Appendix G - ICU Level of Service (LOS) Existing + Project + Cumulative Condition Worksheet

## 1.0 Introduction

Hernandez, Kroone & Associates (HKA) has prepared this report to present the results of the traffic impact analysis (TIA) for the proposed Whittier Aquatic Facility (proposed project). The proposed site is located at Pioneer High School, 10800 Ben Avon Street, Whittier, in the unincorporated community of West Whittier-Los Nietos. It is bordered on the north by Washington Boulevard, on the west by Pioneer Boulevard and commercial businesses, on the east by Danby Avenue and residential housing, and on the south by an existing parking lot used by Pioneer High School. The interstate 605 freeway is located approximately 250 feet west of the proposed project site.

### 1.1 Purpose of the Traffic Analysis and Study Objectives

The purpose of this TIA is to evaluate the potential circulation system deficiencies that may result from the development of the proposed project, and to recommend improvements, if needed, to achieve acceptable circulation system operations.

The California Environmental Quality Act (CEQA) lead agency is the County of Los Angeles, Public Works Department (LACPW). The CEQA was enacted in 1970 for the purpose of providing decision-makers and the public with information regarding environmental effects of proposed projects; identifying means of avoiding environmental damage; and disclosing to the public the reasons behind a project's approval, even if it leads to environmental damage. LACPW, as the lead agency under CEQA, has determined the project is subject to CEQA and no exemptions apply. Therefore, this TIA has been prepared to identify any potential traffic impacts the proposed project may create and methods to mitigate these impacts.

### 1.2 Study Guidelines

This TIA has been prepared in accordance with the following guidelines:

1. County of Los Angeles, Department of Public Works - Traffic Impact Analysis Report Guidelines Draft, last revised December 2013 (LACPW Guidelines)
2. Los Angeles County Metropolitan Transportation Authority - 2010 Congestion Management Program (LACMTA CMP)
3. Disclosure of potential impacts and mitigation per the California Environmental Quality Act (CEQA)

The LACPW guidelines require a "before" and "after" Level of Service (LOS) analysis when the proposed project's generated traffic alone, or together with other projects in the area, could worsen the LOS of an intersection or roadway.

The LACPW guidelines require an Intersection Capacity Utilization (ICU) analysis to assess existing and future LOS at intersections. The ICU analysis bases LOS on a vehicle volume to capacity (v/c) ratio.

The LACPW guidelines define significant impact threshold as follows:

*Table 1: Significant Impact Threshold*

Intersections		
Pre-Project		With Project v/c Increase
LOS	v/c	
C	0.71 to 0.80	0.04 or more
D	0.81 to 0.90	0.02 or more
E/F	0.91 or more	0.01 or more

(LACPW, Traffic Impact Analysis Report Guidelines, December 2013)

If the LOS analysis determines a significant impact per the v/c increase as outlined in the LACPW guidelines, an analysis will be ran with mitigation measures to improve LOS to acceptable level.

### 1.3 Study Scope

During the development of this TIA, HKA submitted a Memorandum of Understanding (MOU) (Appendix A - Memorandum of Understanding) to the LACPW to coordinate and obtain approval on the scope of the study and identify which intersections would be analyzed.

#### 1.3.1 Study Intersections

The intersections included for analysis as part of this study include the following:

*Table 2: Study Intersections*

Intersections
1. Seragosa St. / I-605 NB On-Ramp / N. Pioneer Blvd.
2. I-605 NB Off-Ramp / N. Pioneer Blvd.
3. N. Pioneer Blvd. / Washington Blvd.
4. Millergrove Dr. / Washington Blvd.
5. Norwalk Blvd. / Washington Blvd.
6. Millergrove Dr. / Washington Blvd. (Frontage Road)
7. Danby Ave. / Project Driveway 1
8. N. Pioneer Blvd. / Project Driveway 2
9. N. Pioneer Blvd. / I-605 NB Off-Ramp

*Remainder of Page Intentionally Left Blank*

### 1.3.1 Study Scenarios

This TIA will analyze the following scenarios:

*Table 3: Study Scenarios*

Scenario	Time Frames Analyzed
Existing Year	AM / PM Weekday Peak Hour Saturday Morning Peak Hour
Existing Year + Construction Traffic	AM / PM Weekday Peak Hour
Existing Year + Construction Traffic <b>with Mitigation Measures*</b>	AM / PM Weekday Peak Hour
Existing Year + Project Trips	AM / PM Weekday Peak Hour Saturday Morning Peak Hour
Existing Year + Project Trips <b>with Mitigation Measures*</b>	AM / PM Weekday Peak Hour Saturday Morning Peak Hour
Existing Year + Project Trips + Cumulative Traffic	AM / PM Weekday Peak Hour Saturday Morning Peak Hour
Existing Year + Project Trips + Cumulative Traffic <b>with Mitigation Measures*</b>	AM / PM Weekday Peak Hour Saturday Morning Peak Hour

(Study scenarios based on LACPW, Traffic Impact Analysis Report Guidelines, December 2013 and MOU)

\*If mitigation is deemed necessary by LOS results

A Saturday morning peak hour is included in this analysis due to the proposed project's operation and an existing Saturday swap meet located at the proposed site's location. A further description on proposed site usage and existing site can be found in Section 2.0 - Project Description.

## 2.0 Project Description

The following subsections will describe the existing site and conditions as well as the proposed project.

### 2.1 Existing Site

The existing site of the proposed project is currently a parking lot for Pioneer High School located in the sphere of influence of Whittier, CA in the unincorporated County of Los Angeles. According to school officials during a site visit, the parking lot is rarely utilized during or outside of school hours. The parking lot is located in the northeast corner of the campus and is bordered by Pioneer Boulevard to the west, Washington Boulevard to the north, and Danby Avenue to the east, as shown in *Figure 2: Conceptual Site Plan*.

#### 2.1.1 Parking

On April 23, 2013, Whittier Union High School District submitted a Mitigated Negative Declaration (MND) for the Pioneer High School Stadium Expansion Project. The expansion of the stadium created a deficient supply of 474 parking spaces. As a mitigation measure, a joint use agreement (JUA) was established that provided additional off-site parking spaces at Nelson Elementary School, Los Nietos Middle School, and the First Fundamental Bible Church when needed.

At the time of this analysis, the proposed site plan is currently conceptual and there is no clear conclusion on how many parking spaces will be removed due to the proposed project's

development. Once the amount of parking spaces to be removed is defined, a conclusion on the parking sufficiency or an adjustment to the existing JUA may be determined.

### 2.1.2 Saturday Swap Meet

An existing swap meet takes place in the parking lot of the proposed site on the 2<sup>nd</sup> and 4<sup>th</sup> Saturday of each month. The swap meet operates from 7:00 am - 2:00 pm. According to school officials, the swap meet will be relocated or terminated upon development of proposed project. In order to ensure a conservative assessment of traffic impacts, no project trip credit was applied to this study for the Saturday Morning Peak Hour LOS analysis.

### 2.1.3 Pioneer High School

The proposed aquatic facility will be developed in the most northerly parking lot of Pioneer High School. According to Pioneer High School officials, the vast majority of students either take the bus to school or walk. The existing parking lot site is primarily unutilized by the high school.

#### School Buses

A school bus drop off zone exists just south of the northerly parking lot and proposed facility. The drive through for buses is accessible by a driveway along Danby Avenue, which is identified in this study as Intersection 7: Danby Avenue / Project Driveway 1. Buses will be able to access this driveway during construction and when the aquatic facility is developed. The project site is also accessible via a driveway on Pioneer Boulevard which is also identified in this study as Intersection 8: N. Pioneer Boulevard / Driveway 2. This driveway will further accommodate construction traffic as well as project trip traffic when the site is operating.

#### Pedestrians

Pioneer High School will remain accessible for pedestrian foot traffic during both the construction phase of the project as well as the operation and maintenance stage. There are various access points for students, staff, and parents along Pioneer Boulevard, Danby Avenue, Ben Avon Street, Millergrove Drive, and Slauson Avenue. No impact on pedestrian accessibility via foot traffic is anticipated due to this project.

### 2.1.3 Roadway Network

Regional access to the study area is provided by the San Gabriel River Freeway (Interstate 605). The streets included in this study that provide access to the proposed project include Pioneer Boulevard, Millergrove Drive, Washington Boulevard, Norwalk Boulevard, Danby Avenue, and Saragosa Street.

The following paragraphs provide a brief description of the characteristics of these roadways.

**The San Gabriel River Freeway (Interstate 605)** is located approximately 250 feet west of the proposed project. It runs north-south generally parallel to and west of Pioneer Boulevard and has on/off ramps on Washington Boulevard, Slauson Avenue, Saragosa Street and Pioneer Boulevard.

**Pioneer Boulevard** is a four-lane north-south street that abuts the west side of the school campus. It intersects with Washington Boulevard at the most northerly corner of the campus. Two existing school access driveways are located on Pioneer Boulevard, one of which will provide access to the proposed site and is included in this analysis. The I-605 has an off-ramp and an on-ramp that

intersect with Pioneer Boulevard across from the school site. The speed limit on Pioneer Boulevard is 35 miles per hour.

**Millergrove Drive** is a two-lane north-south street that abuts the east side of the school campus. It intersects with Slauson Avenue at the southeast corner of the campus adjacent to the stadium and an existing school access driveway is located on Millergrove that provides access to a parking lot at the northeast corner of the school campus. The speed limit on Millergrove Drive is 25 miles per hour.

**Washington Boulevard** is a four to six lane east-west street that abuts the north side of the school campus. It has six lanes near the school site and narrows to four lanes east of Norwalk Boulevard and west of the I-605 freeway. The speed limit on Washington Boulevard is 40 miles per hour.

**Norwalk Boulevard** is a four-lane north-south street located approximately one-half mile east of the school campus. The speed limit on Norwalk Boulevard is 45 miles per hour north of Washington Boulevard, 40 miles per hour between Washington Boulevard and Slauson Avenue, and 30 miles per hour south of Slauson Avenue.

**Danby Avenue / Washington Boulevard (Frontage Road)** is a two-lane north-south which also converts to an east-west street that provides a link between Washington Boulevard and the school campus. Vehicles can turn onto Danby Avenue from eastbound Washington Boulevard and access two driveways on Danby Avenue that provide access to the school's north parking lot. The most northerly driveway will provide access to the project site and is included in this analysis. The speed limit on Danby Avenue is 25 miles per hour.

**Saragosa Street** is a 4-lane east-west located between the intersection of Pioneer Boulevard, I-605 Southbound / Northbound On-Ramp and Norwalk Boulevard. It is located approximately a third of a mile from the project site. The speed limit on Saragosa Street is 25 miles per hour.

#### 2.1.4 Intersection Control Type and Lane Configurations

The following table is a summary of the existing traffic control features at each study intersection.

*Table 4: Existing Traffic Control at Study Intersections*

Intersection	Existing Traffic Control
1. Seragosa St. / I-605 NB On-Ramp / N. Pioneer Blvd.	All-Way Stop Control
2. I-605 NB Off-Ramp / N. Pioneer Blvd.	One-Way Stop Control (I-605 NB Off-Ramp)
3. N. Pioneer Blvd. / Washington Blvd.	Traffic Signal
4. Millergrove Dr. / Washington Blvd.	Traffic Signal
5. Norwalk Blvd. / Washington Blvd.	Traffic Signal
6. Millergrove Dr. / Washington Blvd. (Frontage Road)	All-Way Stop Control
7. Danby Ave. / Project Driveway 1	One-Way Stop Control (Project Driveway)
8. N. Pioneer Blvd. / Project Driveway 2	One-Way Stop Control (Project Driveway)
9. N. Pioneer Blvd. / I-605 NB Off-Ramp	One-Way Stop Control (I-605 NB Off-Ramp)

### 2.1.5 Public Bus Transit

Public bus transit service within the project study vicinity is currently provided by Los Angeles County Metropolitan Transit Authority (Metro), Norwalk Transit, and Montebello Bus Lines. The only transit line identified to have a route along the project study intersections is the **M50 - Montebello Line 50** which operates along Washington Boulevard between study intersections with Norwalk Boulevard and N. Pioneer Boulevard. Just outside of the project study area is the **NT001 - Norwalk Transit Line** which operates along Pioneer Boulevard just south of Slauson Avenue.

*Remainder of Page Intentionally Left Blank*

## Existing Intersection Lane Configurations and Traffic Control

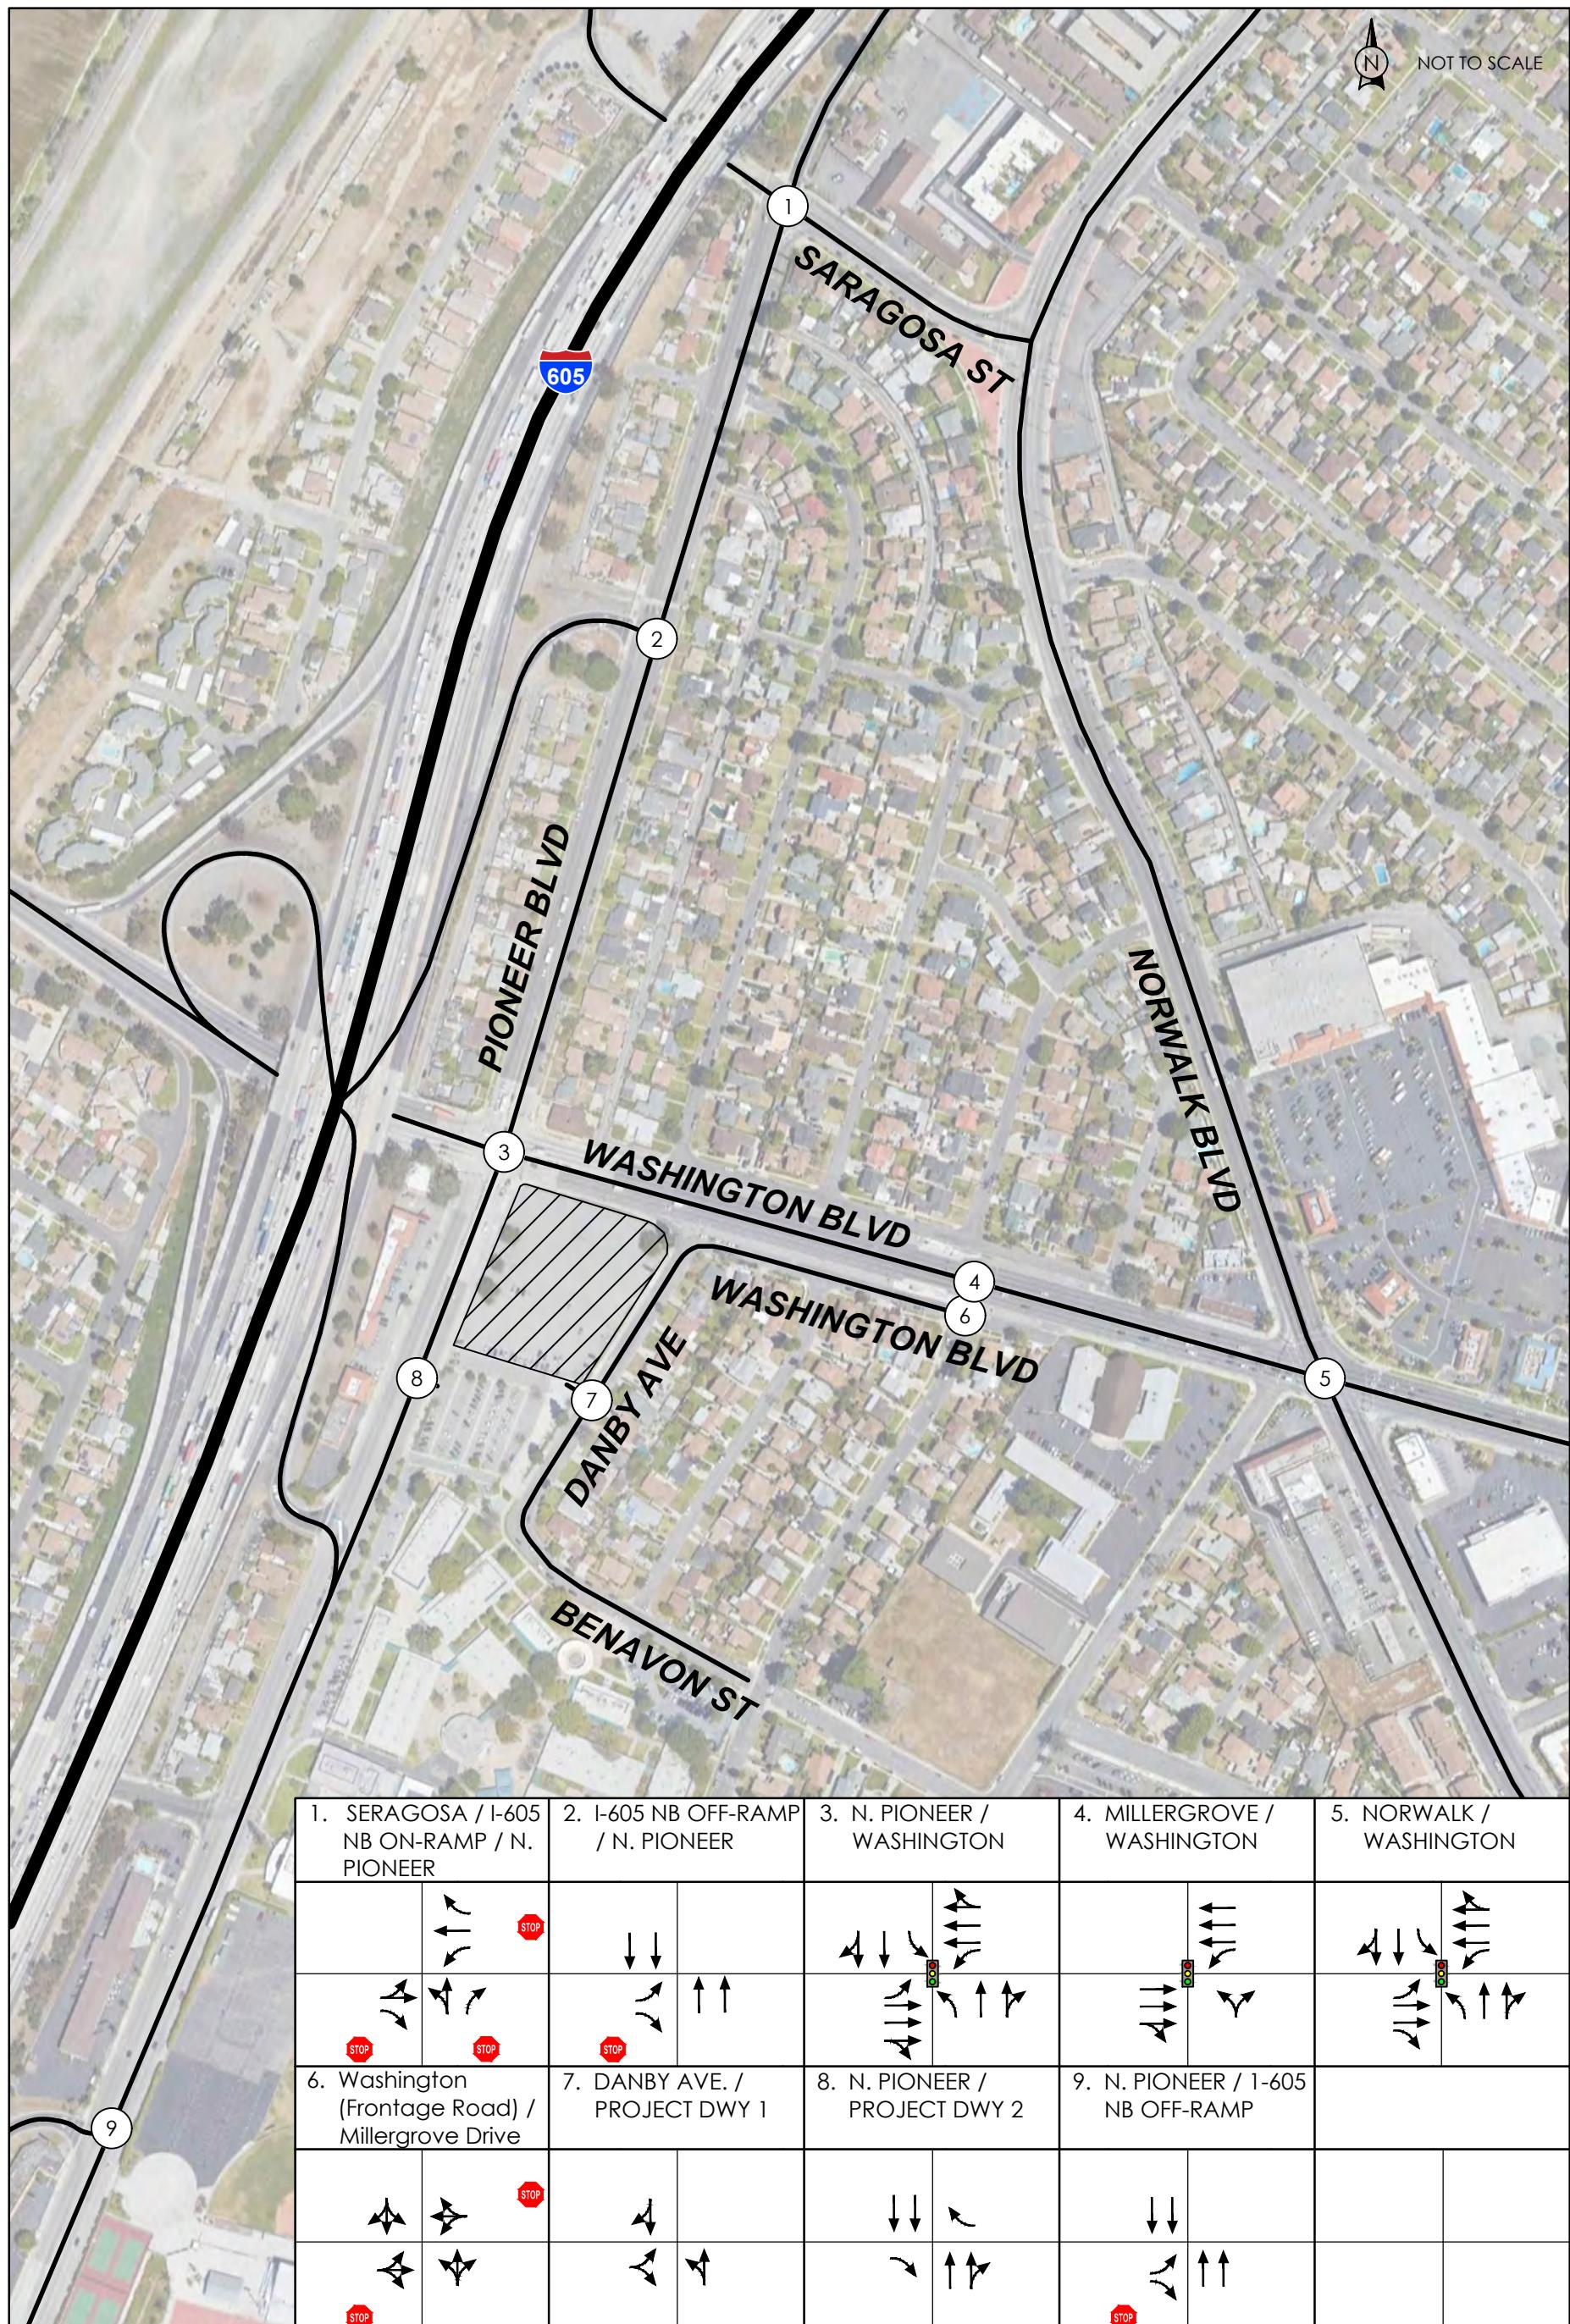

Figure 1

## 2.2 Proposed Project

The proposed project consists of the construction of a new aquatics facility which would include the following:

- a pool building with offices, classrooms, restrooms and storage (approximately 10,000 SF)
- an Olympic-size 50-meter by 25-yard competitive swimming pool
- a 25-meter by 25-yard practice pool; and related improvements

The proposed programs would include various water exercises, recreational swimming, swim lessons, junior lifeguard training, synchronized swimming, water polo, and diving. The Olympic-size competition pool would also provide a venue for master swim teams and would be certified for hosting official swimming competitions and water polo events.

At the time of this study, the site plan is at a conceptual stage.

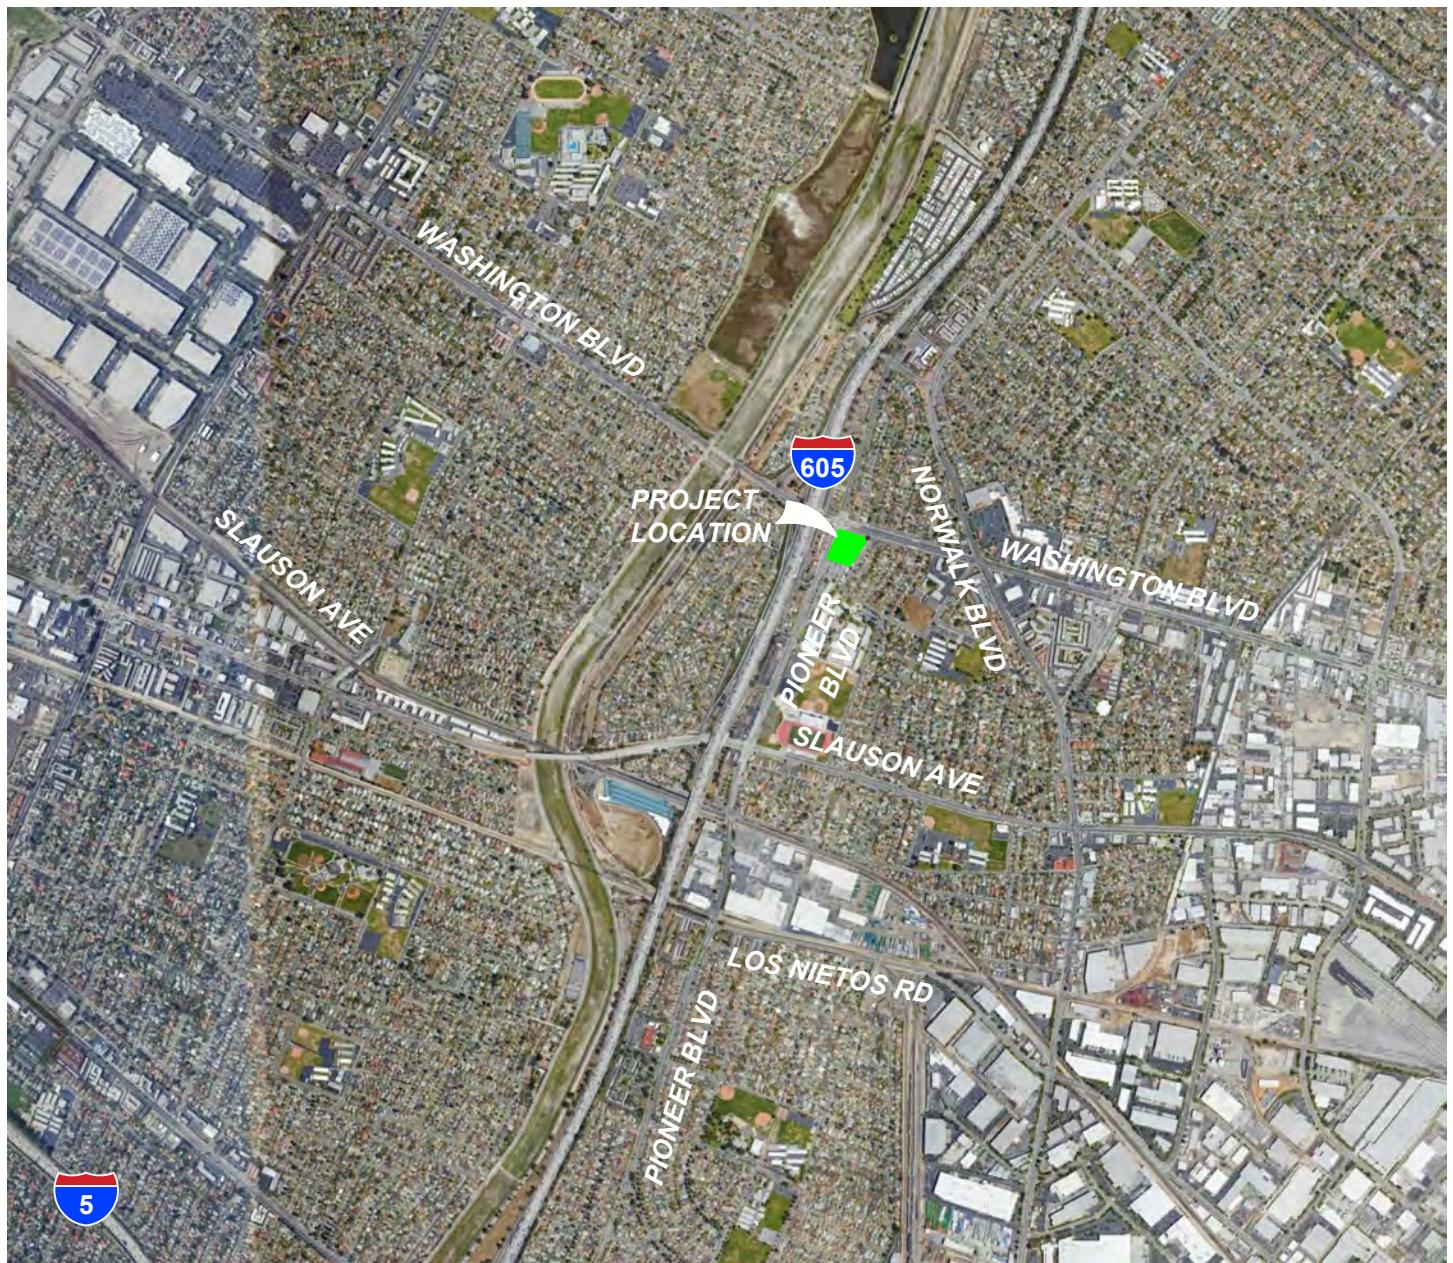

*Figure 2: Conceptual Site Plan*

(Appendix B - Whittier Aquatics Facility Program, June 2018)

A project vicinity map is included on the following page.

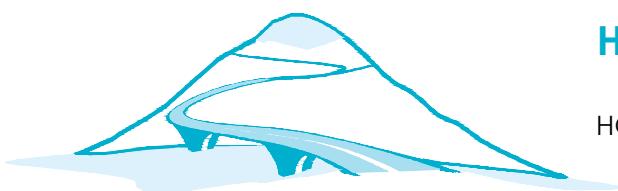

## VICINITY MAP

## LEGEND

PROJECT BOUNDARY

Engineers & Land Surveyors

HQ: 234 East Drake Drive, San Bernardino, CA 92408  
PHONE: 909-884-3222 ▲ [info@hkagroup.com](mailto:info@hkagroup.com)

### 2.2.1 Construction Activity

Construction of the proposed site will include the following schedule and assigned construction laborers.

*Table 5: Construction Schedule and Work Load*

Construction Activity	Total Days	Worker	Vendor	Hauling
Demolition / Grading	33	10	2	124
Building Pad	33	8	2	50
Footings	55	5	1	8
Superstructure	66	8	1	25
Building Construction	220	8	2	25
Pool Excavation	44	8	1	1,000
Pool Construction	121	8	1	24
Paving	10	15	0	40
Architectural Coating	20	2	0	0
		/day	/day	Total

(Construction data obtained from Aspen Environmental Group and LACPW)

According to LACPW and Aspen Environmental Group, there will be construction overlap during the pool excavation phase and the building construction phase. This overlap period will represent the worst-case day for construction traffic impacts and be the scenario analyzed in this study. The following table includes the worst-case scenario for construction activities.

The proposed project site will also serve as the staging yard during the construction stage. Therefore there is no anticipated construction traffic due to equipment being transported from a staging yard to the construction site.

*Table 6: Worst-Case Construction Traffic*

Construction Activity	Worker	Vendor	Hauling*
Demolition / Grading	16 round trips	2 round trips	24 round trips
	/day	/day	/day

\*Hauling trips converted to passenger car equivalent (PCE) for analysis

This analysis will assume that worker and vendor trips to the construction site will occur during the AM and PM Peak Hour. Hauling trips will be distributed equally throughout a typical 8-hour work day. Hauling trips per hour will then be applied to both the AM and PM Peak Hour to ensure a conservative analysis.

### 2.2.2 Operation and Maintenance (O&M)

The proposed project is intended to be open for the public. Operation hours will be:

*Table 7: Proposed Project Hours of Operation*

	Hours of Operation
Monday - Friday	6 am - 10 pm
Saturday - Sunday	7 am - 9 pm

Facility is expected to operate year around and will be closed for major holidays.

The following table provides a breakdown of the number of staff on site throughout a typical workday.

*Table 8: Staff Schedule Typical Workday*

<b>Staff</b>	<b>Schedule</b>
4 Lifeguards 2 Locker Room Attendants 1 Cashier 1 Supervisor	5:30 am - 6:00 am
4 Lifeguards 2 Locker Room Attendants 1 Cashier 1 Supervisor	6:00 am - 8:00 am
7 Lifeguards 2 Locker Room Attendants 1 Cashier 1 Supervisor	8:00 am - 12:00 pm
10 Lifeguards 2 Locker Room Attendants 1 Cashier 1 Senior Pool Lifeguard 1 Supervisor	12:30 pm - 3:00 pm
7 Lifeguards 2 Locker Room Attendants 1 Cashier 1 Supervisor	3:00 pm - 6:00 pm
7 Lifeguards 2 Locker Room Attendants 1 Cashier 1 Supervisor	6:00 pm - 8:00 pm
Special Programming (ie. master teams, scuba diving, etc.)	8:00 pm - 10:00 pm

*Remainder of Page Intentionally Left Blank*

### 3.0 Project Traffic and Trip Distribution

#### 3.1 Project Construction Trip Generation

To analyze the peak hour conditions during construction, this study considers the worst-case scenario of construction activity as described in “Section 2.2.1 Construction Activity”.

*Table 9: Project Construction Trip Generation*

	Daily Trips	AM Peak Hour			PM Peak Hour		
		In	Out	Total	In	Out	Total
Worker Vehicles	32	16	0	16	0	16	16
Vendor Vehicles	4	1	1	2	1	1	2
Hauling Trucks	48	3	3	6	3	3	6
Total	84	20	4	24	4	20	24
<b>Total (Applying PCE factor of 2.0 for 3-axle Hauling Trucks)</b>	<b>132</b>	<b>23</b>	<b>7</b>	<b>30</b>	<b>7</b>	<b>23</b>	<b>30</b>

This analysis will apply a passenger car equivalent (PCE) to hauling trucks of 2.0 based on 3-axle trucks.

#### 3.2 Project O&M Trip Generation

Project trip generation represents the amount of traffic which is both attracted to and produced by a development. Determining traffic generation for a specific project is therefore based upon forecasting the amount of traffic is expected to be both attracted to and produced by the specific land uses being proposed for a given development.

The vehicle trip generation for the proposed project was developed using rates from the Institute of Transportation Engineers (ITE) Trip Generation (10th Edition) for the various land uses shown in the table on the following page.

The ITE does not include a usage specific to a water aquatic facility. The intended usage of the site and the description of the “Recreational Community Center - Code 495” in the ITE are the most compatible for the purposes of this study and were approved under the MOU. Under the description for “Recreational Community Center - Code 495” in the ITE, swimming pools are included.

*Table 10: Project O&M Trip Generation Weekday*

Land Use	Size	Units	ADT	AM Peak Hour			PM Peak Hour		
				In	Out	Total	In	Out	Total
Recreational Community Center, ITE 495	28.5	TSF	821	33	17	50	31	35	66

(ITE Trip Generation, 10<sup>th</sup> Edition)

*Table 11: Project O&M Trip Generation Saturday*

Land Use	Size	Units	ADT	Saturday Peak Hour		
				In	Out	Total
Recreational Community Center, ITE 495	28.5	TSF	259	16	14	30

(ITE Trip Generation, 10<sup>th</sup> Edition)

### 3.3 Project Construction and O&M Trip Distribution

The directional trip distribution patterns for the project are presented in Figure 4. Project O&M and construction traffic volumes and construct, both entering and exiting the site, have been distributed and assigned to the adjacent street system based on the following considerations:

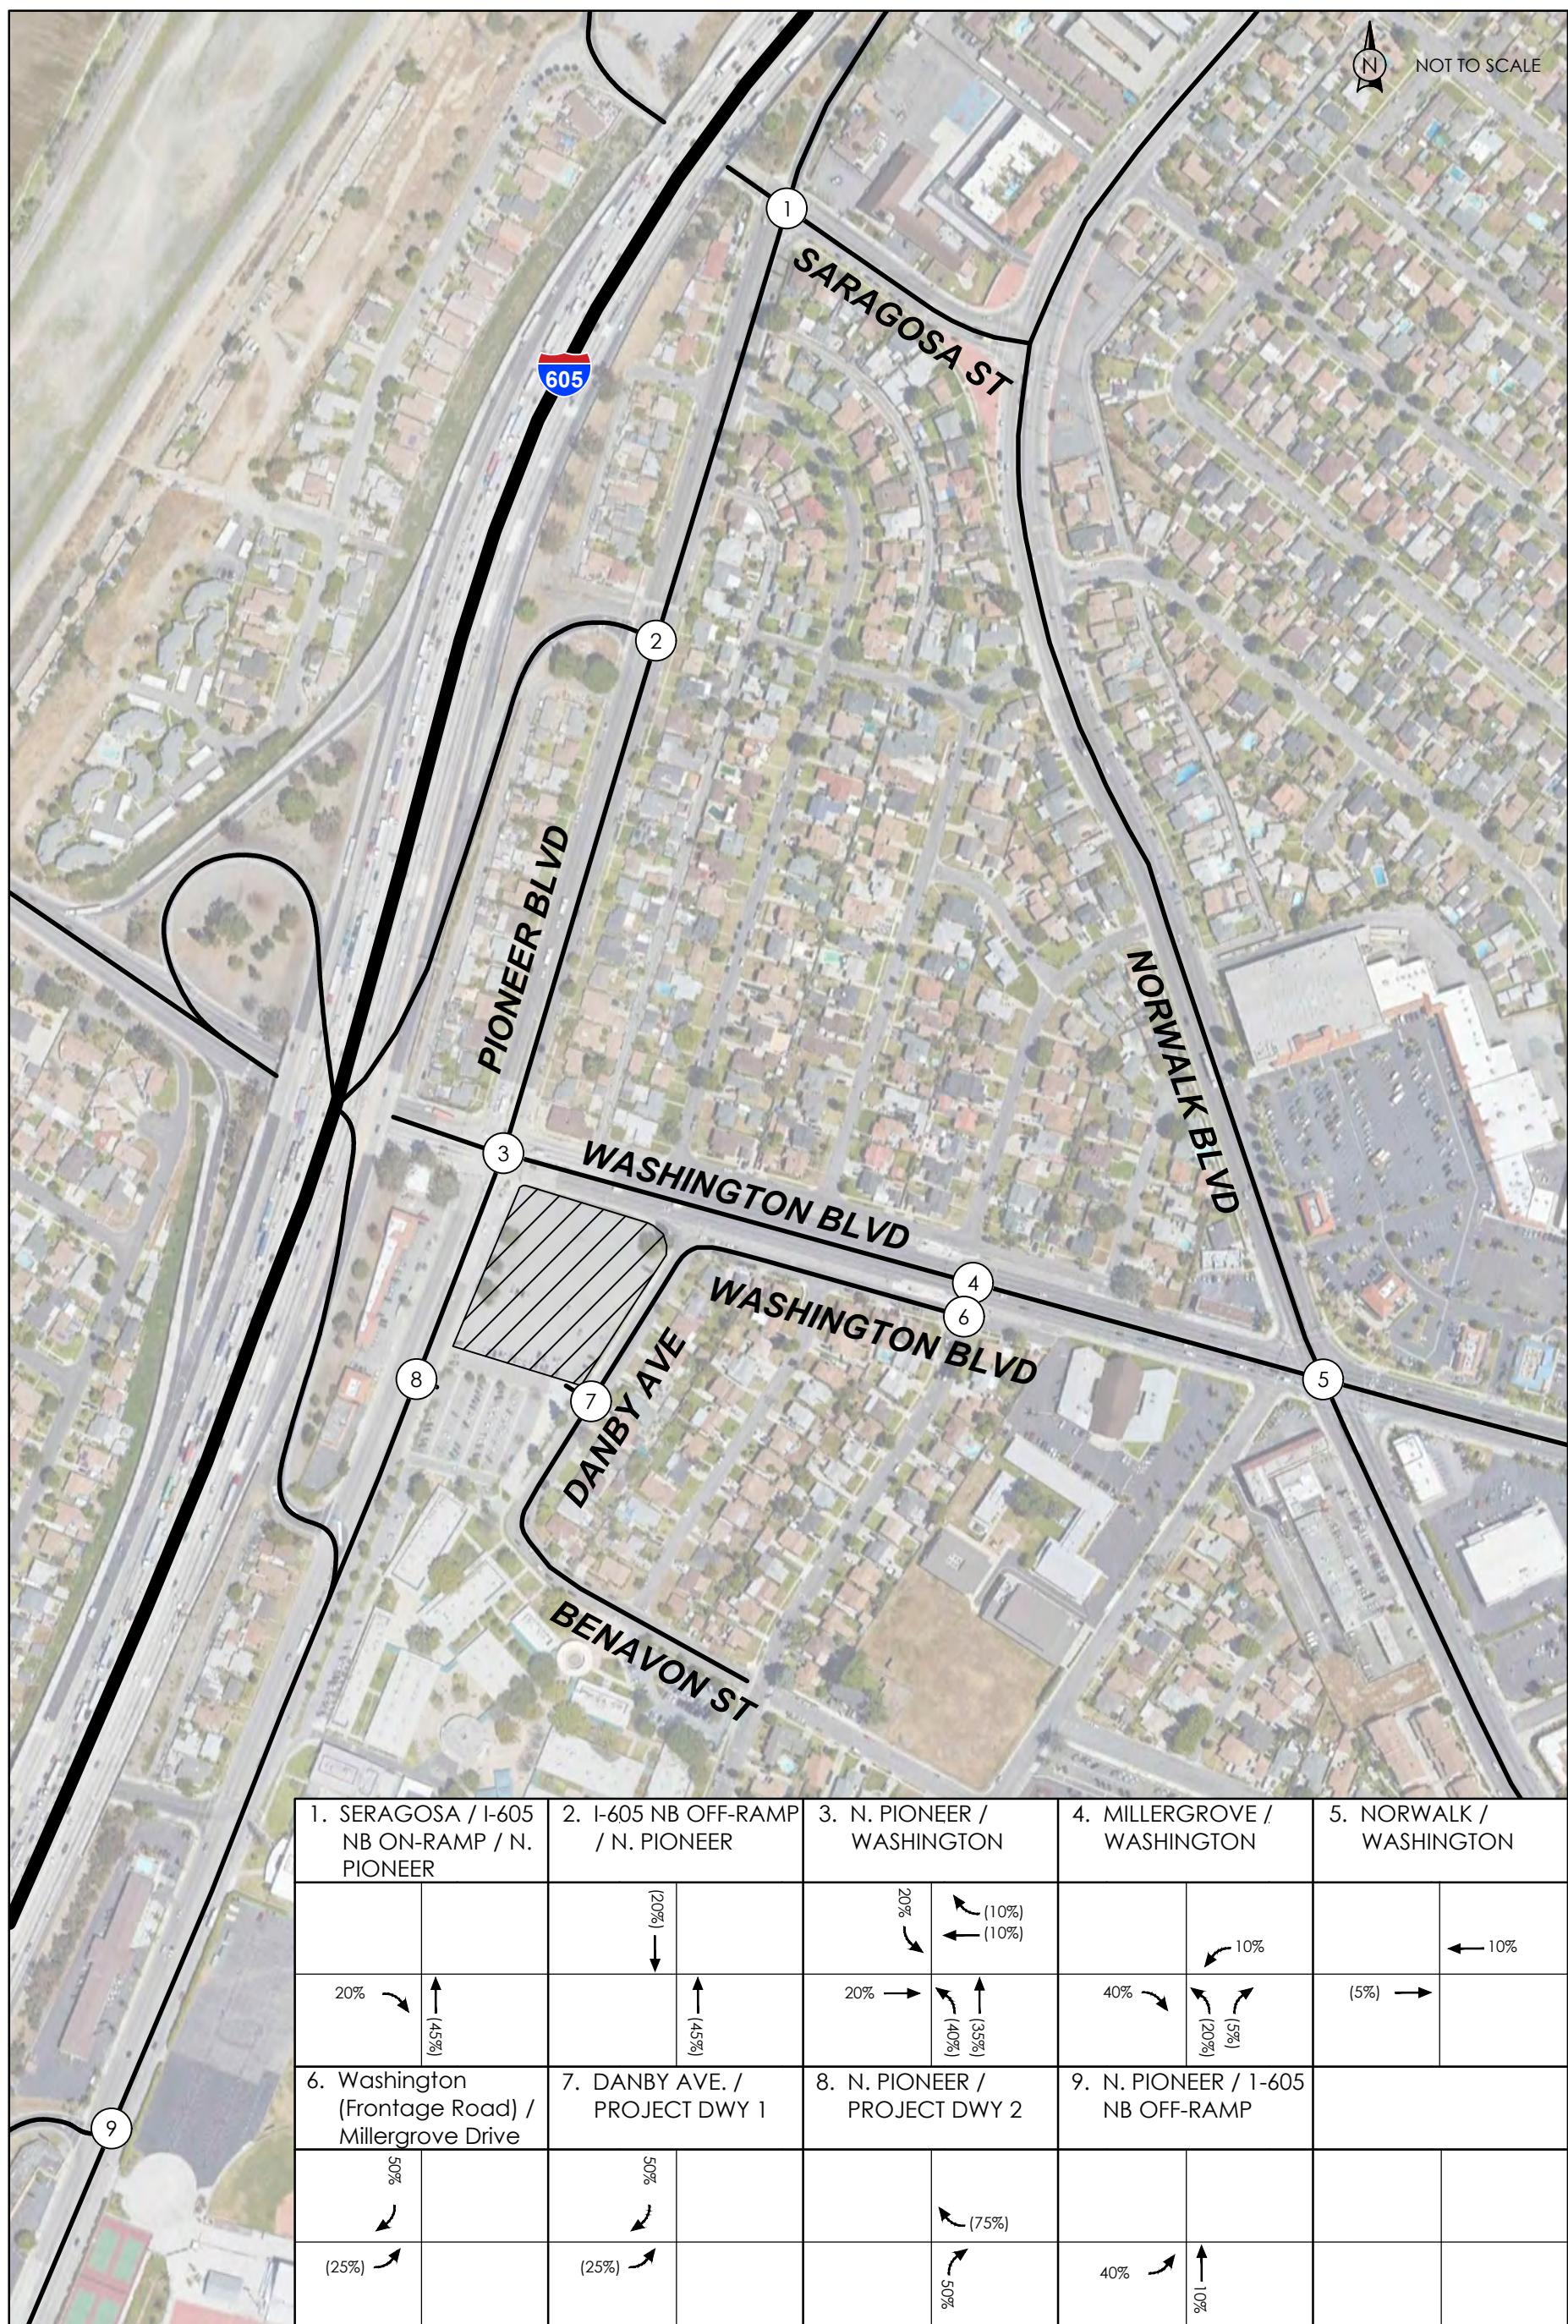

- the site's proximity to the I-605
- expected localized traffic flow patterns based on adjacent street channelization and presence of traffic signals,
- traffic carrying capacity and travel speed available on roadways serving the project site,
- existing intersection traffic volumes, and
- ingress / egress availability at the project site.

During the development of this TIA, HKA submitted a Memorandum of Understanding (MOU) (Appendix A - Memorandum of Understanding) to the LACPW. In this MOU the trip distribution for both the construction and O&M project trips were identified to be the same. The majority of trips are distributed towards major intersections and primarily the I-605.

Trip distribution, construction trip assignment, and O&M trip assignment exhibits can be found on the following pages.

*Remainder of Page Intentionally Left Blank*

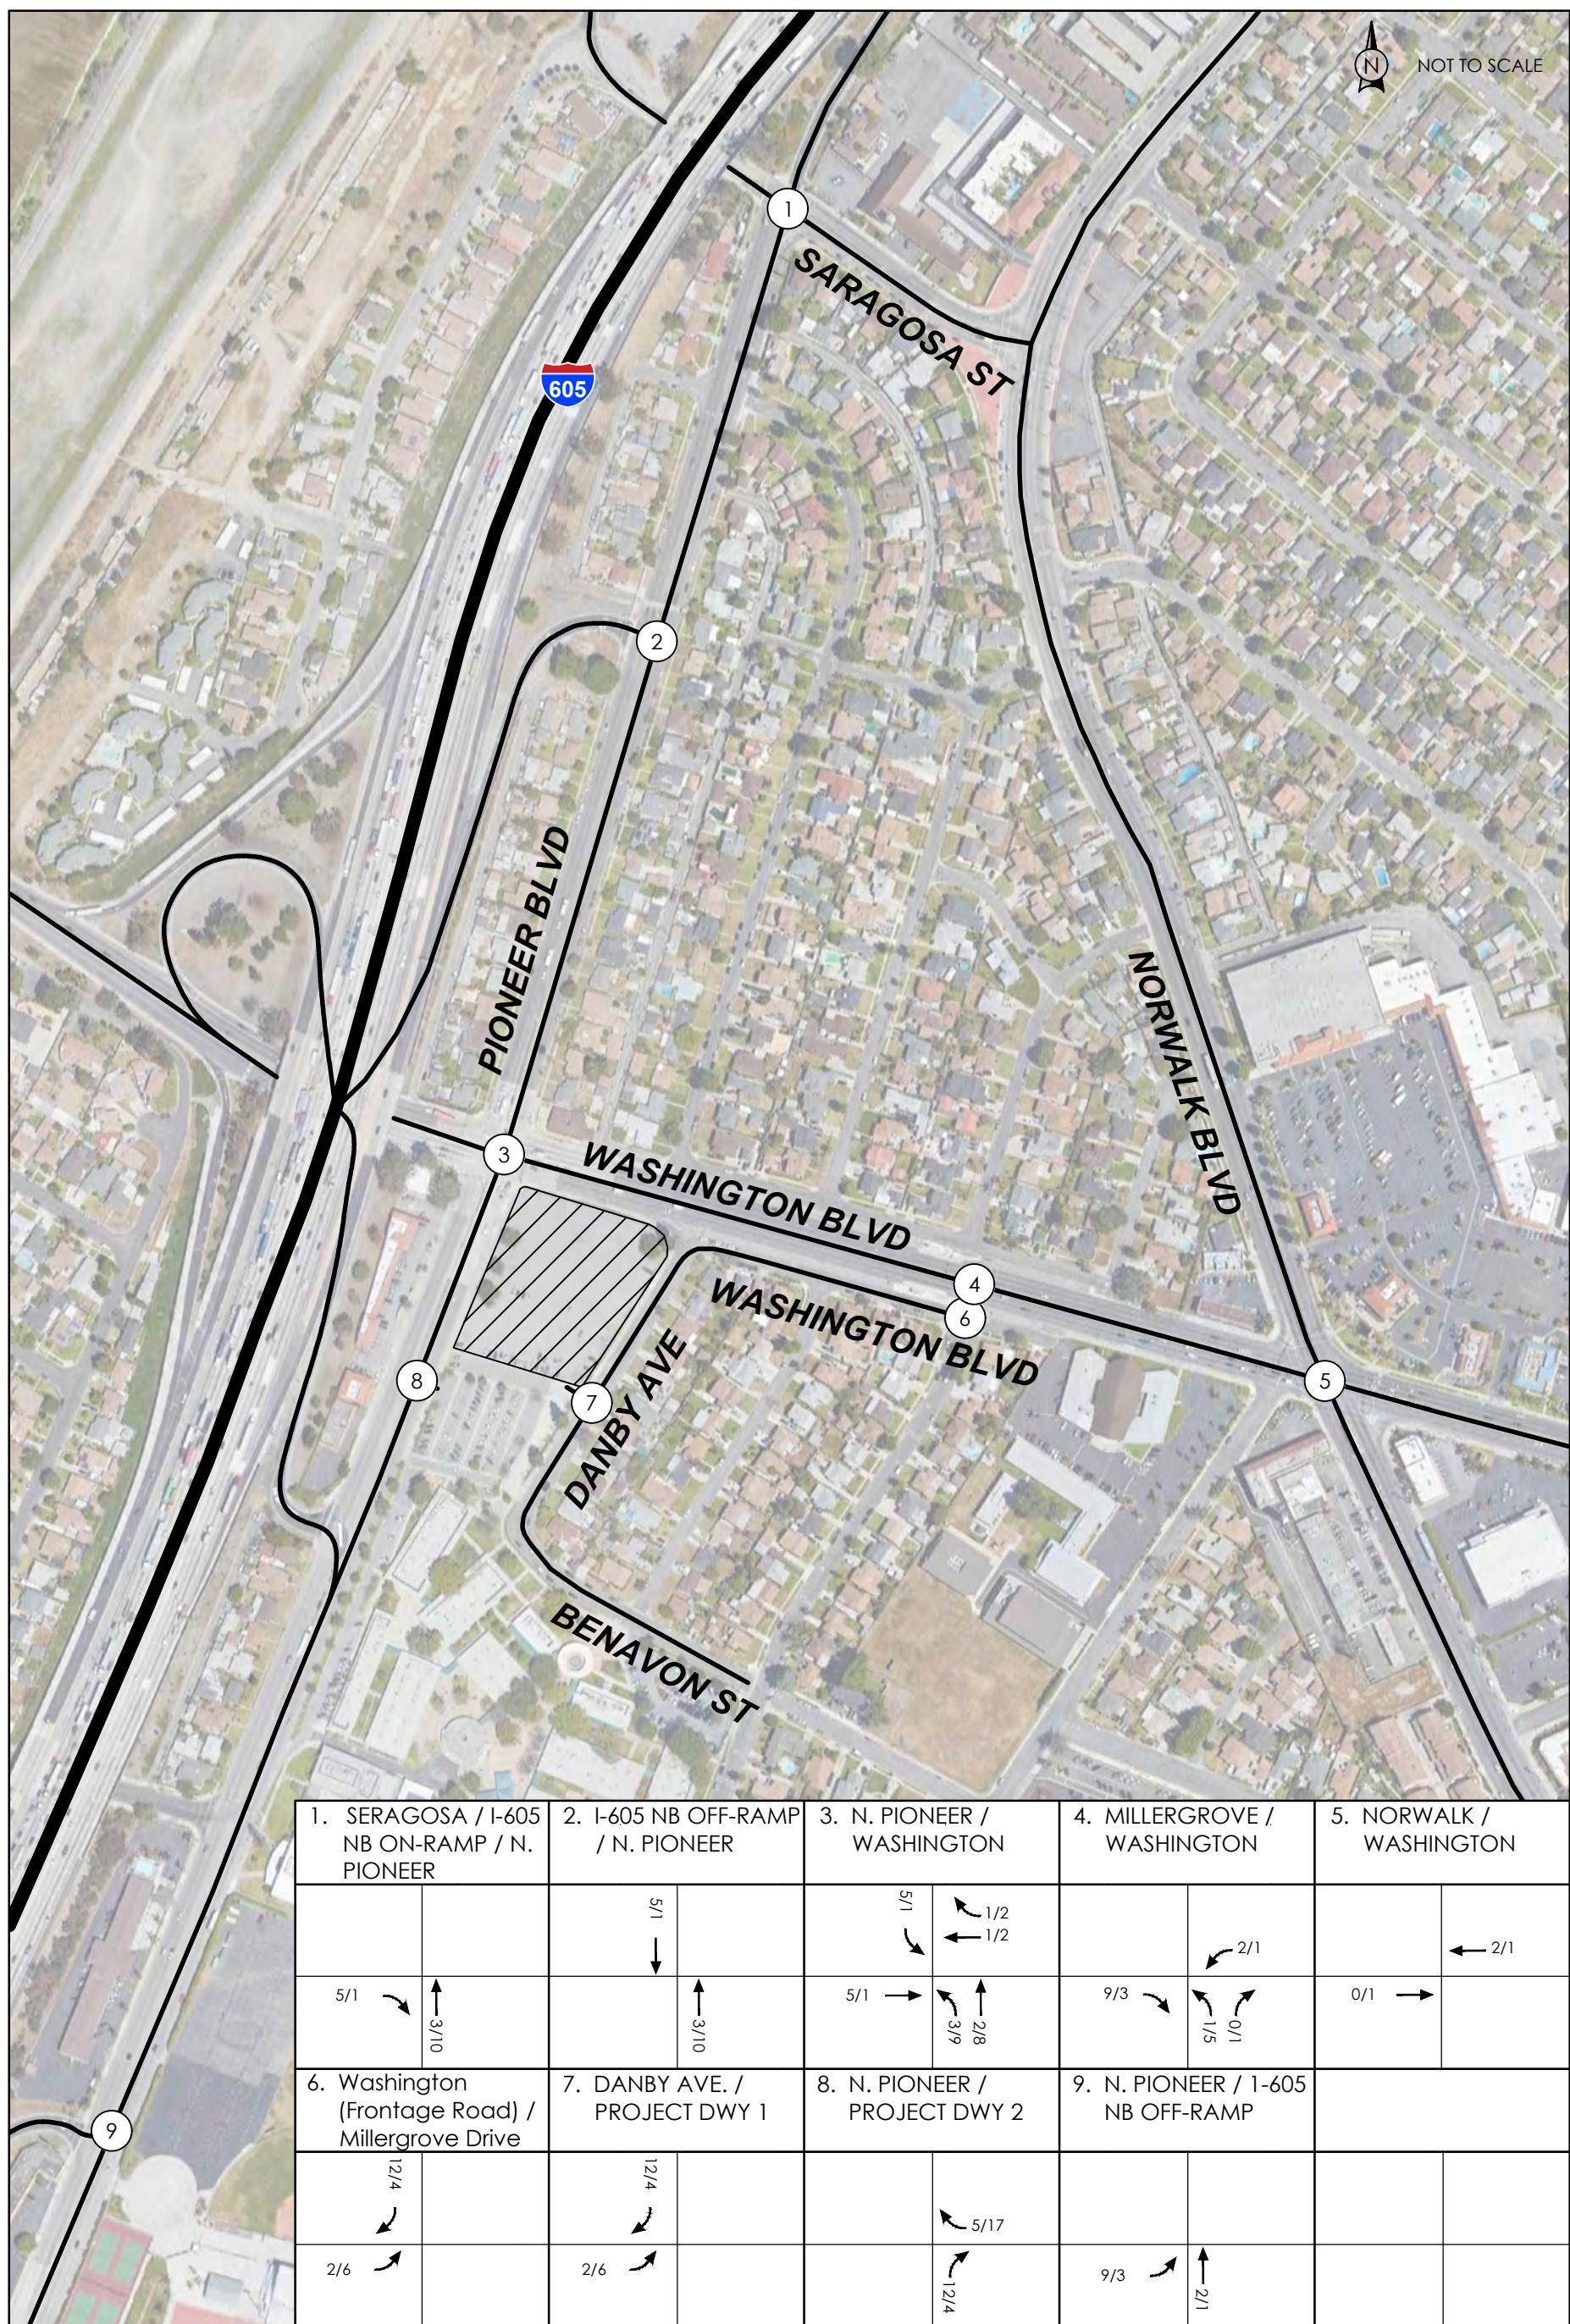

## Project Construction and O&M Trip Distribution

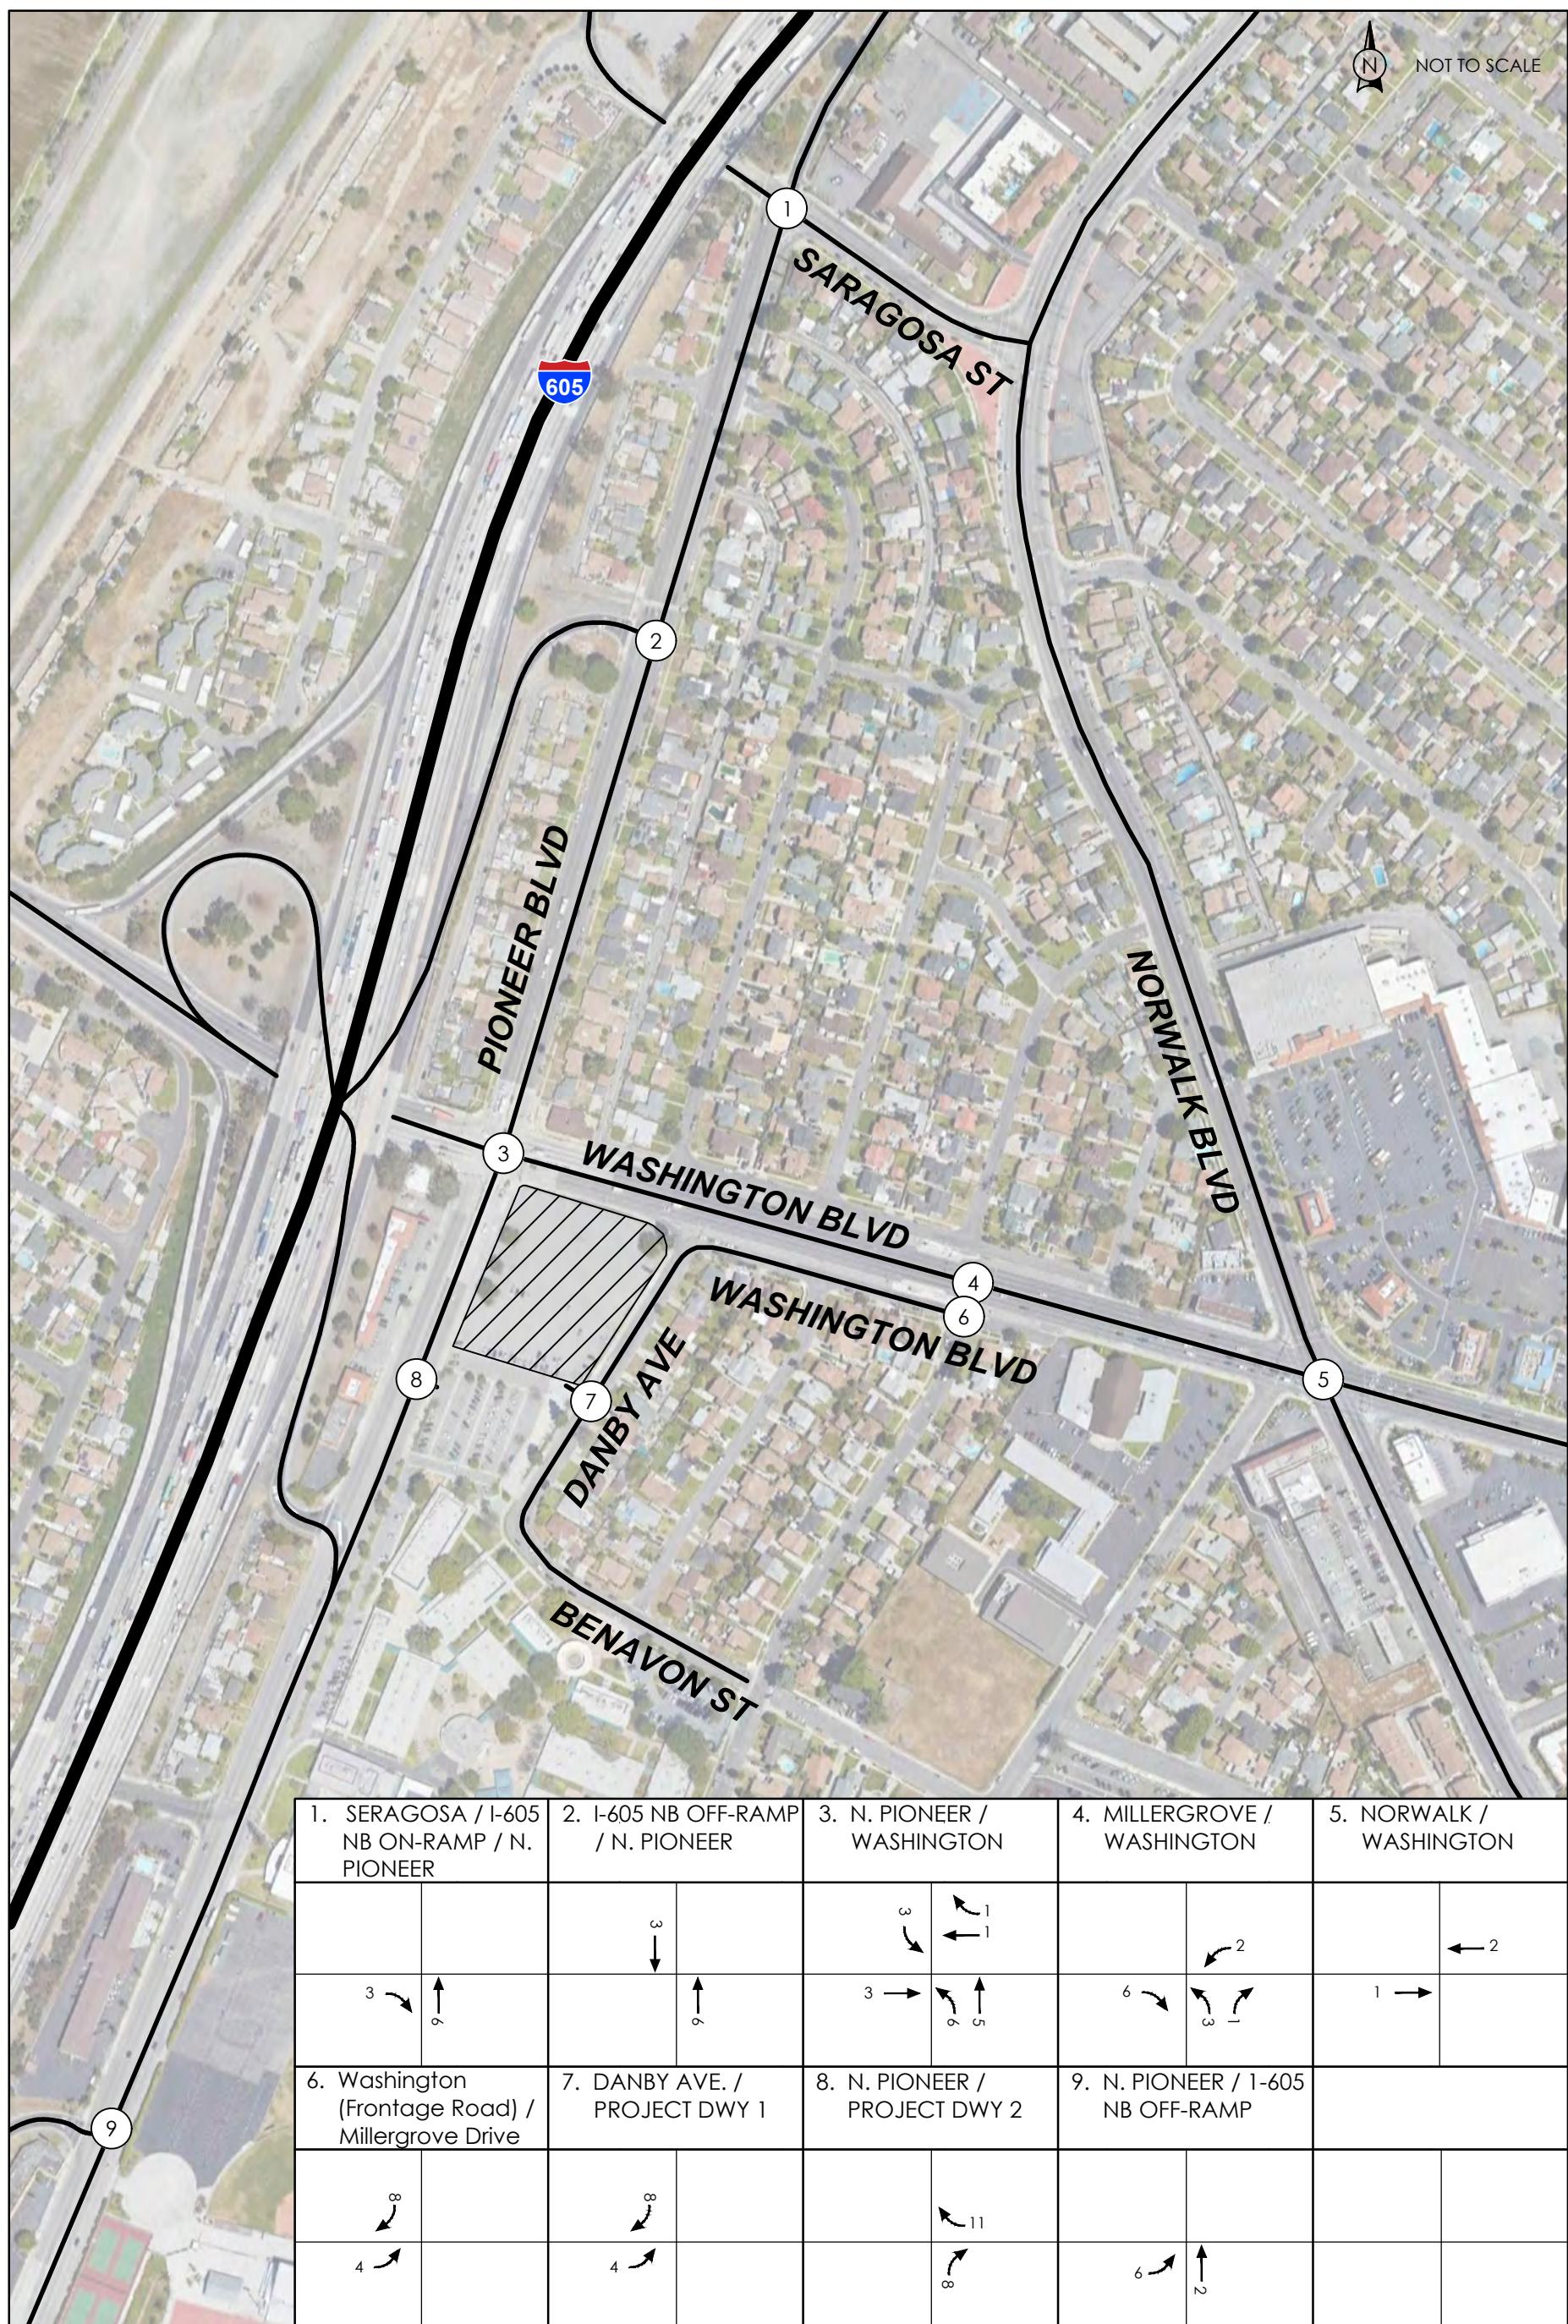

Figure 7

## 4.0 Cumulative Projects

While the project site is located in the unincorporated area of Los Angeles County, it is within the sphere of influence of other jurisdictions.

The following agencies were contacted to gather data on other projects in development or scheduled for development that would impact study intersections:

- County of Los Angeles
- City of Pico Rivera
- City of Whittier

The area surrounding the proposed aquatic center is densely developed and heavily populated with housing, retail centers, and various options for major arterial roadways in all directions including close proximity to both the I-605 and I-5 freeways. Therefore cumulative trips were distributed uniformly to account for the various points of interest and commuting options available to motorists in the area.

### 4.1 County of Los Angeles

On-going projects within the County's jurisdiction were found to not be significant enough to include in the cumulative analysis for this study. The majority of the projects included architectural improvements to existing businesses as well as private residential improvements to existing housing. New commercial developments were classified as completed in the project list obtained from the County. Therefore no County jurisdiction cumulative projects were included in this study.

### 4.2 City of Pico Rivera

The City of Pico Rivera provided the following six (6) projects within a 5 mile radius of the proposed aquatic facility. Three (3) of the developments are residential properties. However, these properties are in a different school zone than Pioneer High School. The remaining three (3) projects are for industrial buildings / warehouses.

Based on the usages of the cumulative projects provided by Pico Rivera, the trips to the study intersections are anticipated to be minimal. For the industrial developments, it is assumed that most trucking trips will commute to either the I-605 or I-5 freeway at on- and off-ramps outside of the scope of this study and therefore these developments were not considered for this study.

For the residential developments, this study will assume that 5 - 10% of the trips generated for each will commute to the proposed water recreational facility and / or surrounding commercial area along Washington and/or Pioneer Boulevard. Those trips have been distributed to the study intersections accordingly.

10% of the Burke Site, Single Family Homes have been assigned to the intersection of Slauson Avenue and Pioneer Boulevard where trips will then be distributed accordingly.

For both Townhome Developments I and II, based on the vicinity to the proposed aquatic center as well as the small size of the two developments, both did not impact study intersections when a 5% trip distribution was applied.

#### 4.3 City of Whittier

The City of Whittier identified The Grove development as a project that would impact the study intersections of this analysis. The 75-acre mixed use development is anticipated to be fully constructed by 2020 according to the City's planning department. Construction is currently underway for all facets of the development.

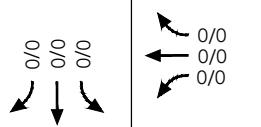

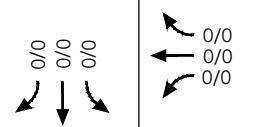

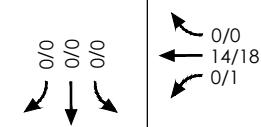

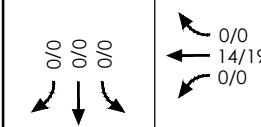

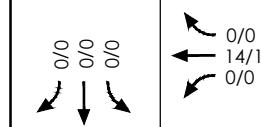

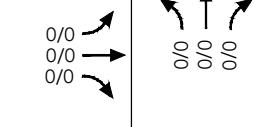

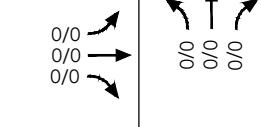

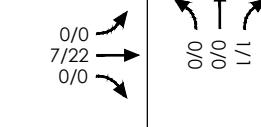

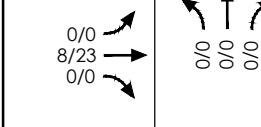

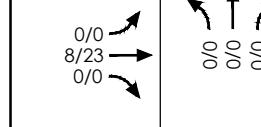

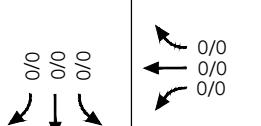

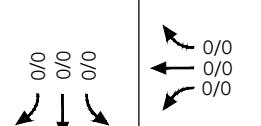

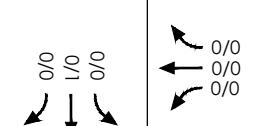

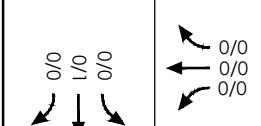

The development is located at 11850 Whittier Boulevard Whittier, CA. The development includes the construction of 561 homes, 189 apartments units, and 150,000 square feet of retail and restaurant space.

This study assumes 10% of these cumulative trips will travel to the intersection of Washington Boulevard and Whittier Boulevard with one third of these trips distributed to travel west of the intersection along Washington Boulevard in the vicinity of the proposed aquatic facility.

#### 4.4 Cumulative Project Trips

*Tables 12 and 13* list the cumulative trips assigned per the assumptions above for both the weekday peak hours and Saturday peak hour, respectively, for each cumulative project. *Figures 8a and 8b* show the locations of the cumulative projects in relation to the proposed aquatic facility as well as the trip assignment at study intersections.

## 5.0 Level of Service Analysis

The following section will analyze the level of service (LOS) for the intersections identified in the study, as described in Table 2 of this study in *Section 1.3 Study Scope*.

These intersections include the following:

1. Seragosa St. / I-605 NB On-Ramp / N. Pioneer Blvd.
2. I-605 NB Off-Ramp / N. Pioneer Blvd.
3. N. Pioneer Blvd. / Washington Blvd.
4. Millergrove Dr. / Washington Blvd.
5. Norwalk Blvd. / Washington Blvd.
6. Millergrove Dr. / Washington Blvd. (Frontage Road)
7. Danby Ave. / Project Driveway 1
8. N. Pioneer Blvd. / Project Driveway 2
9. N. Pioneer Blvd. / I-605 NB Off-Ramp

LOS is based on the ICU Method as outlined in the County Guidelines to determine intersections' functionality to determine traffic flow. Significant impact thresholds are based on the parameters as listed in Table 1 and derived from the County Guidelines.

Study scenarios to be analyzed include the following:

*Table 14: Study Scenarios*

Scenario	Time Frames Analyzed
Existing Year	AM / PM Weekday Peak Hour Saturday AM Peak Hour
Existing Year + Construction Traffic	AM / PM Weekday Peak Hour
Existing Year + Project Trips	AM / PM Weekday Peak Hour Saturday AM Peak Hour
Existing Year + Project Trips + Cumulative Traffic	AM / PM Weekday Peak Hour Saturday AM Peak Hour

(Study scenarios based on LACPW, Traffic Impact Analysis Report Guidelines, December 2013 and MOU)

\*If mitigation is deemed necessary by LOS results

If mitigation is required, an appropriate mitigation measure will be assigned to the intersection and a new LOS Analysis will be run to determine an improved LOS. LOS is based on the ICU Method as outlined in the County Guidelines to determine intersections' functionality to determine traffic flow.

### 5.1 Existing Year

#### 5.1.1 Traffic Counts

Existing traffic counts were taken at each study intersection for both a typical weekday and a typical Saturday morning. Weekday AM / PM Peak Hour turning movement counts were taken on Thursday, May 9, 2019 while Saturday AM Peak Hour turning movement counts were taken on May 11, 2019. Weekday AM Peak Hour counts were conducted between 7:00 AM to 9:00 AM while Weekday PM Peak Hour counts were conducted between 4:00 PM to 6:00 PM. Saturday AM Peak Hour counts were taken between 8:00 AM to 12:00 PM. Traffic count data for each study intersection can be found in Appendix C.

### 5.1.2 Existing Year LOS

The existing year LOS and v/c for each corresponding intersection serves as the baseline for determining significant impacts for the subsequent study scenarios and determining which intersections will require mitigation. Existing Weekday Peak Hour and Saturday AM Peak Hour Turning Movements are shown in Figures 9 and 10, respectively. As indicated in Table 15, all study intersections operate at LOS D or better during weekday AM/PM Peak Hour and Saturday AM Peak Hours under existing conditions.

## 5.2 Existing + Construction Traffic

This scenario combines the existing peak hour traffic volume counts with the construction trip generation as described in *Figure 5* in *Section 3.1* of this study. Saturday analysis is not considered for this scenario as construction is assumed to not take place during weekends. Existing + Construction Weekday Peak Hour Turning Movements can be found in Figure 11. As indicated in Table 15, all study intersections operate at LOS D or better during weekday AM/PM Peak Hour under this scenario. The v/c ratio does not increase by more than 0.01 at any study intersection from the existing baseline conditions and therefore no significant impacts occur.

## 5.3 Existing + Project O&M Trips

This scenario combines the existing peak hour traffic volume counts with the project operation and maintenance trip generation as described in *Section 4* and *Figure 6* and *Figure 7* of this study. Existing + Project O&M Weekday Peak Hour and Existing + Project O&M Saturday AM Peak Hour Turning Movements are shown in Figures 12 and 13, respectively. As indicated in Table 15, all study intersections operate at LOS D or better during weekday AM/PM Peak Hour and Saturday AM Peak Hours under this scenario. The v/c ratio does not increase by more than 0.01 at any study intersection from the existing baseline conditions and therefore no significant impacts occur.

## 5.4 Existing + Project + Cumulative Trips

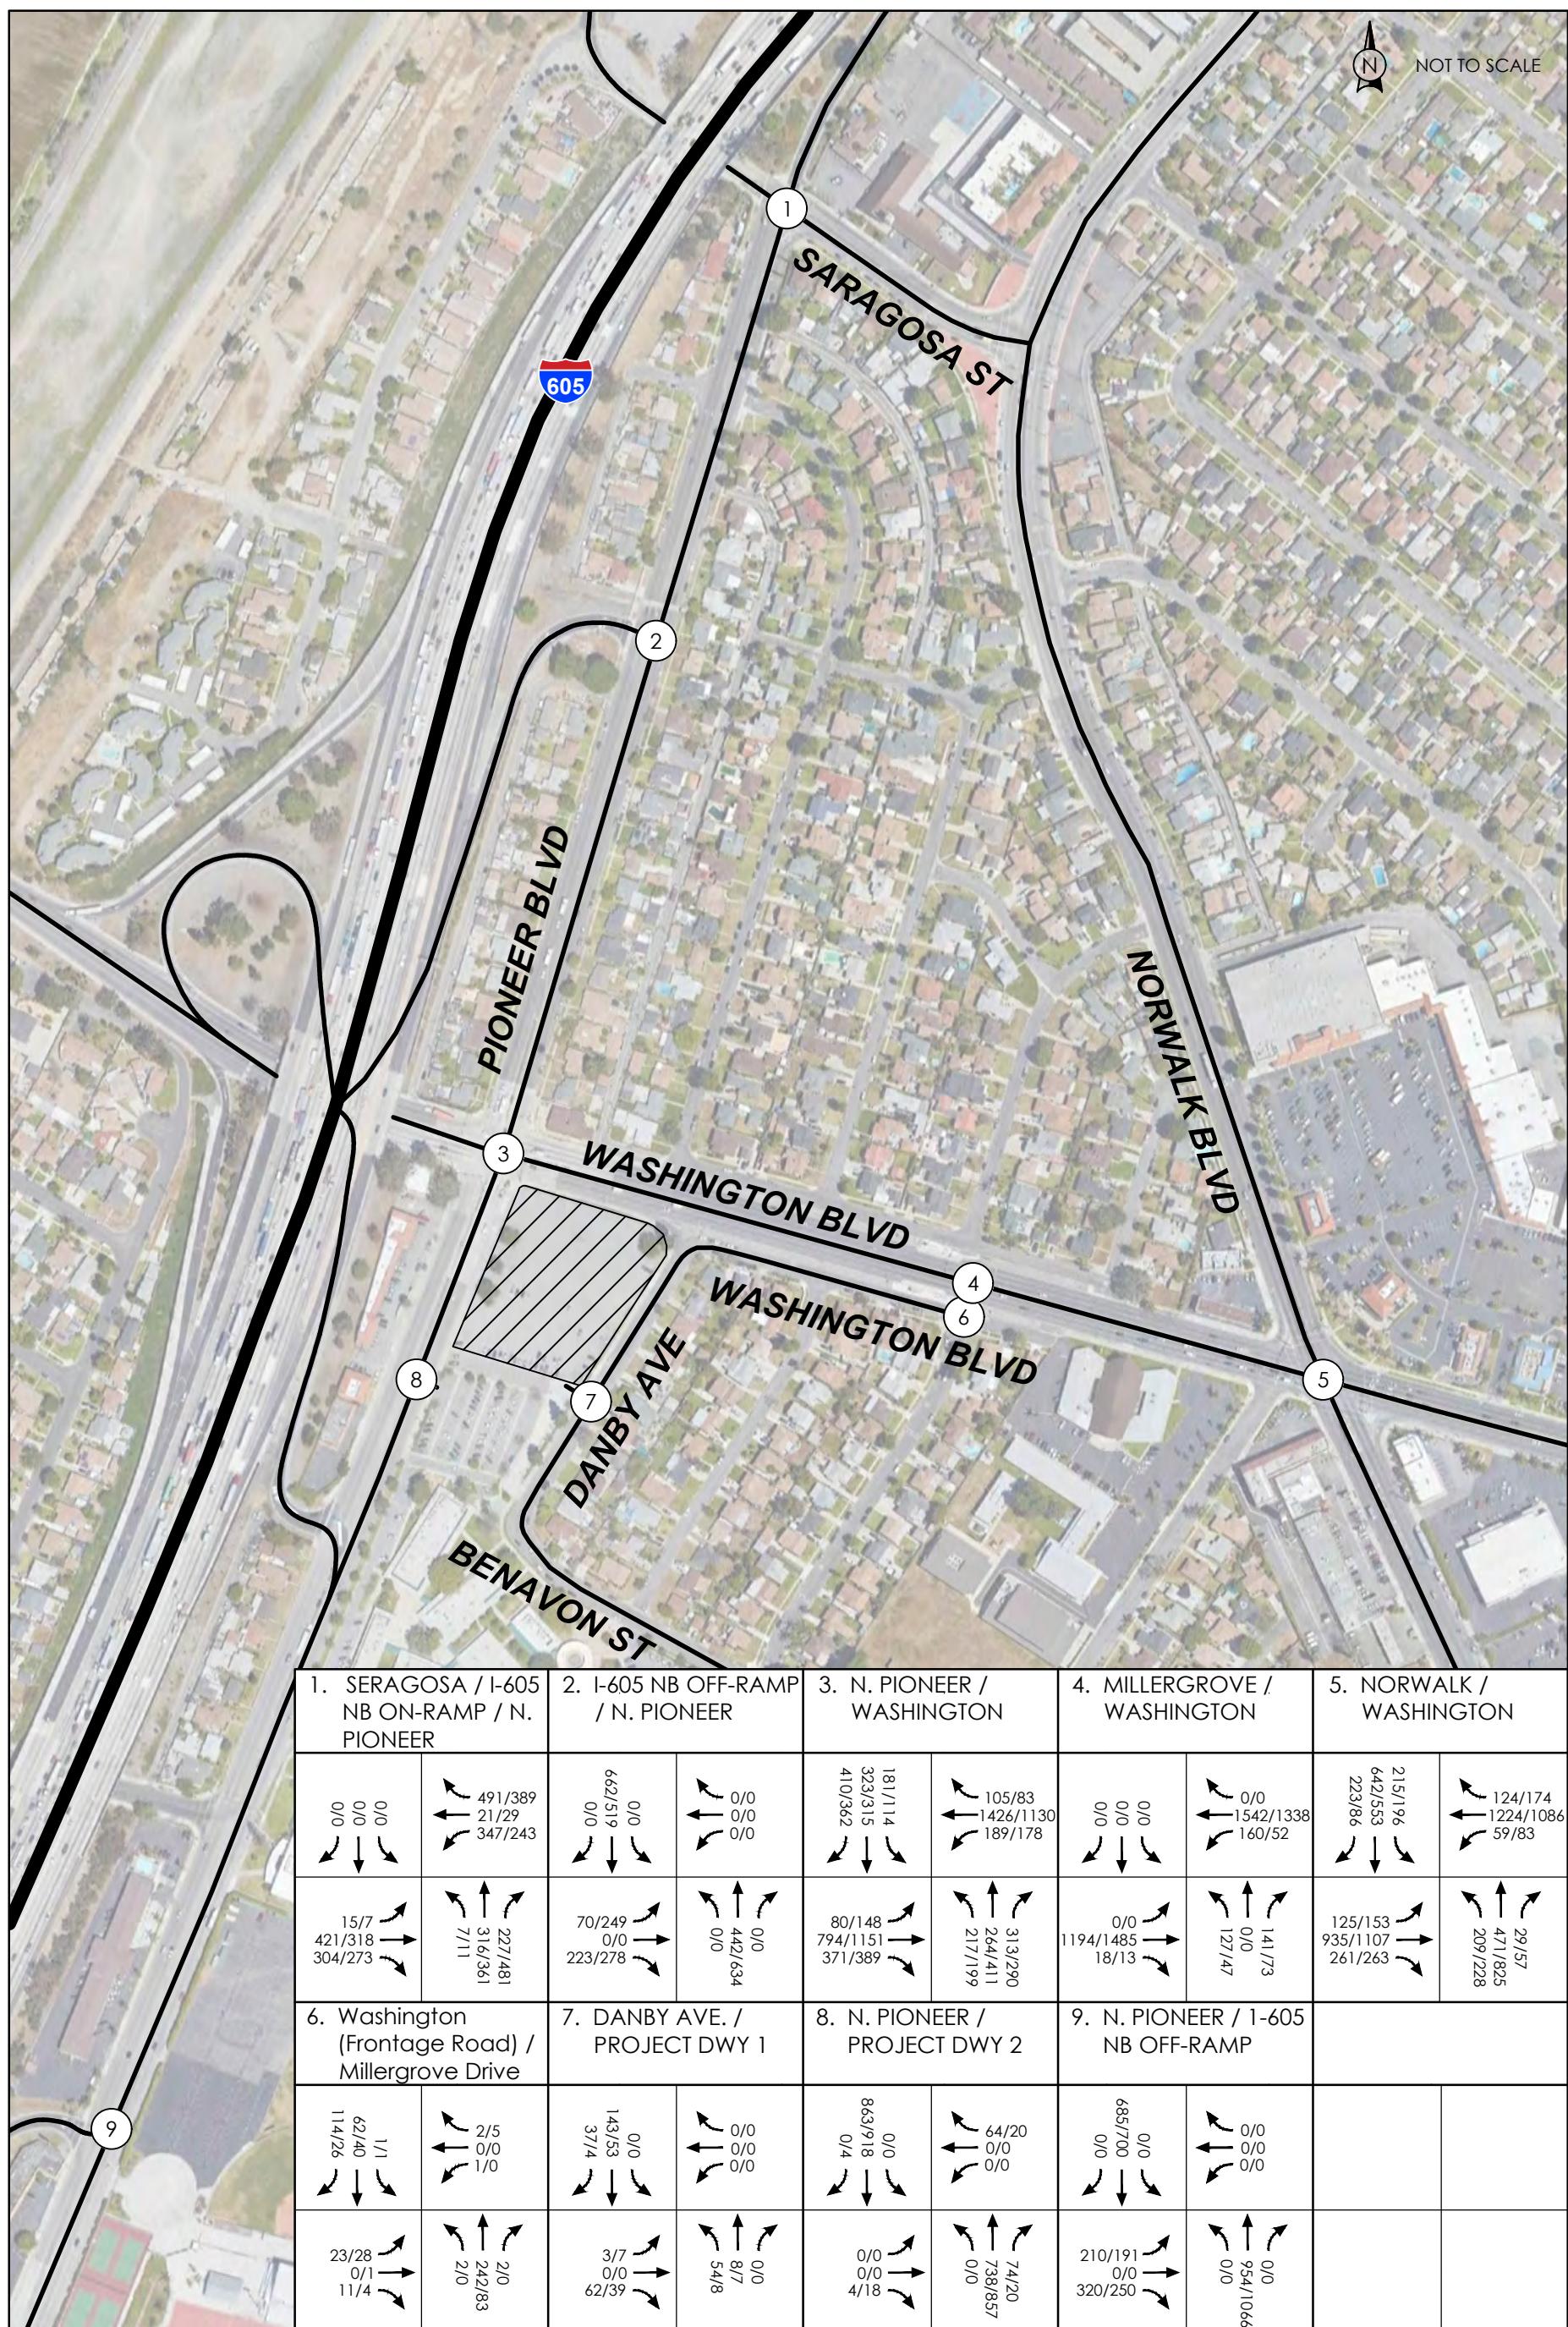

This scenario combines the existing peak hour traffic volume counts with the project operation and maintenance trip generation and the cumulative projects as described in *Section 3.2* and *Figure 8* of this study. Existing + Project + Cumulative Weekday Peak Hour and Existing + Project + Cumulative Saturday AM Peak Hour Turning Movements are shown in Figures 14 and 15, respectively. As indicated in Table 15, all study intersections operate at LOS D or better during weekday AM/PM Peak Hour and Saturday AM Peak Hours under this scenario. The v/c ratio does not increase by more than 0.01 at any study intersection from the existing baseline conditions and therefore no significant impacts occur.

## 5.5 LOS and v/c Worksheets

Detailed LOS Analysis and v/c worksheets can be found in the Appendix:

- Appendix D: Existing Year LOS Analysis
- Appendix E: Existing Year + Construction Traffic
- Appendix F: Existing Year + Project Trips
- Appendix G: Existing Year + Project Trips + Cumulative Traffic

## 6.0 Mitigation Measures

The analysis determined no significant traffic impact to all study intersections per Table 15 of this study. Therefore no mitigation measures were applied based on the results of this study.

## 7.0 Conclusions

This traffic impact analysis has been prepared to evaluate the potential impacts to the local street system due to the development of the proposed Whittier Aquatic Facility located at Pioneer High School, 10800 Ben Avon Street, Whittier, in the unincorporated community of West Whittier-Los Nietos, on the corner southeast corner of Pioneer Boulevard and Washington Boulevard.

Analysis was prepared in accordance to the County of Los Angeles Department of Public Works - Traffic Impact Analysis Report Guidelines Draft, last revised December 2013. Nine intersections, including two project driveways, were identified and analyzed in order to determine changes in traffic operations due to the construction and operation of the proposed project.

Application of the County of Los Angeles impact threshold criteria indicates that there is no significant impact to any of the study intersections both during construction and after construction during the site's operation and usage. Therefore, all project-related traffic impacts due to the project are deemed to be less than significant.

## SCOPING FOR TRAFFIC STUDY

Project Name: Whittier Aquatics Facility

**3. Study Intersections:** At minimum, the study shall include the following intersections. The list is subject to change after related projects, trip generation and distribution are determined. Consultant should check with adjoining Cities regarding their requirements in addition to the following County/City intersections. Documentation of the consultation from these agencies shall be included in the traffic study.

Xtn #	Jurisdictional Split	Thomas Guide Page+Grid	N/S and E/W Street Names	Signalized	CMP
1			SERAGOSA / I-605 NB ON-RAMP / N. PIONEER	Yes/no	Yes/no

## SCOPING FOR TRAFFIC STUDY

Project Name:	Whittier Aquatics Facility
---------------	----------------------------

**4. Related Projects:** Project Consultant shall consult with Los Angeles County Department of Regional Planning and planning departments of adjoining Cities to identify planned development in the vicinity of the project site.

**5. Congested Management Program (CMP):** Project Consultant shall conduct CMP analysis in accordance with the County's Traffic Impact Analysis Report Guidelines.

**6. Freeway Analysis:** Project Consultant shall consult with the State of California Department of Transportation (Caltrans) to determine the California Environmental Quality Act levels of significance with regard to traffic impacts on Caltrans' freeway facilities. This consultation shall also include a determination of Caltrans requirements for the study of traffic impacts to its facilities and the mitigation of any such impacts. This analysis must follow the most current Caltrans' Guide for the Preparation of Traffic Impact Studies (December 2002). If Caltrans finds that the project has a significant impact on the freeway, Caltrans shall be requested to include the basis for this finding in their response. If fees are proposed to mitigate the freeway impact, Caltrans shall be requested to identify the specific project to which the fees will apply. These written comments from Caltrans shall be included with the traffic study and submitted to Public Works for review and approval. If a documented good faith effort is made to consult with Caltrans and written comments cannot be obtained from within a reasonable amount of time, an analysis of the freeway impact shall be made using the County of Los Angeles' CMP Land Use Analysis Guidelines.

**7. Site Access Analysis:** Project's in rural areas shall conduct a site access analysis in accordance with the County's Access Management for Private Developments Guidelines Manual. All schools, waste/recycling collection or other projects as determined by TLD shall conduct a queuing analysis to ensure queues do not spill-over onto County roads. For schools, provide boundary map and information on neighboring schools including day care facilities. The traffic study will also document pick-up and drop-off procedures.

### 8. Other Instructions:

Traffic counts may be conducted immediately per the following:

- Must be taken on Tuesdays, Wednesdays or Thursdays.
- Must exclude holidays, and the first weekdays before and after the holiday.
- Must be taken on days when local schools or colleges are in session.
- Must be taken on days of good weather, and avoid atypical conditions (e.g., road construction, detours, or major traffic incidents).
- Traffic counts used for other traffic studies in the area shall **NOT** be reused again, unless 25% of the counts conducted for that particular traffic study are validated with new counts. The difference in volumes between the old and new counts at each corresponding movement should not be more than 10%.
- New traffic counts shall be checked to ensure the difference in volumes at corresponding approaches, if applicable, between two adjacent intersections is no more than 10% unless the difference can be justified.

For all proposed mitigation measures to address project specific impacts, the project shall include conceptual plans for the improvements in the traffic study which shall be made part of the review and approval of the traffic study. All proposed improvements

For General Questions, please contact Traffic Studies Section at (626) 300-4740

## SCOPING FOR TRAFFIC STUDY

Project Name:	Whittier Aquatics Facility
---------------	----------------------------

shall be within public the right-of-way.

For all proposed mitigation measures to address cumulative impacts, the project shall include conceptual plans and cost estimates for the improvements in the traffic study which shall be made part of the review and approval of the traffic study.

Unless otherwise approved by TLD, level-of-service analysis shall be performed based on the following scenarios:

- (a) Traffic conditions in the vicinity of the project as they exist at the time the notice of preparation (NOP) is published, or if no NOP is published, at the time environmental analysis is commenced;
- (b) Traffic in (a) plus project traffic;
- (c) Traffic in (b) with the proposed mitigation measures (if necessary);
- (d) Traffic in (b) plus the cumulative traffic that includes project and other known developments at the time the notice of preparation (NOP) is published, or if no NOP is published, at the time environmental analysis is commenced; and
- (e) Traffic in (d) with the proposed mitigation measures (if necessary).

Any required Traffic Index calculations shall be prepared in accordance with the latest version of the Caltrans Highway Design Manual

For General Questions, please contact Traffic Studies Section at (626) 300-4740

## FACILITY PROGRAM

---

### WHITTIER AQUATICS FACILITY

---

#### PART 1 - INFORMATION

##### A. Park Information

**Supervisorial District:** Fourth Supervisorial District  
**Agency:** Regional Facilities Agency  
**Park Name:** Whittier Aquatics Facility  
**Park Address or Location:** 10800 Ben Avon Street  
Whittier, CA 90606  
**Park Phone Number:** N/A  
**Park Classification:** New Aquatics Facility

##### B. Project Information

**Project Manager:** Capital Projects Group  
**Study Manager:** Christopher Spisak  
**Project Description:** Design and Construction of an aquatics facility  
**Project Funding:** County of Los Angeles funds and State of California school funds  
**Project Schedule:** TBD

#### PART 2 – PROJECT ANALYSIS AND FINDINGS

##### A. Analysis

###### **Neighborhood/Regional Context and Connectivity:**

Pioneer High School is located in the unincorporated community of West Whittier-Los Nietos, California neighboring the city of Pico Rivera. The school serves students from the Los Nietos, South Whittier, and Whittier City School Districts.

The property is bordered on the north by Washington Blvd., bordered on the east by residential neighborhoods, and on the south by Slauson Avenue. The long west

side of the property is fronted by Pioneer Blvd. Commercial businesses run along the opposite side of Pioneer Boulevard.

### **Property Issues and Land Use Considerations:**

1. Existing Facilities
  - a. Grades 9-12 High School
  - b. Existing L-shaped pool
  - c. Existing parking lot at the north end of the property where the aquatic facility can be located
  - d. Existing bus service is located along Pioneer Boulevard

2. Infrastructure/Utilities

Following is a list of utility companies and purveyors to the park:

Electricity: Southern California Edison Company

Water: San Gabriel Valley Water District

Storm Drain: LA County Flood Control District

Telephone: Frontier California, Inc.

Gas: Southern California Gas Company

Internet: Sunesys

3. Public Services

The school site has an exercise/ fitness zone located along Pioneer Blvd. which is open for public use.

### **Grant Requirements:**

DPR has not secured grant funds for Pioneer High School; therefore, there are no grant restrictions applicable.

### **Site Analysis:**

The school currently contains an existing L-shaped pool, which will be retained (and will not be a part of the subject property.) It is located between existing buildings, requiring the new aquatics facility to be located elsewhere on the site. A large parking lot at the north end of the school site is of sufficient size to site this project. See the enclosed attachment, which shows one possible configuration of the Pool Building and associated pools in this area.

**California Environmental Quality Act (CEQA) / NEPA Compliance:**

The proposed project exceeds 10,000 square feet in floor area as defined in State CEQA Guidelines Section 15303 (c). An Initial Study/Mitigated Negative Declaration may be required for the project.

**Regulatory-Permitting Considerations:**

The construction of the new aquatics facility will require design reviews, not limited to the following County of Los Angeles agencies:

- Department of Public Health, Environmental Health – Recreational Waters Program
- Department of Regional Planning
- Department of Public Works, Building and Safety Division
- Department of Parks and Recreation Planning and Development Agency and Aquatics Division

And the State of California:

- California Health and Safety Code
- California Code of Regulations (Title 22, Chapter 20)
- California Building Code (Title 24 with County of Los Angeles amendments)
- Virginia Graeme Baker Pool and Spa Safety Act
- California Division of the State Architect (DSA)

**Maintenance and Operational Considerations:**

Construction of this aquatics facility will heavily impact daily operations at the school. Scheduling, park staff involvement, and impacts will need to be coordinated closely between the school and Regional Facilities Agency Pools Aquatics Division.

**Findings:**

1. Sufficient space exists in the chosen location to accommodate this aquatics facility.
2. All pool enclosures and pool drains to follow California Building Code requirements.
3. The Board of Supervisors (BOS) and the Whittier Union School Board's desire for a local swimming facility at this location is high.
4. The building is to be designed using *LEED v4, BD+C: New Construction standards, and follow 2017 County of Los Angeles Green Building Standards Code (Title 31.)*

These analyses and findings are valid for a one-year period after approval of this Facility Program and will require re-evaluation thereafter.

## **PART 3 – DESIGN AND CONSTRUCTION DOCUMENTS SCOPE OF WORK**

Provide complete contract documents for the following design requirements including, but not limited to:

### **A. Demolition and Site Work**

1. The work site to be securely fenced and protected at all times during construction.
2. Removal of asphalt and construction debris to comply with the *Los Angeles County Construction and Demolition Debris Recycling Ordinance*, Chapter 20.87 to the LA County Code.
3. Existing utilities are to be identified within the work area. Any necessary relocation will be coordinated and planned with the school district and utility companies.
4. Erosion control of construction debris and surface runoff of storm water to be contained on site, and not allowed to migrate off-site to the adjacent streets.

### **B. New Construction**

1. Design the new, approximately 5,000-10,000 square feet pool building using the *2017 Park Design Guidelines and Standards*. Provide ADA compliant access from the parking area to the pool building. The building should be provided with and not limited to:
  - a. Information Display Area
  - b. Trophy Display Cases
  - c. Public Counter (with controlled access to the pool area)
  - d. ADA Compliant Drinking Fountains
  - e. Restrooms
  - f. Bag Rooms
  - g. Lifeguard Office with clear visibility of the competition pool and lap instructional pool
  - h. First Aid Area
  - i. Classroom
  - j. Equipment Storage Area (for large items)
  - k. County officials' dedication plaque (located on the outside of the building)
  - l. Electrical Room
  - m. Maximum Air Ventilation
  - n. Eye Wash Station to be located next to chemical containment area per County Health Department Code. All eyewash stations must include the minimum required Dielectric fittings and insulation to ensure proper function.
2. Design a 50-meter x 25 yard, 15-feet deep competitive swimming pool with all applicable improvements necessary to accommodate and allow for competitive swim, diving, water polo training, and other competitive events. Construction should use sustainable methods and durable

materials. Design should meet all pool certification requirements for the following (but not limited to) organizations:

- a. FINA – Federation Internationale de Natation Amateur
  - b. U.S. Swimming
  - c. U.S. Diving
  - d. U.S. Water Polo
  - e. U.S. Synchronized Swimming
  - f. NCAA – National Collegiate Athletic Association
  - g. NFSHSA – National Federation of State High School Associations
3. Design a 25-meter x 25 yard practice pool. The shallow end to be 3 feet to 4 1/2 feet deep and the deep end to be 13 feet deep. This will allow for lessons, Aqua Exercise, ADA lessons, and competitive lap swimming. Lanes to be 8 feet 2 ½ inches wide.
  4. Pools should be oriented with the shallow end located closest to the pool building.
  5. Include a retractable pool cover in the design (for both pools.)
  6. All drain lines to connect to sanitary sewer system. Permit requirements shall be verified by the Sanitation District.
  7. Decorative steel security fence to enclose entire pool area.
  8. Provide ADA path-of-travel compliance to the facility.
  9. Re-surface and refurbish existing remaining parking lot adjacent to the facility.
  10. All new landscaping to be drought tolerant and irrigated using weather sensor controls.
  11. Include security lighting throughout the facility.
  12. Site amenities to include bicycle racks, drinking fountains, benches, and trash receptacles.
  13. Pool Deck Area and Pool to be lighted using energy efficient LED lighting fixtures (to allow for night swimming.)
  14. Include competitive type diving boards at the deep end of the pool.
  15. Pool water shall be heated to between 25 to 28 degrees Celsius. Consider solar water heating and include if feasible, as well as showers and domestic hot water.
  16. ADA compliant entry into the pool shall be provided.
  17. The concrete pool decking shall be a minimum of twenty feet (20') feet wide from the pool's edges.
  18. Pool gutter system shall be tiled with deep gutter system.
  19. ADA compliant Bleachers to be included in the design.
  20. Ladders and built-in steps should be provided.
  21. Swimming pool deck shall include "NO DIVING / RUNNING IN SWIMMING POOL AREA" with tile letters.
  22. Pool equipment area with exterior roll-up doors, minimum 12' wide, for equipment access. A separate drive-up access shall be provided to the chemical tanks and equipment area.

23. A public address system (PA) to serve pool areas. External components to be vandal proof.
24. Electronic score board and timing equipment.
25. Automated pool vacuum.
26. All Signage as required.
27. Include capacity for installing Variable-Frequency Drives in the equipment design with energy monitoring.
28. Integrate energy and water efficient pool pumps into the design.
29. Incorporate shower wastewater heat recovery for the shower areas.
30. Include the AngelEye LifeGuard anti-drowning system in the design.
31. A data connectivity line shall be provided in the Pool Equipment room to allow for remote connection.
32. Provide a 1 ½" Domestic Water Source. Provide isolation valves on all water source lines.
33. Use only Schedule 80 PVC pipe and fittings.

### **1. Reference Documents**

Not available

### **2. Surveys/ Reports/ Tests**

Surveys, reports, and tests may include, but are not limited to the following:

- a. Boundary Survey
- b. Topographic Survey
- c. Geotechnical Report
- d. Title Report

### **3. Water and Energy Conservation**

- a. Contact the Development Division's Water and Conservation Planning Section to coordinate all possible rebates through Southern California Edison Company, Southern California Gas Company, Metropolitan Water District, and the Southern California Regional Energy Network, prior to the final selection of products.
- b. Contact the Development Division's Water and Conservation Planning Section to coordinate "Savings by Design" application prior to the start of the project Schematic Design phase.

## **C. Design Requirements**

Project design shall comply with all requirements of the Department's *Park Design Guidelines and Standards 2017*, available at:

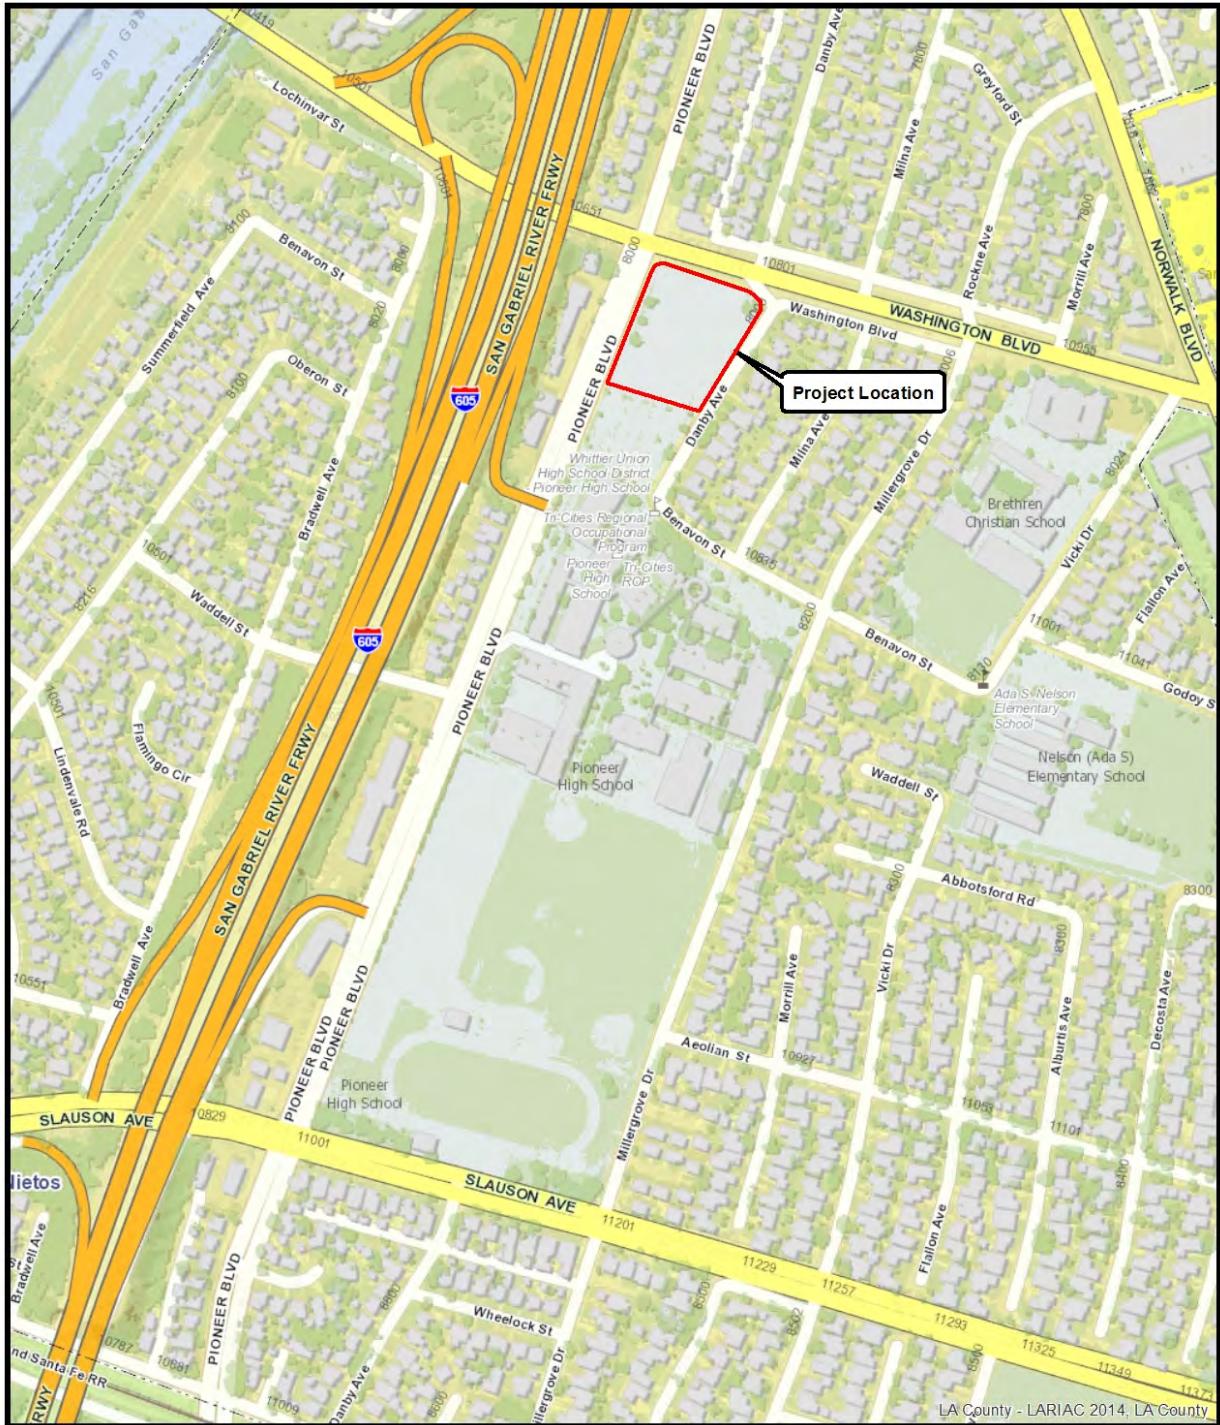

[http://file.lacounty.gov/SDSInter/dpr/1029701\\_ParkDesignGuideline2017.pdf](http://file.lacounty.gov/SDSInter/dpr/1029701_ParkDesignGuideline2017.pdf)

## **D. Consultant Requirements**

**Deliverables:** Deliverables shall be per Master Agreement for As-Needed Consultant Services made and entered into between County and Consultant on July 11, 2016, and Consultant's Fee Proposal approved by the Department.

## **End of Program**
