ENGINEER'S REPORT AFFIDAVIT

ENGINEER'S REPORT AFFIDAVIT LOS ANGELES COUNTY FLOOD CONTROL DISTRICT CLEAN WATER FEE

Pursuant to Section 2, subsection 8a, of the Los Angeles County Flood Control Act (Chapter 755 of the Statutes of 1915 and subsequent amendments), the Los Angeles County Flood Control District is authorized to impose a fee ("Clean Water Fee") upon parcels within the district, subject to compliance with the substantive and procedural requirements of Article XIID of the California Constitution. The Enclosed Engineer's Report sets forth the methodology for calculating and apportioning the proposed Clean Water Fee as well as the estimated fee revenue.

This Engineer's Report for the Los Angeles County Flood Control District Clean Water Fee consists of five (5) parts, with exhibits as follows:

PART I — INTRODUCTION

Provides general information and background regarding the Los Angeles County Flood Control District and Clean Water Fee, as well as the basis for the fee.

PART II — WATERSHED AREAS

This section describes the nine (9) watershed areas within the Los Angeles County Flood Control District in which the proposed Clean Water Fee will be imposed and in which revenues from the fee will be spent Clean Water Fee including the properties and parcels of land therein that would be subject to the Clean Water Fee.

PART III — METHOD OF APPORTIONMENT (FEE CALCULATIONS)

Identifies the rationale and the formulas used for calculating the Clean Water Fee in relationship to the proportional cost of service to each parcel.

PART IV — BUDGET AND REVENUE ALLOCATIONS

Provides an overview of the estimated annual costs to finance a portion of the property related cost of service to enhance the overall water quality within the Los Angeles County Flood Control District attributable to stormwater and urban runoff; as well as the allocation of revenues from the Clean Water Fee.

PART V — FEE SERVICE AREA BOUNDARY DIAGRAM

A copy of the Fee Service Area boundary diagram that identifies the nine (9) designated watersheds and the cities and unincorporated areas within those watersheds.

EXHIBITS

Various Exhibits that provide summary information regarding the properties within the Clean Water Fee service area, impervious percentages, impervious areas and fees including:

EXHIBIT A — LAND USE IMPERVIOUS ASSIGNMENTS

EXHIBIT B — REVENUES BY LAND USE FOR THE DISTRICT

EXHIBIT C — REVENUES BY LAND USE PER WATERSHED

EXHIBIT D — REVENUES BY MUNICIPALITY PER WATERSHED

EXHIBIT E — REVENUES BY MUNICIPALITY

EXHIBIT F — PARCEL FEE ROLL

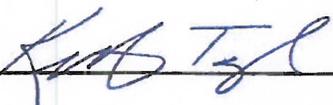

The undersigned respectfully submits the enclosed Clean Water Fee Engineer's Report for the Los Angeles County Flood Control District, County of Los Angeles, State of California.

Dated this 29th day of November, 2012

Respectfully submitted,

By: 

Jim McGuire

PART I — INTRODUCTION

BACKGROUND

Following a disastrous regional flood which took a heavy toll on lives and property, the State Legislature in 1915 adopted the Los Angeles County Flood Control Act (Chapter 755 of the Statutes of 1915), which established the Los Angeles County Flood Control District (the "District") and empowered it to provide flood control, water conservation, and flood protection within its boundaries. The District is governed, as a separate entity, by the County of Los Angeles Board of Supervisors.

The District encompasses more than 3,000 square miles, 85 cities and approximately 2.2 million parcels of land within the County of Los Angeles. Within the District, the drainage infrastructure includes over 20,000 miles of public roadways, 500 miles of open channel, 2,800 miles of underground storm drain, and an estimated 120,000 catch basins within incorporated and unincorporated areas of the various watersheds within the District.

Based on an overall evaluation of the District's storm drain system and in part to comply with water quality regulations mandated by provisions of the Clean Water Act¹ and the Porter Cologne Water Quality Act², the cost associated with implementing specific projects, programs, and activities necessary to improve water quality and reduce and/or mitigate storm water and urban runoff pollution is estimated to be in the billions of dollars district-wide. Neither the cities within the District, the County, nor the District have current funding sources sufficient to address these costs and new funding sources are necessary to reduce and/or mitigate storm water and urban runoff pollution to meet increasing state and federal regulation for water quality.

In response to these additional water quality needs within the District, Assembly Bill 2554 ("AB 2554"), an amendment to the Los Angeles County Flood Control Act, became law on January 1, 2011, authorizing the District to impose a fee or charge on parcels within its territory, in compliance with Article XIID of the California Constitution. The fee or charge would pay the costs and expenses of carrying out projects and providing services to improve water quality and reduce stormwater and urban runoff pollution in the District. AB 2554 requires the fees to be collected with county taxes. In addition, the revenues must be paid into the county treasury to the District's credit.

There are nine (9) designated watershed areas within the District in which the Clean Water Fee is proposed ("Fee Service Area"), which are identified in AB 2554 as: Ballona Creek, Dominguez Channel, Upper Los Angeles River, Lower Los Angeles River, Rio Hondo, Upper San Gabriel River, Lower San Gabriel River, Santa Clara River, and Santa Monica Bay watersheds. The boundaries of these watershed areas are determined by hydrology, based upon the flow of stormwater and urban runoff. Each of these nine watershed areas has its own regional infrastructure improvement and maintenance needs.

The proposed Clean Water Fee will be imposed on parcels located within the Fee Service Area, which consists of these nine watershed areas. The boundaries of the nine watershed

¹ 33 U.S.C. §1251 et seq. (1972)

² Division 7, Sections 13000 through 14958 of the California Water Code

areas are described in more detail in Part II of this Report, entitled “Watershed Areas”, and are illustrated by the diagram in Part V of this Report, entitled “Fee Service Area Boundary Diagram”. Certain area located in the northern part of the District is not included in these nine watershed areas and is therefore not included in the Fee Service Area and the Clean Water Fee will not be imposed on parcels in this area.

BASIS OF FEE

The Los Angeles County Flood Control District Clean Water Fee is authorized pursuant to AB 2554 which is codified at Section 2, subsection 8a, of the Los Angeles County Flood Control Act (Chapter 755 of the Statutes of 1915 and subsequent amendments) and is subject to the applicable requirements of Proposition 218 (Articles XIII C and XIII D of the California Constitution).

Article XIII D, Section 6.b, of the California Constitution sets forth the following requirements for existing, new or increased property-related fees and charges. A fee or charge shall not be extended, imposed, or increased by any agency unless it meets all of the following requirements:

1. Revenues derived from the fee or charge shall not exceed the funds required to provide the property related service.
2. Revenues derived from the fee or charge shall not be used for any purpose other than that for which the fee or charge was imposed.
3. The amount of a fee or charge imposed upon any parcel or person as an incident of property ownership shall not exceed the proportional cost of the service attributable to the parcel.
4. No fee or charge may be imposed for a service unless that service is actually used by, or immediately available to, the owner of the property in question. Fees or charges based on potential or future use of service are not permitted. Standby charges, whether characterized as charges or assessments, shall be classified as assessments and shall not be imposed without compliance with Section 4 of this Article.
5. No fee or charge may be imposed for general governmental services including, but not limited to, police, fire, ambulance or library services, where the service is available to the public at large in substantially the same manner as it is to property owners.

In compliance with these provisions, the Clean Water Fee is based on “cost of service”, which means that each property owner will pay a fee proportional to its “fair share” of the cost of services implemented to improve water quality and paid for by the revenues from the fee. For each parcel, the fee levied is proportional to the amount of stormwater runoff attributable to and contributed by the parcel to the storm drain system and/or to water bodies within the watershed in which the parcel is located, which is determined by the amount of impervious area of the property. Impervious area is determined as a percentage of the total parcel area based on the parcel’s designated land use. The formula for calculating impervious area is set forth in Part III of this Report, entitled “Method of Apportionment (Fee Calculations)”

The annual Clean Water Fee would be levied upon each parcel of property within the Fee Service Area which is comprised of parcels within the nine designated watersheds of the District. Excluded from the Fee Service Area are parcels within the District that do not drain to the nine designated watersheds listed in the California State Assembly Bill No. 2554, but

instead drain to the Antelope Valley Watershed and/or to Kern and Ventura Counties as well as the various islands along the Los Angeles County coast line. In addition, the fee will not be imposed on parcels that are considered part of the drainage infrastructure or conveyance of water runoff, which may include, but is not limited to public roads, water bodies and flood control channels or related water quality facilities. In addition, the Clean Water Fee will not be levied on four undeveloped parcels along the northern edge of the Santa Clara River Watershed that are within the City of Palmdale. Although these four parcels are physically within the Santa Clara River Watershed, they are the only parcels within the City of Palmdale that are within the Fee Service Area and it has been determined that the administrative costs of including them in the program would exceed the fee revenues collected from those parcels.

The annual fee proposed to be levied on parcels within the Fee Service Area is intended to provide a stable and long-term funding source to finance a portion of the property-related cost of service to improve water quality and reduce pollution from stormwater and urban runoff throughout the Fee Service Area, although it is anticipated that the specific projects, programs, and activities to be financed from fee revenues would vary within the nine watershed areas and municipalities. The Clean Water Fee will provide ongoing funding to initiate, plan, design, construct, implement, and sustain water quality improvement projects and programs based on effective best management practices. The revenues derived from the fee will finance in part, the construction, operation, and maintenance of projects and development of programs to help meet the emerging stormwater and urban water runoff water quality regulations being imposed by state and federal agencies, specifically, compliance with Total Maximum Daily Load (TMDL) regulations and National Pollutant Discharge Elimination System (NPDES) permits regulating stormwater and urban water runoff associated with the parcels of land within the District.

To address the differing projects and programs expected to be developed for each watershed area, nine regional Watershed Authority Groups ("WAG's) will be established within the nine watersheds within the Fee Service Area. Clean Water Fee These nine Watershed Authority Groups must be formed in accordance with the Joint Exercise of Powers Act, Article 1 (commencing with Section 6500) of Chapter 5 of Division 7 of Title 1 of the Government Code.

Membership in each Watershed Authority Group ("WAG") will consist of municipalities (including cities as well as the County unincorporated area) that are located within the boundaries of the Watershed Area for that WAG, and may also include other public entities. Additional details regarding the structure and governance of the WAGs, and their duties, are set forth in the draft Ordinance and draft Program Elements that were filed with the Board of Supervisors and are available on request

ALLOCATION OF CLEAN WATER FEE REVENUES

In accordance with Section 2, subsection 8b, of the Los Angeles County Flood Control Act, the revenues from the Clean Water Fee shall be allocated and used as follows:

Allocation to the Los Angeles County Flood Control District

Ten percent (10%) of the annual revenues collected shall be allocated to the District to be used for implementation and administration of water quality programs and projects, as determined by the District, including activities such as regional planning, regional water

quality monitoring consistent with Municipal Separate Storm Sewer Systems (MS4) permits, preparation of technical, financial, and administrative reports, and any other related activities, and for payment of the costs incurred in connection with the levy and collection of the fee and the distribution of the funds generated by imposition of the fee as established by an ordinance adopted pursuant to Section 2, subsection 8c, of the Los Angeles County Flood Control Act.

Allocation to Municipalities

Forty percent (40%) of the annual revenues collected shall be allocated to the cities and unincorporated areas within the Fee Service Area ("Municipalities"), in the same proportion as the amount of fees collected within each Municipality. The revenues allocated to each Municipality are to be expended by those Municipalities within their respective jurisdictions for eligible water quality improvement projects and programs, in conformance with criteria established by an ordinance adopted pursuant to Section 2, subsection 8c, of the Los Angeles County Flood Control Act.

Allocation to Watersheds

Fifty percent (50%) of the annual revenues collected shall be allocated to the nine Watershed Authority Groups formed in each watershed area described in Part II of this Report, entitled "Watershed Areas" The revenues shall be allocated in the same proportion as the amount of fees collected within each watershed area to be used to implement regional water quality improvement plans or programs within the watersheds through a collaborative process as set forth in an ordinance adopted pursuant to Section 2, subsection 8c, of the Los Angeles County Flood Control Act.

PART II — WATERSHED AREAS

WATERSHED DESIGNATIONS

As previously noted, there are nine Watershed Areas within the Fee Service Area of the District in which regional water quality issues will be addressed. The Watershed Area boundaries are detailed on maps retained by the Chief Engineer and are generally illustrated by the diagram in Part V of this Report, entitled “Fee Service Area Boundary Diagram”. The following is a list of the Watershed Areas and a summary of the boundaries and related data of the cities and unincorporated areas included within each Watershed Area:

Ballona Creek Watershed

The Ballona Creek Watershed covers approximately 100 square miles of land that will be subject to the Clean Water Fee if approved by the voters in accordance with Proposition 218. The Ballona Creek is a nine-mile long flood protection channel within this watershed that drains the Los Angeles basin, from the Santa Monica Mountains on the north, the Harbor Freeway (110) on the east, and the Baldwin Hills on the south. The major tributaries to the Ballona Creek include Centinela Creek, Sepulveda Canyon Channel, Benedict Canyon Channel, and numerous storm drains.

This Watershed includes all parcels within Beverly Hills and West Hollywood; most of the properties within Culver City; more than a quarter of the properties in Inglewood and Los Angeles; as well as unincorporated areas of the County. The following provides a summary of the current parcel count and approximate square miles of land area of the cities and unincorporated areas within the Ballona Creek Watershed.

BALLONA CREEK WATERSHED MUNICIPALITIES	PARCEL COUNT	APPROXIMATE SQUARE MILES
Beverly Hills	10,070	4.37
Culver City	13,528	3.87
Inglewood	7,021	1.85
Los Angeles	238,762	82.98
Unincorporated LA County	6,720	5.15
West Hollywood	9,608	1.40
Ballona Creek Total	285,709	99.62

Dominguez Channel Watershed

The Dominguez Channel Watershed is located within the southern portion of Los Angeles County, and encompasses approximately 100 square miles of land that will be subject to the Clean Water Fee if approved by the voters in accordance with Proposition 218.

This Watershed includes all parcels within Gardena, Hawthorne, Lawndale, and Lomita; most of the properties within Carson, Inglewood, Rolling Hills Estates, and Torrance; significant portions of El Segundo, Manhattan Beach, Rancho Palos Verdes, Redondo Beach and Rolling Hills, small portions of Compton, Long Beach, Los Angeles, Palos Verdes Estates; plus unincorporated areas of the County. The following provides a summary of the current parcel count and approximate square miles of land area of the cities and unincorporated areas within the Dominguez Channel Watershed.

DOMINGUEZ CHANNEL WATERSHED MUNICIPALITIES	PARCEL COUNT	APPROXIMATE SQUARE MILES
Carson	23,883	16.09
Compton	1,433	0.50
El Segundo	411	1.69
Gardena	14,026	4.58
Hawthorne	12,972	4.61
Inglewood	14,241	5.16
Lawndale	5,857	1.43
Lomita	5,073	1.54
Long Beach	348	3.30
Los Angeles	42,970	25.64
Manhattan Beach	831	0.51
Palos Verdes Estates	698	0.31
Rancho Palos Verdes	6,052	3.62
Redondo Beach	7,241	1.97
Rolling Hills	613	2.33
Rolling Hills Estates	2,520	2.64
Torrance	32,671	14.04
Unincorporated LA County	22,062	9.94
Dominguez Channel Total	193,902	99.90

Upper Los Angeles River Watershed

The Upper Los Angeles River Watershed comprises much of the central western portion of Los Angeles County, and encompasses approximately 521 square miles of land that will be subject to the Clean Water Fee if approved by the voters in accordance with Proposition 218.

This Watershed includes all parcels within Burbank, Glendale, La Canada Flintridge, and San Fernando; most of the properties within Hidden Hills and South Pasadena; significant portions of Alhambra, Calabasas, Los Angeles, Monterey Park, Pasadena and Vernon; a few properties within Commerce; plus unincorporated areas of the County. The following provides a summary of the current parcel count and approximate square miles of land area of the cities and unincorporated areas within the Upper Los Angeles River Watershed.

UPPER LOS ANGELES RIVER WATERSHED MUNICIPALITIES	PARCEL COUNT	APPROXIMATE SQUARE MILES
Alhambra	5,533	1.70
Burbank	28,900	14.14
Calabasas	5,803	6.07
Commerce	4	0.03
Glendale	44,494	26.08
Hidden Hills	781	1.68
La Canada Flintridge	7,737	7.48
Los Angeles	423,136	221.56
Monterey Park	1,604	1.16
Pasadena	8,312	7.48
San Fernando	5,189	1.81
South Pasadena	6,192	2.32
Unincorporated LA County	25,464	227.00
Vernon	432	1.12
Upper Los Angeles River Total	563,581	519.64

Lower Los Angeles River Watershed

The Lower Los Angeles River Watershed is located in the central southern portion of Los Angeles County, and encompasses approximately 94 square miles of land that will be subject to the Clean Water Fee if approved by the voters in accordance with Proposition 218.

That portion of this Watershed lying within the boundaries of the District includes all parcels within Bell, Bell Gardens, Cudahy, Huntington Park, Lynwood, Maywood and South Gate; most of the properties within Commerce, Compton, Montebello and Vernon; significant portions of Downey, Long Beach, Monterey Park, Paramount, Pico Rivera and Signal Hill; very small portions of Carson, Lakewood and Los Angeles; as well as unincorporated areas of the County. The following provides a summary of the current parcel count and approximate square miles of land area of the cities and unincorporated areas within the Lower Los Angeles River Watershed.

LOWER LOS ANGELES RIVER WATERSHED MUNICIPALITIES	PARCEL COUNT	APPROXIMATE SQUARE MILES
Bell	4,313	2.08
Bell Gardens	4,297	1.97
Carson	31	0.24
Commerce	4,123	5.54
Compton	18,838	7.53
Cudahy	1,829	1.07
Downey	11,135	4.55
Huntington Park	7,611	2.33
Lakewood	283	0.07
Long Beach	56,384	17.00
Los Angeles	43,594	11.08
Lynwood	10,446	3.48
Maywood	3,393	0.91
Montebello	11,940	5.71
Monterey Park	8,439	3.34
Paramount	4,518	2.40
Pico Rivera	3,826	2.39
Signal Hill	3,076	0.81
South Gate	16,458	5.91
Unincorporated LA County	37,555	11.64
Vernon	1,278	3.46
Lower Los Angeles River Total	253,367	93.51

Rio Hondo Watershed

The Rio Hondo Watershed is located in the central portion of Los Angeles County, and covers approximately 104 square miles of land that will be subject to the Clean Water Fee if approved by the voters in accordance with Proposition 218. The rugged steep terrain of the San Gabriel Mountains defines the upper reaches of the watershed, much of which lies within the Angeles National Forest.

This Watershed includes all parcels within Rosemead, San Gabriel, San Marino, Sierra Madre and Temple City; most of the properties within Alhambra, Arcadia, El Monte, Monrovia, Pasadena and South El Monte; significant portions of Bradbury, Duarte and Monterey Park; small portions of Montebello and South Pasadena; a couple of parcels in Industry and Whittier; plus unincorporated areas of the County. The following provides a summary of the current parcel count and approximate square miles of land area of the cities and unincorporated areas within the Rio Hondo Watershed.

RIO HONDO WATERSHED MUNICIPALITIES	PARCEL COUNT	APPROXIMATE SQUARE MILES
Alhambra	13,510	4.06
Arcadia	16,588	8.92
El Monte	16,412	7.03
Industry	2	0.01
Monrovia	10,751	12.74
Montebello	1,091	1.13
Monterey Park	6,317	1.72
Pasadena	30,607	10.95
Rosemead	10,876	4.14
San Gabriel	9,642	3.26
San Marino	4,730	2.95
Sierra Madre	4,206	2.60
South El Monte	4,305	2.26
South Pasadena	910	0.35
Temple City	10,096	3.20
Unincorporated LA County	24,329	38.62
Whittier	2	0.06
Rio Hondo Total	164,374	103.99

Upper San Gabriel River Watershed

The Upper San Gabriel River Watershed is located in the eastern portion of Los Angeles County, and covers approximately 442 square miles of land that will be subject to the Clean Water Fee if approved by the voters in accordance with Proposition 218.

That portion of this Watershed lying within the boundaries of the District includes all parcels within Azusa, Baldwin Park, Claremont, Covina, Glendora, Industry, La Puente, La Verne, Pomona, San Dimas, Walnut, and West Covina; most of the properties within Industry and Irwindale; significant portions of Bradbury, Diamond Bar and Duarte, small portions of Arcadia, El Monte, La Habra Heights, Pico Rivera, South El Monte and Whittier; as well as a significant portion of the overall County unincorporated area. The following provides a summary of the current parcel count and approximate square miles of land area of the cities and unincorporated areas within the Upper San Gabriel River Watershed.

UPPER SAN GABRIEL RIVER WATERSHED MUNICIPALITIES	PARCEL COUNT	APPROXIMATE SQUARE MILES
Arcadia	43	0.22
Azuza	10,399	8.37
Baldwin Park	15,131	5.35
Bradbury	418	1.93
Claremont	10,270	11.74
Covina	12,516	5.59
Diamond Bar	10,650	6.05
Duarte	6,143	6.04
El Monte	1,857	0.79
Glendora	15,844	17.57
Industry	1,945	10.75
Irwindale	1,135	8.88
La Habra Heights	132	1.26
La Puente	7,652	2.71
La Verne	9,554	7.27
Pico Rivera	29	0.36
Pomona	32,831	17.87
San Dimas	10,823	13.53
South El Monte	135	0.06
Unincorporated LA County	59,120	294.88
Walnut	9,334	7.76
West Covina	26,385	12.95
Whittier	13	0.13
Upper San Gabriel River Total	242,359	442.05

Lower San Gabriel River Watershed

The Lower San Gabriel River Watershed is located in the south eastern portion of Los Angeles County, and encompasses almost 115 square miles of land that will be subject to the Clean Water Fee if approved by the voters in accordance with Proposition 218. Water runoff from properties within this watershed, eventually flows into the San Gabriel River which extends through both the Upper and Lower San Gabriel River Watersheds (a distance of approximately 58 miles) south to the Pacific Ocean.

That portion of this Watershed lying within the boundaries of the District includes all parcels within Artesia, Bellflower, Cerritos, Hawaiian Gardens, La Mirada, Norwalk and Santa Fe Springs; most of the properties within La Habra Heights, Lakewood and Whittier; significant portions of Diamond Bar, Downey, Long Beach, Paramount, Pico Rivera and Signal Hill; a few parcels within Industry; plus unincorporated areas of the County. The following provides a summary of the current parcel count and approximate square miles of land area of the cities and unincorporated areas within the Lower San Gabriel River Watershed.

LOWER SAN GABRIEL RIVER WATERSHED MUNICIPALITIES	PARCEL COUNT	APPROXIMATE SQUARE MILES
Artesia	3,983	1.22
Bellflower	13,100	4.82
Cerritos	16,252	6.64
Diamond Bar	7,603	6.36
Downey	12,313	5.25
Hawaiian Gardens	2,558	0.76
Industry	9	0.03
La Habra Heights	2,102	4.48
La Mirada	14,255	6.29
Lakewood	23,940	7.15
Long Beach	49,484	20.22
Norwalk	23,106	7.12
Paramount	4,240	1.38
Pico Rivera	11,027	4.66
Santa Fe Springs	6,096	7.46
Signal Hill	1,417	0.90
Unincorporated LA County	23,035	17.73
Whittier	22,467	12.12
Lower San Gabriel River Total	236,987	114.60

Santa Monica Bay Watershed

The Santa Monica Bay Watershed is located primarily along Pacific Ocean in the western portion of Los Angeles County, and encompasses almost 221 square miles of land that will be subject to the Clean Water Fee if approved by the voters in accordance with Proposition 218. This watershed incorporates several sub-watersheds including the North Santa Monica Bay, which includes the Malibu Creek Watershed, Topanga Creek Watershed, and other rural Santa Monica Mountains Watersheds; the South Santa Monica Bay watersheds that spans from the Castlerock Watershed near Malibu to Palos Verdes Peninsula Watersheds on the south; and the Marina Del Rey watersheds that encompasses all areas that drain to the marina.

This Watershed includes all parcels within Agoura Hills, Hermosa Beach, Malibu, and Westlake Village; most of the properties within Palos Verdes Estates and Santa Monica; significant portions of Calabasas, El Segundo, Manhattan Beach, Rancho Palos Verdes, Redondo Beach and Rolling Hills Estates; small portions of Culver City, Los Angeles, Rolling Hills Estates and Torrance; as well as unincorporated areas of the County. The following provides a summary of the current parcel count and approximate square miles of land area of the cities and unincorporated areas within the Santa Monica Bay Watershed.

SANTA MONICA BAY WATERSHED MUNICIPALITIES	PARCEL COUNT	APPROXIMATE SQUARE MILES
Agoura Hills	7,800	6.83
Calabasas	2,793	6.16
Culver City	124	0.05
El Segundo	4,816	3.06
Hermosa Beach	7,072	1.05
Los Angeles	45,571	41.91
Malibu	6,911	18.75
Manhattan Beach	12,243	2.54
Palos Verdes Estates	4,732	3.42
Rancho Palos Verdes	9,404	8.28
Redondo Beach	14,030	2.86
Rolling Hills	152	0.66
Rolling Hills Estates	852	0.46
Santa Monica	23,223	6.03
Torrance	7,969	2.40
Unincorporated LA County	12,470	111.96
Westlake Village	3,780	4.95
Santa Monica Bay Total	163,942	221.37

Santa Clara River Watershed

The Santa Clara River Watershed is located in the northern portion of Los Angeles County, and encompasses slightly less than 463 square miles of land within the Los Angeles County Flood Control District that will be subject to the Clean Water Fee if approved by the voters in accordance with Proposition 218. The Santa Clara River which runs through the watershed is one of the few natural river systems remaining in Southern California. The River originates in the Angeles National Forest and flows westward for approximately 84 miles to the Pacific Ocean.

This Watershed includes most of the properties within Santa Clarita and a large portion of the unincorporated areas of the County. The following provides a summary of the current parcel count and approximate square miles of land area of the cities and unincorporated areas within the Santa Clara River Watershed.

SANTA CLARA RIVER WATERSHED MUNICIPALITIES	PARCEL COUNT	APPROXIMATE SQUARE MILES
Santa Clarita	55,444	45.84
Unincorporated LA County	38,075	416.90
Santa Clara River Total	93,519	462.73

PART III — METHOD OF APPORTIONMENT (FEE CALCULATIONS)

The method of apportionment described in this Report for allocation of the Clean Water Fee utilizes commonly accepted engineering practices and has been designed pursuant to the provisions of Sections 2, subsections 8a-c, of the Los Angeles County Flood Control Act and the provisions of the California Constitution, Article XIII D. The formula has been designed to fairly apportion costs based on a determination of the proportional cost of service to each parcel.

The Clean Water Fee is based on the determination that each of the properties to be charged contributes stormwater and/or discharges urban runoff to the water bodies directly or through the storm drain system in the watershed in which the property is located and therefore places a direct demand on the need to control and/or treat the stormwater and urban runoff from those properties and each property should proportionately share in the cost of the services to be funded with the fee. Furthermore, it has been determined that this proportionality and the corresponding fee for each parcel can be directly measured by the stormwater and urban runoff associated with each parcel which can be calculated by an estimate of the impervious area of the parcel and this calculation of proportional stormwater and urban runoff and the resulting fees would not exceed the cost of the services attributable to each parcel.

CALCULATION OF IMPERVIOUS AREAS

Definition of Impervious Area *The term "impervious area" shall have the following meaning: the natural and non-natural state of a parcel's surface area which acts as a barrier or otherwise contributes to stormwater runoff and which prevents or reduces infiltration into the ground below, as estimated by the application of the impervious percentage factors for various land uses established in the Los Angeles County Department of Public Works, Hydrology Manual, January 2006, ("2006 Hydrology Manual"), subject to certain adjustments as described herein.*

To determine the impervious area applicable to each property within the Fee Service Area of the District, the impervious percentage factors identified in "Appendix D — Proportion Impervious Data", of the 2006 Hydrology Manual (hereafter referred to as "Standard Impervious Percentages") have been utilized as the template (basis) upon which the impervious area of each parcel will be calculated. While the Standard Impervious Percentages outlined in the 2006 Hydrology Manual for various land use classifications reflect a reasonable estimate and typical percentage of impervious area that is appropriate for most parcels within a given land use classification, a detailed review and analysis of a random sampling of parcels across various land use classifications indicated that a strict application of the assigned percentages to parcels greater than ten acres were not always appropriate. Based on this review and analysis it was discovered that for most Non-Single-Family Residential Properties, the measured percentage of impervious area for parcels greater than ten acres was slightly less than the impervious area calculated at the Standard Impervious Percentages. Based on this random sampling it was determined that a twenty percent (20%) reduction to the Standard Impervious Percentages every ten acres yields an impervious area result that appropriately reflects the measured impervious area of those parcels. Therefore, to ensure the calculated impervious area for any one parcel recognizes the potential diminishing stormwater runoff proportionality of large properties, the Clean Water Fee calculation for all Non-Single-Family Residential Properties will utilize the

proportional reduction of the Standard Impervious Percentages established by the 2006 Hydrology Manual as described above (commonly referred to as tier reduction). A more detailed description of this tier reduction (adjusted impervious percentages) for each Non-Single-Family Residential land use classification is outlined later in this section and summarized in Exhibit A — Land Use Impervious Assignments.

Likewise for Single-Family Residential Properties, the 2006 Hydrology Manual identifies a Standard Impervious Percentage for Low-Density Single-Family Residential at twenty-one percent (21%) and High-Density Single-Family Residential at forty-two percent (42%), but does not quantify Medium-Density Single-Family Residential, which is the most common type of residential development. The impervious percentage applicable to Medium-Density Single-Family Residential parcels varies based on lot size between the percentage assigned to Low-Density Single-Family Residential and that of High-Density Single-Family Residential. Therefore, to ensure the Clean Water Fee calculated for all Single-Family Residential Properties is an appropriate and proportional reflection of each parcel's impervious area, the Impervious Percentage established for the Clean Water Fee incorporates a Medium-Density Single-Family Residential classification. A more detailed description of this impervious percentage application (adjusted impervious percentage and area) for single-family residential parcels is outlined in the following section and summarized in Exhibit A — Land Use Impervious Assignments.

The impervious area of a parcel is calculated as a percentage of the parcel's assigned lot size based on an adjusted impervious area percentage applied to all parcels within a specified land use classification:

- **Land Use Classification** - The land use classification of each parcel shall be based on the parcel's designated land use as reflected on the Los Angeles County secured property tax roll ("Secured Roll") for each fiscal year; or an appropriate land use designation determined by the District in consultation with the Los Angeles County Assessor's Office, if the Secured Roll designated land use is not assigned or is determined by the District and/or the County Assessor's Office to be incorrect or an inaccurate reflection of the parcel's actual land use for the purposes of calculating the fee.
- **Assigned Lot Size** - The size of each parcel is based on the parcel area (square feet) as determined by the parcel area data contained in the most current Los Angeles County's Geographical Information System (GIS) database. If the data contained in the GIS database is incorrect, the property owner may request an adjustment in accordance with a claims and appeal process to be adopted by the Board of Supervisors. For parcels that have shared common areas and/or shared parcel area in the GIS data (commonly found with condominium developments and parcels with underlying Possessory Interests), the parcel area shall be proportionately allocated to the underlying individual Assessor's Parcel Numbers (i.e. individual condominium parcels or Possessory Interests).
- **Adjusted Impervious Percentage** – As noted above, the Standard Impervious Percentage applied to various land use classifications is based on and identified in *Appendix D* of the 2006 Los Angeles County Department of Public Works Hydrology Manual. However, these impervious percentages have been modified to incorporate a Medium-Density single-family residential classification that establishes an impervious area applicable to a broad range of single-family residential properties; as well as proportional reductions in the percentage of impervious area applied to large Non-Single-Family Residential Properties.

Each parcel's calculated impervious area ("Applied Impervious Area") is determined by the following formula:

$$\text{(Adjusted Impervious Percentage X Assigned Lot Size) = Applied Impervious Area}$$

(Because percentages are used to calculate the impervious area of each parcel, the resulting calculation of impervious area (Applied Impervious Area) for each parcel shall be rounded to the nearest ten square feet).

Single-Family Residential Properties

Single-Family Residential Properties include all land use designations assigned by the County Assessor's Office with a land use code prefix of "01". This land use classification includes, but is not limited to individual detached single-family residential dwellings, attached single-family residential dwellings with separate Assessor Parcel Numbers (APN's), condominiums, townhomes and modular homes. This land use does not include multi-family residential parcels that have two or more dwelling units on the parcel (multi-family residential parcels are treated as Non-Single-Family Residential Properties). For those single-family residential parcels that include common areas (areas of land not typically assigned an APN) such as condominium developments, the lot size assigned to each condominium parcel shall include that parcel's proportionate share of the common area (typically the total area of the condominium development is divided by the number of condominiums to establish an equal lot size for each condominium parcel). Similarly, for multi-story single-family residential developments (condominiums and townhomes), the lot size established for each residential parcel is that parcel's proportional share of the ground level lot size that the building is located on, rather than the footprint or size of the unit/individual parcel.

Single-Family Residential Properties currently comprise over seventy-five (75%) of all parcels subject to the Clean Water Fee, but only represent about twenty-five (25%) of the total impervious area. Based on the overall single-family residential development data in the County, it is estimated that on average most single-family residential developments yield between four and eight residential units per acre (4 to 8 units/acre). This coupled with the Standard Impervious Percentage ranges established in the 2006 Hydrology Manual for Low-Density and High-Density single-family residential parcels, indicates that the average or Medium-Density Single-Family Residential lot size ranges between 5,000 square feet to 10,000 square feet. Applying the established Standard Impervious Percentages ranges of forty-two percent (42%) for High-Density Single-Family Residential and twenty-one percent (21%) for Low-Density Single-Family Residential to these upper and lower square footage ranges for Medium-Density Single-Family Residential lot sizes yields a consistent impervious area calculation of 2,100 square feet:

$$\text{(5,000 square foot lot X 42\%)} = 2,100 \text{ square feet of Impervious Area}$$

$$\text{(10,000 square foot lot X 21\%)} = 2,100 \text{ square feet of Impervious Area}$$

Therefore all Single-Family Residential Properties that have a lot size greater than or equal to 5,000 square feet, but less than or equal to 10,000 square feet will have an assigned proportional Impervious Area of 2,100 square feet. This application of impervious area includes almost sixty percent (60%) of the parcels currently identified as Single-Family Residential Properties, most of which are near the middle of the lot size range (7,500 square feet).

Although consideration has been given to applying the fixed impervious percentages identified in the 2006 Hydrology Manual for Low and High Density Single-Family Residential parcels to each parcel's specific lot size (i.e. 42% for all lot sizes less than 5,000 square feet; and 21% for all lot sizes greater than 10,000 square feet), this approach to calculating the proportional fee would result in a number of different fees being charged to those residential properties that are not identified as Medium-Density. While this approach would certainly be consistent with the application of the Standard Impervious Percentages identified in the 2006 Hydrology Manual for establishing each parcel's specific impervious area, it must be recognized that these Standard Impervious Percentages are considered typical or average percentages for each land use and the actual impervious area for any given parcel may vary slightly from the calculated impervious area derived by applying these Standard Impervious Percentages.

Therefore in order to establish a more simplified and consistent application of the proportional cost of service associated with these residential parcels, those Single-Family Residential parcels less than 5,000 square feet (High-Density) and those greater than 10,000 square feet (Low-Density) have been grouped into lot square footage ranges similar to the range identified for Medium-Density Single-Family Residential parcels. Within each lot square footage range (500 square foot increments) the mid-lot-size value within each lot size range is multiplied by an adjusted Impervious Percentage, ranging between 40% for lot sizes of 5,000 to less than 5,500 square feet (slightly less than the 42% assigned to High Density Lots) and 22% for parcel lot sizes of 9,500 to less than 10,000 square feet (slightly more than the 21% assigned to Low Density Lots).

The following table summarizes the application and calculation of impervious areas assigned to the various lot sizes of Single Family Residential Properties:

Land Use Classification	Lot Size Ranges Square Feet (SF)	Assigned ⁽¹⁾ Lot Size	Adjusted Impervious Percentages	Applied Impervious Area (SF) ⁽⁴⁾
Single Family Residential:	Less than 1,000	750 ⁽²⁾	42%	320
	1,000 to < 1,500	1,250	42%	530
County Use Code Designations:	1,500 to < 2,000	1,750	42%	740
0100, 0101, 0102, 0103, 0104,	2,000 to < 2,500	2,250	42%	950
0105, 0106, 0108, 0109, 010C,	2,500 to < 3,000	2,750	42%	1160
010D, 010E, 010F, 010G, 010H,	3,000 to < 3,500	3,250	42%	1370
010L, 010M, 010Y, 0110, 0111,	3,500 to < 4,000	3,750	42%	1580
0113, 0114, 0115, 0118, 011C,	4,000 to < 4,500	4,250	42%	1790
0120, 0121, 0122, 0123, 0129,	4,500 to < 5,000	4,750	42%	2000
012C, 012D, 012E, 0130, 0131,	5,000 to < 5,500	5,250	40%	2,100
0133, 0134, 0140, 0141, 014C,	5,500 to < 6,000	5,750	37%	2,100
014D, 01DC, 01DE, 01H3,	6,000 to < 6,500	6,250	34%	2,100
01HC, 01HE, 01HG, 01MC,	6,500 to < 7,000	6,750	31%	2,100
01TO, 01TO, 020A, 020C, 020E,	7,000 to < 7,500	7,250	29%	2,100
055C, 0600, 540V, D101, LAR1,	7,500 to < 8,000	7,750	27%	2,100
LBR4N, LKR1*, LYR3	8,000 to < 8,500	8,250	25%	2,100
	8,500 to < 9,000	8,750	24%	2,100
	9,000 to < 9,500	9,250	23%	2,100
	9,500 to < 10,000	9,750	22%	2,100
	10,000 to < 10,500	10,250	21%	2150
	10,500 to < 11,000	10,750	21%	2260
	11,000 to < 11,500	11,250	21%	2360
	11,500 to < 12,000	11,750	21%	2470
	12,000 to < 12,500	12,250	21%	2570
	12,500 to < 13,000	12,750	21%	2680
	13,000 to < 13,500	13,250	21%	2780
	13,500 to < 14,000	13,750	21%	2890
	14,000 to < 14,500	14,250	21%	2990
	14,500 to < 15,000	14,750	21%	3100
	Greater than 15,000	15,250 ⁽³⁾	21%	3200

(1) For purposes of establishing the Impervious Area, each single-family residential parcel within a specified Lot Size Range is assigned the mid-range square footage value "Assigned Lot Size". This mid-range value multiplied by the "Adjusted Impervious Percentage" establishes the "Applied Impervious Area" for each single-family residential parcel in that Lot Size Range.

(2) Each single-family residential parcel with a Lot Size less than 1,000 square feet is assigned a minimum Impervious Area of 750 square feet.

(3) Each Single-family residential parcel with a Lot Size greater than 15,000 square feet is assigned a maximum Impervious Area of 15,250 square feet.

(4) Because percentages are used to calculate the impervious area of each parcel, the resulting calculation of impervious area for each lot size range is rounded to the nearest ten (10) square feet).

Non-Single-Family Residential Properties

Non-Single-Family Residential Properties includes all other land use designations assigned by the County Assessor's Office that are not designated as Single-Family Residential Properties. These land use classifications include, but are not limited to multi-family residential, vacant land, commercial, industrial, farm land; institutional, recreational, government properties, and miscellaneous designations. Each parcel's land use assignment is determined by the land use code designation on the most recent Los Angeles County Secured Roll or determined by the District in consultation with the Los Angeles County Assessor's Office.

While the 2006 Hydrology Manual established Standard Impervious Percentages applicable to these various land use designations assigned by the County Assessor's Office, it is recognized that these impervious percentages are a reflection of typical or average impervious percentages for those land uses. To account for exceptionally large properties within the various land use classifications, the method of apportionment and calculation of impervious area for the Clean Water Fee outlined in the Report utilizes a tiered approach for calculating the impervious area for these properties.

In general for each Non-Single-Family Residential land use classification, a proportional reduction of the Standard Impervious Percentages established by the 2006 Hydrology Manual shall be applied as follows:

- The appropriate Standard Impervious Percentage outlined in the 2006 Hydrology Manual shall be applied to the first 435,600 square feet of lot size (first ten acres) or to the entire parcel lot size if the parcel is less than 435,600 square feet; then,
- For the next 435,600 square feet of lot size (next ten acres) or portion thereof, the impervious percentage applied will be reduced by twenty percent (20%) or 80% of the Standard Impervious Percentage; then
- For the next 435,600 square feet of lot size (next ten acres) or portion thereof, the previous impervious percentage is then reduced again by twenty percent (20%) which is 80% of the previous percentage or 64% of the Standard Impervious Percentage; and,
- This process of percentage reductions (20% reduction) continues for each of the remaining 435,600 square feet incremental portions of a parcel's total lot size until the calculation yields a resulting value of less than ten (10) square feet.
- Therefore the total impervious area applied to each parcel within a specific Non-Single-Family Residential land use classification, is the sum total of the calculated impervious area for each ten-acre increment (or portion thereof) applicable to that parcel. [Note: Because percentages are used to calculate the impervious area of each parcel, the resulting calculation of impervious area for each parcel including each ten-acre increment applied to Non-Single-Family Residential land use classifications, are each rounded to the nearest ten (10) square feet].

The following table provides an example of the previously described application for calculating the impervious area for one of the Non-Single-Family Residential land use classifications:

Land Use Classification	Lot Size Ranges Square Feet (SF)	Adjusted Impervious Percentages	Calculated Impervious Area (SF)	Accumulative Impervious Area (SF)
Commercial (Developed) — Group F:	0 to 435,600	96.000000%	418,180	418,180
Modern Strip Development, Hotels and Motels	435,601 to 871,200	76.800000%	334,540	752,720
	871,201 to 1,306,800	61.440000%	267,630	1,020,350
County Use Code Designations:	1,306,801 to 1,742,400	49.152000%	214,110	1,234,460
1000, 1001, 1002, 1009, 100C, 100G, 100L, 1010,	1,742,401 to 2,178,000	39.321600%	171,280	1,405,740
1012, 101C, 101G, 10T0, 110*, 1100, 1101, 1102,	2,178,001 to 2,613,600	31.457280%	137,030	1,542,770

	19,166,401 to 19,602,000	0.005227%	20	2,090,810
	19,602,001 to 20,037,600	0.004181%	20	2,090,830
	20,037,601 to 20,473,200	0.003345%	10	2,090,840
	20,473,201 to 20,908,800	0.002676%	10	2,090,850
	20,908,801 to 21,344,400	0.002141%	10	2,090,860
	21,344,401 to 21,780,000	0.001713%	10	2,090,870
	21,780,001 to 22,215,600 ⁽¹⁾	0.001370%	10	2,090,880
	22,215,601 to 22,651,200	0.001096%	-	2,090,880
	22,651,201 to 23,086,800	0.000877%	-	2,090,880
	Maximum Accumulative Impervious Area:		2,090,880	Square Feet

(1) In the above example, a lot size greater than 22,215,600 square feet yields an impervious area result that is less than 10 square feet.

Possessory Interest Parcels

Possessory Interest Parcels, unlike Single-Family Residential Properties and Non-Single-Family Residential Properties, are Assessor Parcel Numbers that do not appear on the Assessor's Parcel Number Maps (APN Maps). These possessory interests, however either through a lease agreement or some other type of entitlement, have an assessable interest in one or more underlying government-owned property which is subject to the Clean Water Fee. While some possessory interests may be considered incidental interests for which the Clean Water Fee is not applicable (short-term leases, non-recurring leases, and/or lease interests with no measurable footprint on the property), many Possessory Interest Parcels because of their lease agreement or entitlements, actually have quantifiable physical attributes (structural square footage and/or land square footage) that can be used to calculate the parcel's proportionate share (interest) in the underlying property for which a fee is calculated. Based on these physical attributes, the fee calculated for the underlying government-owned property ("Fee Parcel") will be proportionately allocated to the Possessory Interests and the Fee Parcel. If the physical attributes (square footage) of the Possessory Interests Parcels are equal to the lot size of the underlying Fee Parcel, the calculated fee for that Fee Parcel will be allocated entirely to the Possessory Interests and apportioned to each Possessory Interests based on its proportional square footage (no fee will be levied on the underlying government-owned Fee Parcel). If however, the total square footage of the Possessory Interest parcels is less than the lot size of the underlying Fee Parcel, the calculated fee for that property will be apportioned to the various Possessory Interests based on their proportional square footage of the property's total lot size with the remainder being allocated to the Fee Parcel.

SUMMARY OF IMPERVIOUS AREAS

Appendix D of the 2006 Hydrology Manual identifies numerous land use classifications with each classification being assigned a Standard Impervious Percentage (ranging from 1% to 96% for those properties subject to the Clean Water Fee). Associated with these various land use classifications and impervious percentages there are a mix of land uses which the County Assessor's Office identifies by primary land use categories including: residential (which includes both single-family and multi-family); commercial; industrial; irrigated farm; dry farm; recreational; institutional; miscellaneous; and government properties. Within these primary land use categories, the land use codes used by the County Assessor's Office further identifies and refines a more specific land use within those categories which in turn correspond to the various land use classifications and impervious percentages identified in the hydrology manual. The following table provides a summary listing of the various land use classification groupings used to calculate the Clean Water Fee and the corresponding Standard Impervious Percentages based on this correlation between the hydrology manual and County Assessor's Office land use designations as well as the number of parcels and total impervious area applicable to each of those land use classifications. While this summary table indicates the Standard Impervious Percentages associated with the various Non-Single-Family Residential land use classifications, as previously noted these percentages have been modified to include a tiered reduction for parcels greater than ten acres, the details of which are provided in "Exhibit A — Land Use Impervious Assignments", which provides a summary of the Impervious Percentages and Applied Impervious Area application and calculation for both Single-Family Residential Properties and each of the Non-Single-Family Residential Property classifications and related land uses.

The following table provides a listing of the various Land Use Classification groupings based on corresponding Impervious Percentages and the estimated Total Impervious Area associated with each:

Land Use Classification	Parcel Count (# APN'S)	Standard Impervious Percentage	Applied Impervious Area (SF)
Vacant	100,449	1%	101,287,530
Single-Family Residential: Less than 1,000 SF	95,069	42%	30,422,080
Single-Family Residential: 1,000 to < 1,500 SF	55,557	42%	29,445,210
Single-Family Residential: 1,500 to < 2,000 SF	52,834	42%	39,097,160
Single-Family Residential: 2,000 to < 2,500 SF	43,364	42%	41,195,800
Single-Family Residential: 2,500 to < 3,000 SF	41,164	42%	47,750,240

CALCULATION OF FEE

The impervious area and the amount of the Clean Water Fee for each individual parcel shall be computed as follows: Parcel square footage shall be multiplied by the estimated percentage of impervious area on the parcel (based on the Standard Impervious Percentage factors identified in the Hydrology Manual as modified by this Report). The resulting value shall be multiplied by a per-square-foot impervious surface rate in order to calculate the dollar fee for the fiscal year. Each parcel's calculated Impervious Area ("Applied Impervious Area") is determined by the following formula and application of the previously discussed impervious percentage adjustments and land use classifications:

$$\text{(Adjusted Impervious Percentage(s) X Property Lot Size) = Applied Impervious Area}$$

(The calculation of impervious area and/or impervious area segments for each parcel shall be rounded to the nearest ten square feet).

The estimated annual cost of property related service to be collected (estimated revenue) divided by the total Impervious Area for the parcels, establishes the fee rate:

$$\text{(Total Cost of Services to be collected / Total Applied Impervious Area) = Fee Rate}$$

This rate multiplied by each parcel's calculated Applied Impervious Area (Impervious Lot Size) equals the Calculated Fee for each parcel:

$$\text{(Parcel's Applied Impervious Lot Size) X Fee Rate = Parcel's Calculated Fee}$$

To ensure that the actual fee applied to each parcel reflects and does not exceed the parcel's proportional cost of service, the Calculated Fee for each parcel shall be rounded down to the nearest whole dollar, but a minimum of one dollar(\$1.00). (Therefore a Calculated Fee of \$152.64 would be rounded to \$152.00).

When the land use of a parcel changes resulting in an increase or decrease to the estimated impervious percentage of the parcel, or as a result of a parcel split, merge or lot-line adjustment which results in an increase or decrease of the parcel's total square footage; the parcel's impervious area will be recalculated to the method of apportionment described herein and the annual fee amount shall be adjusted for the next fiscal year succeeding the change in impervious area of the parcel.

PART IV — BUDGET AND REVENUE ALLOCATIONS

DETERMINATION OF PROPERTY RELATED SERVICE COSTS

As previously noted the Los Angeles County Flood Control District Clean Water Fee is authorized pursuant to Section 2, subsection 8a, of the Los Angeles County Flood Control Act and is subject to the applicable requirements of Article XIII D of the California Constitution. The Clean Water Fee is intended to provide a stable and long-term regional funding source to finance a portion of the property related cost of service to enhance water quality throughout Fee Service Area and protect the various marine habitats, water bodies and ecosystems which may receive waters and potential pollutants carried by stormwater and urban runoff. The Clean Water Fee will provide an ongoing funding for Municipalities, Watershed Authority Groups and the District to initiate, plan, design, construct, implement, and sustain water quality improvement projects and programs based on effective best management practices. In addition, wherever feasible, water quality improvement projects and programs shall be designed to achieve multiple objectives and incorporate sustainable solutions that incorporate low impact development, natural filtration and cleansing of water, environmentally sound infrastructure, improved permeability of surfaces, and similar methods.

While this Report does not identify specific projects or programs that may ultimately be funded in whole or in part by the Clean Water Fee revenues, the projects and programs or elements of these projects and programs implemented by the Watershed Authority Groups and Municipalities shall have as their primary purpose, to improve water quality and reduce stormwater and urban runoff pollution in the District. The revenues derived from the fee are intended to finance only in part, the construction, operations, maintenance and development of projects and programs to help meet the emerging and more stringent stormwater and urban water runoff water quality regulations being imposed by state and federal agencies, and specifically, compliance with Total Maximum Daily Load (TMDL) regulations and National Pollutant Discharge Elimination System (NPDES) permits regulating stormwater and urban water runoff associated with the parcels of land within the Fee Service Area.

The amount of revenue to be collected annually and the proportional fee rate per square foot of impervious area for each parcel has been developed based on an overall needs assessment utilizing the collective findings of several independent studies and evaluations of various segments of the stormwater infrastructure within the District. These studies and reports include:

- A report prepared in November 2002 through the School of Engineering and School of Policy, Planning, and Development at the University of Southern California, entitled "An Economic Impact Evaluation of Proposed Storm Water Treatment for Los Angeles County";
- A report prepared in November 2003 by the California Department of Finance, Performance Review Unit, entitled "A Review of the Department of Transportation's Storm Water Management Program";
- A report prepared in January 2003 by the California Regional Water Quality Control Board, Los Angeles Region, regarding Los Angeles County Municipal Storm Water Permits, entitled "Review and Analysis of Budget Data Submitted by the Permittees for Fiscal Years 2000 – 2003";

- A prioritized project list prepared in May 2011 by the City of Los Angeles Bureau of Sanitation Watershed Protection Division, identifying projects and estimated costs for Total Maximum Daily Loads Compliance;
- A report prepared in May 2009 by the City of Los Angeles Watershed Protection Division Bureau of Sanitation Department of Public Works, entitled "Water Quality Compliance Master Plan for Urban Runoff";

In addition, to these reports and studies, past budget and expenditure data for implementation of the storm water programs from the various municipalities within the District have been evaluated.

Based on the findings and information discussed in these various reports and studies, one prevailing theme becomes evident; the long term efforts and expense needed to implement the various projects, programs and services required to improve water quality and reduce stormwater and urban runoff pollution in the District is conservatively estimated to be in the tens of billions of dollars. While these studies and reports clearly identify a significant long term price tag to address water quality and stormwater runoff, no definitive annual cost has been identified. However, based on the information provided it is reasonable to conclude that the cost to improve water quality and reduce stormwater and urban runoff pollution in the Fee Service Area on an annual basis will most certainly far exceed the revenues being proposed herein as the Clean Water Fee (\$296,730,000 annually). Therefore, in addition to the fee, implementing and funding many of the projects and programs over the years within the various watershed areas and municipalities will also need to rely on federal and state grants/funds, existing local revenues, as well as other future revenue sources, and this Clean Water Fee will address only in part the cost of service to properties within the Fee Service Area.

ESTIMATED ANNUAL REVENUES AND CLEAN WATER FEE RATE

As previously noted, the estimated annual cost of property related service to be collected (Needed Revenue) divided by the total Impervious Area for the parcels, establishes the fee rate:

$$\text{(Total Cost of Services to be collected / Total Applied Impervious Area) = Fee Rate}$$

Applying this formula based on the following:

- **Proposed estimated revenue budget of approximately \$296,730,000 annually;**
- **Total Applied Impervious Area of 11,332,072,380 square feet for all District parcels (existing at the time this Report was prepared);**
- **Resulting fee rate per square foot of Impervious Area (rounded to six decimal places) is established. That rate is of \$0.026185 per square foot of impervious area (rounded to six decimal places).**

$(\$296,730,000 / 11,332,072,380 \text{ SF}) = \0.026185 per square foot of impervious area

This calculated rate applied individually to each parcel's Applied Impervious Area results in a calculated fee which is rounded down to the nearest dollar. This calculation of the fee (applied to each of the current Fee Service Area parcels) will yield an estimated revenue total of \$295,134,052 for the first fiscal year. (The variance between the budget amount of \$296,730,000 and the actual estimated revenue of \$295,134,052 is due to rounding.)

This estimated revenue of \$295,134,052 allocated to the various entities as described in the preceding represents approximately:

- **\$29,513,400 to the Los Angeles County Flood Control District**
- **\$118,053,600 to the Municipalities**
- **\$147,567,000 to the Watershed Authority Groups**

The estimated allocations above are approximate revenues (rounded to the nearest hundred dollars) and may vary slightly when the fees are actually collected.

Exhibit B provides a summary of these revenues by Land Use for the entire District

Exhibit C provides a summary of these revenues by Land Use within each Watershed

Exhibit D provides a summary of the revenues by Municipality within each Watershed

Exhibit E provides a summary of the revenues by Municipality

Exhibit F provides a list of the Assessor's Parcel Number and fee for each parcel in the Fee Service Area, identified by Assessor's Parcel Number, with the parcel's land use classification, lot size, applied impervious area, and proposed fee amount.

EXHIBIT F —PARCEL FEE ROLL

Due to the number of parcels in the Fee Service Area subject to the Clean Water Fee, the Parcel Fees for fiscal year 2013/2014 (a listing of the Assessor's Parcel Numbers to be levied the proposed fee amounts) has been filed with the District in an electronic format and is, by reference, made part of this Report. The proposed Parcel Fee Roll shall be available for public inspection in the District Office during normal business office hours.

The Parcel Fee Roll reflects all properties currently identified within the Fee Service Area and their fee amount proposed for fiscal year 2013/2014. Each lot or parcel listed on the Parcel Fee Roll is currently shown and illustrated on the County Assessor's Roll and the County Assessor's Parcel Number Maps (APN maps). These records are, by reference, made part of this Report. All fees presented on the Parcel Fee Roll are subject to change as a result of parcel changes made by the County including parcel splits, parcel merges or development changes that occur prior to the County securing the final roll and generating tax bills for fiscal year 2013/2014.
