ABOUT MENTAL HEALTH

The Los Angeles County Department of Mental Health provides a wide range of services to the residents of the communities in Service Area 7, including 24/7 crisis response to children, youth, adults and families having urgent mental health needs. DMH provides clinically competent, as well as culturally and linguistically appropriate mental health services. We help clients and families recover from mental illness and serious emotional disturbances, increase their ability to be self-sufficient, and develop the skills needed to lead constructive and satisfying lives.

An array of new services are provided by DMH and its contracted agencies. These new services are funded through the Mental Health Services Act (MHSA), a bill passed by the voters in November 2004. The new programs across all age groups fund expanded services to clients which are described in this brochure under “MHSA Programs.”

Our Service Area Navigators and Outreach and Engagement workers can assist you with accessing our MHSA programs, including housing assistance, linkage to mental health services, and linkage to community resources. Navigators and Outreach workers are also available for community presentations. There is no cost for linkage services, or presentations for the purpose of community education. Access to our Service Area 7 Navigators is available by calling the number below:

MHSA PROGRAMS

PEI - An early intervention program for individuals who are experiencing a recent crisis or trauma and have not been diagnosed with a serious and persistent mental illness. PEI may also serve those consumers who are experiencing the onset of a serious psychiatric illness - “first break”.

WELLNESS CENTERS - A clinic based program which provides professional and peer run services to clients who are stable in treatment and looking to further progress in their recovery goals. **Peer Run Centers** provide self-help groups or one-on-one services including mentoring. Through peer support, clients with similar experiences can relate to each other and offer advice, suggestions and strategies for managing their lives in recovery.

FCCS - A field based program designed to provide mental health services to consumers who are isolated or unable to access traditional mental health outpatient services due to location/distance barriers, physical disabilities, or because of the stigma associated with receiving clinic based services.

FSP - A team-based intensive services program consisting of a partnership between the mental health team and the client, and when appropriate the client’s family, to plan services in order to achieve their identified goals.
