Director and Chief Medical Officer

for Jonathan E. Fielding, M.D., M.P.H.
Director of Public Health and Health Officer

SUBJECT: **WEST NILE VIRUS SURVEILLANCE AND PREVENTION**

On May 30, 2006, the Board approved a motion by Mayor Antonovich, instructing the Director of Public Health to continue collaborative efforts for surveillance and mosquito control with vector control districts, conduct educational meetings and outreach activities to key organizations and civic leaders, and report back to the Board in 30 days with a calendar of scheduled community forums.

The Acute Communicable Disease Control Program (ACDC) is conducting several surveillance activities:

- An informational letter was distributed to all licensed physicians and laboratory directors within the county on May 25, 2006. It advised them that West Nile virus (WNV) is now enzootic in Los Angeles County (LAC) and California, so all cases of viral meningitis, encephalitis, acute flaccid paralysis, and suspected WNV fever should be tested for WNV and other arboviruses. Free testing for arboviral infections is available through the LAC Public Health Laboratory.
- Four medical centers located in areas deemed to be at high risk for WNV-related human illness have agreed to participate in enhanced surveillance of encephalitis and viral meningitis during the WNV season.
- ACDC staff will be meeting regularly with local mosquito abatement district staff and participate in the Regional West Nile Virus Task Force. ACDC also participates in statewide WNV surveillance activities and conference calls.
- ACDC will update the website with WNV-disease related activity as it develops. See http://lapublichealth.org/acd/vectorwestnile.htm.

Our presentation on WNV prevention for the general public was updated and the Office of Organizational Development and Training is conducting training of district public health staff to enable them to give community presentations.

www.ladhs.org

Community Health Services has reached out to over 230 community groups to offer presentations detailing prevention of WNV infections. We are awaiting a number of responses. At this time, 134 presentations have been scheduled and 66 responses are pending, as noted on the attachment. Three dozen contacts have received printed materials or have indicated that they do not wish to have a formal presentation.

If you need additional information, please do not hesitate to contact either of us.
