient construction of the Project.

I. Completion of Project. Participating County agrees to proceed expeditiously with, and complete, the Project in accordance with the Project Documents and Plans as approved by the BSCC and the Agencies and/or as incorporated in all provisions of this Agreement. Participating County acknowledges and understands that failure to meet application assurances, construction timelines and any other milestones or timelines as set forth in the Project Documents or Plans as approved by the Agencies and/or as incorporated in all provisions of this Agreement, may result at any time in award adjustments or Agreement termination by the BSCC.

ARTICLE 5. SUBSTANTIAL CHANGES.

In addition to the modification requirements set forth in Article 4, Section 4.2 of the PDCA, no substantial change to the Project Documents or other substantial modification to the Project may be made by Participating County without the prior written permission of the BSCC. Minor modifications to the Project do not require BSCC approval, but must be documented and reported on routine progress reports to the BSCC. Without limiting the foregoing, BSCC approval shall be required upon any of the following events or circumstances:

1. more than minor changes which affect the design or scope of the Project;
2. a delay or change in the date of substantial completion or Final Completion;
3. a more than minor change to the design, location, size, capacity or quality of major items of equipment. As used herein "substantial" is as defined in the State Administrative Manual, Section 6863. As used herein a minor change is any change which does not rise to the level of a substantial change under the State Administrative Manual, Section 6863;
4. a change in approved budget categories, or movement of dollars between budget categories as indicated in Exhibit B; or
5. any change that would impact BSCC or State Fire Marshal construction or operational regulations including, without limitation, Titles 15 and 24 of the CCR , or which affects the security or fire and life safety of the facility.

Participating County agrees that its County Construction Administrator will give prompt notification in writing to the BSCC of the occurrence of any of the above events and report any substantial modifications to the Agreement for Construction with its contractor. BSCC shall notify the Department consistent with Article 4 of the PDCA, and the Department shall make a Scope Change Request to the Board. Approval of this Scope Change Request by the Board shall be required before material change to the Project Documents or other substantial modification to the Project may be made by the Participating County.

In no event shall any budget changes be authorized which would cause the amount of Total Project Costs to be exceeded unless the Participating County covenants to fund such excess with lawfully available funds and with the consent of the Agencies and so appropriates such funding.

ARTICLE 6. PROJECT FUNDING

A. Invoices. Invoice and progress/final reports and all required audit reports shall be submitted to the BSCC in a timely manner as specified in this Agreement and Exhibit A.

B. State Financing Obligations.

1. In no event or circumstance shall the State or Agencies be obligated to pay the Participating County under this Agreement or any other Project Document any amount in excess of the Maximum State Financing. Participating County waives any and all claims against the Agencies or the State of California for any costs which exceed the Maximum State

Financing. The Participating County is solely responsible for any and all cost, expenses or fees of the Project which exceed the Maximum State Financing. Reimbursement of county costs from State Financing shall be limited to those costs permitted under Article 1(A) of Exhibit A and/or specifically identified in Exhibit B as “**Eligible State Costs**” provided, however, the State’s obligations to reimburse Participating County for any State Financing is contingent on (1) the availability of Interim Financing and (2) even if Interim Financing is provided, the successful sale of bonds sufficient to cover all remaining Eligible State Costs. State Financing shall be subject to the terms and conditions set forth in the PDCA.

2. Eligible State Costs subject to reimbursement shall in no event or circumstance exceed Maximum State Financing. Because the funds to be paid are limited, Participating County shall be obligated to complete the Project without additional State Financing. No additional State Financing will be available, and Participating County should take all necessary precautions to ensure that the Project is designed and constructed within the Project budget. The Participating County shall be responsible for any costs exceeding the Total Eligible Project Costs.

3. State shall reimburse the Participating County for Eligible State Costs provided Participating County’s performance of the Project is consistent with the Project Documents, including the Construction Schedule, and Participating County is not in breach of any term or condition of this Agreement, any Project Document, or any Applicable Law. At mutually agreed upon intervals as set forth in Exhibit A, Article 7, Participating County shall submit to BSCC a reimbursement request for payments of Eligible State Costs for which Participating County has already paid.

4. BSCC may reject any invoice or item on an invoice should it be determined that such invoice or item is ineligible for reimbursement under the terms of this Agreement, the Project Documents or any Applicable Laws (“**Improper Expenditure**”). Should it later be determined Participating County has been reimbursed for an Improper Expenditure or the State has made a payment to Participating County in excess of the amount for which the State is obligated (“**Excess Payment**”), BSCC may withhold future payments or repayments in amounts equal to the Improper Expenditure or the Excess Payment. In the event the amount of an Improper Expenditure exceeds the total reimbursement amount due Participating County, or should the discovery of the Improper Expenditure or Excess Payment occur after payment of the Withhold Amount (as defined below), Participating County shall immediately pay to BSCC the amount of the Improper Expenditure or Excess Payment.

5. At such time as the unreimbursed balance of the Eligible State Costs equals Five percent (5%) of the total Eligible State Costs (“**Withhold Amount**”), BSCC shall withhold that amount as security for Participating County’s performance of all its obligations under this Agreement. The Withhold Amount shall be released upon satisfaction of all of the following conditions: (a) there has been Final Completion of the Project, (b) delivery by Participating County and acceptance by Agencies of the Final Audit and the Final Project Summary Report, (c) Participating County has staffed and operated the jail as required under Article 4(G) above, and (d) Participating County is not in breach of any provisions of this Agreement, the other Project Documents and Applicable Laws.

6. All agreements with the contractor and any other contractor or subcontractor of Participating County or the contractor providing services or goods on the Project and for which reimbursement with State Financing for all or any portion of the payment for such services or goods is sought, shall require the contractor or subcontractor to list construction costs according to the CSI Divisions for the approved Schedule of Values.

C. Participating County Funding. Subject to all terms and provisions of this Agreement, the Participating County agrees to appropriate and spend cash (hard) matching funds as provided in Exhibits A and B (“**Cash (hard) Match**”). Subject to all terms and provisions of this Agreement, the Participating County agrees to provide in-kind (soft) match in accordance with Exhibits A and B (“**In-kind (soft) Match**”). Participating County agrees to expend Cash (hard) Match funds on a schedule that is at least pro-rata with the percentage expenditure of Eligible State Costs.

ARTICLE 7. ADMINISTRATIVE OVERSIGHT BY BOARD

Notwithstanding any other term or condition of this Agreement or any other Project Document, the scope and cost of the Project shall be subject to approval and administrative oversight by the Board, as required by California Government Code Section 15820.911.

ARTICLE 8. PERFORMANCE AND PAYMENT BONDS

Participating County shall require the contractor to procure and maintain a payment bond and a performance bond each of which shall be in an amount not less than one hundred percent (100%) of the contractor’s total contract price as set forth in the agreement between Participating County and contractor. The bonds shall be issued by one or more surety companies acceptable to the Agencies. The performance bond required by this Article 8 shall name the State as an additional beneficiary under the bonds.

ARTICLE 9. INDEMNITY

As required by California Government Code Section 15820.915, the Participating County hereby agrees to indemnify, defend and save harmless the State, including but not limited to the Board, the Department and the BSCC, and each of their respective officers, governing members, directors, officials, employees, subcontractors, consultants, and agents (collectively, “Indemnitees”) for any and all claims and losses arising out of the acquisition, design, construction, operation, maintenance, use and occupancy of the Project. The Participating County shall not be obligated to provide indemnity or defense where the claim arises out of the active negligence or willful misconduct of the Indemnitees. These obligations shall survive any termination of this Agreement.

ARTICLE 10. DISPUTES

Disputes arising under or relating to this Agreement shall be resolved in accordance with the provisions of Article 10 of Exhibit A.

ARTICLE 11. GENERAL TERMS AND CONDITIONS

The general terms and conditions published by the Department of General Services at <http://www.documents.dgs.ca.gov/ols/GTC-610.doc> and applicable to all State of California contracts are hereby incorporated by reference into this Agreement. In the event of a conflict between GTC-610 and any sections herein, the sections herein take precedence. In signing below, the Participating County's authorized representative represents and warrants that the Participating County has read and understands these general terms and conditions.

ARTICLE 12. COUNTERPARTS

This Agreement may be executed in one or more counterparts, any one of which need not contain the signatures of more than one Party, but all of which when taken together shall constitute one and the same instrument, notwithstanding that all Parties have not signed the same counterpart hereof.

EXHIBIT A

CONSTRUCTION AGREEMENT STANDARD CONDITIONS

ARTICLE 1. TOTAL ELIGIBLE PROJECT COSTS

A. Participating County shall only be reimbursed by the State from State Financing for Eligible State Costs. “**Eligible State Costs**” means reasonable and necessary Project costs actually incurred in construction of the Project and as specified in Exhibits A and B attached to the Agreement. Eligible State Costs also must be eligible for lease-revenue bond financing pursuant to this Agreement (including all Exhibits referenced therein) and all California state laws, rules, regulations, guidelines, and policies including, without limitation, Title 15, Local Jail Construction Financing Program regulations and any other Applicable Laws. Such Eligible State Costs shall include, but are not limited to, the items set forth in subsection (1) through (8) below. Participating County shall receive BSCC’s written consent prior to Participating County’s incurring the expense for any Project costs not listed below and for which Participating County wants State reimbursement provided such expenses do not fall within Participating County Costs as defined below in subsection (B).

1. On-site costs of facility construction of the BSCC-approved local jail facility project, including site preparation (eligible for State Financing or Cash (hard) Match).
2. Architectural programming and design (for activities by consultants and contractors; eligible for State Financing or Cash (hard) Match).
3. Construction management (for activities by consultants and contractors; eligible for State Financing or Cash (hard) Match).
4. Building permit fees, sewer/utility use or unit fees, and building inspection fees (eligible for State Financing or Cash (hard) Match).
5. Fixed equipment items (e.g., heating, ventilation, air conditioning, plumbing, lighting, communications, surveillance, security and life/safety equipment, etc.) as necessary for the operation of the BSCC-approved local jail facility (eligible for State Financing or Cash (hard) Match).
6. Fixed furnishings items (e.g., built-in and/or permanently affixed counters, tables, cabinets, seats, etc.) as necessary for the operation of the BSCC-approved local jail facility (eligible for State Financing or Cash (hard) Match).
7. Installation of existing fixed equipment and furnishings as necessary for the operation of the BSCC-approved local jail facility (eligible for State Financing or Cash (hard) Match).
8. Moveable equipment and moveable furnishings (subject to State review and approval; eligible for State Financing or Cash (hard) Match).

B. Participating County must provide a minimum of at least _____ percent (___%) of the Total Eligible Project Costs as any combination of Cash (hard) Match and In-kind (soft) Match funds. **(Note to drafter: Large and Medium counties must provide a minimum of 10%).** Cash (hard) Match funds cannot be used to supplant or replace funds otherwise dedicated or appropriated by the Participating County for construction activities. Cash (hard) Match funds cannot be claimed for salaries/benefits of regular employees of the Participating County Workforce but may be claimed for the services of consultants or contractors engaged to perform Project related services as described below. Cash (hard) Match funds only include costs of:

1. Items eligible for Eligible State Costs as described above;
2. Preparation costs for full or focused environmental reports (for activities by consultants and contractors);
3. Off-site costs, including access roads and utilities development, outside of a reasonable buffer zone surrounding the perimeter of the security fence, detention facility building and parking lot; and
4. Public art.

C. In-kind (soft) Match funds may be claimed for Project related costs for activities performed by Participating County staff or consultants. Eligible In-kind (soft) Match funds only includes:

1. Audit of Total Eligible Project Costs at the conclusion of the Project (staff salary/benefits of independent Participating County auditor or services of contracted auditor);
2. Needs assessments (staff salary/benefits and/or consultant costs directly related to the Project);
3. Site acquisition cost or current fair market land value supported by independent appraisal (on-site land only regardless of acquisition date) and as approved by the Department of General Services. This can be claimed for on-site land cost/value for new facility construction, on-site land cost/value of a closed facility that will be renovated and reopened, or on-site land cost/value used for expansion of an existing facility. It cannot be claimed for land cost/value under an existing operational local jail facility;
4. Participating County administration (staff salary/benefits directly related to the Project for activities after October 1, 2011);
5. Transition planning (staff salary/benefits and consultant activities directly related to the Project for activities after October 1, 2011); and
6. Real estate due diligence costs as billed to the Participating County by the State.

D. Participating County shall not under any circumstance be reimbursed by the State from Board interim financing sources, lease-revenue bond funds or from any other financing

source for Ineligible Project Costs. “**Ineligible Project Costs**” means all costs which are not eligible for lease-revenue bond financing or Participating County matching funds pursuant to the PDCA (including all Exhibits attached thereto) or pursuant to any California state law, rule, regulation, guideline, or policy including, without limitation, the AB 900 Jail Financing Program or any other Applicable Law. Participating County shall be responsible for all Ineligible Project Costs (“**Participating County Costs**”). Ineligible Project Costs also shall include but are not limited to the following:

1. Those Project Costs that are determined by the BSCC to be unreasonable or unnecessary costs.
2. Detention facility personnel and operational costs and related costs of supplies.
3. Soil and water contamination assessment/mitigation.
4. Excavation of burial sites.
5. Preparation of Environmental Impact Reports (ineligible for State Financing; eligible for Cash (hard) Match only if performed by consultants or contractors outside the regular county work force, eligible for In-kind (soft) Match if performed by county-paid employees).
6. Bonus payments for early completion of work.
7. Interest charges for late payments.
8. Interest on bonds or any other form of indebtedness required to finance Project costs.
9. Costs outside the scope of the BSCC-approved Project.
10. Fines and penalties due to violation of or failure to comply with federal, state or local laws, ordinances, or regulations.
11. Personal injury compensation or damages arising out of or connected with the Project, whether determined by adjudication, arbitration, negotiation, or otherwise.
12. All costs incurred in violation of the terms, provisions, conditions, or commitments of this Agreement.
13. Travel and per diem costs.
14. All costs arising out of or connected with contractor claims against the Participating County, or those persons for whom the Participating County may be vicariously liable, including, but not limited to, any and all costs related to defense or settlement of such claims.

15. Maintenance costs.
16. Supplanting of existing construction, programs, projects, or personnel.
17. All costs arising out of or attributable to Participating County's malfeasance, misfeasance, mismanagement, or negligence.
18. Temporary holding or court holding facilities.
19. Local Jail facilities or portions thereof operated by jurisdictions other than Participating County.

ARTICLE 2. PARTICIPATING COUNTY'S GENERAL RESPONSIBILITY

Participating County is solely responsible for design, construction, operation, and maintenance of the Project as identified in Exhibit B of this Agreement. Review and approval of plans, specifications, or other documents by BSCC, the Agencies and the State Fire Marshal, is solely for the purpose of proper administration of State Financing by the BSCC and the Agencies and shall not be deemed to relieve or restrict the Participating County's responsibility.

ARTICLE 3. PARTICIPATING COUNTY ASSURANCES AND COMMITMENTS

A. Compliance with Laws and Regulations. This Agreement is governed by and shall be interpreted in accordance with the laws of the State of California. Participating County shall at all times comply with all Applicable Laws (as defined in the Agreement).

B. Fulfillment of Assurances and Declarations. Participating County shall fulfill all assurances, declarations, representations, and statements made by the Participating County in the County Project Proposal, documents, amendments, and communications filed in support of its request for lease-revenue bond funds including adoption of a BSCC approved staffing plan for staffing and operating the facility in accordance with state standards within ninety (90) calendar days of construction completion.

C. Use of State Financing. Participating County shall expend all State Funds and identified matching funds solely for Eligible Project Costs. Participating County shall, upon demand, remit to the BSCC any State Financing not expended for Eligible Project Costs or an amount equal to any State Financing expended by the Participating County in violation of the terms, provisions, conditions, or commitments of this Agreement. Any State Financing so remitted to the BSCC shall include interest equal to the rate earned by the State Pooled Money Investment Account.

D. Permits and Licenses. Participating County agrees to procure all permits and licenses necessary to complete the Project, pay all charges and fees, and give all notices necessary or incidental to the due and lawful proceeding of the Project work.

E. Compliance with Deliverables, Drawings, and Specifications. Participating County agrees that deliverables, drawings, and specifications, upon which prime and subcontracts are awarded, shall be the same as those submitted to and approved by the BSCC.

F. Prime and Subcontracting Requirements. In accordance with the provisions of this Agreement, the Participating County may contract with public or private contractors of services for activities necessary for the completion of the Project. Participating County agrees that in the event of an inconsistency between the Agreement and any other Project Document and Participating County's Construction Agreement with a contractor, the Project Documents will prevail. Participating County shall ensure that the contractor complies with all requirements of the Project Documents and all instructions of the County Construction Administrator regarding compliance with the Project Documents.

Participating County assures that for any contract awarded by the Participating County, such insurance (e.g., fire and extended coverage, workers' compensation, public liability and property damage, and "all-risk" coverage) as is customary and appropriate will be obtained.

Participating County agrees that its contractor will list construction costs according to the CSI Divisions for the approved Schedule of Values. Since certain portions of the Project may not be eligible for State Financing in all requests for reimbursement, the Participating County's contractor shall separately list work not eligible for State Financing, and the County Construction Administrator shall identify such work for the contractor.

Participating County agrees that it is the County Construction Administrator's responsibility to provide a liaison between the Participating County, the BSCC, and its contractor. Participating County agrees that its contractor is not responsible nor required to engage in direct discussion with the BSCC or any representative thereof, except that the contractor shall in good faith exert its best effort to assist the Participating County in fully complying with all requirements of the contract.

Participating County agrees to place appropriate language in all contracts for work on the Project requiring the Participating County's contractor(s) to:

1. Books and Records. Maintain adequate fiscal and Project books, records, documents, and other evidence pertinent to the contractor's work on the Project in accordance with generally accepted accounting principles. Adequate supporting documentation shall be maintained in such detail so as to permit tracing transactions from the invoices, to the financial statement, to the accounting records, and to the supporting documentation. These records shall be maintained for the period set forth in Article 5 below, and shall be subject to examination and/or audit by the BSCC or designees, state government auditors or designees.

2. Access to Books and Records. Make such books, records, supporting documentations, and other evidence available to the BSCC or designees, the Department, the Board, the Department of General Services, the Department of Finance, the Bureau of State Audits, their designated representatives, during the course of the Project and for the period set forth in Article 5 below, and provide suitable facilities for access, monitoring, inspection, and copying thereof. Further, the Participating County agrees to include a similar right of the state to audit records and interview staff in any subcontract related to the performance of this Agreement.

3. Contractor Advisement. Be advised that a partial source of financing for the agreement between the Participating County and contractor for construction of the Project is the State Financing, and that the Participating County may not have funds to finance the Construction Agreement independently of the State Financing. The contractor shall in all ways cooperate with the Participating County and the BSCC in maintaining a good working relationship. The contractor shall cooperate as instructed by the County Construction Administrator in resolving any disputes arising under the Agreement.

ARTICLE 4. PROJECT ACCESS

To the extent not inconsistent with the Bond Documents, as that term is defined in Article 1 Section 1.1(a) of the PDCA, at all times during construction of the Project and after final completion, the Participating County shall provide to employees, subcontractors, and consultants of the Agencies reasonable unrestricted access to observe, monitor and inspect the Project. The Agencies' access to observe, monitor and inspect shall include the right to review all documents and files relating to the Project, as well as construction on the Site, including all tests and inspections relating to design or construction of the Project.

ARTICLE 5. RECORDS

Participating County shall establish an Official Project File, as defined in Article 7, Section 7.1 of the PDCA.

Participating County shall establish separate accounting records for receipt, deposit, and disbursement of all Project funds as specified in Exhibit A Article 9.

Participating County shall maintain books, records, documents, and other evidence sufficient to reflect properly the amount, receipt, and disposition of all Project funds, including State Financing, any matching funds provided by the Participating County and the total cost of the Project. The maintenance requirements extend to books of original entry, source documents supporting accounting transactions, the general ledger, subsidiary ledgers, personnel and payroll records, canceled checks, and related documents and records. Source documents include copies of all awards, applications, and required financial and narrative reports. Personnel and payroll records shall include the time and attendance reports for all individuals reimbursed under the award, whether they are employed full-time or part-time. Time and effort reports are also required for consultants and contractors. Supporting documentation for matching funds, goods or services shall, at a minimum, include the source of the match, the basis upon which the value of the match was calculated, and when the matching funds, goods, or services were provided. Receipts, signed by the recipient of donated goods and/or services should be issued and a copy retained. Generally accepted government accounting principles and adequate supporting documentation shall be maintained in such detail so as to provide an audit trail which will permit tracing transactions from the invoices to the financial statement, to the accounting records, and to the supporting documentation for the purpose of determining compliance with Section 10115 *et seq.* of the California Public Contract Code, Section 8546.7 of the California Government Code, and Title 2, Division 2, Chapter 3, Subchapter 10.5 Section 1896.60 *et seq.* of the CCR (as applicable).

Participating County shall maintain all records for the period set forth in the PDCA (“**Record Maintenance Period**”). Participating County agrees to protect records adequately from fire or other damage. When records are stored away from the Participating County’s principal office, a written index of the location of records stored must be on hand and ready access must be assured. All Participating County records shall be subject at all reasonable times to inspection, examination, monitoring, copying, excerpting, transcribing, and audit by the BSCC or designees, the Agencies, and by state government auditors or designees. If any litigation, claim, negotiation, audit, or other action involving the records has been started before the expiration of the Record Maintenance Period, the records must be retained until the completion of the action and resolution of all issues which arise from it or until the end of the Record Maintenance Period, whichever is later.

ARTICLE 6. ACCOUNTING AND AUDIT REQUIREMENTS

All funds received by the Participating County shall be deposited into separate fund accounts which identify the funds and clearly show the manner of their disposition. Participating County agrees that the audit and accounting procedures shall be in accordance with generally accepted government accounting principles and practices (see Accounting Standards and Procedures for Counties, California State Controller, Division of Local Government Fiscal Affairs) and adequate supporting documentation shall be maintained in such detail so as to provide an audit trail which will permit tracing transactions from support documentation to the accounting records to the financial reports and billings. Participating County further agrees to the following audit requirements:

A. Pre-payment Audit. Prior to the deposit of State Financing into the separate account, the BSCC may require the Participating County to have a system audit performed by an auditor satisfactory to the BSCC to insure that the Participating County’s accounting system meets generally accepted government accounting principles;

B. Interim Audit. The BSCC reserves the right to call for a program audit or a system audit at any time between the execution of this Agreement and the completion or termination of the Project. At any time, the BSCC may disallow (that is, deny both use of funds and any applicable matching credit for) all or part of the cost of the activity or action determined to be not in compliance with the terms and conditions of this Agreement, or take other remedies legally available; and,

C. Final Audit. Within ninety (90) calendar days of Final Completion, the Participating County must obtain and submit a final program audit to the BSCC (see Construction Financing Program Agreement Administration and Audit Guide). The audit shall be prepared in accordance with generally accepted auditing standards and government auditing standards for financial and compliance audits. The audit may be performed by the Participating County subject to the terms hereinafter described, or the Participating County may hire, at Participating County cost, an independent auditor to complete the final audit. Participating County should obtain assurances that the personnel selected to perform the audit collectively have the necessary skills. It is important that a sound procurement practice be followed when contracting for audit services. Sound contract and approval procedures, including the monitoring of contract performance, should be in place. The objectives and scope of the audit should be

made clear. In addition to price, other factors to be considered include: the responsiveness of the bidder to the request for proposal; the past experience of the bidder; availability of bidder staff with professional qualifications and technical abilities; and whether the bidder organization participates in an external quality control review program. It should be noted that these steps are important whether the Participating County is hiring auditors from an outside CPA firm or within its own internal auditing unit.

Since the audit function must maintain organizational independence, the County Financial Officer for this Project shall not perform audits of the contract-related activities. If the Participating County internal auditor performs the audit, the auditor must be organizationally independent from the Participating County's accounting and project management functions. Additionally, Participating County internal auditors who report to the Project Financial Officer, or to whom the Project Financial Officer reports, shall not perform the audit. The person conducting the audit shall be a certified public accountant, unless a Participating County auditor completes the audit. Failure to comply with these qualifications standards could result in the rejection of the audit report.

At any time, the BSCC may disallow (that is, deny both use of funds and any applicable matching credit for) all or part of the cost of the activity or action determined to be not in compliance with the terms and conditions of this Agreement, or take other remedies legally available.

The BSCC reserves the right to have an audit conducted (at the BSCC's expense) at any time between execution of the Agreement up to and including the final audit of the Project.

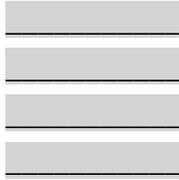

ARTICLE 7. REPORTS

Participating County agrees to submit fiscal invoices and progress/final reports in a format specified by the BSCC, and at mutually agreed upon intervals as defined below, during the period of the Agreement. Reports are due to the BSCC even if State Financing is not expended or requested in the reporting period. Not submitting invoices and progress/final reports in a timely manner may result in disbursements being withheld. In addition, Participating County shall immediately advise the BSCC of any significant problems or changes arising during the course of the Project.

Without limitation of the foregoing, the following reports are required:

A. Fiscal Invoice and Progress/Final Report. Participating County agrees to submit fiscal invoices and progress/final reports to the BSCC on the appropriate form provided to the Participating County during the term of this Agreement and shall do so on a regular schedule of either monthly, bi-monthly or quarterly. The reports shall include, but not be limited to, Project construction activities, change orders issued, problems identified, assistance needed, state funds and match expenditures made, State Financing received, and State Financing requested.

Invoicing/progress reporting interval: The indicate interval fiscal and progress/final report must be submitted within forty-five (45) calendar days after the end of indicate interval. The due dates for the invoices and progress reports are no later than:

B. Final Fiscal Invoice and Project Summary. Participating County agrees to submit to the BSCC a Final Fiscal Invoice and Project Summary on the appropriate form provided to the Participating County within forty-five (45) calendar days of the scheduled construction completion date identified in Exhibit B. The report shall include, but not be limited to, total state funds and match expenditures made by budget division, total State Financing received, remaining State Financing requested, number of BSCC-rated beds added and modified, number of special use beds added and modified, and a detailed description of the finished Project including pre-construction and post-construction photographs or other visual material suitable for public distribution. For purposes of this Exhibit A, “**BSCC-rated beds**” means the number of beds dedicated to housing adult offenders for which a facility’s single- and double-occupancy cells/rooms or dormitories were planned and designed in conformity to the standards and requirements contained in Titles 15 and 24 of the CCR. “**Special use beds**” means beds for the purpose of appropriately housing offenders in medical, mental health, or disciplinary rooms, cells or units that are planned and designed in conformity to the standards and requirements contained in Titles 15 and 24 of the CCR.

ARTICLE 8. WITHHOLDING OF STATE DISBURSEMENTS

A. BSCC may withhold all or any portion of the State Financing provided for by this Agreement in the event that:

1. Participating County Breach of Agreement. Participating County has materially and substantially breached the terms and conditions of this Agreement or any other Project Document.
2. Insufficient County Funds. Participating County is unable to demonstrate, to the satisfaction of the BSCC’s Executive Director, continuous availability of sufficient funds to complete the Project.
3. Insufficient Match Disbursement. Participating County has not expended its Cash (hard) Match requirement on a schedule that is at least pro-rata with the percentage expenditure of, collectively, interim financing and lease-revenue bond funds.

B. In the event that State Financing is withheld from the Participating County, the BSCC’s Executive Director or designee shall notify the Participating County of the reasons for withholding and advise the Participating County of the time within which the Participating County may remedy the failure or violation leading to the withholding.

The BSCC will not reimburse counties for costs identified as ineligible for State Financing. If State Financing has been provided for costs subsequently discovered to be ineligible, the BSCC may either withhold an equal amount from subsequent payments to the

Participating County or require repayment of an equal amount to the State by the Participating County. Any State Financing so remitted to the BSCC may be subject to interest equal to the rate earned by the State Pooled Money Investment Account.

ARTICLE 9. DISBURSEMENT

Participating County shall be paid in arrears on invoices of expenditures and requests for funds submitted to BSCC at mutually agreed upon intervals, see Article 7(A), on the Fiscal Invoice and Progress/Final Report. Participating County shall supply BSCC with appropriate expenditure documentation and request for funds on form(s) provided by BSCC and certify to the accuracy of the report(s) in accordance with generally accepted governmental accounting principles and BSCC regulations, guidelines, policies and procedures. Participating County shall further certify that all listed expenditures are actual and that all funds were expended for the purpose of liquidating obligations identified in Exhibit B and legally incurred.

The State will issue a warrant for eligible funds within approximately thirty (30) to sixty (60) days of receipt of Participating County invoice and documentation of eligible expenditures. All requests for payment shall be accompanied by any documentation as may be required by BSCC or the Board and with such certification(s) as may be required by BSCC.

ARTICLE 10. DISPUTES

Participating County shall continue with the responsibilities under this Agreement during any disputes. Except as otherwise provided in this Agreement, any dispute concerning a question of fact arising under, or relating to, the performance of this Agreement which is not resolved by agreement between Participating County and BSCC staff shall be decided by the BSCC. This clause does not preclude consideration of legal questions; nothing in this Agreement shall be construed as making final the decision of any administrative official, representative, or BSCC on a question of law.

Participating County may appeal on the basis of alleged misapplication, capricious enforcement of regulations, or substantial differences of opinion as may occur concerning the proper application of regulations or procedures. Such appeal shall be filed within thirty (30) calendar days of the notification of the action with which the Participating County is dissatisfied. The request shall be in writing stating the basis for the dissatisfaction and the action being requested of the BSCC.

A hearing shall be conducted by a hearing panel designated by the Chairperson of the BSCC Board at a reasonable time, date, and place, but not later than twenty-one (21) calendar days after the filing of the request for hearing with BSCC, unless delayed for good cause. BSCC shall mail or deliver to the appellant or authorized representative a written notice of the time and place of hearing not less than fourteen (14) calendar days prior to the hearing. The procedural time requirements may be waived with mutual written consent of the parties involved.

Appeal hearing matters shall be set for hearing, heard, and disposed of by a notice of decision by the BSCC Board within ninety (90) calendar days from the date of the request for appeal hearing, except in those cases where the appellant withdraws or abandons the request for hearing or the matter is continued for what is determined by the hearing panel to be good cause.

An appellant may waive a personal hearing before the hearing panel and under such circumstances, the hearing panel shall consider the written information submitted by the appellant and other relevant information as may be deemed appropriate.

The hearing is not formal in nature. Pertinent and relevant information, whether written or oral, will be accepted. Hearings will be tape recorded. After the hearing has been completed, the hearing panel shall submit an advisory recommendation on the matter to the BSCC Board. The decision of the BSCC Board shall be final.

Notwithstanding any other provision of this Article 10, this Article 10 shall not limit any other rights or remedies available to the State or any other Agency under any other Project Document including, without limitation, the PDCA.

ARTICLE 11. REMEDIES

Participating County agrees that any remedy provided in this Agreement is in addition to and not in derogation of any other legal or equitable remedy available to the BSCC as a result of breach of this Agreement by the Participating County, whether such breach occurs before or after completion of the Project. In the event of litigation between the Parties hereto arising from this Agreement, it is agreed that the prevailing Party shall be entitled to such reasonable costs and/or attorney fees and costs as may be ordered within the discretion of the Court.

ARTICLE 12. WAIVER

The Parties hereto may, from time to time, waive any of their rights under this Agreement unless such waiver is contrary to law, provided that any such waiver shall be in writing and signed by the Party making such waiver.

EXHIBIT B

PROJECT DESCRIPTION AND BUDGET

Capitalized terms not defined in this Exhibit B shall have the meaning as set forth in the Agreement to which this Exhibit B is attached.

County (County):

Name of Facility Subject to Construction:

SECTION 1. PROJECT DESCRIPTION

Provide a description of the Project scope as presented in Exhibit A of the PDCA.

SECTION 2. PROJECT TIMETABLE

Provide an updated Project timetable to include start and completion dates for each of the following key events: 1) Schematic Design and Operational Program Statement; 2) Design Development with Staffing Plan; 3) Staffing/Operating Cost Analysis; 4) Construction Documents; 5) Construction Bids; 6) Notice to Proceed; 7) Construction; and 8) Occupancy. Note that construction should be substantially complete within three (3) years from Notice to Proceed and occupancy must occur within ninety (90) days of Final Completion.

SECTION 3. CONSTRUCTION MANAGEMENT PLAN

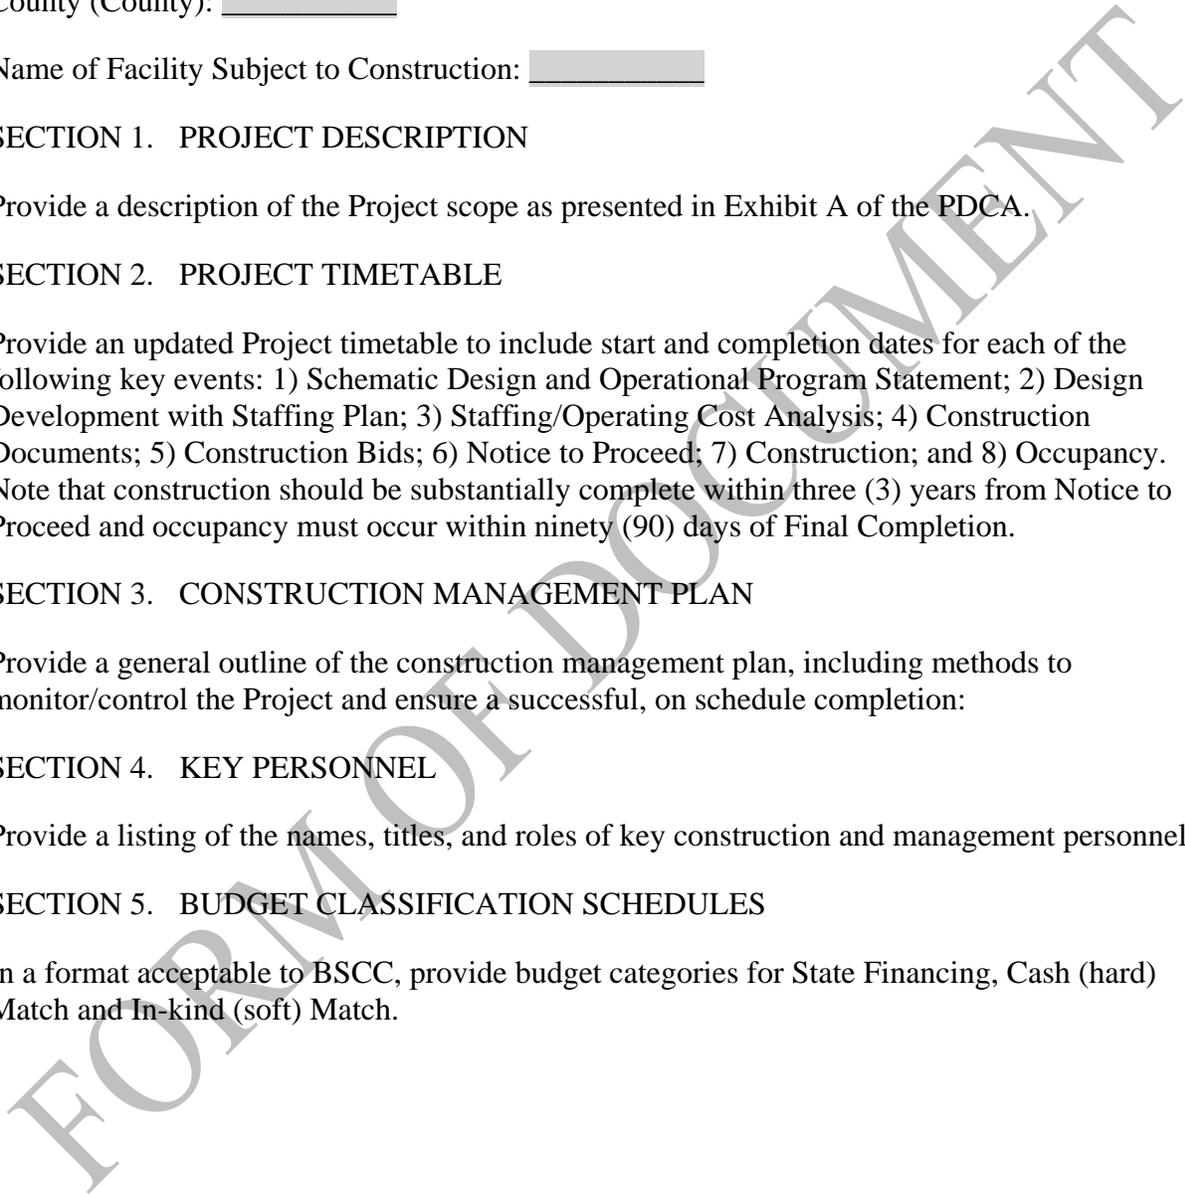

Provide a general outline of the construction management plan, including methods to monitor/control the Project and ensure a successful, on schedule completion:

SECTION 4. KEY PERSONNEL

Provide a listing of the names, titles, and roles of key construction and management personnel:

SECTION 5. BUDGET CLASSIFICATION SCHEDULES

In a format acceptable to BSCC, provide budget categories for State Financing, Cash (hard) Match and In-kind (soft) Match.

**PROJECT DELIVERY AND CONSTRUCTION AGREEMENT
AB 900 JAIL FINANCING PROGRAM
(FOR A JAIL FACILITY
LOCATED IN _____ COUNTY)**

This PROJECT DELIVERY AND CONSTRUCTION AGREEMENT (this “Agreement”) is entered into as of _____, 20____, (the “Effective Date”) by and among the STATE PUBLIC WORKS BOARD OF THE STATE OF CALIFORNIA (the “Board”), an entity of state government of the State of California (the “State”), the DEPARTMENT OF CORRECTIONS AND REHABILITATION OF THE STATE OF CALIFORNIA (the “Department”), an entity of state government of the State, the BOARD OF STATE AND COMMUNITY CORRECTIONS OF THE STATE OF CALIFORNIA (the “BSCC”), an entity of state government of the State, and the COUNTY OF _____ (the “Participating County”), a Political Subdivision of the State. For purposes of this Agreement, the Board, the Department, the BSCC and the Participating County are referred to collectively as the “Parties,” and individually as a “Party.” The Board, the Department and the BSCC are referred to collectively herein, as the “Agencies” and individually as an “Agency.”

WHEREAS, pursuant to Chapter 3.12 of Part 10b of Division 3 of Title 2 of the California Government Code (commencing at Section 15820.91) (the “Law”), the Board is authorized to finance the acquisition, design and construction of a jail facility approved by the BSCC pursuant to Section 15820.916 of the California Government Code (the “AB 900 Jail Financing Program”); and

WHEREAS, pursuant to California Code of Regulations Title 15, Division 1, Chapter 1, Subchapter 6 and this Agreement and other agreements relating to this Project, the cost of certain design and construction activities will be eligible for reimbursement under the AB 900 Jail Financing Program; and

WHEREAS, the Participating County has proposed to build or renovate a jail facility, as more particularly described in **Exhibit A** attached hereto (the “Project”), to be located at _____, real property controlled by the Participating County through fee-simple ownership (the “Site”); and

WHEREAS, the Participating County intends to lease the Site to the Department pursuant to a Ground Lease in substantially the form attached hereto as **Exhibit B** (the “Ground Lease”) executed by and between the Participating County and the Department and consented to by the Board; and

WHEREAS, the Department, as lessee under the Ground Lease, and the Participating County intend to enter a Right of Entry for Construction and Operation (the “Right of Entry”) in substantially the form attached hereto as **Exhibit C** concurrently with the execution of the Ground Lease authorizing the Participating County to enter the Site for the purpose of constructing the Project on the Site and for operation of the Project upon substantial completion of construction (the Site and the Project, collectively, the “Facility”), as more particularly described herein; and

WHEREAS, concurrently with the execution of this Agreement, the BSCC and the Participating County, with the consent of the Board and the Department, intend to enter into an agreement to assist in complying with BSCC's rules and regulations concerning jail construction for the AB 900 Jail Financing Program (the "BSCC Agreement"); and

WHEREAS, the Board intends to oversee and issue lease revenue bonds for the Project, subject to satisfaction of certain conditions and requirements of the Board, including but not limited to establishment of Project scope, cost and schedule; approval of performance criteria; involvement in approval of the Design-Build Solicitation Package (as hereinafter defined) and authorization for the Participating County to solicit design-build bids or proposals; requesting actions to be taken to obtain one or more interim loans in connection with the Project (the "Interim Loan") and, subject to section 1.3 below, the Board intends to issue and sell its lease revenue bonds to repay the Interim Loan and provide additional financing for the Project, as necessary (the "Bonds"); and

WHEREAS, prior to authorization by the Board of actions to be taken to provide for the Interim Loan, the Department shall have certified to the Board that the Participating County is a participating county as required by Section 15820.91 of the California Government Code and the BSCC shall have approved the Project in accordance with Section 15820.911 of the California Government Code; and

WHEREAS, an Interim Loan for the Project may be made pursuant to Sections 16312 and 16313 of the California Government Code (Pooled Money Investment Board loans), Section 15849.1 of the California Government Code (General Fund loans), and/or any other appropriate source in an amount or amounts, which in the aggregate do not exceed the Maximum State Financing (as hereinafter defined); and

WHEREAS, the agent for sale for all Board bonds is the State Treasurer; and

WHEREAS, concurrently with the issuance of the Bonds, the Department, as lessee under the Ground Lease, intends to enter into a Site Lease whereby the Department, as lessor, shall lease the Site to the Board, as lessee (the "Site Lease"); and

WHEREAS, concurrently with the execution of the Site Lease, the Board, as lessee under the Site Lease, intends to enter into a Facility Lease whereby the Board, as lessor, shall lease the Facility to the Department, as lessee (the "Facility Lease"); rental payments under the Facility Lease shall secure the payment of principal of and interest on the Bonds; and

WHEREAS, concurrently with the execution of the Facility Lease, the Department, as lessee under the Facility Lease, and the Participating County intend to enter a Facility Sublease in substantially the form attached hereto as **Exhibit D**, whereby the Department, as sublessor, shall lease the Facility to the Participating County, as sublessee (the "Facility Sublease"), for its use, operation and maintenance; and

WHEREAS, in the event the Board is unable to issue the Bonds to finance the Project and the Interim Loan has been provided, the Department shall commit a sufficient amount of its annual support appropriation to repay the Interim Loan and any other interim financing costs associated with the Interim Loan.

NOW, THEREFORE, FOR AND IN CONSIDERATION of the mutual agreements of the Parties set forth herein and other good and valuable consideration, the adequacy and sufficiency of which are hereby acknowledged by the Parties, and intending to be legally bound, the Parties hereby agree as follows:

ARTICLE 1

GENERAL

1.1 General Covenants, Acknowledgements and Agreements of the Parties.

(a) The Parties hereto acknowledge and agree that an authorization by the Board to request the Interim Loan and the issuance of the Bonds by the Board is done in reliance upon, among other things, the promise of the relevant Parties to execute, deliver and perform their respective obligations, as applicable, under the Site Lease, the Facility Lease, the Facility Sublease, a Tax Agreement and Certificate in a form satisfactory to the Board to be executed in connection with the issuance of the Bonds (the "Tax Certificate"), a Continuing Disclosure Agreement in a form satisfactory to the Board to be executed in connection with the issuance of the Bonds (the "Continuing Disclosure Agreement") and all related certificates, agreements or other documents, including an indenture and supplemental indenture, if any, authorizing the Bonds that the Chair or Executive Director of the Board or a duly authorized designee thereof may deem necessary or desirable to effectuate the sale of the Bonds. Such indenture, supplemental indenture, if any, the Site Lease, the Facility Lease, the Facility Sublease, the Tax Certificate and the Continuing Disclosure Agreement, are collectively referred to herein as the "Bond Documents."

(b) The Parties accept and agree to comply with, to the extent respectively applicable to them, all terms, provisions, conditions, and commitments of this Agreement, the Project Documents (as hereinafter defined) and the Bond Documents, including all incorporated documents, and that they will do and perform all acts and things permitted by law to effectuate the issuance of the Bonds.

(c) The Participating County, the Department and the BSCC agree and acknowledge that the Project is subject to approval and oversight by the Board and the State Department of Finance ("Finance") consistent with the policies and laws governing the expenditure of a State capital outlay appropriation.

1.2 Approvals, Consents and Actions Necessary to Maintain Eligibility in the AB 900 Jail Financing Program. The Participating County acknowledges its eligibility for Project financing pursuant to the AB 900 Jail Financing Program is subject to and contingent upon the following approvals, consents and actions:

(a) A determination by the Board that the Site meets the standard requirements for a site being leased in connection with the issuance by the Board of its lease revenue bonds;

(b) A determination by the Board that the Participating County match as set forth in Article 3 has been satisfied as required by the Law and the source of the Cash (hard)

Match (as hereinafter defined) and any associated security or terms related thereto has been determined by the Board to be compatible with the financing of the Project pursuant to the AB 900 Jail Financing Program;

(c) The Board has established the scope, cost and schedule for the Project consistent with the Participating County's initial proposal submitted to the BSCC and the Participating County has agreed that the Project shall be constructed and completed in accordance with such Project scope, cost and schedule established by the Board, except to the extent any modifications thereof may be approved by the Board through the State's standard capital outlay process;

(d) The Board has approved the Ground Lease, the Right of Entry and the Facility Sublease;

(e) Both the Board and Finance have approved the Performance Criteria for the Project. As used herein "Performance Criteria" shall mean the information that fully describes the scope of the proposed project and includes, but is not limited to, the size, type, and design character of the buildings and site; the required form, fit, function, operational requirements, and quality of design, materials, equipment, and workmanship; and any other information deemed necessary to sufficiently describe the Participating County's needs; including documents prepared pursuant to paragraph (1) of subdivision (a) of Section 22164 of the California Public Contract Code. Performance Criteria may include concept drawings, which include any schematic drawings or architectural renderings that are prepared in such detail as the Participating County determines necessary to sufficiently describe the Participating County's needs;

(f) Finance has approved the Design-Build Solicitation Package for the Project and authorized the Participating County to proceed with soliciting competitive bids or proposals for design and construction of the Project. As used herein "Design-Build Solicitation Package" shall mean the performance criteria, the form of contract, and all other documents and information that serve as the basis on which competitive bids or proposals will be solicited from the design-build entities;

(g) Finance has approved award of the Design-Build Contract (as hereinafter defined) for the Project;

(h) BSCC and the State Fire Marshal have approved the Construction Documents for the Project. As used herein "Construction Documents" shall mean architectural plans and specifications that are one hundred percent (100%) complete and generally include: completed specifications and construction drawings; and special interest items (corrections, modifications, or additions made to the documents). The Construction Documents shall include a complete set of plans and specifications showing and describing all phases of a project, architectural, structural, mechanical, electrical, civil engineering, and landscaping systems to the degree necessary for the purposes of construction by the design-build entity;

(i) The Department has provided the Board the certification required by Section 15820.91 of the California Government Code, which certification the Department intends to provide upon satisfaction of the required statutory and regulatory conditions;

(j) The Board has adopted a Resolution authorizing steps be taken to seek the Interim Loan together with declaring its intent to reimburse any such Interim Loan with the proceeds from the Bonds;

(k) A determination by the Board that it will receive with respect to the Bonds the normal and customary opinions and certificates delivered in connection with an issuance of lease revenue bonds by the Board; and

(l) The sale of the Bonds.

1.3 AB 900 Jail Lease Revenue Bond Financing. State financing for the AB 900 Jail Financing Program is predicated on the Board's ability to issue Bonds for the Project. The Board, acting in good faith, intends to authorize the request for the Interim Loan and, subject to approvals, consents, and actions set forth in section 1.2, to issue Bonds for the Project. The Agencies will make reasonable and good faith efforts to assist in gaining assurance that the Site, the Project, the Participating County's ultimate use of the Project and the Cash (hard) Match (as hereinafter defined) are developed and implemented in such a way to facilitate the financing of the Project through the issuance and sale of the Bonds.

Prior to the Board's authorization to request the Interim Loan, the Department shall have certified to the Board that the Participating County is a participating county as required by Section 15820.91 of the California Government Code and the BSCC shall have approved the design and construction of the Project in accordance with Section 15820.911 of the California Government Code. Certification from the Department to the Board regarding BSCC and State Fire Marshal approval of the Construction Documents must be provided as soon as those approvals have been received and before the issuance and sale of the Bonds.

Notwithstanding the Board's good faith efforts to authorize and provide financing for the Project, the State (including without limitation the Board, the Department, and the BSCC) shall not be obligated to issue Bonds for the Project or authorize the Interim Loan request upon the Board's good-faith determination that such financing is not feasible or appropriate, based upon any one or more of the following factors: the lack of suitability of the Project's configuration or site for lease revenue bond financing, local funding that is incompatible with the issuance of lease revenue bonds by the Board, adverse market conditions, adverse outcomes to legal challenges, inability to obtain access to the financial markets or inability to obtain reasonable rates, inability to receive opinions and certificates customarily delivered in connection with the issuance of lease revenue bonds, or another occurrence or state of affairs that would make it objectively infeasible or inappropriate for the Board to issue Bonds or authorize the Interim Loan request.

In the event the Board determines that it is not feasible or appropriate to issue Bonds or to authorize the Interim Loan request, the Participating County is not entitled to receive the Maximum State Financing (as hereinafter defined) or other State funding for the Project, and shall not receive reimbursement from the State for any Project costs. However, in the event the Board is unable to issue the Bonds to finance the Project and the Interim Loan has been provided, the Department shall commit a sufficient amount of its annual support appropriation to repay the Interim Loan and any other interim financing costs associated with the Interim Loan and all associated costs.

1.4 The Department and the BSCC Act as Liaison of the Board and Finance to the Participating County. The Parties hereto acknowledge that obtaining the approvals and consents of the Board and/or Finance and the provision of documents to the Board and/or Finance as set forth in this Article I and otherwise herein shall be a responsibility of the Department and the BSCC. The Department and the BSCC will act as liaisons between the Participating County and the Board and Finance, and on their own behalf and behalf of the Board and Finance, will work with the Participating County to obtain such consents and approvals, and to provide such documents to the Board and Finance, as applicable.

1.5 Representations and Warranties of the Participating County.

(a) Under the provisions of the State Constitution, the applicable State statutes, and applicable jurisprudence of the State, the Participating County has the power to enter into this Agreement, to be bound hereby, to consummate the transactions contemplated hereby and to perform its obligations hereunder.

(b) The Participating County has taken all actions and has obtained all consents necessary to enable the Participating County to enter into this Agreement, to be bound hereby, to consummate the transactions contemplated hereby and to perform its obligations hereunder.

(c) The person executing and delivering this Agreement on behalf of the Participating County has been duly authorized and empowered to do so.

(d) The execution and delivery of this Agreement on behalf of the Participating County will bind and obligate the Participating County to the extent provided by the terms hereof.

(e) There exists no litigation or other proceeding pending or threatened against the Participating County that, if determined adversely, would materially and adversely affect the ability of the Participating County to consummate the transactions contemplated hereby or to perform its obligations hereunder.

(f) The execution and delivery of this Agreement and the Ground Lease, the Right of Entry, the BSCC Agreement and the Facility Sublease, the consummation of the transactions herein and therein contemplated and the fulfillment of or compliance with the terms and conditions hereof and thereof, will not conflict with or constitute a violation or material breach of or default (with due notice or the passage of time or both) under any applicable law or administrative rule or regulation, or any applicable court or administrative decree or order, or any indenture, mortgage, deed of trust, loan agreement, lease, contract or other agreement or instrument to which the Participating County is a party or by which it or its properties are otherwise subject or bound, or result in the creation or imposition of any lien, charge or encumbrance of any nature whatsoever upon any of the property or assets of the Participating County, which conflict, violation, breach, default, lien, charge or encumbrance might have consequences that would materially and adversely affect the consummation of the transactions contemplated by this Agreement, the Ground Lease, the Right of Entry, the BSCC Agreement or the Facility Sublease, or the financial condition, assets, properties or operations of the Participating County.

1.6 Representations and Warranties of the Board.

(a) Under the provisions of the State Constitution, the applicable State statutes, and applicable jurisprudence of the State, the Board has the power to enter into this Agreement, to be bound hereby, to consummate the transactions contemplated hereby and to perform its obligations hereunder.

(b) The Board has taken all actions and has obtained all consents necessary to enable the Board to enter into this Agreement, to be bound hereby, to consummate the transactions contemplated hereby and to perform its obligations hereunder.

(c) The person executing and delivering this Agreement on behalf of the Board has been duly authorized and empowered to do so.

(d) The execution and delivery of this Agreement on behalf of the Board will bind and obligate the Board to the extent provided by the terms hereof.

(e) There exists no litigation or other proceeding pending against the Board (with service of process having been accomplished) that, if determined adversely, would materially and adversely affect the ability of the Board to consummate the transactions contemplated hereby or to perform its obligations hereunder.

1.7 Representations and Warranties of the Department and the BSCC.

(a) Under the provisions of the State Constitution, the applicable State statutes, and applicable jurisprudence of the State, the Department and the BSCC each have the power to enter into this Agreement, to be bound hereby, to consummate the transactions contemplated hereby and to perform its obligations hereunder.

(b) The Department and the BSCC have each taken all actions and have obtained all consents necessary to enable the Department and the BSCC to enter into this Agreement, to be bound hereby, to consummate the transactions contemplated hereby and to perform its obligations hereunder.

(c) The persons executing and delivering this Agreement on behalf of the Department and the BSCC have been duly authorized and empowered to do so.

(d) The execution and delivery of this Agreement on behalf of the Department and the BSCC will bind and obligate the Department and the BSCC to the extent provided by the terms hereof.

(e) There exists no litigation or other proceeding pending against the Department or the BSCC (with service of process having been accomplished) that, if determined adversely, would materially and adversely affect the ability of the Department or the BSCC to consummate the transactions contemplated hereby or to perform its obligations hereunder.

(f) The execution and delivery of this Agreement and the Ground Lease, the Right of Entry, the Site Lease, the Facility Lease, the BSCC Agreement and the Facility Sublease, the consummation of the transactions herein and therein contemplated and the

fulfillment of or compliance with the terms and conditions hereof and thereof, will not conflict with or constitute a violation or breach of or default (with due notice or the passage of time or both) under any applicable law or administrative rule or regulation, or any applicable court or administrative decree or order, or any indenture, mortgage, deed of trust, loan agreement, lease, contract or other agreement or instrument to which the Department or the BSCC is a party or by which it or its properties are otherwise subject or bound, or result in the creation or imposition of any lien, charge or encumbrance of any nature whatsoever upon any of the property or assets of the Department or the BSCC, which conflict, violation, breach, default, lien, charge or encumbrance might have consequences that would materially and adversely affect the consummation of the transactions contemplated by this Agreement, the Ground Lease, the Right of Entry, the BSCC Agreement or the Facility Sublease, or the financial condition, assets, properties or operations of the Department or the BSCC.

1.8 Compliance with Terms and Conditions of the Project Documents. The Parties agree to comply with all terms and conditions relating to the respective Party of this Agreement, the BSCC Agreement, the Ground Lease, the Right of Entry and all exhibits and schedules attached hereto and thereto relating to the Party (collectively, the “Project Documents”), as well as all applicable laws including, without limitation, the Law and those laws, regulations and guidelines set forth in the BSCC Agreement.

1.9 Conflicts Between Terms of Documents. In the event of any inconsistency in the Project Documents, except as otherwise provided herein, the inconsistency shall be resolved by giving precedence in the following order: 1) this Agreement; 2) the Ground Lease, 3) the BSCC Agreement and all exhibits and schedules attached thereto, and 4) the Right of Entry. In the event the Bonds are issued, any inconsistency between the Project Documents and the Bond Documents shall be resolved by giving precedence to the Bond Documents. To the extent the Parties mutually agree that a provision of a particular document should control with respect to an inconsistency between that document and another document or documents, notwithstanding the other provisions of this section, such provision shall control.

1.10 Indemnity. As required by Section 15820.911(d) of the California Government Code, the Participating County hereby agrees to indemnify, defend and save harmless the State, including but not limited to the Board, the Department and the BSCC, and each of their respective officers, governing members, directors, officials, employees, subcontractors, consultants, and agents (collectively, “Indemnitees”) for any and all claims and losses arising at any time out of the acquisition, design, construction, operation, maintenance, use and occupancy of the Project. The Participating County shall not be obligated to provide indemnity or defense where the claim arises out of the gross negligence or willful misconduct of the Indemnitees. These obligations shall survive any termination of this agreement.

1.11 Assignment or Subletting of the Facility.

(a) *Assignment of Rights and Interest under this Agreement.* Except as otherwise contemplated hereunder, the Participating County may not sublicense, assign, or otherwise confer upon any other person or entity its rights or interests under this Agreement, nor may the Participating County delegate any of its duties or responsibilities required by this Agreement, whether by operation of law or otherwise, without the express, prior written consent of the Agencies, the rights and obligations hereunder imposed being personal to the Participating County.

(b) *Assignment or Subletting of the Facility.* The Participating County and the Department hereby covenant and agree that none of the Ground Lease, the Facility Lease or the Facility Sublease nor any interest of such Parties thereunder shall be sold, mortgaged, pledged, assigned, or transferred by the Parties thereto by voluntary act or by operation of law or otherwise; provided, however, that the Facility may be subleased in whole or in part by the Participating County with the prior written consent of the Department and the Board to the form and substance of such sublease, which consent shall not be unreasonably withheld, and, provided further that, any such sublease shall be subject to the following conditions:

(i) Any sublease of the Facility by the Participating County shall explicitly provide that such sublease is subject to all rights of the Department and the Board under the Facility Sublease, including, the right to re-enter and re-let the Facility or terminate such lease upon a default by the Participating County; and

(ii) At the request of the Department or the Board, the Participating County shall furnish the Department, the Board and the State Treasurer with an opinion of nationally-recognized bond counsel acceptable to the Board to the effect that such sublease will not, in and of itself, cause the interest on the Bonds to be included in gross income for federal income tax purposes.

(c) *Restrictions on Private Use of the Facility.* The Participating County acknowledges that its ability to assign or sublet the Facility is subject to the provisions of section 6.1.2 hereof.

1.12 Relationship of the Parties. The Parties hereto acknowledge and agree that, to the extent expressly provided in this Agreement, the relationship of the Participating County to the Agencies is that of an agent to the Agencies and that the Participating County is principally responsible for the acquisition, design, construction, maintenance, and operation of the Project. Other than as set forth herein, nothing in this Agreement shall create between the Participating County and any of the Agencies the relationship of joint venturers, partners or any other similar or representative relationship, and the Participating County shall not hold itself out as an agent (except as expressly provided herein), representative, partner, member or joint venturer of the Agencies. The Participating County shall not make for or on behalf of the Agencies, or subject the Agencies to, any contract, agreement, warranty, guaranty, representation, assurance or other obligation, which has not been approved in advance in writing by the applicable Agency. This Agreement is for the sole and exclusive benefit of the Parties hereto and their respective successors and assigns, and no third party (including without limitation the owners of the Bonds) is intended to or shall have any rights hereunder.

ARTICLE 2

TERM AND TERMINATION OF AGREEMENT

2.1 Term of Agreement. This Agreement shall commence on the Effective Date and shall terminate upon the later of (i) completion of the construction of the Project or (ii) if the Board issues the Bonds, execution and delivery of the Facility Sublease, unless terminated earlier as provided in section 2.2. The provisions of certain sections hereof as indicated by the express terms thereof will survive termination of this Agreement.

2.2 Termination of Agreement.

(a) *Termination by the State.* The Department or the BSCC, with the consent of the Board, or the Board may terminate this Agreement in the event any of the following occurs:

(i) The Participating County's breach of a material term of this Agreement, any Project Document or any Applicable Laws (as defined in the BSCC Agreement) provided the Participating County has not cured such breach in all respects within thirty (30) days from notice of said breach, which cure period may be extended for a reasonable time with the consent of the Agencies if the Participating County demonstrates that such additional time is required to cure such breach in a diligent and commercially reasonable manner;

(ii) Substantive alteration of the Board approved scope, cost or schedule for the Project as set forth in **Exhibit A** without the prior written approval of the Board;

(iii) Failure to execute the Ground Lease or the Right of Entry;

(iv) Failure to provide the Participating County Funding (as hereinafter defined) when and as required under this Agreement, the Law or any Project agreement to which the Participating County is a party;

(v) In the event the Board determines the Participating County is no longer eligible for Project financing under the AB 900 Jail Financing Program as set forth in section 1.2 hereof; or

(vi) Termination of the BSCC Agreement as provided for in Article 1, Section C of the BSCC Agreement.

(b) *Termination by the Participating County.* The Participating County may, prior to the State providing any amount of financing, terminate this Agreement in the event any of the following occurs:

(i) The State's breach of a material term of this Agreement, any Project Document or any Applicable Laws (as defined in the BSCC Agreement) provided the State has not cured such breach in all respects within thirty (30) days from notice of said breach, which cure period may be extended for a reasonable time with the consent of the Participating County if the State demonstrates that such additional time is required to cure such breach in a diligent and commercially reasonable manner;

(ii) Failure of the State to execute the Ground Lease or the Right of Entry;

(iii) In the event the Board determines the Participating County is no longer eligible for Project financing under the AB 900 Jail Financing Program as set forth in section 1.2 hereof.

(c) *Agreement.* The Parties may terminate this Agreement by mutual agreement. The Agencies agree to terminate this agreement in the event that the Participating County determines it cannot proceed with the Project after initial design-build bids or proposals are received, but before any design-build contract is awarded.

(d) *Notice of Termination.* Prior to terminating this Agreement under the provisions of this Article 2, the Parties shall provide to each other, as applicable, at least thirty (30) calendar days written notice, stating the reason(s) for termination and effective date thereof.

(e) *No Impairment.* Nothing in this Article 2 in any way alters or limits the authority of the Agencies to withhold all or a portion of the Maximum State Financing (as hereinafter defined) in accordance with law or otherwise as permitted hereunder or any other right or remedy available to the State at law or in equity for breach of this Agreement.

ARTICLE 3

COST SHARING OF THE PROJECT

3.1 Financing Eligibility of the Project.

(a) *General.* Subject to the terms and provisions hereof, the costs for design and construction of the Project shall be shared by the State and the Participating County with the State providing financing up to a maximum of [REDACTED] dollars (\$ [REDACTED]) (“Maximum State Financing”) and the Participating County providing the Cash (hard) Match (as hereinafter defined) funding and the In-Kind (soft) Match (as hereinafter defined) funding (collectively, the “Participating County Funding” and together with other Participating County-borne project costs not included as the Participating County Funding and the Maximum State Financing, the “Total Project Costs”). Provided, however, that the Board may provide all or a portion of the Maximum State Financing for Project costs at its discretion as set forth herein. The sources for the Maximum State Financing shall be limited to the proceeds of the Interim Loan, and the proceeds of the Bonds. If Bonds are issued and sold, the proceeds will be used to repay the Interim Loan and to provide additional financing for the Project as appropriate. If the Bonds are issued and sold, in no event or circumstance shall the State or the Agencies be obligated to pay the Participating County under this Agreement or any other Project Document any amount in excess of the Maximum State Financing.

(b) *Cash (hard) Match.* Subject to all terms and provisions of this Agreement, the Participating County agrees to appropriate and spend cash (hard) matching funds for the Project as provided in the BSCC Agreement (“Cash (hard) Match”). **Exhibit E-1** is a detailed description of and certification related to the source or sources of the Cash (hard) Match

and any associated security or terms related thereto as approved by the Agencies, which detail and assurance of has been deemed sufficient by the Board to determine that the use of such funds as the Cash (hard) Match is compatible with the financing of the Project pursuant to the AB 900 Jail Financing Program. Any modifications to the source or sources of the Cash (hard) Match or the associated security and terms related thereto as described in **Exhibit E-1** must be approved by the Agencies. The Participating County shall ensure that all Cash (hard) Match is encumbered prior to Finance approval to proceed to bid the Design-Build Solicitation Package.

(c) *In-Kind (soft) Match.* Subject to all terms and provisions of this Agreement, the Participating County agrees to provide in-kind (soft) match for the Project as provided in the BSCC Agreement (“In-kind (soft) Match”). The Participating County has provided in **Exhibit E-2** a detailed description of the In-kind (soft) Match for the Project as approved by the Agencies. Any modifications to the In-kind (soft) Match as described in **Exhibit E-2** must be approved by the Agencies.

3.2 Excess Project Costs. In no event shall any Project scope, cost, budget or schedule changes be authorized by the Participating County which would cause the amount of Total Project Costs to be exceeded unless the Participating County covenants to fund such excess with lawfully available funds and the Participating County first obtains the consent of the Agencies. The Participating County is solely responsible for any and all cost, expenses or fees of the Project which exceed the Maximum State Financing and the Participating County covenants to use its best efforts to promptly appropriate sufficient amounts to cover such cost, expenses or fees. The Participating County waives any and all claims against any of the Agencies or the State in the event that Total Project Costs exceed the amount initially established by the Board.

3.3 Project Cost Savings. To the extent there exists Project cost savings during the Project the amount of such savings shall be applied first to the Participating County to the extent the Participating County has identified Participating County Funding in an amount more than required by the Applicable Laws (as defined in the BSCC Agreement). Thereafter, cost savings shall be shared by the State and the Participating County on a pro rata basis determined by the percentage of the total amount of Project costs financed by the State and the Participating County Funding, respectively. However, in no case may savings be applied to the Participating County that would (1) result in the State providing financing for activities other than eligible design and construction costs; or (2) result in the Participating County contributing less than the percentage of Total Project Costs required by the Applicable Laws.

ARTICLE 4

PROJECT SCOPE, COST AND SCHEDULE

4.1 The Project. See **Exhibit A** for a description of the scope, cost and schedule of the Project, including a narrative description of the Project, budgeted costs related to the Project and a schedule for completion of design and construction of the Project.

4.2 Modification of Project Scope, Cost or Schedule. No substantial change or other substantial modifications to the Project scope, cost or schedule may be made by the Participating County without prior written permission of Finance and recognition by the Board (“Scope Change”). Minor modifications to the project do not require Finance approval and Board

recognition, but must be documented and reported on routine progress reports to the BSCC as set forth in the BSCC Agreement. Without limiting the foregoing, the Participating County shall notify the Department and the BSCC, and the Department shall in turn notify Finance and the Board upon any of the following events or circumstances that may constitute a Scope Change:

- (a) More than minor changes which affect the design, project configuration, cost or schedule of the Project;
- (b) A delay or change in the substantial completion or final completion dates for the Project;
- (c) A more than minor change to the design, location, size, capacity or quality of major items of equipment;
- (d) A change in approved budget categories, or movement of dollars between budget categories as indicated in the Board approved scope cost and schedule as identified in **Exhibit A**.

As used herein “substantial” is as defined in Section 6863 of the State Administrative Manual. As used herein a minor change is any change which does not rise to the level of a substantial change as defined in Section 6863 of the State Administrative Manual. Finance shall determine whether any reported event or circumstance requires its approval and recognition or other formal action by the Board.

The Participating County agrees that it will give prompt notification in writing to the Department and the BSCC of the occurrence of any of the above events and promptly report, in writing, to the Department and the BSCC any modifications to the Design-Build Contract (as hereinafter defined) with respect to the Project. The Department will provide the aforementioned notices and reports to the Board. The Participating County agrees further that, for purposes of the immediately preceding clause (a) and (c), if unsure whether a particular change is minor it will discuss the appropriate characterization with the Department and the BSCC.

4.3 Excess Project Costs. In no event shall any scope, cost or budget changes be authorized which would cause the amount of Total Project Costs to be exceeded unless the Participating County covenants to fund such excess with lawfully available funds and with the consent of the Agencies and so appropriates such funding.

ARTICLE 5

BIDDING AND DESIGN-BUILD PHASE OF THE PROJECT

5.1 Design-Build Covenant of the Participating County. The Participating County acting as agent of the Board and the Department, hereby covenants and agrees to provide and perform or cause to be performed all activities required to acquire, design and construct the Project on behalf of the Board in accordance with the Participating County’s established policies and procedures for the design and construction of major capital projects such as the Project. The Participating County shall be responsible to contract for all pre-design, design and construction services, and shall manage the day-to-day design and construction of the Project. The

Participating County shall cause the design and construction of the Project to be consistent with the requirements, limitations, and other terms of this Agreement, the other Project Documents, the Law and all Applicable Laws. The Participating County shall also manage all aspects of the development and construction of the Project in accordance with the Project Documents.

5.2 Procurement and Enforcement of Design-Build Contract. The Participating County shall follow and adhere to all pertinent bidding rules and policies applicable to Participating County capital projects of this type and size. If there is an ambiguity as to the applicability of certain contracting rules and/or policies to the Project, the Participating County will seek advice from its counsel, follow that advice and use its best efforts to enforce the general design-build contract (the "Design-Build Contract") between the Participating County and the design-build entity selected by the Participating County.

5.3 Completion of the Project. The Participating County acknowledges it is obligated to undertake and complete the design and construction of the Project in compliance with all of the applicable terms and conditions of the Project Documents and the Participating County agrees to use its best efforts to cause the completion of design and construction of the Project in compliance with the applicable terms and conditions of such documents. The Participating County agrees to complete the Project in accordance with this Agreement and consistent with the scope, cost and schedule established by the Board and attached hereto in **Exhibit A**, as such scope, cost and schedule may be modified with the approval of Finance and the recognition of the Board.

5.4 Project Access. To the extent not inconsistent with the Bond Documents, at all times during design and construction of the Project and after final completion, the Participating County shall provide to employees, subcontractors, and consultants of the Agencies reasonable unrestricted access to observe, monitor and inspect the Project. The Agencies' access to observe, monitor and inspect shall include the right to review all documents and files relating to the Project, as well as construction on the Site, including all tests and inspections relating to design or construction of the Project.

5.5 Insurance.

(a) Insurance Obligations of the Participating County.

(i) Requirements during construction. Not later than the start of construction, and continuing through completion of construction of the Project, the Participating County, at its own cost and expense, shall secure and maintain or cause to be secured and maintained (i) fire, lightning and extended coverage insurance on the Project, which initially may be in the form of a builder's risk policy providing coverage in an amount not less than the construction costs expended for the Project and, if no builder's risk insurance is in effect, shall be in the form of a commercial property policy in an amount equal to one hundred percent (100%) of the then current replacement cost of the Project, excluding the replacement cost of the unimproved real property constituting the Site (except that such insurance may be subject to a deductible clause not to exceed [five hundred thousand dollars (\$500,000) or two million five hundred thousand dollars (\$2,500,000)] for any one loss), and (ii) earthquake insurance (if such insurance is available on the open market from reputable insurance companies at a reasonable cost) on any structure comprising part of the Project in an amount equal to the full insurable value of such

structure or the amount of the attributable portion of the Interim Financing, whichever is less (except that such insurance may be subject to a deductible clause not to exceed [five hundred thousand dollars (\$500,000) or two million five hundred thousand dollars (\$2,500,000)] for any one loss). The extended coverage endorsement shall, as nearly as practicable, cover loss or damage by explosion, windstorm, riot, aircraft, vehicle damage, smoke, vandalism and malicious mischief and such other hazards as are normally covered by such endorsement.

If such policy is expected to expire in accordance with its terms prior to execution of the Facility Sublease, the Participating County shall give written notice to the Agencies forty-five (45) days prior to the expected expiration date.

(ii) Requirements after construction completion. The Participating County, at its own cost and expense, shall secure and maintain or cause to be secured and maintained from an insurance company or companies approved to do business in the State and maintain after completion of construction and/or when placing the Project in operation, the following insurance coverage for the Project:

a. General liability insurance in an amount not less than one million dollars (\$1,000,000) per occurrence. Evidence of such insurance shall be on a General Liability Special Endorsement form and should provide coverage for premises and operations, contractual, personal injury and fire legal liability;

b. By signing this Agreement, the Participating County hereby certifies that it is aware of the provisions of Section 3700, *et seq.*, of the California Labor Code which require every employer to be insured against liability for Workers' Compensation or to undertake self-insurance in accordance with the provisions of that Code, and that it will comply, and it will cause its subtenants and assignees to comply, with such provisions at all such times as they may apply during the term of this Agreement.

c. Auto insurance (written on ISO policy form CA 00 01 or its equivalent) with a limit of not less than one million dollars (\$1,000,000) per occurrence. Such insurance shall include coverage for all "owned," "hired" and "non-owned" vehicles or coverage for any auto.

(iii) Additional Insureds. The Participating County agrees that the Board, the Department, and the BSCC and their respective officers, agents and employees shall be included as additional insured in all insurance required herein.

(iv) Insurance Certificate. Any and all insurance policies related to the Project shall name the Board and the Department as additional insured parties and the Participating County shall deliver to the Agencies a certificate or certificates of insurance authorized by the insurers describing the insurance coverage and stating that it is in full force and effect.

(v) Self-Insurance. Notwithstanding any other provision of this Section, the Participating County may satisfy the insurance obligations hereunder by a combination of commercial insurance, formal risk pooling under the statutory provisions of the State, and/or a self-funded loss reserve in whatever proportions are deemed appropriate by the Participating County. The Participating County shall furnish the Agencies with a certificate or other written

evidence of the Participating County's election to provide or cause to be provided all or part of its coverage under a risk pooling, risk retention, or self-insurance program or any combination thereof.

(b) Insurance Obligations of the Department. If the insurance required in (a)(i) expires in accordance with its terms prior to execution of the Facility Sublease, the Department shall, at its own cost and expense, procure and maintain or cause to be procured and maintained (i) property casualty insurance in an amount equal to one hundred percent (100%) of the then current replacement cost of the Project, excluding the replacement cost of the unimproved real property constituting the Site (except that such insurance may be subject to a deductible clause not to exceed [five hundred thousand dollars (\$500,000) or two million five hundred thousand dollars (\$2,500,000)] for any one loss), and (ii) earthquake insurance (if such insurance is available on the open market from reputable insurance companies at a reasonable cost) on any structure comprising part of the Project in an amount equal to the full insurable value of such structure or the amount of the attributable portion of the Interim Financing, whichever is less (except that such insurance may be subject to a deductible clause not to exceed [five hundred thousand dollars (\$500,000) or two million five hundred thousand dollars (\$2,500,000)] for any one loss). The extended coverage endorsement shall, as nearly as practicable, cover loss or damage by explosion, windstorm, riot, aircraft, vehicle damage, smoke, vandalism and malicious mischief and such other hazards as are normally covered by such endorsement. The property casualty insurance shall be in a form satisfactory and with carriers which are acceptable to the Board.

(c) Disposition of Insurance Proceeds. The Participating County agrees and acknowledges that the Board, in its sole discretion, may elect to use the proceeds of insurance procured pursuant to this Agreement to repay the Interim Loan and related costs. However, in the event of (i) damage or destruction of the Project caused by the perils covered by the insurance procured pursuant to this Agreement and (ii) if the Board elects to repay the Interim Loan and related costs, and (iii) if any insurance proceeds remain after the Interim Loan and related costs have been repaid, and (iv) such remaining insurance proceeds are distributed to the Department, then the Department agrees to distribute such remaining proceeds to the Participating County.

ARTICLE 6

CERTAIN OBLIGATIONS POST PROJECT COMPLETION

6.1 Private Use of the Project.

6.1.1 *Provision of Information Regarding Private Use.* The Participating County acknowledges that under the terms of the Facility Sublease, a form of which is attached hereto as **Exhibit D**, the Participating County will covenant to provide updated information to the Board, the Department and the State Treasurer annually regarding private use, if any, of the Project.

6.1.2 *Restriction on Private Use of Bond Financed Project.* The Participating County acknowledges that under the terms of the Facility Sublease, a form of which is attached hereto as **Exhibit D**, the Participating County will covenant to restrict private use of the Project

as required by the terms thereof.

6.2 No Liens. The Participating County acknowledges that except as permitted under the terms of the Facility Sublease, a form of which is attached hereto as **Exhibit D**, the Participating County will covenant not to allow any liens on the Facility.

ARTICLE 7

RECORD RETENTION

7.1 Establishment of Official Project File. The Participating County shall establish an official file for the Project (the "Official Project File"). The file shall contain adequate documentation of all actions that have been taken with respect to the Project, in accordance with generally accepted government accounting principles and the requirements for record retention for capital projects constructed with the proceeds of tax exempt bonds. The Participating County will provide a copy of such file to the Department upon termination of this Agreement. The documents to be retained shall include, but is not limited to contracts, payment of invoices, transfer of funds and other related accounting records.

7.2 Preservation of Records. The Participating County agrees to protect records adequately from fire or other damage. When records are stored away from the Participating County's principal office, a written index of the location of records stored must be on hand and ready access must be assured. All the Participating County records contained in the Official Project File must be preserved for a minimum of three years after the last date on which no Bonds are outstanding. These records shall be subject at all reasonable times to inspection, examination, monitoring, copying, excerpting, transcribing, and audit by the Agencies or designees, by state government auditors or designees, or by federal government auditors or designees. If any litigation, claim, negotiation, audit, or other action involving the records has been started before the expiration of the relevant time period set forth in the third sentence of this paragraph, the related records must be retained until the completion of the action and resolution of all issues which arise from it if such date is later than the end of the afore-mentioned three-year period.

ARTICLE 8

MISCELLANEOUS

8.1 Entire Agreement. This Agreement constitutes and contains the entire agreement between the Parties hereto with respect to the transactions contemplated hereby and supersedes any prior oral or written understanding or agreement of the Parties with respect to the transactions contemplated hereby.

8.2 Amendment. The Parties may, by mutual agreement in writing, amend this Agreement in any respect.

8.3 Waiver. The Parties hereto may, from time to time, waive any of their rights under this Agreement unless such waiver is contrary to law, provided that any such waiver shall be in writing and signed by the Party making such waiver.

8.4 Counterparts. This Agreement may be executed in one or more counterparts, any one of which need not contain the signatures of more than one Party, but all of which when taken together shall constitute one and the same instrument, notwithstanding that all Parties have not signed the same counterpart hereof.

8.5 Headings. The article and section headings contained in this Agreement are inserted as a matter of convenience and shall not affect in any way the construction or terms of this Agreement.

8.6 Further Assurances. Each of the Parties shall execute such other instruments, documents and other papers and shall take such further actions as may be reasonably required or desirable to carry out the provisions hereof and to consummate the transactions contemplated hereby.

8.7 Survival. The representations, warranties, covenants and agreements made herein or in any certificate or document executed in connection herewith shall survive the execution and delivery hereof or thereof, as the case may be, and all statements contained in any certificate or document delivered by any Party hereto shall be deemed to constitute a representation and warranty made herein by such Party.

8.8 Governing Law. The laws of the State shall govern this Agreement, the interpretation thereof and any right or liability arising hereunder. Any action or proceeding to enforce or interpret any provision of this Agreement shall be brought, commenced or prosecuted in the courts of the State located in the County of Sacramento. All parties expressly assert that Sacramento County is not a forum inconvenience.

8.9 Compliance with Laws. At all times during the performance of this Agreement by the Parties, they shall strictly comply with all applicable governmental, administrative and judicial laws, ordinances, rules, regulations, orders, covenants and findings, including, without limitation, all applicable environmental laws and regulations.

8.10 Partial Invalidity. If any provisions of this Agreement are found by any competent authority to be void or unenforceable, such provision shall be deemed to be deleted from this Agreement and the remaining provisions of this Agreement shall continue in full force and effect.

8.11 Notices. All notices and other official communications between the Parties shall be in writing and shall be given by hand delivery or by recognized overnight courier who maintains verification of delivery (deemed to be duly received on the date delivered), or by registered mail, postage prepaid, return receipt requested (deemed to be duly received five (5) days after such mailing) or by telecopy (deemed to be received on the date sent providing that the facsimile was properly addressed and disclosed the number of pages transmitted on its front sheet and that the transmission report produced indicates that each of the pages of the facsimile was received at the correct facsimile number) to each of the respective Parties as follows:

If to the Board: State Public Works Board
915 L. St., 9th Floor
Sacramento, CA 95814
Attention: Executive Director
Facsimile: 916-449-5739

If to the Department: California Department of Corrections and Rehabilitation
9838 Old Placerville Road, Suite B
Sacramento, CA 95827
Attention: Deputy Director, Facility Planning, Construction and
Management
Facsimile: 916-322-5717

If to the BSCC: Board of State and Community Corrections
2590 Venture Way, Suite 200
Sacramento, CA 95833
Attention: Executive Director
Facsimile: 916-327-3317

If to the Participating County: County of [REDACTED]
[Street Address]
[City, State and Zip Code]
Attention: [REDACTED]
Facsimile: [REDACTED]

or to such other address or number for any of the Parties hereto as may from time to time be designated by notice given by such Party to the other Parties in the manner hereinabove provided.

8.12 Force Majeure. None of the Parties shall be liable or responsible for any delay or failure resulting from (and the times for performance by the Parties hereunder shall be extended by the duration of) causes beyond the control of, and without the fault or negligence of, such Party, including without limitation acts of God, acts of the public enemy, acts of war or terrorism, acts of the government or governmental or quasi-governmental agency or instrumentality, significant market disruptions, fires, floods, earthquakes, epidemics, quarantine restrictions, strikes, civil commotion, casualties, embargoes, severe or inclement weather beyond that usually encountered in [REDACTED] County, California, shortages in labor or materials, or similar cause.

8.13 Exculpation. Notwithstanding anything to the contrary contained in this Agreement, in any Bond Document, Project Document or other certificate, agreement, document or instrument executed in connection with the AB 900 Jail Financing Program, the liability of the Board hereunder shall be limited to and satisfied solely out of proceeds of the Interim Loan, if any, or the Bonds, if any, permitted to be used for such purpose. Except as provided above, the Participating County shall not have the right to obtain payment from the Agencies or from any other assets of the Agencies. The Participating County shall not enforce the liability and obligation of the Agencies to perform and observe the obligations contained in this Agreement,

or any other documents delivered in connection herewith in any action or proceeding wherein a money judgment in excess of the available proceeds of the foregoing sources shall be sought against the Agencies.

8.14 Benefits of this Agreement Limited to the Parties. Except for the Parties to this Agreement, nothing contained in this Agreement, expressed or implied, is intended to give to any person (including without limitation the owners of the Bonds) any right, remedy or claim under or by reason hereof. Any agreement or covenant required herein to be performed by or on behalf of any Party shall be for the sole and exclusive benefit of the other Parties to this Agreement.

DESCRIPTION OF PARTICIPATING COUNTY FUNDING

Cash Contribution

CERTIFICATE OF THE COUNTY OF [ENTER COUNTY NAME] REGARDING ITS CASH (HARD) MATCH FOR THE [ENTER COUNTY NAME] COUNTY JAIL PROJECT

All capitalized terms not otherwise defined herein shall have the meaning given them in the Project Delivery and Construction Agreement.

WHEREAS, pursuant to Chapter 3.12 of Part 10b of Division 3 of Title 2 of the California Government Code (commencing at Section 15820.91) (the "Law"), the State Public Works Board (the "Board") is authorized to finance the acquisition, design and construction of a jail facility approved by the Board of State and Community Corrections (the "BSCC") pursuant to Section 15820.916 of the California Government Code (the "AB 900 Jail Financing Program"); and

WHEREAS, pursuant to California Code of Regulations Title 15, Division 1, Chapter 1, Subchapter 6, only the cost of certain design and construction activities are potentially eligible for reimbursement under the AB900 Jail Financing Program – acquisition, pre-design and other specified design and construction costs are not eligible; and

WHEREAS, the County of [ENTER COUNTY NAME] (the "Participating County") has proposed to build a jail facility, the [ENTER PROJECT NAME] project, (the "Project"), to be located at [ENTER PHYSICAL ADDRESS], real property controlled by the Participating County through fee-simple ownership (the "Site"); and

WHEREAS, pursuant to the Law, the Participating County is paying a portion of the costs of the Project (the "Cash (hard) Match") as described in Exhibit 1; and

WHEREAS, the Board intends to assist in the oversight and financing of the Project, subject to satisfaction of certain conditions and requirements of the Board, and the Board may in its sole, reasonable discretion, issue lease revenue bonds for the Project (the "Bonds"); and

WHEREAS, the interests of both the Board and the Participating County require confirmation of certain facts and certain assurances concerning the Cash (hard) Match.

NOW, THEREFORE, the Participating County, acting through its duly authorized representative, does hereby represent, warrant and covenant as follows:

(A) Lawfully Available Funds. The Cash (hard) Match, as described in Exhibit 1, has been derived exclusively from lawfully available funds of the Participating County.

(B) Cash (hard) Match Is Legal and Authorized. The payment of the Cash (hard) Match for the Project (i) is within the power, legal right, and authority of the Participating County; (ii) is

legal and will not conflict with or constitute on the part of the Participating County a material violation of, a material breach of, a material default under, or result in the creation or imposition of any lien, charge, restriction, or encumbrance upon any property of the Participating County under the provisions of any charter instrument, bylaw, indenture, mortgage, deed of trust, pledge, note, lease, loan, installment sale agreement, contract, or other material agreement or instrument to which the Participating County is a party or by which the Participating County or its properties or funds are otherwise subject or bound, decree, or demand of any court or governmental agency or body having jurisdiction over the Participating County or any of its activities, properties or funds; and (iii) have been duly authorized by all necessary and appropriate action on the part of the governing body of the Participating County. The authorized representative of the Participating County executing this Certificate is fully authorized and empowered to take such actions for and on behalf of the Participating County.

(C) Governmental Consents. The execution, delivery, and performance by the Participating County of this certificate and the use of the Cash (hard) Match for certain costs of the Project do not require the consent, approval, permission, order, license, or authorization of, or the filing, registration, or qualification with, any governmental authority other than the Participating County in connection with the execution, delivery, and performance of this Certificate, the consummation of any transaction herein contemplated, or the offer, issue, sale, or delivery of the Bonds, except as shall have been obtained or made and as are now in full force and effect.

(D) No Prior Pledge. The Cash (hard) Match and the Project are not and will not be mortgaged, pledged, or hypothecated by the Participating County in any manner or for any purpose and have not been and will not be the subject of a grant of a security interest by the Participating County. In addition, the Cash (hard) Match and the Project are not and will not be mortgaged, pledged, or hypothecated for the benefit of the Participating County or its creditors in any manner or for any purpose and have not been and will not be the subject of a grant of a security interest in favor of the Participating County or its creditors. The Participating County shall not in any manner impair, impede or challenge the security, rights and benefits of the owners of the Bonds or the trustee for the Bonds.

IN WITNESS WHEREOF, the undersigned duly authorized representative of the Participating County has executed and delivered this Certificate to the Board on the date set forth below.

FORM OF DOCUMENT

**CERTIFICATE OF THE COUNTY OF [ENTER COUNTY NAME] REGARDING ITS
OTHER PARTICIPATING COUNTY FUNDING FOR THE [ENTER COUNTY NAME]
COUNTY JAIL PROJECT**

All capitalized terms not otherwise defined herein shall have the meaning given them in the Project Delivery and Construction Agreement.

WHEREAS, pursuant to Chapter 3.12 of Part 10b of Division 3 of Title 2 of the California Government Code (commencing at Section 15820.91) (the “Law”), the State Public Works Board (the “Board”) is authorized to finance the acquisition, design and construction of a jail facility approved by the Board of State and Community Corrections (the “BSCC”) pursuant to Section 15820.916 of the California Government Code (the “AB 900 Jail Financing Program”); and

WHEREAS, pursuant to California Code of Regulations Title 15, Division 1, Chapter 1, Subchapter 6, only the cost of certain design and construction activities are potentially eligible for reimbursement under the AB 900 Financing Program – acquisition, pre-design and other specified design and construction costs are not eligible; and

WHEREAS, the County of [ENTER COUNTY NAME] (the “Participating County”) has proposed to build a jail facility, the [ENTER PROJECT NAME] project, (the “Project”), to be located at [ENTER PHYSICAL ADDRESS], real property controlled by the Participating County through fee-simple ownership (the “Site”); and

WHEREAS, pursuant to the Law, the Participating County is contributing funding in addition to its Cash (hard) Match and In-Kind (soft) Match (the “Other Participating County Funding”); and

WHEREAS, the Board intends to assist in the oversight and financing of the Project, subject to satisfaction of certain conditions and requirements of the Board, and the Board may in its sole, reasonable discretion, issue lease revenue bonds for the Project (the “Bonds”); and

WHEREAS, the interests of both the Board and the Participating County require confirmation of certain facts and certain assurances concerning the Other Participating County Funding.

NOW, THEREFORE, the Participating County, acting through its duly authorized representative, does hereby represent, warrant and covenant as follows:

(A) Lawfully Available Funds. The Other Participating County Funding, as described in Exhibit 1, has been derived exclusively from lawfully available funds of the Participating County.

(B) Other Participating County Funding Is Legal and Authorized. The payment of the Other Participating County Funding for the Project (i) is within the power, legal right, and authority of the Participating County; (ii) is legal and will not conflict with or constitute on the part of the Participating County a material violation of, a material breach of, a material default under, or result in the creation or imposition of any lien, charge, restriction, or encumbrance upon any property of the Participating County under the provisions of any charter instrument, bylaw, indenture, mortgage, deed of trust, pledge, note, lease, loan, installment sale agreement, contract, or other material

agreement or instrument to which the Participating County is a party or by which the Participating County or its properties or funds are otherwise subject or bound, decree, or demand of any court or governmental agency or body having jurisdiction over the Participating County or any of its activities, properties or funds; and (iii) have been duly authorized by all necessary and appropriate action on the part of the governing body of the Participating County. The authorized representative of the Participating County executing this Certificate is fully authorized and empowered to take such actions for and on behalf of the Participating County.

(C) Governmental Consents. The execution, delivery, and performance by the Participating County of this certificate and the use of the Other Participating County Funding for certain costs of the Project do not require the consent, approval, permission, order, license, or authorization of, or the filing, registration, or qualification with, any governmental authority other than the Participating County in connection with the execution, delivery, and performance of this Certificate, the consummation of any transaction herein contemplated, or the offer, issue, sale, or delivery of the Bonds, except as shall have been obtained or made and as are now in full force and effect.

(D) No Prior Pledge. The Other Participating County Funding and the Project are not and will not be mortgaged, pledged, or hypothecated by the Participating County in any manner or for any purpose and have not been and will not be the subject of a grant of a security interest by the Participating County. In addition, the Other Participating County Funding and the Project are not and will not be mortgaged, pledged, or hypothecated for the benefit of the Participating County or its creditors in any manner or for any purpose and have not been and will not be the subject of a grant of a security interest in favor of the Participating County or its creditors. The Participating County shall not in any manner impair, impede or challenge the security, rights and benefits of the owners of the Bonds or the trustee for the Bonds.

IN WITNESS WHEREOF, the undersigned duly authorized representative of the Participating County has executed and delivered this Certificate to the Board on the date set forth below.

FORM OF DOCUMENT

GROUND LEASE

THIS GROUND LEASE, dated as of _____, 20__ for reference only (this “Ground Lease”), is entered into by and between COUNTY OF _____ (the “Participating County”), a Political Subdivision of the State of California (the “State”), as Landlord, and the DEPARTMENT OF CORRECTIONS AND REHABILITATION OF THE STATE OF CALIFORNIA (the “Department”), an entity of state government of the State, as Tenant. The Participating County and the Department are sometimes referred to collectively as the “Parties”, and individually as a “Party”.

RECITALS

WHEREAS, pursuant to Chapter 3.12 of Part 10b of Division 3 of Title 2 of the California Government Code (commencing at Section 15820.91), the State Public Works Board (the “Board”) is authorized to finance the acquisition, design and construction of a jail facility approved by the Board of State and Community Corrections (the “BSCC”) pursuant to Section 15820.916 and following, as amended, (the “AB 900 Jail Financing Program”), the Participating County, the Department, BSCC and the Board entered into the Project Delivery and Construction Agreement (the “PDCA”) dated as of _____, 20__, for reference only; and

WHEREAS, further to the PDCA, the Participating County has proposed to build a jail facility as more particularly described in Exhibit A attached hereto (the “Project”), to be located on real property owned in fee simple by the Participating County and legally described in Exhibit B attached hereto (the “Site”); and

WHEREAS, further to the PDCA, the Department desires to ground lease the Site from the Participating County to assist the Participating County in obtaining eligibility for the Board lease revenue bond financing to finance a portion of the construction of the Project (the “Bonds”); and

WHEREAS, the Department and the Board desire that the term of this Ground Lease not terminate or expire until the Bonds have been paid in full or retired under the provisions of the Bond Documents; and

WHEREAS, the Participating County is desirous of maintaining its eligibility to receive financing for the Project, and to achieve this end, the Participating County is willing to lease the Site to the Department; and

WHEREAS, concurrently with the execution of this Ground Lease, the Department as the Licensor and the Participating County as the Licensee, have entered into a Right of Entry for Construction and Operation (the “Right of Entry”) in substantially the form attached as Exhibit C to the PDCA, authorizing the Participating County to enter the Site for the purpose of constructing the Project and for operation of the Project upon substantial completion of construction; and

WHEREAS, if the Participating County maintains its eligibility in the AB 900 Jail Financing Program, and the Board in its sole discretion, is able to issue the Bonds to finance the Project in its typical and customary manner, the Department will concurrently sublease the Site

to the Board, (the “Site Lease”), and enter into a Facility Lease (the “Facility Lease”) providing for the Board to sublease to the Department the Site and the Project (together the “Facility”). The Site Lease and the Facility Lease will provide security for the Bonds to be issued by the Board under an indenture (the “Indenture”) between the Board and the Treasurer of the State, as trustee (the “State Treasurer”); and

WHEREAS, if the Board is able to issue the Bonds for the Project in its typical and customary manner, concurrently with executing the Site Lease and the Facility Lease, the Department and the Participating County intend to enter into a Facility Sublease (the “Facility Sublease”) whereby the Department will sublet the Facility to the Participating County pursuant to the terms of the Facility Sublease; and

NOW, THEREFORE, in consideration of the mutual obligations of the Parties hereto, the Participating County hereby leases to the Department, and the Department hereby leases from the Participating County, the Site subject to the terms, covenants, agreements and conditions hereinafter set forth, to each and all of which the Participating County and the Department hereby mutually agree.

SECTION 1. Definitions.

As used herein, the following terms shall have the following meanings:

- (a) “AB 900 Jail Financing Program” has the meaning given to such term in the Recitals.
- (b) “Abatement Event” shall have the meaning given to such term in the Facility Lease.
- (c) “Board” means the State Public Works Board of the State of California, an entity of state government of the State.
- (d) “Bond Documents” mean each and every document evidencing the Bonds, including, but not limited to, the Site Lease, the Facility Lease, the Facility Sublease, and the Indenture.
- (e) “Bonds” has the meaning given to such term in the Recitals.
- (f) “BSCC” has the meaning given to such term in the Recitals.
- (g) “Claims” has the meaning given to such term in Section 23 of this Ground Lease.
- (h) “Department” has the meaning given to such term in the preamble.
- (i) “DGS” means the Department of General Services of the State of California, an entity of state government of the State.
- (j) “Easements” mean the access, utilities and repairs easements described in Subsection 4(b) of this Ground Lease.

(k) “Easement Agreement” means an easement agreement memorializing the grant of Easements by the Participating County, as grantor, to the Department, as grantee, in the form of Exhibit C attached hereto.

(l) “Easement Property” means real property owned by the Participating County that is burdened by the Easement Agreement as described in Exhibit 2 to the Easement Agreement.

(m) “Effective Date” means the date this Ground Lease is valid, binding and effective as provided in Section 2 of this Ground Lease.

(n) “Facility” has the meaning given to such term in the Recitals.

(o) “Facility Lease” has the meaning given to such term in the Recitals.

(p) “Facility Sublease” has the meaning given to such term in the Recitals.

(q) “Ground Lease” has the meaning given to such term in the preamble, including all exhibits attached hereto.

(r) “Hazardous Materials” mean any substance, material, or waste which is or becomes, regulated by any local governmental authority, the State, or the United States Government, including, but not limited to, any material or substance which is (i) defined as a “hazardous waste”, “extremely hazardous waste”, or “restricted hazardous waste” under Section 25115, 25117 or 25122.7 of the California Health and Safety Code, or listed pursuant to Section 25140 of the California Health and Safety Code, Division 20, Chapter 6.5 (Hazardous Waste Control Law), (ii) defined as “hazardous substance” under Section 25316 of the California Health and Safety Code, Division 20, Chapter 6.8 (Carpenter-Presley-Talmer Hazardous Substance Account Act), (iii) defined as a “hazardous material”, “hazardous substance”, or “hazardous waste” under Section 25501 of the California Health and Safety Code.

(s) “Improvements” mean the physical construction of the Project and other buildings, improvements, structures, furnishings and equipment placed in, under or upon the Site by the Participating County under the terms and conditions in the Right of Entry or this Ground Lease.

(t) “Indemnitees” has the meaning given to such term in Section 24 of this Ground Lease.

(u) “Indenture” has the meaning given to such term in the Recitals.

(v) “Landlord” has the meaning given to such term in the preamble.

(w) “Leasehold Estate” means the real property right and interest held by the Department as Tenant to possess, use and access the Site and the Project under the terms and conditions of this Ground Lease.

(x) “Participating County” has the meaning given to such term in the preamble.

- (y) “Parties” has the meaning given to such term in the preamble.
- (z) “Party” has the meaning given to such term in the preamble.
- (aa) “PDCA” has the meaning given to such term in the Recitals.
- (bb) “Permitted Encumbrances” has the meaning given to such term in Subsection 3(b)(4) of this Ground Lease.
- (cc) “Project” means the buildings, structures, works and related improvements constructed or to be constructed on the Site, as are more particularly described in Exhibit A attached hereto, and any and all additions, betterments, extensions and improvements thereto.
- (dd) “Resolution” has the meaning given to such term in Subsection 3(b)(1) of this Ground Lease.
- (ee) “Right of Entry” has the meaning given to such term in the Recitals.
- (ff) “Right of First Offer” has the meaning given to such term in Section 13 of this Ground Lease.
- (gg) “Site” has the meaning given to such term in the Recitals.
- (hh) “Site Lease” has the meaning given to such term in the Recitals.
- (ii) “State” means the state government of the State of California.
- (jj) “State Treasurer” has the meaning given to such term in the Recitals.
- (kk) “Tenant” has the meaning given to such term in the preamble.
- (ll) “Term” has the meaning given to such term in Section 10 of this Ground Lease.

SECTION 2. Effective Date.

The Parties hereby confirm and agree that this Ground Lease is effective and binding on the Parties upon the first day (the “Effective Date”) on which this Ground Lease has been consented to by the Board and a duly authorized representative of the Board has consented to this Ground Lease by executing it below.

SECTION 3. Representations, Warranties and Covenants.

(a) Representations and Warranties of the Department. In addition to any express agreements of Tenant herein, the Department makes the following representations and warranties to the Participating County as of the Effective Date:

(1) The Department has full legal right, power and authority to enter into this Ground Lease as Tenant and to carry out and consummate all transactions contemplated by this Ground Lease and by proper action has duly authorized the execution and delivery of this

Ground Lease. The Department shall cause an opinion, dated as of [the date in the preamble of this Ground Lease] and in substantially the form of Exhibit D attached to this Ground Lease, to be delivered to the Board contemporaneously with the Department's execution of this Ground Lease;

(2) The officers of the Department executing this Ground Lease are duly and properly holding their respective offices and are fully authorized to execute this Ground Lease; and

(3) This Ground Lease has been duly authorized, executed and delivered by the Department, and will constitute a legal, valid and binding agreement of the Department, enforceable against the Department in accordance with its terms on the Effective Date.

(b) Representations, Warranties and Covenants of the Participating County. In addition to any express agreements of Landlord herein, the Participating County makes the following representations, warranties and covenants to the Department as of the Effective Date:

(1) The Participating County, by Resolution of the Board of Supervisors ("Resolution"), has full legal right, power and authority to enter into this Ground Lease as Landlord, to transfer and convey the Leasehold Estate to the Department under this Ground Lease, and to carry out and consummate all transactions contemplated by this Ground Lease and by proper action has duly authorized the execution and delivery of this Ground Lease. The Participating County shall cause an opinion, dated as of [the date in the preamble of this Ground Lease] and in substantially the form of Exhibit D attached to this Ground Lease, to be delivered to the Board contemporaneously with the Participating County's execution of this Ground Lease.

(2) The officers of Participating County executing this Ground Lease are duly and properly holding their respective offices and have the legal power, right and are fully authorized to execute this Ground Lease pursuant to the Resolution.

(3) This Ground Lease has been duly authorized, executed and delivered by Participating County, and will constitute a legal, valid and binding agreement of Participating County, enforceable against the Participating County in accordance with its terms upon the Effective Date.

(4) The Participating County is the owner in fee simple of the Site and has marketable and insurable fee simple title to the Site, there is no suit, action, arbitration, legal, administrative, or other proceeding or inquiry pending against the Site or pending against the Participating County which could affect the Participating County's title to the Site, affect the value of the Site, or subject an owner of the Site to liability and there are no outstanding mortgages, deeds of trust, bond indebtedness, leaseholds, pledges, conditions or restrictions, liens or encumbrances against the Site except as identified in Exhibit E, attached hereto, collectively, the "Permitted Encumbrances".

(5) No consent, permission, authorization, order, license, or registration with any governmental authority is necessary in connection with the execution and delivery of this Ground Lease, except as have been obtained.

(6) There exists no litigation or other proceeding pending or threatened against the Participating County except as identified in Exhibit F, attached hereto, that, if determined adversely, would materially and adversely affect the ability of the Participating County to perform its obligations under this Ground Lease.

(7) This Ground Lease is, and all other instruments, documents, exhibits, and agreements required to be executed and delivered by the Participating County in connection with this Ground Lease are and shall be, duly authorized, executed and delivered by the Participating County and shall be valid, legally binding obligations of and enforceable against the Participating County in accordance with their terms.

(8) Neither the execution and delivery of this Ground Lease and documents referenced herein, nor the incurrence of the obligations set forth herein, nor the consummation of the transactions herein contemplated, nor compliance with the terms of this Ground Lease and the documents referenced herein conflict with or result in the material breach of any terms, conditions or provisions of, or constitute a default under, any agreements or instruments to which the Participating County is a party or affecting the Site.

(9) There are no attachments, execution proceedings, or assignments for the benefit of creditors, insolvency, bankruptcy, reorganization or other proceedings pending against the Participating County.

(10) There are no and have been no:

(A) actual or pending public improvements which will result in the creation of any liens, encumbrances or assessments upon the Site, including public assessments or mechanics liens, other than the Permitted Encumbrances, and the Participating County agrees to indemnify, defend and hold the Department free and harmless from and against any claims, liabilities, losses, costs, damages, expenses and attorneys' fees arising from any liens, encumbrances or assessments that have been, or may be, imposed upon the Site as a consequence of actual or impending public improvements at or after the Effective Date, including any obligations to pay a fee or assessment for infrastructure to the extent such liability survives or continues at or after the Effective Date, and the Department agrees to cooperate with the Participating County, at the Participating County's costs and to the extent permitted by law, with respect to the Participating County's efforts to remove any such liens, fees, assessments, or encumbrances.

(B) uncured notices from any governmental agency notifying the Participating County of any violations of law, ordinance, rule, or regulation, including Environmental Laws, occurring on the Site.

(C) notices of any condemnation, zoning or other land-use regulation proceedings, either instituted or planned to be instituted, which would detrimentally affect the use, operation or value of the Site.

(11) The Participating County hereby agrees that it will not enter into any new leases or any other obligations or agreements that will affect the Site at or after the Effective Date, without the express prior written consent of the Department and approval of the Board.

(12) The Participating County will not subject the Site to any additional liens, encumbrances, covenants, conditions, easements, rights of way or similar matters after the Effective Date without the express prior written consent of the Department and the approval of the Board.

(13) The Participating County shall promptly notify the Department of any event or circumstance that makes any representation or warranty of the Participating County under this Ground Lease untrue or misleading, or of any covenant of the Participating County under this Ground Lease incapable or less likely of being performed. The Participating County's obligation to provide the notice described in the preceding sentence to the Department shall in no way relieve the Participating County of any liability for a breach by the Participating County of any of its representations, warranties or covenants under this Ground Lease.

(14) The Department shall at all times during the Term have access to and from the Site.

(15) No representation, warranty or statement of the Participating County in this Ground Lease or in any document, certificate, exhibit or schedule furnished or to be furnished to the Department pursuant hereto contains or will contain any untrue statement of a material fact or omits or will omit to state a material fact necessary to make the statements or facts contained therein not misleading.

SECTION 4. Lease of the Site, Access, Utilities and Repairs Easements and Recordation of Lease.

(a) **Lease of the Site and Recordation of Ground Lease.** The Participating County hereby leases the Site to the Department and the Department leases the Site from the Participating County. The Participating County further agrees to provide, or cause to be provided, to the Department and its assigns or sublessees, adequate parking spaces at no cost, and such utility services as the Participating County customarily provides or causes to be provided to facilities similar to the Project, including without limitation electricity, gas, water, sewer, garbage disposal, heating, air conditioning and telephone. The Department and the Board shall have the right to record this Ground Lease in the Official Records of the Participating County as of the Effective Date or anytime thereafter.

[Use Note: Section 4(b) and the Easement Agreement are necessary if Site access and utilities are provided by other real property. The execution form of the Easement Agreement is attached as Exhibit C.]

(b) **Access, Utilities and Repairs Easement.** As of the Effective Date, the Participating County agrees to grant to the Department, for the use, benefit and enjoyment of the Department and its lessees, successors and assigns, and their respective employees, invitees, agents, independent contractors, patrons, customers, guests and members of the public using or visiting the Site or the Project, a non-exclusive easement over, across and under the Easement Property for the purpose of: a) ingress, egress, passage or access to and from the Site by pedestrian or vehicular traffic; b) installation, maintenance and replacement of utility wires, cables, conduits and pipes; and c) other purposes and uses necessary or desirable for access to and from the Site for the repair, operation and maintenance of the Facility (collectively the "Easements"). The grant of the Easements shall be

memorialized in that certain Easement Agreement for Grants of Access, Utilities and Repairs (the "Easement Agreement") in substantially the form of Exhibit C attached to this Ground Lease. The Department and the Board shall have the right to record the Easement Agreement in the Official Records of the Participating County as of the Effective Date or anytime thereafter. The Easements to be granted by the Participating County are subject to the limitations set forth in the Easement Agreement. In the event of a conflict or ambiguity, with respect to the terms of the Easements, between this Ground Lease and the Easement Agreement, the terms of the Easement Agreement shall control.

SECTION 5. Landlord Right of Entry for Construction and Operation.

(a) Landlord Right of Entry for Construction and Operation. Notwithstanding anything to the contrary contained herein, Landlord has reserved the right to enter and use the Site for construction of the Project pursuant to the terms and conditions in the Right of Entry.

(b) Quiet Enjoyment. The Participating County covenants that the Department, its assigns or sublessees, may quietly have, hold, and enjoy all of the Site and the Improvements during the Term of this Ground Lease and any extended term hereof, without hindrance or interruption by the Participating County or by any other person or persons lawfully or equitably claiming by, through or under the Participating County, except as limited by the Permitted Encumbrances.

SECTION 6. Purpose and Use.

The Parties reasonably expect for the Site to be used by the Department, and each of its assignees or sublessees during the Term of this Ground Lease, for the purpose of causing the construction, operation and maintenance of the Project and appurtenances thereto; provided however, the Parties acknowledge that the Site may be utilized for other types of correctional housing or other public purposes as may be required to exercise the Board's obligations, rights and remedies under the Bond Documents.

The Participating County acknowledges and confirms that the Department's use of the Leasehold Estate created hereunder includes, but is not limited to, allowing for potential financing and construction of the Project and the leasing of the Site and/or the Facility pursuant to the Site Lease, the Facility Lease, and the Facility Sublease and for such other purposes as may be incidental thereto. The Participating County further acknowledges and confirms the Board's right to relet the Facility in the event of a default under the Facility Lease and to provide for all other rights and remedies of the Board, the State Treasurer, and the owners of the Bonds in the event of a default under the Bond Documents.

SECTION 7. Assignment or Sublease.

The Department may sublet or assign all or a portion of the Site or the Project or assign this Ground Lease or any interest therein, without the prior consent or approval of the Participating County; provided, however, any sublet or assignment shall be subject to the prior approval of the Board and Participating County is provided notice of said sublet or assignment. Notwithstanding that the Participating County's consent or approval is not required for any subletting of the Site or the Project, to assist with the Board's financing of the Project, the

Participating County hereby consents to and approves the sublease of the Site, together with the Improvements, to the Board under the Site Lease and the further subletting of the Facility by the Board to the Department under the Facility Lease.

SECTION 8. No Commitment to Issue the Bonds and Non-Liability of the Department and the State.

The delivery of this Ground Lease shall not directly, indirectly or contingently, obligate the Department, the Board or any other subdivision of the State to issue the Bonds or levy any form of taxation or to make any appropriation with respect to the Project. Any obligation of the Department created by or arising out of this Ground Lease shall not impose a debt or pecuniary liability upon the Department, the Board or any other subdivision of the State, or a charge upon the general credit or taxing powers thereof but shall be payable solely out of funds duly authorized and appropriated by the State.

SECTION 9. Cooperation.

The Participating County has a duty to fully cooperate and provide all necessary assistance to the Department and the Board to aid them in their efforts to finance the Project. The Participating County acknowledges that it is authorized and directed to provide cooperation concerning the issuance of the Bonds, including without limitation, executing and delivering such certificates, legal opinions or instruments as the Department or the Board may reasonably request. The Participating County's legal counsel, Chief Administrative Officer and its Sheriff are authorized and directed to cooperate in the issuance of the Bonds and to execute all documents reasonably needed to accomplish such financing.

SECTION 10. Term and Extension.

The Term of this Ground Lease shall commence on the Effective Date and shall co-terminate on the same date as the Facility Lease, unless such Term is extended by the parties thereto, or unless sooner terminated as provided herein, except no termination of this Ground Lease shall occur until all the Bonds and all other indebtedness incurred by the Board for the Project, if any, have been fully repaid.

SECTION 11. Rental.

The Department shall pay the Participating County rental in the sum of Ten Dollars (\$10.00) per year, all of which rental shall be deemed to have been prepaid to the Participating County by the Department on the Effective Date and, thereby acknowledges the Participating County's match funding requirement has been sufficiently met. The Participating County agrees that the payment of such rental is adequate consideration for the leasing of the Site, together with the Improvements, under this Ground Lease.

SECTION 12. Taxes and Assessment.

The Department shall pay or cause to be paid all lawful taxes that may be levied at any time upon any interest the Department may have under this Ground Lease (including both the Site and the Improvements after the Effective Date). The Participating County and the

Department each represent and acknowledge that neither Party believes or expects that its respective interests in the Site are subject to payment of property taxes. The Department shall have the right to contest the validity of any levy or tax assessment levied upon the Department's interest in the Site.

SECTION 13. Right of First Offer and Priority of Ground Lease.

(a) **Right of First Offer.** Should the Participating County decide to sell the Site at any time during the Term of this Ground Lease, the Participating County shall notify the Department and the Board in writing of such intention prior to soliciting offers from any prospective purchasers. In such event, the Department and the Board shall have fifteen (15) months from receipt of such notification of intention to sell to inform the Participating County of the Department's interest in acquiring the Site. The Participating County understands that the State's acquisition process requires an appropriation of funds and the approval of the Board. The Participating County agrees to reasonably cooperate with the Department in obtaining such approval and in meeting any other State property acquisition requirements that may exist at that time. If the Department informs the Participating County of the Department's intention to acquire the Site within said fifteen (15) month period, the Parties agree to negotiate a purchase agreement in good faith and at a price that is the fair market value of the Site at the time the Department exercises its Right of First Offer.

(b) **Priority of Ground Lease.** If the Department and the Participating County are unable to agree on the terms and conditions for the purchase and sale of the Site, or if the Board does not approve the acquisition of the Site by the Department, the Participating County shall be free to market and sell the Site to a third party; provided, however, any new owner of the Site shall acquire the Site subject to this Ground Lease and any encumbrances related to the Bonds and the Bond Documents. The Department and the Board shall have no obligation to subordinate the Ground Lease, the Bonds or the Bond Documents to accommodate the new owner or lender(s).

SECTION 14. Damage or Destruction.

Damage or destruction to the Project shall not act to terminate or cancel this Ground Lease. In the event of any damage or destruction of the Project, the use of the proceeds of any property casualty or builder's risk insurance required to be procured and maintained pursuant to the PDCA, or any insurance required by the Facility Lease or Facility Sublease shall be governed by the terms of the agreement that required the procurement of such insurance.

SECTION 15. Insurance.

Except for insurance obligations that may arise as a result of the issuance of the Bonds by the Board, or as may be required by the PDCA, the Department shall have no obligation to purchase insurance for the Site or the Project, including but not limited to any general liability, earthquake, flood, fire or extended casualty coverage.

SECTION 16. Condition and Title to the Improvements on Termination.

Upon termination or expiration of this Ground Lease, the Department shall have no

obligation, to remove the Improvements. Title to the Improvements, including the Project, during the Term shall be vested in the State. Subject to the terms and conditions in the Bond Documents, at the termination or expiration of this Ground Lease, fee title to the Improvements, including the Project, shall vest in the Participating County and become the property of the Participating County without further action of any Party and without the necessity of a deed from the Department to the Participating County.

SECTION 17. The Department's Right to Terminate.

The Department, with the approval of the Board, shall have the right to terminate this Ground Lease upon thirty (30) days written notice to the Participating County without any liability; provided, however, no termination of this Ground Lease or reversion of title to any portion of the Site or vesting of title to the Project may occur until the Bonds have been fully paid or retired under the provisions of the Bond Documents.

SECTION 18. The Participating County's Right to Terminate

Participating County's proper exercise of its termination rights pursuant to Article 2, section 2.2(b) of the PDCA serves to terminate this Ground Lease effective on the date of termination of the PDCA.

SECTION 19. Non-Termination, Default and Damages.

This Ground Lease shall expire at the end of the Term. It is expressly agreed by the Parties to this Ground Lease that any default under this Ground Lease will not allow either Party to terminate or otherwise interfere with the Department's quiet enjoyment and beneficial use of the Site and the Project under this Ground Lease, the Site Lease or the Facility Lease. Until such time as the Bonds have been fully paid or retired under the provisions of the Bond Documents, the sole remedy of any Party upon such default shall be a suit for money damages or specific performance to remedy such a default.

SECTION 20. Waste and Hazardous Materials.

Neither the Participating County nor the Department shall knowingly commit, suffer or permit any waste or nuisance on the Site or any acts to be done thereon in violation of any laws or ordinances. To the Participating County's best knowledge, after having examined its documents, public records and other instruments and having made inquiry of appropriate departments and agencies with respect to the Site and, except as specifically provided in this Ground Lease, no Hazardous Materials, were used, generated, stored, released, discharged or disposed of on, under, in, or about the Site or transported to or from the Site. The Participating County represents with respect to the Site that neither the Participating County nor any other person or entity under the control of, or with the knowledge of the Participating County will cause or permit the use generation, storage, release, discharge, or disposal of any Hazardous Materials on, under, in, or about the Site or transported to or from the Site.

SECTION 21. Eminent Domain.

If the whole or any portion of the Site or the Project shall be taken in eminent domain

proceedings, or by sale in lieu of such taking by a governmental entity threatening to use the power of eminent domain, and which taking in the collective judgment of the Department, the Board, and the State Treasurer renders the Site and/or the Project unsuitable for the continued use by the State, then this Ground Lease shall terminate when possession is taken by the condemning entity.

If this Ground Lease is terminated because of such taking and any of the Bonds are outstanding, then all proceeds from any permanent or temporary taking shall be used to repay any outstanding Bonds as provided in the Bond Documents, including any outstanding or accrued interest, and upon full repayment of the Bonds then the remaining proceeds, if any, shall be distributed to the Department and the Participating County according to their respective interests as provided in the Bond Documents. The Participating County and the Department shall each have the right to represent its own interest, at its own cost and expense, in any proceedings arising out of such taking, and each of the Participating County and the Department shall reasonably cooperate with the other, including without limitation, settling with the condemning authority only with the other Party's consent if such settlement would affect the other Party's rights.

If this Ground Lease is not terminated because of such taking, then it shall remain in full force and effect with respect to the remainder of the Site and the Project. The Participating County and the Department each waives the provisions of the California Code of Civil Procedure, Section 1265.130, or any similar law that permits a Party to petition a court to terminate this Ground Lease upon a taking affecting the Site or the Project, the Parties agreeing that any such termination rights shall be only as expressly set forth in this Ground Lease.

SECTION 22. Non-Discrimination.

During the performance of this Ground Lease, the Participating County shall not deny benefits to any person on the basis of religion, color, ethnic group identification, sex, age, physical or mental disability, nor shall they discriminate unlawfully against any employee or applicant for employment because of race, religion, color, national origin, ancestry, physical handicap, mental disability, medical condition, marital status, age, or sex. The Participating County shall ensure that the evaluation and treatment of employees and applicants for employment are free of such discrimination.

The Participating County shall comply with the provisions of the Fair Employment and Housing Act (Government Code, Section 12900 et seq.), the regulations promulgated thereunder (California Code of Regulations, Title 2, Section 7285.0 et seq.), the provisions of Article 9.5, Chapter I, Part I, Division 3, Title 2 of the Government Code (Government Code, Sections 11135- 11139.5), and the regulations or standards adopted to implement such article.

SECTION 23. Liens.

In the event the Department, the Board or their designees, at any time during the Term, causes any changes, alterations, additions, improvements, or other work to be done or performed or materials to be supplied, in or upon the Project or the Site, the Department, the Board or their designees shall pay, when due, all sums of money that may become due for any labor, services,

materials, supplies or equipment furnished to or for the Department or the Board, upon or about the Project or the Site and which may be secured by any lien against the Project or the Site or the Department's or the Board's interest therein, and will cause each such lien to be fully discharged and released at the time the performance of any obligation secured by any such lien matures or comes due; except that, if the Department or the Board desires to contest any such lien, it may do so. If any such lien is reduced to final judgment and such judgment or other process as may be issued for the enforcement thereof is not promptly stayed, or if so stayed, said stay thereafter expires, the Department or the Board shall forthwith pay and discharge said judgment.

SECTION 24. Indemnification.

As required by Section 15820.915 of the California Government Code, the Participating County hereby agrees that it shall indemnify, protect, defend and hold harmless the State, including but not limited to, the Department, the Board, DGS, and each of their respective officers, governing members, directors, officials, employees, subcontractors, consultants and agents (collectively the "Indemnitees"), for any and all claims, liabilities and losses arising out of the use of the Site or the Project, including, but not limited to all demands, causes of action and liabilities of every kind and nature whatsoever arising out of, related to, or in connection with (a) any breach of this Ground Lease by the Participating County; (b) the construction, operation, maintenance, use and occupancy of the Project; (c) any acts or omissions of any contractor hired by the Participating County or its agents or subcontractor hired by such contractor (collectively the "Claims"). The Participating County's obligation to indemnify, defend, and save harmless the Indemnitees shall extend to all Claims arising, occurring, alleged, or made any time, including prior to, during, or after this Ground Lease is in full force and effect. The Participating County's obligation to indemnify, defend, and save harmless the Indemnitees shall apply regardless of any active and/or passive negligent act or omission of the Indemnitees, but the Participating County shall not be obligated to provide indemnity or defense for Indemnitees wherein the Claims arise out of the gross negligence or willful misconduct of the Indemnitees. The indemnification obligation of the Participating County set forth in this Section shall survive the expiration of the Term or earlier termination of this Ground Lease.

SECTION 25. Non-Encumbrance.

The Participating County covenants that the Facility is not and will not be mortgaged, pledged, or hypothecated in any manner or for any purpose and has not been and will not be the subject of a grant of a security interest by the Participating County without the written consent of the Department and the Board. The Participating County further covenants that it shall not in any manner impair, impede or challenge the security, rights and benefits of the owners of the Bonds or the trustee for the Bonds.

SECTION 26. Miscellaneous.

(a) Amendments. This Ground Lease may only be amended, changed, modified or altered in writing by the Parties. As long as any of the Bonds are outstanding the Board must consent to any amendment hereto to be effective.

(b) Waiver. The waiver by any Party of a breach by the other Party of any term,

covenant or condition hereof shall not operate as a waiver of any subsequent breach of the same or any other term, covenant or condition hereof.

(c) Law Governing. This Ground Lease shall be governed exclusively by the provisions hereof and by the laws of the State and any action arising from or relating to this Ground Lease shall be filed and maintained in Sacramento County Superior Court, Sacramento, California.

(d) Section Headings. All articles, paragraph and section headings, titles or captions contained in this Ground Lease are for convenience of reference only and are not intended to define or limit the scope of any provision of this Ground Lease.

(e) Conflicts Between Terms of Documents. Nothing in this Ground Lease is intended to amend, modify or supersede the PDCA except as expressly provided herein. In the event of any inconsistency in the PDCA and this Ground Lease, the inconsistency shall be resolved by giving preference to the PDCA. In the event of any inconsistency between this Ground Lease and the Bond Documents, the inconsistencies shall be resolved by giving preference to the Bond Documents.

(f) Relationship of Parties. The Department and its agents and employees involved in the performance of this Ground Lease shall act in an independent capacity and not as officers, employees or agents of the Participating County.

(g) Successors and Assigns. The terms and provisions hereof shall extend to and be binding upon and inure to the benefit of the successors and assigns of the respective Parties.

(h) Partial Invalidity. If any one or more of the terms, provisions, covenants or conditions of this Ground Lease shall to any extent be declared invalid, unenforceable, void or voidable for any reason by a court of competent jurisdiction and the finding or order or decree of which becomes final, none of the remaining terms, provisions, covenants or conditions of this Ground Lease shall be affected thereby, and each provision of this Ground Lease shall be valid and enforceable to the fullest extent permitted by law.

(i) Notices. All notices herein which are to be given or which may be given by either Party to the other, shall be in writing and shall be deemed to have been given three (3) business days after deposit in the United States Mail, certified and postage prepaid, return receipt requested and addressed as follows:

To the Department: California Department of Corrections and Rehabilitation
9838 Old Placerville Road, Suite B
Sacramento, CA 95827
Attention: Deputy Director, Facility Planning, Construction
and Management
Facsimile: 916-322-5717

To the Board: State Public Works Board
915 L Street, 9th Floor
Sacramento, CA 95814

Attention: Executive Director
Facsimile: 916-449-5739

To the Participating County: County of _____
[Street Address]
[City, State and Zip Code]
Attention: _____
Facsimile: _____

Nothing herein contained shall preclude the giving of any such written notice by personal service, in which event notice shall be deemed given when actually received. The address to which notices shall be mailed to a Party may be changed by written notice given to all Parties as hereinabove provided.

(j) Execution and Counterparts. This Ground Lease may be executed in any number of counterparts, each of which shall be deemed to be an original, but all of which together shall constitute one and the same Ground Lease. It is also agreed that separate counterparts of this Ground Lease may separately be executed by the signatories to this Ground Lease, all with the same force and effect as though the same counterpart had been executed by all of the signatories.

(k) Bankruptcy. In the event of any bankruptcy proceeding, this Ground Lease will not be treated as an executory contract and cannot be rejected by the Participating County.

(l) Exhibits. The following Exhibits are attached to this Ground Lease and incorporated by reference herein.

- Exhibit A: Project Description
- Exhibit B: Legal Description of the Site
- Exhibit C: Form of Easement Agreement for Grants of Access, Utilities and Repairs
- Exhibit D: Form of Legal Opinion Letter
- Exhibit E: List of the Permitted Encumbrances
- Exhibit F: Pending and Threatened Lawsuits

[SIGNATURE PAGE TO IMMEDIATELY FOLLOW]

IN WITNESS WHEREOF, the Parties hereto have caused this Ground Lease to be executed by their respective officers thereunto duly authorized, all as of the day and year first written above.

CERTIFICATE OF ACCEPTANCE

This is to certify that, pursuant to Section 27281 of the California Government Code, the interest in real property conveyed by the Ground Lease dated as of _____, 20__ for reference only from the County of _____, a Political Subdivision of the State of California to the State of California on behalf of the Department of Corrections and Rehabilitation of the State of California is hereby accepted by the undersigned officer on behalf of the State Public Works Board pursuant to authority conferred by said Board in its duly adopted delegation resolution on December 13, 2013.

Note to Recorder: If this certificate is for a correction deed, all corrections and/or changes to the previously recorded deed must be reviewed and accepted by the State prior to recording a correction deed. All correction deeds require a new Certificate of Acceptance dated subsequent to recordation of the original deed or the most recent correction deed if any.

Form of Easement Agreement for Grants of Access, Utilities and Repairs

**RECORDING REQUESTED BY
AND WHEN RECORDED RETURN TO:**

NO DOCUMENTARY TRANSFER TAX DUE. This Ground Lease is recorded for the benefit of the State of California and is exempt from California transfer tax pursuant to Section 11928 of the California Revenue and Taxation code and from recording fees pursuant to Sections 6103 and 27383 of the California Government Code.

[THE AREA ABOVE IS RESERVED FOR RECORDER'S USE]

**EASEMENT AGREEMENT FOR GRANTS OF
ACCESS, UTILITIES AND REPAIRS**

This Easement Agreement for Grants of Access, Utilities and Repairs (this "Easement Agreement"), dated for reference only as of _____, 20__, is made by and between COUNTY OF _____, (the "Participating County"), a Political Subdivision of the State of California, as grantor, and the DEPARTMENT OF CORRECTIONS AND REHABILITATION OF THE STATE OF CALIFORNIA (the "Department"), an entity of state government of the State of California, as grantee.

RECITALS

A. The Participating County, as landlord, and the Department as tenant, entered into a ground lease dated as of _____, 20__ for reference only, (the "Ground Lease") for the lease of that certain real property located in the County of [_____] and more particularly described in Exhibit 1, attached hereto and incorporated herein by this reference (the "Site"); and

B. The Ground Lease provides that the Participating County, as owner of certain real property adjacent to the Site, shall grant Easements to the Department in the Easement Property, which is more particularly described in Exhibit 2, attached hereto and incorporated herein by this reference; and

C. The Participating County and the Department desire to the grant of Easements in the Easement Property on the terms and conditions contained in this Easement Agreement.

NOW, THEREFORE, for good and valuable consideration, the receipt and sufficiency of which are hereby acknowledged, the Parties hereto hereby agree as follows:

1. Definitions. Unless otherwise required by the context, all capitalized terms used herein and not defined herein shall have the meanings assigned to such terms in the Ground Lease or the Project Delivery and Construction Agreement.

2. Grant and Description of Easements.

2.1 Grant of Access Easement. The Participating County, as the owner of the Easement Property, hereby establishes and grants to and for the benefit of the Department and the Board and their respective contractors, subcontractors, employees, lessees, licensees, permittees, successors and assigns a non-exclusive easement over and across the Easement Property as shown in Exhibit 2 hereto for purposes of ingress and egress to and from the Site and the Project (the "Access Easement"); provided, however, that rights pursuant to such Access Easement shall only be exercised if there is no reasonable access to the Site and the Project via adjacent public streets and roadways and subject to the security limitations set forth in Section 2.3 hereof; and provided further, that such Access Easement is only effective (i) during such times where the Department, or its lessees, successors or assigns, is in possession of the Facility and is responsible for maintenance and repair of the Facility under the terms of the Facility Sublease or (ii) during such times where the Board, or its lessees, successors or assigns, is in possession of the Facility and is responsible for maintenance and repair of the Facility under the terms of the Facility Lease.

2.2 Grant of Utilities and Repairs Easement. The Participating County, as the owner of the Easement Property, hereby grants to and for the benefit of the Department and the Board and their respective contractors, subcontractors, employees, lessees, licensees, permittees, successors and assigns a non-exclusive easement across, over and under the Easement Property as shown in Exhibit 2 hereto for the purpose of: a) installation, maintenance and replacement of utility wires, cables, conduits and pipes for "Utilities", as defined below; and b) other purposes and uses necessary or desirable for the repair, operation and maintenance of the Facility (the "Utilities and Repairs Easement" and together with the Access Easement, the "Easements"); provided, however, that such Utilities and Repairs Easement is subject to the security limitations set forth in Section 2.3 hereof; and; provided further, that such Utilities and Repairs Easement is only effective (i) during such times where the Department, or its lessees, successors or assigns, is in possession of the Facility and is responsible for maintenance and repair of the Facility under the terms of the Facility Sublease or (ii) during such times where the Board, or its lessees, successors or assigns, is in possession of the Facility and is responsible for maintenance and repair of the Facility under the terms of the Facility Lease. "Utilities" shall mean any and all wet and dry utilities (including sewer) necessary or required to service the Facility, including, without limitation, all electrical, natural gas, water, sewer, telephone, data, and other telecommunications services.

2.3 Security Limitation on Easements. The exercise of the rights granted under the Easements will be expressly subject to the limitations and requirements imposed by the Participating County's customary security measures for the Participating County's facilities that may be located on the Easement Property (the "Security Measures"). Prior to the exercise of any rights under the Easements, the Department or the Board, as the case may be, or their respective lessees, successors or assigns shall contact the [Title of Appropriate Individual at Participating County] to ensure that such exercise of rights granted under the Easements will be in compliance

with the requirements of the Security Measures.

3. No Unreasonable Interference. The Participating County shall not conduct any activity on, under or about the Easement Property that would unreasonably interfere with the use of the Easements.

4. Term of Easement Agreement; No Termination by Breach. The term of this Easement Agreement shall be coextensive with the Term of the Ground Lease, as such Term may be extended or terminated as provided in the Ground Lease. No breach of this Easement Agreement shall entitle any of the parties hereunder to cancel, rescind, or otherwise terminate this Easement Agreement, but such limitation shall not affect in any manner any other rights or remedies which a party may have hereunder by reason of any breach.

5. Character. The Easements granted by this Easement Agreement shall be appurtenant to the Site and nonexclusive and for the use and benefit of the Department and the Board. This Easement Agreement is not intended to grant a fee interest in the Easement Property, nor is it intended to be a lease or a license. The Department acknowledges that the Easements herein granted are nonexclusive easements and that the Participating County and its successors and assigns may grant one or more additional non-exclusive easements in the Easement Property to third parties, so long as the rights granted by such easements do not materially interfere with or hinder the use of the Easements by the Department or the Board or that of their respective lessees, successors or assigns.

6. Covenants Running with the Land; Binding on Successors. Pursuant to California Civil Code section 1468, this Easement Agreement and the Easements are covenants related to the use, repair, maintenance and improvement of the properties benefited and burdened hereby, and, as such, the covenants set forth herein shall be binding upon the Easement Property and shall be binding upon all parties having or in the future acquiring any interest in the Easement Property.

7. Binding Effect. This Easement Agreement shall be binding on and shall inure to the benefit of the lessees, successors and assigns of the Participating County, the Department, and the Board.

8. Recordation of Easement Agreement. This Easement Agreement shall be recorded in the Official Records of [_____] County, State of California, and shall serve as notice to all parties succeeding to the interest of the parties hereto that their use of the Site and the Project and the Easement Property shall be benefited or restricted, or both, in the manner herein described.

9. Entire Agreement; Amendments. This Easement Agreement contains the entire agreement of the parties hereto relating to the Easements herein granted. Any representations or modifications concerning this Easement Agreement shall be of no force and effect, excepting a subsequent modification in writing, signed by the Department and approved by the Board and the current owner of the Easement Property and recorded in the Official Records of [_____] County, State of California.

10. Warranty of Authority. The Participating County represents and warrants as of

the Effective Date that (i) it is the legal owner of the Easement Property, (ii) it has full power and authority to place the encumbrance of this Easement Agreement on the Easement Property, (iii) it has not conveyed (or purported to convey) any right, title or interest in or to the Easement Property, except as has been disclosed in writing to the Department prior to the Effective Date, and (iv) if necessary, it has the written consent of any lenders, tenants and subtenants of the Easement Property to the terms and conditions of this Easement Agreement.

11. Counterparts. This Easement Agreement may be signed in multiple counterparts which, when signed by all parties, shall constitute a binding agreement.

IN WITNESS WHEREOF, the parties hereto have caused this Easement Agreement to be executed by their respective officers thereunto duly authorized, all as of the day and year first written above.

Form of Legal Opinion Letter

[LEGAL COUNSEL LETTERHEAD]

[Client]

State Public Works Board
of the State of California
Sacramento, California

Re: Ground Lease By and Between [insert name of the Participating County] and the Department for the [insert name of the Project] Located at [insert address of the Site]

Ladies and Gentlemen:

I am legal counsel for [insert name of client] with respect to the above referenced matter. I have examined originals or copies, certified or otherwise identified to my satisfaction, of such documents, exhibits, public records and other instruments in connection with the Ground Lease dated as of _____, 20__ for reference only between [insert name of the Participating County], as landlord, and the Department of Corrections and Rehabilitation of the State of California (the "Department"), as tenant, (the "Ground Lease"), and have conducted such other investigations of fact and law as I have deemed necessary for the purpose of this opinion.

I am of the opinion that:

[Use one of the following alternatives]

[Alternative 1: If the Participating County is the client]

1. The [insert name of the Participating County] is a political subdivision of the State of California created in accordance with the provisions of the Constitution of the State of California, with full legal right, power and authority to enter into and perform its obligations under the Ground Lease *[if easements are being granted under the terms of an Easement Agreement in the form of Exhibit C to the Ground Lease, add: "and Easement Agreement in the form attached as Exhibit C to the Ground Lease" and revise letter accordingly].*

[Alternative 2: If the Department is the client]

1. The Department is an entity of state government of the State of California with full legal right, power and authority to enter into and perform its obligations under the Ground

Lease [if easements are being granted under the terms of an Easement Agreement in the form of Exhibit C to the Ground Lease, add: “and Easement Agreement in the form attached as Exhibit C to the Ground Lease” and revise letter accordingly].

[The following provisions apply regardless of the client]

2. The Ground Lease [and Easement Agreement] [has/have] been duly authorized, executed and delivered by [insert name of client], and [is/are] valid and binding upon and enforceable against the [insert name of client] in accordance with [its/their] terms if [it is/they are] in like fashion valid and binding upon and enforceable against the respective other parties thereto, except that enforceability may be limited by bankruptcy, insolvency and other laws affecting the enforcement of creditors’ rights generally and by the application of equitable principles if equitable remedies are sought.

3. The execution and delivery by the [insert name of client] of the Ground Lease [and Easement Agreement] and compliance with the provisions thereof do not and will not materially conflict with or constitute on the part of the [insert name of client] a breach of or a default under the law, administrative regulation, judgment, decree or any agreement or other instrument known to me which the [insert name of client] is a party or otherwise subject.

4. All actions on the part of the [insert name of client] necessary for the execution and performance of the Ground Lease [and Easement Agreement] have been duly and effectively taken, and no consent, authorization or approval of, or filing or registration with, any governmental or regulatory officer or body not already obtained or not obtainable in due course by the [insert name of client] is required to be obtained by the [insert name of client] for the making and performance of the Ground Lease [and Easement Agreement] .

5. There is no action, suit or proceeding pending (with the service of process having been accomplished) to restrain or enjoin the execution and delivery of the Ground Lease [and Easement Agreement], or in any way contesting or affecting the validity of the Ground Lease [and Easement Agreement].

[THE AREA ABOVE IS RESERVED FOR RECORDER'S USE]

**EASEMENT AGREEMENT FOR GRANTS OF
ACCESS, UTILITIES AND REPAIRS**

This Easement Agreement for Grants of Access, Utilities and Repairs (this "Easement Agreement"), dated for reference only as of _____, 20___, is made by and between COUNTY OF _____, (the "Participating County"), a Political Subdivision of the State of California, as grantor, and the DEPARTMENT OF CORRECTIONS AND REHABILITATION OF THE STATE OF CALIFORNIA (the "Department"), an entity of state government of the State of California, as grantee. The Participating County and the Department are sometimes referred to collectively as the "Parties" and individually as a "Party."

RECITALS

A. The Participating County, as landlord, and the Department as tenant, entered into a ground lease dated as of _____, 20___ for reference only, (the "Ground Lease") for the lease of that certain real property located in the County of _____ and more particularly described in Exhibit 1, attached hereto and incorporated herein by this reference (the "Site"); and

B. The Ground Lease provides that the Participating County, as owner of certain real property adjacent to the Site, shall grant Easements to the Department in the Easement Property, which is more particularly described in Exhibit 2, attached hereto and incorporated herein by this reference; and

C. The Participating County desires to grant and the Department desires to accept the grant of Easements in the Easement Property on the terms and conditions contained in this Easement Agreement.

NOW, THEREFORE, for good and valuable consideration, the receipt and sufficiency of which are hereby acknowledged, the Parties hereto hereby agree as follows:

1. Definitions. Unless otherwise required by the context, all capitalized terms used herein and not defined herein shall have the meanings assigned to such terms in the Ground Lease or the Project Delivery and Construction Agreement.

2. Grant and Description of Easements.

2.1 Grant of Access Easement. The Participating County, as the owner of the Easement Property, hereby establishes and grants to and for the benefit of the Department and the Board and their respective contractors, subcontractors, employees, lessees, licensees, permittees, successors and assigns a non-exclusive easement over and across the Easement Property as shown in Exhibit 2 hereto for purposes of ingress and egress to and from the Site and the Project (the "Access Easement"); provided, however, that rights pursuant to such Access Easement shall only be exercised if there is no reasonable access to the Site and the Project via adjacent public streets and roadways and subject to the security limitations set forth in Section 2.3 hereof; and provided further, that such Access Easement is only effective (i) during such times where the Department, or its lessees, successors or assigns, is in possession of the Facility and is responsible for maintenance and repair of the Facility under the terms of the Facility Sublease or (ii) during such times where the Board, or its lessees, successors or assigns, is in possession of the Facility and is responsible for maintenance and repair of the Facility under the terms of the Facility Lease.

2.2 Grant of Utilities and Repairs Easement. The Participating County, as the owner of the Easement Property, hereby grants to and for the benefit of the Department and the Board and their respective contractors, subcontractors, employees, lessees, licensees, permittees, successors and assigns a non-exclusive easement across, over and under the Easement Property as shown in Exhibit 2 hereto for the purpose of: a) installation, maintenance and replacement of utility wires, cables, conduits and pipes for "Utilities", as defined below; and b) other purposes and uses necessary or desirable for the repair, operation and maintenance of the Facility (the "Utilities and Repairs Easement" and together with the Access Easement, the "Easements"); provided, however, that such Utilities and Repairs Easement is subject to the security limitations set forth in Section 2.3 hereof; and; provided further, that such Utilities and Repairs Easement is only effective (i) during such times where the Department, or its lessees, successors or assigns, is in possession of the Facility and is responsible for maintenance and repair of the Facility under the terms of the Facility Sublease or (ii) during such times where the Board, or its lessees, successors or assigns, is in possession of the Facility and is responsible for maintenance and repair of the Facility under the terms of the Facility Lease. "Utilities" shall mean any and all wet and dry utilities (including sewer) necessary or required to service the Facility, including, without limitation, all electrical, natural gas, water, sewer, telephone, data, and other telecommunications services.

2.3 Security Limitation on Easements. The exercise of the rights granted under the Easements will be expressly subject to the limitations and requirements imposed by the Participating County's customary security measures for the Participating County's facilities that may be located on the Easement Property (the "Security Measures"). Prior to the exercise of any rights under the Easements, the Department or the Board, as the case may be, or their respective lessees, successors or assigns shall contact the [Title of Appropriate Individual at Participating County] to ensure that such exercise of rights granted under the Easements will be in compliance with the requirements of the Security Measures.

3. No Unreasonable Interference. The Participating County shall not conduct any activity on, under or about the Easement Property that would unreasonably interfere with the use

of the Easements.

4. Term of Easement Agreement; No Termination by Breach. The term of this Easement Agreement shall be coextensive with the Term of the Ground Lease, as such Term may be extended or terminated as provided in the Ground Lease. No breach of this Easement Agreement shall entitle any of the Parties hereunder to cancel, rescind, or otherwise terminate this Easement Agreement, but such limitation shall not affect in any manner any other rights or remedies which a Party may have hereunder by reason of any breach.

5. Character. The Easements granted by this Easement Agreement shall be appurtenant to the Site and non-exclusive and for the use and benefit of the Department and the Board. This Easement Agreement is not intended to grant a fee interest in the Easement Property, nor is it intended to be a lease or a license. The Department acknowledges that the Easements herein granted are non-exclusive easements and that the Participating County and its successors and assigns may grant one or more additional non-exclusive easements in the Easement Property to third parties, so long as the rights granted by such easements do not materially interfere with or hinder the use of the Easements by the Department or the Board or that of their respective lessees, successors or assigns.

6. Covenants Running with the Land; Binding on Successors. Pursuant to California Civil Code section 1468, this Easement Agreement and the Easements are covenants related to the use, repair, maintenance and improvement of the properties benefited and burdened hereby, and, as such, the covenants set forth herein shall be binding upon the Easement Property and shall be binding upon all parties having or in the future acquiring any interest in the Easement Property.

7. Binding Effect. This Easement Agreement shall be binding on and shall inure to the benefit of the lessees, successors and assigns of the Participating County, the Department, and the Board.

8. Recordation of Easement Agreement. This Easement Agreement shall be recorded in the Official Records of _____ County, State of California, and shall serve as notice to all parties succeeding to the interest of the Parties hereto that their use of the Site and the Project and the Easement Property shall be benefited or restricted, or both, in the manner herein described.

9. Entire Agreement; Amendments. This Easement Agreement contains the entire agreement of the Parties hereto relating to the Easements herein granted. Any representations or modifications concerning this Easement Agreement shall be of no force and effect, excepting a subsequent modification in writing, signed by the Department and approved by the Board and the current owner of the Easement Property and recorded in the Official Records of _____ County, State of California.

10. Warranty of Authority. The Participating County represents and warrants as of the Effective Date that (i) it is the legal owner of the Easement Property, (ii) it has full power and authority to place the encumbrance of this Easement Agreement on the Easement Property, (iii) it has not conveyed (or purported to convey) any right, title or interest in or to the Easement

Property, except as has been disclosed in writing to the Department prior to the Effective Date, and (iv) if necessary, it has the written consent of any lenders, tenants and subtenants of the Easement Property to the terms and conditions of this Easement Agreement.

11. Counterparts. This Easement Agreement may be signed in multiple counterparts which, when signed by all Parties, shall constitute a binding agreement.

IN WITNESS WHEREOF, the Parties hereto have caused this Easement Agreement to be executed by their respective officers thereunto duly authorized, all as of the day and year first written above.

FORM OF RIGHT OF ENTRY FOR CONSTRUCTION AND OPERATION

<p>Location of Site</p> <p>_____</p> <p>_____</p>
<p>Agency: Department of Corrections and Rehabilitation of the State of California</p> <p>Real Property: _____</p>

RIGHT OF ENTRY FOR CONSTRUCTION AND OPERATION

This RIGHT OF ENTRY FOR CONSTRUCTION AND OPERATION AGREEMENT (this “License”) is entered into as of _____ 20__, by and between the DEPARTMENT OF CORRECTIONS AND REHABILITATION OF THE STATE OF CALIFORNIA (the “Department”), an entity of state government of the State of California (the “State”), as licensor, and the COUNTY OF _____, (the “Participating County”), a political subdivision of the State of California, as licensee. The Department and the Participating County are sometimes individually referred to as “Party” and collectively as “Parties”.

RECITALS

WHEREAS, pursuant to Chapter 3.12 of Part 10b of Division 3 of Title 2 of the California Government Code (commencing at Section 15820.91), the State Public Works Board (the “Board”) is authorized to finance the acquisition, design and construction of a jail facility approved by the Board of State and Community Corrections (the “BSCC”) pursuant to Section 15820.916 of the California Government Code (the “AB 900 Jail Financing Program”); and

WHEREAS, the Participating County has proposed to build a jail facility, the _____ project (the “Project”), to be located at _____ real property controlled by the Participating County through fee-simple ownership (the “Site”); and

WHEREAS, contemporaneous with entry into this License, Participating County intends to lease the Site to the Department pursuant to a Ground Lease executed by and between the Participating County and the Department and consented to by the Board (the “Ground Lease”); and

WHEREAS, the Department, as lessee under the Ground Lease intends to provide the Participating County access to the Site for the purpose of jail construction-related activities and for operation of the Project upon substantial completion of construction.

WITNESSETH

NOW THEREFORE, FOR AND IN CONSIDERATION of the mutual agreements by the Parties set forth herein and other good and valuable consideration, this License is subject to the following terms and conditions:

1. Grant of License – The Department hereby grants to the Participating County, its employees, consultants, representatives and contractors a non-exclusive, temporary license to enter the Site for site analysis, Project construction-related activities, and for operation of the Project upon substantial completion of construction (“Activities”), all as contemplated by that certain Project Delivery and Construction Agreement by and among the Department, the Board, the BSCC and the Participating County (the “PDCA”). This License is subordinate to all prior or future rights and obligations of the Department and the Board in the Site, except that the Department and the Board shall grant no rights inconsistent with the reasonable exercise by the Participating County of its rights under this License.
2. License Term – This License shall commence on the Effective Date of the Ground Lease and shall terminate on the date of termination of the PDCA (the “Term”).
3. Compliance with Laws – The Participating County shall conduct all Activities in compliance with all Federal, State and municipal statutes and ordinances, and with all regulations, orders and directives of appropriate governmental agencies (“Laws and Regulations”), as such Laws and Regulations exist during the Term of this License.
4. Inspections – The Department, the Board, and their representatives, employees, agents or independent contractors may enter and inspect the Site or any portion thereof or any improvements thereon, and the Project at any time and from time to time at reasonable times to verify the Participating County’s compliance with the terms and conditions of this License.
5. Special Condition – In the performance of the required studies and tests, the Participating County acknowledges that the Participating County will practice all due diligence to protect the Site.
6. Cooperation – In the event the Department or the Board has business on the Site or the Project, the Participating County agrees to coordinate the Activities with the Department or the Board to minimize any impairment of access to the Site or the Project and any inconvenience to or disruption of the Department’s or the Board’s business. Department and Board agree to coordinate their business at the Site or the Project so as to minimize any delay or disruption of the Participating County’s Activities.
7. Indemnity – As required by California Government Code Section 15820.915 the Participating County hereby agrees that it shall indemnify, defend and save harmless the State, including but not limited to the Board, CDCR and BSCC, and each of their respective officers, governing members, directors, officials, employees, subcontractors, consultants, and agents (collectively, “Indemnitees”) for any and all claims and losses arising out of the acquisition, design,

construction, and operation of the Project, including, but not limited to all demands, causes of actions and liabilities of every kind and nature whatsoever arising out of, related to, or in connection with (a) any breach of this License by the Participating County; (b) operation, maintenance, use and occupancy of the Project; (c) any acts or omissions of any contractor hired by the Participating County or its agents or subcontractor hired by such contractor; and (d) personal injury, bodily injury or property damage resulting from the Activities of the Participating County, its employees, consultants, representatives and contractors (collectively, "Claims"). The Participating County's obligation to indemnify, defend and save harmless the Indemnitees shall extend to all Claims arising, occurring, alleged, or made at any time, including prior to, during, or after the period that this License is in full force and effect. The Participating County shall not be obligated to provide indemnity or defense for an Indemnitee where the claim arises out of the active negligence or willful misconduct of the Indemnitee. The indemnification obligations of the Participating County set forth in this Section shall survive any termination of this License.

8. Insurance – The Participating County shall maintain the following insurances: 1) Commercial General Liability with limits of no less than one million dollars (\$1,000,000) per occurrence and Fire Legal Liability of no less than five hundred thousand dollars (\$500,000); 2) Automobile Liability with a combined single limit of no less than one million dollars (\$1,000,000) per accident and 3) Workers Compensation as required by law and Employers Liability with limits of no less than one million dollars (\$1,000,000) per occurrence. The Participating County shall be solely responsible for monitoring and ensuring that the necessary Workers Compensation Insurance is in effect for all persons entering onto the Site.
9. Utilities – The Department makes no guarantee as to the reliability or availability of utility services. The Department shall not supply any utility services to the Site or the Project.
10. Taxes and Assessments – It is expressly understood that this License is not exclusive and does not in any way whatsoever grant or convey any permanent easement, lease, fee or other interest in the Site or the Project to the Participating County. Any such acquisition of use rights shall be separate agreements at the sole discretion of the Department and the Board. Should taxes or assessments be levied upon any interest in this License, the Participating County agrees to pay all lawful taxes, assessments or charges created by this License. It is understood that this License may create a possessory interest subject to property taxation and the Participating County may be subject to the payment of property taxes levied on such interest.
11. Continuing Liability – No termination of this License shall release the Participating County from any liability or obligations hereunder resulting from any acts, omissions or events happening prior to the termination of this License and restoration of the Site to its prior condition.

- 12. Attorneys' Fees – In the event of a dispute between the Parties with respect to the terms or condition of this License, it is agreed that each Party, including the prevailing Party, must bear its own costs and attorneys' fees.
- 13. Assignment, Subletting and Change in Use – The Participating County shall not transfer or assign this License and shall not sublet, license, permit or suffer any use of the Site or the Project or any part thereof.
- 14. Notices –
 - a. All notices or other communications required or permitted hereunder shall be in writing and shall be personally delivered (including by means of professional messenger service), sent by overnight courier, or sent by registered or certified mail, postage prepaid, return receipt requested to the addresses set forth below.
 - b. All such notices or other communications shall be deemed received upon the earlier of 1) if personally delivered or sent by overnight courier, the date of delivery to the address of the person to receive such notices or 2) if mailed as provided above, on the date of receipt or rejection.

- c. Notice of change of address or telephone number shall be given by written notice in the manner described in this Paragraph. The Participating County is obligated to notice all State offices listed above and the failure to provide notice to all State offices will be deemed to constitute a lack of notice.
- 15. Entire Agreement – This License contains all the agreements of the Parties regarding right of entry for construction and supersedes any prior License or

negotiations. There have been no representations by the Department or understandings made between the Department and the Participating County regarding right of entry for construction and operation other than those set forth in this License. This License may not be modified except by a written instrument duly executed by the Parties hereto with the consent of the Board.

- 16. Counterparts – This License may be executed in one or more counterparts, each of which shall be deemed as original but all of which together shall constitute one and the same instrument.

IN WITNESS WHEREOF, the Parties have executed this License by their duly authorized representatives on the date first above written.

FACILITY SUBLEASE

This Sublease (this "Facility Sublease"), dated as of _____ 1, 20__, is made and entered into by and between the DEPARTMENT OF CORRECTIONS AND REHABILITATION OF THE STATE OF CALIFORNIA, as sublessor (the "Department") and the COUNTY OF [COUNTY], as sublessee (the "Participating County").

RECITALS

WHEREAS, pursuant to Chapter 3.11 of Part 10b of Division 3 of Title 2 of the California Government Code (the "Law"), the State Publics Work Board (the "Board") is authorized to finance the acquisition, design and construction of a jail facility approved by the Corrections Standards Authority pursuant to Section 15820.906 of the Government Code of the State (the "AB 900 Jail Financing Program"); and

WHEREAS, the Participating County [has built/is constructing] a jail facility (the "Project") financed pursuant to the AB 900 Jail Financing Program, which is located on _____, real property controlled by the Participating County through fee-simple ownership (the "Site"); and

WHEREAS, the Participating County has leased the Site to the Department pursuant to a Ground Lease Agreement, dated as of _____ 1, 20__ (the "Ground Lease") executed by and between the Participating County and the Department and consented to by the Board; and

WHEREAS, pursuant to the Law, the Board is authorized to issue lease revenue bonds for the Project (the "Bonds"), the Department, as lessor and the Board, as lessee, entered into a site lease dated as of _____ 1, 20__ (the "Site Lease"), providing for the sublease of the Site to the Board, and the Board, as sublessor, and the Department, as sublessee, entered into a facility lease dated as of _____ 1, 20__ (the "Facility Lease"), providing for the leasing of the Site and the Project (the Site, together with the Project, the "Facility"); and

WHEREAS, The Site Lease and the Facility Lease will provide security for the Bonds issued on the date hereof by the Board under an indenture[... as supplemented by the _____ supplemental indenture], (the "Indenture") between the Board and the Treasurer of the State of California, as trustee (the "State Treasurer"); and

WHEREAS, the Department, pursuant to the Law, is authorized to enter into one or more subleases and/or contracts with the Participating County; and

WHEREAS, the Participating County, as sublessee, will be responsible for all the maintenance and operating costs for the Facility; and

WHEREAS, payment of the Bonds will be made through annual state appropriations to the Department, but the costs of operating and maintaining the Facility will be paid by the Participating County; and

WHEREAS, it is the intent of the parties that upon the payment in full of the Bonds, the Site Lease, the Facility Lease and this Facility Sublease will terminate in accordance with their respective terms and fee title to the Project will vest in the Participating County pursuant to the terms and conditions in the Ground Lease.

NOW THEREFORE, the parties hereto mutually agree as follows:

SECTION 1. Definitions. Unless otherwise required by the context, all capitalized terms used herein and not defined herein shall have the meanings assigned such terms in the Facility Lease or the Indenture.

SECTION 2. Sublease of the Facility to the Participating County Subject to Facility Lease. The Participating County hereby leases the Facility from the Department, and the Department hereby leases the Facility to the Participating County, on the terms and conditions hereinafter set forth, subject to all easements, encumbrances and restrictions of record, including without limitation, the terms and conditions of the Site Lease. A legal description of the Site is attached hereto and incorporated herein as Exhibit A. This Facility Sublease is in all respects subordinate and subject to the Facility Lease. Participating County covenants it shall continuously operate and maintain the Facility and shall have no right to abandon the Facility.

SECTION 3. Term. The term of this Facility Sublease shall commence on the [the first day of the month following the commencement of the Facility Lease/on the date of initial issuance and delivery of the Bonds] and shall co-terminate on the same date as the Facility Lease, unless such term is extended by the parties thereto, or unless sooner terminated as provided herein, provided, however, except as set forth in Section 10(b) or (c), no termination of this Facility Sublease shall occur until all the Bonds and all other indebtedness incurred by the Board for the Project, if any, have been fully repaid.

SECTION 4. Consideration and Conflict between Documents. The Department makes this Facility Sublease in consideration for the public benefit to the State provided by the Project and for undertaking of the financial obligations required under this Facility Sublease. This Facility Sublease is subject to the terms of the Ground Lease, Site Lease and Facility Lease and in the event of a conflict between this Facility Sublease and any of the Ground Lease, Site Lease or the Facility Lease, the provisions of the Ground Lease, Site Lease or the Facility Lease, as the case may be, shall control.

SECTION 5. Purpose and Use. The Site shall be used by the Participating County for the purpose of staffing, operating and maintaining the Project and appurtenances related thereto, in order to provide the Project and for such other purposes as may be ancillary and related thereto for state and local criminal justice agencies. The Participating County shall be required to obtain the concurrence from the Department and the Board for the change in use of the Facility, or any part thereof, or expansion of the Facility.

SECTION 6. Obligations of Participating County.

(a) Maintenance, Repair, Replacement and Utilities. The Participating County shall, at its own cost and expense, pay for all maintenance and repair, both ordinary and extraordinary, of the Facility. The Participating County shall at all times maintain, or otherwise arrange for the maintenance of, the Facility in good condition, and the Participating County shall pay for, or otherwise arrange for, the payment of all utility services supplied to the Facility, and shall pay for, or otherwise arrange for, the payment of the costs of the repair and replacement of the Facility resulting from ordinary or extraordinary wear and tear or want of care on the part of the Participating County or any other cause (except for a catastrophic uninsured loss), and shall pay for, or otherwise arrange for, the payment of any insurance policies, except those provided by the Department pursuant to the Facility Lease.

(b) Rent. The Department shall pay all Base Rental and Additional Rental as required under the Facility Lease. The Participating County shall pay upon the order of the Department or the Board as rent hereunder such amounts, if any, in each year as shall be required by the Department or Board for the payment of all applicable taxes and assessments of any type or nature assessed or levied by any governmental agency or entity having power to levy taxes or assessments charged to the Department, the Board or the State Treasurer affecting or relating to the Facility or their respective interests or estates therein. Except for the Base Rental and Additional Rental obligations and insurance obligations as specified in the Facility Lease, the Department shall have no duty under this Facility Sublease to pay for any other costs to maintain and operate the Facility. The rent required under this section 6(b) shall be abated proportionately during any period in which the Department's obligation to pay rent under the Facility Lease shall be abated.

The Participating County shall submit to the Department within 15 Business Days of the adoption of the Participating County's Budget each year, a copy of its approved and authorized budget that details the amounts allocated to maintain and operate the Facility, including any reserves. The Participating County shall further submit to the Department by the above referenced date, a copy of the relevant portion of the approved and authorized budgets of each sublessee with respect to the Facility, if any, evidencing the respective sublessee's allocation of funds to maintain and operate its portion of the Facility. On September 1 of each year during the term of this Facility Sublease, the Department shall submit a report to the Board including a summary of the information provided by the Participating County as set forth in this paragraph. This report shall be in a form approved by the Board and shall incorporate any other summary to be provided by the Department pursuant to the terms of any facility sublease entered into by the Department in connection with facilities constructed pursuant to the Law, as applicable.

SECTION 7. Insurance.

(a) Insurance Obligations of the Department. The Department will pay or cause to be paid the cost of all insurance required to be maintained under the Facility Lease. The Participating County will not be required to pay or reimburse the Department or any other State of California agency for these insurance costs or any deductible paid by the State. The

Department will provide, or cause to be provided, proof of insurance coverage to the Participating County.

In the event of (i) damage or destruction of the Facility caused by the perils covered by the insurance required under the Facility Lease and (ii) if the Board elects, under the terms of the Facility Lease and the Indenture, to redeem the outstanding Bonds, and (iii) if any insurance proceeds remain after the Bonds have been redeemed and such remaining proceeds are not needed under the terms of the Indenture, and (iv) such funds are distributed to the Department, then the Department agrees to distribute such funds to the Participating County.

The Department will not insure the Participating County's equipment, stored goods, other personal property, fixtures, or tenant improvements, nor such personal property owned by Participating County's, subtenants or assigns, if any, or invitees. The Department shall not be required to repair any injury or damage to any personal property or trade fixtures installed in the Facility by the Participating County caused by fire or other casualty, or to replace any such personal property or trade fixtures. The Participating County may, at its sole option and expense, obtain physical damage insurance covering their equipment, stored goods, other personal property, fixtures or tenant improvement or obtain business interruption insurance.

The Participating County and its boards, officers, agents and employees shall be named as additional insureds on the above insurance. To the extent permitted by law, the Department and the Participating County agree to release the other and waive their rights of recovery against the other for damage to the Facility or their respective property at the Facility arising from perils insured under any commercial property insurance listed in this Facility Sublease or the Facility Lease. The property insurance policies of the Department and the Participating County shall contain a waiver of subrogation endorsement in favor of the other.

(b) Insurance Obligations of the Participating County. The Participating County, at its own cost and expense, shall secure and maintain or cause to be secured and maintained from an insurance company or companies approved to do business in the State of California and maintain during the entire term of this Facility Sublease, the following insurance coverage for the Facility:

(1) General liability insurance in an amount not less than one million Dollars (\$1,000,000) per occurrence. Evidence of such insurance shall be on a General Liability Special Endorsement form and should provide coverage for premises and operations, contractual, personal injury and fire legal liability;

(2) By signing this Facility Sublease, the Participating County hereby certifies that it is aware of the provisions of Section 3700, *et seq.*, of the California Labor Code which require every employer to be insured against liability for Workers' Compensation or to undertake self-insurance in accordance with the provisions of that Code, and that it will comply, and it will cause its subtenants and assignees to comply, with such provisions at all such times as they may apply during the term of this Facility Sublease.

(c) Additional Insureds. The Participating County agrees that the Department and the Board and their officers, agents and employees shall be included as additional insured in all insurance required herein.

(d) Insurance Certificate. The Participating County shall submit or cause to be submitted to the Department, by no later than June 30th of each year, a certificate of insurance or other evidence of insurance in a form satisfactory to the Department.

(e) Self-Insurance. Notwithstanding any other provision of this Section, the Participating County may satisfy the insurance obligations hereunder by a combination of commercial insurance, formal risk pooling under California statutory provisions, and/or a self-funded loss reserve in whatever proportions are deemed appropriate by the Participating County. The Participating County shall furnish the Department and the Board with a certificate or other written evidence of the Participating County's election to provide or cause to be provided all or part of its coverage under a risk pooling, risk retention, or self-insurance program or any combination thereof.

SECTION 8. Assignment or Subletting of Facility.

(a) The Participating County and the Department hereby covenant and agree that neither this Facility Sublease nor any interest of either party in this Facility Sublease shall be sold, mortgaged, pledged, assigned, or transferred by either party by voluntary act or by operation of law or otherwise; provided, however, under certain circumstances, the Facility may be subleased in whole or in part by the Participating County. The Participating County shall not sublet or assign any portion of the Facility, or permit its subtenants to sublet or assign portions of the Facility, without obtaining the prior written consent and approval of the Department and the Board to the form and substance of such sublease, the sublessee and, provided further that, any such sublease shall be subject to the following conditions:

(1) Any sublease of the Facility by the Participating County shall explicitly provide that such sublease is subject to all rights of the Department and the Board under the Facility Sublease, including, the right to re-enter and re-let the Facility or terminate such lease upon a default by the Participating County; and

(2) At the request of the Department or the Board, the Participating County shall furnish the Department, the Board and the State Treasurer with an opinion of nationally recognized bond counsel acceptable to the Board to the effect that such sublease will not, in and of itself, cause the interest on the Bonds to be included in gross income for federal income tax purposes.

(b) The Participating County acknowledges that if the Department breaches the terms of the Facility Lease a remedy for such breach available to the Board under the Facility Lease is to enter and re-let the Facility to an entity other than the Department. If the Board, at its discretion, chooses to exercise this remedy, the Board agrees its first offer to relet the Facility, the terms of such offer to be at the sole reasonable discretion of the Board, shall be made to the Participating County.

- (c) This CDCR Facility Sublease shall not be subordinated.

SECTION 9. Hazardous Materials. The Participating County shall fully disclose in writing to the Department and the Board the existence, extent and nature of any Hazardous Materials, substances, wastes or other environmentally regulated substances, of which the Participating County has actual knowledge relative to the Project. The Participating County further warrants, covenants and represents that it will promptly notify the Department and the Board in writing of any change in the nature or extent of any Hazardous Materials, substances or wastes maintained on, in, around or under the Project or used in connection therewith, of which the Participating County gains actual knowledge, and will transmit to the Agencies and the Trustee copies of any citations, orders, notices or other material governmental or other communication received by the Participating County with respect to any other Hazardous Materials, substances, wastes or other environmentally regulated substances affecting the Project. The Participating County shall ensure (as to itself), and shall use its best efforts to ensure (as to its contractors, consultants and other agents), that all activities of the Participating County or any officers, employees, contractors, consultants, or any other agents of the Participating County performed at the Facility will be in full compliance with all federal, state and local environmental laws, regulations, and ordinances, and further agrees that neither the Participating County nor its contractors, consultants, agents, officers or employees will engage in any management of solid or hazardous wastes at the Project in violation of any Environmental Law. If the presence of Hazardous Materials on the Project results in the contamination or deterioration of the Project or any water or soil beneath the Project, the Participating County shall promptly take all action necessary to investigate and remedy that contamination.

The Participating County shall defend, indemnify and hold the Department and the Board harmless from and against any and all damages, penalties, fines, claims, liens, suits, liabilities, costs (including clean up costs), judgments and expenses (including attorneys', consultants', or experts' fees and expenses of every kind and nature) suffered by or asserted against the Department or the Board as a direct or indirect result of any warranty or representation made by the Participating County in the preceding paragraph being false or untrue in any material respect or the breach of any obligation of the Participating County in the preceding paragraph. The indemnification obligations set forth in this paragraph shall survive any termination of this Facility Sublease.

"Hazardous Materials" means any substance, material, or waste which is or becomes, prior to the date of execution and delivery hereof, regulated by any local governmental authority, the State of California, or the United States Government, including, but not limited to, any material or substance which is (i) defined as a "hazardous substance", "hazardous material", "toxic substance", "solid waste", "pollutant or contaminant", "hazardous waste", "extremely hazardous waste", or "restricted hazardous waste" under the Comprehensive Environmental Response, Compensation and Liability Act of 1980 ("CERCLA") [42 U.S.C.A §§ 9601 et seq.]; the Resource Conservation and Recovery Act of 1976 ("RCRA") [42 U.S.C.A §§ 6901 et seq.]; the Clean Water Act, also known as the Federal Water Pollution Control Act ("FWPCA") [33 U.S.C.A §§ 1251 et seq.]; the Toxic Substances Control Act ("TSCA") [15 U.S.C.A §§ 2601 et seq.]; the Federal Insecticide, Fungicide, Rodenticide Act [7 U.S.C.A §§ 136 et seq.]; the Superfund Amendments and Reauthorization Act [42 U.S.C.A §§ 9601 et seq.]; the Clean Air

Act [42 U.S.C.A §§ 7401 et seq.]; the Safe Drinking Water Act [42 U.S.C.A §§ 300f et seq.]; the Solid Waste Disposal Act [42 U.S.C.A §§ 6901 et seq.]; the Surface Mining Control and Reclamation Act [30 U.S.C.A §§ 1201 et seq.]; the Emergency Planning and Community Right-to-Know Act [42 U.S.C.A §§ 11001 et seq.]; the Occupational Safety and Health Act [29 U.S.C.A §§ 655 and 657]; the California Underground Storage of Hazardous Substances Act [Health & Saf. Code §§ 25280 et seq.]; the California Hazardous Substances Account Act [Health & Saf. Code §§ 25300 et seq.]; the California Hazardous Waste Control Act [Health & Saf. Code §§ 25100 et seq.]; the California Safe Drinking Water and Toxic Enforcement Act [Health & Saf. Code §§ 25249.5 et seq.]; the Porter-Cologne Water Quality Act [Wat. Code §§ 13000 et seq.], including without limitation, Sections 25115, 25117 or 25122.7 of the California Health and Safety Code, or listed pursuant to Section 25140 of the California Health and Safety Code, Division 20, Chapter 6.5 (Hazardous Waste Control Law), (ii) defined as "hazardous substance" under Section 25316 of the California Health and Safety Code, Division 20, Chapter 6.8 (Carpenter-Presley-Talmer Hazardous Substance Account Act), (iii) defined as a "hazardous material", "hazardous substance", or "hazardous waste" under Section 25501 of the California Health and Safety Code.

“Environmental Laws” means any federal, state or local law, statute, code, ordinance, regulation, requirement or rule relating to Hazardous Materials to which the Participating County or the Facility is subject, including all those laws referenced above in the definition of Hazardous Materials.

SECTION 10. Termination, Breach, Default and Damages.

(a) This Facility Sublease shall terminate upon the occurrence of the expiration of the lease term as set forth in Section 3.

(b) If the Participating County shall fail to keep, observe or perform any term, covenant or condition contained herein to be kept or performed by the Participating County for a period of sixty (60) days after notice of the same has been given to the Participating County by the Department or the Board or for such additional time as is reasonably required, in the sole discretion of the Department, with the consent of the Board, to correct any of the same, the Participating County shall be deemed to be in default hereunder and it shall be lawful for the Department to exercise any and all remedies available pursuant to law or granted pursuant to this Facility Sublease. Upon any such default, the Department, in addition to all other rights and remedies it may have at law, shall, with the consent of the Board, have the option to do any of the following:

(1) To terminate this Facility Sublease in the manner hereinafter provided on account of default by the Participating County, notwithstanding any re-entry or re-letting of the Facility as hereinafter provided for in subparagraph (2) hereof, and to re-enter the Facility and remove all persons in possession thereof and all personal property whatsoever situated upon the Facility and place such personal property in storage in any warehouse or other suitable place. In the event of such termination, the Participating County agrees to immediately surrender possession of the Facility, without let or hindrance, and to pay the Department and the Board all damages recoverable at law that the

Department may incur by reason of default by the Participating County, including, without limitation, any costs, loss or damage whatsoever arising out of, in connection with, or incident to any such re-entry upon the Facility and removal and storage of such property by the Department or its duly authorized agents in accordance with the provisions herein contained. Neither notice to deliver up possession of the Facility given pursuant to law nor any entry or re-entry by the Department nor any proceeding in unlawful detainer, or otherwise, brought by the Department for the purpose of effecting such re-entry or obtaining possession of the Facility, nor the appointment of a receiver upon initiative of the Department to protect the Board's interest under the Facility Lease shall of itself operate to terminate this Facility Sublease, and no termination of this Facility Sublease on account of default by the Participating County shall be or become effective by operation of law or acts of the parties hereto, or otherwise, unless and until the Department shall have given written notice to the Participating County of the election on the part of the Department to terminate this Facility Sublease. The Participating County covenants and agrees that no surrender of the Facility or of the remainder of the term hereof or any termination of this Facility Sublease shall be valid in any manner or for any purpose whatsoever unless stated or accepted by the Department by such written notice.

(2) Without terminating this lease, (i) to enforce any term or provision to be kept or performed by the Participating County or (ii) to exercise any and all rights of entry and re-entry upon the Facility. In the event the Department does not elect to terminate this Facility Sublease in the manner provided for in subparagraph (1) hereof, the Participating County shall remain liable and agrees to keep or perform all covenants and conditions herein contained to be kept or performed by the Participating County, and notwithstanding any entry or re-entry by the Department or suit in unlawful detainer, or otherwise, brought by the Department for the purpose of effecting a re-entry or obtaining possession of the Facility. Should the Department elect to re-enter as herein provided, the Participating County hereby irrevocably appoints the Department as the agent and attorney-in-fact of the Participating County to re-let the Facility, or any part thereof, from time to time, either in the Department's name or otherwise, upon such terms and conditions and for such use and period as the Department may deem advisable and to remove all persons in possession thereof and all personal property whatsoever situated upon the Facility and to place such personal property in storage in any warehouse or other suitable place, for the account of and at the expense of the Participating County, and the Participating County hereby exempts and agrees to save harmless the Department from any costs, loss or damage whatsoever arising out of, in connection with, or incident to any such re-entry upon and re-letting of the Facility and removal and storage of such property by the Department or its duly authorized agents in accordance with the provisions herein contained except for any such costs, loss or damage resulting from the intentional or negligent actions of the Department or its agents. The Participating County agrees that the terms of this Facility Sublease constitute full and sufficient notice of the right of the Department to re-let the Facility in the

event of such re-entry without effecting a surrender of this Facility Sublease. The Participating County further agrees that no acts of the Department in effecting such re-letting shall constitute a surrender or termination of this Facility Sublease irrespective of the use or the term for which such re-letting is made or the terms and conditions of such re-letting, or otherwise, but that, on the contrary, in the event of such default by the Participating County the right to terminate this Facility Sublease shall vest in the Department to be effected in the sole and exclusive manner provided for in subparagraph (1) hereof. The Participating County further agrees to pay the Department the cost of any alterations or additions to the Facility necessary to place the Facility in condition for re-letting immediately upon notice to the Participating County of the completion and installation of such additions or alterations.

(c) This Facility Sublease may be terminated at the option of the Board if the Board determines to exercise its right to enter and re-let the Facility under the Facility Lease pursuant to a default by the Department thereunder.

(d) In addition to any default resulting from breach by the Participating County of any term or covenant of this Facility Sublease, if (1) the Participating County's interest in this Facility Sublease or any part thereof be assigned, sublet or transferred without the prior written consent to the Department and the Board, either voluntarily or by operation of law, or (2) the Participating County or any assignee shall file any petition or institute any proceedings under any act or acts, state or federal, dealing with or relating to the subject of bankruptcy or insolvency or under any amendment of such act or acts, either as a bankrupt or as an insolvent or as a debtor or in any similar capacity, wherein or whereby the Participating County asks or seeks or prays to be adjudicated as bankrupt, or is to be discharged from any or all of the Participating County's debts or obligations, or offers to the Participating County's creditors to effect a composition or extension of time to pay the Participating County's debts, or asks, seeks or prays for a reorganization or to effect a plan of reorganization or for a readjustment of the Participating County's debts or for any other similar relief, or if any such petition or if any such proceedings of the same or similar kind or character be filed or be instituted or taken against the Participating County, or if a receiver of the business or of the property or assets of the Participating County shall be appointed by any court, except a receiver appointed at the insistence or request of the Department or the Board, or if the Participating County shall make a general or any assignment for the benefit of the Participating County's creditors, or (3) the Participating County shall abandon the Facility, then the Participating County shall be deemed to be in default hereunder.

(e) The Department shall in no event be in default in the performance of any of its obligations hereunder unless and until the Department shall have failed to perform such obligations within sixty (60) days or such additional time as is reasonably required to correct any such default after notice by the Participating County to the Department that the Department has failed to perform any such obligation.

(f) The Participating County hereby waives any and all claims for damages caused or which may be caused by the Department in re-entering and taking possession of the Facility as herein provided and all claims for damages that may result from the destruction of or

injury to the Facility and all claims for damages to or loss of any property belonging to the Department, or any other person, that may be in or upon the Facility, except for such claims resulting from the intentional or negligent actions of the Department or its agents.

Each and all of the remedies given to the Department hereunder or by any law now or hereafter enacted are cumulative and the single or partial exercise of any right, power or privilege hereunder shall not impair the right of the Department to other or further exercise thereof or the exercise of any or all other rights, powers or privileges. The term “re-let” or “re-letting” as used in this Section shall include, but not be limited to, re-letting by means of the operation or other utilization by the Department of the Facility. If any statute or rule of law validly shall limit the remedies given to the Department hereunder, the Department nevertheless shall be entitled to whatever remedies are allowable under any statute or rule of law.

In the event the Department shall prevail in any action brought to enforce any of the terms and provisions of this Facility Sublease, the Participating County agrees to pay reasonable attorney’s fees incurred by the Department in attempting to enforce any of the remedies available to the Department hereunder; whether or not a lawsuit has been filed and whether or not any lawsuit culminates in a judgment.

SECTION 11. Additions, Betterments, Extensions or Improvements; Liens. If any proposed additions, betterments, extensions or improvements of the Facility require approval by the Corrections Standards Authority, the Participating County shall concurrently with the request for such approval(s) request the approval to such additions, betterments, extensions or improvements of the Board. The Participating County acknowledges the commencement of such additions, betterments, extensions or improvements shall be subject to receipt by the Participating County of the Board’s approval thereto. In the event the Participating County shall at any time during the term of this Facility Sublease cause any additions, betterments, extensions or improvements to the Facility to be acquired or constructed or materials to be supplied in or upon the Facility, the Participating County shall pay or cause to be paid when due all sums of money that may become due, or purporting to be due for any labor, services, materials, supplies or equipment furnished or alleged to have been furnished to or for the Participating County in, upon or about the Facility and shall keep the Facility free of any and all mechanics’ or materialmen’s liens or other liens against the Facility or the Department’s or the Board’s interest therein. In the event any such lien attaches to or is filed against the Facility or the Department’s or the Board’s interest therein, the Participating County shall cause each such lien to be fully discharged and released at the time the performance of any obligation secured by any such lien matures or becomes due, except that if the Participating County desires to contest any such lien it may do so. If any such lien shall be reduced to final judgment and such judgment or such process as may be issued for the enforcement thereof is not promptly stayed, or if so stayed and said stay thereafter expires, the Participating County shall forthwith pay or cause to be paid and discharged such judgment. In accordance with Section 20, the Participating County agrees to and shall, to the maximum extent permitted by law, defend, indemnify and hold the Department, the Board, the State Treasurer and their members, directors, agents, successors and assigns harmless from and against and defend each of them against any claim, demand, loss, damage, liability or expense (including attorneys’ fees) as a result of any such lien or claim of lien against the Facility or the Department’s or the Board’s interest therein. The Participating County hereby

acknowledges and agrees that it shall not cause any additions, betterments, extensions or improvements to the Facility to occur in such a manner that Rental under the Facility Lease would be abated.

The Department covenants that the Project is not and will not be mortgaged, pledged, or hypothecated by the Department in any manner or for any purpose and that the Project has not been and will not be the subject of a security interest by the Department. In addition, the Department covenants that the Project is not and will not be mortgaged, pledged, or hypothecated for the benefit of the Participating County or its creditors in any manner or for any purpose and that the Project has not been and will not be the subject of a grant of a security interest in favor of the Participating County or its creditors. The Department shall not in any manner impair, impede, or challenge the security, rights and benefits of the owners of the Bonds or the trustee for the Bonds.

SECTION 12. Continuing Disclosure. The Participating County hereby covenants and agrees that it will fully cooperate with the Department, the Board and the State Treasurer so that they can comply with and carry out all of the provisions of the Continuing Disclosure Agreement and will provide all information reasonably requested by the Department, the Board or the State Treasurer regarding the Facility, in connection with continuing disclosure obligations.

SECTION 13. Status of Private Activity Use of the Facility. The Participating County hereby covenants and agrees to provide information to the Department, the Board and the State Treasurer annually regarding the private activity use, if any, of the Facility. Any such private use must be consistent with the Participating County's covenants pursuant to Section 14 hereof. The information that must be updated annually is set forth in the Tax Certificate that was executed and delivered by the Board upon the initial issuance of the Bonds.

SECTION 14. Tax Covenants. The Participating County covenants that it will not use or permit any use of the Facility, and shall not take or permit to be taken any other action or actions, which would cause any Bond to be a "private activity bond" within the meaning of Section 141 of the Internal Revenue Code of 1986, as amended; and any applicable regulations promulgated from time to time thereunder. The Participating County further covenants that it will not take any action or fail to take any action, if such action or the failure to take such action would adversely affect the exclusion from gross income for federal income tax purposes of interest on the Bonds.

The Participating County does not expect to and shall not perform any act, enter into any agreement, or use or permit more than 10% of the Bond proceeds or the Project to be used in any trade or business unrelated to the exempt purposes of the Participating County (as defined in Section 513(a) of the Code), or enter into any contract or arrangement with any person or organization (other than a state or local governmental unit, or a 501(c)(3) organization acting within the scope of its exempt purposes), including the federal government (a "Disqualified Person"), which provides for use of more than 10% of the Project in any trade or business of such Disqualified Person ("Private Use"), including a lease or sale of any part of the Project excluding general public use and other uses disregarded under Treasury Regulation §1.141-3, unless the Participating County provides prior written notice to the Board of the proposed act,

agreement or use and the Participating County and the Issuer receive an opinion of nationally recognized bond counsel acceptable to the Board with respect to such act, agreement or use.

The Participating County will not enter into any arrangement with any Disqualified Person which provides for such person to manage, operate, or provide services with respect to the Project (or any portion thereof) (a "Service Contract"), unless the guidelines set forth in Revenue Procedure 97-13, as modified by Revenue Procedure 2001-39 (the "Guidelines"), are satisfied, except to the extent the Participating County obtains a private letter ruling from the Internal Revenue Service or an opinion of nationally recognized bond counsel acceptable to the Board which allows for a variation from the Guidelines.

The Participating County will not enter into any contract or arrangement with any Disqualified Person which provides for use of the Project (or any portion thereof) for "research," within the meaning of Treasury Regulations Section 1.141-3(b)(6), for the benefit of such Disqualified Person unless such contract or arrangement meets the requirements of Rev. Proc. 2007-47. For this purpose, "research" includes activities that represent research in the experimental or laboratory sense. The term generally includes all activities incident to the development or improvement of a product, including obtaining a patent. "Research" for this purpose does not include management studies. However, contracts or arrangements with a Disqualified Person for management studies may result in private trade or business use if the Disqualified Person has possessory or priority rights in specific portions of the Project.

SECTION 15. No Merger. The parties hereto intend that there shall be no merger of any estate or interest created by this Facility Lease with any other estate or interest in the Facility, or any part thereof, by reason of the fact that the same party may acquire or hold all or any part of the estate or interest in the Facility created by this Facility Lease as well as another estate or interest in the Facility.

SECTION 16. Waste. The Participating County shall not commit, suffer, or permit any waste or nuisance on or within the Facility or any acts to be done thereon in violation of any laws or ordinances.

SECTION 17. Amendments. This Facility Sublease may not be amended, changed, modified or altered without the prior written consent of the parties hereto and the Board.

SECTION 18. Waiver.

The waiver by the Department, any such waiver subject to the consent thereto of the Board, of any breach by the Participating County of any agreement, covenant or condition hereof shall not operate as a waiver of any subsequent breach of the same or any other agreement, covenant or condition hereof.

The waiver by the Participating County, any such waiver subject to the consent thereto of the Board, of any breach by the Department of any agreement, covenant or condition hereof shall not operate as a waiver of any subsequent breach of the same or any other agreement, covenant or condition hereof.

SECTION 19. Non-Liability of the Department and other State Entities. Any obligation of the Department created by or arising out of this Facility Sublease shall not impose a debt or pecuniary liability upon the Department, the Board or the State of California, or a charge upon the general credit or taxing powers thereof, but shall be payable solely out of funds duly authorized and appropriated by the State.

The delivery of this Facility Sublease shall not, directly or indirectly or contingently, obligate the Board, the Department, the State Treasurer or the State of California to levy any form of taxation therefor or to make any appropriation. Nothing herein or in the proceedings of the Participating County, the Board or the Department shall be construed to authorize the creation of a debt of the Board, the Department, the State Treasurer or the State of California, within the meaning of any constitutional or statutory provision of the State of California. No breach of any pledge, obligation or agreement made or incurred in connection herewith may impose any pecuniary liability upon, or any charge upon the general credit of the Board, the Department or the State of California.

SECTION 20. Indemnification.

As required by California Government Code Section 15820.905, the Participating County agrees to indemnify, defend, and hold harmless the State of California, including but not limited to the Department and the Board and their officers, agents and employees, for any and all claims and losses accruing and resulting from or arising out of the Participating County's use and occupancy of the Facility. The Participating County's obligation to indemnify, defend and hold harmless under this Section shall extend to all such claims and losses arising, occurring, alleged, or made at any time, including prior to, during, or after the period that this Facility Sublease is in full force and effect. Notwithstanding the preceding sentence, the Participating County will not be required to indemnify, defend or hold harmless the Department, the Board, or any other State agency, or their respective officers, agents, employees, contractors and/or invitees from any claim which arises, in whole or in part, from the gross negligence or willful misconduct or omission of the Department, the Board, or any other State agency, or their respective officers, agents, employees, contractors and/or invitees. The indemnification obligations of the Participating County set forth in this Section shall survive any termination of this Facility Sublease.

SECTION 21. Law Governing. This Facility Sublease shall be governed exclusively by the provisions hereof and by the laws of the State of California as the same from time to time exist. Any action or proceeding to enforce or interpret any provision of this lease shall, to the extent permitted by law, be brought, commenced or prosecuted in the courts of the State located in the County of Sacramento, California.

SECTION 22. Headings. All section headings contained in this Facility Sublease are for convenience of reference only and are not intended to define or limit the scope of any provision of this Facility Sublease.

SECTION 23. Notices. All approvals, authorizations, consents, demands, designations, notices, offers, requests, statements or other communications hereunder by either party to the other shall be in writing and shall be sufficiently given and served upon the other party if delivered personally or if mailed by United States registered or certified mail, return receipt requested, postage prepaid, and addressed as follows:

Attention: _____

The address to which notices shall be mailed as aforesaid to any party may be changed by written notice given by such party to the others as hereinabove provided.

SECTION 24. Successors and Assigns. The terms and provisions hereof shall extend to and be binding upon and inure to the benefit of the successors and assigns of the respective parties hereto.

SECTION 25. Validity and Severability. If for any reason this Facility Sublease or any part thereof shall be held by a court of competent jurisdiction to be void, voidable, or unenforceable by the Department or by the Participating County, all of the remaining terms of this Facility Sublease shall nonetheless continue in full force and effect. If for any reason it is held by such a court that any of the covenants and conditions of the Participating County hereunder, including the covenant to pay rentals hereunder, is unenforceable for the full term hereof, then and in such event this Facility Sublease is and shall be deemed to be a lease from year to year under which the rentals are to be paid by the Participating County annually in consideration of the right of the Participating County to possess, occupy and use the Facility, and all the other terms, provisions and conditions of this Facility Sublease, except to the extent that such terms, provisions and conditions are contrary to or inconsistent with such holding, shall remain in full force and effect, to the extent permitted by law.

SECTION 26. Execution. This Facility Sublease may be executed in any number of counterparts, each of which shall be deemed to be an original, but all of which together shall constitute one and the same Facility Sublease. It is also agreed that separate counterparts of this Facility Sublease may separately be executed by the Department, the Participating County and any other signatory hereto, all with the same force and effect as though the same counterpart had been executed by the Department, the Participating County and such other signatory.

SECTION 27. Multiple Originals. This Facility Sublease may be executed in any number of originals, each of which shall be deemed to be an original.

SECTION 28. Net Lease. This Facility Sublease shall be deemed and construed to be a “net lease” and the Participating County hereby agrees that the rentals provided for herein shall be an absolute net return to the Department, free and clear of any expenses, charges or set-offs whatsoever.

IN WITNESS WHEREOF, this Facility Sublease has been executed by the parties hereto as of the ____ day of _____, 20__.

- F Supplemental Phase II ESA Soil Sampling Report

SECTION 1.0 INTRODUCTION

Pursuant to the California Environmental Quality Act (CEQA), the potential environmental effects of the proposed Mira Loma Women's Detention Center Project (hereinafter referred to as the "Project") have been analyzed in a Draft Environmental Impact Report (Draft EIR) (SCH No. 2014091012) dated November 2015. This document contains the Final Environmental Impact Report (FEIR) for the Lead Agency – the County of Los Angeles (County):

Section 15132 of the State CEQA Guidelines lists the contents of the Final EIR:

- (a) The Draft EIR or a revision of the Draft EIR
- (b) Comments and recommendations received on the Draft EIR either verbatim or in summary.
- (c) A list of persons, organizations, and public agencies commenting on the Draft EIR.
- (d) The County's responses to significant environmental points raised in the review and consultation process.
- (e) Any other information added by the County as Lead Agency.

The purpose of the Final EIR is to respond to all comments received by the County regarding the environmental information and analyses contained in the Draft EIR. Additionally, any clarifications/corrections to the text, tables, figures, and appendices of the Draft EIR generated either from responses to comments or independently by the County are stated in the Final EIR in Section 4.0. The Draft EIR text has not been modified to reflect these clarifications.

The Responses to Comments (Section 2.0 in this Final EIR) and related appendices include copies of all letters received during and after the close of the Draft EIR public review period, as described further below, as well as the responses to all comments received.

Section 15097 of the State CEQA Guidelines states that the lead agency shall adopt a program for monitoring or reporting on the revisions that it has required for the project and the measures it has imposed to mitigate or avoid significant environmental effects. Section 3.0, Mitigation Monitoring and Reporting Program (MMRP), describes the mitigation program to be implemented by the County for the proposed Mira Loma Women's Detention Center Project.

1.1 THE CALIFORNIA ENVIRONMENTAL QUALITY ACT AND PUBLIC REVIEW OF THE DRAFT ENVIRONMENTAL IMPACT REPORT

Upon completion of the Draft EIR, notice of the public review period was given in accordance with Section 15087 of the State CEQA Guidelines. In November 2015, a *Notice of Availability (NOA) of the Draft Environmental Impact Report and Notice of Public Meeting* was prepared and distributed to the State Office of Planning and Research, Los Angeles County Clerk, responsible and trustee agencies, organizations, interested parties, and all parties who requested a copy of the EIR in accordance with CEQA. The County decided to provide a voluntary extension beyond the CEQA-mandated 45-day public review period to account for the holiday season and to provide ample opportunity and time for the public to review the Draft EIR. Thus, comments on the Draft EIR were accepted during a 64-day public review period extending from Monday, November 9, 2015 through Tuesday, January 12, 2016.

The NOA was distributed to the mailing list and email list prepared for the Notice of Preparation (NOP) for the scoping stage of the proposed Project before issuance of the Draft EIR, and was

augmented to include property owners within a 300-foot radius of the Project site, individuals requested to be added to the list, as well as individuals who had provided comments on the NOP. The NOA and Draft EIR were posted on the County's website for viewing and downloading at <ftp://dpwftp.co.la.ca.us/pub/PMD/MiraLomaWomenFacility>. Newspaper advertisements of the NOA and Draft EIR comment period and the information on a public meeting were placed in the following papers and ran on Monday, November 9, 2015:

- *Acton-Aqua Dolce News*: a weekly publication so the ad was available for 7 days.
- *Los Angeles Daily News*: a daily publication
- *Antelope Valley Press*: a daily publication
- *Antelope Valley Times*: an online publication

Hardcopies of the Draft EIR were available for public viewing at the following locations:

Quartz Hill Library
42018 North 50th Street
West
Quartz Hill, California 93536

Lancaster Library
601 West Lancaster
Boulevard
Lancaster, California 93534

Public Information Office
358 Kenneth Hahn Hall of
Administration
500 West Temple Street
Los Angeles, California 90012

The first of two public meetings was held to provide an overview of the Project and the conclusions of the Draft EIR and information on the comment process and to invite submission of public comments on the Draft EIR on Tuesday, December 8, 2015, from 6:00 PM to 8:00 PM at the James C. Gilley Lancaster National Soccer Center Eastside Activity Center, which is located at 43000 30th Street East in Lancaster, CA 93535. There were approximately 15 attendees at the first public meeting, and some submitted written comments. The notice for this meeting stated that attendance at this public meeting was voluntary and not required in order to submit comments on the Draft EIR.

Subsequently, in January 2016, in response to requests from the public to provide an additional extension of the public review period and an additional public meeting, a *Notice of Extended Comment Period for the Draft Environmental Impact Report for the Mira Loma Women's Detention Center Project and Notice of Second Public Meeting in Lancaster, California* (Notice) was sent to the 2015 NOA mailing list and email list, as well as additional mailing list contacts that had provided comment letters during the Draft EIR public review period up to the time of the mailing. This Notice extended the Draft EIR public review period from Monday, February 1, 2016, through Wednesday, March 2, 2016. This 30-day extension was in addition to the original 64-day Draft EIR public review period. All written comments received on the Draft EIR from Monday, November 9, 2015, through Wednesday, March 2, 2016, are responded to in this document.

The Notice extending the public review period was provided in both English and Spanish as requested by some members of the public. Additionally, the Executive Summary of the Draft EIR was translated into Spanish and posted on the County's website for viewing and downloading. Hardcopies of the Spanish-translated Executive Summary were made available, in addition to the Draft EIR, at the Quartz Hill and Lancaster Libraries, and the Los Angeles County Public Information Office. Newspaper advertisements of the extended comment period and second public meeting were placed in the following papers and ran on Monday, February 1, 2016:

- *Acton-Aqua Dolce News*: a weekly publication (the ad was available for 7 days)
- *Los Angeles Daily News*: a daily publication

- *La Opinion*: a daily publication (the ad was in both English and Spanish)
- *Antelope Valley Press*: a daily publication
- *Antelope Valley Times*: an online publication

The second public meeting was held on Tuesday, February 9, 2016, at the Lancaster Public Library at 601 West Lancaster Boulevard in Lancaster, CA 93534 to provide an overview of the Project, the conclusions of the Draft EIR, and information on the comment process, and to invite submission of public comments on the Draft EIR. Real-time Spanish translation services were made available, as also requested by members of the public, as were copies of the Notice and the Executive Summary in both English and Spanish. This second public meeting had two attendees from the public and neither requested available translation services.

In summary, the County conducted all required noticing and scoping for the proposed Project in accordance with Section 15083 of the State CEQA Guidelines, and conducted the public review for the Draft EIR in compliance with Section 15087 of the State CEQA Guidelines. The two public meetings, as well as the extension of the public review period until March 2, 2016, exceeded the requirements of CEQA.

During the comment period, written comments on the Draft EIR were received by the County of Los Angeles Chief Executive Office. The County has reviewed all comments and has determined that no substantial new environmental issues have been raised and that all issues raised in the comments have been adequately addressed in the Draft EIR and/or in the Responses to Comments, Mitigation Monitoring and Reporting Program, and Clarifications to the Draft EIR. All potential impacts associated with the proposed Project were found to be less than significant with incorporation of relevant mitigation measures, where applicable. Therefore, the EIR concludes that the proposed Project would not result in any significant impacts.

The Final EIR for the proposed Project, dated September 2016, consists of the following documents:

- Draft EIR and Technical Appendices dated November 2015
- Responses to Comments, Mitigation Monitoring and Reporting Program and Revisions, Clarifications, and Corrections to the Draft EIR, which includes:
 - A list of all persons, organizations, and public agencies that commented as well as the verbatim comments received on the Draft EIR;
 - Responses to written comments on the Draft EIR; and
 - Other information beyond the scope of CEQA provided by the County for context and information to the decision makers, agencies and the public

This document includes all public comment letters; the County's responses to comments; and the State Clearinghouse letter that documents compliance with CEQA review requirements.

Next Procedural Steps

The County Board of Supervisors is required to consider and certify a Final EIR only if it exercises its discretion to approve the proposed Project in the future. The Final EIR, and related documents will be filed with the County staff's Project recommendations for Board of Supervisors consideration on a future Board of Supervisors agenda. Consideration of recommendations relating to the proposed Project will be publically noticed as required by state law.

Members of the public can view searchable agendas for scheduled Board of Supervisors meetings and access agenda-related County information and services directly on the following website: <http://bos.lacounty.gov/Board-Meeting/Board-Agendas>. This site has an email notification service enrollment process for copies of future Board of Supervisors agendas.

The Final EIR document will be posted for viewing and download with the previously posted Draft EIR prior to the County's consideration of the Final EIR and Project recommendations on the same website noted above for the posting of the Draft EIR: <ftp://dpwftp.co.la.ca.us/pub/PMD/MiraLomaWomenFacility>. Hard copies were provided for public viewing at the same locations used for the distribution of the Draft EIR.

1.2 PROJECT DESCRIPTION

1.2.1 PROJECT LOCATION AND SETTING

The Project site is located in northern Los Angeles County in the Antelope Valley in the City of Lancaster, which is approximately 70 miles north of downtown Los Angeles and immediately north of the City of Palmdale. The Project site is located at 45100 60th Street West, on the southeast corner of West Avenue I and 60th Street West. The Project will occupy a 46-acre portion of the existing Mira Loma Detention Center (MLDC) property and facilities, which is currently not occupied by inmates or serving any detention functions.

Primary vehicular access to the Project site is from 60th Street West via West Avenue I, which connects to the north-south Antelope Valley Freeway (State Route [SR] 14). SR-14 provides access to the area's major cities of Lancaster, Palmdale, and Santa Clarita, and the greater Los Angeles area to the south via Interstate (I) 5. The Antelope Valley Line of the Metrolink commuter rail system runs generally parallel to the SR-14 and connects the Antelope Valley cities to Santa Clarita, Newhall, Sylmar, Sun Valley, Burbank, Glendale, and downtown Los Angeles. The Lancaster Metrolink Station is located approximately six miles east of the Project site.

The Project site is located on approximately 355 acres of County-owned property, which includes various facilities, including the MLDC; the former High Desert Health System Multi-Ambulatory Care Center (HDHS MACC); a County-operated solar energy facility; the County Probation Department's Challenger Memorial Youth Center (CMYC); and the County Animal Care and Control – Lancaster Shelter. The Bachelor Officer's Quarters (BOQ) is a part of the MLDC and is located on the west side of 60th Street West, across from the main MLDC property. The northern portion of the block, including the Project site, is owned by the County and is not subject to regulation by the Lancaster General Plan or Zoning Ordinance. Located south of the County-owned property is approximately 262 acres of property owned by the State of California for the California State Prison – Los Angeles County.

The MLDC has been in operation as a detention center since 1945–1946, when the California Youth Authority began to run a vocational school at the site, which focused on job training for juvenile offenders. In the mid-1950s, the MLDC operated as a medium-security facility until it ceased operations for the first time in 1979. It reopened in 1983 and was expanded with the construction of several new buildings in 1986. The facility was repurposed for female inmates and was known as the Mira Loma Female Honor Ranch, but was closed again in 1993. The MLDC reopened for use in 1997 by the U.S. Immigration and Customs Enforcement (ICE) to house undocumented immigrants until their immigration cases were decided, and it operated in that capacity until 2012. The site has not housed inmates since that time.

1.2.2 PROJECT DESCRIPTION

The Project site includes 46 acres of the MLDC property. The Mira Loma Women's Detention Center (MLWDC) Project involves the reuse, renovation, and expansion of the majority of the currently unoccupied MLDC property to provide a total of 1,604 beds for low- to medium-security female inmates. Some buildings will be demolished to accommodate the new site plan, which includes new building and facility construction. The majority of the buildings will be renovated and/or expanded, making use of the majority of the existing buildings and infrastructure on the Project site.

The MLWDC Project will provide detention services within a secured custody setting (e.g., security fencing, guard towers). The Project will include dormitory housing in twinned barracks (896 beds), single barracks (68 beds), new transitional housing (384 beds), and barracks E and F (256 beds), along with facilities for other support services (e.g., administration, visitation, kitchen, inmate processing, laundry, medical, education, recreation, and maintenance). In total, the Project will include approximately 365,210 gross square feet (gsf) of building space.

Of the total outdoor areas proposed on site, approximately 428,000 square feet (sf, i.e., 46.4 percent) will be pervious (e.g., soil or landscaped) and approximately 494,150 sf (53.6 percent) will be paved, including buildings, roadways and sidewalks. Within the secured and fenced property, approximately 63,400 sf will be set aside for outdoor recreational activities and program space that will be accessible to the female inmates (e.g., sports courts and recreation fields, gardens, and courtyards-passive recreational areas).

The Project is designed to deliver a more normative environment than the current detention facilities housing women to assist in the transition of eligible female inmates from detention to release into independent living. To provide for an education-based incarceration, the Project will offer general education classes, computer training, general and vocational career technical education, career counseling, college courses, a learning resource center, culinary classes, and indoor/outdoor recreation for inmates. All facilities will be enclosed within a secured and guarded perimeter fencing.

In order to meet the standards of the Board of State and Community Corrections (BSCC) and long-term occupancy at MLWDC, utility and infrastructure repairs and upgrades will be required to the Project site's water infrastructure; sewer infrastructure; storm drain infrastructure; heating, ventilation, air conditioning (HVAC) system; and electrical facilities. A new water line connection will be required to link the Project site to the Los Angeles County Waterworks District 40 water line within West Avenue I. Water service from the existing on-site water wells and storage tanks will be disconnected.

Upon completion of the Project, low- to medium-security female inmates will be transferred to the Project site from their current detention facility, which is now the Century Regional Detention Facility (CRDF) in Lynwood. The County's remaining female inmate population, who are not in low- to medium-security classifications or who require medical or other services not available at the Project site, will be housed at other jail facilities that have appropriate services to meet their needs.

The Project will be staffed by approximately 523 employees in total, with approximately 225 employees during the AM shift (6:00 AM to 2:00 PM); approximately 177 employees during the PM shift (2:00 PM to 10:00 PM); and approximately 121 employees during the EM shift (10:00 PM to 6:00 AM). This will include Los Angeles Sheriff's Department (Sheriff's Department) security/sworn staff, Sheriff's Department civilian staff, teachers, counselors, maintenance

personnel, physicians, registered nurses, registered nurse practitioners, and other County employees and contractors. A number of community-based volunteers are also anticipated at the site to provide training and assist with visitation.

1.3 SUMMARY OF ENVIRONMENTAL IMPACTS

The Initial Study indicated that the Project will have no impacts on Agriculture and Forest Resources or on Mineral Resources, and that no further analysis in the Draft EIR is required.

The Draft EIR evaluates the environmental impacts associated with Project implementation. The analysis indicates that implementation of the Project Design Features (PDFs) and compliance with Regulatory Requirements (RRs) will result in the Project having no impact or less than significant impacts on Air Quality; Geology and Soils; Greenhouse Gases; Hydrology and Water Quality; Land Use and Planning; Population, Housing, and Employment; Public Services and Recreation; Transportation and Traffic; and Energy.

The PDFs are specific design elements incorporated into the Project or standard procedures and will be reflected in the Project's construction specifications and final plans, which will be implemented in accordance with County protocol to prevent the occurrence of, or reduce the significance of, potential environmental effects. RRs are applicable local, state, or federal regulations.

Prior to mitigation, Project implementation will result in potentially significant impacts to Aesthetics, Biological Resources, Cultural Resources, Hazards and Hazardous Materials, Noise, and Utilities and Services Systems. However, mitigation measures (MMs) have been developed to avoid or reduce all of these impacts to levels considered less than significant. No significant unavoidable impacts will occur after mitigation.

SECTION 2.0 RESPONSES TO COMMENTS

Letters commenting on the information and analysis in the Draft EIR were received from various parties during the initial 64-day public review period (i.e., Monday, November 9, 2015 through Tuesday, January 12, 2016). Additional comments were received when the public review period was subsequently extended to March 2, 2016. A total of 295 comment letters were received, including 5 letters from public agencies, 7 letters from organizations, and 283 letters from individuals. Blank self-addressed comment cards were also made available for convenience during the public meetings held on December 8, 2015 and February 9, 2016 in the City of Lancaster.

The County's responses to all comments are provided below. Responses to state, regional, and local agencies are included in Section 2.1; responses to organizations are included in Section 2.2; and responses to individuals that sent comment letters are included in Section 2.3.

Section 2.3 organizes the letters from individuals as follows:

- Section 2.3.1 includes 135 comment letters that were exact duplicates of a sample "form letter", with only the name of the sender being different. These individually submitted form letters are included in Appendix A of this Final EIR. Responses to the comments in the form letter follow a sample of the text of the form letter and are numbered as Form Letter-1, Form Letter-2, and so on to the end of the responses to each comment in that letter.
- Section 2.3.2 includes the responses to 88 form letters that included individualized introductory comments or some other personalized information, as well as the form letter that is responded to in Section 2.3.1. These 88 comment letters are included in this Responses to Comments document, located on the page prior to the response. For these letters, the comments are numbered as Name – 1, Name -2, and so on to the end of each of the individualized comments that were added to the form letter comments. The responses to the form letter portion of these comment letters references but does not repeat the form letter responses, which are located in Section 2.3.1.
- Section 2.3.3 includes 60 other comment letters and comment cards that were received from individuals, and the responses to those comments. Responses to each of these comment letters and cards from individuals are numbered Name-1, Name -2, and so on to the end of the individual responses to each of the comments in these letters and cards.

Each comment letter is provided first and is bracketed in the right margin, sequentially numbered (e.g., AVAQMD-1, AVAQMD-2). Following the bracketed comment letter, the County's responses are presented in corresponding order to provide a matching numbered response on the pages following each comment letter.

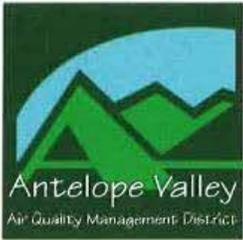

If you submitted comments on this proposed project, you will be able to see your comments and the County's responses in this Final EIR. In addition, you may be interested in the comments that others have submitted and the responses to those comments.

2.1 **STATE, REGIONAL, AND LOCAL AGENCIES**

Comment letters from state, regional, and local agencies include:

- Antelope Valley Air Quality Management District, December 7, 2015
- Los Angeles County Fire Department (LACFD), November 23, 2015
- Los Angeles County Sanitation Districts (Districts), January 11, 2016/February 8, 2016
- State of California, State Clearinghouse and Planning Unit, January 28, 2016
- State of California, State Clearinghouse and Planning Unit, March 4, 2016

Responses to the comments in these letters are provided below, after each letter.

December 7, 2015

Mr. Matthew Diaz
County of Los Angeles
Chief Executive Office
754 Kenneth Hahn Hall of Administration
500 West Temple Street
Los Angeles, California 90012

Project: Draft Environmental Impact Report for the Mira Loma Women’s Detention Center Project (SCH No. 2014091012).

Dear Mr. Diaz:

The Antelope Valley Air Quality Management District (District) has received the Draft Environmental Impact Report (Report) for the Mira Loma Women’s Detention Center Project.

The District has reviewed the Report and concurs with the proposed analysis of the air quality impacts associated with the intended project. The District also appreciates the focus on fugitive dust issues and that the proposed project must comply with the all requirements outlined in District Rule 403, Fugitive Dust, including submittal of a Dust Control Plan prior to initiating construction.

AVAQMD-1

The Report also references possible demolition/renovation of existing structures located the project property. The proposed project must comply with the all requirements outlined in District Rule 1403, Asbestos Emissions from Demolition/Renovation Activities, including submittal of an asbestos survey for all structures to demolished and/or renovated.

AVAQMD-2

Lastly, all diesel fueled construction equipment must comply with the California Code of Regulations (CCR) §2449 for the In-Use, Off-Road Diesel Vehicle Regulation.

AVAQMD-3

Thank you for the opportunity to review this planning document. If you have any questions regarding the information presented in this letter please contact me at (661) 723-8070 ext. 2 or bbanks@avaqmd.ca.gov.

Sincerely,

Bret Banks
Operations Manager

2.1.1 ANTELOPE VALLEY AIR QUALITY MANAGEMENT DISTRICT (AVAQMD)

December 7, 2015

AVAQMD-1

Thank you for your review of the Draft EIR and your concurrence with the proposed analysis of project air quality impacts as well as your expression of appreciation for the focus in the Draft EIR on fugitive dust issues and the requirements of the Antelope Valley Air Quality Management District's (AVAQMD's) Rule 403. As stated in the comment, as discussed in Section 4.2, Air Quality, and as stated in Regulatory Requirement (RR) AIR-1, all construction activities must be conducted in compliance with all applicable AVAQMD rules and regulations. RR AIR-1 provides a listing of the AVAQMD Rules applicable to the construction of the Project. Rule 403, Fugitive Dust, requires measures such as watering and control of track-out from the site and requires submittal of a Dust Control Plan prior to the start of construction.

AVAQMD-2

As described in Section 4.6, Hazards and Hazardous Materials, and as stated in RR HAZ-4, any Project-related demolition activities that have the potential to expose construction workers and/or the public to asbestos-containing materials (ACMs) or lead-based paint (LBP) will be conducted in accordance with applicable regulations, including, but not limited to AVAQMD's Rule 1403.

AVAQMD-3

As set forth in Section 4.2, Air Quality, and as stated in RR AIR-3, all construction activities will be conducted in compliance with the *California Code of Regulations* (CCR, specifically Title 13 Section 2485), which prohibits all diesel-fueled commercial motor vehicles from idling for more than five consecutive minutes at any location. Similarly, the Project will be operated in compliance with all applicable regulations, including 13 CCR 2449 for In-Use, Off-Road Diesel Vehicle Regulations.

COUNTY OF LOS ANGELES

FIRE DEPARTMENT

1320 NORTH EASTERN AVENUE
LOS ANGELES, CALIFORNIA 90063-3294

DARYL L. OSBY
FIRE CHIEF
FORESTER & FIRE WARDEN

November 23, 2015

Capital Projects/Debt Management Division
Mira Loma Women's Detention
County of Los Angeles Chief Executive Office
754 Kenneth Hahn Hall of Administration
500 West Temple Street
Los Angeles, CA 90012

Dear Sir or Madam:

NOTICE OF AVAILABILITY OF THE DRAFT ENVIRONMENTAL IMPACT REPORT AND NOTICE OF PUBLIC MEETING, "MIRA LOMA WOMEN'S DETENTION CENTER PROJECT", PROPOSES REUSE, RENOVATION, AND EXPANSION OF THE MAJORITY OF THE CURRENTLY UNOCCUPIED MLDC PROPERTY TO PROVIDE A TOTAL OF 1,604 BEDS FOR LOW-TO-MEDIUM-SECURITY FEMALE INMATES, 45100 60TH STREET WEST, LANCASTER (FFER 201500196)

The Notice of Availability of the Draft Environmental Impact Report and Notice of Public Meeting has been reviewed by the Planning Division, Land Development Unit, Forestry Division, and Health Hazardous Materials Division of the County of Los Angeles Fire Department. The following are their comments:

PLANNING DIVISION:

1. In Section 4.12.2, Public Services and Recreation, Existing Conditions, Fire Protection and Emergency Medical Services, the distances to the project site included in Table 4.12.1 should be corrected as follows:

Fire Station 84 - 4.7 miles
Fire Station 112 - 6.9 miles
Fire Station 134 - 5.7 miles

} LACFD-1

SERVING THE UNINCORPORATED AREAS OF LOS ANGELES COUNTY AND THE CITIES OF:

- | | | | | | | | |
|--------------|-----------|------------------|----------------------|-----------|----------------------|-----------------------|------------------|
| AGOURA HILLS | CALABASAS | DIAMOND BAR | HIDDEN HILLS | LA MIRADA | MALIBU | POMONA | SIGNAL HILL |
| ARTESIA | CARSON | DUARTE | HUNTINGTON PARK | LA PUENTE | MAYWOOD | RANCHO PALOS VERDES | SOUTH EL MONTE |
| AZUSA | CERRITOS | EL MONTE | INDUSTRY | LAKEWOOD | NORWALK | ROLLING HILLS | SOUTH GATE |
| BALDWIN PARK | CLAREMONT | GARDENA | INGLEWOOD | LANCASTER | PALMDALE | ROLLING HILLS ESTATES | TEMPLE CITY |
| BELL | COMMERCE | GLENDDORA | IRWINDALE | LAWNDALE | PALOS VERDES ESTATES | ROSEMead | WALNUT |
| BELL GARDENS | COVINA | HAWAIIAN GARDENS | LA CANADA FLINTRIDGE | LOMITA | PARAMOUNT | SAN DIMAS | WEST HOLLYWOOD |
| BELLFLOWER | CUDAHY | HAWTHORNE | LA HABRA | LYNWOOD | PICO RIVERA | SANTA CLARITA | WESTLAKE VILLAGE |
| BRADBURY | | | | | | | WHITTIER |

In addition, in paragraph 3, the second sentence should be deleted, and the third sentence should be corrected to state the following:

Effective October 1, 2015, this station is staffed with a four-person assessment engine, which is an engine company with some limited paramedic capabilities, and a two-person paramedic squad.

LACFD-2

LAND DEVELOPMENT UNIT:

1. The proposed development may necessitate multiple ingress/egress access for the circulation of traffic and emergency response issues.
2. The development of this project must comply with all applicable code and ordinance requirements for construction, access, water mains, fire flows, and fire hydrants.
3. Specific fire and life safety requirements for the construction phase will be addressed at the building fire plan check. There may be additional fire and life safety requirements during this time.
4. Every building constructed shall be accessible to Fire Department's apparatus by way of access roadways with an all-weather surface of not less than the prescribed width. The roadway shall be extended to within 150 feet of all portions of the exterior walls when measured by an unobstructed route around the exterior of the building.
5. Fire Department's requirements for access, fire flows, and hydrants are addressed during the building permit stage.
6. The development may require fire flows up to 5,000 gallons per minute at 20 pounds per square inch residual pressure for up to a five-hour duration. Final fire flows will be based on the size of buildings, its relationship to other structures, property lines, and types of construction used.
7. Fire hydrant spacing shall be 300 feet and shall meet the following requirements:
 - a) No portion of lot frontage shall be more than 200 feet via vehicular access from a public fire hydrant.
 - b) No portion of a building shall exceed 400 feet via vehicular access from a properly spaced public fire hydrant.

LACFD-3

- c) Additional hydrants will be required if hydrant spacing exceeds specified distances.
 - d) When cul-de-sac depth exceeds 200 feet on a commercial street, hydrants shall be required at the corner and midblock.
 - e) A cul-de-sac shall not be more than 500 feet in length when serving land zoned for commercial use.
8. Turning radii shall not be less than 32 feet. This measurement shall be determined at the centerline of the road. A Fire Department approved turning area shall be provided for all driveways exceeding 150 feet in-length and at the end of all cul-de-sacs.
9. All on-site driveways/roadways shall provide a minimum unobstructed width of 28 feet, clear-to-sky. The on-site driveway is to be within 150 feet of all portions of the exterior walls of the first story of any building. The centerline of the access driveway shall be located parallel to and within 30 feet of an exterior wall on one side of the proposed structure.
10. Driveway width for non-residential developments shall be increased when any of the following conditions will exist:
- a) Provide 34 feet in-width when parallel parking is allowed on one side of the access roadway/driveway. Preference is that such parking is not adjacent to the structure.
 - b) Provide 42 feet in-width when parallel parking is allowed on each side of the access roadway/driveway.
 - c) Any access way less than 34 feet in-width shall be labeled "Fire Lane" on the final recording map and final building plans.
 - d) For streets or driveways with parking restrictions: The entrance to the street/driveway and intermittent spacing distances of 150 feet shall be posted with Fire Department approved signs stating "NO PARKING - FIRE LANE" in three-inch high letters. Driveway labeling is necessary to ensure access for Fire Department use.
11. All access devices and gates shall comply with California Code of Regulations, Title 19, Articles 3.05 and 3.16.

LACFD-3
cont.

12. All access devices and gates shall meet the following requirements:
 - a) Any single gated opening used for ingress and egress shall be a minimum of 26 feet in-width, clear-to-sky.
 - b) Any divided gate opening (when each gate is used for a single direction of travel i.e., ingress or egress) shall be a minimum width of 20 feet clear-to-sky.
 - c) Gates and/or control devices shall be positioned a minimum of 50 feet from a public right-of-way and shall be provided with a turnaround having a minimum of 32 feet of turning radius. If an intercom system is used, the 50 feet shall be measured from the right-of-way to the intercom control device.
 - d) All limited access devices shall be of a type approved by the Fire Department.
 - e) Gate plans shall be submitted to the Fire Department, prior to installation. These plans shall show all locations, widths and details of the proposed gates.
13. All proposals for traffic calming measures (speed humps/bumps/cushions, traffic circles, roundabouts, etc.) shall be submitted to the Fire Department for review, prior to implementation.
14. The County of Los Angeles Fire Department's Land Development Unit appreciates the opportunity to comment on this project.

LACFD-3
cont.

FORESTRY DIVISION – OTHER ENVIRONMENTAL CONCERNS:

1. The statutory responsibilities of the County of Los Angeles Fire Department's Forestry Division include erosion control, watershed management, rare and endangered species, vegetation, fuel modification for Very High Fire Hazard Severity Zones or Fire Zone 4, archeological and cultural resources, and the County Oak Tree Ordinance.
2. The areas germane to the statutory responsibilities of the County of Los Angeles Fire Department's Forestry Division have been addressed.

LACFD-4

HEALTH HAZARDOUS MATERIALS DIVISION:

1. The Health Hazardous Materials Division (HHMD) of the Los Angeles County Fire Department has no objection to the project; however, the Los Angeles County Department of Public Works, Environmental Program Division (LADPW-EPD) and Los Angeles Regional Water Quality Control Board (LARWQCB) oversaw the cleanup of a leaking underground storage tank (UST) at the site. The leaking UST case was closed as of September 9, 2003. Any concerns or questions regarding the former leaking UST should be addressed to the LADPW-EPD and LARWQCB.

} LACFD-5

If you have any additional questions, please contact this office at (323) 890-4330.

Very truly yours,

Handwritten signature: Kevin T. Johnson

KEVIN T. JOHNSON, ACTING CHIEF, FORESTRY DIVISION

2.1.2 LOS ANGELES COUNTY FIRE DEPARTMENT (LACFD)

November 23, 2015

LACFD-1

The distances in Table 4.12-1 on page 4.12-3 have been revised in the Final EIR, per the information provided in the comment, to read "Fire Station 84 – 4.7 miles south; Fire Station 112 – 6.9 miles northwest; and Fire Station 134 – 5.7 miles southeast".

LACFD-2

The second sentence in the paragraph following Table 4.12-1 on page 4.12-3 has been revised in the Final EIR, per the information provided in the comment, to read "Effective October 1, 2015, this station is staffed with a four-person assessment engine, which is an engine company with some limited paramedic capabilities and a two-person paramedic squad (LACFD 2015)."

LACFD-3

This comment includes a listing of requirements provided by the LACFD Land Development Unit related to the building and construction standards that will be verified through the building fire plan check process. As discussed in Section 4.12, Public Services, and as required under Regulatory Requirement (RR) PS-1, the Project would be constructed in accordance with the County of Los Angeles Fire Code (Los Angeles County Code, Title 32) and the regulations of the Los Angeles County Fire Department, which include building construction standards that would reduce fire hazards and facilitate emergency response. This includes requirements for fire prevention and suppression measures, including construction materials, building access and evacuation routes, automatic fire-extinguishing systems, site access/fire lanes, water availability, fire flows, and hydrants, among other requirements. The LACFD will review and approve all building plans for compliance with fire safety regulations, including all applicable state and local requirements, which shall be verified prior to issuance of the certificate of occupancy.

LACFD-4

The comment's acknowledgement that all areas germane to the statutory responsibilities of the LACFD Forestry Division have been addressed in the Draft EIR is appreciated.

LACFD-5

Underground storage tanks (USTs) at the Project site are discussed in Section 4.7, Hazards and Hazardous Materials, which states that six older USTs at the MLDC were removed in 1999 and contamination was found in the soils. The soil contamination was remediated and the case was closed in 2003. This information is consistent with the comment from the LACFD Health Hazardous Materials Division.

Chief Engineer and General Manager

October 6, 2014

Ref File No.: 3082017

Mr. Matthew Diaz
County of Los Angeles
Chief Executive Office
754 Kenneth Hahn
Hall of Administration
Los Angeles, CA 90012

Dear Mr. Diaz:

Mira Loma Detention Center Women's Facility Project

The County Sanitation Districts of Los Angeles County (Districts) received a Notice of Preparation of a Draft Environmental Impact Report for the subject project on September 4, 2014. We offer the following comments regarding sewerage service:

1. The proposed project may require a Districts' permit for Industrial Wastewater Discharge. Project developers should contact the Districts' Industrial Waste Section at extension 2900, in order to reach a determination on this matter. If this permit is necessary, project developers will be required to forward copies of final plans and supporting information for the proposed project to the Districts for review and approval before beginning project construction. For additional Industrial Wastewater Discharge Permit information, go to http://www.lacsd.org/wastewater/industrial_waste/permit.asp. } Districts -6
2. The wastewater flow originating from the proposed project will discharge to a local sewer line, which is not maintained by the Districts, for conveyance to the Districts' Avenue "I" West Trunk Sewer, located in Avenue I at 30th Street West. This 48-inch lined diameter trunk sewer has a design capacity of 53.9 million gallons per day (mgd) and conveyed a peak flow of 7.4 mgd when last measured in 2011. } Districts -7
3. The wastewater generated by the proposed project will be treated at the Lancaster Water Reclamation Plant, which has a design capacity of 18 mgd and currently processes an average flow of 13.4 mgd. } Districts -8
4. The expected average wastewater flow from the proposed project, an increase of 576 beds to accommodate a total of 1,616 inmates, is 100,800 gallons per day. For a copy of the Districts' average wastewater generation factors, go to www.lacsd.org, Wastewater & Sewer Systems, click on Will Serve Program, and click on the [Table 1, Loadings for Each Class of Land Use](#) link. } Districts -9

- 5. The Districts are empowered by the California Health and Safety Code to charge a fee for the privilege of connecting (directly or indirectly) to the Districts' Sewerage System for increasing the strength or quantity of wastewater attributable to a particular parcel or operation already connected. This connection fee is a capital facilities fee that is imposed in an amount sufficient to construct an incremental expansion of the Sewerage System to accommodate the proposed project. Payment of a connection fee will be required before a permit to connect to the sewer is issued. For more information and a copy of the Connection Fee Information Sheet, go to www.lacsd.org, Wastewater & Sewer Systems, click on Will Serve Program, and search for the appropriate link. For more specific information regarding the connection fee application procedure and fees, please contact the Connection Fee Counter at extension 2727.

- 6. In order for the Districts to conform to the requirements of the Federal Clean Air Act (CAA), the design capacities of the Districts' wastewater treatment facilities are based on the regional growth forecast adopted by the Southern California Association of Governments (SCAG). Specific policies included in the development of the SCAG regional growth forecast are incorporated into clean air plans, which are prepared by the South Coast and Antelope Valley Air Quality Management Districts in order to improve air quality in the South Coast and Mojave Desert Air Basins as mandated by the CCA. All expansions of Districts' facilities must be sized and service phased in a manner that will be consistent with the SCAG regional growth forecast for the counties of Los Angeles, Orange, San Bernardino, Riverside, Ventura, and Imperial. The available capacity of the Districts' treatment facilities will, therefore, be limited to levels associated with the approved growth identified by SCAG. As such, this letter does not constitute a guarantee of wastewater service, but is to advise you that the Districts intend to provide this service up to the levels that are legally permitted and to inform you of the currently existing capacity and any proposed expansion of the Districts' facilities.

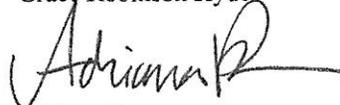

} Districts - 10

2.1.3 LOS ANGELES COUNTY SANITATION DISTRICTS (DISTRICTS)

The Los Angeles County Sanitation Districts (Districts) submitted two separate letters with the same information, one dated January 11, 2016 and one dated February 8, 2016, corresponding to the extended comment period for the proposed Project.

January 11, 2016/February 8, 2016

Districts-1

Responses to the Districts' letter provided to the County on October 6, 2014 (Districts Reference File Number 3082017) are presented below in responses Districts-6 through Districts-11.

Districts-2

The last sentence in the paragraph following Table 4.14-3 on page 4.14-13 has been revised in the Final EIR, per the information provided in the comment, to read "This trunk sewer eventually connects to the Lancaster Water Reclamation Plant at 1865 West Avenue D in Lancaster, which has a design capacity of 18 mgd and currently processes an average of 15 mgd (LACSD 2014a, 2016)."

Districts-3

The first sentence of the third paragraph under Threshold 4.14e on page 4.14-30 has been revised in the Final EIR, per the information provided in the comment, to read "The LACSD estimated the average wastewater flow increase from the Project to be 98,700 gpd (LACSD 2016)."

Districts-4

As discussed in Section 4.14, Utilities and Service Systems, the Districts may charge a fee for the privilege of connecting (directly or indirectly) to their system or increasing the strength or quantity of wastewater attributable to an operation that is already connected. When the LACSD determines the appropriate fee based on the applicable user category, the proposed Project would be subject to payment of the Districts' connection and service fees, as set forth in Regulatory Requirement (RR) UTL-1.

Districts-5

This address has been revised in the Final EIR, per the information provided in the comment, as noted in response Districts -2.

Districts-6

As set forth in Section 4.14, Utilities and Service Systems, the Project would not generate industrial wastewater (i.e., wastewater from manufacturing, processing, institutional, commercial, or agricultural operation, or any operation where the wastewater discharged includes significant quantities of waste of non-human origin). The Project is required to comply with the LACSD's Wastewater Ordinance (RR UTL-1), which mandates that all wastewater discharges into Districts facilities comply with the discharge standards. If the Districts determines through their review of final plans and supporting information that an Industrial Wastewater Discharge permit is required, the Project must obtain the permit from the LACSD and comply with applicable permit restrictions.

Districts-7

The information requested is provided on page 4.14-30 of the Draft EIR.

Districts-8

The information requested is provided on page 4.14-13 of the Draft EIR, but will be revised per response Districts-2 above.

Districts-9

The information requested is provided on page 4.14-30 of the Draft EIR, but will be revised per response Districts-3.

Districts-10

The information requested is provided on page 4.14-30 of the Draft EIR.

Districts-11

As discussed in Section 4.9, Land Use and Planning, the proposed Project would not require a General Plan Amendment or a zone change, and would therefore not result in growth that was not anticipated in the development of the Southern California Association of Governments (SCAG) regional growth forecasts. The Project would not conflict with plans, policies, or regulations related to regional land use, transportation, air quality, or other issues, as demonstrated through the consistency analysis presented in Tables 4.9-1 through 4.9-4 in Section 4.9, Land Use and Planning.

Project Description: *(please use a separate page if necessary)*

The Project involves the reuse and expansion of the existing Mira Loma Detention Facility, which is currently not occupied with inmates or serving detention functions. The Project would provide a total of 1,604 beds for low- to medium-security female inmates. Existing structures would be renovated; new buildings constructed; and some structures demolished to upgrade the existing facility and accommodate the needs of female inmates and programs for an education-based incarceration. Upon completion of the Project, low- to medium-security female inmates would be transferred to the Project site from other County jail facilities.

2.1.4 STATE OF CALIFORNIA CLEARINGHOUSE AND PLANNING UNIT (SCH)

January 28, 2016

SCH-1

This comment letter acknowledges that the Governor's Office of Planning and Research (OPR) has received notice that the public review period for the Draft EIR was extended through March 2, 2016, and that all other information remains the same. The letter attaches a copy of the original Notice of Completion (NOC) for the proposed Project, which was received by the OPR on November 5, 2015.

EDMUND G. BROWN JR.

Los Angeles, CA 90012

Subject: Mira Loma Detention Center Women's Facility Project
SCH#: 2014091012

Dear Matthew Diaz:

The State Clearinghouse submitted the above named Draft EIR to selected state agencies for review. The review period closed on March 2, 2016, and no state agencies submitted comments by that date. This letter acknowledges that you have complied with the State Clearinghouse review requirements for draft environmental documents, pursuant to the California Environmental Quality Act.

Please call the State Clearinghouse at (916) 445-0613 if you have any questions regarding the environmental review process. If you have a question about the above-named project, please refer to the ten-digit State Clearinghouse number when contacting this office.

} SCH-1

Sincerely,

Scott Morgan
Director, State Clearinghouse

**Document Details Report

SCH# 2014091012
Project Title Mira Loma Detention Center Women's Facility Project
Lead Agency Los Angeles County

Type EIR Draft EIR
Description Note: Extended Per Lead

The Project involves the reuse and expansion of the Mira Loma Detention Facility, which is currently not occupied with inmates or serving detention functions, to provide a total of 1,604 beds for low- to medium-security female inmates. Existing structures would be renovated; new buildings constructed; and some structures demolished to upgrade the existing facility and accommodate the needs of inmates and programs for an education-based incarceration. Upon completion of the Project, low- to medium-security female inmates would be transferred to the Project site from other County jail facilities.

MIRA LOMA WOMEN'S DETENTION CENTER PROJECT
PUBLIC MEETING- DECEMBER 8, 2015
6:00 TO 8:00 PM

COMMENTS:

On January 6, 2016 the Antelope Valley Rural Museum Board of Directors voted unanimously to support the effort to preserve the War Eagle Field (located on the SE corner of Avenue I and 60th Street West in Lancaster, California and to designate as a National Historical Landmark.

We also would like to not only save the historical buildings, but we would like to give them purpose by moving our ever expanding museum displays and resources to the War Eagle Field.

Sincerely,

Bill Rawlings

Finance Officer

AVRM

NAME: Bill Rawlings & the Board of Directors of the Antelope Valley Rural Museum

AVRM-1

2.2.1 ANTELOPE VALLEY RURAL MUSEUM (AVRM)

January 11, 2016

AVRM-1

The comment indicates the support of this group for any efforts to preserve War Eagle Field as a national landmark and potentially locate a museum on the site. Designation of the Polaris Flight Academy Historic District (Historic District), referred to as the War Eagle Field, as a National Historic Landmark would require the support of the County of Los Angeles, as the property owner, before pursuing any nomination of the property to the National Park Service. At this time, the County of Los Angeles has not formally considered the potential for such actions, which is beyond the scope of the proposed Project, but the proposed Project would not adversely affect the pursuit of recognition of the significance of this historic site at either the national or local levels.

As discussed in Section 4.4, Cultural Resources, the majority of the proposed renovation and new construction would occur outside the Historic District. Project implementation would only affect non-contributing features of the Historic District; therefore, the Project would not materially alter the physical characteristics that convey the significance of the historical resources. The future uses of these buildings and structures, beyond the requirement to preserve the integrity of the Historic District, is outside the scope of the proposed Project. This Final EIR, including all comments submitted to the County on the Draft EIR, will be provided to the County of Los Angeles Board of Supervisors. Therefore, your interest in the potential recognition of the historic district will be presented directly to the decision makers prior to consideration of Project approval.

Re: Language access for Draft EIR for Proposed Women’s Jail
(Capital Project No. 69719)

Dear Board of Supervisors:

We are writing to formally request a Spanish translation of the Draft Environmental Impact Report (DEIR) of the proposed women’s jail at Mira Loma Detention Center. We also request the lead agency to hold an additional public meeting in Spanish or with Spanish translation available in order for community members with limited English proficiency to participate in the public comment process.

This was a request that was submitted during the Initial Scoping Process that was not answered in the Draft Environmental Process.

Failure to meet this request would violate Civil Rights Acts of 1964, and the Title VI regulations, which prohibits discrimination based on national origin, and Executive order 13166 issued in 2000, and provide grounds for legal prosecution¹. The County must accommodate language services for individuals who do not speak English as their primary language and who have a limited ability to read, speak, write or understand English.

The California Natural Resources Agency which oversees the Environmental Quality Act (CEQA) deems public participation and comment during any environmental review process as an “essential part of the CEQA process”. Failure to provide language access hinders residents’ meaningful participation in the CEQA review process and is subject to legal prosecution².

In addition, the County hosted a public meeting for the DEIR on December 8, 2015 without Spanish interpreters further barring public participation in the environmental review process.

Please notify Diana Zuñiga by Monday, January 11 whether the county will translate the DEIR and hold another public meeting with Spanish interpreters available.

Sincerely,

Re: Acceso al idioma del plan preliminar del EIR para la cárcel propuesta para mujeres
(Capital Project No. 69719)

Estimado Junta de Supervisores:

Le escribimos para solicitar formalmente una traducción en español del Informe Preliminar del Impacto Ambiental (DEIR) para la cárcel propuesta para mujeres en Mira Loma Detention Center. También solicitamos que la agencia principal organice un cita adicional en español o que tengan traducción en español disponible para que miembros de la comunidad puedan participar en el proceso de comentarios públicos.

Esta fue una petición que solicitamos durante el proceso de alcance inicial. La petición no fue contestada en el proceso del preliminar del impacto ambiental (DEIR).

El incumplimiento de esta solicitud violaría leyes de derechos civiles de 1964, y las regulaciones del Título VI, que prohíbe la discriminación basada en el origen nacional, y la Orden Ejecutiva 13166 (2000), y proporcione motivos del procesamiento legal. El condado debe dar cabida a servicios de idiomas para las personas que no hablan Inglés como su idioma principal y que tienen una capacidad limitada para leer, hablar, escribir o entender Inglés.

La Agencia de Recursos Naturales de California que supervisa la Ley de Calidad Ambiental (CEQA) considera la participación del público y el comentario durante cualquier proceso de revisión ambiental como una "parte esencial del proceso de CEQA." Falta de proporcionar el acceso del idioma principal obstaculiza la participación de los miembros de la comunidad en el CEQA proceso y está sujeto a persecución legal.

Adicionalmente, el condado organizó una cita pública para el DEIR el 8 de Diciembre de 2015 sin intérpretes españoles restringiendo participación pública en el proceso de revisión ambiental.

Por favor de notificarse hasta el día lunes 11 de Enero de 2016 con Diana Zuñiga si el condado va a traducir el DEIR y tener otra cita pública con intérpretes españoles.

Respetuosamente,

Diana Zuñiga

2.2.2 CALIFORNIANS UNITED FOR A RESPONSIBLE BUDGET (CURB)

January 8, 2016

CURB-1

In response to the commenter's request for Spanish translation of the Project's Draft Environmental Impact Report (EIR) and Spanish interpreters at an additional public meeting, the Los Angeles County Chief Executive Office provided a responsive letter to Californians United for a Responsible Budget (CURB), attention to Ms. Diana Zuniga on January 22, 2016. This letter was also sent to Marcela Hernandez of the Immigrant Youth Coalition, Claudia Bautista of the National Day Laborer Organizing Network, Felicia Gomez of the California Immigrant Policy Center, and Shiu-Ming Cheer of the National Immigration Law Center in response to similar requests. Follow up communications with Ms. Zuniga even before the notice of a new comment period confirmed the date of the second public meeting as February 9, 2016. The letter to CURB and others reads as follows:

We are responding to your letter dated Friday, January 8, 2016, addressed to the Los Angeles County Board of Supervisors. You requested a response regarding "whether the County will translate the Draft Environmental Impact Report (EIR) and hold another public meeting with Spanish interpreters available" with respect to the proposed Mira Loma Women's Detention Center Renovation Project (MLWDC) at Mira Loma in Lancaster.

We appreciate that you are following the review process for the proposed MLWDC project, and respond to your requests here. The County will voluntarily add additional outreach. We will hold a second community meeting in Lancaster to discuss the Draft EIR conclusions and process and invite submission of comments. Once the location and time of the meeting has been determined, a notice in English and Spanish will be provided via a similar notification process as the November 9, 2015, release of the Draft EIR. At this meeting, we will have real time Spanish language translation available, in the event members of the public request this service. Additionally, in light of the unique nature of this detention facility project, the County also will provide a written Spanish translation of the Executive Summary of the Draft EIR. That Draft EIR section summarizes the description, location and setting of the proposed MLWDC project, the project alternatives considered, the concerns raised during the scoping process, and the potential environmental impacts. The Executive Summary also provides the entire list of proposed Project Design Features, Regulatory Requirements and Mitigation Measures. This translation will be made available at the Quartz Hill and Lancaster Libraries, Los Angeles County Public Information Office, and online for download. The County will also provide additional time to accept public comments on the Draft EIR after the written translation is available.

Throughout the California Environmental Quality Act (CEQA) review process for the MLWDC project, the County has voluntarily broadened public outreach beyond what is legally required. As you are aware, the noticed CEQA comment period closed on January 12, 2016, after being open from November 9, 2015. The County voluntarily provided an extended comment period for more than the required 45 days, to avoid any inconvenience to commenters from the holidays occurring in the comment period.

As another example of the County's broad public outreach efforts, the original scoping period was noticed to include the public and interested stakeholders early in the process, although that is not required by law. The County also held a noticed community meeting in the Lancaster community during the Draft EIR comment period, for anyone interested in learning more about the CEQA and public comment process. At that meeting, held on December 8, 2015, there was a presentation on the project description and the CEQA review and comment process. A number of speakers, including CURB, raised approximately 30 different questions at that meeting. No one attending that public community meeting asked for the assistance of a translator for themselves or others. Had they done so, County staff at the meeting would have assisted in Spanish translation.

Also, as you are aware, at the Board of Supervisors' regular meetings, Spanish translation services are available. We appreciate your comments and have responded with specific additional opportunities for public participation.

As stated above, the first of two public meetings was held to provide an overview of the Project and the conclusions of the Draft EIR on Tuesday, December 8, 2015, from 6:00 PM to 8:00 PM at the James C. Gilley Lancaster National Soccer Center Eastside Activity Center, which is located at 43000 30th Street East, Lancaster, CA 93535. There were approximately 15 attendees at the first public meeting, and some submitted written comments. Attendance at this public meeting was voluntary and was not required to submit comments on the Draft EIR.

Subsequently, in January 2016, in response to requests from the public to provide an additional extension of the public review period and an additional public meeting, a *Notice of Extended Comment Period for the Draft Environmental Impact Report for the Mira Loma Women's Detention Center Project and Notice of Second Public Meeting in Lancaster, California* (Notice) was sent to the 2015 Notice of Availability (NOA) mailing list, email list, an additional mailing list of contacts that had provided comment letters during the Draft EIR public review period up to the time of the mailing. This Notice extended the Draft EIR public review period from Monday, February 1, 2016, through Wednesday, March 2, 2016. This 30-day extension was in addition to the original 64-day Draft EIR public review period. All written comments received on the Draft EIR from Monday, November 9, 2015, through Wednesday, March 2, 2016, were responded to in this document. Therefore, the total Draft EIR public review period for which the County received and responded to comments was 114 days (from November 9, 2015 to March 2, 2016).

The Notice extending the public review period was provided in both English and Spanish. Additionally, the Executive Summary of the Draft EIR was translated into Spanish and posted on the County's website for viewing and downloading. Hardcopies of the Spanish-translated Executive Summary and of the Draft EIR (in English) were made available at the Quartz Hill and Lancaster Libraries as well as the Los Angeles County Public Information Office. Newspaper advertisements of the extended comment period and second public meeting were placed in the following papers and ran on Monday, February 1, 2016:

- *Acton-Aqua Dolce News*: a weekly publication so the ad was available for 7 days
- *Los Angeles Daily News*: a daily publication
- *La Opinion*: a daily publication (the ad was in both English and Spanish)
- *Antelope Valley Press*: a daily publication
- *Antelope Valley Times*: an online publication

The second public meeting was held on Tuesday, February 9, 2016, at the Lancaster Public Library at 601 West Lancaster Boulevard in Lancaster, CA 93534 to present an overview of the proposed Project and the Draft EIR process and conclusions, and to invite submission of public comments on the Draft EIR. Real-time Spanish translation services were made available, as were copies of the NOA and the Executive Summary in both English and Spanish. This second public meeting had two attendees from the public. There were no requests for Spanish translation services at the public meeting.

CURB-2 (A Spanish translation of the CURB-1 letter)

Please see the response for CURB-1.

January 12, 2016

via hand-delivery and email

County of Los Angeles Chief Executive Office
Capital Projects/Debt Management Division
Attn: Mira Loma Women's Detention Center EIR
754 Kenneth Hahn Hall of Administration
500 West Temple Street, Los Angeles, CA 90012

Dear Chief Executive Office,

We are writing in response to the Draft Environmental Impact Report (DEIR) prepared for the Mira Loma Women's Detention Center Project (MLWDC), made available on November 9, 2015. After a thorough review, we believe that the DEIR neither adequately addresses the negative environmental impacts of the project, nor does it adequately consider possible alternatives to the proposed project that would significantly reduce environmental harms.

CRLA-1

A new jail in Lancaster will be severely detrimental to the health and wellbeing of LA County residents as well as destructive to the local environment. The EIR fails to adequately address many serious issues specific to the project site and surrounding area including Valley Fever, increased smog and traffic pollution, potential Native American resources, suitable energy sources, and water resources in the context of drought. In numerous instances, the DEIR fails to provide detailed explanations of how significant environmental impacts are reduced but instead only includes vague mitigation measures.

CRLA-2

Additionally, the DEIR fails to consider a comprehensive list of alternatives to the MLWDC project as required by CEQA. Objective A of the project states "To prioritize the on-site integration of gender-responsive female inmate education, treatment, and vocational training

CRLA-3

to reduce female inmate recidivism” (5-7), with reducing recidivism named as a primary objective (5-7). Many experts, including our organizations, have repeatedly pointed to reports and evidence based practices that illustrate how recidivism is greatly reduced through programs that employ alternatives to imprisonment. However, suitable out-of-custody alternatives that are being increasingly implemented across the state and country are not considered in this DEIR as project alternatives, despite the fact they would satisfy the same project objectives and undoubtedly produce less harmful environmental impacts.

CRLA-3

Please find attached a detailed list of comments addressing specific areas of the DEIR. We believe that our concerns with the inadequacy of this report, along with the detrimental environmental impacts of the MLWDC, are sufficient to warrant a rejection of the Mira Loma proposal on the basis that environmental impacts cannot be appropriately mitigated, and at the very least, a rewriting of the report to include missing analysis and information.

cc: Board of Supervisors

ATTACHMENT 1

Who will monitor the design-build process to ensure any changes made are in compliance with CEQA Guidelines? What types of changes would warrant an addendum?

CRLA-5

What are the estimated costs of the proposed mitigation measures? Has the price tag for the jail increased? What are the total estimated expenses so far?

CRLA-6

What are future projects in the area and how will they impact the project site? How will future projects intensify significant impacts to the environment? Please list with detail all additional relevant policies and regulations in each topic area.

CRLA-7

4.1 AESTHETICS

Substantial adverse effect on a scenic vista:
The radio tower, when considered alone, may not significantly alter the view of scenic resources. However, its construction, which will likely require large machinery, may potentially significantly alter or block the view of scenic resources, particularly when compounded with the large water tower in the same viewshed.

CRLA-8

Mitigation of adverse lighting effects is proposed through MM AES-1, yet no details are provided. An EIR is required to contain “ways in which any adverse effects of such a project might be minimized” (PRC 21061). Because the specifics of a Lighting Plan are not provided, but only its intended mitigation, readers of the EIR are unable to assess the adequacy of such a plan and mitigation based on concrete data.

CRLA-9

4.2 AIR QUALITY

The report fails to address the long-term impact of Valley Fever to prisoners, personnel, visitors and neighboring residents (i.e., the homeless shelter). The long-term impact of Valley must be analyzed as the disease is endemic to Antelope Valley.¹ Recent findings in the article, “The Changing Epidemiology of Coccidioidomycosis in Los Angeles (LA) County, California, 1973-2011,” by Ramon Guevara of the LA Department of Public Health, should be considered in the final EIR. Findings include notable changes in the epidemiology of coccidioidomycosis in LA county started in 2004 and include significant increases in case numbers and incidence rates across various demographic categories and geographic areas, a sudden and substantial rise in female cases, and collectively more annual cases in the endemic areas, especially high case numbers and incidence rates in the Antelope Valley. The county should consult with Fugitive Dust and Health and Valley Fever Scoping Group in Antelope Valley.

CRLA-10

There is a Valley Fever “hot spot” close to the project site that requires further investigation into potential long-term impacts on people, e.g., prisoners and residents nearby. The report states that “The nine prisons and facilities identified by the CDCR as having a higher risk of exposure to Valley Fever do not include the California State Prison- Los Angeles County, located in the City of Lancaster, which is adjacent to the MLWDC Project site. As such, the CDCR has not identified the Lancaster area being a geographic location that requires screening or interventions for the State prison population with regard to exposure to Valley Fever.” Referring to CDCR’s list of high risk facilities is neither scientifically adequate nor does it have any analysis of the actual danger of contracting Valley Fever at the project site. As a counterexample, a severe and highly-publicized case of Valley Fever in California State Prison - Los Angeles County was reported on by Mother Jones this year.²

CRLA-11

Rather than mitigate the contraction of Valley Fever by sensitive receptors (i.e. prisoners, staff, visitors), the DEIR states that “because the majority of the Project site will be paved or landscaped, there are few opportunities for on-site soils to produce airborne dust...The operation of the MLWDC will follow standard LASD procedures for medical care and prevention with regard to health care for inmates in general, and Valley Fever specific all [sic] and will continue to coordinate with LACDPH (Masis 2015).” The report essentially and inadequately dismisses the very real possibility of Valley Fever contraction among sensitive receptors. Antelope Valley is a high wind area, meaning that infectious spores may become airborne from surrounding soils not considered “on-site.”

CRLA-12

The report fails to consider frequent clinical misdiagnosis of coccidioidomycosis cases.³ How will the project ensure proper diagnosis and treatment of Valley Fever?

CRLA-13

¹ <http://journals.plos.org/plosone/article?id=10.1371/journal.pone.0136753>

² <http://www.motherjones.com/environment/2015/01/valley-fever-california-central-valley-prison>

³ <http://publichealth.lacounty.gov/acd/docs/cocciRxarticle.pdf>

Analysis of motor vehicle pollutant fails to consider additional traffic necessitated by services contractors and/or vendors, e.g., laundry. Since the project site will not include a laundry site, how frequent will laundry services occur? Will this service be contracted? If so, with what company and where? How will the regular travel to the jail to pick up laundry impact additional pollutants from motor vehicles? What other vendors will the project require? How will regular visits by truck from service/delivery vendors to and from the jail impact air quality? What is the estimated vehicle mileage incurred by all delivery/service trucks in two weeks?

CRLA-14

“Air quality plan” is vague. Please provide examples of potential air quality standard plans.

CRLA-15

The report states that 44% of the site will be outdoors; 1.5 out of 46 acres will be outdoor recreational space. What are the long-term impacts of potential exposure to Valley Fever during outdoor recreational activities? Where will the imported soil (for garden beds) come from? The soil must be tested and the results of which should be included in the final EIR.

CRLA-16

What soil tests have been conducted on the project site for Valley Fever specifically? What were the findings? How many, if any, tests have been completed? Who conducted the test? Please include documentation of soil testing on the project site for Valley Fever in the final EIR.

CRLA-17

What are the potential impacts of increased pollutants on the health of prisoners? What mitigation measures will be provided during outdoor recreation?

CRLA-18

What are long-term mitigation measures for Valley Fever with regard to the soccer field, running track and other outdoor recreational area?

4.3 BIOLOGICAL RESOURCES

Page 155, 4.3-10

What are the few wildlife species expected to use the site? How will refurbishment of MLDC impact the habitat or movement of wildlife species?

CRLA-19

Describe in detail how the project will directly and indirectly impact nesting habitat for migratory birds. What are the migratory patterns of birds expected to occur, and what are proposed mitigations? When do active nests occur during the year? The project proposes to mitigate the loss of an active nest by requiring seasonal avoidance or pre-construction surveys for nesting birds. If the duration of construction is 35 months, how will the construction of this project avoid particular seasons? How will pre-construction surveys mitigate the indirect impacts of a 35 month construction period?

CRLA-20

How will MBTA regulations be enforced and monitored for compliance during the construction phase?

Page 154, 4.3-12

The project projects construction to begin in December 2016 for a duration of 35 months. MM BIO-1 prohibits removal of trees supporting roost sites during bat maternity roost season (March 1 to July 31). However, the demolition of bat maternity roosts will indirectly impede the use of wildlife nursery sites, as the colony will not be able to return to their nursery site.

CRLA-21

What are the ecological impacts of removing bat maternity roosts in the area? How will the removal of colonial and solitary roosts sites impact the regional population of the bat species?

MM BIO-1 is contradictory in that it calls for the complete removal of nests in order to mitigate the project's interference of wildlife movement. MM BIO-1 is not an appropriate nor effective in reducing the impact of removing occupied bat maternity roosts.

CRLA—22

Which program of the Los Angeles County Department of Public Works will be provided the results of the pre-construction bat habitat assessment? Will this be available to the public. I would recommend the county to include the details of this assessment in the final EIR.

CRLA-23

The name, credentials or institutional affiliation of the Biologist(s) conducting pre-construction surveys and assessments must be disclosed. We recommend the county to seek specifically a conservation biologist.

CRLA-24

MM BIO-2 proposes "an appropriate buffer zone" around an active nest if found. What exactly constitutes an appropriate buffer zone? Is there a standard determined by the American Institute of Biological Sciences? Will the standard be used? If not, why?

4.4. CULTURAL RESOURCES

Letters to native american consultations = appendix C-3
look at appendix C-2

Page 171, 4.4-10

The last paleontological resources record search was performed in 2008. The county must verify that no discovery of fossil localities have been recently recorded with the project site. These references must by updated by the NHMLAC.

CRLA-25

Page 172, 4.4-11

In assessing potential effects of Native American artifacts, BonTerra Consulting only received one response. It is not indicated whether follow up was made to the remaining six individuals, as recommended by the Native American Heritage Commission. The county must ensure that all the Native American tribes and individuals are consulted, not simply informed.

CRLA-26

Beverly Salazar Folkes informed us on December 8, 2015 that she never received the informational letter, dated February 3, 2014.

Page 180, 4.4-16

The determination of "non-contributor" to the historic designation of the Old Lock Building requires justification and further investigation. Built in 1946, it is located directly adjacent to Old Hangar 2. Its demolition potentially affects the historical significance of the site. Similarly, the Quonset Hut (built c. 1971) and Wooden Shed (built c. 1959), are also slated for demolition, but fall under the 45 year requirement for assessment as potentially warranting individual preservation as historic structures. These assessments are not provided. Additionally, demolition of these structures together for the creation of a parking lot will have a cumulative detrimental impact on the site's feeling, historic association, setting, and design.

CRLA-27

Page 182, 4.4-18

The name, credential and/or institutional affiliation of the Paleontologist retained by the county to monitor excavations must be disclosed.

CRLA-28

If a fossil resource is determined to be significant, any plan formulated by the paleontologist must be disclosed and detailed in the final EIR or an addendum.

What are the short-term and long-term impacts of excavation activities with regard to Valley Fever and fugitive dust? What are proposed mitigation measures for fugitive dust and exposure of Valley Fever during the excavation of native soils?

CRLA-29

MM CUL-1 and MM CUL-2 are not sufficient mitigation measures. All pre-construction assessments/surveys must be documented in the Environmental Impact Report (EIR) to ensure compliance with CEQA Guidelines. Archaeologists and paleontologists must conduct their evaluations and submit their findings as part of the final EIR. There is no third-party monitor to ensure compliance with CEQA after the final EIR is approved. The only option to ensure compliance is to complete pre-construction assessments prior to the completion of the final EIR.

CRLA-30

GEOLOGY AND SOILS

The report does not indicate if the soil has been tested for coccidioidomycosis (Valley Fever), lead, chemical, and other toxins. Please provide detailed and summarized results of soil tests conducted on the project site. The final report must also include the name, credentials and/or institutional affiliation of the soil specialist.

CRLA-31

Page 193, 4.5-4

How will continued drought conditions and further depletion of groundwater in the area affect the project site's susceptibility to liquefaction in areas of localized perched groundwater?

CRLA-32

Page 196, 4.5-7

Antelope Valley does experience very high winds from March through July. What are proposed mitigation measures to prevent fugitive dust and exposure of Valley Fever to the construction workers, scientific monitors, and the residents proximate to the project site during construction?

CRLA-33

Page 197, 4.5-8

Drought conditions and depletion of groundwater will continue; thus, subsidence will worsen causing damage to the foundation of the structure. How will the county propose appropriate mitigation measures given current and projected conditions? What are anticipated hazards for the prisoners residing in the jail should further subsidence occur? What are estimated operational costs for repair and maintenance of overlying structures, foundations and walls?

CRLA-34

The findings of a geotechnical investigation must be disclosed in the final EIR. The determination of "less than significant impact" must be justified in detail.

CRLA-35

GREENHOUSE GAS EMISSIONS

Page 211, 4.6-10

Water resource summary of general environmental effects of climate change does not include recent drought conditions and its exacerbation of reduced water supplies.

CRLA-36

Page 215, 4.6-14

The report states that "soil import and export are not anticipated for the Project," however, the raised garden beds for the project's on-site recreational activities "will be filled with imported soils derived from outside the Antelope and Kern Valleys" to prevent prisoners from interacting with local soil. The construction activity impacts are incorrect and must be updated in to include energy expended for soil import and export.

CRLA-37

Furthermore, the construction input data fails to account for the import of water for prevention of fugitive dust and exposure to Valley fever when breaking ground.

} CRLA-37

The construction input data fails to account for removal of hazardous waste.

The report states that “GHG emission-reduction measures for construction equipment are relatively limited.” This statement requires further justification/evidence. What is the inventory of construction equipment for this project? What are the average GHG emissions of each equipment?

} CRLA-38

Report states that construction will begin in November 2016. In other pages, December 2016 is the projected start date for construction.

} CRLA-39

The report concludes that a separate significance finding for construction emissions is not necessary. This requires further justification and the report must provide the threshold for construction annual GHG emissions.

} CRLA-40

Page 216, 4.6-15

If the design-build contractor requests an expedited schedule, the total GHG emissions would not be the same if project assumes at 5-day work week. The purported “offsetting decreases” are groundless assumptions that cannot be used to claim a reduction in total GHG emissions even if the number of work days increases. Total GHG emissions must be recalculated assuming a 6-day work week.

} CRLA-41

Failure to accurately include all operational GHG emissions (e.g., vehicle emissions from service/deliver truck) requires the estimated operational annual GHG emissions to be recalculated.

} CRLA-42

How was the operational annual emissions for each source area (energy, mobile, etc) calculated? How do these numbers compare to annual emissions of MLDC when it operated under Immigration and Customs Enforcement? Please provide the operational annual emissions of the facility when it was last used, and how the county determined input estimates for electricity, natural gas, water and solid waste.

} CRLA-43

The conclusion that total annual estimated GHG emissions for the project would result in less than significant GHG missions is not accurate. GHG emissions must be recalculated to include all input and output data.

} CRLA-44

Page 218, 4.6-17

The development of Project-specific ECRP must be created and disclosed in the final EIR to ensure compliance of mitigation. If the proposed measures of ECRP are not feasible, it is not appropriate to claim an overall reduction in GHG emissions.

} CRLA-45

PDF GHG-2 projects GHG emissions reduction with the placement of video-visiting stations at the Project site. However, it is erroneous to assume that in-person visitations will decrease with the availability of video visitations. There is no evidence to prove correlation; thus, the report cannot conclude a reduction in total GHG emissions based on this assumption. In fact, given the jail site’s proximity to different areas of Los Angeles and neighboring counties, one can conversely assume that family/friends, who may live in Antelope Valley or Kern County and could not previously visit their loved ones at CDRF due to the distance, will now frequent the jail.

} CRLA-46

PDF GHG-3 projects GHG emissions reduction by posting AVTA bus transit and Metrolink schedules. This is illogical and inappropriate to assume that simply posting transit schedules will encourage use of public transportation. This reasoning fails to account for an array of reasons for why people are unable to use public transportation. Moreover, it is irresponsible and deceptive to then claim definitively that there will be a reduction in total annual GHG emissions (and therefore no significant impact needs to be addressed).

CRLA-47

PDF GHG-4 proposes GHG emissions reductions by providing secure on-site bicycle storage for both staff commuting and visitors. Again, this is groundless. Simply setting up bicycle storage does not guarantee a reduction in VMT associated with vehicle travel. Therefore, the project cannot assume a reduction in overall annual GHG emissions. The project acknowledges uncertainty of staffing availability in Antelope Valley, and cannot claim definitively that staff commuting would live locally. Additionally, there is only one dedicated bicycle lane in the freeway and roadway system of the project; that is, the bicycle lane only on the east side of Valley Central Way. There are no proposals by the project, city or county to expand bicycle lanes in Lancaster or Antelope Valley.

CRLA-48

Given these contradictions, the Project must recalculate total annual GHG emissions without purported "offsetting decreases". The above comments challenge the report's finding that the project would have no impact on GHG emissions.

CRLA-49

The report fails to address how conditions of climate change will affect the project's water supply and impact on Los Angeles county's water supply. Additionally, the report does not address how the spread of Coccidioidomycosis will intensify with higher temperatures, drier land, loosened soil/sand and other environmental effects of climate change. Furthermore, the report states that the degrading quality of our air will increase the spread of infectious diseases and their vectors but does not consider Valley Fever as one such infectious disease. The environmental effects of climate change will exacerbate prominence of coccidioidomycosis which is already endemic to the project site. Women are particularly vulnerable, evidence in Dr. Ramon Guevara's article published September 2015. Therefore, the Project must thoroughly assess the potential health impacts on the women who would be forced to relocate to the project site.

CRLA-50

The project must assess the environmental effects of climate change on air quality, water supply and the spread of Valley Fever.

HAZARDS AND HAZARDOUS MATERIALS

Regarding the onsite underground storage tanks at the central plant that has failed leak detection tests and has not been corrected. There is not mitigation proposed to repair or remove this underground storage tank. It is possible that over time, with use or not, hazardous waste will continue to leak and potentially contaminate the soil and groundwater.

CRLA-51

Page 229, 4.7-8

Report states that when six older USTs at the MLDC were removed, contamination was found in the soil. The soil contamination was remediated. Which county department oversaw the remediation of the contaminated soil? Please disclose this information.

CRLA-52

Minor staining of the carpet and hydraulic oil on the concrete floors beneath the emergency generator were found in 2014. Despite this, the report states that no leaks were observed. What was the minor staining on the carpet and where did the hydraulic oil come from? What led the county to conclude that no leaks were observed despite staining and presence of oil.

CRLA-53

Regarding asbestos and lead sampling, the report must justify why Building 27-29 were not sampled. } CRLA-54

Please attach the "Closure Certification" letter issued by LA County Department of Public Works (LACDPW) to the property on May 22, 2008 to the appendix of the final environmental impact report. } CRLA-55

This section describes the project site as "the southern and eastern sections of the larger MLDC property are included in the 46-acre Project site, with older structures that were part of the Polaris Flight Academy at the northwestern section *generally not part of the Project site.*" Was the "northwestern section" of the project site, which includes the older structures of the Polaris Flight Academy, tested for hazardous waste and/or materials? The entire project site, including older structures that will be torn down during construction and the Polaris Flight Academy, must be tested for hazards and hazardous materials. The results of said tests must be detailed and summarized in the final report. } CRLA-56

Page 230, 4.7-9

The report states that the facility was cited, in June 2013, by the Los Angeles County Fire Department because the generator and USTs did not have current permits. The report does not state if and how the project will seek to update permits for hazardous wastes and generators. } CRLA-57

The report is contradicting in that it states on page 4.7-8 that "no leaks were observed" in 2014, however, on page 4.7-9, the report indicates that "the UST at the central plant also failed leak detection tests in 2013." In addition, on page 4.7-11, the report states that "two USTs at the fueling station were found...to have failed leak detection tests in 2013." The report does not propose repair and/or removal of these leaking USTs. } CRLA-58

Pg 232, 4.7-11

The report notes that two USTs at the fueling station were found to not have current permits and have failed leak detection tests. There are no proposed mitigations to update permits. } CRLA-59

What are the hazardous implications of the two hydraulic hoists observed in the vehicle service garage? } CRLA-60

The report states that there is a possibility for soil and groundwater contamination if hazardous materials are not properly dealt with. Has the project already tested the soil for contamination? If so, the report must include detailed and summarized results. } CRLA-61

Has the project already tested the groundwater for contamination? Given that, at the very least 3 USTs have failed leak detection tests without remediation since 2013 and 2014, it is necessary to test both soil and groundwater for contamination. The results of soil and groundwater tests for contamination must be included in the final report. } CRLA-62

Page 235, 4.7-14

What is SWPPP? What are all the requirements of preparing and implementing an SWPPP? Will the results of the SWPPP be disclosed in the final report? If not, why? } CRLA-63

The report must describe in detail the proposed mitigation of storm water discharge. It is not sufficient to simply list the requirements of NPDES Construction General Permit. The final } CRLA-64

report must include detailed proposed mitigation for preventing hazardous wastes and/or pollutants from being discharged in storm water.
The project fails to provide mitigation measures for the impact of transporting and disposing of hazardous waste on the neighboring residents and larger community.

CRLA-65

The emergency generator at the central plant and beneath the hole punch machine in the George Barracks must be further investigated for toxic leaking and the proximate area must be analyzed for contamination.

CRLA-66

The report fails to comprehensively analyze the potential long-term operational impacts of transporting, disposing and/or handling hazardous materials on the prisoners that would reside on the project site and nearby residents.

CRLA-67

Page 236, 4.7-15

The report fails to mitigate the potential impact of utilizing, transporting and/or disposing hazardous materials during construction/demolition on nearby residents.

All buildings on the MLDC property must be sampled for asbestos. If asbestos is found, then materials containing asbestos should be handled, removed, transported and disposed of in compliance with existing regulations. By conducting tests on all buildings on the MLDC property, i.e. project site, the Project would render MM HAZ-1 unnecessary.

CRLA-68

Page 237, 4.7-16

The claim that “intact painted surfaces do not require stabilization prior to renovation/ remodeling or demolition” must be justified. If intact painted surfaces contains any lead content, mitigation measures for operational impact must be proposed.

CRLA-69

All buildings on the MLDC property must be sampled for lead. MM HAZ-2 is not a sufficient mitigation measure as it does not comprehensively describe the process preventing exposure to lead-based paint for construction workers and neighboring residents, whom might be impacted during demolition/construction.

MM HAZ-1 is not a sufficient measure to mitigate the significant impact of the presence of released asbestos fibers where prisoners would be exposed on a daily basis. The development of an “O&M” that requires periodic observation, inspection and documentation does not mitigate the potential exposure and detrimental health impacts on prisoners that would be exposed on a daily basis. The buildings that have been tested for ACM and have potential for airborne asbestos fiber release must be removed to ensure the safety and health of prisoners forced to reside at the project site. MM HAZ-1 also failed to adequately address the exposure of asbestos fibers where damaged ACMs have occurred.

CRLA-70

Page 238, 4.7-17

Regarding off-site impacts, the proposed mitigation, RR HAZ-5, fails to adequately address the potential impact of use, storage, disposal and transport of hazardous materials/wastes during construction on off-site infrastructure. Simply notifying owner/operators of such infrastructure would not mitigate potential damage to high priority lines.

CRLA-71

The report notes that an elementary school has been proposed on Lancaster Boulevard, east of 50th Street West in 2010. The report fails to indicate if this elementary school, which would be 0.70 miles away from the project site, has been constructed and if it is in operation.

CRLA-72

The report fails to adequately mitigate the impact of potential emission of hazardous materials, substances or waste on nearby residents, namely, the homeless shelter (GRACE) which is less than 0.25 miles away from the project site.

} CRLA-73

Page 239, 4.7-18

The report states that the Polaris Flight Academy, which is within/near the project site/MLDC property, has a status of “inactive-needs evaluation” as of 2005, however, no evaluation is proposed to update the status. The potential contaminants of the Polaris Flight Academy must be investigated and reported in the final EIR with appropriate mitigations. The county must work with the Defense Environmental Restoration Account (DERA) and the DTSC to evaluate the site as significant hazards may be identified.

} CRLA-74

The soil sampling and analysis completed at 14 locations are not specific enough. Please indicate where soil sampling and analysis occurred on the project site. Regarding these specific samplings, what was tested for? Please list all toxins, chemicals, and/or hazardous waste that these samplings tested for.

} CRLA-75

Concentrations of TPH in the diesel and/or oil ranges must be investigated and the hypothesis that elevated concentration samples resulted from overlying asphalt surface over must be further justified.

Test and analysis of concentrations of total petroleum hydrocarbons (TPH) must be justified in the final report.

The potential impacts of elevated TPH concentration detected at locations M1 and M10 on prisoners and personnel must be further investigated. Any claim that minimal exceedance would not pose a threat to the health of prisoners and employees must be justified. The proposal to cover contaminated soil so that exposure pathways are prevented must be detailed and considered in relevant areas (i.e., greenhouse gas emissions, geology and soil, etc). The claim that TPH concentrations would not present a significant risk to occupants require further justification as the proposal to lay asphalt is not included in other sections of the report.

} CRLA-76

Page 240, 4.7-19

The report must analyze the impact of moving 1600+ people to the project site when MLDC is listed in government databases as a hazardous waste generator, and proposed mitigations do not include any reparation or removal of existing hazards materials and waste.

} CRLA-77

The failure to remove or repair the UST that has failed leak detection tests does not adequately mitigate potential health impacts on the prisoners and employees and environmental impacts on and near the project site.

} CRLA-78

The impacts related to past hazardous materials use at the site are not adequately mitigated. Further justification of the report’s finding that it would be less than significant is required.

} CRLA-79

The report’s finding that the “vehicle fleet garage” is not a part of the project site and therefore requires no mitigation is not sufficient. The vehicle fleet garage is on the property of MLDC, of which the project site is also included, is within reasonable proximity of the project site and justifies further investigation and appropriate mitigations to prevent environmental and health impacts. In other words, the soil beneath the pits of the hydraulic hoists must be tested, analyzed and appropriate mitigation must be proposed in the final report.

} CRLA-80

Page 242, 4.7-21

The report indicated that the helipad will remain in place at the northeastern corner of the Project site and its use is anticipated by the Sheriff's Department helicopters. The potential for fugitive dust is anticipated with helicopter use, however, potential impacts are not studied nor recognized.

CRLA-81

4.8 HYDROLOGY AND WATER QUALITY

Regarding the adjudication of groundwater rights, how might the outcome affect water supply for the proposed jail? What are the associated costs? Will the proposed jail contribute to further overdraft of groundwater in LA County, not just Antelope Valley? What is the well flow rate, well yield, water quantity and rate of replenishment of LA County Waterworks District 40 water line and Antelope Valley-East Kern Water Agency (AVEK)?

CRLA-82

The impact on Waterworks District 40 water line and supply must be considered in light of drought conditions. The entire county, not just Antelope Valley and underlying groundwater sources, is in a state of overdraft. What is the impact of this project on the water supply of Waterworks District 40 and AVEK?

CRLA-83

The historic well production statistics are outdated. The intensification of drought conditions in recent years (post 2012) warrants an updated study.

CRLA-84

How do they monitor compliance during construction? For example, the report states that compliance with NPDES Construction General Permit would ensure the project does not violate water quality standards, but during the construction process, how will water quality standards be monitored?

CRLA-85

The report states that increased storm water runoff could result in erosion if site improvements are not conducted in compliance with regulations. What third party monitor will be in place to ensure compliance during construction and operational use?

What are the associated costs with a new drain system?

CRLA-86

The report states that the project will not use groundwater supplies for long-term operations. Imported and recycled water is proposed as an alternative. What are the long-term impacts of importing water on traffic and air quality? Where will the recycled water come from? Are there safety and hygiene concerns with using recycled water?

CRLA-87

Construction and disturbance of soil will occur before the new water pipeline is completed. Spraying the ground with water is proposed as a mitigation measure for Valley Fever during construction. What water supply will be used during construction?

CRLA-88

Page 263, 4.8-14

The project proposes to use on-site water wells for water needed during construction activities and dust control. However, the report claims that no significant impact will occur because the water used during construction will replace "existing water use from minor maintenance and security activities." What are the existing water use from minor maintenance and security activities? And will that water use continue during construction? If so, the report is inaccurately in its determination that impacts to groundwater supplies or recharge would be less than significant.

CRLA-89

What are current groundwater supplies and recharge rate for groundwater supplies of the Antelope Valley Groundwater Basin? How will use during construction impact groundwater supplies and recharge rate? } CRLA-89

The report does not accurately assess the amount of the water required for construction activities and dust control. The report must analyze every construction activity that would require the use of water (e.g. spraying down exposed soil where new buildings are proposed). The sum of this assessment must also be considered in analyzing the overall GHG emission rate of the overall project, and outlined in the final report. } CRLA-90

What is the estimated cost of developing a new on-site storm drain system? } CRLA-91

Page 269, 4.8-19
The report states that the project does not propose the use of groundwater supplies for long-term operations therefore would not contribute to the depletion of local groundwater supplies. However, the report fails to analyze the current and projected groundwater supplies of the Antelope Valley-East Kern Water Agency and the project's impact on said groundwater supplies. } CRLA-92

4.11 POPULATION AND HOUSING

Are growth projections reconciled with environmental impacts? For example, Table 4.11-6 projects an increase of ~20,000 people in 2020 (from 2008) – is this projected population considered in the long-term analysis of water usage in Lancaster? } CRLA-93

Jobs at the jails are not the type of job creation that the community needs. What percentage of the unemployed population in Lancaster would qualify as an employee of the sheriff's department? } CRLA-94

4.12 PUBLIC SERVICES AND RECREATION

Page 4.12-3
The report states “neither the project site nor the city of Lancaster is located within areas identified to have “very high fire hazard severity.” However, in the Hazardous Waste section, the report claims that the project site is at least 4.5 miles from the edge of an area determined to be “very high fire hazard severity.” } CRLA-95

Outdoor recreation area is required for detention facilities. However, no mitigation measures have been proposed for the outdoor recreational space (soccer field, running track and gardening areas) and potential exposure to Valley Fever and poor air quality. } CRLA-96

It is not indicated whether the full-sized sports court for volleyball and basketball is outdoor or indoor. } CRLA-97

4.13 TRANSPORTATION AND TRAFFIC

The report includes a very limited assessment of traffic, i.e. the report only analyzes increased traffic from visitors and fails to include increased traffic from regular service/delivery trucks and vendors. The report inappropriately mitigates projected increase in traffic by proposing the use of video visitation. } CRLA-98

The project site is not easily accessible by public transportation, creating further obstacles for families to visit loved ones inside the jail. The project does not propose an increase in } CRLA-99

frequency of bus routes from LA to Lancaster, nor does the project propose additional bus stops or routes near the project site.

} CRLA-99

There is only one bicycle lane on one road near the project site. There are no proposed bikeways to facilitate transportation to the site.

} CRLA-100

In total, the project fails to propose meaningful alternatives to the increased distance from families of people inside the jail. The increased distance for some family members would negatively impact the post-release success of individuals.

} CRLA-101

The way visiting is described in this report and the way visiting was described in the Women's Program Model for Mira Loma (reference Feb 2014 Sheriff's Education Based Incarceration Bureau) are in conflict. The Program Model laments that the existing jails do not provide for contact visiting – implying that Mira Loma will. The Program Model also states that the Sheriff's Department would provide bus service for visitors (but limits that service to children and their guardians). However, in this report, it is proposed that this project not only encourages but assumes video visitations as the primary form of visitation. In addition, there is no proposal in this report that includes a bus service for visitors.

} CRLA-102

2.2.3 CRITICAL RESISTANCE LOS ANGELES ET AL. (CRLA)

January 12, 2016

CRLA-1

This comment provides a general introduction to the comment letter and alleges a failure to address environmental impacts and alternatives to the Project. The Draft EIR for the proposed Project has been prepared in accordance with the California Environmental Quality Act (CEQA, *California Public Resources Code*, Sections 21000 et seq.) and the State CEQA Guidelines (*California Code of Regulations* [CCR], Title 14), and addresses the potential direct, indirect, and cumulative impacts of the Project on all environmental issue areas. Section 5.0, Project Alternatives, was prepared in accordance with Sections 15126.6(a) through 15126.6(f) of the State CEQA Guidelines. As demonstrated throughout the Draft EIR, all potentially significant impacts have been reduced to levels that are less than significant through the identified mitigation measures, and no significant unavoidable environmental impacts would result from Project implementation.

CRLA-2

This comment alleges that a new jail will be detrimental to the environment and residents of Los Angeles County. Although the Project site has been unoccupied since 2012 as discussed in Section 2.0, Environmental Setting, the Project site has generally been in operation and providing various detention/jail functions since 1945–1946, when the California Youth Authority began to run a vocational school for juvenile offenders at the site. In the mid-1950s, the MLDC operated as a medium-security facility until it ceased operations for the first time in 1979. It reopened in 1983 and was expanded with the construction of several new buildings in 1986. The facility was repurposed for female inmates and was known as the Mira Loma Female Honor Ranch, but was closed again in 1993. The MLDC reopened for use in 1997 by the U.S. Immigration and Customs Enforcement (ICE) to house undocumented immigrants until their immigration cases were decided, and it operated in that capacity until 2012. The site has not housed inmates since that time. The MLWDC Project proposes the adaptive reuse, renovation, and expansion of the majority of the buildings at MLDC, which is an existing County asset. The redevelopment of the property as the MLWDC would avoid the costs associated with constructing a new facility.

Sections 4.1 through 4.15 of the Draft EIR provide analyses of environmental effects that could impact residents in Los Angeles County and others by Project implementation. Each of the environmental issues listed in the comment are fully analyzed in the Draft EIR. Valley Fever and the generation of criteria pollutants (i.e., carbon monoxide [CO]; nitrogen oxides [NOx]; volatile organic compounds [VOCs]; sulfur oxides [SOx]; respirable particulate matter less than 10 microns in diameter [PM10]; and fine particulate matter less than 2.5 microns in diameter [PM2.5]) are discussed in Section 4.2, Air Quality. Native American resources are discussed in Section 4.4, Cultural Resources. Energy demands and sources are discussed in Section 4.15, Energy. Additionally, a Water Supply Assessment was prepared for the Project and is included in Appendix G-2 of the Draft EIR; this is summarized in Section 4.14, Utilities and Service Systems. The mitigation measures (MMs) presented in the Draft EIR are prepared in compliance with Section 15126.4 of the State CEQA Guidelines. This Final EIR, including all comments submitted to the County on the Draft EIR, will be provided to the County of Los Angeles Board of Supervisors. Therefore, your concerns will be presented directly to the decision makers prior to consideration of Project approval.

CRLA-3

This comment alleges a failure to consider a comprehensive list of alternatives to the Project, including alternatives to incarceration and out-of-custody alternatives. The Draft EIR in fact addresses alternatives in accordance with CEQA and the State CEQA Guidelines. As demonstrated in Section 5.0, Project Alternatives, an EIR must describe a range of reasonable and of potentially feasible alternatives to the proposed Project, or to the location of the Project, which would feasibly attain most of the basic Project Objectives but would avoid or substantially lessen any significant effects. Based on the analyses in Sections 4.1 through 4.15 of the Draft EIR, the proposed Project would result in significant environmental effects prior to mitigation on a number of environmental topics. Following mitigation, however, impacts to all of these topical areas would be avoided or reduced to less than significant levels with the implementation of mitigation measures. No significant and unavoidable impacts would occur with the Project.

Additionally, an EIR is not required to consider alternatives that are infeasible. The range of alternatives is governed by a “rule of reason” that requires discussion of only those alternatives necessary for the County of Los Angeles Board of Supervisors (Board) to make a reasoned choice. As demonstrated in Section 3.0, Project Description, on October 22, 2013, the Board authorized the evaluation of a proposal to use a portion of the Mira Loma Detention Center (MLDC) property as the site for a female detention facility in lieu of the Pitchess Detention Center (PDC) site previously proposed. In May 2014, the Board directed that “Option 1B” be studied, as recommended in the *Los Angeles County Jail Plan Independent Review and Comprehensive Report* (Jail Plan Report). Option 1B recommended continued evaluation of renovating the facility at MLDC for a women’s detention center. The Draft EIR has been prepared to evaluate the environmental impacts of pursuing the proposed Project, in compliance with this Board of Supervisors directive.

The proposed jail planning is set in the context of the County’s other programmatic and financial support of diversion from incarceration. Purely social effects of a project are beyond the scope of CEQA analysis, which focuses on the proposal’s effect on the physical environment. The County, however, has a concurrent focus on diversion from incarceration as it considers this Project. Therefore, the proposed Project is consistent with the Board of Supervisor’s consideration of policy issues addressing alternative approaches to incarceration, including out-of-custody alternatives.

The Board of Supervisors has adopted numerous recent actions to reduce the number of people who are incarcerated in Los Angeles County, particularly those with mental illness and/or substance use disorders. The Board of Supervisors’ actions relating to diversion from the criminal justice system to reduce the need for incarceration are based in part on their consideration of the August 4, 2015, District Attorney’s report of the Criminal Justice Mental Health Advisory Board in a document entitled “Mental Health Advisory Report: A Blueprint for Change – Providing Treatment, Promoting Rehabilitation and Reducing Recidivism: An Initiative to Develop a Comprehensive Plan for Los Angeles County”.

The members of the District Attorney’s Advisory Board were the Sheriff; the Fire Chief; the Directors of the Departments of Mental Health, Health Services, Public Health, Veteran’s Affairs, and Public Social Services; the Public Defender; and the Executive Director of the Countywide Criminal Justice Coordination Committee. All Advisory Board members participated in the Countywide assessment of services and recommendations to provide for comprehensive mental health diversion for each stage of the criminal justice continuum, from first responders to community re-entry and support. This report summarized the range of diversion programs already existing in the County and analyzed the need for additional mental health and substance abuse

diversion services for each stage along the criminal justice continuum. The County of Los Angeles Chief Executive Office (CEO) has acknowledged that these recommendations recognize that there are potential new efficiencies and cost avoidance by redirecting persons in need of physical, mental, and public health care services from the criminal justice system to appropriate care and treatment in lieu of incarceration.

On August 11, 2015 and September 1, 2015, in the context of determining potential capacity of proposed County jail facilities, and responding to treatment needs for the mentally ill or victims of substance use disorders, the Board directed an ordinance be prepared to establish an Office of Diversion and Re-Entry (Office) within the Department of Health Services. That ordinance was adopted, and the Office has been established pursuant to Section 2.76.600 of the Los Angeles County Code. For administrative oversight, the Board of Supervisors determined the Office will be a part of the Department of Health Services and the Director of the Office will report to the Director of the Department of Health Services. The Director of this Office will be advised by a Permanent Steering Committee with broad membership from County departments working in collaboration with working groups established by the District Attorney. It includes representatives from the offices of the Sheriff, the Fire Chief, the Chief Executive Office, Superior Court, Public Defender, Alternate Public Defender, Probation, the District Attorney, Mental Health, Public Health, and Health Services.

The Office will oversee Countywide diversion efforts including a system of integrated mental, physical, and public health care services as well as supportive housing for those at risk of homelessness who are redirected from the criminal justice system or re-entering the community after incarceration. For purposes of this Office's jurisdiction, the expectation is for diversion to seamlessly occur across "sequential intercept" points within the criminal justice system. Such intercept points include initial contact with law enforcement or other first responders, involvement with the criminal court system, incarceration, or post-release from incarceration.

The Office was allocated an initial Supplemental Budget of \$74.5 million to be spent 40 percent on housing; 50 percent for diversion and anti-recidivism programs; and 10 percent for administration. The Board of Supervisors directed that future budget allocations be a part of the annual budget process. On September 1, 2015, the Board of Supervisors also directed that the Office distribute funding so at least 1,000 individuals would be diverted across all intercept points within the criminal justice system.

The Criminal Justice Mental Health Advisory Board report of August 2015 concluded that, even with increased opportunities for diversion from a jail environment, there will still be a need for mental health treatment in jails and that diversion efforts can reduce, but will not eliminate, the need for the County to operate detention facilities (LACDA 2015). In light of the County's diversion efforts, the Board of Supervisors directed that, for purposes of ongoing study and evaluation in the environmental review process, the maximum size of the proposed women's detention center at Mira Loma in Lancaster would remain at 1,604 beds. In addition, the Board of Supervisors reduced the maximum proposed size by approximately 1,000 beds, for purposes of the environmental review of a separate proposed treatment and detention center addressing needs of incarcerated men and women with mental illness and/or substance use disorders at the site of the current Men's Central Jail in downtown Los Angeles. In summary, the Board of Supervisors has taken steps to reduce the number of people who are incarcerated in Los Angeles County.

The Draft EIR Section 5.0, Project Alternatives, was prepared in accordance with Sections 15126.6(a) through 15126.6(f) of the State CEQA Guidelines and adequately considers alternatives to the proposed Project. Out-of-custody alternatives were not required to be analyzed

in the Draft EIR beyond the No Project alternative analyses and they would not be able to achieve the Project's primary goal, as stated below and in Section 5.3.2 of the Draft EIR.

The Project's goal is to provide detention facilities for low- to medium-security level female inmates that meet modern correctional standards and that prioritize the on-site integration of gender-responsive female inmate education, treatment, and vocational training. This goal focuses on providing a secure detention facility with cost-effective therapeutic and rehabilitative programs to meet needs of eligible female inmates in order to reduce recidivism.

Potential environmental impacts associated with "no action" on the proposed Project are described in Alternative 1A, No Project/Continuation of Existing Operations, and Alternative 1B, No Project/Predictable Actions, as demonstrated in Section 5.0, Alternatives. These alternatives provide information regarding the potential impacts to the environment if the County does not move forward with the proposed Project. This Final EIR, including all comments submitted to the County on the Draft EIR, will be provided to the County of Los Angeles Board of Supervisors. Therefore, your concerns will be presented directly to the decision makers prior to consideration of Project approval.

CRLA-4

This comment provides a general concern that the Draft EIR is inadequate. Responses to the detailed list of comments are provided below, beginning with the response for the comment marked CRLA-5.

CRLA-5

The mitigation measures (MMs) are set forth throughout the Draft EIR and are included in Table ES-2 in the Draft EIR Executive Summary. Each MM includes a requirement for the timing of the implementation, as well as the required monitoring agency. This information is further documented through the Mitigation Monitoring and Reporting Program (MMRP) that is included in the Final EIR package that is presented to the Board for their review and consideration.

Section 15164 (a) of the State CEQA Guidelines states that an addendum to a previously certified EIR must be prepared if changes or additions are needed to the EIR, but none of the conditions in Section 15162 requiring a subsequent EIR have occurred. The conditions that would allow preparation of an addendum include changes to the project or the circumstances under which project would be implemented that do not require major revisions to the previous EIR or that would not result in new significant environmental effects or an increase in the severity of the identified significant effects. When new information becomes available but would not change the significant effects of the project, would not increase the severity of the impacts of the project, or would not make new mitigation measures or alternatives feasible, an addendum may also be prepared. Otherwise, a subsequent EIR or a supplement to an EIR may be needed.

CRLA-6

The estimated costs for building the proposed MLWDC from design to occupancy are presented in Item S-1 of the June 9, 2015, presentation to the Board of Supervisors on jail planning. In this presentation, the proposed MLWDC Project is shown to cost approximately \$123.4 million, and the costs are broken down into Assembly Bill (AB) 900 Grant Contribution, net County cost, and other funding sources. These preliminary costs include the costs associated with the mitigation measures included in the Final EIR. An updated total Project cost estimate will be prepared for

the Board of Supervisors for their consideration at the time the Final EIR and the proposed Project recommendations are presented to them for consideration. The 2015 document can be viewed at the following website: <http://file.lacounty.gov/bos/supdocs/94070.pdf>.

CRLA-7

Table 2-1, City of Lancaster Cumulative Projects, and Table 2-2, County of Los Angeles Cumulative Projects, in Section 2.0, Environmental Setting, presents a listing of projects that could potentially contribute to impacts from the proposed Project, resulting in cumulative impacts. Cumulative impacts are assessed under a stand-alone heading within each Draft EIR Section (i.e., 4.1 through 4.15). Regulatory Requirements (RRs) are also included within each Draft EIR Section (i.e., 4.1 through 4.15) and include applicable local, State, or federal regulations that are required independently of CEQA review and also serve to prevent the occurrence of, or reduce the significance of, potential environmental effects. Typical RRs include compliance with the provisions of the California Building Code, Antelope Valley Air Quality Management District (AVAQMD) rules, local agency requirements, and other regulations and standards. RRs are identified in the MMRP for convenience of tracking.

CRLA-8

The short-term construction impacts of a radio communications tower would not significantly affect scenic resources or result in a significant aesthetic impact. The Project site is currently vacant and there would be no site occupants to be affected by construction activities. Construction of the tower would require approximately two weeks/14 days of crane operations, which is the only piece of machinery that would be visible above the rooflines of adjacent structures. An important consideration is not just whether the crane is visible, but whether it would result in a "substantial adverse effect" on scenic views. A crane is a narrow structure with a thin profile that would not hide or inhibit views of distant mountains. Short-term deployment of construction-related equipment is a common occurrence and is generally understood to be a temporary visual inconvenience. As demonstrated in Section 4.1, Aesthetics, the Project site has an institutional character due to the utilitarian nature of the facility, which is exemplified by the security fencing with barbed wire that separates various sections of the site, tall exterior flood lights, internal paved roadways and parking areas, security watch towers, and an aboveground water tank. The temporary presence of construction-related equipment would not significantly alter or block the views of scenic resources.

CRLA-9

As stated in Section 15126.4(b) of the State CEQA Guidelines, MMs may specify performance standards that would mitigate the significant effect of the project and that may be accomplished in more than one specified way. There are many ways to design exterior lighting to avoid spillover, including adjustments to heights, angles, wattage, filters, and other modifications. As such, MM AES-1 includes the performance standard of requiring that properties with sensitive receptors not be significantly adversely affected by light spillover onto properties with sensitive receptors, while also ensuring that lighting levels meet the security requirements for the MLWDC. Compliance with this standard through the provision of a Lighting Plan is subject to the review and approval of the Los Angeles County Director of Public Works prior to the commencement of any on-site or off-site demolition/construction activities.

CRLA-10

This comment alleges a failure to address the long-term impact of Valley Fever to on-site inmates and individuals living and working in the Project area. Coccidioidomycosis, also known as Valley Fever, and its potential impact on potential future inmates and County staff is discussed in Section 4.2, Air Quality. A summary of hazards associated with the fungus is provided in the Draft EIR and includes summaries of trends related to Valley Fever in Los Angeles County, as inventoried and reported by the Los Angeles County Department of Public Health (LACDPH), which was consulted during the preparation of the Draft EIR.

The commenter references *The Changing Epidemiology of Coccidioidomycosis in Los Angeles (LA) County, California 1973–2011*, co-authored by Ramon Guevara, Tasneem Motala, and Dawn Terashita, MD, MPH of the Los Angeles County Department of Public Health. Dr. Terashita has consulted with County staff on the issue of Valley Fever during preparation of this EIR. This reference has been reviewed and it provides an analysis of the incidence rate of Valley Fever in Los Angeles County, including discussion of the Antelope Valley, and describes the trend of increasing cases through 2011. This information is augmented in the Section 4.2, Air Quality with more recent data, as published in the LACDPH *2013 Annual Morbidity Report*. Information presented in the referenced report is consistent with information provided in the Draft EIR.

The Draft EIR includes an analysis of exposure hazards due to fugitive dust that may result from construction-related earth-moving activities, and identifies several Project Design Features (PDFs) and regulatory requirements (RRs) to minimize any exposure risks. PDF AIR-1, which will be included in the Contractor's Specification and monitored through the MMRP, requires the distribution of materials on Valley Fever, or any updated materials as applicable, to worksite supervisors and construction workers. PDF AIR-2 and RR AIR-1, which will be included in the Contractor's Specification and monitored through the MMRP, requires compliance with Best Management Practices and AVAQMD Rule 403 for the prevention of fugitive dust and nuisance air contaminants. RR AIR-1 provides a listing of the most applicable AVAQMD Rules. Rule 403, Fugitive Dust, requires measures such as watering and control of track-out from the site, as well as submittal of a Dust Control Plan prior to the start of construction. Rule 403 requires control of fugitive dust and avoidance of nuisance, and Rule 402 prohibits the emission of quantities of air contaminants that could cause injury, detriment, nuisance, or annoyance to the public, or that endanger the comfort, repose, health or safety of the public. With implementation of RR AIR-1, on-site earthmoving activities would not result in fugitive dust that could affect adjacent off-site land uses.

As stated in RR AIR-2, the Project will be constructed in compliance with the Department of Health – Infection Control Policy Guidelines Procedure No. 918.01. Policy 918 is intended to prevent the spread of diseases that may be caused by construction-induced airborne pollution in susceptible individuals (patients, staff, and the public) in Department of Health Services (DHS) facilities. The protocols and requirements mandate the designation of an Infection Control Coordinator who must review and approve infection-control plans for new construction or renovation projects to ensure a safe environment. These infection-control plans must include infection-control measures to contain dust, debris, and other elements and to protect the patients, employees, and visitors in this environment. The Infection Control Coordinator has independent authority to stop construction-related activity immediately when the public may be adversely affected by infection-control hazards generated during construction-related activities and when the infection-control precautions and/or engineering controls are inadequate to contain the hazard. As such, the Draft EIR states that exposure to Valley Fever during construction activities would be the same as exposure to dust, and, thus, should follow the requirements for the mitigation of dust. Impacts would be less than significant, and no mitigation is required.

Section 4.2, Air Quality, acknowledges that the future inmate population has the potential to be exposed to dust generated from soils in the Antelope Valley, which have the potential to contain *Coccidioides* spores (i.e., the fungus that causes Valley Fever). As discussed in Section 3.0, Project Description, of the Draft EIR, according to the Sheriff's Department, AB 109 female inmates are serving an average of 423 days in custody from sentencing date to release date, while non-AB 109 female inmates serve an average of 107 days in custody. Therefore, the length of time that inmates would be living at the MLWDC is temporary, and is not equivalent to a permanent living circumstance or the longer sentences in state prisons that house higher-security inmates.

The Draft EIR summarizes the LACDPH 2013 *Annual Morbidity Report*, which presents the recent trends related to Valley Fever in Los Angeles County, including an increasing incidence rate for reported coccidioidomycosis cases in the last ten years, which has doubled in the past five years. However, the overall incidence rate in the Antelope Valley was not determined to warrant changes in the County's protocol for disease prevention, notwithstanding the fact that the County health and public health officials are well educated on the condition; are familiar with its incidence in the County and elsewhere in the state and are involved in research and education on the subject of Valley Fever.

The LACDPH has not identified the previous U.S. Immigration and Customs Enforcement (ICE) detainee population at MLDC, the future inmate population at MLWDC, or earlier occupants at the HDHS MACC (the adjacent hospital facility, which has relocated in Lancaster) as requiring the implementation of health screening protocols or other measures to address potential Valley Fever exposure.

Also, as demonstrated in Section 4.2, Air Quality, the California Department of Corrections and Rehabilitation (CDCR) determined the State prison facilities that are located in the geographic area where Valley Fever has been reported to be most common are: Avenal State Prison (ASP) in Kings County; Substance Abuse Treatment Facility (SATF) in Kings County; California State Prison-Corcoran (COR) in Kings County; Pleasant Valley State Prison (PVSP) in Fresno County; California Correctional Institution (CCI) in Kern County; Kern Valley State Prison (KVSP) in Kern County; North Kern State Prison (NKSP) in Kern County; and Wasco State Prison in Kern County (WSP). In 2011, 535 of the 640 reported Valley Fever cases within the CDCR (approximately 85 percent) occurred at ASP and PVSP (U.S. District Court 2013). The prisons and facilities identified by the CDCR as having a higher risk of exposure to Valley Fever do not include the California State Prison-Los Angeles County, located in the City of Lancaster, which is adjacent to the MLWDC Project site. As such, the CDCR has not identified the Lancaster area as being a geographic location that requires screening or interventions for the State prison population with regard to exposure to Valley Fever (CDCR 2013).

As discussed with the Sheriff's Department staff for the preparation of the Draft EIR, the operation of the MLWDC will follow standard Sheriff's Department procedures for medical care and prevention with regard to health care for inmates in general, and Valley Fever specifically, and the Sheriff's Department will continue to coordinate with LACDPH (Masis 2015). The LACDPH is the designated County agency with the mandate to protect health, to prevent disease, and to promote the health and well-being of all persons in Los Angeles County. As such, any future changes in LACDPH policies that may be made regarding Valley Fever for inmate populations will be implemented, as applicable, throughout the County jail system.

Because the future inmate population's exposure to disturbed soils would be limited to gardening activities, PDF AIR-3 in Section 4.2, Air Quality, states that the Project will import gardening soils from outside of the Antelope Valley, which would be used in raised planting beds to remove

gardening in native soil as a potential source of exposure to Valley Fever spores. Further, outdoor recreational areas would be covered with landscaping, turf grass, gravel or landscaping/wood chip ground cover that would minimize the opportunity for soils to become airborne.

The Antelope Valley has not been identified by the LACDPH, the AVAQMD, or any other governmental health agency as a region that should be avoided by the elderly, women, children, health-compromised individuals, or by any specific ethnic groups. The Antelope Valley includes the major population centers of the cities of Lancaster and Palmdale, which have an estimated 2014 combined population of approximately 314,902 people. This portion of the Antelope Valley includes a diverse population of residents that includes many individuals that could be considered to be at higher risk of complications due to infection from Valley Fever spores. As stated in Section 4.2, Air Quality, persons at the highest risk of developing disseminated Valley Fever include the very young (under 1 year old); adults over 60 years; immunocompromised individuals; people with diabetes; women in the third trimester of pregnancy; and certain ethnic groups, including African-Americans and Filipinos.

The demographics of the two cities include approximately 158,605 females (50.4 percent) and 156,297 males (49.6 percent) with a median age of approximately 30.7 years old. The racial/ethnic composition of the area is approximately 47 percent Latino, 29 percent white, 17 percent African American, and 4 percent Asian (U.S. Census Bureau 2016). As such, the temporary presence of a female inmate population into the Antelope Valley would not introduce a new or unusual demographic into the area that is not already present in the existing population of the region.

The MLWDC property is not located in an area determined to be hazardous to the health of local residents or visitors to the region. The Draft EIR concludes that the potential future inmate population's temporary placement into the Antelope Valley, which includes the inmates' participation in all indoor and outdoor activities at the MLWDC, would not constitute placement into a hazardous existing environmental setting that would require mitigation. Additionally, the operation of the proposed Project would not increase the prevalence of Valley Fever spores or otherwise exacerbate an existing environmental condition.

The LACDPH representatives participate in various community focus groups including the Fugitive Dust Group, California Cocci Collaborative, and Centers for Disease Control's (CDC's) Cocci Public Health Working Group in order to stay abreast of current information and resources surrounding the condition.

CRLA-11

The commenter states that there is a "hot spot" of Valley Fever near the Project site, and the source information for this comment is assumed to be *The Changing Epidemiology of Coccidioidomycosis in Los Angeles (LA) County, California 1973–2011*, co-authored by Ramon Guevara, Tasneem Motala, and Dawn Terashita of the LACDPH discussed above in the response for CRLA-10. Section 4.2, Air Quality, includes an overview of the LACDPH *2013 Annual Morbidity Report*. Data included in this report show the incidence in Valley Fever in Service Planning Area (SPA) 1 (i.e., Antelope Valley) from 2009 to 2013. The number of incidents of Valley Fever infection spiked in 2011 in SPA 1 with 93 reported cases, which represented 30 percent of the cases in Los Angeles County, with an incidence rate of 25 per 100,000 people. The incidence rate decreased to 74 reported cases in both 2012 and 2013. As such, in 2013, SPA 1 represented approximately 20.4 percent of the total reported cases in Los Angeles County, with an incidence rate of 19 per 100,000 people. SPA 1 has the highest infection rate in Los Angeles County, which relates to the hot spot referred to in the comment (LACDPH 2013).

However, the rate of Valley Fever infection in Los Angeles County, and the Antelope Valley specifically, is substantially less than in neighboring Kern County, which had a 2013 infection rate of 276 per 100,000 people in the north valley region (KCPHSD 2016). The eastern portion of San Luis Obispo County had Valley Fever infection rates ranging from 205 to 257 per 100,000 people in 2007 through 2012 (SLOCPHD 2014). Therefore, although the Antelope Valley has the highest rates in Los Angeles County, the rates are well below rates found nearby counties where Valley Fever is endemic.

According to the Centers for Disease Control, California has areas that are categorized as “highly endemic”, “established endemic”, and “suspected endemic” for coccidioidomycosis. Los Angeles County as a whole is categorized as being “suspected endemic”, which is the same category ascribed to large areas of Nevada, New Mexico, and western Texas (CDC 2016). Highly endemic areas include Kern County and southern Arizona, including the metropolitan areas of Phoenix and Tucson. As presented in CRLA-10 above, the CDCR has not identified the Lancaster area as being a geographic location that requires screening or interventions for the State prison population with regard to exposure to Valley Fever (CDCR 2013).

CRLA-12

The possibility of future inmates potentially contracting Valley Fever is expressly addressed in the Draft EIR Section 4.2, Air Quality, which acknowledges that the future inmate population has the potential to be exposed to dust generated from soils in the Antelope Valley, which have the potential to contain *Coccidioides* spores. Additionally, Section 4.2, Air Quality, acknowledges that the Project site is located adjacent to land on the east that has exposed native soils (i.e., a 2-megawatt [MW] solar array) and is situated in the context of many acres of undeveloped land and fallow farmland that could generate airborne dust during windstorms. However, the Draft EIR concludes that the potential future inmate population's temporary placement into the Antelope Valley, which includes the inmates' participation in all indoor and outdoor activities at the MLWDC, would not constitute placement into a hazardous existing environmental setting that would require mitigation.

CRLA-13

As discussed with the Sheriff's Department staff for the preparation of the Draft EIR, the operation of the MLWDC will follow standard LACDPH procedures for medical care and prevention with regard to health care for inmates in general, and Valley Fever specifically, and the Sheriff's Department will continue to coordinate with the LACDPH (Masis 2015). The LACDPH is the designated County agency with the mandate to protect health, to prevent disease, and to promote the health and well-being of all persons in Los Angeles County. In fact, *The Changing Epidemiology of Coccidioidomycosis in Los Angeles (LA) County, California 1973–2011*, which is referred to in the CRLA comment letter, was co-authored by Ramon Guevara, Tasneem Motala, and Dawn Terashita of the LACDPH. The LACDPH is highly aware of Valley Fever and monitors reports of any cases of the disease. As such, any future changes in LACDPH policies that may be made regarding Valley Fever for inmate populations will be implemented, as applicable, throughout the County jail system.

CRLA-14

The commenter's assertion that emissions from service/delivery trucks are not included in the Draft EIR analysis is incorrect. As stated in the footnotes to Table 6-1, Project Trip Generation, of the Traffic Impact Study (which is Appendix H of the EIR), “The site specific daily trip generation was derived based on detailed site programming information (employee numbers and shifts,

miscellaneous delivery trucks, and inmate transport vehicles) as provided by County staff" (LLG 2015). Employee trips were estimated at 922 daily trips (461 round-trips); inmate transport trips were estimated at 16 daily trips (8 round-trips); and other miscellaneous trips were estimated at 100 daily trips (50 round-trips).

Laundry will be delivered to the site 3 times a week, with the actual laundering done remotely at another County facility. The Project will also receive food deliveries daily during the work week. Commissary delivery will occur once a week. These deliveries are accounted for in the estimated 100 daily service vehicle trips used in the Traffic Impact Study.

The trip generation is summarized in Section 4.13, Transportation and Traffic, which states the trip generation data includes "all trip types (i.e., staff and employees, service, and inmate visitation trips)". The calculation of mobile source input for trip generation was taken from the Project's Traffic Impact Study. Section 4.2, Air Quality, presents the results of the emission analysis using California Emissions Estimator Model (CalEEMod) Version 2013.2.2, which is a computer program that is used to calculate anticipated emissions associated with land development projects in California. Operational inputs include the year of analysis and vehicle trip generation rates. Output operational emissions data categories include area, energy, and mobile sources. Area sources are landscape maintenance equipment, consumer products, and architectural coatings used for routine maintenance. Energy emissions are from natural gas consumption. Mobile sources are the vehicles used by staff, visitors, and vendors, and include buses used for inmate transport.

Therefore, the Project's trip generation, which includes 100 daily trips for service vehicles, was included as an input into the CalEEMod air quality analysis. As shown in Table 4.2-7 of Section 4.2, Air Quality, the estimated annual operational emissions due to Project-related operations would not exceed the AVAQMD's CEQA significance thresholds, and potential impacts would be less than significant. In fact, emissions were well below the thresholds of significance. For example, carbon monoxide (CO) was the air contaminant with the highest annual rate of emission, and the Project was estimated to emit 18 tons per year, while the AVAQMD threshold of significance is 100 tons per year.

As described in the Project Traffic Impact Study, it is anticipated that the relocation of inmates to the MLWDC would result in additional vehicle miles traveled (VMT) by visitors on weekends and holidays, inmate buses, and by service/delivery trucks seven days per week when compared to the length of trips required for the Century Regional Detention Facility (CRDF) located in the City of Lynwood. The worst-case estimate is an increase of 2,500 VMT on a weekday and 25,700 VMT on a weekend day or holiday (LLG 2015). To account for the increased VMT, CalEEMod default trip distances were adjusted to add approximately 3.26 million annual VMT to the VMT generated with default trip distances.

CRLA-15

The commenter's concern with use of the "Air quality plan" is unclear. The use of that term in Section 4.2, Air Quality, is derived from CEQA Guidelines Threshold 4.2a, which states "A project would result in a significant adverse impact related to Air Quality if it would conflict with or obstruct implementation of the applicable air quality plan". As stated in Section 4.2.2, Existing Conditions, of Section 4.2, Air Quality, areas that are in nonattainment are required to prepare air quality plans and implement measures that will bring the region into attainment. When an area has been reclassified from nonattainment to attainment for a federal standard, the status is identified as "maintenance", and there must be a plan and measures established that will keep the region in attainment for the following ten years. For the reasons detailed on page 4.2-14 under Threshold

4.2a, the air quality plans applicable to the Project site are the *AVAQMD 2004 Ozone Attainment Plan (State and Federal)* and the *2008 AVAQMD Federal 8-Hour Ozone Attainment Plan (Western Mojave Desert Non-attainment Area)*.

CRLA-16

Outdoor recreation, both active (e.g., use of sports courts, running track) and passive (e.g., sitting in courtyards or on turf grass areas), will occur on the Project site. The outdoor recreation opportunities and amenities are one of the benefits of the proposed MLWDC Project when compared to existing facilities at the CRDF. There are no known reasons to believe that risks of infection from Valley Fever from participating in outdoor recreational activities at the MLWDC site would be any different from the risks of participating in outdoor activities elsewhere in the Lancaster portion of the Antelope Valley.

Because the future inmate population's exposure to disturbed soils would be limited to gardening activities, PDF AIR-3 in Section 4.2, Air Quality, states that the Project will import gardening soils from outside the Antelope Valley to be used in raised planting beds to remove gardening in native soil as a potential source of exposure to Valley Fever spores. Vendors for garden soil are numerous and a specific provider has not been determined at this time; however, as required by PDF AIR-3, only imported gardening soil will be used at the Project site. Further, outdoor recreational areas would be covered with landscaping, turf grass, gravel or landscaping/wood chip ground cover that would minimize the opportunity for soils to become airborne.

CRLA-17

There have been no tests conducted on the Project site to measure for Valley Fever spores within on-site soils. According to the Centers for Disease Control, testing soil for *Coccidioides* is not likely to be useful because the fungus is thought to be common in the soil in certain areas. A soil sample that tests positive for *Coccidioides* does not necessarily mean that the soil will release the fungus into the air and cause infection. Also, there are no commercially available tests to detect *Coccidioides* in soil. Testing soil for *Coccidioides* is currently only done for scientific research (CDC 2016).

The majority of the Project site will be paved or landscaped, and exposure to disturbed soils would be minimized through PDF AIR-3. Section 4.2, Air Quality, acknowledges that the future inmate population has the potential to be exposed to dust generated from soils in the Antelope Valley, which have the potential to contain *Coccidioides* spores. Additionally, Section 4.2 acknowledges that the Project site is located adjacent to land on the east that has exposed native soils (i.e., a 2-MW solar array), and is situated in the context of many acres of undeveloped land and fallow farmland that could generate airborne dust during windstorms. However, the Draft EIR concludes that the potential future inmate population's temporary placement into the Antelope Valley, which includes the inmates' participation in all indoor and outdoor activities at the MLWDC, would not constitute placement into a hazardous existing environmental setting that would require mitigation.

CRLA-18

Section 4.2, Air Quality, analyzes the potential for pollutant emissions during demolition, construction and operation of the Project. Impacts were determined to be less than significant, with compliance with RRs and the implementation of Project Design Features (PDFs). As stated in Response CRLA-16, there are no known reasons to believe that risks of infection from Valley Fever from participating in outdoor recreational activities at the MLWDC site would be any

different from the risks of participating in outdoor activities elsewhere in the Lancaster portion of the Antelope Valley.

Section 4.2, Air Quality, acknowledges that the future inmate population has the potential to be exposed to dust generated from soils in the Antelope Valley, which has the potential to contain *Coccidioides* spores. As discussed in Section 3.0, Project Description of the Draft EIR, according to the Sheriff's Department, AB 109 female inmates are serving an average of 423 days in custody from sentencing date to release date, while non-AB 109 female inmates serve an average of 107 days in custody. Therefore, the length of time that inmates would be living at the MLWDC is temporary, and is not equivalent to a permanent living circumstance or the longer sentences in state prisons that house higher-security inmates. The Draft EIR concludes that the potential future inmate population's temporary placement into the Antelope Valley, which includes the inmates' participation in all indoor and outdoor activities at the MLWDC, would not constitute placement into a hazardous existing environmental setting that would require mitigation.

CRLA-19

Section 4.3.2 of the Draft EIR sets forth a detailed description of the existing conditions relating to the plant and animal wildlife species that may be encountered on the Project site. A few examples of wildlife species expected to use the Project site include reptiles such as side-blotched lizard (*Uta stansburiana*) and western whiptail (*Aspidoscelis tigris*); bird species such as rock pigeon (*Columba livia*), house finch (*Haemorhous mexicanus*), European starling (*Sturnus vulgaris*), mourning dove (*Zenaida macroura*), and northern mockingbird (*Mimus polyglottos*); and mammals such as deer mouse (*Peromyscus maniculatus*), Botta's pocket gopher (*Thomomys bottae*), and desert cottontail (*Sylvilagus audubonii*).

Implementation of the proposed Project would have limited impact on habitat and/or movement of wildlife species due to limited wildlife use of the Project site. As stated in Section 4.3, Biological Resources, the site is highly developed and lacks native habitats. The Project site is entirely contained by a perimeter fence that does not allow for passage into or out of the MLDC except within secured gated areas. Therefore, the Project site does not represent an important regional movement corridor, and few wildlife species are expected to use the site. Extremely limited local movement of common wildlife species through unfenced parking areas or landscaped areas of the site may occur for foraging and dispersal. The Project's short-term and long-term construction impacts would not have an impact on any regional wildlife movement. Furthermore, the wildlife expected to use the site are expected to be highly adapted to human disturbance. Construction and ground-disturbing activities would not significantly impact habitat because there is extensive (non-specialized) habitat for these common species throughout the Project site.

CRLA-20

As stated in Section 4.3, Biological Resources, essentially all naturally occurring bird species (e.g., house finch) in North America are considered to be migratory and are included on the list of species protected under the Migratory Bird Treaty Act (MBTA). Suitable nesting habitat for common migratory birds is present in mature trees and other structures on the Project site, and in its adjacent areas, and could be adversely impacted either directly or indirectly during the Project's short-term construction impacts. Activities such as vegetation removal and structure demolition could potentially cause nest failure during the breeding season. Implementation of MM BIO-2, which requires nesting bird surveys and construction buffer zones for construction activities occurring during the breeding season, would reduce potential direct and indirect impacts on nesting migratory birds.

The majority of bird species expected to use the Project site can be found year round and do not migrate long distances. Bird species expected to occur (e.g., European starling, mourning dove, and house finch) exhibit either differential or partial migration. In differential migration, migration is related to a bird's age and sex, and some birds do not travel at all but remain in the same general location year round. Partial migration is when some birds (independent of age/sex) migrate, while other birds do not travel at all. MM BIO-2, which requires nesting bird surveys and construction buffer zones for construction activities occurring during the breeding season, is proposed mitigation for protecting nesting migrating birds.

Generally speaking, construction will continue unhindered by particular seasons during the calendar year. In some cases, and when feasible, particular construction activities with high potential for breeding bird impacts (such as vegetation removal) may be scheduled during the non-breeding season. If avoidance of particular construction activities during the breeding season is not feasible, MM BIO-2 would be implemented. The duration of construction activities does not have an effect on implementation of MM BIO-2. As generally summarized below, MM BIO-2 requires that protective procedures are implemented if construction is scheduled to occur during the bird nesting season:

- To the extent feasible, vegetation/tree removal shall occur during the non-breeding season for nesting birds (generally late September to early March) and nesting raptors (generally early July to late January) to avoid impacts to nesting birds and raptors. If the nature of the Project requires that work be initiated during the breeding season for nesting birds and raptors (February 1 to August 31), a pre-construction survey shall be conducted by a qualified Biologist. If the Biologist does not find any active nests within or immediately adjacent to the impact area, the vegetation clearing/construction work shall be allowed to proceed.
- If the Biologist finds an active nest within or immediately adjacent to the construction area and determines that the nest may be impacted or breeding activities substantially disrupted, the Biologist shall delineate an appropriate buffer zone around the nest and the active nest shall be protected until nesting activity has ended. Encroachment into the buffer area around a known nest shall only be allowed if the Biologist determines that the proposed activity would not disturb the nest occupants. Construction will be allowed to proceed when the qualified Biologist has determined that fledglings have left the nest or the nest has failed.

MM BIO-2 will be implemented by the qualified Biologist hired by the County or its contractor prior to the start of construction. As stated in MM BIO-2, a letter report shall be prepared and submitted to the Los Angeles County Department of Public Works to document the survey findings and recommended protective measures.

CRLA-21

Potential impacts to bat maternity roosts are analyzed under Threshold 4.3d in the Draft EIR. Construction activities on the Project site are anticipated to begin in December 2016 for a duration of 35 months. MM BIO-1 prohibits removal of trees supporting bat maternity roost sites (where bats give birth and nurse their young) during bat maternity roost season (March 1 to July 31). The demolition of bat maternity roosts, if present on the Project site, would indirectly impede the use of wildlife nursery sites, as the colony would not be able to return to their nursery site. However, there is low potential for bat maternity roosts on the Project site due to limited suitable habitat, the presence of human activity on the site, and a lack of open water. A potential bat maternity roost location on the Project site being removed after the maternity season would not be considered a

substantial impediment to the use of native wildlife nursery sites due to the relatively low population such roost would support in relation to the larger regional bat population.

Bat maternity roosts of any bat species may be considered native wildlife nursery sites. Common bat species, such as California myotis, form maternity colonies in places such as crevices of old snags, crevices of trees, bridges, and buildings. Impacts to multiple such active breeding colonies during the breeding season could potentially cause a decline in regional population. MM BIO-1 calls for pre-construction bat surveys and bat exclusion procedures. There is low potential for bat maternity roosts, colonial roosts, and solitary roost sites on the Project site due to limited suitable habitat, the presence of human activity on the site, and a lack of open water. Potential colonial, solitary, and maternity roosts being removed from the Project site would not be considered a substantial ecological impact due to the relatively low population such roosts would support in relation to the larger regional bat population.

CRLA-22

This comment alleges that MM BIO-1 is not appropriate or effective. The portion of MM BIO-1 related to bats is intended to avoid direct impacts to maternity roosts during the breeding season. The purpose of said avoidance is to reduce potentially significant impacts to native wildlife nursery sites (bat maternity roosts) to levels considered less than significant. MM BIO-1 effectively avoids the impact of removing occupied bat maternity roosts by requiring a pre-construction bat habitat assessment of the trees and/or structures marked for potential removal/demolition prior to commencement of construction activities. If potential maternity roosts are detected during the bat habitat assessment, construction activities will not occur until the bat maternity season has ended.

CRLA-23

The implementation of MM BIO-1 would occur immediately prior to Project construction activities. Therefore, surveys would not be conducted or completed during the timeframe of the Final EIR, which must be provided to the Board of Supervisors for review and consideration prior to any decision to approve, revise, or deny the Project. As required in MM BIO-1 and MM BIO-2, only qualified biologists shall be retained to conduct the required surveys and/or assessments. County studies and reports such as the ones required by the Draft EIR would be available for public review in accordance with the California Public Records Act (CPRA), which requires that governmental records must be disclosed to the public upon request, unless there is a specific reason not to do so, in accordance with exemptions within the CPRA or other state laws.

CRLA-24

MM BIO-2 requires the establishment of "an appropriate buffer zone" around an active nest, if found. An appropriate buffer zone is an area surrounding an active nest where no Project-related activities may occur. The zone is determined by a qualified Biologist who is familiar with the behavior of the birds tending to the nest. The buffer zone is specific to each particular nest and may vary from site to site depending on the construction activity, the height of the nest in a tree or other structure, the species of nesting bird, and other factors. An appropriate buffer zone is one that avoids a nest failure (through direct or indirect impacts) due to construction activities. We are unaware of a standard buffer size determined by the American Institute of Biological Sciences. The method set forth in MM BIO-2 is consistent with the requirements set forth for other development Projects throughout Los Angeles County that require compliance with the MTBA, which are regularly vetted through the California Department of Fish and Wildlife (CDFW) review of CEQA environmental documents.

CRLA-25

The Draft EIR relied upon a thorough search of the Vertebrate Paleontology records conducted by the Natural History Museum of Los Angeles County (NHMLAC), as documented in a letter dated June 6, 2010, and located in Appendix C-2 of the Draft EIR. As stated, the surficial deposits in the Project area are “composed exclusively of younger Quaternary Alluvium beneath soil. These types of sedimentary deposits usually do not contain significant vertebrate fossils, at least in the uppermost layers”. The NHMLAC letter goes on to state that surface grading or shallow excavations in the proposed Project area are unlikely to encounter significant vertebrate fossils in the younger Quaternary Alluvium, while deeper excavations into older deposits could uncover significant fossil vertebrate remains (McLeod 2010).

Sedimentary deposits and formations do not change over the course of five years and, even if fossils were discovered in the Project area, the mitigation measure identified in the Draft EIR would remain unchanged. MM CUL-2 requires that a qualified Paleontologist be notified and retained when earth-moving activities are anticipated to impact undisturbed deposits in the older Quaternary alluvium on the Project site (i.e., approximately five feet below ground surface or deeper). The Paleontologist shall determine, based on consultation with the County, when monitoring of grading activities is needed based on on-site soils and final grading plans. If any fossil remains are discovered, the Paleontologist must prepare a report of the results of any findings, which would be submitted to the NHMLAC that would then update its own records and maps accordingly.

An updated records search was requested and received from the NHMLAC and their response is provided in Appendix B of this Response to Comments (McLeod 2016). The only difference between the new 2016 records search and the 2010 records search is that additional fossil species have been found in the vicinity of the Project site. The camel fossil that is mentioned in the letter was found at the County's High Desert Regional Health Center (located approximately 5.5 miles east of the Project site). However, the recommendations in the NHMLAC letter are the same as in the prior records search, and MM CUL-2 reflects the NHMLAC's recommendation. No change to the Draft EIR analysis or MM CUL-2 is required.

CRLA-26

As stated on page 4.4-11 of the Draft EIR, an inquiry was made on January 30, 2014, of the Native American Heritage Commission (NAHC) to request a review of the Sacred Lands File database regarding the possibility of Native American cultural resources and/or sacred places in the Project vicinity that are not documented in other databases. The NAHC responded on January 31, 2014, and indicated that there are no records of Native American traditional cultural places with the NAHC in the Project area, but the NAHC provided a list of Native American groups and individuals who may have knowledge regarding Native American cultural resources not formally listed on any database. Subsequently, letters to Native American tribes were sent out on February 3, 2014. Beverly Salazar Folkes was sent a letter on February 3, 2014, using the address provided by the NAHC (see Appendix C-3 of the Draft EIR). Only Daniel McCarthy of the San Manuel Band of Mission Indians responded via email on February 6, 2014, and stated that, given the nature and location of the Project, the San Manuel Band has no concerns (McCarthy 2014). See Appendix C of this Final EIR. No follow-up on the other tribes was made as the documentation relies on the contact information from the NAHC as the authoritative source and it is common not to receive responses from all the tribes contacted.

The Project does not require a General Plan Amendment or Specific Plan Amendment and thus, is not subject to the Native American consultation under Senate Bill (SB) 18. The Notice of

Preparation (NOP) for the Project was also sent out prior to the effective date of Assembly Bill (AB) 52, which provides a separate consultation process that can be triggered by a tribe and applies only to projects for which the NOP scoping notice was sent on or after July 1, 2015. Thus, the County is not specifically required to notify Native American tribes under CEQA. However, as stated above, information letters were sent to local tribes as part of the background research for the Project site (see Appendix C-3 of the Draft EIR for the letters sent).

It cannot be entirely discounted that archaeological resources may be present beneath the pavement, buildings, or ground surfaces. Thus, MM CUL-1 calls for a qualified Archaeologist to be retained by the County to attend the pre-grading meeting with the Construction Contractor to establish, based on the site plans, appropriate procedures for monitoring earth-moving activities during construction. The Archaeologist would determine, based on consultation with the County, when monitoring of grading activities is needed. Monitoring should observe disturbance of the uppermost layers of sediment (soils and younger Quaternary alluvium), and any archaeological resources discovered shall be salvaged and catalogued, as necessary.

CRLA-27

The comment alleges that not all contributing buildings to the Historic District have been identified. Section 4.4, Cultural Resources, includes a summary of the findings of the Historical Resources Report included in Appendix C-1 of the Draft EIR. The Report concludes that there is a historic district in the Project study area. The district, named the Polaris Flight Academy Historic District, meets the criteria for listing in the National Register of Historic Places (NRHP) and the California Register of Historical Resources (CRHR) for its direct associations with military aviation during World War II and the work of Major Corliss Champion Moseley. It is therefore considered a historical resource subject to the requirements of CEQA (GPA 2015).

It is recognized as standard methodology to evaluate groupings of buildings, structures, objects, and landscape features within a distinct geographic area with shared historic contexts as potential historic districts. One key factor in determining contributing and non-contributing resources is period of significance. Buildings constructed outside the period of significance cannot be considered contributors. Because the Historic District, in this case, is significant for its World War II history, its period of significance within this context ended in 1945. Thus, the buildings constructed after 1945 are not contributors. They were constructed for different uses by different entities.

It would have been appropriate to evaluate the three buildings (i.e., Old Lock Building, Quonset Hut, and Wooden Shed) in question individually, above and beyond their evaluations as contributors, if they had any potential to represent an important historic context as individual buildings. The contextual research into the postwar history of the property when it was used by the State and the County as a detention facility indicated no reason to conclude that the property had any significance other than its World War II significance. As a result, there is no significant historic context for the three buildings to potentially represent. The resulting evaluation would reach exactly the same conclusion: the buildings would be assigned a 6Z classification, not eligible for designation.

Furthermore, there were no buildings between the two large historic hangars during the property's period of significance, so removing the three non-contributing buildings will actually be beneficial to the ratio of contributors to non-contributors in the Historic District. Project implementation will not have a significant impact on the Historic District, and no further analysis is required.

CRLA-28

The implementation of MM CUL-2 would occur immediately prior to, and during, Project construction activities. The qualified Paleontologist would be hired by the County or its contractor prior to the start of construction. Therefore, monitoring would not be conducted or completed during the timeframe of the Final EIR, which must be provided to the Board of Supervisors for review and consideration prior to any decision to approve, revise, or deny the Project. A plan for the evaluation, recordation, recovery, and/or salvage of any discovered fossil remains would be formulated by the Paleontologist at the time of the discovery based on the circumstances of the find. County studies and reports such as the ones required by the Draft EIR would be available for public review in accordance with the California Public Records Act (CPRA), which requires that governmental records be disclosed to the public upon request, unless there is a specific reason not to do so, in accordance with exemptions within the CPRA or other state laws.

CRLA-29

The Draft EIR includes an analysis of exposure hazards due to fugitive dust that may result from construction-related earth-moving activities. PDF AIR-1, which will be included in the Contractor's Specification and monitored through the MMRP, requires the distribution of materials on Valley Fever, or any updated materials as applicable, to worksite supervisors and construction workers. PDF AIR-2 and RR AIR-1, which will be included in the Contractor's Specification and monitored through the MMRP, require compliance with Best Management Practices and AVAQMD Rule 403 for the prevention of fugitive dust and nuisance air contaminants. RR AIR-1 provides a listing of the most applicable AVAQMD Rules. Rule 403, Fugitive Dust, requires measures such as watering and control of track-out from the site, as well as submittal of a Dust Control Plan prior to the start of construction. Rule 403 requires control of fugitive dust and avoidance of nuisance, and Rule 402 prohibits the emission of quantities of air contaminants that could cause injury, detriment, nuisance, or annoyance to the public or that could endanger the comfort, repose, health, or safety of the public. With implementation of RR AIR-1, on-site earth-moving activities would not result in fugitive dust that could affect adjacent off-site land uses.

As stated in RR AIR-2, the Project will be constructed in compliance with the Department of Health – Infection Control Policy Guidelines Procedure No. 918.01. Policy 918 is intended to prevent the spread of diseases that may be caused by construction-induced airborne pollution in susceptible individuals (patients, staff, and the public) at Department of Health Services (DHS) facilities. The protocols and requirements mandate the designation of an Infection Control Coordinator who must review and approve infection-control plans for new construction or renovation projects to ensure a safe environment. These infection-control plans must include infection-control measures to contain dust, debris, and others and must protect the patients, employees, and visitors in this environment. The Infection Control Coordinator has independent authority to stop construction-related activity immediately when the public may be adversely affected by infection-control hazards generated during construction-related activities and when the infection-control precautions and/or engineering controls are inadequate to contain the hazard. As such, the Draft EIR states that exposure to Valley Fever during construction activities would be the same as exposure to dust, and, thus, should follow the requirements for the mitigation of dust. Impacts would be less than significant, and no mitigation is required.

CRLA-30

This comment alleges that MM CUL-1 and MM CUL-2 are not sufficient. MMs are set forth in the Draft EIR as required activities that must occur in order to reduce potentially significant environmental impacts. No required pre-construction activities would occur or be contracted for,

until the Board of Supervisors has made a determination to approve the Project. Should the Board of Supervisors decide to modify the Project, the MMs set forth in the Draft EIR may require changes. Should the Board of Supervisors decide to deny the Project, then there would be no need to continue with requirements set forth in the MMs.

The Project site survey that was completed for on-site archaeological resources is discussed in Section 4.4, Cultural Resources, under Thresholds 4.4b and 4.4c. BonTerra Psomas' Archaeologist Patrick Maxon, M.A., RPA, completed a pedestrian survey of the Project site on November 21, 2013. He walked all accessible open areas of the site to determine if there were exposed archaeological resources. No archaeological resources were expected as the site is largely developed with buildings, sidewalks, parking areas, roads, and other paved areas. The findings of his site survey, along with the conclusions of the Vertebrate Paleontology records conducted by the NHMLAC (see Appendix C-2 of the Draft EIR), are incorporated into the analyses in Section 4.4, Cultural Resources, under Thresholds 4.4b and 4.4c.

Section 21081.6 of CEQA and Section 15097 of the State CEQA Guidelines require a public agency to adopt an MMRP for assessing and ensuring the implementation of required mitigation measures applied to proposed projects. Specific reporting and/or monitoring requirements that will be enforced during Project implementation shall be adopted simultaneously with final Project approval by the responsible lead agency.

CRLA-31

There have been no tests conducted on the Project site for Valley Fever spores within on-site soils. According to the Centers for Disease Control, in general, testing soil for *Coccidioides* spores (i.e., the fungus that causes Valley Fever) is not likely to be useful because the fungus is thought to be common in the soils in certain areas. A soil sample that tests positive for *Coccidioides* does not necessarily mean that the soil will release the fungus into the air and cause infection. Also, there are no commercially available tests to detect *Coccidioides* in soil. Testing soil for *Coccidioides* is currently only done for scientific research (CDC 2016).

The Phase I Environmental Site Assessment (ESA) included in Appendix E-1 of the Draft EIR included the results of a survey of the Project site to identify potential environmental concerns (Converse 2014c). The Phase II ESA included in Appendix E-3 of the Draft EIR included the results of 14 soil borings to depths of 8 feet below the ground surface (bgs) (Converse 2015). All soil samples from two and four feet bgs were analyzed for Total Petroleum Hydrocarbons (TPH), Volatile Organic Compounds (VOCs), and metals in accordance with U.S. Environmental Protection Agency (USEPA) Test Methods 8015M, 8260B, and 6010B/7471A, respectively. The findings of the Phase I and Phase II ESAs are summarized in Section 4.7, Hazards and Hazardous Materials, of the Draft EIR. As stated on page 4.7-18, the soil analyses indicate that no VOCs are present in the soil samples. All reported metals, except arsenic, were found to be at levels below the California Human Health Screening Levels (CHHSLs) for both residential and commercial/industrial land. The arsenic levels are below the background level of the 12 milligrams per kilogram (mg/kg) level that the Department of Toxic Substances Control (DTSC) has determined to be naturally occurring background levels at school sites in California. The qualifications of the preparers of the Phase I ESA are provided in Section 13.0 of the report. The preparer of the Phase II ESA is also one of the preparers of the Phase I ESA.

CRLA-32

As stated in Section 4.5, Geology and Soils, liquefaction is the sudden decrease in the strength of cohesionless soils due to dynamic or cyclic shaking. Saturated soils behave temporarily as a

viscous fluid (liquefaction) and, consequently, lose their capacity to support structures. The potential for liquefaction decreases with increasing clay and gravel content, but increases as the ground acceleration and duration of shaking increase. Liquefaction potential has been found to be the greatest where both high groundwater and loose sands occur within 50 feet of the ground surface.

The *Geohazard Study Report* for the Project, as summarized in the Draft EIR, included a liquefaction analysis and indicates that the Project site may be susceptible to liquefaction (Converse 2014b). As such, proposed structures and infrastructure on the Project site may be exposed to liquefaction hazards, including damage to foundations; settlement of aboveground structures; and uplift of buried structures and infrastructure. Prior to the completion of final engineering design plans, additional geotechnical exploration, lab testing, and analysis may be required for planned seismic upgrades to existing buildings in order to provide detailed design recommendations. The Project's structural design, which must be completed in accordance with the recommendations of the geotechnical investigation and subject to the County Building Official, as included in RR GEO-1, would address liquefaction hazards to prevent damage to foundations, structures, and infrastructure.

Reductions in the groundwater levels are generally likely to decrease the potential for liquefaction because water would be farther from the ground surface. It is anticipated that the engineering design for the Project will account for liquefaction hazards based on soil testing that would be completed as part of RR GEO-1.

CRLA-33

As the commenter states, the Antelope Valley can be subject to periodic strong winds. High winds have the ability to transport dust and soil, which may or may not contain *Coccidioides* spores. The Draft EIR includes an analysis of potential exposure to fugitive dust that may result from construction-related earth-moving activities. PDF AIR-1, which will be included in the Contractor's Specification and monitored through the MMRP, requires the distribution of materials on Valley Fever, or any updated materials as applicable, to worksite supervisors and construction workers. PDF AIR-2 and RR AIR-1, which will be included in the Contractor's Specification and monitored through the MMRP, requires compliance with Best Management Practices and AVAQMD Rule 403 for the prevention of fugitive dust and nuisance air contaminants. RR AIR-1 provides a listing of the most applicable AVAQMD Rules. Rule 403, Fugitive Dust, requires measures such as watering and control of track-out from the site, as well as submittal of a Dust Control Plan prior to the start of construction. Rule 403 requires control of fugitive dust and avoidance of nuisance, and Rule 402 prohibits the emission of quantities of air contaminants that could cause injury, detriment, nuisance, or annoyance to the public, or that endanger the comfort, repose, health or safety of the public. With implementation of RR AIR-1, on-site earth-moving activities would not result in fugitive dust that could affect adjacent off-site land uses.

In a letter received from the AVAQMD, as included in Section 2.1.1 of this document, on this Project and included in the comment section of this Final EIR, the AVAQMD has concurred with the Draft EIR analysis of air quality and dust impacts.

CRLA-34

The groundwater level declines and associated land subsidence are not as severe near at the Project site as in other parts of the Antelope Valley groundwater basin. Local survey monument bench mark records would be reviewed to determine the amount of land subsidence on or near the Project site, as part of RR GEO-1. The design of the building foundations has not been

determined, as the design phase is yet to occur. However, the foundation design for new buildings or additions will be designed and constructed to appropriately address current soil conditions and characteristics identified by a California licensed geologist, soils engineer, and structural engineer. The design will meet code requirements, which include recognition of soil bearing pressure, seismic activity, and jurisdictional building codes as well as AB 900 structural requirements. Existing facilities are monitored periodically for distress as part of facility operation and maintenance protocol, and there would be no hazards posed to the inmate or employee population.

Additionally, the Antelope Valley Groundwater Basin has been recently adjudicated through Los Angeles Superior Court case number 1-05-CV-049053: Antelope Valley Groundwater Cases, Consolidated Proceeding 4408, which determined the safe yield of groundwater extraction from the basin and allocates pumping rights accordingly to users. As such, improved water conservation measures, including recharge of reclaimed water, storm water and imported waters, and other improved groundwater basin management and measures in compliance with the adjudication could be expected to reduce water level declines and associated land subsidence in the region, and provided sustainable safe yields within the Antelope Valley groundwater basin.

Regarding operational costs associated with the proposed Project, the final design of the facility has not been drafted or approved, and the long-term operational costs have not yet been determined.

CRLA-35

The analysis of geologic, soils, and seismic characteristics and constraints on the Project site and surrounding area—as presented in Section 4.5, Geology and Soils, is based on the *Geohazard Study Report – Mira Loma Detention Center, 45100 North 60th Street West, Lancaster, California* prepared by Converse Consultants in June 2014—has, in fact, been fully disclosed and included as Appendix D of the Draft EIR. The conclusions of significance findings in Section 4.5, Geology and Soils, are based on the substantial evidence presented in this technical study.

CRLA-36

While the Project's estimated water demand is less than the 250 acre-feet per year (afy) threshold established by the California Department of Water Resources (DWR) for requiring a Water Supply Assessment (WSA) as required under legislation commonly referred to as Senate Bill (SB) 610, a WSA was prepared for the Project and provided in Appendix G-2 of the Draft EIR. The WSA is also summarized in Section 4.14, Utilities and Service Systems. As required under SB 610, the WSA must include an evaluation of the sufficiency of the water supplies available to the water supplier to meet existing and anticipated future demands (including the demand associated with the project) over a 20-year horizon that includes normal, single-dry, and multiple-dry years. The multiple-dry year scenario would represent drought conditions.

The WSA for the Project indicates that the Los Angeles County Waterworks District 40 (LACWWD 40) would be able to meet the projected water demands in its service area, along with the Project's demands, through the next 20 years, including normal, single-dry, and multiple dry (5-year period) years. Future demand is projected to increase within the LACWWD 40 service areas and the reliability of the LACWWD 40's future water supplies to meet demand will be ensured through continued implementation of programs for water banking; purchase of new imported supplies; water transfers; water conservation; and expansion of recycled water systems.

Thus, the potential impacts of climate change on reduced water supplies due to drought conditions have been accounted for in the Project's WSA. The WSA was reviewed by LACWWD 40 prior to inclusion in the Draft EIR.

CRLA-37

As stated in Section 4.6, Greenhouse Gas Emissions, of the Draft EIR, "materials to be imported to and exported from the site" are accounted for in the CalEEMod calculations for the Project. Although it is anticipated that "cut and fill would be balanced on site; no import or export of soils would occur". As stated on page 4.2-15 of the Draft EIR, the CalEEMod analysis presented in Section 4.2, Air Quality, and Section 4.6, Greenhouse Gas Emissions, conservatively include 200 haul truck roundtrips during the Site Preparation phase to cover unanticipated and incidental export and import haul, such as import soil for raised garden beds or for the removal of waste materials.

The Project would use water from wells that are on site during construction activities; there would be no imported water for construction use, as stated on page 4.14-17 of Section 4.14, Utilities and Service Systems. However, the CalEEMod input specifies watering for construction dust control and assumes the use of water trucks in the emissions calculations. Additionally, the modeling assumes ten truck roundtrips per day during the Building Construction phase to cover the delivery of materials and export of construction waste. Therefore, the analysis set forth in the Draft EIR includes a conservative analysis of truck trips and no additional analysis is required.

CRLA-38

The commenter's quoted text is a statement that describes the rationale for the South Coast Air Quality Management District's (SCAQMD's) construction emission amortization methodology. Section 4.6, Greenhouse Gas Emissions, utilizes the methodology set forth by SCAQMD, which is also used by the AVAQMD. In essence, this statement means that construction equipment greenhouse gas (GHG) emission factors only change slowly with time, and therefore, there are limited ways to decrease emissions from construction equipment. The inventory of construction equipment to be used during each phase of this Project is included in Appendix B of the Draft EIR, as stated in Section 4.6, Greenhouse Gas Emissions. The construction equipment type, amount, usage hours per day, horse power, and load factor are also included in Appendix B of the Draft EIR.

CRLA-39

The reference in Section 4.6, Greenhouse Gas Emissions, to construction activities beginning in November 2016 has been revised in Section 3.0, Clarifications to the Draft EIR to reflect the anticipated December 2016 start date. The analysis throughout the Draft EIR is not materially affected by the start date of construction activities. The analysis of GHG emissions is not based on start/end dates because emissions are analyzed on an annual basis. The following is stated under Section 4.6.6, Impact Analysis,

It should be noted that the Design-Build contractor may request an expedited schedule to work on Saturdays and/or to increase the intensity of the daily construction operations through the use of more equipment/workers on-site than anticipated in the Project's proposed schedule (see Section 3.0, Project Description). This request would be considered for the purpose of reducing the duration of the Project construction period. The emissions modeling assumes a 5-day work week. If some or all construction would occur on a 6-day per week

schedule and/or the schedule would be shortened by using more equipment, annual greenhouse gas emissions may increase for the years affected. Because the total Project effort would not change, there would be offsetting decreases later in the Project and the total greenhouse gas emissions would be the same, or approximately the same as shown in Table 4.6-2. The amortized Project emissions would not change.

No additional analysis is required.

CRLA-40

As stated in Section 4.6, Greenhouse Gas Emissions, “as originally proposed by the SCAQMD, it has become current practice (in most air districts) that construction emissions are amortized over a project lifetime (typically 30 years) so that GHG-reduction measures will address construction GHG emissions as part of the operational GHG reduction strategies (SCAQMD 2008; SMAQMD 2009)”. The AVAQMD uses the SCAQMD’s construction emission amortization methodology. The AVAQMD threshold for significant GHG emissions of 100,000 tons (90,718 metric tons) is stated on page 4.6-12 of the Draft EIR. There are no separate thresholds for construction and operations. However, for comparison, the estimated construction emissions per year are shown in Table 4.6-2 in Section 4.6, Greenhouse Gas Emissions. As shown, the Project’s maximum annual construction GHG emissions in 2017 of 306 metric tons of carbon dioxide equivalent (MTCO_{2e}) are substantially less than 90,718 MTCO_{2e}.

As shown in Table 4.6-4 of Section 4.6, Greenhouse Gas Emissions, with consideration of amortized construction emissions, the total annual estimated GHG emissions for the Project are 5,614 MTCO_{2e}/yr. This value is considerably less than the AVAQMD threshold of 90,718 MTCO_{2e}/yr. Therefore, the Project would result in less than significant GHG emissions, and no mitigation is required.

CRLA-41

The total Project-related greenhouse gas emissions from construction activities are estimated based on the total work effort, whether that effort occurs during five-day or six-day work weeks. The “offsetting decreases” are not GHG reductions; they indicate that more work is done earlier in the schedule. The total work effort remains unchanged. The following is stated under Section 4.6.6, Impact Analysis:

It should be noted that the Design-Build contractor may request an expedited schedule to work on Saturdays and/or to increase the intensity of the daily construction operations through the use of more equipment/workers on-site than anticipated in the Project’s proposed schedule (see Section 3.0, Project Description). This request would be considered for the purpose of reducing the duration of the Project construction period. The emissions modeling assumes a 5-day work week. If some or all construction would occur on a 6-day per week schedule and/or the schedule would be shortened by using more equipment, annual greenhouse gas emissions may increase for the years affected. Because the total Project effort would not change, there would be offsetting decreases later in the Project and the total greenhouse gas emissions would be the same, or approximately the same as shown in Table 4.6-2. The amortized Project emissions would not change.

No additional analysis is required.

CRLA-42

The commenter's assertion that emissions from service/delivery trucks are not included in the Draft EIR analysis is incorrect. As stated in the footnotes to Table 6-1, Project Trip Generation, of the Traffic Impact Study, Appendix H of the EIR, "The site specific daily trip generation was derived based on detailed site programming information (employee numbers and shifts, miscellaneous delivery trucks, and inmate transport vehicles) as provided by County staff". Employee trips were estimated at 922 daily trips (461 round-trips); inmate transport trips were estimated at 16 daily trips (8 round-trips); and other miscellaneous trips were estimated at 100 daily trips (50 round-trips) (LLG 2015). The calculation of mobile source input for trip generation was taken from the Project's Traffic Impact Study and used as an input into CalEEMod, which is a computer program that is used to calculate anticipated emissions associated with land development projects in California. Therefore, the Project's trip generation, which includes 100 daily trips for service vehicles, was included as an input into the CalEEMod air quality and GHG analysis. No additional analysis is required.

CRLA-43

The operational annual emissions for each source area (i.e., area, energy, mobile, off-road, solid waste, water) were calculated using CalEEMod Version 2013.2.2. Estimates of energy use and solid waste were provided by the Los Angeles County Department of Public Works engineering staff. Additional details relative to the CalEEMod calculations may be found in Section 4.2, Air Quality, and in Appendix B of the Draft EIR. Operational emissions from the MLDC when it was occupied by the Immigration and Customs Enforcement (ICE) were not analyzed because the program ended in 2012 and was not in operation at the time of the issuance of the Project's Notice of Preparation (NOP). The NOP was issued in September 2014 which, according to Section 15125 of the State CEQA Guidelines, establishes the existing physical conditions on the Project site from both a local and regional perspective, and constitutes the baseline conditions by which a lead agency determines whether an impact is significant. As such, the GHG emissions from the previous uses at the Project site were not determined to be applicable for the Draft EIR.

CRLA-44

This comment offers no basis to support the statement that the analysis presented in Section 4.6, Greenhouse Gas Emissions, is inaccurate. As demonstrated through the responses for CRLA-37 through CRLA-43, the Draft EIR includes a conservative analysis of GHG emissions using the widely accepted CalEEMod methodology. We hope that a review of these responses to your comments and the information in the Draft EIR referenced will help to address your concerns. No additional analysis is required.

CRLA-45

As stated in RR GHG-4 in Section 4.6, Greenhouse Gas Emissions, "The Project will include an Employee Commute Reduction Plan (ECRP), commonly known as the Rideshare Plan, in accordance with Los Angeles County Code Chapter 5.9, Vehicle Trip Reduction. The ECRP will specify the measures to be implemented at MLWDC to achieve the target average vehicle ridership performance goal for employee vehicles subject to the Ordinance". Because reductions in GHG emissions from RR GHG-4 cannot be reasonably quantified, they were not taken into account in the CalEEMod emission calculations.

Although the ECRP is incorporated as a mandatory component of the Project, no GHG emissions reductions were applied to the CalEEMod assumptions for PDF GHG-1 through PDF GHG-4 or

for RR GHG-1 through RR GHG-5. Therefore, the elimination of the ECRP, or the inclusion of it, would not result in any changes to the calculations or conclusions presented in Section 4.6, Greenhouse Gas Emissions. The requirement for the ECRP is not a mitigation measure that is necessary to reduce a significant impact, but rather a County policy designed to encourage alternatives to single-occupancy vehicle trips.

CRLA-46

As stated in PDF GHG-2 in Section 4.6, Greenhouse Gas Emissions, the Project will provide a combined minimum of 34 video-visiting stations on site, along with video interview rooms in transitional housing buildings. This is anticipated to reduce VMT associated with vehicle travel to the MLWDC by inmate visitors by providing more options and opportunities for visitation when compared to the two video-visiting stations currently located within CRDF. However, deductions of VMT and GHG emissions associated with the video-visiting stations were not quantified in the GHG analyses or in the Project's Traffic Impact Study.

Because reductions in GHG emissions from PDF GHG-2 cannot be reasonably quantified, they were not taken into account in the CalEEMod emission calculations. Although PDF GHG-2 is incorporated as a mandatory component of the Project, no greenhouse gas emissions reductions were applied to the CalEEMod assumptions for PDF GHG-1 through PDF GHG-4 or for RR GHG-1 through RR GHG-5. Therefore, the elimination of the video visiting stations as set forth in PDF GHG-3, or the inclusion of them, would not result in any changes to the calculations or conclusions presented in Section 4.6, Greenhouse Gas Emissions.

CRLA-47

As stated in PDF GHG-3 in Section 4.6, Greenhouse Gas Emissions, the Project will post Antelope Valley Transit Authority (AVTA) bus and Metrolink schedules, as well as the locations of the nearest Park-and-Ride lots, in areas visible to visitors and in the Staff Services building to encourage the use of public transportation by staff and visitors. AVTA bus and Metrolink schedule information will be updated a minimum of every six months to ensure that they are accurate.

Because reductions in GHG emissions from PDF GHG-3 cannot be reasonably quantified, they were not taken into account in the CalEEMod emission calculations. Although PDF GHG-3 is incorporated as a mandatory component of the Project, no GHG emissions reductions were applied to the CalEEMod assumptions for PDF GHG-1 through PDF GHG-4 or for RR GHG-1 through RR GHG-5. Therefore, the elimination of the requirements set forth in PDF GHG-3, or the inclusion of them, would not result in any changes to the calculations or conclusions presented in Section 4.6, Greenhouse Gas Emissions.

CRLA-48

As stated in PDF GHG-4 in Section 4.6, Greenhouse Gas Emissions, the Project will incorporate (1) a secure storage area for staff to store bicycles into the Project design plans that allow for the individual locking of bicycles and protection from sun and inclement weather and (2) bicycle rack(s) adjacent to the Visitor Parking Lot that allows for the individual locking of bicycles.

Because reductions in GHG emissions from PDF GHG-4 cannot be reasonably quantified, they were not taken into account in the CalEEMod emission calculations. Although PDF GHG-4 is incorporated as a mandatory component of the Project, no GHG emissions reductions were applied to the CalEEMod assumptions for PDF GHG-1 through PDF GHG-4 or for RR GHG-1 through RR GHG-5. Therefore, the elimination of the requirements for bicycle facilities, or the

inclusion of them, would not result in any changes to the calculations or conclusions presented in Section 4.6, Greenhouse Gas Emissions.

CRLA-49

As stated in the responses for CRLA-45 through CRLA-48, the analysis presented in Section 4.6, Greenhouse Gas Emissions, did not take any deductions from the total annual GHG emissions that would result from implementation of PDF GHG-1 through PDF GHG-4, nor were deductions taken for RRs GHG-1 through GHG-5 because the reductions in VMT and mobile GHG emissions from the implementation of these RRs cannot be reasonably quantified. Therefore, the GHG emission estimates presented in the Draft EIR are conservatively high, and the impacts are less than significant.

CRLA-50

This comment, in part, raises issues that extend beyond the scope of CEQA requirements; nonetheless, the Board of Supervisors will receive and be able to consider it and all other comments raised before taking any action on the proposed Project. The scope of CEQA is generally limited to the evaluation of a proposed project's potential impact on the environment, and does not extend to the impact of the existing environment on a proposed project, or on its users or residents. The applicable definition of the environment analyzed for CEQA purposes in an environmental impact report is the physical conditions in the area that are affected by the proposed project (e.g., land, air, and water). The proposed MLWDC Project's Draft EIR discloses and addresses the potential direct, indirect, and cumulative impacts of the proposed Project on the physical environment, in accordance with the State CEQA Guidelines for all environmental issue areas. For the topics mentioned in the comment, refer specifically to Section 4.2, Air Quality, 4.6, Greenhouse Gas Emissions, and 4.14, Utilities and Service Systems of the Draft EIR.

CRLA-51

In 2015, the underground storage tanks (USTs) were reported to be in compliance and passed all leak detection requirements (CERS 2016, AW Associates 2016). Also, no soil contamination has been found near the fueling island (Converse 2016b). As such, the use or removal of these tanks will not lead to leaks that may potentially contaminate the underlying soils and groundwater and no mitigation is required.

CRLA-52

The information on the removal of the six USTs was taken from the Phase I ESA, which states that the information on the leaking underground tanks and clean up information was based on the list of Leaking Underground Storage Tanks (LUST) Sites (pages 24 and 25 of the Phase I ESA) and the County Department of Public Works records (pages 33 and 34 of the Phase I ESA). The County Department of Public Works oversaw the remediation and issued the "no further action" letter. The Phase I ESA is provided in Appendix E-1 of the Draft EIR.

CRLA-53

The sentence on page 4.7-8 of the Draft EIR reads “No leaks were observed, except for minor staining on the carpet and hydraulic oil on the concrete floors beneath the emergency generator in the central plant (i.e., steam plant)”. This information on minor staining was taken from the Phase I ESA, which is provided in Appendix E-1 of the Draft EIR. The minor staining was observed near unlabeled five-gallon containers with a minor amount of an oil-tar-like substance in the Sergeant Senior Building (pages 38 and 47 of Phase I ESA). The hydraulic oil was observed on the floor beneath the hole punch machine in the George Barracks and the emergency generator in the central plant (pages 5, 48, 51 and 52 of Phase I ESA). Soil testing near the hole punch machine location was performed in January 2016, which indicated no significant contamination findings (Converse 2016b). No further assessment is required.

CRLA-54

The Asbestos and Lead Based Paint Survey Report (Appendix E-2 of the Draft EIR) states that Buildings 27, 28 and 29 are temporary modular buildings that were visually inventoried but not sampled. These are pre-fabricated modular units (i.e., mobile homes) that appeared to be of newer construction (Converse 2014a). Building 27 will remain in place but Buildings 28, 29 and 40 may be disassembled and removed from the site but not demolished. However, this is not certain at this time prior to the Project's final design.

As demonstrated in Section 4.7, Hazards and Hazardous Materials, of the Draft EIR, MM HAZ-1 and MM HAZ-2 requires that, in the event that building materials are encountered during construction activities that are suspected of being asbestos-containing materials (ACMs) or lead-based paint (LBP), these materials shall be assumed to contain asbestos or lead and shall be handled, removed, transported and/or disposed in accordance with applicable regulations, until such time that they can be sampled and evaluated. As provided in Appendix D of this Final EIR, subsequent testing of building material samples from Buildings 27, 28, 29, 32 and 40 indicate the presence of asbestos-containing materials in Buildings 28, 29 and 40; and lead-based paint was found in the sinks in Building 29. If Buildings 27, 28, 29, 32 and 40 are removed, without being demolished, asbestos materials need not be abated. If these buildings are demolished, the asbestos materials would have to be abated and disposed in accordance with RR HAZ-4 and MM HAZ-1. If the sinks in Building 29 are removed intact, they can be disposed as construction debris; otherwise, they would have to be disposed in accordance with RR HAZ-4 and MM HAZ-2 (Converse 2016a). No adjustments to the RRs and MMs set forth in Section 4.7 of the Draft EIR are required.

CRLA-55

The DPW Closure Certification has been documented in the Phase I ESA and was reviewed by Converse Consultants during the preparation of the Phase I ESA.

CRLA-56

The Phase I ESA included the entire Project site, the former High Desert Hospital/Multi-Service Ambulatory Care Center, the Polaris Flight Academy, and the adjacent solar energy facility. The Phase I ESA is provided in Appendix E-1 of the Draft EIR. The northwestern section of the property parcel and any other structures and conditions that exist outside the Project boundary (identified in Exhibit 2.2 of Section 2.0, Environmental Setting) were not tested for the presence of hazardous materials under the Phase II ESA as no disturbance to these areas would occur with the Project. The Asbestos and Lead Based Paint Survey Report included the original survey

of 16 barracks buildings, approximately 20 surrounding and adjoining buildings, and a utility tunnel. The scope of the survey was subsequently expanded to include 15 additional, older buildings at the Mira Loma Detention Facility. The Asbestos and Lead Based Paint Survey Report is provided in Appendix E-2 of the Draft EIR. The Phase II ESA included soil borings at locations where environmental concerns were identified in the Phase I ESA. The Phase II ESA is provided in Appendix E-3 of the Draft EIR.

CRLA-57

As stated on pages 29 to 31 of the Phase I ESA, the County is working on compliance with the permit requirements but the Los Angeles County Fire Department has not accepted/received all required plans and documentation.

CRLA-58

The sentence on page 4.7-8 of the Draft EIR states that “No leaks were observed, except for minor staining on the carpet and hydraulic oil on the concrete floors beneath the emergency generator in the central plant (i.e., steam plant)”; this is based on visual observations during a 2014 site visit. The references to failing leak detection tests is a mechanical testing procedure that determines whether the leak detection system is functioning properly and does not indicate the presence of a leak. As stated on pages 35 and 36 of the Phase I ESA, Converse reviewed the leak detection reports, which indicated that secondary containment of two USTs at the fuel station failed for the turbine sump and fill sump and that one diesel fuel UST at the power plant failed for secondary containment piping and fill sump. Tanks have passed subsequent leak detection tests and are considered in compliance.

CRLA-59

As stated on page 4.7-19 of the Draft EIR, the existing fueling station is located outside the Project site boundary, but may be used by the Project. This fueling station has two USTs that previously failed leak detection tests. As shown in the California Environmental Reporting System (CERS) database and the Monitoring System Certification by AW Associates in Appendix E to this Final EIR, the tank permits were updated in 2015 and have passed subsequent leak detection tests and are now in compliance. Soil testing also indicated there is no soil contamination near the USTs (Converse 2016b). MM HAZ-3 requires the testing and repair, as necessary, of the USTs prior to the use of the existing fueling station by the Project.

CRLA-60

The hydraulic hoists in the vehicle service garage are located outside the Project site and are not planned to be used by the Project. Also, hydraulic hoists are not regulated like underground storage tanks and are considered to be benign or a low environmental concern (and off site).

As stated on page 4.7-19 of the Draft EIR, the hydraulic hoists have the potential to have led to subsurface soil contamination at the pits of the hoists. The Phase I ESA states that, when the hydraulic hoists are removed, the soils beneath the pits shall be sampled to determine the presence of contamination. If the results of the testing show that chemical levels are present above regulatory levels, remediation and/or removal of the contamination would have to be with the oversight of applicable regulatory agencies such as the Los Angeles County Fire Department (LACFD), the AVAQMD, the DTSC, and/or the USEPA in compliance with established maximum contaminant levels (MCLs). Also, the hoists and hydraulic oil would have to be disposed of in accordance with existing regulations for hazardous waste disposal. However, these hoists would

not be used or removed by the Project and thus, would not pose Project-related hazards to the environment. Soil testing at the project boundary area nearest to the hydraulic hoist location was performed in January 2016, which indicated no significant contamination findings (Converse 2016b).

CRLA-61

Based on the environmental concerns identified in the Phase I ESA, the Phase II ESA included soil borings at locations where these environmental concerns are located. Two soil sampling events have occurred at the site: Phase II ESA (May 9, 2015) and Supplemental Phase II ESA Soil Sampling (January 7, 2016). No contaminants of concern were detected in the soils during either sampling event. The findings of the soil testing in the Phase II ESA are summarized in Section 4.7, Hazards and Hazardous Materials, in the Draft EIR and the Phase II ESA is provided in Appendix E-3 of the Draft EIR.

CRLA-62

The Phase II ESA included 14 soil borings to depths of 8 feet below the ground surface (bgs). All soil samples from two and four feet bgs were analyzed for Total Petroleum Hydrocarbons (TPH), Volatile Organic Compounds (VOCs), and metals in accordance with USEPA Test Methods 8015M, 8260B, and 6010B/7471A, respectively. The findings of the Phase I and Phase II ESAs are summarized in Section 4.7, Hazards and Hazardous Materials, of the Draft EIR. As stated on page 4.7-18, the soil analyses indicate that no VOCs are present in the soil samples. All reported metals, except arsenic, were found to be at levels below the CHHSLs for both residential and commercial/industrial land. The arsenic levels are below the background level of 12 mg/kg level that the DTSC has determined to be naturally occurring background levels at school sites in California. The complete Phase I ESA is provided in Appendix E-1, and the Phase II ESA is provided in Appendix E-3.

Soil sampling occurred in 2015 (Supplemental Phase II ESA, Jan. 7, 2016) in the area of the fueling station and found no contaminants of concern. The references to failing leak detection tests is a mechanical testing procedure that determines whether the leak detection system is functioning properly and does not indicate the presence of a leak. Also, existing tanks are currently in compliance and have passed leak detection tests.

As stated on page 4.8-8 of the Draft EIR, groundwater levels in the Antelope Valley Groundwater Basin in 2006 were estimated at 2,230 feet above mean sea level (RWMG 2013) or 120 feet below ground surface (bgs) at the site. No testing of the underlying groundwater was conducted and is not warranted as the soil testing did not indicate the presence of contamination on near-surface soils.

CRLA-63

As provided on page 4.8-4 of the Draft EIR, "SWPPP" is an acronym for Storm Water Pollution Prevention Plan. The SWPPP is required for coverage under the NPDES Construction General Permit. It identifies the temporary best management practices (BMPs) to reduce storm water pollutants that would have to be implemented by the contractor during construction activities on sites of one acre or larger. The specific requirements for preparation and implementation of an SWPPP are outlined in the State Water Resources Control Board's (SWRCB's) National Pollutant Discharge Elimination System (NPDES) General Permit for Storm Water Discharges Associated with Construction and Land Disturbance Activities (Order No. 2009-0009-DWQ, as amended by Order No. 2010-0014-DWQ and Order No. 2012-0006-DWQ). As the SWPPP is prepared by the

contractor and submitted to the SWRCB (and the local jurisdiction, if required) just before the start of construction and when final building plans are completed, it will not be available at the time the Final EIR is completed.

CRLA-64

As indicated above, the SWPPP includes temporary BMPs to be implemented during construction. There is a menu of sediment control, erosion control, wind erosion control, tracking control, waste management and materials pollution control, and non-stormwater management BMPs; from this, the contractor chooses which ones are suitable for the site and the Project. Preparation of an SWPPP at this time would be based on preliminary plans and schedules that would not accurately describe conditions at the time that construction of the Project begins. Also, if the County identifies the BMPs that should be implemented at the site at this time, the future selected contractor may propose different but comparable BMPs that he/she would commit to implementing. Thus, while an SWPPP can be prepared for the Project as part of the Final EIR, it would not be useful and is likely to change at the time that construction of the Project begins.

CRLA-65

There is a host of regulations related to the disposal of hazardous materials; those relevant to the Project are discussed in Section 4.7, Hazards and Hazardous Materials. The Project would need to comply with applicable regulations that are listed in Section 4.7.4 and the mitigation measures in Section 4.7.7. In addition, regulations related to hydrology and water quality are discussed in Section 4.8, Hydrology and Water Quality. The Project would need to comply with applicable regulations that are listed in Section 4.8.5. These RRs and MMs would prevent hazardous wastes and/or pollutants from being discharged into the storm water.

As demonstrated in Section 4.7, Hazards and Hazardous Materials, the transport of hazardous wastes would have to be made in accordance with applicable State and federal requirements, including U.S. Department of Transportation regulations listed in the *Code of Federal Regulations* (i.e., Title 49, Hazardous Materials Transportation Act); California Department of Transportation (Caltrans) standards; and the California Occupational Safety and Health Administration (CalOSHA) standards (RR HAZ-1). All construction activities that disturb hazardous materials must prepare hazardous waste manifest documentation that denotes the custody of the removed material, transport, and final destination of disposal. Such operations must be conducted by qualified and licensed contractors and operators. The carrier has the responsibility of storing, packing, handling, and transporting the hazardous material in a way that protects against risks to life, property, and the environment. Emergency training is required for the carrier's employees and emergency response and communication procedures have to be set, so that, in the event that accidents happen during the transport of hazardous wastes, hazards to life, property, and the environment are minimized. Also, it is anticipated that construction trucks, including those transporting hazardous wastes, would use designated truck routes, as required by the City of Lancaster (RR TRA-3). Due to the location of the site, it is likely that trucks would use West Avenue I to get to SR-14 as the most direct route to regional freeway system. As stated on page 4.7-17, there would be no need to pass through local residential streets and residential neighborhoods or utilize local streets where schools are located.

Long-term impacts are discussed under each threshold on pages 4.7-15 through 4.7-19, which generally state that compliance with existing hazardous material regulations (RR HAZ-1 through RR HAZ-3) would prevent accidental releases and undue hazards. The disposal of hazardous wastes would be made in compliance with the Subtitle C of the Resource Conservation and Recovery Act (RCRA) (RR HAZ-2) and other applicable regulations. Upon the conclusion of

construction, the resulting facility must comply with indoor air quality standards for inhabitable spaces. Hazardous wastes from the Project site would only be disposed at landfills and facilities allowed to accept such wastes. These facilities operate under permit conditions that prevent health and safety hazards to residents. Impacts would be less than significant and no mitigation for the transport of hazardous waste is required.

CRLA-66

As demonstrated on page 4.7-14, as part of the Phase II ESA, the soils beneath the equipment at the central plant were tested to determine if subsurface soil contamination has occurred. Sampling occurred in 2015 and did not detect impacts requiring further action (Converse 2015). While the testing showed that no soil contamination is present, the hydraulic oil stains on the asphalt/concrete areas would have to be removed and disposed of in accordance with RR HAZ-1. Soil testing near the hole punch machine location was performed in January 2016, which indicated no significant contamination findings (Converse 2016b). No further assessment is required.

CRLA-67

Please refer to the response for CRLA-65 above.

CRLA-68

The Asbestos and Lead Based Paint Survey Report included the original survey of 16 barracks buildings, approximately 20 surrounding and adjoining buildings, and a utility tunnel. The scope of the survey was subsequently expanded to include 15 additional, older buildings at the Mira Loma Detention Facility. Thus, all buildings at the MLDC have been included in the Asbestos and Lead Based Paint Survey Report, which is provided in Appendix E-2 of the Draft EIR.

As demonstrated in Section 4.7, Hazards and Hazardous Materials, of the Draft EIR, RR HAZ-4 requires that any Project-related demolition activities that have the potential to expose construction workers and/or the public to asbestos-containing materials (ACMs) or lead-based paint (LBP) will be conducted in accordance with applicable regulations, including, but not limited to:

- AVAQMD Rule 1403
- *California Health and Safety Code* (Section 39650 et seq.)
- *California Code of Regulations* (Title 8, Section 1529)
- California Occupational Safety and Health Administration (CalOSHA) regulations (*California Code of Regulations*, Title 8, Section 1529 [Asbestos] and Section 1532.1 [Lead])

ACM sampling was made on suspect ACMs in each building but not all building components need to be sampled. In addition, a negative result on the first ACM testing may not necessarily prove that the suspect material does not contain asbestos as only a part of the material was tested. Thus, additional testing was made on samples with negative results with the appropriate number of bulk samples to meet the definition of a negative material. The findings of the Asbestos and Lead Based Paint Survey Report would inform the handling of ACMs during the demolition or renovation of buildings.

Materials that would be impacted by the Project have been surveyed and tested to the extent possible by certified and experienced asbestos consultants. While the Project's intent is to identify

all possible hazardous materials through surveying, including selective demolition, there is the potential that some materials can be discovered below the surface of cover materials and/or simply encountered as an unforeseeable condition during demolition or renovation activities. In that event, MM HAZ-1 serves as the protocol which must be adhered to until further investigation results in a determination of the suspect materials hazardous status.

MM HAZ-1 requires that, in the event that suspect building materials that have not been previously sampled are observed during renovation/remodeling activities, these materials should be assumed to contain asbestos, until such time that they can be accessed, sampled, and evaluated for asbestos content. The suspect building materials that are not evaluated for asbestos shall be handled, removed, transported, and disposed of in compliance with existing regulations that would allow for the proper removal and disposal of ACMs and asbestos-containing construction materials (ACCMs), including AVAQMD Rule 1403 and CalOSHA regulations on asbestos abatement (RR HAZ-4).

Also, there are buildings that would not be demolished or renovated but reused as part of the Project. As some of these buildings may contain ACMs, MM HAZ-1 requires an Operations and Maintenance (O&M) Plan for asbestos observation, inspection, and documentation to ensure that ACMs do not become damaged and do not result in airborne asbestos fiber release over time. MM HAZ-1 would protect inmates and employees at the MLWDC from hazards associated with ACMs.

CRLA-69

As required by RR HAZ-4, the Project shall comply with Title 8, Section 1532.1 of the *California Code of Regulations*, which regulates the exposure of construction crews to lead. These regulations set the allowable exposure limit and include exposure assessment; standards for respiratory protection and protective clothing and equipment; and medical testing. In addition, the USEPA issued its Lead Renovation, Repair & Painting (RRP) rules, which includes work practices in the handling of materials containing lead. As stated in Section 4.7, Hazards and Hazardous Materials, intact lead-painted surfaces can be maintained in place in accordance with Title 8 and Title 17 of the California Code of Regulations and the USEPA's Lead RRP Rule.

The Asbestos and Lead Based Paint Survey Report included the original survey of 16 barracks buildings, approximately 20 surrounding and adjoining buildings, and a utility tunnel. The scope of the survey was subsequently expanded to include 15 additional, older buildings at the Mira Loma Detention Facility. Thus, all buildings at the MLDC have been included in the Asbestos and Lead Based Paint Survey Report, which is provided in Appendix E-2 of the Draft EIR.

Materials that are considered to be impacted by the scope of the Project have been surveyed and tested to the extent possible by certified and experienced California Department of Public Health Lead Inspector/Assessors. While the Project's intent is to identify all possible hazardous materials through surveying, including selective demolition, there is the potential that some materials can be discovered below the surface of cover materials and/or simply encountered as an unforeseeable condition. In this event, MM HAZ-2 serves as the protocol which must be adhered to until further investigation results in a determination of the suspect material's hazardous status. MM HAZ-2 requires that, in the event that painted or ceramic surfaces materials are encountered during demolition and renovation activities that are suspected of containing lead and/or lead-based paint, these materials shall be assumed to contain lead in concentrations exceeding the Los Angeles County Department of Health Services' definition of 0.7 milligrams per square centimeter (mg/cm², or 600 parts per million) and shall be handled, removed, transported and/or disposed of in accordance with applicable regulations for lead content, until such time that they

can be sampled and evaluated for lead content. This is a conservative way of handling materials that may or may not contain lead.

CRLA-70

As demonstrated in Section 4.7, Hazards and Hazardous Materials, of the Draft EIR, asbestos is a known human carcinogen, and the USEPA and California Environmental Protection Agency (CalEPA) have identified asbestos as a hazardous air pollutant. Existing regulations prohibit emissions of asbestos from demolition or construction activities; require medical examinations and monitoring of employees engaged in activities that could disturb asbestos; specify precautions and safe work practices that must be followed to minimize the potential for release of asbestos fibers; and require notice to federal and local government agencies prior to beginning renovation or demolition that could disturb asbestos. The disturbance of asbestos-containing materials could lead to the release of asbestos fibers, and the inhalation or swallowing of these asbestos fibers could result in a health hazard.

As the Project includes the rehabilitation and reuse of existing buildings, there would be structures that would remain and that may contain asbestos-containing materials in areas that are not exposed or a covered by other materials. These would not pose a hazard for inhalation or swallowing of the asbestos fibers and thus, need not be removed. Considering that some asbestos-containing materials would remain, MM HAZ-1 requires these materials be managed through an O&M Plan. The O&M Plan shall include periodic observations, inspections, and documentation that would allow for detection of concerns (e.g., damage to potential asbestos-containing materials that may result in airborne asbestos) and appropriate follow-up actions or removals that may be necessary to prevent airborne asbestos. Subsequent removals would have to be made in accordance with RR HAZ-4.

CRLA-71

RR HAZ-5 requires new construction, excavations, and/or new utility lines within 10 feet of crossing existing high pressure pipelines, natural gas/petroleum pipelines, and/or electrical lines greater than 60,000 volts to be designed and constructed in accordance with the *California Code of Regulations* (Title 8, Section 1541). This regulation includes notification of the owners/operators of high priority¹ subsurface installations; subsurface installation locating activities by trained excavators; and the responsibility of the excavators to prevent undue hazards from accidental damage to underground utility lines. Notification of utility line owners/operators is often followed by the owner/operator providing guidelines for work near their utility lines or their monitoring of excavation work near their lines. Thus, compliance with RR HAZ-5 would prevent damage to subsurface utility lines.

CRLA-72

Review of April 2015 aerial photographs shows the site for the proposed elementary school to be vacant. In recent discussions with the City of Lancaster Planning Department staff, this site is zoned for future school use when the surrounding area develops, but the school is not yet constructed (Rosenstein 2016).

¹ Examples of "high priority" subsurface installations include high pressure pipelines, natural gas/petroleum pipelines, and electrical lines greater than 60,000 volts.

CRLA-73

Please refer to the response for CRLA-65 above.

CRLA-74

Additional testing for potential contamination at the Project site has been conducted. Two soil sampling events have occurred: one sampling event for the Phase II ESA – March 9, 2015 (Appendix E-3 of the Draft EIR) and an additional sampling event documented in the Supplemental Phase II ESA-January 7, 2016 (Appendix F of the Final EIR). Soil borings collected in the area of the possible former location of the airstrip did not detect any contaminants that would require further action. As no hazards are present, mitigation is not required. The County will contact and coordinate with all pertinent agencies having jurisdiction on this issue.

CRLA-75

The Phase II ESA is included in Appendix E-3 of the Draft EIR and shows the location (Figure 2) and results (Tables) of 14 soil borings to depths of 8 feet bgs. All soil samples from two and four feet bgs were analyzed for TPH, VOCs, and metals in accordance with USEPA Test Methods 8015M, 8260B, and 6010B/7471A, respectively. The findings of the Phase II ESA are summarized in Section 4.7, Hazards and Hazardous Materials, of the Draft EIR. As stated on page 4.7-18, the soil analyses indicate that no VOCs are present in the soil samples. All reported metals, except arsenic, were found to be at levels below the CHHSLs for both residential and commercial/industrial land. The arsenic levels are below the background level of 12 mg/kg level that the DTSC has determined to be naturally occurring background levels at school sites in California.

CRLA-76

As provided in the Phase II ESA (included in Appendix E-3 of the Draft EIR), TPH was investigated in accordance with USEPA Test Method 8015M. Concentrations of TPH were not detected in any of the samples analyzed in the gasoline range. TPH in the diesel range (C13–C22)² and heavy hydrocarbon (oil) range (C23–C40)³ was reported in a limited number of the samples analyzed, but at concentrations below the Maximum Soil Screening Levels (MSSLs) established by the Los Angeles Regional Water Quality Control Board (RWQCB). Concentrations of TPH in the diesel and/or oil ranges exceeded the Regional Screening Levels (RSLs) for residential land use of 110 and 2,500 milligrams per kilogram (mg/kg), respectively, in 2 samples from 2 feet bgs (M1 and M10), but these concentrations are less than the RSLs for commercial/industrial land use of 600 and 33,000 mg/kg, respectively. It is suspected that the TPH concentrations in these samples may be elevated as a result of the overlying asphalt surface cover having been mixed into the samples. The Phase II ESA was prepared by a Professional Geologist and he has stated that “no further action” related to testing and analysis of concentrations of total petroleum hydrocarbons (TPH) is needed and includes a supporting justification based on applicable regulatory thresholds. No additional analysis is required.

CRLA-77

The Project site is listed in government databases due to past hazardous material uses. However, the site was never operated as a site that accepted hazardous wastes for disposal. The Project site is on the list of Leaking Underground Storage Tanks (LUST) Sites, but the leaking

² Number of carbon atoms

³ Ibid

underground storage tanks have been removed, and the affected area cleaned up. The County Department of Public Works oversaw the remediation and issued the "no further action" letter. The DTSC lists the Polaris Flight Academy with a status of "inactive-needs evaluation" (Converse 2014c). As part of the environmental site assessment conducted for the Project, soil borings collected in the area of the possible former location of the airstrip did not detect any contaminants that would require further action (Converse 2015). Thus, the listing of the site in government databases was based on past uses that no longer pose hazards.

As part of the environmental analysis for the Draft EIR, a Phase I ESA has been prepared that reviewed past and current uses and site conditions and identified Recognized Environmental Concerns (RECs) on the Project site and in the surrounding area. The Phase I ESA is provided in Appendix E-1 of the Draft EIR. Subsequent to the Phase I ESA, a Phase II ESA was prepared that included soil sampling to determine if soil contamination is present on the site. The Phase II ESA is provided in Appendix E-3 of the Draft EIR. In addition, an Asbestos and Lead Based Paint Survey Report was completed to identify the building components that contained asbestos and lead-based paint. The Asbestos and Lead Based Paint Survey Report is provided in Appendix E-2 of the Draft EIR. These reports are summarized in Section 4.7, Hazards and Hazardous Materials of the Draft EIR.

The Project must comply with existing RRs for the proper handling of hazardous wastes, including transportation, treatment, storage, and disposal; repair and/or removal of underground storage tanks based on applicable standards; and practices that would protect the demolition and construction crews from asbestos and lead exposure. In addition, the Project must incorporate MMs for the handling of suspected asbestos-containing materials and lead-based paint; an O&M Plan for regular inspection of any asbestos-containing materials; and testing and repair of underground storage tanks prior to use. Thus, existing hazardous materials and wastes would be removed from the Project site and future hazardous materials use would comply with applicable regulations to prevent hazards to future inmates. In summary, compliance with RRs and implementation of MMs set forth in the Draft EIR would prevent public health and safety hazards to inmates, employees, visitors, and other individuals at the Project site.

CRLA-78

The leak detection test is a mechanical testing procedure that determines whether a leak detection system is functioning properly and does not indicate the presence of a leak. As stated on pages 35 and 36 of the Phase I ESA, Converse reviewed the leak detection reports, which indicated that secondary containment of two USTs at the fuel station failed for the turbine sump and fill sump and that one diesel fuel UST at the power plant failed for secondary containment piping and fill sump. The same tanks have passed subsequent leak detection tests and are now considered to be in compliance.

CRLA-79

Soil sampling events occurred in 2015 (Phase II ESA-March 9, 2015 and Supplemental Phase II-January 7, 2016) in which borings were placed in areas of potential concern, as well as serving as a screening tool to evaluate past uses. Contaminants were not detected above levels that would require further action. This final opinion was rendered by a Professional Geologist.

CRLA-80

A soil sampling event occurred in 2015 (Supplemental Phase II ESA-January 7, 2016) in which a boring was completed within the boundary of the Project area, south of the vehicle fleet garage.

Contaminants were not detected above levels that would require further action. Hydraulic hoists are unregulated and are of low concern (and are located off site).

As stated on page 4.7-19 of the Draft EIR, the hydraulic hoists have the potential to have led to subsurface soil contamination at the pits of the hoists. The Phase I ESA states that, when the hydraulic hoists are removed, the soils beneath the pits shall be sampled to determine the presence of contamination. If the results of the testing show that chemical levels are present above regulatory levels, remediation and/or removal of the contamination would have to be with the oversight of applicable regulatory agencies such as the LACFD, the AVAQMD, the DTSC, and/or the USEPA in compliance with established MCLs. Also, the hoists and hydraulic oil would have to be disposed of in accordance with existing regulations for hazardous waste disposal. However, these hoists would not be used or removed by the Project and thus, would not pose hazards to the environment.

CRLA-81

Helicopters landing at and taking off from the helipad have a potential for generating fugitive dust. This occurrence would be limited to once a day for a few minutes. The helipad is paved, as is the majority of the land surrounding the area.

Please see response for CRLA-33 for information on fugitive dust impacts.

CRLA-82

The WSA for the Project, as summarized in Section 4.14, Utilities and Service Systems, discusses the adjudication of groundwater rights in the Antelope Valley and that this adjudication will provide a final allocation of groundwater rights for the long-term groundwater management of the Antelope Valley Groundwater Basin. A finite volume of groundwater that the LACWWD 40 can pump without paying penalties or replenishment fees would be assigned as part of the adjudication, and the adjudication judgment provides LACWWD 40 with the rights to pump approximately 22,500 afy to 27,000 afy of groundwater depending on factors including the amount of the Federal reserved right, which is not used by the United States, and the supplemental yield attributable to return flows from imported water purchased by LACWWD 40 and delivered to its customers. The Integrated Regional Urban Water Management Plan (IRUWMP) for the Antelope Valley projects that groundwater allocation for LACWWD 40 would be based on historical pumping amounts. The LACWWD 40 is projected to have an average annual pumping rate of 23,200 acre-feet per year (afy) from 2015 to 2035 (LACWWD 40 2011). These projections are subject to change after the adjudication has been finalized as the judgment is currently being appealed; however, it is estimated the 23,200 afy allocation is a conservative value and the final adjudicated amount could be higher, as indicated above.

As contained in the WSA, no change in the available groundwater supplies for the LACWWD 40 is projected from 2015 to 2035 (Psomas 2015). Thus, if the final adjudication judgment results in LACWWD 40 having the right to pump a greater amount, it will have the option to pump up to its allocation or pump below its allocation. This will allow the LACWWD 40 to readily provide water supply to the Project and its other customers, as well as reduce its use of imported water sources. If the final adjudication judgment results in LACWWD 40 receiving the right to pump a lower volume of groundwater, LACWWD 40 would have the option to use a greater amount of imported water or to more heavily rely on its programs for water banking; purchase of new imported supplies; water transfers; water conservation; and expansion of recycled water systems.

As indicated on page 4.14-29 of the Draft EIR, the LACWWD 40 will serve the Project with imported water purchased through the Antelope Valley East Kern Agency (AVEK). MM UTL-1 requires that the County sign the New Water Supply Entitlement Acquisition Agreement with the LACWWD 40 and pay a deposit of \$10,000 per acre-foot of annual water demand from the Project for the acquisition of additional water supplies from AVEK to serve the Project. The adjudication judgment prevents overdraft of the Antelope Valley Groundwater Basin by setting the safe yield of the basin to eliminate the long-term overdraft condition, and creates a Watermaster to enforce the terms of the judgment.

The well flow, well yield, and water quantity of the LACWWD 40 varies by well and period but the LACWWD 40's Integrated Regional Urban Water Management Plan for the Antelope Valley shows historic (2005-2009)⁴ groundwater pumping totals ranging from 12,371 afy in 2006 to 24,901 afy in 2008. The Antelope Valley Integrated Regional Water Management Plan indicates that AVEK operates a groundwater basin banking project (Water Supply Stabilization Project No. 2 [WSSP-2]) that recharges the groundwater basin with imported water during wet years when supplies exceed demands and extracts up to 90 percent of the banked water in drought years when supplies are low. LACWWD 40 participates in the WSSP-2. There is no way to determine the exact source (i.e. well water or imported water, or the particular well yield) of the water that would serve the Project site via the proposed new water pipeline extension from the on-site water lines to the existing 12-inch LACWWD 40-owned distribution pipeline within West Avenue I because LACWWD 40 waters are comingled to meet water quality and distribution requirements.

CRLA-83

Page 4.14-11 of Section 4.14, Utilities and Service Systems, states that the LACWWD 40 currently has a 36-inch-diameter, cement-lined, coated steel transmission water main located 25 feet from the property line along 60th Street West and a 12-inch-diameter pipe located within West Avenue I. The availability of water or the current drought conditions have no direct effects on this water infrastructure.

The LACWWD 40 has sufficient infrastructure to use State Water Project (SWP) water from AVEK to meet the water demands in its service area even during peak summer demand periods. The LACWWD 40 also has planned for potential water shortages through various demand management measures that would reduce water use and consumption. The WSA for the Project addresses drought conditions and states that future water supplies of the LACWWD 40 will be ensured through continued implementation programs such as water banking, purchase of new imported supplies, water transfers, water conservation, and expansion of recycled water systems.

As stated on page 4.14-8, of Section 4.14, Utilities and Service Systems, the adjudication process for the Antelope Valley Groundwater Basin acknowledges that the basin is in a state of overdraft. Allocation of groundwater rights would limit groundwater extraction in the basin to its safe yield and avoid continued overdraft conditions. As demonstrated on page 4.14-23, the LACWWD 40 has implemented a New Supply Acquisition program to provide funding for additional imported water supplies. Thus, while the Project would require water from the LACWWD 40 to operate, the LACWWD 40 will serve the Project with imported water supplies obtained through AVEK. MM UTL-1 requires that the County sign the New Water Supply Entitlement Acquisition Agreement with the LACWWD 40 and pay a deposit of \$10,000 per acre-foot of annual water demand from the Project for the acquisition of additional water supplies from AVEK to serve the Project. The WSA concludes that there is a sufficient and reliable water supply for LACWWD 40, now and into the future, including a sufficient water supply for the Project. These supplies are also sufficient to

⁴ The production statistics used are published data and more current data has not yet been published.

provide for overall growth in the LACWWD 40 service area at the rate projected in the 2010 IRUWMP (Psomas 2015).

CRLA-84

The historic water use numbers in Table 4.14-1 in Section 4.14, Utilities and Service Systems, are provided to show the amount of water pumped by on-site wells when the MLDC was in use as an Immigration and Customs Enforcement (ICE) facility until 2012. Since then, the Project site has been largely vacant and the water use has been limited. Water use data from the MLDC when it was occupied by ICE were not incorporated into the WSA analysis because the program was not in operation at the time of the issuance of the Project's Notice of Preparation (NOP). The NOP was issued in September of 2014 which, according to Section 15125 of the State CEQA Guidelines, establishes the existing physical conditions on the Project site from both a local and regional perspective and constitutes the baseline conditions by which a lead agency determines whether an impact is significant. As such, the use of water from the historic uses at the Project site are not relevant to the future proposed Project operations, and no additional analysis is required.

CRLA-85

The SWPPP must be prepared by a Qualified SWPPP Developer (QSD) and implemented by a Qualified SWPPP Practitioner (QSP) who will be responsible for monitoring that selected BMPs are in place and in working condition at the construction site. The SWPPP must include BMPs to be implemented during construction, including a Construction Site Monitoring Program (CSMP). The primary objective of the SWPPP is to ensure that the responsible party properly constructs, implements, and maintains BMPs to reduce or eliminate pollutants in storm water discharges and authorized non-storm water discharges from the construction site. The SWPPP must also outline the monitoring and sampling program to verify compliance with discharge Numeric Action Levels (NALs) set by the Construction General Permit.

Public agency monitoring of compliance with the SWPPP is provided by SWRCB inspectors who visit construction sites and verify implementation of the BMPs and compliance with other requirements of the SWPPP. In addition, the Los Angeles County Department of Public Works (LACDPW) would also be performing site inspections to monitor compliance with the approved construction plans. Any person may also report a storm water pollution problem to the SWRCB or the local agency.

As stated in Section 4.8, Hydrology and Water Quality, PDF HYD-1 requires that the on-site storm drainage system would comply with storm water quality and quality control requirements under the County's Standard Urban Stormwater Management Plan (SUSMP), Low Impact Development (LID) standards, Hydrology Manual, Best Management Practices Handbook, and Green Building Standards Code. These requirements, along with RR HYD-2, address potential pollutant runoff from long-term operations of the Project and include a drainage concept and storm water quality plan that would reduce peak storm water runoff discharge rates; conserve natural areas; minimize storm water pollutants of concern; protect slopes and channels; provide storm drain system stenciling and signage; properly design outdoor material storage areas and trash storage areas; and provide proof of ongoing maintenance of structural or treatment-control BMPs that would prevent pollutants from entering the runoff. The Project's permanent storm water treatment-control BMPs would be included in the final engineering plans for the Project and would be subject to the LACDPW review and approval as part of the plan check process, and would be inspected during construction. Code enforcement actions by the County would monitor proper and continued use of these BMPs.

CRLA-86

Please refer to the response for CRLA-6 regarding the costs of the proposed Project.

CRLA-87

The MLDC property currently and historically obtains its water supply from an on-site system of groundwater wells, pumps, and tanks, as described in Section 4.14, Utilities and Service Systems. As part of the proposed Project, a new off-site water pipeline extension will be constructed from the on-site water lines to the existing 12-inch LACWWD 40-owned distribution pipeline in West Avenue I. Existing pipeline connections to County-owned groundwater wells and reservoirs located adjacent to 60th Street West will be disconnected, and the proposed MLWDC Project site's potable water supply would be provided by LACWWD 40 rather than from the County-owned groundwater wells.

The LACWWD 40 obtains water primarily from local groundwater resources and imported water from the SWP through the AVEK. In the past few years, recycled water has been introduced to the LACWWD 40 service area by the City of Lancaster, and the Los Angeles County Sanitation District (LACSD) No. 14 continues to serve recycled water directly to Apollo Park. However, recycled water is not yet available to the Project site.

Therefore, it cannot be said that the Project will not use groundwater because the Project will be served by LACWWD 40, which sources its water supply from both groundwater and SWP water. However, the MLWDC property will no longer be connected to the County's system of wells, pumps, and tanks and will not be directly provided water via this groundwater pumping and distribution system.

The environmental impacts associated with the acquisition and development of additional imported water supplies is the responsibility of AVEK. As stated in the WSA prepared for the Project (see Appendix B of the WSA, which includes a Memorandum of Understanding [MOU] Between AVEK and LACWWD 40), which is included as Appendix G-2 of the Draft EIR:

The Waterworks District and AVEK will enter into an agreement by which the Waterworks District may require the applicant to deposit with the Waterworks District the amount of money estimated by AVEK to be necessary to fund AVEK's cost of purchasing the additional imported water supplies required by the Waterworks District as a condition of providing a service commitment to the applicant's development. Upon receipt of that deposit by the applicant, the Waterworks District will then deposit that amount with AVEK. The deposit shall cover the estimated purchase price of the additional water supplies, AVEK's cost of completing the environmental assessment under the California Environmental Quality Act and the National Environmental Policy Act (if required), and AVEK's transactional costs including document preparation and review by AVEK staff and legal counsel ("Costs").

MM UTL-1 requires that the County sign the New Water Supply Entitlement Acquisition Agreement with the LACWWD 40 and pay a deposit of \$10,000 per acre-foot of annual water demand from the Project for the acquisition of additional water supplies from AVEK to serve the Project. Therefore, the impacts on traffic and air quality from water importation are determined through the appropriate CEQA/National Environmental Policy Act (NEPA) documentation prepared by AVEK to support the procurement of additional imported water supplies.

CRLA-88

As stated in Section 4.8, Hydrology and Water Quality, and Section 4.14, Utilities and Service Systems, existing water lines connected to the on-site wells and reservoirs would provide the needed water for construction activities on site, replacing existing water use from minor maintenance and security activities. The proposed connection to the LACWWD 40's 12-inch potable water line within West Avenue I would not need to be connected in order to conduct construction activities or suppress potential dust generated by earth-moving activities because the existing and operational County-owned groundwater pumping and storage system infrastructure would be available at the Project site.

CRLA-89

The current water use at the MLDC is associated with keeping essential plumbing systems operational, as well as for general facility maintenance, groundskeeping, and upkeep. During construction, water from the existing wells will likely be used for landscaping irrigation and will be required for temporary facilities. In addition, well water will be used for dust suppression and other construction-related activities until the connection is made to the LACWWD 40's water supply. As discussed below, this use would not result in impacts to groundwater supplies or recharge.

Groundwater supplies and recharge in the Antelope Valley Groundwater Basin is highly variable and depends on the rate of pumping of various agencies and entities; it also depends on the amount of natural recharge (by rainfall and runoff) as this recharge is provided by AVEK projects (e.g., the Water Supply Stabilization Project No. 2 [WSSP-2]), which includes a 1,500-acre groundwater recharge and extraction field that recharges water from the SWP during wet years when supplies exceed demands, and extracts up to 90 percent of the banked water in drought years when supplies are low. Recharge rates would also depend on overlying soil conditions and the location and capacity of underlying aquifers.

Construction on the Project site would occur for approximately 35 months and, as shown in Table 3-4, Estimated Construction Schedule, in Section 3.0, Project Description, approximately 15 months would involve the vast majority of earth-moving activities (e.g., Demolition, Site Preparation, and Grading phases). Approximately 35,000 cubic yards (cy) of cut and fill will be balanced on site through grading activities, as stated on page 3-21 of Section 3.0, Project Description. Assuming approximately 30 gallons per cubic yard of material moved (MCAQD 2005), this would result in a total of approximately 1.05 million gallons of construction water over the course of the 15 months of earth-moving activities. This temporary requirement for water for construction activities would equate to approximately 1.08 percent of the potable water supplied through the existing County-owned wells in 2012 (i.e., 97,294,604 gallons in 2012), which was the last year of the operations of ICE at the MLDC property. Given the historic pumping at the County-owned wells, the temporary requirement of approximately one percent of historic groundwater pumping at the County-owned wells would not result in an impact to groundwater supplies or recharge rates.

CRLA-90

As demonstrated in the response for CRLA-89 above, construction water use is estimated to be approximately 1.05 million gallons of construction water over the course of the 15 months of earth-moving activities. This temporary requirement for water for construction activities would equate to approximately 1.08 percent of the potable water supplied through the existing County-owned wells in 2012 (i.e., 97,294,604 gallons in 2012), which was the last year of the operations of ICE at the MLDC property. Given the historic pumping at the County-owned wells, the temporary

requirement of approximately one percent of historic groundwater pumping at the County-owned wells would not result in an impact to groundwater supplies or recharge rates.

There would be no imported water for construction use, as stated on page 4.14-17 of Section 4.14, Utilities and Service Systems. However, as demonstrated under the response for CRLA-37, the CalEEMod input for air quality and GHG specifies watering for construction dust control and assumes the use of water trucks in the emissions calculations. Additionally, the modeling assumes ten truck roundtrips per day during the Building Construction phase to cover the delivery of materials and export of construction waste. Therefore, the analysis set forth in the Draft EIR includes a conservative analysis of truck trips and no additional analysis is required.

CRLA-91

Please refer to the response for CRLA-6 regarding the costs of the proposed Project.

CRLA-92

The MLDC property currently and historically obtains its water supply from an on-site system of groundwater wells, pumps, and tanks, as described in Section 4.14, Utilities and Service Systems. As part of the proposed Project, a new off-site water pipeline extension will be constructed from the on-site water lines to the existing 12-inch LACWWD 40-owned distribution pipeline in West Avenue I. Existing pipeline connections to County-owned groundwater wells and reservoirs located adjacent to 60th Street West will be disconnected, and the proposed MLWDC Project site's potable water supply would be provided by LACWWD 40 rather than from the County-owned groundwater wells.

The LACWWD 40 obtains water primarily from local groundwater resources and imported water from the SWP through AVEK. In the past few years, recycled water has been introduced to the LACWWD 40 service area by the City of Lancaster, and the LACSD No. 14 continues to serve recycled water directly to Apollo Park. However, recycled water is not yet available to the Project site.

Therefore, it cannot be said that the Project will not use groundwater because the Project will be served by LACWWD 40, which sources its water supply from both groundwater and SWP water. However, the MLWDC property will no longer be connected to the County's system of wells, pumps, and tanks and will not directly provide water via this groundwater pumping and distribution system.

The WSA for the Project, as summarized in Section 4.14, Utilities and Service Systems, discusses the adjudication of groundwater rights in the Antelope Valley, and that this adjudication will provide a final allocation of groundwater rights for the long-term groundwater management of the Antelope Valley Groundwater Basin. The adjudication would prevent the overdraft of the Antelope Valley Groundwater Basin by setting the safe yield of the basin to eliminate the long-term overdraft condition. As indicated on page 4.14-29 of the Draft EIR, the LACWWD 40 will serve the Project with imported water purchased through the AVEK. The Project's WSA concludes that there is a sufficient and reliable water supply for LACWWD 40, now and into the future, including a sufficient water supply for the Project (Psomas 2015). These supplies are also sufficient to provide for overall growth in the LACWWD 40 service area at the rate projected in the 2010 IRUWMP.

CRLA-93

As stated on page 4.11-5 of Section 4.11, Population and Housing, the growth projections in Table 4.11-6 are projections that were prepared by the Southern California Association of Governments (SCAG) for individual cities and counties as part of its regional planning efforts for the development of the Regional Comprehensive Plan (RCP), Regional Transportation Plan/Sustainable Communities Strategy (RTP/SCS), and the Regional Housing Needs Assessment (RHNA). These projections were adopted by the SCAG Board in 2012.

The Integrated Regional Urban Water Management Plan for the Antelope Valley also includes growth projections for the service areas of the LACWWD 40 and the Quartz Hill Water District. As stated in Table 1-3 of the Integrated Regional Urban Water Management Plan, these growth projections were based on land use maps and General Plans for the cities of Palmdale and Lancaster (LACWWD 40 2011).

Because the boundaries of the SCAG projections follow city boundaries, which differ from the service area boundaries of the water districts, these projections are not comparable to the other. Still, the SCAG projections are also used in the analysis of cumulative impacts in Section 4.11.5 of the Draft EIR. The projections in the Integrated Regional Urban Water Management Plan for the Antelope Valley are used in the LACWWD 40's plans to meet future water demands in their service areas, as demonstrated in Section 4.14.7 of the Draft EIR.

CRLA-94

The Project would be staffed by Sheriff's Department security/sworn staff, Sheriff's Department civilian staff, teachers, counselors, maintenance personnel, physicians, registered nurses, registered nurse practitioners, and other County employees. There is no specific breakdown of the skills and experience of unemployed residents in the City of Lancaster. Thus, a match of the future jobs at the MLWDC and the unemployed residents cannot be readily made. However, this does not preclude Lancaster residents from taking the training or learning the skills needed to work at the Project.

CRLA-95

According to the California Department of Forestry and Fire Protection (CAL FIRE), the Very High Fire Hazard Severity zone is located at the base of the Sierra Pelona Mountains to the south, which is outside the Lancaster city boundaries. The 4.5-mile distance between this zone and the site includes relatively flat areas with urban development that are not considered to be in a Very High Fire Hazard Severity Zone area. Thus, no wildfire hazards are present on or near the site.

CRLA-96

This comment, in part, raises issues that extend beyond the scope of the CEQA requirements; nonetheless, the Board of Supervisors will receive and be able to consider it and all other comments raised before taking any action on the proposed Project. The scope of CEQA is generally limited to the evaluation of a proposed Project's potential impact on the environment, and does not extend to the impact of the existing environment on a proposed project, or on its users or residents. The applicable definition of the environment analyzed for CEQA purposes in an environmental impact report is the physical conditions in the area that are affected by the proposed project (e.g., land, air, and water). The proposed MLWDC Project's Draft EIR discloses and addresses the potential direct, indirect, and cumulative impacts of the proposed Project on

the physical environment, in accordance with the State CEQA Guidelines for all environmental issue areas.

Outdoor recreation, both active (e.g., use of sports courts, running track) and passive (e.g., sitting in courtyards or on turf grass areas), will occur on the Project site. The outdoor recreation opportunities and amenities are one of the benefits of the proposed MLWDC Project when compared to existing facilities at the CRDF. There are no known reasons to believe that risks of infection from Valley Fever from participating in outdoor recreational activities at the MLWDC site would be any different from the risks of participating in outdoor activities elsewhere in the Lancaster portion of the Antelope Valley.

CRLA-97

As shown in Exhibit 3-1 in Section 3.0, Project Description, the volleyball and basketball courts are outdoor facilities. The Project does not include an indoor gymnasium.

CRLA-98

Section 4.13, Transportation and Traffic, summarizes the findings of the Project's Traffic Impact Study. The Traffic Impact Study is provided in Appendix H of the Draft EIR. As stated on pages 4.13-2 to 4.13-3, the estimate of the Project's daily trip generation was based on specific data provided by the Los Angeles County Sheriff's Department and includes employee shift times, number of employees per shift, frequency of inmate transport buses, and miscellaneous service/delivery vehicles, among other factors. The miscellaneous vehicle trips due to service/delivery, medical delivery, and court personnel transport were estimated at no more than 25 vehicles per weekday and at ½ of this total for weekend daily trips.

The discussion of video visitation on page 4.13-20 is provided in the context of estimating the total vehicle miles travelled (VMT) as associated with the located of the MLWDC away from the highly urbanized area of Los Angeles County, but is not considered in the trip generation estimates in the Traffic Impact Study. Rather, the number of trips for inmate visitation was estimated at 39 percent of the available appointment slots or about 28,543 visits per year (the same rate as existing at the CRDF). Forecasts assume 250 inbound visitor trips and 250 outbound visitor trips per day during the 114 weekend days and holidays per year. This visitation reflects the number of visitors that is currently occurring at a detention facility that is located in the highly urbanized area of Los Angeles County. With this estimate, it is expected that video visitation would occur in addition to the in-person visits that involve personal vehicle trips to the MLWDC. Therefore, contrary to the commenter's assertion, the Project does not assume that video visitation is mitigation for increased traffic.

CRLA-99

The County does not operate the buses and trains that serve the Antelope Valley area. The Southern California Regional Rail Authority (SCRRA), which operates the Metrolink commuter rail system, and the AVTA, which operates buses, provide transit services to meet demand and generally review service routes and schedules as part of their long-range planning efforts. Should demand increase over existing levels, it will be up to the Metrolink and AVTA agencies to revise or expand their services to meet demand.

The Draft EIR acknowledges that increased driving distances would be required for some families with the Project due to the location of the site in relation to the CRDF in Lynwood, which is closer to higher density urban areas near the City of Los Angeles. The County is aware of the potential

challenges this increased distance may pose for some visiting family members, while for other visiting family members from the Lancaster and other County areas, the Project location will be closer to their homes than the current women's jail in Lynwood. As demonstrated on page 3-4, in Section 3.0, Project Description, the Board of Supervisors directed the establishment of an Advisory Board (now called the Gender Responsive Advisory Committee) that will report to the Board of Supervisors on specific programmatic and operational issues. The Advisory Committee has already begun to organize its meetings with a membership including representatives of County staff, outside agencies, advocates, organizations, individuals with incarceration experience, and representatives with expertise in reducing recidivism of female inmates. As part of its charge, the Advisory Committee is tasked with reviewing the program model for the proposed MLWDC Project to ensure that it is evidence-based in reducing recidivism; evaluating strategies to reduce negative impacts of operating the proposed MLWDC away from the downtown Los Angeles area, including contract transportation for visitors, video visiting for attorney consultation; and reviewing national best practices for visiting and family reunification.

CRLA-100

The City of Lancaster has jurisdiction over the City roadways and the implementation of bicycle lanes in the City. As stated on page 4.13-24 of Section 4.13, Transportation and Traffic, while the City of Lancaster has no existing or proposed bikeways on 60th Street West and West Avenue I along the site boundaries, roadway shoulders and sidewalks in the area may be used by bicyclists and pedestrians coming to or going from the Project site.

CRLA-101

The Draft EIR acknowledges that increased driving distances would be required for some families with the Project due to the location of the site in relation to the CRDF in Lynwood, which is closer to higher density urban areas near the City of Los Angeles. The County is aware of the potential challenges the increased distance may pose for some visiting family members, while for other visiting family members from the Lancaster and other County areas, the Project location will be closer to their homes than the current women's jail in Lynwood. As demonstrated on page 3-4, in Section 3.0, Project Description, the Board of Supervisors directed the establishment of an Advisory Board (now called the Gender Responsive Advisory Committee) that will report to the Board of Supervisors on specific programmatic and operational issues. The Advisory Committee has already begun to organize its meetings with a membership including representatives of County staff, outside agencies, advocates, organizations, individuals with incarceration experience, and representatives with expertise in reducing recidivism of female inmates. As part of its charge, the Advisory Committee is tasked with reviewing the program model for the proposed MLWDC Project to ensure that it is evidence-based in reducing recidivism; evaluating strategies to reduce negative impacts of operating the proposed MLWDC away from the downtown Los Angeles area, including contract transportation for visitors, video visiting for attorney consultation; and reviewing national best practices for visiting and family reunification.

Efforts to minimize any inconveniences of increased distance include PDF GHG-2 in Section 4.6, Greenhouse Gas Emissions. The Project will provide a combined minimum of 34 video-visiting stations on site, along with video interview rooms in transitional housing buildings. This is anticipated to reduce VMT associated with vehicle travel to the MLWDC by inmate visitors, while allowing more opportunities for video visiting than currently exist at CRDF. As of January 1, 2016, the installation of 72 video visiting stations at the Carson, East Los Angeles, Lancaster, Lakewood, Norwalk, Palmdale and San Dimas Stations has been completed. Video visiting stations are also in operation at Century Regional Detention Facility, Men's Central Jail, Pitches Detention Center (North County Correctional Facility and South Facility), Twin Towers

Correctional Facility and Los Angeles County Medical Center. Currently, the Sheriff's Department is working with software vendors to define the scope of the pilot project that will allow visitors to video conference from home or office during this calendar year.

CRLA-102

The 2014 *Mira Loma Center For Women Program Model, Education Based Incarceration* document that is cited in this comment has been reviewed, and the Sheriff's Department has not found significant differences between this document and information in the Draft EIR. The Draft EIR acknowledges that increased driving distances would be required for some families with the Project due to the location of the site in relation to the CRDF in Lynwood, which is closer to higher density urban areas near the City of Los Angeles. The County is aware of the potential challenges this increased distance may pose for some visiting family members, while for other visiting family members from the Lancaster and other County areas, the Project location will be closer to their homes than the current women's jail in Lynwood. As demonstrated on page 3-4, in Section 3.0, Project Description, the Board of Supervisors directed the establishment of an Advisory Board (now called the Gender Responsive Advisory Committee) that will report to the Board of Supervisors on specific programmatic and operational issues. The Advisory Committee has already begun to organize its meetings with a membership including representatives of County staff, outside agencies, advocates, organizations, individuals with incarceration experience, and representatives with expertise in reducing recidivism of female inmates. As part of its charge, the Advisory Committee is tasked with reviewing the program model for the proposed MLWDC Project to ensure that it is evidence-based in reducing recidivism; evaluating strategies to reduce negative impacts of operating the proposed MLWDC away from the downtown Los Angeles area, including contract transportation for visitors, video visiting for attorney consultation; and reviewing national best practices for visiting and family reunification.

Importantly, the proposed MLWDC will accommodate various forms of visitation, including traditional non-contact visiting, telephone access, video visiting, and contact visiting. Contact visits refer to opportunities for inmates and visitors to interact face to face, allowing for physical contact. Non-contact visits refer to visitations where the inmate and the visitor are separated by a glass barrier, and no physical contact is allowed. Video visits refer to long-distance visitation that can occur through a video conferencing program, allowing the inmate and the visitor to hear and see each other via the computer and screen. Therefore, video visiting is a component of a visiting program.

Re: Acceso al idioma del plan preliminar del EIR para la cárcel propuesta para mujeres
(Capital Project No. 69719)

Estimado Junta de Supervisores:

Le escribimos para solicitar formalmente una traducción en español del Informe Preliminar del Impacto Ambiental (DEIR) para la cárcel propuesta para mujeres en Mira Loma Detention Center. También solicitamos que la agencia principal organice un cita adicional en español o que tengan traducción en español disponible para que miembros de la comunidad puedan participar en el proceso de comentarios públicos.

Esta fue una petición que solicitamos durante el proceso de alcance inicial. La petición no fue contestada en el proceso del preliminar del impacto ambiental (DEIR).

El incumplimiento de esta solicitud violaría leyes de derechos civiles de 1964, y las regulaciones del Título VI, que prohíbe la discriminación basada en el origen nacional, y la Orden Ejecutiva 13166 (2000), y proporcione motivos del procesamiento legal. El condado debe dar cabida a servicios de idiomas para las personas que no hablan Inglés como su idioma principal y que tienen una capacidad limitada para leer, hablar, escribir o entender Inglés.

La Agencia de Recursos Naturales de California que supervisa la Ley de Calidad Ambiental (CEQA) considera la participación del público y el comentario durante cualquier proceso de revisión ambiental como una "parte esencial del proceso de CEQA." Falta de proporcionar el acceso del idioma principal obstaculiza la participación de los miembros de la comunidad en el CEQA proceso y está sujeto a persecución legal.

Adicionalmente, el condado organizó una cita pública para el DEIR el 8 de Diciembre de 2015 sin intérpretes españoles restringiendo participación pública en el proceso de revisión ambiental.

Por favor de notificarme el día lunes 11 de Enero de 2016 si el condado va a traducir el DEIR y tener otra cita pública con intérpretes que hablen español.

2.2.4 NATIONAL DAY LABORER ORGANIZING NETWORK (NDLON)

January 5, 2016

NDLON-1

In response to the commenter's request for Spanish translation of the Project's Draft Environmental Impact Report (EIR) and Spanish interpreters at an additional public meeting, the Los Angeles County Chief Executive Office provided a responsive letter to Californian's United for a Responsible Budget (CURB), attention to Ms. Diana Zuniga on January 22, 2016. This letter was also sent to Marcela Hernandez of the Immigrant Youth Coalition, Claudia Bautista of the National Day Laborer Organizing Network, Felicia Gomez of the California Immigrant Policy Center, and Shiu-Ming Cheer of the National Immigration Law Center in response to similar requests. Follow up communications with Ms. Zuniga even before the notice of a new comment period confirmed the date of the second public meeting as February 9, 2016. The letter to CURB and others reads as follows:

We are responding to your letter dated Friday, January 8, 2016, addressed to the Los Angeles County Board of Supervisors. You requested a response regarding "whether the County will translate the Draft Environmental Impact Report (EIR) and hold another public meeting with Spanish interpreters available" with respect to the proposed Mira Loma Women's Detention Center Renovation Project (MLWDC) at Mira Loma in Lancaster.

We appreciate that you are following the review process for the proposed MLWDC project, and respond to your requests here. The County will voluntarily add additional outreach. We will hold a second community meeting in Lancaster to discuss the Draft EIR conclusions and process and invite submission of comments. Once the location and time of the meeting has been determined, a notice in English and Spanish will be provided via a similar notification process as the November 9, 2015, release of the Draft EIR. At this meeting, we will have real time Spanish language translation available, in the event members of the public request this service. Additionally, in light of the unique nature of this detention facility project, the County also will provide a written Spanish translation of the Executive Summary of the Draft EIR. That Draft EIR section summarizes the description, location and setting of the proposed MLWDC project, the project alternatives considered, the concerns raised during the scoping process, and the potential environmental impacts. The Executive Summary also provides the entire list of proposed Project Design Features, Regulatory Requirements and Mitigation Measures. This translation will be made available at the Quartz Hill and Lancaster Libraries, Los Angeles County Public Information Office, and online for download. The County will also provide additional time to accept public comments on the Draft EIR after the written translation is available.

Throughout the California Environmental Quality Act (CEQA) review process for the MLWDC project, the County has voluntarily broadened public outreach beyond what is legally required. As you are aware, the noticed CEQA comment period closed on January 12, 2016, after being open from November 9, 2015. The County voluntarily provided an extended comment period for more than the required 45 days, to avoid any inconvenience to commenters from the holidays occurring in the comment period.

As another example of the County's broad public outreach efforts, the original scoping period was noticed to include the public and interested stakeholders early in the process, although that is not required by law. The County also held a noticed community meeting in the Lancaster community during the Draft EIR comment period, for anyone interested in learning more about the CEQA and public comment process. At that meeting, held on December 8, 2015, there was a presentation on the project description and the CEQA review and comment process. A number of speakers, including CURB, raised approximately 30 different questions at that meeting. No one attending that public community meeting asked for the assistance of a translator for themselves or others. Had they done so, County staff at the meeting would have assisted in Spanish translation.

Also, as you are aware, at the Board of Supervisors' regular meetings, Spanish translation services are available. We appreciate your comments and have responded with specific additional opportunities for public participation.

As stated above, the first of two public meetings was held to provide an overview of the Project and the conclusions of the Draft EIR on Tuesday, December 8, 2015, from 6:00 PM to 8:00 PM at the James C. Gilley Lancaster National Soccer Center Eastside Activity Center at 43000 30th Street East in Lancaster, CA 93535. There were approximately 15 attendees at the first public meeting, and some submitted written comments. Attendance at this public meeting was voluntary and was not required to submit comments on the Draft EIR.

Subsequently, in January 2016, in response to requests from the public to provide an additional extension of the public review period and an additional public meeting, a *Notice of Extended Comment Period for the Draft Environmental Impact Report for the Mira Loma Women's Detention Center Project and Notice of Second Public Meeting in Lancaster, California* (Notice) was sent to the 2015 Notice of Availability (NOA) mailing list and email list, as well as additional mailing list contacts that had provided comment letters during the Draft EIR public review period up to the time of the mailing. This Notice extended the Draft EIR public review period from Monday, February 1, 2016, through Wednesday, March 2, 2016. This 30-day extension was in addition to the original 64-day Draft EIR public review period. All written comments received on the Draft EIR from Monday, November 9, 2015, through Wednesday, March 2, 2016, were responded to in this document. Therefore, the total Draft EIR public review period for which the County received and responded to comments was 114 days.

The Notice extending the public review period was provided in both English and Spanish. Additionally, the Executive Summary of the Draft EIR was translated into Spanish and posted on the County's website for viewing and downloading. Hardcopies of the Spanish-translated Executive Summary were made available, in addition to the Draft EIR, at the Quartz Hill and Lancaster Libraries, and the Los Angeles County Public Information Office. Newspaper advertisements of the extended comment period and second public meeting were placed in the following papers and ran on Monday, February 1, 2016:

- *Acton-Aqua Dolce News*: a weekly publication so the ad was available for 7 days
- *Los Angeles Daily News*: a daily publication
- *La Opinion*: a daily publication (the ad was in both English and Spanish)
- *Antelope Valley Press*: a daily publication
- *Antelope Valley Times*: an online publication

The second public meeting was held on Tuesday, February 9, 2016, at the Lancaster Public Library at 601 West Lancaster Boulevard in Lancaster, CA 93534 to present an overview of the proposed Project and the Draft EIR process and conclusions and to invite submission of public comments on the Draft EIR. Real-time Spanish translation services were made available, as were copies of the Notice and the Executive Summary in both English and Spanish. This second public meeting had two attendees from the public. There were no requests for Spanish translation services at the second public meeting.

Re: Language access for Draft EIR for Proposed Women’s Jail
(Capital Project No. 69719)

Dear Board of Supervisors:

We are writing to formally request a Spanish translation of the Draft Environmental Impact Report (DEIR) of the proposed women’s jail at Mira Loma Detention Center. We also request the lead agency to hold an additional public meeting in Spanish or with Spanish translation available in order for community members with limited English proficiency to participate in the public comment process.

This was a request that was submitted during the Initial Scoping Process that was not answered in the Draft Environmental Process.

Failure to meet this request would violate Civil Rights Acts of 1964, and the Title VI regulations, which prohibits discrimination based on national origin, and Executive order 13166 issued in 2000, and provide grounds for legal action¹. The County must accommodate language services for individuals who do not speak English as their primary language and who have a limited ability to read, speak, write or understand English.

The California Natural Resources Agency which oversees the Environmental Quality Act (CEQA) deems public participation and comment during any environmental review process as an “essential part of the CEQA process”. Failure to provide language access hinders residents’ meaningful participation in the CEQA review process and is subject to legal action².

² <http://www.ca-ilq.org/sites/main/files/file->

[attachments/resources_Language_Access_Guide_formatted_9-27-11_0.pdf](#)

In addition, the County hosted a public meeting for the DEIR on December 8, 2015 without Spanish interpreters further barring public participation in the environmental review process.

Please notify me whether the county will translate the DEIR and hold another public meeting with Spanish interpreters available.

Sincerely,

Shiu-Ming Cheer
Immigration Attorney
National Immigration Law Center

2.2.5 NATIONAL IMMIGRATION LAW CENTER (NILC)

January 12, 2016

NILC-1

In response to the commenter's request for Spanish translation of the Project's Draft Environmental Impact Report (EIR) and Spanish interpreters at an additional public meeting, the Los Angeles County Chief Executive Office provided a responsive letter to Californian's United for a Responsible Budget (CURB), attention to Ms. Diana Zuniga on January 22, 2016. This letter was also sent to Marcela Hernandez of the Immigrant Youth Coalition, Claudia Bautista of the National Day Laborer Organizing Network, Felicia Gomez of the California Immigrant Policy Center, and Shiu-Ming Cheer of the National Immigration Law Center in response to similar requests. Follow up communications with Ms. Zuniga even before the notice of a new comment period confirmed the date of the second public meeting as February 9, 2016. The letter to CURB and others reads as follows:

We are responding to your letter dated Friday, January 8, 2016, addressed to the Los Angeles County Board of Supervisors. You requested a response regarding "whether the County will translate the Draft Environmental Impact Report (EIR) and hold another public meeting with Spanish interpreters available" with respect to the proposed Mira Loma Women's Detention Center Renovation Project (MLWDC) at Mira Loma in Lancaster.

We appreciate that you are following the review process for the proposed MLWDC project, and respond to your requests here. The County will voluntarily add additional outreach. We will hold a second community meeting in Lancaster to discuss the Draft EIR conclusions and process and invite submission of comments. Once the location and time of the meeting has been determined, a notice in English and Spanish will be provided via a similar notification process as the November 9, 2015, release of the Draft EIR. At this meeting, we will have real time Spanish language translation available, in the event members of the public request this service. Additionally, in light of the unique nature of this detention facility project, the County also will provide a written Spanish translation of the Executive Summary of the Draft EIR. That Draft EIR section summarizes the description, location and setting of the proposed MLWDC project, the project alternatives considered, the concerns raised during the scoping process, and the potential environmental impacts. The Executive Summary also provides the entire list of proposed Project Design Features, Regulatory Requirements and Mitigation Measures. This translation will be made available at the Quartz Hill and Lancaster Libraries, Los Angeles County Public Information Office, and online for download. The County will also provide additional time to accept public comments on the Draft EIR after the written translation is available.

Throughout the California Environmental Quality Act (CEQA) review process for the MLWDC project, the County has voluntarily broadened public outreach beyond what is legally required. As you are aware, the noticed CEQA comment period closed on January 12, 2016, after being open from November 9, 2015. The County voluntarily provided an extended comment period for more than the required 45 days, to avoid any inconvenience to commenters from the holidays occurring in the comment period.

As another example of the County's broad public outreach efforts, the original scoping period was noticed to include the public and interested stakeholders early in the process, although that is not required by law. The County also held a noticed community meeting in the Lancaster community during the Draft EIR comment period, for anyone interested in learning more about the CEQA and public comment process. At that meeting, held on December 8, 2015, there was a presentation on the project description and the CEQA review and comment process. A number of speakers, including CURB, raised approximately 30 different questions at that meeting. No one attending that public community meeting asked for the assistance of a translator for themselves or others. Had they done so, County staff at the meeting would have assisted in Spanish translation.

Also, as you are aware, at the Board of Supervisors' regular meetings, Spanish translation services are available. We appreciate your comments and have responded with specific additional opportunities for public participation.

As stated above, the first of two public meetings was held to provide an overview of the Project and the conclusions of the Draft EIR on Tuesday, December 8, 2015, from 6:00 PM to 8:00 PM at the James C. Gilley Lancaster National Soccer Center Eastside Activity Center at 43000 30th Street East in Lancaster, CA 93535. There were approximately 15 attendees at the first public meeting, and some submitted written comments. Attendance at this public meeting was voluntary and was not required to submit comments on the Draft EIR.

Subsequently, in January 2016, in response to requests from the public to provide an additional extension of the public review period and an additional public meeting, a *Notice of Extended Comment Period for the Draft Environmental Impact Report for the Mira Loma Women's Detention Center Project and Notice of Second Public Meeting in Lancaster, California* (Notice) was sent to the 2015 Notice of Availability (NOA) mailing list and email list, as well as additional mailing list contacts that had provided comment letters during the Draft EIR public review period up to the time of the mailing. This Notice extended the Draft EIR public review period from Monday, February 1, 2016, through Wednesday, March 2, 2016. This 30-day extension was in addition to the original 64-day Draft EIR public review period. All written comments received on the Draft EIR from Monday, November 9, 2015, through Wednesday, March 2, 2016, were responded to in this document. Therefore, the total Draft EIR public review period for which the County received and responded to comments was 114 days.

The Notice extending the public review period was provided in both English and Spanish. Additionally, the Executive Summary of the Draft EIR was translated into Spanish and posted on the County's website for viewing and downloading. Hardcopies of the Spanish-translated Executive Summary were made available, in addition to the Draft EIR, at the Quartz Hill and Lancaster Libraries, and the Los Angeles County Public Information Office. Newspaper advertisements of the extended comment period and second public meeting were placed in the following papers and ran on Monday, February 1, 2016:

- *Acton-Aqua Dolce News*: a weekly publication so the ad was available for 7 days
- *Los Angeles Daily News*: a daily publication
- *La Opinion*: a daily publication (the ad ran in both English and Spanish)
- *Antelope Valley Press*: a daily publication
- *Antelope Valley Times*: an online publication

The second public meeting was held on Tuesday, February 9, 2016, at the Lancaster Public Library at 601 West Lancaster Boulevard in Lancaster, CA 93534 to present an overview of the proposed Project and the Draft EIR process and conclusions, and to invite submission of public comments on the Draft EIR. Real-time Spanish translation services were made available, as were copies of the Notice and the Executive Summary in both English and Spanish. This second public meeting had two attendees from the public. There were no requests for Spanish translation services at the second public meeting.

From: Janisha Mickens [mailto:JanishaM@weingart.org]
Sent: Monday, January 11, 2016 11:12 AM
To: CEO Environmental <environmental@ceo.lacounty.gov>
Subject:

January 7, 2016

County of Los Angeles Chief Executive Office
Capital Projects/Debt Management Division
Attn: Mira Loma Women's Detention Center EIR
754 Kenneth Hahn Hall of Administration
500 West Temple Street
Los Angeles, California 90012

Dear Chief Executive Office,

We are writing in response to the Draft Environmental Impact Report (DEIR) prepared for the Mira Loma Women's Detention Center Project (MLWDC), made available on November 9, 2015. After a thorough review, we believe that the DEIR neither adequately addresses the negative environmental impacts of the project, nor does it adequately consider possible alternatives to the proposed project that would significantly reduce environmental harms.

} Weingart-1

A new jail in Lancaster will be severely detrimental to the health and wellbeing of LA County residents as well as destructive to the local environment. The EIR fails to adequately address many serious issues specific to the project site and surrounding area including Valley Fever, increased smog and traffic pollution, potential Native American resources, suitable energy sources, and water resources in the context of drought. In numerous instances, the DEIR fails to provide detailed explanations of how significant environmental impacts are reduced but instead only includes vague mitigation measures.

} Weingart-2

Additionally, the DEIR fails to consider a comprehensive list of alternatives to the MLWDC project as required by CEQA. Objective A of the project states "To prioritize the on-site integration of gender-responsive female inmate education, treatment, and vocational training to reduce female inmate recidivism" (5-7), with reducing recidivism named as a primary objective (5-7). Many experts, including our organizations, have repeatedly pointed to reports and evidence based practices that illustrate how recidivism is greatly reduced through programs that employ alternatives to imprisonment. However, suitable out-of-custody alternatives that are being increasingly implemented across the state and country are not considered in this DEIR as project alternatives, despite the fact they would satisfy the same project objectives and undoubtedly produce less harmful environmental impacts.

} Weingart-3

Please find attached a detailed list of comments addressing specific areas of the DEIR. We believe that our concerns with the inadequacy of this report, along with the detrimental environmental impacts of the MLWDC, are sufficient to warrant a rejection of the Mira Loma proposal on the basis that environmental impacts cannot be appropriately mitigated, and at the very least, a rewriting of the report to include missing analysis and information.

} Weingart-4

Sincerely,
Janisha Mickens

ATTACHMENT 1

Who will monitor the design-build process to ensure any changes made are in compliance with CEQA Guidelines? What types of changes would warrant an addendum?

} Weingart-5

What are the estimated costs of the proposed mitigation measures? Has the price tag for the jail increased? What are the total estimated expenses so far?

} Weingart-6

What are future projects in the area and how will they impact the project site? How will future projects intensify significant impacts to the environment? Please list with detail all additional relevant policies and regulations in each topic area.

} Weingart-7

4.1 AESTHETICS

Substantial adverse effect on a scenic vista:

The radio tower, when considered alone, may not significantly alter the view of scenic resources. However, its construction, which will likely require large machinery, may potentially significantly alter or block the view of scenic resources, particularly when compounded with the large water tower in the same viewshed.

} Weingart-8

Page 117, 4.1-12:

Mitigation of adverse lighting effects is proposed through MM AES-1, yet no details are provided. An EIR is required to contain "ways in which any adverse effects of such a project might be minimized" (PRC 21061). Because the specifics of a Lighting Plan are not provided, but only its intended mitigation, readers of the EIR are unable to assess the adequacy of such a plan and mitigation based on concrete data.

} Weingart-9

4.2 AIR QUALITY

The report fails to address the long-term impact of Valley Fever to prisoners, personnel, visitors and neighboring residents (i.e., the homeless shelter). The long-term impact of Valley must be analyzed as the disease is endemic to Antelope Valley.^[1] Recent findings in the article, "The Changing Epidemiology of Coccidioidomycosis in Los Angeles (LA) County, California, 1973–2011," by Ramon Guevara of the LA Department of Public Health, should be considered in the final EIR. Findings include notable changes in the epidemiology of coccidioidomycosis in LA county started in 2004 and include significant increases in case numbers and incidence rates across various demographic categories and geographic areas, a sudden and substantial rise in female cases, and collectively more annual cases in the endemic areas, especially high case numbers and incidence rates in the Antelope Valley. The county should consult with Fugitive Dust and Health and Valley Fever Scoping Group in Antelope Valley.

} Weingart-10

There is a Valley Fever "hot spot" close to the project site that requires further investigation into potential long-term impacts on people, e.g., prisoners and residents nearby. The report states

} Weingart-11

^[1] <http://journals.plos.org/plosone/article?id=10.1371/journal.pone.0136753>

that “The nine prisons and facilities identified by the CDCR as having a higher risk of exposure to Valley Fever do not include the California State Prison- Los Angeles County, located in the City of Lancaster, which is adjacent to the MLWDC Project site. As such, the CDCR has not identified the Lancaster area being a geographic location that requires screening or interventions for the State prison population with regard to exposure to Valley Fever.” Referring to CDCR’s list of high risk facilities is neither scientifically adequate nor does it have any analysis of the actual danger of contracting Valley Fever at the project site. As a counterexample, a severe and highly-publicized case of Valley Fever in California State Prison – Los Angeles County was reported on by Mother Jones this year.^[2]

Weingart-11
cont.

Rather than mitigate the contraction of Valley Fever by sensitive receptors (i.e. prisoners, staff, visitors), the DEIR states that “because the majority of the Project site will be paved or landscaped, there are few opportunities for on-site soils to produce airborne dust... The operation of the MLWDC will follow standard LASD procedures for medical care and prevention with regard to health care for inmates in general, and Valley Fever specific all [sic] and will continue to coordinate with LACDPH (Masis 2015).” The report essentially and inadequately dismisses the very real possibility of Valley Fever contraction among sensitive receptors. Antelope Valley is a high wind area, meaning that infectious spores may become airborne from surrounding soils not considered “on-site.”

Weingart-12

The report fails to consider frequent clinical misdiagnosis of coccidioidomycosis cases.^[3] How will the project ensure proper diagnosis and treatment of Valley Fever?

Weingart-13

Analysis of motor vehicle pollutant fails to consider additional traffic necessitated by services contractors and/or vendors, e.g., laundry. Since the project site will not include a laundry site, how frequent will laundry services occur? Will this service be contracted? If so, with what company and where? How will the regular travel to the jail to pick up laundry impact additional pollutants from motor vehicles? What other vendors will the project require? How will regular visits by truck from service/delivery vendors to and from the jail impact air quality? What is the estimated vehicle mileage incurred by all delivery/service trucks in two weeks?

Weingart-14

“Air quality plan” is vague. Please provide examples of potential air quality standard plans.

Weingart-15

The report states that 44% of the site will be outdoors; 1.5 out of 46 acres will be outdoor recreational space. What are the long-term impacts of potential exposure to Valley Fever during outdoor recreational activities? Where will the imported soil (for garden beds) come from? The soil must be tested and the results of which should be included in the final EIR.

Weingart-16

What soil tests have been conducted on the project site for Valley Fever specifically? What were the findings? How many, if any, tests have been completed? Who conducted the test? Please include documentation of soil testing on the project site for Valley Fever in the final EIR.

Weingart-17

What are the potential impacts of increased pollutants on the health of prisoners? What mitigation measures will be provided during outdoor recreation?

Weingart-18

What are long-term mitigation measures for Valley Fever with regard to the soccer field, running track and other outdoor recreational area?

^[2] <http://www.motherjones.com/environment/2015/01/valley-fever-california-central-valley-prison>

^[3] <http://publichealth.lacounty.gov/acd/docs/cocciRxarticle.pdf>

4.3 BIOLOGICAL RESOURCES

Pg. 155, 4.3-10

What are the few wildlife species expected to use the site? How will refurbishment of MLDC impact the habitat or movement of wildlife species?

} Weingart-19

Describe in detail how the project will directly and indirectly impact nesting habitat for migratory birds. What are the migratory patterns of birds expected to occur, and what are proposed mitigations? When do active nests occur during the year?

The project proposes to mitigate the loss of an active nest by requiring seasonal avoidance or pre-construction surveys for nesting birds. If the duration of construction is 35 months, how will the construction of this project avoid particular seasons? How will pre-construction surveys mitigate the indirect impacts of a 35 month construction period?

} Weingart-20

How will MBTA regulations be enforced and monitored for compliance during the construction phase?

154, 4.3-12

The project projects construction to begin in December 2016 for a duration of 35 months. MM BIO-1 prohibits removal of trees supporting roost sites during bat maternity roost season (March 1 to July 31). However, the demolition of bat maternity roosts will indirectly impede the use of wildlife nursery sites, as the colony will not be able to return to their nursery site.

} Weingart-21

What are the ecological impacts of removing bat maternity roosts in the area? How will the removal of colonial and solitary roosts sites impact the regional population of the bat species?

MM BIO-1 is contradictory in that it calls for the complete removal of nests in order to mitigate the project's interference of wildlife movement. MM BIO-1 is not an appropriate nor effective in reducing the impact of removing occupied bat maternity roosts.

} Weingart-22

Which program of the Los Angeles County Department of Public Works will be provided the results of the pre-construction bat habitat assessment? Will this be available to the public. I would recommend the county to include the details of this assessment in the final EIR.

} Weingart-23

The name, credentials or institutional affiliation of the Biologist(s) conducting pre-construction surveys and assessments must be disclosed. We recommend the county to seek specifically a conservation biologist.

MM BIO-2 proposes "an appropriate buffer zone" around an active nest if found. What exactly constitutes an appropriate buffer zone? Is there a standard determined by the American Institute of Biological Sciences? Will the standard be used? If not, why?

} Weingart-24

4.4. CULTURAL RESOURCES

Letters to native american consultations = appendix C-3
look at appendix C-2

Page 171, 4.4-10

The last paleontological resources record search was performed in 2008. The county must verify that no discovery of fossil localities have been recently recorded with the project site. These references must be updated by the NHMLAC.

} Weingart-25

Page 172, 4.4-11

In assessing potential effects of Native American artifacts, BonTerra Consulting only received one response. It is not indicated whether follow up was made to the remaining six individuals, as recommended by the Native American Heritage Commission. The county must ensure that all the Native American tribes and individuals are consulted, not simply informed.

} Weingart-26

Beverly Salazar Folkes informed us on December 8, 2015 that she never received the informational letter, dated February 3, 2014.

Page 180, 4.4-16

The determination of "non-contributor" to the historic designation of the Old Lock Building requires justification and further investigation. Built in 1946, it is located directly adjacent to Old Hangar 2. Its demolition potentially affects the historical significance of the site. Similarly, the Quonset Hut (built c. 1971) and Wooden Shed (built c. 1959), are also slated for demolition, but fall under the 45 year requirement for assessment as potentially warranting individual preservation as historic structures. These assessments are not provided. Additionally, demolition of these structures together for the creation of a parking lot will have a cumulative detrimental impact on the site's feeling, historic association, setting, and design.

} Weingart-27

Page 182, 4.4-18

The name, credential and/or institutional affiliation of the Paleontologist retained by the county to monitor excavations must be disclosed.

} Weingart-28

If a fossil resource is determined to be significant, any plan formulated by the paleontologist must be disclosed and detailed in the final EIR or an addendum.

What are the short-term and long-term impacts of excavation activities with regard to Valley Fever and fugitive dust? What are proposed mitigation measures for fugitive dust and exposure of Valley Fever during the excavation of native soils?

} Weingart-29

MM CUL-1 and MM CUL-2 are not sufficient mitigation measures. All pre-construction assessments/surveys must be documented in the Environmental Impact Report (EIR) to ensure compliance with CEQA Guidelines. Archaeologists and paleontologists must conduct their evaluations and submit their findings as part of the final EIR. There is no third-party monitor to ensure compliance with CEQA after the final EIR is approved. The only option to ensure compliance is to complete pre-construction assessments prior to the completion of the final EIR.

} Weingart-30

GEOLOGY AND SOILS

Page 193, 4.5-4

How will continued drought conditions and further depletion of groundwater in the area affect the project site's susceptibility to liquefaction in areas of localized perched groundwater?

} Weingart-31

Page 196, 4.5-7

Antelope Valley does experience very high winds from March through July. What are proposed mitigation measures to prevent fugitive dust and exposure of Valley Fever to the construction workers, scientific monitors, and the residents proximate to the project site during construction?

Weingart-32

Page 197, 4.5-8

Drought conditions and depletion of groundwater will continue; thus, subsidence will worsen causing damage to the foundation of the structure. How will the county propose appropriate mitigation measures given current and projected conditions? What are anticipated hazards for the prisoners residing in the jail should further subsidence occur? What are estimated operational costs for repair and maintenance of overlying structures, foundations and walls?

Weingart-33

The findings of a geotechnical investigation must be disclosed in the final EIR. The determination of "less than significant impact" must be justified in detail.

Weingart-34

GREENHOUSE GAS EMISSIONS

Page 211, 4.6-10

Water resource summary of general environmental effects of climate change does not include recent drought conditions and its exacerbation of reduced water supplies.

Weingart-35

Page 215, 4.6-14

The report states that "soil import and export are not anticipated for the Project," however, the raised garden beds for the project's on-site recreational activities "will be filled with imported soils derived from outside the Antelope and Kern Valleys" to prevent prisoners from interacting with local soil. The construction activity impacts are incorrect and must be updated in to include energy expended for soil import and export.

Weingart-36

Furthermore, the construction input data fails to account for the import of water for prevention of fugitive dust and exposure to Valley fever when breaking ground.

The construction input data fails to account for removal of hazardous waste.

The report states that "GHG emission-reduction measures for construction equipment are relatively limited." This statement requires further justification/evidence. What is the inventory of construction equipment for this project? What are the average GHG emissions of each equipment?

Weingart-37

Report states that construction will begin in November 2016. In other pages, December 2016 is the projected start date for construction.

Weingart-38

The report concludes that a separate significance finding for construction emissions is not necessary. This requires further justification and the report must provide the threshold for construction annual GHG emissions.

Weingart-39

Page 216, 4.6-15

If the design-build contractor requests an expedited schedule, the total GHG emissions would not be the same if project assumes at 5-day work week. The purported "offsetting decreases" are groundless assumptions that cannot be used to claim a reduction in total GHG emissions even if the number of work days increases. Total GHG emissions must be recalculated assuming a 6-day work week.

Weingart-40

Failure to accurately include all operational GHG emissions (e.g., vehicle emissions from service/deliver truck) requires the estimated operational annual GHG emissions to be recalculated.

Weingart-41

How was the operational annual emissions for each source area (energy, mobile, etc) calculated? How do these numbers compare to annual emissions of MLDC when it operated under Immigration and Customs Enforcement? Please provide the operational annual emissions of the facility when it was last used, and how the county determined input estimates for electricity, natural gas, water and solid waste.

Weingart-42

The conclusion that total annual estimated GHG emissions for the project would result in less than significant GHG missions is not accurate. GHG emissions must be recalculated to include all input and output data.

Weingart-43

Page 218, 4.6-17

The development of Project-specific ECRP must be created and disclosed in the final EIR to ensure compliance of mitigation. If the proposed measures of ECRP are not feasible, it is not appropriate to claim an overall reduction in GHG emissions.

Weingart-44

PDF GHG-2 projects GHG emissions reduction with the placement of video-visiting stations at the Project site. However, it is erroneous to assume that in-person visitations will decrease with the availability of video visitations. There is no evidence to prove correlation; thus, the report cannot conclude a reduction in total GHG emissions based on this assumption. In fact, given the jail site's proximity to different areas of Los Angeles and neighboring counties, one can conversely assume that family/friends, who may live in Antelope Valley or Kern County and could not previously visit their loved ones at CDRF due to the distance, will now frequent the jail.

Weingart-45

PDF GHG-3 projects GHG emissions reduction by posting AVTA bus transit and Metrolink schedules. This is illogical and inappropriate to assume that simply posting transit schedules will encourage use of public transportation. This reasoning fails to account for an array of reasons for why people are unable to use public transportation. Moreover, it is irresponsible and deceptive to then claim definitively that there will be a reduction in total annual GHG emissions (and therefore no significant impact needs to be addressed).

Weingart-46

PDF GHG-4 proposes GHG emissions reductions by providing secure on-site bicycle storage for both staff commuting and visitors. Again, this is groundless. Simply setting up bicycle storage does not guarantee a reduction in VMT associated with vehicle travel. Therefore, the project cannot assume a reduction in overall annual GHG emissions. The project acknowledges uncertainty of staffing availability in Antelope Valley, and cannot claim definitively that staff commuting would live locally. Additionally, there is only one dedicated bicycle lane in the freeway and roadway system of the project; that is, the bicycle lane only on the east side of Valley Central Way. There are no proposals by the project, city or county to expand bicycle lanes in Lancaster or Antelope Valley.

Weingart-47

Given these contradictions, the Project must recalculate total annual GHG emissions without purported "offsetting decreases". The above comments challenge the report's finding that the project would have no impact on GHG emissions.

Weingart-48

The report fails to address how conditions of climate change will affect the project's water supply and impact on Los Angeles county's water supply. Additionally, the report does not

Weingart-49

address how the spread of Coccidioidomycosis will intensify with higher temperatures, drier land, loosened soil/sand and other environmental effects of climate change. Furthermore, the report states that the degrading quality of our air will increase the spread of infectious diseases and their vectors but does not consider Valley Fever as one such infectious disease. The environmental effects of climate change will exacerbate prominence of coccidioidomycosis which is already endemic to the project site. Women are particularly vulnerable, evidence in Dr. Ramon Guevara's article published September 2015. Therefore, the Project must thoroughly assess the potential health impacts on the women who would be forced to relocate to the project site.

Weingart-49

The project must assess the environmental effects of climate change on air quality, water supply and the spread of Valley Fever.

HAZARDS AND HAZARDOUS MATERIALS

Regarding the onsite underground storage tanks at the central plant that has failed leak detection tests and has not been corrected. There is not mitigation proposed to repair or remove this underground storage tank. It is possible that over time, with use or not, hazardous waste will continue to leak and potentially contaminate the soil and groundwater.

Weingart-50

Page 229, 4.7-8

Report states that when six older USTs at the MLDC were removed, contamination was found in the soil. The soil contamination was remediated. Which county department oversaw the remediation of the contaminated soil? Please disclose this information.

Weingart-51

Minor staining of the carpet and hydraulic oil on the concrete floors beneath the emergency generator were found in 2014. Despite this, the report states that no leaks were observed. What was the minor staining on the carpet and where did the hydraulic oil come from? What led the county to conclude that no leaks were observed despite staining and presence of oil.

Weingart-52

Regarding asbestos and lead sampling, the report must justify why Building 27-29 were not sampled.

Weingart-53

Pg 232, 4.7-11

The report notes that two USTs at the fueling station were found to not have current permits and have failed leak detection tests. There are no proposed mitigations to update permits and repair/remove the leaking USTs.

Weingart-54

4.8 HYDROLOGY AND WATER QUALITY

Regarding the adjudication of groundwater rights, how might the outcome affect water supply for the proposed jail? What are the associated costs? Will the proposed jail contribute to further overdraft of groundwater in LA County, not just Antelope Valley? What is the well flow rate, well yield, water quantity and rate of replenishment of LA County Waterworks District 40 water line and Antelope Valley-East Kern Water Agency (AVEK)?

Weingart-55

The impact on Waterworks District 40 water line and supply must be considered in light of drought conditions. The entire county, not just Antelope Valley and underlying groundwater sources, is in a state of overdraft. What is the impact of this project on the water supply of Waterworks District 40 and AVEK?

Weingart-56

The historic well production statistics are outdated. The intensification of drought conditions in recent years (post 2012) warrants an updated study.

Weingart-57

How do they monitor compliance during construction? For example, the report states that compliance with NPDES Construction General Permit would ensure the project does not violate water quality standards, but during the construction process, how will water quality standards be monitored?

Weingart-58

The report states that increased storm water runoff could result in erosion if site improvements are not conducted in compliance with regulations. What third party monitor will be in place to ensure compliance during construction and operational use?

Weingart-59

What are the associated costs with a new drain system?

Weingart-60

The report states that the project will not use groundwater supplies for long-term operations. Imported and recycled water is proposed as an alternative. What are the long-term impacts of importing water on traffic and air quality? Where will the recycled water come from? Are there safety and hygiene concerns with using recycled water?

Weingart-61

Construction and disturbance of soil will occur before the new water pipeline is completed. Spraying the ground with water is proposed as a mitigation measure for Valley Fever during construction. What water supply will be used during construction?

Weingart-62

4.9 LAND USE AND PLANNING

4.10 NOISE

4.11 POPULATION AND HOUSING

Are growth projections reconciled with environmental impacts? For example, Table 4.11-6 projects an increase of ~20,000 people in 2020 (from 2008) — is this projected population considered in the long-term analysis of water usage in Lancaster?

Weingart-63

Jobs at the jails are not the type of job creation that the community needs. What percentage of the unemployed population in Lancaster would qualify as an employee of the sheriff's department?

Weingart-64

4.12 PUBLIC SERVICES AND RECREATION

Page 4.12-3

The report states "neither the project site nor the city of Lancaster is located within areas identified to have "very high fire hazard severity." However, in the Hazardous Waste section, the report claims that the project site is at least 4.5 miles from the edge of an area determined to be "very high fire hazard severity."

Weingart-65

Outdoor recreation area is required for detention facilities. However, no mitigation measures have been proposed for the outdoor recreational space (soccer field, running track and gardening areas) and potential exposure to Valley Fever and poor air quality.

Weingart-66

It is not indicated whether the full-sized sports court for volleyball and basketball is outdoor or indoor.

} Weingart-67

4.13 TRANSPORTATION AND TRAFFIC

Analysis based on Traffic Impact Study prepared by Linscott, Law and Greenspan (LLG) in April 2015. Visitation is by appointment only during weekends and holidays; traffic impacts of visitation based on review of existing visitation levels at CRDF/Lynwood as provided by the sheriffs.

} Weingart-68

Limited assessment of traffic when focusing on visitors alone. There will be an increase in traffic from service/delivery trucks and vendors.

Regarding alternative transportations, will the frequency of bus routes from LA to Lancaster increase? Is there a bus stop within .25 miles of the project site? Will there be additional bus routes created?

} Weingart-69

There is only one bicycle lane on one road near the project site. There are no proposed bikeways to facilitate transportation to the project site.

} Weingart-70

4.14 UTILITIES AND SERVICE SYSTEMS

4.15 ENERGY

2.2.6 WEINGART

January 7, 2016

Weingart-1

This comment provides a general introduction to the comment letter and alleges a failure to address environmental impacts and alternatives to the Project. The Draft Environmental Impact Report (EIR) for the proposed Project has been prepared in accordance with the California Environmental Quality Act (CEQA) and the State CEQA Guidelines (14 *California Code of Regulations* [CCR]), and addresses the potential direct, indirect, and cumulative impacts of the Project on all environmental issue areas. Section 5.0, Project Alternatives, was prepared in accordance with Sections 15126.6(a) through 15126.6(f) of the State CEQA Guidelines. As demonstrated throughout the Draft EIR, all potentially significant impacts have been reduced to levels that are less than significant through the identified mitigation measures, and no significant unavoidable environmental impacts would result from Project implementation.

Weingart-2

This comment alleges that a new jail will be detrimental to the environment and residents of Los Angeles County. Although the Project site has been unoccupied since 2012, as discussed in Section 2.0, Environmental Setting, the Project site has generally been in operation and providing various detention/jail functions since 1945–1946, when the California Youth Authority began a vocational school for juvenile offenders at the site. In the mid-1950s, the Mira Loma Detention Center (MLDC) operated as a medium-security facility until it ceased operations for the first time in 1979. It reopened in 1983 and was expanded with the construction of several new buildings in 1986. The facility was repurposed for female inmates and was known as the Mira Loma Female Honor Ranch, but was closed again in 1993. The MLDC reopened for use in 1997 by the U.S. Immigration and Customs Enforcement (ICE) to house undocumented immigrants until their immigration cases were decided, and it operated in that capacity until 2012. The site has not housed inmates since that time. The MLWDC Project proposes the adaptive reuse, renovation, and expansion of the majority of the buildings at MLDC, which is an existing County asset. The redevelopment of the property as the MLWDC would avoid the costs associated with constructing a new facility.

Sections 4.1 through 4.15 of the Draft EIR provide analyses of environmental effects that could impact residents in Los Angeles County, and others potentially affected by Project implementation. Each of the environmental issues listed in the comment are fully analyzed in the Draft EIR. Valley Fever and the generation of criteria pollutants (i.e. carbon monoxide [CO]; nitrogen oxides [NOx]; volatile organic compounds [VOCs]; sulfur oxides [SOx]; respirable particulate matter less than 10 microns in diameter [PM10]; and fine particulate matter less than 2.5 microns in diameter [PM2.5]) are discussed in Section 4.2, Air Quality; Native American resources are discussed in Section 4.4, Cultural Resources; energy demands and sources are discussed in Section 4.15, Energy; and a Water Supply Assessment was prepared for the Project and included in Appendix G-2 of the Draft EIR, and summarized in Section 4.14, Utilities and Service Systems. The mitigation measures (MMs) presented in the Draft EIR are prepared in compliance with Section 15126.4 of the State CEQA Guidelines. This Final EIR, including all comments submitted to the County on the Draft EIR, will be provided to the County of Los Angeles Board of Supervisors. Therefore, your concerns will be presented directly to the decision makers prior to consideration of Project approval.

Weingart-3

This comment alleges a failure to consider a comprehensive list of alternatives to the Project, including alternatives to incarceration and out-of-custody alternatives. The Draft EIR in fact addresses alternatives in accordance with the CEQA (*California Public Resources Code*, Sections 21000 et seq.) and the State CEQA Guidelines (14 *California Code of Regulations* [CCR]). As demonstrated in Section 5.0, Project Alternatives, an EIR must describe a range of reasonable and of potentially feasible alternatives to the proposed Project, or to the location of the Project, which would feasibly attain most of the basic Project Objectives but would avoid or substantially lessen any significant effects. Based on the analyses in Sections 4.1 through 4.15 of the Draft EIR, the proposed Project would result in significant environmental effects prior to mitigation on a number of environmental topics. Following mitigation, however, impacts to all of these topical areas would be avoided or reduced to less than significant levels with the implementation of mitigation measures. No significant and unavoidable impacts would occur with the Project.

Additionally, an EIR is not required to consider alternatives that are infeasible. The range of alternatives is governed by a “rule of reason” that requires discussion of only those alternatives necessary for the County of Los Angeles Board of Supervisors (Board) to make a reasoned choice. As demonstrated in Section 3.0, Project Description, on October 22, 2013, the Board authorized the evaluation of a proposal to use a portion of the MLDC property as the site for a female detention facility in lieu of the Pitchess Detention Center (PDC) site previously proposed. In May, 2014, the Board directed that “Option 1B” be studied, as recommended in the *Los Angeles County Jail Plan Independent Review and Comprehensive Report* (Jail Plan Report). Option 1B recommended continued evaluation of renovating the facility at MLDC for a women’s detention center. The Draft EIR has been prepared to evaluate the environmental impacts of pursuing the proposed Project, in compliance with this Board of Supervisors directive.

The proposed jail planning is set in the context of the County’s other programmatic and financial support of diversion from incarceration. Purely social effects of a project are beyond the scope of CEQA analysis, which focuses on the proposal’s effect on the physical environment. The County, however, has a concurrent focus on diversion from incarceration as it considers this Project. Therefore, the proposed Project is consistent with the Board of Supervisor’s consideration of policy issues addressing alternative approaches to incarceration, including the commenter’s suggestions regarding out-of-custody alternatives.

The Board of Supervisors has adopted numerous recent actions to reduce the number of people who are incarcerated in Los Angeles County, particularly those with mental illness and/or substance use disorders. The Board of Supervisors’ actions relating to diversion from the criminal justice system to reduce the need for incarceration, are based in part on their consideration of the August 4, 2015, District Attorney’s report of the Criminal Justice Mental Health Advisory Board in a document entitled “Mental Health Advisory Report: A Blueprint for Change – Providing Treatment, Promoting Rehabilitation and Reducing Recidivism: An Initiative to Develop a Comprehensive Plan for Los Angeles County”.

The members of the District Attorney’s Advisory Board were the Sheriff; the Fire Chief; the Directors of the Departments of Mental Health, Health Services, Public Health, Veteran's Affairs, and Public Social Services; the Public Defender; and the Executive Director of the Countywide Criminal Justice Coordination Committee. All Advisory Board members participated in the Countywide assessment of services and provided recommendations for comprehensive mental health diversion for each stage of the criminal justice continuum, from first responders to community re-entry and support. This report summarized the range of diversion programs already existing in the County and analyzed the need for additional mental health and substance abuse

diversion services for each stage along the criminal justice continuum. The County of Los Angeles Chief Executive Office (CEO) has acknowledged that these recommendations recognize that there are potential new efficiencies and cost avoidance by redirecting persons in need of physical, mental, and public health care services from the criminal justice system to appropriate care and treatment in lieu of incarceration.

On August 11, 2015, and September 1, 2015, in the context of determining potential capacity of proposed County jail facilities and responding to treatment needs for the mentally ill or victims of substance use disorders, the Board directed an ordinance be prepared to establish an Office of Diversion and Re-Entry (Office) within the Department of Health Services. That ordinance was adopted, and the Office has been established pursuant to Section 2.76.600 of the Los Angeles County Code. For administrative oversight, the Board of Supervisors determined the Office will be a part of the Department of Health Services and the Director of the Office will report to the Director of the Department of Health Services. The Director of this Office will be advised by a Permanent Steering Committee with broad membership from County departments working in collaboration with working groups established by the District Attorney. It includes representatives from the offices of the Sheriff, the Fire Chief, the Chief Executive Office, the Superior Court, the Public Defender, the Alternate Public Defender, Probation, the District Attorney, Mental Health, Public Health, and Health Services.

The Office will oversee Countywide diversion efforts including a system of integrated mental, physical, and public health care services and supportive housing for those at risk of homelessness who are re-directed from the criminal justice system or re-entering the community after incarceration. For purposes of this Office's jurisdiction, the expectation is for diversion to seamlessly occur across "sequential intercept" points within the criminal justice system. Such intercept points include initial contact with law enforcement or other first responders, involvement with the criminal court system, incarceration, or post-release from incarceration.

The Office was allocated an initial Supplemental Budget of \$74.5 million to be spent 40 percent on housing; 50 percent for diversion and anti-recidivism programs; and 10 percent for administration. The Board of Supervisors directed that future budget allocations be a part of the annual budget process. On September 1, 2015, the Board of Supervisors also directed that the Office distribute funding so at least 1,000 individuals would be diverted across all intercept points within the criminal justice system.

The Criminal Justice Mental Health Advisory Board report of August 2015 concluded that, even with increased opportunities for diversion from a jail environment, there will still be a need for mental health treatment in jails and that diversion efforts can reduce, but will not eliminate, the need for the County to operate detention facilities (LACDA 2015). In light of the County's diversion efforts, the Board of Supervisors directed that, for purposes of ongoing study and evaluation in the environmental review process, the maximum size of the proposed women's detention center at Mira Loma in Lancaster would remain at 1,604 beds. In addition, the Board of Supervisors reduced the maximum proposed size by approximately 1,000 beds, for purposes of the environmental review of a separate proposed treatment and detention center addressing needs of incarcerated men and women with mental illness and/or substance use disorders at the site of the current Men's Central Jail in downtown Los Angeles. In summary, the Board of Supervisors has taken steps to reduce the number of people who are incarcerated in Los Angeles County.

The Draft EIR Section 5.0, Project Alternatives, was prepared in accordance with Sections 15126.6(a) through 15126.6(f) of the State CEQA Guidelines and adequately considers alternatives to the proposed Project. Out-of-custody alternatives were not required to be analyzed

in the Draft EIR beyond the No Project alternative analyses and they would not be able to achieve the Project's primary goal, as stated below and in Section 5.3.2 of the Draft EIR.

The Project's goal is to provide detention facilities for low- to medium-security level female inmates that meet modern correctional standards and that prioritize the on-site integration of gender-responsive female inmate education, treatment, and vocational training. This goal focuses on providing a secure detention facility with cost-effective therapeutic and rehabilitative programs to meet needs of eligible female inmates in order to reduce recidivism.

Potential environmental impacts associated with "no action" on the proposed Project are described in Alternative 1A, No Project/Continuation of Existing Operations, and Alternative 1B, No Project/Predictable Actions, as demonstrated in Section 5.0, Alternatives. These alternatives provide information regarding the potential impacts to the environment if the County does not move forward with the proposed Project. This Final EIR, including all comments submitted to the County on the Draft EIR, will be provided to the County of Los Angeles Board of Supervisors. Therefore, your concerns will be presented directly to the decision makers prior to consideration of Project approval.

Weingart-4

This comment provides a general concern that the Draft EIR is inadequate. Responses to the detailed list of comments are provided below beginning with the response for the comment marked Weingart-5.

Weingart-5

The mitigation measures (MMs) are set forth throughout the Draft EIR and are included in Table ES-2 in the Draft EIR's Executive Summary. Each MM includes a requirement for the timing of the implementation, as well as the required monitoring agency. This information is further documented through the Mitigation Monitoring and Reporting Program (MMRP) that is included in the Final EIR package that is presented to the Board for their review and consideration.

Section 15164 (a) of the State CEQA Guidelines states that an addendum to a previously certified EIR must be prepared if changes or additions are needed to the EIR, but none of the conditions in Section 15162 requiring a subsequent EIR have occurred. The conditions that would allow preparation of an addendum include changes to the project or the circumstances under which project would be implemented that do not require major revisions to the previous EIR or that would not result in new significant environmental effects or an increase in the severity of the identified significant effects. When new information becomes available but would not change the significant effects of the project, would not increase the severity of the impacts of the project, or would not make new mitigation measures or alternatives feasible, an addendum may also be prepared. Otherwise, a subsequent EIR or a supplement to an EIR may be needed.

Weingart-6

The estimated costs for the building of the proposed MLWDC from design to occupancy are presented in Item S-1 of the June 9, 2015, presentation to the Board of Supervisors on jail planning. In this presentation, the proposed MLWDC Project is shown to cost approximately \$123.4 million, and the costs are broken down into Assembly Bill (AB) 900 Grant Contribution, net County cost, and other funding sources. These preliminary costs include the costs associated with the mitigation measures included in the Final EIR. An updated total Project cost estimate will

be prepared for the Board of Supervisors for their consideration at the time the Final EIR and the proposed Project recommendations are presented to them for consideration. The 2015 document can be viewed at the following website: <http://file.lacounty.gov/bos/supdocs/94070.pdf>.

Weingart-7

Table 2-1, City of Lancaster Cumulative Projects, and Table 2-2, County of Los Angeles Cumulative Projects, in Section 2.0, Environmental Setting, presents a listing of projects that could potentially contribute to impacts from the proposed Project, resulting in cumulative impacts. Cumulative impacts are assessed under a stand-alone heading within each Draft EIR Section 4.1 through 4.15. Regulatory Requirements (RRs) are also included within each Draft EIR Section 4.1 through 4.15 and include applicable local, State, or federal regulations that are required independently of CEQA review and also serve to prevent the occurrence of, or reduce the significance of, potential environmental effects. Typical RRs include compliance with the provisions of the California Building Code, Antelope Valley Air Quality Management District (AVAQMD) rules, local agency requirements, and other regulations and standards. RRs are identified in the MMRP for convenience of tracking.

Weingart-8

The short-term construction impacts of a radio communications tower would not significantly affect scenic resources or result in a significant aesthetic impact. The Project site is currently vacant and there would be no site occupants to be affected by construction activities. Construction of the tower would require approximately two weeks/14 days of crane operations which is the only piece of machinery that would be visible above the rooflines of adjacent structures. An important consideration is not just whether the crane is visible, but whether it would result in a "substantial adverse effect" on scenic views. A crane is a narrow structure with a thin profile that would not hide or inhibit views of distant mountains. Short-term deployment of construction-related equipment is a common occurrence and is generally understood to be a temporary visual inconvenience. As demonstrated in Section 4.1, Aesthetics, the Project site has an institutional character due to the utilitarian nature of the facility, which is exemplified by the security fencing with barbed wire that separates various sections of the site, tall exterior flood lights, internal paved roadways and parking areas, security watch towers, and an aboveground water tank. The temporary presence of construction-related equipment would not significantly alter or block the views of scenic resources.

Weingart-9

As stated in Section 15126.4(b) of the State CEQA Guidelines, MMs may specify performance standards that would mitigate the significant effect of the project and that may be accomplished in more than one specified way. There are many ways to design exterior lighting to avoid spillover, including adjustments to heights, angles, wattage, filters, and other elements. As such, MM AES-1 includes the performance standard of requiring that properties with sensitive receptors not be significantly adversely affected by light spillover onto properties with sensitive receptors, while also ensuring that lighting levels meet the security requirements for the MLWDC. Compliance with this standard through the provision of a Lighting Plan is subject to the review and approval of the Los Angeles County Director of Public Works prior to the commencement of any on-site or off-site demolition/construction activities.

Weingart-10

This comment alleges a failure to address the long-term impact of Valley Fever to on-site and individuals living and working in the Project area. Coccidioidomycosis, also known as Valley Fever, and its potential impact on potential future inmates and County staff is discussed in Section 4.2, Air Quality. A summary of hazards associated with the fungus is provided in the Draft EIR, and it includes summaries of trends related to Valley Fever in Los Angeles County, as inventoried and reported by the Los Angeles County Department of Public Health (LACDPH), which was consulted during the preparation of the Draft EIR.

The commenter references *The Changing Epidemiology of Coccidioidomycosis in Los Angeles (LA) County, California 1973–2011*, prepared by Ramon Guevara, Tasneem Motala, and Dawn Terashita of the Los Angeles County Department of Public Health. Dr. Terashita has coordinated consulted with the County staff on the issue of Valley Fever during preparation of this EIR. This reference has been reviewed and it provides an analysis of the incidence rate of Valley Fever in Los Angeles County, including discussion of the Antelope Valley, and displays the trend of increasing cases through 2011. This information is augmented in Section 4.2, Air Quality, with more recent data, as published in the LACDPH's *2013 Annual Morbidity Report*. Information presented in the referenced report is consistent with the Draft EIR.

The Draft EIR includes an analysis of exposure hazards due to fugitive dust that may result from construction-related earth-moving activities. PDF AIR-1, which will be included in the Contractor's Specification and monitored through the MMRP, requires the distribution of materials on Valley Fever, or any updated materials as applicable, to worksite supervisors and construction workers. PDF AIR-2 and RR AIR-1, which will be included in the Contractor's Specification and monitored through the MMRP, requires compliance with Best Management Practices and AVAQMD Rule 403 for the prevention of fugitive dust and nuisance air contaminants. RR AIR-1 provides a listing of the most applicable AVAQMD Rules. Rule 403, Fugitive Dust, requires measures such as watering and control of track-out from the site, as well as submittal of a Dust Control Plan prior to the start of construction. Rule 403 requires control of fugitive dust and avoidance of nuisance, and Rule 402 prohibits the emission of quantities of air contaminants that could cause injury, detriment, nuisance, or annoyance to the public, or that endanger the comfort, repose, health or safety of the public. With implementation of RR AIR-1, on-site earth-moving activities would not result in fugitive dust that could affect adjacent off-site land uses.

As stated in RR AIR-2, the Project will be constructed in compliance with the Department of Health – Infection Control Policy Guidelines Procedure No. 918.01. Policy 918 is intended to prevent the spread of diseases that may be caused by construction-induced airborne pollution in susceptible individuals (patients, staff and the public) in Department of Health Services (DHS) facilities. The protocols and requirements mandate the designation of an Infection Control Coordinator who must review and approve infection-control plans for new construction or renovation projects to ensure a safe environment. These infection-control plans must include infection-control measures to contain dust, debris, and other elements and to protect the patients, employees, and visitors in this environment. The Infection Control Coordinator has independent authority to stop construction-related activities immediately when the public may be adversely affected by infection-control hazards generated during construction-related activities and when the infection-control precautions and/or engineering controls are inadequate to contain the hazard. As such, the Draft EIR states that exposure to Valley Fever during construction activities would be the same as exposure to dust, and, thus, should follow the requirements for the mitigation of dust. Impacts would be less than significant, and no mitigation is required.

Section 4.2, Air Quality, acknowledges that the future inmate population has the potential to be exposed to dust generated from soils within the Antelope Valley, which have the potential to contain *Coccidioides* spores. As discussed in Section 3.0, Project Description, of the Draft EIR, according to the Sheriff's Department, Assembly Bill (AB) 109 female inmates are serving an average of 423 days in custody from date of sentencing to date of release, while non-AB 109 female inmates serve an average of 107 days in custody. Therefore, the length of time that inmates would be living at the MLWDC is temporary, and is not equivalent to a permanent living circumstance or the longer sentences in state prisons that house higher-security inmates.

The Draft EIR summarizes the LACDPH 2013 *Annual Morbidity Report*, which presents the recent trends related to Valley Fever in Los Angeles County, including an increasing incidence rate for reported coccidioidomycosis cases within the last ten years. However, the overall incidence rate in the Antelope Valley was not determined to warrant changes in the County's protocol for disease prevention, notwithstanding the fact that the County health and public health officials are well educated on the condition; are familiar with its incidence in the County and elsewhere in the state; and are involved in research and education on the subject of Valley Fever.

The LACDPH has not identified the previous U.S. Immigration and Customs Enforcement (ICE) detainee population at the MLDC, the future inmate population at MLWDC, or earlier occupants at the High Desert Health System (HDHS) Multi-Ambulatory Care Center (MACC) (the adjacent hospital facility, which has relocated in Lancaster) as requiring the implementation of health screening protocols or other measures to address potential Valley Fever exposure.

Also, as demonstrated in Section 4.2, Air Quality, the California Department of Corrections and Rehabilitation (CDCR) determined the State prison facilities that are located in the geographic area where Valley Fever has been reported to be most common are: Avenal State Prison (ASP) in Kings County; Substance Abuse Treatment Facility (SATF) in Kings County; California State Prison-Corcoran (COR) in Kings County; Pleasant Valley State Prison (PVSP) in Fresno County; California Correctional Institution (CCI) in Kern County; Kern Valley State Prison (KVSP) in Kern County; North Kern State Prison (NKSP) in Kern County; and Wasco State Prison in Kern County (WSP). In 2011, 535 of the 640 reported Valley Fever cases within the CDCR (approximately 85 percent) occurred at ASP and PVSP (U.S. District Court 2013). The prisons and facilities identified by the CDCR as having a higher risk of exposure to Valley Fever do not include the California State Prison-Los Angeles County, located in the City of Lancaster, which is adjacent to the MLWDC Project site. As such, the CDCR has not identified the Lancaster area as being a geographic location that requires screening or interventions for the State prison population with regard to exposure to Valley Fever (CDCR 2013).

As discussed with the Sheriff's Department staff for the preparation of the Draft EIR, the operation of the MLWDC will follow standard Sheriff's Department procedures for medical care and prevention with regard to health care for inmates in general, and Valley Fever specifically, and the Sheriff's Department will continue to coordinate with LACDPH (Masis 2015). The LACDPH is the designated County agency with the mandate to protect health, prevent disease, and promote the health and well-being of all persons within Los Angeles County. As such, any future changes in LACDPH policies that may be made regarding Valley Fever for inmate populations will be implemented, as applicable, throughout the County jail system.

Because the future inmate population's exposure to disturbed soils would be limited to gardening activities, PDF AIR-3 in Section 4.2, Air Quality, states that the Project will import gardening soils from outside of the Antelope Valley that would be used in raised planting beds to remove gardening in native soil as a potential source of exposure to Valley Fever spores. Further, outdoor

recreational areas would be covered with landscaping, turf grass, gravel, or landscaping/wood chip ground cover that would minimize the opportunity for soils to become airborne.

The Antelope Valley has not been identified by the LACDPH, the AVAQMD, or any other governmental health agency as a region that should be avoided by the elderly, women, children, health-compromised individuals, or by any specific ethnic groups. The Antelope Valley includes the major population centers of the cities of Lancaster and Palmdale, which have an estimated 2014 combined population of approximately 314,902 people. This portion of the Antelope Valley includes a diverse population of residents that includes many individuals that could be considered to be at higher risk of complications due to infection from Valley Fever spores. As stated in Section 4.2, Air Quality, persons at the highest risk of developing disseminated Valley Fever include the very young (under 1 year old); adults over 60 years; immunocompromised individuals; people with diabetes; women in the third trimester of pregnancy; and certain ethnic groups, including African-Americans and Filipinos.

The demographics of the two cities include approximately 158,605 females (50.4 percent) and 156,297 males (49.6 percent) with a median age of approximately 30.7 years old. The racial/ethnic composition of the area is approximately 47 percent Latino, 29 percent white, 17 percent African American, and 4 percent Asian (U.S. Census Bureau 2016). As such, the temporary presence of a female inmate population into the Antelope Valley would not introduce a new or unusual demographic into the area that is not already present in the existing population of the region.

The MLWDC property is not located in an area determined to be hazardous to the health of local residents or visitors to the region. The Draft EIR concludes that the potential future inmate population's temporary placement into the Antelope Valley, which includes the inmates' participation in all indoor and outdoor activities at the MLWDC, would not constitute placement into a hazardous existing environmental setting that would require mitigation. Additionally, the operation of the proposed Project would not increase the prevalence of Valley Fever spores or otherwise exacerbate an existing environmental condition.

The LACDPH representatives participate in various community focus groups including the Fugitive Dust Group, California Cocci Collaborative, and the Centers for Disease Control's (CDC's) Cocci Public Health Working Group, in order to stay abreast of current information and resources surrounding the condition.

Weingart-11

The commenter states that there is a "hot spot" of Valley Fever near the Project site, but no source information is provided. Section 4.2, Air Quality, includes an overview of the LACDPH 2013 *Annual Morbidity Report*. Data included in this report show the incidence in Valley Fever in Service Planning Area (SPA) 1 (i.e., Antelope Valley) from 2009 to 2013. The number of incidents of Valley Fever infection spiked in 2011 in SPA 1 with 93 reported cases, which represented 30 percent of cases in Los Angeles County, with an incidence rate of 25 per 100,000 people. The incidence rate decreased to 74 reported cases in both 2012 and 2013. As such, in 2013, SPA 1 represented approximately 20.4 percent of the total reported cases in Los Angeles County, with an incidence rate of 19 per 100,000 people (LACDPH 2013). SPA 1 has the highest infection rate in Los Angeles County, which is presumed to relate to the "hot spot" referred to in the comment (LACDPH 2013).

However, the rate of Valley Fever infection in Los Angeles County, and the Antelope Valley specifically, is substantially less than in neighboring Kern County, which had a 2013 infection rate

of 276 per 100,000 people in the north valley region (KCPHSD 2016). The eastern portion of San Luis Obispo County had Valley Fever infection rates ranging from 205 to 257 per 100,000 people between 2007 and 2012 (SLOCPHD 2014). Therefore, although the Antelope Valley has the highest rates in Los Angeles County, the rates are well below rates found nearby counties where Valley Fever is endemic.

According to the Centers for Disease Control, California has areas that are categorized as “highly endemic”, “established endemic”, and “suspected endemic” for coccidioidomycosis. Los Angeles County as a whole is categorized as being “suspected endemic,” which is the same category ascribed to large areas of Nevada, New Mexico, and western Texas (CDC 2016). Highly endemic areas include Kern County and southern Arizona, including the metropolitan areas of Phoenix and Tucson. As presented in the response to Weingart-10 above, the CDCR has not identified the Lancaster area as being a geographic location that requires screening or interventions for the State prison population with regard to exposure to Valley Fever (CDCR 2013).

Weingart-12

The possibility of future inmates potentially contracting Valley Fever is not dismissed, as Section 4.2, Air Quality, acknowledges that the future inmate population has the potential to be exposed to dust generated from soils in the Antelope Valley, which have the potential to contain *Coccidioides* spores. Additionally, Section 4.2, Air Quality, acknowledges that the Project site is located adjacent to land on the east that has exposed native soils (i.e., a 2 megawatt [MW] solar array) and is situated in the context of many acres of undeveloped land and fallow farmland that could generate airborne dust during windstorms. However, the Draft EIR concludes that the potential future inmate population’s temporary placement into the Antelope Valley, which includes the inmates’ participation in all indoor and outdoor activities at the MLWDC, would not constitute placement into a hazardous existing environmental setting that would require mitigation.

Weingart-13

As discussed with the Sheriff’s Department staff for the preparation of the Draft EIR, the operation of the MLWDC will follow standard Sheriff’s Department procedures for medical care and prevention with regard to health care for inmates in general, and Valley Fever specifically, and the Sheriff’s Department will continue to coordinate with the LACDPH (Masis 2015). The LACDPH is the designated County agency with the mandate to protect health, prevent disease, and promote the health and well-being of all persons in Los Angeles County. In fact, *The Changing Epidemiology of Coccidioidomycosis in Los Angeles (LA) County, California 1973–2011*, which is referred to in the Weingart comment letter, was co-authored by Ramon Guevara, Tasneem Motala, and Dawn Terashita of the LACDPH. The LACDPH is highly aware of Valley Fever and monitors reports of any cases of the disease. As such, any future changes in LACDPH policies that may be made regarding Valley Fever for inmate populations will be implemented, as applicable, throughout the County jail system.

Weingart-14

The commenter’s assertion that emissions from service/delivery trucks are not included in the Draft EIR analysis is incorrect. As stated in the footnotes to Table 6-1, Project Trip Generation, of the Traffic Impact Study (Appendix H of the Draft EIR), “The site specific daily trip generation was derived based on detailed site programming information (employee numbers and shifts, miscellaneous delivery trucks, and inmate transport vehicles) as provided by County staff”. Employee trips were estimated at 922 daily trips (461 round-trips); inmate transport trips were

estimated at 16 daily trips (8 round-trips); and other miscellaneous trips were estimated at 100 daily trips (50 round-trips) (LLG 2015).

Laundry will be delivered to the site 3 times a week, with the actual laundering done remotely at another County facility. The Project will also receive food deliveries daily during the work week. Commissary delivery will occur once a week. These deliveries are accounted for in the estimated 100 daily service vehicle trips used in the Traffic Impact Study.

The trip generation is summarized in Section 4.13, Transportation and Traffic, which states the trip generation data includes "all trip types (i.e., staff and employees, service, and inmate visitation trips)". The calculation of mobile source input for trip generation was taken from the Project's Traffic Impact Study. Section 4.2, Air Quality, presents the results of the emission analysis using California Emissions Estimator Model (CalEEMod) Version 2013.2.2, which is a computer program that is used to calculate anticipated emissions associated with land development projects in California. Operational inputs include the year of analysis and vehicle trip generation rates. Output operational emissions data categories include area, energy, and mobile sources. Area sources are landscape maintenance equipment, consumer products, and architectural coatings used for routine maintenance. Energy emissions are from natural gas consumption. Mobile sources are the vehicles used by staff, visitors, and vendors, and include buses used for inmate transport.

Therefore, the Project's trip generation, which includes 100 daily trips for service vehicles, was included as an input into the CalEEMod air quality analysis. As shown in Table 4.2-7 of Section 4.2, Air Quality, the estimated annual operational emissions due to Project-related operations would not exceed the AVAQMD CEQA significance thresholds and potential impacts would be less than significant. In fact, emissions were well below the thresholds of significance. For example, carbon monoxide (CO) was the air contaminant with the highest annual rate of emission, and the Project was estimated to emit 18 tons per year, while the AVAQMD threshold of significance is 100 tons per year.

As described in the Project Traffic Impact Study, it is anticipated that the relocation of inmates to the MLWDC would result in additional vehicle miles traveled (VMT) by visitors on weekends and holidays, inmate buses, and by service/delivery trucks seven days per week when compared to the length of trips required for the Century Regional Detention Facility (CRDF) located in the City of Lynwood. The worst-case estimate is an increase of 2,500 VMT on a weekday and 25,700 VMT on a weekend day or holiday (LLG 2015). To account for the increased VMT, CalEEMod default trip distances were adjusted to add approximately 3.26 million annual VMT to the VMT generated with default trip distances.

Weingart-15

The commenter's concern with use of the "air quality plan" is unclear. The use of that term in Section 4.2, Air Quality, is derived from Threshold 4.2a of Appendix G of the State CEQA Guidelines, which states "A project would result in a significant adverse impact related to Air Quality if it would conflict with or obstruct implementation of the applicable air quality plan". As stated in Section 4.2.2, Existing Conditions, of Section 4.2, Air Quality, areas that are in nonattainment are required to prepare air quality plans and implement measures that will bring the region into attainment. When an area has been reclassified from nonattainment to attainment for a federal standard, the status is identified as "maintenance", and there must be a plan and measures established that will keep the region in attainment for the following ten years. For the reasons detailed on page 4.2-14 under Threshold 4.2a, the air quality plans applicable to the

Project site are the AVAQMD 2004 Ozone Attainment Plan (State and Federal) and the AVAQMD Federal 8-Hour Ozone Attainment Plan (Western Mojave Desert Non-attainment Area).

Weingart-16

Outdoor recreation, both active (e.g., use of sports courts, running track) and passive (e.g., sitting in courtyards or on turf grass areas), will occur on the Project site. The outdoor recreation opportunities and amenities are one of the benefits of the proposed MLWDC Project when compared to existing facilities at the CRDF. There are no known reasons to believe that risks of infection from Valley Fever from participating in outdoor recreational activities at the MLWDC site would be any different from the risks of participating in outdoor activities elsewhere in the Lancaster portion of the Antelope Valley.

Because the future inmate population's exposure to disturbed soils would be limited to gardening activities, PDF AIR-3 in Section 4.2, Air Quality, states that the Project will import gardening soils from outside the Antelope Valley, which would be used in raised planting beds to remove gardening in native soil as a potential source of exposure to Valley Fever spores. Vendors for garden soil are numerous and a specific provider has not been determined at this time; however, as required by PDF AIR-3, only imported gardening soil will be used at the Project site. Further, outdoor recreational areas would be covered with landscaping, turf grass, gravel or landscaping/wood chip ground cover that would minimize the opportunity for soils to become airborne.

Weingart-17

There have been no tests conducted on the Project site to measure for Valley Fever spores within on-site soils. According to the Centers for Disease Control, testing soil for *Coccidioides* (i.e., the fungus that causes Valley Fever) is not likely to be useful because the fungus is thought to be common in the soil in certain areas. A soil sample that tests positive for *Coccidioides* does not necessarily mean that the soil will release the fungus into the air and cause infection. Also, there are no commercially-available tests to detect *Coccidioides* in soil. Testing soil for *Coccidioides* is currently only done for scientific research (CDC 2016).

The majority of the Project site will be paved or landscaped, and exposure to disturbed soils would be minimized through PDF AIR-3. Section 4.2, Air Quality, acknowledges that the future inmate population has the potential to be exposed to dust generated from soils within the Antelope Valley, which have the potential to contain *Coccidioides* spores. Additionally, Section 4.2, Air Quality, acknowledges that the Project site is located adjacent to land on the east that has exposed native soils (i.e., 2 MW solar array) and is situated in the context of many acres of undeveloped land and fallow farmland that could generate airborne dust during windstorms. However, the Draft EIR concludes that the potential future inmate population's temporary placement into the Antelope Valley, which includes the inmates' participation in all indoor and outdoor activities at the MLWDC, would not constitute placement into a hazardous existing environmental setting that would require mitigation.

Weingart-18

Section 4.2, Air Quality, analyzes the potential for pollutant emissions during demolition, construction, and operation of the Project. Impacts were determined to be less than significant, with compliance with regulatory requirements (RRs) and the implementation of Project Design Features (PDFs). As stated in Response Weingart-16 above, there are no known reasons to believe that risks of infection from Valley Fever from participating in outdoor recreational activities

at the MLWDC site would be any different from the risks of participating in outdoor activities elsewhere in the Lancaster portion of the Antelope Valley.

Section 4.2, Air Quality, acknowledges that the future inmate population has the potential to be exposed to dust generated from soils within the Antelope Valley, which have the potential to contain *Coccidioides* spores. As discussed in Section 3.0, Project Description, of the Draft EIR, according to the Sheriff's Department, AB 109 female inmates are serving an average of 423 days in custody from date of sentencing to date of release, while non-AB 109 female inmates serve an average of 107 days in custody. Therefore, the length of time that inmates would be living at the MLWDC is temporary and is not equivalent to a permanent living circumstance or the longer sentences in state prisons that house higher-security inmates. The Draft EIR concludes that the potential future inmate population's temporary placement into the Antelope Valley, which includes the inmates' participation in all indoor and outdoor activities at the MLWDC, would not constitute placement into a hazardous existing environmental setting that would require mitigation.

Weingart-19

Section 4.3.2 of the Draft EIR sets forth a detailed description of the existing conditions related to the plant and animal wildlife species that may be encountered on the Project site. A few examples of wildlife species expected to use the Project site include reptiles such as side-blotched lizard (*Uta stansburiana*) and western whiptail (*Aspidoscelis tigris*); bird species such as rock pigeon (*Columba livia*), house finch (*Haemorhous mexicanus*), European starling (*Sturnus vulgaris*), mourning dove (*Zenaida macroura*), and northern mockingbird (*Mimus polyglottos*); and mammals such as deer mouse (*Peromyscus maniculatus*), Botta's pocket gopher (*Thomomys bottae*), and desert cottontail (*Sylvilagus audubonii*).

Implementation of the proposed Project would have limited impact on habitat and/or movement of wildlife species due to limited wildlife use of the Project site. As stated in Section 4.3, Biological Resources, the site is highly developed with a lack of native habitats. The Project site is entirely contained by a perimeter fence that does not allow for passage into or out of the MLDC except within secured gated areas. Therefore, the Project site does not represent an important regional movement corridor, and few wildlife species are expected to use the site. Extremely limited local movement of common wildlife species through unfenced parking areas or landscaped areas of the site may occur for foraging and dispersal. The Project's short-term and long-term construction impacts would not have an impact on any regional wildlife movement. Furthermore, the wildlife expected to use the site are expected to be highly adapted to human disturbance. Construction and ground-disturbing activities would not significantly impact habitat because there is extensive (non-specialized) habitat for these common species throughout the Project site.

Weingart-20

As stated in Section 4.3, Biological Resources, essentially all naturally occurring bird species (such as house finch) in North America are considered to be migratory and included on the list of species protected under the Migratory Bird Treaty Act (MBTA). Suitable nesting habitat for common migratory birds is present in mature trees and other structures on the Project site and in its adjacent areas, and these species could be adversely impacted either directly or indirectly during the Project's short-term construction impacts. Activities such as vegetation removal and structure demolition could potentially cause nest failure during the breeding season. Implementation of MM BIO-2, which requires nesting bird surveys and construction buffer zones for construction activities occurring during the breeding season, would reduce potential direct and indirect impacts on nesting migratory birds.

The majority of bird species expected to use the Project site can be found year round and do not migrate long distances. Bird species expected to occur such as the European starling, mourning dove, and house finch exhibit either differential or partial migration. In differential migration, migration is related to a bird's age and sex and some birds do not travel at all but remain in the same general location year round. Partial migration is when some birds (independent of age/sex) migrate, while other birds do not travel at all. MM BIO-2, which requires nesting bird surveys and construction buffer zones for construction activities occurring during the breeding season, is proposed mitigation for protecting nesting migrating birds.

Generally speaking, construction will continue unhindered by particular seasons during the calendar year. In some cases, and when feasible, particular construction activities with high potential for breeding bird impacts (such as vegetation removal) may be scheduled during the non-breeding season. If avoidance of particular construction activities during the breeding season is not feasible, MM BIO-2 would be implemented. The duration of construction activities does not have an effect on implementation of MM BIO-2. As generally summarized below, MM BIO-2 requires that protective procedures are implemented if construction is scheduled to occur during the bird nesting season:

- To the extent feasible, vegetation/tree removal shall occur during the non-breeding season for nesting birds (generally late September to early March) and nesting raptors (generally early July to late January) to avoid impacts to nesting birds and raptors. If the nature of the Project requires that work be initiated during the breeding season for nesting birds and raptors (February 1 to August 31), a pre-construction survey shall be conducted by a qualified Biologist. If the Biologist does not find any active nests within or immediately adjacent to the impact area, the vegetation clearing/construction work shall be allowed to proceed.
- If the Biologist finds an active nest within or immediately adjacent to the construction area and determines that the nest may be impacted or breeding activities substantially disrupted, the Biologist shall delineate an appropriate buffer zone around the nest and the active nest shall be protected until nesting activity has ended. Encroachment into the buffer area around a known nest shall only be allowed if the Biologist determines that the proposed activity would not disturb the nest occupants. Construction will be allowed to proceed when the qualified Biologist has determined that fledglings have left the nest or the nest has failed.

MM BIO-2 will be implemented by the qualified Biologist hired by the County or its contractor prior to the start of construction. As stated in MM BIO-2, a letter report shall be prepared and submitted to the Los Angeles County Department of Public Works to document the survey findings and recommended protective measures.

Weingart-21

Potential impacts to bat maternity roosts are analyzed under Threshold 4.3d in the Draft EIR. Construction activities on the Project site are anticipated to begin in December 2016 for a duration of 35 months. MM BIO-1 prohibits removal of trees supporting bat maternity roost sites (where bats give birth and nurse their young) during bat maternity roost season (March 1 to July 31). However, the demolition of bat maternity roosts, if present on the Project site, would indirectly impede the use of wildlife nursery sites, as the colony would not be able to return to their nursery site. However, there is low potential for bat maternity roosts on the Project site due to limited suitable habitat, the presence of human activity on the site, and a lack of open water. A potential bat maternity roost location on the Project site being removed after the maternity season would

not be considered a substantial impediment to the use of native wildlife nursery sites due to the relatively low population such roost would support in relation to the larger regional bat population.

Bat maternity roosts of any bat species may be considered native wildlife nursery sites. Common bat species, such as California myotis, form maternity colonies in places such as crevices of old snags, crevices of trees, bridges, and buildings. Impacts to multiple such active breeding colonies during the breeding season could potentially cause a decline in regional population. MM BIO-1 calls for pre-construction bat surveys and bat exclusion procedures. There is low potential for bat maternity roosts, colonial roosts, and solitary roost sites on the Project site due to limited suitable habitat, the presence of human activity on the site, and a lack of open water. Potential colonial, solitary, and maternity roost being removed from the Project site would not be considered a substantial ecological impact due to the relatively low population such roosts would support in relation to the larger regional bat population.

Weingart-22

This comment alleges that MM BIO-1 is not appropriate or effective. The portion of MM BIO-1 related to bats is intended to avoid direct impacts to maternity roosts during the breeding season. The purpose of said avoidance is to reduce potentially significant impacts to native wildlife nursery sites (bat maternity roosts) to levels considered less than significant. MM BIO-1 effectively avoids the impact of removing occupied bat maternity roosts by calling for a pre-construction bat habitat assessment of the trees and/or structures marked for potential removal/demolition prior to commencement of construction activities. If potential maternity roosts are detected during the bat habitat assessment, construction activities will not occur until the bat maternity season has ended.

Weingart-23

The implementation of MM BIO-1 would occur immediately prior to Project construction activities. Therefore, surveys would not be conducted or completed during the timeframe of the Final EIR, which must be provided to the Board of Supervisors for review and consideration prior to any decision to approve, revise, or deny the Project. As required in MM BIO-1 and MM BIO-2, only qualified biologists shall be retained to conduct the required surveys and/or assessments. County studies and reports such as the ones required by the Draft EIR would be available for public review in accordance with the California Public Records Act (CPRA), which requires that governmental records be disclosed to the public upon request, unless there is a specific reason not to do so, in accordance with exemptions within the CPRA or other state laws.

Weingart-24

MM BIO-2 requires the establishment of "an appropriate buffer zone" around an active nest, if found. An appropriate buffer zone is an area surrounding an active nest where no Project-related activities may occur. The zone is determined by a qualified Biologist who is familiar with the behavior of the birds tending to the nest. The buffer zone is specific to each particular nest and may vary from site to site depending on the construction activity, the height of the nest in a tree or other structure, the species of nesting bird, and other factors. An appropriate buffer zone is one that avoids a nest failure (through direct or indirect impacts) due to construction activities. We are unaware of a standard buffer size determined by the American Institute of Biological Sciences. The methodology set forth in MM BIO-2 is consistent with the requirements set forth for other development Projects throughout Los Angeles County that require compliance with the MBTA, which are regularly vetted through the California Department of Fish and Wildlife (CDFW) review of CEQA environmental documents.

Weingart-25

The Draft EIR relied upon a thorough search of the Vertebrate Paleontology records conducted by the Natural History Museum of Los Angeles County (NHMLAC), as documented in a letter dated June 6, 2010, and located in Appendix C-2 of the Draft EIR. As stated, the surficial deposits in the Project area are “composed exclusively of younger Quaternary Alluvium beneath soil. These types of sedimentary deposits usually do not contain significant vertebrate fossils, at least in the uppermost layers” (McLeod 2010). The NHMLAC letter goes on to state that surface grading or shallow excavations in the proposed Project area are unlikely to encounter significant vertebrate fossils in the younger Quaternary Alluvium, while deeper excavations into older deposits could uncover significant fossil vertebrate remains (McLeod 2010).

Sedimentary deposits and formations do not change over the course of five years and, even if fossils were discovered in the Project area, MM CUL-2 in the Draft EIR would remain unchanged. MM CUL-2 requires that a qualified Paleontologist be notified and retained when earth-moving activities are anticipated to impact undisturbed deposits in the older Quaternary Alluvium on the Project site (i.e., approximately five feet below ground surface or deeper). The Paleontologist shall determine, based on consultation with the County, when monitoring of grading activities is needed based on the on-site soils and final grading plans. If any fossil remains are discovered, the Paleontologist must prepare a report of the results of any findings, which would be submitted to the NHMLAC that would then update its own records and maps accordingly.

An updated records search was requested and received from the NHMLAC and their response is provided in Appendix B of this document. The only difference between the new 2016 records search and the 2010 records search is that additional fossil species have been found in the vicinity of the Project site. The camel fossil that is mentioned in the letter was found at the County's High Desert Regional Health Center (located approximately 5.5 miles east of the Project site) (McLeod 2016). However, the recommendations in the NHMLAC letter are the same as in the prior records search, and MM CUL-2 reflects the NHMLAC's recommendation. No change to the Draft EIR analysis or MM CUL-2 is required.

Weingart-26

As stated on page 4.4-11 of the Draft EIR, an inquiry was made on January 30, 2014, of the Native American Heritage Commission (NAHC) to request a review of the Sacred Lands File database regarding the possibility of Native American cultural resources and/or sacred places in the Project vicinity that are not documented in other databases. The NAHC responded on January 31, 2014, and indicated that there are not records of Native American traditional cultural places with the NAHC, but the NAHC provided a list of Native American groups and individuals who may have knowledge regarding Native American cultural resources not formally listed on any database. Subsequently, letters to Native American tribes were sent out on February 3, 2014. Beverly Folkes was sent a letter on February 3, 2014, using the address provided by the NAHC (see Appendix C-3 of the Draft EIR). Only Daniel McCarthy of San Manuel Band of Mission Indians responded via email on February 6, 2014, and stated that, given the nature and location of the Project, the San Manuel Band has no concerns (McCarthy 2014). See Appendix C of this Final EIR. No follow-up on the other tribes was made as the documentation relies on the contact information from the NAHC as the authoritative source and it is common not to receive responses from all the tribes contacted.

The Project does not require a General Plan Amendment or Specific Plan Amendment and thus, is not subject to the Native American consultation under SB 18. The Notice of Preparation (NOP) for the Project was also sent out prior to the effective date of Assembly Bill (AB) 52, which provides

a separate consultation process that can be triggered by a tribe and which applies only to projects for which the NOP scoping notice was sent on or after July 1, 2015. Thus, the County is not specifically required to notify Native American tribes under CEQA. However, information letters were sent to local tribes as part of the background research for the Project site.

It cannot be entirely discounted that archaeological resources may be present beneath the pavement, buildings, or ground surfaces. Thus, MM CUL-1 calls for a qualified Archaeologist to be retained by the County to attend the pre-grading meeting with the Construction Contractor to establish, based on the site plans, appropriate procedures for monitoring earth-moving activities during construction. The Archaeologist would determine, based on consultation with the County, when monitoring of grading activities is needed. Monitoring should observe disturbance of the uppermost layers of sediment (soils and younger Quaternary alluvium) and any archaeological resources discovered shall be salvaged and catalogued, as necessary.

Weingart-27

The comment alleges that not all contributing buildings to the Historic District have been identified. Section 4.4, Cultural Resources, includes a summary of the findings of the Historical Resources Report included in Appendix C-1 of the Draft EIR. The Report concludes that there is a historic district within the Project study area. The district, named the Polaris Flight Academy Historic District, meets the criteria for listing in the National Register of Historic Places (NRHP) and the California Register of Historical Resources (CRHR) for its direct associations with military aviation during World War II and the work of Major Corliss Champion Moseley (GPA 2015). It is therefore considered a historical resource subject to the requirements of CEQA.

It is recognized as standard methodology to evaluate groupings of buildings, structures, objects, and landscape features within a distinct geographic area with shared historic contexts as potential historic districts. One key factor in determining contributing and non-contributing resources is period of significance. Buildings constructed outside the period of significance cannot be considered contributors. Because the Historic District, in this case, is significant for its World War II history, its period of significance within this context ended in 1945. Thus, the buildings constructed after 1945 are not contributors. They were constructed for different uses by different entities.

It would have been appropriate to evaluate the three buildings (i.e., Old Lock Building, Quonset Hut, and Wooden Shed) in question individually, above and beyond their evaluations as contributors, if they had any potential to represent an important historic context as individual buildings. The contextual research into the postwar history of the property when it was used by the State and the County as a detention facility indicated no reason to conclude that the property had any other significance than its World War II significance. As a result, there is no significant historic context for the three buildings to potentially represent. The resulting evaluation would reach exactly the same conclusion: the buildings would be assigned a 6Z classification, not eligible for designation.

Furthermore, there were no buildings between the two large historic hangars during the property's period of significance, so removing the three non-contributing buildings will actually be beneficial to the ratio of contributors to non-contributors in the Historic District. Project implementation will not have a significant impact on the Historic District, and no further analysis is required.

Weingart-28

The implementation of MM CUL-2 would occur immediately prior to, and during, Project construction activities. The qualified Paleontologist would be hired by the County or its contractor prior to the start of construction. Therefore, monitoring would not be conducted or completed during the timeframe of the Final EIR, which must be provided to the Board of Supervisors for review and consideration prior to any decision to approve, revise, or deny the Project. A plan for the evaluation, recordation, recovery and/or salvage of any discovered fossil remains would be formulated by the Paleontologist at the time of the discovery based on the circumstances of the find. County studies and reports such as the ones required by the Draft EIR would be available for public review in accordance with the California Public Records Act (CPRA), which requires that governmental records be disclosed to the public upon request, unless there is a specific reason not to do so, in accordance with exemptions within the CPRA or other state laws.

Weingart-29

The Draft EIR includes an analysis of exposure hazards due to fugitive dust that may result from construction-related earth-moving activities. PDF AIR-1, which will be included in the Contractor's Specification and monitored through the MMRP, requires the distribution of materials on Valley Fever, or any updated materials as applicable, to worksite supervisors and construction workers. PDF AIR-2 and RR AIR-1, which will be included in the Contractor's Specification and monitored through the MMRP, requires compliance with Best Management Practices and AVAQMD Rule 403 for the prevention of fugitive dust and nuisance air contaminants. RR AIR-1 provides a listing of the most applicable AVAQMD Rules. Rule 403, Fugitive Dust, requires measures such as watering and control of track-out from the site, as well as submittal of a Dust Control Plan prior to the start of construction. Rule 403 requires control of fugitive dust and avoidance of nuisance, and Rule 402 prohibits the emission of quantities of air contaminants that could cause injury, detriment, nuisance, or annoyance to the public, or that endanger the comfort, repose, health or safety of the public. With implementation of RR AIR-1, on-site earth-moving activities would not result in fugitive dust that could affect adjacent off-site land uses.

As stated in RR AIR-2, the Project will be constructed in compliance with the Department of Health – Infection Control Policy Guidelines Procedure No. 918.01. Policy 918 is intended to prevent the spread of diseases that may be caused by construction-induced airborne pollution in susceptible individuals (patients, staff, and the public) in Department of Health Services (DHS) facilities. The protocols and requirements mandate the designation of an Infection Control Coordinator who must review and approve infection-control plans for new construction or renovation projects to ensure a safe environment. These infection-control plans must include infection-control measures to contain dust, debris, and other elements and to protect the patients, employees and visitors in this environment. The Infection Control Coordinator has independent authority to stop construction-related activities immediately when the public may be adversely affected by infection-control hazards generated during construction-related activities and when the infection-control precautions and/or engineering controls are inadequate to contain the hazard. As such, the Draft EIR states that exposure to Valley Fever during construction activities would be the same as exposure to dust, and, thus, should follow the requirements for the mitigation of dust. Impacts would be less than significant, and no mitigation is required.

Weingart-30

This comment alleges that MM CUL-1 and MM CUL-2 are not sufficient. MMs are set forth in the Draft EIR as required activities that must occur in order to reduce potentially significant environmental impacts. No required pre-construction activities would occur or be contracted for

until the Board of Supervisors has made a determination to approve the Project. Should the Board of Supervisors decide to modify the Project, then the MMs set forth in the Draft EIR may require changes. Should the Board of Supervisors decide to deny the Project, then there would be no need to continue with requirements set forth in the MMs.

The Project site survey that was completed for on-site archaeological resources is discussed in Section 4.4, Cultural Resources, under Thresholds 4.4b and 4.4c. BonTerra Psomas' Archaeologist Patrick Maxon, M.A., RPA, completed a pedestrian survey of the Project site on November 21, 2013. He walked all accessible open areas of the site to determine if there were exposed archaeological resources. No archaeological resources were expected as the site is largely developed with buildings, sidewalks, parking areas, roads, and other paved areas. The findings of his site survey, along with the conclusions of the Vertebrate Paleontology records conducted by the NHMLAC (see Appendix C-2 of the Draft EIR), are incorporated into the analyses in Section 4.4, Cultural Resources, under Thresholds 4.4b and 4.4c.

Section 21081.6 of CEQA and Section 15097 of the State CEQA Guidelines require a public agency to adopt an MMRP for assessing and ensuring the implementation of required mitigation measures applied to proposed projects. Specific reporting and/or monitoring requirements that will be enforced during Project implementation shall be adopted simultaneously with any final Project approval by the lead agency.

Weingart-31

As stated in Section 4.5, Geology and Soils, liquefaction is the sudden decrease in the strength of cohesionless soils due to dynamic or cyclic shaking. Saturated soils behave temporarily as a viscous fluid (liquefaction) and, consequently, lose their capacity to support structures. The potential for liquefaction decreases with increasing clay and gravel content, but increases as the ground acceleration and duration of shaking increase. Liquefaction potential has been found to be the greatest where both high groundwater and loose sands occur within 50 feet of the ground surface.

The *Geohazard Study Report* for the Project, as summarized in the Draft EIR, included a liquefaction analysis and indicates that the Project site may be susceptible to liquefaction (Converse 2014b). As such, proposed structures and infrastructure on the Project site may be exposed to liquefaction hazards, including damage to foundations; settlement of aboveground structures; and uplift of buried structures and infrastructure. Prior to the completion of final engineering design plans, additional geotechnical exploration, lab testing, and analysis may be required for planned seismic upgrades to existing buildings in order to provide detailed design recommendations. The Project's structural design, which must be completed in accordance with the recommendations of the geotechnical investigation and subject to the County Building Official, as included in RR GEO-1, would address liquefaction hazards to prevent damage to foundations, structures, and infrastructure.

Reductions in the groundwater levels are generally likely to decrease the potential for liquefaction because water would be farther from the ground surface. It is anticipated that the engineering design for the Project will account for liquefaction hazards based on soil testing that would be completed as part of RR GEO-1.

Weingart-32

As the commenter states, the Antelope Valley can be subject to periodic strong winds. High winds have the ability to transport dust and soil, which may or may not contain *Coccidioides* spores. The

Draft EIR includes an analysis of potential exposure to fugitive dust that may result from construction-related earth-moving activities. PDF AIR-1, which will be included in the Contractor's Specification and monitored through the MMRP, requires the distribution of materials on Valley Fever, or any updated materials as applicable, to worksite supervisors and construction workers. PDF AIR-2 and RR AIR-1, which will be included in the Contractor's Specification and monitored through the MMRP, requires compliance with Best Management Practices and AVAQMD Rule 403 for the prevention of fugitive dust and nuisance air contaminants. RR AIR-1 provides a listing of the most applicable AVAQMD Rules. Rule 403, Fugitive Dust, requires measures such as watering and control of track-out from the site, as well as submittal of a Dust Control Plan prior to the start of construction. Rule 403 requires control of fugitive dust and avoidance of nuisance, and Rule 402 prohibits the emission of quantities of air contaminants that could cause injury, detriment, nuisance, or annoyance to the public, or that endanger the comfort, repose, health or safety of the public. With implementation of RR AIR-1, on-site earth-moving activities would not result in fugitive dust that could affect adjacent off-site land uses.

In a letter received from the AVAQMD on this Project and included in the comment section of this Final EIR (see Section 2.1.1), the AVAQMD has concurred with the Draft EIR analysis of air quality and dust impacts.

Weingart-33

The groundwater level declines and associated land subsidence are not as severe near the Project site as in other parts of the Antelope Valley Groundwater Basin. Local survey monument bench mark records would be reviewed to determine the amount of land subsidence on or near the Project site, as part of RR GEO-1. The design of the building foundations has not been determined, as the design phase has yet to occur. However, the foundation design for new buildings or additions will be designed and constructed to appropriately address current soil conditions and characteristics identified by a California licensed geologist, a soils engineer, and a structural engineer. The design will meet code requirements, which include recognition of soil bearing pressure, seismic activity and jurisdictional building codes as well as AB 900 structural requirements. Existing facilities are monitored periodically for distress as part of facility operation and maintenance protocol, and there would be no hazards posed to the inmate or employee population.

Additionally, the Antelope Valley Groundwater Basin has been recently adjudicated through Los Angeles Superior Court case number 1-05-CV-049053: Antelope Valley Groundwater Cases, Consolidated Proceeding 4408, which determined the safe yield of groundwater extraction from the basin and allocates pumping rights accordingly to users. As such, improved water conservation measures, including recharge of reclaimed water, storm water and imported waters, and other measures in compliance with the adjudication could be expected to reduce water level declines and associated land subsidence in the region, and provided sustainable safe yields within the Antelope Valley groundwater basin.

Regarding operational costs associated with the proposed Project, the final design of the facility has not been drafted or approved, and the long-term operational costs have not yet been determined.

Weingart-34

The analysis of geologic, soils, and seismic characteristics and constraints on the Project site and surrounding area presented in Section 4.5, Geology and Soils, is based on the *Geohazard Study Report – Mira Loma Detention Center, 45100 North 60th Street West, Lancaster, California*

prepared by Converse Consultants in June 2014 and has, in fact, been fully disclosed and included as Appendix D of the Draft EIR. The conclusions of significance findings in Section 4.5, Geology and Soils, are based on the substantial evidence presented in this technical study.

Weingart-35

While the Project's estimated water demand is less than the 250 acre-feet per year (afy) threshold established by the California Department of Water Resources (DWR) for requiring a Water Supply Assessment (WSA) under Senate Bill (SB) 610, a WSA was prepared for the Project and provided in Appendix G-2 of the Draft EIR. The WSA is also summarized in Section 4.14, Utilities and Service Systems. As required under SB 610, the WSA must include an evaluation of the sufficiency of the water supplies available to the water supplier to meet existing and anticipated future demands (including the demand associated with the project) over a 20-year horizon that includes normal, single-dry, and multiple-dry years. The multiple-dry year scenario would represent drought conditions.

The WSA for the Project indicates that the Los Angeles County Department of Public Works Waterworks District 40 (LACWWD 40) would be able to meet the projected water demands in its service area, along with the Project's demands, through the next 20 years, including normal, single-dry, and multiple-dry (5-year period) years. Future demand is projected to increase within the LACWWD 40 service area, and the reliability of the LACWWD 40's future water supplies to meet demand will be ensured through continued implementation of programs for water banking; purchase of new imported supplies; water transfers; water conservation; and expansion of recycled water systems (Psomas 2015).

Thus, the potential impacts of climate change on reduced water supplies due to drought conditions has been accounted for in the WSA for the Project. The WSA was reviewed by LACWWD 40 prior to inclusion in the Draft EIR.

Weingart-36

As stated in Section 4.6, Greenhouse Gas Emissions, of the Draft EIR, "materials to be imported to and exported from the site" are accounted for in the CalEEMod calculations for the Project. Although it is anticipated that "cut and fill would be balanced on site; no import or export of soils would occur" (as stated on page 4.2-15 of the Draft EIR), the CalEEMod analysis presented in Section 4.2, Air Quality, and Section 4.6, Greenhouse Gas Emissions, conservatively include 200 haul truck roundtrips during the Site Preparation phase to cover unanticipated and incidental export and import haul, such as import soil for raised garden beds or for the removal of waste materials.

The Project would use water from wells that are on site during construction activities; there would be no imported water for construction use as stated on page 4.14-17 of Section 4.14, Utilities and Service Systems. However, the CalEEMod input specifies watering for construction dust control and assumes the use of water trucks in the emissions calculations. Additionally, the modeling assumes ten truck roundtrips per day during the Building Construction phase to cover the delivery of materials, and export of construction waste. Therefore, the analysis set forth in the Draft EIR includes a conservative analysis of truck trips and no additional analysis is required.

Weingart-37

The commenter's quoted text is a statement that describes the rationale for the South Coast Air Quality Management District's (SCAQMD's) construction emission amortization methodology.

Section 4.6, Greenhouse Gas Emissions, utilizes the methodology set forth by the SCAQMD, which is also used by the AVAQMD. In essence, this statement means that construction equipment greenhouse gas (GHG) emission factors only change slowly with time, and therefore, there are limited ways to decrease emissions from construction equipment. The inventory of construction equipment to be used during each phase of this Project is included in Appendix B of the Draft EIR, as stated in Section 4.6, Greenhouse Gas Emissions. The construction equipment type, amount, usage hours per day, horsepower, and load factor are also included in Appendix B of the Draft EIR.

Weingart-38

The reference in Section 4.6, Greenhouse Gas Emissions, to construction activities beginning in November 2016 has been revised in Section 3.0, Clarifications to the Draft EIR to reflect the anticipated December 2016 start date. The analysis throughout the Draft EIR is not materially affected by the start date of construction activities. The analysis of GHG emissions is not based on start/end dates because emissions are analyzed on an annual basis. Section 4.6.6, Impact Analysis, states the following:

It should be noted that the Design-Build contractor may request an expedited schedule to work on Saturdays and/or to increase the intensity of the daily construction operations through the use of more equipment/workers on-site than anticipated in the Project's proposed schedule (see Section 3.0, Project Description). This request would be considered for the purpose of reducing the duration of the Project construction period. The emissions modeling assumes a 5-day work week. If some or all construction would occur on a 6-day per week schedule and/or the schedule would be shortened by using more equipment, annual greenhouse gas emissions may increase for the years affected. Because the total Project effort would not change, there would be offsetting decreases later in the Project and the total greenhouse gas emissions would be the same, or approximately the same as shown in Table 4.6-2. The amortized Project emissions would not change.

No additional analysis is required.

Weingart-39

As stated in Section 4.6, Greenhouse Gas Emissions, "as originally proposed by the SCAQMD, it has become current practice (in most air districts) that construction emissions are amortized over a project lifetime (typically 30 years) so that GHG-reduction measures will address construction GHG emissions as part of the operational GHG reduction strategies (SCAQMD 2008; SMAQMD 2009)". The AVAQMD uses the SCAQMD construction emission amortization methodology. The AVAQMD threshold for significant GHG emissions of 100,000 tons (90,718 metric tons) is stated on page 4.6-12 of the Draft EIR. There are no separate thresholds for construction and operations. However, for comparison, the estimated emissions per year of construction are shown in Table 4.6-2 in Section 4.6, Greenhouse Gas Emissions. As shown, the Project's maximum annual construction GHG emissions in 2017 of 306 metric tons of carbon dioxide equivalent (MTCO_{2e}) are substantially less than the AVAQMD's 90,718 MTCO_{2e} threshold.

As shown in Table 4.6-4 of Section 4.6, Greenhouse Gas Emissions, with consideration of amortized construction emissions, the total annual estimated GHG emissions for the Project are 5,614 MTCO_{2e}/yr. This value is considerably less than the AVAQMD threshold of

90,718 MTCO₂e/yr. Therefore, the Project would result in less than significant GHG emissions and no mitigation is required.

Weingart-40

The total Project-related GHG emissions from construction activities are estimated based on the total work effort, whether that effort occurs during five-day or six-day work weeks. The “offsetting decreases” are not GHG reductions; they indicate that more work is done earlier in the schedule. The total work effort remains unchanged. Section 4.6.6, Impact Analysis, states the following:

It should be noted that the Design-Build contractor may request an expedited schedule to work on Saturdays and/or to increase the intensity of the daily construction operations through the use of more equipment/workers on-site than anticipated in the Project's proposed schedule (see Section 3.0, Project Description). This request would be considered for the purpose of reducing the duration of the Project construction period. The emissions modeling assumes a 5-day work week. If some or all construction would occur on a 6-day per week schedule and/or the schedule would be shortened by using more equipment, annual greenhouse gas emissions may increase for the years affected. Because the total Project effort would not change, there would be offsetting decreases later in the Project and the total greenhouse gas emissions would be the same, or approximately the same as shown in Table 4.6-2. The amortized Project emissions would not change.

No additional analysis is required.

Weingart-41

The commenter's assertion that emissions from service/delivery trucks are not included in the Draft EIR analysis is incorrect. As stated in the footnotes to Table 6-1, Project Trip Generation, of the Traffic Impact Study (Appendix H of the EIR), “The site specific daily trip generation was derived based on detailed site programming information (employee numbers and shifts, miscellaneous delivery trucks, and inmate transport vehicles) as provided by County staff” (LLG 2015). Employee trips were estimated at 922 daily trips (461 round-trips); inmate transport trips were estimated at 16 daily trips (8 round-trips); and other miscellaneous trips were estimated at 100 daily trips (50 round-trips). The calculation of mobile source input for trip generation was taken from the Project's Traffic Impact Study and used as an input into CalEEMod, which is a computer program that is used to calculate anticipated emissions associated with land development projects in California. Therefore, the Project's trip generation, which includes 100 daily trips for service vehicles, was included as an input into the CalEEMod air quality and greenhouse gas analysis. No additional analysis is required.

Weingart-42

The operational annual emissions for each source area (i.e., area, energy, mobile, off-road, solid waste, water) were calculated using CalEEMod Version 2013.2.2. Estimates of energy use and solid waste were provided by the Los Angeles County Department of Public Works engineering staff. Additional details relative to the CalEEMod calculations may be found in Section 4.2, Air Quality, and in Appendix B of the Draft EIR. Operational emissions from the MLDC when it was occupied by the Immigration and Customs Enforcement (ICE) were not analyzed because the program ended in 2012 and was not in operation at the time of the issuance of the Project's Notice of Preparation (NOP). The NOP was issued in September of 2014 which, according to Section

15125 of the State CEQA Guidelines, establishes the existing physical conditions on the Project site from both a local and regional perspective and constitutes the baseline conditions by which a lead agency determines whether an impact is significant. As such, the GHG emissions from the previous uses at the Project site were not determined to be applicable for the Draft EIR.

Weingart-43

This comment offers no basis to support the statement that the analysis presented in Section 4.6, Greenhouse Gas Emissions, is inaccurate. As demonstrated through the responses to Weingart-36 through Weingart-42, the Draft EIR includes a conservative analysis of GHG emissions using the widely accepted CalEEMod methodology. We hope that a review of these responses to your comments and the information in the Draft EIR referenced will help to address your concerns. No additional analysis is required.

Weingart-44

As stated in RR GHG-4 in Section 4.6, Greenhouse Gas Emissions, "The Project will include an Employee Commute Reduction Plan (ECRP), commonly known as the Rideshare Plan, in accordance with Los Angeles County Code Chapter 5.9, Vehicle Trip Reduction. The ECRP will specify the measures to be implemented at MLWDC to achieve the target average vehicle ridership performance goal for employee vehicles subject to the Ordinance". Because reductions in GHG emissions from RR GHG-4 cannot be reasonably quantified, they were not taken into account in the CalEEMod emission calculations.

Although the ECRP is incorporated as a mandatory component of the Project, no GHG emissions reductions were applied to the CalEEMod assumptions for PDFs GHG-1 through PDF GHG-4 or for RRs GHG-1 through GHG-5. Therefore, the elimination of the ECRP, or the inclusion of it, would not result in any changes to the calculations or conclusions presented in Section 4.6, Greenhouse Gas Emissions. The requirement for the ECRP is not a mitigation measure that is necessary to reduce a significant impact, but rather a County policy designed to encourage alternatives to single-occupancy vehicle trips.

Weingart-45

As stated in PDF GHG-2 in Section 4.6, Greenhouse Gas Emissions, the Project will provide a combined minimum of 34 video-visiting stations on site, along with video interview rooms in transitional housing buildings. This is anticipated to reduce VMT associated with vehicle travel to the MLWDC by inmate visitors by providing more options and opportunities for visitation when compared to the two video-visiting stations currently located within CRDF. However, deductions of VMT and GHG emissions associated with the video-visiting stations were not quantified in the GHG analyses or in the Traffic Impact Study for the Project.

Because reductions in GHG emissions from PDF GHG-2 cannot be reasonably quantified, they were not taken into account in the CalEEMod emission calculations. Although PDF GHG-2 is incorporated as a mandatory component of the Project, no GHG emissions reductions were applied to the CalEEMod assumptions for PDFs GHG-1 through PDF GHG-4 or for RRs GHG-1 through GHG-5. Therefore, the elimination of the video visiting stations as set forth in PDF GHG-3, or the inclusion of them, would not result in any changes to the calculations or conclusions presented in Section 4.6, Greenhouse Gas Emissions.

Weingart-46

As stated in PDF GHG-3 in Section 4.6, Greenhouse Gas Emissions, the Project will post Antelope Valley Transit Authority (AVTA) bus and Metrolink schedules, as well as the locations of the nearest Park-and-Ride lots, in areas visible to visitors and in the Staff Services building to encourage the use of public transportation by staff and visitors. AVTA bus and Metrolink schedule information will be updated not a minimum of every six months to ensure that they are accurate.

Because reductions in GHG emissions from PDF GHG-3 cannot be reasonably quantified, they were not taken into account in the CalEEMod emission calculations. Although PDF GHG-3 is incorporated as a mandatory component of the Project, no GHG emissions reductions were applied to the CalEEMod assumptions for PDFs GHG-1 through PDF GHG-4 or for RRs GHG-1 through GHG-5. Therefore, the elimination of the requirements set forth in PDF GHG-3, or the inclusion of them, would not result in any changes to the calculations or conclusions presented in Section 4.6, Greenhouse Gas Emissions.

Weingart-47

As stated in PDF GHG-4 in Section 4.6, Greenhouse Gas Emissions, the Project will incorporate (1) a secure storage area for staff to store bicycles into the Project design plans that allow for the individual locking of bicycles and protection from sun and inclement weather and (2) bicycle rack(s) adjacent to the Visitor Parking Lot that allows for the individual locking of bicycles.

Because reductions in GHG emissions from PDF GHG-4 cannot be reasonably quantified, they were not taken into account in the CalEEMod emission calculations. Although PDF GHG-4 is incorporated as a mandatory component of the Project, no GHG emissions reductions were applied to the CalEEMod assumptions for PDFs GHG-1 through PDF GHG-4 or for RRs GHG-1 through GHG-5. Therefore, the elimination of the requirements for bicycle facilities, or the inclusion of them, would not result in any changes to the calculations or conclusions presented in Section 4.6, Greenhouse Gas Emissions.

Weingart-48

As stated in the responses to Weingart-44 through Weingart-47, the analysis presented in Section 4.6, Greenhouse Gas Emissions, did not take any deductions from the total annual GHG emissions that would result from implementation of PDF GHG-1 through PDF GHG-4, nor were deductions taken for RRs GHG-1 through GHG-5 because the reductions in VMT and mobile GHG emissions from the implementation of these RRs cannot be reasonably quantified. Therefore, the GHG emission estimates presented in the Draft EIR are conservatively high, and the impacts are less than significant.

Weingart-49

This comment, in part, raises issues that extend beyond the scope of the CEQA requirements; nonetheless, the Board of Supervisors will receive and be able to consider it and all other comments raised before taking any action on the proposed Project. The scope of CEQA is generally limited to the evaluation of a proposed project's potential impact on the environment, and does not extend to the impact of the existing environment on a proposed project or on its users or residents. The applicable definition of the environment analyzed for CEQA purposes in an environmental impact report is the physical conditions in the area that are affected by the proposed project (e.g., land, air, and water). The proposed MLWDC Project's Draft EIR discloses and addresses the potential direct, indirect, and cumulative impacts of the proposed Project on

the physical environment, in accordance with the State CEQA Guidelines for all environmental issue areas. For the topics mentioned in the comment, refer specifically to Section 4.2, Air Quality, 4.6, Greenhouse Gas Emissions, and 4.14, Utilities and Service Systems, of the Draft EIR.

Weingart-50

In 2015, the underground storage tanks (USTs) were reported to be in compliance and passed all leak detection requirements (CERS 2016, AW Associates 2016). As such, the use or removal of these tanks will not lead to leaks that may potentially contaminate the underlying soils and groundwater and no mitigation is required.

Weingart-51

The information on the removal of the six USTs was taken from the Phase I Environmental Site Assessment (ESA), which states that the information on the leaking underground tanks and clean up information was based on the list of Leaking Underground Storage Tanks (LUST) Sites (see Converse 2014c, pages 24 and 25) and the County Department of Public Works records (see Converse 2014c, pages 33 and 34). The County Department of Public Works oversaw the remediation and issued the "no further action" letter. The Phase I ESA is provided in Appendix E-1 of the Draft EIR.

Weingart-52

The sentence on page 4.7-8 of the Draft EIR reads: "No leaks were observed, except for minor staining on the carpet and hydraulic oil on the concrete floors beneath the emergency generator in the central plant (i.e., steam plant)". This information on minor staining was taken from the Phase I ESA, which is provided in Appendix E-1 of the Draft EIR. The minor staining was observed near unlabeled five-gallon containers with a minor amount of an oil-tar-like substance in the Sergeant Senior Building (see Converse 2014c, pages 38 and 47). The hydraulic oil was observed on the floor beneath the hole punch machine in the George Barracks and the emergency generator in the central plant (see Converse 2014c, pages 5, 48, 51 and 52). Soil testing near the hole punch machine location was performed in January 2016, which indicated no significant contamination findings (Converse 2016b). No further assessment is required.

Weingart-53

The Asbestos and Lead Based Paint Survey Report (Appendix E-2 of the Draft EIR) states that Buildings 27, 28 and 29 are temporary modular buildings that were visually inventoried but not sampled. These are pre-fabricated modular units (i.e., mobile homes) that appeared to be of newer construction (Converse 2014a). Building 27 will remain in place but Buildings 28, 29 and 40 may be disassembled and removed from the site but not demolished. However, this is not certain at this time prior to the Project's final design.

As demonstrated in Section 4.7, Hazards and Hazardous Materials, of the Draft EIR, MM HAZ-1 and MM HAZ-2 requires that, in the event that building materials are encountered during construction activities that are suspected of being asbestos-containing materials (ACMs) or lead-based paint (LBP), these materials shall be assumed to contain asbestos or lead and shall be handled, removed, transported and/or disposed in accordance with applicable regulations, until such time that they can be sampled and evaluated. As provided in Appendix D of this Final EIR, subsequent testing of building material samples from Buildings 27, 28, 29, 32 and 40 indicate the presence of asbestos-containing materials in Buildings 28, 29 and 40; and lead-based paint was found in the sinks in Building 29. If Buildings 27, 28, 29, 32 and 40 are removed, without being

demolished, asbestos materials need not be abated. If these buildings are demolished, the asbestos materials would have to be abated and disposed in accordance with RR HAZ-4 and MM HAZ-1. If the sinks in Building 29 are removed intact, they can be disposed as construction debris; otherwise, they would have to be disposed in accordance with RR HAZ-4 and MM HAZ-2 (Converse 2016a).

Weingart-54

As stated on page 4.7-19 of the Draft EIR, the existing fueling station is located outside the Project site boundary, but may be used by the Project. This fueling station has two USTs that previously failed leak detection tests. As shown in the California Environmental Reporting System (CERS) database and the Monitoring System Certification by AW Associates in Appendix E to this Final EIR, the tank permits were updated in 2015 and have passed subsequent leak detection tests and are now in compliance. Soil testing also indicated there is no soil contamination near the USTs (Converse 2016b). MM HAZ-3 requires the testing and repair, as necessary, of the USTs prior to the use of the existing fueling station by the Project.

Weingart-55

The WSA for the Project, as summarized in Section 4.14, Utilities and Service Systems, discusses the adjudication of groundwater rights in the Antelope Valley and that this adjudication will provide a final allocation of groundwater rights for the long-term groundwater management of the Antelope Valley Groundwater Basin. A finite volume of groundwater that the LACWWD 40 can pump without paying penalties or replenishment fees would be assigned as part of the adjudication, and the adjudication judgment provides LACWWD 40 with the rights to pump approximately 22,500 afy to 27,000 afy of groundwater depending on factors including the amount of the Federal reserved right which is not used by the United States and the supplemental yield attributable to return flows from imported water purchased by LACWWD 40 and delivered to its customers. The Integrated Regional Urban Water Management Plan (IRUWMP) for the Antelope Valley projects that groundwater allocation for LACWWD 40 would be based on historical pumping amounts. The LACWWD 40 is projected to have an average annual pumping rate of 23,200 acre-feet per year (afy) from 2015 to 2035 (LACWWD 40 2011). These projections are subject to change after the adjudication has been finalized as the judgment is currently being appealed; however, it is estimated the 23,200 afy allocation is a conservative value and the final adjudicated amount could be higher, as indicated above.

As contained in the WSA, no change in the available groundwater supplies for the LACWWD 40 is projected from 2015 to 2035 (Psomas 2015). Thus, if the final adjudication judgment results in LACWWD 40 having the right to pump a greater amount, it will have the option to pump up to its allocation or pump below its allocation. This will allow the LACWWD 40 to readily provide water supply to the Project and its other customers, as well as reduce its use of imported water sources. If the final adjudication judgment results in LACWWD 40 receiving the right to pump a lower volume of groundwater, LACWWD 40 would have the option to use a greater amount of imported water or to more heavily rely on its programs for water banking; purchase of new imported supplies; water transfers; water conservation; and expansion of recycled water systems.

As indicated on page 4.14-29 of the Draft EIR, the LACWWD 40 will serve the Project with imported water purchased through the Antelope Valley East Kern Agency (AVEK). MM UTL-1 requires that the County sign the New Water Supply Entitlement Acquisition Agreement with the LACWWD 40 and pay a deposit of \$10,000 per acre-foot of annual water demand from the Project for the acquisition of additional water supplies from AVEK to serve the Project. The adjudication judgment prevents overdraft of the Antelope Valley Groundwater Basin by setting the safe yield

of the basin to eliminate the long-term overdraft condition, and creates a Watermaster to enforce the terms of the judgment.

The well flow, well yield, and water quantity of the LACWWD 40 varies by well and period but the LACWWD 40's Integrated Regional Urban Water Management Plan for the Antelope Valley shows historic (2005-2009)⁵ groundwater pumping totals ranging from 12,371 afy in 2006 to 24,901 afy in 2008. The Antelope Valley Integrated Regional Water Management Plan indicates that AVEK operates a groundwater basin banking project (Water Supply Stabilization Project No. 2 [WSSP-2]) that recharges the groundwater basin with imported water during wet years when supplies exceed demands and extracts up to 90 percent of the banked water in drought years when supplies are low. LACWWD 40 participates in the WSSP-2. There is no way to determine the exact source (i.e. well water or imported water, or the particular well yield) of the water that would serve the Project site via the proposed new water pipeline extension from the on-site water lines to the existing 12-inch LACWWD 40-owned distribution pipeline within West Avenue I because LACWWD 40 waters are comingled to meet water quality and distribution requirements.

Weingart-56

Page 4.14-11 of Section 4.14, Utilities and Service Systems, states that the LACWWD 40 currently has a 36-inch-diameter, cement-lined, coated steel transmission water main located 25 feet from the property line along 60th Street West and a 12-inch-diameter pipe located within West Avenue I. The availability of water or the current drought conditions have no direct effects on this water infrastructure.

The LACWWD 40 has sufficient infrastructure to use State Water Project (SWP) water from AVEK to meet the water demands in its service area even during peak summer demand periods. The LACWWD 40 has also planned for potential water shortages through various demand management measures that would reduce water use and consumption. The WSA for the Project addresses drought conditions and states that future water supplies of the LACWWD 40 will be ensured through continued implementation programs such as water banking, purchase of new imported supplies, water transfers, water conservation, and expansion of recycled water systems.

As stated on page 4.14-8, of Section 4.14, Utilities and Service Systems, the adjudication process for the Antelope Valley Groundwater Basin acknowledges that the basin is in a state of overdraft. Allocation of groundwater rights would limit groundwater extraction in the basin to its safe yield and avoid continued overdraft conditions. As demonstrated on page 4.14-23, the LACWWD 40 has implemented a New Supply Acquisition program to provide funding for additional imported water supplies. Thus, while the Project would require water from the LACWWD 40 to operate, the LACWWD 40 will serve the Project with imported water supplies obtained through AVEK. MM UTL-1 requires that the County sign the New Water Supply Entitlement Acquisition Agreement with the LACWWD 40 and pay a deposit of \$10,000 per acre-foot of annual water demand from the Project for the acquisition of additional water supplies from AVEK to serve the Project. The WSA concludes that there is a sufficient and reliable water supply for LACWWD 40, now and into the future, including a sufficient water supply for the Project. These supplies are also sufficient to provide for overall growth in the LACWWD 40 service area at the rate projected in the 2010 IRUWMP (Psomas 2015).

⁵ The production statistics used are published data and more current data has not yet been published.

Weingart-57

The historic water use numbers in Table 4.14-1 in Section 4.14, Utilities and Service Systems, are provided to show the amount of water pumped by on-site wells when the MLDC was in use as an Immigration and Customs Enforcement (ICE) facility until 2012. Since then, the Project site has been largely vacant and the water use has been limited. Water use data from the MLDC when it was occupied by ICE were not incorporated into the WSA analysis because the program was not in operation at the time of the issuance of the Project's NOP. The NOP was issued in September of 2014 which, according to Section 15125 of the State CEQA Guidelines, establishes the existing physical conditions on the Project site from both a local and regional perspective and constitutes the baseline conditions by which a lead agency determines whether an impact is significant. As such, the use of water from the historic uses at the Project site are not relevant to the future proposed Project operations, and no additional analysis is required.

Weingart-58

The Storm Water Pollution Prevention Plan (SWPPP) must be prepared by a Qualified SWPPP Developer (QSD) and implemented by a Qualified SWPPP Practitioner (QSP) who will be responsible for monitoring that selected Best Management Practices (BMPs) are in place and in working condition at the construction site. The SWPPP must include BMPs to be implemented during construction, including a Construction Site Monitoring Program (CSMP). The primary objective of the SWPPP is to ensure that the responsible party properly constructs, implements, and maintains BMPs to reduce or eliminate pollutants in storm water discharges and authorized non-storm water discharges from the construction site. The SWPPP must also outline the monitoring and sampling program to verify compliance with discharge Numeric Action Levels (NALs) set by the Construction General Permit.

Public agency monitoring of compliance with the SWPPP is provided by State Water Resources Control Board (SWRCB) inspectors who visit construction sites and verify implementation of the BMPs and compliance with other requirements of the SWPPP. In addition, the Los Angeles County Department of Public Works (LACDPW) would also be performing site inspections to monitor compliance with the approved construction plans. Any person may also report a storm water pollution problem to the SWRCB or the local agency.

As stated in Section 4.8, Hydrology and Water Quality, PDF HYD-1 requires that the on-site storm drainage system would comply with storm water quality and quality control requirements under the County's Standard Urban Stormwater Management Plan (SUSMP), Low Impact Development (LID) standards, Hydrology Manual, Best Management Practices Handbook, and Green Building Standards Code. These requirements, along with RR HYD-2, address potential pollutant runoff from long-term operations of the Project and include a drainage concept and storm water quality plan to reduce peak storm water runoff discharge rates; to conserve natural areas; to minimize storm water pollutants of concern; to protect slopes and channels; to provide storm drain system stenciling and signage; to properly design outdoor material storage areas and trash storage areas; and to provide proof of ongoing maintenance of structural or treatment-control BMPs that would prevent pollutants from entering the runoff.

Weingart-59

The Project's permanent storm water treatment-control BMPs would be included in the final engineering plans for the Project; would be subject to LACDPW review and approval as part of the plan check process; and would be inspected during construction. Code enforcement actions by the County would monitor proper and continued use of these BMPs.

Weingart-60

Please refer to the response for Weingart-6 regarding the costs of the proposed Project.

Weingart-61

The MLDC property currently and historically obtains its water supply from an on-site system of groundwater wells, pumps, and tanks, as described in Section 4.14, Utilities and Service Systems. As part of the proposed Project, a new off-site water pipeline extension will be constructed from the on-site water lines to the existing 12-inch LACWWD 40-owned distribution pipeline in West Avenue I. Existing pipeline connections to County-owned groundwater wells and reservoirs located adjacent to 60th Street West will be disconnected, and the proposed MLWDC Project site's potable water supply would be provided by LACWWD 40 rather than from the County-owned groundwater wells.

The LACWWD 40 obtains water primarily from local groundwater resources and imported water from the State Water Project through the AVEK. In the past few years, recycled water has been introduced to the LACWWD 40 service area by the City of Lancaster, and the County of Los Angeles Sanitation District (LACSD) No. 14 continues to serve recycled water directly to Apollo Park. However, recycled water is not yet available to the Project site.

Therefore, it cannot be said that the Project will not use groundwater because the Project will be served by LACWWD 40, which sources its water supply from both groundwater and SWP water. However, the MLWDC property will no longer be connected to the County's system of wells, pumps, and tanks and will not be directly provided water via this groundwater pumping and distribution system.

The environmental impacts associated with the acquisition and development of additional imported water supplies is the responsibility of AVEK. As stated in the WSA prepared for the Project (see Appendix B of the WSA – MOU Between AVEK and Waterworks District No. 40), included as Appendix G-2 of the Draft EIR (Psomas 2015):

The Waterworks District and AVEK will enter into an agreement by which the Waterworks District may require the applicant to deposit with the Waterworks District the amount of money estimated by AVEK to be necessary to fund AVEK's cost of purchasing the additional imported water supplies required by the Waterworks District as a condition of providing a service commitment to the applicant's development. Upon receipt of that deposit by the applicant, the Waterworks District will then deposit that amount with AVEK. The deposit shall cover the estimated purchase price of the additional water supplies, AVEK's cost of completing the environmental assessment under the California Environmental Quality Act and the National Environmental Policy Act (if required), and AVEK's transactional costs including document preparation and review by AVEK staff and legal counsel ("Costs").

MM UTL-1 requires that the County sign the New Water Supply Entitlement Acquisition Agreement with the LACWWD 40 and pay a deposit of \$10,000 per acre-foot of annual water demand from the Project for the acquisition of additional water supplies from AVEK to serve the Project. Therefore, the impacts of importing water on traffic and air quality is determined through the appropriate CEQA/National Environmental Policy Act (NEPA) documentation prepared by the AVEK to support the procurement of additional imported water supplies.

Weingart-62

As stated in Section 4.8, Hydrology and Water Quality, and Section 4.14, Utilities and Service Systems, existing water lines connected to the on-site wells and reservoirs would provide the needed water for construction activities, replacing existing water use from minor maintenance and security activities. The proposed connection to the LACWWD 40 12-inch potable water line within West Avenue I would not need to be connected in order to conduct construction activities or suppress potential dust generated by earth-moving activities because the existing and operational County-owned groundwater pumping and storage system infrastructure would be available at the Project site.

Weingart-63

As stated on page 4.11-5 of Section 4.11, Population and Housing, the growth projections in Table 4.11-6 are projections that were prepared by the Southern California Association of Governments (SCAG) for individual cities and counties as part of its regional planning efforts for the development of the Regional Comprehensive Plan (RCP), Regional Transportation Plan/Sustainable Communities Strategy (RTP/SCS), and the Regional Housing Needs Assessment (RHNA). These projections were adopted by the SCAG Board in 2012.

The Integrated Regional Urban Water Management Plan (IRUWMP) for the Antelope Valley also include growth projections for the service areas of the LACWWD 40 and the Quartz Hill Water District service area. As stated in Table 1-3 of the IRUWMP, these growth projections were based on land use maps and General Plans for the cities of Palmdale and Lancaster (LACWWD 40 2011).

Because the boundaries of the SCAG projections follow city boundaries, which differ from the service area boundaries of the water districts, the SCAG and IRUWMP projections are not comparable to the other. Still, the SCAG projections are also used in the analysis of cumulative impacts in Section 4.11.5 of the Draft EIR. The projections in the Integrated Regional Urban Water Management Plan for the Antelope Valley are used in the LACWWD 40's plans to meet future water demands in their service areas, as demonstrated in Section 4.14.7 of the Draft EIR.

Weingart-64

The Project would be staffed by Sheriff's Department security/sworn staff, Sheriff's Department civilian staff, teachers, counselors, maintenance personnel, physicians, registered nurses, registered nurse practitioners, and other County employees. There is no specific breakdown of the skills and experience of unemployed residents in the City of Lancaster. Thus, a match of the future jobs at the MLWDC and the unemployed residents cannot be readily made. However, this does not preclude Lancaster residents from taking the training or learning the skills needed to work at the Project.

Weingart-65

According to the California Department of Forestry and Fire Protection (CAL FIRE), the Very High Fire Hazard Severity zone is located at the base of the Sierra Pelona Mountains to the south, which is outside the city boundaries of Lancaster. The 4.5-mile distance between this zone and the site includes relatively flat areas with urban development that are not considered to be in a Very High Fire Hazard Severity Zone area. Thus, no wildfire hazards are present on or near the site.

Weingart-66

This comment, in part, raises issues that extend beyond the scope of the CEQA requirements; nonetheless, the Board of Supervisors will receive and be able to consider it and all other comments raised before taking any action on the proposed Project. The scope of CEQA is generally limited to the evaluation of a proposed project's potential impact on the environment, and does not extend to the impact of the existing environment on a proposed project, or on its users or residents. The applicable definition of the environment analyzed for CEQA purposes in an environmental impact report is the physical conditions in the area that are affected by the proposed project (e.g., land, air, and water). The proposed MLWDC Project's Draft EIR discloses and addresses the potential direct, indirect, and cumulative impacts of the proposed Project on the physical environment, in accordance with the State CEQA Guidelines for all environmental issue areas.

Outdoor recreation, both active (e.g., use of sports courts, running track) and passive (e.g., sitting in courtyards or on turf grass areas), will occur on the Project site. The outdoor recreation opportunities and amenities are one of the benefits of the proposed MLWDC Project when compared to existing facilities at the CRDF. There are no known reasons to believe that risks of infection from Valley Fever from participating in outdoor recreational activities at the MLWDC site would be any different from the risks of participating in outdoor activities elsewhere in the Lancaster portion of the Antelope Valley.

Weingart-67

As shown in Exhibit 3-1 in Section 3.0, Project Description, the volleyball and basketball courts are outdoor facilities. The Project does not include an indoor gymnasium.

Weingart-68

Section 4.13, Transportation and Traffic, summarizes the findings of the Traffic Impact Study for the Project. The Traffic Impact Study is provided in Appendix H of the Draft EIR. As stated on pages 4.13-2 to 4.13-3 of Section 4.13, the estimate of the Project's daily trip generation was based on specific data provided by the Los Angeles County Sheriff's Department and includes employee shift times, number of employees per shift, frequency of inmate transport buses, and miscellaneous service/delivery vehicles, among other factors. The miscellaneous vehicle trips due to service/delivery, medical delivery, and court personnel transport were estimated at no more than 25 vehicles per weekday and at ½ of this total for weekend daily trips.

The discussion of video visitation on page 4.13-20 is provided in the context of estimating the total VMT as associated with the location of the MLWDC away from the highly urbanized area of Los Angeles County but is not considered in the trip generation estimates in the Traffic Impact Study. Rather, the number of trips for inmate visitation was estimated at 39 percent of the available appointment slots or about 28,543 visits per year (the same rate as existing at the CRDF). Forecasts assume 250 inbound visitor trips and 250 outbound visitor trips per day during the 114 weekend days and holidays per year. This visitation reflects the number of visitors that is currently occurring at a detention facility that is located in the highly urbanized area of Los Angeles County. With this estimate, it is expected that video visitation would occur in addition to the in-person visits that involve personal vehicle trips to the MLWDC. Therefore, contrary to the commenter's assertion, the Project does not assume that video visitation is a mitigation for increased traffic.

Weingart-69

As discussed on page 4.13-23 and 4.13-24 of the Draft EIR, the existing transit services in the area will adequately accommodate the increase of Project-generated transit trips. The County does not operate the buses and trains that serve the Antelope Valley area. The Southern California Regional Rail Authority (SCRRA), which operates the Metrolink commuter rail system, and the AVTA, which operates buses, provide transit services to meet demand and generally review service routes and schedules as part of their long-range planning efforts. Should demand increase over existing levels, it will be up to the Metrolink and AVTA agencies to revise or expand their services to meet demand. There is a bus stop at the former High Desert Regional Health Center that is located south of the Project site.

Weingart-70

The City of Lancaster has jurisdiction over the City roadways and the implementation of bicycle lanes within the City. As stated on page 4.13-24 of Section 4.13, Transportation and Traffic, while the City of Lancaster has no existing or proposed bikeways on 60th Street West and West Avenue I along the site boundaries, roadway shoulders and sidewalks in the area may be used by bicyclists and pedestrians coming to or going from the Project site.

Subject: Attn: Mira Loma Women's Jail Environmental Impact Report

Dear LA County Chief Exec Office and Board of Supervisors,

Public comment on the Draft Environmental Impact Report (EIR) for the proposed new Mira Loma Jail

From: Women of Color in the Global Women's Strike and Global Women's Strike/LA

As multi-racial women's organizations with a long history of working for resources for mothers and children and against poverty in LA County, we submit that the proposed new LA County jail in Lancaster will be severely detrimental to the health and well being of LA County residents beginning with women and children, as well as destructive to the local environment. The EIR fails to address a number of negative impacts.

WOC-1

The proposed new jail location is a known "hazardous waste site", with two underground storage tanks that have failed leak detection tests, meaning there is a high probability of soil and groundwater contamination. This would put the health of women prisoners at the proposed jail at risk. Some undoubtedly would be pregnant or may become pregnant, so the County would be endangering also the health of their unborn children with the real possibility of lifelong impacts and should and would be held accountable for this.

WOC-2

There is as well increased danger of catching Valley Fever in this area, which was essentially ignored in the EIR. If the jail proposal moves forward, women detained here will be put at risk for this serious disease, particularly but not only those with compromised immune systems. With healthcare in LA's jails already desperately needing improvement, as acknowledged by the County last summer, a jail located here could prove deadly. The County would also be putting at risk the health of family members who visit including children and older women who are especially vulnerable, as well as County workers employed at the facility. During construction, local residents and construction workers would also be at increased health risks due to displacement of soil, including the risk of chemical poisoning from hazardous waste contaminants and of catching Valley Fever as the fungus which causes this potentially fatal disease is located in the soil and is spread by the wind.

WOC-3

The proposed jail site is located several hours from downtown Los Angeles, requiring additional travel for those imprisoned who need to be taken to court etc, for their loved ones who visit, as well as for lawyers and service providers serving prisoners. This increased travel will be a severe burden on families. One of the 'primary objectives' of the project is to reduce recidivism. Maintaining strong family connections has been documented as a key factor in reducing recidivism. Yet the County building its jail way out in Lancaster undermines this stated primary objective. Furthermore, this proposed jail is for women, and it is well-documented that women are the primary caregivers, fighting for the well-

WOC-4

being of children and sick, disabled and elderly people – and this work continues when women are jailed. The majority of women in prison are mothers, while the new proposed Mira Loma correctional facility is 75 miles or more away from the neighborhoods in which most of their children live. How are children supposed to stay connected with their moms when visits are made more difficult and burdensome, which will likely make it impossible for many children to visit their moms? Making it more difficult for mothers to maintain contact with their children also increases the risk of mothers' parental rights being terminated, putting their children at risk of abuse in foster care or being adopted away from their extended families. Children must not be "collateral captives" in LA County plans.

WOC-4
cont.

Increasingly communities and even the President are looking to decrease the number of people who are incarcerated. Why isn't the County of Los Angeles focused on that rather than building a new jail? Women jailed in LA County, for as little as failing to pay parking tickets and other "crimes" of poverty, are disproportionately women of color and from low-income communities – it is unacceptable that their lives and those of their children and other loved ones are being treated as disposable. Rather than continuing down this road spending billions building new jails, we urge the County to use those precious resources to undercut the growing poverty of women and our children in LA County, to prioritize keeping families together, housed, nourished and healthy.

WOC-5

This proposed jail is unhealthy for LA County families, communities and our environment. For the above reasons, the proposed new Mira Loma Jail should be rejected and the Draft EIR must not be approved.

WOC-6

--

Women of Color in the Global Women's Strike, Global Women's Strike/LA la@allwomenscount.net PO Box 86681 Los Angeles, California 90086 Women of Color in the Global Women's Strike, Global Women's Strike/LA

2.2.7 WOMEN OF COLOR IN THE GLOBAL WOMEN'S STRIKE (WOC)

January 11, 2016

WOC-1

This comment provides a general introduction to the comment letter and summarizes concerns related to environmental impacts of the Project. The Draft EIR for the proposed Project has been prepared in accordance with the California Environmental Quality Act (CEQA, *California Public Resources Code*, Sections 21000 et seq.) and the State CEQA Guidelines (14 *California Code of Regulations* [CCR]) and addresses the potential direct, indirect, and cumulative impacts of the Project on all applicable environmental issue areas. Section 5.0, Project Alternatives, was prepared in accordance with Sections 15126.6(a) through 15126.6(f) of the State CEQA Guidelines. As demonstrated throughout the Draft EIR, all potentially significant environmental impacts have been reduced to less than significant levels through the required mitigation measures, and no significant unavoidable environmental impacts would result from Project implementation. The Final EIR, including copies of all comments submitted, will be provided to the County of Los Angeles Board of Supervisors. Therefore, your concerns will be presented directly to the decision makers prior to consideration of Project approval.

WOC-2

The Draft EIR provides information directly addressing the commenter's concern regarding potential on-site hazardous waste health risks. The Project site is listed in government databases due to past hazardous material uses. However, the site was never operated as a site that accepted hazardous wastes for disposal. The Project site is on the list of Leaking Underground Storage Tanks (LUST) Sites, but the leaking underground storage tanks have been removed and the affected area was cleaned up. The County of Los Angeles Department of Public Works (LACDPW) oversaw the remediation and issued the "no further action" letter. The California Department of Toxic Substances Control (DTSC) lists the Polaris Flight Academy with a status of "inactive-needs evaluation". As part of the Phase II Environmental Site Assessment (ESA), soil borings collected in the area of the possible former location of the airstrip did not detect any contaminants that would require further action (Converse 2015). Thus, the listing of the site in government databases was based on previous uses that no longer pose hazards (Converse 2015).

As part of the environmental analysis for the Draft EIR, a Phase I ESA reviewed past and current uses and site conditions and identified Recognized Environmental Concerns (RECs) on the Project site and surrounding area. The Phase I ESA is provided in Appendix E-1 of the Draft EIR. Subsequent to the Phase I ESA, a Phase II ESA was prepared that included soil sampling to determine if soil contamination is present on the site. The Phase II ESA is provided in Appendix E-3 of the Draft EIR. In addition, an Asbestos and Lead Based Paint Survey Report was completed to identify the building components that contained asbestos and lead-based paint. The Asbestos and Lead Based Paint Survey Report is provided in Appendix E-2 of the Draft EIR. These reports are summarized in Section 4.7, Hazards and Hazardous Materials, of the Draft EIR.

The proposed Project must comply with existing regulatory requirements (RRs) for the proper handling of hazardous wastes, including transportation, treatment, storage, and disposal; repair and/or removal of underground storage tanks based on applicable standards; and practices that would protect the demolition and construction crews from asbestos and lead exposure. In addition, the Project must incorporate mitigation measures (MMs) for the handling of suspected

asbestos-containing materials and lead-based paint; an Operations and Maintenance Plan for regular inspection of any asbestos-containing materials; and testing and repair of underground storage tanks prior to use. Thus, existing hazardous materials and wastes would be removed from the Project site and future hazardous materials use would comply with applicable regulations to prevent hazards to future inmates. In summary, compliance with RRs and implementation of MMs set forth in the Draft EIR would prevent public health and safety hazards to inmates, employees, visitors, and other individuals at the Project site.

The Phase II ESA included 14 soil borings to depths of 8 feet below the ground surface (bgs). All soil samples from two and four feet bgs were analyzed for Total Petroleum Hydrocarbons (TPH), Volatile Organic Compounds (VOCs), and metals in accordance with U.S. Environmental Protection Agency (USEPA) Test Methods 8015M, 8260B, and 6010B/7471A, respectively (Converse 2015). As stated on page 4.7-18 of the Draft EIR, the soil analyses indicate that no VOCs are present in the soil samples. All reported metals, except arsenic, were found to be at levels below the California Human Health Screening Levels (CHHSLs) for both residential and commercial/industrial land. The arsenic levels are below the background level of the 12 milligrams per kilogram (mg/kg) level that the DTSC has determined to be naturally occurring background levels at school sites in California. The findings of the Phase II ESA indicated that there is no soil contamination on the site. With no contamination identified near-surface soils, it is unlikely that groundwater contamination would be present, considering that groundwater levels in the Antelope Valley Groundwater Basin in 2006 were estimated at 120 feet bgs at the Project site (RWMG 2013).

In summary, the Phase II ESA concludes that there is no soil or groundwater contamination on the Project site requiring remediation or other mitigation measures (Converse 2015). Existing hazardous materials in various buildings would be removed, transported, and disposed of in accordance with existing regulations. Mitigation Measures (MMs) HAZ-1 and HAZ-2 would be implemented for the handling of remaining building materials that may contain asbestos and lead-based paint; and MM HAZ-3 would be implemented for the reuse of other facilities near the Project site. Further, the use, storage, handling, transport and disposal of hazardous materials during operation of the Mira Loma Women's Detention Center (MLWDC) would be made in compliance with existing regulations. Accordingly, the Draft EIR concludes that the Project's impacts would be less than significant. Therefore, female inmates, including pregnant inmates and their unborn children, would not be exposed to health hazards or lifelong health effects from their stay at the MLWDC.

WOC-3

The Draft EIR specifically addresses the commenter's concern regarding the potential for exposure to Valley Fever, in both the construction and operational phases of the proposed Project. *Coccidioidomycosis*, also known as Valley Fever, and its potential impact on local residents, potential future inmates, and County staff is discussed in Section 4.2, Air Quality. A summary of hazards associated with the *Coccidioides* spores (i.e., the fungus that causes Valley Fever) that are found in native soil is provided, as well as summaries of trends related to Valley Fever in Los Angeles County, as inventoried and reported by the Los Angeles County Department of Public Health (LACDPH), which was consulted during the preparation of the Draft EIR.

The Draft EIR includes an analysis of exposure hazards due to fugitive dust that may result from construction-related earth-moving activities, and identifies several Project Design Features (PDFs) and Regulatory Requirements (RRs) to minimize any exposure risks. PDF AIR-1, which will be included in the Contractor's Specification and monitored through the Mitigation Monitoring and Reporting Program (MMRP), requires the distribution of materials on Valley Fever, or any

updated materials as applicable, to worksite supervisors and construction workers. PDF AIR-2 and RR AIR-1, which will be included in the Contractor's Specification and monitored through the MMRP, require compliance with Best Management Practices and AVAQMD Rule 403 for the prevention of fugitive dust and nuisance air contaminants. RR AIR-1 provides a listing of the most applicable AVAQMD Rules. Rule 403, Fugitive Dust, requires measures such as watering and control of track-out from the site, as well as submittal of a Dust Control Plan prior to the start of construction. Rule 403 requires control of fugitive dust and avoidance of nuisance, and Rule 402 prohibits the emission of quantities of air contaminants that could cause injury, detriment, nuisance, or annoyance to the public, or that endanger the comfort, repose, health or safety of the public. With implementation of RR AIR-1, on-site earth-moving activities would not result in fugitive dust that could affect adjacent off-site land uses.

As stated in RR AIR-2, the Project will be constructed in compliance with the Department of Health – Infection Control Policy Guidelines Procedure No. 918.01. Policy 918 is intended to prevent the spread of diseases that may be caused by construction-induced airborne pollution in susceptible individuals (patients, staff, and the public) at Department of Health Services (DHS) facilities. The protocols and requirements mandate the designation of an Infection Control Coordinator who must review and approve infection-control plans for new construction or renovation projects to ensure a safe environment. These infection-control plans must include infection-control measures to contain dust, debris, and other elements and protect the patients, employees, and visitors in this environment. The Infection Control Coordinator has independent authority to stop construction-related activities immediately when the public may be adversely affected by infection-control hazards generated during construction-related activities and when the infection-control precautions and/or engineering controls are inadequate to contain the hazard. The Draft EIR provides that exposure to Valley Fever during construction activities would be less than significant, and no mitigation is required.

Section 4.2, Air Quality, acknowledges that the future inmate population has the potential to be exposed to dust generated from soils in the Antelope Valley, which have the potential to contain *Coccidioides* spores, during operation of the proposed Project. As discussed in Section 3.0, Project Description, of the Draft EIR, according to the Sheriff's Department, Assembly Bill (AB) 109 female inmates are serving an average of 423 days in custody from date of sentencing to date of release, while non-AB 109 female inmates serve an average of 107 days in custody. Therefore, the length of time that inmates would be living at the MLWDC is temporary, and is not equivalent to a permanent living circumstance or the longer sentences in state prisons that house higher-security inmates.

The Draft EIR summarizes the LACDPH *2013 Annual Morbidity Report*, which presents the recent trends related to Valley Fever in Los Angeles County, including an increasing incidence rate for coccidioidomycosis in the last ten years. However, the overall incidence rate in the Antelope Valley has not warranted changes to date in the County's protocol for disease prevention, notwithstanding the fact that the County health and public health officials are well educated on the condition; are familiar with its incidence in the County and elsewhere in the state; and are involved in research and education on the subject of Valley Fever.

The LACDPH has not identified the previous U.S. Immigration and Customs Enforcement (ICE) detainee population at the MLDC, the future inmate population at MLWDC, or earlier occupants at the High Desert Health System (HDHS) Multi-Ambulatory Care Center (MACC) (the adjacent hospital facility, which has relocated in Lancaster) as requiring the implementation of health screening protocols or other measures to address potential Valley Fever exposure.

Also, as demonstrated in Section 4.2, Air Quality, the California Department of Corrections and Rehabilitation (CDCR) has not identified the Lancaster area as being a geographic location that requires screening or interventions for the State prison population with regard to exposure to Valley Fever (CDCR 2013).

The operation of the MLWDC will follow standard Sheriff's Department procedures for medical care and prevention with regard to health care for inmates in general, and Valley Fever specifically, and the Sheriff's Department will continue to coordinate with the LACDPH (Masis 2015). The LACDPH is the designated County agency with the mandate to protect health, prevent disease, and promote the health and well-being of all persons in Los Angeles County. As such, any future changes in LACDPH policies that may be made regarding Valley Fever for inmate populations will be implemented, as applicable, throughout the County jail system.

Because the future inmate population's exposure to disturbed soils would be limited to gardening activities, PDF AIR-3 states that the Project will import gardening soils from outside the Antelope Valley, which would be used in raised planting beds to remove gardening in native soils as a potential source of exposure to *Coccidioides* spores. Further, outdoor recreational areas and other non-paved areas on the Project site would be covered with landscaping, turf grass, gravel, or landscaping/wood chip ground cover that would minimize the opportunity for soils to become airborne.

The Antelope Valley has not been identified by the LACDPH, the Antelope Valley Air Quality Management District (AVAQMD), or any other governmental health agency as a region that should be avoided by the elderly, women, children, health-compromised individuals, or by any specific ethnic groups. The Antelope Valley includes the major population centers of the cities of Lancaster and Palmdale, which have an estimated 2014 combined population of approximately 314,902 people. This portion of the Antelope Valley includes a diverse population of residents that includes many individuals that could be considered to be at higher risk of complications due to infection from *Coccidioides* spores. As stated in Section 4.2, Air Quality, persons at the highest risk of developing disseminated Valley Fever include the very young (under 1 year old); adults over 60 years; immunocompromised individuals; people with diabetes; women in the third trimester of pregnancy; and certain ethnic groups, including African-Americans and Filipinos.

The demographics of the two cities include approximately 158,605 females (50.4 percent) and 156,297 males (49.6 percent) with a median age of approximately 30.7 years old. The racial/ethnic composition of the area is approximately 47 percent Latino, 29 percent white, 17 percent African American, and 4 percent Asian (U.S. Census Bureau 2016). As such, the temporary presence of a female inmate population into the Antelope Valley would not introduce a new or unusual demographic into the area that is not already present in the existing population of the region.

The MLWDC property is not located in an area determined to be hazardous to the health of local residents or visitors to the region. The Draft EIR concludes that the potential future inmate population's temporary placement into the Antelope Valley, which includes the inmates' participation in all indoor and outdoor activities at the MLWDC, would not constitute placement into a hazardous existing environmental setting that would require mitigation. Additionally, the operation of the proposed Project would not increase the prevalence of *Coccidioides* spores or otherwise exacerbate an existing environmental condition.

WOC-4

The commenter's concern regarding the potential environmental and other impacts resulting from the Antelope Valley location of the Project is addressed by several different sections of the Draft EIR, including Section 4.13, Transportation and Traffic. The Draft EIR acknowledges that an increase in vehicle miles travelled (VMT) would occur with the Project due to the location of the Project site in relation to the Century Regional Detention Facility (CRDF) in Lynwood, which is closer to higher density urban areas near the City of Los Angeles. As described on pages 4.13-19 through 4.13-20, the Project's Traffic Impact Study estimated that the relocation of inmates to the Mira Loma Women's Detention Center (MLWDC) would result in additional VMT by visitors, inmate buses, and service/delivery trucks when compared to the length of trips required for the CRDF. The worst-case estimate is an increase of 2,500 VMT on a weekday and 25,700 VMT on a weekend day or holiday. No specific significance thresholds related to VMT increases have been adopted by the City of Lancaster or the County of Los Angeles. The use of VMT as a measure of impacts from traffic to replace the Level of Service (LOS) metric for traffic impact analysis is still under review at the California Office of Planning and Research (OPR) and is proposed to be phased in over a two-year period following administrative rulemaking.

The County is aware of the potential challenges this increased distance may pose for some visiting family members, while for other visiting family members from the Lancaster and other County areas, the Project location will be closer to their homes than the current women's jail in Lynwood. Efforts to minimize any inconveniences of increased distance include PDF GHG-2 in Section 4.6, Greenhouse Gas Emissions. The Project will provide a combined minimum of 34 video-visiting stations on site, along with video interview rooms in transitional housing buildings. This is anticipated to reduce VMT associated with vehicle travel to the MLWDC by inmate visitors, while allowing more opportunities for video-visiting than currently exist at CRDF, where most female inmates are housed.

Importantly, the proposed MLWDC will accommodate various forms of visitation, including traditional non-contact visiting, telephone access, video visiting, and contact visiting. Contact visits refer to opportunities for inmates and visitors to interact face to face, allowing for physical contact. Non-contact visits refer to visitations where the inmate and the visitor are separated by a glass barrier, and no physical contact is allowed. Video visits refer to long-distance visitation that can occur through a video conferencing program, allowing the inmate and the visitor to hear and see each other via the computer and screen. Therefore, video visiting is a component of a visiting program. As demonstrated in Table 3-5 of the Draft EIR, the MLWDC would also allow contact visits, which are not currently allowed at CRDF.

Additionally, as demonstrated on page 3-4, in Section 3.0, Project Description, the Board of Supervisors directed the establishment of an Advisory Board (now called the Gender Responsive Advisory Committee) that will report to the Board of Supervisors on specific programmatic and operational issues. The Advisory Committee has already begun to organize its meetings with a membership including representatives of County staff, outside agencies, advocates, organizations, individuals with incarceration experience, and representatives with expertise in reducing recidivism of female inmates. As part of its charge, the Advisory Committee is tasked with reviewing the program model for the proposed MLWDC Project to ensure that it is evidence-based in reducing recidivism; evaluating strategies to reduce negative impacts of operating the proposed MLWDC away from the downtown Los Angeles area, including contract transportation for visitors, video visiting for attorney consultation; and reviewing national best practices for visiting and family reunification.

WOC-5

The purpose of and need for the Project is described in detail in Section 3.1, Project Background, of the Draft EIR. That section provides information regarding the County's existing detention facilities, relevant regulatory mandates, and studies analyzing future facility needs, including for housing of female inmates. The proposed Project does not hinder or preclude the Board of Supervisors' consideration of alternate approaches to incarceration, including the commenter's suggestions regarding out-of-custody alternatives to incarceration.

The proposed Project is not directly intended to decrease the number of incarcerated people, but would reduce recidivism in the long-term. As demonstrated on page 3-17 of Section 3.0, Project Description, the average number of inmates in the Sheriff's Department population has increased due to a substantial number of inmates categorized as "N3" (i.e., non-violent, non-serious, non-sexual) serving their terms in County jail as mandated under Assembly Bill (AB) 109. These inmates are being incarcerated in accordance with established laws, and the process of determining which women are appropriately incarcerated is beyond the scope of this proposed Project. As stated in the Project Objectives in Section 3.0, Project Description, the MLWDC Project would prioritize the on-site integration of gender-responsive female inmate education, treatment, and vocational training to reduce female inmate recidivism. The Project would reduce recidivism through programming and development of a women's detention facility at a site with sufficient space to accommodate both campus-style inmate housing and support facilities for education and vocational training, implementing the best practices of Education Based Incarceration (EBI). Therefore, contrary to the commenter's concern that inmates and their families are "being treated as disposable", the proposed MLWDC Project would prioritize cost-effective therapeutic and rehabilitative programs and promote release-readiness and community reintegration in order to reduce recidivism.

Although the Project site has been unoccupied since 2012, as discussed in Section 2.0, Environmental Setting, the Project site has generally been in operation and providing various detention/jail functions since 1945–1946, when the California Youth Authority began to run a vocational school for juvenile offenders at the site. In the mid-1950s, the MLDC operated as a medium-security facility until it ceased operations for the first time in 1979. It reopened in 1983 and was expanded with the construction of several new buildings in 1986. The facility was repurposed for female inmates and was known as the Mira Loma Female Honor Ranch, but was closed again in 1993. The MLDC reopened for use in 1997 by the U.S. Immigration and Customs Enforcement (ICE) to house undocumented immigrants until their immigration cases were decided, and it operated in that capacity until 2012. The site has not housed inmates since that time. The MLWDC Project proposes the adaptive reuse, renovation, and expansion of the majority of the buildings at MLDC, which is an existing County asset. The redevelopment of the property as the MLWDC would avoid the costs associated with constructing a new facility.

Regarding the County's efforts to reduce the number of incarcerated individuals, the Board of Supervisors has adopted numerous recent actions to reduce the number of people who are incarcerated in Los Angeles County, particularly those with mental illness and/or substance use disorders. The Board of Supervisors' actions relating to diversion from the criminal justice system to reduce the need for incarceration are based in part on their consideration of the August 4, 2015, District Attorney's report of the Criminal Justice Mental Health Advisory Board in a document entitled "Mental Health Advisory Report: A Blueprint for Change – Providing Treatment, Promoting Rehabilitation and Reducing Recidivism: An Initiative to Develop a Comprehensive Plan for Los Angeles County".

The members of the District Attorney's Advisory Board were the Sheriff; the Fire Chief; the Directors of the Departments of Mental Health, Health Services, Public Health, Veteran's Affairs, and Public Social Services; the Public Defender; and the Executive Director of the Countywide Criminal Justice Coordination Committee. All Advisory Board members participated in the Countywide assessment of services and recommendations to provide for comprehensive mental health diversion for each stage of the criminal justice continuum, from first responders to community re-entry and support. This report summarized the range of diversion programs already existing in the County and analyzed the need for additional mental health and substance abuse diversion services for each stage along the criminal justice continuum. The County of Los Angeles Chief Executive Office (CEO) has acknowledged that these recommendations recognize that there are potential new efficiencies and cost avoidance by redirecting persons in need of physical, mental, and public health care services from the criminal justice system to appropriate care and treatment in lieu of incarceration.

On August 11, 2015, and September 1, 2015, in the context of determining potential capacity of proposed County jail facilities and responding to treatment needs for the mentally ill or victims of substance use disorders, the Board directed an ordinance be prepared to establish an Office of Diversion and Re-Entry (Office) within the Department of Health Services. That ordinance was adopted, and the Office has been established pursuant to Section 2.76.600 of the Los Angeles County Code. For administrative oversight, the Board of Supervisors determined that the Office will be a part of the Department of Health Services and the Director of the Office will report to the Director of the Department of Health Services. The Director of this Office will be advised by a Permanent Steering Committee with broad membership from County departments working in collaboration with working groups established by the District Attorney. It includes representatives from the Sheriff, the Fire Chief, the Chief Executive, Superior Court, the Public Defender, the Alternate Public Defender, Probation, the District Attorney, Mental Health, Public Health, and Health Services.

The Office will oversee Countywide diversion efforts including a system of integrated mental, physical and public health care services and supportive housing for those at risk of homelessness who are redirected from the criminal justice system or re-entering the community after incarceration. For purposes of this Office's jurisdiction, the expectation is for diversion to seamlessly occur across "sequential intercept" points within the criminal justice system. Such intercept points include initial contact with law enforcement or other first responders, involvement with the criminal court system, incarceration, or post-release from incarceration.

The Office was allocated an initial Supplemental Budget of \$74.5 million to be spent 40 percent on housing; 50 percent for diversion and anti-recidivism programs; and 10 percent for administration. The Board of Supervisors directed that future budget allocations be a part of the annual budget process. On September 1, 2015, the Board of Supervisors also directed that the Office distribute funding so at least 1,000 individuals would be diverted across all intercept points within the criminal justice system.

The Criminal Justice Mental Health Advisory Board report of August 2015 concluded that, even with increased opportunities for diversion from a jail environment, there will still be a need for mental health treatment in jails, and that diversion efforts can reduce, but will not eliminate, the need for the County to operate detention facilities (LACDA 2015). In light of the County's diversion efforts, the Board of Supervisors directed that, for purposes of ongoing study and evaluation in the environmental review process, the maximum size of the proposed women's detention center at Mira Loma in Lancaster would remain at 1,604 beds. In addition, the Board of Supervisors reduced the maximum proposed size by approximately 1,000 beds, for purposes of the environmental review of a separate proposed treatment and detention center addressing needs

of incarcerated men and women with mental illness and/or substance use disorders at the site of the current Men's Central Jail in downtown Los Angeles. In summary, the Board of Supervisors has taken steps to reduce the number of people who are incarcerated in Los Angeles County.

WOC-6

This comment is a summary of the concerns expressed in the WOC letter, which has been responded to in WOC-1 through WOC-5. We hope that a review of these responses to your comments, which will be included in the Final EIR, and the information in the Draft EIR referenced will help to address your concerns. The Responses to Comments document, including your comment letter, will be provided to the County of Los Angeles Board of Supervisors so that your concerns will be presented directly to the decision makers prior to consideration of Project approval.

Final Environmental Impact Report

APPENDICES

Appendices

- A Form Letters
- B Cultural Resources Records Search
- C San Manuel Band of Mission Indians Response to the Project
- D Limited Asbestos and Lead-Based Paint Sampling Report - Buildings 27, 28, 29, 32 and 40
- E California Environmental Reporting System (CERS) database and Monitoring System Certification
- F Supplemental Phase II ESA Soil Sampling Report

2.3 INDIVIDUALS

Responses to state, regional, and local agencies are included in Section 2.1; responses to organizations are included in Section 2.2; and responses to individuals that sent comment letters are included in Section 2.3. Section 2.3 organizes the letters from individuals as follows:

- Section 2.3.1 includes 135 comment letters that were exact duplicates of a sample “form letter”, with only the name of the sender being different. These individually submitted form letters are included in Appendix A of this Final EIR. Responses to the comments in the form letter follow a sample of the text of the form letter and are numbered as Form Letter-1, Form Letter-2, and so on to the end of the responses to each comment in that letter.
- Section 2.3.2 includes the responses to 88 form letters that included individualized introductory comments or some other personalized information, as well as the form letter that is responded to in Section 2.3.1. These 88 comment letters are included in this Responses to Comments document, located on the page prior to the response. For these letters, the comments are numbered as Name – 1, Name -2, and so on to the end of each of the individualized comments that were added to the form letter comments. The responses to the form letter portion of these comment letters references but does not repeat the form letter responses, which are located in Section 2.3.1.
- Section 2.3.3 includes 60 other comment letters and comment cards that were received from individuals, and the responses to those comments. Responses to each of these comment letters and cards from individuals are numbered Name-1, Name -2, and so on to the end of the individual responses to each of the comments in these letters and cards.

Section 2.3.1 "form letter" comments are from the 135 individuals listed alphabetically below. The responses to the numbered comments in this letter are in Section 2.3.1, and copies of each of the form letters sent are in Appendix A of the Final EIR.

FORM LETTER

Subject: Attn: Mira Loma Women's Jail Environmental Impact Report

Dear LA County Chief Exec Office and Board of Supervisors,

Please consider my public comment on the Draft Environmental Impact Report (EIR) regarding the proposed new Mira Loma Jail released on November 9th.

A new jail in Lancaster County will be severely detrimental to the health and well being of LA County residents as well as destructive to the local environment. The EIR fails to adequately address the negative impacts on residents and the natural landscape caused by jail construction, nor does it adequately provide plans for community based alternatives to jail construction. With investment in diversion, bail/bond reform, and other jail population reduction measures, this proposed jail would be unnecessary.

Form Letter-1

The proposed jail site is located several hours from downtown Los Angeles, requiring additional travel for people imprisoned there, lawyers and service providers serving prisoners, and their loved ones who wish to visit. This increased travel will be a severe burden on families, providers, and prisoners that must be considered in the proposal as community connections through programs and family visits have been shown to greatly reduce recidivism. Additionally, increased travel will cause greater smog and air pollution, as well as place a strain on already inadequate public transportation and road systems used by prisoners, loved ones, jail staff, and construction workers.

Form Letter-2

The suggested location is a known "hazardous waste site", with two underground storage tanks that have failed leak detection tests, meaning there could be contamination of soil and groundwater, and a high risk of exposure to contaminated soil and ground since 44% of the project site will be "outdoor pervious area". This puts prisoners at the jail, in custody of the County of Los Angeles, in extreme health risk. Plans for water usage and storage when proposing to introduce thousands of new prisoners as well as hundreds of employees are inadequate at mitigating the strain to the environment and current residents. Additionally the weather and environmental conditions in this area foster a high probability for "Valley Fever", a fungal disease that can result in death. If the jail proposal moves forward, during construction local residents would be at increased risk due to displacement of dry soils. After completion, prisoners at the jail would be at great risk for this disease, particularly those with already compromised immune systems.

Form Letter-3

Form Letter-4

Form Letter-5

This proposed jail is unsafe for LA County communities and our environment. For the above reasons, the proposed new Mira Loma Jail should be rejected and the Draft EIR must not be approved.

Form Letter-6

2.3.1 FORM LETTER

Form Letter-1

This comment provides a general introduction to the comment letter and alleges a failure to address environmental impacts and alternatives to the Project. It also characterizes the proposed jail as “unnecessary”, pointing to “jail population reduction measures” such as investment in diversion. The Draft Environmental Impact Report (EIR) for the proposed Project, in fact, addresses environmental impacts and alternatives. It has been prepared in accordance with the California Environmental Quality Act (CEQA, *California Public Resources Code*, Sections 21000 et seq.) and the State CEQA Guidelines (14 *California Code of Regulations* [CCR]), and it addresses the potential direct, indirect, and cumulative impacts of the Project on all applicable environmental issue areas. Sections 4.1 through 4.15 of the Draft EIR provide analyses of potential environmental impacts of Project implementation on the environment. As demonstrated throughout the Draft EIR, all potentially significant environmental impacts have been reduced to levels that are less than significant through application of the identified mitigation measures, and no significant unavoidable environmental impacts would result from Project implementation.

The purpose of and need for the Project is described in detail in Section 3.1, Project Background, of the Draft EIR. That section provides information regarding the County's existing detention facilities, relevant regulatory mandates, and studies analyzing future facility needs, including for housing of female inmates.

The proposed jail planning is set in the context of the County's other programmatic and financial support of diversion from incarceration. Purely social effects of a project are beyond the scope of CEQA analysis, which focuses on the proposal's effect on the physical environment. The County, however, has a concurrent focus on diversion from incarceration as it considers this Project. Therefore, the proposed Project is consistent with the Board of Supervisors' consideration of policy issues addressing alternative approaches to incarceration, including the commenter's suggestions regarding out-of-custody alternatives.

The Board of Supervisors has adopted numerous recent actions to reduce the number of people who are incarcerated in Los Angeles County, particularly those with mental illness and/or substance use disorders. The Board of Supervisors' actions relating to diversion from the criminal justice system to reduce the need for incarceration are based, in part, on their consideration of the August 4, 2015, District Attorney's report of the Criminal Justice Mental Health Advisory Board in a document entitled “Mental Health Advisory Report: A Blueprint for Change – Providing Treatment, Promoting Rehabilitation and Reducing Recidivism: An Initiative to Develop a Comprehensive Plan for Los Angeles County”.

The members of the District Attorney's Advisory Board were the Sheriff; the Fire Chief; the Directors of the Departments of Mental Health, Health Services, Public Health, Veteran's Affairs, and Public Social Services; the Public Defender; and the Executive Director of the Countywide Criminal Justice Coordination Committee. All Advisory Board members participated in the Countywide assessment of services and recommendations to provide for comprehensive mental health diversion for each stage of the criminal justice continuum, from first responders to community re-entry and support. This report summarized the range of diversion programs already existing in the County and analyzed the need for additional mental health and substance abuse diversion services for each stage along the criminal justice continuum. The County of Los Angeles Chief Executive Office (CEO) has acknowledged that these recommendations recognize that there are potential new efficiencies and cost avoidance by redirecting persons in need of physical,

mental, and public health care services from the criminal justice system to appropriate care and treatment in lieu of incarceration.

On August 11, 2015, and September 1, 2015, in the context of determining potential capacity of proposed County jail facilities, and responding to treatment needs for the mentally ill or victims of substance use disorders, the Board directed an ordinance be prepared to establish an Office of Diversion and Re-Entry (Office) within the Department of Health Services. That ordinance was adopted, and the Office has been established pursuant to Section 2.76.600 of the Los Angeles County Code. For administrative oversight, the Board of Supervisors determined the Office will be a part of the Department of Health Services and the Director of the Office will report to the Director of the Department of Health Services. The Director of this Office will be advised by a Permanent Steering Committee with broad membership from County departments working in collaboration with working groups established by the District Attorney. It includes representatives from the offices of the Sheriff, the Fire Chief, the Chief Executive Office, Superior Court, the Public Defender, the Alternate Public Defender, Probation, the District Attorney, Mental Health, Public Health, and Health Services.

The Office will oversee Countywide diversion efforts including a system of integrated mental, physical, and public health care services and supportive housing for those at risk of homelessness who are redirected from the criminal justice system or re-entering the community after incarceration. For purposes of this Office's jurisdiction, the expectation is for diversion to seamlessly occur across "sequential intercept" points within the criminal justice system. Such intercept points include initial contact with law enforcement or other first responders, involvement with the criminal court system, incarceration, or post-release from incarceration.

The Office was allocated an initial Supplemental Budget of \$74.5 million to be spent 40 percent on housing; 50 percent for diversion and anti-recidivism programs; and 10 percent for administration. The Board of Supervisors directed that future budget allocations be a part of the annual budget process. On September 1, 2015, the Board of Supervisors also directed that the Office distribute funding so at least 1,000 individuals would be diverted across all intercept points within the criminal justice system.

The Criminal Justice Mental Health Advisory Board report of August 2015 concluded that, even with increased opportunities for diversion from a jail environment, there will still be a need for mental health treatment in jails and that diversion efforts can reduce, but will not eliminate, the need for the County to operate detention facilities (LACDA 2015). In light of the County's diversion efforts, the Board of Supervisors directed that, for purposes of on-going study and evaluation in the environmental review process, the maximum size of the proposed women's detention center at Mira Loma in Lancaster would remain at 1,604 beds. In addition, the Board of Supervisors reduced the maximum proposed size by approximately 1,000 beds, for purposes of the environmental review of a separate proposed treatment and detention center addressing needs of incarcerated men and women with mental illness and/or substance use disorders at the site of the current Men's Central Jail in downtown Los Angeles. In summary, the Board of Supervisors has taken steps to reduce the number of people who are incarcerated in Los Angeles County.

With respect to the Final EIR alternative analysis, Section 5.0, Project Alternatives, of the Draft EIR was prepared in accordance with Sections 15126.6(a) through 15126.6(f) of the State CEQA Guidelines and adequately considers alternatives to the proposed Project. Out-of-custody alternatives were not required to be analyzed in the Draft EIR beyond the No Project alternative

analyses and they would not be able to achieve the Project's primary goal, as stated below and in Section 5.3.2 of the Draft EIR.

The Project's goal is to provide detention facilities for low- to medium-security level female inmates that meet modern correctional standards and that prioritize the on-site integration of gender-responsive female inmate education, treatment, and vocational training. This goal focuses on providing a secure detention facility with cost-effective therapeutic and rehabilitative programs to meet needs of eligible female inmates in order to reduce recidivism.

Potential environmental impacts associated with "no action" on the proposed Project are described in Alternative 1A, No Project/Continuation of Existing Operations, and Alternative 1B, No Project/Predictable Actions, as demonstrated in Section 5.0, Alternatives. These alternatives provide information regarding the potential impacts to the environment if the County does not move forward with the proposed Project.

The Final EIR, including copies of all comments submitted, will be provided to the County of Los Angeles Board of Supervisors. Therefore, your concerns will be presented directly to the decision makers prior to consideration of Project approval.

Form Letter-2

The commenter's concern regarding the potential environmental and other impacts resulting from the Antelope Valley location of the Project is addressed by several different sections of the Draft EIR, including Section 4.13, Transportation and Traffic. The Draft EIR acknowledges that an increase in vehicle miles travelled (VMT) would occur with the Project due to the location of the Project site in relation to the Century Regional Detention Facility (CRDF) in Lynwood, which is closer to higher density urban areas near the City of Los Angeles. As described on pages 4.13-19 through 4.13-20, the Project's Traffic Impact Study estimated that the relocation of inmates to the Mira Loma Women's Detention Center (MLWDC) would result in additional VMT by visitors, inmate buses, and service/delivery trucks when compared to the length of trips required for the CRDF. The worst-case estimate is an increase of 2,500 VMT on a weekday and 25,700 VMT on a weekend day or holiday. No specific significance thresholds related to VMT increases have been adopted by the City of Lancaster or the County of Los Angeles. The use of VMT as a measure of impacts from traffic to replace the Level of Service (LOS) metric for traffic impact analysis is still under review at the California Office of Planning and Research (OPR) and is proposed to be phased in over a two-year period following administrative rulemaking.

The County is aware of the potential challenges this increased distance may pose for some visiting family members, while for other visiting family members from the Lancaster and other County areas, the Project location will be closer to their homes than the current women's jail in Lynwood. Efforts to minimize any inconveniences of increased distance include PDF GHG-2 in Section 4.6, Greenhouse Gas Emissions. The Project will provide a combined minimum of 34 video-visiting stations on site, along with video interview rooms in transitional housing buildings. This is anticipated to reduce VMT associated with vehicle travel to the MLWDC by inmate visitors, while allowing more opportunities for video-visiting than currently exist at CRDF, where most female inmates are housed.

Importantly, the proposed MLWDC will accommodate various forms of visitation, including traditional non-contact visiting, telephone access, video visiting, and contact visiting. Contact visits refer to opportunities for inmates and visitors to interact face to face, allowing for physical contact. Non-contact visits refer to visitations where the inmate and the visitor are separated by

a glass barrier, and no physical contact is allowed. Video visits refer to long-distance visitation that can occur through a video conferencing program, allowing the inmate and the visitor to hear and see each other via the computer and screen. Therefore, video visiting is a component of a visiting program. As demonstrated in Table 3-5 of the Draft EIR, the MLWDC would also allow contact visits, which are not currently allowed at CRDF.

Additionally, as demonstrated on page 3-4, in Section 3.0, Project Description, the Board of Supervisors directed the establishment of an Advisory Board (now called the Gender Responsive Advisory Committee) that will report to the Board of Supervisors on specific programmatic and operational issues. The Advisory Committee has already begun to organize its meetings with a membership including representatives of County staff, outside agencies, advocates, organizations, individuals with incarceration experience, and representatives with expertise in reducing recidivism of female inmates. As part of its charge, the Advisory Committee is tasked with reviewing the program model for the proposed MLWDC Project to ensure that it is evidence-based in reducing recidivism; evaluating strategies to reduce negative impacts of operating the proposed MLWDC away from the downtown Los Angeles area, including contract transportation for visitors, video visiting for attorney consultation; and reviewing national best practices for visiting and family reunification.

Regarding the commenter's concern about potential increases in smog and air pollution, Section 4.2, Air Quality, presents the results of the emission analysis using California Emissions Estimator Model (CalEEMod) Version 2013.2.2. This computer program is used to calculate anticipated emissions associated with land development projects in California, including emissions from vehicles traveling to and from the Project site. As shown in Table 4.2-7 of Section 4.2, Air Quality, the estimated annual operational emissions due to Project-related operations would not exceed the Antelope Valley Air Quality Management District (AVAQMD) CEQA significance thresholds, and potential impacts would be less than significant. In fact, emissions were well below the thresholds of significance. For example, carbon monoxide (CO) was the air contaminant with the highest annual rate of emission, and the Project was estimated to emit 18 tons per year, which is less than significant when compared to the AVAQMD threshold of significance of 100 tons per year.

Regarding the commenter's concern about potential impacts to public transportation and the road system, Section 4.13, Transportation and Traffic, of the Draft EIR discusses potential impacts related to Project-generated traffic. The analysis indicates that increase in traffic volumes would not significantly impact local intersections (intersections would still operate at LOS D or better), or alternative transportation (Metrolink trains or AVTA bus service), and impacts on California Department of Transportation (Caltrans) facilities would be less than significant. As discussed on page 4.13-23 and 4.13-24, the existing transit services in the area will adequately accommodate the increase in Project-generated transit trips. No mitigation is required for short-term construction or long-term operational traffic impacts.

Form Letter-3

The Draft EIR provides information directly addressing the commenter's concern regarding potential on-site hazardous material creating potential health risks. The Project site is listed in government databases due to past hazardous material uses. However, the site was never operated as a site that accepted hazardous wastes for disposal. The Project site is on the list of Leaking Underground Storage Tanks (LUST) Sites, but the leaking underground storage tanks have been removed, and the affected area has been cleaned up. The County Department of Public Works oversaw the remediation and issued the "no further action" letter. The California Department of Toxic Substances Control (DTSC) lists the Polaris Flight Academy with a status of

“inactive-needs evaluation”. A Phase 1 Environmental Site Assessment (ESA) was prepared to identify Recognized Environmental Concerns (RECs) at the site and a Phase II ESA was prepared to further evaluate the RECs. As part of those studies, soil borings collected in the area of the possible former location of the airstrip were evaluated and the results did not detect any contaminants that would require further action. Thus, the listing of the site in government databases was based on past uses that no longer pose hazards (Converse 2015).

As part of the environmental analysis for the Draft EIR, the Phase I ESA reviewed past and current uses and site conditions and identified RECs on the Project site and surrounding area. The Phase I ESA is provided in Appendix E-1 of the Draft EIR. Subsequent to the Phase I ESA, a Phase II ESA was prepared that included soil sampling to determine if soil contamination is present on the site. The Phase II ESA is provided in Appendix E-3 of the Draft EIR. In addition, an Asbestos and Lead Based Paint Survey Report was completed to identify the building components that contained asbestos and lead-based paint. The Asbestos and Lead Based Paint Survey Report is provided in Appendix E-2 of the Draft EIR. These reports are summarized in Section 4.7, Hazards and Hazardous Materials, of the Draft EIR.

The proposed Project must comply with existing regulatory requirements (RRs) for the proper handling of hazardous wastes, including transportation, treatment, storage, and disposal; repair and/or removal of underground storage tanks based on applicable standards; and practices that would protect the demolition and construction crews from asbestos and lead exposure. In addition, the Project must incorporate mitigation measures (MMs) for the handling of suspected asbestos-containing materials and lead-based paint; an Operations and Maintenance Plan for regular inspection of any asbestos-containing materials; and testing and repair of underground storage tanks prior to use. Thus, existing hazardous materials and wastes would be removed from the Project site and future hazardous materials use would comply with applicable regulations to prevent hazards to future inmates. In summary, compliance with RRs and implementation of MMs set forth in the Draft EIR would prevent public health and safety hazards to inmates, employees, visitors and other individuals at the Project site.

The Phase II ESA included 14 soil borings to depths of 8 feet below the ground surface (bgs). All soil samples from two and four feet bgs were analyzed for Total Petroleum Hydrocarbons (TPH), Volatile Organic Compounds (VOCs), and metals in accordance with U.S. Environmental Protection Agency (USEPA) Test Methods 8015M, 8260B, and 6010B/7471A, respectively (Converse 2015). As stated on page 4.7-18 of the Draft EIR, the soil analyses indicate that no volatile organic compounds (VOCs) are present in the soil samples. All reported metals, except arsenic, were found to be at levels below the California Human Health Screening Levels (CHHSLs) for both residential and commercial/industrial land. The arsenic levels are below the background level of 12 milligrams per kilogram (mg/kg) level that the DTSC has determined to be naturally occurring background levels at school sites in California. The findings of the Phase II ESA indicated that there is no soil contamination on the site (Converse 2015). With no contamination identified near-surface soils, it is unlikely that groundwater contamination would be present, considering that groundwater levels in the Antelope Valley Groundwater Basin in 2006 were estimated at 120 feet bgs at the Project site (RWMG 2013).

In summary, the Phase II ESA concludes that there is no soil or groundwater contamination on the Project site requiring remediation or other mitigation measures (Converse 2015). Existing hazardous materials in various buildings would be removed, transported, and disposed of in accordance with existing regulations. Mitigation Measures (MMs) HAZ-1 and HAZ-2 would be implemented for the handling of remaining building materials that may contain asbestos and lead-based paint; and MM HAZ-3 would be implemented for the reuse of other facilities near the Project site. Further, the use, storage, handling, transport, and disposal of hazardous materials during

operation of the proposed MLWDC would be made in compliance with existing regulations. Accordingly, the Draft EIR concludes that the Project's hazardous material impacts would be less than significant. Therefore, neither the female inmate population, nor visitors or workers at the MLWDC would be put at risk.

Form Letter-4

The comment expresses concern that water demand for the proposed MLWDC, when considered with current demands, will negatively impact groundwater resources. The Project's projected water usage is addressed in Section 4.14, Utilities and Service Systems. The Project's estimated water demand is less than the 250 acre-feet per year (afy) threshold established by the California Department of Water Resources (DWR) for requiring a Water Supply Assessment (WSA) for the proposed Project under legislation commonly referred to as Senate Bill (SB) 610, as described further in Section 4.14 of the Draft EIR. Nonetheless, to provide informed decision-making, a WSA was prepared for the Project and provided in Appendix G-2 of the Draft EIR. The WSA is also summarized in Section 4.14. As required under SB 610, the WSA must include an evaluation of the sufficiency of the water supplies available to the water supplier to meet existing and anticipated future demands (including the demand associated with the project) over a 20-year horizon that includes normal, single-dry, and multiple-dry years. The multiple-dry year scenario would represent drought conditions. With implementation of MM UTL-1, the Los Angeles County Waterworks District No. 40 (LACWWD 40), which will be the Project's water supplier, would have the water supply needed to serve the Project. MM UTL-1 requires that the County sign the New Water Supply Entitlement Acquisition Agreement with LACWWD 40 and pay a deposit of \$10,000 per acre-foot of annual water demand from the Project for the acquisition of additional water supplies from Antelope Valley – East Kern Water Agency (AVEK) to serve the Project.

With implementation of MM UTL-1, Project-related estimates for water supply and demand, as provided in the WSA, show that water supply is available to serve the Project during the average year, single-dry year, and multiple-dry years. The WSA concludes the information on record indicates a sufficient and reliable water supply for LACWWD 40, now and into the future, including a sufficient water supply for the Project (Psomas 2015). These supplies are also sufficient to provide for existing demands and demands from overall growth in the LACWWD 40 service area at the rate projected in the 2010 Integrated Regional Urban Water management Plan (IRUWMP) (LACWWD 40 2011).

Form Letter-5

The comment expresses concern about exposure to Valley Fever, both in the construction and operational phases of the proposed Project. *Coccidioidomycosis*, also known as Valley Fever, and its potential impact on local residents, potential future inmates, and County staff is discussed in Section 4.2, Air Quality. A summary of hazards associated with the *Coccidioides* spores (i.e., the fungus that causes Valley Fever) that are found in native soil is provided, as well as summaries of trends related to Valley Fever in Los Angeles County, as inventoried and reported by the Los Angeles County Department of Public Health (LACDPH), which was consulted during the preparation of the Draft EIR.

The Draft EIR includes an analysis of exposure hazards due to fugitive dust that may result from construction-related earth-moving activities, and identifies several Project Design Features (PDFs) and Regulatory Requirements (RRs) to minimize any exposure risks. PDF AIR-1, which will be included in the Contractor's Specification and monitored through the Mitigation Monitoring and Reporting Program (MMRP), requires the distribution of materials on Valley Fever, or any updated materials as applicable, to worksite supervisors and construction workers. PDF AIR-2

and RR AIR-1, which will be included in the Contractor's Specification and monitored through the MMRP, require compliance with Best Management Practices and AVAQMD Rule 403 for the prevention of fugitive dust and nuisance air contaminants. RR AIR-1 provides a listing of the most applicable AVAQMD Rules. Rule 403, Fugitive Dust, requires measures such as watering and control of track-out from the site, as well as submittal of a Dust Control Plan prior to the start of construction. Rule 403 requires control of fugitive dust and avoidance of nuisance, and Rule 402 prohibits the emission of quantities of air contaminants that could cause injury, detriment, nuisance, or annoyance to the public, or that endanger the comfort, repose, health or safety of the public. With implementation of RR AIR-1, on-site earth-moving activities would not result in fugitive dust that could affect adjacent off-site land uses.

As stated in RR AIR-2, the Project will be constructed in compliance with the Department of Health – Infection Control Policy Guidelines Procedure No. 918.01. Policy 918 is intended to prevent the spread of diseases that may be caused by construction-induced airborne pollution in susceptible individuals (patients, staff, and the public) at Department of Health Services (DHS) facilities. The protocols and requirements mandate the designation of an Infection Control Coordinator who must review and approve infection-control plans for new construction or renovation projects to ensure a safe environment. These infection-control plans must include infection-control measures to contain dust, debris, and other elements and protect the patients, employees, and visitors in this environment. The Infection Control Coordinator has independent authority to stop construction-related activities immediately when the public may be adversely affected by infection-control hazards generated during construction-related activities and when the infection-control precautions and/or engineering controls are inadequate to contain the hazard. The Draft EIR provides that exposure to Valley Fever during construction activities would be less than significant, and no mitigation is required.

Section 4.2, Air Quality, acknowledges that the future inmate population has the potential to be exposed to dust generated from soils in the Antelope Valley, which have the potential to contain *Coccidioides* spores, during operation of the proposed Project. As discussed in Section 3.0, Project Description, of the Draft EIR, according to the Sheriff's Department, Assembly Bill (AB) 109 female inmates are serving an average of 423 days in custody from date of sentencing to date of release, while non-AB 109 female inmates serve an average of 107 days in custody. Therefore, the length of time that inmates would be living at the MLWDC is temporary, and is not equivalent to a permanent living circumstance or the longer sentences in state prisons that house higher-security inmates.

The Draft EIR summarizes the LACDPH *2013 Annual Morbidity Report*, which presents the recent trends related to Valley Fever in Los Angeles County, including an increasing incidence rate for coccidioidomycosis in the last ten years. However, the overall incidence rate in the Antelope Valley has not warranted changes to date in the County's protocol for disease prevention, notwithstanding the fact that the County health and public health officials are well educated on the condition; are familiar with its incidence in the County and elsewhere in the state; and are involved in research and education on the subject of Valley Fever.

The LACDPH has not identified the previous U.S. Immigration and Customs Enforcement (ICE) detainee population at the MLDC, the future inmate population at MLWDC, or earlier occupants at the High Desert Health System (HDHS) Multi-Ambulatory Care Center (MACC) (the adjacent hospital facility, which has relocated in Lancaster) as requiring the implementation of health screening protocols or other measures to address potential Valley Fever exposure.

Also, as demonstrated in Section 4.2, Air Quality, the California Department of Corrections and Rehabilitation (CDCR) has not identified the Lancaster area as being a geographic location that requires screening or interventions for the State prison population with regard to exposure to Valley Fever (CDCR 2013).

The operation of the MLWDC will follow standard Sheriff's Department procedures for medical care and prevention with regard to health care for inmates in general, and Valley Fever specifically, and the Sheriff's Department will continue to coordinate with the LACDPH (Masis 2015). The LACDPH is the designated County agency with the mandate to protect health, prevent disease, and promote the health and well-being of all persons in Los Angeles County. As such, any future changes in LACDPH policies that may be made regarding Valley Fever for inmate populations will be implemented, as applicable, throughout the County jail system.

Because the future inmate population's exposure to disturbed soils would be limited to gardening activities, PDF AIR-3 states that the Project will import gardening soils from outside the Antelope Valley, which would be used in raised planting beds to remove gardening in native soils as a potential source of exposure to *Coccidioides* spores. Further, outdoor recreational areas and other non-paved areas on the Project site would be covered with landscaping, turf grass, gravel, or landscaping/wood chip ground cover that would minimize the opportunity for soils to become airborne.

The Antelope Valley has not been identified by the LACDPH, the Antelope Valley Air Quality Management District (AVAQMD), or any other governmental health agency as a region that should be avoided by the elderly, women, children, health-compromised individuals, or by any specific ethnic groups. The Antelope Valley includes the major population centers of the cities of Lancaster and Palmdale, which have an estimated 2014 combined population of approximately 314,902 people. This portion of the Antelope Valley includes a diverse population of residents that includes many individuals that could be considered to be at higher risk of complications due to infection from *Coccidioides* spores. As stated in Section 4.2, Air Quality, persons at the highest risk of developing disseminated Valley Fever include the very young (under 1 year old); adults over 60 years; immunocompromised individuals; people with diabetes; women in the third trimester of pregnancy; and certain ethnic groups, including African-Americans and Filipinos.

The demographics of the two cities include approximately 158,605 females (50.4 percent) and 156,297 males (49.6 percent) with a median age of approximately 30.7 years old. The racial/ethnic composition of the area is approximately 47 percent Latino, 29 percent white, 17 percent African American, and 4 percent Asian (U.S. Census Bureau 2016). As such, the temporary presence of a female inmate population into the Antelope Valley would not introduce a new or unusual demographic into the area that is not already present in the existing population of the region.

The MLWDC property is not located in an area determined to be hazardous to the health of local residents or visitors to the region. The Draft EIR concludes that the potential future inmate population's temporary placement into the Antelope Valley, which includes the inmates' participation in all indoor and outdoor activities at the MLWDC, would not constitute placement into a hazardous existing environmental setting that would require mitigation. Additionally, the operation of the proposed Project would not increase the prevalence of *Coccidioides* spores or otherwise exacerbate an existing environmental condition.

Form Letter-6

This comment is a summary of the concerns expressed in the letter, which have been responded to in the responses for Form Letter-1 through Form Letter-5 above, and your conclusion that the proposed new jail "should be rejected". We hope that a review of these responses to your comments, and responses to the comments of others, all of which will be included in the Final EIR, as well as the referenced information in the Draft EIR will help to address your concerns. The Responses to Comments document, including your comment letter, will be provided to the County of Los Angeles Board of Supervisors so that your concerns will be presented directly to the decision makers prior to consideration of Project approval.

From: Liz Amsden <LizAmsden@hotmail.com>

Subject: Attn: Mira Loma Women's Jail Environmental Impact Report

Dear LA County Chief Exec Office and Board of Supervisors,

As well as what follows, I strongly OPPOSE the jail on the following grounds.

One, we need to spend this money on affordable housing and start solving some of the problems that lead to crime.

And, two, as a taxpayer I am offended that my taxes are being used to sustain the 'Prison-Industrial Complex' which does everything in its power to expand its income.

The US has more people in prison than ANY other country including China and Russia. We represent 5% of the world's population but we incarcerate 25% of the world's prisoners, 33% of the world's female prisoners.

This is despicable. And I am ashamed of my state and my country in its embracing of policies that created and further these statistics.

Please consider the foregoing along with this, my public comment on the Draft Environmental Impact Report (EIR) regarding the proposed new Mira Loma Jail released on November 9th.

A new LA county jail in Lancaster will be severely detrimental to the health and well being of LA County residents as well as destructive to the local environment. The EIR fails to adequately address the negative impacts on residents and the natural landscape caused by jail construction, nor does it adequately provide plans for community based alternatives to jail construction. With investment in diversion, bail/bond reform, and other jail population reduction measures, this proposed jail would be unnecessary.

The proposed jail site is located several hours from downtown Los Angeles, requiring additional travel for people imprisoned there, lawyers and service providers serving prisoners, and their loved ones who wish to visit. This increased travel will be a severe burden on families, providers, and prisoners that must be considered in the proposal as community connections through programs and family visits have been shown to greatly reduce recidivism. Additionally, increased travel will cause greater smog and air pollution, as well as place a strain on already inadequate public transportation and road systems used by prisoners, loved ones, jail staff, and construction workers.

The suggested location is a known "hazardous waste site", with two underground storage tanks that have failed leak detection tests, meaning there could be contamination of soil and groundwater, and a high risk of exposure to contaminated soil and ground since 44% of the project site will be "outdoor pervious area". This puts prisoners at the jail, in custody of the County of Los Angeles, in extreme health risk. Plans for water usage and storage when proposing to introduce thousands of new prisoners as well as hundreds of employees are inadequate at mitigating the strain to the environment and current residents. Additionally the weather and environmental conditions in this area foster a high probability for "Valley Fever", a fungal disease that can result in death. If the jail proposal moves forward, during construction local residents would be at increased risk due to displacement of dry soils. After completion, prisoners at the jail would be at great risk for this disease, particularly those with already compromised immune systems.

Amsden-1

Please refer to responses to form letter

This proposed jail is unsafe for LA County communities and our environment. For the above reasons, the proposed new Mira Loma Jail should be rejected and the Draft EIR must not be approved.

2.3.2 INDIVIDUALIZED INTRODUCTIONS TO FORM LETTERS

Liz Amsden (February 5, 2016)

Amsden-1

The commenter opposes the jail and instead wants money spent on affordable housing and crime prevention. She alleges that her taxes are used to sustain the jail system, which does everything to expand its income. She also provides comparative statistics on US prisoners and expresses general strong opposition to the proposed project.

The Environmental Impact Report (EIR) relates to a public local jail and not a private for profit prison. This comment relates to the merits of the proposed Project and not the environmental analysis included in the Draft EIR or the environmental impacts of the Project.

Please refer to responses for Form Letter-1 through Form Letter-6 for remaining comments.

Rebecca Barker (March 2, 2016)

Barker-1

The commenter alleges that the prison industry drains funds that are needed for more effective, long-term solutions for struggling and disadvantaged individuals. The proposed jail planning is set in the context of the County's other programmatic and financial support of diversion from incarceration. Purely social effects of a project are beyond the scope of CEQA analysis, which focuses on the proposal's effect on the physical environment. The County has a concurrent focus on diversion from incarceration as it considers this Project. Therefore, the proposed Project is consistent with the Board of Supervisor's consideration of policy issues addressing alternative approaches to incarceration.

Please refer to responses for Form Letter-1 through Form Letter-6 for remaining comments.

Subject: Attn: Mira Loma Women's Jail Environmental Impact Report

Dear LA County Chief Exec Office and Board of Supervisors,

I strongly believe that more jails are no solution, and I have personal experience to back up my belief. My brother, who was introduced to drugs as a teenager in foster care, was consistently "punished" with ever greater jail time as he repeatedly went back to feeding his drug habit with a life of crime. At no point in his life did the exposure to jails and prisons make a single difference in the trajectory of his decline. He only grew ill in jail - sick in mind and body - until he died at the age of 45. He needed treatment, not jail.

My brother's story is nothing new. But what's new is that these days locking people up has become a profitable venture with mutual backslapping between sheriff's departments, prison guard unions, municipal leaders, property developers and construction companies. We are investing our resources entirely wrong! And all this building in remote locations merely separates inmates from their families and damages the environment of the prison site! It's just wrong, wrong, wrong.

So please consider my public comment on the Draft Environmental Impact Report (EIR) regarding the proposed new Mira Loma Jail released on November 9th.

A new LA county jail in Lancaster will be severely detrimental to the health and well being of LA County residents as well as destructive to the local environment. The EIR fails to adequately address the negative impacts on residents and the natural landscape caused by jail construction, nor does it adequately provide plans for community based alternatives to jail construction. With investment in diversion, bail/bond reform, and other jail population reduction measures, this proposed jail would be unnecessary.

The proposed jail site is located several hours from downtown Los Angeles, requiring additional travel for people imprisoned there, lawyers and service providers serving prisoners, and their loved ones who wish to visit. This increased travel will be a severe burden on families, providers, and prisoners that must be considered in the proposal as community connections through programs and family visits have been shown to greatly reduce recidivism. The commenter opposes more jails because of her brother who was in and out of jail until he died. She alleges that locking people up has become a profitable venture between public agencies and private companies.

Thank you for your comment generally sharing your family's experience. The Los Angeles County owns the proposed Project site and the Sheriff's Department, which would operate the proposed MLWDC, would not make a profit on the facility.

Regarding the commenter's concern about building in remote locations, please refer to the response for Form Letter-2. For concern about damage to the environment, the Draft EIR for the proposed Project has been prepared in accordance with the California Environmental Quality Act (CEQA, *California Public Resources Code*, Sections 21000 et seq.) and the State CEQA Guidelines (*California Code of Regulations* [CCR], Title 14), and addresses the potential direct, indirect, and cumulative impacts of the Project on all environmental issue areas.

Please refer to responses for Form Letter-1 through Form Letter-6 for remaining comments.

Dear LA County Chief Exec Office and Board of Supervisors,

I can think of so many things we can really use public funding for: housing for homeless; generally affordable housing; fixing sidewalks, roads & bridges; cleaning up toxic pollution--esp. around the Exide plant. We already have the highest national rate of incarceration in the world. Women especially alternatives to prison because many of their crimes are minor, and because their children suffer incredibly.

Brodtkin-1

Please consider my public comment on the Draft Environmental Impact Report (EIR) regarding the proposed new Mira Loma Jail released on November 9th.

A new LA county jail in Lancaster will be severely detrimental to the health and well being of LA County residents as well as destructive to the local environment. Subject: Attn: Mira Loma Women's Jail Environmental Impact Report

Dear LA County Chief Exec Office and Board of Supervisors,

Dear Colleagues,

Greetings. My name is Keith L. Camacho, and I am an associate professor at UCLA. I am writing to protest the proposal to build another jail facility in Los Angeles. Instead, please use the monies allocated for this facility for pro-reactive measures, as with providing increased educational, employment, and medical resources for the residents of this and other cities in California. Your support is greatly appreciated.

} Camacho-1

If you have any questions, you can reach me at 310-267-5592.

Sincerely,

Keith L. Camacho, Ph.D

PS:

Please consider my public comment on the Draft Environmental Impact Report (EIR) regarding the proposed new Mira Loma Jail released on November 9th.

A new jail in Lancaster County will be severely detrimental to the health and well being of LA County residents as well as destructive to the local environment. The EIR fails to adequately address the negative impacts on residents and the natural landscape caused by jail construction, nor does it adequately provide plans for community based alternatives to jail construction. With investment in diversion, bail/bond reform, and other jail population reduction measures, this proposed jail would be unnecessary.

} Please refer to responses to form letter

The proposed jail site is located several hours from downtown Los Angeles, requiring additional travel for people imprisoned there, lawyers and service providers serving prisoners, and their loved ones who wish to visit. This increased travel will be a severe burden on families, providers, and prisoners that must be considered in the proposal as community connections through programs and family visits have been shown to greatly reduce recidivism. Additionally, increased travel will cause greater smog and air pollution, as well as place a strain on already inadequate public transportation and road systems used by prisoners, loved ones, jail staff, and construction workers.

The suggested location is a known "hazardous waste site", with two underground storage tanks that have failed leak detection tests, meaning there could be contamination of soil and groundwater, and a high risk of exposure to contaminated soil and ground since 44% of the project site will be "outdoor pervious area". This puts prisoners at the jail, in custody of the County of Los Angeles, in extreme health risk. Plans for water usage and storage when proposing to introduce thousands of new prisoners as well as hundreds of employees are inadequate at mitigating the strain to the environment and current residents. Additionally the weather and environmental conditions in this area foster a high probability for "Valley Fever", a fungal disease that can result in death. If the jail proposal moves forward, during construction local residents would be at increased risk due to displacement of dry soils. After completion, prisoners at the jail would be at great risk for this disease, particularly those with already compromised immune systems.

This proposed jail is unsafe for LA County communities and our environment. For the above reasons, the proposed new Mira Loma Jail should be rejected and the Draft EIR must not be approved.

Subject: Attn: Mira Loma Women's Jail Environmental Impact Report

Dear LA County Chief Exec Office and Board of Supervisors,

It is not time to build more jails, but rather look into why we have more incarcerated people than any other country. The system needs to be rebuilt, and not more structures to demonstrate our failure as a nation to solve our social issues.

Please consider my public comment on the Draft Environmental Impact Report (EIR) regarding the proposed new Mira Loma Jail released on November 9th.

A new LA county jail in Lancaster will be severely detrimental to the health and well being of LA County residents as well as destructive to the local environment. The EIR fails to adequately address the negative impacts on residents and the natural landscape caused by jail construction, nor does it adequately provide plans for community based alternatives to jail construction. With investment in diversion, bail/bond reform, and other jail population reduction measures, this proposed jail would be unnecessary.

The proposed jail site is located several hours from downtown Los Angeles, requiring additional travel for people imprisoned there, lawyers and service providers serving prisoners, and their loved ones who wish to visit. This increased travel will be a severe burden on families, providers, and prisoners that must be considered in the proposal as community connections through programs and family visits have been shown to greatly reduce recidivism. Additionally, increased travel will cause greater smog and air pollution, as well as place a strain on already inadequate public transportation and road systems used by prisoners, loved ones, jail staff, and construction workers.

The suggested location is a known "hazardous waste site", with two underground storage tanks that have failed leak detection tests, meaning there could be contamination of soil and groundwater, and a high risk of exposure to contaminated soil and ground since 44% of the project site will be "outdoor pervious area". This puts prisoners at the jail, in custody of the County of Los Angeles, in extreme health risk. Plans for water usage and storage when proposing to introduce thousands of new prisoners as well as hundreds of employees are inadequate at mitigating the strain to the environment and current residents. Additionally the weather and environmental conditions in this area foster a high probability for "Valley Fever", a fungal disease that can result in death. If the jail proposal moves forward, during construction local residents would be at increased risk due to displacement of dry soils. After completion, prisoners at the jail would be at great risk for this disease, particularly those with already compromised immune systems.

Dear LA County Chief Exec Office and Board of Supervisors,

As a parent and resident of LA County, I completely disagree with the proposal to build a new jail in Lancaster, or anywhere in LA County. Our current Jail system, one of the largest in the entire country, state, and world, is already being mismanaged, full of human rights abuses, and holds majority of people who have not been convicted of anything and are too impoverished to post the exorbitant amount of bail. My child, the city I live in, and LA County will not be safer or more financially secure with a new jail.

Chávez-1

Secondly, please consider my public comment on the Draft Environmental Impact Report (EIR) regarding the proposed new Mira Loma Jail released on November 9th.

A new LA county jail in Lancaster will be severely detrimental to the health and well being of LA County residents as well as destructive to the local environment. The EIR fails to adequately address the negative impacts on residents and the natural landscape caused by jail construction, nor does it adequately provide plans for community based alternatives to jail construction. With investment in diversion, bail/bond reform, and other jail population reduction measures, this proposed jail would be unnecessary.

The proposed jail site is located several hours from downtown Los Angeles, requiring additional travel for people imprisoned there, lawyers and service providers serving prisoners, and their loved ones who wish to visit. The author identifies himself an educator who works in jails and who does not support the renovation of the site for the proposed facility. He further indicates strong concern about "privatization" of incarceration. The proposed MLWDC would not be a privately-operated facility. The Los Angeles County owns the proposed Project site and the Sheriff's Department, which would operate the proposed MLWDC, would not make a profit on the facility. This comment relates to the merits of the proposed Project, and not the environmental analysis included in the Draft EIR or the environmental impacts of the Project.

Subject: Attn: Mira Loma Women's Jail Environmental Impact Report

Dear LA County Chief Exec Office and Board of Supervisors,

The building of prisons has been a continued poor investment by our society into beating down the beaten. The statistics speak for themselves according to the UltraViolet women prisoners: 82% are survivors of severe child abuse. 1 in 10 minimally will be sexually assaulted in prison, 1 in 25 will give birth in prison while being shackled, 75% of women prisoners are survivors of domestic violence, and black women are three times more likely to be put in prison than than white women. Prison has continually been filled since the 1970s with the most vulnerable within our society. It is time we reallocate our resources not to destroy the lives of those that are already destroyed, but to uplift our most vulnerable. We as a society cannot do that until we stop investing our county resources into prisons and torturing those who have already been harmed by everyone else.

Clinton-1

As a citizen of Los Angeles County, I urge you to vote against the building of this prison.

"This isn't Justice." Ultraviolet. web. 2/8/2016.

This comment relates statistics on women inmates and asks that resources be reallocated away from prisons. He also states opposition to the Project. The proposed jail planning is set in the context of the County's other programmatic and financial support of diversion from incarceration. Purely social effects of a project are beyond the scope of CEQA analysis, which focuses on the proposal's effect on the physical environment. The County has a concurrent focus on diversion from incarceration as it considers this Project. Therefore, the proposed Project is consistent with the Board of Supervisor's consideration of policy issues addressing alternative approaches to incarceration.

Subject: Attn: Mira Loma Women's Jail Environmental Impact Report

Dear LA County Chief Exec Office and Board of Supervisors,

Good afternoon, Sir/Ma'am

I am a concerned citizen, and a mother. I am strongly opposed to the building of a women jail in Lancaster. I strongly support other alternatives to keep families together like community programs with security monitoring. Jails are not the answer they only breed criminal behavior on staff and inmates; its a loose/loose situation.. Building a jails so far from the inmates family and friends will only have negative outcomes. Family members will not be able to afford to travel such a long distance and isolate inmates from their loved ones and family members.

Cooper-1

Inmate Safety is critical. The proposed site is a known "hazardous waste site". This will expose healthy inmates, staff and visitors to hazards which make cause cancers and other chronic long term disease. Building on known hazardous waste site will open the city, county and state for lawsuits costing the tax payers millions of dollars. The money saved from lawsuits could go into effective community programs to help inmates improve their lives, obtain jobs and change the criminal justice system for better outcomes.

Cooper-2

Please consider my public comment on the Draft Environmental Impact Report (EIR) regarding the proposed new Mira Loma Jail released on November 9th.

A new jail in Lancaster County will be severely detrimental to the health and well being of LA County residents as well as destructive to the local environment. The EIR fails to adequately address the negative impacts on residents and the natural landscape caused by jail construction, nor does it adequately provide plans for community based alternatives to jail construction. With investment in diversion, bail/bond reform, and other jail population reduction measures, this proposed jail would be unnecessary.

Irma Cooper (January 6, 2016)

Cooper-1

The commenter opposes the building of a womens' jail in Lancaster and supports other alternatives. The purpose of and need for the Project is described in detail in Section 3.1, Project Background, of the Draft EIR. That section provides information regarding the County's existing detention facilities, relevant regulatory mandates, and studies analyzing future facility needs, including for housing of female inmates. The proposed jail planning is set in the context of the County's other programmatic and financial support of diversion from incarceration. The County has a concurrent focus on diversion from incarceration as it considers this Project. Therefore, the proposed Project is consistent with the Board of Supervisor's consideration of policy issues addressing alternative approaches to incarceration.

Regarding the comment on families not affording to travel a long distance, please refer to the response for Form Letter-2 for a discussion of increased travel distances and public transportation. In addition to contact and non-contact visits, the proposed MLWDC will provide video visiting options.

Cooper-2

Regarding the comment that the site is a hazardous waste site, the Project site was never operated as a site that accepted hazardous wastes for disposal. The response for Form Letter-3 provides additional discussion of this issue.

Please refer to responses for Form Letter-1 through Form Letter-6 for remaining comments.

This comment alleges that the proposed Project will be a health care issue for Los Angeles County in the future. The Draft Environmental Impact Report (EIR) for the proposed Project has been prepared in accordance with the California Environmental Quality Act (CEQA, *California Public Resources Code*, Sections 21000 et seq.) and the State CEQA Guidelines (14 *California Code of Regulations* [CCR]), and addresses the potential direct, indirect, and cumulative impacts of the Project on all environmental issue areas. As demonstrated throughout the Draft EIR, all potentially significant impacts have been reduced to levels that are less than significant through the identified mitigation measures, and no significant unavoidable environmental impacts would result from Project implementation.

Please refer to responses for Form Letter-1 through Form Letter-6 for remaining comments.

Ali Day

aliday720@gmail.com

LOS ANGELES, California 90029

Ali Day (January 6, 2016)

Day-1

The commenter opposes the creation of all new jails and alleges that they do not help rehabilitate people and, thus, should be closed. The commenter also wants community programs to prevent people from reoffending.

Although the Project site has been unoccupied since 2012, as discussed in Section 2.0, Environmental Setting, the Project site has generally been in operation and providing various detention/jail functions since 1945–1946, when the California Youth Authority began to run a vocational school for juvenile offenders at the site. The MLWDC Project proposes the adaptive reuse, renovation, and expansion of the majority of the buildings at the Mira Loma Detention Center (MLDC), which is an existing County asset. The redevelopment of the property would avoid the costs associated with constructing a new facility.

In relation to reducing recidivism, the proposed Project's primary goal is stated below and in Section 5.3.2 of the Draft EIR.

The Project's goal is to provide detention facilities for low- to medium-security level female inmates that meet modern correctional standards and that prioritize the on-site integration of gender-responsive female inmate education, treatment, and vocational training. This goal focuses on providing a secure detention facility with cost-effective therapeutic and rehabilitative programs to meet needs of eligible female inmates in order to reduce recidivism.

The Project will offer general education classes, computer training, general and vocational career technical education, college courses, career counseling, a learning resource center, a library and computer labs, culinary classes, and indoor/outdoor recreation for inmates. Other services include religious services, counseling services, and community transition services. Participation in classes, training, and other activities will be scheduled for each inmate according to individual evaluation, interests, needs, and availability.

Course selections will be determined based on a student's needs for specific services and students' interest levels. Courses will be offered during three blocks of time each weekday (morning, afternoon, and evening), providing opportunities for inmates to be enrolled in multiple courses. Programs are also divided into three categories based on program intensity: all-day, half-day, and evening programs. Examples of all-day programs (morning and afternoon) include culinary arts programs, cosmetology programs, and Prisoner Assisted Community Enhancement (PACE). Examples of half-day programs (morning or afternoon) include small engine repair; animal grooming/training; social media management and marketing/office assistant; automotive detailing, windshield, and headlight repair; and recycling. Examples of evening programs include computer coding; small business entrepreneurship; community college; Associate of Arts Degree; and General Education. Other programs include prenatal programs, volunteer programs, peer mentoring, physical education, dance, arts and crafts, a commissary program, and book clubs.

Please refer to responses for Form Letter-1 through Form Letter-6 for remaining comments.

Dear LA County Chief Exec Office and Board of Supervisors,

[Insert brief introductory message why you oppose jail] I think it is abominable that a women's jail would be built in such an area that would expose women to the potential of serious illness (Valley Fever) and the toxic materials in the soil and the pipes.

} Debs-1

Please consider my public comment on the Draft Environmental Impact Report (EIR) regarding the proposed new Mira Loma Jail released on November 9th.

A new LA county jail in Lancaster will be severely detrimental to the health and well being of LA County residents as well as destructive to the local environment. The EIR fails to adequately address the negative impacts on residents and the natural landscape caused by jail construction, nor does it adequately provide plans for community based alternatives to jail construction. With investment in diversion, bail/bond reform, and other jail population reduction measures, this proposed jail would be unnecessary.

The proposed jail site is located several hours from downtown Los Angeles, requiring additional travel for people imprisoned there, lawyers and service providers serving prisoners, and their loved ones who wish to visit. This increased travel will be a severe burden on families, providers, and prisoners that must be considered in the proposal as community connections through programs and family visits have been shown to greatly reduce recidivism. Additionally, increased travel will cause greater smog and air pollution, as well as place a strain on already inadequate public transportation and road systems used by prisoners, loved ones, jail staff, and construction workers.

} Please refer to responses to form letter

The suggested location is a known "hazardous waste site", with two underground storage tanks that have failed leak detection tests, meaning there could be contamination of soil and groundwater, and a high risk of exposure to contaminated soil and ground since 44% of the project site will be "outdoor pervious area". This puts prisoners at the jail, in custody of the County of Los Angeles, in extreme health risk. Plans for water usage and storage when proposing to introduce thousands of new prisoners as well as hundreds of employees are inadequate at mitigating the strain to the environment and current residents. Additionally the weather and environmental conditions in this area foster a high probability for "Valley Fever", a fungal disease that can result in death. If the jail proposal moves forward, during construction local residents would be at increased risk due to displacement of dry soils. After completion, prisoners at the jail would be at great risk for this disease, particularly those with already compromised immune systems.

This proposed jail is unsafe for LA County communities and our environment. For the above reasons, the proposed new Mira Loma Jail should be rejected and the Draft EIR must not be approved.

The commenter expresses opposition to the women's jail due to allegations relating to the potential for serious illness (Valley Fever) and toxic materials in the soil and pipes. These issues have been addressed in the EIR as reviewed in the referenced responses to your comments, which are marked as Form Letter 3 and Form Letter-5 in the Form Letter above.

Please refer to responses for Form Letter-1 through Form Letter-6 for remaining comments.

John DeVincent (February 5, 2016)

DeVincent-1

The commenter does not believe in the need for more jails and states that there should be more focus on rehabilitation and treatment programs. The purpose of and need for the Project is described in detail in Section 3.1, Project Background, of the Draft EIR. That section provides information regarding the County's existing detention facilities, relevant regulatory mandates, and studies analyzing future facility needs, including for housing of female inmates. The proposed jail planning is set in the context of the County's other programmatic and financial support of diversion from incarceration. The County has a concurrent focus on diversion from incarceration as it considers this Project. Therefore, the proposed Project is consistent with the Board of Supervisor's consideration of policy issues addressing alternative approaches to incarceration.

Please refer to responses for Form Letter-1 through Form Letter-6 for remaining comments.

Amy Doering (January 6, 2016)

Doering-1

The commenter's introductory concern is that the proposed Project would be located on what is alleged to be "toxic" land. She also states that all prisons must be "humane" and "close" for visiting purposes. Regarding the comment on the site being toxic land, Section 4.7, Hazards and Hazardous Materials, of the Draft EIR addresses this issue. Also, please refer to the response for Form Letter-3. Regarding the travel distance for inmate visitors, please refer to the response for Form Letter-2.

Please refer to responses for Form Letter-1 through Form Letter-6 for remaining comments.

Subject: Attn: Mira Loma Women's Jail Environmental Impact Report

Dear LA County Chief Exec Office and Board of Supervisors,

As a teacher and long time resident of L.A. county, I am completely opposed to the construction of a new jail facility in Lancaster. Beyond the urgent need to reallocate resources away from incarceration and towards reinvestment in programs that will facilitate the long term health of L.A. county residents, this project raises significant environmental concerns. Not only does the proposed facility likely pose health risks to future inmates but situating the facility so far outside of the city center is environmentally unsound.

Ehrlich-1

Please consider my public comment on the Draft Environmental Impact Report (EIR) regarding the proposed new Mira Loma Jail released on November 9th.

A new LA county jail in Lancaster will be severely detrimental to the health and well being of LA County residents as well as destructive to the local environment. The EIR fails to adequately address the negative impacts on residents and the natural landscape caused by jail construction, nor does it adequately provide plans for community based alternatives to jail construction. With investment in diversion, bail/bond reform, and other jail population reduction measures, this proposed jail would be unnecessary.

The proposed jail site is located several hours from downtown Los Angeles, requiring additional travel for people imprisoned there, lawyers and service providers serving prisoners, and their loved ones who wish to visit. Subject: Attn: Mira Loma Women's Jail Environmental Impact Report

Dear LA County Chief Exec Office and Board of Supervisors,

[Totally against this! Too much traffic, pollution and overcrowding in the city. Also feel it's an ugly structure that would ruining the city sky and landscape]

} Franco-1

Please consider my public comment on the Draft Environmental Impact Report (EIR) regarding the proposed new Mira Loma Jail released on November 9th.

A new LA county jail in Lancaster will be severely detrimental to the health and well being of LA County residents as well as destructive to the local environment. The EIR fails to adequately address the negative impacts on residents and the natural landscape caused by jail construction, nor does it adequately provide plans for community based alternatives to jail construction. With investment in diversion, bail/bond reform, and other jail population reduction measures, this proposed jail would be unnecessary.

The proposed jail site is located several hours from downtown Los Angeles, requiring additional travel for people imprisoned there, lawyers and service providers serving prisoners, and their loved ones who wish to visit. This increased travel will be a severe burden on families, providers, and prisoners that must be considered in the proposal as community connections through programs and family visits have been shown to greatly reduce recidivism. Additionally, increased travel will cause greater smog and air pollution, as well as place a strain on already inadequate public transportation and road systems used by prisoners, loved ones, jail staff, and construction workers.

} Please refer to responses to form letter

The suggested location is a known "hazardous waste site", with two underground storage tanks that have failed leak detection tests, meaning there could be contamination of soil and groundwater, and a high risk of exposure to contaminated soil and ground since 44% of the project site will be "outdoor pervious area". This puts prisoners at the jail, in custody of the County of Los Angeles, in extreme health risk. Plans for water usage and storage when proposing to introduce thousands of new prisoners as well as hundreds of employees are inadequate at mitigating the strain to the environment and current residents. Additionally the weather and environmental conditions in this area foster a high probability for "Valley Fever", a fungal disease that can result in death. If the jail proposal moves forward, during construction local residents would be at increased risk due to displacement of dry soils. After completion, prisoners at the jail would be at great risk for this disease, particularly those with already compromised immune systems.

This proposed jail is unsafe for LA County communities and our environment. For the above reasons, the proposed new Mira Loma Jail should be rejected and the Draft EIR must not be approved.

The commenter expresses opposition to the Project due to traffic, pollution, overcrowding, and an ugly structure. The Draft Environmental Impact Report (EIR) discusses potential impacts related to Project-generated traffic in Section 4.13, Transportation and Traffic; potential increases in air pollution in Section 4.2, Air Quality; and the potential of the project to induce growth in Lancaster and the Antelope Valley in Section 4.11, Population and Housing.

Regarding the commenter's concern about the ugly structure ruining the city sky and landscape, Section 4.1, Aesthetics, analyzes the changes in visual quality that would occur with the Project. As demonstrated throughout the Draft EIR, all potentially significant impacts have been reduced to levels that are less than significant through the identified mitigation measures and no significant unavoidable environmental impacts would result from Project implementation.

Please refer to responses for Form Letter-1 through Form Letter-6 for remaining comments.

Subject: Attn: Mira Loma Women's Jail Environmental Impact Report

Dear LA County Chief Exec Office and Board of Supervisors,

To Whom it May Concern:

I am a retired teacher, so my concern for young people, the opportunities they do and don't have, and what happens to them in their lives is built into my mind set. I feel we need fewer, not more prisons. People who commit crimes where no one else is a victim do not belong in long-term facilities. They should be at home and under the probation system. Better education can help prevent others from committing violent crimes. I'd like to see more money spent on educating high-risk youth. Of course, there is a need for high-security prisons for people who are a danger to others, but even those need to be humane, and the health risks in Lancaster sound like a prison there is a bad idea.

Fuss-1

Please consider my public comment on the Draft Environmental Impact Report (EIR) regarding the proposed new Mira Loma Jail released on November 9th.

A new jail in Lancaster County will be severely detrimental to the health and well being of LA County residents as well as destructive to the local environment. The EIR fails to adequately address the negative impacts on residents and the natural landscape caused by jail construction, nor does it adequately provide plans for community based alternatives to jail construction. With investment in diversion, bail/bond reform, and other jail population reduction measures, this proposed jail would be unnecessary.

The proposed jail site is located several hours from downtown Los Angeles, requiring additional travel for people imprisoned there, lawyers and service providers serving prisoners, and their loved ones who wish to visit. This increased travel will be a severe burden on families, providers, and prisoners that must be considered in the proposal as community connections through programs and family visits have been shown to greatly reduce recidivism. Additionally, increased travel will cause greater smog and air pollution, as well as place a strain on already inadequate public transportation and road systems used by prisoners, loved ones, jail staff, and construction workers.

Marylin Fuss (January 6, 2016)

Fuss-1

The commenter states that there is no need for more prisons and the use of money on probation and better education for high-risk youth can deter crimes. She states that high-security prisons need to be humane and that the health risks in Lancaster make the prison a bad idea. The proposed jail planning is set in the context of the County's other programmatic and financial support of diversion from incarceration. Purely social effects of a project are beyond the scope of CEQA analysis, which focuses on the proposal's effect on the physical environment. The County has a concurrent focus on diversion from incarceration as it considers this Project. Therefore, the proposed Project is consistent with the Board of Supervisor's consideration of policy issues addressing alternative approaches to incarceration.

Regarding the comment on the health risks in Lancaster, Section 4.7, Hazards and Hazardous Materials, of the Draft EIR addresses this issue and Section 4.2, Air Quality, discusses potential impacts related to Valley Fever. Also, please refer to the response for Form Letter-3 for a discussion of hazardous materials and the response for Form Letter-5 for a discussion of Valley Fever.

Please refer to responses for Form Letter-1 through Form Letter-6 for remaining comments.

Subject: Attn: Mira Loma Women's Jail Environmental Impact Report

Dear LA County Chief Exec Office and Board of Supervisors,

I see it every day: I'm a high school teacher in an area of poverty. People need help. Women are confused, trying their best, overwhelmed. Kids are being led to blame them. Communities need to have more institutions of compassionate resolution of problems, not jails. The rates of incarceration that we have in California should be a source of deep thought, deep revision of our direction. Noone's "profit," noone's "job," and certainly no budget deficit due to the construction of yet another jail should come between us and the design of better ways to help women and families. It recently came out that to keep one child in juvenile jail for a year cost well over \$200,000. There are far better ways to help that family and the community.

Garcia-1

Subject: Attn: Mira Loma Women's Jail Environmental Impact Report

Dear LA County Chief Exec Office and Board of Supervisors,

Expanding jails doesn't make me and my family feel safer. Building a new women's jail in Lancaster flies in the face of the growing consensus that we have to reduce incarceration and support community-based alternatives to locking people up. What's more, the environmental and health risks are too great - building on a hazardous materials site, exposing inmates to Valley Fever and making families travel long distances. Please don't worsen over-incarceration in California. Please choose more effective and environmentally-friendly alternatives.

Gutwillig-1

Please consider my public comment on the Draft Environmental Impact Report (EIR) regarding the proposed new Mira Loma Jail released on November 9th.

Stephen Gutwillig (January 6, 2016)

Gutwillig-1

The commenter expresses opposition to the Project and wants to reduce incarceration and support community-based alternatives. The proposed jail planning is set in the context of the County's other programmatic and financial support of diversion from incarceration. The County has a concurrent focus on diversion from incarceration as it considers this Project. Therefore, the proposed Project is consistent with the Board of Supervisor's consideration of policy issues addressing alternative approaches to incarceration.

Regarding the comment on environmental and health risks, the Draft EIR for the proposed Project has been prepared in accordance with the California Environmental Quality Act (CEQA, *California Public Resources Code*, Sections 21000 et seq.) and the State CEQA Guidelines (14 *California Code of Regulations* [CCR]), and addresses the potential direct, indirect, and cumulative environmental impacts of the Project on all environmental issue areas. As demonstrated throughout the Draft EIR, all potentially significant impacts have been reduced to levels that are less than significant through the identified mitigation measures, and no significant unavoidable environmental impacts would result from Project implementation.

Regarding the comment on the site being a hazardous materials site, please refer to the response for Form Letter-3. Regarding the commenter's concern for exposing inmates to Valley Fever, please refer to the response for Form Letter-5. Regarding the longer distance that visiting families have to travel, please refer to the response for Form Letter-2.

Please refer to responses for Form Letter-1 through Form Letter-6 for remaining comments.

Subject: Attn: Mira Loma Women's Jail Environmental Impact Report

Dear LA County Chief Exec Office and Board of Supervisors,

To whom it may concern,

I strongly oppose the proposed women's jail in Lancaster. As the son of a parent who acquired valley fever while incarcerated and still suffers from it, I cannot stand the thought of putting others at risk of acquiring this terrible disease. Please consider my public comment on the Draft Environmental Impact Report (EIR) regarding the proposed new Mira Loma Jail released on November 9th.

} Healy-1

A new LA county jail in Lancaster will be severely detrimental to the health and well being of LA County residents as well as destructive to the local environment. The EIR fails to adequately address the negative impacts on residents and the natural landscape caused by jail construction, nor does it adequately provide plans for community based alternatives to jail construction. With investment in diversion, bail/bond reform, and other jail population reduction measures, this proposed jail would be unnecessary.

The proposed jail site is located several hours from downtown Los Angeles, requiring additional travel for people imprisoned there, lawyers and service providers serving prisoners, and their loved ones who wish to visit. This increased travel will be a severe burden on families, providers, and prisoners that must be considered in the proposal as community connections through programs and family visits have been shown to greatly reduce recidivism. Additionally, increased travel will cause greater smog and air pollution, as well as place a strain on already inadequate public transportation and road systems used by prisoners, loved ones, jail staff, and construction workers.

} Please refer to responses to form letter

The suggested location is a known "hazardous waste site", with two underground storage tanks that have failed leak detection tests, meaning there could be contamination of soil and groundwater, and a high risk of exposure to contaminated soil and ground since 44% of the project site will be "outdoor pervious area". This puts prisoners at the jail, in custody of the County of Los Angeles, in extreme health risk. Plans for water usage and storage when proposing to introduce thousands of new prisoners as well as hundreds of employees are inadequate at mitigating the strain to the environment and current residents. Additionally the weather and environmental conditions in this area foster a high probability for "Valley Fever", a fungal disease that can result in death. If the jail proposal moves forward, during construction local residents would be at increased risk due to displacement of dry soils. After completion, prisoners at the jail would be at great risk for this disease, particularly those with already compromised immune systems.

This proposed jail is unsafe for LA County communities and our environment. For the above reasons, the proposed new Mira Loma Jail should be rejected and the Draft EIR must not be approved.

Daniel Healy (January 8, 2016)

Healy-1

The commenter's introductory comment identifies him as strongly opposed to the proposed project due to dangers of Valley Fever. He also indicates that he has a parent suffering from the effects of Valley Fever from a former incarceration at an unspecified location and time period.

Thank you for your comment generally sharing your family's experience. The Valley Fever issue has been disclosed and addressed in the Draft EIR and responses to comments including but not limited to the incorporated response for Form Letter-5 on this issue. These responses reflect both awareness and attention to the potential for this disease and its prevention as well as ongoing collaboration between the County's public health officers and the Sheriff on these issues with respect to the proposed project.

Please refer to responses for Form Letter-1 through Form Letter-6 for remaining comments.

Subject: Attn: Mira Loma Women's Jail Environmental Impact Report

Dear LA County Chief Exec Office and Board of Supervisors,

Hello, My name is Eunisses Hernadnez with the Drug Policy Alliance, and we oppose the building of the New LA County Jail at Mira Loma because there are better and effective alternatives to incarceration that are not being used, such as Law Enforcement Assisted Diversion. LA County has not used split sentencing to its full potential, if used more it can significantly reduce the jail populations. Prop 47 is keeping many folks out of jail and this year there will be substantial funding put into creating and broadening services for those involved with the criminal justice system. By building a new jail you are creating more opportunities for incarceration than successful reentry and the reduction of recidivism.

E. Hernandez-1

Please consider my public comment on the Draft Environmental Impact Report (EIR) regarding the proposed new Mira Loma Jail released on November 9th.

A new jail in Lancaster County will be severely detrimental to the health and well being of LA County residents as well as destructive to the local environment. The EIR fails to adequately address the negative impacts on residents and the natural landscape caused by jail construction, nor does it adequately provide plans for community based alternatives to jail construction. With investment in diversion, bail/bond reform, and other jail population reduction measures, this proposed jail would be unnecessary.

The proposed jail site is located several hours from downtown Los Angeles, requiring additional travel for people imprisoned there, lawyers and service providers serving prisoners, and their loved ones who wish to visit. This increased travel will be a severe burden on families, providers, and prisoners that must be considered in the proposal as community connections through programs and family visits have been shown to greatly reduce recidivism. Additionally, increased travel will cause greater smog and air pollution, as well as place a strain on already inadequate public transportation and road systems used by prisoners, loved ones, jail staff, and construction workers.

Please refer to responses to form letter

Eunisses Hernandez (January 6, 2016)

E. Hernandez-1

The commenter is with the Drug Policy Alliance and opposes the Project and alleges there are better alternatives to incarceration that are not being used and that can reduce jail populations.

The purpose of and need for the Project is described in detail in Section 3.1, Project Background, of the Draft EIR. That section provides information regarding the County's existing detention facilities, relevant regulatory mandates, and studies analyzing future facility needs, including for housing of female inmates. The proposed jail planning is set in the context of the County's other programmatic and financial support of diversion from incarceration. The County has a concurrent focus on diversion from incarceration as it considers this Project. Therefore, the proposed Project is consistent with the Board of Supervisor's consideration of policy issues addressing alternative approaches to incarceration, such as law enforcement assisted diversion and split sentencing.

Please refer to responses for Form Letter-1 through Form Letter-6 for remaining comments.

Subject: Attn: Mira Loma Women’s Jail Environmental Impact Report

Dear LA County Chief Exec Office and Board of Supervisors,

I am opposing this jail plan for the following environmental reasons:

- The site where the jail will be is a “hazardous materials site.” Building it will put those inside the jail in significant danger. } M. Hernandez-1
- People in the jail will be highly susceptible to Valley Fever. Since 2005, thousands of California prisoners contracted the disease, and over 50 have died as a result. Yet, Valley Fever is basically ignored in this report. } M. Hernandez-2
- A new jail in Lancaster will mean more travel, creating more traffic and air pollution. } M. Hernandez-3
- Family visits are crucial for prisoners to maintain strong connections and reduce recidivism. The longer distance makes it harder for family members to visit their loved ones who are locked up. } M. Hernandez-4
- Two underground storage tanks at the site have failed leak detection tests, meaning there could be contamination of soil and groundwater. } M. Hernandez-5
- For people at the jail, there is a high risk of exposure to contaminated soil and ground since 44% of the project site will be “outdoor pervious area.” } M. Hernandez-6
- The Environmental Impact Report must assess alternatives to building the jail. However, the report does not look at alternatives to imprisonment that would make this jail completely unnecessary. } M. Hernandez-7

Please consider my public comment on the Draft Environmental Impact Report (EIR) regarding the proposed new Mira Loma Jail released on November 9th.

A new LA county jail in Lancaster will be severely detrimental to the health and well being of LA County residents as well as destructive to the local environment. The EIR fails to adequately address the negative impacts on residents and the natural landscape caused by jail construction, nor does it adequately provide plans for community based alternatives to jail construction. With investment in diversion, bail/bond reform, and other jail population reduction measures, this proposed jail would be unnecessary.

The proposed jail site is located several hours from downtown Los Angeles, requiring additional travel for people imprisoned there, lawyers and service providers serving prisoners, and their loved ones who wish to visit. This increased travel will be a severe burden on families, providers, and prisoners that must be considered in the proposal as community connections through programs and family visits have been

marcelah@theyc.org
Los Angeles, California
Immigrant Youth Coalition

Marcela Hernandez (January 11, 2016)

M. Hernandez-1

The commenter provides reasons for opposing the jail. Regarding the commenter's concern that the site is a hazardous materials site, Section 4.7, Hazards and Hazardous Materials, of the Draft Environmental Impact Report (EIR) addresses this issue. Also, please refer to the response for Form Letter-3.

M. Hernandez-2

Regarding the comment on Valley Fever, Section 4.2, Air Quality, of the Draft EIR addresses this issue. Also, please refer to the response for Form Letter-5.

M. Hernandez-3

Regarding the concern for increased traffic and air pollution, Section 4.13, Transportation and Traffic, estimates the trip generation of the Project and impacts on the roadway and highway system. Section 4.2, Air Quality, analyzes construction and operational pollutant emissions from the Project. Also, please refer to the response for Form Letter-2.

M. Hernandez-4

The commenter's concern regarding the increase travel distance is addressed in the response for Form Letter-2.

M. Hernandez-5

Regarding the underground storage tanks (USTs), as stated on page 4.7-19 of the Draft EIR, the existing fueling station, which has the USTs, is located outside the Project site boundary, but may be used by the Project. This fueling station has two USTs that previously failed leak detection tests. As shown in the California Environmental Reporting System (CERS) database and the Monitoring System Certification by AW Associates in Appendix E to this Final EIR, the tank permits were updated in 2015 and have passed subsequent leak detection tests and are now in compliance. Soil testing also indicated there is no soil contamination near the USTs (Converse 2016b). MM HAZ-3 requires the testing and repair, as necessary, of the USTs prior to the use of the existing fueling station by the Project.

M. Hernandez-6

Regarding the comment related to the contamination of the soil, please refer to the response for Form Letter-3.

M. Hernandez-7

This comment states the EIR must assess alternatives to the Project, including alternatives to building a jail. Section 5.0, Project Alternatives, of the Draft EIR in fact addresses alternatives in accordance with the California Environmental Quality Act (CEQA, *California Public Resources Code*, Section 21000 et seq.) and the State CEQA Guidelines (14 *California Code of Regulations* [CCR]). The proposed jail planning is also set in the context of the County's other programmatic and financial support of diversion from incarceration. The County has a concurrent focus on diversion from incarceration as it considers this Project. Therefore, the proposed Project is

consistent with the Board of Supervisor's consideration of policy issues addressing alternative approaches to incarceration.

Please refer to responses for Form Letter-1 through Form Letter-6 for remaining comments.

Subject: Attn: Mira Loma Women's Jail Environmental Impact Report

Dear LA County Chief Exec Office and Board of Supervisors,

I am a college student living in Santa Clarita, CA. For several years, my grandmother volunteered with an organization that attempts to connect children with their incarcerated parents and family members. Prisons and jails, especially those strategically located far outside of urban areas, such as the proposed Women's Jail in Lancaster, greatly harm the lives of these children by distancing them from their parents both physically and emotionally. This issue is deeply important to me for this reason, in addition to the following given below.

Herzog-1

Please consider my public comment on the Draft Environmental Impact Report (EIR) regarding the proposed new Mira Loma Jail released on November 9th.

A new jail in Lancaster County will be severely detrimental to the health and well being of LA County residents as well as destructive to the local environment. The EIR fails to adequately address the negative impacts on residents and the natural landscape caused by jail construction, nor does it adequately provide plans for community based alternatives to jail construction. Subject: Attn: Mira Loma Women’s Jail Environmental Impact Report

Dear LA County Chief Exec Office and Board of Supervisors,

I strongly oppose construction of the new Mira Loma Detention Center Women's Facility in Lancaster, CA, as outlined in the Draft Environmental Impact Report (EIR) released on November 9th.

} Isis-Brown-1

Please consider my public comment on this EIR, as follows:

It is apparent that a new jail in Lancaster will be severely detrimental to the health and well being of L.A. County residents, as well as destructive to the local environment. The EIR fails to adequately address the negative impacts on residents and the natural landscape caused by jail construction, nor does it adequately provide plans for community-based alternatives to jail construction. With investment in diversion, bail/bond reform, and other jail population reduction measures, this proposed jail would be unnecessary.

The proposed jail site is located several hours from downtown Los Angeles, requiring additional travel for people imprisoned there, lawyers and service providers serving prisoners, and their loved ones who wish to visit. This increased travel will be a severe burden (in time, money, and opportunity costs, as well as emotional and physical strain) on families, providers, and prisoners. The burdens on these groups must be considered in the jail proposal. One fundamental reason why these groups' burdens must be considered is that community connections through programs and family visits have been shown to greatly reduce recidivism. Additionally, increased travel by such people will cause unnecessary increases in air pollution, as well as place a strain on already inadequate public transportation and crumbling road systems used by prisoners, loved ones, jail staff, and construction workers.

The proposed jail location is a known "hazardous waste site", with two underground storage tanks that have failed leak detection tests. This means that contaminated soil and groundwater may exist at the site. In turn, this means that there may also be a high risk of prisoners being exposed to contaminated soil and ground, since 44% of the project site will be "outdoor pervious area". This puts prisoners at the jail, in custody of the County of Los Angeles, in extreme health risk. The plans for water usage and storage, given that thousands of new prisoners and hundreds of employees will be introduced, and a historic drought still continues, are inadequate at mitigating the strain to the environment and current residents. Additionally, the weather and environmental conditions in this area foster a high probability of "Valley Fever", a fungal disease that can result in death. Since 2005, thousands of California prisoners have contracted the disease, and over 50 have died as a result

. However, Valley Fever is essentially ignored in the EIR. If the jail proposal moves forward, during construction local residents would be at increased risk of Valley Fever due to displacement of dry soils. After completion, prisoners at the jail would be at great risk for this disease, particularly those with already compromised immune systems. Providing adequate healthcare to prisoners sickened with Valley Fever would also increase the cost of the prison.

} Please refer to responses to form letter

This proposed jail is unsafe for L.A. County communities and our environment. For the above reasons, the proposed new Mira Loma Jail should be rejected and the Draft EIR must not be approved.

Subject: Attn: Mira Loma Women's Jail Environmental Impact Report

Dear LA County Chief Exec Office and Board of Supervisors,

Solve the problems and do not lock up people.

Please consider my public comment on the Draft Environmental Impact Report (EIR) regarding the proposed new Mira Loma Jail released on November 9th.

A new LA county jail in Lancaster will be severely detrimental to the health and well being of LA County residents as well as destructive to the local environment. The EIR fails to adequately address the negative impacts on residents and the natural landscape caused by jail construction, nor does it adequately provide plans for community based alternatives to jail construction. With investment in diversion, bail/bond reform, and other jail population reduction measures, this proposed jail would be unnecessary.

The proposed jail site is located several hours from downtown Los Angeles, requiring additional travel for people imprisoned there, lawyers and service providers serving prisoners, and their loved ones who wish to visit. This increased travel will be a severe burden on families, providers, and prisoners that must be considered in the proposal as community connections through programs and family visits have been shown to greatly reduce recidivism. Additionally, increased travel will cause greater smog and air pollution, as well as place a strain on already inadequate public transportation and road systems used by prisoners, loved ones, jail staff, and construction workers.

The suggested location is a known "hazardous waste site", with two underground storage tanks that have failed leak detection tests, meaning there could be contamination of soil and groundwater, and a high risk of exposure to contaminated soil and ground since 44% of the project site will be "outdoor pervious area". This puts prisoners at the jail, in custody of the County of Los Angeles, in extreme health risk. Plans for water usage and storage when proposing to introduce thousands of new prisoners as well as hundreds of employees are inadequate at mitigating the strain to the environment and current residents. Additionally the weather and environmental conditions in this area foster a high probability for "Valley Fever", a fungal disease that can result in death. If the jail proposal moves forward, during construction local residents would be at increased risk due to displacement of dry soils. After completion, prisoners at the jail would be at great risk for this disease, particularly those with already compromised immune systems.

This proposed jail is unsafe for LA County communities and our environment. For the above reasons, the proposed new Mira Loma Jail should be rejected and the Draft EIR must not be approved.

The commenter provides support services for inmates at the Placer County jail and expresses concern about the negative impacts of the Project because she is familiar with inmate families' dependence on public transportation. Please refer to the response for Form Letter-2 for a discussion of increased travel distances and public transportation. In addition to contact and non-contact visits, the proposed MLWDC will provide video visiting options, which would avoid the need for travel.

Please refer to responses for Form Letter-1 through Form Letter-6 for remaining comments.

Subject: Attn: Mira Loma Women's Jail Environmental Impact Report

Dear LA County Chief Exec Office and Board of Supervisors,

During the last election, I moderated a candidates' forum for the office of L.A. County Sheriff. In my research preparing for the debate, I learned many things about the state of our jail system that I wish were not true. It is my firm belief, that the lives of people who for whatever reason, find themselves at the mercy of our justice system, matter for less than the money that can be made from their detainment and incarceration. This system has more than shown itself to be a detriment to our collective community in the form of broken families and the resulting increase in crime, increased recidivism, decrease in health and welfare of the incarcerated and their families, and the decreased value of the neighborhoods from which these women come. Despite clear evidence of this, it seems that the wealth of the few that profit from this ugly system is simply more important. We must, as a community, turn the tide on this wave of profit over lives. We must consider the lives of the women, in this case, that will be damaged or even ended, instead of being rehabilitated, by the addition of this new jail.

Keymah-1

The comment relates to the experience and belief of the commenter that inmates matter less than the money made from their incarceration; that jails result in broken families, increased crime, increased recidivism, decreased health and welfare; and decreased value of the neighborhoods; and that the profit from the jail system is more important. She asks that we consider the lives of women that would be damaged by the addition of the new jail.

This comment relates to the jail system in general and does not address the proposed Project, the environmental analysis included in the Draft Environmental Impact Report (EIR), or the environmental impacts of the Project. The Los Angeles County owns the proposed Project site and the Sheriff's Department, which would operate the proposed MLWDC, would not make a profit on the facility.

Nancy White Kuykendall (February 25, 2016)

Kuykendall-1

The commenter alleges that jails are warehouses for the economically disadvantaged, with no vocational rehabilitation or decent books. She states that jails make humans embittered and we should stop building these warehouses. The proposed jail planning is set in the context of the County's other programmatic and financial support of diversion from incarceration. Purely social effects of a project are beyond the scope of CEQA analysis, which focuses on the proposal's effect on the physical environment. The County has a concurrent focus on diversion from incarceration as it considers this Project. Therefore, the proposed Project is consistent with the Board of Supervisor's consideration of policy issues addressing alternative approaches to incarceration.

Please refer to responses for Form Letter-1 through Form Letter-6 for remaining comments.

Subject: Attn: Mira Loma Women's Jail Environmental Impact Report

Dear LA County Chief Exec Office and Board of Supervisors,

I am a Los Angeles resident and I am opposed to the construction of the new jail for the following reasons.

} Larkey-1

Please consider my public comment on the Draft Environmental Impact Report (EIR) regarding the proposed new Mira Loma Jail released on November 9th.

A new LA county jail in Lancaster will be severely detrimental to the health and well being of LA County residents as well as destructive to the local environment. The EIR fails to adequately address the negative impacts on residents and the natural landscape caused by jail construction, nor does it adequately provide plans for community based alternatives to jail construction. With investment in diversion, bail/bond reform, and other jail population reduction measures, this proposed jail would be unnecessary.

The proposed jail site is located several hours from downtown Los Angeles, requiring additional travel for people imprisoned there, lawyers and service providers serving prisoners, and their loved ones who wish to visit. This increased travel will be a severe burden on families, providers, and prisoners that must be considered in the proposal as community connections through programs and family visits have been shown to greatly reduce recidivism. Additionally, increased travel will cause greater smog and air pollution, as well as place a strain on already inadequate public transportation and road systems used by prisoners, loved ones, jail staff, and construction workers.

} Please refer to responses to form letter

The suggested location is a known "hazardous waste site", with two underground storage tanks that have failed leak detection tests, meaning there could be contamination of soil and groundwater, and a high risk of exposure to contaminated soil and ground since 44% of the project site will be "outdoor pervious area". This puts prisoners at the jail, in custody of the County of Los Angeles, in extreme health risk. Plans for water usage and storage when proposing to introduce thousands of new prisoners as well as hundreds of employees are inadequate at mitigating the strain to the environment and current residents. Additionally the weather and environmental conditions in this area foster a high probability for "Valley Fever", a fungal disease that can result in death. If the jail proposal moves forward, during construction local residents would be at increased risk due to displacement of dry soils. After completion, prisoners at the jail would be at great risk for this disease, particularly those with already compromised immune systems.

This proposed jail is unsafe for LA County communities and our environment. For the above reasons, the proposed new Mira Loma Jail should be rejected and the Draft EIR must not be approved.

Subject: Attn: Mira Loma Women’s Jail Environmental Impact Report

Dear LA County Chief Exec Office and Board of Supervisors,

Taking women out of their communities is even more harmful than taking men out, so it's important that this be done only if no alternative solutions to whatever hazard to communities some of them may pose.

Even under current laws and arrest policies (which have their own problems!), women are highly likely to be adequately dealt with from the public safety point of view by non-incarceration programs, services, and if necessary, restrictions.

Such alternatives have been very poorly developed and funded by L.A. County and California, though that situation is slowly changing. Pouring more scarce state and county funds into construction and operation of the distant jail will, from the financial and political point of view, make the expansion of those creative improvements in public safety and social policy all the more difficult.

Building the jail before major reductions in jailing and major reforms basing sentencing on sophisticated assessment systems and use of non-incarceration alternatives is an unnecessary burden on physical environmental factors and a damaging step from the social, budgetary, and public safety points of view.

Maizlish-1

Please consider my public comment on the Draft Environmental Impact Report (EIR) regarding the proposed new Mira Loma Jail released on November 9th.

A new jail in Lancaster County will be severely detrimental to the health and well being of LA County residents as well as destructive to the local environment. Subject: Attn: Mira Loma Women’s Jail Environmental Impact Report

Dear LA County Chief Exec Office and Board of Supervisors,

Dear Sir or Madam,

I have been advocating for an alternative approach to our justice system, one which doesn't see incarceration as the only solution. While I have many other thoughts regarding our criminal justice system as a whole, I believe there is a better way forward, and it shouldn't include spending hundreds of millions of taxpayer money to incarcerate people. I challenge your office to think of more creative ways to use these moneys, there are ALWAYS alternatives, its simply a matter of seeking a change.

} Martinez-1

In addition, please consider my public comment on the Draft Environmental Impact Report (EIR) regarding the proposed new Mira Loma Jail released on November 9th.

A new LA county jail in Lancaster will be severely detrimental to the health and well being of LA County residents as well as destructive to the local environment. The EIR fails to adequately address the negative impacts on residents and the natural landscape caused by jail construction, nor does it adequately provide plans for community based alternatives to jail construction. Dear LA County Chief Exec Office and Board of Supervisors,

At this point in our history concerning prisons - we know it is not working to deter crime in our country. The funds to build this new jail should be used for programs to help reduce the amount of people going into jail. Also, the land the jail is to be built on has serious issues with contamination of the soil and underground water - this will lead to more money being spent when there are health problems with the prisoners and the surrounding community.

} Messana-1

Please consider my public comment on the Draft Environmental Impact Report (EIR) regarding the proposed new Mira Loma Jail released on November 9th.

A new jail in Lancaster County will be severely detrimental to the health and well being of LA County residents as well as destructive to the local environment. The EIR fails to adequately address the negative impacts on residents and the natural landscape caused by jail construction, nor does it adequately provide plans for community based alternatives to jail construction. Messana-1

The commenter alleges that prisons are not deterring crime and funds should be used for programs to reduce jail populations. The purpose of and need for the Project is described in detail in Section 3.1, Project Background, of the Draft EIR. That section provides information regarding the County's existing detention facilities, relevant regulatory mandates, and studies analyzing future facility needs, including for housing of female inmates. The proposed jail planning is set in the context of the County's other programmatic and financial support of diversion from incarceration. The County has a concurrent focus on diversion from incarceration as it considers this Project. Therefore, the proposed Project is consistent with the Board of Supervisor's consideration of policy issues addressing alternative approaches to incarceration.

Regarding the comment related to the contamination of the soil and groundwater, please refer to the response for Form Letter-3 for a discussion of this issue.

Please refer to responses for Form Letter-1 through Form Letter-6 for remaining comments.

Subject: Attn: Mira Loma Women's Jail Environmental Impact Report

Dear LA County Chief Exec Office and Board of Supervisors,

Hello,

The proposal for a new LA jail is short-sighted and I oppose it on all accounts.

Please consider my public comment on the Draft Environmental Impact Report (EIR) regarding the proposed new Mira Loma Jail released on November 9th.

A new LA county jail in Lancaster will be severely detrimental to the health and well being of LA County residents as well as destructive to the local environment. The EIR fails to adequately address the negative impacts on residents and the natural landscape caused by jail construction, nor does it adequately provide plans for community based alternatives to jail construction. With investment in diversion, bail/bond reform, and other jail population reduction measures, this proposed jail would be unnecessary.

The proposed jail site is located several hours from downtown Los Angeles, requiring additional travel for people imprisoned there, lawyers and service providers serving prisoners, and their loved ones who wish to visit. This increased travel will be a severe burden on families, providers, and prisoners that must be considered in the proposal as community connections through programs and family visits have been shown to greatly reduce recidivism. Additionally, increased travel will cause greater smog and air pollution, as well as place a strain on already inadequate public transportation and road systems used by prisoners, loved ones, jail staff, and construction workers.

The suggested location is a known "hazardous waste site", with two underground storage tanks that have failed leak detection tests, meaning there could be contamination of soil and groundwater, and a high risk of exposure to contaminated soil and ground since 44% of the project site will be "outdoor pervious area". This puts prisoners at the jail, in custody of the County of Los Angeles, in extreme health risk. Plans for water usage and storage when proposing to introduce thousands of new prisoners as well as hundreds of employees are inadequate at mitigating the strain to the environment and current residents. Additionally the weather and environmental conditions in this area foster a high probability for "Valley Fever", a fungal disease that can result in death. If the jail proposal moves forward, during construction local residents would be at increased risk due to displacement of dry soils. After completion, prisoners at the jail would be at great risk for this disease, particularly those with already compromised immune systems.

This proposed jail is unsafe for LA County communities and our environment. For the above reasons, the proposed new Mira Loma Jail should be rejected and the Draft EIR must not be approved.

The commenter opposes the proposal for a new jail and considers it short-sighted. The proposed jail planning is set in the context of the County's other programmatic and financial support of diversion from incarceration. Purely social effects of a project are beyond the scope of CEQA analysis, which focuses on the proposal's effect on the physical environment. The County has a concurrent focus on diversion from incarceration as it considers this Project. Therefore, the proposed Project is consistent with the Board of Supervisor's consideration of policy issues addressing alternative approaches to incarceration.

Please refer to responses for Form Letter-1 through Form Letter-6 for remaining comments.

Dear LA County Chief Exec Office and Board of Supervisors,

Please consider investing the 2 billion dollars into community solutions. As a non-profit worker that works on government funded projects (particularly to enhance education in communities most harshly affected by the lack of adequate funding for education, parks and recreation center programming, and economic infrastructure, among other things), I know that the creation of jails is not a viable solution. It will not help to empower communities, it will only destroy communities. In considering this plan, please be mindful that LA County will not only spend 2 billion dollars on this one jail - this vote on spending is a will be a part of a harmful legacy of cyclical spending on jails in order to avoid real solutions to put an end to real issues facing our community of LA County residents. This harmful legacy will not stop until legislators and elected officials decide to make it stop by listening to the constituents they represent.

The author identifies himself as a non-profit community worker in education who advocates spending \$2 Billion for community solutions and not for a jail. The estimated budget for the renovation of the proposed project is not \$2 billion but is approximately \$123.4 million, and the costs are broken down into Assembly Bill (AB) 900 Grant Contribution, net County cost, and other funding sources. These preliminary costs include the costs associated with the mitigation measures included in the Final EIR. An updated total Project cost estimate will be prepared for the Board of Supervisors for their consideration at the time the Final EIR and the proposed Project recommendations are presented to them for consideration. The 2015 document can be viewed at the following website: <http://file.lacounty.gov/bos/supdocs/94070.pdf>.

This comment relates to the merits of the proposed Project and not the environmental analysis included in the Draft EIR or the environmental impacts of the Project.

Subject: Attn: Mira Loma Women's Jail Environmental Impact Report

Dear LA County Chief Exec Office and Board of Supervisors,

My name is Anayeli Rivas and I oppose the construction of this women's jail because it is an attack on the health of the residents in Lancaster. It is also a band-aid solution to women's violence and it perpetuates the school-to-prison pipeline.

} Rivas-1

Please consider my public comment on the Draft Environmental Impact Report (EIR) regarding the proposed new Mira Loma Jail released on November 9th.

A new jail in Lancaster County will be severely detrimental to the health and well-being of LA County residents as well as destructive to the local environment. The EIR fails to adequately address the negative impacts on residents and the natural landscape caused by jail construction, nor does it adequately provide plans for community-based alternatives to jail construction. With investment in diversion, bail/bond reform, and other jail population reduction measures, this proposed jail would be unnecessary.

The proposed jail site is located several hours from downtown Los Angeles, requiring additional travel for people imprisoned there, lawyers and service providers serving prisoners, and their loved ones who wish to visit. This increased travel will be a severe burden on families, providers, and prisoners that must be considered in the proposal as community connections through programs and family visits have been shown to greatly reduce recidivism. Additionally, increased travel will cause greater smog and air pollution, as well as place a strain on already inadequate public transportation and road systems used by prisoners, loved ones, jail staff, and construction workers.

} Please refer to responses to form letter

The suggested location is a known "hazardous waste site", with two underground storage tanks that have failed leak detection tests, meaning there could be contamination of soil and groundwater, and a high risk of exposure to contaminated soil and ground since 44% of the project site will be "outdoor pervious area". This puts prisoners at the jail, in custody of the County of Los Angeles, in extreme health risk. Plans for water usage and storage when proposing to introduce thousands of new prisoners, as well as hundreds of employees, are inadequate at mitigating the strain to the environment and current residents. Additionally, the weather and environmental conditions in this area foster a high probability for "Valley Fever", a fungal disease that can result in death. If the jail proposal moves forward, during construction local residents would be at increased risk due to displacement of dry soils. After completion, prisoners at the jail would be at great risk for this disease, particularly those with already compromised immune systems.

This proposed jail is unsafe for LA County communities and our environment. For the above reasons, the proposed new Mira Loma Jail should be rejected and the Draft EIR must not be approved.

This comment introduction alleges that the proposed Project is an attack on the health of the residents of Lancaster, as well as indicating opposition to a "school to prison pipeline". The Draft Environmental Impact Report (EIR) for the proposed Project has been prepared in accordance with the California Environmental Quality Act (CEQA, *California Public Resources Code*, Sections 21000 et seq.) and the State CEQA Guidelines (14 *California Code of Regulations* [CCR]), and addresses the potential direct, indirect, and cumulative impacts of the Project on all environmental issue areas.

Comment (please personalize): Dear LA County Chief Exec Office and Board of Supervisors,

~ Insert brief introductory message why you oppose jail ~

The origin of this increase in jail capacity goes back several years to its undemocratic State bond funding mechanism. Assembly Bill 900 was designated by the then Governor Arnold Schwarzenegger as "Emergency Legislation." This meant that there would be no vetting or discussion of the bill. Legislators were not even given an opportunity to read the legislation; they were only able to note on the measure. There was no concurrent discussion about modernizing sentencing laws, or parole regulations. While AB900 allowed for some rehabilitation programs, these were not possible in State Prisons, because recreation and education space was used to mitigate overcrowding by converting these spaces to dormitories. The environmental considerations above are reason enough not to invest in new jails, rather they are trumped by the fact that these monies could be invested in diversion and rehabilitation programs. This is an

Rosenwald-1

opportunity to allow for forward-thinking, progressive assistance to our broken, dysfunctional correctional system in California. My name is Peter Joseph Rosenwald.

I'm a member of: Temple Israel of Long Beach; I received: The Leon Shirley Award for Grassroots Community Activism from FACTS (Families to Amend California's Three Strikes) in 2012; In December, 2015 I received a "Peacemaker of the Year Award: Lifetime of Service Award for Peace and Justice" from The Long Beach Area Peace Network; From my professional career as a Community Librarian working for the County of Los Angeles Public Library, I was given "The Golden Apple" award by the Northwest San Gabriel Region of the California School Administrator's Association.

Peter Rosenwald (January 12, 2016)

Rosenwald-1

The comment discusses Assembly Bill (AB) 900 and indicates it is a reason not to invest in jails and to use monies for diversion and rehabilitation programs. The proposed jail planning is set in the context of the County's other programmatic and financial support of diversion from incarceration. The County has a concurrent focus on diversion from incarceration as it considers this Project. Therefore, the proposed Project is consistent with the Board of Supervisor's consideration of policy issues addressing alternative approaches to incarceration.

Rosenwald-2

This comment relates to the commenter's qualifications and does not address the proposed Project, the environmental analysis included in the Draft EIR, or the environmental impacts of the Project.

Subject: Attn: Mira Loma Women's Jail Environmental Impact Report

Dear LA County Chief Exec Office and Board of Supervisors,

I have a particular interest in helping to make people's experience in and around jails less de-humanizing. One reason is that in the past I worked on projects with juvenile offenders and saw how difficult their lives were. It makes no sense to make the lives of both people who are in jail and of people who know and care about those who are in jail. It is both counter-productive as well as inhumane.

Schick-1

Please consider my public comment on the Draft Environmental Impact Report (EIR) regarding the proposed new Mira Loma Jail released on November 9th.

A new LA county jail in Lancaster will be severely detrimental to the health and well being of LA County residents as well as destructive to the local environment. The EIR fails to adequately address the negative impacts on residents and the natural landscape caused by jail construction, nor does it adequately provide plans for community based alternatives to jail construction. The commenter does not want money spent on building a new jail and prefers incarceration alternatives.

The purpose of and need for the Project is described in detail in Section 3.1, Project Background, of the Draft EIR. That section provides information regarding the County's existing detention facilities, relevant regulatory mandates, and studies analyzing future facility needs, including for housing of female inmates. The proposed jail planning is set in the context of the County's other programmatic and financial support of diversion from incarceration. The County has a concurrent focus on diversion from incarceration as it considers this Project. Therefore, the proposed Project is consistent with the Board of Supervisor's consideration of policy issues addressing alternative approaches to incarceration.

A new jail in Lancaster County will be severely detrimental to the health and well being of LA County residents as well as destructive to the local environment. The EIR fails to adequately address the negative impacts on residents and the natural landscape caused by jail construction, nor does it adequately provide plans for community based alternatives to jail construction. With investment in diversion, bail/bond reform, and other jail population reduction measures, this proposed jail would be unnecessary.

The proposed jail site is located several hours from downtown Los Angeles, requiring additional travel for people imprisoned there, lawyers and service providers serving prisoners, and their loved ones who wish to visit. This increased travel will be a severe burden on families, providers, and prisoners that must be considered in the proposal as community connections through programs and family visits have been shown to greatly reduce recidivism. Additionally, increased travel will cause greater smog and air pollution, as well as place a strain on already inadequate public transportation and road systems used by prisoners, loved ones, jail staff, and construction workers.

} Please refer to responses to form letter

The suggested location is a known "hazardous waste site", with two underground storage tanks that have failed leak detection tests, meaning there could be contamination of soil and groundwater, and a high risk of exposure to contaminated soil and ground since 44% of the project site will be "outdoor pervious area". This puts prisoners at the jail, in custody of the County of Los Angeles, in extreme health risk. Plans for water usage and storage when proposing to introduce thousands of new prisoners as well as hundreds of employees are inadequate at mitigating the strain to the environment and current residents. Additionally the weather and environmental conditions in this area foster a high probability for "Valley Fever", a fungal disease that can result in death. If the jail proposal moves forward, during construction local residents would be at increased risk due to displacement of dry soils. After completion, prisoners at the jail would be at great risk for this disease, particularly those with already compromised immune systems.

This proposed jail is unsafe for LA County communities and our environment. For the above reasons, the proposed new Mira Loma Jail should be rejected and the Draft EIR must not be approved.

--

Michael Terry (January 6, 2018)

Terry-1

The commenter states that we need more schools and fewer jails. The proposed jail planning is set in the context of the County's other programmatic and financial support of diversion from incarceration. Purely social effects of a project are beyond the scope of CEQA analysis, which focuses on the proposal's effect on the physical environment. The County has a concurrent focus on diversion from incarceration as it considers this Project. Therefore, the proposed Project is consistent with the Board of Supervisor's consideration of policy issues addressing alternative approaches to incarceration.

Please refer to responses for Form Letter-1 through Form Letter-6 for remaining comments.

Subject: Attn: Mira Loma Women's Jail Environmental Impact Report

Dear LA County Chief Exec Office and Board of Supervisors,

The following are my concerns for the construction of this jail on environmental grounds:

How does this new women's jail benefit the community? What positive impacts does this project have on youth? What positives impacts does this construction have on community health?

} Toorawa-1

Valley Fever

If there is an epidemic of valley fever, what kind of medical services are going to be allotted to the prisoners?

} Toorawa-2

Water Distribution

Given that California is experiencing a drought, how will the construction of this jail effect water use per capita for community residents?

} Toorawa-3

Fires

Lancaster is prone to fires, what are the types of fire services that will be provided?

} Toorawa-4

Air

What are the chemicals that will be used in the construction?

What schools are in the area, and how will that affect them?

} Toorawa-5

Energy

How energy efficient is this place going to be, is it going to rely on the community?

} Toorawa-6

Landfills

Where are the landfills, and what type of recycling plan will be in place for the community?

Ecologically, what does that look like on the grand scale based on the 1300 tons of waste estimated, what does that look like as a recycling program in the community?

} Toorawa-7

Have you researched the wildlife, are there endangered species in the area?

} Toorawa-8

Historic Landmark

(northwest historic district- historic aviation hangars play role in community for education) Have you been in correspondence with the historic society?

What type of monument is the site, will its integrity remain with the construction?

how many children visit? will construction affect the types of commuters that come for education?

} Toorawa-9

Human Impact

Have any of your scientists looked at the negative impact this construction will have on people?
Have they looked at the ecological impacts of construction?
How will the air and noise pollution affect the psychology of those living in the community?
Which native tribes gave permission for construction, and when was this permission acquired? (These grievances change over time) Have you consulted with Native American Graves Protection and Repatriation Act at the federal level?

Toorawa-10

Please consider my public comment on the Draft Environmental Impact Report (EIR) regarding the proposed new Mira Loma Jail released on November 9th.

A new LA county jail in Lancaster will be severely detrimental to the health and well being of LA County residents as well as destructive to the local environment. The EIR fails to adequately address the negative impacts on residents and the natural landscape caused by jail construction, nor does it adequately provide plans for community based alternatives to jail construction. With investment in diversion, bail/bond reform, and other jail population reduction measures, this proposed jail would be unnecessary.

The proposed jail site is located several hours from downtown Los Angeles, requiring additional travel for people imprisoned there, lawyers and service providers serving prisoners, and their loved ones who wish to visit. This increased travel will be a severe burden on families, providers, and prisoners that must be considered in the proposal as community connections through programs and family visits have been shown to greatly reduce recidivism. Additionally, increased travel will cause greater smog and air pollution, as well as place a strain on already inadequate public transportation and road systems used by prisoners, loved ones, jail staff, and construction workers.

Please refer to responses to form letter

The suggested location is a known "hazardous waste site", with two underground storage tanks that have failed leak detection tests, meaning there could be contamination of soil and groundwater, and a high risk of exposure to contaminated soil and ground since 44% of the project site will be "outdoor pervious area". This puts prisoners at the jail, in custody of the County of Los Angeles, in extreme health risk. Plans for water usage and storage when proposing to introduce thousands of new prisoners as well as hundreds of employees are inadequate at mitigating the strain to the environment and current residents. Shabina Toorawa (March 2, 2016)

Toorawa-1

The commenter lists her environmental concerns for the construction of the jail. She questions the benefits of the jail on the community, the youth, and the community health.

The goal of the Project is to provide detention facilities for low- to medium-security level female inmates that meet modern correctional standards and that prioritize the on-site integration of gender-responsive female inmate education, treatment, and vocational training. This goal focuses on providing a secure detention facility with cost-effective therapeutic and rehabilitative programs to meet needs of eligible female inmates in order to reduce recidivism.

The supporting objectives of the Project are outlined in Section 3.2.2 of the Draft Environmental Impact Report (EIR) and include the following:

- A. To prioritize the on-site integration of gender-responsive female inmate education, treatment, and vocational training to reduce female inmate recidivism.
 - 1. To maximize system-wide efficiencies for County jails by providing a women's facility to permit Gender Responsive Rehabilitation (GRR) model programming for eligible low- to medium-security female inmates.
 - 2. To provide a facility reflective of "real world" living that incorporates abundant natural light, opportunities for social interactions in landscaped open spaces, and defined functional areas to promote release readiness and community reintegration within a secured detention perimeter.
 - 3. To reduce recidivism through programming and development of a women's detention facility at a site with sufficient space to accommodate both campus-style inmate housing and support facilities for education and vocational training, implementing the best practices of Education Based Incarceration (EBI), within a secured detention perimeter.
- B. To provide a detention facility with capacity for eligible low- to medium-security level female inmates.
 - 4. To permit re-allocation of detention facilities designed for higher security levels for male inmates and/or inmates with special security or other needs to serve the appropriate security-level populations.
 - 5. To provide a facility with adequate capacity for a selected subset of the female inmate population based on security level and health status based on system trend analysis from data 2001-2013, which includes the beginning of the "AB 109" [Assembly Bill 109] population of Low – Level (N3) Offender Population, and later state law changes.
 - 6. To reduce inmate overcrowding according to the BSCC [California Board of State and Community Corrections] standards for rated capacity, as determined for the qualifying female inmate population.
- C. To maximize the financial resources available to the County's correctional system for construction and operation of jail facilities serving female inmates.
 - 7. To avoid or minimize land acquisition and entitlement costs and to efficiently use existing County-owned physical assets.

8. To avoid or minimize costs and delays to resolve easement and other land title clearances involving other parties' property interests.
9. To avoid new land use conflicts by prioritizing the re-use of currently or formerly operated County-owned property with detention facilities.
10. To control the higher costs of new construction compared to the cost of renovation of existing facilities and the higher costs of maximum security construction compared to medium and low security detention facility construction by renovating and re-purposing existing facilities and infrastructure and/or designing separate low and medium security detention facilities where feasible.
11. To maximize the use of state grant funds from AB 900 and any other grant funds, including the maximization of the number of female inmate beds covered per grant.
12. To minimize the County's net cost to fund a female detention facility, including long-term operation and maintenance costs.

The Project would meet these goals and objectives, which would present benefits to the community.

Toorawa-2

Regarding the commenter's concern on an epidemic of Valley Fever, that topic is discussed in Section 4.2, Air Quality, of the Draft EIR. Also, please refer to the response for Form Letter-5.

Toorawa-3

The comment on water use by the project is addressed in Section 4.14, Utilities and Service Systems, of the Draft EIR and in the response for Form Letter-4.

Toorawa-4

Regarding the comment on fire services, fire protection services will be provided by the Los Angeles County Fire Department (LACFD), as discussed in Section 4.12, Public Services and Recreation. Also, Threshold 4.7h in Section 4.7, Hazards and Hazardous Materials, addresses wildfire hazards and the regulatory requirement (RR PS-1) to prevent fire hazards.

Toorawa-5

Regarding the question on chemical use, various hazardous materials will be used for construction and include, but are not limited to, fuels, lubricating oils, solvents, antifreeze, hydraulic fluid, and compressed gases. In addition, construction activities would utilize some hazardous materials (e.g., paints and solvents) and would generate hazardous waste streams such as waste oil and empty containers that previously held hazardous materials. This issue is discussed in Section 4.7, Hazards and Hazardous Materials. Threshold 4.7c on pages 4.7-17 to 4.7-18 specifically address hazards to nearby schools. As stated, the Project would use, store, and dispose of hazardous materials, substances, and/or wastes in accordance with existing regulations (Regulatory Requirement [RR] HAZ-1 through RR HAZ-3) and would not pose hazards to on-site inmates, staff, visitors, or volunteers or to children in nearby schools.

Toorawa-6

On the question of the energy efficiency of the Project, as discussed in Section 3.0, Project Description, the Project would feature a number of Green Building and Sustainability Features in accordance with the County's Low Impact Development (LID) Ordinance, the County's Drought-Tolerant Landscaping Ordinance, and the County's Green Building Ordinance. Additionally, the Project would be connected to the County's adjacent solar energy facility, which would provide up to one megawatt (MW) of electricity to the site. Section 4.15, Energy, analyzes the Project's demand for energy and identifies the Project Design Features (PDFs) and Regulatory Requirements (RRs) that would reduce energy demand from the Project.

Toorawa-7

Regarding the comment on landfills and recycling programs, Section 4.14, Utilities and Service Systems, identifies that the landfills that would serve the Project are the Lancaster Landfill and Recycling Center and the Antelope Valley Landfill. Solid waste generation during operation of the Project is estimated at 1,384 tons per year (DLR Group 2015). The proposed Project would operate a number of recycling programs in accordance with County directives (RR UTL-4). This would include the purchase and use of re-refined motor oil in all County motorized vehicles and equipment; the purchase and use of 30 percent recycled-content paper, electronic waste surplus, and used printer cartridges; encouragement of reduced paper-based correspondence; paper and beverage container collection and recycling; purchase and use of remanufactured laser toner cartridges for black and white printers and copiers; restricted use of styrofoam containers; and prohibited use of plastic carryout bags (LACDPW 2015).

The MLWDC waste handling protocol requires that deputies are responsible for ensuring that the barrack trustees have collected all trash from inside the barracks and from the compound area. The trash is then pre-sorted and separated for recycling as a standard operating procedure, when practical. The Project's barracks/compound trash shall be sorted into recyclable and food waste, and placed into separate blue recycling containers. Therefore, the estimated 1,384 tons per year of solid waste generated by the Project would be reduced through the implementation of various recycling programs.

Toorawa-8

Regarding the comment on wildlife and endangered species, Section 4.3, Biological Resources, of the Draft EIR identifies existing vegetation and wildlife species that have the potential to occur on the site and those that were observed during surveys of the site. The site did not have any plant or wildlife species that are identified as Endangered, Threatened, Candidate, Sensitive, or Special Status. Also, there were no riparian habitats or other special status vegetation types that occur on or immediately adjacent to the Project site. However, construction of the Project may have the potential to affect roosting bats and nesting birds. MM BIO-1, which calls for pre-construction bat surveys and bat exclusion, would reduce impacts to roosting bats. MM BIO-2 requires seasonal avoidance or pre-construction surveys for nesting birds to reduce disturbance of nesting birds. Based on the analysis in the Draft EIR, impacts to wildlife would be less than significant after mitigation.

Toorawa-9

Regarding the comment on the historic district and hangars, Section 4.4, Cultural Resources, discusses the historical buildings in and near the site. The Notice of Preparation was mailed to the Los Angeles Conservancy, and the Notice of Completion was mailed to the Los Angeles

Conservancy and the Antelope Valley Rural Museum. Regarding correspondence with the historic society, the preparers of the Historical Resource Report conducted research on the history of buildings, structures, objects and landscape features within the Project site and the surrounding area; reviewed ordinances, statutes, regulations bulletins and technical materials related to historic preservation; and conducted a field inspection to determine the historical significance of the individual buildings and group of buildings. The public notices for the Project also informed members of the local historical society, some of whom have provided comments on the Draft EIR.

The northwest corner of the MLDC was evaluated as a potential historic district. Based on the evaluation, 27 buildings are considered contributors to the Polaris Flight Academy Historic District and 8 buildings are considered non-contributors. The majority of the proposed renovation and new construction would occur outside the Historic District. Changes within the Historic District would be limited to (1) demolition of non-contributing buildings (i.e., Wooden Shed, Quonset Hut, and Old Lock Building) for the creation of a parking lot and other minor utility trenching in paved areas within the District boundaries and (2) decommissioning of the register-ineligible Central Boiler Plant (i.e., steam plant) and demolition of the ESB Building for construction of the new food warehouse and laundry. None of the District's contributing buildings or structures would be impacted by the proposed Project. Changes in the vicinity of Hangars 1 and 2 would also be visual in nature and only minimally alter their immediate setting.

Specifically, construction activities would not materially alter the physical characteristics that convey the significance of the historical resources. After Project construction, all historical resources within the Historic District would remain eligible for listing in both the National Register of Historic Places (NRHP) and the California Register of Historic Resources (CRHR). The operation of the MLWDC would not involve changes to the hangars or structures within the Polaris Flight Academy Historic District. No impact to nearby historical resources would occur.

Regarding the comment on the number of children who visit and types of commuters that come for education, the buildings at the MLDC that comprise the Polaris Flight Academy Historic District are not open to the public. Thus, there are no visitors or children that come to the Historic District.

Toorawa-10

Regarding the comment on the negative impact of construction, the Draft EIR addresses the potential direct, indirect, and cumulative impacts of construction and operation of the Project on all environmental issue areas. As demonstrated throughout the Draft EIR, all potentially significant impacts have been reduced to levels that are less than significant through the identified mitigation measures, and no significant unavoidable environmental impacts would result from Project implementation.

Potential impacts to the psychology of nearby residents is beyond the scope of the Draft EIR. Regarding the commenter's concern about air pollution, Section 4.2, Air Quality, analyzes the Project's construction and long-term emissions. Regarding the commenter's concern about noise, Section 4.10, Noise, discusses the existing noise environment and the increase in noise that would accompany construction and operation of the Project. Regarding the comment on permission from native tribes, Section 4.4, Cultural Resources, identifies the Native American tribes and individuals who were mailed an informational letter on February 3, 2014, requesting any information they might have regarding cultural resources in the area:

- Beverly Salazar Folkes, Chumash, Tataviam, and Fernandefio Tribal Member
- Larry Ortega, Chairperson, Fernandefio Tataviam Band of Mission Indians

- Ron Andrade, Director, LA City/County Native American Indian Commission
- Delia Dominguez, Chairperson, Kitanemuk and Yowlumne Tejon Indians
- John Valenzuela, Chairperson, San Fernando Band of Mission Indians
- Randy Guzman-Folkes, Chumash, Fernandefño, Tataviam, Shoshone Paiute, and Yaqui Tribal Member
- Daniel McCarthy, M.S., Director-CRM Department, San Manuel Band of Mission Indians

Daniel McCarthy of San Manuel Band of Mission Indians responded via email on February 6, 2014, and stated that, given the nature and location of the Project, the San Manuel Band has no concerns (McCarthy 2014). See Appendix C of this Final EIR. No other responses have been received to date.

Regarding the Native American Graves Protection and Repatriation Act, this Act is a federal law passed in 1990 that provides a process for museums and federal agencies to return certain Native American cultural items (i.e., human remains, funerary objects, sacred objects, or objects of cultural patrimony) to lineal descendants and culturally affiliated Indian tribes and Native Hawaiian organizations. In addition, the Act authorizes federal grants to Indian tribes, Native Hawaiian organizations, and museums to assist with the documentation and repatriation of Native American cultural items and establishes the Native American Graves Protection and Repatriation Review Committee to monitor the process and facilitate the resolution of disputes that may arise concerning repatriation.

The excavation and inadvertent discovery provisions of this Act apply only to federal and tribal lands. If the burial ground is not on federal or tribal land, then this Act does not apply. Thus, this Act does not apply to the proposed Project. However, other state and federal cultural preservation laws may apply, and state or local cemetery laws may also apply.

In accordance with California law, in the event of the discovery of human remains, all work shall halt at the site and or any nearby areas reasonably suspected to overlie adjacent remains and the County Coroner shall be notified in compliance with Section 7050.5 of the *California Health and Safety Code* (RR CUL-1). The Coroner will determine whether the remains are of forensic interest within two working days of receiving notification. If the Coroner, with the aid of the qualified Archaeologist, determines that the remains are prehistoric, the Coroner will contact the Native American Heritage Commission (NAHC) within 24 hours of the determination. The NAHC shall be responsible for designating the most likely descendant (MLD), who will be responsible for the ultimate disposition of the remains, as required by Section 5097.98 of the *California Public Resources Code*. Compliance with RR CUL-1 would ensure that impacts on human remains would be less than significant.

Please refer to responses for Form Letter-1 through Form Letter-6 for remaining comments.

Subject: Attn: Mira Loma Women's Jail Environmental Impact Report

Dear LA County Chief Exec Office and Board of Supervisors,

The United States is the only free country with huge amounts of human beings locked up in jail. The USA is the first to talk about human rights. Yet look at the incarceration rate put on poor communities. We demand that this jail not be built.

} Tutt-1

Please consider my public comment on the Draft Environmental Impact Report (EIR) regarding the proposed new Mira Loma Jail released on November 9th.

A new LA county jail in Lancaster will be severely detrimental to the health and well being of LA County residents as well as destructive to the local environment. The EIR fails to adequately address the negative impacts on residents and the natural landscape caused by jail construction, nor does it adequately provide plans for community based alternatives to jail construction. With investment in diversion, bail/bond reform, and other jail population reduction measures, this proposed jail would be unnecessary.

The proposed jail site is located several hours from downtown Los Angeles, requiring additional travel for people imprisoned there, lawyers and service providers serving prisoners, and their loved ones who wish to visit. This increased travel will be a severe burden on families, providers, and prisoners that must be considered in the proposal as community connections through programs and family visits have been shown to greatly reduce recidivism. Additionally, increased travel will cause greater smog and air pollution, as well as place a strain on already inadequate public transportation and road systems used by prisoners, loved ones, jail staff, and construction workers.

} Please refer to responses to form letter

The suggested location is a known "hazardous waste site", with two underground storage tanks that have failed leak detection tests, meaning there could be contamination of soil and groundwater, and a high risk of exposure to contaminated soil and ground since 44% of the project site will be "outdoor pervious area". This puts prisoners at the jail, in custody of the County of Los Angeles, in extreme health risk. Plans for water usage and storage when proposing to introduce thousands of new prisoners as well as hundreds of employees are inadequate at mitigating the strain to the environment and current residents. Additionally the weather and environmental conditions in this area foster a high probability for "Valley Fever", a fungal disease that can result in death. If the jail proposal moves forward, during construction local residents would be at increased risk due to displacement of dry soils. After completion, prisoners at the jail would be at great risk for this disease, particularly those with already compromised immune systems.

This proposed jail is unsafe for LA County communities and our environment. For the above reasons, the proposed new Mira Loma Jail should be rejected and the Draft EIR must not be approved.

--
Nancy Van Iderstine
nanvan108@gmail.com

Nancy Van Iderstine (February 5, 2016)

Van Iderstine-1

The commenter states that we do not need more jails and instead need more help battling addiction; need economic revival and stop outsourcing jobs overseas. The proposed jail planning is set in the context of the County's other programmatic and financial support of diversion from incarceration. Purely social effects of a project are beyond the scope of CEQA analysis, which focuses on the proposal's effect on the physical environment. The County has a concurrent focus on diversion from incarceration as it considers this Project. Therefore, the proposed Project is consistent with the Board of Supervisor's consideration of policy issues addressing alternative approaches to incarceration.

Please refer to responses for Form Letter-1 through Form Letter-6 for remaining comments.

Subject: Attn: Mira Loma Women's Jail Environmental Impact Report

Dear LA County Chief Exec Office and Board of Supervisors,

My name is Alex Villalpando and I am an educator. I work with predominantly first generation college students. They're hard working, intellectually aware, and future leaders of Los Angeles and the State of California. We consistently have conversations regarding our current economic crisis and the impacts on their employment prospects. A major part of our economic crisis has been exacerbated because the continued expansion of prisons and the drain this process has on education, families, and communities. Please help build a better and more dignified California for all of us.

Villalpando-1

Please consider my public comment on the Draft Environmental Impact Report (EIR) regarding the proposed new Mira Loma Jail released on November 9th.

A new LA county jail in Lancaster will be severely detrimental to the health and well being of LA County residents as well as destructive to the local environment. The EIR fails to adequately address the negative impacts on residents and the natural landscape caused by jail construction, nor does it adequately provide plans for community based alternatives to jail construction. With investment in diversion, bail/bond reform, and other jail population reduction measures, this proposed jail would be unnecessary.

The proposed jail site is located several hours from downtown Los Angeles, requiring additional travel for people imprisoned there, lawyers and service providers serving prisoners, and their loved ones who wish to visit. This increased travel will be a severe burden on families, providers, and prisoners that must be considered in the proposal as community connections through programs and family visits have been shown to greatly reduce recidivism. Additionally, increased travel will cause greater smog and air pollution, as well as place a strain on already inadequate public transportation and road systems used by prisoners, loved ones, jail staff, and construction workers.

Please refer to responses to form letter

The suggested location is a known "hazardous waste site", with two underground storage tanks that have failed leak detection tests, meaning there could be contamination of soil and groundwater, and a high risk of exposure to contaminated soil and ground since 44% of the project site will be "outdoor pervious area". This puts prisoners at the jail, in custody of the County of Los Angeles, in extreme health risk. Plans for water usage and storage when proposing to introduce thousands of new prisoners as well as hundreds of employees are inadequate at mitigating the strain to the environment and current residents. Additionally the weather and environmental conditions in this area foster a high probability for "Valley Fever", a fungal disease that can result in death. If the jail proposal moves forward, during construction local residents would be at increased risk due to displacement of dry soils. After completion, prisoners at the jail would be at great risk for this disease, particularly those with already compromised immune systems.

This proposed jail is unsafe for LA County communities and our environment. For the above reasons, the proposed new Mira Loma Jail should be rejected and the Draft EIR must not be approved.

Harry Waksberg (February 5, 2016)

Waksberg-1

The commenter says he does not believe the County needs another jail. The purpose of and need for the Project is described in detail in Section 3.1, Project Background, of the Draft EIR. That section provides information regarding the County's existing detention facilities, relevant regulatory mandates, and studies analyzing future facility needs, including for housing of female inmates. The proposed jail planning is set in the context of the County's other programmatic and financial support of diversion from incarceration. The County has a concurrent focus on diversion from incarceration as it considers this Project. Therefore, the proposed Project is consistent with the Board of Supervisor's consideration of policy issues addressing alternative approaches to incarceration.

Please refer to responses for Form Letter-1 through Form Letter-6 for remaining comments.

Waksberg-2

Thank you for your comment letter. This Final EIR, including all comments submitted to the County on the Draft EIR, will be provided to the County of Los Angeles Board of Supervisors. Therefore, your concerns will be presented directly to the decision makers prior to consideration of Project approval.

Subject: Attn: Mira Loma Women’s Jail Environmental Impact Report

Dear LA County Chief Exec Office and Board of Supervisors,

I believe the environmental impact of building a new jail in Lancaster would be beyond devastating for the community in Lancaster as well as communities across Los Angeles - not only will the health of those in the area be negatively impacted, but the well being of those in the facility would be greatly impacted. The feasibility and impact of holding a human being in a restrictive fashion for years at a time will have a negative impact on all facets of their health and will effect their own families and loved ones in numerous ways. It is irresponsible and dangerous to build such a facility.

Weathers-1

Please consider my public comment on the Draft Environmental Impact Report (EIR) regarding the proposed new Mira Loma Jail released on November 9th.

A new jail in Lancaster County will be severely detrimental to the health and well being of LA County residents as well as destructive to the local environment. The EIR fails to adequately address the negative impacts on residents and the natural landscape caused by jail construction, nor does it adequately provide plans for community based alternatives to jail construction. With investment in diversion, bail/bond reform, and other jail population reduction measures, this proposed jail would be unnecessary.

The proposed jail site is located several hours from downtown Los Angeles, requiring additional travel for people imprisoned there, lawyers and service providers serving prisoners, and their loved ones who wish to visit. This increased travel will be a severe burden on families, providers, and prisoners that must be considered in the proposal as community connections through programs and family visits have been shown to greatly reduce recidivism. This comment alleges that building a new jail would be devastating to the health and well-being of the community and it is irresponsible and dangerous to build such a facility.

As demonstrated throughout the Draft EIR, all potentially significant impacts have been reduced to levels that are less than significant through the identified mitigation measures and no significant unavoidable environmental impacts would result from Project implementation.

Subject: War Eagle Field / Mira Loma detention center

Our Beloved War Eagle Field, One of a kind.

In July 1939 the future security of the United States was placed in a large measure in the hands of a small group of Veteran pilots of World War I and non-military flyers. Nothing comparable to that had ever been done before. It was done then only because there was nothing else anybody could do. This was the year civilization as we knew it went off the deep end and people everywhere were fighting a war.

Our armed forces as of that year (1939) was more fiction than force. Our air arm to put it mildly, was ineffectual, and you could not build up an air force from scratch overnight. Even if we had the planes we didn't have the pilots to fly them. We had only one training air base, Randolph Field in Texas where they were turning out just 500 pilots a year.

Facing a desperate situation General Hap Arnold was faced with breaking new ground. He appealed to a small group World War One Pilots and a few non-military flyers whom he knew. These men were then operating their own commercial flying schools. He asked them if they would be willing to help train combat Pilots for the Army Air Corps asked would if they would take green youngsters into their schools, some who had never been near an airplane and teach them how to fly.

The Operators said yes, they would.

Would they do it although the Army, then without funds for that purpose, was unable to guarantee payment for such training?

The Operators said yes, they would.

And would they expanded their present facilities and finance the expansions if the Army asked them to do this too?

The operators said, yes, they would do that!

General Arnold looked into the faces of the original eight that had everything to lose and one at a time and said "If you let me down on this " God help us all for America is doomed if we can't pull off this miracle .

One of these eight was a World War One pilot named C.C.Moseley .It seems only yesterday that the command placed its entire future in the hands of a few patriotic men such as Mr. Moseley. Without the civilian contractors this command could not possibly have expanded from four or five hundred a year to the astounding rate of 110,000 pilots per year. War Eagle field is the story of that miracle and the reason it needs to survive.

Alvis-1

War Eagle Field / Polaris Flight Academy the sole survivor of the original eight at Lancaster California was one mile wide and comprised 640 acres . Commissioned in 1941 it was used shortly after Pearl Harbor for both RAF and American Eagle Squadron instruction. When the United States entered the war the school was shifted to AAF basic training and became one of the three civilian schools entrusted with advanced instruction of cadets.

War Eagle Field with its rich history and its impressive record of producing the finest pilots of its time period needs a chance to carry on as a living tribute to the will of the American people and the dedication of the individuals of not only those young men that trained there, but the citizens who made it work twenty four hours a day and the vision of one General and eight men that put country before self and trained the air force that would save the world.

Let's make this Field a lasting tribute for future Generations to come and visit when they need inspiration when things in their own lives become turbulent. And they can draw on the spirits of the men and women that proved that miracles can happen when tested.

War Eagle Field has been my passion for over the last thirty years and I would hate to see anything tragic happen to this history and facility. Please give it back its dignity and let it live again in a way that will benefit the young generations of families and school children for all time. Our history like this needs to live on.

Thank you for your consideration , Robert S Alvis , Antelope Valley Citizen for sixty years

The comment expresses admiration for the War Eagle Field as a unique resource. This comment then relates a story about the War Eagle Field and does not address the Project or the Environmental Impact Report (EIR). This Final EIR, including all comments submitted to the County on the Draft EIR, will be provided to the County of Los Angeles Board of Supervisors. Therefore, your concerns will be presented directly to the decision makers prior to consideration of Project approval.

Alvis-2

A summary of the findings of the Historical Resources Report is included in Appendix C-1 of the Draft EIR. The Report concludes that there is a historic district within the Project study area. The district, named the Polaris Flight Academy Historic District, meets the criteria for listing in the National Register of Historic Places (NRHP) and the California Register of Historical Resources (CRHR) for its direct associations with military aviation during World War II and the work of Major Corliss Champion Moseley (GPA 2015). It is therefore considered a historical resource subject to the requirements of CEQA.

As discussed in Section 4.4, Cultural Resources, the majority of the proposed renovation and new construction would occur outside the Historic District. Project implementation would only affect non-contributing features of the Historic District; therefore, the Project would not materially alter the physical characteristics that convey the significance of the historical resources. Thus, the Project would not adversely affect the Polaris Flight Academy Historic District or its potential recognition on federal or other historic registers.

The future uses of these buildings and structures, beyond the requirement to preserve the integrity of the Historic District, is outside the scope of the proposed Project. This Final EIR, including all comments submitted to the County on the Draft EIR, will be provided to the County of Los Angeles Board of Supervisors. Therefore, your concerns will be presented directly to the decision makers prior to consideration of Project approval.

MIRA LOMA WOMEN'S DETENTION CENTER PROJECT
 PUBLIC MEETING- DECEMBER 8, 2015
 6:00 TO 8:00 PM

COMMENTS:

More prisons is the easier way to deal with problems & instead of giving persons counseling or learning how to change behavior. More importantly the traffic pollution and illness of opening new jails and prisons seems unbearable. Many in the police department abuse their authority with both violence and by killing in many given situations. The police department misuse of authority seems "militant" and give poor meaning to the words "protect and serve"

Sheila Armstead

Armstead-1

Regarding the commenter's concern about the need for counseling and learning to change behavior, the Mira Loma Women's Detention Center (MLWDC) will offer general education classes, computer training, general and vocational career technical education, college courses, career counseling, a learning resource center, a library and computer labs, culinary classes, and indoor/outdoor recreation for inmates. Other services include religious services, counseling services, and community transition services. Participation in classes, training, and other activities will be scheduled for each inmate according to individual evaluation, interests, needs, and availability.

Course selections will be determined based on a students' needs for specific services, and students' interest levels. Courses will be offered during three blocks of time each weekday (morning, afternoon, and evening), providing opportunities for inmates to be enrolled in multiple courses. Programs are also divided into three categories based on program intensity: all-day, half-day, and evening programs. Examples of all-day programs (morning and afternoon) include culinary arts programs, cosmetology programs, and Prisoner Assisted Community Enhancement (PACE). Examples of half-day programs (morning or afternoon) include: small engine repair; animal grooming/training; social media management and marketing/office assistant; automotive detailing, windshield and headlight repair; and recycling. Examples of evening programs include: computer coding; small business entrepreneurship; community college; Associate of Arts Degree; and General Education. Other programs include prenatal programs, volunteer programs; peer mentoring; physical education; dance; arts and crafts; a commissary program; and book clubs.

Armstead-2

Regarding the commenter's concern about increased traffic, Section 4.13, Transportation and Traffic, of the Draft Environmental Impact Report (EIR) discusses potential impacts related to Project-generated traffic. The analysis indicates that increase in traffic volumes would not significantly impact local intersections (intersections would still operate at Level-of-Service D or better), or alternative transportation (Metrolink trains or Antelope Valley Transit Authority [AVTA] bus service), and impacts on California Department of Transportation (Caltrans) facilities would be less than significant. As discussed on page 4.13-23 and 4.13-24 of Section 4.13, Traffic and Transportation, the existing transit services in the area will adequately accommodate the increase of Project-generated transit trips. No mitigation is required for short-term construction or long-term operation traffic impacts.

Regarding the commenter's concern about increased air pollution, Section 4.2, Air Quality, presents the results of the emission analysis using California Emissions Estimator Model (CalEEMod) Version 2013.2.2. This computer program is used to calculate anticipated emissions associated with land development projects in California, including emissions from vehicles traveling to and from the Project site. As shown in Table 4.2-7 of Section 4.2, Air Quality, the estimated annual operational emissions due to Project-related operations would not exceed the Antelope Valley Air Quality Management District's (AVAQMD's) California Environmental Quality Act (CEQA) significance thresholds and potential impacts would be less than significant. In fact, emissions were well below the thresholds of significance. For example, carbon monoxide (CO) was the air contaminant with the highest annual rate of emission, and the Project was estimated to emit 18 tons per year, while the AVAQMD threshold of significance is 100 tons per year.

On the comment regarding illness, coccidioidomycosis, also known as Valley Fever, and its potential impact on potential future inmates and County staff is discussed in Section 4.2, Air Quality. A summary of hazards associated with the *Coccidioides* spores (i.e., the fungus that causes Valley Fever) is provided and includes trends related to Valley Fever in Los Angeles County, as inventoried and reported by the Los Angeles County Department of Public Health (LACDPH), which was consulted during the preparation of the Draft EIR.

The MLWDC property is not located in an area determined to be hazardous to the health of local residents or visitors to the region. The Draft EIR concludes that the potential future inmate population's temporary placement into the Antelope Valley, which includes the inmate's participation in all indoor and outdoor activities at the MLWDC, would not constitute placement into a hazardous existing environmental setting that would require mitigation. Additionally, the operation of the proposed Project would not increase the prevalence of Valley Fever spores or otherwise exacerbate an existing environmental condition. . Please see response for Form Letter-5 for additional detail regarding potential Project impacts relating to Valley Fever.

Armstead-3

This comment relates to the alleged actions of the police department and does not address the proposed Project, the environmental analysis included in the Draft EIR or the environmental impacts of the Project. This Final EIR, including all comments submitted to the County on the Draft EIR, will be provided to the County of Los Angeles Board of Supervisors. Therefore, your concerns will be presented directly to the decision makers prior to consideration of Project approval.

MIRA LOMA WOMEN'S DETENTION CENTER PROJECT
PUBLIC MEETING- DECEMBER 8, 2015
6:00 TO 8:00 PM

COMMENTS:

Building a Women's Jail will be a magnet
for environmental and economic fragility
profits at. Desert can create far
greater cost down the line. Please
stop irresponsible construction

Bell-1

Bell-2

NAME: Shem Bell
ADDRESS: 4017 Palmswood Dr #3 CA 90008
E-MAIL: Shembell28@gmail.com

Shem Bell

Bell-1

This comment alleges that the Project would be a magnet for what is characterized as environmental and economic tragedy. Although the Project site has been unoccupied since 2012, as discussed in Section 2.0, Environmental Setting, the Project site has generally been in operation and providing various detention/jail functions since 1945–1946. The MLWDC Project proposes the adaptive reuse, renovation, and expansion of the majority of the buildings at Mira Loma Detention Center (MLDC), which is an existing County asset. The redevelopment of the property would avoid the costs associated with constructing a new facility.

The Draft Environmental Impact Report (EIR) for the proposed Project has been prepared in accordance with the California Environmental Quality Act (CEQA, *California Public Resources Code*, Sections 21000 et seq.) and the State CEQA Guidelines (14 *California Code of Regulations* [CCR]), and addresses the potential direct, indirect, and cumulative impacts of the Project on all environmental issue areas. Section 5.0, Project Alternatives, was prepared in accordance with Sections 15126.6(a) through 15126.6(f) of the State CEQA Guidelines. As demonstrated throughout the Draft EIR, all potentially significant impacts have been reduced to levels that are less than significant through the identified mitigation measures, and no significant unavoidable environmental impacts would result from Project implementation.

Bell-2

This comment relates to the merits of the proposed Project and not the environmental analysis included in the Draft EIR or the environmental impacts of the Project. This Final EIR, including all comments submitted to the County on the Draft EIR, will be provided to the County of Los Angeles Board of Supervisors. Therefore, your concerns will be presented directly to the decision makers prior to consideration of Project approval.

Benitez-1

English translation of Spanish comment:

I need the EIR in Spanish to share it with my family.

English Response:

The County voluntarily added additional outreach in Spanish for the MLWDC Draft EIR public review process as a result of public comments. In January 2016, a *Notice of Extended Comment Period for the Draft Environmental Impact Report for the Mira Loma Women's Detention Center Project and Notice of Second Public Meeting in Lancaster, California* was sent to the Project's mailing list and email list, as well as additional mailing list contacts that had provided comment letters during the Draft EIR public review period up to the time of the second mailing. This Notice was prepared in both English and Spanish. Additionally, the Executive Summary of the Draft EIR was translated into Spanish and posted on the County's website for viewing and downloading. Hardcopies of the Spanish-translated Executive Summary were made available at the Quartz Hill and Lancaster Libraries, as well as the Los Angeles County Public Information Office. Newspaper advertisements of the extended comment period and second public meeting were placed in the following papers and ran on Monday, February 1, 2016:

- *Acton-Aqua Dolce News*: a weekly publication so the ad was available for 7 days
- *Los Angeles Daily News*: a daily publication
- *La Opinion*: a daily publication (the ad was in both English and Spanish)
- *Antelope Valley Press*: a daily publication
- *Antelope Valley Times*: an online publication

A second public meeting was held on Tuesday, February 9, 2016 at the Lancaster Public Library at 601 West Lancaster Boulevard in Lancaster, CA 93534 to present an overview of the proposed Project and the Draft EIR process and conclusions, and to invite submission of public comments on the Draft EIR. Real-time Spanish translation services were made available, as were copies of the Notice and the Executive Summary in both English and Spanish. Two members of the public attended that meeting and neither requested Spanish translation services.

Spanish translation of English response:

El Condado agregó voluntariamente el alcance adicional en español para el proceso de revisión pública del EIR Borrador del MLWDC como resultado de los comentarios públicos. En enero de 2016, se envió una *Notificación del período extendido para comentarios del Informe de impacto ambiental borrador para el Proyecto del Centro de detención femenino Mira Loma y Notificación de la segunda reunión pública en Lancaster, California* a la lista de correo y lista de correo electrónico del Proyecto, así como también a contactos de listas de correo adicionales que habían enviado cartas con comentarios durante el período de revisión pública del EIR Borrador hasta el momento del segundo envío de correos. Esta Notificación fue redactada en inglés y en español. Además, el Resumen Ejecutivo del EIR Borrador fue traducido al español y publicado en el sitio web del Condado, en donde podía ser leído y descargado. Copias físicas del Resumen Ejecutivo traducido al español se pusieron a disposición en las Bibliotecas de Quartz Hill y Lancaster, así como también en la Oficina de Información Pública del Condado de Los Ángeles. Se publicaron anuncios del período extendido para comentarios y de la segunda reunión pública en los siguientes periódicos, desde el lunes 1 de febrero de 2016:

- *Acton-Aqua Dolce News*: una publicación semanal, por lo que el anuncio estuvo disponible durante 7 días
- *Los Angeles Daily News*: una publicación diaria
- *La Opinion*: una publicación diaria (el anuncio se publico en inglés y en español)
- *Antelope Valley Press*: una publicación diaria
- *Antelope Valley Times*: una publicación en línea

Se celebró una segunda reunión pública el martes 9 de febrero de 2016 en Lancaster Public Library ubicada en 601 West Lancaster Boulevard en Lancaster, CA 93534, para presentar una descripción general del Proyecto propuesto y del proceso y conclusiones del EIR Borrador y para invitar a que se presenten comentarios públicos sobre el EIR Borrador. Hubo disponibles servicios de traducción al español en tiempo real así como también copias de la Notificación y del Resumen Ejecutivo en inglés y en español. Dos miembros del público asistieron y dicha reunión y ninguno solicitó servicios de traducción al español.

MIRA LOMA WOMEN'S DETENTION CENTER PROJECT
PUBLIC MEETING- DECEMBER 8, 2015
6:00 TO 8:00 PM

COMMENTS:

1) Why I oppose this jail on environmental grounds. 2) People in jail will be highly susceptible to Valley fever. Since 2005, thousands of California prisoners contracted the disease, and over 50 have died as a result. Yet, Valley fever is ignored in this report

Bunch-1

3) A new jail in Lancaster would mean more travel, creating more traffic & pollution. Storm water drainage and the water supply are not up to current standards. The environmental report must assess alternatives to building this jail. However the report does not look @ alternatives to

Bunch-2

Bunch-3

imprisonment that would make this jail unnecessary

Bunch-4

Bunch-1

Coccidioidomycosis, also known as Valley Fever, and its potential impact on potential future inmates and County staff is discussed in Section 4.2, Air Quality. A summary of hazards associated with the *Coccidioides* spores (i.e., the fungus that causes Valley Fever) is provided and includes trends related to Valley Fever in Los Angeles County, as inventoried and reported by the Los Angeles County Department of Public Health (LACDPH), which was consulted during the preparation of the Draft Environmental Impact Report (EIR).

The MLWDC property is not located in an area determined to be hazardous to the health of local residents or visitors to the region. The Draft EIR concludes that the potential future inmate population's temporary placement into the Antelope Valley, which includes the inmate's participation in all indoor and outdoor activities at the MLWDC, would not constitute placement into a hazardous existing environmental setting that would require mitigation. Additionally, the operation of the proposed Project would not increase the prevalence of Valley Fever spores or otherwise exacerbate an existing environmental condition. Please see response for Form Letter-5 for additional detail regarding potential Project impacts relating to Valley Fever.

Bunch-2

Regarding the commenter's concern about increased traffic, Section 4.13, Transportation and Traffic, of the Draft EIR discusses potential impacts related to Project-generated traffic. The analysis indicates that an increase in traffic volumes would not significantly impact local intersections (intersections would still operate at Level-of-Service D or better), or alternative transportation (Metrolink trains or Antelope Valley Transit Authority [AVTA] bus service), and impacts on California Department of Transportation (Caltrans) facilities would be less than significant. As discussed on page 4.13-23 and 4.13-24, the existing transit services in the area will adequately accommodate the increase of Project-generated transit trips. No mitigation is required for short-term construction or long-term operation traffic impacts.

Regarding the commenter's concern about increased air pollution, Section 4.2, Air Quality, presents the results of the emission analysis using California Emissions Estimator Model (CalEEMod) Version 2013.2.2. This computer program is used to calculate anticipated emissions associated with land development projects in California, including emissions from vehicles traveling to and from the Project site. As shown in Table 4.2-7 of Section 4.2, Air Quality, the estimated annual operational emissions due to Project-related operations would not exceed the Antelope Valley Air Quality Management District's (AVAQMD) California Environmental Quality Act (CEQA) significance thresholds, and potential impacts would be less than significant. In fact, emissions were well below the thresholds of significance. For example, carbon monoxide (CO) was the air contaminant with the highest annual rate of emission, and the Project was estimated to emit 18 tons per year, while the AVAQMD threshold of significance is 100 tons per year.

Bunch-3

Regarding the commenter's concern about stormwater drainage and water supply, Section 4.14, Utilities and Services Systems, discusses existing and proposed storm drainage infrastructure and the water demand and supply to serve the Project. Pages 4.14-19 to 4.14-20 discusses impacts related to storm drainage during construction and long-term operation. As stated in Section 4.8, Hydrology and Water Quality, Project Design Feature (PDF) HYD-1 requires that the on-site storm drainage system would comply with storm water quality and quality control

requirements under the County's Standard Urban Stormwater Management Plan (SUSMP), Low Impact Development (LID) standards, Hydrology Manual, Best Management Practices Handbook, and Green Building Standards Code. These requirements, along with Regulatory Requirement (RR) HYD-2, address potential pollutant runoff from long-term operations of the Project.

The water supply needed by the Project is estimated in the Water Supply Assessment (WSA) that was prepared for the Project. The WSA is summarized in Section 4.14, Utilities and Service Systems, and provided in Appendix G-2 of the Draft EIR. The WSA for the Project includes an evaluation of the sufficiency of the water supplies available to the water supplier to meet existing and anticipated future demands (including the demand associated with the Project) over a 20-year horizon that includes normal, single-dry, and multiple-dry years. Pages 4.14-20 to 4.14-30 discuss the availability of water supplies to meet demands from the Project.

Bunch-4

This comment alleges that the Draft EIR must assess alternatives to the Project, including alternatives to building a jail. The Draft EIR, in fact, addresses alternatives in accordance with CEQA (*California Public Resources Code*, Sections 21000 et seq.) and the State CEQA Guidelines (14 *California Code of Regulations* [CCR]). As demonstrated in Section 5.0, Project Alternatives, an EIR must describe a range of reasonable and of potentially feasible alternatives to the proposed Project, or to the location of the Project, which would feasibly attain most of the basic Project Objectives but would avoid or substantially lessen any significant effects. Based on the analyses in Sections 4.1 through 4.15 of the Draft EIR, the proposed Project would result in significant environmental effects prior to mitigation on a number of environmental topics. Following mitigation, however, impacts to all of these topical areas would be avoided or reduced to less than significant levels with the implementation of mitigation measures. No significant and unavoidable impacts would occur with the Project.

In addition, the Board of Supervisors has adopted numerous recent actions to reduce the number of people who are incarcerated in Los Angeles County, particularly those with mental illness and/or substance use disorders. The Board of Supervisors' actions relating to diversion from the criminal justice system to reduce the need for incarceration, are based in part on their consideration of the August 4, 2015 District Attorney's report of the Criminal Justice Mental Health Advisory Board in a document entitled "Mental Health Advisory Report: A Blueprint for Change – Providing Treatment, Promoting Rehabilitation and Reducing Recidivism: An Initiative to Develop a Comprehensive Plan for Los Angeles County".

The Criminal Justice Mental Health Advisory Board report of August 2015 concluded that even with increased opportunities for diversion from a jail environment, there will still be a need for mental health treatment in jails, and that diversion efforts can reduce, but will not eliminate, the need for the County to operate detention facilities. In light of the County's diversion efforts, the Board of Supervisors directed that, for purposes of on-going study and evaluation in the environmental review process, the maximum size of the proposed women's detention center at Mira Loma in Lancaster would remain at 1,604 beds. In addition the Board of Supervisors reduced the maximum proposed size by approximately 1,000 beds, for purposes of the environmental review of a separate proposed treatment and detention center addressing needs of incarcerated men and women with mental illness and/or substance use disorders at the site of the current Men's Central Jail in downtown Los Angeles. In summary, the Board of Supervisors has taken steps to reduce the number of people who are incarcerated in Los Angeles County.

In addition, please see the more detailed response on this issue in the response to Form Letter-1 regarding County actions relating to diversion and other out-of-custody alternatives, which is included in Section 2.3.1 of this Final EIR.

As requested, the commenter has been added to the public notice list for this Project. The Final EIR will be posted with the Draft EIR on the County's website at: <ftp://dpwftp.co.la.ca.us/pub/PMD/MiraLomaWomenFacility>.

Members of the public can view searchable agendas for scheduled Board of Supervisors meetings and access agenda-related County information and services directly on the following website: <http://bos.lacounty.gov/Board-Meeting/Board-Agendas>. This site has an email notification service enrollment process for copies of future Board of Supervisors agendas.

MIRA LOMA WOMEN'S DETENTION CENTER PROJECT
PUBLIC MEETING- DECEMBER 8, 2015
6:00 TO 8:00 PM

COMMENTS:

Children & their families will be severely affected if you move the women's jail to Lancaster. The cost in travel to the rural area of Los Angeles County will create a hardship for many children who have their mother/family member in the women's jail. In addition, it is unethical, deplorable and a complete violation of human rights to build on toxic land where the proposed site is considered. I ask that you not vote to build this site or funnel funds for more jails.

Camacho-Rodriguez-1

The Draft Environmental Impact Report (EIR) acknowledges that increased driving distances would be required for some families with the Project due to the location of the site in relation to the Century Regional Detention Facility (CRDF) in Lynwood, which is closer to higher density urban areas near the City of Los Angeles. The County is aware of the potential challenges this increased distance may pose for some visiting family members, while for other visiting family members from the Lancaster and other County areas, the Project location will be closer to their homes than the current women's jail in Lynwood. As demonstrated on page 3-4, in Section 3.0, Project Description, the Board of Supervisors directed the establishment of an Advisory Board (now called the Gender Responsive Advisory Committee) that will report to the Board of Supervisors on specific programmatic and operational issues. The Advisory Committee has already begun to organize its meetings with a membership including representatives of County staff, outside agencies, advocates, organizations, individuals with incarceration experience, and representatives with expertise in reducing recidivism of female inmates. As part of its charge, the Advisory Committee is tasked with reviewing the program model for the proposed MLWDC Project to ensure that it is evidence-based in reducing recidivism; evaluating strategies to reduce negative impacts of operating the proposed MLWDC away from the downtown Los Angeles area, including contract transportation for visitors, video visiting for attorney consultation; and reviewing national best practices for visiting and family reunification.

Camacho-Rodriguez-2

Regarding the commenter's concern that the Project would be located on toxic land, the Project site was never operated as a site that accepted hazardous wastes for disposal. The Project site is on the list of Leaking Underground Storage Tanks (LUST) Sites, but the leaking underground storage tanks have been removed and the affected area cleaned up. The County Department of Public Works oversaw the remediation and issued the "no further action" letter. The California Department of Toxic Substances Control (DTSC) lists the Polaris Flight Academy with a status of "inactive-needs evaluation". As part of the Phase II Environmental Site Assessment (ESA), soil borings collected in the area of the possible former location of the airstrip did not detect any contaminants that would require further action (Converse 2015). Thus, the listing of the site in government databases was based on past uses that no longer pose hazards.

As part of the environmental analysis for the Draft EIR, a Phase I ESA has been prepared that reviewed past and current uses and site conditions and identified Recognized Environmental Concerns (RECs) on the Project site and surrounding area. The Phase I ESA is provided in Appendix E-1 of the Draft EIR. Subsequent to the Phase I ESA, a Phase II ESA was prepared that included soil sampling to determine if soil contamination is present on the site. The Phase II ESA is provided in Appendix E-3 of the Draft EIR. In addition, an Asbestos and Lead Based Paint Survey Report was completed to identify the building components that contained asbestos and lead-based paint. The Asbestos and Lead Based Paint Survey Report is provided in Appendix E-2 of the Draft EIR. These reports are summarized in Section 4.7, Hazards and Hazardous Materials of the Draft EIR.

The Project must comply with existing regulatory requirements (RRs) for the proper handling of hazardous wastes, including transportation, treatment, storage, and disposal; repair and/or removal of underground storage tanks based on applicable standards; and practices that would protect the demolition and construction crews from asbestos and lead exposure. In addition, the Project must incorporate mitigation measures (MMs) for the handling of suspected asbestos-

containing materials and lead-based paint; an Operations and Maintenance Plan for regular inspection of any asbestos-containing materials; and testing and repair of underground storage tanks prior to use. Thus, existing hazardous materials and wastes would be removed from the Project site and future hazardous materials use would comply with applicable regulations to prevent hazards to future inmates. In summary, compliance with RRs and implementation of MMs set forth in the Draft EIR would prevent public health and safety hazards to inmates, employees, visitors and other individuals at the Project site.

Camacho-Rodriguez-3

This comment relates to the merits of the proposed Project, and not the environmental analysis included in the Draft EIR or the environmental impacts of the Project. This Final EIR, including all comments submitted to the County on the Draft EIR, will be provided to the County of Los Angeles Board of Supervisors. Therefore, your concerns will be presented directly to the decision makers prior to consideration of Project approval.

Chesney-1

The comment asks whether there will be design features to prevent rape of inmates in the facility. All Sheriff's Department personnel receive gender specific training with regard to the care and treatment of female inmates, including the prevention of crime incidence.

Further, the design of the facility promotes the safety of both inmates and staff by maintaining lighting, sight lines and security procedures, in compliance with applicable correctional standards. Examples of physical design items which address issues of privacy include partitions at toilet and showering facilities. Also, as a part of this project, the design criteria requires a video monitoring system with cameras and recording storage to monitor activity within the facility.

FifthDistrict@lacbos.org
Subject: Attn: Mira Loma Women's Jail Environmental Impact Report

Dear LA County Chief Exec Office and Board of Supervisors,

As a member of the LA community, I oppose the building of the new Mira Loma Jail because of its harmful effects on the physical and mental health of LA residents as well as the local environment. Building a new LA county jail in Lancaster will worsen traffic pollution, degrade LA's natural resources, and increase the distance between inmates and their families, negatively affecting their success after release and increasing the likelihood of recidivism. The proposed jail should be rejected and the Draft EIR must not be approved, as community based alternatives, including diversion, bail/bond reform, and other jail population reduction measures, have not been adequately acknowledged.

Karen Limón Corrales (February 3, 2016)

Corrales-1

To the extent that this comment raises concerns regarding the merits of the proposed Project, this Final EIR, including all comments submitted to the County on the Draft EIR, will be provided to the County of Los Angeles Board of Supervisors. Therefore, your concerns will be presented directly to the decision makers prior to consideration of Project approval.

Regarding the commenter's concerns about building a new jail, the Board of Supervisors has adopted numerous recent actions to reduce the number of people who are incarcerated in Los Angeles County, particularly those with mental illness and/or substance use disorders. The Board of Supervisors' actions relating to diversion from the criminal justice system to reduce the need for incarceration are based in part on their consideration of the August 4, 2015, District Attorney's report of the Criminal Justice Mental Health Advisory Board in a document entitled "Mental Health Advisory Report: A Blueprint for Change – Providing Treatment, Promoting Rehabilitation and Reducing Recidivism: An Initiative to Develop a Comprehensive Plan for Los Angeles County".

The members of the District Attorney's Advisory Board were the Sheriff; the Fire Chief; the Directors of the Departments of Mental Health, Health Services, Public Health, Veteran's Affairs, and Public Social Services; the Public Defender; and the Executive Director of the Countywide Criminal Justice Coordination Committee. All Advisory Board members participated in the Countywide assessment of services and recommendations to provide for comprehensive mental health diversion for each stage of the criminal justice continuum, from first responders to community re-entry and support. This report summarized the range of diversion programs already existing in the County and analyzed the need for additional mental health and substance abuse diversion services for each stage along the criminal justice continuum. The County of Los Angeles Chief Executive Office (CEO) has acknowledged that these recommendations recognize that there are potential new efficiencies and cost avoidance by redirecting persons in need of physical, mental, and public health care services from the criminal justice system to appropriate care and treatment in lieu of incarceration.

On August 11, 2015, and September 1, 2015, in the context of determining potential capacity of proposed County jail facilities and responding to treatment needs for the mentally ill or victims of substance use disorders, the Board directed an ordinance be prepared to establish an Office of Diversion and Re-Entry (Office) within the Department of Health Services. That ordinance was adopted, and the Office has been established pursuant to Section 2.76.600 of the Los Angeles County Code. For administrative oversight, the Board of Supervisors determined the Office will be a part of the Department of Health Services and the Director of the Office will report to the Director of the Department of Health Services. The Director of this Office will be advised by a Permanent Steering Committee with broad membership from County departments working in collaboration with working groups established by the District Attorney. It includes representatives from the offices of the Sheriff, the Fire Chief, the Chief Executive, the Superior Court, the Public Defender, the Alternate Public Defender, Probation, the District Attorney, Mental Health, Public Health, and Health Services.

The Office will oversee Countywide diversion efforts including a system of integrated mental, physical and public health care services and supportive housing for those at risk of homelessness who are redirected from the criminal justice system or re-entering the community after incarceration. For purposes of this Office's jurisdiction, the expectation is for diversion to seamlessly occur across "sequential intercept" points within the criminal justice system. Such

intercept points include initial contact with law enforcement or other first responders, involvement with the criminal court system, incarceration, or post-release from incarceration.

The Office was allocated an initial Supplemental Budget of \$74.5 million to be spent 40 percent on housing; 50 percent for diversion and anti-recidivism programs; and 10 percent for administration. The Board of Supervisors directed that future budget allocations be a part of the annual budget process. On September 1, 2015, the Board of Supervisors also directed that the Office distribute funding so at least 1,000 individuals would be diverted across all intercept points within the criminal justice system.

The Criminal Justice Mental Health Advisory Board report of August 2015 concluded that, even with increased opportunities for diversion from a jail environment, there will still be a need for mental health treatment in jails, and that diversion efforts can reduce, but will not eliminate, the need for the County to operate detention facilities. In light of the County's diversion efforts, the Board of Supervisors directed that, for purposes of ongoing study and evaluation in the environmental review process, the maximum size of the proposed women's detention center at Mira Loma in Lancaster would remain at 1,604 beds. In addition, the Board of Supervisors reduced the maximum proposed size by approximately 1,000 beds, for purposes of the environmental review of a separate proposed treatment and detention center addressing needs of incarcerated men and women with mental illness and/or substance use disorders at the site of the current Men's Central Jail in downtown Los Angeles. In summary, the Board of Supervisors has taken steps to reduce the number of people who are incarcerated in Los Angeles County.

Regarding the commenter's concern about increased traffic, Section 4.13, Transportation and Traffic, estimates the trip generation of the Project, which includes all trip types (i.e., staff and employees, service, and inmate visitation trips) and discusses potential impacts related to Project-generated traffic. The analysis indicates that an increase in traffic volumes would not significantly impact local intersections (intersections would still operate at Level of Service D or better), or alternative transportation (Metrolink trains or Antelope Valley Transit Authority [AVTA] bus service), and impacts on California Department of Transportation (Caltrans) facilities would be less than significant. As discussed on page 4.13-23 and 4.13-24, the existing transit services in the area will adequately accommodate the increase of Project-generated transit trips. No mitigation is required for short-term construction or long-term operation traffic impacts because they have been determined to be less than significant without mitigation.

This comment generally alleges that the Project will degrade Los Angeles' natural resources. The Draft EIR for the proposed Project has been prepared in accordance with the California Environmental Quality Act (CEQA, *California Public Resources Code*, Sections 21000 et seq.) and the State CEQA Guidelines (14 *California Code of Regulations* [CCR]), and addresses the potential direct, indirect, and cumulative impacts of the Project on all environmental issue areas. Section 5.0, Project Alternatives, was prepared in accordance with Sections 15126.6(a) through 15126.6(f) of the State CEQA Guidelines. As demonstrated throughout the Draft EIR, all potentially significant impacts have been reduced to levels that are less than significant through the identified mitigation measures, and no significant unavoidable environmental impacts would result from Project implementation.

The Draft EIR acknowledges that increased driving distances would be required for some families with the Project due to the location of the site in relation to the Century Regional Detention Facility (CRDF) in Lynwood, which is closer to higher density urban areas near the City of Los Angeles. The County is aware of the potential challenges the increased distance may pose for some visiting family members, while for other visiting family members from the Lancaster and other County areas, the Project location will be closer to their homes than the current women's jail in Lynwood.

As demonstrated on page 3-4, in Section 3.0, Project Description, the Board of Supervisors directed the establishment of an Advisory Board (now called the Gender Responsive Advisory Committee) that will report to the Board of Supervisors on specific programmatic and operational issues. The Advisory Committee has already begun to organize its meetings with a membership including representatives of County staff, outside agencies, advocates, organizations, individuals with incarceration experience, and representatives with expertise in reducing recidivism of female inmates. As part of its charge, the Advisory Committee is tasked with reviewing the program model for the proposed MLWDC Project to ensure that it is evidence-based in reducing recidivism; evaluating strategies to reduce negative impacts of operating the proposed MLWDC away from the downtown Los Angeles area, including contract transportation for visitors, video visiting for attorney consultation; and reviewing national best practices for visiting and family reunification.

The EIR for the MLWDC has been prepared and processed in accordance with CEQA and the State CEQA Guidelines. As demonstrated throughout the Draft EIR, all potentially significant impacts have been reduced to levels that are less than significant through the identified mitigation measures, and no significant unavoidable environmental impacts would result from Project implementation.

Regarding the commenter's concerns about alternatives to jails, the purpose of and need for the Project is described in detail in Section 3.1, Project Background, of the Draft EIR. That section provides information regarding the County's existing detention facilities, relevant regulatory mandates, and studies analyzing future facility needs, including for housing of female inmates. The Draft EIR Section 5.0, Project Alternatives, was prepared in accordance with Sections 15126.6(a) through 15126.6(f) of the State CEQA Guidelines and adequately considers alternatives to the proposed Project. Out-of-custody alternatives were not required to be analyzed in the Draft EIR beyond the No Project alternative analyses and they would not be able to achieve the Project's primary goal.

The proposed jail planning is set in the context of the County's other programmatic and financial support of diversion from incarceration. The County has a concurrent focus on diversion from incarceration as it considers this Project. Therefore, the proposed Project is consistent with the Board of Supervisor's consideration of policy issues addressing alternative approaches to incarceration, including community based alternatives, diversion, bail/bond reform, and other jail population reduction measures, as discussed above at the beginning of this response.

Subject: Mira Loma Women's Detention Center (MLDC) Project

Attn: County of LA CEO

Let it be known that I am completely and unequivocally opposed to the MLDC expansion to provide 1,604 beds for low- to medium security female inmates. } Courtney-1

I do not want my taxpayer dollars spent on an incarceration facility to warehouse women. What these women likely need much more is education, career training, counseling, and learning resources in a constructive and supportive environment, rather than a prison. } Courtney-2

My organization promotes community and family values. Many of these women have children who need their mother. Spend our taxpayer money on giving these women the tools so they can reunite with their families. } Courtney-3

Sincerely,
Craig Courtney
Conservatives for Social Change

Craig Courtney (February 17, 2016)

Courtney-1

This introductory comment expresses strong opposition to the proposed project and relates to the merits of the proposed Project and not the environmental analysis included in the Draft Environmental Impact Report (EIR) or the environmental impacts of the Project. This Final EIR, including all comments submitted to the County on the Draft EIR, will be provided to the County of Los Angeles Board of Supervisors. Therefore, your concerns will be presented directly to the decision makers prior to consideration of Project approval.

Courtney-2

The purpose of and need for the Project is described in detail in Section 3.1, Project Background, of the Draft EIR. That section provides information regarding the County's existing detention facilities, relevant regulatory mandates, and studies analyzing future facility needs, including for housing of female inmates.

The Draft EIR addresses the goal of the project to provide education and training in a supportive environment for eligible low to moderate security level women inmates to reduce recidivism. Section 3.0, Project Description, of the Draft EIR states that the Project will offer general education classes, computer training, general and vocational career technical education, college courses, career counseling, a learning resource center, a library and computer labs, culinary classes, and indoor/outdoor recreation for inmates. Other services include religious services, counseling services, and community transition services.

Course selections will be determined based on their needs for specific services and students' interest levels. Courses will be offered during three blocks of time each weekday (morning, afternoon, and evening), providing opportunities for inmates to be enrolled in multiple courses. Programs are also divided into three categories based on program intensity: all-day, half-day, and evening programs. Examples of all-day programs (morning and afternoon) include culinary arts programs, cosmetology programs, and Prisoner Assisted Community Enhancement (PACE). Examples of half-day programs (morning or afternoon) include small engine repair, animal grooming/training, social media management and marketing/office assistant, automotive detailing, windshield and headlight repair, and recycling. Examples of evening programs include computer coding, small business entrepreneurship, community college, Associate of Arts Degree, and General Education. Other programs include prenatal programs, volunteer programs, peer mentoring, physical education, dance, arts and crafts, a commissary program, and book clubs.

Courtney-3

This comment relates to the merits of the proposed Project, and not the environmental analysis included in the Draft EIR or the environmental impacts of the Project. This Final EIR, including all comments submitted to the County on the Draft EIR, will be provided to the County of Los Angeles Board of Supervisors. Therefore, your concerns will be presented directly to the decision makers prior to consideration of Project approval.

The Board of Supervisors has addressed the importance of education programming and family reunification goals for women inmates at the proposed project. As stated in the Project Objectives in Section 3.0, Project Description, the MLWDC Project would prioritize the on-site integration of gender-responsive female inmate education, treatment, and vocational training to reduce female inmate recidivism. The Project would reduce recidivism through programming and development

of a women's detention facility at a site with sufficient space to accommodate both campus-style inmate housing and support facilities for education and vocational training, implementing the best practices of Education Based Incarceration (EBI). Therefore, contrary to the commenter's concern that inmates and their families are "being treated as disposable", the proposed MLWDC Project would prioritize cost-effective therapeutic and rehabilitative programs and promote release-readiness and community reintegration in order to reduce recidivism.

Subject: Attn: Mira Loma Women's Jail Environmental Impact Report

Dear LA County Chief Exec Office and Board of Supervisors,

Dear Sir or Madam,

I ask that you take my comment into consideration on the Draft Environmental Impact Report (EIR) regarding the proposed new Mira Loma Jail released on November 9th.

I am extremely concerned that a new LA county jail is being considered in Lancaster on a site that is a known "hazardous waste site".

In addition there are two underground storage tanks that have not past the leak detection tests, this would mean there could be contamination of soil and groundwater, and a high risk of exposure to contaminated soil and ground since 44% of the project site will be "outdoor pervious area".

This puts everyone at risk: prisoners, employes and visitors at the jail, others in custody of the County of Los Angeles etc all extreme health risk. Plans for water usage and storage when proposing to introduce thousands of new prisoners as well as hundreds of employees are inadequate at mitigating the strain to the environment and current residents.

In addition to that, this area is a likely hot spot for "Valley Fever", the fungal disease that can result in death.

If the jail proposal moves forward, during construction local residents would be at increased risk due to displacement of dry soils. After completion, prisoners at the jail would be at great risk for this disease, particularly those with already compromised immune systems.

So if a jail is built on this site in spite of all these KNOWN environmental hazards, people will very likely suffer health problems in the future. This could make LA County vulnerable to being sued for medical damages.

For the above reasons, the proposed new Mira Loma Jail should be rejected and the Draft EIR must not be approved.

Regarding the commenter's concern about hazardous materials, the Project site is listed in government databases due to past hazardous material uses. However, the Project site was never operated as a site that accepted hazardous wastes for disposal. The Project site is on the list of Leaking Underground Storage Tanks (LUST) Sites, but the leaking underground storage tanks have been removed and the affected area cleaned up. The County Department of Public Works oversaw the remediation and issued the "no further action" letter. The California Department of Toxic Substances Control (DTSC) lists the Polaris Flight Academy with a status of "inactive-needs evaluation". As part of the environmental assessment conducted for the Project, soil borings collected in the area of the possible former location of the airstrip did not detect any contaminants that would require further action (Converse 2015). Thus, the listing of the site in government databases was based on past uses that no longer pose hazards.

As part of the environmental analysis for the Draft Environmental Impact Report (EIR), a Phase I Environmental Site Assessment (ESA) has been prepared that reviewed past and current uses and site conditions and identified Recognized Environmental Concerns (RECs) on the Project site and surrounding area. The Phase I ESA is provided in Appendix E-1 of the Draft EIR. Subsequent to the Phase I ESA, a Phase II ESA was prepared that included soil sampling to determine if soil contamination is present on the site. The Phase II ESA is provided in Appendix E-3 of the Draft EIR. In addition, an Asbestos and Lead Based Paint Survey Report was completed to identify the building components that contained asbestos and lead-based paint. The Asbestos and Lead Based Paint Survey Report is provided in Appendix E-2 of the Draft EIR. These reports are summarized in Section 4.7, Hazards and Hazardous Materials of the Draft EIR.

The Project must comply with existing regulatory requirements (RRs) for the proper handling of hazardous wastes, including transportation, treatment, storage, and disposal; repair and/or removal of underground storage tanks based on applicable standards; and practices that would protect the demolition and construction crews from asbestos and lead exposure. In addition, the Project must incorporate mitigation measures (MMs) for the handling of suspected asbestos-containing materials and lead-based paint; an Operations and Maintenance Plan for regular inspection of any asbestos-containing materials; and testing and repair of underground storage tanks prior to use. Thus, existing hazardous materials and wastes would be removed from the Project site and future hazardous materials use would comply with applicable regulations to prevent hazards to future inmates. In summary, compliance with RRs and implementation of MMs set forth in the Draft EIR would prevent public health and safety hazards to inmates, employees, visitors and other individuals at the Project site.

Crotty-2

As stated on page 4.7-19 of the Draft EIR, the existing fueling station is located outside the Project site boundary, but may be used by the Project. This fueling station has two USTs that previously failed leak detection tests. As shown in the California Environmental Reporting System (CERS) database and the Monitoring System Certification by AW Associates in Appendix E to this Final EIR, the tank permits were updated in 2015 and have passed subsequent leak detection tests and are now in compliance. Soil testing also indicated there is no soil contamination near the USTs (Converse 2016b). MM HAZ-3 requires the testing and repair, as necessary, of the USTs prior to the use of the existing fueling station by the Project.

The Phase II ESA included 14 soil borings to depths of 8 feet below the ground surface (bgs). All soil samples from two and four feet bgs were analyzed for Total Petroleum Hydrocarbons (TPH), Volatile Organic Compounds (VOCs), and metals in accordance with U.S. Environmental Protection Agency (USEPA) Test Methods 8015M, 8260B, and 6010B/7471A, respectively. As stated on page 4.7-18 of the Draft EIR, the soil analyses indicate that no VOCs are present in the soil samples. All reported metals, except arsenic, were found to be at levels below the California Human Health Screening Levels (CHHSLs) for both residential and commercial/industrial land. The arsenic levels are below the background level of the 12 milligrams per kilogram (mg/kg) level that the DTSC has determined to be naturally occurring background levels at school sites in California. The findings of the Phase II ESA indicated that there is no soil contamination on the site (Converse 2015). With no contamination on near-surface soils, it is unlikely that groundwater contamination would be present, considering that groundwater levels in the Antelope Valley Groundwater Basin in 2006 were estimated at 120 feet bgs at the Project site (RWMG 2013).

The Draft EIR concludes that the Project's impacts to hazardous materials would be less than significant because there is no soil or groundwater contamination on the Project site; because existing hazardous materials in various buildings would be removed, transported, and disposed of in accordance with existing regulations; because MMs would be implemented for the handling of remaining materials that may contain asbestos and lead-based paint and these MMs would be implemented for the reuse of other facilities near the Project site; and because the use, storage, handling, transport and disposal of hazardous materials during operation of the MLWDC would be made in compliance with existing regulations. Therefore, female inmates, including pregnant inmates and their unborn children, would not be exposed to health hazards or lifelong health effects from their stay at the MLWDC.

The Project's projected water usage is addressed in Section 4.14, Utilities and Service Systems. The Project's estimated water demand is less than the 250 acre-feet per year (afy) threshold established by the California Department of Water Resources (DWR) for requiring a Water Supply Assessment (WSA) for the proposed Project under legislation commonly referred to as Senate Bill (SB) 610, as described further in Section 4.14 of the Draft EIR. Nonetheless, to provide informed decision-making, a WSA was prepared for the Project and provided in Appendix G-2 of the Draft EIR. The WSA is also summarized in Section 4.14. As required under SB 610, the WSA must include an evaluation of the sufficiency of the water supplies available to the water supplier to meet existing and anticipated future demands (including the demand associated with the project) over a 20-year horizon that includes normal, single-dry, and multiple-dry years. The multiple-dry year scenario would represent drought conditions. With implementation of MM UTL-1, the Los Angeles County Waterworks District No. 40 (LACWWD 40), which will be the Project's water supplier, would have the water supply needed to serve the Project. MM UTL-1 requires that the County sign the New Water Supply Entitlement Acquisition Agreement with LACWWD 40 and pay a deposit of \$10,000 per acre-foot of annual water demand from the Project for the acquisition of additional water supplies from Antelope Valley – East Kern Water Agency (AVEK) to serve the Project.

With implementation of MM UTL-1, Project-related estimates for water supply and demand, as provided in the WSA, show that water supply is available to serve the Project during the average year, single-dry year, and multiple-dry years. The WSA concludes the information on record indicates a sufficient and reliable water supply for LACWWD 40, now and into the future, including a sufficient water supply for the Project (Psomas 2015). These supplies are also sufficient to provide for existing demands and demands from overall growth in the LACWWD 40 service area at the rate projected in the 2010 Integrated Regional Urban Water management Plan (IRUWMP) (LACWWD 40 2011).

Crotty-3

Coccidioidomycosis, also known as Valley Fever, and its potential impact on potential future inmates and County staff is discussed in Section 4.2, Air Quality. A summary of hazards associated with the fungus is provided in the Draft EIR and includes summaries of trends related to Valley Fever in Los Angeles County, as inventoried and reported by the Los Angeles County Department of Public Health (LACDPH), which was consulted during the preparation of the Draft EIR.

As stated in RR AIR-2, the Project will be constructed in compliance with the Department of Health – Infection Control Policy Guidelines Procedure No. 918.01. Policy 918 is intended to prevent the spread of diseases that may be caused by construction-induced airborne pollution in susceptible individuals (patients, staff, and the public) in Department of Health Services (DHS) facilities. The protocols and requirements include the designation of an Infection Control Coordinator who must review and approve infection-control plans for new construction or renovation projects to ensure a safe environment. These infection-control plans must include infection-control measures to contain dust, debris, and other elements and to protect the patients, employees, and visitors in this environment. The Infection Control Coordinator has independent authority to stop construction-related activities immediately when the public may be adversely affected by infection-control hazards generated during construction-related activities and when the infection-control precautions and/or engineering controls are inadequate to contain the hazard. As such, the Draft EIR states that exposure to Valley Fever during construction activities would be the same as exposure to dust, and, thus, should follow the requirements for the mitigation of dust. Impacts would be less than significant, and no mitigation is required.

Section 4.2, Air Quality, acknowledges that the future inmate population has the potential to be exposed to dust generated from soils within the Antelope Valley, which have the potential to contain *Coccidioides* spores (i.e., the fungus that causes Valley Fever). As discussed in Section 3.0, Project Description, of the Draft EIR, according to the Los Angeles County Sheriff's Department, Assembly Bill (AB) 109 female inmates are serving an average of 423 days in custody from date of sentencing to date of release, while non-AB 109 female inmates serve an average of 107 days in custody. Therefore, the length of time that inmates would be living at the MLWDC is temporary, and is not equivalent to a permanent living circumstance or the longer sentences in state prisons that house higher-security inmates.

The Draft EIR summarizes the LACDPH *2013 Annual Morbidity Report*, which presents the recent trends related to Valley Fever in Los Angeles County, including and increasing incidence rate for reported coccidioidomycosis cases within the last ten years. However, the overall incidence rate in the Antelope Valley was not determined to warrant changes in the County's protocol for disease prevention, notwithstanding the fact that the County health and public health officials are well educated on the condition; are familiar with its incidence in the County and elsewhere in the state; and are involved in research and education on the subject of Valley Fever.

The LACDPH has not identified the previous U.S. Immigration and Customs Enforcement (ICE) detainee population at the Mira Loma Detention Center (MLDC), the future inmate population at the MLWDC, or earlier occupants at the High Desert Health System (HDHS) Multi-Ambulatory Care Center (MACC) (the adjacent hospital facility, which has relocated in Lancaster) as requiring the implementation of health screening protocols or other measures to address potential Valley Fever exposure.

Also, as demonstrated in Section 4.2, Air Quality, the California Department of Corrections and Rehabilitation (CDCR) has not identified the Lancaster area as being a geographic location that

requires screening or interventions for the State prison population with regard to exposure to Valley Fever (CDCR 2013). As discussed with the Sheriff's Department staff for the preparation of the Draft EIR, the operation of the MLWDC will follow standard Sheriff's Department procedures for medical care and prevention with regard to health care for inmates in general, and Valley Fever specifically, and the Sheriff's Department will continue to coordinate with the LACDPH (Masis 2015). The LACDPH is the designated County agency with the mandate to protect health, prevent disease, and promote the health and well-being of all persons within Los Angeles County. As such, any future changes in LACDPH policies that may be made regarding Valley Fever for inmate populations will be implemented, as applicable, throughout the County jail system.

Because the future inmate population's exposure to disturbed soils would be limited to gardening activities, PDF AIR-3 in Section 4.2, Air Quality, states that the Project will import gardening soils from outside of the Antelope Valley and would be used in raised planting beds to remove gardening in native soil as a potential source of exposure to Valley Fever spores. Further, outdoor recreational areas would be covered with landscaping, turf grass, gravel or landscaping/wood chip ground cover that would minimize the opportunity for soils to become airborne.

The Antelope Valley has not been identified by the LACDPH, the Antelope Valley Air Quality Management District (AVAQMD), or any other governmental health agency as a region that should be avoided by the elderly, women, children, health-compromised individuals, or by any specific ethnic groups. The Antelope Valley includes the major population centers of the cities of Lancaster and Palmdale, which have an estimated 2014 combined population of approximately 314,902 people. This portion of the Antelope Valley includes a diverse population of residents that includes many individuals that could be considered to be at higher risk of complications due to infection from Valley Fever spores. As stated in Section 4.2, Air Quality, persons at the highest risk of developing disseminated Valley Fever include the very young (under 1 year old); adults over 60 years; immunocompromised individuals; people with diabetes; women in the third trimester of pregnancy; and certain ethnic groups, including African-Americans and Filipinos.

The demographics of the two cities include approximately 158,605 females (50.4 percent) and 156,297 males (49.6 percent) with a median age of approximately 30.7 years old. The racial/ethnic composition of the area is approximately 47 percent Latino, 29 percent white, 17 percent African American, and 4 percent Asian (U.S. Census Bureau 2016). As such, the temporary presence of a female inmate population into the Antelope Valley would not introduce a new or unusual demographic into the area that is not already present in the existing population of the region.

The MLWDC property is not located in an area determined to be hazardous to the health of local residents or visitors to the region. The Draft EIR concludes that the potential future inmate population's temporary placement into the Antelope Valley, which includes the inmates' participation in all indoor and outdoor activities at the MLWDC, would not constitute placement into a hazardous existing environmental setting that would require mitigation. Additionally, the operation of the proposed Project would not increase the prevalence of Valley Fever spores or otherwise exacerbate an existing environmental condition.

Crotty-4

Please refer to responses Crotty-1 and Crotty-2 above.

Crotty-5

This Final EIR, including all comments submitted to the County on the Draft EIR, will be provided to the County of Los Angeles Board of Supervisors. Therefore, your concerns will be presented directly to the decision makers prior to consideration of Project approval.

Coccidioidomycosis, also known as Valley Fever, and its potential impact on potential future inmates and County staff is discussed in Section 4.2, Air Quality. A summary of hazards associated with the *Coccidioides* spores (i.e., the fungus that causes Valley Fever) is provided, as well as summaries of trends related to Valley Fever in Los Angeles County, as inventoried and reported by the Los Angeles County Department of Public Health (LACDPH), which was consulted during the preparation of the Draft Environmental Impact Report (EIR).

The MLWDC property is not located in an area determined to be hazardous to the health of local residents or visitors to the region. The Draft EIR concludes that the potential future inmate population's temporary placement into the Antelope Valley, which includes the inmate's participation in all indoor and outdoor activities at the MLWDC, would not constitute placement into a hazardous existing environmental setting that would require mitigation. Additionally, the operation of the proposed Project would not increase the prevalence of Valley Fever spores or otherwise exacerbate an existing environmental condition.

In addition, please see the more detailed response on this issue in the response to Form Letter-5 relating to Valley Fever, which is included in Section 2.3.1 of this Final EIR.

Cristo-2

This comment relates to the merits of the proposed Project, and not the environmental analysis included in the Draft Environmental Impact Report (EIR) or the environmental impacts of the Project. This Final EIR, including all comments submitted to the County on the Draft EIR, will be provided to the County of Los Angeles Board of Supervisors. Therefore, your concerns will be presented directly to the decision makers prior to consideration of Project approval

MIRA LOMA WOMEN'S DETENTION CENTER PROJECT
PUBLIC MEETING- DECEMBER 8, 2015
6:00 TO 8:00 PM

COMMENTS:

What are your specific plans to deal with the incarcerated women in your prison who are pregnant and/or mothers? How will you ensure that these women will have present, positive relationships with their children? Do you condone shackling during child birth? How can you ensure these women will have safe pregnancies?

de Hinojosa-1

de Hinojosa-2

de Hinojosa-3

NAME: ALANA DE HINOJOSA

ADDRESS: _____

E-MAIL: _____

Alana de Hinojosa

de Hinojosa-1

The proposed MLWDC will only house female inmates, so some of them will be mothers or pregnant, as is the case for the current female inmate population housed primarily at the facility in Lynwood. The Sheriff's Department has experience with inmate pregnancies and with incarcerated mothers. Care is provided by licensed professionals and consistent with modern medical standards of care. As discussed in Section 3.0, Project Description of the Draft EIR, the MLWDC will provide medical services, including a clinic staffed with licensed medical personnel 24 hours per day, 7 days per week. On-site medical practitioners will provide obstetrics, gynecological, dental, orthopedic, and dermatology services. Radiology and laboratory services will be available for diagnostic testing. The medical clinic will have multipurpose exam rooms for routine medical examinations and urgent care services.

An on-site pharmacy will be available for medication dispensing. Licensed nursing personnel will provide nurse clinics, sick call, and preventative medical care education. Rooms equipped for tele-medicine and tele-psychiatry will be available to augment on-site services. Mental health clinicians, social workers, and psychologists and psychiatrists will also be available.

Medical situations will be evaluated and handled by on-site staff or transported to the Inmate Reception Center (IRC) in downtown Los Angeles for further evaluation by the appropriate medical/mental health clinician. In the event that an inmate's medical conditions warrant a higher level of care, the medical staff will facilitate transportation to area hospitals. As discussed in Section 3.0, Project Description, of the Draft EIR, female inmates with special medical and/or mental health needs will not be housed at the MLWDC.

de Hinojosa-2

The Sheriff's Department cannot ensure positive relationships between mothers and children. The Project's goal is to provide detention facilities for low- to medium-security level female inmates that meet modern correctional standards and that prioritize the on-site integration of gender-responsive female inmate education, treatment, and vocational training. This goal focuses on providing a secure detention facility with cost-effective therapeutic and rehabilitative programs to meet needs of eligible female inmates in order to reduce recidivism. The reduction of recidivism supports families and communities.

The Draft EIR acknowledges that increased driving distances would be required for some families with the Project due to the location of the site in relation to the Century Regional Detention Facility (CRDF) in Lynwood, which is closer to higher density urban areas near the City of Los Angeles. The County is aware of the potential challenges this increased distance may pose for some visiting family members, while for other visiting family members from the Lancaster and other County areas, the Project location will be closer to their homes than the current women's jail in Lynwood. As demonstrated on page 3-4, in Section 3.0, Project Description, the Board of Supervisors directed the establishment of an Advisory Board (now called the Gender Responsive Advisory Committee) that will report to the Board of Supervisors on specific programmatic and operational issues. The Advisory Committee has already begun to organize its meetings with a membership including representatives of County staff, outside agencies, advocates, organizations, individuals with incarceration experience, and representatives with expertise in reducing recidivism of female inmates. As part of its charge, the Advisory Committee is tasked with reviewing the program model for the proposed MLWDC Project to ensure that it is evidence-based in reducing recidivism; evaluating strategies to reduce negative impacts of operating the

proposed MLWDC away from the downtown Los Angeles area, including contract transportation for visitors, video visiting for attorney consultation; and reviewing national best practices for visiting and family reunification.

Importantly, the proposed MLWDC will accommodate various forms of visitation, including traditional non-contact visiting, telephone access, video visiting, and contact visiting. Contact visits refer to opportunities for inmates and visitors to interact face to face, allowing for physical contact. Non-contact visits refer to visitations where the inmate and the visitor are separated by a glass barrier, and no physical contact is allowed. Video visits refer to long-distance visitation that can occur through a video conferencing program, allowing the inmate and the visitor to hear and see each other via the computer and screen.

de Hinojosa-3

Regarding medical care during pregnancy, please refer to the response for de Hinojosa-1.

The Sheriff's Department has policies and procedures in place regarding the treatment of pregnant female inmates and those in labor, in compliance with the California Penal Code. Specifically, California Penal Code Section 6030(f) states that at no time shall a woman who is in labor be shackled by the wrists, ankles, or both including during transport to a hospital, during delivery, and while in recovery after giving birth, except as provided in Section 5007.7 (which states that an inmate may not be shackled after they are declared to be in active labor, "...unless deemed necessary for the safety and security of the inmate, the staff, and the public").

This Final EIR, including all comments submitted to the County on the Draft EIR, will be provided to the County of Los Angeles Board of Supervisors. Therefore, your concerns will be presented directly to the decision makers prior to consideration of Project approval.

MIRA LOMA WOMEN'S DETENTION CENTER PROJECT
PUBLIC MEETING- DECEMBER 8, 2015
6:00 TO 8:00 PM

COMMENTS:

Dear Mr. Diaz - I am writing to express my vehement opposition to the construction of another women's jail in LA county. The allocation of funds would be far better utilized or if diverted to community-based programs that prevent incarceration or vice alternative programs to prison altogether. Existing high recidivism rates will not be combated by more prisons - only more services can address the mental, social-emotional, educational, & vocational needs of at-risk women. In addition, resources must be funnelled into existing women prisons to ~~provide~~ provide robust rehabilitative & educational services. Please stop putting band-aids (expensive ones) on wounds that require attention and care.

Regarding the commenter's concern about the building of a new jail and the associated costs, although the Project site has been unoccupied since 2012 as discussed in Section 2.0, Environmental Setting, the Project site has generally been in operation and providing various detention/jail functions since 1945-1946, when the California Youth Authority began to run a vocational school for juvenile offenders at the site. The MLWDC Project proposes the adaptive reuse, renovation, and expansion of the majority of the buildings at the MLDC, which is an existing County asset. The redevelopment of the property would avoid the costs associated with constructing a new facility.

The Project will offer general education classes, computer training, general and vocational career technical education, college courses, career counseling, a learning resource center, a library and computer labs, culinary classes, and indoor/outdoor recreation for inmates. Other services include religious services, counseling services, and community transition services. Participation in classes, training, and other activities will be scheduled for each inmate according to individual evaluation, interests, needs, and availability.

Course selections will be determined based on a student's needs for specific services, and students' interest levels. Courses will be offered during three blocks of time each weekday (morning, afternoon, and evening), providing opportunities for inmates to be enrolled in multiple courses. Programs are also divided into three categories based on program intensity: all-day, half-day, and evening programs. Examples of all-day programs (morning and afternoon) include culinary arts programs, cosmetology programs, and Prisoner Assisted Community Enhancement (PACE). Examples of half-day programs (morning or afternoon) include: small engine repair; animal grooming/training; social media management and marketing/office assistant; automotive detailing, windshield and headlight repair; and recycling. Examples of evening programs include: computer coding; small business entrepreneurship; community college; Associate of Arts Degree; and General Education. Other programs include prenatal programs, volunteer programs; peer mentoring; physical education; dance; arts and crafts; a commissary program; and book clubs.

In addition, the Board of Supervisors has adopted numerous recent actions to reduce the number of people who are incarcerated in Los Angeles County, particularly those with mental illness and/or substance use disorders. The Board of Supervisors' actions relating to diversion from the criminal justice system to reduce the need for incarceration, are based in part on their consideration of the August 4, 2015 District Attorney's report of the Criminal Justice Mental Health Advisory Board in a document entitled "Mental Health Advisory Report: A Blueprint for Change – Providing Treatment, Promoting Rehabilitation and Reducing Recidivism: An Initiative to Develop a Comprehensive Plan for Los Angeles County".

The members of the District Attorney's Advisory Board were the Sheriff; the Fire Chief; the Directors of the Departments of Mental Health, Health Services, Public Health, Veteran's Affairs, and Public Social Services; the Public Defender, and the Executive Director of the Countywide Criminal Justice Coordination Committee. All Advisory Board members participated in the Countywide assessment of services and recommendations to provide for comprehensive mental health diversion for each stage of the criminal justice continuum, from first responders to community re-entry and support. This report summarized the range of diversion programs already existing in the County and analyzed the need for additional mental health and substance abuse diversion services for each stage along the criminal justice continuum. The County of Los Angeles Chief Executive Office (CEO) has acknowledged that these recommendations recognize that

there are potential new efficiencies and cost avoidance by redirecting persons in need of physical, mental, and public health care services from the criminal justice system to appropriate care and treatment in lieu of incarceration.

On August 11, 2015 and September 1, 2015, in the context of determining potential capacity of proposed County jail facilities, and responding to treatment needs for the mentally ill or victims of substance use disorders, the Board directed an ordinance be prepared to establish an Office of Diversion and Re-Entry (Office) within the Department of Health Services. That ordinance was adopted, and the Office has been established pursuant to Section 2.76.600 of the Los Angeles County Code. For administrative oversight, the Board of Supervisors determined the Office will be a part of the Department of Health Services and the Director of the Office will report to the Director of the Department of Health Services. The Director of this Office will be advised by a Permanent Steering Committee with broad membership from County departments working in collaboration with working groups established by the District Attorney. It includes representatives from the Sheriff, Fire Chief, Chief Executive Office, Superior Court, Public Defender, Alternate Public Defender, Probation, District Attorney, Mental Health, Public Health and Health Services.

The Office will oversee Countywide diversion efforts including a system of integrated mental, physical and public health care services and supportive housing for those at risk of homelessness who are re-directed from the criminal justice system or re-entering the community after incarceration. For purposes of this Office's jurisdiction, the expectation is for diversion to seamlessly occur across "sequential intercept" points within the criminal justice system. Such intercept points include initial contact with law enforcement or other first responders, involvement with the criminal court system, incarceration, or post-release from incarceration.

The Office was allocated an initial Supplemental Budget of \$74.5 million to be spent 40 percent on housing; 50 percent for diversion and anti-recidivism programs; and 10 percent for administration. The Board of Supervisors directed that future budget allocations be a part of the annual budget process. On September 1, 2015, the Board of Supervisors also directed that the Office distribute funding so at least 1,000 individuals would be diverted across all intercept points within the criminal justice system.

The Criminal Justice Mental Health Advisory Board report of August 2015 concluded that even with increased opportunities for diversion from a jail environment, there will still be a need for mental health treatment in jails, and that diversion efforts can reduce, but will not eliminate, the need for the County to operate detention facilities. In light of the County's diversion efforts, the Board of Supervisors directed that, for purposes of on-going study and evaluation in the environmental review process, the maximum size of the proposed women's detention center at Mira Loma in Lancaster would remain at 1,604 beds. In addition the Board of Supervisors reduced the maximum proposed size by approximately 1,000 beds, for purposes of the environmental review of a separate proposed treatment and detention center addressing needs of incarcerated men and women with mental illness and/or substance use disorders at the site of the current Men's Central Jail in downtown Los Angeles. In summary, the Board of Supervisors has taken steps to reduce the number of people who are incarcerated in Los Angeles County.

This Final Environmental Impact Report (EIR), including all comments submitted to the County on the Draft EIR, will be provided to the County of Los Angeles Board of Supervisors. Therefore, your concerns will be presented directly to the decision makers prior to consideration of Project approval.

MIRA LOMA WOMEN'S DETENTION CENTER PROJECT
PUBLIC MEETING- DECEMBER 8, 2015
6:00 TO 8:00 PM

COMMENTS: As an anthropologist at USC, I know the crucial and ~~can~~ crucial role that women play in the life of their families and communities. Isolating ~~to~~ female felons in a proposed Lancaster site will further isolate and alienate these women as mothers and daughters from their community. ~~It~~ Also most imprisoned individuals come from impoverished communities and a location in Lancaster, without access to public transport ~~it~~ will generally affect women + their families.

Gajaweena-1

With respect to the concern raised about mothers being separated from their children and community, the purely social effects of a project are beyond the scope of CEQA analysis, which focuses on the proposal's effect on the physical environment. This Final Environmental Impact Report (EIR), including all comments submitted to the County on the Draft EIR, will be provided to the County of Los Angeles Board of Supervisors. Therefore, your concerns will be presented directly to the decision makers prior to consideration of Project approval.

The Draft Environmental Impact Report (EIR) acknowledges that increased driving distances would be required for some families with the Project due to the location of the site in relation to the Century Regional Detention Facility (CRDF) in Lynwood, which is closer to higher density urban areas near the City of Los Angeles. The County is aware of the potential challenges the increased distance may pose for some visiting family members, while for other visiting family members from the Lancaster and other County areas, the Project location will be closer to their homes than the current women's jail in Lynwood. As demonstrated on page 3-4, in Section 3.0, Project Description, the Board of Supervisors directed the establishment of an Advisory Board (now called the Gender Responsive Advisory Committee) that will report to the Board of Supervisors on specific programmatic and operational issues. The Advisory Committee has already begun to organize its meetings with a membership including representatives of County staff, outside agencies, advocates, organizations, individuals with incarceration experience, and representatives with expertise in reducing recidivism of female inmates. As part of its charge, the Advisory Committee is tasked with reviewing the program model for the proposed MLWDC Project to ensure that it is evidence-based in reducing recidivism; evaluating strategies to reduce negative impacts of operating the proposed MLWDC away from the downtown Los Angeles area, including contract transportation for visitors, video visiting for attorney consultation; and reviewing national best practices for visiting and family reunification.

Regarding the comment on access to public transportation, Section 4.13, Transportation and Traffic, of the Draft EIR discusses potential impacts related to public transportation (Metrolink trains and Antelope Valley Transit Authority [AVTA] bus service). As discussed on page 4.13-23 and 4.13-24, the existing transit services in the area will adequately accommodate the increase of Project-generated transit trips. The Project would not significantly impact alternative transportation and impacts would be less than significant.

Subject: Comments on the Draft EIR

To whom it may concern:

I am sending this email in regards to the Draft Environmental Impact Report for the Mira Loma Women's Dentention Center project.

I do not agree with the expansion of the Mira Loma prison as I believe the most effective way of rehabilitating incarcerated women is to have them released and receiving assistance outside prison. The educational services that are proposed in this project should be provided to ALL inmates regardless of expansion. Countless others are working on building better community solutions as opposed to better jails. Thanks for your time.

Gonzalez-

This Final EIR, including all comments submitted to the County on the Draft EIR, will be provided to the County of Los Angeles Board of Supervisors. Therefore, your concerns will be presented directly to the decision makers prior to consideration of Project approval.

The purpose of and need for the Project is described in detail in Section 3.1, Project Background, of the Draft EIR. That section provides information regarding the County's existing detention facilities, relevant regulatory mandates, and studies analyzing future facility needs, including for housing of female inmates.

Section 3.0, Project Description, of the Draft Environmental Impact Report (EIR) states that the Project will offer general education classes, computer training, general and vocational career technical education, college courses, career counseling, a learning resource center, a library and computer labs, culinary classes, and indoor/outdoor recreation for inmates. Other services include religious services, counseling services, and community transition services. Participation in classes, training, and other activities will be scheduled for each inmate according to individual evaluation, interests, needs, and availability.

Course selections will be determined based on their needs for specific services and students' interest levels. Courses will be offered during three blocks of time each weekday (morning, afternoon, and evening), providing opportunities for inmates to be enrolled in multiple courses. Programs are also divided into three categories based on program intensity: all-day, half-day, and evening programs. Examples of all-day programs (morning and afternoon) include culinary arts programs, cosmetology programs, and Prisoner Assisted Community Enhancement (PACE). Examples of half-day programs (morning or afternoon) include small engine repair, animal grooming/training, social media management and marketing/office assistant, automotive detailing, windshield and headlight repair, and recycling. Examples of evening programs include computer coding, small business entrepreneurship, community college, Associate of Arts Degree, and General Education. Other programs include prenatal programs, volunteer programs, peer mentoring, physical education, dance, arts and crafts, a commissary program, and book clubs.

The Board of Supervisors has adopted numerous recent actions to reduce the number of people who are incarcerated in Los Angeles County, particularly those with mental illness and/or substance use disorders. The Board of Supervisors' actions relating to diversion from the criminal justice system to reduce the need for incarceration are based in part on their consideration of the August 4, 2015, District Attorney's report of the Criminal Justice Mental Health Advisory Board in a document entitled "Mental Health Advisory Report: A Blueprint for Change – Providing Treatment, Promoting Rehabilitation and Reducing Recidivism: An Initiative to Develop a Comprehensive Plan for Los Angeles County".

The members of the District Attorney's Advisory Board were the Sheriff; the Fire Chief; the Directors of the Departments of Mental Health, Health Services, Public Health, Veteran's Affairs, and Public Social Services; the Public Defender; and the Executive Director of the Countywide Criminal Justice Coordination Committee. All Advisory Board members participated in the Countywide assessment of services and recommendations to provide for comprehensive mental health diversion for each stage of the criminal justice continuum, from first responders to community re-entry and support. This report summarized the range of diversion programs already existing in the County and analyzed the need for additional mental health and substance abuse diversion services for each stage along the criminal justice continuum. The County of Los Angeles

Chief Executive Office (CEO) has acknowledged that these recommendations recognize that there are potential new efficiencies and cost avoidance by redirecting persons in need of physical, mental, and public health care services from the criminal justice system to appropriate care and treatment in lieu of incarceration.

On August 11, 2015, and September 1, 2015, in the context of determining potential capacity of proposed County jail facilities and responding to treatment needs for the mentally ill or victims of substance use disorders, the Board directed an ordinance be prepared to establish an Office of Diversion and Re-Entry (Office) within the Department of Health Services. That ordinance was adopted, and the Office has been established pursuant to Section 2.76.600 of the Los Angeles County Code. For administrative oversight, the Board of Supervisors determined the Office will be a part of the Department of Health Services and the Director of the Office will report to the Director of the Department of Health Services. The Director of this Office will be advised by a Permanent Steering Committee with broad membership from County departments working in collaboration with working groups established by the District Attorney. It includes representatives from the offices of the Sheriff, the Fire Chief, the Chief Executive, the Superior Court, the Public Defender, the Alternate Public Defender, Probation, the District Attorney, Mental Health, Public Health, and Health Services.

The Office will oversee Countywide diversion efforts including a system of integrated mental, physical, and public health care services and supportive housing for those at risk of homelessness who are redirected from the criminal justice system or re-entering the community after incarceration. For purposes of this Office's jurisdiction, the expectation is for diversion to seamlessly occur across "sequential intercept" points within the criminal justice system. Such intercept points include initial contact with law enforcement or other first responders, involvement with the criminal court system, incarceration, or post-release from incarceration.

The Office was allocated an initial Supplemental Budget of \$74.5 million to be spent 40 percent on housing; 50 percent for diversion and anti-recidivism programs; and 10 percent for administration. The Board of Supervisors directed that future budget allocations be a part of the annual budget process. On September 1, 2015, the Board of Supervisors also directed that the Office distribute funding so at least 1,000 individuals would be diverted across all intercept points within the criminal justice system.

The Criminal Justice Mental Health Advisory Board report of August 2015 concluded that, even with increased opportunities for diversion from a jail environment, there will still be a need for mental health treatment in jails and that diversion efforts can reduce, but will not eliminate, the need for the County to operate detention facilities. In light of the County's diversion efforts, the Board of Supervisors directed that, for purposes of ongoing study and evaluation in the environmental review process, the maximum size of the proposed women's detention center at Mira Loma in Lancaster would remain at 1,604 beds. In addition the Board of Supervisors reduced the maximum proposed size by approximately 1,000 beds, for purposes of the environmental review of a separate proposed treatment and detention center addressing needs of incarcerated men and women with mental illness and/or substance use disorders at the site of the current Men's Central Jail in downtown Los Angeles.

MIRA LOMA WOMEN'S DETENTION CENTER PROJECT
PUBLIC MEETING- DECEMBER 8, 2015
6:00 TO 8:00 PM

COMMENTS:

AL MOVER LA CARCEL DE MUJERES HACIA EL DESIERTO USTEDES MISMOS VAN A SER UNA SOCIEDAD MAS VIOLENTA Y AGRESIVA YA QUE UCHOS DE SUS HIJOS DE ESAS MUJERES NO TENDRAN MAS OPORTUNIDAD DE VISITAS A SUS RESPECTIVOS FAMILIARES YA QUE SI SIENDO DE MUY AJOS RECURSOS SE LES DIFICULTA VISITARLES... CON ESA MEDIDA VE ESTAN HACIENDO MENOS PODRAN HACERLO. QUIEN HOY EN, YA PUEDE DARSE EL LUJO O PRIVILEGIO DE TOMAR UN DIA MINIMO DE TRABAJO? QUIEN PERDONA UNA FALTA EN A ESCUELA? QUIEN PERDONA UN DOLAR? MINIMO UN DOLAR PARA SUBIR AL TRANSPORTE O PAGAR BILES?

HOY HACEN PASAR A NUESTRA GENTESITA UN INFIERNO VOTA: PERO YO NO QUIERO QUE USTEDES PASEN LA ETERNIDAD AHI!

Gutierrez-2

Josefina Gutierrez

Gutierrez-1

English translation of Spanish comment:

By moving the women's detention center to the desert, you will create a more violent and aggressive society since many of those women's children will not have the opportunity to visit their family, since if they have a very low income, it will be difficult for them to visit them... With that action, less people will be able to do that. Who has nowadays the luxury or privilege of taking a day off? Who allows for an absence from school? Who has a dollar to spare? Who has a dollar at least to pay for transport or to pay bills?

English Response:

The comment alleges creation of "a more violent and aggressive society" and relates to the merits of the proposed Project, and not the environmental analysis included in the Draft EIR or the environmental impacts of the Project. Purely social effects of a project are beyond the scope of CEQA analysis, which focuses on the proposal's effect on the physical environment.

The proposed MLWDC will accommodate various forms of visitation, including traditional non-contact visiting, telephone access, video visiting, and contact visiting. Contact visits refer to opportunities for inmates and visitors to interact face to face, allowing for physical contact. Non-contact visits refer to visitations where the inmate and the visitor are separated by a glass barrier, and no physical contact is allowed. Video visits refer to long-distance visitation that can occur through a video conferencing program, allowing the inmate and the visitor to hear and see each other via the computer and screen. Therefore, video visiting is a component of the Project's visiting program.

The Draft EIR acknowledges that increased driving distances would be required for some families with the Project due to the location of the site in relation to the CRDF in Lynwood, which is closer to higher density urban areas near the City of Los Angeles. The County is aware of the potential challenges this increased distance may pose for some visiting family members, while for other visiting family members from the Lancaster and other County areas, the Project location will be closer to their homes than the current women's jail in Lynwood. As demonstrated on page 3-4, in Section 3.0, Project Description, the Board of Supervisors directed the establishment of an Advisory Board (now called the Gender Responsive Advisory Committee) that will report to the Board of Supervisors on specific programmatic and operational issues. The Advisory Committee has already begun to organize its meetings with a membership including representatives of County staff, outside agencies, advocates, organizations, individuals with incarceration experience, and representatives with expertise in reducing recidivism of female inmates. As part of its charge, the Advisory Committee is tasked with reviewing the program model for the proposed MLWDC Project to ensure that it is evidence-based in reducing recidivism; evaluating strategies to reduce negative impacts of operating the proposed MLWDC away from the downtown Los Angeles area, including contract transportation for visitors, video visiting for attorney consultation; and reviewing national best practices for visiting and family reunification.

Spanish translation of English response:

El comentario alega la creación de "una sociedad más violenta y agresiva" y relaciona los méritos del Proyecto propuesto y no el análisis ambiental incluido en el EIR Borrador o los impactos ambientales del Proyecto. Los efectos puramente sociales de un proyecto están más allá del

alcance del análisis de la CEQA, que se enfoca en el efecto de la propuesta sobre el ambiente físico.

El MLWDC propuesto brindará varias formas de visitas, que incluyen la tradicional visita sin contacto, acceso por teléfono, visitas por videoconferencia y visitas con contacto. Las visitas con contacto hacen referencia a oportunidades para que los internos y los visitantes interactúen cara a cara, permitiéndoles el contacto físico. Las visitas sin contacto hacen referencia a las visitas en las que el interno y el visitante están separados por una barrera de vidrio y no se permite ningún tipo de contacto físico. Las visitas por videoconferencia hacen referencia a visitas a larga distancia que pueden realizarse a través de un programa de videoconferencia, el cual permite al interno y al visitante escucharse y verse mediante la computadora y la pantalla. Por lo tanto, las visitas por videoconferencia son un componente del programa de visitas del Proyecto.

El EIR Borrador reconoce que con el Proyecto algunas familias requerirían distancias de manejo mayores debido a la ubicación del sitio con relación al CRDF en Lynwood, que se encuentra más cerca de áreas urbanas de mayor densidad próximas a la Ciudad de Los Ángeles. El Condado está al tanto de los potenciales desafíos que esta distancia mayor podría plantear para algunos familiares visitantes, mientras que para otros familiares visitantes de Lancaster y otras áreas del Condado, la ubicación del Proyecto será más cercana a sus hogares que la cárcel de mujeres actual en Lynwood. Como se demostró en la página 3-4 en la Sección 3.0, Descripción del Proyecto, la Junta de Supervisores ordenó el establecimiento de una Junta Asesora (ahora denominada Comité Asesor con Perspectiva de Género) que presentará informes a la Junta de Supervisores sobre problemas programáticos y operativos específicos. El Comité Asesor ya ha comenzado a organizar sus reuniones con miembros que incluyen representantes del personal del Condado, agencias externas, defensores, organizaciones, personas con experiencia en encarcelamiento y representantes con experiencia en la reducción de la reincidencia de las reclusas. Como parte de su cargo, el Comité Asesor tiene la tarea de revisar el modelo de programa para el Proyecto MLWDC propuesto para garantizar que se base en pruebas para reducir la reincidencia; evaluar las estrategias para reducir los impactos negativos de operar el MLWDC propuesto lejos del área del centro de Los Ángeles, incluyendo contratación de transporte para visitantes y videoconferencias para consultas con abogados; y revisar las mejores prácticas nacionales para visitas y reunificación familiar.

Gutierrez-2

English translation of Spanish comment:

You are putting our people through hell, but I don't want you to spend eternity there.

English Response:

This comment raises social issues that are beyond the scope of CEQA analysis. The comment does not address the proposed Project, the environmental analysis included in the Draft EIR or the environmental impacts of the Project. This Final EIR, including all comments submitted to the County on the Draft EIR, will be provided to the County of Los Angeles Board of Supervisors. Therefore, your concerns will be presented directly to the decision makers prior to consideration of Project approval.

Spanish translation of English response:

Este comentario presenta cuestiones sociales que van más allá del alcance del análisis de la CEQA. El comentario no trata el Proyecto propuesto, el análisis ambiental incluido en el EIR

Borrador ni los impactos ambientales del Proyecto. Este EIR Final, incluyendo todos los comentarios presentados al Condado en el EIR Borrador, será proporcionado a la Junta de Supervisores del Condado de Los Ángeles. Por lo tanto, sus preocupaciones serán presentadas directamente a las personas encargadas de tomar decisiones antes de la consideración de la aprobación del Proyecto.

Comment (please personalize): Dear LA County Chief Exec Office and Board of Supervisors,

I'm writing as a concerned California resident who recently celebrated a victory against jail expansion in San Francisco. This is a critical moment for our state, when we have a clear and compelling decision to make: invest in people, healthcare and sustainable public infrastructure, or continue to cage human beings and squander millions of dollars further impoverishing our communities and public resources. I urge you to take action and reject this environmentally toxic jail plan for LA, which proposed caging women on a toxic land site at the far reaches of LA County.

Heaney-1

We have been fighting your proposals for jail expansion in LA for ten years and this draft EIR presents another clear example of how and why jails are socially, environmentally, and economically toxic to residents in LA.

Heaney-2

Please consider my public comment on the Draft Environmental Impact Report (EIR) regarding the proposed new Mira Loma Jail released on November 9th.

The basics are clear and we've said this to you time and again (I come to LA frequently to support local resistance to jail expansion): A new LA county jail in Lancaster will be severely detrimental to the health and well being of LA County residents as well as destructive to the local environment. The EIR fails to adequately address the negative impacts on residents and the natural landscape caused by jail construction, nor does it adequately provide plans for community based alternatives to jail construction.

Heaney-3

This is not your only option: With investment in diversion, bail/bond reform, and other jail population reduction measures, this proposed jail would be unnecessary.

Heaney-4

This plan also spells out social distress and hardship for communities impacted by imprisonment: the proposed jail site is located several hours from downtown Los Angeles, requiring additional travel for people imprisoned there, lawyers and service providers serving prisoners, and their loved ones who wish to visit. This increased travel will be a severe burden on families, providers, and prisoners that must be considered in the proposal as community connections through programs and family visits have been shown to greatly reduce recidivism. Additionally, increased travel will cause greater smog and air pollution, as well as place a strain on already inadequate public transportation and road systems used by prisoners, loved ones, jail staff, and construction workers.

Heaney-5

This land is toxic! The suggested location is a known "hazardous waste site", with two underground storage tanks that have failed leak detection tests, meaning there could be contamination of soil and groundwater, and a high risk of exposure to contaminated soil and ground since 44% of the project site will be "outdoor pervious area". This puts

Heaney-6

prisoners at the jail, in custody of the County of Los Angeles, in extreme health risk. Plans for water usage and storage when proposing to introduce thousands of new prisoners as well as hundreds of employees are inadequate at mitigating the strain to the environment and current residents. Additionally the weather and environmental conditions in this area foster a high probability for "Valley Fever", a fungal disease that can result in death. If the jail proposal moves forward, during construction local residents would be at increased risk due to displacement of dry soils. After completion, prisoners at the jail would be at great risk for this disease, particularly those with already compromised immune systems.

} Heaney-7

} Heaney-8

This proposed jail is unsafe for LA County communities and our environment. For the above reasons, the proposed new Mira Loma Jail should be rejected and the Draft EIR must not be approved.

} Heaney-9

Best,
Jess Heaney

Jess Heaney (February 3, 2016)

Heaney-1

This comment raises concerns regarding the merits of the proposed Project, and not the environmental analysis included in the Draft EIR or the environmental impacts of the Project. This Final EIR, including all comments submitted to the County on the Draft EIR, will be provided to the County of Los Angeles Board of Supervisors. Therefore, your concerns will be presented directly to the decision makers prior to consideration of Project approval.

Regarding the comment asserting that the Project will be located at a "toxic land site," please see response for Heaney-6 below.

Regarding the commenter's concerns about the expansion of jails, the Board of Supervisors has adopted numerous recent actions to reduce the number of people who are incarcerated in Los Angeles County, particularly those with mental illness and/or substance use disorders. The Board of Supervisors' actions relating to diversion from the criminal justice system to reduce the need for incarceration, are based in part on their consideration of the August 4, 2015 District Attorney's report of the Criminal Justice Mental Health Advisory Board in a document titled: *Providing Treatment, Promoting Rehabilitation and Reducing Recidivism: An Initiative to Develop a Comprehensive Plan for Los Angeles County*.

The members of the District Attorney's Advisory Board were the Sheriff, Fire Chief, Directors of the Departments of Mental Health, Health Services, Public Health, Veteran's Affairs, Public Social Services, Public Defender, and the Executive Director of the Countywide Criminal Justice Coordination Committee. All Advisory Board members participated in the County-wide assessment of services and recommendations to provide for comprehensive mental health diversion for each stage of the criminal justice continuum, from first responders to community re-entry and support. This report summarized the range of diversion programs already existing in the County and analyzed the need for additional mental health and substance abuse diversion services for each stage along the criminal justice continuum. The County of Los Angeles Chief Executive Office (CEO) has acknowledged that these recommendations recognize that there are potential new efficiencies and cost avoidance by re-directing persons in need of physical, mental and public health care services from the criminal justice system to appropriate care and treatment in lieu of incarceration.

On August 11, 2015 and September 1, 2015, in the context of determining potential capacity of proposed County jail facilities, and responding to treatment needs for the mentally ill or victims of substance use disorders, the Board directed an ordinance be prepared to establish an Office of Diversion and Re-Entry (Office) within the Department of Health Services. That ordinance was adopted, and the Office has been established pursuant to Section 2.76.600 in the Los Angeles County Code. For administrative oversight, the Board of Supervisors determined the Office will be a part of the Department of Health Services and the Director of the Office will report to the Director of the Department of Health Services. The Director of this Office will be advised by a Permanent Steering Committee with broad membership from County departments working in collaboration with working groups established by the District Attorney. It includes representatives from the Sheriff, Fire Chief, Chief Executive Office, Superior Court, Public Defender, Alternate Public Defender, Probation, District Attorney, Mental Health, Public Health and Health Services.

The Office will oversee County-wide diversion efforts including a system of integrated mental, physical and public health care services, as well as supportive housing for those at risk of homelessness who are re-directed from the criminal justice system or re-entering the community

after incarceration. For purposes of this Office's jurisdiction, the expectation is for diversion to seamlessly occur across "sequential intercept" points within the criminal justice system. Such intercept points include initial contact with law enforcement or other first responders, involvement with the criminal court system, incarceration, or post-release from incarceration.

The Office was allocated an initial Supplemental Budget funding of \$74.5 million to be spent 40 percent on housing, 50 percent for diversion and anti-recidivism programming and 10 percent for administration. The Board of Supervisors directed that future budget allocations be a part of the annual budget process. On September 1, 2015, the Board of Supervisors also directed that the Office distribute funding so at least 1,000 individuals would be diverted across all intercept points within the criminal justice system.

The Criminal Justice Mental Health Advisory Board report of August 2015 included the conclusions that even with increased opportunities for diversion from a jail environment, there will still be a need for mental health treatment in jails, and that diversion efforts can reduce, but will not eliminate, the need for the County to operate detention facilities. In light of the County's diversion efforts, the Board of Supervisors directed that, for purposes of on-going study and evaluation in the environmental review process, the maximum proposed size of the proposed women's detention center at Mira Loma in Lancaster would remain at 1,604 beds. In addition the Board of Supervisors reduced the maximum proposed size by approximately 1,000 beds, for purposes of the environmental review of a separate proposed treatment and detention center addressing needs of incarcerated men and women with mental illness and/or substance use disorders at the site of the current Men's Central Jail in downtown Los Angeles. In summary, the Board of Supervisors has taken steps to reduce the number of people who are incarcerated in Los Angeles County.

Heaney-2

This comment relates to the merits of the proposed Project, and not the environmental analysis included in the Draft EIR or the environmental impacts of the Project. Purely social effects of a project are beyond the scope of CEQA analysis, which focuses on the proposal's effect on the physical environment. This Final EIR, including all comments submitted to the County on the Draft EIR, will be provided to the County of Los Angeles Board of Supervisors. Therefore, your concerns will be presented directly to the decision makers prior to consideration of Project approval.

Heaney-3

This comment alleges that the Draft EIR fails to address the negative impacts on the residents and the natural landscape of the proposed Project. The Draft EIR for the proposed Project has been prepared in accordance with the California Environmental Quality Act (CEQA, *California Public Resources Code*, Sections 21000 et seq.) and the State CEQA Guidelines (14 *California Code of Regulations* [CCR]), and addresses the potential direct, indirect, and cumulative impacts of the Project on all environmental issue areas. As demonstrated throughout the Draft EIR, all potentially significant impacts have been reduced to levels that are less than significant through the identified mitigation measures, and no significant unavoidable environmental impacts would result from Project implementation.

Section 5.0, Project Alternatives, was prepared in accordance with Sections 15126.6(a) through 15126.6(f) of the State CEQA Guidelines and adequately considers alternatives to the proposed Project. As demonstrated in that section, an EIR must describe a range of reasonable and of potentially feasible alternatives to the proposed Project, or to the location of the Project, which would feasibly attain most of the basic Project Objectives but would avoid or substantially lessen

any significant effects. An EIR is not required to consider alternatives that are infeasible. The range of alternatives is governed by a "rule of reason" that requires discussion of only those alternatives necessary for the County of Los Angeles Board of Supervisors (Board) to make a reasoned choice.

As demonstrated in Section 3.0, Project Description, on October 22, 2013, the Board authorized the evaluation of a proposal to use a portion of the Mira Loma Detention Center (MLDC) property as the site for a female detention facility in lieu of the Pitchess Detention Center (PDC) site previously proposed. In May, 2014, the Board directed that "Option 1B" be studied, as recommended in the *Los Angeles County Jail Plan Independent Review and Comprehensive Report* (Jail Plan Report). Option 1B recommended continued evaluation of renovating the facility at MLDC for a women's detention center. The Draft EIR has been prepared to evaluate the environmental impacts of pursuing the proposed Project, in compliance with this Board directive.

The proposed Project does not hinder or preclude the Board's consideration of alternate approaches to incarceration, including the commenter's suggestions regarding diversion.

Out-of-custody alternatives were not required to be analyzed in the Draft EIR beyond the No Project alternative analyses, and they would not be able to achieve the Project's primary goal, as stated below and in Section 5.3.2 of the Draft EIR.

The Project's goal is to provide detention facilities for low- to medium-security level female inmates that meet modern correctional standards and that prioritize the on-site integration of gender-responsive female inmate education, treatment, and vocational training. This goal focuses on providing a secure detention facility with cost-effective therapeutic and rehabilitative programs to meet needs of eligible female inmates in order to reduce recidivism.

In addition, environmental impacts associated with "no action," are provided in Alternative 1A: No Project/Continuation of Existing Operations and Alternative 1B: No Project/Predictable Actions, as demonstrated in Section 5.0, Alternatives. These alternatives analyze the potential environmental impacts that would result if the County chose not to implement the proposed Project.

Heaney-4

Please see the response to comment Heaney-1 regarding the County's actions to reduce the inmate population. The purpose of and need for the Project is described in detail in Section 3.1, Project Background, of the Draft EIR. That section provides information regarding the County's existing detention facilities, relevant regulatory mandates, and studies analyzing future facility needs, including for housing of female inmates.

Heaney-5

The Draft EIR acknowledges that increased driving distances would be required for some families with the Project due to the location of the site in relation to the Century Regional Detention Facility (CRDF) in Lynwood, which is closer to higher density urban areas near the City of Los Angeles. The County is aware of the potential challenges the increased distance may pose for some visiting family members, while for other visiting family members from the Lancaster and other County areas, the Project location will be closer to their homes than the current women's jail in Lynwood. As demonstrated on page 3-4, in Section 3.0, Project Description, the Board of Supervisors directed the establishment of an Advisory Board (now called the Gender Responsive Advisory

Committee) that will report to the Board of Supervisors on specific programmatic and operational issues. The Advisory Committee has already begun to organize its meetings with a membership including representatives of County staff, outside agencies, advocates, organizations, individuals with incarceration experience, and representatives with expertise in reducing recidivism of female inmates. As part of its charge, the Advisory Committee is tasked with reviewing the program model for the proposed MLWDC Project to ensure that it is evidence-based in reducing recidivism; evaluating strategies to reduce negative impacts of operating the proposed MLWDC away from the downtown Los Angeles area, including contract transportation for visitors, video visiting for attorney consultation; and reviewing national best practices for visiting and family reunification.

Regarding the commenter's concern about increased traffic, Section 4.13, Transportation and Traffic, estimates the trip generation of the Project, which includes all trip types (i.e., staff and employees, service, and inmate visitation trips) and discusses potential impacts related to Project-generated traffic. The analysis indicates that an increase in traffic volumes would not significantly impact local intersections (intersections would still operate at Level of Service D or better), or alternative transportation (Metrolink trains or Antelope Valley Transit Authority [AVTA] bus service), and impacts on California Department of Transportation (Caltrans) facilities would be less than significant. As discussed on page 4.13-23 and 4.13-24, the existing transit services in the area will adequately accommodate the increase of Project-generated transit trips. No mitigation is required for short-term construction or long-term operation traffic impacts.

Regarding the commenter's concern about smog and air pollutants, Section 4.2, Air Quality, presents the results of the emission analysis using California Emissions Estimator Model (CalEEMod) Version 2013.2.2, which is a computer program that is used to calculate anticipated emissions associated with land development projects in California. As shown in Table 4.2-7 of Section 4.2, Air Quality, the estimated annual operational emissions due to Project-related operations would not exceed the Antelope Valley Air Quality Management District's (AVAQMD's) CEQA significance thresholds and potential impacts would be less than significant.

Heaney-6

The Project site is listed in government databases due to past hazardous material uses. However, it was never operated as a site that accepted hazardous wastes for disposal. The Draft EIR includes the results of site-specific studies on hazards and hazardous materials. A Phase I Environmental Site Assessment (ESA) was prepared that reviewed past and current uses and site conditions and identified Recognized Environmental Concerns (RECs) on the Project site and surrounding area. The Phase I ESA is provided in Appendix E-1 of the Draft EIR. Subsequent to the Phase I ESA, a Phase II ESA was prepared that included soil sampling to determine if soil contamination is present on the Project site. The Phase II ESA is provided in Appendix E-3 of the Draft EIR. In addition, an Asbestos and Lead Based Paint Survey Report was completed to identify the building components that contained asbestos and lead-based paint. The Asbestos and Lead Based Paint Survey Report is provided in Appendix E-2 of the Draft EIR. These reports are summarized in Section 4.7, Hazards and Hazardous Materials, of the Draft EIR.

Based on the findings of these studies, mandatory compliance with existing regulations (RRs) and mitigation measures (MMs), as set forth in the Draft EIR, would prevent public health and safety hazards to inmates, employees, visitors, and other individuals at the Project site.

As stated on page 4.7-19 of the Draft EIR, the existing fueling station is located outside the Project site boundary, but may be used by the Project. This fueling station has two USTs that previously failed leak detection tests. As shown in the California Environmental Reporting System (CERS) database and the Monitoring System Certification by AW Associates in Appendix E to this Final

EIR, the tank permits were updated in 2015 and have passed subsequent leak detection tests and are now in compliance. Soil testing also indicated there is no soil contamination near the USTs (Converse 2016b). MM HAZ-3 requires the testing and repair, as necessary, of the USTs prior to the use of the existing fueling station by the Project.

The Phase II ESA included 14 soil borings to depths of 8 feet below the ground surface (bgs). All soil samples from two and four feet bgs were analyzed for Total Petroleum Hydrocarbons (TPH), Volatile Organic Compounds (VOCs), and metals in accordance with U.S. Environmental Protection Agency (USEPA) Test Methods 8015M, 8260B, and 6010B/7471A, respectively. As stated on page 4.7-18 of the Draft EIR, the soil analyses indicate that no VOCs are present in the soil samples. All reported metals, except arsenic, were found to be at levels below the California Human Health Screening Levels (CHHSLs) for both residential and commercial/industrial land. The arsenic levels are below the background level of 12 milligrams per kilogram (mg/kg) level that the DTSC has determined to be naturally occurring background levels at school sites in California. The findings of the Phase II ESA indicated that there is no soil contamination on the site (Converse 2015). With no contamination on near-surface soils, it is unlikely that groundwater contamination would be present, considering that groundwater levels in the Antelope Valley Groundwater Basin in 2006 were estimated at 120 feet bgs at the Project site (RWMG 2013).

The Draft EIR concludes that the Project's impacts would be less than significant because there is no soil or groundwater contamination on the Project site, MM HAZ-1 and MM HAZ-2 would be implemented for the handling of remaining materials that may contain asbestos and lead-based paint; MM HAZ-3 would be implemented for the reuse of other facilities near the Project site; and the use, storage, handling, transport, and disposal of hazardous materials during operation of the MLWDC would be made in compliance with existing regulations. Therefore, female inmates, including pregnant inmates and their unborn children, would not be exposed to health hazards or lifelong health effects from their stay at the MLWDC.

Heaney-7

The Project's projected water usage and storage are addressed in Section 4.14, Utilities and Service Systems. The Project's estimated water demand is less than the 250 acre-feet per year (afy) threshold established by the California Department of Water Resources (DWR) for determining whether a Water Supply Assessment (WSA) is required under legislation commonly referred to as Senate Bill (SB) 610, as further described in Section 4.14. Nonetheless, to provide informed decision-making, a WSA was prepared for the Project and is provided in Appendix G-2 of the Draft EIR. The WSA is also summarized in Section 4.14, Utilities and Service Systems. As required under SB 610, the WSA must include an evaluation of the sufficiency of the water supplies available to the water supplier to meet existing and anticipated future demands (including the demand associated with the project) over a 20-year horizon that includes normal, single-dry, and multiple-dry years. The multiple-dry year scenario would represent drought conditions. With implementation of MM UTL-1, the Los Angeles County Waterworks District No. 40 (LACWWD 40), which will be the Project's water supplier, would have the water supply needed to serve the Project. MM UTL-1 requires that the County sign the New Water Supply Entitlement Acquisition Agreement with the LACWWD 40 and pay a deposit of \$10,000 per acre-foot of annual water demand from the Project for the acquisition of additional water supplies from Antelope Valley – East Kern Water Agency (AVEK) to serve the Project.

With implementation of MM UTL-1, Project-related estimates for water supply and demand, as provided in the WSA, show that water supply is available to serve the Project during the average year, single-dry year, and multiple-dry years. The WSA concludes the information on record indicates a sufficient and reliable water supply for LACWWD 40, now and into the future, including

a sufficient water supply for the Project. These supplies are also sufficient to provide for overall growth in the LACWWD 40 service area at the rate projected in the 2010 Integrated Regional Urban Water Management Plan (IRUWMP).

Heaney-8

The comment alleges the increased risk of local residents to coccidioidomycosis, known as Valley Fever, due to ground disturbance during construction and the health risk to inmates who would be housed at the Project. Valley Fever and its potential impact on potential future inmates and County staff is discussed in Section 4.2, Air Quality. A summary of hazards associated with the fungus is provided in the Draft EIR and includes summaries of trends related to Valley Fever in Los Angeles County, as inventoried and reported by the Los Angeles County Department of Public Health (LACDPH), which was consulted during the preparation of the Draft EIR.

The Draft EIR includes an analysis of exposure hazards due to fugitive dust that may result from construction-related earth-moving activities. PDF AIR-1, which will be included in the Contractor's Specification and monitored through the Mitigation Monitoring and Reporting Program (MMRP), requires the distribution of materials on Valley Fever, or any updated materials as applicable, to worksite supervisors and construction workers. PDF AIR-2 and RR AIR-1, which will be included in the Contractor's Specification and monitored through the MMRP, requires compliance with Best Management Practices and AVAQMD Rule 403 for the prevention of fugitive dust and nuisance air contaminants. RR AIR-1 provides a listing of the most applicable AVAQMD Rules. Rule 403, Fugitive Dust, requires measures such as watering and control of track-out from the site, as well as submittal of a Dust Control Plan prior to the start of construction. Rule 403 requires control of fugitive dust and avoidance of nuisance, and Rule 402 prohibits the emission of quantities of air contaminants that could cause injury, detriment, nuisance, or annoyance to the public, or that endanger the comfort, repose, health or safety of the public. With implementation of RR AIR-1, on-site earth-moving activities would not result in fugitive dust that could affect adjacent off-site land uses.

As stated in RR AIR-2, the Project will be constructed in compliance with the Department of Health – Infection Control Policy Guidelines Procedure No. 918.01. Policy 918 is intended to prevent the spread of diseases that may be caused by construction induced airborne pollution in susceptible individuals (patients, staff and the public) in Department of Health Services (DHS) facilities. The protocols and requirements mandate the designation of an Infection Control Coordinator who must review and approve infection-control plans for new construction or renovation projects to ensure a safe environment. These infection-control plans must include infection-control measures to contain dust, debris, and other elements and to protect the patients, employees and visitors in this environment. The Infection Control Coordinator has independent authority to stop construction-related activities immediately when the public may be adversely affected by infection control hazards generated during construction-related activities and the infection control precautions and/or engineering controls are inadequate to contain the hazard. The Draft EIR states that exposure to Valley Fever during construction activities would be the same as exposure to dust, and, thus, should follow the requirements for the mitigation of dust. Impacts would be less than significant, and no mitigation is required.

Section 4.2, Air Quality, acknowledges that the future inmate population has the potential to be exposed to dust generated from soils in the Antelope Valley, which have the potential to contain *Coccidioides* spores (i.e., the fungus that causes Valley Fever) during operation of the proposed Project. As discussed in Section 3.0, Project Description, of the Draft EIR, according to the Los Angeles County Sheriff's Department, Assembly Bill (AB) 109 female inmates are serving an average of 423 days in custody from date of sentencing to date of release, while non-AB 109

female inmates serve an average of 107 days in custody. Therefore, the length of time that inmates would be living at the MLWDC is temporary, and is not equivalent to a permanent living circumstance or the longer sentences in state prisons that house higher-security inmates.

The Draft EIR summarizes the LACDPH *2013 Annual Morbidity Report*, which presents the recent trends related to Valley Fever in Los Angeles County, including and increasing incidence rate for reported coccidioidomycosis cases in the last ten years, which has doubled in the past five years. However, the overall incidence rate in the Antelope Valley has not warranted changes in the County's protocol for disease prevention, notwithstanding the fact that the County health and public health officials are well educated on the condition; are familiar with its incidence in the County and elsewhere in the state; and are involved in research and education on the subject of Valley Fever.

The LACDPH has not identified the previous U.S. Immigration and Customs Enforcement (ICE) detainee population at MLDC, the future inmate population at MLWDC, or earlier occupants at the High Desert Health System (HDHS) Multi-Ambulatory Care Center (MACC) (the adjacent hospital facility, which has relocated in Lancaster) as requiring the implementation of health screening protocols or other measures to address potential Valley Fever exposure.

Also, as demonstrated in Section 4.2, Air Quality, the California Department of Corrections and Rehabilitation (CDCR) has not identified the Lancaster area as being a geographic location that requires screening or interventions for the State prison population with regard to exposure to Valley Fever (CDCR 2013). As discussed with the Sheriff's Department staff for the preparation of the Draft EIR, the operation of the MLWDC will follow standard Sheriff's Department procedures for medical care and prevention with regard to health care for inmates in general, and Valley Fever specifically, and the Sheriff's Department will continue to coordinate with LACDPH (Masis 2015). The LACDPH is the designated County agency with the mandate to protect health, prevent disease, and promote the health and well-being of all persons within Los Angeles County. As such, any future changes in LACDPH policies that may be made regarding Valley Fever for inmate populations will be implemented, as applicable, throughout the County jail system.

Because the future inmate population's exposure to disturbed soils would be limited to gardening activities, PDF AIR-3 in Section 4.2, Air Quality, states that the Project will import gardening soils from outside of the Antelope Valley, which would be used in raised planting beds to remove gardening in native soil as a potential source of exposure to Valley Fever spores. Further, outdoor recreational areas would be covered with landscaping, turf grass, gravel or landscaping/wood chip ground cover that would minimize the opportunity for soils to become airborne.

The Antelope Valley has not been identified by the LACDPH, the AVAQMD, or any other governmental health agency as a region that should be avoided by the elderly, women, children, health-compromised individuals, or by any specific ethnic groups. The Antelope Valley includes the major population centers of the cities of Lancaster and Palmdale, which have an estimated 2014 combined population of approximately 314,902 people. This portion of the Antelope Valley includes a diverse population of residents that includes many individuals that could be considered to be at higher risk of complications due to infection from Valley Fever spores. As stated in Section 4.2, Air Quality, persons at the highest risk of developing disseminated Valley Fever include the very young (under 1 year old); adults over 60 years; immunocompromised individuals; people with diabetes; women in the third trimester of pregnancy; and certain ethnic groups, including African-Americans and Filipinos.

The demographics of the two cities include approximately 158,605 females (50.4 percent) and 156,297 males (49.6 percent) with a median age of approximately 30.7 years old. The

racial/ethnic composition of the area is approximately 47 percent Latino, 29 percent white, 17 percent African American, and 4 percent Asian (U.S. Census Bureau 2016). As such, the temporary presence of a female inmate population into the Antelope Valley would not introduce a new or unusual demographic into the area that is not already present in the existing population of the region.

The MLWDC property is not located in an area determined to be hazardous to the health of local residents or visitors to the region. The Draft EIR concludes that the potential future inmate population's temporary placement into the Antelope Valley, which includes the inmates' participation in all indoor and outdoor activities at the MLWDC, would not constitute placement into a hazardous existing environmental setting that would require mitigation. Additionally, the operation of the proposed Project would not increase the prevalence of Valley Fever spores or otherwise exacerbate an existing environmental condition.

Heaney-9

The EIR for the MLWDC has been prepared and processed in accordance with CEQA and the State CEQA Guidelines. As demonstrated throughout the Draft EIR, all potentially significant impacts have been reduced to levels that are less than significant through the identified mitigation measures, and no significant unavoidable environmental impacts would result from Project implementation. This Final EIR, including all comments submitted to the County on the Draft EIR, will be provided to the County of Los Angeles Board of Supervisors. Therefore, your concerns will be presented directly to the decision makers prior to consideration of Project approval.

MIRA LOMA WOMEN'S DETENTION CENTER PROJECT
PUBLIC MEETING- DECEMBER 8, 2015
6:00 TO 8:00 PM

COMMENTS: Mr Diaz -

I don't think there is any research or logic to support another jail system as being a source of good - health, benefit, further happiness - in LA County. My vote, my taxes and my presence are opposed to this sell-out and racist solution (if it meant that term) to complex social issues

Hedges-1

NAME: Broghan Hedges
ADDRESS: ~~120~~ Culver City

Broghan Hedges

Hedges-1

This commenter opposes what is referred to as a "racist solution to complex social problems". This relates to the merits of the proposed Project, and not the environmental analysis included in the Draft EIR or the environmental impacts of the Project. Purely social effects of a project are beyond the scope of CEQA analysis, which focuses on the proposal's effect on the physical environment.

This Final EIR, including all comments submitted to the County on the Draft EIR, will be provided to the County of Los Angeles Board of Supervisors. Therefore, your concerns will be presented directly to the decision makers prior to consideration of Project approval.

MIRA LOMA WOMEN'S DETENTION CENTER PROJECT
PUBLIC MEETING- DECEMBER 8, 2015
6:00 TO 8:00 PM

COMMENTS:

The new jail in Lancaster needs to first ~~address~~ address the issue of contaminated soil and water due to the leaking of the underground storage tanks. The leak endangers both the prisoners and the people living around the construction site.

Jackson-1

NAME: Mackenzie Jackson

ADDRESS: 330 De Neve Drive, Los Angeles, CA, 90024

E-MAIL: kenziejackson@yahoo.com

Mackenzie Jackson

Jackson-1

Regarding the commenter's concern about contaminated soil and water from Leaking Underground Storage Tanks, the Project site is listed in government databases due to past hazardous material uses. However, the Project site was never operated as a site that accepted hazardous wastes. The Project site is on the list of Leaking Underground Storage Tanks (LUST) Sites, but the leaking underground storage tanks have been removed and the affected area cleaned up. The County Department of Public Works oversaw the remediation and issued the "no further action" letter. The California Department of Toxic Substances Control (DTSC) lists the Polaris Flight Academy with a status of "inactive-needs evaluation". As part of the Phase II Environmental Site Assessment (ESA), soil borings collected in the area of the possible former location of the airstrip did not detect any contaminants that would require further action (Converse 2015). Thus, the listing of the site in government databases was based on past uses that no longer pose hazards.

The underground storage tanks (USTs) that previously failed leak detection tests are located at the fueling station that is located outside the Project site. The tank permits were updated in 2015 and have passed subsequent leak detection tests and are now considered in compliance. Soil testing also indicated there is no soil contamination near the USTs. As stated on page 4.7-19 of the Draft EIR, the existing fueling station is located outside the Project site boundary, but may be used by the Project. This fueling station has two USTs that previously failed leak detection tests. As shown in the California Environmental Reporting System (CERS) database and the Monitoring System Certification by AW Associates in Appendix E to this Final EIR, the tank permits were updated in 2015 and have passed subsequent leak detection tests and are now in compliance. Soil testing also indicated there is no soil contamination near the USTs (Converse 2016b). MM HAZ-3 requires the testing and repair, as necessary, of the USTs prior to the use of the existing fueling station by the Project.

As part of the environmental analysis for the Draft Environmental Impact Report (EIR), a Phase I ESA has been prepared that reviewed past and current uses and site conditions and identified Recognized Environmental Concerns (RECs) on the Project site and surrounding area. The Phase I ESA is provided in Appendix E-1 of the Draft EIR. Subsequent to the Phase I ESA, a Phase II ESA was prepared that included soil sampling to determine if soil contamination is present on the site. The Phase II ESA is provided in Appendix E-3 of the Draft EIR. In addition, an Asbestos and Lead Based Paint Survey Report was completed to identify the building components that contained asbestos and lead-based paint. The Asbestos and Lead Based Paint Survey Report is provided in Appendix E-2 of the Draft EIR. These reports are summarized in Section 4.7, Hazards and Hazardous Materials of the Draft EIR.

The Project must comply with existing regulatory requirements (RRs) for the proper handling of hazardous wastes, including transportation, treatment, storage, and disposal; repair and/or removal of underground storage tanks based on applicable standards; and practices that would protect the demolition and construction crews from asbestos and lead exposure. In addition, the Project must incorporate mitigation measures (MMs) for the handling of suspected asbestos-containing materials and lead-based paint; an Operations and Maintenance Plan for regular inspection of any asbestos-containing materials; and testing and repair of underground storage tanks prior to use. Thus, existing hazardous materials and wastes would be removed from the Project site and future hazardous materials use would comply with applicable regulations to prevent hazards to future inmates. In summary, compliance with RR and implementation of MMs

set forth in the Draft EIR would prevent public health and safety hazards to inmates, employees, visitors and other individuals at the Project site.

MIRA LOMA WOMEN'S DETENTION CENTER PROJECT
PUBLIC MEETING- DECEMBER 8, 2015
6:00 TO 8:00 PM

COMMENTS:

Jails often destroy our Communities encouraging
hyper ~~participation~~ in carceration. Often many individuals are
unjustly arrested for nonviolent crimes, once they are in the prison
population they are often forced to become violent because of the
prison environment.

Jn-Marie-1

Inmates in the Los Angeles County jail system are incarcerated in accordance with established laws, and the process of determining which women are appropriately incarcerated is beyond the scope of this proposed Project. The County jail population is directly influenced by sentences imposed by the judicial court system. Magistrates have the legal discretion to impose the maximum or minimum sentencing.

This comment relates to the merits of the proposed Project, and not the environmental analysis included in the Draft Environmental Impact Report (EIR) or the environmental impacts of the Project. This Final EIR, including all comments submitted to the County on the Draft EIR, will be provided to the County of Los Angeles Board of Supervisors. Therefore, your concerns will be presented directly to the decision makers prior to consideration of Project approval.

MIRA LOMA WOMEN'S DETENTION CENTER PROJECT
PUBLIC MEETING- DECEMBER 8, 2015
6:00 TO 8:00 PM

COMMENTS:

I am a community organizer that works with Community Coalition, a social justice organization that has been at work for 25 years. Our criminal justice frame is prevention & intervention services & programs over incarceration. Jails have been used as surrogate mental health and treatment centers for far too long. Communities that have been impacted the most by criminalization, war on drugs tactics, and lack of investment need a supportive infrastructure that helps to successfully re-integrate back into society and not recidivate. Invest our tax dollars into our communities, not jail/prison expansion.

G.
Johnson-1

E-MAIL: Gilbert@ccc.southla.org

Gilbert Johnson

G. Johnson-1

Regarding the commenter's concern about the successful re-integration of inmates back into society and reducing recidivism, the Project's primary goal, is stated below and in Section 5.3.2 of the Draft EIR.

The Project's goal is to provide detention facilities for low- to medium-security level female inmates that meet modern correctional standards and that prioritize the on-site integration of gender-responsive female inmate education, treatment, and vocational training. This goal focuses on providing a secure detention facility with cost-effective therapeutic and rehabilitative programs to meet needs of eligible female inmates in order to reduce recidivism.

The Project will offer general education classes, computer training, general and vocational career technical education, college courses, career counseling, a learning resource center, a library and computer labs, culinary classes, and indoor/outdoor recreation for inmates. Other services include religious services, counseling services, and community transition services. Participation in classes, training, and other activities will be scheduled for each inmate according to individual evaluation, interests, needs, and availability.

Course selections will be determined based on a student's needs for specific services, and students' interest levels. Courses will be offered during three blocks of time each weekday (morning, afternoon, and evening), providing opportunities for inmates to be enrolled in multiple courses. Programs are also divided into three categories based on program intensity: all-day, half-day, and evening programs. Examples of all-day programs (morning and afternoon) include culinary arts programs, cosmetology programs, and Prisoner Assisted Community Enhancement (PACE). Examples of half-day programs (morning or afternoon) include: small engine repair; animal grooming/training; social media management and marketing/office assistant; automotive detailing, windshield and headlight repair; and recycling. Examples of evening programs include: computer coding; small business entrepreneurship; community college; Associate of Arts Degree; and General Education. Other programs include prenatal programs, volunteer programs; peer mentoring; physical education; dance; arts and crafts; a commissary program; and book clubs.

In addition, the Board of Supervisors has adopted numerous recent actions to reduce the number of people who are incarcerated in Los Angeles County, particularly those with mental illness and/or substance use disorders. The Board of Supervisors' actions relating to diversion from the criminal justice system to reduce the need for incarceration, are based in part on their consideration of the August 4, 2015 District Attorney's report of the Criminal Justice Mental Health Advisory Board in a document entitled "Mental Health Advisory Report: A Blueprint for Change – Providing Treatment, Promoting Rehabilitation and Reducing Recidivism: An Initiative to Develop a Comprehensive Plan for Los Angeles County".

The Criminal Justice Mental Health Advisory Board report of August 2015 concluded that even with increased opportunities for diversion from a jail environment, there will still be a need for mental health treatment in jails, and that diversion efforts can reduce, but will not eliminate, the need for the County to operate detention facilities. In light of the County's diversion efforts, the Board of Supervisors directed that, for purposes of on-going study and evaluation in the environmental review process, the maximum size of the proposed women's detention center at Mira Loma in Lancaster would remain at 1,604 beds. In addition the Board of Supervisors reduced the maximum proposed size by approximately 1,000 beds, for purposes of the environmental

review of a separate proposed treatment and detention center addressing needs of incarcerated men and women with mental illness and/or substance use disorders at the site of the current Men's Central Jail in downtown Los Angeles. In summary, the Board of Supervisors has taken steps to reduce the number of people who are incarcerated in Los Angeles County.

In addition, please see the more detailed response on this issue in the response to Form Letter-1 regarding County actions relating to diversion and other out-of-custody alternatives, which is included in Section 2.3.1 of this Final EIR.

G. Johnson-2

This comment relates to the merits of the Project and does not address the proposed Project, the environmental analysis included in the Draft Environmental Impact Report (EIR) or the environmental impacts of the Project. This Final EIR, including all comments submitted to the County on the Draft EIR, will be provided to the County of Los Angeles Board of Supervisors. Therefore, your concerns will be presented directly to the decision makers prior to consideration of Project approval.

MIRA LOMA WOMEN'S DETENTION CENTER PROJECT
PUBLIC MEETING- DECEMBER 8, 2015
6:00 TO 8:00 PM

COMMENTS:

I oppose this project because there's no
need for another jail because we already got bigger
ones and it will be waste of time and space
the could use the money for better things

Jordon-1

Regarding the commenter's concern about the building of a new jail and the associated costs, although the Project site has been unoccupied since 2012, as discussed in Section 2.0, Environmental Setting, the Project site has generally been in operation and providing various detention/jail functions from 1945–1946 until 2012. The MLWDC Project proposes the adaptive reuse, renovation, and expansion of the majority of the buildings at MLDC, which is an existing County asset. The redevelopment of the property would avoid the costs associated with constructing a new facility.

This comment relates to the merits of the proposed Project and not the environmental analysis included in the Draft Environmental Impact Report (EIR) or the environmental impacts of the Project. This Final EIR, including all comments submitted to the County on the Draft EIR, will be provided to the County of Los Angeles Board of Supervisors. Therefore, your concerns will be presented directly to the decision makers prior to consideration of Project approval.

MIRA LOMA WOMEN'S DETENTION CENTER PROJECT
PUBLIC MEETING- DECEMBER 8, 2015
6:00 TO 8:00 PM

COMMENTS:

I oppose the building of a new women's jail and ask that the County spend my tax dollars on rehabilitation, education, and community buildy. Our county is rick with solutions & experts to help guide this

Kaplan-1

I'm dismayed to learn that the Environmental Impact Report neglects to account for the increased travel-pollution & traffic — the hazardous materials site, and Valley Fever.

Kaplan-2

And certainly in the state of California we can translate the report into Spanish so that more people can access it.

Kaplan-3

ADDRESS: 1545 Vanderbilt Pl, Apt A, Glendale CA 91205

E-MAIL: vkaplan@gmail.com

Victoria Kaplan

Kaplan-1

The comment expresses opposition to the jail and a preference for expenditure of tax dollars on rehabilitation and education. Purely social effects of a project are beyond the scope of CEQA analysis, which focuses on the proposal's effect on the physical environment. This Final Environmental Impact Report (EIR), including all comments submitted to the County on the Draft EIR, will be provided to the County of Los Angeles Board of Supervisors. Therefore, your concerns will be presented directly to the decision makers prior to consideration of Project approval.

The Board of Supervisors has adopted numerous recent actions to reduce the number of people who are incarcerated in Los Angeles County, particularly those with mental illness and/or substance use disorders. The Board of Supervisors' actions relating to diversion from the criminal justice system to reduce the need for incarceration, are based in part on their consideration of the August 4, 2015 District Attorney's report of the Criminal Justice Mental Health Advisory Board in a document entitled "Mental Health Advisory Report: A Blueprint for Change – Providing Treatment, Promoting Rehabilitation and Reducing Recidivism: An Initiative to Develop a Comprehensive Plan for Los Angeles County".

The members of the District Attorney's Advisory Board were the Sheriff; the Fire Chief; the Directors of the Departments of Mental Health, Health Services, Public Health, Veteran's Affairs, and Public Social Services; the Public Defender, and the Executive Director of the Countywide Criminal Justice Coordination Committee. All Advisory Board members participated in the Countywide assessment of services and recommendations to provide for comprehensive mental health diversion for each stage of the criminal justice continuum, from first responders to community re-entry and support. This report summarized the range of diversion programs already existing in the County and analyzed the need for additional mental health and substance abuse diversion services for each stage along the criminal justice continuum. The County of Los Angeles Chief Executive Office (CEO) has acknowledged that these recommendations recognize that there are potential new efficiencies and cost avoidance by redirecting persons in need of physical, mental, and public health care services from the criminal justice system to appropriate care and treatment in lieu of incarceration.

On August 11, 2015 and September 1, 2015, in the context of determining potential capacity of proposed County jail facilities, and responding to treatment needs for the mentally ill or victims of substance use disorders, the Board directed an ordinance be prepared to establish an Office of Diversion and Re-Entry (Office) within the Department of Health Services. That ordinance was adopted, and the Office has been established pursuant to Section 2.76.600 of the Los Angeles County Code. For administrative oversight, the Board of Supervisors determined that the Office will be a part of the Department of Health Services and the Director of the Office will report to the Director of the Department of Health Services. The Director of this Office will be advised by a Permanent Steering Committee with broad membership from County departments working in collaboration with working groups established by the District Attorney. It includes representatives from the offices of the Sheriff, the Fire Chief, the Chief Executive, the Superior Court, the Public Defender, the Alternate Public Defender, Probation, the District Attorney, Mental Health, Public Health, and Health Services.

The Office will oversee Countywide diversion efforts including a system of integrated mental, physical and public health care services and supportive housing for those at risk of homelessness who are re-directed from the criminal justice system or re-entering the community after incarceration. For purposes of this Office's jurisdiction, the expectation is for diversion to

seamlessly occur across “sequential intercept” points within the criminal justice system. Such intercept points include initial contact with law enforcement or other first responders, involvement with the criminal court system, incarceration, or post-release from incarceration.

The Office was allocated an initial Supplemental Budget of \$74.5 million to be spent 40 percent on housing; 50 percent for diversion and anti-recidivism programs; and 10 percent for administration. The Board of Supervisors directed that future budget allocations be a part of the annual budget process. On September 1, 2015, the Board of Supervisors also directed that the Office distribute funding so at least 1,000 individuals would be diverted across all intercept points within the criminal justice system.

The Criminal Justice Mental Health Advisory Board report of August 2015 concluded that even with increased opportunities for diversion from a jail environment, there will still be a need for mental health treatment in jails, and that diversion efforts can reduce, but will not eliminate, the need for the County to operate detention facilities. In light of the County's diversion efforts, the Board of Supervisors directed that, for purposes of on-going study and evaluation in the environmental review process, the maximum size of the proposed women's detention center at Mira Loma in Lancaster would remain at 1,604 beds. In addition the Board of Supervisors reduced the maximum proposed size by approximately 1,000 beds, for purposes of the environmental review of a separate proposed treatment and detention center addressing needs of incarcerated men and women with mental illness and/or substance use disorders at the site of the current Men's Central Jail in downtown Los Angeles. In summary, the Board of Supervisors has taken steps to reduce the number of people who are incarcerated in Los Angeles County.

Kaplan-2

This comment alleges generally that the Draft Environmental Impact Report (EIR) does not account for increased travel, pollutants and traffic, hazardous materials, or Valley Fever. The Draft EIR for the proposed Project has been prepared in accordance with the California Environmental Quality Act (CEQA, *California Public Resources Code*, Sections 21000 et seq.) and the State CEQA Guidelines (14 *California Code of Regulations* [CCR]), and in fact addresses the potential direct, indirect, and cumulative impacts of the Project on all environmental issue areas. Section 5.0, Project Alternatives, was prepared in accordance with Sections 15126.6(a) through 15126.6(f) of the State CEQA Guidelines. As demonstrated throughout the Draft EIR, all potentially significant impacts have been reduced to levels that are less than significant through the identified mitigation measures, and no significant unavoidable environmental impacts would result from Project implementation.

Regarding the commenter's concern about increased traffic, Section 4.13, Transportation and Traffic, estimates the trip generation of the Project, which includes all trip types (i.e., staff and employees, service, and inmate visitation trips) and discusses potential impacts related to Project-generated traffic. The analysis indicates that increase in traffic volumes would not significantly impact local intersections (intersections would still operate at Level-of-Service D or better), or alternative transportation (Metrolink trains or Antelope Valley Transit Authority [AVTA] bus service), and impacts on California Department of Transportation (Caltrans) facilities would be less than significant. As discussed on page 4.13-23 and 4.13-24, the existing transit services in the area will adequately accommodate the increase of Project-generated transit trips. No mitigation is required for short-term construction or long-term operation traffic impacts.

Regarding the commenter's concern about pollutants, Section 4.2, Air Quality, presents the results of the emission analysis using California Emissions Estimator Model (CalEEMod) Version 2013.2.2, which is a computer program that is used to calculate anticipated emissions associated

with land development projects in California. As shown in Table 4.2-7 of Section 4.2, Air Quality, the estimated annual operational emissions due to Project-related operations would not exceed the Antelope Valley Air Quality Management District's (AVAQMD's) CEQA significance thresholds and potential impacts would be less than significant.

Regarding the commenter's concern about hazardous materials, the Project site is listed in government databases due to past hazardous material uses. However, the Project site was never operated as a site that accepted hazardous wastes. The Project site is on the list of Leaking Underground Storage Tanks (LUST) Sites, but the leaking underground storage tanks have been removed and the affected area cleaned up. The County Department of Public Works oversaw the remediation and issued the "no further action" letter. The California Department of Toxic Substances Control (DTSC) lists the Polaris Flight Academy with a status of "inactive-needs evaluation". As part of the Phase II Environmental Site Assessment (ESA), soil borings collected in the area of the possible former location of the airstrip did not detect any contaminants that would require further action (Converse 2015). Thus, the listing of the site in government databases was based on past uses that no longer pose hazards.

As part of the environmental analysis for the Draft EIR, a Phase I ESA has been prepared that reviewed past and current uses and site conditions and identified Recognized Environmental Concerns (RECs) on the Project site and surrounding area. The Phase I ESA is provided in Appendix E-1 of the Draft EIR. Subsequent to the Phase I ESA, a Phase II ESA was prepared that included soil sampling to determine if soil contamination is present on the site. The Phase II ESA is provided in Appendix E-3 of the Draft EIR. In addition, an Asbestos and Lead Based Paint Survey Report was completed to identify the building components that contained asbestos and lead-based paint. The Asbestos and Lead Based Paint Survey Report is provided in Appendix E-2 of the Draft EIR. These reports are summarized in Section 4.7, Hazards and Hazardous Materials of the Draft EIR.

The Project must comply with existing regulatory requirements (RRs) for the proper handling of hazardous wastes, including transportation, treatment, storage, and disposal; repair and/or removal of underground storage tanks based on applicable standards; and practices that would protect the demolition and construction crews from asbestos and lead exposure. In addition, the Project must incorporate mitigation measures (MMs) for the handling of suspected asbestos-containing materials and lead-based paint; an Operations and Maintenance Plan for regular inspection of any asbestos-containing materials; and testing and repair of underground storage tanks prior to use. Thus, existing hazardous materials and wastes would be removed from the Project site and future hazardous materials use would comply with applicable regulations to prevent hazards to future inmates. In summary, compliance with RRs and implementation of MMs set forth in the Draft EIR would prevent public health and safety hazards to inmates, employees, visitors and other individuals at the Project site.

Regarding Valley Fever (i.e., coccidioidomycosis), its potential impact on potential future inmates and County staff is discussed in Section 4.2, Air Quality. A summary of hazards associated with the *Coccidioides* spores (i.e., the fungus that causes Valley Fever) is provided and includes trends related to Valley Fever in Los Angeles County, as inventoried and reported by the Los Angeles County Department of Public Health (LACDPH), which was consulted during the preparation of the Draft EIR.

The Draft EIR summarizes the LACDPH 2013 *Annual Morbidity Report*, which presents the recent trends related to Valley Fever in Los Angeles County, including the increasing incidence rate within the last ten years. Data included in this report show the incidence in Valley Fever in Service Planning Area (SPA) 1 (i.e. Antelope Valley) from 2009 to 2013. The number of incidents of Valley

Fever infection spiked in 2011 in SPA 1 with 93 reported cases, which represented 30 percent of cases in Los Angeles County, with an incidence rate of 25 per 100,000 people. The incidence rate decreased to 74 reported cases in both 2012 and 2013. As such, in 2013, SPA 1 represented approximately 20.4 percent of the total reported cases in Los Angeles County, with an incidence rate of 19 per 100,000 people. SPA 1 has the highest infection rate in Los Angeles County (LACDPH 2013).

However, the rate of Valley Fever infection in Los Angeles County, and the Antelope Valley specifically, is substantially less than in neighboring Kern County, which had a 2013 infection rate of 276 per 100,000 people in the north valley region (KCPHSD 2016). The eastern portion of San Luis Obispo County had Valley Fever infection rates ranging from 205 to 257 per 100,000 people between 2007 and 2012 (SLOCPHD 2014). Therefore, although the Antelope Valley has the highest rates in Los Angeles County, the rates are well below rates found nearby counties where Valley Fever is endemic.

The overall incidence rate of Valley Fever in the Antelope Valley was not determined to warrant changes in the County's protocol for disease prevention, notwithstanding the fact that the County health and public health officials are well educated on the condition; are familiar with its incidence in the County and elsewhere in the state; and are involved in research and education on the subject of Valley Fever.

Also, as demonstrated in Section 4.2, Air Quality the California Department of Corrections and Rehabilitation (CDCR) has not identified the Lancaster area as being a geographic location that requires screening or interventions for the State prison population with regard to exposure to Valley Fever (CDCR 2013). Additionally, the LACDPH has not identified the previous U.S. Immigration and Customs Enforcement (ICE) detainee population at the MLDC, the future inmate population at the MLWDC, or earlier occupants at the High Desert Health System (HDHS) Multi-Ambulatory Care Center (MACC) (the adjacent hospital facility, which has relocated in Lancaster) as requiring the implementation of health screening protocols or other measures to address potential Valley Fever exposure.

The operation of the MLWDC will follow standard Sheriff's Department procedures for medical care and prevention with regard to health care for inmates in general, and Valley Fever specifically, and the Sheriff's Department will continue to coordinate with the LACDPH (Masis 2015). The LACDPH is the designated County agency with the mandate to protect health, prevent disease, and promote the health and well-being of all persons in Los Angeles County. As such, any future changes in LACDPH policies that may be made regarding Valley Fever for inmate populations will be implemented, as applicable, throughout the County jail system.

The MLWDC property is not located in an area determined to be hazardous to the health of local residents or visitors to the region. The Draft EIR concludes that the potential future inmate population's temporary placement into the Antelope Valley, which includes the inmates' participation in all indoor and outdoor activities at the MLWDC, would not constitute placement into a hazardous existing environmental setting that would require mitigation. Additionally, the operation of the proposed Project would not increase the prevalence of Valley Fever spores or otherwise exacerbate an existing environmental condition.

Kaplan-3

The County voluntarily added additional outreach in Spanish for the MLWDC Draft EIR public review process as a result of public comments. In January 2016, a *Notice of Extended Comment Period for the Draft Environmental Impact Report for the Mira Loma Women's Detention Center*

Project and Notice of Second Public Meeting in Lancaster, California was sent to the Project's mailing list and email list, as well as additional mailing list contacts that had provided comment letters during the Draft EIR public review period up to the time of the second mailing. This Notice was prepared in both English and Spanish. Additionally, the Executive Summary of the Draft EIR was translated into Spanish and posted on the County's website for viewing and downloading. Hardcopies of the Spanish-translated Executive Summary were made available at the Quartz Hill and Lancaster Libraries, and the Los Angeles County Public Information Office. Newspaper advertisements of the extended comment period and second public meeting were placed in the following papers and ran on Monday, February 1, 2016:

- *Acton-Aqua Dolce News*: a weekly publication so the ad was available for 7 days
- *Los Angeles Daily News*: daily publication
- *La Opinion*: a daily publication (the ad was in both English and Spanish)
- *Antelope Valley Press*: a daily publication
- *Antelope Valley Times*: an online publication

A second public meeting was held on Tuesday, February 9, 2016 at the Lancaster Public Library at 601 West Lancaster Boulevard in Lancaster, CA 93534 to present an overview of the proposed Project and the Draft EIR process and conclusions, and to invite submission of public comments on the Draft EIR. Real-time Spanish translation services were made available, as were copies of the Notice and the Executive Summary in both English and Spanish. Two members of the public attended that meeting and neither requested Spanish translation services.

This comment generally alleges that the proposed Project will result in environmental and health deterioration and should not be funded. The Draft Environmental Impact Report (EIR) for the proposed Project has been prepared in accordance with the California Environmental Quality Act (CEQA, *California Public Resources Code*, Sections 21000 et seq.) and the State CEQA Guidelines (14 *California Code of Regulations* [CCR]), and addresses the potential direct, indirect, and cumulative impacts of the Project on all environmental issue areas. Section 5.0, Project Alternatives, was prepared in accordance with Sections 15126.6(a) through 15126.6(f) of the State CEQA Guidelines. As demonstrated throughout the Draft EIR, all potentially significant impacts have been reduced to levels that are less than significant through the identified mitigation measures, and no significant unavoidable environmental impacts would result from Project implementation.

This comment expresses opposition to Project approval. The Final EIR, including all comments submitted to the County on the Draft EIR, will be provided to the County of Los Angeles Board of Supervisors. Therefore, your concerns will be presented directly to the decision makers prior to consideration of Project approval.

Regarding the comment on the hazardous materials site at the site, the Project site is listed in government databases due to past hazardous material uses. However, the Project site was never operated as a site that accepted hazardous wastes for disposal. The Project site is on the list of Leaking Underground Storage Tanks (LUST) Sites, but the leaking underground storage tanks have been removed and the affected area cleaned up. The County Department of Public Works oversaw the remediation and issued the “no further action” letter. The California Department of Toxic Substances Control (DTSC) lists the Polaris Flight Academy with a status of “inactive-needs evaluation”. As part of the environmental site assessments for the Project, soil borings collected in the area of the possible former location of the airstrip did not detect any contaminants that would require further action (Converse 2015). Thus, the listing of the site in government databases was based on past uses that no longer pose hazards.

As part of the environmental analysis for the Draft EIR, a Phase I Environmental Site Assessment (ESA) has been prepared that reviewed past and current uses and site conditions and identified Recognized Environmental Concerns (RECs) on the Project site and surrounding area. The Phase I ESA is provided in Appendix E-1 of the Draft EIR. Subsequent to the Phase I ESA, a Phase II ESA was prepared that included soil sampling to determine if soil contamination is present on the site. The Phase II ESA is provided in Appendix E-3 of the Draft EIR. In addition, an Asbestos and Lead Based Paint Survey Report was completed to identify the building components that contained asbestos and lead-based paint. The Asbestos and Lead Based Paint Survey Report is provided in Appendix E-2 of the Draft EIR. These reports are summarized in Section 4.7, Hazards and Hazardous Materials of the Draft EIR.

The Project must comply with existing regulatory requirements (RRs) for the proper handling of hazardous wastes, including transportation, treatment, storage, and disposal; repair and/or removal of underground storage tanks based on applicable standards; and practices that would protect the demolition and construction crews from asbestos and lead exposure. In addition, the Project must incorporate mitigation measures (MMs) for the handling of suspected asbestos-containing materials and lead-based paint; an Operations and Maintenance Plan for regular inspection of any asbestos-containing materials; and testing and repair of underground storage tanks prior to use. Thus, existing hazardous materials and wastes would be removed from the Project site and future hazardous materials use would comply with applicable regulations to prevent hazards to future inmates. In summary, compliance with RRs and implementation of MMs set forth in the Draft EIR would prevent public health and safety hazards to inmates, employees, visitors and other individuals at the Project site.

Lan-2

This comment alleges a failure to consider a comprehensive list of alternatives to the Project, including alternatives to building a jail. The Draft EIR, in fact, addresses alternatives in accordance with the California Environmental Quality Act (CEQA, *California Public Resources Code*, Sections 21000 et seq.) and the State CEQA Guidelines (14 *California Code of Regulations* [CCR]). As demonstrated in Section 5.0, Project Alternatives, an EIR must describe a range of reasonable and of potentially feasible alternatives to the proposed Project, or to the location of the Project, which would feasibly attain most of the basic Project Objectives but would avoid or substantially lessen any significant effects. Based on the analyses in Sections 4.1 through 4.15 of the Draft EIR, the proposed Project would result in significant environmental effects prior to mitigation on a number of environmental topics. Following mitigation, however, impacts to all of these topical

areas would be avoided or reduced to less than significant levels with the implementation of mitigation measures. No significant and unavoidable impacts would occur with the Project.

Additionally, an EIR is not required to consider alternatives that are infeasible. The range of alternatives is governed by a "rule of reason" that requires discussion of only those alternatives necessary for the County of Los Angeles Board of Supervisors (Board) to make a reasoned choice. As demonstrated in Section 3.0, Project Description, on October 22, 2013, the Board authorized the evaluation of a proposal to use a portion of the MLDC property as the site for a female detention facility in lieu of the Pitchess Detention Center (PDC) site previously proposed. In May, 2014, the Board directed that "Option 1B" be studied, as recommended in the *Los Angeles County Jail Plan Independent Review and Comprehensive Report* (Jail Plan Report). Option 1B recommended continued evaluation of renovating the facility at the MLDC for a women's detention center. The Draft EIR has been prepared to evaluate the environmental impacts of pursuing the proposed Project, in compliance with this Board of Supervisors directive.

MIRA LOMA WOMEN'S DETENTION CENTER PROJECT
PUBLIC MEETING- DECEMBER 8, 2015
6:00 TO 8:00 PM

COMMENTS:

To Mr. Matthew Diaz:

I write as a concerned citizen and resident of LA county regarding the plan to move forward with the building of a new women's jail in Lancaster. The construction of this jail will only harm families - specifically poor families who are already disadvantaged. The construction of this jail is also a poor use of tax payers' money. It costs more to house people in jail than to enter people into community assistance programs. There is also a very alarming rate of Valley Fever among CA prisoners and also hazardous materials that will put my resident in harm. Please consider this and other citizens' pleas to stop the plan for this construction.

This comment relates to the merits of the proposed Project and not the environmental analysis included in the Draft EIR or the environmental impacts of the Project. Purely social effects of a project are beyond the scope of CEQA analysis, which focuses on the proposal's effect on the physical environment. This Final EIR, including all comments submitted to the County on the Draft EIR, will be provided to the County of Los Angeles Board of Supervisors. Therefore, your concerns will be presented directly to the decision makers prior to consideration of Project approval.

Although the Project site has been unoccupied since 2012 as discussed in Section 2.0, Environmental Setting, the Project site has generally been in operation and providing various detention/jail functions since 1945 - 1946, when the California Youth Authority began to run a vocational school for juvenile offenders at the site. In the mid-1950s, the Mira Loma Detention Center (MLDC) operated as a medium-security facility until it ceased operations for the first time in 1979. It reopened in 1983 and was expanded with the construction of several new buildings in 1986. The facility was repurposed for female inmates and was known as the Mira Loma Female Honor Ranch, but was closed again in 1993. The MLDC reopened for use in 1997 by the U.S. Immigration and Customs Enforcement (ICE) to house undocumented immigrants until their immigration cases were decided, and it operated in that capacity until 2012. The site has not housed inmates since that time. The MLWDC Project proposes the adaptive reuse, renovation, and expansion of the majority of the buildings at MLDC, which is an existing County asset. The redevelopment of the property would avoid the costs associated with constructing a new facility.

The Project will offer general education classes, computer training, general and vocational career technical education, college courses, career counseling, a learning resource center, a library and computer labs, culinary classes, and indoor/outdoor recreation for inmates. Other services include religious services, counseling services, and community transition services. Participation in classes, training, and other activities will be scheduled for each inmate according to individual evaluation, interests, needs, and availability.

Course selections will be determined based on a student's needs for specific services, and students' interest levels. Courses will be offered during three blocks of time each weekday (morning, afternoon, and evening), providing opportunities for inmates to be enrolled in multiple courses. Programs are also divided into three categories based on program intensity: all-day, half-day, and evening programs. Examples of all-day programs (morning and afternoon) include culinary arts programs, cosmetology programs, and Prisoner Assisted Community Enhancement (PACE). Examples of half-day programs (morning or afternoon) include: small engine repair; animal grooming/training; social media management and marketing/office assistant; automotive detailing, windshield and headlight repair; and recycling. Examples of evening programs include: computer coding; small business entrepreneurship; community college; Associate of Arts Degree; and General Education. Other programs include prenatal programs, volunteer programs; peer mentoring; physical education; dance; arts and crafts; a commissary program; and book clubs.

In addition, the Board of Supervisors has adopted numerous recent actions to reduce the number of people who are incarcerated in Los Angeles County, particularly those with mental illness and/or substance use disorders. The Board of Supervisors' actions relating to diversion from the criminal justice system to reduce the need for incarceration, are based in part on their consideration of the August 4, 2015 District Attorney's report of the Criminal Justice Mental Health Advisory Board in a document entitled "Mental Health Advisory Report: A Blueprint for Change –

Providing Treatment, Promoting Rehabilitation and Reducing Recidivism: An Initiative to Develop a Comprehensive Plan for Los Angeles County”.

The members of the District Attorney's Advisory Board were the Sheriff; the Fire Chief; the Directors of the Departments of Mental Health, Health Services, Public Health, Veteran's Affairs, and Public Social Services; the Public Defender, and the Executive Director of the Countywide Criminal Justice Coordination Committee. All Advisory Board members participated in the Countywide assessment of services and recommendations to provide for comprehensive mental health diversion for each stage of the criminal justice continuum, from first responders to community re-entry and support. This report summarized the range of diversion programs already existing in the County and analyzed the need for additional mental health and substance abuse diversion services for each stage along the criminal justice continuum. The County of Los Angeles Chief Executive Office (CEO) has acknowledged that these recommendations recognize that there are potential new efficiencies and cost avoidance by redirecting persons in need of physical, mental, and public health care services from the criminal justice system to appropriate care and treatment in lieu of incarceration.

On August 11, 2015 and September 1, 2015, in the context of determining potential capacity of proposed County jail facilities, and responding to treatment needs for the mentally ill or victims of substance use disorders, the Board directed an ordinance be prepared to establish an Office of Diversion and Re-Entry (Office) within the Department of Health Services. That ordinance was adopted, and the Office has been established pursuant to Section 2.76.600 of the Los Angeles County Code. For administrative oversight, the Board of Supervisors determined the Office will be a part of the Department of Health Services and the Director of the Office will report to the Director of the Department of Health Services. The Director of this Office will be advised by a Permanent Steering Committee with broad membership from County departments working in collaboration with working groups established by the District Attorney. It includes representatives from the offices of the Sheriff, the Fire Chief, the Chief Executive, the Superior Court, the Public Defender, the Alternate Public Defender, Probation, the District Attorney, Mental Health, Public Health, and Health Services.

The Office will oversee Countywide diversion efforts including a system of integrated mental, physical and public health care services and supportive housing for those at risk of homelessness who are re-directed from the criminal justice system or re-entering the community after incarceration. For purposes of this Office's jurisdiction, the expectation is for diversion to seamlessly occur across “sequential intercept” points within the criminal justice system. Such intercept points include initial contact with law enforcement or other first responders, involvement with the criminal court system, incarceration, or post-release from incarceration.

The Office was allocated an initial Supplemental Budget of \$74.5 million to be spent 40 percent on housing; 50 percent for diversion and anti-recidivism programs; and 10 percent for administration. The Board of Supervisors directed that future budget allocations be a part of the annual budget process. On September 1, 2015, the Board of Supervisors also directed that the Office distribute funding so at least 1,000 individuals would be diverted across all intercept points within the criminal justice system.

The Criminal Justice Mental Health Advisory Board report of August 2015 concluded that even with increased opportunities for diversion from a jail environment, there will still be a need for mental health treatment in jails, and that diversion efforts can reduce, but will not eliminate, the need for the County to operate detention facilities. In light of the County's diversion efforts, the Board of Supervisors directed that, for purposes of on-going study and evaluation in the environmental review process, the maximum size of the proposed women's detention center at

Mira Loma in Lancaster would remain at 1,604 beds. In addition the Board of Supervisors reduced the maximum proposed size by approximately 1,000 beds, for purposes of the environmental review of a separate proposed treatment and detention center addressing needs of incarcerated men and women with mental illness and/or substance use disorders at the site of the current Men's Central Jail in downtown Los Angeles. In summary, the Board of Supervisors has taken steps to reduce the number of people who are incarcerated in Los Angeles County.

Montague-2

Coccidioidomycosis, also known as Valley Fever, and its potential impact on potential future inmates and County staff is discussed in Section 4.2, Air Quality. A summary of hazards associated with the *Coccidioides* spores (i.e., the fungus that causes Valley Fever) is provided as are summaries of trends related to Valley Fever in Los Angeles County, as inventoried and reported by the Los Angeles County Department of Public Health (LACDPH), which was consulted during the preparation of the Draft Environmental Impact Report (EIR).

The Draft EIR summarizes the LACDPH *2013 Annual Morbidity Report*, which presents the recent trends related to Valley Fever in Los Angeles County, including the increasing incidence rate within the last ten years. Data included in this report show the incidence in Valley Fever in Service Planning Area (SPA) 1 (i.e. Antelope Valley) from 2009 to 2013. The number of incidents of Valley Fever infection spiked in 2011 in SPA 1 with 93 reported cases, which represented 30 percent of cases in Los Angeles County, with an incidence rate of 25 per 100,000 people. The incidence rate decreased to 74 reported cases in both 2012 and 2013. As such, in 2013, SPA 1 represented approximately 20.4 percent of the total reported cases in Los Angeles County, with an incidence rate of 19 per 100,000 people. SPA 1 has the highest infection rate in Los Angeles County (LACDPH 2013).

However, the rate of Valley Fever infection in Los Angeles County, and the Antelope Valley specifically, is substantially less than in neighboring Kern County, which had a 2013 infection rate of 276 per 100,000 people in the north valley region (KCPHSD 2016). The eastern portion of San Luis Obispo County had Valley Fever infection rates ranging from 205 to 257 per 100,000 people between 2007 and 2012. (SLOCPHD 2014). Therefore, although the Antelope Valley has the highest rates in Los Angeles County, the rates are well below rates found nearby counties where Valley Fever is endemic.

The overall incidence rate of Valley Fever in the Antelope Valley was not determined to warrant changes in the County's protocol for disease prevention, notwithstanding the fact that the County health and public health officials are well educated on the condition; are familiar with its incidence in the County and elsewhere in the state; and are involved in research and education on the subject of Valley Fever.

Also, as demonstrated in Section 4.2, Air Quality the California Department of Corrections and Rehabilitation (CDCR) has not identified the Lancaster area as being a geographic location that requires screening or interventions for the State prison population with regard to exposure to Valley Fever (CDCR 2013). Additionally, the LACDPH has not identified the previous ICE detainee population at MLDC, the future inmate population at the MLWDC, or the earlier occupants at the High Desert Health System (HDHS) Multi-Ambulatory Care Center (MACC) (the adjacent hospital facility, which has relocated in Lancaster) as requiring the implementation of health screening protocols or other measures to address potential Valley Fever exposure.

The operation of the MLWDC will follow standard Sheriff's Department procedures for medical care and prevention with regard to health care for inmates in general, and Valley Fever

specifically, and the Sheriff's Department will continue to coordinate with LACDPH (Masis 2015). The LACDPH is the designated County agency with the mandate to protect health, prevent disease, and promote the health and well-being of all persons within Los Angeles County. As such, any future changes in LACDPH policies that may be made regarding Valley Fever for inmate populations will be implemented, as applicable, throughout the County jail system.

The MLWDC property is not located in an area determined to be hazardous to the health of local residents or visitors to the region. The Draft EIR concludes that the potential future inmate population's temporary placement into the Antelope Valley, which includes the inmates' participation in all indoor and outdoor activities at the MLWDC, would not constitute placement into a hazardous existing environmental setting that would require mitigation. Additionally, the operation of the proposed Project would not increase the prevalence of Valley Fever spores or otherwise exacerbate an existing environmental condition.

Montague-3

The Project site is listed in government databases due to past hazardous material uses. However, the Project site was never operated as a site that accepted hazardous wastes. The Project site is on the list of Leaking Underground Storage Tanks (LUST) Sites, but the leaking underground storage tanks have been removed and the affected area cleaned up. The County Department of Public Works oversaw the remediation and issued the "no further action" letter. The California Department of Toxic Substances Control (DTSC) lists the Polaris Flight Academy with a status of "inactive-needs evaluation". As part of the Phase II Environmental Site Assessment (ESA), soil borings collected in the area of the possible former location of the airstrip did not detect any contaminants that would require further action (Converse 2015). Thus, the listing of the site in government databases was based on past uses that no longer pose hazards.

As part of the environmental analysis for the Draft EIR, a Phase I ESA has been prepared that reviewed past and current uses and site conditions and identified Recognized Environmental Concerns (RECs) on the Project site and surrounding area. The Phase I ESA is provided in Appendix E-1 of the Draft EIR. Subsequent to the Phase I ESA, a Phase II ESA was prepared that included soil sampling to determine if soil contamination is present on the site. The Phase II ESA is provided in Appendix E-3 of the Draft EIR. In addition, an Asbestos and Lead Based Paint Survey Report was completed to identify the building components that contained asbestos and lead-based paint. The Asbestos and Lead Based Paint Survey Report is provided in Appendix E-2 of the Draft EIR. These reports are summarized in Section 4.7, Hazards and Hazardous Materials of the Draft EIR.

The Project must comply with existing regulatory requirements (RRs) for the proper handling of hazardous wastes, including transportation, treatment, storage, and disposal; repair and/or removal of underground storage tanks based on applicable standards; and practices that would protect the demolition and construction crews from asbestos and lead exposure. In addition, the Project must incorporate mitigation measures (MMs) for the handling of suspected asbestos-containing materials and lead-based paint; an Operations and Maintenance Plan for regular inspection of any asbestos-containing materials; and testing and repair of underground storage tanks prior to use. Thus, existing hazardous materials and wastes would be removed from the Project site and future hazardous materials use would comply with applicable regulations to prevent hazards to future inmates. In summary, compliance with RRs and implementation of MMs set forth in the Draft EIR would prevent public health and safety hazards to inmates, employees, visitors and other individuals at the Project site.

Montague-4

This Final EIR, including all comments submitted to the County on the Draft EIR, will be provided to the County of Los Angeles Board of Supervisors. Therefore, your concerns will be presented directly to the decision makers prior to consideration of Project approval.

Subject: Jail Construction

Good day:

Please do not go forward with building a women's jail in Lancaster. Alternate means can be used rather than incarcerating more women. The funds can be used for alternate forms of punishment/rehabilitation.
The jail population should be decreased rather than increased.

} Nash-1

With regards,

Launa Nash

Regarding the commenter's concerns about the expansion of jails, the purpose of and need for the Project is described in detail in Section 3.1, Project Background, of the Draft EIR. That section provides information regarding the County's existing detention facilities, relevant regulatory mandates, and studies analyzing future facility needs, including for housing of female inmates. The proposed jail planning is set in the context of the County's other programmatic and financial support of diversion from incarceration. The County has a concurrent focus on diversion from incarceration as it considers this Project. Therefore, the proposed Project is consistent with the Board of Supervisor's consideration of policy issues addressing alternative approaches to incarceration, including the commenter's suggestions regarding out-of-custody alternatives.

The Board of Supervisors has adopted numerous recent actions to reduce the number of people who are incarcerated in Los Angeles County, particularly those with mental illness and/or substance use disorders. The Board of Supervisors' actions relating to diversion from the criminal justice system to reduce the need for incarceration are based in part on their consideration of the August 4, 2015, District Attorney's report of the Criminal Justice Mental Health Advisory Board in a document entitled "Mental Health Advisory Report: A Blueprint for Change – Providing Treatment, Promoting Rehabilitation and Reducing Recidivism: An Initiative to Develop a Comprehensive Plan for Los Angeles County".

The members of the District Attorney's Advisory Board were the Sheriff; the Fire Chief; the Directors of the Departments of Mental Health, Health Services, Public Health, Veteran's Affairs, and Public Social Services; the Public Defender; and the Executive Director of the Countywide Criminal Justice Coordination Committee. All Advisory Board members participated in the Countywide assessment of services and recommendations to provide for comprehensive mental health diversion for each stage of the criminal justice continuum, from first responders to community re-entry and support. This report summarized the range of diversion programs already existing in the County and analyzed the need for additional mental health and substance abuse diversion services for each stage along the criminal justice continuum. The County of Los Angeles Chief Executive Office (CEO) has acknowledged that these recommendations recognize that there are potential new efficiencies and cost avoidance by redirecting persons in need of physical, mental, and public health care services from the criminal justice system to appropriate care and treatment in lieu of incarceration.

On August 11, 2015, and September 1, 2015, in the context of determining potential capacity of proposed County jail facilities and responding to treatment needs for the mentally ill or victims of substance use disorders, the Board directed an ordinance be prepared to establish an Office of Diversion and Re-Entry (Office) within the Department of Health Services. That ordinance was adopted, and the Office has been established pursuant to Section 2.76.600 of the Los Angeles County Code. For administrative oversight, the Board of Supervisors determined the Office will be a part of the Department of Health Services and the Director of the Office will report to the Director of the Department of Health Services. The Director of this Office will be advised by a Permanent Steering Committee with broad membership from County departments working in collaboration with working groups established by the District Attorney. It includes representatives from the offices of the Sheriff, the Fire Chief, the Chief Executive, the Superior Court, the Public Defender, the Alternate Public Defender, Probation, the District Attorney, Mental Health, Public Health, and Health Services.

The Office will oversee Countywide diversion efforts, including a system of integrated mental, physical, and public health care services and supportive housing for those at risk of homelessness who are redirected from the criminal justice system or re-entering the community after incarceration. For purposes of this Office's jurisdiction, the expectation is for diversion to seamlessly occur across "sequential intercept" points within the criminal justice system. Such intercept points include initial contact with law enforcement or other first responders, involvement with the criminal court system, incarceration, or post-release from incarceration.

The Office was allocated an initial Supplemental Budget of \$74.5 million to be spent 40 percent on housing; 50 percent for diversion and anti-recidivism programs; and 10 percent for administration. The Board of Supervisors directed that future budget allocations be a part of the annual budget process. On September 1, 2015, the Board of Supervisors also directed that the Office distribute funding so at least 1,000 individuals would be diverted across all intercept points within the criminal justice system.

The Criminal Justice Mental Health Advisory Board report of August 2015 concluded that, even with increased opportunities for diversion from a jail environment, there will still be a need for mental health treatment in jails and that diversion efforts can reduce, but will not eliminate, the need for the County to operate detention facilities. In light of the County's diversion efforts, the Board of Supervisors directed that, for purposes of ongoing study and evaluation in the environmental review process, the maximum size of the proposed women's detention center at Mira Loma in Lancaster would remain at 1,604 beds. In addition the Board of Supervisors reduced the maximum proposed size by approximately 1,000 beds, for purposes of the environmental review of a separate proposed treatment and detention center addressing needs of incarcerated men and women with mental illness and/or substance use disorders at the site of the current Men's Central Jail in downtown Los Angeles. In summary, the Board of Supervisors has taken steps to reduce the number of people who are incarcerated in Los Angeles County.

This Final EIR, including all comments submitted to the County on the Draft EIR, will be provided to the County of Los Angeles Board of Supervisors. Therefore, your concerns will be presented directly to the decision makers prior to consideration of Project approval.

MIRA LOMA WOMEN'S DETENTION CENTER PROJECT
PUBLIC MEETING- DECEMBER 8, 2015
6:00 TO 8:00 PM

COMMENTS:

After listening to this public meeting, I felt inspired to have my voice be heard and read. Mr. Diaz it is unjust in my mind to continue imprison a large and disproportion of marginalized folk. I urge you to please help the community community to prevent the social and environmental impacts that institutions like the Mira Loma Women's Detention Center continue to perpetuate!

Ortega-1

NAME: Jeronimo Ortega

ADDRESS: 10811 Ashton Ave. Los Angeles, CA 90024

E-MAIL: jeronimortega@gmail.com

Jerónimo Ortega

Ortega-1

This comment relates generally to the merits of the proposed Project, and not the environmental analysis included in the Draft EIR. The commenter generally refers to preventing social injustices on marginalized people and environmental impacts that "institutions like" the proposed Project "perpetuate". Purely social effects of a project are beyond the scope of CEQA analysis, which focuses on the proposal's effect on the physical environment. The Draft EIR for the proposed Project has been prepared in accordance with the California Environmental Quality Act (CEQA, *California Public Resources Code*, Sections 21000 et seq.) and the State CEQA Guidelines (14 *California Code of Regulations* [CCR]), and it addresses the potential direct, indirect, and cumulative impacts of the Project on all applicable environmental issue areas.

This Final EIR, including all comments submitted to the County on the Draft EIR, will be provided to the County of Los Angeles Board of Supervisors. Therefore, your concerns will be presented directly to the decision makers prior to consideration of Project approval.

MIRA LOMA WOMEN'S DETENTION CENTER PROJECT
PUBLIC MEETING- DECEMBER 8, 2015
6:00 TO 8:00 PM

COMMENTS:

I think building a jail will have many ^{negative} environmental impacts. From the amount of money it will be required to build, to the susceptibility to Valley fever.

} Ortiz-1

NAME: Mario Ortiz

ADDRESS:

E-MAIL:

Mario Ortiz

Ortiz-1

Regarding the commenter's concern about the building of a new jail and the associated costs, although the Project site has been unoccupied since 2012 as discussed in Section 2.0, Environmental Setting, the Project site has generally been in operation and providing various detention/jail functions from 1945-1946 until 2012. The MLWDC Project proposes the adaptive reuse, renovation, and expansion of the majority of the buildings at MLDC, which is an existing County asset. The redevelopment of the property would avoid the costs associated with constructing a new facility.

The Draft Environmental Impact Report (EIR) for the proposed Project has been prepared in accordance with the California Environmental Quality Act (CEQA, *California Public Resources Code*, Section 21000 et seq.) and the State CEQA Guidelines (14 *California Code of Regulations* [CCR]), and addresses the potential direct, indirect, and cumulative environmental impacts of the Project on all environmental issue areas. Section 5.0, Project Alternatives, was prepared in accordance with Sections 15126.6(a) through 15126.6(f) of the State CEQA Guidelines. As demonstrated throughout the Draft EIR, all potentially significant impacts have been reduced to levels that are less than significant through the identified mitigation measures, and no significant unavoidable environmental impacts would result from Project implementation.

Regarding the comment on susceptibility to coccidioidomycosis, known as Valley Fever, its potential impact on potential future inmates and County staff is discussed in Section 4.2, Air Quality. A summary of hazards associated with the *Coccidioides* spores (i.e., the fungus that causes Valley Fever) is provided and includes trends related to Valley Fever in Los Angeles County, as inventoried and reported by the Los Angeles County Department of Public Health (LACDPH), which was consulted during the preparation of the Draft EIR.

The MLWDC property is not located in an area determined to be hazardous to the health of local residents or visitors to the region. The Draft EIR concludes that the potential future inmate population's temporary placement into the Antelope Valley, which includes the inmate's participation in all indoor and outdoor activities at the MLWDC, would not constitute placement into a hazardous existing environmental setting that would require mitigation. Additionally, the operation of the proposed Project would not increase the prevalence of Valley Fever spores or otherwise exacerbate an existing environmental condition.

In addition, please see the more detailed response on this issue in the response to Form Letter-5 relating to Valley Fever, which is included in Section 2.3.1 of this Final EIR.

MIRA LOMA WOMEN'S DETENTION CENTER PROJECT
PUBLIC MEETING- DECEMBER 8, 2015
6:00 TO 8:00 PM

COMMENTS:

The new women's jail has been pitched as a humane, open space/out door, campus like facility. But, what about the valley fever exposure that inmates would suffer from. We don't need more jails. We need services in our community

Pena-Vargas-1

NAME: Carmen Peña-Vargas
ADDRESS: 4434 Radium Dr. LA, CA 90032
E-MAIL: _____

Camela Pena-Vargas

Pena-Vargas-1

Regarding the commenter's concern about Valley Fever, its potential impact on potential future inmates and County staff is discussed in Section 4.2, Air Quality. A summary of hazards associated with the *Coccidioides* spores (i.e., the fungus that causes Valley Fever) is provided, as well as summaries of trends related to Valley Fever in Los Angeles County, as inventoried and reported by the Los Angeles County Department of Public Health (LACDPH), which was consulted during the preparation of the Draft Environmental Impact Report (EIR).

The Draft EIR summarizes the LACDPH 2013 *Annual Morbidity Report*, which presents the recent trends related to Valley Fever in Los Angeles County, including the increasing incidence rate within the last ten years. Data included in this report show the incidence in Valley Fever in Service Planning Area (SPA) 1 (i.e., Antelope Valley) from 2009 to 2013. The number of incidents of Valley Fever infection spiked in 2011 in SPA 1 with 93 reported cases, which represented 30 percent of cases in Los Angeles County, with an incidence rate of 25 per 100,000 people. The incidence rate decreased to 74 reported cases in both 2012 and 2013. As such, in 2013, SPA 1 represented approximately 20.4 percent of the total reported cases in Los Angeles County, with an incidence rate of 19 per 100,000 people. SPA 1 has the highest infection rate in Los Angeles County (LACDPH 2013).

However, the rate of Valley Fever infection in Los Angeles County, and the Antelope Valley specifically, is substantially less than in neighboring Kern County, which had a 2013 infection rate of 276 per 100,000 people in the north valley region (KCPHSD 2016). The eastern portion of San Luis Obispo County had Valley Fever infection rates ranging from 205 to 257 per 100,000 people between 2007 and 2012 (SLOCPHD 2014). Therefore, although the Antelope Valley has the highest rates in Los Angeles County, the rates are well below rates found nearby counties where Valley Fever is endemic.

The overall incidence rate of Valley Fever in the Antelope Valley was not determined to warrant changes in the County's protocol for disease prevention, notwithstanding the fact that the County health and public health officials are well educated on the condition; are familiar with its incidence in the County and elsewhere in the state; and are involved in research and education on the subject of Valley Fever.

Also, as demonstrated in Section 4.2, Air Quality the California Department of Corrections and Rehabilitation (CDCR) has not identified the Lancaster area as being a geographic location that requires screening or interventions for the State prison population with regard to exposure to Valley Fever (CDCR 2013). Additionally, the LACDPH has not identified the previous U.S. Immigration and Customs Enforcement (ICE) detainee population at the MLDC, the future inmate population at MLWDC, or earlier occupants at the High Desert Health System (HDHS) Multi-Ambulatory Care Center (MACC) (the adjacent hospital facility, which has relocated in Lancaster) as requiring the implementation of health screening protocols or other measures to address potential Valley Fever exposure.

The operation of the MLWDC will follow standard Sheriff's Department procedures for medical care and prevention with regard to health care for inmates in general, and Valley Fever specifically, and the Sheriff's Department will continue to coordinate with LACDPH (Masis 2015). The LACDPH is the designated County agency with the mandate to protect health, prevent disease, and promote the health and well-being of all persons within Los Angeles County. As

such, any future changes in LACDPH policies that may be made regarding Valley Fever for inmate populations will be implemented, as applicable, throughout the County jail system.

The MLWDC property is not located in an area determined to be hazardous to the health of local residents or visitors to the region. The Draft EIR concludes that the potential future inmate population's temporary placement into the Antelope Valley, which includes the inmate's participation in all indoor and outdoor activities at the MLWDC, would not constitute placement into a hazardous existing environmental setting that would require mitigation. Additionally, the operation of the proposed Project would not increase the prevalence of Valley Fever spores or otherwise exacerbate an existing environmental condition.

Pena-Vargas-2

This comment does not specifically address the proposed Project, nor the environmental analysis included in the Draft EIR or the environmental impacts of the Project. Purely social effects of a project are beyond the scope of CEQA analysis, which focuses on the proposal's effect on the physical environment. This Final EIR, including all comments submitted to the County on the Draft EIR, will be provided to the County of Los Angeles Board of Supervisors. Therefore, your concerns will be presented directly to the decision makers prior to consideration of Project approval.

Attn: Mira Loma Environmental Impact Report
environmental@ceo.lacounty.gov

Dear Authors of the Mira Loma EIR:

Attached are my questions and comments about the most recent version of the Mira Loma EIR that was publicly presented in Lancaster on Tuesday, December 8, 2015. Below are some general comments and attached are comments specific to sections of the EIR.

1. Continuing to incarcerate women, especially non-non-nons rather than establishing diversion alternatives perpetuates a draconian incarceration system and results in disastrous effects on their families. In this EIR there is no mention of alternatives to incarceration. } Pinkel-1
2. Placing a new jail in an area with extreme drought conditions will potentially result in an unusable facility if drought conditions reflected in Exhibit 1 at the end of this document continue. This area has already experienced significant subsidence due to drought. } Pinkel-2
3. Attorneys familiar with the problem of Valley Fever have indicated that this site MUST include in its design seals around all doors and windows, especially external doors and windows, to limit the possibility for Valley Fever spores to enter MLWDC.
Placing women in an area recognized as a site for Valley Fever, where 40% of the women will potentially come down with flu like symptoms and black and women of Philippine origin are specially susceptible to Valley Fever is a potential health disaster. Will black and Philippino women be housed elsewhere? } Pinkel-3
4. Creating a restrictive visitation system where only a small percentage of the minimum to medium security women will be allowed contact visits and these will be limited to ½ - 1 hour slots in an enclosed room is antithetical to the concept of creating a 'Women's Village'. MRWDC is not analogous to Lynwood Jail. It will require at least 100 extra miles of travel for visitors. A visitation } Pinkel-4

system in which visitors can come all day if they choose, can have meals, possibly from vending machines, can bring children, can go indoors and outdoors where there are picnic tables and play areas for children, is much more in keeping with the vision of a 'Women's Village'.

5. The two community meetings in 2014 and 2015 were not advertised in such a way to adequately let community members know about the meetings. Hence, almost no community members were present. I recommend that another EIR community meeting be held so that the community can really be apprised of this project.

Pinkel-4
cont.

Pinkel-5

I have spent a great deal of time reviewing this EIR because of its potential impact on so many people and will appreciate responses to my questions and/or comments.

Sincerely,
Sheila Pinkel
Emerita Professor, Pomona College

Preliminary comments: COMMUNITY EIR MEETINGS

Both EIR meetings in Lancaster, 2014 and 2015, had very few residents from Lancaster in attendance because in both cases, the location of the meetings was poorly advertised. Most people do not regularly check government websites. The only truly public advertisement of the meeting in 2014 as mentioned on page 1-5 of the current EIR was a one day notice in the *Antelope Valley Press* and the *Country Journal* and a six day notice on the *Antelope Valley Times* website. No effort was made to post signage in the library, the city hall or other public buildings about the meetings or readily accessible information that a copy of the EIR was available in the Lancaster Library for public review and there was no signage posted anywhere advertising the 2014 EIR meeting.

Last year we were given the incorrect address for the EIR meeting as 701 W. Kettering Ave. when it was actually held in an unnamed building on W. Jackman St. with no outdoor signage there indicating that was the place where the meeting was being held. There was not public notice of the change in venue. I was fortunate enough to come to Lancaster an hour early. I went to City Hall right before it closed and asked the clerk where the meeting was. It was only then that I learned of the change in address. If I had been five minutes later, City Hall would have been closed and I would have never found the meeting.

This year a (NOA) of the Draft EIR was published in the *Antelope Valley Press*, *Acton Aqua Dolce News* and *Los Angeles Daily News* as well as posted on the *Antelope Valley Times* website. However, we don't know how many days this notice was posted or how the public was suppose to know that a copy of the draft EIR was available at the Lancaster Library. The 2015 meeting was held in an un-named building with no visible address at the end of a torturous and long labyrinth of a parking lot that we were supposed to locate in the dark. There was no obvious building with an address of 43000 30th Street East, the advertised address. If public meetings are held in obscure buildings, then a map showing exactly where the building is located must be provided if a good faith effort is made to publicize these meetings.

I spoke with a few local residents who said that they found out about the meeting quite by accident and had no idea of how to find the EIR to review it before the meeting. Because this happened two years in a row I call this a problem with the advertising process itself. Whatever process has been employed to include the Lancaster public in the review of the current EIR document, it has failed. Because this process has not really included the population affected by the building of the Mira Loma Women's Detention Center, another EIR meeting needs to be held in Lancaster in January, 2016, after adequately advertising the meeting to the Lancaster community so they can have an opportunity to review the Mira Loma EIR and respond. Churches, the new paper, library, Chamber of Commerce, city officials, schools, all need to be apprised with posters of this new meeting day and time and how they can find the EIR for review. The date for written comments needs to be moved to February.

Pinkel-6

COMMENTS AND QUESTIONS ABOUT THE MIRA LOMA EIR:

At the beginning of this report it would be helpful if authors provided a list of abbreviations like MLWDC – Mira Loma Women’s Detention Center, so that readers could refer to them.

} Pinkel-7

ES-2: If “The Project is designed to deliver a more normative environment than current detention facilities housing women...” why is visitation arrangement restricted to 40 booths and one half – one hour contact visits? People will have travelled over three hours in each direction to get to the site. In other detention facilities I have visited I have been able to stay there all day if I choose, eat meals which I purchase from machines with the person I visited, bring children and go inside and outside to picnic and children’s play areas with the incarcerated person I was visiting. The current visitation structure is antithetical to the goal of making a ‘more normative environment’ and needs to be revisioned. It certainly does not allow women to have visits with children and loved ones in an environment conducive for visiting.

} Pinkel-8

ES-3: Why are these alternatives mentioned here since the LA County Board of Supervisors voted to move forward with MLWDC? These are no longer viable alternatives.

} Pinkel-9

Alternatives 1A, 1B, and 3 do not adequately clarify the environmental impact if the female inmate population continues to be housed at the CRDF. The MLWDC is not a stand-alone project. The plan is that once women have been transferred from CRDF to MLWDC, men from Men’s Central Jail and Twin Towers will be transferred to CRDF where they will stay until the new central jail is built. However, if the MLWDC does not happen and women at CRDF are not moved, then where will the men from Men’s Central Jail or Twin Towers be housed during the construction of the new Men’s Central Jail? Or, will not building MLWDC stop the construction of Men’s Central Jail as well? The relationship to and dependence on the MLWDC to these other projects needs to be clarified.

} Pinkel-10

If the alternatives listed here are really included as good faith alternatives, then why are there not EIRs for those alternatives as well so that a real comparison of their relative environmental impacts can be made?

} Pinkel-11

ES-5: “While Alternative 1A..., this alternative would not meet the majority of the Project’s basic objectives.” One of the basic objectives, CRDF providing a place for men from Men’s Central Jail and Twin Towers while it is under construction, **the imperative for both plans, MRWDC and Men’s Central Jail and Twin Towers, is missing from this discussion. They are linked and this needs to be clarified.**

} Pinkel-12

- ES-6: Primary areas of known controversy:
 • **opposition to expansion of any jail facilities... EIR fails to address the possibility of social and diversion programs instead of expansion of jail facilities. Jurisdictions throughout the country are currently implementing alternatives to incarceration. This needs to be done in Los Angeles as well.** Pinkel-13
- ES-7: “Prior to mitigation...No significant unavoidable impacts will occur after mitigation.” **How can the authors make this claim that no significant ‘unavoidable’ impacts will occur after mitigation? Unexpected things do happen.** Pinkel-14
- 1-9: While CEQA Guidelines encourage public agencies to ‘develop and publish thresholds of significance’ in determining significance of an environmental impact, throughout this report assertions are made that the authors have determined that there are none or negligible environmental impacts **without** providing “thresholds...of identifiable quantitative, qualitative or performance-level criteria used to determine non-compliance or compliance.” I will try to point them out as I find them in this report, referring to them as Thresholds of Significance (TS). Pinkel-15
- 3-1: This report asserts that AB 109 allowed non-non-nons to serve their sentence in county jails rather than state prisons. **However, that was not the only option for implementing AB 109 as described below in the description of Santa Cruz use of AB 109 funds.** So this statement of the implementation of AB 109 needs to be clarified as indicated below:
 “Approximately \$5.2 million was allocated by the state to the county (of Santa Cruz) for AB 109-related costs in fiscal year 2012-2013. Rather than spending the full amount for incarceration expenses, the county elected to allocate one-third to corrections, one-third to probation, and one-third to intervention services and rehabilitation programs.
 “A key feature of the Partnership is the Sheriff’s Custody Alternatives Program (CAP). Non-violent, non-sexual, non-serious offenders are given the opportunity of an incarceration reduction and/or release with an ankle monitor. Between October 2011 and December 2012, 292 inmates were released with monitors. This has saved the county \$1.9 million when compared to the cost of housing these offenders.” Source: [http://www.co.santa-cruz.ca.us/grandjury/GJ2013_final/AB_109 - A Year in Review.pdf](http://www.co.santa-cruz.ca.us/grandjury/GJ2013_final/AB_109_-_A_Year_in_Review.pdf) Pinkel-16
- This report indicates a trend in recent years of increased inmate population within the LA County jail system. In fact, **sentences for women have been** Pinkel-17

- getting longer without anyone from the Sheriff's Department able to explain why, which partially explains the reason for overcrowding. This needs to be addressed.** } Pinkel-17 cont.
- 3-4: **In September 2015, while the LACBOS established a new Office of Diversion and Re-entry with limited funding; they also affirmed in prior meetings that they would insist that non-non-nons serve their full sentence, unlike the County of Santa Cruz, opting to continue to saddle tax payers with the cost of incarceration of present and future non-non-nons. This needs to be pointed out because had they made decisions like the County of Santa Cruz, the construction of MLWDC would not be necessary or appropriate for most of the women being incarcerated.** } Pinkel-18
- 3.2.1 **If the goal of this project is to reduce recidivism, then building a new jail is not the answer; rather community based solutions are. This new jail is not the solution; it is the problem. The goals of this project as enumerated in this section are misguided.** } Pinkel-19
- Proposed Site Plan: **Design of Building 3 for visitation needs to be redesigned to allow for extended visitation with indoor/outdoor access and play areas for children so that visitors and incarcerated women and their children can have normalized contact experiences with access to food from vending machines for extended periods of time on weekends. The current plan for 40 booths and one half to one hour periods for visitation is antithetical to the goals of generating a 'woman's village'.** } Pinkel-20
- What will the charge be for using video visitation rather than in person visitation? What will the time restrictions be on these visits? Will an incarcerated woman have a private place for video visits? Will those video visits be constantly interrupted by the message that this is a MLWDC visit, as are telephone conversations constantly interrupted? Will incarcerated women still have phone access for telephone visits as well? Will these phone visits be constantly interrupted with the message that this is phone conversation from MLWDC? } Pinkel-21
- 3-9: **Will women in Transition Housing (Buildings G and H) have additional visitation opportunities since they are living in transitional housing?** } Pinkel-22
- Since this is a 'woman's village', a low to medium security facility, why is visitation so restrictive, i.e. non-contact personal and family visits, supervised contact visits in booths with immediate family members and children of extremely limited duration? (see comments in ES-2 above). This plan is inhumane.** } Pinkel-23

- Where will classes in creative writing, music, art, drama, dance conducted by teachers from the community be held?** The stats are that providing cultural curricula is an important way to reduce recidivism. There are no plans for these kinds of classes in this EIR. } Pinkel-24
- 3-10E: **Who does the term ‘licensed medical personnel’ refer to? Since staff will be asked to provide urgent care services, will medical doctors be at the facility as well?** } Pinkel-25
- 3-10H: **Will incarcerated women have access to computers, computer classes? What does the ‘telecommunications space in each building’ refer to?** } Pinkel-26
- 3-11: **3.3.3: Architecture: How are the cells of the women at MLWDC going to be less institutional than conventional prison cells? Will their size be any different?** } Pinkel-27
- 3.3.3: **Lighting: In bunk bed arrangements, typically the woman on the bottom bunk cannot sit up on her bunk to read and also the lighting is not sufficient to read, especially at night. Will bunks be built to allow a woman to sit up, even if she is in a lower bunk, and lighting in each cell be constructed to allow each woman to be able to read on her bunk without disturbing the other person in the room?** } Pinkel-28
- 3-13: **Water Infrastructure:**
- 3-14: **Will the Inmate Video Visitation System allow the incarcerated woman to have private uninterrupted conversations? How much will use of this cost?** } Pinkel-29
- 3-17: **3.3.4: 70% of the women at MLWDC be incarcerated while awaiting court sentences at the pre-trial phase? Why are they in jail at all? They serve an average of 107 days while waiting for their trial? If we stopped incarcerating women before they are prosecuted, we wouldn’t need this jail. If they are found not guilty, then 107 days will have been stolen from the women and their families.** } Pinkel-30
- If the 30% of women at MLWDC who are non-non-nons were allowed out on probation and possibly ankle bracelets, then no one would have to be incarcerated there. Since “93% of the LASD female inmates have the need for substance use programs” why not provide these programs as community based programs and let them out of jail? They could go to all of the programs mentioned in this section as community based programs. If the County is really interested in cost reduction, this would be a lot cheaper than incarcerating them.** } Pinkel-31

- 3-18: **Where in this EIR is a provision for training of sheriffs who are sensitive to the needs of women? That is as important as training of incarcerated women.** } Pinkel-32
- 3-19: This EIR says that women will be able to earn an AA degree there. **Will women be able to earn a BA degree there? What Career Technical Education (CTE) will be provided? I have observed in other incarceration facilities that courses billed like that provide incarcerated people with no or very limited employable skills. Who will assess the quality and effectiveness of this education?** } Pinkel-33
- Will work opportunities be provided for incarcerated women at MLWDC? A description of this needs to be included.** } Pinkel-34
- 3-24: Table 3-5: **Visitation Protocol Comparison: Because this is a minimum to medium security prison why are non-contact visitations allowed for anyone? Why is visitation by appointment only? Why are contact visits limited to one half to one hour? The average visitor will have to travel 2-3 hours each way to get to MLWDC. They should be able to stay all day if they choose and bring children.** } Pinkel-35
- How much will video visits cost? Why are they only available to inmates housed in privileged or transitional housing areas? This is only a fraction of the women housed at MLWDC. Why don't all women have access to video visitations?** } Pinkel-36
- 3-25: **Why is there only one Video Visitation System (IVVS) at each of the seven sites?** Certainly the needs of the community will be greater than that, especially at the Lynwood facility since the women will be coming from there. } Pinkel-37
- Since women will be able to have two or more non-contact visits via phone or video per week, how many phones and video stations need to be installed to give women the ability to make phone calls or have video conferences? In my experience, there are usually not enough phones to handle the needs of the incarcerated. What will be the calculation here? For instance, there will be 1,604 women. If each of them wants to make one phone call during the weekend, will there be enough phones to handle their needs?** } Pinkel-38
- What provisions will be made so that a woman and her attorney can have a private visit in a private room?** } Pinkel-39
- 4.2-4 Climate and Meteorology:
- "The MDAB is classified as a dry-hot desert climate." Because this area is so hot and dry, requiring water to be piped into the area to support MLWDC residents and staff, what argument is made for this being a suitable location for this jail?** } Pinkel-40

- While the average wind speed is 11.2 mph, how many days per year are wind speeds higher than average? Average wind speeds of 11.2 mph are high enough to disturb the soil and transport Valley Fever spores. This is relevant to the issue of spores from valley fever infecting residents of MLWDC.** } Pinkel-41
- 4.2-9 Valley Fever
- This EIR states that “SPA 1 (i.e. Antelope Valley) reported the highest incidence rate of coccidioidomycosis in Los Angeles County...” **Since 40 percent of people exposed to Valley Fever spores develop symptoms like “mild respiratory illness with flu-like symptoms that can last about a month” why is a jail being planned for an area with a high incidence of Valley Fever spores where at least 40% of the incarcerated women could be affected? What kind of care will be given to women who develop flu-like symptoms? What kind of care will be given to women who develop Valley Fever? How could LACDPH approve this plan with its “mandate to protect health, prevent disease and promote the health and well-being of all persons within Los Angeles County”4.2-21?** } Pinkel-42
- Since the incidence rate for blacks is the highest among racial groups and certain groups including “the elderly and people with respiratory illnesses or impaired lung function...” and Philipinos are more sensitive to airborne pollutants, will these women be housed in a different location than MLWDC?** } Pinkel-43
- 4.2-21 “...the future inmate population has the potential to be exposed to dust generated from soils within the Antelope Valley, which have the potential to contain coccidioidomycosis (i.e. Valley Fever) spores.” **Will MRWDC be added to the list of facilities with potential exposure to Valley Fever?** } Pinkel-44
- “Because the majority of the project site will be paved or landscaped, there are few opportunities for on-site soils to produce airborne dust.” Expert attorneys familiar with the problem of Valley Fever have indicated that this site MUST include in its design seals around all doors and windows, especially external doors and windows, to limit the possibility for Valley Fever spores to enter MLWDC.** } Pinkel-45
- 4.6-10 “...climate change would reduce California’s water supplies even as its growing population requires additional resources.” **How can this EIR justify placing a jail in a desert when it is well acknowledged that California’s drought is a present and future problem?** } Pinkel-46
- 4.8-7: “Approximately 292 square miles of the Antelope Valley has experienced subsidence of more than 1 foot, which has reduced aquifer storage by 50,000 acre-feet (DWR 2004).” **Why does the County consider this a suitable site for a new jail? At the project’s inception the geological profile is un-sustainable.** } Pinkel-47

- Because of this this project will require a 12 inch pipe connecting with LA County water supply to be built and water from The County used at the site. This will add a significant on-going cost for water to the project, at tax payers' expense. } Pinkel-48
- 4.8-19 **“As the Project does not...No cumulative impact on groundwater resource would occur with the Project.” This EIR fails to take into account that potentially at least 1,684 people either employed or families of the employed at MLWDC would move into the area and affect local groundwater supplies. Average water consumption per person in California is 79 gallons/day. Also, families of the incarcerated could potentially move to the area increasing demand on local water supplies. In addition, this EIR estimates a high volume of visitors on each of two weekend days. However, there is no calculation of how this influx of people to the area could impact local water resources.** } Pinkel-49
- 4.11-7 **Why are contact visitations permitted only for qualifying inmates? Isn't MLWDC a low to medium level jail? Shouldn't all residents be qualified for contact visits?** } Pinkel-50
- Why are visits limited to half or whole hour slots and no more than three people? If this was the inhumane visitation system at Lynwood, there is no justification to perpetuate it at MLWDC. Visitors will have traveled 2 or more hours to get to this site. In prisons I have visited I could stay all day, have a meal with the person I was visiting, sit in a room with other inmates and visitors, bring children and go inside and outside to picnic areas where there were places for the children to play. The visitation portion for this EIR needs to be redone to make it more humane and conform to the idea that this is a “woman's village” instead of a super max penitentiary.** } Pinkel-51
- 4.13-10 **Will there be monitoring of use of public transportation after MRWDC opens to determine if the bus and Metrolink options are adequate? Will the bus schedules at the Metrolink station be synced with the transit bus schedule of local buses to the jail site?** } Pinkel-52
- 4.13-20 **This EIR assumes that because of the 98 round trip mile average increase of distance that visitors will have to travel that they will be more prone to want to use the video visiting stations. However, video visitation is no replacement for contact visits and cannot be described as a replacement for contact visits. In other parts of this EIR it was estimated that there would be a maximum of 1,920 visits between residents and visitors per weekend day. However, in this section the number of contact visits per weekend day is 250 at one half to one hour intervals. Because all of the women housed at MRWDC are low to medium level offenders, all of the women should have the right to contact visitations, not just 250 selected persons.** } Pinkel-53

While Lynwood may have had ½ hour – one hour visitation schedule, there is not reason to replicate this inhumane visitation system at MLWDC. **The visitation portion of this EIR needs to be changed to describe more humane visitation that does not require appointments or limited duration for visitors, allows visitors including children to have food, possibly from machines, in a common area with residents, go inside and outside, have a play area for children and is available to ALL women housed at MRWDC.**

Pinkel-54

4.14-2 Because of MRWDC, how will the influx of visitors on the weekends and potential new residents to Lancaster as a result of this project impact Governor Brown’s EC of 4/15 requiring 25 percent statewide water reduction in potable urban water use? **Won’t this project place additional strain on the city to meet this state requirement since the water they will use will come for city wells and aquafer?**

Pinkel-55

4.14-18 The water supply assessment for this project is for the next 20 years. The report asserts that the reliability of future water supplies will be ensured ‘through continued implementation of programs for water banking; **purchase of new imported supplies; water transfers**, water conservation; and expansion of recycled water systems.’ While this dreamscape for future water for the area sounds good, there is no concrete analysis of where new imported water supplies or transfers will come from, **especially if the extreme drought conditions continue, or how much this import will cost taxpayers. If the New Supply Acquisition program mentioned on 4.14-23 doesn’t have any new supplies of water, what will be done?** At a time when the desertification of Southern California is taking place, when in 20 years this area may not be habitable because of lack of water, it is unacceptable to imagine placing women in a desert jail where future access to water is uncertain. As noted on 4.14-29, “...imported water from the SWP could experience large swings in available supply depending on rainfall and snowpack conditions....” Since imported water will be the main source of potable water for MLWDC, building a project with this level of uncertainty is unacceptable.

Pinkel-56

4.14-17 Short-Term Construction Impacts: Water sprayed on exposed soils for dust suppression during the four-year construction plan will come from **on-site wells. The volume of water used for the purpose of mitigating dust and illness from Valley Fever needs to be calculated in order to adequately determine whether this reduction of ground water is significant or not.** This calculation is missing in this report.

Pinkel-57

4.14-29 Drought conditions could result in purchase of water for \$10,000/afy with a need for 223afy, the cost to tax payers per year for water during drought conditions will be \$2,230,000. This needs to be clarified and added to the potential cost of the project.

Pinkel-58

Sheila Pinkel (January 6, 2016)**Pinkel-1**

The purpose of and need for the Project is described in detail in Section 3.1, Project Background, of the Draft Environmental Impact Report (EIR). That section provides information regarding the County's existing detention facilities, relevant regulatory mandates, and studies analyzing future facility needs, including for housing of female inmates.

As demonstrated in Section 5.0, Project Alternatives, an EIR must describe a range of reasonable and of potentially feasible alternatives to the proposed Project or to the location of the Project that would feasibly attain most of the basic Project Objectives but would avoid or substantially lessen any significant effects. An EIR is not required to consider alternatives that are infeasible. The range of alternatives is governed by a "rule of reason" that requires discussion of only those alternatives necessary for the County of Los Angeles Board of Supervisors (Board) to make a reasoned choice.

As demonstrated in Section 3.0, Project Description, on October 22, 2013, the Board authorized the evaluation of a proposal to use a portion of the Mira Loma Detention Center (MLDC) property as the site for a female detention facility in lieu of the Pitchess Detention Center (PDC) site previously proposed. In May 2014, the Board directed that "Option 1B" be studied, as recommended in the *Los Angeles County Jail Plan Independent Review and Comprehensive Report* (Jail Plan Report). Option 1B recommended continued evaluation of renovating the facility at MLDC for a women's detention center. The Draft EIR has been prepared to evaluate the environmental impacts of pursuing the proposed Project, in compliance with this Board directive.

The proposed jail planning is set in the context of the County's other programmatic and financial support of diversion from incarceration. Purely social effects of a project are beyond the scope of CEQA analysis, which focuses on the proposal's effect on the physical environment. The County, however, has a concurrent focus on diversion from incarceration as it considers this Project. Therefore, the proposed Project is consistent with the Board of Supervisor's consideration of policy issues addressing alternative approaches to incarceration, including the commenter's suggestions regarding diversion. Please refer to the response below to Pinkel-19 for additional information relating to the County's actions relating to diversion.

The Draft EIR Section 5.0, Project Alternatives, was prepared in accordance with Sections 15126.6(a) through 15126.6(f) of the State CEQA Guidelines and adequately considers alternatives to the proposed Project. Out-of-custody alternatives were not required to be analyzed in the Draft EIR beyond the No Project alternative analyses and they would not be able to achieve the Project's primary goal, as stated below and in Section 5.3.2 of the Draft EIR.

The Project's goal is to provide detention facilities for low- to medium-security level female inmates that meet modern correctional standards and that prioritize the on-site integration of gender-responsive female inmate education, treatment, and vocational training. This goal focuses on providing a secure detention facility with cost-effective therapeutic and rehabilitative programs to meet needs of eligible female inmates in order to reduce recidivism.

However, environmental impacts associated with "no action" are provided in Alternative 1A, No Project/Continuation of Existing Operations, and Alternative 1B, No Project/Predictable Actions, as demonstrated in Section 5.0, Alternatives. This Final EIR, including all comments submitted to the County on the Draft EIR, will be provided to the County of Los Angeles Board of Supervisors.

Therefore, your concerns will be presented directly to the decision makers prior to consideration of Project approval.

Pinkel-2

A Water Supply Assessment (WSA) was prepared for the Project and is included in Appendix G-2 of the Draft EIR and summarized in Section 4.14, Utilities and Service Systems. The WSA for the Project indicates that the Los Angeles County Waterworks District No. 40 (LACWWD 40) would be able to meet the projected water demands in its service area (Psomas 2015). As required under legislation commonly referred to as Senate Bill (SB) 610, the WSA must include an evaluation of the sufficiency of the water supplies available to the water supplier to meet existing and anticipated future demands (including the demand associated with the project) over a 20-year horizon that includes normal, single-dry, and multiple-dry years. The multiple-dry year scenario would represent drought conditions. With implementation of Mitigation Measure (MM) UTL-1, the LACWWD 40, which will be the Project's water supplier, would have the water supply needed to serve the Project. MM UTL-1 requires that the County sign the New Water Supply Entitlement Acquisition Agreement with the LACWWD 40 and pay a deposit of \$10,000 per acre-foot of annual water demand from the Project for the acquisition of additional water supplies from the Antelope Valley – East Kern Water Agency (AVEK) to serve the Project.

With implementation of MM UTL-1, Project-related estimates for water supply and demand, as provided in the WSA, show that water supply is available to serve the Project during the average year, single-dry year, and multiple-dry years. The WSA concludes that the information on record indicates a sufficient and reliable water supply for LACWWD 40, now and into the future, including a sufficient water supply for the Project (Psomas 2015). These supplies are also sufficient to provide for overall growth in the LACWWD 40 service area at the rate projected in the 2010 Integrated Regional Urban Water Management Plan (IRUWMP).

Regarding the commenter's concern about placement of the Mira Loma Women's Detention Center (MLWDC) in an area subject to drought and subsidence, this comment, in part, raises issues that extend beyond the scope of the California Environmental Quality Act (CEQA) requirements. Nonetheless, the Board of Supervisors will receive and be able to consider it and all other comments raised before taking any action on the proposed Project. The scope of CEQA is generally limited to the evaluation of a proposed Project's potential impact on the environment, and does not extend to the impact of the existing environment on a proposed project or on its users or residents. The applicable definition of the environment analyzed for CEQA purposes in an environmental impact report is the physical conditions in the area that are affected by the proposed project (e.g., land, air, and water). The proposed MLWDC Project's Draft EIR discloses and addresses the potential direct, indirect, and cumulative impacts of the proposed Project on the physical environment, in accordance with the State CEQA Guidelines for all environmental issue areas.

As stated on page 4.5-8, Regulatory Requirement (RR) GEO-1 requires that, prior to the completion of final engineering design plans, the Project's design and construction must be conducted with consideration of the effects of potential subsidence and collapsible soils. This could include remedial grading in specific areas to prepare the site to support the proposed structures; to provide a relative uniform-bearing material below shallow foundations; and/or to allow for overexcavation and recompaction below the planned foundations. Compliance with RR GEO-1 would ensure that the potential for impacts associated with subsidence and collapsible soils would be less than significant.

Pinkel-3

This comment alleges a failure to address the long-term impact of coccidioidomycosis, known as Valley Fever, to on site inmates and women living and working in the Project area. Valley Fever and its potential impact on potential future inmates and County staff is discussed in Section 4.2, Air Quality. A summary of hazards associated with the fungus is provided in the Draft EIR and includes trends related to Valley Fever in Los Angeles County, as inventoried and reported by the Los Angeles County Department of Public Health (LACDPH), which was consulted during the preparation of the Draft EIR.

The commenter references *The Changing Epidemiology of Coccidioidomycosis in Los Angeles (LA) County, California 1973–2011*, co-authored by Ramon Guevara, Tasneem Motala, and Dawn Terashita of the LACDPH. Dr. Terashita has coordinated consulted with the County staff on the issue of Valley Fever during preparation of this EIR. This reference has been reviewed, and it provides an analysis of the incidence rate of Valley Fever in Los Angeles County, including discussion of the Antelope Valley, and displays the trend of increasing cases through 2011. This information is augmented in the Section 4.2, Air Quality, with more recent data, as published in the LACDPH *2013 Annual Morbidity Report*. Information presented in the referenced report is consistent with information provided in the Draft EIR.

The Draft EIR includes an analysis of exposure hazards due to fugitive dust that may result from construction-related earth-moving activities and identifies several Project Design Features (PDFs) and RRs to minimize any exposure risks. PDF AIR-1, which will be included in the Contractor's Specification and monitored through the Mitigation Monitoring and Reporting Program (MMRP), requires the distribution of materials on Valley Fever, or any updated materials as applicable, to worksite supervisors and construction workers. PDF AIR-2 and RR AIR-1, which will be included in the Contractor's Specification and monitored through the MMRP, require compliance with Best Management Practices and Antelope Valley Air Quality Management District (AVAQMD) Rule 403 for the prevention of fugitive dust and nuisance air contaminants. RR AIR-1 provides a listing of the most applicable AVAQMD Rules. Rule 403, Fugitive Dust, requires measures such as watering and control of track-out from the site, as well as submittal of a Dust Control Plan prior to the start of construction. Rule 403 requires control of fugitive dust and avoidance of nuisance, and Rule 402 prohibits the emission of quantities of air contaminants that could cause injury, detriment, nuisance, or annoyance to the public, or that endanger the comfort, repose, health or safety of the public. With implementation of RR AIR-1, on-site earth-moving activities would not result in fugitive dust that could affect adjacent off-site land uses.

As stated in RR AIR-2, the Project will be constructed in compliance with the Department of Health – Infection Control Policy Guidelines Procedure No. 918.01. Policy 918 is intended to prevent the spread of diseases that may be caused by construction-induced airborne pollution in susceptible individuals (patients, staff, and the public) in Department of Health Services (DHS) facilities. The protocols and requirements mandate the designation of an Infection Control Coordinator who must review and approve infection-control plans for new construction or renovation projects to ensure a safe environment. These infection-control plans must include infection-control measures to contain dust, debris, and other elements and to protect the patients, employees, and visitors in this environment. The Infection Control Coordinator has independent authority to stop construction-related activities immediately when the public may be adversely affected by infection-control hazards generated during construction-related activities and when the infection-control precautions and/or engineering controls are inadequate to contain the hazard. As such, the Draft EIR states that exposure to Valley Fever during construction activities would be the same as exposure to dust, and, thus, should follow the requirements for the mitigation of dust. Impacts would be less than significant, and no mitigation is required.

Section 4.2, Air Quality, acknowledges that the future inmate population has the potential to be exposed to dust generated from soils within the Antelope Valley, which have the potential to contain *Coccidioides* spores (i.e., the fungus that causes Valley Fever). As discussed in Section 3.0, Project Description, of the Draft EIR, according to the Sheriff's Department, Assembly Bill (AB) 109 female inmates are serving an average of 423 days in custody from date of sentencing to date of release, while non-AB 109 female inmates serve an average of 107 days in custody. Therefore, the length of time that inmates would be living at the MLWDC is temporary, and is not equivalent to a permanent living circumstance or the longer sentences in state prisons that house higher-security inmates.

The Draft EIR summarizes the LACDPH 2013 *Annual Morbidity Report*, which presents the recent trends related to Valley Fever in Los Angeles County, including and increasing incidence rate for reported coccidioidomycosis cases in the last ten years, which has doubled in the past five years. However, the overall incidence rate in the Antelope Valley was not determined to warrant changes in the County's protocol for disease prevention, notwithstanding the fact that the County health and public health officials are well educated on the condition; are familiar with its incidence in the County and elsewhere in the state; and are involved in research and education on the subject of Valley Fever.

The LACDPH has not identified the previous U.S. Immigration and Customs Enforcement (ICE) detainee population at the Mira Loma Detention Center (MLDC), the future inmate population at the MLWDC, or earlier occupants at the High Desert Health System (HDHS) Multi-Ambulatory Care Center (MACC) (the adjacent hospital facility, which has relocated in Lancaster) as requiring the implementation of health screening protocols or other measures to address potential Valley Fever exposure.

Also, as demonstrated in Section 4.2, Air Quality, the California Department of Corrections and Rehabilitation (CDCR) has not identified the Lancaster area as being a geographic location that requires screening or interventions for the State prison population with regard to exposure to Valley Fever (CDCR 2013). As discussed with the Sheriff's Department staff for the preparation of the Draft EIR, the operation of the MLWDC will follow standard Sheriff's Department procedures for medical care and prevention with regard to health care for inmates in general, and Valley Fever specifically, and the Sheriff's Department will continue to coordinate with the LACDPH (Masis 2015). The LACDPH is the designated County agency with the mandate to protect health, prevent disease, and promote the health and well-being of all persons within Los Angeles County. As such, any future changes in LACDPH policies that may be made regarding Valley Fever for inmate populations will be implemented, as applicable, throughout the County jail system.

Because the future inmate population's exposure to disturbed soils would be limited to gardening activities, PDF AIR-3 in Section 4.2, Air Quality, states that the Project will import gardening soils from outside of the Antelope Valley and would be used in raised planting beds to remove gardening in native soil as a potential source of exposure to Valley Fever spores. Further, outdoor recreational areas would be covered with landscaping, turf grass, gravel, or landscaping/wood chip ground cover that would minimize the opportunity for soils to become airborne.

The Antelope Valley has not been identified by the LACDPH, the AVAQMD, or any other governmental health agency as a region that should be avoided by the elderly, women, children, health-compromised individuals, or by any specific ethnic groups. The Antelope Valley includes the major population centers of the cities of Lancaster and Palmdale, which have an estimated 2014 combined population of approximately 314,902 people. This portion of the Antelope Valley includes a diverse population of residents that includes many individuals that could be considered to be at higher risk of complications due to infection from Valley Fever spores. As stated in

Section 4.2, Air Quality, persons at the highest risk of developing disseminated Valley Fever include the very young (under 1 year old); adults over 60 years; immunocompromised individuals; people with diabetes; women in the third trimester of pregnancy; and certain ethnic groups, including African-Americans and Filipinos.

The demographics of the two cities include approximately 158,605 females (50.4 percent) and 156,297 males (49.6 percent) with a median age of approximately 30.7 years old. The racial/ethnic composition of the area is approximately 47 percent Latino, 29 percent white, 17 percent African American, and 4 percent Asian (U.S. Census Bureau 2016). As such, the temporary presence of a female inmate population into the Antelope Valley would not introduce a new or unusual demographic into the area that is not already present in the existing population of the region.

The MLWDC property is not located in an area determined to be hazardous to the health of local residents or visitors to the region. The Draft EIR concludes that the potential future inmate population's temporary placement into the Antelope Valley, which includes the inmates' participation in all indoor and outdoor activities at the MLWDC, would not constitute placement into a hazardous existing environmental setting that would require mitigation. Additionally, the operation of the proposed Project would not increase the prevalence of Valley Fever spores or otherwise exacerbate an existing environmental condition.

Pinkel-4

The proposed visitation protocol at the MLWDC will be similar to the protocol at the Century Regional Detention Center (CRDF) and opportunities for visitation will be augmented as feasible. Each inmate will be eligible for one 1-hour non-contact visit or two ½-hour non-contact visits (via phone and video) per week during Saturdays and Sundays; during dayshift hours (8:00 AM to 6:00 PM); and on designated holidays. Additional visitation opportunities will be based on volume and space availability. Contact visits will be allowed for inmates who meet established criteria and will be based on visiting volume, scheduled visits, and available time. Attorney visits will be allowed during normal business hours. Visitation systems and protocols at the facility will include visitation areas in two buildings and video visitation rooms and video interview rooms in transitional housing.

The goal at the MLWDC will be to increase visitation opportunities and augment current systems in place at the CRDF with video visiting and contact visitation in areas that are not enclosed, but open, thereby creating a more normative environment.

As such, the Project will provide a combined minimum of 34 video-visiting stations on site, along with video interview rooms in transitional housing buildings. Additionally, as demonstrated on page 3-4, in Section 3.0, Project Description, the Board of Supervisors directed the establishment of an Advisory Board (now called the Gender Responsive Advisory Committee) that will report to the Board of Supervisors on specific programmatic and operational issues. The Advisory Committee has already begun to organize its meetings with a membership including representatives of County staff, outside agencies, advocates, organizations, individuals with incarceration experience, and representatives with expertise in reducing recidivism of female inmates. As part of its charge, the Advisory Committee is tasked with reviewing the program model for the proposed MLWDC Project to ensure that it is evidence-based in reducing recidivism; evaluating strategies to reduce negative impacts of operating the proposed MLWDC away from the downtown Los Angeles area, including contract transportation for visitors, video visiting for attorney consultation; and reviewing national best practices for visiting and family reunification.

Pinkel-5

The County conducted the noticing and scoping for the proposed Project in accordance with Section 15082 of the State CEQA Guidelines. An Initial Study and Notice of Preparation (NOP) of an EIR was made available for public review between September 5, 2014, and October 6, 2014, which included a notice of a Scoping Meeting. The NOP and Scoping Meeting notice was sent to all responsible/trustee agencies and individuals that had requested to be informed about the Project in order to solicit feedback from federal, State, regional, and local government agencies and interested parties on the scope and content of the Draft EIR for the Project. A notice announcing the availability of the Initial Study, the NOP, and the Scoping Meeting was published in the *Antelope Valley Press* on September 5, 2014; in the *Country Journal* on September 6, 2014; and on the *Antelope Valley Times* website from September 5 through September 11, 2014. Hardcopies of the Initial Study and NOP were also made available at the Quartz Hill Library and the Lancaster Library.

The County then held a Scoping Meeting for the EIR from 6:00 PM to 8:00 PM on September 18, 2014, at the American Heroes Park Community Room at 701 West Kettering Avenue in Lancaster, California. A total of 19 individuals (not including County employees) signed the attendance sheet for the Scoping Meeting, which is provided in Appendix A-3 of the Draft EIR.

The County then held two public community meetings during the Draft EIR noticed public review periods. The first was held on Tuesday, December 8, 2015, from 6:00 PM to 8:00 PM at the James C. Gilley Lancaster National Soccer Center Eastside Activity Center, 43000 30th Street East in Lancaster, CA 93535, and the second meeting was held subsequent to the receipt of the commenter's letter on Tuesday, February 9, 2016, at the Lancaster Public Library at 601 West Lancaster Boulevard in Lancaster, CA 93534. As such, this second public meeting addresses the commenter's request for an additional community meeting. Attendance at the public meetings was voluntary and was not required to submit comments on the Draft EIR. The public notifications and public meeting opportunities on the proposed Project are summarized in detail in Section 1.0 of this Final EIR.

Pinkel-6

The County conducted the noticing and scoping for the proposed Project in accordance with Section 15082 of the CEQA Guidelines. An Initial Study and NOP was made available for public review between September 5, 2014 and October 6, 2014, which included a notice of a scoping meeting. The NOP and scoping meeting notice was sent to all responsible/trustee agencies and individuals that had requested to be informed about the Project in order to solicit feedback from federal, State, regional, and local government agencies and interested parties on the scope and content of the Draft EIR for the Project. A notice announcing the availability of the Initial Study and NOP was also published in the *Antelope Valley Press* on September 5, 2014; in the *Country Journal* on September 6, 2014; and on the *Antelope Valley Times* website from September 5 through September 11, 2014. Hardcopies of the Initial Study and NOP were also made available at the Quartz Hill Library and the Lancaster Library.

The County then held a Scoping Meeting for the EIR from 6:00 PM to 8:00 PM on September 18, 2014, at the American Heroes Park Community Room at 701 West Kettering Avenue in Lancaster, California. A total of 19 individuals (not including County employees) signed the attendance sheet for the Scoping Meeting, which is provided in Appendix A-3 of the Draft EIR. The address for the Scoping Meeting was properly listed in all notifications, as confirmed on the City of Lancaster's website (<http://www.cityoflancasterca.org/about-us/departments-services/parks-recreation->

[arts/parks/american-heroes-park](#)) and contained a photograph of the meeting building and the address for the American Heroes Park, at 701 West Kettering Avenue.

The notifications for the Draft EIR and public review period were made in accordance with Section 15087 of the California Environmental Quality Act (CEQA) Guidelines. In November 2015, a Notice of Availability (NOA) of the Draft Environmental Impact Report and Notice of Public Meeting was prepared and distributed to the State Office of Planning and Research, responsible and trustee agencies, organizations, interested parties, and other agencies required to receive the notice to announce the MLWDC Draft EIR public review period between November 9, 2015, and January 12, 2016. The County voluntarily provided an extended comment period for more than the required 45 days, to avoid any inconvenience to commenters from the holidays occurring in the comment period.

A public meeting was held to provide an overview of the Project and the conclusions of the Draft EIR on Tuesday, December 8, 2015, from 6:00 PM to 8:00 PM at the James C. Gilley Lancaster National Soccer Center Eastside Activity Center at 43000 30th Street East in Lancaster, CA 93535. This meeting was voluntary and attendance was not required to submit comments on the Draft EIR. The NOA was distributed to the mailing list and email list prepared for the Notice of Preparation (NOP), and was augmented to include property owners within a 300-foot radius of the Project site, individuals requested to be added to the list, as well as individuals that had provided comments on the NOP. The NOA was posted on the County's website for viewing and downloading at <ftp://dpwftp.co.la.ca.us/pub/PMD/MiraLomaWomenFacility>. Newspaper advertisements of the NOA and Draft EIR comment period and the public meeting were placed in the following papers and ran on Monday, November 9, 2015:

- *Acton-Aqua Dolce News*: a weekly publication so the ad was available for 7 days.
- *Los Angeles Daily News*: a daily publication
- *Antelope Valley Press*: a daily publication
- *Antelope Valley Times*: an online publication

The County voluntarily added additional outreach for the MLWDC Draft EIR public review process. In January 2016, a *Notice of Extended Comment Period for the Draft Environmental Impact Report for the Mira Loma Women's Detention Center Project and Notice of Second Public Meeting in Lancaster, California* was sent to the 2015 NOA mailing list and email list, as well as additional mailing list contacts that had provided comment letters during the Draft EIR public review period up to the time of the mailing. This Notice was prepared in both English and Spanish. Additionally, the Executive Summary of the Draft EIR was prepared in Spanish and posted on the County's website for viewing and downloading. Hardcopies of the Spanish-translated Executive Summary was made available at the Quartz Hill and Lancaster Libraries, and the Los Angeles County Public Information Office. Newspaper advertisements of the extended comment period and second public meeting were placed in the following papers and ran on Monday, February 1, 2016:

- *Acton-Aqua Dolce News*: weekly publication so the ad was available for 7 days
- *Los Angeles Daily News*: a daily publication
- *La Opinion*: a daily publication (the ad ran in both English and Spanish)
- *Antelope Valley Press*: a daily publication
- *Antelope Valley Times*: an online publication

The second public meeting was held on Tuesday, February 9, 2016, at the Lancaster Public Library at 601 West Lancaster Boulevard in Lancaster, CA 93534 to present an overview of the proposed Project and the Draft EIR process and conclusions, and to invite submission of public comments on the Draft EIR. Real-time Spanish translation services were made available, as were

copies of the Notice and the Executive Summary in both English and Spanish. This second public meeting had two attendees from the public. Attendance at the public meetings was voluntary and was not required to submit comments on the Draft EIR.

In summary, the County conducted all required noticing and scoping for the proposed Project in accordance with Section 15082 of the State CEQA Guidelines and conducted the public review for the Draft EIR in compliance with Section 15087 of the State CEQA Guidelines. The two public meetings, as well as the extension of the public review period until March 2, 2016, are beyond the requirements of CEQA.

Pinkel-7

In each section of the Draft EIR, the first instance of the first use of a phrase that will be referred to with an acronym (e.g. Mira Loma Women's Detention Center [MLWDC]), the Draft EIR defines the phrase. This is repeated within each section so that the reader does not need to refer to other sections within the Draft EIR or to an abbreviation list to understand the acronym.

Pinkel-8

The MLWDC will provide an adequate number of visiting booths to comply with state regulations and mandates (providing two 30-minute visits/week or one 1-hour visit/week). Importantly, the proposed MLWDC will accommodate various forms of visitation, including traditional non-contact visiting, telephone access, video visiting, and contact visiting. Contact visits refer to opportunities for inmates and visitors to interact face to face, allowing for physical contact. Non-contact visits refer to visitations where the inmate and the visitor are separated by a glass barrier, and no physical contact is allowed. Video visits refer to long-distance visitation that can occur through a video conferencing program, allowing the inmate and the visitor to hear and see each other via the computer and screen. In order to achieve a more normative environment, it is the goal of the Project to provide video visiting as well as both indoor and outdoor areas where contact visitation opportunities can be provided for inmates and their families. Visitation will be an integral part of the rehabilitative process at the MLWDC. Contact visitation is believed to provide families a positive opportunity to maintain closer ties and assist them into transitioning back into their communities, thus reducing recidivism.

Pinkel-9

The evaluation of alternatives was appropriately included in the Draft EIR as required by CEQA. Once it can consider the Final EIR and recommendations of its staff, the Board of Supervisors has the discretion to approve, revise, or deny the proposed Project, and may also choose to move forward with an alternative to the proposed Project. This comment incorrectly describes this proposed project as having been approved. As demonstrated in Section 5.0, Project Alternatives, an EIR must describe a range of reasonable and of potentially feasible alternatives to the proposed Project or to the location of the Project, which would feasibly attain most of the basic Project Objectives, but would avoid or substantially lessen any significant effects. Based on the analyses in Sections 4.1 through 4.15, the Project would result in significant environmental effects prior to mitigation on a number of environmental topics. Following mitigation, however, impacts to all of these topical areas would be avoided or reduced to less than significant levels with the implementation of mitigation measures. No significant and unavoidable impacts would occur with the Project.

Additionally, an EIR is not required to consider alternatives that are infeasible. The range of alternatives is governed by a "rule of reason" that requires discussion of only those alternatives

necessary for the County of Los Angeles Board of Supervisors (Board) to make a reasoned choice. As demonstrated in Section 3.0, Project Description, on October 22, 2013, the Board authorized the evaluation of a proposal to use a portion of the Mira Loma Detention Center (MLDC) property as the site for a female detention facility in lieu of the Pitchess Detention Center (PDC) site previously proposed. In May 2014, the Board directed that "Option 1B" be studied, as recommended in the *Los Angeles County Jail Plan Independent Review and Comprehensive Report* (Jail Plan Report). Option 1B recommended continued evaluation of renovating the facility at MLDC for a women's detention center.

The alternatives set forth in Section 5.0, Project Alternatives satisfy the requirements of Section 15126.6 of the State CEQA Guidelines because they could feasibly attain most of the basic objectives. The alternatives would also reduce environmental impacts, although as discussed in the Draft EIR, implementation of the proposed Project would not result in any significant impacts after mitigation.

Pinkel-10

The environmental impacts associated with "no action" are provided in Alternative 1A, No Project/Continuation of Existing Operations, and Alternative 1B, No Project/Predictable Actions, as demonstrated in Section 5.0, Alternatives. The continuation of housing the female inmates at the CRDF would not result in new environmental impacts as this is occurring under existing conditions. Occupation by female inmates was the condition at the time of the issuance of the Project's NOP. The NOP was issued in September of 2014, which according to Section 15125 of the State CEQA Guidelines, establishes the existing physical conditions on the Project site from both a local and regional perspective and constitutes the baseline conditions by which a lead agency determines whether an impact is significant. Thus, the implications of Alternatives 1A, 1B, and 3, which do not represent new environmental impacts, need not be considered in the EIR.

While the Project is one of several actions that the County is considering for improvements to the entire jail system, the Project itself has independent utility, in that it can be implemented separately from all other County projects. Thus, it is considered in the Draft EIR as a Project that would be presented to the Board of Supervisors for consideration independent of other County plans and proposals. If the MLWDC Project is not approved and the County decides to build a new Men's Central Jail, then a means of temporarily housing the male inmate population could be evaluated in the CEQA document prepared for that project, as necessary.

Pinkel-11

As stated in Section 15126.6(d) of the State CEQA Guidelines, the EIR shall include sufficient information about each alternative to allow meaningful evaluation, analysis, and comparison with the proposed project. If an alternative would cause one or more significant effects in addition to those that would be caused by the project as proposed, the significant effects of the alternative shall be discussed, but in less detail than the significant effects of the project as proposed. Thus, the analysis of the alternatives to the Project in Section 5.0 of the Draft EIR is not intended to be, nor is it required to be, as extensive as the analysis of the impacts of the Project in Section 4.0 of the Draft EIR.

Pinkel-12

Please refer to the response for Pinkel-10 above.

Pinkel-13

Please refer to the response for Pinkel-1 above.

Pinkel-14

The analyses in Sections 4.1 to 4.15 of the Draft EIR discuss the environmental impacts of the Project and indicate that compliance with existing regulations and implementation of identified mitigation measures will avoid significant environmental impacts or reduce significant impact to less than significant levels. The Draft EIR was prepared based on the proposed site plan, as shown in Exhibit 3-1 of the Draft EIR, as well as information about the construction and operation of the proposed Project from the County Department of Public Works and the County Sheriff's Department. The Draft EIR includes an analysis of a conservative set of assumptions about Project construction and operations.

Pinkel-15

The comment incorrectly concludes that thresholds of significance are not described in the Draft EIR. The thresholds of significance used under each issue area are provided in Section 4.0 of the Draft EIR. Some are derived from Appendix G of the State CEQA Guidelines, which are used in determining whether the impact of the Project would be significant or not. In other instances, quantitative thresholds are also provided, such as in Section 4.2, Air Quality, and Section 4.13, Transportation and Traffic.

Pinkel-16

Currently, the Sheriff's Department is following the mandates of AB 109 in accordance with the direction of the County Board of Supervisors with regard to funding allocations.

Pinkel-17

As demonstrated on page 3-17 of Section 3.0, Project Description, the average number of inmates in the Sheriff's Department population has increased due to a substantial number of inmates categorized as "N3" (i.e. non-violent, non-serious, non-sexual) serving their terms in County jail as mandated under AB 109. These inmates are being incarcerated in accordance with established laws and the process of determining which women are appropriately incarcerated is beyond the scope of this proposed Project. The County jail population is directly influenced by sentences imposed by the court system.

Pinkel-18

Purely social effects of a project are beyond the scope of CEQA analysis, which focuses on the proposal's effect on the physical environment. Currently, the Sheriff's Department is following the mandates of AB 109 in accordance with the direction of the County Board of Supervisors with regard to funding allocations. The County, however, has a concurrent focus on diversion from incarceration as it considers this Project, as described in the response for Pinkel-19 below.

Women currently in the custody of the Los Angeles County Sheriff's Department who are not granted diversion opportunities do not qualify for early release and/or diversion programs due to the severity of the violation.

Pinkel-19

This comment relates to the merits of the proposed Project and not the environmental analysis included in the Draft EIR or the environmental impacts of the Project. Purely social effects of a project are beyond the scope of CEQA analysis, which focuses on the proposal's effect on the physical environment. The County, however, has a concurrent focus on diversion from incarceration as it considers this Project. This Final EIR, including all comments submitted to the County on the Draft EIR, will be provided to the County of Los Angeles Board of Supervisors. Therefore, your concerns will be presented directly to the decision makers prior to consideration of Project approval.

The Board of Supervisors has adopted numerous recent actions to reduce the number of people who are incarcerated in Los Angeles County, particularly those with mental illness and/or substance use disorders. The Board of Supervisors' actions relating to diversion from the criminal justice system to reduce the need for incarceration, are based in part on their consideration of the August 4, 2015 District Attorney's report of the Criminal Justice Mental Health Advisory Board in a document entitled "Mental Health Advisory Report: A Blueprint for Change – Providing Treatment, Promoting Rehabilitation and Reducing Recidivism: An Initiative to Develop a Comprehensive Plan for Los Angeles County".

The members of the District Attorney's Advisory Board were the Sheriff; the Fire Chief; the Directors of the Departments of Mental Health, Health Services, Public Health, Veteran's Affairs, and Public Social Services; the Public Defender, and the Executive Director of the Countywide Criminal Justice Coordination Committee. All Advisory Board members participated in the Countywide assessment of services and recommendations to provide for comprehensive mental health diversion for each stage of the criminal justice continuum, from first responders to community re-entry and support. This report summarized the range of diversion programs already existing in the County and analyzed the need for additional mental health and substance abuse diversion services for each stage along the criminal justice continuum. The County of Los Angeles Chief Executive Office (CEO) has acknowledged that these recommendations recognize that there are potential new efficiencies and cost avoidance by redirecting persons in need of physical, mental, and public health care services from the criminal justice system to appropriate care and treatment in lieu of incarceration.

On August 11, 2015 and September 1, 2015, in the context of determining potential capacity of proposed County jail facilities, and responding to treatment needs for the mentally ill or victims of substance use disorders, the Board directed an ordinance be prepared to establish an Office of Diversion and Re-Entry (Office) within the Department of Health Services. That ordinance was adopted, and the Office has been established pursuant to Section 2.76.600 of the Los Angeles County Code. For administrative oversight, the Board of Supervisors determined the Office will be a part of the Department of Health Services and the Director of the Office will report to the Director of the Department of Health Services. The Director of this Office will be advised by a Permanent Steering Committee with broad membership from County departments working in collaboration with working groups established by the District Attorney. It includes representatives from the Sheriff, Fire Chief, Chief Executive Office, Superior Court, Public Defender, Alternate Public Defender, Probation, District Attorney, Mental Health, Public Health and Health Services.

The Office will oversee Countywide diversion efforts including a system of integrated mental, physical and public health care services and supportive housing for those at risk of homelessness who are re-directed from the criminal justice system or re-entering the community after incarceration. For purposes of this Office's jurisdiction, the expectation is for diversion to seamlessly occur across "sequential intercept" points within the criminal justice system. Such

intercept points include initial contact with law enforcement or other first responders, involvement with the criminal court system, incarceration, or post-release from incarceration.

The Office was allocated an initial Supplemental Budget of \$74.5 million to be spent 40 percent on housing; 50 percent for diversion and anti-recidivism programs; and 10 percent for administration. The Board of Supervisors directed that future budget allocations be a part of the annual budget process. On September 1, 2015, the Board of Supervisors also directed that the Office distribute funding so at least 1,000 individuals would be diverted across all intercept points within the criminal justice system.

The Criminal Justice Mental Health Advisory Board report of August 2015 concluded that even with increased opportunities for diversion from a jail environment, there will still be a need for mental health treatment in jails, and that diversion efforts can reduce, but will not eliminate, the need for the County to operate detention facilities. In light of the County's diversion efforts, the Board of Supervisors directed that, for purposes of on-going study and evaluation in the environmental review process, the maximum size of the proposed women's detention center at Mira Loma in Lancaster would remain at 1,604 beds. In addition the Board of Supervisors reduced the maximum proposed size by approximately 1,000 beds, for purposes of the environmental review of a separate proposed treatment and detention center addressing needs of incarcerated men and women with mental illness and/or substance use disorders at the site of the current Men's Central Jail in downtown Los Angeles.

Pinkel-20

As stated on page 3-9 in Section 3.0, Project Description, Building 3 will provide visiting activities, including (1) non-contact personal and family visits; (2) non-contact attorney visits with provisions for passing and reviewing papers; (3) contact visits with attorneys with appropriate work orders and/or department authorization; and (4) supervised contact visits with immediate family members and children. In addition to these accommodations, the MLWDC will have video visitation opportunities in Building 3 and within some of the housing units that may also be used by inmates for off-site attorney consultations.

In order to achieve a more normative environment, it is the goal of the Project to provide video visiting as well as both indoor and outdoor areas where contact visitation opportunities can be provided for inmates and their families. A fenced outdoor courtyard area within the secured perimeter fencing will be constructed to allow for outdoor visitation. Visitation will be an integral part of the rehabilitative process at the MLWDC. Contact visitation is believed to provide families a positive opportunity to maintain closer ties and assist them into transitioning back into their communities, thus reducing recidivism.

Pinkel-21

There will be a fee associated with the video visitation service that will be determined after completion of the facility and based on available technology and related costs at that time. Fees will be similar to those associated with traditional phone calls. The MLWDC will meet minimum State requirements and mandates with the goal of providing augmented services, if feasible. Visitation will be offered according to available space and time frames, which will consist of an hour minimum per week. Each inmate will be eligible for one 1-hour non-contact visit or two ½-hour non-contact visits (via phone and video) per week during Saturdays and Sundays; during dayshift hours (8:00 AM to 6:00 PM); and on designated holidays. Any additional visitation time allowance will be determined based on total inmate population, the volume of visitors, and facility capabilities. A scheduling system is necessary in order to accommodate the entire inmate

population in an orderly manner and to account for minimum requirements. Any interruption to the scheduled visit would only be due to emergency notifications and/or at the conclusion of the scheduled visit.

Pinkel-22

Yes, it is the intention of the Sheriff's Department that the Transition Housing will receive augmented visitation services and other program opportunities to assist female inmates in their transition back into their communities.

Pinkel-23

The comment alleges that the proposed Project's visitation protocol is inhumane. The MLWDC will meet minimum State requirements and mandates with the goal of providing augmented services, if feasible. Visitation will be offered according to available space and time frames, in which each inmate will be eligible for one 1-hour non-contact visit or two ½-hour non-contact visits (via phone and video) per week during Saturdays and Sundays; during dayshift hours (8:00 AM to 6:00 PM); and on designated holidays. Any additional visitation time allowance will be determined based on total inmate population, the volume of visitors, and facility capabilities. A scheduling system is necessary in order to accommodate the entire inmate population in an orderly manner and to account for minimum requirements. Any interruption to the scheduled visit would only be due to emergency notifications and/or at the conclusion of the scheduled visit.

Pinkel-24

Section 3.0, Project Description, of the Draft EIR states that the Project will offer general education classes, computer training, general and vocational career technical education, college courses, career counseling, a learning resource center, a library and computer labs, culinary classes, and indoor/outdoor recreation for inmates. Other services include religious services, counseling services, and community transition services. Participation in classes, training, and other activities will be scheduled for each inmate according to individual evaluation, interests, needs, and availability.

Course selections will be determined based their needs for specific services, and students' interest levels. Courses will be offered during three blocks of time each weekday (morning, afternoon, and evening), providing opportunities for inmates to be enrolled in multiple courses. Programs are also divided into three categories based on program intensity: all-day, half-day, and evening programs. Examples of all-day programs (morning and afternoon) include culinary arts programs, cosmetology programs, and Prisoner Assisted Community Enhancement (PACE). Examples of half-day programs (morning or afternoon) include small engine repair, animal grooming/training, social media management and marketing/office assistant, automotive detailing, windshield and headlight repair, and recycling. Examples of evening programs include computer coding, small business entrepreneurship, community college, Associate of Arts Degree, and General Education. Other programs include prenatal programs, volunteer programs, peer mentoring, physical education, dance, arts and crafts, a commissary program, and book clubs.

The Advisory Committee established at Board direction includes in its tasks a review of the program model for the proposed Project to ensure that its programming is evidence-based in reducing recidivism. See response for Pinkel-4 for a description of the Advisory Committee.

Pinkel-25

“Licensed Medical Personnel” refers to Registered Nurses. On-site “medical practitioners” refers to Licensed Physicians and Registered Nurse Practitioners. On-site medical practitioners will provide obstetrics, gynecological, dental, orthopedic, and dermatology services. Radiology and laboratory services will be available for diagnostic testing. An on-site pharmacy will be available for medication dispensing. Licensed nursing personnel will provide nurse clinics, sick call, and preventative medical care education.

Pinkel-26

Inmates at the MLWDC will have access to computer classes and computer labs will be available at Building 5. Telecommunications space in each building refer to telephone, internet, radio, public announcement, and alarm systems that would be provided at each building to facilitate communications between Project staff in different buildings.

Pinkel-27

The MLWDC is an open campus setting with barrack-style and dormitory housing in lieu of traditional high security structure cell configurations such as those in the current Lynwood facility, which is housing women inmates in jail cells originally designed for high security male inmates. Each housing barrack will have an open day room for group activities as well as outdoor facilities establishing a less institutional environment.

Pinkel-28

The bunks will be standard detention style bunks and inmates will have space to sit and read in open dayroom spaces away from the bunks. The exact configuration of the bunk bed system and associated lighting are internal design considerations that are not within the scope of the Draft EIR, which evaluates the impacts of the proposed Project on the physical environment.

Pinkel-29

Yes, the video visitation system will provide the opportunity for private conversations. Any interruption would only be due to emergency notifications and/or at the conclusion of the scheduled visit. There will be a fee associated with the service that will be determined after completion of the facility and based on available technology and related costs at that time. Fees will be similar to those associated with traditional phone calls.

Pinkel-30

Female inmates are being incarcerated in accordance with established laws, and the process of determining which women are appropriately incarcerated is beyond the scope of this proposed Project. This comment will be presented to the County of Los Angeles Board of Supervisors prior to their consideration of Project approval.

Pinkel-31

Please refer to the response for Pinkel-1 above.

Pinkel-32

The Draft EIR process does not require a description of staff training requirements, which is not an environmental impact. However all Sheriff's Department personnel receive gender specific training with regard to female inmates.

Pinkel-33

Courses are provided by licensed community based organizations and are established according to the need/demand as well as achievable time frames. Career Technical courses such as computer, culinary arts, and family life skills are among the many purpose programs intended for the MLWDC. The EBI program would provide inmates the opportunity to participate in college courses, which are to be provided by College of the Canyons. However, there would be no established program for inmates to specifically earn a Bachelor's degree. The educational programs that will be available at MLWDC will be facilitated by appropriately licensed and accredited institutions and instructors, which are held accountable to the standards set by the governing agency/institution. As discussed in Section 3.0, Project Description, of the Draft EIR, according to the Sheriff's Department, AB 109 female inmates are serving an average of 423 days in custody from sentencing date to release date, while non-AB 109 female inmates serve an average of 107 days in custody. Thus, the average period of incarceration would be inconsistent with earning a four-year degree.

Pinkel-34

Inmate worker jobs will be available to assist in the everyday functioning duties of the facilities. Jobs will include but will not be limited to; working in the kitchen, serving food, and sorting laundry.

Pinkel-35

Visitation will be offered according to available space and time frames in order to meet State requirements and mandates (providing two 30-minute visits /week, or one 1-hour visit /week). The proposed MLWDC will accommodate various forms of visitation, including traditional non-contact visiting, telephone access, video visiting, and contact visiting. In order to achieve a more normative environment, it is the goal of the Project to provide video visiting as well as both indoor and outdoor areas where contact visitation opportunities can be provided for inmates and their families. Visitation will be an integral part of the rehabilitative process at MLWDC. A scheduling system is necessary in order to accommodate the entire inmate population in an orderly manner and to account for minimum requirements. Any additional visitation allowances will be determined by the availability of space and time.

Pinkel-36

There will be a fee associated with video visits that will be determined after completion of the facility and based on available technology at that time and related costs. The MLWDC will meet minimum state regulations and mandates with the goal of providing augmented visitation services. It is the intention of the Sheriff's Department to provide video visitations to all inmates at MLWDC.

Pinkel-37

As discussed in Section 3.0, Project Description, the Sheriff's Department is in the process of expanding the number of locations throughout the County to afford visitors/families access to video visiting equipment. Currently, seven Sheriff's Department stations are equipped with an

Inmate Video Visitation System (IVVS) that is accessible to the public. They are Lakewood, San Dimas, Norwalk, Carson, Lancaster, Palmdale, and East Los Angeles. Each of these seven Sheriff's Department stations currently has one public facing video visiting station installed. These seven video stations are available for visitor/family access and are able to communicate with inmates housed at all the current jail facilities throughout Los Angeles County.

As funding becomes available, the Sheriff's Department intends to complete the expansion of IVVS into the remaining Sheriff's Department stations throughout Los Angeles County and increase the number of video units inside the inmate housing units at a rate of 40 to 50 new video visiting stations per year. Additional video units will also be installed in the public visiting areas of the jail facilities. As of January 1, 2016, the installation of 72 video visiting stations at the Carson, East Los Angeles, Lancaster, Lakewood, Norwalk, Palmdale and San Dimas Stations has been completed. Video visiting stations are also in operation at Century Regional Detention Facility, Men's Central Jail, Pitches Detention Center (North County Correctional Facility and South Facility), Twin Towers Correctional Facility and Los Angeles County Medical Center. Currently, the Sheriff's Department is working with software vendors to define the scope of the pilot project that will allow visitors to video conference from home or office during this calendar year.

Pinkel-38

The MLWDC will provide an adequate number of visiting booths and video visiting stations to accommodate the intended inmate population of 1,604 individuals, in accordance with state regulations and mandates. With the introduction of a contact visitation center to augment the Sheriff's Department visitation services at the MLWDC, the Project will provide sufficient options for inmates to visit with their families. Providing adequate visitation for inmates and their families is a goal of the proposed Project.

Pinkel-39

The MLWDC will provide an attorney room to accommodate private inmate visits with attorneys. Attorneys will also have extended hours to visit with their clients. Section 3.0, Project Description, of the Draft EIR provides information on the operational characteristics of the Project. Attorney visits will be allowed during normal business hours. Visitation systems and protocols at the facility will include visitation areas in two buildings and video visitation rooms and video interview rooms in transitional housing. As stated on page 3-9, Building 3 will provide visiting activities, including (1) non-contact personal and family visits; (2) non-contact attorney visits with provisions for passing and reviewing papers; (3) contact visits with attorneys with appropriate work orders and/or department authorization; and (4) supervised contact visits with immediate family members and children. In addition to these accommodations, the MLWDC will have video visitation opportunities in Building 3 and within some of the housing units that may also be used by inmates for off-site attorney consultations.

Pinkel-40

Water to serve the Project would be provided by imported water purchased by the LACWWD 40 from the State Water Project through AVEK. The Project's projected water usage is addressed in Section 4.14, Utilities and Service Systems. The Project's estimated water demand is less than the 250 acre-feet per year (afy) threshold established by the California Department of Water Resources (DWR) for requiring a Water Supply Assessment (WSA) for the proposed Project under legislation commonly referred to as Senate Bill (SB) 610, as described further in Section 4.14 of the Draft EIR. Nonetheless, to provide informed decision-making, a WSA was prepared for the Project and provided in Appendix G-2 of the Draft EIR. The WSA is also

summarized in Section 4.14. As required under SB 610, the WSA must include an evaluation of the sufficiency of the water supplies available to the water supplier to meet existing and anticipated future demands (including the demand associated with the project) over a 20-year horizon that includes normal, single-dry, and multiple-dry years. The multiple-dry year scenario would represent drought conditions. With implementation of MM UTL-1, the Los Angeles County Waterworks District No. 40 (LACWWD 40), which will be the Project's water supplier, would have the water supply needed to serve the Project. MM UTL-1 requires that the County sign the New Water Supply Entitlement Acquisition Agreement with LACWWD 40 and pay a deposit of \$10,000 per acre-foot of annual water demand from the Project for the acquisition of additional water supplies from Antelope Valley – East Kern Water Agency (AVEK) to serve the Project.

With implementation of MM UTL-1, Project-related estimates for water supply and demand, as provided in the WSA, show that water supply is available to serve the Project during the average year, single-dry year, and multiple-dry years. The WSA concludes the information on record indicates a sufficient and reliable water supply for LACWWD 40, now and into the future, including a sufficient water supply for the Project (Psomas 2015). These supplies are also sufficient to provide for existing demands and demands from overall growth in the LACWWD 40 service area at the rate projected in the 2010 Integrated Regional Urban Water Management Plan (IRUWMP) (LACWWD 40 2011).

Pinkel-41

Information from the Western Regional Climate Center indicates that the average wind speeds in the Lancaster area (as measured from the General William J. Fox Airfield) was 11.2 mph from 1996-2006. The average wind speeds from 1996-2008 changed to 10.9 mph. The average number days when peak gusts were over 30 mph was 182.3 days per year during this 12-year period, with 28.5 days when peak gusts were equal to or over 40 mph and 2.5 days when peak gusts were equal to or over 50 mph. The potential for the transport of soil particles and Valley Fever spores is not only dependent on wind speeds, but also on ground surface cover (e.g., impervious surface, vegetation, soil binders, etc.), the compaction of the soil, moisture content, and the amount of disturbance. Thus, it cannot be readily said if a specific wind speed would result in the transport of soil particles and Valley Fever spores.

Section 4.2, Air Quality, acknowledges that the future inmate population has the potential to be exposed to dust generated from soils within the Antelope Valley, which have the potential to contain *Coccidioides* spores (i.e., the fungus that causes coccidioidomycosis, commonly known as Valley Fever). Additionally, Section 4.2, Air Quality, acknowledges that the Project site is located adjacent to land on the east that has exposed native soils (i.e., a two-megawatt [MW] solar array) and is situated in the context of many acres of undeveloped land and fallow farmland that could generate airborne dust during windstorms. However, the Draft EIR concludes that the potential future inmate population's temporary placement into the Antelope Valley, which includes the inmates' participation in all indoor and outdoor activities at the MLWDC, would not constitute placement into a hazardous existing environmental setting.

Please refer to the response for Pinkel-3 above for the discussion of Valley Fever.

Pinkel-42

Please refer to the response for Pinkel-3 above.

Pinkel-43

As discussed in the response for Pinkel-3 above, the Draft EIR acknowledges that certain populations are more at risk of being infected with Valley Fever; however, neither African American, Philippino, nor other female inmates would be housed at separate facilities due to potential Valley Fever exposure. The Antelope Valley has not been identified by the LACDPH, the AVAQMD, or any other governmental health agency as a region that should be avoided by the elderly, women, children, health-compromised individuals, or by any specific ethnic groups. The Antelope Valley includes the major population centers of the cities of Lancaster and Palmdale, which have an estimated 2014 combined population of approximately 314,902 people. This portion of the Antelope Valley includes a diverse population of residents that includes many individuals that could be considered to be at higher risk of complications due to infection from Valley Fever spores.

The operation of the MLWDC will follow standard Sheriff's Department procedures for medical care and prevention with regard to health care for inmates in general, and Valley Fever specifically, and the Sheriff's Department will continue to coordinate with the LACDPH (Masis 2015). The LACDPH is the designated County agency with the mandate to protect health, prevent disease, and promote the health and well-being of all persons in Los Angeles County. As such, any future changes in LACDPH policies that may be made regarding Valley Fever for inmate populations will be implemented, as applicable, throughout the County jail system.

Pinkel-44

As discussed in the response for Pinkel-3 above, the MLWDC property is not located in an area determined to be hazardous to the health of local residents or visitors to the region. The Draft EIR concludes that the potential future inmate population's temporary placement into the Antelope Valley, which includes inmates' participation in all indoor and outdoor activities at the MLWDC, would not constitute placement into a hazardous existing environmental setting that would require mitigation. As discussed in Section 4.2, Air Quality, the operation of the MLWDC will follow standard Sheriff's Department procedures for medical care and prevention with regard to health care for inmates in general, and Valley Fever specifically, and the Sheriff's Department will continue to coordinate with the LACDPH (Masis 2015). The LACDPH is the designated County agency with the mandate to protect health, prevent disease, and promote the health and well-being of all persons within Los Angeles County. As such, any future changes in LACDPH policies that may be made regarding Valley Fever for inmate populations will be implemented, as applicable, throughout the County jail system.

Pinkel-45

As discussed under the response for Pinkel-3, and as discussed in Section 4.6, Greenhouse Gas Emissions, regulations, plans, and policies adopted for the purpose of reducing GHG emissions and maximizing energy efficiency that are directly applicable to the Project include: (1) Title 24, Part 6 Energy Efficiency Standards for Residential and Nonresidential Buildings, of the *California Code of Regulations* (CCR); (2) Title 24, Part 11 California Green Building Standards Code (CALGreen Code) of the CCR; (3) Title 22 of the County Code, Parts 20 (Green Building) and 21 (Drought-tolerant Landscaping); and (4) Title 31 of the County Code (Los Angeles County Green Building Standards Code). The Project would be consistent with the requirements of these energy-related regulations, as per RRs GHG-1, GHG-2, and GHG-3.

The MLWDC property is not located in an area determined to be hazardous to the health of local residents or visitors to the region. The Draft EIR concludes that the potential future inmate

population's temporary placement into the Antelope Valley facility, which includes the inmates' participation in all indoor and outdoor activities at the MLWDC, would not constitute placement into a hazardous existing environmental setting that would require the described additional measures.

Pinkel-46

This comment, in part, raises issues that extend beyond the scope of the CEQA requirements; nonetheless, the Board of Supervisors will receive and be able to consider it and all other comments raised before taking any action on the proposed Project. The scope of CEQA is generally limited to the evaluation of a proposed project's potential impact on the environment, and does not extend to the impact of the existing environment on a proposed project, or on its users or residents. The applicable definition of the environment analyzed for CEQA purposes in an environmental impact report is the physical conditions in the area that are affected by the proposed project (e.g. land, air, and water). The proposed MLWDC Project's Draft EIR discloses and addresses the potential direct, indirect, and cumulative impacts of the proposed Project on the physical environment, in accordance with the State CEQA Guidelines for all environmental issue areas.

The WSA for the Project indicates that the LACWWD 40 would be able to meet the projected water demands in its service area, along with the Project's demands, through the next 20 years, including normal, single-dry, and multiple dry (5-year period) years. Future demand is projected to increase within the LACWWD 40 service areas and the reliability of the LACWWD 40's future water supplies to meet demand will be ensured through continued implementation of programs for water banking; purchase of new imported supplies; water transfers; water conservation; and expansion of recycled water systems.

Pinkel-47

The groundwater level declines and associated land subsidence are not as severe near the Project site as in other parts of the Antelope Valley Groundwater Basin. Local survey monument benchmark records would be reviewed to determine the amount of land subsidence on or near the Project site, as part of RR GEO-1. The design of the building foundations has not been determined, as the design phase is yet to occur. However, the foundation design for new buildings or additions will be designed and constructed to appropriately address current soil conditions and characteristics identified by a California licensed geologist, soils engineer and structural engineer. The design will meet code requirements, which include recognition of soil bearing pressure, seismic activity and jurisdictional building codes as well as AB 900 structural requirements. Existing facilities are monitored periodically for distress as part of facility operation and maintenance protocol, and there would be no hazards posed to the inmate or employee population.

The MLWDC Project proposes the adaptive reuse, renovation, and expansion of the majority of the buildings at MLDC. As stated on page 4.5-8, RR GEO-1 requires that prior to the completion of final engineering design plans, the Project's design and construction must be conducted with consideration of the effects of potential subsidence and collapsible soils. This could include remedial grading in specific areas to prepare the site to support the proposed structures; to provide a relative uniform-bearing material below shallow foundations; and/or to allow for over-excavation and re-compaction below planned foundations. Compliance with RR GEO-1 would ensure that the potential for impacts associated with existing geologic conditions would be less than significant.

Pinkel-48

The Project requires a new water line to connect the Project's on-site water infrastructure to the existing 12-inch LACWWD 40 water line in West Avenue I. The Project does not require the construction of new trunk lines or other major infrastructure improvements, as the LACWWD 40 facilities are adequate to serve the proposed Project. Costs associated with the provision of water at the MLWDC will be an ongoing operational cost. Economic costs are beyond the scope of the CEQA analysis, which focuses on the proposed Project's effect on the physical environment. Additional information regarding the Project's capital costs is provided below in the response for Pinkel-58.

Pinkel-49

The use of potable water from persons moving into the Antelope Valley area due to employment or relations with inmates at the Project would be met by LACWWD 40 as part of its projected increase in demands through the years analyzed through its Urban Water Management Plan. The Integrated Regional Urban Water Management Plan (IRUWMP) for the Antelope Valley indicates that the LACWWD 40 would be able to meet the projected water demands in its service area through the next 20 years, including normal, single-dry, and multiple dry (5-year period) years. Future demand is projected to increase within the LACWWD 40 service areas and the reliability of the LACWWD 40's future water supplies to meet demand will be ensured through continued implementation of programs for water banking; purchase of new imported supplies; water transfers; water conservation; and expansion of recycled water systems. The temporary increase in water use during the weekends due to the estimated 250 visitors per weekend or holiday is not expected to represent a significant amount of water when compared to the LACWWD 40's 2014 total supply of 50,447 acre-feet per year (afy), as some of these visitors would not be permanently living in the area.

Pinkel-50

The Sheriff's Department has protocols established for visitation to determine if an inmate is "ineligible" for visitation for various reasons, including the inmate's failure to comply with jail rules, her medical or mental/restricted status, the facility's security condition, or the inmate's engagement in inappropriate behavior during a visit.

Pinkel-51

The comment alleges that the proposed Project's visitation protocol is inhumane. The MLWDC will meet minimum State requirements and mandates with the goal of providing augmented services. Visitation will be offered according to available space and time frames, in which each inmate will be eligible for one 1-hour non-contact visit or two ½-hour non-contact visits (via phone and video) per week during Saturdays and Sundays, during dayshift hours (8:00 AM to 6:00 PM) and on designated holidays. Any additional visitation time allowance will be determined based on total inmate population, the volume of visitors and facility capabilities. A scheduling system is necessary in order to accommodate the entire inmate population in an orderly manner and to account for minimum requirements. Any interruption to the scheduled visit would only be due to emergency notifications and/or at the conclusion of the scheduled visit.

Pinkel-52

As stated in PDF GHG-3 in Section 4.6, Greenhouse Gas Emissions, the Project will post Antelope Valley Transit Authority (AVTA) bus and Metrolink schedules, as well as the locations

of the nearest Park-and-Ride lots, in areas visible to visitors and in the Staff Services building to encourage the use of public transportation by staff and visitors. AVTA bus and Metrolink schedule information will be updated a minimum of every six months to ensure that they are accurate. The County does not operate the buses and trains that serve the Antelope Valley area. The Southern California Regional Rail Authority (SCRRA), which operates the Metrolink commuter rail system, and the AVTA, which operates buses, provide transit services to meet demand and generally review service routes and schedules as part of their long-range planning efforts. Should demand increase over existing levels, it will be up to the Metrolink and AVTA agencies to revise or expand their services to meet demand.

As demonstrated on page 3-4, in Section 3.0, Project Description, the Board of Supervisors directed the establishment of an Advisory Board (now called the Gender Responsive Advisory Committee) that will report to the Board of Supervisors on specific programmatic and operational issues. The Advisory Committee has already begun to organize its meetings with a membership including representatives of County staff, outside agencies, advocates, organizations, individuals with incarceration experience, and representatives with expertise in reducing recidivism of female inmates. As part of its charge, the Advisory Committee is tasked with reviewing the program model for the proposed MLWDC Project to ensure that it is evidence-based in reducing recidivism; evaluating strategies to reduce negative impacts of operating the proposed MLWDC away from the downtown Los Angeles area, including contract transportation for visitors, video visiting for attorney consultation; and reviewing national best practices for visiting and family reunification.

Pinkel-53

As described in the Project Traffic Impact Study, it is anticipated that the relocation of inmates to the MLWDC would result in additional vehicle miles traveled (VMT) by visitors, inmate buses, and by service/delivery trucks when compared to the length of trips required for the CRDF located in the City of Lynwood (LLG 2015). The discussion of video visitation on page 4.13-20 is provided in the context of estimating the total VMT as associated with the located of the MLWDC away from the highly urbanized area of Los Angeles County, but is not considered in the trip generation estimates in the Traffic Impact Study.

Page 4.11-7 of the Draft EIR states that there are 1,920 visitation slots available. However, the number of trips for inmate visitation was estimated at 39 percent of the available appointment slots or about 28,543 visits per year (the same rate as existing at the CRDF). Forecasts assume 250 inbound visitor trips and 250 outbound visitor trips per day during the 114 weekend days and holidays per year. This visitation reflects the number of visitors that currently occurs at a detention facility that is located in the highly urbanized area of Los Angeles County. With this estimate, it is expected that video visitation would occur in addition to the in-person visits that involve personal vehicle trips to the MLWDC. Again, all 1,920 visitation slots would be available to inmates of the Project.

Pinkel-54

Please see the response for Pinkel-4 above.

Pinkel-55

Please see the response for Pinkel-49 above.

Pinkel-56

While the Project's estimated water demand is less than the 250 acre-feet per year (afy) threshold established by the California Department of Water Resources (DWR) for requiring a WSA under legislation commonly referred to as Senate Bill (SB) 610, a WSA was prepared for the Project and provided in Appendix G-2 of the Draft EIR. The WSA is also summarized in Section 4.14, Utilities and Service Systems. As required under SB 610, the WSA must include an evaluation of the sufficiency of the water supplies available to the water supplier to meet existing and anticipated future demands (including the demand associated with the project) over a 20-year horizon that includes normal, single-dry, and multiple-dry years. The multiple-dry year scenario would represent drought conditions.

The WSA for the Project, as summarized in Section 4.14, Utilities and Service Systems, discusses the adjudication of groundwater rights in the Antelope Valley and that this adjudication will provide a final allocation of groundwater rights for the long-term groundwater management of the Antelope Valley Groundwater Basin. A finite volume of groundwater that the LACWWD 40 can pump without paying penalties or replenishment fees would be assigned as part of the adjudication, and the adjudication judgment provides LACWWD 40 with the rights to pump approximately 22,500 afy to 27,000 afy of groundwater depending on factors including the amount of the Federal reserved right which is not used by the United States and the supplemental yield attributable to return flows from imported water purchased by LACWWD 40 and delivered to its customers. The Integrated Regional Urban Water Management Plan (IRUWMP) for the Antelope Valley projects that groundwater allocation for LACWWD 40 would be based on historical pumping amounts. The LACWWD 40 is projected to have an average annual pumping rate of 23,200 acre-feet per year (afy) from 2015 to 2035 (LACWWD 40 2011). These projections are subject to change after the adjudication has been finalized as the judgment is currently being appealed; however, it is estimated the 23,200 afy allocation is a conservative value and the final adjudicated amount could be higher, as indicated above.

As contained in the WSA, no change in the available groundwater supplies for the LACWWD 40 is projected from 2015 to 2035 (Psomas 2015). Thus, if the final adjudication judgment results in LACWWD 40 having the right to pump a greater amount, it will have the option to pump up to its allocation or pump below its allocation. This will allow the LACWWD 40 to readily provide water supply to the Project and its other customers, as well as reduce its use of imported water sources. If the final adjudication judgment results in LACWWD 40 receiving the right to pump a lower volume of groundwater, LACWWD 40 would have the option to use a greater amount of imported water or to more heavily rely on its programs for water banking; purchase of new imported supplies; water transfers; water conservation; and expansion of recycled water systems.

The WSA for the Project indicates that the LACWWD 40 would be able to meet the projected water demands in its service area, along with the Project's demands, through the next 20 years, including normal, single-dry, and multiple dry (5-year period) years (Psomas 2015). As indicated on page 4.14-29 of the Draft EIR, the LACWWD 40 will serve the Project with imported water purchased through the Antelope Valley East Kern Agency (AVEK). MM UTL-1 requires that the County sign the New Water Supply Entitlement Acquisition Agreement with the LACWWD 40 and pay a deposit of \$10,000 per acre-foot of annual water demand from the Project for the acquisition of additional water supplies from AVEK to serve the Project.

The WSA concludes that there is a sufficient and reliable water supply for LACWWD 40, now and into the future, including a sufficient water supply for the Project during normal, single-dry, and multiple dry (5-year period) years (Psomas 2015). The LACWWD 40's water supplies are also

sufficient to provide for overall growth in the LACWWD 40 service area at the rate projected in the 2010 IRUWMP during normal, single-dry, and multiple dry years.

Pinkel-57

Construction on the Project site would occur for approximately 35 months, and as shown on Table 3-4, Estimated Construction Schedule in Section 3.0, Project Description, approximately 15 months would involve the vast majority of earth-moving activities (e.g. Demolition, Site Preparation, and Grading phases). Approximately 35,000 cubic yards (cy) of cut and fill will be balanced on-site through grading activities, as stated on page 3-21 of Section 3.0, Project Description. Assuming approximately 30 gallons per cubic yard of material moved (MCAQD 2005), this would result in a total of approximately 1.05 million gallons of construction water over the course of the 15 months of earthmoving activities. This temporary requirement for water for construction activities would equate to approximately 1.08 percent of the potable water supplied through the existing County-owned wells in 2012 (i.e. 97,294,604 gallons in 2012), which was the last year of the operations of ICE at the MLDC property. Given the historic pumping at the County-owned wells, the temporary requirement of approximately one percent of historic groundwater pumping at the County-owned wells would not result in an impact to groundwater supplies or recharge rates.

Pinkel-58

The estimated costs for the building of the proposed MLWDC from design to occupancy are presented in Item S-1 of the June 9, 2015 presentation to the Board of Supervisors on jail planning. In this presentation, the proposed MLWDC Project is shown to cost approximately \$123.4 million, and the costs are broken down into AB 900 Grant Contribution, net County cost, and other funding sources. These preliminary costs include the costs associated with the mitigation measures included in the Final EIR. An updated total Project cost estimate will be prepared for the Board of Supervisors for their consideration at the time the Final EIR and the proposed Project recommendations are presented to them for consideration. The 2015 document can be viewed at the following website: <http://file.lacounty.gov/bos/supdocs/94070.pdf>

Regarding operational costs associated with the proposed Project, the final design of the facility has not been drafted or approved, and the long-term operational costs have not yet been determined.

Pinkel-59

This comment is the completion of a reference made in Pinkel-2. Please refer to the response for Pinkel-2 above.

MIRA LOMA WOMEN'S DETENTION CENTER PROJECT
PUBLIC MEETING- DECEMBER 8, 2015
6:00 TO 8:00 PM

COMMENTS:

We need more schools, better transportation, and real mental ~~best~~ health.

ADDRESS: *8336 Summerfield Ave, Whittier, CA 90606*

E-MAIL: *ramondone@gmail.com*

Ramon Quintero

R. Quintero-1

This comment does not specifically address the proposed Project, nor the environmental analysis included in the Draft Environmental Impact Report (EIR) or the environmental impacts of the Project, but indicates a need for schools, better transportation, and mental health care.

This Final EIR, including all comments submitted to the County on the Draft EIR, will be provided to the County of Los Angeles Board of Supervisors. Therefore, your concerns will be presented directly to the decision makers prior to consideration of Project approval.

MIRA LOMA WOMEN'S DETENTION CENTER PROJECT
PUBLIC MEETING- DECEMBER 8, 2015
6:00 TO 8:00 PM

COMMENTS: There is no need for a women's Detention Center, we need to focus more on mental health issues and youth centers. Removing mothers from their children will end up in a never ending cycle of kids who don't know what to do with their life.

S.Quintero-

Sergio Quintero

S. Quintero-1

Although the Project site has been unoccupied since 2012, as discussed in Section 2.0, Environmental Setting, the Project site has generally been in operation and providing various detention/jail functions since 1945–1946. The MLWDC Project proposes the adaptive reuse, renovation, and expansion of the majority of the buildings at Mira Loma Detention Center (MLDC), which is an existing County asset. The redevelopment of the property would avoid the costs associated with constructing a new facility.

Inmates in the Los Angeles County jail system are incarcerated in accordance with established laws, and the process of determining which women are appropriately incarcerated is beyond the scope of this proposed Project. The County jail population is directly influenced by sentences imposed by the judicial court system. Magistrates have the legal discretion to impose the maximum or minimum sentencing.

The Board of Supervisors has adopted numerous recent actions to reduce the number of people who are incarcerated in Los Angeles County, particularly those with mental illness and/or substance use disorders. The Board of Supervisors' actions relating to diversion from the criminal justice system to reduce the need for incarceration, are based in part on their consideration of the August 4, 2015 District Attorney's report of the Criminal Justice Mental Health Advisory Board in a document entitled "Mental Health Advisory Report: A Blueprint for Change – Providing Treatment, Promoting Rehabilitation and Reducing Recidivism: An Initiative to Develop a Comprehensive Plan for Los Angeles County".

The Criminal Justice Mental Health Advisory Board report of August 2015 concluded that even with increased opportunities for diversion from a jail environment, there will still be a need for mental health treatment in jails, and that diversion efforts can reduce, but will not eliminate, the need for the County to operate detention facilities. In light of the County's diversion efforts, the Board of Supervisors directed that, for purposes of on-going study and evaluation in the environmental review process, the maximum size of the proposed women's detention center at Mira Loma in Lancaster would remain at 1,604 beds. In addition the Board of Supervisors reduced the maximum proposed size by approximately 1,000 beds, for purposes of the environmental review of a separate proposed treatment and detention center addressing needs of incarcerated men and women with mental illness and/or substance use disorders at the site of the current Men's Central Jail in downtown Los Angeles. In summary, the Board of Supervisors has taken steps to reduce the number of people who are incarcerated in Los Angeles County.

This comment relates to the merits of the proposed Project and not the environmental analysis included in the Draft Environmental Impact Report (EIR) or the environmental impacts of the Project. This Final EIR, including all comments submitted to the County on the Draft EIR, will be provided to the County of Los Angeles Board of Supervisors. Therefore, your concerns will be presented directly to the decision makers prior to consideration of Project approval. Please see response for Form Letter-1 for additional detail regarding County actions relating to diversion and other out-of-custody alternatives.

The County voluntarily added additional outreach in Spanish for the Mira Loma Women's Detention Center (MLWDC) Draft Environmental Impact Report (EIR) public review process as a result of public comments. In January 2016, a *Notice of Extended Comment Period for the Draft Environmental Impact Report for the Mira Loma Women's Detention Center Project and Notice of Second Public Meeting in Lancaster, California* was sent to the Project's mailing list and email list, as well as additional mailing list contacts that had provided comment letters during the Draft EIR public review period up to the time of the second mailing. This Notice was prepared in both English and Spanish. Additionally, the Executive Summary of the Draft EIR was translated into Spanish and posted on the County's website for viewing and downloading. Hardcopies of the Spanish-translated Executive Summary were made available at the Quartz Hill and Lancaster Libraries, as well as the Los Angeles County Public Information Office. Newspaper advertisements of the extended comment period and second public meeting were placed in the following papers and ran on Monday, February 1, 2016:

- *Acton-Aqua Dolce News*: a weekly publication so the ad was available for 7 days
- *Los Angeles Daily News*: a daily publication
- *La Opinion*: a daily publication (the ad was in both English and Spanish)
- *Antelope Valley Press*: a daily publication
- *Antelope Valley Times*: an online publication

A second public meeting was held on Tuesday, February 9, 2016 at the Lancaster Public Library at 601 West Lancaster Boulevard in Lancaster, CA 93534 to present an overview of the proposed Project and the Draft EIR process and conclusions, and to invite submission of public comments on the Draft EIR. Real-time Spanish translation services were made available, as were copies of the Notice and the Executive Summary in both English and Spanish. Two members of the public attended that meeting and neither requested Spanish translation services.

Rand-Washington-2

This comment raises the issue of environmental hazards, but does not articulate a detailed concern related to the Draft EIR. The Draft EIR for the proposed Project has been prepared in accordance with the California Environmental Quality Act (CEQA, *California Public Resources Code*, Sections 21000 et seq.) and the State CEQA Guidelines (14 *California Code of Regulations* [CCR]), and addresses the potential direct, indirect, and cumulative impacts of the Project on all environmental issue areas. Section 5.0, Project Alternatives, was prepared in accordance with Sections 15126.6(a) through 15126.6(f) of the State CEQA Guidelines. As demonstrated throughout the Draft EIR, all potentially significant impacts have been reduced to levels that are less than significant through the identified mitigation measures, and no significant unavoidable environmental impacts would result from Project implementation.

For specific impacts related to hazards and hazardous materials, a Phase I Environmental Site Assessment (ESA) has been prepared that reviewed past and current uses and site conditions and identified Recognized Environmental Concerns (RECs) on the Project site and surrounding area. The Phase I ESA is provided in Appendix E-1 of the Draft EIR. Subsequent to the Phase I ESA, a Phase II ESA was prepared that included soil sampling to determine if soil contamination is present on the site. The Phase II ESA is provided in Appendix E-3 of the Draft EIR. In addition, an Asbestos and Lead Based Paint Survey Report was completed to identify the building components that contained asbestos and lead-based paint. The Asbestos and Lead Based Paint

Survey Report is provided in Appendix E-2 of the Draft EIR. These reports are summarized in Section 4.7, Hazards and Hazardous Materials of the Draft EIR.

The Project must comply with existing regulatory requirements (RRs) for the proper handling of hazardous wastes, including transportation, treatment, storage, and disposal; repair and/or removal of underground storage tanks based on applicable standards; and practices that would protect the demolition and construction crews from asbestos and lead exposure. In addition, the Project must incorporate mitigation measures (MMs) for the handling of suspected asbestos-containing materials and lead-based paint; an Operations and Maintenance Plan for regular inspection of any asbestos-containing materials; and testing and repair of underground storage tanks prior to use. Thus, existing hazardous materials and wastes would be removed from the Project site and future hazardous materials use would comply with applicable regulations to prevent hazards to future inmates. In summary, compliance with RRs and implementation of MMs set forth in the Draft EIR would prevent public health and safety hazards to inmates, employees, visitors and other individuals at the Project site.

Rand-Washington-3

This comment relates to disadvantages for families, siblings, children and supportive service, but does not articulate a detailed concern related to the Draft EIR. As it relates to visitation, the County is aware of the potential challenges this increased distance may pose for some visiting family members, while for other visiting family members from the Lancaster and other County areas, the Project location will be closer to their homes than the current women's jail in Lynwood. As demonstrated on page 3-4, in Section 3.0, Project Description, the Board directed the establishment of an Advisory Board (now called the Gender Responsive Advisory Committee) that will report back to the Board of Supervisors. The Advisory Committee consists of County staff, outside experts, and others including previously incarcerated participants to review the program model for the MLWDC Project to ensure that it is evidence based in reducing recidivism. As part of its charge, the Advisory Committee is tasked with further evaluating strategies to reduce negative impacts of operating the MLWDC away from the downtown Los Angeles area, including contract transportation for visitors, video visiting for attorney consultation, and reviewing national best practices for visiting and family reunification.

Rand-Washington-4

This comment relates to video visitation, but does not articulate a detailed concern related to the Draft EIR. As discussed in Section 3.0, Project Description, an Inmate Video Visitation System will be provided that will include a cable television signal distribution system to the proposed 34 video visiting stations in the central inmate area, barracks, and video interview rooms in transitional housing buildings. Television sets or computer screens will be provided in each video visiting station. Table 3-5 on page 3-24 of Section 3.0, Project Description, states that video visits would be allowed by appointment only, with no maximum weekly time limit and with daytime and evening appointments available. Importantly, the proposed MLWDC will accommodate various forms of visitation, including traditional non-contact visiting, telephone access, video visiting, and contact visiting. Contact visits refer to opportunities for inmates and visitors to interact face to face, allowing for physical contact. Non-contact visits refer to visitations where the inmate and the visitor are separated by a glass barrier, and no physical contact is allowed. Video visits refer to long-distance visitation that can occur through a video conferencing program, allowing the inmate and the visitor to hear and see each other via the computer and screen. Therefore, video visiting is a component of a visiting program.

Rand-Washington-5

This comment relates to the merits of the proposed Project, and not the environmental analysis included in the Draft EIR or the environmental impacts of the Project. This Final EIR, including all comments submitted to the County on the Draft EIR, will be provided to the County of Los Angeles Board of Supervisors. Therefore, your concerns will be presented directly to the decision makers prior to consideration of Project approval.

To: info@lanomorejails.org; executiveoffice@bos.lacounty.gov; CEO Environmental <environmental@ceo.lacounty.gov>; lily@criticalresistance.org; FirstDistrict@bos.lacounty.gov; MarkRidley-Thomas@bos.lacounty.gov; Sheila@bos.lacounty.gov; Don@bos.lacounty.gov; FifthDistrict@lacbos.org

Subject: Attn: Mira Loma Women’s Jail Environmental Impact Report

Dear LA County Chief Exec Office and Board of Supervisors,

Dear LA County Board of Supervisors and Chief Executive Office, Please consider my public comment on the Draft Environmental Impact Report (EIR) regarding the proposed new Mira Loma Jail released on November 9th.

I’m writing to alert you that the agency tasked with monitoring the toxicity of the Mira Loma proposal, including construction and ensuing use, has been exposed as notoriously racist, sexist, and transphobic. Senior level scientists at the Department of Toxic Substances Control (DTSC) have been exposed for sending extremely offensive and prejudicial emails leading Critical Resistance and other community organizations to be concerned over such a biased agency’s ability to successfully monitor the toxicity levels and health concerns in any areas with concentrations of marginalized communities. Though the agency staff involved in the matter has received reprimand, there has not been sufficient investigation into the impacts of their racist and prejudicial actions and if this has resulted in harms to communities residing in or near the areas they monitor.

Rivas-1

Part of the proposed site for the Mira Loma jail, the War Eagle Field, (see DEIR 4.7-18) has high levels of total petroleum hydrocarbons and arsenic, which the DTSC has ruled “less than significant”. We do not trust a known racist, sexist, and transphobic agency to determine the health standards for an imprisoned population of primarily women and transgenderpeople of color. Additionally, Lancaster is 38% Latino/a and 21% African American – how are we to trust a racist agency with monitoring the land toxicity impacting the health of these Lancaster residents?

Rivas-2
Rivas-3

According to the LA Times, the DTSC was similarly responsible for monitoring “the now-shuttered Exide Technologies plant [which was] was able to operate for years in Vernon without a permit despite pollution problems affecting nearby, predominantly Latino neighborhoods. Toxic lead dust has been found at homes and yards near the battery recycling plant.”

Rivas-4

By partnering with the DTSC, LA County puts itself not only in the position of endangering its residents and prisoners, but also at risk for a potential lawsuit due to long term health impacts of toxicity. The DTSC must undergo a full investigation in order for confidence to be instilled in LA County residents that this agency takes seriously its responsibility to care for the residents of Lancaster, the proposed prisoners at Mira Loma Jail, and the construction workers who would be tasked with building the facility. This proposed jail is unsafe for LA County communities and our environment. DTSC cannot be trusted to unprejudicially monitor the health impacts related to toxicity. For the above reasons, the proposed new Mira Loma Jail should be rejected and the Draft EIR must not be approved.

Rivas-5
Rivas-6

Sincerely,
Anayeli Rivas
on behalf of
Critical Resistance Los Angeles

Anayeli Rivas (January 12, 2016)

Rivas-1

This comment relates to the merits of the proposed Project, including concerns regarding personnel employed by the California Department of Toxic Substances Control (DTSC), and not the environmental analysis included in the Draft Environmental Impact Report (EIR) or the environmental impacts of the Project. This Final EIR, including all comments submitted to the County on the Draft EIR, will be provided to the County of Los Angeles Board of Supervisors. Therefore, your concerns will be presented directly to the decision makers prior to consideration of Project approval.

Rivas-2

As stated on page 4.7-18 of the Draft EIR, the DTSC lists the Polaris Flight Academy with a status of "inactive-needs evaluation" as of July 2005 (Converse 2014c). However, the potential media affected and the potential contaminants of concern were not identified. Funding for the evaluation, investigation, or remediation of old airfields is through Defense Environmental Restoration Account (DERA), with the DTSC as the lead agency. As part of the Phase II Environmental Site Assessment (ESA) conducted for this Project in March 2015, soil borings collected in the area of the possible former location of the airstrip did not detect any contaminants that would require further action. On the same page of the Draft EIR, it is noted that the DTSC sets the background level for arsenic at 12 milligrams per kilogram (mg/kg), which is the level that is equivalent to naturally occurring background concentrations in soils in Los Angeles County. The comment on the DTSC does not relate to the Project, the environmental analysis included in the Draft EIR, or the environmental impacts of the Project. This Final EIR, including all comments submitted to the County on the Draft EIR, will be provided to the County of Los Angeles Board of Supervisors. Therefore, your concerns will be presented directly to the decision makers prior to consideration of Project approval.

Rivas-3

Please refer to the response for Rivas-1 above.

Rivas-4

The comments on the DTSC and the Exide plant do not relate to the proposed Project, the environmental analysis included in the Draft EIR, or the environmental impacts of the Project. This Final EIR, including all comments submitted to the County on the Draft EIR, will be provided to the County of Los Angeles Board of Supervisors. Therefore, your concerns will be presented directly to the decision makers prior to consideration of Project approval.

Rivas-5

The proposed Project is not a partnership between the County and DTSC; however, the DTSC is expected to perform its regulatory functions and responsibilities as it relates to hazardous materials that are under their purview. The County of Los Angeles does not have the authority to perform an investigation of the activities of DTSC, which is a State agency.

Rivas-6

Regarding the commenter's concern that the site is unsafe due to toxicity, the Project site is listed in government databases due to past hazardous material uses. However, the Project site was never operated as a site that accepted hazardous wastes for disposal. The Project site is on the list of Leaking Underground Storage Tanks (LUST) Sites, but the leaking underground storage tanks have been removed and the affected area cleaned up. The County Department of Public Works oversaw the remediation and issued the "no further action" letter. The DTSC lists the Polaris Flight Academy with a status of "inactive-needs evaluation". As part of the environmental assessments prepared for the Project, soil borings collected in the area of the possible former location of the airstrip were evaluated and the results did not detect any contaminants that would require further action (Converse 2015). Thus, the listing of the site in government databases was based on past uses that no longer pose hazards.

As part of the environmental analysis for the Draft EIR, a Phase I ESA reviewed past and current uses and site conditions and identified Recognized Environmental Concerns (RECs) on the Project site and surrounding area. The Phase I ESA is provided in Appendix E-1 of the Draft EIR. Subsequent to the Phase I ESA, a Phase II ESA was prepared that included soil sampling to determine if soil contamination is present on the site. The Phase II ESA is provided in Appendix E-3 of the Draft EIR. In addition, an Asbestos and Lead Based Paint Survey Report was completed to identify the building components that contained asbestos and lead-based paint. The Asbestos and Lead Based Paint Survey Report is provided in Appendix E-2 of the Draft EIR. These reports are discussed in Section 4.7, Hazards and Hazardous Materials, of the Draft EIR. In summary, the Phase II ESA concludes that there is no soil or groundwater contamination on the Project site requiring remediation or other mitigation measures.

The Project must comply with existing regulatory requirements (RRs) for the proper handling of hazardous wastes, including transportation, treatment, storage, and disposal; repair and/or removal of underground storage tanks based on applicable standards; and practices that would protect the demolition and construction crews from asbestos and lead exposure. In addition, the Project must incorporate mitigation measures (MMs) for the handling of suspected asbestos-containing materials and lead-based paint; an Operations and Maintenance Plan for regular inspection of any asbestos-containing materials; and testing and repair of underground storage tanks prior to use. Thus, existing hazardous materials and wastes would be removed from the Project site and future hazardous materials use would comply with applicable regulations to prevent hazards to future inmates. In summary, compliance with RRs and implementation of MMs set forth in the Draft EIR would prevent public health and safety hazards to inmates, employees, visitors and other individuals at the Project site.

MIRA LOMA WOMEN'S DETENTION CENTER PROJECT
PUBLIC MEETING- DECEMBER 8, 2015
6:00 TO 8:00 PM

COMMENTS:

I dont this project should be passed
there is harmful thing these woman can
catch well being incarcerated. where they
plan on locating this new jail the
finances should be spent on counseling
healthy care for these woman.

Adrianna Rodriguez

A. Rodriguez-1

Regarding the commenter's concern that the proposed Project is harmful, as part of the environmental analysis for the Draft Environmental Impact Report (EIR), a Phase I Environmental Site Assessment (ESA) has been prepared that reviewed past and current uses and site conditions and identified Recognized Environmental Concerns (RECs) on the Project site and surrounding area. The Phase I ESA is provided in Appendix E-1 of the Draft EIR. Subsequent to the Phase I ESA, a Phase II ESA was prepared that included soil sampling to determine if soil contamination is present on the site. The Phase II ESA is provided in Appendix E-3 of the Draft EIR. In addition, an Asbestos and Lead Based Paint Survey Report was completed to identify the building components that contained asbestos and lead-based paint. The Asbestos and Lead Based Paint Survey Report is provided in Appendix E-2 of the Draft EIR. These reports are summarized in Section 4.7, Hazards and Hazardous Materials of the Draft EIR.

The Project must comply with existing regulatory requirements (RRs) for the proper handling of hazardous wastes, including transportation, treatment, storage, and disposal; repair and/or removal of underground storage tanks (USTs) based on applicable standards; and practices that would protect the demolition and construction crews from asbestos and lead exposure. In addition, the Project must incorporate mitigation measures (MMs) for the handling of suspected asbestos-containing materials and lead-based paint; an Operations and Maintenance Plan for regular inspection of any asbestos-containing materials; and testing and repair of USTs prior to use. Thus, existing hazardous materials and wastes would be removed from the Project site and future hazardous materials use would comply with applicable regulations to prevent hazards to future inmates. In summary, compliance with RRs and implementation of MMs set forth in the Draft EIR would prevent public health and safety hazards to inmates, employees, visitors and other individuals at the Project site.

The commenter's concern about what inmates can catch while being incarcerated appears to relate to the issue of Valley Fever. *Coccidioidomycosis*, also known as Valley Fever, and its potential impact on potential future inmates and County staff is discussed in Section 4.2, Air Quality. A summary of hazards associated with the *Coccidioides* spores (i.e., the fungus that causes Valley Fever) is provided, as well as summaries of trends related to Valley Fever in Los Angeles County, as inventoried and reported by the Los Angeles County Department of Public Health (LACDPH), which was consulted during the preparation of the Draft EIR.

The MLWDC property is not located in an area determined to be hazardous to the health of local residents or visitors to the region. The Draft EIR concludes that the potential future inmate population's temporary placement into the Antelope Valley, which includes the inmate's participation in all indoor and outdoor activities at the MLWDC, would not constitute placement into a hazardous existing environmental setting that would require mitigation. Additionally, the operation of the proposed Project would not increase the prevalence of Valley Fever spores or otherwise exacerbate an existing environmental condition.

In addition, please see the more detailed response on this issue in the response to Form Letter-5 relating to Valley Fever, which is included in Section 2.3.1 of this Final EIR.

A. Rodriguez-2

Regarding the commenter's concern about the building of a new jail and the associated costs, although the Project site has been unoccupied since 2012 as discussed in Section 2.0,

Environmental Setting, the Project site has generally been in operation and providing various detention/jail functions since 1945-1946. The MLWDC Project proposes the adaptive reuse, renovation, and expansion of the majority of the buildings at MLDC, which is an existing County asset. The redevelopment of the property would avoid the costs associated with constructing a new facility.

Regarding the commenter's assertion that County resources should be spent on counseling for female inmates, the Project will offer general education classes, computer training, general and vocational career technical education, college courses, career counseling, a learning resource center, a library and computer labs, culinary classes, and indoor/outdoor recreation for inmates. Other services include religious services, counseling services, and community transition services. Participation in classes, training, and other activities will be scheduled for each inmate according to individual evaluation, interests, needs, and availability.

Course selections will be determined based on a student's needs for specific services, and students' interest levels. Courses will be offered during three blocks of time each weekday (morning, afternoon, and evening), providing opportunities for inmates to be enrolled in multiple courses. Programs are also divided into three categories based on program intensity: all-day, half-day, and evening programs. Examples of all-day programs (morning and afternoon) include culinary arts programs, cosmetology programs, and Prisoner Assisted Community Enhancement (PACE). Examples of half-day programs (morning or afternoon) include: small engine repair; animal grooming/training; social media management and marketing/office assistant; automotive detailing, windshield and headlight repair; and recycling. Examples of evening programs include: computer coding; small business entrepreneurship; community college; Associate of Arts Degree; and General Education. Other programs include prenatal programs, volunteer programs; peer mentoring; physical education; dance; arts and crafts; a commissary program; and book clubs.

In addition, the Board of Supervisors has adopted numerous recent actions to reduce the number of people who are incarcerated in Los Angeles County, particularly those with mental illness and/or substance use disorders. The Board of Supervisors' actions relating to diversion from the criminal justice system to reduce the need for incarceration, are based in part on their consideration of the August 4, 2015 District Attorney's report of the Criminal Justice Mental Health Advisory Board in a document entitled "Mental Health Advisory Report: A Blueprint for Change – Providing Treatment, Promoting Rehabilitation and Reducing Recidivism: An Initiative to Develop a Comprehensive Plan for Los Angeles County".

The Criminal Justice Mental Health Advisory Board report of August 2015 concluded that even with increased opportunities for diversion from a jail environment, there will still be a need for mental health treatment in jails, and that diversion efforts can reduce, but will not eliminate, the need for the County to operate detention facilities. In light of the County's diversion efforts, the Board of Supervisors directed that, for purposes of on-going study and evaluation in the environmental review process, the maximum size of the proposed women's detention center at Mira Loma in Lancaster would remain at 1,604 beds. In addition the Board of Supervisors reduced the maximum proposed size by approximately 1,000 beds, for purposes of the environmental review of a separate proposed treatment and detention center addressing needs of incarcerated men and women with mental illness and/or substance use disorders at the site of the current Men's Central Jail in downtown Los Angeles. In summary, the Board of Supervisors has taken steps to reduce the number of people who are incarcerated in Los Angeles County. Please see response for Form Letter-1 for additional detail regarding County actions relating to diversion and other out-of-custody alternatives.

MIRA LOMA WOMEN'S DETENTION CENTER PROJECT
PUBLIC MEETING- DECEMBER 8, 2015
6:00 TO 8:00 PM

COMMENTS:

I am a student in Compton, CA. I am requesting that you not use money to build more jails. We students need programs, educational sites, clinics, housing and aid so that we can continue to be successful. I speak for those who don't have a voice and need our community to support them. Our board of Supervisors need to look after the least of our brothers/sisters. The money will be wasted on making developer richer while our communities of color continue to be victimized by the system. I am a member of Dignity & Power Now as well as Compton for Youth Coalition. We want justice and dignity for our communities of color

Erik Rodriguez

E. Rodriguez-1

Although the Project site has been unoccupied since 2012, as discussed in Section 2.0, Environmental Setting, the Project site has generally been in operation and providing various detention/jail functions since 1945–1946. The MLWDC Project proposes the adaptive reuse, renovation, and expansion of the majority of the buildings at the Mira Loma Detention Center (MLDC), which is an existing County asset. The redevelopment of the property would avoid the costs associated with constructing a new facility.

Section 3.0, Project Description, of the Draft Environmental Impact Report (EIR) states that female inmates at the Century Regional Detention Facility (CRDF) in Lynwood currently receive various programmatic and rehabilitative services, including but not limited to parenting programs; life-skills training; anger management classes; alcohol and drug abuse counseling; and vocational training. These programs will continue at the MLWDC and will be expanded to include Educational Based Incarceration (EBI) programs.

The Project will offer general education classes, computer training, general and vocational career technical education, college courses, career counseling, a learning resource center, a library and computer labs, culinary classes, and indoor/outdoor recreation for inmates. Other services include religious services, counseling services, and community transition services. Participation in classes, training, and other activities will be scheduled for each inmate according to individual evaluation, interests, needs, and availability.

Course selections will be determined based on a student's needs for specific services, and students' interest levels. Courses will be offered during three blocks of time each weekday (morning, afternoon, and evening), providing opportunities for inmates to be enrolled in multiple courses. Programs are also divided into three categories based on program intensity: all-day, half-day, and evening programs. Examples of all-day programs (morning and afternoon) include culinary arts programs, cosmetology programs, and Prisoner Assisted Community Enhancement (PACE). Examples of half-day programs (morning or afternoon) include: small engine repair; animal grooming/training; social media management and marketing/office assistant; automotive detailing, windshield and headlight repair; and recycling. Examples of evening programs include: computer coding; small business entrepreneurship; community college; Associate of Arts Degree; and General Education. Other programs include prenatal programs, volunteer programs; peer mentoring; physical education; dance; arts and crafts; a commissary program; and book clubs.

This comment relates to the merits of the proposed Project, and not the environmental analysis included in the Draft EIR or the environmental impacts of the Project. This Final EIR, including all comments submitted to the County on the Draft EIR, will be provided to the County of Los Angeles Board of Supervisors. Therefore, your concerns will be presented directly to the decision makers prior to consideration of Project approval.

E. Rodriguez-2

This comment alleges that the developer of the jail will get richer. The County of Los Angeles owns the proposed Project site and the Sheriff's Department, which would operate the proposed MLWDC, would not make a profit on the facility. This comment relates to the merits of the proposed Project, and not the environmental analysis included in the Draft EIR or the environmental impacts of the Project. This Final EIR, including all comments submitted to the County on the Draft EIR, will be provided to the County of Los Angeles Board of Supervisors.

Therefore, your concerns will be presented directly to the decision makers prior to consideration of Project approval.

MIRA LOMA WOMEN'S DETENTION CENTER PROJECT
PUBLIC MEETING- DECEMBER 8, 2015
6:00 TO 8:00 PM

COMMENTS:

We have many, many concerns about this new jail project. One is that a new jail in Lancaster will create more traffic & pollution. We also know that jails are hazardous and this location has been identified as a "hazardous material site" and building would put all inside in danger. And also, how does this jail work to liberate & empower marginal people & groups?

K.

K. Rodriguez-1

This comment indicates that there are many concerns on the proposed project. Regarding the commenter's concerns over pollutants, Section 4.2, Air Quality, presents the results of the emission analysis using California Emissions Estimator Model (CalEEMod) Version 2013.2.2, which is a computer program that is used to calculate anticipated emissions associated with land development projects in California. As shown in Table 4.2-7 of Section 4.2, Air Quality, the estimated annual operational emissions due to Project-related operations would not exceed the Antelope Valley Air Quality Management District's (AVAQMD's) California Environmental Quality Act (CEQA) significance thresholds, and potential impacts would be less than significant.

Regarding the commenter's concerns over increased traffic, Section 4.13, Transportation and Traffic, estimates the trip generation of the Project, which includes all trip types (i.e., staff and employees, service, and inmate visitation trips) and discusses potential impacts related to Project-generated traffic. The analysis indicates that an increase in traffic volumes would not significantly impact local intersections (intersections would still operate at Level-of-Service D or better), or alternative transportation (Metrolink trains or Antelope Valley Transit Authority [AVTA] bus service), and impacts on California Department of Transportation (Caltrans) facilities would be less than significant. As discussed on page 4.13-23 and 4.13-24, the existing transit services in the area will adequately accommodate the increase of Project-generated transit trips. No mitigation is required for short-term construction or long-term operation traffic impacts.

K. Rodriguez-2

Regarding the comment on the hazardous materials site, the Project site is listed in government databases due to past hazardous material uses. However, the Project site was never operated as a site that accepted hazardous wastes for disposal. The Project site is on the list of Leaking Underground Storage Tanks (LUST) Sites, but the leaking underground storage tanks have been removed and the affected area cleaned up. The County Department of Public Works oversaw the remediation and issued the "no further action" letter. The California Department of Toxic Substances Control (DTSC) lists the Polaris Flight Academy with a status of "inactive-needs evaluation". As part of the environmental site assessments for the Project, soil borings collected in the area of the possible former location of the airstrip did not detect any contaminants that would require further action (Converse 2015). Thus, the listing of the site in government databases was based on past uses that no longer pose hazards.

As part of the environmental analysis for the Draft Environmental Impact Report (EIR), a Phase I Environmental Site Assessment (ESA) has been prepared that reviewed past and current uses and site conditions and identified Recognized Environmental Concerns (RECs) on the Project site and surrounding area. The Phase I ESA is provided in Appendix E-1 of the Draft EIR. Subsequent to the Phase I ESA, a Phase II ESA was prepared that included soil sampling to determine if soil contamination is present on the site. The Phase II ESA is provided in Appendix E-3 of the Draft EIR. In addition, an Asbestos and Lead Based Paint Survey Report was completed to identify the building components that contained asbestos and lead-based paint. The Asbestos and Lead Based Paint Survey Report is provided in Appendix E-2 of the Draft EIR. These reports are summarized in Section 4.7, Hazards and Hazardous Materials of the Draft EIR.

The Project must comply with existing regulatory requirements (RRs) for the proper handling of hazardous wastes, including transportation, treatment, storage, and disposal; repair and/or removal of underground storage tanks based on applicable standards; and practices that would

protect the demolition and construction crews from asbestos and lead exposure. In addition, the Project must incorporate mitigation measures (MMs) for the handling of suspected asbestos-containing materials and lead-based paint; an Operations and Maintenance Plan for regular inspection of any asbestos-containing materials; and testing and repair of underground storage tanks prior to use. Thus, existing hazardous materials and wastes would be removed from the Project site and future hazardous materials use would comply with applicable regulations to prevent hazards to future inmates. In summary, compliance with RRs and implementation of MMs set forth in the Draft EIR would prevent public health and safety hazards to inmates, employees, visitors and other individuals at the Project site.

K. Rodriguez-3

This comment relates to the merits of the proposed Project, and not the environmental analysis included in the Draft EIR or the environmental impacts of the Project. The inmates eligible for this facility will receive various programmatic and rehabilitative services, including but not limited to parenting programs; life-skills training; anger management classes; alcohol and drug abuse counseling; and vocational training. These programs are intended to reduce recidivism.

This Final EIR, including all comments submitted to the County on the Draft EIR, will be provided to the County of Los Angeles Board of Supervisors. Therefore, your concerns will be presented directly to the decision makers prior to consideration of Project approval.

MIRA LOMA WOMEN'S DETENTION CENTER PROJECT
PUBLIC MEETING- DECEMBER 8, 2015
6:00 TO 8:00 PM

COMMENTS:

As a community member I oppose to this new jail since this will effect the children of the mother whom are incarcerated in many different ways for them to visit them. Instead of thinking on building new jails you should be thinking of opening new programs for educating incarcerated people so they never put a foot inside Jail again.

Raul Rodriguez

R. Rodriguez-1

The Draft Environmental Impact Report (EIR) acknowledges that increased driving distances would be required for some families with the Project due to the location of the site in relation to the Century Regional Detention Facility (CRDF) in Lynwood, which is closer to higher density urban areas near the City of Los Angeles. The County is aware of the potential challenges this increased distance may pose for some visiting family members, while for other visiting family members from the Lancaster and other County areas, the Project location will be closer to their homes than the current women's jail in Lynwood. As demonstrated on page 3-4, in Section 3.0, Project Description, the Board of Supervisors directed the establishment of an Advisory Board (now called the Gender Responsive Advisory Committee) that will report to the Board of Supervisors on specific programmatic and operational issues. The Advisory Committee has already begun to organize its meetings with a membership including representatives of County staff, outside agencies, advocates, organizations, individuals with incarceration experience, and representatives with expertise in reducing recidivism of female inmates. As part of its charge, the Advisory Committee is tasked with reviewing the program model for the proposed MLWDC Project to ensure that it is evidence-based in reducing recidivism; evaluating strategies to reduce negative impacts of operating the proposed MLWDC away from the downtown Los Angeles area, including contract transportation for visitors, video visiting for attorney consultation; and reviewing national best practices for visiting and family reunification.

R. Rodriguez-2

Although the Project site has been unoccupied since 2012 as discussed in Section 2.0, Environmental Setting, the Project site has generally been in operation and providing various detention/jail functions since 1945-1946. The MLWDC Project proposes the adaptive reuse, renovation, and expansion of the majority of the buildings at the Mira Loma Detention Center (MLDC), which is an existing County asset. The redevelopment of the property would avoid the costs associated with constructing a new facility.

Section 3.0, Project Description, of the Draft EIR states that female inmates at the CRDF in Lynwood currently receive various programmatic and rehabilitative services, including but not limited to parenting programs; life-skills training; anger management classes; alcohol and drug abuse counseling; and vocational training. These programs will continue at the MLWDC and will be expanded to include Educational Based Incarceration (EBI) programs.

The Project will offer general education classes, computer training, general and vocational career technical education, college courses, career counseling, a learning resource center, a library and computer labs, culinary classes, and indoor/outdoor recreation for inmates. Other services include religious services, counseling services, and community transition services. Participation in classes, training, and other activities will be scheduled for each inmate according to individual evaluation, interests, needs, and availability.

Course selections will be determined based on a student's needs for specific services, and students' interest levels. Courses will be offered during three blocks of time each weekday (morning, afternoon, and evening), providing opportunities for inmates to be enrolled in multiple courses. Programs are also divided into three categories based on program intensity: all-day, half-day, and evening programs. Examples of all-day programs (morning and afternoon) include culinary arts programs, cosmetology programs, and Prisoner Assisted Community Enhancement (PACE). Examples of half-day programs (morning or afternoon) include: small engine repair;

animal grooming/training; social media management and marketing/office assistant; automotive detailing, windshield and headlight repair; and recycling. Examples of evening programs include: computer coding; small business entrepreneurship; community college; Associate of Arts Degree; and General Education. Other programs include prenatal programs, volunteer programs; peer mentoring; physical education; dance; arts and crafts; a commissary program; and book clubs.

This comment relates to the merits of the proposed Project, and not the environmental analysis included in the Draft EIR or the environmental impacts of the Project. This Final EIR, including all comments submitted to the County on the Draft EIR, will be provided to the County of Los Angeles Board of Supervisors. Therefore, your concerns will be presented directly to the decision makers prior to consideration of Project approval.

Regarding the commenter's concern about the building of a new jail and the associated costs, although the Project site has been unoccupied since 2012, as discussed in Section 2.0, Environmental Setting, the Project site has generally been in operation and providing various detention/jail functions from 1945–1946 until 2012. The MLWDC Project proposes the adaptive reuse, renovation, and expansion of the majority of the buildings at the Mira Loma Detention Center (MLDC), which is an existing County asset. The redevelopment of the property would avoid the costs associated with constructing a new facility.

The Project will offer general education classes, computer training, general and vocational career technical education, college courses, career counseling, a learning resource center, a library and computer labs, culinary classes, and indoor/outdoor recreation for inmates. Other services include religious services, counseling services, and community transition services. Participation in classes, training, and other activities will be scheduled for each inmate according to individual evaluation, interests, needs, and availability.

Course selections will be determined based on a student's needs for specific services, and students' interest levels. Courses will be offered during three blocks of time each weekday (morning, afternoon, and evening), providing opportunities for inmates to be enrolled in multiple courses. Programs are also divided into three categories based on program intensity: all-day, half-day, and evening programs. Examples of all-day programs (morning and afternoon) include culinary arts programs, cosmetology programs, and Prisoner Assisted Community Enhancement (PACE). Examples of half-day programs (morning or afternoon) include: small engine repair; animal grooming/training; social media management and marketing/office assistant; automotive detailing, windshield and headlight repair; and recycling. Examples of evening programs include: computer coding; small business entrepreneurship; community college; Associate of Arts Degree; and General Education. Other programs include prenatal programs, volunteer programs; peer mentoring; physical education; dance; arts and crafts; a commissary program; and book clubs.

In addition, the Board of Supervisors has adopted numerous recent actions to reduce the number of people who are incarcerated in Los Angeles County, particularly those with mental illness and/or substance use disorders. The Board of Supervisors' actions relating to diversion from the criminal justice system to reduce the need for incarceration, are based in part on their consideration of the August 4, 2015 District Attorney's report of the Criminal Justice Mental Health Advisory Board in a document entitled "Mental Health Advisory Report: A Blueprint for Change – Providing Treatment, Promoting Rehabilitation and Reducing Recidivism: An Initiative to Develop a Comprehensive Plan for Los Angeles County".

The Criminal Justice Mental Health Advisory Board report of August 2015 concluded that even with increased opportunities for diversion from a jail environment, there will still be a need for mental health treatment in jails, and that diversion efforts can reduce, but will not eliminate, the need for the County to operate detention facilities. In light of the County's diversion efforts, the Board of Supervisors directed that, for purposes of on-going study and evaluation in the environmental review process, the maximum size of the proposed women's detention center at Mira Loma in Lancaster would remain at 1,604 beds. In addition the Board of Supervisors reduced the maximum proposed size by approximately 1,000 beds, for purposes of the environmental review of a separate proposed treatment and detention center addressing needs of incarcerated men and women with mental illness and/or substance use disorders at the site of the current

Men's Central Jail in downtown Los Angeles. In summary, the Board of Supervisors has taken steps to reduce the number of people who are incarcerated in Los Angeles County.

In addition, please see the more detailed response on this issue in the response to Form Letter-1 regarding County actions relating to diversion and other out-of-custody alternatives, which is included in Section 2.3.1 of this Final EIR.

Segura-2

Coccidioidomycosis, also known as Valley Fever, and its potential impact on potential future inmates and County staff is discussed in Section 4.2, Air Quality. A summary of hazards associated with the *Coccidioides* spores (i.e., the fungus that causes Valley Fever) is provided, as well as summaries of trends related to Valley Fever in Los Angeles County, as inventoried and reported by the Los Angeles County Department of Public Health (LACDPH), which was consulted during the preparation of the Draft Environmental Impact Report (EIR).

The MLWDC property is not located in an area determined to be hazardous to the health of local residents or visitors to the region. The Draft EIR concludes that the potential future inmate population's temporary placement into the Antelope Valley, which includes the inmate's participation in all indoor and outdoor activities at the MLWDC, would not constitute placement into a hazardous existing environmental setting that would require mitigation. Additionally, the operation of the proposed Project would not increase the prevalence of Valley Fever spores or otherwise exacerbate an existing environmental condition.

In addition, please see the more detailed response on this issue in the response to Form Letter-5 relating to Valley Fever, which is included in Section 2.3.1 of this Final EIR.

Segura-3

This comment relates to the merits of the proposed Project and not the environmental analysis included in the Draft Environmental Impact Report (EIR) or the environmental impacts of the Project. PUBLIC MEETING- DECEMBER 8, 2015
6:00 TO 8:00 PM

COMMENTS:

Jails already separate families. Family visits are crucial for prisoners to maintain strong connections and reduce recidivism. The longer distance makes it harder for family members to visit their loved ones and check up.

Solorzano-
1

NAME: Rafael Solorzano
ADDRESS: 3765 Vinton Ave, Los Angeles 90034
E-MAIL: _____

Rafael Solorzano

Solorzano-1

This comment expresses concerns that jails separate families and the proposed site in Lancaster makes contact harder.

The Draft Environmental Impact Report (EIR) acknowledges that increased driving distances would be required for some families due to the location of the site in relation to the Century Regional Detention Facility (CRDF) in Lynwood, which is closer to higher density urban areas near the City of Los Angeles. The County is aware of the potential challenges the increased distance may pose for some visiting family members, while for other visiting family members from the Lancaster and other County areas, the Project location will be closer to their homes than the current women's jail in Lynwood.

The County is aware of the potential challenges this increased distance may pose for some visiting family members, while for other visiting family members from the Lancaster and other County areas, the Project location will be closer to their homes than the current women's jail in Lynwood. Efforts to minimize any inconveniences of increased distance include PDF GHG-2 in Section 4.6, Greenhouse Gas Emissions. The Project will provide a combined minimum of 34 video-visiting stations on site, along with video interview rooms in transitional housing buildings. This is anticipated to reduce VMT associated with vehicle travel to the MLWDC by inmate visitors, while allowing more opportunities for video-visiting than currently exist at CRDF, where most female inmates are housed.

Importantly, the proposed MLWDC will accommodate various forms of visitation, including traditional non-contact visiting, telephone access, video visiting, and contact visiting. Contact visits refer to opportunities for inmates and visitors to interact face to face, allowing for physical contact. Non-contact visits refer to visitations where the inmate and the visitor are separated by a glass barrier, and no physical contact is allowed. Video visits refer to long-distance visitation that can occur through a video conferencing program, allowing the inmate and the visitor to hear and see each other via the computer and screen. Therefore, video visiting is a component of a visiting program. As demonstrated in Table 3-5 of the Draft EIR, the MLWDC would also allow contact visits, which are not currently allowed at CRDF.

Additionally, as demonstrated on page 3-4, in Section 3.0, Project Description, the Board of Supervisors directed the establishment of an Advisory Board (now called the Gender Responsive Advisory Committee) that will report to the Board of Supervisors on specific programmatic and operational issues. The Advisory Committee has already begun to organize its meetings with a membership including representatives of County staff, outside agencies, advocates, organizations, individuals with incarceration experience, and representatives with expertise in reducing recidivism of female inmates. As part of its charge, the Advisory Committee is tasked with reviewing the program model for the proposed MLWDC Project to ensure that it is evidence-based in reducing recidivism; evaluating strategies to reduce negative impacts of operating the proposed MLWDC away from the downtown Los Angeles area, including contract transportation for visitors, video visiting for attorney consultation; and reviewing national best practices for visiting and family reunification.

January 12, 2016

County of Los Angeles Chief Executive Office
Capital Projects/Debt Management Division
Attn: Mira Loma Women’s Detention Center EIR
754 Kenneth Hahn Hall of Administration
500 West Temple Street
Los Angeles, California 90012

Dear Chief Executive Office,

As a student in Urban Sustainability and a long-time member of the LA No More Jails, Coalition, I am responding to the Draft Environmental Impact Report (DEIR) for the proposed Mira Loma Women’s Detention Center (MLWDC) dated November 9, 2015. The draft report prepared by BonTerra Psomas for the Chief Executive Office of the County of Los Angeles does not address many negative environmental impacts on human populations and it does not propose adequate solutions to mitigate environmental harm to the Lancaster community, the people who would be incarcerated, and staff.

} Sutton-1

The EIR fails to adequately address many serious issues specific to the project site and surrounding area including Valley Fever, increased smog and traffic pollution, potential Native American resources, suitable energy sources, and water resources in the context of drought.

} Sutton-2

The DEIR suggests that the nests of birds will be protected during construction and renovation of the jail site at the Mira Loma Detention Center in Lancaster. Yet, the report does not address the destruction of families and distress to children that is a direct result of extracting women from their communities and incarcerating them in LA County Jails.

} Sutton-3

In the U.S., around 2.7 million children have a parent who is locked up in prison or jail. Nell Bernstein states, “The growing number of children with an incarcerated parent represents one of the most significant collateral consequences of the record prison population in the U.S.” (as cited in Rutgers, 2014). The number of women in prison increased by 587% between 1980 and 2011 (Rutgers, 2014). “Roughly two-thirds of women in prison are women of color, representing the fastest growing prison population” (Rutgers, 2014). Most often, the women are

} Sutton-4

incarcerated for non-violent drug crimes and “survival crimes”. They are often victims of sexual and physical abuse. (Levi & Waldman, 2011; D.S. & Hewko, L., 2014)

In Los Angeles County, no less than 174,000 children have a parent who is in jail or prison, or on probation, or parole (Families and Criminal Justice, 2015). In 2013, there were 1400 mothers inside L.A.’s jails. The trauma that results from the separation of children from their parents can cause permanent damage to families and society. (Families and Criminal Justice, n.d.). Children suffer from toxic stress that induces high levels of cortisol in their bloodstream similar to what happens when someone faces a life-threatening situation (Lefer, 2014). “Toxic stress can change the chemistry and architecture of the developing brain, potentially with lifelong consequences.” (Lefer, 2014).

Los Angeles District Attorney, Jackie Lacey states that 17% of the men and 24% of women in the L.A. County jail have a severe mental health condition (L.A. Times, 2014). Black people make up 9.6% of the Los Angeles County population yet; they are 30% of the jail population and 43% of those in jail with a serious mental health condition (Palta, 2014).

The solution to repairing the devastation caused by decades of over-incarceration is to stop locking people up and to renew people’s lives by enabling them to use their energy to rebuild their own communities. To mitigate the overall environmental harm to communities of color, the Los Angeles County Board of Supervisors must invest in solutions that will reduce incarceration rates and invest in the development of Women’s Center’s and “Eco-Villages” in every county service area, rather than pretending a jail, in any form, can be a curative solution.

In recent years, cities and counties across the state have adopted plans to create more sustainable communities, to reduce traffic and carbon emissions, improve air quality and improve the health of the community at large. The incarceration of the most vulnerable women in the county of Los Angeles defies all the principles of sustainability.

First, it is not a win-win solution. There is a huge disproportionate distribution of wealth in Los Angeles County and the evident disparities, as to who is healthy, who is homeless and who goes to jail breaks records worldwide. Second, the full cost of building a women’s jail has not been calculated. The projected cost to build the women’s’ jail in Lancaster is \$120 million, but in the end it will be much more. Jail construction is to be financed with \$100 million dollars generated by the state through the sale of Lease Revenue Bonds. Investors on Wall Street, like Goldman Sachs, Wells Fargo, J.P. Morgan, and the like, will double and triple their investment

Sutton-4
cont.

at the expense of California taxpayers, who are already struggling, and who did not have a chance to vote on the jail in the first place. Third, future generations of California taxpayers will bear the burden of a massive debt and the ongoing disenfranchisement of families and communities. We cannot measure the compounded impact of the carceral debt for future generations. “The uneven geographic distribution of incarceration in poor communities and communities of color means that the effects radiate beyond the individual to the broader community, presenting profound long-term consequences for family integrity, public health and general quality of life” (Rutgers, 2014). Incarcerating poor women and women of color, who have been victims of violence and sexual assault, is not ethical, it is not environmentally sustainable if the County acknowledges these communities. There is no justification.

When the criminal justice system severs women from their children and their loved ones, the dynamic balance of the community is altered. Women provide and require social interaction that is crucial to the health and well-being of everyone (Clone & DeHart, 2014). “Social ties among individuals, neighbors...are a source of considerable strength and advantage...a primary source of support sense of community” (Chang & Sullivan, 2011). When women are isolated in prison or jail, they are alienated and degraded—as is their home environment.

When we sequester over 1600 women in jail, their energy that could be applied more productively to benefit their families and community, is diverted. High incarceration rates in Los Angeles have extracted massive amounts of usable energy from the poorest communities. At the same time, thousands of members of the surrounding urban society, spend unprecedented amounts of energy and billions of dollars to lock people up and destibalize other peoples’ communities.

If the County will protect a nest of baby birds it is a outrageous contradiction that there is no effort to protect and care for black and brown children and their mothers. As affluent as Los Angeles is, there has been little energy spent to rebuild communities that are disenfranchised by mass incarceration. To turn things around and correct what has gone wrong will require an intentional effort.

The investment of energy to build Womens’ eco-villages throughout Los Angeles County is a dynamic solution that will prevent the incarceration of women, heal families, save children and create healthy communities. An eco-village is an intentional community that addresses the sustainability concepts: economy, the environment, and social equity. They are designed to

Sutton-4
cont.

Sutton-5

Sutton-6

incorporate local resources and participatory processes “to sustain and regenerate social and natural environments” (Global Eco Village Network, n.d.). The underused and degraded energy of the women, who would be incarcerated, will be transformed and invested in their communities. They will enjoy a sense of purpose, belonging, safety, and a place to call home.

Sutton-6
cont.

Building a women’s jail in Lancaster, CA would increase Los Angeles’ contribution to degradation to the environment in many aspects. To remove women to an area recognized as a site for Valley Fever, where 40% of the women will potentially come down with flu like symptoms. Black and women of Philippine origin are most vulnerable. To jail over 1600 women 70 miles from where they live, will increase automobile traffic in the area. Visitors, staff, and attorneys will be forced to drive the long distance. Transportation of the prisoners on a daily basis will increase CO2 emissions, which cause global warming. Lancaster is in the high desert in the Antelope Valley. Like much of Southern California, there is little biota to absorb excess CO2 emissions. Second, according to the initial draft of an Environment Impact Report the air quality surrounding the old Mira Loma Detention is recorded as “in Severe-17 Nonattainment for ambient ozone (O3) concentrations. The State has designated the area as being in nonattainment for the State standard for respirable particulate matter with a diameter of 10 microns or less (PM10) and in Extreme Nonattainment for O3”. The air quality is not safe; there is too much particulate matter in the breathable air and too much ozone. Ozone is a “colorless and highly reactive gas... a major ingredient of photochemical smog” (Miller et al, 2014, pg. 479). High concentrations of ozone in the troposphere close to the ground cause asthma, increase lung and heart disease and reduce resistance to respiratory illnesses (Miller et al, 2014, pg. 479). The formation of Photochemical smog happens when a mixture of chemicals including Nitric oxide (NO), a major air pollutant, released in car exhaust and reacts to sunlight. Third, there is underground toxic waste storage and old fuel tanks on the site that contaminate the soil and the groundwater that would service the jail. Fourth, there is a water shortage throughout California. The Antelope Valley is in a legal battle to figure out who will get the scarce amounts of water that is available. Opening a new jail in the vicinity will increase the demand for water at a time when the region should restrict the use of groundwater.

Sutton-7
Sutton-8

Sutton-9

Sutton-10

Sutton-11

The Mira Loma site in Lancaster is not a healthy place for women, or for those who work there. Nearby, there is a youth detention center, Camp Jarvis, holding an undisclosed number of juveniles, and California State Prison (LAC) incarcerating 3471 men, 150.9 percent over

Sutton-12

capacity (Department of Corrections and Rehabilitation State of California, 2015). Another jail will further disrupt the natural nutrient cycles worsening air quality, water scarcity, soil contamination and groundwater pollution. A women's jail will also exacerbate the destruction of the human part of natural capital, extremely vulnerable women, their children, and their broader communities that have already suffered from disproportionate levels of abuse and social disenfranchisement. Incarcerating women and keeping them from their children promotes poor health, increased mental illness, and ongoing poverty for both parent and child (Rutgers, 2014).

Sutton-12
cont.

Attached I am also including the concerns compiled by the LA No More Jails Coalition to emphasize my support.

Sutton-13

I look forward to your response.

Sincerely,

Mary Sutton

Candidate in the MA in Urban Sustainability at Antioch University Los Angeles

LA No More Jails Coalition.

} Sutton-14

What are the estimated costs of the proposed mitigation measures? Has the price tag for the jail increased? What are the total estimated expenses so far?

} Sutton-15

What are future projects in the area and how will they impact the project site? How will future projects intensify significant impacts to the environment? Please list with detail all additional relevant policies and regulations in each topic area.

} Sutton-16

4.1 AESTHETICS

Substantial adverse effect on a scenic vista:

The radio tower, when considered alone, may not significantly alter the view of scenic resources. However, its construction, which will likely require large machinery, may potentially significantly alter or block the view of scenic resources, particularly when compounded with the large water tower in the same viewshed.

} Sutton-17

Page 117, 4.1-12:

Mitigation of adverse lighting effects is proposed through MM AES-1, yet no details are provided. An EIR is required to contain “ways in which any adverse effects of such a project might be minimized” (PRC 21061). Because the specifics of a Lighting Plan are not provided, but only its intended mitigation, readers of the EIR are unable to assess the adequacy of such a plan and mitigation based on concrete data.

} Sutton-18

4.2 AIR QUALITY

The report fails to address the long-term impact of Valley Fever to prisoners, personnel, visitors and neighboring residents (i.e., the homeless shelter). The long-term impact of Valley must be

} Sutton-19

analyzed as the disease is endemic to Antelope Valley.¹ Recent findings in the article, “The Changing Epidemiology of Coccidioidomycosis in Los Angeles (LA) County, California, 1973–2011,” by Ramon Guevara of the LA Department of Public Health, should be considered in the final EIR. Findings include notable changes in the epidemiology of coccidioidomycosis in LA county started in 2004 and include significant increases in case numbers and incidence rates across various demographic categories and geographic areas, a sudden and substantial rise in female cases, and collectively more annual cases in the endemic areas, especially high case numbers and incidence rates in the Antelope Valley. The county should consult with Fugitive Dust and Health and Valley Fever Scoping Group in Antelope Valley.

Sutton-19
cont.

There is a Valley Fever “hot spot” close to the project site that requires further investigation into potential long-term impacts on people, e.g., prisoners and residents nearby. The report states that “The nine prisons and facilities identified by the CDCR as having a higher risk of exposure to Valley Fever do not include the California State Prison- Los Angeles County, located in the City of Lancaster, which is adjacent to the MLWDC Project site. As such, the CDCR has not identified the Lancaster area being a geographic location that requires screening or interventions for the State prison population with regard to exposure to Valley Fever.” Referring to CDCR’s list of high risk facilities is neither scientifically adequate nor does it have any analysis of the actual danger of contracting Valley Fever at the project site. As a counterexample, a severe and highly-publicized case of Valley Fever in California State Prison – Los Angeles County was reported on by Mother Jones this year.²

Sutton-20

Rather than mitigate the contraction of Valley Fever by sensitive receptors (i.e. prisoners, staff, visitors), the DEIR states that “because the majority of the Project site will be paved or landscaped, there are few opportunities for on-site soils to produce airborne dust...The operation of the MLWDC will follow standard LASD procedures for medical care and prevention with regard to health care for inmates in general, and Valley Fever specific all [sic] and will continue to coordinate with LACDPH (Masis 2015).” The report essentially and inadequately dismisses the very real possibility of Valley Fever contraction among sensitive receptors. Antelope Valley

Sutton-21

¹ <http://journals.plos.org/plosone/article?id=10.1371/journal.pone.0136753>

² <http://www.motherjones.com/environment/2015/01/valley-fever-california-central-valley-prison>

is a high wind area, meaning that infectious spores may become airborne from surrounding soils not considered “on-site.”

} Sutton-21
cont.

The report fails to consider frequent clinical misdiagnosis of coccidioidomycosis cases.³ How will the project ensure proper diagnosis and treatment of Valley Fever?

} Sutton-22

Analysis of motor vehicle pollutant fails to consider additional traffic necessitated by services contractors and/or vendors, e.g., laundry. Since the project site will not include a laundry site, how frequent will laundry services occur? Will this service be contracted? If so, with what company and where? How will the regular travel to the jail to pick up laundry impact additional pollutants from motor vehicles? What other vendors will the project require? How will regular visits by truck from service/delivery vendors to and from the jail impact air quality? What is the estimated vehicle mileage incurred by all delivery/service trucks in two weeks?

} Sutton-23

“Air quality plan” is vague. Please provide examples of potential air quality standard plans.

} Sutton-24

The report states that 44% of the site will be outdoors; 1.5 out of 46 acres will be outdoor recreational space. What are the long-term impacts of potential exposure to Valley Fever during outdoor recreational activities? Where will the imported soil (for garden beds) come from? The soil must be tested and the results of which should be included in the final EIR.

} Sutton-25

What soil tests have been conducted on the project site for Valley Fever specifically? What were the findings? How many, if any, tests have been completed? Who conducted the test? Please include documentation of soil testing on the project site for Valley Fever in the final EIR.

} Sutton-26

What are the potential impacts of increased pollutants on the health of prisoners? What mitigation measures will be provided during outdoor recreation?

} Sutton-27

What are long-term mitigation measures for Valley Fever with regard to the soccer field, running track and other outdoor recreational area?

³ <http://publichealth.lacounty.gov/acd/docs/cocciRxarticle.pdf>

4.3 BIOLOGICAL RESOURCES

Pg. 155, 4.3-10

What are the few wildlife species expected to use the site? How will refurbishment of MLDC impact the habitat or movement of wildlife species?

Sutton-28

Describe in detail how the project will directly and indirectly impact nesting habitat for migratory birds. What are the migratory patterns of birds expected to occur, and what are proposed mitigations? When do active nests occur during the year?

The project proposes to mitigate the loss of an active nest by requiring seasonal avoidance or pre-construction surveys for nesting birds. If the duration of construction is 35 months, how will the construction of this project avoid particular seasons? How will pre-construction surveys mitigate the indirect impacts of a 35 month construction period?

Sutton-29

How will MBTA regulations be enforced and monitored for compliance during the construction phase?

154, 4.3-12

The project projects construction to begin in December 2016 for a duration of 35 months. MM BIO-1 prohibits removal of trees supporting roost sites during bat maternity roost season (March 1 to July 31). However, the demolition of bat maternity roosts will indirectly impede the use of wildlife nursery sites, as the colony will not be able to return to their nursery site.

Sutton-30

What are the ecological impacts of removing bat maternity roosts in the area? How will the removal of colonial and solitary roosts sites impact the regional population of the bat species?

MM BIO-1 is contradictory in that it calls for the complete removal of nests in order to mitigate the project's interference of wildlife movement. MM BIO-1 is not an appropriate nor effective in reducing the impact of removing occupied bat maternity roosts.

Sutton-31

Which program of the Los Angeles County Department of Public Works will be provided the results of the pre-construction bat habitat assessment? Will this be available to the public. I would recommend the county to include the details of this assessment in the final EIR.

The name, credentials or institutional affiliation of the Biologist(s) conducting pre-construction surveys and assessments must be disclosed. We recommend the county to seek specifically a conservation biologist.

MM BIO-2 proposes “an appropriate buffer zone” around an active nest if found. What exactly constitutes an appropriate buffer zone? Is there a standard determined by the American Institute of Biological Sciences? Will the standard be used? If not, why?

Sutton-32

Sutton-33

4.4. CULTURAL RESOURCES

Letters to native american consultations = appendix C-3

look at appendix C-2

Page 171, 4.4-10

The last paleontological resources record search was performed in 2008. The county must verify that no discovery of fossil localities have been recently recorded with the project site. These references must be updated by the NHMLAC.

Sutton-34

Page 172, 4.4-11

In assessing potential effects of Native American artifacts, BonTerra Consulting only received one response. It is not indicated whether follow up was made to the remaining six individuals, as recommended by the Native American Heritage Commission. The county must ensure that all the Native American tribes and individuals are consulted, not simply informed.

Sutton-35

Beverly Salazar Folkes informed us on December 8, 2015 that she never received the informational letter, dated February 3, 2014.

Page 180, 4.4-16

The determination of “non-contributor” to the historic designation of the Old Lock Building requires justification and further investigation. Built in 1946, it is located directly adjacent to Old Hangar 2. Its demolition potentially affects the historical significance of the site. Similarly, the Quonset Hut (built c. 1971) and Wooden Shed (built c. 1959), are also slated for demolition, but fall under the 45 year requirement for assessment as potentially warranting individual preservation as historic structures. These assessments are not provided. Additionally, demolition of these structures together for the creation of a parking lot will have a cumulative detrimental impact on the site’s feeling, historic association, setting, and design.

Sutton-36

Page 182, 4.4-18

The name, credential and/or institutional affiliation of the Paleontologist retained by the county to monitor excavations must be disclosed.

If a fossil resource is determined to be significant, any plan formulated by the paleontologist must be disclosed and detailed in the final EIR or an addendum.

Sutton-37

What are the short-term and long-term impacts of excavation activities with regard to Valley Fever and fugitive dust? What are proposed mitigation measures for fugitive dust and exposure of Valley Fever during the excavation of native soils?

Sutton-38

MM CUL-1 and MM CUL-2 are not sufficient mitigation measures. All pre-construction assessments/surveys must be documented in the Environmental Impact Report (EIR) to ensure compliance with CEQA Guidelines. Archaeologists and paleontologists must conduct their evaluations and submit their findings as part of the final EIR. There is no third-party monitor to ensure compliance with CEQA after the final EIR is approved. The only option to ensure compliance is to complete pre-construction assessments prior to the completion of the final EIR.

Sutton-39

GEOLOGY AND SOILS

Page 193, 4.5-4

How will continued drought conditions and further depletion of groundwater in the area affect the project site's susceptibility to liquefaction in areas of localized perched groundwater?

} Sutton-40

Page 196, 4.5-7

Antelope Valley does experience very high winds from March through July. What are proposed mitigation measures to prevent fugitive dust and exposure of Valley Fever to the construction workers, scientific monitors, and the residents proximate to the project site during construction?

} Sutton-41

Page 197, 4.5-8

Drought conditions and depletion of groundwater will continue; thus, subsidence will worsen causing damage to the foundation of the structure. How will the county propose appropriate mitigation measures given current and projected conditions? What are anticipated hazards for the prisoners residing in the jail should further subsidence occur? What are estimated operational costs for repair and maintenance of overlying structures, foundations and walls?

} Sutton-42

The findings of a geotechnical investigation must be disclosed in the final EIR. The determination of "less than significant impact" must be justified in detail.

} Sutton-43

GREENHOUSE GAS EMISSIONS

Page 211, 4.6-10

Water resource summary of general environmental effects of climate change does not include recent drought conditions and its exacerbation of reduced water supplies.

} Sutton-44

Page 215, 4.6-14

The report states that "soil import and export are not anticipated for the Project," however, the raised garden beds for the project's on-site recreational activities "will be filled with imported soils derived from outside the Antelope and Kern Valleys" to prevent prisoners from interacting with local soil. The construction activity impacts are incorrect and must be updated in to include energy expended for soil import and export.

} Sutton-45

Furthermore, the construction input data fails to account for the import of water for prevention of fugitive dust and exposure to Valley fever when breaking ground.

Sutton-45
cont.

The construction input data fails to account for removal of hazardous waste.

The report states that “GHG emission-reduction measures for construction equipment are relatively limited.” This statement requires further justification/evidence. What is the inventory of construction equipment for this project? What are the average GHG emissions of each equipment?

Sutton-46

Report states that construction will begin in November 2016. In other pages, December 2016 is the projected start date for construction.

Sutton-47

The report concludes that a separate significance finding for construction emissions is not necessary. This requires further justification and the report must provide the threshold for construction annual GHG emissions.

Sutton-48

Page 216, 4.6-15

If the design-build contractor requests an expedited schedule, the total GHG emissions would not be the same if project assumes at 5-day work week. The purported “offsetting decreases” are groundless assumptions that cannot be used to claim a reduction in total GHG emissions even if the number of work days increases. Total GHG emissions must be recalculated assuming a 6-day work week.

Sutton-49

Failure to accurately include all operational GHG emissions (e.g., vehicle emissions from service/deliver truck) requires the estimated operational annual GHG emissions to be recalculated.

Sutton-50

How was the operational annual emissions for each source area (energy, mobile, etc) calculated?
How do these numbers compare to annual emissions of MLDC when it operated under

Sutton-51

Immigration and Customs Enforcement? Please provide the operational annual emissions of the facility when it was last used, and how the county determined input estimates for electricity, natural gas, water and solid waste.

} Sutton-51
cont.

The conclusion that total annual estimated GHG emissions for the project would result in less than significant GHG emissions is not accurate. GHG emissions must be recalculated to include all input and output data.

} Sutton-52

Page 218, 4.6-17

The development of Project-specific ECRP must be created and disclosed in the final EIR to ensure compliance of mitigation. If the proposed measures of ECRP are not feasible, it is not appropriate to claim an overall reduction in GHG emissions.

} Sutton-53

PDF GHG-2 projects GHG emissions reduction with the placement of video-visiting stations at the Project site. However, it is erroneous to assume that in-person visitations will decrease with the availability of video visitations. There is no evidence to prove correlation; thus, the report cannot conclude a reduction in total GHG emissions based on this assumption. In fact, given the jail site's proximity to different areas of Los Angeles and neighboring counties, one can conversely assume that family/friends, who may live in Antelope Valley or Kern County and could not previously visit their loved ones at CDRF due to the distance, will now frequent the jail.

} Sutton-54

PDF GHG-3 projects GHG emissions reduction by posting AVTA bus transit and Metrolink schedules. This is illogical and inappropriate to assume that simply posting transit schedules will encourage use of public transportation. This reasoning fails to account for an array of reasons for why people are unable to use public transportation. Moreover, it is irresponsible and deceptive to then claim definitively that there will be a reduction in total annual GHG emissions (and therefore no significant impact needs to be addressed).

} Sutton-55

PDF GHG-4 proposes GHG emissions reductions by providing secure on-site bicycle storage for both staff commuting and visitors. Again, this is groundless. Simply setting up bicycle storage does not guarantee a reduction in VMT associated with vehicle travel. Therefore, the project cannot assume a reduction in overall annual GHG emissions. The project acknowledges uncertainty of staffing availability in Antelope Valley, and cannot claim definitively that staff commuting would live locally. Additionally, there is only one dedicated bicycle lane in the freeway and roadway system of the project; that is, the bicycle lane only on the east side of Valley Central Way. There are no proposals by the project, city or county to expand bicycle lanes in Lancaster or Antelope Valley.

Sutton-56

Given these contradictions, the Project must recalculate total annual GHG emissions without purported “offsetting decreases”. The above comments challenge the report’s finding that the project would have no impact on GHG emissions.

Sutton-57

The report fails to address how conditions of climate change will affect the project’s water supply and impact on Los Angeles county’s water supply. Additionally, the report does not address how the spread of Coccidioidomycosis will intensify with higher temperatures, drier land, loosened soil/sand and other environmental effects of climate change. Furthermore, the report states that the degrading quality of our air will increase the spread of infectious diseases and their vectors but does not consider Valley Fever as one such infectious disease. The environmental effects of climate change will exacerbate prominence of coccidioidomycosis which is already endemic to the project site. Women are particularly vulnerable, evidence in Dr. Ramon Guevara’s article published September 2015. Therefore, the Project must thoroughly assess the potential health impacts on the women who would be forced to relocate to the project site.

Sutton-58

The project must assess the environmental effects of climate change on air quality, water supply and the spread of Valley Fever.

HAZARDS AND HAZARDOUS MATERIALS

Regarding the onsite underground storage tanks at the central plant that has failed leak detection tests and has not been corrected. There is not mitigation proposed to repair or remove this underground storage tank. It is possible that over time, with use or not, hazardous waste will continue to leak and potentially contaminate the soil and groundwater.

} Sutton-59

Page 229, 4.7-8

Report states that when six older USTs at the MLDC were removed, contamination was found in the soil. The soil contamination was remediated. Which county department oversaw the remediation of the contaminated soil? Please disclose this information.

} Sutton-60

Minor staining of the carpet and hydraulic oil on the concrete floors beneath the emergency generator were found in 2014. Despite this, the report states that no leaks were observed. What was the minor staining on the carpet and where did the hydraulic oil come from? What led the county to conclude that no leaks were observed despite staining and presence of oil.

} Sutton-61

Regarding asbestos and lead sampling, the report must justify why Building 27-29 were not sampled.

} Sutton-62

Pg 232, 4.7-11

The report notes that two USTs at the fueling station were found to not have current permits and have failed leak detection tests. There are no proposed mitigations to update permits and repair/remove the leaking USTs.

} Sutton-63

4.8 HYDROLOGY AND WATER QUALITY

Regarding the adjudication of groundwater rights, how might the outcome affect water supply for the proposed jail? What are the associated costs? Will the proposed jail contribute to further overdraft of groundwater in LA County, not just Antelope Valley? What is the well flow rate, well yield, water quantity and rate of replenishment of LA County Waterworks District 40 water line and Antelope Valley-East Kern Water Agency (AVEK)?

} Sutton-64

The impact on Waterworks District 40 water line and supply must be considered in light of drought conditions. The entire county, not just Antelope Valley and underlying groundwater sources, is in a state of overdraft. What is the impact of this project on the water supply of Waterworks District 40 and AVEK?

Sutton-65

The historic well production statistics are outdated. The intensification of drought conditions in recent years (post 2012) warrants an updated study.

Sutton-66

How do they monitor compliance during construction? For example, the report states that compliance with NPDES Construction General Permit would ensure the project does not violate water quality standards, but during the construction process, how will water quality standards be monitored?

Sutton-67

The report states that increased storm water runoff could result in erosion if site improvements are not conducted in compliance with regulations. What third party monitor will be in place to ensure compliance during construction and operational use?

What are the associated costs with a new drain system?

Sutton-68

The report states that the project will not use groundwater supplies for long-term operations. Imported and recycled water is proposed as an alternative. What are the long-term impacts of importing water on traffic and air quality? Where will the recycled water come from? Are there safety and hygiene concerns with using recycled water?

Sutton-69

Construction and disturbance of soil will occur before the new water pipeline is completed. Spraying the ground with water is proposed as a mitigation measure for Valley Fever during construction. What water supply will be used during construction?

Sutton-70

4.9 LAND USE AND PLANNING

4.10 NOISE

4.11 POPULATION AND HOUSING

Are growth projections reconciled with environmental impacts? For example, Table 4.11-6 projects an increase of ~20,000 people in 2020 (from 2008) — is this projected population considered in the long-term analysis of water usage in Lancaster?

} Sutton-71

Jobs at the jails are not the type of job creation that the community needs. What percentage of the unemployed population in Lancaster would qualify as an employee of the sheriff's department?

} Sutton-72

4.12 PUBLIC SERVICES AND RECREATION

Page 4.12-3

The report states “neither the project site nor the city of Lancaster is located within areas identified to have “very high fire hazard severity.” However, in the Hazardous Waste section, the report claims that the project site is is at least 4.5 miles from the edge of an area determined to be “very high fire hazard severity.”

} Sutton-73

Outdoor recreation area is required for detention facilities. However, no mitigation measures have been proposed for the outdoor recreational space (soccer field, running track and gardening areas) and potential exposure to Valley Fever and poor air quality.

} Sutton-74

It is not indicated whether the full-sized sports court for volleyball and basketball is outdoor or indoor.

} Sutton-75

4.13 TRANSPORTATION AND TRAFFIC

Analysis based on Traffic Impact Study prepared by Linscott, Law and Greenspan (LLG) in April 2015. Visitation is by appointment only during weekends and holidays; traffic impacts of

} Sutton-76

visitation based on review of existing visitation levels at CRDF/Lynwood as provided by the sheriffs.

Limited assessment of traffic when focusing on visitors alone. There will be an increase in traffic from service/delivery trucks and vendors.

Regarding alternative transportations, will the frequency of bus routes from LA to Lancaster increase? Is there a bus stop within .25 miles of the project site? Will there be additional bus routes created?

There is only one bicycle lane on one road near the project site. There are no proposed bikeways to facilitate transportation to the project site.

} Sutton-76
cont.

} Sutton-77

} Sutton-78

4.14 UTILITIES AND SERVICE SYSTEMS

4.15 ENERGY

Mary Sutton (January 12, 2016)

Sutton-1

This comment provides a general introduction to the comment letter and alleges a failure to address environmental impacts of the Project. The Draft Environmental Impact Report (EIR) for the proposed Project has been prepared in accordance with the California Environmental Quality Act (CEQA, *California Public Resources Code*, Sections 21000 et seq.) and the State CEQA Guidelines (14 *California Code of Regulations* [CCR]), and addresses the potential direct, indirect, and cumulative impacts of the Project on all environmental issue areas. Section 5.0, Project Alternatives, was prepared in accordance with Sections 15126.6(a) through 15126.6(f) of the State CEQA Guidelines. As demonstrated throughout the Draft EIR, all potentially significant impacts have been reduced to levels that are less than significant through the identified mitigation measures, and no significant unavoidable environmental impacts would result from Project implementation.

Sutton-2

The Draft EIR does in fact adequately address each of the environmental areas listed in this comment.

Section 4.2, Air Quality, of the Draft EIR addresses the impacts associated with coccidioidomycosis, known as Valley Fever, and pollutant emissions from demolition, construction, and operational activities. Impacts were determined to be less than significant, with compliance with regulatory requirements (RRs) and the implementation of Project Design Features (PDFs). Please see the response for Sutton-7 below for additional information regarding Valley Fever.

Section 4.4, Cultural Resources, addresses impacts to historical, archaeological, and paleontological resources, including potential Native American resources. Impacts were determined to be less than significant, with compliance with regulatory requirements (RRs) and the implementation of Project Design Features (PDFs) and mitigation measures (MMs).

Section 4.15, Energy, discusses Project demands for energy resources and identifies PDFs and RR that would reduce energy demands.

A Water Supply Assessment (WSA) was prepared for this project, although it was not required by law. Section 4.14, Utilities and Service Systems, summarizes the findings of the WSA for the Project that looks at the availability of water to serve the Project during a normal year, a single-dry year and multiple-dry years. As indicated on page 4.14-29, with implementation of MM UTL-1, estimates for water supply and demand during single-dry and multiple-dry years, as provided in the WSA, show that water supply is available to serve the Project during the average year, single-dry year, and multiple-dry years. The WSA concludes that the information on record indicates a sufficient and reliable water supply for Los Angeles County Waterworks District 40 (LACWWD 40), now and into the future, including a sufficient water supply for the Project. These supplies are also sufficient to provide for overall growth in the LACWWD 40 service area at the rate projected in the 2010 Integrated Regional Urban Water Management Plan (IRUWMP).

Sutton-3

This comment relates to the merits of the proposed Project and not the environmental analysis included in the Draft EIR or the environmental impacts of the Project. Purely social effects of a

project are beyond the scope of CEQA analysis, which focuses on the proposal's effect on the physical environment. This Final EIR, including all comments submitted to the County on the Draft EIR, will be provided to the County of Los Angeles Board of Supervisors. Therefore, your concerns will be presented directly to the decision makers prior to consideration of Project approval.

Sutton-4

This comment includes views and data about national and County statistics regarding children with a parent who is in jail; the race, economic status, and health of inmates; and generally the commenter's criticisms generally of the impacts of incarceration. This comment does not relate to the environmental analysis included in the Draft EIR or the environmental impacts of the Project. Purely social or economic effects of a project are beyond the scope of CEQA analysis, which focuses on the proposal's effect on the physical environment. This Final EIR, including all comments submitted to the County on the Draft EIR, will be provided to the County of Los Angeles Board of Supervisors. Therefore, your concerns will be presented directly to the decision makers prior to consideration of Project approval.

Sutton-5

Consideration of a project's impacts on biological resources is a mandate of CEQA, which requires an evaluation of impacts on the physical environment. This comment does not relate to the environmental analysis included in the Draft EIR or the environmental impacts of the Project. This Final EIR, including all comments submitted to the County on the Draft EIR, will be provided to the County of Los Angeles Board of Supervisors. Therefore, your concerns will be presented directly to the decision makers prior to consideration of Project approval.

Sutton-6

The proposed Project does not preclude the Board of Supervisor's consideration of alternate approaches to incarceration, including the commenter's suggestions regarding women's ecovillages.

The Board of Supervisors has adopted numerous recent actions to reduce the number of people who are incarcerated in Los Angeles County, particularly those with mental illness and/or substance use disorders. The Board of Supervisors' actions relating to diversion from the criminal justice system to reduce the need for incarceration are based in part on their consideration of the August 4, 2015, District Attorney's report of the Criminal Justice Mental Health Advisory Board in a document entitled "Mental Health Advisory Report: A Blueprint for Change – Providing Treatment, Promoting Rehabilitation and Reducing Recidivism: An Initiative to Develop a Comprehensive Plan for Los Angeles County".

The members of the District Attorney's Advisory Board were the Sheriff; the Fire Chief; the Directors of the Departments of Mental Health, Health Services, Public Health, Veteran's Affairs, and Public Social Services; the Public Defender; and the Executive Director of the Countywide Criminal Justice Coordination Committee. All Advisory Board members participated in the Countywide assessment of services and recommendations to provide for comprehensive mental health diversion for each stage of the criminal justice continuum, from first responders to community re-entry and support. This report summarized the range of diversion programs already existing in the County and analyzed the need for additional mental health and substance abuse diversion services for each stage along the criminal justice continuum. The County of Los Angeles Chief Executive Office (CEO) has acknowledged that these recommendations recognize that there are potential new efficiencies and cost avoidance by redirecting persons in need of physical,

mental, and public health care services from the criminal justice system to appropriate care and treatment in lieu of incarceration.

On August 11, 2015, and September 1, 2015, in the context of determining potential capacity of proposed County jail facilities and responding to treatment needs for the mentally ill or victims of substance use disorders, the Board directed an ordinance be prepared to establish an Office of Diversion and Re-Entry (Office) within the Department of Health Services. That ordinance was adopted, and the Office has been established pursuant to Section 2.76.600 of the Los Angeles County Code. For administrative oversight, the Board of Supervisors determined the Office will be a part of the Department of Health Services and the Director of the Office will report to the Director of the Department of Health Services. The Director of this Office will be advised by a Permanent Steering Committee with broad membership from County departments working in collaboration with working groups established by the District Attorney. It includes representatives from the offices of the Sheriff, the Fire Chief, the Chief Executive, the Superior Court, the Public Defender, the Alternate Public Defender, Probation, the District Attorney, Mental Health, Public Health, and Health Services.

The Office will oversee Countywide diversion efforts including a system of integrated mental, physical, and public health care services and supportive housing for those at risk of homelessness who are redirected from the criminal justice system or re-entering the community after incarceration. For purposes of this Office's jurisdiction, the expectation is for diversion to seamlessly occur across "sequential intercept" points within the criminal justice system. Such intercept points include initial contact with law enforcement or other first responders, involvement with the criminal court system, incarceration, or post-release from incarceration.

The Office was allocated an initial Supplemental Budget of \$74.5 million to be spent 40 percent on housing; 50 percent for diversion and anti-recidivism programs; and 10 percent for administration. The Board of Supervisors directed that future budget allocations be a part of the annual budget process. On September 1, 2015, the Board of Supervisors also directed that the Office distribute funding so at least 1,000 individuals would be diverted across all intercept points within the criminal justice system.

The Criminal Justice Mental Health Advisory Board report of August 2015 concluded that, even with increased opportunities for diversion from a jail environment, there will still be a need for mental health treatment in jails and that diversion efforts can reduce, but will not eliminate, the need for the County to operate detention facilities. In light of the County's diversion efforts, the Board of Supervisors directed that, for purposes of ongoing study and evaluation in the environmental review process, the maximum size of the proposed women's detention center at Mira Loma in Lancaster would remain at 1,604 beds. In addition the Board of Supervisors reduced the maximum proposed size by approximately 1,000 beds, for purposes of the environmental review of a separate proposed treatment and detention center addressing needs of incarcerated men and women with mental illness and/or substance use disorders at the site of the current Men's Central Jail in downtown Los Angeles.

Section 5.0, Project Alternatives, of the Draft EIR was prepared in accordance with Sections 15126.6(a) through 15126.6(f) of the State CEQA Guidelines and adequately considers alternatives to the proposed Project. Out-of-custody alternatives were not required to be analyzed in the Draft EIR beyond the No Project alternative analyses and they would not be able to achieve the Project's primary goal, as stated below and in Section 5.3.2 of the Draft EIR.

The Project's goal is to provide detention facilities for low- to medium-security level female inmates that meet modern correctional standards and that prioritize the on-

site integration of gender-responsive female inmate education, treatment, and vocational training. This goal focuses on providing a secure detention facility with cost-effective therapeutic and rehabilitative programs to meet needs of eligible female inmates in order to reduce recidivism.

Potential environmental impacts associated with “no action” on the proposed Project are described in Alternative 1A, No Project/Continuation of Existing Operations, and Alternative 1B, No Project/Predictable Actions, as demonstrated in Section 5.0, Alternatives. These alternatives provide information regarding the potential impacts to the environment if the County does not move forward with the proposed Project.

Sutton-7

The Project site has been unoccupied since 2012, as discussed in Section 2.0, Environmental Setting, but the Project site has generally been in operation and providing various detention/jail functions since 1945–1946, when the California Youth Authority began to run a vocational school for juvenile offenders at the site. The MLWDC Project proposes the adaptive reuse, renovation, and expansion of the majority of the buildings at the Mira Loma Detention Center (MLDC), which is an existing County asset. The redevelopment of the property as the MLWDC would avoid the costs associated with constructing a new facility.

Coccidioidomycosis, also known as Valley Fever, and its potential impact on potential future inmates and County staff is discussed in Section 4.2, Air Quality. A summary of hazards associated with the fungus is provided in the Draft EIR and includes summaries of trends related to Valley Fever in Los Angeles County, as inventoried and reported by the Los Angeles County Department of Public Health (LACDPH), which was consulted during the preparation of the Draft EIR.

As stated in RR AIR-2, the Project will be constructed in compliance with the Department of Health – Infection Control Policy Guidelines Procedure No. 918.01. Policy 918 is intended to prevent the spread of diseases that may be caused by construction-induced airborne pollution in susceptible individuals (patients, staff, and the public) in Department of Health Services (DHS) facilities. The protocols and requirements mandate the designation of an Infection Control Coordinator who must review and approve infection-control plans for new construction or renovation projects to ensure a safe environment. These infection-control plans must include infection-control measures to contain dust, debris, and other elements and protect the patients, employees, and visitors in this environment. The Infection Control Coordinator has independent authority to stop construction-related activities immediately when the public may be adversely affected by infection-control hazards generated during construction-related activities and when the infection-control precautions and/or engineering controls are inadequate to contain the hazard. As such, the Draft EIR states that exposure to Valley Fever during construction activities would be the same as exposure to dust, and, thus, should follow the requirements for the mitigation of dust. Impacts would be less than significant, and no mitigation is required.

Section 4.2, Air Quality, acknowledges that the future inmate population has the potential to be exposed to dust generated from soils within the Antelope Valley, which have the potential to contain *Coccidioides* spores (i.e., the fungus that causes Valley Fever). As discussed in Section 3.0, Project Description, of the Draft EIR, according to the Los Angeles County Sheriff's Department, Assembly Bill (AB) 109 female inmates are serving an average of 423 days in custody from date of sentencing to date of release, while non-AB 109 female inmates serve an average of 107 days in custody. Therefore, the length of time that inmates would be living at the

MLWDC is temporary, and is not equivalent to a permanent living circumstance or the longer sentences in state prisons that house higher-security inmates.

The Draft EIR summarizes the LACDPH 2013 Annual Morbidity Report, which presents the recent trends related to Valley Fever in Los Angeles County, including and increasing incidence rate for reported Valley Fever cases in the last ten years, which has doubled in the past five years. However, the overall incidence rate in the Antelope Valley was not determined to warrant changes in the County's protocol for disease prevention, notwithstanding the fact that the County health and public health officials are well educated on the condition; are familiar with its incidence in the County and elsewhere in the state; and are involved in research and education on the subject of Valley Fever.

The LACDPH has not identified the previous U.S. Immigration and Customs Enforcement (ICE) detainee population at MLDC, the future inmate population at MLWDC, or earlier occupants at the High Desert Health System (HDHS) Multi-Ambulatory Care Center (MACC) (the adjacent hospital facility, which has relocated in Lancaster) as requiring the implementation of health screening protocols or other measures to address potential Valley Fever exposure.

Also, as demonstrated in Section 4.2, Air Quality, the California Department of Corrections and Rehabilitation (CDCR) has not identified the Lancaster area as being a geographic location that requires screening or interventions for the State prison population with regard to exposure to Valley Fever (CDCR 2013). As discussed with the Sheriff's Department staff for the preparation of the Draft EIR, the operation of the MLWDC will follow standard Sheriff's Department procedures for medical care and prevention with regard to health care for inmates in general, and Valley Fever specifically, and the Sheriff's Department will continue to coordinate with LACDPH (Masis 2015). The LACDPH is the designated County agency with the mandate to protect health, prevent disease, and promote the health and well-being of all persons within Los Angeles County. As such, any future changes in LACDPH policies that may be made regarding Valley Fever for inmate populations will be implemented, as applicable, throughout the County jail system.

Because the future inmate population's exposure to disturbed soils would be limited to gardening activities, PDF AIR-3 in Section 4.2, Air Quality, states that the Project will import gardening soils from outside of the Antelope Valley and would be used in raised planting beds to remove gardening in native soil as a potential source of exposure to *Coccidioides* spores. Further, outdoor recreational areas would be covered with landscaping, turf grass, gravel or landscaping/wood chip ground cover that would minimize the opportunity for soils to become airborne.

The Antelope Valley has not been identified by the LACDPH, the Antelope Valley Air Quality Management District (AVAQMD), or any other governmental health agency as a region that should be avoided by the elderly, women, children, health-compromised individuals, or by any specific ethnic groups. The Antelope Valley includes the major population centers of the cities of Lancaster and Palmdale, which have an estimated 2014 combined population of approximately 314,902 people. This portion of the Antelope Valley includes a diverse population of residents that includes many individuals that could be considered to be at higher risk of complications due to infection from *Coccidioides* spores. As stated in Section 4.2, Air Quality, persons at the highest risk of developing disseminated Valley Fever include the very young (under 1 year old); adults over 60 years; immunocompromised individuals; people with diabetes; women in the third trimester of pregnancy; and certain ethnic groups, including African-Americans and Filipinos.

The demographics of the 2 cities include approximately 158,605 females (50.4 percent) and 156,297 males (49.6 percent) with a median age of approximately 30.7 years old. The racial/ethnic composition of the area is approximately 47 percent Latino, 29 percent white,

17 percent African American, and 4 percent Asian (U.S. Census Bureau 2016). As such, the temporary presence of a female inmate population into the Antelope Valley would not introduce a new or unusual demographic into the area that is not already present in the existing population of the region.

The MLWDC property is not located in an area determined to be hazardous to the health of local residents or visitors to the region. The Draft EIR concludes that the potential future inmate population's temporary placement into the Antelope Valley, which includes the inmates' participation in all indoor and outdoor activities at the MLWDC, would not constitute placement into a hazardous existing environmental setting that would require mitigation. Additionally, the operation of the proposed Project would not increase the prevalence of *Coccidioides* spores or otherwise exacerbate an existing environmental condition.

Sutton-8

Section 4.13, Transportation and Traffic, of the Draft EIR discusses potential impacts related to Project-generated traffic. The analysis indicates that an increase in traffic volumes would not significantly impact local intersections (i.e., intersections would still operate at Level of Service D or better) and impacts on California Department of Transportation (Caltrans) facilities would be less than significant.

The Draft EIR acknowledges that increased driving distances would be required for some families with the Project due to the location of the site in relation to the Century Regional Detention Facility (CRDF) in Lynwood, which is closer to higher density urban areas near the City of Los Angeles. The County is aware of the potential challenges this increased distance may pose for some visiting family members, while for other visiting family members from the Lancaster and other County areas, the Project location will be closer to their homes than the current women's jail in Lynwood. As demonstrated on page 3-4, in Section 3.0, Project Description, the Board of Supervisors directed the establishment of an Advisory Board (now called the Gender Responsive Advisory Committee) that will report to the Board of Supervisors on specific programmatic and operational issues. The Advisory Committee has already begun to organize its meetings with a membership including representatives of County staff, outside agencies, advocates, organizations, individuals with incarceration experience, and representatives with expertise in reducing recidivism of female inmates. As part of its charge, the Advisory Committee is tasked with reviewing the program model for the proposed MLWDC Project to ensure that it is evidence-based in reducing recidivism; evaluating strategies to reduce negative impacts of operating the proposed MLWDC away from the downtown Los Angeles area, including contract transportation for visitors, video visiting for attorney consultation; and reviewing national best practices for visiting and family reunification.

Sutton-9

Section 4.2, Air Quality, analyzes the potential for pollutant emissions during demolition, construction, and operation of the Project. The criteria pollutants and the attainment status of the Antelope Valley Portion of the Mojave Desert Air Basin are discussed in this section, along with estimates of pollutant emissions that would be generated by the Project. Impacts were determined to be less than significant, with compliance with regulatory requirements (RRs) and the implementation of Project Design Features (PDFs).

Section 4.6, Greenhouse Gases, discusses the potential for greenhouse gas (GHG) emissions and global climate change. The analysis indicates that impacts would be less than significant, with compliance with RR and implementation of PDFs.

Sutton-10

Underground storage tanks (USTs) at the Project site are discussed in Section 4.7, Hazards and Hazardous Materials, which states that six older USTs at the MLDC were removed in 1999 and contamination was found in the soils. The soil contamination was remediated and the case was closed in 2003. The site was never operated as a site that accepted hazardous wastes for disposal.

As stated on page 4.7-19 of the Draft EIR, the existing fueling station is located outside the Project site boundary, but may be used by the Project. This fueling station has two USTs that previously failed leak detection tests. As shown in the California Environmental Reporting System (CERS) database and the Monitoring System Certification by AW Associates in Appendix E to this Final EIR, the tank permits were updated in 2015 and have passed subsequent leak detection tests and are now in compliance. Soil testing also indicated there is no soil contamination near the USTs (Converse 2016b). MM HAZ-3 requires the testing and repair, as necessary, of the USTs prior to the use of the existing fueling station by the Project.

Sutton-11

The WSA for the Project, as summarized in Section 4.14, Utilities and Service Systems, discusses the adjudication of groundwater rights in the Antelope Valley and that this adjudication will provide a final allocation of groundwater rights for the long-term groundwater management of the Antelope Valley Groundwater Basin. A finite volume of groundwater that the LACWWD 40 can pump without paying penalties or replenishment fees would be assigned as part of the adjudication, and the adjudication judgment provides LACWWD 40 with the rights to pump approximately 22,500 afy to 27,000 afy of groundwater depending on factors including the amount of the Federal reserved right which is not used by the United States and the supplemental yield attributable to return flows from imported water purchased by LACWWD 40 and delivered to its customers. The Integrated Regional Urban Water Management Plan (IRUWMP) for the Antelope Valley projects that groundwater allocation for LACWWD 40 would be based on historical pumping amounts. The LACWWD 40 is projected to have an average annual pumping rate of 23,200 acre-feet per year (afy) from 2015 to 2035 (LACWWD 40 2011). These projections are subject to change after the adjudication has been finalized as the judgment is currently being appealed; however, it is estimated the 23,200 afy allocation is a conservative value and the final adjudicated amount could be higher, as indicated above.

As contained in the WSA, no change in the available groundwater supplies for the LACWWD 40 is projected from 2015 to 2035 (Psomas 2015). Thus, if the final adjudication judgment results in LACWWD 40 having the right to pump a greater amount, it will have the option to pump up to its allocation or pump below its allocation. This will allow the LACWWD 40 to readily provide water supply to the Project and its other customers, as well as reduce its use of imported water sources. If the final adjudication judgment results in LACWWD 40 receiving the right to pump a lower volume of groundwater, LACWWD 40 would have the option to use a greater amount of imported water or to more heavily rely on its programs for water banking; purchase of new imported supplies; water transfers; water conservation; and expansion of recycled water systems.

As indicated on page 4.14-29 of the Draft EIR, the LACWWD 40 will serve the Project with imported water purchased through the Antelope Valley East Kern Agency (AVEK). MM UTL-1 requires that the County sign the New Water Supply Entitlement Acquisition Agreement with the LACWWD 40 and pay a deposit of \$10,000 per acre-foot of annual water demand from the Project for the acquisition of additional water supplies from AVEK to serve the Project. The adjudication judgment prevents overdraft of the Antelope Valley Groundwater Basin by setting the safe yield

of the basin to eliminate the long-term overdraft condition, and creates a Watermaster to enforce the terms of the judgment.

The well flow, well yield, and water quantity of the LACWWD 40 varies by well and period but the LACWWD 40's Integrated Regional Urban Water Management Plan for the Antelope Valley shows historic (2005-2009)⁶ groundwater pumping totals ranging from 12,371 afy in 2006 to 24,901 afy in 2008. The Antelope Valley Integrated Regional Water Management Plan indicates that AVEK operates a groundwater basin banking project (Water Supply Stabilization Project No. 2 [WSSP-2]) that recharges the groundwater basin with imported water during wet years when supplies exceed demands and extracts up to 90 percent of the banked water in drought years when supplies are low. LACWWD 40 participates in the WSSP-2. There is no way to determine the exact source (i.e. well water or imported water, or the particular well yield) of the water that would serve the Project site via the proposed new water pipeline extension from the on-site water lines to the existing 12-inch LACWWD 40-owned distribution pipeline within West Avenue I because LACWWD 40 waters are comingled to meet water quality and distribution requirements.

Sutton-12

This comment provides a general summary of the comment letter and alleges various environmental impacts of the Project. The Draft EIR for the proposed Project has been prepared in accordance with CEQA and the CEQA Guidelines (14 California Code of Regulations [CCR]), and addresses the potential direct, indirect, and cumulative impacts of the Project on all applicable environmental issue areas. Sections 4.1 through 4.15 of the Draft EIR provide analyses of potential environmental impacts of Project implementation on the environment. As demonstrated throughout the Draft EIR, all potentially significant environmental impacts have been reduced to levels that are less than significant through the identified mitigation measures, and no significant unavoidable environmental impacts would result from Project implementation.

Please see the responses to your specific comments in Sutton 1-11 above.

This comment also addresses the merits of the proposed Project, and alleges potential societal impacts. Purely social effects of a project are beyond the scope of CEQA analysis, which focuses on the proposal's effect on the physical environment. This Final EIR, including all comments submitted to the County on the Draft EIR, will be provided to the County of Los Angeles Board of Supervisors. Therefore, your concerns will be presented directly to the decision makers prior to consideration of Project approval.

Sutton-13

Please see responses to the following comments, beginning with the response for Sutton-14.

Sutton-14

The MMs are set forth throughout the Draft EIR and are included in Table ES-2 in the Draft EIR's Executive Summary. Each MM includes a requirement for the timing of implementation, as well as the required monitoring agency. This information is further documented through the Mitigation Monitoring and Reporting Program (MMRP) that is included in the Final EIR package that is presented to the Board for their review and consideration.

⁶ The production statistics used are published data and more current data has not yet been published.

Section 15164 (a) of the State CEQA Guidelines states that an addendum to a previously certified EIR shall be prepared if changes or additions are needed to the EIR, but none of the conditions in Section 15162 requiring a subsequent EIR have occurred. The conditions that would allow preparation of an addendum include changes to the project or the circumstances under which project would be implemented that do not require major revisions to the previous EIR or that would not result in new significant environmental effects or an increase in the severity of the identified significant effects. When new information becomes available but would not change the significant effects of the project or increase the severity of the impacts of the project or would not make new mitigation measures or alternatives feasible, an addendum may also be prepared. Otherwise, a subsequent EIR or a supplement to an EIR may be needed.

Sutton-15

The estimated costs for building the proposed MLWDC from design to occupancy are presented in Item S-1 of the June 9, 2015, presentation to the Board of Supervisors on jail planning. In this presentation, the proposed MLWDC Project is shown to cost approximately \$123.4 million, and the costs are broken down into Assembly Bill (AB) 900 Grant Contribution, net County cost, and other funding sources. These preliminary costs include the costs associated with the mitigation measures included in the Final EIR. An updated total Project cost estimate will be prepared for the Board of Supervisors for their consideration at the time the Final EIR and the proposed Project recommendations are presented to them for consideration. The 2015 document can be viewed at the following website: <http://file.lacounty.gov/bos/supdocs/94070.pdf>.

Sutton-16

Table 2-1, City of Lancaster Cumulative Projects, and Table 2-2, County of Los Angeles Cumulative Projects, in Section 2.0, Environmental Setting, presents a listing of projects that could potentially contribute to impacts from the proposed Project, resulting in cumulative impacts. Cumulative impacts are assessed under a stand-alone heading within each Draft EIR impact section (i.e., Sections 4.1 through 4.15). Regulatory Requirements (RRs) are also included within each Draft EIR impact section (i.e., 4.1 through 4.15) and include applicable local, State, or federal regulations that are required independently of CEQA review and also serve to prevent the occurrence of, or reduce the significance of, potential environmental effects. Typical RRs include compliance with the provisions of the California Building Code, Antelope Valley Air Quality Management District rules, local agency requirements, and other regulations and standards. RRs are identified in the MMRP for convenience of tracking.

Sutton-17

The short-term construction impacts of a radio communications tower would not significantly affect scenic resources or result in a significant aesthetic impact. The Project site is currently vacant and there would be no site occupants to be affected by construction activities. Construction of the tower would require approximately two weeks/14 days of crane operations, which is the only piece of machinery that would be visible above the rooflines of adjacent structures. An important consideration is not just whether the crane is visible, but whether it would result in a "substantial adverse effect" on scenic views. A crane is a narrow structure with a thin profile that would not hide or inhibit views of distant mountains. Short-term deployment of construction-related equipment is a common occurrence and is generally understood to be a temporary visual inconvenience. As demonstrated in Section 4.1, Aesthetics, the Project site has an institutional character due to the utilitarian nature of the facility, which is exemplified by the security fencing with barbed wire that separates various sections of the site, tall exterior flood lights, internal paved roadways and parking areas, security watch towers, and an aboveground water tank. The

temporary presence of construction-related equipment would not significantly alter or block the views of scenic resources.

Sutton-18

As stated in Section 15126.4(b) of the State CEQA Guidelines, mitigation measures (MMs) may specify performance standards that would mitigate the significant effect of the project and that may be accomplished in more than one specified way. There are many ways to design exterior lighting to avoid spillover, including adjustments to heights, angles, wattage, filters, and other elements. As such, MM AES-1 includes the performance standard of requiring that properties with sensitive receptors not be significantly adversely affected by light spillover onto properties with sensitive receptors, while also ensuring that lighting levels meet the security requirements for the MLWDC. Compliance with this standard through the provision of a Lighting Plan is subject to the review and approval of the Los Angeles County Director of Public Works prior to the commencement of any on-site or off-site demolition/construction activities.

Sutton-19

This comment alleges a failure to address the long-term impact of Valley Fever to on-site inmates and individuals living and working in the Project area. Coccidioidomycosis, also known as Valley Fever, and its impact on potential future inmates and County staff is discussed in Section 4.2, Air Quality. A summary of hazards associated with the fungus is provided in the Draft EIR, as well as summaries of trends related to Valley Fever in Los Angeles County, as inventoried and reported by the Los Angeles County Department of Public Health (LACDPH), which was consulted during the preparation of the Draft EIR.

The commenter references *The Changing Epidemiology of Coccidioidomycosis in Los Angeles (LA) County, California 1973–2011*, prepared by Ramon Guevara, Tasneem Motala, and Dawn Terashita of the LACDPH. Dr. Terashita has coordinated consulted with the County staff on the issue of Valley Fever during preparation of this EIR. This reference has been reviewed and it provides an analysis of the incidence rate of Valley Fever in Los Angeles County, including discussion of the Antelope Valley, and displays the trend of increasing cases through 2011. This information is augmented in the Section 4.2, Air Quality, with more recent data, as published in the LACDPH *2013 Annual Morbidity Report*. Information presented in the referenced report is consistent with information provided in the Draft EIR.

The Draft EIR includes an analysis of exposure hazards due to fugitive dust that may result from construction-related earth-moving activities. PDF AIR-1, which will be included in the Contractor's Specification and monitored through the MMRP, requires the distribution of materials on Valley Fever, or any updated materials as applicable, to worksite supervisors and construction workers. PDF AIR-2 and RR AIR-1, which will be included in the Contractor's Specification and monitored through the MMRP, requires compliance with Best Management Practices and AVAQMD Rule 403 for the prevention of fugitive dust and nuisance air contaminants. RR AIR-1 provides a listing of the most applicable AVAQMD Rules. Rule 403, Fugitive Dust, requires measures such as watering and control of track-out from the site, as well as submittal of a Dust Control Plan prior to the start of construction. Rule 403 requires control of fugitive dust and avoidance of nuisance, and Rule 402 prohibits the emission of quantities of air contaminants that could cause injury, detriment, nuisance, or annoyance to the public, or that endanger the comfort, repose, health or safety of the public. With implementation of RR AIR-1, on-site earth-moving activities would not result in fugitive dust that could affect adjacent off-site land uses.

As stated in RR AIR-2, the Project will be constructed in compliance with the Department of Health – Infection Control Policy Guidelines Procedure No. 918.01. Policy 918 is intended to prevent the spread of diseases that may be caused by construction-induced airborne pollution in susceptible individuals (patients, staff, and the public) in Department of Health Services (DHS) facilities. The protocols and requirements mandate the designation of an Infection Control Coordinator who must review and approve infection-control plans for new construction or renovation projects to ensure a safe environment. These infection-control plans must include infection-control measures to contain dust, debris, and other elements and protect the patients, employees, and visitors in this environment. The Infection Control Coordinator has independent authority to stop construction-related activities immediately when the public may be adversely affected by infection-control hazards generated during construction-related activities and the infection-control precautions and/or engineering controls are inadequate to contain the hazard. As such, the Draft EIR states that exposure to Valley Fever during construction activities would be the same as exposure to dust, and, thus, should follow the requirements for the mitigation of dust. Impacts would be less than significant, and no mitigation is required.

Section 4.2, Air Quality, acknowledges that the future inmate population has the potential to be exposed to dust generated from soils within the Antelope Valley, which have the potential to contain *Coccidioides* spores (i.e., the fungus that causes Valley Fever). As discussed in Section 3.0, Project Description, of the Draft EIR, according to the Sheriff's Department, AB 109 female inmates are serving an average of 423 days in custody from date of sentencing to date of release, while non-AB 109 female inmates serve an average of 107 days in custody. Therefore, the length of time that inmates would be living at the MLWDC is temporary, and is not equivalent to a permanent living circumstance or the longer sentences in state prisons that house higher-security inmates.

The Draft EIR summarizes the LACDPH 2013 *Annual Morbidity Report*, which presents the recent trends related to Valley Fever in Los Angeles County, including and increasing incidence rate for reported coccidioidomycosis cases within the last ten years. However, the overall incidence rate in the Antelope Valley was not determined to warrant changes in the County's protocol for disease prevention, notwithstanding the fact that the County health and public health officials are well educated on the condition; are familiar with its incidence in the County and elsewhere in the state; and are involved in research and education on the subject of Valley Fever.

The LACDPH has not identified the previous U.S. Immigration and Customs Enforcement (ICE) detainee population at the MLDC, the future inmate population at MLWDC, or earlier occupants at the High Desert Health System (HDHS) Multi-Ambulatory Care Center (MACC) (the adjacent hospital facility, which has relocated in Lancaster) as requiring the implementation of health screening protocols or other measures to address potential Valley Fever exposure.

Also, as demonstrated in Section 4.2, Air Quality, the California Department of Corrections and Rehabilitation (CDCR) has not identified the Lancaster area as being a geographic location that requires screening or interventions for the State prison population with regard to exposure to Valley Fever (CDCR 2013). As discussed with the Sheriff's Department staff for the preparation of the Draft EIR, the operation of the MLWDC will follow standard Sheriff's Department procedures for medical care and prevention with regard to health care for inmates in general, and Valley Fever specifically, and the Sheriff's Department will continue to coordinate with LACDPH (Masis 2015). The LACDPH is the designated County agency with the mandate to protect health, prevent disease, and promote the health and well-being of all persons within Los Angeles County. As such, any future changes in LACDPH policies that may be made regarding Valley Fever for inmate populations will be implemented, as applicable, throughout the County jail system.

Because the future inmate population's exposure to disturbed soils would be limited to gardening activities, PDF AIR-3 in Section 4.2, Air Quality, states that the Project will import gardening soils from outside of the Antelope Valley and would be used in raised planting beds to remove gardening in native soil as a potential source of exposure to Valley Fever spores. Further, outdoor recreational areas would be covered with landscaping, turf grass, gravel, or landscaping/wood chip ground cover that would minimize the opportunity for soils to become airborne.

The Antelope Valley has not been identified by the LACDPH, the AVAQMD, or any other governmental health agency as a region that should be avoided by the elderly, women, children, health-compromised individuals, or by any specific ethnic groups. The Antelope Valley includes the major population centers of the cities of Lancaster and Palmdale, which have an estimated 2014 combined population of approximately 314,902 people. This portion of the Antelope Valley includes a diverse population of residents that includes many individuals that could be considered to be at higher risk of complications due to infection from Valley Fever spores. As stated in Section 4.2, Air Quality, persons at the highest risk of developing disseminated Valley Fever include the very young (under 1 year old); adults over 60 years; immunocompromised individuals; people with diabetes; women in the third trimester of pregnancy; and certain ethnic groups, including African-Americans and Filipinos.

The demographics of the two cities include approximately 158,605 females (50.4 percent) and 156,297 males (49.6 percent) with a median age of approximately 30.7 years old. The racial/ethnic composition of the area is approximately 47 percent Latino, 29 percent white, 17 percent African American, and 4 percent Asian (U.S. Census Bureau 2016). As such, the temporary presence of a female inmate population into the Antelope Valley would not introduce a new or unusual demographic into the area that is not already present in the existing population of the region.

The MLWDC property is not located in an area determined to be hazardous to the health of local residents or visitors to the region. The Draft EIR concludes that the potential future inmate population's temporary placement into the Antelope Valley, which includes the inmates' participation in all indoor and outdoor activities at the MLWDC, would not constitute placement into a hazardous existing environmental setting that would require mitigation. Additionally, the operation of the proposed Project would not increase the prevalence of Valley Fever spores or otherwise exacerbate an existing environmental condition.

The commenter requests that the County consult with Fugitive Dust and Health and Valley Fever Scoping Group in Antelope Valley. The LACDPH representatives participate in various community focus groups including the Fugitive Dust Group, California Cocci Collaborative, and Centers for Disease Control's (CDC's) Cocci Public Health Working Group in order to stay abreast of current information and resources surrounding the condition.

Sutton-20

The commenter states that there is a "hot spot" of Valley Fever near the Project site, but no source information is provided. Section 4.2, Air Quality includes an overview of the LACDPH *2013 Annual Morbidity Report*. Data included in this report show the incidence in Valley Fever in Service Planning Area (SPA) 1 (i.e., Antelope Valley) from 2009 to 2013. The number of incidents of Valley Fever infection spiked in 2011 in SPA 1 with 93 reported cases, which represented 30 percent of cases in Los Angeles County, with an incidence rate of 25 per 100,000 people. The incidence rate decreased to 74 reported cases in both 2012 and 2013. As such, in 2013, SPA 1 represented approximately 20.4 percent of the total reported cases in Los Angeles County, with

an incidence rate of 19 per 100,000 people. SPA 1 has the highest infection rate in Los Angeles County, which is presumed to relate to the “hot spot” referred to in the comment (LACDPH 2013).

However, the rate of Valley Fever infection in Los Angeles County, and the Antelope Valley specifically, is substantially less than in neighboring Kern County, which had a 2013 infection rate of 276 per 100,000 people in the north valley region (KCPHSD 2016). The eastern portion of San Luis Obispo County had Valley Fever infection rates ranging from 205 to 257 per 100,000 people between 2007 and 2012 (SLOCPHD 2014). Therefore, although the Antelope Valley has the highest rates in Los Angeles County, the rates are well below rates found nearby counties where Valley Fever is endemic.

According to the Centers for Disease Control, California has areas that are categorized as “highly endemic”, “established endemic”, and “suspected endemic” for coccidioidomycosis. Los Angeles County as a whole is categorized as being “suspected endemic,” which is the same category ascribed to large areas of Nevada, New Mexico, and western Texas (CDC 2016). Highly endemic areas include Kern County and southern Arizona, including the metropolitan areas of Phoenix and Tucson. As presented in Sutton-19 above, the CDCR has not identified the Lancaster area as being a geographic location that requires screening or interventions for the State prison population with regard to exposure to Valley Fever (CDCR 2013).

Sutton-21

The possibility of future inmates potentially contracting Valley Fever is not dismissed as alleged, as Section 4.2, Air Quality, acknowledges that the future inmate population has the potential to be exposed to dust generated from soils within the Antelope Valley, which have the potential to contain *Coccidioides* spores. Additionally, Section 4.2, Air Quality, acknowledges that the Project site is located adjacent to land on the east that has exposed native soils (i.e., a two megawatt [MW] solar array), and is situated in the context of many acres of undeveloped land and fallow farmland that could generate airborne dust during windstorms. However, the Draft EIR concludes that the potential future inmate population’s temporary placement into the Antelope Valley, which includes the inmates’ participation in all indoor and outdoor activities at the MLWDC, would not constitute placement into a hazardous existing environmental setting that would require mitigation.

Sutton-22

As discussed with the Sheriff’s Department staff for the preparation of the Draft EIR, the operation of the MLWDC will follow standard Sheriff’s Department procedures for medical care and prevention with regard to health care for inmates in general, and Valley Fever specifically, and the Sheriff’s Department will continue to coordinate with LACDPH (Masis 2015). The LACDPH is the designated County agency with the mandate to protect health, prevent disease, and promote the health and well-being of all persons within Los Angeles County. In fact, *The Changing Epidemiology of Coccidioidomycosis in Los Angeles (LA) County, California 1973–2011*, which is referred to in the Sutton comment letter, was co-authored by Ramon Guevara, Tasneem Motala, and Dawn Terashita of the LACDPH. The LACDPH is highly aware of Valley Fever and monitors reports of any cases of the disease. As such, any future changes in LACDPH policies that may be made regarding Valley Fever for inmate populations will be implemented, as applicable, throughout the County jail system.

Sutton-23

The commenter's assertion that emissions from service/delivery trucks are not included in the Draft EIR analysis is incorrect. As stated in the footnotes to Table 6-1, Project Trip Generation, of the Traffic Impact Study, Appendix H of the EIR, "The site specific daily trip generation was derived based on detailed site programming information (employee numbers and shifts, miscellaneous delivery trucks, and inmate transport vehicles) as provided by County staff" (LLG 2015). Employee trips were estimated at 922 daily trips (461 round-trips); inmate transport trips were estimated at 16 daily trips (8 round-trips); and other miscellaneous trips were estimated at 100 daily trips (50 round-trips).

Laundry will be delivered to the site 3 times a week, with the actual laundering done remotely at another County facility. The Project will also receive food deliveries daily during the work week. Commissary delivery will occur once a week. These deliveries are accounted for in the estimated 100 daily service vehicle trips used in the Traffic Impact Study.

The trip generation is summarized in Section 4.13, Transportation and Traffic, which states the trip generation data includes "all trip types (i.e., staff and employees, service, and inmate visitation trips)". The calculation of mobile source input for trip generation was taken from the Project's Traffic Impact Study. Section 4.2, Air Quality, presents the results of the emission analysis using California Emissions Estimator Model (CalEEMod) Version 2013.2.2, which is a computer program that is used to calculate anticipated emissions associated with land development projects in California. Operational inputs include the year of analysis and vehicle trip generation rates. Output operational emissions data categories include area, energy, and mobile sources. Area sources are landscape maintenance equipment, consumer products, and architectural coatings used for routine maintenance. Energy emissions are from natural gas consumption. Mobile sources are the vehicles used by staff, visitors, and vendors, and include buses used for inmate transport.

Therefore, the Project's trip generation, which includes 100 daily trips for service vehicles, was included as an input into the CalEEMod air quality analysis. As shown in Table 4.2-7 of Section 4.2, Air Quality, the estimated annual operational emissions due to Project-related operations would not exceed the AVAQMD's CEQA significance thresholds and potential impacts would be less than significant. In fact, emissions were well below the thresholds of significance. For example, carbon monoxide (CO) was the air contaminant with the highest annual rate of emission, and the Project was estimated to emit 18 tons per year, while the AVAQMD threshold of significance is 100 tons per year.

As described in the Project Traffic Impact Study, it is anticipated that the relocation of inmates to the MLWDC would result in additional vehicle miles traveled (VMT) by visitors on weekends and holidays, inmate buses, and by service/delivery trucks seven days per week when compared to the length of trips required for the CRDF located in the City of Lynwood. The worst-case estimate is an increase of 2,500 VMT on a weekday and 25,700 VMT on a weekend day or holiday. To account for the increased VMT, CalEEMod default trip distances were adjusted to add approximately 3.26 million annual VMT to the VMT generated with default trip distances.

Sutton-24

The commenter's concern with use of the "air quality plan" is unclear. The use of that term in Section 4.2, Air Quality, is derived from Threshold 4.2a of Appendix G of the State CEQA Guidelines, which states "A project would result in a significant adverse impact related to Air Quality if it would conflict with or obstruct implementation of the applicable air quality plan". As

stated in Section 4.2.2, Existing Conditions, of Section 4.2, Air Quality, areas that are in nonattainment are required to prepare air quality plans and to implement measures that will bring the region into attainment. When an area has been reclassified from nonattainment to attainment for a federal standard, the status is identified as “maintenance”, and there must be a plan and measures established that will keep the region in attainment for the following ten years. For the reasons detailed on page 4.2-14 under Threshold 4.2a, the air quality plans applicable to the Project site are the *AVAQMD 2004 Ozone Attainment Plan (State and Federal)* and the *AVAQMD Federal 8-Hour Ozone Attainment Plan (Western Mojave Desert Non-attainment Area)*.

Sutton-25

Outdoor recreation, both active (e.g., use of sports courts, running track) and passive (e.g., sitting in courtyards or on turf grass areas), will occur on the Project site. The outdoor recreation opportunities and amenities are one of the benefits of the proposed MLWDC Project when compared to existing facilities at the CRDF. There are no known reasons to believe that risks of infection from Valley Fever from participating in outdoor recreational activities at the MLWDC site would be any different from the risks of participating in outdoor activities elsewhere in the Lancaster portion of the Antelope Valley.

Because the future inmate population's exposure to disturbed soils would be limited to gardening activities, PDF AIR-3 in Section 4.2, Air Quality, states that the Project will import gardening soils from outside the Antelope Valley and would be used in raised planting beds to remove gardening in native soil as a potential source of exposure to Valley Fever spores. Vendors for garden soil are numerous and a specific provider has not been determined at this time; however, as required by PDF AIR-3, only imported gardening soil will be used at the Project site. Further, outdoor recreational areas would be covered with landscaping, turf grass, gravel or landscaping/wood chip ground cover that would minimize the opportunity for soils to become airborne.

Sutton-26

There have been no tests conducted on the Project site to measure for Valley Fever spores within on-site soils. According to the Centers for Disease Control, testing soil for *Coccidioides* is not likely to be useful because the fungus is thought to be common in the soil in certain areas. A soil sample that tests positive for *Coccidioides* does not necessarily mean that the soil will release the fungus into the air and cause infection. Also, there are no commercially-available tests to detect *Coccidioides* in soil. Testing soil for *Coccidioides* is currently only done for scientific research (CDC 2016).

The majority of the Project site will be paved or landscaped, and exposure to disturbed soils would be minimized through PDF AIR-3. Section 4.2, Air Quality acknowledges that the future inmate population has the potential to be exposed to dust generated from soils within the Antelope Valley, which have the potential to contain *Coccidioides* spores. Additionally, Section 4.2, Air Quality, acknowledges that the Project site is located adjacent to land on the east that has exposed native soils (i.e., a two-MW solar array), and is situated in the context of many acres of undeveloped land and fallow farmland that could generate airborne dust during windstorms. However, the Draft EIR concludes that the potential future inmate population's temporary placement into the Antelope Valley, which includes the inmates' participation in all indoor and outdoor activities at the MLWDC, would not constitute placement into a hazardous existing environmental setting that would require mitigation.

Sutton-27

Section 4.2, Air Quality, analyzes the potential for pollutant emissions during demolition, construction, and operation of the Project. Impacts were determined to be less than significant, with compliance with regulatory requirements (RRs) and the implementation of Project Design Features (PDFs). As stated in Response Sutton-25, there are no known reasons to believe that risks of infection from Valley Fever from participating in outdoor recreational activities at the MLWDC site would be any different from the risks of participating in outdoor activities elsewhere in the Lancaster portion of the Antelope Valley.

Section 4.2, Air Quality, acknowledges that the future inmate population has the potential to be exposed to dust generated from soils within the Antelope Valley, which have the potential to contain *Coccidioides* spores. As discussed in Section 3.0, Project Description, of the Draft EIR, according to the Sheriff's Department, AB 109 female inmates are serving an average of 423 days in custody from date of sentencing to date of release, while non-AB 109 female inmates serve an average of 107 days in custody. Therefore, the length of time that inmates would be living at the MLWDC is temporary and is not equivalent to a permanent living circumstance or the longer sentences in state prisons that house higher-security inmates. The Draft EIR concludes that the potential future inmate population's temporary placement into the Antelope Valley, which includes the inmates' participation in all indoor and outdoor activities at the MLWDC, would not constitute placement into a hazardous existing environmental setting that would require mitigation.

Sutton-28

Section 4.3.2 of the Draft EIR sets forth a detailed description of the existing conditions relating to the plant and animal wildlife species that may be encountered on the Project site. A few examples of wildlife species expected to use the Project site include reptiles such as side-blotched lizard (*Uta stansburiana*) and western whiptail (*Aspidoscelis tigris*); bird species such as rock pigeon (*Columba livia*), house finch (*Haemorhous mexicanus*), European starling (*Sturnus vulgaris*), mourning dove (*Zenaida macroura*), and northern mockingbird (*Mimus polyglottos*); and mammals such as deer mouse (*Peromyscus maniculatus*), Botta's pocket gopher (*Thomomys bottae*), and desert cottontail (*Sylvilagus audubonii*).

Implementation of the proposed Project would have limited impact on habitat and/or movement of wildlife species due to limited wildlife use of the Project site. As stated in Section 4.3, Biological Resources, the site is highly developed with a lack of native habitats. The Project site is entirely contained by a perimeter fence that does not allow for passage into or out of the MLDC except within secured gated areas. Therefore, the Project site does not represent an important regional movement corridor, and few wildlife species are expected to use the site. Extremely limited local movement of common wildlife species through unfenced parking areas or landscaped areas of the site may occur for foraging and dispersal. The Project's short-term and long-term construction impacts would not have an impact on regional wildlife movement. Furthermore, the wildlife expected to use the site is expected to be highly adapted to human disturbance. Construction and ground-disturbing activities would not significantly impact habitat because there is extensive (non-specialized) habitat for these common species throughout the Project site.

Sutton-29

As stated in Section 4.3, Biological Resources, essentially all naturally occurring bird species (such as house finch) in North America are considered to be migratory and included on the list of species protected under the Migratory Bird Treaty Act (MBTA). Suitable nesting habitat for common migratory birds is present in mature trees and other structures on the Project site and in

its adjacent areas and could be adversely impacted either directly or indirectly during the Project's short-term construction impacts. Activities such as vegetation removal and structure demolition could potentially cause nest failure during the breeding season. Implementation of MM BIO-2, which requires nesting bird surveys and construction buffer zones for construction activities occurring during the breeding season, would reduce potential direct and indirect impacts on nesting migratory birds.

The majority of bird species expected to use the Project site can be found year round and do not migrate long distances. Bird species expected to occur such as the European starling, mourning dove, and house finch exhibit either differential or partial migration. In differential migration, migration is related to a bird's age and sex, and some birds do not travel at all but remain in the same general location year round. Partial migration is when some birds (independent of age/sex) migrate, while other birds do not travel at all. MM BIO-2, which requires nesting bird surveys and construction buffer zones for construction activities occurring during the breeding season, is proposed mitigation for protecting nesting migrating birds.

Generally speaking, construction will continue unhindered by particular seasons during the calendar year. In some cases, and when feasible, particular construction activities with high potential for breeding bird impacts (such as vegetation removal) may be scheduled during the non-breeding season. If avoidance of particular construction activities during the breeding season is not feasible, MM BIO-2 would be implemented. The duration of construction activities does not have an effect on implementation of MM BIO-2. As generally summarized below, MM BIO-2 requires that protective procedures are implemented if construction is scheduled to occur during the bird nesting season:

- To the extent feasible, vegetation/tree removal shall occur during the non-breeding season for nesting birds (generally late September to early March) and nesting raptors (generally early July to late January) to avoid impacts to nesting birds and raptors. If the nature of the Project requires that work be initiated during the breeding season for nesting birds and raptors (February 1 to August 31), a pre-construction survey shall be conducted by a qualified Biologist. If the Biologist does not find any active nests within or immediately adjacent to the impact area, the vegetation clearing/construction work shall be allowed to proceed.
- If the Biologist finds an active nest within or immediately adjacent to the construction area and determines that the nest may be impacted or breeding activities substantially disrupted, the Biologist shall delineate an appropriate buffer zone around the nest and the active nest shall be protected until nesting activity has ended. Encroachment into the buffer area around a known nest shall only be allowed if the Biologist determines that the proposed activity would not disturb the nest occupants. Construction will be allowed to proceed when the qualified Biologist has determined that fledglings have left the nest or the nest has failed.

MM BIO-2 will be implemented by the qualified Biologist hired by the County or its contractor prior to the start of construction. As stated in MM BIO-2, a letter report shall be prepared and submitted to the Los Angeles County Department of Public Works to document the survey findings and recommended protective measures.

Sutton-30

Potential impacts to bat maternity roosts are analyzed under Threshold 4.3d in the Draft EIR. Construction activities on the Project site are anticipated to begin in December 2016 for a duration of 35 months. MM BIO-1 prohibits removal of trees supporting bat maternity roost sites (where

bats give birth and nurse their young) during bat maternity roost season (March 1 to July 31). However, the demolition of bat maternity roosts, if present on the Project site, would indirectly impede the use of wildlife nursery sites, as the colony would not be able to return to their nursery site. However, there is low potential for bat maternity roosts on the Project site due to limited suitable habitat, the presence of human activity on the site, and a lack of open water. A potential bat maternity roost location on the Project site being removed after the maternity season would not be considered a substantial impediment to the use of native wildlife nursery sites due to the relatively low population such roost would support in relation to the larger regional bat population.

Bat maternity roosts of any bat species may be considered native wildlife nursery sites. Common bat species, such as California myotis, form maternity colonies in places such as crevices of old snags, crevices of trees, bridges, and buildings. Impacts to multiple such active breeding colonies during the breeding season could potentially cause a decline in regional population. MM BIO-1 calls for calls for pre-construction bat surveys and bat exclusion procedures. There is low potential for bat maternity roosts, colonial roosts, and solitary roost sites on the Project site due to limited suitable habitat, the presence of human activity on the site, and a lack of open water. Potential colonial, solitary, and maternity roost being removed from the Project site would not be considered a substantial ecological impact due to the relatively low population such roosts would support in relation to the larger regional bat population.

Sutton-31

This comment alleges that MM BIO-1 is not appropriate or effective. The portion of MM BIO-1 related to bats is intended to avoid direct impacts to maternity roosts during the breeding season. The purpose of said avoidance is to reduce potentially significant impacts to native wildlife nursery sites (bat maternity roosts) to levels considered less than significant. MM BIO-1 effectively avoids the impact of removing occupied bat maternity roosts by calling for a pre-construction bat habitat assessment of the trees and/or structures marked for potential removal/demolition prior to commencement of construction activities. If potential maternity roosts are detected during the bat habitat assessment, construction activities will not occur until the bat maternity season has ended.

Sutton-32

The implementation of MM BIO-1 would occur immediately prior to Project construction activities. Therefore, surveys would not be conducted or completed during the timeframe of the Final EIR, which must be provided to the Board of Supervisors for review and consideration prior to any decision to approve, revise, or deny the Project. As required in MM BIO-1 and MM BIO-2, only qualified biologists shall be retained to conduct the required surveys and/or assessments. County studies and reports such as the ones required by the Draft EIR would be available for public review in accordance with the California Public Records Act (CPRA), which requires that governmental records be disclosed to the public upon request, unless there is a specific reason not to do so, in accordance with exemptions within the CPRA or other state laws.

Sutton-33

MM BIO-2 requires the establishment of "an appropriate buffer zone" around an active nest, if found. An appropriate buffer zone is an area surrounding an active nest where no Project-related activities may occur. The zone is determined by a qualified Biologist who is familiar with the behavior of the birds tending to the nest. The buffer zone is specific to each particular nest and may vary from site to site depending on the construction activity, the height of the nest in a tree or other structure, and the species of nesting bird, among other factors. An appropriate buffer zone is one that avoids a nest failure (through direct or indirect impacts) due to construction

activities. We are unaware of a standard buffer size determined by the American Institute of Biological Sciences. The methodology set forth in MM BIO-2 is consistent with the requirements set forth for other development Projects throughout Los Angeles County that require compliance with the MBTA, which are regularly vetted through the California Department of Fish and Wildlife (CDFW) review of CEQA environmental documents.

Sutton-34

The Draft EIR relied upon a thorough search of the Vertebrate Paleontology records conducted by the Natural History Museum of Los Angeles County (NHMLAC), as documented in a letter dated June 6, 2010, and located in Appendix C-2 of the Draft EIR. As stated, the surficial deposits in the Project area are “composed exclusively of younger Quaternary Alluvium beneath soil. These types of sedimentary deposits usually do not contain significant vertebrate fossils, at least in the uppermost layers” (McLeod 2010) The NHMLAC letter goes on to state that surface grading or shallow excavations in the proposed Project area are unlikely to encounter significant vertebrate fossils in the younger Quaternary Alluvium, while deeper excavations into older deposits could uncover significant fossil vertebrate remains (McLeod 2010).

Sedimentary deposits and formations do not change over the course of five years and, even if fossils were discovered in the Project area, MM CUL-2 in the Draft EIR would remain unchanged. MM CUL-2 requires that a qualified Paleontologist be notified and retained when earth-moving activities are anticipated to impact undisturbed deposits in the older Quaternary alluvium on the Project site (i.e., approximately five feet below ground surface or deeper). The Paleontologist shall determine, based on consultation with the County, when monitoring of grading activities is needed based on the on-site soils and final grading plans. If any fossil remains are discovered, the Paleontologist must prepare a report of the results of any findings, which would be submitted to the NHMLAC that would then update its own records and maps accordingly.

An updated records search was requested and received from the NHMLAC and their response is provided in Appendix B to this document. The only difference between the new 2016 records search and the 2010 records search is that additional fossil species have been found in the vicinity of the Project site. The camel fossil that is mentioned in the letter was found at the County's High Desert Regional Health Center (located approximately 5.5 miles east of the Project site) (McLeod 2016). However, the recommendations in the NHMLAC letter are the same as in the prior records search, and MM CUL-2 reflects the NHMLAC's recommendation. No change to the Draft EIR analysis or MM CUL-2 is required.

Sutton-35

As stated on page 4.4-11 of the Draft EIR, an inquiry was made on January 30, 2014, of the Native American Heritage Commission (NAHC) to request a review of the Sacred Lands File database regarding the possibility of Native American cultural resources and/or sacred places in the Project vicinity that are not documented in other databases. The NAHC responded on January 31, 2014, and indicated that there are not records of Native American traditional cultural places with the NAHC, but the NAHC provided a list of Native American groups and individuals who may have knowledge regarding Native American cultural resources not formally listed on any database. Subsequently, letters to Native American tribes were sent out on February 3, 2014. Beverly Folkes was sent a letter on February 3, 2014, using the address provided by the NAHC (see Appendix C-3 of the Draft EIR). Only Daniel McCarthy of San Manuel Band of Mission Indians responded via email on February 6, 2014, and stated that, given the nature and location of the Project, the San Manuel Band has no concerns (McCarthy 2014). See Appendix C of this Final EIR. No follow-up on the other tribes was made as the documentation relies on the contact

information from the NAHC as the authoritative source and it is common not to receive responses from all the tribes contacted.

The Project does not require a General Plan Amendment or Specific Plan Amendment and thus, is not subject to the Native American consultation under Senate Bill (SB) 18. The Notice of Preparation (NOP) for the Project was also sent out prior to the effective date of Assembly Bill (AB) 52, which provides a separate consultation process that can be triggered by a tribe and applies only to projects for which the NOP scoping notice was sent on or after July 1, 2015. Thus, the County is not specifically required to notify Native American tribes under CEQA. However, information letters were sent to local tribes as part of the background research for the Project site.

It cannot be entirely discounted that archaeological resources may be present beneath the pavement, buildings, or ground surfaces. Thus, MM CUL-1 calls for a qualified Archaeologist to be retained by the County to attend the pre-grading meeting with the Construction Contractor to establish, based on the site plans, appropriate procedures for monitoring earth-moving activities during construction. The Archaeologist would determine, based on consultation with the County, when monitoring of grading activities is needed. Monitoring should observe disturbance of the uppermost layers of sediment (soils and younger Quaternary alluvium) and any archaeological resources discovered shall be salvaged and catalogued, as necessary.

Sutton-36

The comment alleges that not all contributing buildings to the Historic District have been identified. Section 4.4, Cultural Resources, includes a summary of the findings of the Historical Resources Report included in Appendix C-1 of the Draft EIR. The Report concludes that there is a historic district within the Project study area. The district, named the Polaris Flight Academy Historic District, meets the criteria for listing in the National Register of Historic Places (NRHP) and the California Register of Historical Resources (CRHR) for its direct associations with military aviation during World War II and the work of Major Corliss Champion Moseley (GPA 2015). It is therefore considered a historical resource subject to the requirements of CEQA.

It is recognized as standard methodology to evaluate groupings of buildings, structures, objects, and landscape features within a distinct geographic area with shared historic contexts as potential historic districts. One key factor in determining contributing and non-contributing resources is period of significance. Buildings constructed outside the period of significance cannot be considered contributors. Because the Historic District, in this case, is significant for its World War II history, its period of significance within this context ended in 1945. Thus, the buildings constructed after 1945 are not contributors. They were constructed for different uses by different entities.

It would have been appropriate to evaluate the three buildings (i.e., Old Lock Building, Quonset Hut, and Wooden Shed) in question individually, above and beyond their evaluations as contributors, if they had any potential to represent an important historic context as individual buildings. The contextual research into the postwar history of the property when it was used by the State and the County as a detention facility indicated no reason to conclude that the property had any other significance than its World War II significance. As a result, there is no significant historic context for the three buildings to potentially represent. The resulting evaluation would reach exactly the same conclusion: the buildings would be assigned a 6Z classification, not eligible for designation.

Furthermore, there were no buildings between the two large historic hangars during the property's period of significance, so removing the three non-contributing buildings will actually be beneficial

to the ratio of contributors to non-contributors in the Historic District. Project implementation will not have a significant impact on the Historic District, and no further analysis is required.

Sutton-37

Implementation of MM CUL-2 would occur immediately prior to, and during, Project construction activities. The qualified Paleontologist would be hired by the County or its contractor prior to the start of construction. Therefore, monitoring would not be conducted or completed during the timeframe of the Final EIR, which must be provided to the Board of Supervisors for review and consideration prior to any decision to approve, revise, or deny the Project. A plan for the evaluation, recordation, recovery and/or salvage of any discovered fossil remains would be formulated by the Paleontologist at the time of the discovery based on the circumstances of the find. County studies and reports such as the ones required by the Draft EIR would be available for public review in accordance with the CPRA, which requires that governmental records be disclosed to the public upon request, unless there is a specific reason not to do so, in accordance with exemptions within the CPRA or other state laws.

Sutton-38

The Draft EIR includes an analysis of exposure hazards due to fugitive dust that may result from construction-related earth-moving activities. PDF AIR-1, which will be included in the Contractor's Specification and monitored through the MMRP, requires the distribution of materials on Valley Fever, or any updated materials as applicable, to worksite supervisors and construction workers. PDF AIR-2 and RR AIR-1, which will be included in the Contractor's Specification and monitored through the MMRP, requires compliance with Best Management Practices and AVAQMD Rule 403 for the prevention of fugitive dust and nuisance air contaminants. RR AIR-1 provides a listing of the most applicable AVAQMD Rules. Rule 403, Fugitive Dust, requires measures such as watering and control of track-out from the site, as well as submittal of a Dust Control Plan prior to the start of construction. Rule 403 requires control of fugitive dust and avoidance of nuisance, and Rule 402 prohibits the emission of quantities of air contaminants that could cause injury, detriment, nuisance, or annoyance to the public, or that endanger the comfort, repose, health, or safety of the public. With implementation of RR AIR-1, on-site earth-moving activities would not result in fugitive dust that could affect adjacent off-site land uses.

As stated in RR AIR-2, the Project will be constructed in compliance with the Department of Health – Infection Control Policy Guidelines Procedure No. 918.01. Policy 918 is intended to prevent the spread of diseases that may be caused by construction-induced airborne pollution in susceptible individuals (patients, staff, and the public) in Department of Health Services (DHS) facilities. The protocols and requirements mandate the designation of an Infection Control Coordinator who must review and approve infection-control plans for new construction or renovation projects to ensure a safe environment. These infection-control plans must include infection-control measures to contain dust, debris, and other elements and to protect the patients, employees, and visitors in this environment. The Infection Control Coordinator has independent authority to stop construction-related activity immediately when the public may be adversely affected by infection-control hazards generated during construction-related activities and when the infection-control precautions and/or engineering controls are inadequate to contain the hazard. As such, the Draft EIR states that exposure to Valley Fever during construction activities would be the same as exposure to dust, and, thus, should follow the requirements for the mitigation of dust. Impacts would be less than significant, and no mitigation is required.

Sutton-39

This comment alleges that MM CUL-1 and MM CUL-2 are not sufficient. MMs are set forth in the Draft EIR as required activities that must occur in order to reduce potentially significant environmental impacts. No required pre-construction activities would occur or be contracted for, until the Board of Supervisors has made a determination to approve the Project. Should the Board of Supervisors decide to modify the Project, then the MMs set forth in the Draft EIR may require changes. Should the Board of Supervisors decide to deny the Project, then there would be no need to continue with requirements set forth in the MMs.

The Project site survey that was completed for on-site archaeological resources is discussed in Section 4.4, Cultural Resources, under Thresholds 4.4b and 4.4c. BonTerra Psomas' archaeologist Patrick Maxon, M.A., RPA, completed a pedestrian survey of the Project site on November 21, 2013. He walked all accessible open areas of the site to determine if there were exposed archaeological resources. No archaeological resources were expected as the site is largely developed with buildings, sidewalks, parking areas, roads, and other paved areas. The findings of his site survey, along with the conclusions of the Vertebrate Paleontology records conducted by the NHMLAC (see Appendix C-2 of the Draft EIR), are incorporated into the analyses under Thresholds 4.4b and 4.4c in Section 4.4, Cultural Resources.

Section 21081.6 of CEQA and Section 15097 of the State CEQA Guidelines require a public agency to adopt an MMRP for assessing and ensuring the implementation of required mitigation measures applied to proposed projects. Specific reporting and/or monitoring requirements that will be enforced during Project implementation shall be adopted simultaneously with final Project approval by the responsible lead agency.

Sutton-40

As stated in Section 4.5, Geology and Soils, liquefaction is the sudden decrease in the strength of cohesionless soils due to dynamic or cyclic shaking. Saturated soils behave temporarily as a viscous fluid (liquefaction) and, consequently, lose their capacity to support structures. The potential for liquefaction decreases with increasing clay and gravel content, but increases as the ground acceleration and duration of shaking increase. Liquefaction potential has been found to be greatest where both high groundwater and loose sands occur within 50 feet of the ground surface.

The *Geohazard Study Report* for the Project, as summarized in the Draft EIR, included a liquefaction analysis and indicates that the Project site may be susceptible to liquefaction (Converse 2014b). As such, proposed structures and infrastructure on the Project site may be exposed to liquefaction hazards, including damage to foundations; settlement of aboveground structures; and uplift of buried structures and infrastructure. Prior to the completion of final engineering design plans, additional geotechnical exploration, lab testing, and analysis may be required for planned seismic upgrades to existing buildings in order to provide detailed design recommendations. The Project's structural design, which must be completed in accordance with the recommendations of the geotechnical investigation and subject to the County Building Official, as included in RR GEO-1, would address liquefaction hazards to prevent damage to foundations, structures, and infrastructure.

Reductions in the groundwater levels are generally likely to decrease the potential for liquefaction because water would be farther from the ground surface. It is anticipated that the engineering design for the Project will account for liquefaction hazards based on soil testing that would be completed as part of RR GEO-1.

Sutton-41

As the commenter states, the Antelope Valley can be subject to periodic strong winds. High winds have the ability to transport dust and soil, which may or may not contain *Coccidioides* spores (i.e., the fungus that causes Valley Fever). The Draft EIR includes an analysis of potential exposure to fugitive dust that may result from construction-related earth-moving activities. PDF AIR-1, which will be included in the Contractor's Specification and monitored through the MMRP, requires the distribution of materials on Valley Fever, or any updated materials as applicable, to worksite supervisors and construction workers. PDF AIR-2 and RR AIR-1, which will be included in the Contractor's Specification and monitored through the MMRP, requires compliance with Best Management Practices and AVAQMD Rule 403 for the prevention of fugitive dust and nuisance air contaminants. RR AIR-1 provides a listing of the most applicable AVAQMD Rules. Rule 403, Fugitive Dust, requires measures such as watering and control of track-out from the site, as well as submittal of a Dust Control Plan prior to the start of construction. Rule 403 requires control of fugitive dust and avoidance of nuisance, and Rule 402 prohibits the emission of quantities of air contaminants that could cause injury, detriment, nuisance, or annoyance to the public, or that endanger the comfort, repose, health or safety of the public. With implementation of RR AIR-1, on-site earth-moving activities would not result in fugitive dust that could affect adjacent off-site land uses.

In a letter received from the Antelope Valley Air Quality Management District (AVAQMD), as included in Appendix B of this document, regarding this Project and included in the comment section of this Final EIR, the AVAQMD has concurred with the Draft EIR analysis of air quality and dust impacts.

Sutton-42

The groundwater level declines and associated land subsidence are not as severe near at the Project site as in other parts of the Antelope Valley groundwater basin. Local survey monument benchmark records would be reviewed to determine the amount of land subsidence on or near the Project site, as part of RR GEO-1. The design of the building foundations has not been determined, as the design phase is yet to occur. However, the foundation design for new buildings or additions will be designed and constructed to appropriately address current soil conditions and characteristics identified by a California licensed geologist, soils engineer, and structural engineer. The design will meet code requirements which include recognition of soil bearing pressure, seismic activity and jurisdictional building codes as well as AB 900 structural requirements. Existing facilities are monitored periodically for distress as part of facility operation and maintenance protocol, and there would be no hazards posed to the inmate or employee population.

Additionally, the Antelope Valley Groundwater Basin has been recently adjudicated through Los Angeles Superior Court case number 1-05-CV-049053: Antelope Valley Groundwater Cases, Consolidated Proceeding 4408, which determined the safe yield of groundwater extraction from the basin and allocates pumping rights accordingly to users. As such, improved water conservation measures, including recharge of reclaimed water, storm water and imported waters, and other measures in compliance with the adjudication could be expected to reduce water level declines and associated land subsidence in the region, and provided sustainable safe yields within the Antelope Valley groundwater basin.

Regarding operational costs associated with the proposed Project, the final design of the facility has not been drafted or approved, and the long-term operational costs have not yet been determined.

Sutton-43

The analysis of geologic, soils, and seismic characteristics and constraints on the Project site and surrounding area presented in Section 4.5, Geology and Soils, is based on the *Geohazard Study Report – Mira Loma Detention Center, 45100 North 60th Street West, Lancaster, California* prepared by Converse Consultants in June 2014, which has in fact been fully disclosed and included as Appendix D of the Draft EIR. The conclusions of significance findings in Section 4.5, Geology and Soils, are based on the substantial evidence presented in this technical study.

Sutton-44

While the Project's estimated water demand is less than the 250 acre-feet per year (afy) threshold established by the California Department of Water Resources (DWR) for determining whether a Water Supply Assessment (WSA) is required under Senate Bill (SB) 610, a WSA was prepared for the Project and is provided in Appendix G-2 of the Draft EIR. The WSA is also summarized in Section 4.14, Utilities and Service Systems. As required under SB 610, the WSA must include an evaluation of the sufficiency of the water supplies available to the water supplier to meet existing and anticipated future demands (including the demand associated with the project) over a 20-year horizon that includes normal, single-dry, and multiple-dry years. The multiple-dry year scenario would represent drought conditions.

The WSA for the Project indicates that the Los Angeles County Department of Public Works Waterworks District 40 (LACWWD 40) would be able to meet the projected water demands in its service area, along with the Project's demands, through the next 20 years, including normal, single-dry, and multiple-dry (5-year period) years. Future demand is projected to increase within the LACWWD 40 service area, and the reliability of the LACWWD 40's future water supplies to meet demand will be ensured through continued implementation of programs for water banking; purchase of new imported supplies; water transfers; water conservation; and expansion of recycled water systems (Psomas 2015).

Thus, the potential impacts of climate change on reduced water supplies due to drought conditions has been accounted for in the WSA for the Project. The WSA was reviewed by LACWWD 40 prior to inclusion in the Draft EIR.

Sutton-45

As stated in Section 4.6, Greenhouse Gas Emissions, of the Draft EIR, "materials to be imported to and exported from the site" are accounted for in the CalEEMod calculations for the Project. Although it is anticipated that "cut and fill would be balanced on site; no import or export of soils would occur", as stated on page 4.2-15 of the Draft EIR. The CalEEMod analysis presented in Section 4.2, Air Quality, and Section 4.6, Greenhouse Gas Emissions, conservatively includes 200 haul truck roundtrips during the Site Preparation phase to cover unanticipated and incidental export and import haul, such as imported soil for raised garden beds or for the removal of waste materials.

The Project would use water from wells that are on site during construction activities; there would be no imported water for construction use as stated on page 4.14-17 of Section 4.14, Utilities and Service Systems. However, the CalEEMod input specifies watering for construction dust control and assumes the use of water trucks in the emissions calculations. Additionally, the modeling assumes ten truck roundtrips per day during the Building Construction phase to cover the delivery of materials, and export of construction waste. Therefore, the analysis set forth in the Draft EIR includes a conservative analysis of truck trips and no additional analysis is required.

Sutton-46

The commenter's quoted text is a statement that describes the rationale for the South Coast Air Quality Management District's (SCAQMD's) construction emission amortization methodology. Section 4.6, Greenhouse Gas Emissions, utilizes the methodology set forth by the SCAQMD, which is also used by the AVAQMD. In essence, this statement means that construction equipment greenhouse gas (GHG) emission factors only change slowly with time, and therefore, there are limited ways to decrease emissions from construction equipment. The inventory of construction equipment to be used during each phase of this Project is included in Appendix B of the Draft EIR, as stated in Section 4.6, Greenhouse Gas Emissions. The construction equipment type, amount, usage hours per day, horsepower, and load factor are also included in Appendix B of the Draft EIR.

Sutton-47

The reference in Section 4.6, Greenhouse Gas Emissions, to construction activities beginning in November 2016 has been revised in Section 3.0, Clarifications to the Draft EIR, to reflect the anticipated December 2016 start date. The analysis throughout the Draft EIR is not materially affected by the start date of construction activities. The analysis of GHG emissions is not based on start/end dates because emissions are analyzed on an annual basis. Section 4.6.6, Impact Analysis, states the following:

It should be noted that the Design-Build contractor may request an expedited schedule to work on Saturdays and/or to increase the intensity of the daily construction operations through the use of more equipment/workers on-site than anticipated in the Project's proposed schedule (see Section 3.0, Project Description). This request would be considered for the purpose of reducing the duration of the Project construction period. The emissions modeling assumes a 5-day work week. If some or all construction would occur on a 6-day per week schedule and/or the schedule would be shortened by using more equipment, annual greenhouse gas emissions may increase for the years affected. Because the total Project effort would not change, there would be offsetting decreases later in the Project and the total greenhouse gas emissions would be the same, or approximately the same as shown in Table 4.6-2. The amortized Project emissions would not change.

No additional analysis is required.

Sutton-48

As stated in Section 4.6, Greenhouse Gas Emissions, "as originally proposed by the SCAQMD, it has become current practice (in most air districts) that construction emissions are amortized over a project lifetime (typically 30 years) so that GHG-reduction measures will address construction GHG emissions as part of the operational GHG reduction strategies (SCAQMD 2008; SMAQMD 2009)". The AVAQMD uses the SCAQMD construction emission amortization methodology. The AVAQMD threshold for significant GHG emissions of 100,000 tons (90,718 metric tons) is stated on page 4.6-12 of the Draft EIR. There are no separate thresholds for construction and operations. However, for comparison, the estimated emissions per year of construction are shown in Table 4.6-2 in Section 4.6, Greenhouse Gas Emissions. As shown, the Project's maximum annual construction GHG emissions in 2017 of 306 metric tons of carbon dioxide equivalent (MTCO_{2e}) are substantially less than the AVAQMD's 90,718 MTCO_{2e} threshold.

As shown in Table 4.6-4 of Section 4.6, Greenhouse Gas Emissions, with consideration of amortized construction emissions, the total annual estimated GHG emissions for the Project are 5,614 MTCO₂e/yr. This value is considerably less than the AVAQMD threshold of 90,718 MTCO₂e/yr. Therefore, the Project would result in less than significant GHG emissions and no mitigation is required.

Sutton-49

The total Project-related GHG emissions from construction activities are estimated based on the total work effort, whether that effort occurs during 5-day or 6-day work weeks. The “offsetting decreases” are not GHG reductions; they indicate that more work is done earlier in the schedule. The total work effort remains unchanged. Section 4.6.6, Impact Analysis states the following:

It should be noted that the Design-Build contractor may request an expedited schedule to work on Saturdays and/or to increase the intensity of the daily construction operations through the use of more equipment/workers on-site than anticipated in the Project's proposed schedule (see Section 3.0, Project Description). This request would be considered for the purpose of reducing the duration of the Project construction period. The emissions modeling assumes a 5-day work week. If some or all construction would occur on a 6-day per week schedule and/or the schedule would be shortened by using more equipment, annual greenhouse gas emissions may increase for the years affected. Because the total Project effort would not change, there would be offsetting decreases later in the Project and the total greenhouse gas emissions would be the same, or approximately the same as shown in Table 4.6-2. The amortized Project emissions would not change.

No additional analysis is required.

Sutton-50

The commenter's assertion that emissions from service/delivery trucks are not included in the Draft EIR analysis is incorrect. As stated in the footnotes to Table 6-1, Project Trip Generation, of the Traffic Impact Study, Appendix H of the EIR, “The site specific daily trip generation was derived based on detailed site programming information (employee numbers and shifts, miscellaneous delivery trucks, and inmate transport vehicles) as provided by County staff” (LLG 2015). Employee trips were estimated at 922 daily trips (461 round-trips); inmate transport trips were estimated at 16 daily trips (8 round-trips); and other miscellaneous trips were estimated at 100 daily trips (50 round-trips). The calculation of mobile source input for trip generation was taken from the Project's Traffic Impact Study and used as an input into CalEEMod, which is a computer program that is used to calculate anticipated emissions associated with land development projects in California. Therefore, the Project's trip generation, which includes 100 daily trips for service vehicles, was included as an input into the CalEEMod air quality and GHG analyses. No additional analysis is required.

Sutton-51

The operational annual emissions for each source area (i.e., area, energy, mobile, off-road, solid waste, water) were calculated using CalEEMod Version 2013.2.2. Estimates of energy use and solid waste were provided by the Los Angeles County Department of Public Works engineering staff. Additional details relative to the CalEEMod calculations may be found in Section 4.2, Air Quality, and in Appendix B of the Draft EIR. Operational emissions from the MLDC when it was

occupied by the Immigration and Customs Enforcement (ICE) were not analyzed because the program ended in 2012 and was not in operation at the time of the issuance of the Project's Notice of Preparation (NOP). The NOP was issued in September of 2014 which, according to Section 15125 of the State CEQA Guidelines, establishes the existing physical conditions on the Project site from both a local and regional perspective, and constitutes the baseline conditions by which a lead agency determines whether an impact is significant. As such, the GHG emissions from the previous uses at the Project site were not determined to be applicable for the Draft EIR.

Sutton-52

This comment offers no basis to support the statement that the analysis presented in Section 4.6, Greenhouse Gas Emissions, is inaccurate. As demonstrated through the responses for Sutton-45 through Sutton-51, the Draft EIR includes a conservative analysis of GHG emissions using the widely accepted CalEEMod methodology. We hope that a review of these responses to your comments and the information in the Draft EIR referenced will help to address your concerns. No additional analysis is required.

Sutton-53

As stated in RR GHG-4 in Section 4.6, Greenhouse Gas Emissions, "The Project will include an Employee Commute Reduction Plan (ECRP), commonly known as the Rideshare Plan, in accordance with Los Angeles County Code Chapter 5.9, Vehicle Trip Reduction. The ECRP will specify the measures to be implemented at MLWDC to achieve the target average vehicle ridership performance goal for employee vehicles subject to the Ordinance." Because reductions in GHG emissions from RR GHG-4 cannot be reasonably quantified, they were not taken into account in the CalEEMod emission calculations.

Although the ECRP is incorporated as a mandatory component of the Project, no GHG emissions reductions were applied to the CalEEMod assumptions for PDFs GHG-1 through PDF GHG-4 or for RRs GHG-1 through GHG-5. Therefore, the elimination of the ECRP, or the inclusion of it, would not result in any changes to the calculations or conclusions presented in Section 4.6, Greenhouse Gas Emissions. The requirement for the ECRP is not a mitigation measure that is necessary to reduce a significant impact, but rather a County policy designed to encourage alternatives to single-occupancy vehicle trips.

Sutton-54

As stated in PDF GHG-2 in Section 4.6, Greenhouse Gas Emissions, the Project will provide a combined minimum of 34 video-visiting stations on site, along with video interview rooms in transitional housing buildings. This is anticipated to reduce VMT associated with vehicle travel to the MLWDC by inmate visitors by providing more options and opportunities for visitation when compared to the two video-visiting stations currently located within CRDF. However, deductions of VMT and GHG emissions associated with the video-visiting stations were not quantified in the GHG analyses or in the Traffic Impact Study for the Project.

Because reductions in GHG emissions from PDF GHG-2 cannot be reasonably quantified, they were not taken into account in the CalEEMod emission calculations. Although PDF GHG-2 is incorporated as a mandatory component of the Project, no GHG emissions reductions were applied to the CalEEMod assumptions for PDFs GHG-1 through PDF GHG-4 or for RRs GHG-1 through GHG-5. Therefore, the elimination of the video visiting stations as set forth in PDF GHG-3, or the inclusion of them, would not result in any changes to the calculations or conclusions presented in Section 4.6, Greenhouse Gas Emissions.

Sutton-55

As stated in PDF GHG-3 in Section 4.6, Greenhouse Gas Emissions, the Project will post Antelope Valley Transit Authority (AVTA) bus and Metrolink schedules, as well as the locations of the nearest Park-and-Ride lots, in areas visible to visitors and in the Staff Services building to encourage the use of public transportation by staff and visitors. AVTA bus and Metrolink schedule information will be updated a minimum of every six months to ensure that they are accurate.

Because reductions in GHG emissions from PDF GHG-3 cannot be reasonably quantified, they were not taken into account in the CalEEMod emission calculations. Although PDF GHG-3 is incorporated as a mandatory component of the Project, no GHG emissions reductions were applied to the CalEEMod assumptions for PDFs GHG-1 through PDF GHG-4 or for RRs GHG-1 through GHG-5. Therefore, the elimination of the requirements set forth in PDF GHG-3, or the inclusion of them, would not result in any changes to the calculations or conclusions presented in Section 4.6, Greenhouse Gas Emissions.

Sutton-56

As stated in PDF GHG-4 in Section 4.6, Greenhouse Gas Emissions, the Project will incorporate (1) a secure storage area for staff to store bicycles into the Project design plans that allow for the individual locking of bicycles and protection from sun and inclement weather and (2) bicycle rack(s) adjacent to the Visitor Parking Lot that allows for the individual locking of bicycles.

Because reductions in GHG emissions from PDF GHG-4 cannot be reasonably quantified, they were not taken into account in the CalEEMod emission calculations. Although PDF GHG-4 is incorporated as a mandatory component of the Project, no GHG emissions reductions were applied to the CalEEMod assumptions for PDFs GHG-1 through PDF GHG-4 or for RRs GHG-1 through GHG-5. Therefore, the elimination of the requirements for bicycle facilities, or the inclusion of them, would not result in any changes to the calculations or conclusions presented in Section 4.6, Greenhouse Gas Emissions.

Sutton-57

As stated in the responses for Sutton-53 through Sutton-56, the analysis presented in Section 4.6, Greenhouse Gas Emissions, did not take any deductions from the total annual GHG emissions that would result from implementation of PDF GHG-1 through PDF GHG-4, nor were deductions taken for RRs GHG-1 through GHG-5 because the reductions in VMT and mobile GHG emissions from the implementation of these RRs cannot be reasonably quantified. Therefore, the GHG emission estimates presented in the Draft EIR are conservatively high, and the impacts are less than significant.

Sutton-58

This comment, in part, raises issues that extend beyond the scope of the CEQA requirements; nonetheless, the Board of Supervisors will receive and be able to consider it and all other comments raised before taking any action on the proposed Project. The scope of CEQA is generally limited to the evaluation of a proposed project's potential impact on the environment, and does not extend to the impact of the existing environment on a proposed project, or on its users or residents. The applicable definition of the environment analyzed for CEQA purposes in an EIR is the physical conditions in the area that are affected by the proposed project (e.g., land, air, and water). The proposed MLWDC Project's Draft EIR discloses and addresses the potential direct, indirect, and cumulative impacts of the proposed Project on the physical environment, in

accordance with the State CEQA Guidelines for all environmental issue areas. For the topics mentioned in the comment, refer specifically to Section 4.2, Air Quality, 4.6, Greenhouse Gas Emissions, and 4.14, Utilities and Service Systems of the Draft EIR.

Sutton-59

In 2015, the underground storage tanks (USTs) were reported to be in compliance and passed all leak detection requirements (CERS 2016, AW Associates 2016). As such, the use or removal of these tanks will not lead to leaks that may potentially contaminate the underlying soils and groundwater and no mitigation is required.

Sutton-60

The information on the removal of the six USTs was taken from the Phase I Environmental Site Assessment (ESA), which states that the information on the leaking underground tanks and clean up information was based on the list of Leaking Underground Storage Tanks (LUST) Sites (see Converse 2014c, pages 24 and 25) and the County Department of Public Works records (see Converse 2014c, pages 33 and 34). The County Department of Public Works oversaw the remediation and issued the "no further action" letter. The Phase I ESA is provided in Appendix E-1 of the Draft EIR.

Sutton-61

The sentence on page 4.7-8 of the Draft EIR states, "No leaks were observed, except for minor staining on the carpet and hydraulic oil on the concrete floors beneath the emergency generator in the central plant (i.e., steam plant)". This information on minor staining was taken from the Phase I ESA, which is provided in Appendix E-1 of the Draft EIR. The minor staining was observed near unlabeled five-gallon containers with a minor amount of an oil-tar-like substance in the Sergeant Senior Building (see Converse 2014c, pages 38 and 47). The hydraulic oil was observed on the floor beneath the hole punch machine in the George Barracks and the emergency generator in the central plant (see Converse 2014c, pages 5, 48, 51 and 52). Soil testing near the hole punch machine location was performed in January 2016, which indicated no significant contamination findings (Converse 2016b). No further assessment is required.

Sutton-62

The Asbestos and Lead Based Paint Survey Report (Appendix E-2 of the Draft EIR) states that Buildings 27, 28 and 29 are temporary modular buildings that were visually inventoried but not sampled. These are pre-fabricated modular units (i.e., mobile homes) that appeared to be of newer construction (Converse 2014a). Building 27 will remain in place but Buildings 28, 29 and 40 may be disassembled and removed from the site but not demolished. However, this is not certain at this time prior to the Project's final design.

As demonstrated in Section 4.7, Hazards and Hazardous Materials, of the Draft EIR, MM HAZ-1 and MM HAZ-2 requires that, in the event that building materials are encountered during construction activities that are suspected of being asbestos-containing materials (ACMs) or lead-based paint (LBP), these materials shall be assumed to contain asbestos or lead and shall be handled, removed, transported and/or disposed in accordance with applicable regulations, until such time that they can be sampled and evaluated. As provided in Appendix D of this Final EIR, subsequent testing of building material samples from Buildings 27, 28, 29, 32 and 40 indicate the presence of asbestos-containing materials in Buildings 28, 29 and 40; and lead-based paint was found in the sinks in Building 29. If Buildings 27, 28, 29, 32 and 40 are removed, without being

demolished, asbestos materials need not be abated. If these buildings are demolished, the asbestos materials would have to be abated and disposed in accordance with RR HAZ-4 and MM HAZ-1. If the sinks in Building 29 are removed intact, they can be disposed as construction debris; otherwise, they would have to be disposed in accordance with RR HAZ-4 and MM HAZ-2 (Converse 2016a).

Sutton-63

As stated on page 4.7-19 of the Draft EIR, the existing fueling station is located outside the Project site boundary, but may be used by the Project. This fueling station has two USTs that previously failed leak detection tests. As shown in the California Environmental Reporting System (CERS) database and the Monitoring System Certification by AW Associates in Appendix E to this Final EIR, the tank permits were updated in 2015 and have passed subsequent leak detection tests and are now in compliance. Soil testing also indicated there is no soil contamination near the USTs (Converse 2016b). MM HAZ-3 requires the testing and repair, as necessary, of the USTs prior to the use of the existing fueling station by the Project.

Sutton-64

Refer to the response for Sutton-11 above.

Sutton-65

Page 4.14-11 of Section 4.14, Utilities and Service Systems, states that the LACWWD 40 currently has a 36-inch-diameter, cement-lined, coated steel transmission water main located 25 feet from the property line along 60th Street West and a 12-inch-diameter pipe located within West Avenue I. The availability of water or the current drought conditions has no direct effects on this water infrastructure.

The LACWWD 40 has sufficient infrastructure to use State Water Project (SWP) water from AVEK to meet the water demands in its service area even during peak summer demand periods. The LACWWD 40 also has planned for potential water shortages through various demand management measures that would reduce water use and consumption. The WSA for the Project addresses drought conditions and states that future water supplies of the LACWWD 40 will be ensured through continued implementation programs such as water banking, purchase of new imported supplies, water transfers, water conservation, and expansion of recycled water systems (Psomas 2015).

As stated on page 4.14-8, of Section 4.14, Utilities and Service Systems, the adjudication process for the Antelope Valley Groundwater Basin acknowledges that the basin is in a state of overdraft. Allocation of groundwater rights would limit groundwater extraction in the basin to its safe yield and avoid continued overdraft conditions. As demonstrated on page 4.14-23, the LACWWD 40 has implemented a New Supply Acquisition program to provide funding for additional imported water supplies. Thus, while the Project would require water from the LACWWD 40 to operate, the LACWWD 40 will serve the Project with imported water supplies obtained through AVEK. MM UTL-1 requires that the County sign the New Water Supply Entitlement Acquisition Agreement with the LACWWD 40 and pay a deposit of \$10,000 per acre-foot of annual water demand from the Project for the acquisition of additional water supplies from AVEK to serve the Project. The WSA concludes that there is a sufficient and reliable water supply for LACWWD 40, now and into the future, including a sufficient water supply for the Project. These supplies are also sufficient to provide for overall growth in the LACWWD 40 service area at the rate projected in the 2010 IRUWMP (Psomas 2015).

Sutton-66

The historic water use numbers in Table 4.14-1 in Section 4.14, Utilities and Service Systems, are provided to show the amount of water pumped by on-site wells when the MLDC was in use as an Immigration and Customs Enforcement (ICE) facility until 2012. Since then, the Project site has been largely vacant and the water use has been limited. Water use data from the MLDC when it was occupied by ICE were not incorporated into the WSA analysis because the program was not in operation at the time of the issuance of the Project's Notice of Preparation (NOP). The NOP was issued in September of 2014 which, according to Section 15125 of the State CEQA Guidelines, establishes the existing physical conditions on the Project site from both a local and regional perspective, and constitutes the baseline conditions by which a lead agency determines whether an impact is significant. As such, the use of water from the historic uses at the Project site are not relevant to the future proposed Project operations, and no additional analysis is required.

Sutton-67

The Storm Water Pollution Prevention Program (SWPPP) must be prepared by a Qualified SWPPP Developer (QSD) and implemented by a Qualified SWPPP Practitioner (QSP) who will be responsible for monitoring that selected Best Management Practices (BMPs) are in place and in working condition at the construction site. The SWPPP must include BMPs to be implemented during construction, including a Construction Site Monitoring Program (CSMP). The primary objective of the SWPPP is to ensure that the responsible party properly constructs, implements, and maintains BMPs to reduce or eliminate pollutants in storm water discharges and authorized non-storm water discharges from the construction site. The SWPPP must also outline the monitoring and sampling program to verify compliance with discharge Numeric Action Levels (NALs) set by the Construction General Permit.

Public agency monitoring of compliance with the SWPPP is provided by State Water Resources Control Board (SWRCB) inspectors who visit construction sites and verify implementation of the BMPs and compliance with other requirements of the SWPPP. In addition, the Los Angeles County Department of Public Works (LACDPW) would also be performing site inspections to monitor compliance with the approved construction plans. Any person may also report a storm water pollution problems to the SWRCB or the local agency.

As stated in Section 4.8, Hydrology and Water Quality, PDF HYD-1 requires that the on-site storm drainage system comply with storm water quality and quality control requirements under the County's Standard Urban Stormwater Management Plan (SUSMP), Low Impact Development (LID) standards, the Hydrology Manual, the Best Management Practices Handbook, and the Green Building Standards Code. These requirements, along with RR HYD-2, address potential pollutant runoff from long-term operations of the Project and include a drainage concept and storm water quality plan that reduce peak storm water runoff discharge rates; conserve natural areas; minimize storm water pollutants of concern; protect slopes and channels; provide storm drain system stenciling and signage; properly design outdoor material storage areas and trash storage areas; and provide proof of ongoing maintenance of structural or treatment-control BMPs that would prevent pollutants from entering the runoff. The Project's permanent storm water treatment-control BMPs would be included in the final engineering plans for the Project; would be subject to the LACDPW's review and approval as part of the plan check process; and would be inspected during construction. Code enforcement actions by the County would monitor proper and continued use of these BMPs.

Sutton-68

Please refer to the response for Sutton-15 regarding the cost of the proposed Project.

Sutton-69

The MLDC property currently and historically obtains its water supply from an on-site system of groundwater wells, pumps, and tanks, as described in Section 4.14, Utilities and Service Systems. As part of the proposed Project, a new off-site water pipeline extension will be constructed from the on-site water lines to the existing 12-inch LACWWD 40-owned distribution pipeline in West Avenue I. Existing pipeline connections to County-owned groundwater wells and reservoirs located adjacent to 60th Street West will be disconnected, and the proposed MLWDC Project site's potable water supply would be provided by LACWWD 40 rather than from the County-owned groundwater wells.

The LACWWD 40 obtains water primarily from local groundwater resources and imported water from the State Water Project through AVEK. In the past few years, recycled water has been introduced to the LACWWD 40 service area by the City of Lancaster, and the LACSD No. 14 continues to serve recycled water directly to Apollo Park. However, recycled water is not yet available to the Project site.

Therefore, it cannot be said that the Project will not use groundwater because the Project will be served by LACWWD 40, which sources its water supply from both groundwater and SWP water. However, the MLWDC property will no longer be connected to the County's system of wells, pumps, and tanks and will not be directly provided water via this groundwater pumping and distribution system.

The environmental impacts associated with the acquisition and development of additional imported water supplies is the responsibility of AVEK. As stated in the WSA prepared for the Project (see Appendix B of the WSA – MOU Between AVEK and Waterworks District No. 40), included as Appendix G-2 of the Draft EIR (Psomas 2015):

The Waterworks District and AVEK will enter into an agreement by which the Waterworks District may require the applicant to deposit with the Waterworks District the amount of money estimated by AVEK to be necessary to fund AVEK's cost of purchasing the additional imported water supplies required by the Waterworks District as a condition of providing a service commitment to the applicant's development. Upon receipt of that deposit by the applicant, the Waterworks District will then deposit that amount with AVEK. The deposit shall cover the estimated purchase price of the additional water supplies, AVEK's cost of completing the environmental assessment under the California Environmental Quality Act and the National Environmental Policy Act (if required), and AVEK's transactional costs including document preparation and review by AVEK staff and legal counsel ("Costs").

MM UTL-1 requires that the County sign the New Water Supply Entitlement Acquisition Agreement with the LACWWD 40 and pay a deposit of \$10,000 per acre-foot of annual water demand from the Project for the acquisition of additional water supplies from AVEK to serve the Project. Therefore, the impacts of importing water on traffic and air quality is determined through the appropriate CEQA/National Environmental Policy Act (NEPA) documentation prepared by AVEK to support the procurement of additional imported water supplies.

Sutton-70

As stated in Section 4.8, Hydrology and Water Quality, and Section 4.14, Utilities and Service Systems, existing water lines connected to the on-site wells and reservoirs would provide the needed water for construction activities, replacing existing water use from minor maintenance and security activities. The proposed connection to the LACWWD 40 12-inch potable water line within West Avenue I would not need to be connected in order to conduct construction activities or suppress potential dust generated by earth-moving activities because the existing and operational County-owned groundwater pumping and storage system infrastructure would be available at the Project site.

Sutton-71

As stated on page 4.11-5 of Section 4.11, Population and Housing, the growth projections in Table 4.11-6 are projections that were prepared by the Southern California Association of Governments (SCAG) for individual cities and counties as part of its regional planning efforts for the development of the Regional Comprehensive Plan (RCP), Regional Transportation Plan/Sustainable Communities Strategy (RTP/SCS), and the Regional Housing Needs Assessment (RHNA). These projections were adopted by the SCAG Board in 2012.

The IRUWMP for the Antelope Valley also includes growth projections for the service areas of the LACWWD 40 and the Quartz Hill Water District service area. As stated in Table 1-3 of the Integrated Regional Urban Water Management Plan, these growth projections were based on land use maps and General Plans for the cities of Palmdale and Lancaster (LACWWD 40 2011).

Because the boundaries of the SCAG projections follow city boundaries, which differ from the service area boundaries of the water districts, these projections are not comparable to the other. Still, the SCAG projections are also used in the analysis of cumulative impacts in Section 4.11.5 of the Draft EIR. The projections in the IRUWMP for the Antelope Valley are used in the LACWWD 40's plans to meet future water demands in their service areas, as demonstrated in Section 4.14.7 of the Draft EIR.

Sutton-72

The Project would be staffed by Sheriff's Department security/sworn staff, Sheriff's Department civilian staff, teachers, counselors, maintenance personnel, physicians, registered nurses, registered nurse practitioners, and other County employees. There is no specific breakdown of the skills and experience of unemployed residents in the City of Lancaster. Thus, a match of the future jobs at the MLWDC and the unemployed residents cannot be readily made. However, this does not preclude Lancaster residents from taking training or learning the skills needed to work at the Project.

Sutton-73

According to the California Department of Forestry and Fire Protection (CAL FIRE), the Very High Fire Hazard Severity zone is located at the base of the Sierra Pelona Mountains to the south, which is outside the city boundaries of Lancaster. The 4.5-mile distance between this zone and the site includes relatively flat areas with urban development that are not considered to be in a Very High Fire Hazard Severity Zone area. Thus, no wildfire hazards are present on or near the site.

Sutton-74

This comment, in part, raises issues that extend beyond the scope of the CEQA requirements; nonetheless, the Board of Supervisors will receive and be able to consider it and all other comments raised before taking any action on the proposed Project. The scope of CEQA is generally limited to the evaluation of a proposed project's potential impact on the environment, and does not extend to the impact of the existing environment on a proposed project or on its users or residents. The applicable definition of the environment analyzed for CEQA purposes in an environmental impact report is the physical conditions in the area that are affected by the proposed project (e.g., land, air, and water). The proposed MLWDC Project's Draft EIR discloses and addresses the potential direct, indirect, and cumulative impacts of the proposed Project on the physical environment, in accordance with the State CEQA Guidelines for all environmental issue areas.

Outdoor recreation, both active (e.g., use of sports courts, running track) and passive (e.g., sitting in courtyards or on turf grass areas), will occur on the Project site. The outdoor recreation opportunities and amenities are one of the benefits of the proposed MLWDC Project when compared to existing facilities at the CRDF. There are no known reasons to believe that risks of infection from Valley Fever from participating in outdoor recreational activities at the MLWDC site would be any different from the risks of participating in outdoor activities elsewhere in the Lancaster portion of the Antelope Valley.

Sutton-75

As shown in Exhibit 3-1 in Section 3.0, Project Description, the volleyball and basketball courts are outdoor facilities. The Project does not include an indoor gymnasium.

Sutton-76

Section 4.13, Transportation and Traffic, summarizes the findings of the Traffic Impact Study for the Project. The Traffic Impact Study is provided in Appendix H of the Draft EIR. As stated on pages 4.13-2 to 4.13-3, the estimate of the Project's daily trip generation was based on specific data provided by the Los Angeles County Sheriff's Department and includes employee shift times, number of employees per shift, frequency of inmate transport buses, and miscellaneous service/delivery vehicles, among other factors. The miscellaneous vehicle trips due to service/delivery, medical delivery, and court personnel transport were estimated at no more than 25 vehicles per weekday and at ½ of this total for weekend daily trips.

The discussion of video visitation on page 4.13-20 is provided in the context of estimating the total vehicle miles travelled (VMT) as associated with the located of the MLWDC away from the highly urbanized area of Los Angeles County, but is not considered in the trip generation estimates in the Traffic Impact Study. Rather, the number of trips for inmate visitation was estimated at 39 percent of the available appointment slots or about 28,543 visits per year (the same rate as existing at the CRDF). Forecasts assume 250 inbound visitor trips and 250 outbound visitor trips per day during the 114 weekend days and holidays per year. This visitation reflects the number of visitors that are currently occurring at a detention facility that is located in the highly urbanized area of Los Angeles County. With this estimate, it is expected that video visitation would occur in addition to the in-person visits that involve personal vehicle trips to the MLWDC. Therefore, contrary to the commenter's assertion, the Draft EIR does not assume that video visitation is a mitigation for increased traffic.

Sutton-77

As discussed on page 4.13-23 and 4.13-24 of the Draft EIR, the existing transit services in the area will adequately accommodate the increase of Project-generated transit trips. The County does not operate the buses and trains that serve the Antelope Valley area. The Southern California Regional Rail Authority (SCRRA), which operates the Metrolink commuter rail system, and the AVTA, which operates buses, provide transit services to meet demand and generally review service routes and schedules as part of their long-range planning efforts. Should demand increase over existing levels, it will be up to the Metrolink and AVTA agencies to revise or expand their services to meet demand. There is a bus stop at the former High Desert Regional Health Center that is located south of the Project site.

Sutton-78

The City of Lancaster has jurisdiction over the City roadways and the implementation of bicycle lanes within the City. As stated on page 4.13-24 of Section 4.13, Transportation and Traffic, while the City of Lancaster has no existing or proposed bikeways on 60th Street West and West Avenue I along the site boundaries, roadway shoulders and sidewalks in the area may be used by bicyclists and pedestrians coming to or going from the Project site.

MIRA LOMA WOMEN'S DETENTION CENTER PROJECT
PUBLIC MEETING- DECEMBER 8, 2015
6:00 TO 8:00 PM

COMMENTS:

I oppose for this project because we already
got enough jails, we don't need new ones
it don't matter if is for women or men.

} Vasquez-1

NAME: MARIO VASQUEZ
ADDRESS: 2936 1/2 WYATTIER BLVD LA CA 90023
E-MAIL: _____

Mario Vasquez

Vasquez-1

Although the Project site has been unoccupied since 2012, as discussed in Section 2.0, Environmental Setting, the Project site has generally been in operation and providing various detention/jail functions from 1945–1946 until 2012. The MLWDC Project proposes the adaptive reuse, renovation, and expansion of the majority of the buildings at MLDC, which is an existing County asset. The redevelopment of the property would avoid the costs associated with constructing a new facility.

This comment relates to the merits of the proposed Project and not the environmental analysis included in the Draft Environmental Impact Report (EIR) or the environmental impacts of the Project. This Final EIR, including all comments submitted to the County on the Draft EIR, will be provided to the County of Los Angeles Board of Supervisors. Therefore, your concerns will be presented directly to the decision makers prior to consideration of Project approval.

Comment (please personalize): Dear LA County Board of Supervisors and Chief Executive Office, Please consider my public comment on the Draft Environmental Impact Report (EIR) regarding the proposed new Mira Loma Jail released on November 9th.

Southern California Gas (SCG) will be providing the natural gas services according to the proposal in the EIR. SCG has indicated that there are high-pressure main gas lines in public streets in the area that may serve the Project (Draft EIR 4.14-14).

This is the same gas company that has leaked over 80,000 metric tons (and counting) of methane gas into the atmosphere prompting the evacuation of Porter Ranch and other areas as well as a state of emergency declaration by Governor Jerry Brown.

The Los Angeles Daily News reported on December 25, “Los Angeles County health officials said prolonged exposure to trace chemicals, some of which are known carcinogens, can cause long-term health effects.” The Southern California Gas an irresponsible contractor who has failed to properly account for the negative consequences it has caused to the health of LA County residents. Until the Porter Ranch gas leak is fully contained, an investigation completed, and reparations to impacted residents paid, LA County must not engage in any new contracts with Southern California Gas. This proposed partnership puts Lancaster residents and the potential imprisoned population at health risk. Additionally, if the gas leak continues at the current rate of depletion, it is questionable whether there will even be a sufficient gas supply available for use by the time of proposed construction completion. After the County commissions a thorough additional study, the Draft EIR must be updated with other gas or electric options to deal with energy consumption in the proposed Mira Loma Jail in order to be accepted.

This proposed jail is unsafe for LA County communities and our environment. Southern California Gas is not a safe or reliable provider of energy for the proposed Mira Loma site. For the above reasons, the proposed new Mira Loma Jail should be rejected and the Draft EIR must not be approved.

Sincerely,

Critical Resistance Los Angeles

Christine Wang

Christine Wang (January 12, 2016)

Wang-1

The Southern California Gas Company (SCG) provides natural gas services to the Lancaster area, and there is no other natural gas provider in the area. Although the Project would be served by SCG, the County has no partnership with SCG. As of March 2016, the Porter Ranch leak has been stopped. The California Public Utilities Commission (CPUC) regulates SCG, which is a private utility company, and it is anticipated that existing CPUC regulations, as well as other applicable regulations and any future regulations that would arise from the Porter Ranch gas leak, would protect public health and safety.

Wang-2

As stated in Section 4.15, Energy, on page 4.15-5 of the Draft Environmental Impact Report (EIR), the DLR Group estimates that the Project would use 7,200 million British Thermal Units (BTU) of natural gas per year (DLR 2015). SCG has 136 billion cubic feet (Bcf) of storage capacity, with 83 Bcf used for existing core customers, 4 Bcf for system balancing, and the remaining 49 Bcf available for other [new] customers (SCG 2015). The Project's natural gas demand is equal to 7.2 million BTU, or less than 0.01 percent of SCG's storage capacity for its natural gas supplies and would not, therefore, create a significant effect on either peak or base load energy demand.

Wang-3

Regarding the commenter's concern that the site is unsafe, the Draft EIR provides extensive information regarding potential Project hazards, including in Section 4.7, Hazards and Hazardous Materials.

As part of the environmental analysis for the Draft EIR, the Phase I Environmental Site Assessment (ESA) has been prepared that reviewed past and current uses and site conditions and identified Recognized Environmental Concerns (RECs) on the Project site and surrounding area. The Phase I ESA is provided in Appendix E-1 of the Draft EIR. Subsequent to the Phase I ESA, a Phase II ESA was prepared that included soil sampling to determine if soil contamination is present on the site. The Phase II ESA is provided in Appendix E-3 of the Draft EIR. In addition, an Asbestos and Lead Based Paint Survey Report was completed to identify the building components that contained asbestos and lead-based paint. The Asbestos and Lead Based Paint Survey Report is provided in Appendix E-2 of the Draft EIR. These reports are discussed in Section 4.7, Hazards and Hazardous Materials, of the Draft EIR.

The Project must comply with existing regulatory requirements (RRs) for the proper handling of hazardous wastes, including transportation, treatment, storage, and disposal; repair and/or removal of underground storage tanks based on applicable standards; and practices that would protect the demolition and construction crews from asbestos and lead exposure. In addition, the Project must incorporate mitigation measures (MMs) for the handling of suspected asbestos-containing materials and lead-based paint; an Operations and Maintenance Plan for regular inspection of any asbestos-containing materials; and testing and repair of underground storage tanks prior to use. Thus, existing hazardous materials and wastes would be removed from the Project site and future hazardous materials use would comply with applicable regulations to prevent hazards to future inmates. In summary, compliance with RRs and implementation of MMs set forth in the Draft EIR would prevent public health and safety hazards to inmates, employees, visitors, and other individuals at the Project site.

Regarding the commenter's concern regarding SCG as a safe and reliable provider of energy, please refer to the responses above for Wang-1 and Wang-2. This Final EIR, including all comments submitted to the County on the Draft EIR, will be provided to the County of Los Angeles Board of Supervisors. Therefore, your concerns will be presented directly to the decision makers prior to consideration of Project approval.

Watkins-1

The comment asks for ending jailing, particularly of economically disadvantaged inmates. This comment relates to the merits of the proposed Project and not the environmental analysis included in the Draft EIR or the environmental impacts of the Project. Purely social effects of a project are beyond the scope of CEQA analysis, which focuses on the proposal's effect on the physical environment. This Final Environmental Impact Report (EIR), including all comments submitted to the County on the Draft EIR, will be provided to the County of Los Angeles Board of Supervisors. Therefore, your concerns will be presented directly to the decision makers prior to consideration of Project approval.

Watkins-2

Coccidioidomycosis, also known as Valley Fever, and its potential impact on potential future inmates and County staff is discussed in Section 4.2, Air Quality. A summary of hazards associated with the *Coccidioides* spores (i.e., the fungus that causes Valley Fever) is provided and includes summaries of trends related to Valley Fever in Los Angeles County, as inventoried and reported by the Los Angeles County Department of Public Health (LACDPH), which was consulted during the preparation of the Draft EIR.

The Draft EIR summarizes the LACDPH 2013 *Annual Morbidity Report*, which presents the recent trends related to Valley Fever in Los Angeles County, including the increasing incidence rate within the last ten years. Data included in this report show the incidence in Valley Fever in Service Planning Area (SPA) 1 (i.e. Antelope Valley) from 2009 to 2013. The number of incidents of Valley Fever infection spiked in 2011 in SPA 1 with 93 reported cases, which represented 30 percent of cases in Los Angeles County, with an incidence rate of 25 per 100,000 people. The incidence rate decreased to 74 reported cases in both 2012 and 2013. As such, in 2013, SPA 1 represented approximately 20.4 percent of the total reported cases in Los Angeles County, with an incidence rate of 19 per 100,000 people. SPA 1 has the highest infection rate in Los Angeles County (LACDPH 2013).

However, the rate of Valley Fever infection in Los Angeles County, and the Antelope Valley specifically, is substantially less than in neighboring Kern County, which had a 2013 infection rate of 276 per 100,000 people in the north valley region (KCPHSD 2016). The eastern portion of San Luis Obispo County had Valley Fever infection rates ranging from 205 to 257 per 100,000 people between 2007 and 2012 (SLOCPHD 2014). Therefore, although the Antelope Valley has the highest rates in Los Angeles County, the rates are well below rates found nearby counties where Valley Fever is endemic.

The overall incidence rate of Valley Fever in the Antelope Valley was not determined to warrant changes in the County's protocol for disease prevention, notwithstanding the fact that the County health and public health officials are well educated on the condition; are familiar with its incidence in the County and elsewhere in the state; and are involved in research and education on the subject of Valley Fever.

Also, as demonstrated in Section 4.2, Air Quality the California Department of Corrections and Rehabilitation (CDCR) has not identified the Lancaster area as being a geographic location that requires screening or interventions for the State prison population with regard to exposure to Valley Fever (CDCR 2013). Additionally, the LACDPH has not identified the previous U.S. Immigration and Customs Enforcement (ICE) detainee population at the Mira Loma Detention

Center (MLDC), the future inmate population at the Mira Loma Women's Detention Center (MLWDC), or earlier occupants at the High Desert Health System (HDHS) Multi-Ambulatory Care Center (MACC) (the adjacent hospital facility, which has relocated in Lancaster) as requiring the implementation of health screening protocols or other measures to address potential Valley Fever exposure.

The operation of the MLWDC will follow standard Sheriff's Department procedures for medical care and prevention with regard to health care for inmates in general, and Valley Fever specifically, and the Sheriff's Department will continue to coordinate with the LACDPH (Masis 2015). The LACDPH is the designated County agency with the mandate to protect health, prevent disease, and promote the health and well-being of all persons within Los Angeles County. As such, any future changes in LACDPH policies that may be made regarding Valley Fever for inmate populations will be implemented, as applicable, throughout the County jail system.

The MLWDC property is not located in an area determined to be hazardous to the health of local residents or visitors to the region. The Draft EIR concludes that the potential future inmate population's temporary placement into the Antelope Valley, which includes the inmates' participation in all indoor and outdoor activities at the MLWDC, would not constitute placement into a hazardous existing environmental setting that would require mitigation. Additionally, the operation of the proposed Project would not increase the prevalence of Valley Fever spores or otherwise exacerbate an existing environmental condition.

Watkins-3

Regarding the commenter's concern about increased traffic, Section 4.13, Transportation and Traffic, of the Draft EIR discusses potential impacts related to Project-generated traffic. The analysis indicates that increase in traffic volumes would not significantly impact local intersections (intersections would still operate at Level-of-Service D or better), or alternative transportation (Metrolink trains or Antelope Valley Transit Authority [AVTA] bus service), and impacts on California Department of Transportation (Caltrans) facilities would be less than significant. As discussed on page 4.13-23 and 4.13-24, the existing transit services in the area will adequately accommodate the increase of Project-generated transit trips. No mitigation is required for short-term construction or long-term operational traffic impacts.

Watkins-4

The County voluntarily added additional outreach in Spanish for the MLWDC Draft EIR public review process as a result of public comments. In January 2016, a *Notice of Extended Comment Period for the Draft Environmental Impact Report for the Mira Loma Women's Detention Center Project and Notice of Second Public Meeting in Lancaster, California* was sent to the Project's mailing list and email list, as well as additional mailing list contacts that had provided comment letters during the Draft EIR public review period up to the time of the second mailing. This Notice was prepared in both English and Spanish. Additionally, the Executive Summary of the Draft EIR was translated into Spanish and posted on the County's website for viewing and downloading. Hardcopies of the Spanish-translated Executive Summary were made available at the Quartz Hill and Lancaster Libraries, as well as the Los Angeles County Public Information Office. Newspaper advertisements of the extended comment period and second public meeting were placed in the following papers and ran on Monday, February 1, 2016:

- *Acton-Aqua Dolce News*: a weekly publication so the ad was available for 7 days
- *Los Angeles Daily News*: a daily publication
- *La Opinion*: a daily publication (the ad was in both English and Spanish)

- *Antelope Valley Press*: a daily publication
- *Antelope Valley Times*: an online publication

A second public meeting was held on Tuesday, February 9, 2016 at the Lancaster Public Library at 601 West Lancaster Boulevard in Lancaster, CA 93534 to present an overview of the proposed Project and the Draft EIR process and conclusions, and to invite submission of public comments on the Draft EIR. Real-time Spanish translation services were made available, as were copies of the Notice and the Executive Summary in both English and Spanish. Two members of the public attended that meeting and neither requested Spanish translation services.

Norman Joseph Williams

Williams-1

This comment questions whether the Draft Environmental Impact Report (EIR) considered alternatives to incarceration. The Draft EIR, in fact, addresses alternatives in accordance with the California Environmental Quality Act (CEQA, *California Public Resources Code*, Sections 21000 et seq.) and the State CEQA Guidelines (14 *California Code of Regulations* [CCR]). As demonstrated in Section 5.0, Project Alternatives, an EIR must describe a range of reasonable and of potentially feasible alternatives to the proposed Project, or to the location of the Project, which would feasibly attain most of the basic Project Objectives but would avoid or substantially lessen any significant effects. Based on the analyses in Sections 4.1 through 4.15 of the Draft EIR, the proposed Project would result in significant environmental effects prior to mitigation on a number of environmental topics. Following mitigation, however, impacts to all of these topical areas would be avoided or reduced to less than significant levels with the implementation of mitigation measures. No significant and unavoidable impacts would occur with the Project.

Additionally, an EIR is not required to consider alternatives that are infeasible. The range of alternatives is governed by a "rule of reason" that requires discussion of only those alternatives necessary for the County of Los Angeles Board of Supervisors (Board) to make a reasoned choice. As demonstrated in Section 3.0, Project Description, on October 22, 2013, the Board authorized the evaluation of a proposal to use a portion of the Mira Loma Detention Center (MLDC) property as the site for a female detention facility in lieu of the Pitchess Detention Center (PDC) site previously proposed. In May, 2014, the Board directed that "Option 1B" be studied, as recommended in the *Los Angeles County Jail Plan Independent Review and Comprehensive Report* (Jail Plan Report). Option 1B recommended continued evaluation of renovating the facility at the MLDC for a women's detention center. The Draft EIR has been prepared to evaluate the environmental impacts of pursuing the proposed Project, in compliance with this Board of Supervisors directive.

The Board of Supervisors has adopted numerous recent actions to reduce the number of people who are incarcerated in Los Angeles County, particularly those with mental illness and/or substance use disorders. The Board of Supervisors' actions relating to diversion from the criminal justice system to reduce the need for incarceration, are based in part on their consideration of the August 4, 2015 District Attorney's report of the Criminal Justice Mental Health Advisory Board in a document entitled "Mental Health Advisory Report: A Blueprint for Change – Providing Treatment, Promoting Rehabilitation and Reducing Recidivism: An Initiative to Develop a Comprehensive Plan for Los Angeles County".

The members of the District Attorney's Advisory Board were the Sheriff; the Fire Chief; the Directors of the Departments of Mental Health, Health Services, Public Health, Veteran's Affairs, and Public Social Services; the Public Defender, and the Executive Director of the Countywide Criminal Justice Coordination Committee. All Advisory Board members participated in the Countywide assessment of services and recommendations to provide for comprehensive mental health diversion for each stage of the criminal justice continuum, from first responders to community re-entry and support. This report summarized the range of diversion programs already existing in the County and analyzed the need for additional mental health and substance abuse diversion services for each stage along the criminal justice continuum. The County of Los Angeles Chief Executive Office (CEO) has acknowledged that these recommendations recognize that there are potential new efficiencies and cost avoidance by redirecting persons in need of physical, mental, and public health care services from the criminal justice system to appropriate care and treatment in lieu of incarceration.

On August 11, 2015 and September 1, 2015, in the context of determining potential capacity of proposed County jail facilities, and responding to treatment needs for the mentally ill or victims of substance use disorders, the Board directed an ordinance be prepared to establish an Office of Diversion and Re-Entry (Office) within the Department of Health Services. That ordinance was adopted, and the Office has been established pursuant to Section 2.76.600 of the Los Angeles County Code. For administrative oversight, the Board of Supervisors determined the Office will be a part of the Department of Health Services and the Director of the Office will report to the Director of the Department of Health Services. The Director of this Office will be advised by a Permanent Steering Committee with broad membership from County departments working in collaboration with working groups established by the District Attorney. It includes representatives from the offices of the Sheriff, the Fire Chief, the Chief Executive, the Superior Court, the Public Defender, the Alternate Public Defender, Probation, the District Attorney, Mental Health, Public Health, and Health Services.

The Office will oversee Countywide diversion efforts including a system of integrated mental, physical and public health care services and supportive housing for those at risk of homelessness who are re-directed from the criminal justice system or re-entering the community after incarceration. For purposes of this Office's jurisdiction, the expectation is for diversion to seamlessly occur across "sequential intercept" points within the criminal justice system. Such intercept points include initial contact with law enforcement or other first responders, involvement with the criminal court system, incarceration, or post-release from incarceration.

The Office was allocated an initial Supplemental Budget of \$74.5 million to be spent 40 percent on housing; 50 percent for diversion and anti-recidivism programs; and 10 percent for administration. The Board of Supervisors directed that future budget allocations be a part of the annual budget process. On September 1, 2015, the Board of Supervisors also directed that the Office distribute funding so at least 1,000 individuals would be diverted across all intercept points within the criminal justice system.

The Criminal Justice Mental Health Advisory Board report of August 2015 concluded that even with increased opportunities for diversion from a jail environment, there will still be a need for mental health treatment in jails, and that diversion efforts can reduce, but will not eliminate, the need for the County to operate detention facilities. In light of the County's diversion efforts, the Board of Supervisors directed that, for purposes of on-going study and evaluation in the environmental review process, the maximum size of the proposed women's detention center at Mira Loma in Lancaster would remain at 1,604 beds. In addition the Board of Supervisors reduced the maximum proposed size by approximately 1,000 beds, for purposes of the environmental review of a separate proposed treatment and detention center addressing needs of incarcerated men and women with mental illness and/or substance use disorders at the site of the current Men's Central Jail in downtown Los Angeles. In summary, the Board of Supervisors has taken steps to reduce the number of people who are incarcerated in Los Angeles County.

The Draft EIR Section 5.0, Project Alternatives, was prepared in accordance with Sections 15126.6(a) through 15126.6(f) of the State CEQA Guidelines and adequately considers alternatives to the proposed Project. Out-of-custody alternatives were not required to be analyzed in the Draft EIR beyond the No Project alternative analyses and they would not be able to achieve the Project's primary goal, as stated below and in Section 5.3.2 of the Draft EIR.

The Project's goal is to provide detention facilities for low- to medium-security level female inmates that meet modern correctional standards and that prioritize the on-site integration of gender-responsive female inmate education, treatment, and vocational training. This goal focuses on providing a secure detention facility with

cost-effective therapeutic and rehabilitative programs to meet needs of eligible female inmates in order to reduce recidivism.

Potential environmental impacts associated with “no action,” on the proposed Project are described in Alternative 1A: No Project/Continuation of Existing Operations and Alternative 1B: No Project/Predictable Actions, as demonstrated in Section 5.0, Alternatives. These alternatives provide information regarding the potential impacts to the environment if the County does not move forward with the proposed Project. This Final EIR, including all comments submitted to the County on the Draft EIR, will be provided to the County of Los Angeles Board of Supervisors. Therefore, your concerns will be presented directly to the decision makers prior to consideration of Project approval.

Williams-2

This comment asks if the negative impact of incarceration on “marginalized communities” has been addressed. Purely social effects of a project are beyond the scope of CEQA analysis, which focuses on the proposal’s effect on the physical environment.

Inmates in the Los Angeles County jail system are incarcerated in accordance with established laws, and the process of determining which women are appropriately incarcerated is beyond the scope of the CEQA analysis.

This comment relates to the merits of the proposed Project, and not the environmental analysis included in the Draft EIR or the environmental impacts of the Project. This Final EIR, including all comments submitted to the County on the Draft EIR, will be provided to the County of Los Angeles Board of Supervisors. Therefore, your concerns will be presented directly to the decision makers prior to consideration of Project approval.

Williams-3

The comment asks about reducing recidivism and promoting rehabilitation. As stated in the Project Objectives in Section 3.0, Project Description, the MLWDC Project would prioritize the on-site integration of gender-responsive female inmate education, treatment, and vocational training to reduce female inmate recidivism. The Project would reduce recidivism through programming and development of a women’s detention facility at a site with sufficient space to accommodate both campus-style inmate housing and support facilities for education and vocational training, implementing the best practices of Education Based Incarceration (EBI).

The Project will offer general education classes, computer training, general and vocational career technical education, college courses, career counseling, a learning resource center, a library and computer labs, culinary classes, and indoor/outdoor recreation for inmates. Other services include religious services, counseling services, and community transition services. Participation in classes, training, and other activities will be scheduled for each inmate according to individual evaluation, interests, needs, and availability.

Course selections will be determined based on a students’ needs for specific services, and students’ interest levels. Courses will be offered during three blocks of time each weekday (morning, afternoon, and evening), providing opportunities for inmates to be enrolled in multiple courses. Programs are also divided into three categories based on program intensity: all-day, half-day, and evening programs. Examples of all-day programs (morning and afternoon) include culinary arts programs, cosmetology programs, and Prisoner Assisted Community Enhancement (PACE). Examples of half-day programs (morning or afternoon) include: small engine repair;

animal grooming/training; social media management and marketing/office assistant; automotive detailing, windshield and headlight repair; and recycling. Examples of evening programs include: computer coding; small business entrepreneurship; community college; Associate of Arts Degree; and General Education. Other programs include prenatal programs, volunteer programs; peer mentoring; physical education; dance; arts and crafts; a commissary program; and book clubs.

Additionally, as demonstrated on page 3-4, in Section 3.0, Project Description, the Board of Supervisors directed the establishment of an Advisory Board (now called the Gender Responsive Advisory Committee) that will report to the Board of Supervisors on specific programmatic and operational issues. The Advisory Committee has already begun to organize its meetings with a membership including representatives of County staff, outside agencies, advocates, organizations, individuals with incarceration experience, and representatives with expertise in reducing recidivism of female inmates. As part of its charge, the Advisory Committee is tasked with reviewing the program model for the proposed MLWDC Project to ensure that it is evidence-based in reducing recidivism; evaluating strategies to reduce negative impacts of operating the proposed MLWDC away from the downtown Los Angeles area, including contract transportation for visitors, video visiting for attorney consultation; and reviewing national best practices for visiting and family reunification.

MIRA LOMA WOMEN'S DETENTION CENTER PROJECT
PUBLIC MEETING- DECEMBER 8, 2015
6:00 TO 8:00 PM

COMMENTS:

Given the environmental hazards of the proposed site, how is it possible that the humanity of ~~the~~ individuals that will be held here is valued less than those anywhere else? Exposed to these risks and harms is undue punishment and treatment.

Wong-1

NAME: Kenny Wong

ADDRESS: _____

E-MAIL: kennywong@gmail.com

Kenny Wong

Wong-1

This comment alleges generally that the Project site would expose individuals incarcerated in the jail to environmental hazards. The Draft EIR for the proposed Project has been prepared in accordance with the California Environmental Quality Act (CEQA, *California Public Resources Code*, Sections 21000 et seq.) and the State CEQA Guidelines (14 *California Code of Regulations* [CCR]), and addresses the potential direct, indirect, and cumulative impacts of the Project on all environmental issue areas. As demonstrated throughout the Draft EIR, all potentially significant impacts have been reduced to levels that are less than significant through the identified mitigation measures, and no significant unavoidable environmental impacts would result from Project implementation.

For specific impacts related to hazards and hazardous materials, a Phase I Environmental Site Assessment (ESA) has been prepared that reviewed past and current uses and site conditions and identified Recognized Environmental Concerns (RECs) on the Project site and surrounding area. The Phase I ESA is provided in Appendix E-1 of the Draft EIR. Subsequent to the Phase I ESA, a Phase II ESA was prepared that included soil sampling to determine if soil contamination is present on the site. The Phase II ESA is provided in Appendix E-3 of the Draft EIR. In addition, an Asbestos and Lead Based Paint Survey Report was completed to identify the building components that contained asbestos and lead-based paint. The Asbestos and Lead Based Paint Survey Report is provided in Appendix E-2 of the Draft EIR. These reports are summarized in Section 4.7, Hazards and Hazardous Materials of the Draft EIR.

The Project must comply with existing regulatory requirements (RRs) for the proper handling of hazardous wastes, including transportation, treatment, storage, and disposal; repair and/or removal of underground storage tanks based on applicable standards; and practices that would protect the demolition and construction crews from asbestos and lead exposure. In addition, the Project must incorporate mitigation measures (MMs) for the handling of suspected asbestos-containing materials and lead-based paint; an Operations and Maintenance Plan for regular inspection of any asbestos-containing materials; and testing and repair of underground storage tanks prior to use. Thus, existing hazardous materials and wastes would be removed from the Project site and future hazardous materials use would comply with applicable regulations to prevent hazards to future inmates. In summary, compliance with RRs and implementation of MMs set forth in the Draft EIR would prevent public health and safety hazards to inmates, employees, visitors and other individuals at the Project site.

This Final EIR, including all comments submitted to the County on the Draft EIR, will be provided to the County of Los Angeles Board of Supervisors. Therefore, your concerns will be presented directly to the decision makers prior to consideration of Project approval.

MIRA LOMA WOMEN'S DETENTION CENTER PROJECT
PUBLIC MEETING- DECEMBER 8, 2015
6:00 TO 8:00 PM

COMMENTS:

As Executive Director of a Community Based organization and a resident of the county of Los Angeles, I vehemently oppose any new construction of new jails due to the harmful environmental impacts on our communities. The proposed site will be housed on a site that has been universally recognized as a hazardous materials site, posing health risks for all those housed inside the facility. Further new jail in Lancaster will bring more traffic pollution to the surrounding community. We need to find alternatives to incarceration such as mental health, job training and placement programming.

Zardeneta-1

Although the Project site has been unoccupied since 2012, as discussed in Section 2.0, Environmental Setting, the Project site has generally been in operation and providing various detention/jail functions from 1945–1946 until 2012. The MLWDC Project proposes the adaptive reuse, renovation, and expansion of the majority of the buildings at MLDC, which is an existing County asset. The redevelopment of the property would avoid the costs associated with constructing a new facility.

This comment raises the issue of harmful environmental impacts. The Draft Environmental Impact Report (EIR) for the proposed Project has been prepared in accordance with the California Environmental Quality Act (CEQA, *California Public Resources Code*, Section 21000 et seq.) and the State CEQA Guidelines (14 *California Code of Regulations* [CCR]), and addresses the potential direct, indirect, and cumulative impacts of the Project on all environmental issue areas. Section 5.0, Project Alternatives, was prepared in accordance with Sections 15126.6(a) through 15126.6(f) of the State CEQA Guidelines. As demonstrated throughout the Draft EIR, all potentially significant impacts have been reduced to levels that are less than significant through the identified mitigation measures, and no significant unavoidable environmental impacts would result from Project implementation.

Zardeneta-2

Regarding the comment on the hazardous materials site, the Project site was never operated as a site that accepted hazardous wastes for disposal.

As part of the environmental analysis for the Draft EIR, a Phase I Environmental Site Assessment (ESA) has been prepared that reviewed past and current uses and site conditions and identified Recognized Environmental Concerns (RECs) on the Project site and surrounding area. The Phase I ESA is provided in Appendix E-1 of the Draft EIR. Subsequent to the Phase I ESA, a Phase II ESA was prepared that included soil sampling to determine if soil contamination is present on the site. The Phase II ESA is provided in Appendix E-3 of the Draft EIR. In addition, an Asbestos and Lead Based Paint Survey Report was completed to identify the building components that contained asbestos and lead-based paint. The Asbestos and Lead Based Paint Survey Report is provided in Appendix E-2 of the Draft EIR. These reports are summarized in Section 4.7, Hazards and Hazardous Materials of the Draft EIR.

The Project must comply with existing regulatory requirements (RRs) for the proper handling of hazardous wastes, including transportation, treatment, storage, and disposal; repair and/or removal of underground storage tanks based on applicable standards; and practices that would protect the demolition and construction crews from asbestos and lead exposure. In addition, the Project must incorporate mitigation measures (MMs) for the handling of suspected asbestos-containing materials and lead-based paint; an Operations and Maintenance Plan for regular inspection of any asbestos-containing materials; and testing and repair of underground storage tanks prior to use. Thus, existing hazardous materials and wastes would be removed from the Project site and future hazardous materials use would comply with applicable regulations to prevent hazards to future inmates. In summary, compliance with RR and implementation of MMs set forth in the Draft EIR would prevent public health and safety hazards to inmates, employees, visitors and other individuals at the Project site.

Zardeneta-3

Regarding the commenter's concern about increased traffic, Section 4.13, Transportation and Traffic, of the Draft EIR discusses potential impacts related to Project-generated traffic. The analysis indicates that increase in traffic volumes would not significantly impact local intersections (intersections would still operate at Level-of-Service D or better), or alternative transportation (Metrolink trains or Antelope Valley Transit Authority [AVTA] bus service), and impacts on California Department of Transportation (Caltrans) facilities would be less than significant. As discussed on page 4.13-23 and 4.13-24, the existing transit services in the area will adequately accommodate the increase of Project-generated transit trips. No mitigation is required for short-term construction or long-term operational traffic impacts.

Regarding the commenter's concern about increased air pollution, Section 4.2, Air Quality, presents the results of the emission analysis using California Emissions Estimator Model (CalEEMod) Version 2013.2.2. This computer program is used to calculate anticipated emissions associated with land development projects in California, including emissions from vehicles traveling to and from the Project site. As shown in Table 4.2-7 of Section 4.2, Air Quality, the estimated annual operational emissions due to Project-related operations would not exceed the Antelope Valley Air Quality Management District (AVAQMD) CEQA significance thresholds and potential impacts would be less than significant. In fact, emissions were well below the thresholds of significance. For example, carbon monoxide (CO) was the air contaminant with the highest annual rate of emission, and the Project was estimated to emit 18 tons per year, while the AVAQMD threshold of significance is 100 tons per year.

Zardeneta-4

This comment alleges that the EIR must assess alternatives to the Project, including alternatives to building a jail. The Draft EIR in fact addresses alternatives in accordance with CEQA (*California Public Resources Code*, Sections 21000 et seq.) and the State CEQA Guidelines (14 *California Code of Regulations* [CCR]). As demonstrated in Section 5.0, Project Alternatives, an EIR must describe a range of reasonable and of potentially feasible alternatives to the proposed Project, or to the location of the Project, which would feasibly attain most of the basic Project Objectives but would avoid or substantially lessen any significant effects. Based on the analyses in Sections 4.1 through 4.15 of the Draft EIR, the proposed Project would result in significant environmental effects prior to mitigation on a number of environmental topics. Following mitigation, however, impacts to all of these topical areas would be avoided or reduced to less than significant levels with the implementation of mitigation measures. No significant and unavoidable impacts would occur with the Project.

In addition, the Board of Supervisors has adopted numerous recent actions to reduce the number of people who are incarcerated in Los Angeles County, particularly those with mental illness and/or substance use disorders. The Board of Supervisors' actions relating to diversion from the criminal justice system to reduce the need for incarceration, are based in part on their consideration of the August 4, 2015 District Attorney's report of the Criminal Justice Mental Health Advisory Board in a document entitled "Mental Health Advisory Report: A Blueprint for Change – Providing Treatment, Promoting Rehabilitation and Reducing Recidivism: An Initiative to Develop a Comprehensive Plan for Los Angeles County".

The Criminal Justice Mental Health Advisory Board report of August 2015 concluded that even with increased opportunities for diversion from a jail environment, there will still be a need for mental health treatment in jails, and that diversion efforts can reduce, but will not eliminate, the need for the County to operate detention facilities. In light of the County's diversion efforts, the

Board of Supervisors directed that, for purposes of on-going study and evaluation in the environmental review process, the maximum size of the proposed women's detention center at Mira Loma in Lancaster would remain at 1,604 beds. In addition the Board of Supervisors reduced the maximum proposed size by approximately 1,000 beds, for purposes of the environmental review of a separate proposed treatment and detention center addressing needs of incarcerated men and women with mental illness and/or substance use disorders at the site of the current Men's Central Jail in downtown Los Angeles. In summary, the Board of Supervisors has taken steps to reduce the number of people who are incarcerated in Los Angeles County.

In addition, please see the more detailed response on this issue in the response to Form Letter-1 regarding County actions relating to diversion and other out-of-custody alternatives, which is included in Section 2.3.1 of this Final EIR.

Subject: Language access for Draft EIR for Proposed Women's Jail

Hello all

Happy New Year! Attached is a request regarding the Draft Environmental Impact Report (DEIR) for the proposed women's jail.

We had asked for the DEIR for the proposed women's jail to be translated into Spanish and for language interpretation at the community meeting. Neither were granted in December. We think it is really important given some of the community members we work with that can't access the document and voice their concerns.

At the state level when we were interacting with the environmental impact process for the Donovan Facility in San Diego they did not grant our request at first and then came back to us with the request fulfilled by translating the document, providing interpretation at an additional community meeting, and extending the public comment period for this purpose.

Zuniga-1

Please let me know if you have any questions or want to talk more.

Thanks,

--

Diana Zuniga (January 8, 2016)

Zuniga-1

In response to the commenter's request for Spanish translation of the Project's Draft EIR and Spanish interpreters at an additional public meeting, the Los Angeles County Chief Executive Office provided a responsive letter to Californian's United for a Responsible Budget (CURB), attention to Ms. Diana Zuniga on January 22, 2016. This letter was also sent to Marcela Hernandez of the Immigrant Youth Coalition, Claudia Bautista of the National Day Laborer Organizing Network, Felicia Gomez of the California Immigrant Policy Center, and Shiu-Ming Cheer of the National Immigration Law Center in response to similar requests. Follow up communications with Ms. Zuniga even before the notice of a new comment period confirmed the date of the second public meeting as February 9, 2016. The letter to CURB and others reads as follows:

We are responding to your letter dated Friday, January 8, 2016, addressed to the Los Angeles County Board of Supervisors. You requested a response regarding "whether the County will translate the Draft Environmental Impact Report (EIR) and hold another public meeting with Spanish interpreters available" with respect to the proposed Mira Loma Women's Detention Center Renovation Project (MLWDC) at Mira Loma in Lancaster.

We appreciate that you are following the review process for the proposed MLWDC project, and respond to your requests here. The County will voluntarily add additional outreach. We will hold a second community meeting in Lancaster to discuss the Draft EIR conclusions and process and invite submission of comments. Once the location and time of the meeting has been determined, a notice in English and Spanish will be provided via a similar notification process as the November 9, 2015, release of the Draft EIR. At this meeting, we will have real time Spanish language translation available, in the event members of the public request this service. Additionally, in light of the unique nature of this detention facility project, the County also will provide a written Spanish translation of the Executive Summary of the Draft EIR. That Draft EIR section summarizes the description, location and setting of the proposed MLWDC project, the project alternatives considered, the concerns raised during the scoping process, and the potential environmental impacts. The Executive Summary also provides the entire list of proposed Project Design Features, Regulatory Requirements and Mitigation Measures. This translation will be made available at the Quartz Hill and Lancaster Libraries, Los Angeles County Public Information Office, and online for download. The County will also provide additional time to accept public comments on the Draft EIR after the written translation is available.

Throughout the California Environmental Quality Act (CEQA) review process for the MLWDC project, the County has voluntarily broadened public outreach beyond what is legally required. As you are aware, the noticed CEQA comment period closed on January 12, 2016, after being open from November 9, 2015. The County voluntarily provided an extended comment period for more than the required 45 days, to avoid any inconvenience to commenters from the holidays occurring in the comment period.

As another example of the County's broad public outreach efforts, the original scoping period was noticed to include the public and interested stakeholders early

in the process, although that is not required by law. The County also held a noticed community meeting in the Lancaster community during the Draft EIR comment period, for anyone interested in learning more about the CEQA and public comment process. At that meeting, held on December 8, 2015, there was a presentation on the project description and the CEQA review and comment process. A number of speakers, including CURB, raised approximately 30 different questions at that meeting. No one attending that public community meeting asked for the assistance of a translator for themselves or others. Had they done so, County staff at the meeting would have assisted in Spanish translation.

Also, as you are aware, at the Board of Supervisors' regular meetings, Spanish translation services are available. We appreciate your comments and have responded with specific additional opportunities for public participation.

As stated above, the first of two public meetings was held to provide an overview of the Project and the conclusions of the Draft Environmental Impact Report (EIR) on Tuesday, December 8, 2015, from 6:00 PM to 8:00 PM at the James C. Gilley Lancaster National Soccer Center Eastside Activity Center at 43000 30th Street East in Lancaster, CA 93535. There were approximately 15 attendees at the first public meeting, and some submitted written comments. Attendance at this public meeting was voluntary and was not required to submit comments on the Draft EIR.

Subsequently, in January 2016, in response to requests from the public to provide an additional extension of the public review period and an additional public meeting, a *Notice of Extended Comment Period for the Draft Environmental Impact Report for the Mira Loma Women's Detention Center Project and Notice of Second Public Meeting in Lancaster, California* (Notice) was sent to the 2015 Notice of Availability (NOA) mailing list and email list, as well as additional mailing list contacts that had provided comment letters during the Draft EIR public review period up to the time of the mailing. This Notice extended the Draft EIR public review period from Monday, February 1, 2016, through Wednesday, March 2, 2016. This 30-day extension was in addition to the original 64-day Draft EIR public review period. All written comments received on the Draft EIR from Monday, November 9, 2015, through Wednesday, March 2, 2016, were responded to in this document. Therefore, the total Draft EIR public review period for which the County received and responded to comments was 114 days.

The Notice extending the public review period was provided in both English and Spanish. Additionally, the Executive Summary of the Draft EIR was translated into Spanish and posted on the County's website for viewing and downloading. Hardcopies of the Spanish-translated Executive Summary were made available, in addition to the Draft EIR, at the Quartz Hill and Lancaster Libraries, and the Los Angeles County Public Information Office. Newspaper advertisements of the extended comment period and second public meeting were placed in the following papers and ran on Monday, February 1, 2016:

- *Acton-Aqua Dolce News*: weekly publication so the ad was available for 7 days
- *Los Angeles Daily News*: a daily publication
- *La Opinion*: a daily publication (the ad was in both English and Spanish)
- *Antelope Valley Press*: a daily publication
- *Antelope Valley Times*: an online publication

The second public meeting was held on Tuesday, February 9, 2016, at the Lancaster Public Library at 601 West Lancaster Boulevard in Lancaster, CA 93534 to present an overview of the

proposed Project and the Draft EIR process and conclusions, and to invite submission of public comments on the Draft EIR. Real-time Spanish translation services were made available, as were copies of the Notice and the Executive Summary in both English and Spanish. This second public meeting had two attendees from the public. There were no requests for Spanish translation services at the public meeting.

MIRA LOMA WOMEN'S DETENTION CENTER PROJECT
PUBLIC MEETING- DECEMBER 8, 2015
6:00 TO 8:00 PM

COMMENTS:

I oppose the construction of any new jail that will continue to imprison any person of color. Also, people in the jail will be highly susceptible to illnesses such as valley fever. As a student of color, I am targeted by such jails, therefore there is enough jails in Southern California. NO MORE JAILS!

No Name Provided**AA-1**

The commenter describes himself or herself as a student of color who is targeted by jails and therefore opposes any jails that incarcerate any person of color. Purely social effects of a project are beyond the scope of CEQA analysis, which focuses on the proposal's effect on the physical environment.

AA-2

Regarding concerns about inmates and Valley Fever (i.e., coccidioidomycosis), its potential impact on potential future inmates and County staff is discussed in Section 4.2, Air Quality. A summary of hazards associated with the *Coccidioides* spores (i.e., the fungus that causes Valley Fever) is provided, and includes trends related to Valley Fever in Los Angeles County, as inventoried and reported by the Los Angeles County Department of Public Health (LACDPH), which was consulted during the preparation of the Draft EIR.

The Draft Environmental Impact Report (EIR) summarizes the LACDPH *2013 Annual Morbidity Report*, which presents the recent trends related to Valley Fever in Los Angeles County, including the increasing incidence rate within the last ten years. Data included in this report show the incidence in Valley Fever in Service Planning Area (SPA) 1 (i.e., Antelope Valley) from 2009 to 2013. The number of incidents of Valley Fever infection spiked in 2011 in SPA 1 with 93 reported cases, which represented 30 percent of cases in Los Angeles County, with an incidence rate of 25 per 100,000 people. The incidence rate decreased to 74 reported cases in both 2012 and 2013. As such, in 2013, SPA 1 represented approximately 20.4 percent of the total reported cases in Los Angeles County, with an incidence rate of 19 per 100,000 people. SPA 1 has the highest infection rate in Los Angeles County (LACDPH 2013).

However, the rate of Valley Fever infection in Los Angeles County, and the Antelope Valley specifically, is substantially less than in neighboring Kern County, which had a 2013 infection rate of 276 per 100,000 people in the north valley region (KCPHSD 2016). The eastern portion of San Luis Obispo County had Valley Fever infection rates ranging from 205 to 257 per 100,000 people in 2007-2012 (SLOCPHD 2014). Therefore, although the Antelope Valley has the highest rates in Los Angeles County, the rates are well below rates found nearby counties where Valley Fever is endemic.

The overall incidence rate of Valley Fever in the Antelope Valley was not determined to warrant changes in the County's protocol for disease prevention, notwithstanding the fact that the County health and public health officials are well educated on the condition; are familiar with its incidence in the County and elsewhere in the state and are involved in research and education on the subject of Valley Fever.

Also, as demonstrated in Section 4.2, Air Quality, the California Department of Corrections and Rehabilitation (CDCR) the CDCR has not identified the Lancaster area as being a geographic location that requires screening or interventions for the State prison population with regard to exposure to Valley Fever (CDCR 2013). Additionally, the LACDPH has not identified the previous U.S. Immigration and Customs Enforcement (ICE) detainee population at the MLDC, the future inmate population at the MLWDC, or earlier occupants at the High Desert Health System (HDHS) Multi-Ambulatory Care Center (MACC) (the adjacent hospital facility, which has relocated in Lancaster) as requiring the implementation of health screening protocols or other measures to address potential Valley Fever exposure.

The operation of the MLWDC will follow standard Sheriff's Department procedures for medical care and prevention with regard to health care for inmates in general, and Valley Fever specifically, and the Sheriff's Department will continue to coordinate with LACDPH (Masis 2015). The LACDPH is the designated County agency with the mandate to protect health, prevent disease, and promote the health and well-being of all persons within Los Angeles County. As such, any future changes in LACDPH policies that may be made regarding Valley Fever for inmate populations will be implemented, as applicable, throughout the County jail system.

The MLWDC property is not located in an area determined to be hazardous to the health of local residents or visitors to the region. The Draft EIR concludes that the potential future inmate population's temporary placement into the Antelope Valley, which includes the inmates' participation in all indoor and outdoor activities at the MLWDC, would not constitute placement into a hazardous existing environmental setting that would require mitigation. Additionally, the operation of the proposed Project would not increase the prevalence of Valley Fever spores or otherwise exacerbate an existing environmental condition.

AA-3

This comment relates to the merits of the proposed Project, and not the environmental analysis included in the Draft Environmental Impact Report (EIR) or the environmental impacts of the Project.

This Final EIR, including all comments submitted to the County on the Draft EIR, will be provided to the County of Los Angeles Board of Supervisors. Therefore, your concerns will be presented directly to the decision makers prior to consideration of Project approval.

MIRA LOMA WOMEN'S DETENTION CENTER PROJECT
PUBLIC MEETING- DECEMBER 8, 2015
6:00 TO 8:00 PM

COMMENTS:

I don't Believe in Building more Jails,
In my opinion Jails are harmful
for Human beings, It affects
people, Jails don't Better people.

Although the Project site has been unoccupied since 2012 as discussed in Section 2.0, Environmental Setting, the Project site has generally been in operation and providing various detention/jail functions from 1945-1946 until 2012. The MLWDC Project proposes the adaptive reuse, renovation, and expansion of the majority of the buildings at the MLDC, which is an existing County asset. The redevelopment of the property would avoid the costs associated with constructing a new facility.

This comment relates to the merits of the proposed Project and not the environmental analysis included in the Draft Environmental Impact Report (EIR) or the environmental impacts of the Project. This Final EIR, including all comments submitted to the County on the Draft EIR, will be provided to the County of Los Angeles Board of Supervisors. Therefore, your concerns will be presented directly to the decision makers prior to consideration of Project approval.

This page intentionally left blank

SECTION 3.0 MITIGATION MONITORING AND REPORTING PROGRAM

Section 21081.6 of CEQA and Section 15097 of the State CEQA Guidelines require a public agency to adopt a Mitigation Monitoring and Reporting Program (MMRP) for assessing and ensuring the implementation of required mitigation measures applied to proposed projects. Specific reporting and/or monitoring requirements that will be enforced during project implementation shall be adopted simultaneously with final Project approval by the responsible decision makers.

The MMRP for the Mira Loma Women's Detention Center (MLWDC) includes Mitigation Measures (MMs) that will reduce or avoid significant environmental effects associated with Project implementation. For ease of reference, the MMRP also includes the Project Design Features (PDFs) and Regulatory Requirements (RRs) that are applicable to the Project and will reduce potential environmental impacts. The PDFs and RRs are included in the MMRP for convenience as only MMs are required to be in the MMRP.

The PDFs, RRs, and MMs for the MLWDC are listed in the first column in Table 1 below, along with the timeframe for implementation of the PDF, RR, or MM in the second column, the agency or party with primary responsibility for implementing the PDF, RR or MM in the third column, and the agency or party with responsibility for monitoring compliance in the fourth column. Implementation of the PDFs, RRs and MMs for the MLWDC would primarily be the responsibility of the County of Los Angeles, as the Lead Agency under CEQA, and its consultants/contractors.

RR AIR-2 All construction activities will be conducted in compliance with Department of Health - Infection Control Policy Guidelines Procedure No. 918.01, which requires that building additions, demolition, retrofit, alterations, new construction comply with the Infection Control Policy.	During construction activities	Design-Builder	County of Los Angeles Department of Public Works
RR AIR-3 All construction activities will be conducted in compliance with 13 CCR §2485, which requires that all diesel-fueled commercial motor vehicles must not idle for more than 5 consecutive minutes at any location.	During construction activities	Design-Builder	County of Los Angeles Department of Public Works
Biological Resources (Section 4.3 of the EIR)			
MM BIO-1 Prior to commencement of construction activities, a qualified Biologist shall conduct a pre-construction bat habitat assessment of the trees and/or structures marked for potential removal/demolition. Potential for roosting shall be categorized by (1) potential for solitary roost sites and (2) potential for colonial roost sites (i.e., ten bats or more). If the potential for colonial roosting is determined, those trees/structures shall not be removed during the bat maternity roost season (March 1 to July 31). Trees potentially supporting colonial roosts outside the maternity roost season, and trees potentially supporting solitary roosts, may be removed via a two-step removal process whereby, at the direction of the Biologist, some level of disturbance (such as trimming of lower branches) is applied to the tree on the day prior to removal to allow bats to escape during the darker hours, and the roost tree shall be removed the following day (i.e., there shall be no less or more than one night between initial disturbance and the grading or tree removal). Structures potentially supporting colonial roosts outside the maternity roost season and structures potentially supporting solitary roosts may be fitted with a bat exclusionary device at the entry location, whereby bats are allowed to leave the structure but are unable to return. The structure can be demolished the following day. The results of the pre-construction bat habitat assessment, and any measures taken to protect bats, shall be documented and provided to the Los Angeles County Department of Public Works.	Prior to commencement of construction activities	Biologist	County of Los Angeles Department of Public Works

**TABLE 3-1
MITIGATION MONITORING AND REPORTING PROGRAM**

Mitigation Measures	Mitigation Timing	Responsible Agency/Party	Monitoring Agency/Party
<p>MM BIO-2 The Project shall be conducted in compliance with the conditions set forth in the Migratory Bird Treaty Act (MBTA) and California Fish and Game Code with methods accepted by the U.S. Fish and Wildlife Service (USFWS) and the California Department of Fish and Wildlife (CDFW) to protect active bird/raptor nests. To the extent feasible, vegetation/tree removal shall occur during the non-breeding season for nesting birds (generally late September to early March) and nesting raptors (generally early July to late January) to avoid impacts to nesting birds and raptors. If the nature of the Project requires that work be initiated during the breeding season for nesting birds and raptors (February 1 to August 31), a pre-construction survey shall be conducted by a qualified Biologist (i.e. one with experience conducting nesting bird surveys) for nesting birds and raptors within 3 days prior to clearing of any vegetation and/or any work near existing structures (i.e., within 300 feet for nesting birds, within 300 feet for nesting special status birds, and within 500 feet for nesting raptors). If the Biologist does not find any active nests within or immediately adjacent to the impact area, the vegetation clearing/construction work shall be allowed to proceed. A letter report shall be prepared and submitted to the Los Angeles County Department of Public Works to document the survey findings and recommended protective measures.</p> <p>If the Biologist finds an active nest within or immediately adjacent to the construction area and determines that the nest may be impacted or breeding activities substantially disrupted, the Biologist shall delineate an appropriate buffer zone around the nest depending on the sensitivity of the species and the nature of the construction activity. Any nest found during survey efforts shall be mapped on the construction plans. The active nest shall be protected until nesting activity has ended. To protect any nest site, the following restrictions to construction activities shall be required until nests are no longer active, as determined by a qualified Biologist: (1) clearing limits shall be established within a buffer around any occupied nest (the buffer shall be 25–300 feet for nesting birds and 300–500 feet for nesting raptors), unless otherwise determined by a qualified Biologist and (2) access and surveying shall be restricted within the buffer of any occupied nest, unless otherwise determined by a qualified Biologist.</p>	<p>Completed within 3 days prior to vegetation clearing and During construction activities, if nesting birds are present</p>	<p>Biologist</p>	<p>County of Los Angeles Department of Public Works</p>

**TABLE 3-1
MITIGATION MONITORING AND REPORTING PROGRAM**

Mitigation Measures	Mitigation Timing	Responsible Agency/Party	Monitoring Agency/Party
<p>Encroachment into the buffer area around a known nest shall only be allowed if the Biologist determines that the proposed activity would not disturb the nest occupants. Flagging, stakes, and/or construction fencing shall be used to demarcate the buffer around the nest and construction personnel shall be instructed as to the sensitivity of the area. Construction will be allowed to proceed when the qualified Biologist has determined that fledglings have left the nest or the nest has failed.</p>			
<p>MM BIO-3 If MLWDC implementation, including potential off-site trenching for the water line connection (temporary) and/or off-site construction of a storm drain outlet (permanent), would result in discharge to jurisdictional features, the County shall consult with the CDFW and the RWQCB to determine if the agency will consider the feature to be within their jurisdiction and require regulatory permits. If an agency indicates that the feature will not be regulated and no permit is required, no further action will be required for that agency. If an agency indicates that the feature will be regulated and permits are required, the balance of this Mitigation Measure, described below, shall be implemented prior to initiation of Project activities.</p> <p>Prior to initiation of Project activities, the County shall obtain any necessary permits for impacts to Regional Water Quality Control Board (RWQCB) and CDFW jurisdictional areas. Mitigation for the loss of jurisdictional resources shall be negotiated with the resource agencies during the regulatory permitting process. Potential mitigation options shall include one or more of the following: (1) payment to a mitigation bank or regional riparian enhancement program (e.g., invasive plant or wildlife species removal) and/or (2) restoration of riparian habitat either on site or off site at a ratio of no less than 1:1, determined through consultation with the above-listed resource agencies. If in-lieu mitigation fees are required, prior to the initiation of any construction-related activities, the LACFCD shall pay the in-lieu mitigation fee to a mitigation bank/enhancement program for the in-kind (equivalent vegetation type and acreage) replacement of impacted jurisdictional resources. If a Restoration Program is required, prior to the initiation of any construction-related activities, LACFCD shall prepare and submit a Riparian Habitat Mitigation</p>	<p>Prior to off-site trenching for water line connection and storm drain outlet construction</p>	<p>County of Los Angeles Department of Public Works and Biologist, if required</p>	<p>County of Los Angeles Department of Public Works</p>

MITIGATION MONITORING AND REPORTING PROGRAM**

Mitigation Measures	Mitigation Timing	Responsible Agency/Party	Monitoring Agency/Party
<p>and Monitoring Program (HMMP) for USACE and CDFW approval. If a Riparian HMMP is required, it shall contain the following items:</p> <ul style="list-style-type: none"> A. Responsibilities and qualifications of the personnel to implement and supervise the plan. The responsibilities of the Landowner, Specialists, and Maintenance Personnel that would supervise and implement the plan shall be specified. B. Site selection. The mitigation site shall be determined in coordination with the USACE, CDFW, and RWQCB. The site shall either be located in a dedicated open space area on County land, USFS land, or off-site land shall be purchased. C. Seed source. Seeds (or plantings) used shall be from local sources (within ten miles of the Project area) to ensure genetic integrity. D. Site preparation and planting implementation. Site preparation shall include (1) protection of existing native species; (2) trash and weed removal; (3) native species salvage and reuse (i.e., duff); (4) soil treatments (i.e., imprinting, decompacting); (5) temporary irrigation installation; (6) erosion-control measures (i.e., rice or willow wattles); (7) seed mix application; and (8) container species planting. E. Schedule. A schedule shall be developed which includes planting in late fall and early winter, between October 1 and January 30. F. Maintenance Plan/Guidelines. The Maintenance Plan shall include (1) weed control; (2) herbivory control; (3) trash removal; (4) irrigation system maintenance; (5) maintenance training; and (6) replacement planting. G. Monitoring plan. The Monitoring Plan shall include (1) qualitative monitoring (i.e., photographs and general observations); (2) quantitative monitoring (i.e., randomly placed transects); (3) performance criteria, as approved by the above-listed resource agencies; (4) monthly reports for the first year and reports quarterly thereafter; and (5) annual reports for five years, which shall be submitted to the resource agencies on an annual basis. The site shall be monitored and maintained for five years to ensure successful

<p>establishment of riparian habitat within the restored and created areas.</p> <p>H. Long-term preservation. Long-term preservation of the site shall also be outlined in the conceptual Mitigation Plan to ensure the mitigation site is not impacted by future development.</p>			
Cultural Resources (Section 4.4 of the EIR)			
<p>PDF CUL-1 The Project site boundaries, as defined, exclude the two hangars, which have been previously evaluated and appear eligible for listing in the National Register of Historic Places (NRHP). The Contractor's Specifications will require that none of the Polaris Flight Academy Historic District's contributing buildings or structures would be impacted by the Project.</p>	<p>Prior to approval of contractor's specifications and During construction activities</p>	<p>Design-Builder</p>	<p>County of Los Angeles Department of Public Works</p>
<p>RR CUL-1 All construction activities will be conducted in accordance with Section 7050.5 of the California Health and Safety Code regarding the potential discovery of human remains. If applicable, the Native American Heritage Commission (NAHC) will be responsible for designating the most likely descendant (MLD), as required by Section 5097.98 of the California Public Resources Code. If the landowner rejects the recommendations of the MLD, the burial location would be determined in compliance with California Public Resources Code, Section 5097.98.</p>	<p>During ground disturbance (e.g., grading, trenching or excavation activities)</p>	<p>Design-Builder</p>	<p>County of Los Angeles Department of Public Works Archaeologist and Native American Heritage Commission, if applicable</p>
<p>MM CUL-1 Prior to the start of construction activities, a qualified Archaeologist shall be retained by the County to attend the pre-grading meeting with the construction contractor to establish, based on the site plans, appropriate procedures for monitoring earth-moving activities during construction. The Archaeologist shall determine, based on consultation with the County, when monitoring of grading activities is needed. Monitoring should observe disturbance in the uppermost layers of sediment including the younger Quaternary Alluvium (i.e. approximately 5 feet below ground surface or shallower) and if any archaeological resources are discovered, construction activities must cease within 50 feet of the discovery, as appropriate, and they shall be protected from further disturbance until the qualified Archaeologist evaluates them using standard archaeological protocols. The Archaeologist must first</p>	<p>Pre-grade meeting orientation and During grading and excavation activities, if needed</p>	<p>Archaeologist</p>	<p>County of Los Angeles Department of Public Works</p>

**TABLE 3-1
MITIGATION MONITORING AND REPORTING PROGRAM**

Mitigation Measures	Mitigation Timing	Responsible Agency/Party	Monitoring Agency/Party
<p>determine whether an archaeological resource uncovered during construction is a "Tribal Cultural Resources" pursuant to Section 21074 of the California Public Resources Code, or a "unique archaeological resource" pursuant to Section 21083.2(g) of the California Public Resources Code or a "historical resource" pursuant to Section 15064.5(a) of the State CEQA Guidelines. If the archaeological resource is determined to be a "Tribal Cultural Resource", "unique archaeological resource" or a "historical resource", the Archaeologist shall formulate a Mitigation Plan in consultation with the County of Los Angeles that satisfies the requirements of the above-listed Code Sections. Upon approval of the Mitigation Plan by the Los Angeles County Director of Public Works (DPW), the Project shall be implemented in compliance with the Plan.</p> <p>If the Archaeologist determines that the resource is not a "Tribal Cultural Resource", "unique archaeological resource" or "historical resource," s/he shall record the site and submit the recordation form to the California Historical Resources Information System (CHRIS) at the South Central Coastal Information Center (SCCIC). The Archaeologist shall prepare a report of the results of any study prepared as part of a testing or mitigation plan, following accepted professional practice. The report shall follow guidelines of the California Office of Historic Preservation. Copies of the report shall be submitted to the County and to the CHRIS at the SCCIC at the California State University, Fullerton.</p>			
<p>MM CUL-2 Prior to the start of ground disturbing activities in native soils, a qualified Paleontologist shall be notified and retained when earth-moving activities are anticipated to impact undisturbed deposits in the older Quaternary alluvium on the Project site (i.e. approximately 5 feet below ground surface or deeper). The designated Paleontologist shall be present during the pre-grade meeting to discuss paleontological sensitivity and to assess whether scientifically important fossils have the potential to be encountered. The Paleontologist shall determine, based on consultation with the County, when monitoring of grading activities is needed based on the on-site soils and final grading plans.</p> <p>All paleontological work to assess and/or recover a potential resource at the Project site shall be conducted under the direction of the qualified Paleontologist. If any fossil remains are uncovered</p>	<p>Prior to the commencement of ground-disturbing activities in native soils and During excavation activities in native soils deeper than five feet below ground surface</p>	<p>Paleontologist</p>	<p>County of Los Angeles Department of Public Works</p>

**TABLE 3-1
MITIGATION MONITORING AND REPORTING PROGRAM**

Mitigation Measures	Mitigation Timing	Responsible Agency/Party	Monitoring Agency/Party
<p>during earth-moving activities, all heavy equipment shall be diverted at least 50 feet from the fossil site until the monitor has had an opportunity to examine the remains and determines that earthmoving can resume. The extent of land area that is prohibited from disturbance shall be at the discretion of the Paleontological monitor. Samples of older Quaternary alluvium shall be collected as necessary for processing and shall be examined for very small vertebrate fossils. The Paleontologist shall prepare a report of the results of any findings following accepted professional practice.</p>			
Geology and Soils (Section 4.5 of the EIR)			
<p>RR GEO-1 The Project will be designed and constructed in accordance with the Los Angeles County's Building Code, which adopts the California Building Code (CBC), which is based on the International Building Code (IBC). New construction, alteration, or rehabilitation shall comply with applicable ordinances set forth by the County and/or by the most recent County building and seismic codes in effect at the time of project design. In accordance with Section 1803.2 of the 2013 CBC, a geotechnical investigation is required that must evaluate soil classification, slope stability, soil strength, position and adequacy of load-bearing soils, the effect of moisture variation on soil-bearing capacity, compressibility, liquefaction, and expansiveness, as necessary, determined by the County Building Official. The geotechnical investigation must be prepared by registered professionals (i.e., California Registered Civil Engineer or Certified Engineering Geologist). Recommendations of the report, as they pertain to structural design and construction recommendations for earthwork, grading, slopes, foundations, pavements, and other necessary geologic and seismic considerations, must be incorporated into the design and construction of the Project.</p>	<p>Prior to approval of final site plans and During construction activities</p>	<p>Design-Builder</p>	<p>County of Los Angeles Department of Public Works</p>
Greenhouse Gas Emissions (Section 4.6 of the EIR)			
<p>PDF GHG-1 Up to 1 megawatt (MW) of the Project's electricity demands will be offset through the County's existing 2-megawatt (MW) solar energy facility located immediately east of the Project site. The Contractor's Specifications will require that this County-owned renewable energy source will off-set the Project's electrical</p>	<p>Prior to approval of contractor's specifications and</p>	<p>Design-Builder</p>	<p>County of Los Angeles Department of Public Works</p>

**TABLE 3-1
MITIGATION MONITORING AND REPORTING PROGRAM**

Mitigation Measures	Mitigation Timing	Responsible Agency/Party	Monitoring Agency/Party
demands throughout construction as well as long-term operations.	During construction activities		
PDF GHG-2 The Contractor's Specifications will require that the Project will provide a combined minimum of 34 video-visiting stations on-site, along with video interview rooms in transitional housing buildings.	Prior to approval of contractor's specifications and During construction activities	Design-Builder	County of Los Angeles Department of Public Works
PDF GHG-3 The Project site will have the Antelope Valley Transit Authority (AVTA) bus and Metrolink schedules posted, as well as the locations of the nearest Park-and-Ride lots, in areas visible to visitors and in the Staff Services building to encourage the use of public transportation by staff and visitors. AVTA bus and Metrolink schedule information will be updated to ensure accuracy.	Prior to issuance of occupancy permit and Ongoing, every six months thereafter	County of Los Angeles Sheriff's Department	County of Los Angeles Sheriff's Department
PDF GHG-4 The Contractor's Specifications will require that the Project will incorporate (1) a secure storage area for staff to store bicycles into the Project design plans that allow for the individual locking of bicycles and protection from sun and inclement weather, and (2) bicycle rack(s) adjacent to the Visitor Parking Lot that allows for the individual locking of bicycles.	Prior to approval of contractor's specifications and During construction activities	Design-Builder	County of Los Angeles Department of Public Works
RR GHG-1 The Project will be designed and constructed in accordance with the Los Angeles County Code (Title 22, Section 22.52.2130), which requires that all new buildings that are greater than 10,000 square feet (sf) and less than 25,000 sf in area will be designed and constructed to achieve the equivalency of a Leadership in Energy and Environmental Design (LEED™) certification; buildings of 25,000 sf or greater will achieve the equivalency of a LEED Silver certification. The Project will comply with Title 22 (Section 22.52.2200 et seq., Drought Tolerant Landscaping; and Section 22.52.2100, Green Building).	Prior to approval of contractor's specifications and During construction activities	Design-Builder	County of Los Angeles Department of Public Works
RR GHG-2 The Project will be designed and constructed in accordance with the California Code of Regulations, Title 24 Building Energy Efficiency Program, which establishes a minimum level of building energy efficiency and requires energy efficient measures, including ventilation, insulation, and construction and the use of energy-saving appliances, conditioning systems, water heating, and lighting.	Prior to approval of contractor's specifications and During construction activities	Design-Builder	County of Los Angeles Department of Public Works

**TABLE 3-1
MITIGATION MONITORING AND REPORTING PROGRAM**

Mitigation Measures	Mitigation Timing	Responsible Agency/Party	Monitoring Agency/Party
RR GHG-3 The Project will be designed and constructed in accordance with the Los Angeles County Code (Title 31, including but not limited to, Section 301.2.1 Low-rise Residential Buildings, and Section 301.3.1, Nonresidential Buildings greater than or equal to 25,000 square feet.), Section 4.106.5, Landscape Design, and Section 5.106.3, Low Impact Development or the current County code requirements in place at the time of Project design and construction. Title 31 requires project designs and practices that will result in the conservation of water and energy resources, such as measures for building commissioning, clean vehicle parking, and solid waste recycling.	Prior to approval of contractor's specifications and During construction activities	Design-Builder	County of Los Angeles Department of Public Works
RR GHG-4 The Project will include an Employee Commute Reduction Plan (ECRP), commonly known as the Rideshare Plan, in accordance with Los Angeles County Code Chapter 5.9, Vehicle Trip Reduction. The ECRP will specify the measures to be implemented at MLWDC to achieve the target average vehicle ridership performance goal for employee vehicles subject to the Ordinance.	Prior to issuance of occupancy permit	County of Los Angeles Sheriff's Department	County of Los Angeles Sheriff's Department
RR GHG-5 The Project will be subject to any project direction adopted by the Board of Supervisors based upon the findings of the Advisory Board's evaluation of strategies to reduce negative impacts of operating the MLWDC away from the downtown Los Angeles area, including contract transportation for visitors, videoconferencing for attorney consultation, and reviewing national best practices for visiting and family reunification.	Ongoing, throughout operations	Gender Responsive Advisory Committee	County of Los Angeles Sheriff's Department
Hazards and Hazardous Materials (Section 4.7 of the EIR)			
RR HAZ-1 Any Project-related hazardous materials and hazardous wastes will be transported to and/or from the Project in compliance with any applicable State and federal requirements, including the U.S. Department of Transportation regulations listed in the Code of Federal Regulations (Title 49, Hazardous Materials Transportation Act); California Department of Transportation (Caltrans) standards; and the California Occupational Safety and Health Administration (CalOSHA) standards.	During construction activities	Design-Builder	County of Los Angeles Department of Public Works

**TABLE 3-1
MITIGATION MONITORING AND REPORTING PROGRAM**

Mitigation Measures	Mitigation Timing	Responsible Agency/Party	Monitoring Agency/Party
<p>RR HAZ-2 Any Project-related hazardous waste generation, transportation, treatment, storage, and disposal will be conducted in compliance with the Subtitle C of the Resource Conservation and Recovery Act (RCRA) (Code of Federal Regulations, Title 40, Part 263), including the management of non-hazardous solid wastes and underground tanks storing petroleum and other hazardous substances. The Project will be designed and constructed in accordance with the regulations of the Los Angeles County Fire Department, which serves as the designated CUPA and which implements State and federal regulations for the following programs: (1) Hazardous Waste Generator Program, (2) Hazardous Materials Release Response Plans and Inventory Program, (3) CalARP, (4) AST Program, and (5) UST Program.</p>	<p>Prior to approval of final designs and During construction activities</p>	<p>Design-Builder</p>	<p>County of Los Angeles Department of Public Works and County of Los Angeles Fire Department, as the CUPA, if required</p>
<p>RR HAZ-3 Any Project-related underground storage tank (UST) repairs and/or removals will be conducted in accordance with the California Underground Storage Tank Regulations (Title 23, Chapter 16 of the California Code of Regulations). Any unauthorized release of hazardous materials will require release reporting, initial abatement, and corrective actions that will be completed with oversight from the RWQCB, DTSC, LACFD, SCAQMD and/or other regulatory agencies, as necessary. Any Project-related use of existing USTs will also have to be conducted (i.e., used, maintained and monitored) in accordance with the California Underground Storage Tank Regulations (Title 23, Chapter 16 of the California Code of Regulations).</p>	<p>During construction activities</p>	<p>County of Los Angeles Sheriff's Department</p>	<p>County of Los Angeles Sheriff's Department and County of Los Angeles Fire Department, as the CUPA, if required</p>
<p>RR HAZ-4 Any Project-related demolition activities that have the potential to expose construction workers and/or the public to asbestos-containing materials (ACMs) or lead-based paint (LBP) will be conducted in accordance with applicable regulations, including, but not limited to:</p> <ul style="list-style-type: none"> • Antelope Valley Air Quality Management District's (AVAQMD's) Rule 1403 • California Health and Safety Code (Section 39650 et seq.) • California Code of Regulations (Title 8, Section 1529) • California Occupational Safety and Health Administration (CalOSHA) regulations (California Code of Regulations, Title 8, Section 1529 [Asbestos] and Section 1532.1 [Lead]) 	<p>During demolition activities</p>	<p>Design-Builder</p>	<p>County of Los Angeles Department of Public Works</p>

**TABLE 3-1
MITIGATION MONITORING AND REPORTING PROGRAM**

Mitigation Measures	Mitigation Timing	Responsible Agency/Party	Monitoring Agency/Party
RR HAZ-5 Any Project-related new construction, excavations, and/or new utility lines within 10 feet or crossing existing high pressure pipelines, natural gas/petroleum pipelines, electrical lines greater than 60,000 volts, will be designed and constructed in accordance with the California Code of Regulations (Title 8, Section 1541).	During construction activities	Design-Builder	County of Los Angeles Department of Public Works
RR HAZ-6 The Project will be designed and constructed in accordance with Part 77 of the Federal Aviation Regulations (FAR), which requires the County to notify the Federal Aviation Administration of proposed construction or alteration within 20,000 feet from the nearest point of the nearest runway of an airport where the structure would extend into a slope of a 100:1 and within 5,000 feet of a heliport where the structure would extend into a slope of a 25:1 from the nearest landing and take-off area of the heliport.	Prior to approval of final designs and During construction activities	Design-Builder	County of Los Angeles Department of Public Works
RR HAZ-7 The radio communications tower shall be subject to review by the Los Angeles County Airport Land Use Commission for compliance with the General William J. Fox Airfield Land Use Compatibility Plan.	Prior to approval of final designs	County of Los Angeles Department of Public Works	County of Los Angeles Department of Public Works and Los Angeles County Airport Land Use Commission
MM HAZ-1 In the event that building materials are encountered during construction activities that are suspected of being asbestos-containing materials (ACMs), these materials shall be assumed to contain asbestos and shall be handled, removed, transported and/or disposed in accordance with applicable ACM regulations, until such time that they can be sampled and evaluated for asbestos content. Prior to Project occupancy, an Operations and Maintenance (O&M) Plan shall be prepared by a CalOSHA-certified Asbestos Consultant and implemented by building maintenance staff who have undergone at least 16 hours of asbestos O&M training. The O&M Plan shall be subject to review and approval by the County of Los Angeles Director of Public Works and shall require periodic observation, inspection, and documentation by designated staff to ensure that ACMs do not become damaged and do not result in airborne asbestos fiber release. Any required removal of asbestos shall be made under the direction of a CalOSHA Certified Asbestos Consultant.	During construction activities and Prior to issuance of occupancy permit and Ongoing, throughout operations	Design-Builder and CalOSHA-certified Asbestos Consultant and County of Los Angeles Sheriff's Department	County of Los Angeles Department of Public Works and County of Los Angeles Sheriff's Department

**TABLE 3-1
MITIGATION MONITORING AND REPORTING PROGRAM**

Mitigation Measures	Mitigation Timing	Responsible Agency/Party	Monitoring Agency/Party
MM HAZ-2 In the event that painted or ceramic surfaces materials are encountered during construction activities that are suspected of containing lead and/or lead-based paint, these materials shall be assumed to contain lead in concentrations exceeding the Los Angeles County Department of Health Services' definition of 0.7 milligrams per square centimeter (mg/cm ² , or 600 parts per million) and shall be handled, removed, transported and/or disposed in accordance with applicable regulations for lead content, until such time that they can be sampled and evaluated for lead content.	During construction activities	Design-Builder	County of Los Angeles Department of Public Works
MM HAZ-3 Prior to the use of the off-site fueling station by any Project-related activities, including any construction activities, the underground storage tanks (USTs) at the off-site fueling station shall be tested and repaired as necessary, subject to inspection and approval by the Los Angeles County Fire Department, as the Certified Unified Program Agency (CUPA).	Prior to the use of the off-site fueling station	County of Los Angeles Department of Public Works	County of Los Angeles Department of Public Works and County of Los Angeles Fire Department, as the CUPA, if required
Hydrology and Water Quality (Section 4.8 of the EIR)			
PDF HYD-1 The Contractor's Specifications will require that the Project will be designed and constructed in accordance with the following requirements of the Los Angeles County Department of Public Works for the incorporation of source-control, site-design, and treatment-control BMPs to reduce pollutants in the storm water and to reduce runoff rates and volumes to match existing conditions: <ul style="list-style-type: none"> • 2002 Standard Urban Stormwater Mitigation Plan (SUSMP) • 2006 Hydrology Manual • 2009 County's Low Impact Development (LID) Standards Manual • 2010 Green Building Standards Code (California Code of Regulations Title 24, Part 11) • 2012 Best Management Practices Handbook 	Prior to approval of final designs and contractor's specifications and During construction activities	Design-Builder	County of Los Angeles Department of Public Works

**TABLE 3-1
MITIGATION MONITORING AND REPORTING PROGRAM**

Mitigation Measures	Mitigation Timing	Responsible Agency/Party	Monitoring Agency/Party
PDF HYD-2 The Contractor's Specifications will require that the Project will be designed and constructed in accordance with the County's Stormwater and Runoff Pollution Control Ordinance (Chapter 12.80 of the Los Angeles County Code), which prohibits illicit discharges; manages runoff into and from its Municipal Separate Storm Sewer Systems (MS4s); and requires BMPs for new development and major redevelopment projects.	Prior to approval of final designs and contractor's specifications and During construction activities	Design-Builder	County of Los Angeles Department of Public Works
RR HYD-1 The Project will be constructed in accordance with the National Pollutant Discharge Elimination System (NPDES) General Permit for Storm Water Discharges Associated with the Construction and Land Disturbance Activities, Order No 2009-0009-DWQ, NPDES No. CAS000002 (or the latest approved Construction General Permit). Compliance requires filing a Notice of Intent (NOI); a Risk Assessment; a Site Map; a Storm Water Pollution Prevention Plan (SWPPP) and associated Best Management Practices (BMPs); an annual fee; and a signed certification statement.	Prior to approval of final designs and contractor's specifications and During construction activities	Design-Builder	County of Los Angeles Department of Public Works
RR HYD-2 The Project will be constructed and operated in accordance with the National Pollutant Discharge Elimination System (NPDES) General Permit for Storm Water Discharges from Small Municipal Separate Storm Sewer Systems (MS4), Order No 2013-0001-DWQ, NPDES No. CAS000004 (or the latest approved MS4 General Permit). Compliance requires controls to reduce pollutants from the MS4 to the maximum extent practicable (MEP). The MEP standard requires Permittees to apply Best Management Practices (BMPs) that are effective in reducing or eliminating the discharge of pollutants to the waters of the U.S., and emphasizes pollutant reduction and source control BMPs to prevent pollutants from entering storm water runoff.	Prior to approval of final designs and contractor's specifications and During construction activities	Design-Builder	County of Los Angeles Department of Public Works
Land Use and Planning (Section 4.9 of the EIR)			
No PDF, RR or MM required.			
Noise (Section 4.10 of the EIR)			
PDF NOI-1 The Contractor's Specifications will require that the Project will use construction vehicles and equipment, either fixed or mobile, that will be equipped with properly operating and maintained mufflers (equivalent or better than original factory equipment), which will be	Prior to approval of contractor's specifications and	Design-Builder	County of Los Angeles Department of Public Works

**TABLE 3-1
MITIGATION MONITORING AND REPORTING PROGRAM**

Mitigation Measures	Mitigation Timing	Responsible Agency/Party	Monitoring Agency/Party
periodically inspected to ensure compliance. Equipment maintenance and staging areas will be located at least 450 feet from residences on 60th Street West.	During construction activities		
RR NOI-1 The Project will be constructed in accordance with Section 12.08.440 of the County Code, which prohibits construction activities that generate noise that could create a disturbance across a residential or commercial property line from occurring between 7:00 PM and 7:00 AM on weekdays, or at any time on Sunday or a federal holiday.	Prior to approval of contractor's specifications and During construction activities	Design-Builder	County of Los Angeles Department of Public Works
MM NOI-1 The County of Los Angeles Department of Public Works shall include the following requirement in the Contractor's Specifications: Stationary equipment, such as generators and air compressors, shall be located at least 450 feet from the residences on 60th Street West opposite the Project site. If stationary equipment use is required to be closer than 450 feet, the equipment shall include an enclosure or similar noise attenuation if needed to limit the average hourly daytime noise level at the nearest residential property line to 60 A-weighted decibels (dBA) or less. Proof of compliance, such as noise measurements during construction activities, shall be provided to the County of Los Angeles Department of Public Works within one week of the start of use of stationary equipment within 450 feet of a residence.	Prior to approval of contractor's specifications and During construction activities	Design-Builder	County of Los Angeles Department of Public Works
Population and Housing (Section 4.11 of the EIR)			
No PDF, RR or MM mitigation required.			
Public Services (Section 4.12 of the EIR)			
PDF PS-1 The Contractor's Specifications will require that the Project will include space to accommodate both indoor and outdoor recreational facilities for inmate use only, including a recreational building for indoor recreation (e.g., game tables and a craft room); a full sized sports court for volleyball and basketball; a soccer field; a running track; and gardening areas, for both vegetable and flower cultivation.	Prior to approval of final designs and contractor's specifications and During construction activities	Design-Builder	County of Los Angeles Department of Public Works

**TABLE 3-1
MITIGATION MONITORING AND REPORTING PROGRAM**

Mitigation Measures	Mitigation Timing	Responsible Agency/Party	Monitoring Agency/Party
<p>PDF PS-2 The Contractor's Specifications will require that the Project will include space to accommodate general education classes, computer training, general and vocational career technical education, career counseling, a learning resource center, a library and computer labs, and culinary classes that will be made available to the female inmate population and provided through on-site classrooms, library facilities, and computer labs.</p>	<p>Prior to approval of final designs and contractor's specifications and During construction activities</p>	<p>Design-Builder</p>	<p>County of Los Angeles Department of Public Works</p>
<p>PDF PS-3 The Contractor's Specifications will require that the Project will include space to accommodate a Medical Building and Inmate Processing Area that will provide medical screening; mental health screening; a pharmacy; dental care services; radiology; laboratory services; obstetrics and gynecological services; orthopedic and dermatology services; wellness, hygiene, and diseases prevention training; preventative medical care; sick call services; emergent care; annual medical and dental exams; and tele-medicine/tele-psychiatry services.</p>	<p>Prior to approval of final designs and contractor's specifications and During construction activities</p>	<p>Design-Builder</p>	<p>County of Los Angeles Department of Public Works</p>
<p>RR PS-1 The Project will be designed and constructed in accordance with the County of Los Angeles Fire Code (Los Angeles County Code, Title 32) and the regulations of the Los Angeles County Fire Department, which include standards for building construction that would reduce the creation of fire hazards and facilitate emergency response.</p>	<p>Prior to approval of final designs and contractor's specifications and During construction activities</p>	<p>Design-Builder</p>	<p>County of Los Angeles Department of Public Works</p>
<p>RR PS-2 The Project will be designed, constructed and operated in accordance with pertinent provisions of Title 15 of the California Code of Regulations (Crime Prevention and Corrections) and other applicable State and federal requirements. Title 15 (specifically Division 1, Chapter 1, Subchapter 4) outlines the minimum standards for local detention facilities, court holding facilities, temporary holding facilities, and law enforcement facilities, including lockups (a locked room or secure enclosure under the control of a peace officer or custodial officer and primarily used for the temporary confinement).</p>	<p>Prior to approval of final designs and contractor's specifications and During construction activities</p>	<p>Design-Builder</p>	<p>County of Los Angeles Department of Public Works</p>

**TABLE 3-1
MITIGATION MONITORING AND REPORTING PROGRAM**

Mitigation Measures	Mitigation Timing	Responsible Agency/Party	Monitoring Agency/Party
Transportation (Section 4.13 of the EIR)			
<p>PDF TRA-1 The Contractor's Specifications will require that the Vehicular access to the Project will be via two existing driveways: one at 60th Street West south of West Avenue I and one at West Avenue I. The site access driveways will be stop-sign controlled with a stop-sign facing the minor street approach (i.e., at the Project driveway). The Project driveways will have one inbound travel lane and one outbound travel lane. As determined by the County of Los Angeles Department of Public Works improvements to driveways to accommodate ingress/egress, including new curb and gutter improvements, may be required.</p>	<p>Prior to approval of final designs and contractor's specifications and During construction activities</p>	<p>Design-BUILDER</p>	<p>County of Los Angeles Department of Public Works</p>
<p>RR TRA-1 The Project's construction activities will be conducted in accordance with the provision of traffic-control devices in compliance with the Manual for Uniform Traffic Control Devices (MUTCD) to ensure traffic safety on public streets, highways, pedestrian walkways, and bikeways.</p>	<p>During construction activities</p>	<p>Design-BUILDER</p>	<p>County of Los Angeles Department of Public Works</p>
<p>RR TRA-2 The Project's construction activities on public rights-of-way will be conducted in accordance with the current Standard Specifications for Public Works Construction (Greenbook) and Additions and Amendments to the Standard Specifications for Public Works Construction (Graybook), including Traffic Control Provisions.</p>	<p>During construction activities</p>	<p>Design-BUILDER</p>	<p>County of Los Angeles Department of Public Works</p>
<p>RR TRA-3 For any off-site traffic or parking-related activities within the City of Lancaster, the Project's construction activities will be conducted in accordance with the City of Lancaster's Traffic Code (Title 10 of the Lancaster Municipal Code), related to vehicle parking on public roads; construction traffic signs and traffic control; and other related regulations.</p>	<p>During construction activities</p>	<p>Design-BUILDER</p>	<p>County of Los Angeles Department of Public Works</p>
Utilities and Service Systems (Section 4.14 of the EIR)			
<p>PDF UTL-1 The Contractor's Specifications will require that the Project will include the following on-site utility infrastructure improvements:</p> <ul style="list-style-type: none"> New on-site fire and domestic/potable water pipelines that connect to all existing and new buildings, and includes new fire hydrants, as required by the County of Los Angeles Fire Department and/or Department of Public Works. 	<p>Prior to approval of final designs and contractor's specifications and During construction activities</p>	<p>Design-BUILDER</p>	<p>County of Los Angeles Department of Public Works</p>

MITIGATION MONITORING AND REPORTING PROGRAM**

Mitigation Measures	Mitigation Timing	Responsible Agency/Party	Monitoring Agency/Party
<ul style="list-style-type: none"> New connections of the existing on-site sewage pipelines to ensure connection to new on-site buildings. New on-site storm drainage pipelines and facilities that connect with existing storm drain infrastructure that complies with storm water quality and quality control requirements under the County's SUSMP, LID standards, and Green Building Standards Code. 			
<p>PDF UTL-2 The Contractor's Specifications will require that the Project will include a new off-site 12-inch water pipeline extension from the on-site water lines to the existing water main within West Avenue I. The extension will connect from either 60th Avenue West or from the northern boundary of the site near the helipad, to the existing 12-inch LACWWD 40-owned distribution pipeline in West Avenue I. Existing connections to existing groundwater wells and reservoirs located adjacent to 60th Street West will be severed. The Project's disconnection from the existing water distribution system will be conducted in such a manner as to ensure the integrity of the existing wells, pumps, reservoirs, and water lines for continued use by other County-owned facilities currently being served by this water system.</p>	<p>Prior to approval of final designs and contractor's specifications and During construction activities</p>	<p>Design-Builder</p>	<p>County of Los Angeles Department of Public Works</p>
<p>RR UTL-1 The Project will be designed, constructed and operated in accordance with the County of Los Angeles Sanitation District's (LACSD's) Wastewater Ordinance, all wastewater discharges into LACSD facilities shall be required to comply with the discharge standards set forth to protect the public sewage system.</p>	<p>Prior to approval of final designs and contractor's specifications and During construction activities</p>	<p>Design-Builder</p>	<p>County of Los Angeles Department of Public Works</p>
<p>RR UTL-2 The Project's water, sewer, storm drain, and other utility infrastructure improvements will be designed, constructed and operated in accordance with the applicable regulations set forth in the Los Angeles County Code, which incorporates by reference the California Building Code, the California Electrical Code, the California Mechanical Code, the California Plumbing Code, the California Fire Code, and the Green Building Standards Code.</p>	<p>Prior to approval of final designs and contractor's specifications and During construction activities</p>	<p>Design-Builder</p>	<p>County of Los Angeles Department of Public Works</p>

**TABLE 3-1
MITIGATION MONITORING AND REPORTING PROGRAM**

Mitigation Measures	Mitigation Timing	Responsible Agency/Party	Monitoring Agency/Party
RR UTL-3 The Project will be constructed in accordance with the County's Green Building Standards Code and Construction and Demolition Debris Recycling and Reuse Ordinance, which requires a minimum of 65 percent of the "non hazardous construction and demolition debris" (by weight or volume) to be recycled or reused unless a lower percentage is approved by the Director of Public Works.	Prior to approval of final designs and contractor's specifications and During construction activities	Design-Builder	County of Los Angeles Department of Public Works
RR UTL-4 The Project will be designed, constructed and operated in accordance with the County's Departmental Recycling Program Directives to implement waste reduction and recycling measures.	Prior to approval of final designs and contractor's specifications and During construction activities and Ongoing, throughout operations	Design-Builder and County of Los Angeles Sheriff's Department	County of Los Angeles Department of Public Works and County of Los Angeles Sheriff's Department
MM UTL-1 The County shall enter the New Water Supply Entitlement Acquisition program established by the County Waterworks District No. 40 (LACWWD No. 40) and pay a one-time deposit of \$10,000 per acre-foot of annual water demand from the Project for the acquisition of additional water supplies from Antelope Valley-East Kern Water Agency (AVEK) to serve the Project, pursuant to the August 13, 2013 Memorandum of Understanding between LACWWD No. 40 and AVEK.	Prior to issuance of occupancy permit	County of Los Angeles Department of Public Works	County of Los Angeles Department of Public Works and Los Angeles County Waterworks District No. 40
Energy (Section 4.15 of the EIR)			
No PDF, RR or MM required.			

SECTION 4.0 REVISIONS, CLARIFICATIONS, AND CORRECTIONS ON THE DRAFT EIR

The number of changes to the Draft EIR have been made based on the comments and the responses to the comments. These are listed below, with inserted text shown as **bold** and deleted text shown as ~~strikeout~~.

Page ES-9, Table ES-2 and Page 4.2-13 and Page 4.6-12

PDF AIR-3 is revised to read:

PDF AIR-3 The Contractor's Specifications will require that on-site gardening **features be constructed within** ~~activities will be conducted in contained~~ raised beds only and will be filled with imported soils derived from outside the Antelope and Kern Valleys so that inmates would not be interacting directly with local soils.

PDF GHG-3 is revised to read:

PDF GHG-3 The Project **site will have the** ~~post~~ Antelope Valley Transit Authority (AVTA) bus and Metrolink schedules **posted**, as well as the locations of the nearest Park-and-Ride lots, in areas visible to visitors and in the Staff Services building to encourage the use of public transportation by staff and visitors. AVTA bus and Metrolink schedule information will be updated ~~not less than every six months to ensure that they are accurate~~ **to ensure accuracy**.

RR GHG-5 is revised to read:

RR GHG-5 The Project will be subject **to any project direction adopted by the Board of Supervisors based upon** the findings of the Advisory Board's evaluation of strategies to reduce negative impacts of operating the MLWDC away from the downtown Los Angeles area, including contract transportation for visitors, videoconferencing for attorney consultation, and reviewing national best practices for visiting and family reunification.

Pages 1-2 and 1-3, Section 1.1.4

To replace the discussion and dates of documents that provided context and background for the actions taken by the Board of Supervisors related to County jails in general, and the Project in particular, the text is revised to read:

This EIR references several technical studies, analyses, and reports that have been used in the preparation of this EIR, which are identified at the end of each section under the heading "References". The preparation of this EIR also relied upon information provided in various County of Los Angeles Board of Supervisors Agenda Reports, Summary of Proceedings, and Final Meeting Minutes. These documents provided context and background for the actions taken by the Board of Supervisors related to County jails in general, and the Project in particular. In accordance with Section 15150(b) of the State CEQA Guidelines, the locations where the public may obtain and review these referenced documents by appointment during normal business hours used in the preparation of the EIR include the County of Los Angeles, Public Information Office at 358 Kenneth Hahn Hall of Administration, 500 W. Temple Street, Los Angeles, California 90012. As stated in Section 15150(f) of the State CEQA Guidelines, incorporation by reference is most appropriate for including long, descriptive, or technical materials that provide general background but do not contribute directly to the analysis of the

problem at hand. ~~The summary listing of Board Agenda Reports, Summary Proceedings, and Final Meeting Minutes referenced below provide an overview of the Board of Supervisor's deliberations and actions taken on the following dates:~~

~~2006: March 6, March 21, June 20, July 11, August 1
2007: January 9, June 18, September 11, October 16, November 6, November 27
2008: January 29, February 19, March 4, March 18, April 8
2011: October 11, October 18, October 25, November 1, November 29
2012: January 24, May 6
2013: May 21, July 12, July 16, August 20, October 18, October 22
2014: May 6
2015: January 26, September 4~~

The County of Los Angeles Board of Supervisors' official meeting minutes, called Statements of Proceedings, along with related documents including Board Agenda Reports, individual motions, filed reports and meeting transcripts concerning the proposed Project, are also incorporated by reference. These documents can be accessed on the County's website by meeting date or the searchable links, including "Statement of Proceedings/Minutes" or "Transcripts", available on line at:

<http://bos.lacounty.gov/Board-Meeting/Board-Agendas>

The summary listing below of these contextual documents incorporated by reference provides a non-exclusive selection of dates of the Board of Supervisors' deliberations and actions taken related to topics including County jail system capacity, diversion from incarceration in general, and the proposed Project:

2006 - February 14, March 14, March 21, June 20, July 21, August 1

2007 - June 18, September 11, October 9, October 16, November 6, November 27

2008 - January 29, February 19, March 4, March 18, April 8

2011 - October 11, October 18, October 25, November 1, November 29

2012 - January 24, June 6

2013 - May 21, July 16, August 20, September 3, September 17, October 22

2014 - May 6, June 23, July 29, August 5

2015 - May 5, May 19, May 26, June 9, August 4, August 11, August 18, September 1

Page 4.2-9

4th paragraph, 3rd sentence is revised to read:

The majority of people (approximately 60 percent) ~~exposed to~~ **infected with** Valley Fever spores develop no symptoms (CDPH ~~2012~~**2016**).

Page 4.2-21

The California Department of Corrections and Rehabilitation (CDCR) determined the State prison facilities that are located in the geographic area where Valley Fever has been reported to be most common are: Avenal State Prison (ASP) in Kings County; Substance Abuse Treatment Facility (SATF) in Kings County; California State Prison-Corcoran in Kings County; ~~California Men's Colony (CMC) in San Luis Obispo County~~; Pleasant Valley State Prison (PVSP) in Fresno County; California Correctional Institution (CCI) in Kern County; Kern Valley State Prison (KVSP) in Kern County; North Kern State Prison (NKSP) in Kern County; and Wasco State Prison in Kern County (WSP) (U.S. District Court 2013). In 2011, 535 of the 640 reported Valley Fever cases within the CDCR (approximately 85 percent) occurred at ASP and PVSP.

The ~~nine~~ prisons and facilities identified by the CDCR as having a higher risk of exposure to Valley Fever do not include the California State Prison- Los Angeles County, located in the City of Lancaster, which is adjacent to the MLWDC Project site. As such, the CDCR has not identified the Lancaster area as being a geographic location that requires screening or interventions for the State prison population with regard to exposure to Valley Fever.

Page 4.2-24

A new reference is added:

California Department of Public Health (CDPH). 2016 (January). Valley Fever Fact Sheet. Sacramento, CA: CDPH.
<https://www.cdph.ca.gov/HealthInfo/discond/Documents/VFGeneral.pdf>

Page 4.3-13

MM BIO-3, 2nd paragraph, 4th sentence is revised to read:

If in-lieu mitigation fees are required, prior to the initiation of any construction-related activities, the ~~LACFCDC~~**County** shall pay the in-lieu mitigation fee to a mitigation bank/enhancement program for the in-kind (equivalent vegetation type and acreage) replacement of impacted jurisdictional resources.

Page 4.3-13

MM BIO-3, 2nd paragraph, 5th sentence is revised to read:

If a Restoration Program is required, prior to the initiation of any construction-related activities, ~~LACFCDC~~**County** shall prepare and submit a Riparian Habitat Mitigation and Monitoring Program (HMMP) for USACE and CDFW approval.

Page 4.6-14

3rd paragraph, 2nd sentence is revised to read:

The Project is proposed for construction beginning in ~~November~~**December** 2016, with the facility in operation by the last quarter of 2019.

Page 4.12-3

Table 4.12-1, last column is revised to read:

**TABLE 4.12-1
FIRE STATIONS IN THE PROJECT AREA**

Fire Station Number	Address	Distance from Project Site
84	5030 West Avenue L-14 Quartz Hill, CA 93536	3.75 4.7 miles south
112	8812 West Avenue E-8 Lancaster, CA 93536	4.37 6.9 miles northwest
130	44558 40 th Street West Lancaster, CA 93536	4.7 1.8 miles east
134	43225 25 th Street West Lancaster, CA 93534	3.87 5.7 miles southeast

* Source: Lancaster 2009b, LACFD 2015.

Page 4.12-3

1st paragraph after Table 4.12-1, 1st sentence is revised to read:

Fire Station 130 is located closest (**1.78** miles) to the site and is the jurisdictional station (i.e., first due) for the Project site.

Page 4.12-3

1st paragraph after Table 4.12-1, last sentence is revised to read:

Effective January 1, 2015, **this station is staffed with a four-person assessment engine, which is an engine company with some limited paramedic capabilities, and a two-person paramedic squad.** ~~the three-person engine company was converted to a four-person assessment engine, which is an engine company with some limited paramedic capabilities (LACFD 2014.)~~

Page 4.14-13

1st paragraph after Table 4.14-3, last sentence is revised to read:

This trunk sewer eventually connects to the Lancaster Water Reclamation Plant at ~~18~~**18965** West Avenue D in Lancaster, which has a design capacity of 18 mgd and currently processes an average of ~~13.415~~ **175** mgd (LACSD 2014a, **2016**).

Page 4.14-30

2nd paragraph under Long-Term Operational Impacts, 1st sentence is revised to read:

The LACSD estimated the average wastewater flow increase from the Project ~~at 100,800 to be 98,700 gpd (which assumes 175 gpd per additional bed)~~ **at 100,800 to be 98,700 gpd** (LACSD 2014a, **2016**).

Page 4.14-25 - Table 4.14-6; Page 4.14-26 - Table 4.14-7; Page 4.14-27 - Table 4.14-8 and Table 4.14-9; and Page 4.14-28 - Table 4.14-10 and Table 4.14-11:

A star is added at the row for Imported Water: Imported Water*

A note is added at the bottom of each table to read:

***Imported Water Values vary from the District 40 2010 IRUWMP as this WSA uses the 2013 SWP Reliability percentages (see Table 5.1).**

Page 5-2 – Text and Table 5-1

The Jail Plan Report was issued on July 5, 2013 and it identified several critical needs for the County-wide jail system, including the need to: (1) close and demolish Men's Central Jail; (2) provide appropriate mental health treatment facilities; (3) restore Twin Towers Correctional Facility to general population inmates; (4) align cell and bed types with inmate population; and (5) reduce crowding in the jail system (Vanir 2013). The Jail Plan Report set forth various options that would address these critical needs and create the correct size County Jail system, provide the proper housing types to accommodate the inmate population, improve public safety, and provide flexibility to adapt to changes over time. The Jail Plan Report Options **described in the 2014 version of the report** are summarized in Table 5-1, **including estimated operating and construction costs for each option:**

TABLE 4-1
JAIL PLAN REPORT SUMMARY OF OPTIONS

Option	Description	New Beds	Total Operating Capacity (Beds)	Total Estimated Project Annual Operational Cost	Construction Cost
1A	New CCTF and New Women's Village at PDC	4,800 (CCTF) 1,156 (Female-PDC)	20,645	\$405 Million	\$1.97 Billion
1B	New CCTF and Modernize/Re-Open MLDC	4,800 (CCTF) 1,604 (Female- MLDC)	21,093	\$456 Million	\$1.74 Billion
2	New CCTF and No New Women's Facility	5,800 (CCTF) 0 (Female)	20,489	\$442 Million	\$2.18 Billion
3	New CCTF at PDC and Downtown Los Angeles, and New Women's Village at PDC	1,740 (New PDC-CCTF) 3,120 (New Central CCTF) 1,156 (Female- PDC)	20,705	\$430 Million	\$2.09 Billion
4	New CCTF and Modernize/Re-Open MLDC, New Women's Village at PDC, and Close PDC East	5,600 (New CCTF) 1,604 (Female- MLDC)	21,769	\$543 Million	\$2.32 Billion
Facility Names CCTF: Consolidated Correctional Treatment Facility PDC: Pitchess Detention Center, Santa Clarita, CA. MLDC: Mira Loma Detention Center, Lancaster, CA Source: Vanir 2014 (Appendix A-4)					

Appendix G-2 - Water Supply Assessment

Tables 5.4, 5.5, 5.6, 5.7, 5.8, and 5.9 are revised as follows:

A star is added at the row for Imported Water: Imported Water*

A note is added at the bottom of each table to read:

***Imported Water Values vary from the District 40 2010 IRUWMP as this WSA uses the 2013 SWP Reliability percentages (see Table 5.1).**

These changes merely clarify or update the discussion but do not change the analysis or conclusions of the Draft EIR. Based on the analysis in the Draft EIR, the comments received, and the responses to these comments, no substantial new environmental issues have been raised that have not been adequately addressed in the Draft EIR. Also, no changes to the analysis or conclusions of the Draft EIR are necessary based on the comments, the responses to the comments, and the revisions to the Draft EIR that are listed above.

Subject: Attn: Mira Loma Women's Jail Environmental Impact Report

Dear LA County Chief Exec Office and Board of Supervisors,

[Insert brief introductory message why you oppose jail]

Please consider my public comment on the Draft Environmental Impact Report (EIR) regarding the proposed new Mira Loma Jail released on November 9th.

A new jail in Lancaster County will be severely detrimental to the health and well being of LA County residents as well as destructive to the local environment. The EIR fails to adequately address the negative impacts on residents and the natural landscape caused by jail construction, nor does it adequately provide plans for community based alternatives to jail construction. With investment in diversion, bail/bond reform, and other jail population reduction measures, this proposed jail would be unnecessary.

The proposed jail site is located several hours from downtown Los Angeles, requiring additional travel for people imprisoned there, lawyers and service providers serving prisoners, and their loved ones who wish to visit. This increased travel will be a severe burden on families, providers, and prisoners that must be considered in the proposal as community connections through programs and family visits have been shown to greatly reduce recidivism. Additionally, increased travel will cause greater smog and air pollution, as well as place a strain on already inadequate public transportation and road systems used by prisoners, loved ones, jail staff, and construction workers.

The suggested location is a known "hazardous waste site", with two underground storage tanks that have failed leak detection tests, meaning there could be contamination of soil and groundwater, and a high risk of exposure to contaminated soil and ground since 44% of the project site will be "outdoor pervious area". This puts prisoners at the jail, in custody of the County of Los Angeles, in extreme health risk. Plans for water usage and storage when proposing to introduce thousands of new prisoners as well as hundreds of employees are inadequate at mitigating the strain to the environment and current residents. Additionally the weather and environmental conditions in this area foster a high probability for "Valley Fever", a fungal disease that can result in death. If the jail proposal moves forward, during construction local residents would be at increased risk due to displacement of dry soils. After completion, prisoners at the jail would be at great risk for this disease, particularly those with already compromised immune systems.

This proposed jail is unsafe for LA County communities and our environment. For the above reasons, the proposed new Mira Loma Jail should be rejected and the Draft EIR must not be approved.

Dear LA County Chief Exec Office and Board of Supervisors,

[Insert brief introductory message why you oppose jail]

Please consider my public comment on the Draft Environmental Impact Report (EIR) regarding the proposed new Mira Loma Jail released on November 9th.

We need to reform sentencing guidelines and focus on rehabilitation. We have more people in jail than any other advanced country does. I do not support building new jails now. Let's invest the same money in rehab facilities, training, and community-based alternatives to jail construction. With investment in diversion, bail/bond reform, and other jail population reduction measures, this proposed jail would be unnecessary.

The proposed new Mira Loma Jail should be rejected and the Draft EIR must not be approved.

please consider my public comment on the Draft Environmental Impact Report (EIR) regarding the proposed new Mira Loma Jail released on November 9th.

A new LA county jail in Lancaster will be severely detrimental to the health and well being of LA County residents as well as destructive to the local environment. The EIR fails to adequately address the negative impacts on residents and the natural landscape caused by jail construction, nor does it adequately provide plans for community based alternatives to jail construction. With investment in diversion, bail/bond reform, and other jail population reduction measures, this proposed jail would be unnecessary.

The proposed jail site is located several hours from downtown Los Angeles, requiring additional travel for people imprisoned there, lawyers and service providers serving prisoners, and their loved ones who wish to visit. This increased travel will be a severe burden on families, providers, and prisoners that must be considered in the proposal as community connections through programs and family visits have been shown to greatly reduce recidivism. Additionally, increased travel will cause greater smog and air pollution, as well as place a strain on already inadequate public transportation and road systems used by prisoners, loved ones, jail staff, and construction workers.

The suggested location is a known "hazardous waste site", with two underground storage tanks that have failed leak detection tests, meaning there could be contamination of soil and groundwater, and a high risk of exposure to contaminated soil and ground since 44% of the project site will be "outdoor pervious area". This puts prisoners at the jail, in custody of the County of Los Angeles, in extreme health risk. Plans for water usage and storage when proposing to introduce thousands of new prisoners as well as hundreds of employees are inadequate at mitigating the strain to the environment and current residents. Additionally the weather and environmental conditions in this area foster a high probability for "Valley Fever", a fungal disease that can result in death. If the jail proposal moves forward, during construction local residents would be at increased risk due to displacement of dry soils. After completion, prisoners at the jail would be at great risk for this disease, particularly those with already compromised immune systems.

This proposed jail is unsafe for LA County communities and our environment. For the above reasons, the proposed new Mira Loma Jail should be rejected and the Draft EIR must not be approved.
