PEI OMA Version 1.5 Informational Webinar

Kara Taguchi MHSA Implementation and Outcomes Division

February 19, 2015

Introduction

- Target audience for this webinar
- What will be covered
- What won't be covered

Agenda

- Recap/ How did we get here?
- Features of PEI OMA v 1.5
- Type of training/resources available
- Suggestion of approach to back data entry
- Error reports and Correction
- Ongoing reporting for MAP, TF-CBT, and Triple P
- Questions & Answers

How did we get here?

- CiMH data reporting
- Excel spreadsheets
- Submissions on 6 month schedule
- Final Submissions
 - January of 2014 for Triple P and MAP for data through 12/31/13
 - February of 2014 for TF-CBT for data through 1/31/14

Sample CiMH Spreadsheet

How did we get here? (cont.)

- One reporting source
- Building upon previously submitted data
- Integration into PEI OMA
 - Data quality issues
- Conflicting data standards
- PEI OMA data elements for other EBPs
- Minimizing impact on providers
- Preserving data quality/data integrity

Features of PEI OMA v1.5

- Added new practices
 - MAP, TF-CBT, Triple P
- Added new questionnaires
 - RCADS (MAP-Anxiety)
 - "CiMH" questionnaires
- New "Unable to Collect" reasons
 - "Therapist did not administer tool"
 - "Never collected-CiMH" (only for treatment cycles starting prior to 2/1/14)

Features of PEI OMA v1.5 (cont.)

- Fixed inactive Staff Code issue
- Remove Date of Intake
- Create CiMH Historical Data view
 - Shows all data submitted on final spreadsheet as received by CiMH
 - Viewable by provider site

A Few Details on New Practices

- Generally, Beginning of Treatment info and End of Treatment Info is the same as was reported to CiMH
 - Exceptions: DSM-IV Diagnosis at Termination
- Questionnaire Administration Dates (QADs)
- All scores must be reported or Unable to Collected checked with reason selected
- Ability to report updates

"Active" cycles integrated

- Treatment cycles with a Date of First Session (DOFS) and no Date of Last Session (DOLS) and no post questionnaires were considered "active"
- Only clean "active" cycles were integrated into PELOMA
- Pre Questionnaire QADs set to DOFS. For MAP, general measures set to DOFS, specific questionnaires Pre QAD set to Focus Start Date

MAP is different...

- Assumptions for MAP
 - It's possible to go through more than one focus during a single treatment cycle of MAP
 - While in MAP, client must be in a focus
 - No concurrent or overlapping foci in MAP

MAP is different... (cont.)

- General measures (YOQ/YOQ-SR/OQ) are collected at the start and end of MAP as a practice
- Specific questionnaires (PHQ-9, RCADS, ECBI, SESBI-R, PTSD-RI) are captured at the start and end of a focus (depression, anxiety, disruptive behavior, trauma)

MAP is different... (cont.)

- Beginning of Treatment (BOT) info for MAP includes selecting Focus 1
- Saving the BOT opens up the general track
 DOFS populates Focus Start date for Focus 1
- At the End of the Focus, EBP session count reported and whether focus is completed is asked
- User can start another focus or go to End of Treatment information for MAP
- End of Focus 1date becomes either Focus 2 start date or DOLS if ending MAP

Training/ Resources

- Information regarding the data transition on Outcomes Wiki website
 - http://dmhoma.pbworks.com/w/page/55241 527/CiMH
- Data Entry Booster Training for new practices offered through March (for people already trained in data entry for PEI OMA)
- Initial PEI OMA Data Entry Training offered every
 6-8 weeks for training on all PEI EBP data entry
- PEI OMA User Manual available via link in PEI OMA
- Data entry worksheets for MAP, TF-CBT, Triple P
- Quick Guide for RCADS

Approaching Back Data Entry

- Be familiar with your data tracking process for these practices
- Do you know what has changed since your final submission?
- View active cases integrated into PEI
 OMA to get an idea of what's there
- Start with current caseload

Error Reports and Correction

- Planned changes to CiMH Historical Data View
 - Error reports will be created for re-entry
 - Will be easier for providers to determine what was integrated and what wasn't
- Fatal errors
- "Active" cases with errors
- Entering fresh data vs. correcting inactive treatment cycles
- Data Change/Deletion Request Forms to delete erroneous treatment cycles

Ongoing Reporting for MAP, TF-CBT, and Triple P

- Data will be in one source for easier reporting
- Data will be available like it is for all practices
- Will devise a timeline for provider specific reports
- Can be added to PEI TASV charts and data
- No longer every 6-9 months

Questions & Answers

- Visit our Outcomes Wiki website for info on training, worksheets, Quick Guides: http://dmhoma.pbworks.com
