Mechanism consistent with brain death
No other cause of coma, exclude the following:
- Toxins / drugs (no contributory abnormalities)
- Metabolic parameters (no contributory abnormalities)

Vital signs
- Temperature (> 35°C)
- Blood pressure normal for age

Neurological Examination
- Response to verbal stimuli absent
- Pupils fixed
- Gag reflex absent
- Motor response to noxious stimulation absent
- Sucking/rooting reflexes absent (for infants)
- Apnea test (pCO₂ ≥ 60 mmHg AND 20 mmHg above baseline) (Only one apnea test is required for 18 yrs and older if performed by an attending)
- Oculovestibular reflex absent
- Oculocephalic reflex absent (test only if C-spine injury NOT suspected)
  Note: Omitting the oculocephalic test in the presence of c-spine injury is permitted as long as the oculovestibular reflex is tested and absent.

☐ I certify that I have performed a complete clinical exam according to hospital policy and that this patient is brain dead.
☐ I certify that I have performed a clinical examination as complete as circumstances permit. This will constitute an independent exam determining brain death only if confirmed by an objective test of cerebral blood flow or function.

California licensed physician ¹ (Signature )                           (Staff ID Number)          (date)                     (time)

Brain Death Determination/Confirmation using Objective Tests
