- Zoom to change the text size:** A yellow box highlights the browser's zoom controls (1 / 10, 100%, +, -) in the top right corner.
- Download and Print:** A yellow box highlights the download and print icons in the top right corner.
- Article Structure:** A vertical sidebar on the left shows a table of contents with sections like "Program Evaluation", "The Use of Anticonvulsants", "Trauma Mechanisms and Surgical Outcomes", and "Gender Differences".
- Article Content:** The main content area displays the article's title, authors (Jimmy Sundblom, MD, PhD¹, Elisabeth Sandberg, MD^{1,2}, Elisabeth Ronne-Engström MD, PhD¹), affiliations, and the start of the abstract and introduction sections.

ORIGINAL RESEARCH

Trauma Mechanisms and Surgical Outcomes in the Elderly Patient with Chronic Subdural Hematoma

Jimmy Sundblom, MD, PhD¹, Elisabeth Sandberg, MD^{1,2}, Elisabeth Ronne-Engström MD, PhD¹

¹Department of Medical Sciences, Section of Neurosurgery, Uppsala University Hospital, Uppsala; ²Department of Radiology, Karolinska University Hospital, Stockholm, Sweden
<https://doi.org/10.5770/cg.25.519>

ABSTRACT

Background
Chronic subdural hematoma is the preeminent neurosurgical condition in the older population. This retrospective single-centre study focuses on outcome after surgery of chronic subdural hematoma in patients over 70 years.

Methods
Patients treated at a single neurosurgical referral centre between 2010 and 2014 were screened. Included patients were assessed for comorbid conditions, lifestyle factors, and outcomes including recurrence, mortality, and postoperative complications.

Results
A total of 511 patients (70–97 yrs) were identified. 50.7% of patients were treated with anticoagulants and/or antiplatelet therapy. A known probable cause for the hematoma was found in 68.1% of patient's histories. Mortality rate was 3.1% and recurrence was seen in 49 patients (9.6%). Postoperative complications were more common in patients with excessive use of alcohol (p value = .02). Neurological function was improved

INTRODUCTION

Chronic subdural hematoma (CSDH) is a collection of blood and degraded blood products located between the dura and arachnoid.^(1,2) CSDH occurs more often in the elderly.^(3,4) The yearly incidence of CSDH ranges from 8.2–14/100.000 in the general population^(2,5,6) and is expected to be increasing as a consequence of an aging population.⁽⁴⁾ The cause of CSDH has been explained by head trauma which leads to tearing of the bridging veins.⁽⁷⁾ Subsequent inflammation and neovascularization of hematoma capsule, creating small vessels susceptible further tearing, are also important factors for the development of CSDH.⁽¹⁾

Surgical evacuation of CSDH is one of the most common procedures in neurosurgical practice. Several different types of surgical techniques have been described and are currently used, including twist-drill craniotomy, burr-hole craniotomy with closed drainage system, and craniotomy.^(2,8-10) Non-surgical treatment regimes have been suggested, with medical options such as corticosteroids, atorvastatin, tranexamic acid, and ACE-inhibitors being subjected to trials⁽¹¹⁻¹³⁾ with no clinically relevant effect proven.

Symptoms of CSDH are heterogenous, with the most

EBSCOhost Research Databases

EBSCOhost is a powerful online reference system accessible via the Internet. It offers a variety of proprietary full text databases and popular databases from leading information providers.

The comprehensive databases range from general reference collections to specially designed, subject-specific databases for public, academic, medical, corporate and school libraries.

[View A Tutorial On This Topic »](#)

EBSCO Connect

[EBSCO Connect](#) is available 24 hours a day, 7 days a week. Our FAQ database, [tutorials](#), and user guides can provide answers to your technical questions.

- **Library Staff/Administrators:** EBSCO Customer Support Representatives are also available by [e-mail](#) 24 hours a day, 7 days a week.
- **Library Patrons/Students:** For additional assistance, please contact your library staff/administrators.

How to Use Help

- When the Help icon  appears, you can click the icon and help for the screen you are on will display.
- To obtain help for the database(s) you are searching, click the Help icon  to the right of the Find field and click on the Database name at the bottom of the left-hand side of the Help window. Database help is also available from the Choose Databases window.
- To view the entire Help System, click the [Help](#) link at the top right-hand corner of the screen.

Note: The recommended screen resolution for EBSCOhost is 1024 x 768.
