1. Assess airway and initiate basic and/or advanced airway maneuvers prn (*MCG 1302*)

2. Assess for additional signs of trauma
   If traumatic injury suspected, treat in conjunction with *TP 1244-P, Traumatic Injury*

3. If penetrating globe injury present/suspected, shield the eye and position patient at 45 degrees. Do not put any pressure on the eye

4. Do not remove any impaled foreign bodies from eye; secure them in place

5. If contacts lenses are present and the patient is unable to remove them, leave in place

6. Establish vascular access prn (*MCG 1375*)

7. Burns to eye:
   Chemical Burn – Irrigate with **Normal Saline 1L**
   Thermal Burn – Cover with dry dressing
   Treat in conjunction with *TP 1220-P, Burns*

8. For eye pain: refer to *MCG 1345, Pain Management*
   Dose per *MCG 1309*

9. For nausea or vomiting in patients ≥ 4 years old:
   **Ondansetron 4mg ODT**
SPECIAL CONSIDERATIONS

1. Consider a penetrating globe injury with any eye trauma, especially penetrating trauma, large subconjunctival hemorrhage, abnormal shaped pupil or iris, or the appearance of fluid or tissue coming from the eye.
