

MARINA DEL REY 18-INCH WATER LINE REPLACEMENT, PHASE II

BACKGROUND

The Los Angeles County Department of Public Works, on behalf of the Marina del Rey Water System, is proposing to install approximately 9,500 linear feet of new 18-inch diameter steel pipeline to replace the existing aged and undersized 14-inch-diameter water mains that currently form a loop around Marina del Rey. Numerous fire hydrant and water system laterals and appurtenances along the water line alignment will be improved as well. This project is the second phase of a scheduled three phase process to replace the entire Marina del Rey Water System. The third Phase is expected to start soon after Phase II is completed.

PURPOSE

The purpose of the project is to improve the Marina del Rey Water System to meet domestic and fire protection water demands. Phase II consists of installing approximately 9,500 linear feet of water main along Admiralty Way and portions of Via Marina and Fiji Way (See Map attached below).

APPROXIMATE DURATION OF CONSTRUCTION

Construction is expected to begin in late March 2011. The project will be completed by May 2012.
