## EXECUTIVE SUMMARY

This traffic study was prepared for the County of Los Angeles by KOA for the proposed San Gabriel Valley Aquatic Center. The following summarizes the traffic study results, conclusions, and recommendations:

- The project is the San Gabriel Valley Aquatic Center project, proposed by the County of Los Angeles on the Temple Academy School property in an unincorporated County area near the City of La Puente at 635 North California Avenue, La Puente.
- The project site is owned by the Hacienda La Puente Unified School District (HLPUSD). The County is planning to negotiate a ground lease with the HLPUSD to complete the project. The project site is bordered by Temple Academy school/North California Avenue on the southeast, East Temple Avenue to the southwest, residences/Evanwood Avenue to the northwest, and Allen J. Martin Park/East Giordano Street to the northeast.
- The proposed facility will provide a 10,800 square foot pool building, a large competitive swimming pool, a smaller practice pool, signage, fencing, bleachers, a new one-acre park area, central plaza, parking lot, and other site improvements.
- The main objective of the project is to construct a joint-use aquatics facility available for public use and to provide recreational opportunities to the local community. The proposed pools would provide for local residents to have an aquatics facility in closer proximity.
- The project would increase recreational opportunities for the local community, thereby reducing trips and vehicle miles traveled. The project would not result in new regional swim meets compared to what is already occurring.
- The traffic impact analysis methodology and data sources were defined by a project scoping document, submitted to the County of Los Angeles Department of Public Works (DPW) on February 25, 2021 and finalized on April 22, 2021.
- The project is anticipated to be completed and occupied within the year 2024.
- The project would generate a net total of 843 daily net trips, including 51 vehicle trips during the weekday a.m. peak hour and 68 vehicle trips during the weekday p.m. peak hour. Weekend midday peak hour vehicle trips would be 31 .

The project impact determinations are as follows, based on the analysis conducted and the application of the County traffic impact guidelines:

- The characteristics of this facility make the project impacts on VMT less than significant, per County guidelines requirements related to the California Environmental Quality Act (CEQA).
- By providing additional swimming facilities in the region, the County would increase recreational opportunities for the local community, thereby reducing trips and vehicle miles traveled for general swim facility use, practice, and regional meets.
- The project would not result in new practice activity and regional swim meets over the pattern of meets that is already occurring. In this manner, the proposed facility will not generate new regional vehicle trips.
- The project would reduce trips to other area swim facilities located further from the local area. Area VMT will therefore be reduced. The project will not substantially increase regional VMT in this manner, and therefore the project VMT impacts would be less than significant.
- The proposed project would not significantly affect local traffic circulation and access, based on a review of study area mobility conditions per County non-CEQA analysis requirements. The local traffic circulation effects of the project are determined to be nominal, and operational improvements are not recommended. The County will make timing adjustments in the future to accommodate queuing based on cumulative conditions.

## 1. INTRODUCTION

### 1.1 LEAD AND LOCAL AGENCY REVIEW

The analysis summarized in this report was completed based on the methodologies and procedures outlined in the County of Los Angeles Department of Public Works (DPW) Transportation Impact Analysis Guidelines dated July 23, 2020. This report presents the conclusions of the evaluation of CEQA and nonCEQA transportation impacts for the project

The City of La Puente northern limits are located to the south of the project site, and some of the study area intersections are located within or on the boundary of the City. The City of La Puente was contacted during project scoping efforts, to share planned study area and methodology details, and the City accepted the scoping document. The City by policy applies the County guidelines to traffic studies, so the County guidelines are used in this document for the review of potential project impacts by both the City of La Puente and the County of Los Angeles.

A scoping document for this study was submitted to DPW on March 26, 2021 and finalized on April 17, 2021. Four intersections were defined as the study area, and the finalized document is provided in Appendix A.

### 1.2 PROJECT DESCRIPTION

The San Gabriel Valley Aquatic Center project is proposed by the County of Los Angeles on the Temple Academy School property in an unincorporated County area near the City of La Puente at 635 North California Avenue, La Puente. The Assessor's ID is 8212-011-901. The planned opening year is 2024.

The school is part of the Hacienda La Puente Unified School District (HLPUSD). The County is planning to negotiate a ground lease with the HLPUSD to complete the project. The project site is bordered by Temple Academy school/North California Avenue on the south, East Temple Avenue to the west, residences/Evanwood Avenue to the north, and Allen J. Martin Park/East Giordano Street to the east. The new aquatic facility will be placed in an area currently used as a play field and a parking lot at the corner of East Temple Ave and Evanwood Avenue. The facility will include a 10,800 square foot pool building, a large competitive swimming pool, a smaller practice pool, signage, fencing, bleachers, a new one-acre park area, central plaza, parking lot, and other site improvements.

The proposed project site plan is provided on Figure 1.
The proposed primary site access will be on Temple Avenue. The parking lot will be provided at the Temple Avenue side of the site, with all vehicular access via proposed inbound and outbound driveways on Temple Avenue. Gated access will be provided to the planned Performance Art Center to the south, for shared parking use during events.

County of Los Angeles - San Gabriel Valley Aquatics Center Project Site Plan

## 2. CEQA TRANSPORTATION IMPACT ANALYSIS

County of Los Angeles transportation guidelines for California Environmental Quality Act (CEQA) impacts are based on guidance from the State of California Office of Planning and Research for the assessment of vehicle miles traveled (VMT). County thresholds of significance and mitigation measure programs were considered for this analysis, as appropriate to the outcome of the VMT review for the project.

### 2.1 VMT ANALYSIS GUIDELINES

County guidelines for project VMT impacts are based on consistency with CEQA guidelines. Development projects are analyzed to determine if and how much they reduce total VMT. Public Works guidance on screening and impact criteria was reviewed as part of the scoping process undertaken with the County for this project.

## Screening Criteria Review

Two screening criteria were considered that relate directly to the project characteristics:

- Non-retail project trip generation screening criteria: Does the development project generate a net increase of 110 or more daily vehicle 1 trips? If no, a less than significant CEQA impact determination can be made.
- Proximity to transit based screening criteria: Is the project located within a one-half mile radius of a major transit stop or an existing stop along a high-quality transit corridor?

The proposed project is estimated to generate 843 trips on a daily basis, and therefore the first criterion cannot be applied. The project is not located near a major transit stop or a high-quality transit corridor, and therefore the second criterion cannot be applied.

A retail project screening criterion was not considered, as the proposed project is non-retail. An additional screening measure is for low-income housing uses, which also does not apply to the proposed project.

For typical land uses, a potentially significant VMT impact would occur when specific minimum criteria are exceeded. These include VMT per capita or VMT per employee for specific land use categories and land use plans. For the analysis of transportation impacts under CEQA, the Baseline VMT for the North and South areas of the County are defined by the guidelines.

## Significant Impact Threshold

For projects that are not residential, office, regional serving retail, or land use plans, Public Works is to be contacted to determine the appropriate threshold of significance to be applied to the analysis. KOA coordinated with Public Works to define the project VMT analysis and the threshold to be applied. A quantified VMT analysis was not undertaken for this project, as the proposed project has characteristics that will not generate regional increases in VMT.

The impact threshold for the project was defined as no substantial increase in VMT. The review is discussed in more detail below.

### 2.2 VMT IMPACT REVIEW

No new swim/sports groups or leagues will be formed due to this facility development. Those local swimmers using the facility for practice will have a shorter distance to travel from the existing facilities that they are currently using. The presence of other existing similar pool facilities (in other locations) and how existing swimmers use these facilities was the basis for project VMT significance determinations.

The potential local circulation impacts of regional swim meets that may be relocated to the new facility are evaluated in the Special Events section of this report.

The main objective of the project is to construct a joint-use aquatics facility available for public use and to provide recreational opportunities to the local community. The community, the County, and the Hacienda La Puente Unified School District (HLPUSD) maintain a desire for a publicly accessible swimming facility at this location as well as park facilities to complement the adjacent Allen J. Martin Park.

The proposed facility pools would provide for local residents to have an aquatics facility in closer proximity. Existing swimmers in the project area typically travel to the California High School for regional meets, located approximately 7.5 miles to the south of the site. County-operated practice locations are located at Arcadia Community Regional Park ( 7.8 miles to the north of the site) and the Whittier Aquatics Facility (7.5 miles to the south). The proposed project will provide a location within the San Gabriel Valley that does not exist for regional meets, providing an additional area location. The proposed project will also provide a new practice and training location, closer to County residents in the south San Gabriel Valley area than the Arcadia or Whittier locations.

Figure 2 illustrates the proposed project location and the locations of nearby pools operated by the County of Los Angeles.

A comparison of the existing and proposed facilities is provided below:

- Arcadia Community Regional Park - The Norman S. Johnson Aquatic Center was completed in May 2012. The total building and pool facility area is 20,600 square feet, including the main building of 8,000 square feet.
- Whittier Aquatics Facility - Project environmental review was completed in 2019 and the facility is now open. The total building and pool facility area is 28,500 square feet, including a main building of 10,000 square feet.
- Proposed Project - The San Gabriel Valley Aquatics Center will be 29,255 square feet in area, including the main building of 10,800 square feet.

The Arcadia pool facility has a lower overall size in terms of floor area, although the main building is only 20 percent smaller than the Whittier and proposed SGV main project buildings. The Whittier and proposed Project sizes are very similar in terms of overall size and the main pool building size. Therefore, these existing and the proposed pool facilities can provide very similar functions and intensities of use. The proposed use complements the existing network of pools and reduces the average trip length for users across the local County area.

By providing additional swimming facilities in the region, the County would increase recreational opportunities for the local community, thereby reducing trips and vehicle miles traveled for general swim facility use, practice, and regional meets. The project would not result in new practice activity and regional
swim meets over the pattern of meets that is already occurring. In this manner, the proposed facility will not generate new regional vehicle trips.

It is anticipated that the project would reduce trips to these other facilities, as they are located further from the local neighborhood, and VMT will therefore be reduced for most trips to and from the proposed facility. The project will not increase regional VMT substantially, and therefore the project VMT impacts would be less than significant.

## Nearby LA County Maintained Swimming Pools

## 3. SITE ACCESS STUDY - OPERATIONAL ANALYSIS

In addition to the analysis of potential CEQA impacts, the County requires the analysis of potential local circulation impacts for proposed development projects. The determinations for this area of analysis are not tied to CEQA, and are focused on the County review of local effects of projects.

Based on the scoping process for this study, site access and circulation constraints must be reviewed, based on the number of daily project trips at 843 , over the minimum threshold of 110 trips and the need for discretionary project action by the County Department of Regional Planning.

The County guidelines indicate that site access studies should address site access and circulation needs of vehicles, bicycles and pedestrians. The analysis area should include primary site access points, unsignalized intersections that provide project site access, and signalized intersections in the vicinity.

This section provides a summary of the local circulation review conducted for the proposed project. For purposes of conservative traffic analysis, a project completion year of 2024 has been assumed based on County project planning.

### 3.1 STUDY METHODOLOGY

To determine the effects of the project on the operation of vehicular travel within the immediate project vicinity, an evaluation was made of the project contribution to delay and queuing at intersections adjacent to and near the project site under existing and future conditions.

KOA coordinated with County staff as the first step in the traffic analysis, and provided an initial and revised scoping document to the County Department of Public Works, in order to define the study area and other major details.

The project study area includes the following four study intersections along the primary access routes to and from the site:

1. California Avenue/Amar Road
2. California Avenue/Giordano Street
3. Sunset Avenue/ Temple Avenue
4. California Avenue/Temple Avenue

Figure 3 illustrates the study area and the locations of the study intersections.
The availability of historical counts for existing conditions was researched with County Public Works, to define available data that could be applied to the analysis. This was done to best define typical traffic conditions that occur outside of recent periods of COVID-related restrictions on activity. A combination of new counts and historical counts was used. Existing pre-COVID counts available from the County and new volume counts at the study intersections were compared to determine if factoring should be applied to define typical volumes where direct comparison data was not available.

## Study Area

Jurisdiction
I_I West Puente Valley
[_- La Puente
Industry

The County traffic guidelines state that an access analysis should focus on site ingress/egress and circulation needs of vehicles, bicycles, and pedestrians. The required quantitative evaluation includes a level of service and queuing analysis. Queuing is evaluated for pre-project and post-project conditions at turn pockets, at the project study intersections, and the driveway access point. The analysis determined if the project would cause queuing to block nearby intersections and other site driveways.

The analysis includes the evaluation of potential queuing at the inbound left-turn of the project Temple Avenue driveway as it will require turning from a travel lane in the eastbound direction. A Highway Capacity Manual analysis was conducted based on the project trip generation and the volumes analyzed at the nearby study intersection.

## Analysis Scenarios

The study included the analysis of the following traffic scenarios:

- Existing
- Existing with-Project
- Future without-Project
- Future with-Project

Project trip generation was based on land use intensities and trip rates defined by Trip Generation, $10^{\text {th }}$ edition, published by the Institute of Transportation Engineers (ITE). Project trip distribution percentages were defined based on the expected local travel routes to and from the facility.

The existing with-project conditions scenario was included to analyze project impacts without cumulative projects and annual ambient growth.

In order to account for traffic growth in the study area through the project opening year, an ambient/background traffic growth rate was applied to the traffic counts. Traffic from related projects (approved and pending developments) was also added to the study area. Based on the future withoutproject volumes plus traffic from the proposed project, the future with-project traffic volume conditions were determined and analyzed.

## Level of Service Methodology

For analysis of Level of Service (LOS) at signalized intersections, the County has designated the Highway Capacity Manual (HCM) methodology as the desired tool. A facility is at capacity (delay of 80 seconds or greater) when extreme congestion occurs. This total vehicle approach delay output of the HCM is a function of hourly volumes, signal phasing, and approach lane configuration, and green time for each leg of the intersection.

Level of service values range from LOS A to LOS F. LOS A indicates excellent operating conditions with little delay to motorists, whereas LOS F represents congested conditions with excessive vehicle delay. LOS E is typically defined as the operating capacity of a roadway. Table 4 defines the level of service criteria applied to the study intersections.

Table 1 - Level of Service Definitions, Highway Capacity Manual Method

| LEVEL OF SERVICE | GENERAL DEFINITION | Delay Per Vehicle (seconds) |
| :---: | :---: | :---: |
| A | EXCELLENT. No vehicle waits longer than one red light and no approach phase is fully used. | $\leq 10$ |
| B | VERY GOOD. An occasional approach phase is fully used; many drivers begin to feel somewhat restricted within groups of vehicles. | > $10-20$ |
| C | GOOD. Occasionally drivers may have to wait through more than one red light; backups may develop behind turning vehicles. | >20-35 |
| D | FAIR. Delays may be substantial during portions of rush hours, but enough lower volume periods occur to permit clearing of developing lines, preventing excessive backups. | > $35-55$ |
| E | POOR. Represents the maximum vehicles that intersection approaches can accommodate; may be long lines of waiting vehicles through several signal cycles. | >55-80 |
| F | FAILURE. Backups from nearby locations or on cross streets may restrict or prevent movement of vehicles out of the intersection approaches. Tremendous delays with continuously increasing queue lengths. | >80 |

## Special Analysis - Construction and Cut-Through Traffic

The County guidelines state that additional analysis tasks should be undertaken if requirements are met. These two areas are reviewed below based on the guidelines.

## Construction Phase Analysis

This analysis as defined by the County guidelines will not be conducted, as project construction will not directly affect adjacent roadways. The project will not require major construction activities that require lane closures to take place within the right-of-way of adjacent roadways, nor would vehicle, bicycle, pedestrian access, or bus stop access on area roadways be physically restricted during project construction.

Therefore, it was determined that a construction phase analysis was not necessary for this project.

## Local Residential Street Cut-Through Analysis

This analysis will not be conducted, as there are no identified Local Streets near the project site that would provide cut-through routes that are shorter than routes on collector or arterial roadways. The project is not expected to add vehicle trips to congested arterial street segments. The intersection of Sunset Avenue/Temple Avenue operates at LOS E or F as analyzed, but it is estimated that this would not cause neighborhood cut-through traffic due to multiple available arterial routes in the area that can be used for alternate travel, and the other study intersections do not operate at poor LOS.

Therefore, the project is not expected to add automobile traffic to alternative local residential roadways during peak hours and a cut-through analysis was not conducted.

### 3.2 EXISTING MOBILITY SYSTEM

This section describes the existing conditions within the study area in terms of roadway facilities, transit service, and traffic operating conditions.

All the roadway classifications are based on the County Master Plan of Highways. The key roadways within the study area are described here. The discussion is limited to specific roadways that traverse the study intersections and serve the project site.

Amar Road is classified as a Major Highway. This east-west roadway provides two travel lanes in each direction and a striped center median. On-street parking is generally prohibited on both sides of the roadway, and the posted speed limit is 40 mph .

California Avenue is classified as a Collector Street. This north-south roadway provides one travel lane in each direction. On-street parking is generally permitted on both sides of the roadway. The prima facie speed limit is 25 miles per hour.

Giordano Street is classified as a Collector Street. This east-west roadway provides one travel lane in each direction. On-street parking is generally permitted on both sides of the roadway. The prima facie speed limit is 25 miles per hour.

Sunset Avenue is classified as a Major Highway. This north-south roadway provides two travel lanes in each direction and a double-yellow striped median. On-street parking is generally prohibited on the west side of the roadway, and permitted on the east side of the roadway with the exception of Thursdays from 9 AM to 1 PM commercial vehicles, and a bike lane facility is provided on both sides of the roadway. The posted speed limit is 45 mph .

Temple Avenue is classified as a Secondary Highway. This east-west roadway provides two travel lanes in each direction and a double-yellow striped median. On-street parking is generally permitted on the north side of the roadway, and prohibited on the south side of the roadway the posted speed limit is 40 mph .

Figure 4 illustrates the existing traffic controls and approach lane geometries at the study intersections.
Transit service is provided within one-quarter mile radius from the proposed project site, which is operated by Foothill Transit. Table 2 summarizes the project study area transit service.

Table 2 - Existing Transit Service

| Agency | Line | From | To | Via | Peak Frequency <br> (approx.) |
| :---: | :---: | :---: | :---: | :---: | :---: |
| Foothill Transit | 486 | El Monte Station | Cal Poly Pomona | Amar Road | 13 Minutes |
| Foothill Transit | 281 | Puente Hills Mall | Citrus College | Sunset Avenue | 30 Minutes |

### 3.3 EXISTING CIRCULATION CONDITIONS

The existing conditions analysis for the study area used both existing and historical counts. Existing traffic conditions were analyzed based on factoring of traffic counts from a comparison of current and past data, due to the current reduced traffic levels caused by COVID-19 related activity restrictions.

Traffic data was compiled from a combination of current year-2021 counts collected in the field by National Data and Surveying Services (NDS) and historical year-2018 counts obtained from the County Department of Public Works.

The recent counts were conducted on Thursday, May 06, 2021 during the peak timeframes of 7:00 AM to 9:00 AM and 4:00 PM to 6:00 PM. The year-2018 counts used for comparison calculations were conducted on February 05,2018 , with volumes overlapping the same timeframes.

In order to define existing traffic conditions, counts taken in 2021 were compared with historical traffic counts taken in 2018. Historical data was available from the County at the intersection of California Avenue and Giordano Street. Comparison ratios for the AM and PM peak hours from data at this location was applied to the other three intersection count locations, to increase the volume values to the expected normal volume levels. As the previous counts at this location were higher than the new counts, the previous but higher volume counts were used for the California Avenue and Giordano Street location, with a one percent per year growth factor to provide conservative values.

A ratio was then defined based on the difference of the two sets of comparison volumes, and input volumes were then adjusted to reflect pre-pandemic volumes and operations. For the AM factoring, an increase of 54.3 percent was applied. For the PM factoring, an increase of 30.2 percent was applied.

The overall traffic count data set after factoring was used to define existing traffic conditions. Fieldwork within the study area was undertaken to identify the condition of key study area roadways, including traffic control and approach lane configurations at each study intersection and on-street parking restrictions.

Based on the intersection lane configurations and the existing traffic volumes, average vehicle delay and corresponding levels of service (LOS) were determined for each of the study intersections during the weekday a.m. and p.m. peak hours for existing conditions. The existing with-project traffic volumes were derived by adding project trips to the existing traffic volumes.

Table 3 provides the operations analysis results for the existing conditions scenario, with vehicle delay in seconds and LOS values at the study intersections.

Table 3 - Existing Intersection Operations

| Study Intersections |  | AM Peak |  | PM Peak |  | Saturday |  |
| :---: | :--- | :---: | :---: | :---: | :---: | :---: | :---: |
|  | Delay | LOS | Delay | LOS | Delay | LOS |  |
| 1 | California Avenue and Amar Road | 26.2 | C | 53.3 | D | 38.2 | D |
| 2 | California Avenue and Giordano Street* | 7.8 | A | 9.8 | A | 8.5 | A |
| 3 | Sunset Avenue and Temple Avenue | 67.0 | E | 92.3 | F | 58.0 | E |
| 4 | California Avenue and Temple Avenue | 33.40 | C | 36.3 | D | 31.6 | C |

[^1]The study intersection of Sunset Avenue/Temple Avenue operates at LOS E in the AM peak period and at LOS F in the PM peak period. The other study intersections operate at LOS D or better during the peak hours.

The existing weekday a.m. peak-hour and p.m. peak-hour traffic turning movement volumes are illustrated on Figure 5. The traffic count data sheets are provided in Appendix C, and the existing traffic analysis scenario worksheets are provided in Appendix D.

Figure 5 - Existing AM/PM Peak Hour Traffic Volumes

XX/XX AM /PM/SAT Peak Hour Traffic Volumes

### 3.4 PROJECT TRAFFIC

This section defines the traffic generated by the proposed project in a three-step process, including trip generation, trip distribution, and trip assignment.

The project will include a 10,800 square-foot pool building, and competitive and practice pools. The combined area of these elements is 29,255 square feet. Institute of Transportation Engineers (ITE) rates from Trip Generation, 10 th edition for the recreational community center land use category. This category of trip rates was applied to the project as it represents a generally similar use to the typical daily activity expected at the proposed facility.

The total estimated weekday daily project vehicle trip total is 843 , as calculated in Table 4 . This includes 51 AM peak hour trips and 68 PM peak hour trips. Saturday mid-day peak-hour trips would be 31.

Table 4 - Project Trip Generation

| Land Use ${ }^{1}$ | Intensity | Units ${ }^{2}$ | Daily <br> Total | Weekday AM Peak |  |  | Weekday PM Peak |  |  | Saturday Mid-Day |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  |  |  |  | Total | In | Out | Total | In | Out | Total | In | Out |
| Trip Generation Rates |  |  |  |  |  |  |  |  |  |  |  |  |
| Recreational Community Center (ITE 495) | - | KSF | 28.82 | 1.76 | 66\% | 34\% | 2.31 | 47\% | 53\% | 1.05 | 53\% | 47\% |
| Trip Generation Estimates |  |  |  |  |  |  |  |  |  |  |  |  |
| Proposed Pool Project | 29.2547 | KSF | 843 | 51 | 34 | 17 | 68 | 32 | 36 | 31 | 17 | 14 |
| Total |  |  | 843 | 51 | 34 | 17 | 68 | 32 | 36 | 31 | 17 | 14 |

## Project Trip Distribution

Trip distribution is the process of assigning the directions from which traffic will access the project site. Trip distribution is dependent upon the land use characteristics of the project, the local roadway network, and the general locations of other land uses to which project trips would originate or terminate.

Figure 6 illustrates the trip distribution percentages that were utilized for the project traffic.

## Project Trip Assignment

Based on the trip generation and distribution assumptions described above, project traffic was assigned to the roadway system. The peak hour project trip assignment is illustrated on Figure 7.

Figure 6 - Project Trip Distribution

| 1 | California Avenue 8\% Amar Road |  |

### 3.5 EXISTING WITH -PROJECT CONDITIONS

The existing conditions scenario traffic volumes were analyzed with the addition of proposed project trips. Table 5 provides a summary of study intersection operations for existing with-project conditions.

Table 5 - Existing with-Project Intersection Delay and Performance

| Study Intersections |  | Peak <br> Hour | Existing Conditions |  | Existing with Project |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  |  | Delay in Sec. | LOS | Delay in Sec. | LOS |
| 1 | California Avenue and Amar Road |  | AM | 26.2 | C | 27.4 | C |
|  |  | PM | 53.3 | D | 56.0 | E |
|  |  | SAT | 38.2 | D | 38.7 | D |
| 2 | California Avenue and Giordano Street* | AM | 7.8 | A | 7.9 | A |

|  |  | SAT | 8.5 | A | 8.5 | A |
| 3 | Sunset Avenue and Temple Avenue | AM | 67.0 | E | 67.1 | E |
|  |  | PM | 92.3 | F | 93.0 | F |
|  |  | SAT | 58.0 | E | 58.1 | E |
| 4 | California Avenue and Temple Avenue | AM | 33.4 | C | 33.5 | C |
|  |  | PM | 36.3 | D | 36.6 | D |
|  |  | SAT | 31.6 | C | 31.7 | C |

LOS = Level of Service; HCM delay per average vehicle
*Stop-controlled intersection
The addition of project traffic to the existing study area volumes causes the PM peak LOS of the California Avenue/Amar Road intersection to worsen from LOS D to E, but only based on a small 2.7 -second delay increase from the project. The other intersection LOS values remain unchanged, with small delay increases due to project traffic.

The existing with-project volumes at the study intersections for the weekday a.m. peak-hour and p.m. peakhour traffic turning movement volumes are illustrated on Figure 8. The analysis worksheets for this scenario are provided in Appendix E.

Figure 8 - Existing With-Project - AM/PM Peak Hour Traffic Volumes

XX/XX AM /PM Peak Hour Traffic Volumes

### 3.6 FUTURE CONDITIONS

This section provides an analysis of future traffic conditions in the study area with cumulative/area project trips and background growth added, but without project traffic. The proposed project is anticipated to be completed within the year 2024, and therefore this defined the future analysis year.

## Ambient Growth

In order to acknowledge regional population and employment growth outside of the study area, an annual ambient traffic growth rate of one percent was applied to the existing scenario traffic volumes.

## Area Projects

Traffic from cumulative area projects (approved and pending developments) was also included in the analysis. The projects were identified during coordination with the County of Los Angeles Regional Planning and the City of La Puente. A total of 17 pending projects within a half-mile radius of the project site were identified for inclusion in the analysis.

Table 6 provides the trip generation estimates for the area projects, and the cumulative project locations are illustrated on Figure 9. The area project trip assignment volumes for the AM and PM peak hours are provided on Figure 10.

Table 6 - Area Projects Trip Generation

## Area Projects Within a Half-Mile Radius

Study Intersections
「_7 Half Mile Buffer

Figure 10 - Area Project Trip Assignment - AM/PM Peak Hour

XX/XX AM /PM Peak Hour Traffic Volumes

## Future Conditions without and with Project Traffic

Future baseline traffic volumes for the without-project condition were determined by applying ambient traffic growth and area project traffic volumes onto the existing traffic volumes. Under the future withproject scenario, the traffic volumes were derived by adding project trips to the future baseline traffic volumes.

Table 7 provides the results of the vehicle delay in seconds and LOS values at the study intersections for Future without-project and Future with-project conditions.

Table 7 - Future Intersection Delay and Performance

| Study Intersections |  | Peak Hour | Future (2024) Without Project |  | Future (2024) with Project |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  |  | Delay in Sec. | LOS | Delay in Sec. | LOS |
| 1 | California Avenue and Amar Road |  | AM | 28.2 | C | 29.5 | C |
|  |  | PM | 57.3 | E | 60.1 | E |
|  |  | SAT | 40.2 | D | 40.8 | D |
| 2 | California Avenue and Giordano Street* | AM | 7.9 | A | 7.9 | A |
|  |  | PM | 10.0 | A | 10.2 | B |
|  |  | SAT | 8.6 | A | 8.6 | A |
| 3 | Sunset Avenue and Temple Avenue | AM | 70.5 | E | 70.5 | E |
|  |  | PM | 99.7 | F | 100.5 | F |
|  |  | SAT | 59.9 | E | 60.0 | E |
| 4 | California Avenue and Temple <br> Avenue | AM | 34.0 | C | 34.2 | C |
|  |  | PM | 37.1 | D | 37.5 | D |
|  |  | SAT | 32.0 | C | 32.1 | C |

LOS = Level of Service; HCM delay shown in X.X format.
*Stop Controlled Intersection
The study intersections will continue to operate similarly to operations analyzed for the existing with-project conditions scenario.

The addition of project traffic to the future study area volumes does not cause any changes in LOS values. The highest delay increase that occurs in the PM is small, but is only a 2.7 -second delay increase from the project. The other intersection LOS values remain unchanged, with small delay increases due to project traffic. These traffic effects of the project are considered to be insignificant, and operational improvements are not recommended.

The Future without-project traffic volumes for the weekday a.m. and p.m. peak hours are illustrated on Figure 11. The Future without-project traffic analysis worksheets for this scenario are provided in Appendix F.

The Future with-project traffic volumes for the weekday a.m. and p.m. peak-hour volumes are illustrated in Figure 12. The analysis worksheets for this scenario are provided in Appendix G.

Figure 11 - Future Without Project - AM/PM Peak Hour Traffic Volumes

### 3.7 QUEUING CONDITIONS

The level of service output provided in the appendices include queuing information by approach calculated by the Highway Capacity Manual method. Locations where striped turn pockets are provided at study intersections, and the project driveway access on Temple Avenue, are analyzed below.

## Intersection Queuing

At the California Avenue/Amar Road intersection, operations would be at LOS E in the PM peak hour, and LOS D or better in the other peak hours, with or without the project. Queuing at the northbound and southbound approaches would increase by one or two vehicles with the proposed project. At the other approaches, queuing value increases due to the project would be much lower than one vehicle on average.

At the California Ave / Giordano St intersection, operations would be at LOS B or better in all peak hours, with or without the project. Queuing value increases due to the project would be much lower than one vehicle on average.

At the Sunset Ave / Temple Ave intersection, operations would be at LOS E in the AM and Saturday peak hours and LOS F in the PM peak hour, with or without the project. The queuing values with and without the project at all of the left-turn pockets would exceed the physical design lengths. However, queuing value increases due to the project would be nine to ten feet at the most affected movement, which is approximately one-half of one vehicle or less.

At the California Ave / Temple Ave intersection, operations would be at LOS D or better in all peak hours, with or without the project. Queuing value increases due to the project would be much lower than one vehicle on average.

The queuing changes associated with the project would not cause changes traffic operations or cause blockages at nearby driveways. No changes to traffic controls or design measures such as lane configurations are recommended for the study intersections, based on this analysis.

Table 8 provides a summary of the queuing analysis at the study intersection striped turn pockets. All of the identified queuing increases due to project traffic would be nominal to operations, as all of the estimated increases are less than one vehicle and are therefore minor circulation impacts.

The County will make timing adjustments in the future to accommodate queuing based on area cumulative conditions, as part of on-going traffic operations planning.

Table 8 - Intersection Turn Pocket Queuing Analysis

## Site Driveway Queuing

The project site would have one access driveway on Temple Street. The driveway location would create an unsignalized intersection with the roadway of Temple Street. The Temple Street approaches would be uncontrolled and the driveway approach for traffic departing the site would be stop-controlled.

Under future conditions with the project, the project driveway on Temple Avenue would have a $95^{\text {th }}$ percentile eastbound left-turn average queue of less than one vehicle during the AM peak hour and a similar average queue during the PM peak hour. These queues would not be enough to cause any significant operational impacts or safety impacts and would be virtually unnoticed by drivers.

The inbound queuing at the project driveway would not significantly affect area traffic operations or cause blockages at adjacent driveways. No additional controls or design measures are recommended for the project driveway location, based on this analysis.

## 4. SITE ACCESS STUDY - SPECIAL EVENTS

A specialized analysis was conducted for special events that will be hosted at the project site. The facility will host regional meets up to six times a year that will bring spectators from the Southwest region. These would be occasional special events, and County Parks will not operate the facilities for these events. During those times, the facility will be leased to swim organizations and competition organizations. An analysis was conducted of trip generation and parking demand that is estimated to occur during the events.

Project facility planning includes a seating capacity of approximately 500 people. Regional meets may have up to 2,000 spectators per day, attending specific heats at different periods of the day. The seating capacity was used to conservatively review the potential local effects of a capacity-level event, although many events may not use the capacity of the facility.

Participants in the regional meets would not be of driving age, and therefore vehicle trip generation and parking demand would be generated by spectators. Assuming that a typical vehicle occupancy for arriving spectators would be two persons, the trip generation for round trips to and from the facility and the parking demand for one heat would be 250 vehicles.

Event parking demand and traffic circulation effects are analyzed in the sections below.

## Event Parking Demand

The project parking lot has a planned vehicle parking capacity of 72 spaces. This supply would not be able to accommodate the expected event parking demand in its entirety. Additional parking supplies would need to be temporarily provided through leases or other means during the events, to provide nearby additional off-street parking supplies. This should be pursued by the County and the event organizations to avoid local neighborhood parking and circulation impacts.

Under typical daily operations of the project facilities, outside of these occasional regional meets, parking demand would be contained within the site off-street supply. There would not be a need under typical project operations to secure off-site parking supplies.

## Event Traffic Effects

Using the same event spectator numbers as those applied to the parking analysis, it was assumed that vehicle round trips for each heat of a regional meet would be the same as the parking demand at 250 vehicles.

For event trip generation, 250 inbound trips were assumed, along with 250 outbound trips. This would represent the overlap between two heats with a change in spectators. Not all of the spectators would likely arrive and depart within a one-hour timeframe, so 30 percent of the trips were assumed to occur outside of the analyzed peak-hour period. Trips were therefore analyzed as 175 inbound and 175 outbound.

The special event trips were analyzed within the study area. Table 9 provides a summary of study area traffic operations with and without special events, applying the same baseline conditions used to analyze the typical operations of the proposed project in earlier report sections.

Table 9 - Future Intersection Delay and Performance Project Special Events

| Study Intersections |  | Peak <br> Hour | Future (2024) Without Project |  | Future (2024) with Regional Meet |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  |  | Delay in Sec. | LOS | Delay in Sec. | LOS |
| 1 | California Avenue and Amar Road |  | SAT | 40.2 | D | 47.5 | D |
| 2 | California Avenue and Giordano Street* | SAT | 8.6 | A | 9.1 | A |
| 3 | Sunset Avenue and Temple Avenue | SAT | 59.9 | E | 61.5 | E |
| 4 | California Avenue and Temple Avenue | SAT | 32.0 | C | 33.5 | C |

LOS = Level of Service; HCM delay shown in X.X format.
*Stop Controlled Intersection
The anticipated special event traffic will not have a significant effect on study area traffic operations. The average delay at the California Avenue/Amar Road intersection would worsen by approximately seven seconds, but LOS would not worsen beyond the baseline value of $D$. The small 1.6 -second increase in average delay at the intersection of Sunset Avenue/Temple Avenue would not be a significant effect. Overall, no level of service degradations would occur with the added trips.

## Event Management Recommendations

The regional meets at the project site are special events that should be managed by a Traffic Event Management Plan, based on the parking demand and traffic circulation effects analyzed above. The Plan would define the following:

- The expected timeframe of regional meets and the schedule for heats throughout the day of the event.
- Scheduling plan that avoids overlap of events at the proposed project and the Performance Art Center.
- The locations of supplemental parking supplies, the owner(s), and documentation of the agreement(s) that provide for the leasing or sharing of parking. Use of gated access to the planned Performance Art Center to the south, for shared parking use.
- Inbound and outbound access plan for the main project driveways on Temple Avenue, including restrictions to access for right-turn inbound only and right-turn outbound only movements.
- Wayfinding methods including directional signage and placement of event staff at critical locations at the perimeter of the site and approaching roadways to direct incoming vehicles to available parking on-site and to the supplemental supplies.
- Event media and on-line resources that provide a map and directions to parking areas in relation to the site.
- Methods for adjusting to times between heats when one group of spectators is leaving and one group is entering.
- Designation of points of traffic control by authorized personnel at major ingress and egress locations, including project site driveways for on-site parking and pick-up/drop-off areas access, and any major off-site parking location access, to control queuing onto neighboring roadways.
- Designation of any other necessary traffic control locations.
- Designation of bus loading zones, if needed, and Uber/Lyft loading zones.

## 5. IMPACTS AND EFFECTS CONCLUSIONS

Project transportation impacts were analyzed for CEQA and non-CEQA related issues in this transportation assessment report. As indicated in the analysis details, the proposed project is not expected to conflict with County of Los Angeles plans, programs, ordinances, or policies.

The project would not cause a significant regional vehicle miles traveled (VMT) increase. The impact threshold for the project was defined as no significant increase in VMT. The characteristics of this facility and the local use patterns that will result make the project impacts on VMT less than significant, per County California Environmental Quality Act (CEQA) analysis requirements and the applied project threshold. This analysis is provided in Section 2.

The access analysis of potential local effects of project traffic indicated that the project and generated traffic are not expected to significantly affect existing roadway operations, access, and safety. All of the identified queuing increases due to project traffic would be nominal to operations, as all of the estimated increases are less than one vehicle and are therefore minor circulation impacts. This analysis is provided in Section 3.

The regional meets at the project site are special events that should be managed by a Traffic Event Management Plan as analyzed in Section 4. It is recommended that based on the parking demand and traffic circulation effects analyzed in that section, that the Plan would define the following:

- The expected timeframe of regional meets and the schedule for heats throughout the day of the event.
- The locations of supplemental parking supplies, the owner(s), and documentation of the agreement(s) that provide for the leasing or sharing of parking.
- Wayfinding methods including directional signage and placement of event staff at critical locations at the perimeter of the site and approaching roadways to direct incoming vehicles to available parking on-site and to the supplemental supplies.
- Event media and on-line resources that provide a map and directions to parking areas in relation to the site.
- Methods for adjusting to times between heats when one group of spectators is leaving and one group is entering.
- Designation of points of traffic control by authorized personnel at major ingress and egress locations, including project site driveways for on-site parking and pick-up/drop-off areas access, and any major off-site parking location access, to control queuing onto neighboring roadways.
- Designation of any other necessary traffic control locations.
- Designation of bus loading zones, if needed, and Uber/Lyft loading zones.

APPENDIX A

## Scoping Document

## MEMORANDUM

Date: August 24, 2021

To: Kent Tsujii, County of Los Angeles Department of Public Works

From: Brian Marchetti, AICP

## Subject: Traffic Scoping Document for San Gabriel Valley Aquatic Center Project

This document provides the proposed project details and study methodology for consideration and comment by the County of Los Angeles Department of Public Works. A copy of this document will be shared with the City of La Puente, as the proposed study area falls partially within that jurisdiction.

## Project Description

The San Gabriel Valley Aquatic Center Project (Project) is proposed on the Temple Academy School property in unincorporated County area near the City of La Puente at 635 North California Ave, La Puente, CA 91744. The Assessor's ID is 8212-011-901. The planned opening year is 2024.

The school is part of the Hacienda La Puente Unified School District (HLPUSD). The County is planning to negotiate a ground lease with the HLPUSD to complete the project. The project site is bordered by Temple Academy school/North California Avenue on the south, East Temple Avenue to the west, residences/Evanwood Avenue to the north, and Allen J. Martin Park/East Giordano Street to the east. The new aquatic facility will be placed in an area currently used as play field and a parking lot at the corner of East Temple Ave and Evanwood Avenue. The facility will include a 10,800 square foot pool building, a large competitive swimming pool, a smaller practice pool, signage, fencing, bleachers, a new one-acre park area, central plaza, parking lot, and other site improvements.

Two proposed alternatives for the site plan are provided as attachments - Option 1 is provided in Attachment A, and Option 2 is provided in Attachment B.

Both site options provide for the main pool building and the competitive and practice pools, and all of those elements are the same size in each option. The orientation of the site is generally the same across both options. The proposed primary site access point on Temple Avenue to the south is the same under both options, as are the pedestrian access points at Allen

J Martin Park to the north. The parking lot will be provided at the Temple Avenue side of the site, with all vehicular access via a proposed driveway on Temple Avenue.

## Vehicle Miles Traveled (VMT) Analysis

Swimmers in the area use existing facilities in other locations. For the analysis of transportation impacts under the California Environmental Quality Act (CEQA), the presence of other existing similar pool facilities (in other locations) and how existing swimmers use these facilities will be documented. It is anticipated that the project would reduce some trips to these other facilities as they are located further from the local neighborhood and will therefore reduce area VMT for local swimmers. No new swim/sports groups or leagues will be formed due to this facility development. Those local swimmers using the facility for practice will have a shorter distance to travel from existing facilities that they are using. The potential regional impact of regional swim meets that may be relocated to the new facility will be evaluated in the report.

## Project Trip Generation

The built areas of the project site will include the 10,800 square-foot pool building, and the competitive and practice pools. The combined area of these elements is 29,255 square feet. Applying Institute of Transportation Engineers (ITE) rates from Trip Generation, $10^{\text {th }}$ edition for the recreational community center land use category, provides for an estimate of project trips for weekday daily at 843 . This includes 51 AM peak hour trips and 68 PM peak hour trips. Saturday mid-day peak-hour trips would be 31 .

PROJECT TRIP GENERATION

| Land Use ${ }^{1}$ | Intensity | Units ${ }^{2}$ | Daily <br> Total | Weekday AM Peak |  |  | Weekday PM Peak |  |  | Saturday Mid-Day |  |  |

| Total |  |  | 843 | 51 | 34 | 17 | 68 | 32 | 36 | 31 | 17 | 14 |

## Site Access Studies

Each of the site access studies defined by the County traffic guidelines for non-CEQA analysis are reviewed below for applicability to the proposed project.

## Operational Analysis

This study section is required when site access and circulation constraints must be reviewed. These specific questions determine the need for this analysis:

- Is the project required to submit a Transportation Impact Analysis?
- Does the development project involve a discretionary action that would be reviewed by the Department of Regional Planning?

Based on the daily trip generation of the project at 843 , and the minimum County threshold of 110 trips for site access studies screening, the project is required to submit a Transportation Impact Analysis.

The County traffic guidelines state that this analysis should "...address the site access and circulation needs of vehicles, bicycles and pedestrians. Including primary site access points, unsignalized intersections integral to the project's site access, and signalized intersections in the vicinity of the project site."

The required quantitative evaluation of the expected access and circulation operations will include a level of service and queuing analysis. Queuing will be evaluated for pre-project and post-project conditions at turn pockets, at the project study intersections and the driveway access point. It will be determined if the project would cause queuing to block nearby intersections and other site driveways.

The traffic study will examine four intersections in the local area for impacts under City and County guidelines under the project operations period. The locations are listed below and shown on the figure in Attachment C :

1. California Avenue/Amar Road
2. California Avenue/Giordano Street
3. Sunset Avenue/ Temple Avenue
4. California Avenue/Temple Avenue

The overall area project trip distribution percentages are included on the Attachment C figure. The percentages at the study intersections, totaling 100 percent for inbound and 100 percent for outbound trips, are provided on the figure in Attachment D.

Historic counts will be used, to represent pre-COVID traffic conditions. A combination of new counts and historic counts may be used, and the newer counts will be compared to volumes at one or more control locations, to factor upward as needed. The factoring would provide increases if volumes from new collected data are low.

The report will evaluate potential queuing at the inbound left-turn of the project Temple Avenue driveway as it will require turning from a travel lane in the eastbound direction. A Highway Capacity Manual analysis will be conducted based on the project trip generation and the volumes analyzed at the nearby study intersection.

A construction phase analysis for the peak trip phase of the construction period, will be analyzed with a trip generation table of anticipated employee levels and off-site truck hauling/delivery trips, and an analysis of level of service effects at the study intersections.

## Construction Phase Analysis

This analysis as defined by the County guidelines will not be conducted, as project construction will not directly affect adjacent roadways. The project will not require major construction activities that require lane closures to take place within the right-of-way of adjacent roadways, nor would vehicle, bicycle, or pedestrian access on area roadways be physically restricted during project construction.

## Local Residential Street Cut-Through Analysis

This analysis will not be conducted, as there are no identified Local Streets near the project site that would provide cut-through routes that are shorter than routes on collector or arterial roadways. The project is not expected to add vehicle trips to congested arterial street segments. Therefore, the project is not expected to add automobile traffic to alternative local residential roadways during peak hours.

## Special Events

A specialized analysis will also be conducted for special events that will be hosted at the project site. The facility will host regional meets up to six times a year that will bring spectators from the Southwest region. These would be occasional special events, and County Parks will not operate the facilities for these events. During those times, the facility will be leased to swim organizations and competition organizations.

The study will evaluate in general the traffic operations and parking demand that will occur during the events. If the demand for parking exceeds the on-site supply of parking during events, then a Traffic Event Management Study will be conducted.

Intersection Analysis Summary

| ID | Intersection Name | Control Type | Method | Worst Mvmt | V/C | Delay (s/veh) | LOS |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| 1 | California Ave / Amar Rd | Signalized | HCM 6th <br> Edition | SB Left | 0.634 | 26.2 | C |
| 2 | California Ave / Giordano St | All-way stop | HCM 6th <br> Edition | NB Thru | 0.135 | 7.8 | A |
| 3 | Sunset Ave / Temple Ave | Signalized | HCM 6th <br> Edition | SB Right | 0.819 | 67.0 | E |
| 4 | California Ave / Temple Ave | Signalized | HCM 6th <br> Edition | SB Thru | 0.439 | 33.4 | C |
| 5 | Site Driveway Intersection | Two-way stop | HCM 6th <br> Edition | WB Thru | 0.011 | 0.0 | A |

V/C, Delay, LOS: For two-way stop, these values are taken from the movement with the worst (highest) delay value. For all other control types, they are taken for the whole intersection.

## Intersection Level Of Service Report Intersection 1: California Ave / Amar Rd

| 3 | Sunset Ave / Temple Ave | Signalized | HCM 6th <br> Edition | NB Right | 0.890 | 92.3 | F |
| 4 | California Ave / Temple Ave | Signalized | HCM 6th <br> Edition | NB Thru | 0.573 | 36.3 | D |
| 5 | Site Driveway Intersection | Two-way stop | HCM 6th <br> Edition | EB Thru | 0.011 | 0.0 | A |

V/C, Delay, LOS: For two-way stop, these values are taken from the movement with the worst (highest) delay value. For all other control types, they are taken for the whole intersection.

| 3 | Sunset Ave / Temple Ave | Signalized | HCM 6th <br> Edition | NB Right | 0.706 | 58.0 | E |
| 4 | California Ave / Temple Ave | Signalized | HCM 6th <br> Edition | NB Thru | 0.406 | 31.6 | C |
| 5 | Site Driveway Intersection | Two-way stop | HCM 6th <br> Edition |  | 0.000 | 0.0 |  |

V/C, Delay, LOS: For two-way stop, these values are taken from the movement with the worst (highest) delay value. For all other control types, they are taken for the whole intersection.

| 3 | Sunset Ave / Temple Ave | Signalized | HCM 6th <br> Edition | NB Right | 0.710 | 58.1 | E |
| 4 | California Ave / Temple Ave | Signalized | HCM 6th <br> Edition | NB Thru | 0.412 | 31.7 | C |
| 5 | Site Driveway Intersection | Two-way stop | HCM 6th <br> Edition | SB Left | 0.008 | 8.7 | A |

V/C, Delay, LOS: For two-way stop, these values are taken from the movement with the worst (highest) delay value. For all other control types, they are taken for the whole intersection.

# Intersection Level Of Service Report Intersection 1: California Ave / Amar Rd

| 3 | Sunset Ave / Temple Ave | Signalized | HCM 6th <br> Edition | SB Right | 0.820 | 67.1 | E |
| 4 | California Ave / Temple Ave | Signalized | HCM 6th <br> Edition | SB Thru | 0.449 | 33.5 | C |
| 5 | Site Driveway Intersection | Two-way stop | HCM 6th <br> Edition | SB Left | 0.068 | 34.0 | D |

V/C, Delay, LOS: For two-way stop, these values are taken from the movement with the worst (highest) delay value. For all other control types, they are taken for the whole intersection.

# Intersection Level Of Service Report Intersection 1: California Ave / Amar Rd

| 2 | California Ave / Giordano St | All-way stop | HCM 6th <br> Edition | SB Thru | 0.441 | 10.0 | A |
| 3 | Sunset Ave / Temple Ave | Signalized | HCM 6th <br> Edition | NB Right | 0.899 | 93.0 | F |
| 4 | California Ave / Temple Ave | Signalized | HCM 6th <br> Edition | NB Thru | 0.582 | 36.6 | D |
| 5 | Site Driveway Intersection | Two-way stop | HCM 6th <br> Edition | SB Left | 0.125 | 30.1 | D |

V/C, Delay, LOS: For two-way stop, these values are taken from the movement with the worst (highest) delay value. For all other control types, they are taken for the whole intersection.

| 3 | Sunset Ave / Temple Ave | Signalized | HCM 6th <br> Edition | NB Right | 0.731 | 59.9 | E |
| 4 | California Ave / Temple Ave | Signalized | HCM 6th <br> Edition | NB Thru | 0.419 | 32.0 | C |
| 5 | Site Driveway Intersection | Two-way stop | HCM 6th <br> Edition | EB Thru | 0.000 | 0.0 | A |

V/C, Delay, LOS: For two-way stop, these values are taken from the movement with the worst (highest) delay value. For all other control types, they are taken for the whole intersection.

# Intersection Level Of Service Report Intersection 1: California Ave / Amar Rd

| ID | Intersection Name | Control Type | Method | Worst Mvmt | V/C | Delay (s/veh) | LOS |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| 1 | California Ave / Amar Rd | Signalized | HCM 6th <br> Edition | SB Left | 0.659 | 28.2 | C |
| 2 | California Ave / Giordano St | All-way stop | HCM 6th <br> Edition | NB Thru | 0.141 | 7.9 | A |
| 3 | Sunset Ave / Temple Ave | Signalized | HCM 6th <br> Edition | SB Right | 0.845 | 70.5 | E |
| 4 | California Ave / Temple Ave | Signalized | HCM 6th <br> Edition | SB Thru | 0.455 | 34.0 | C |
| 5 | Site Driveway Intersection | Two-way stop | HCM 6th <br> Edition | WB Thru | 0.011 | 0.0 | A |

V/C, Delay, LOS: For two-way stop, these values are taken from the movement with the worst (highest) delay value. For all other control types, they are taken for the whole intersection.

| 2 | California Ave / Giordano St | All-way stop | HCM 6th <br> Edition | SB Thru | 0.447 | 10.0 | B |
| 3 | Sunset Ave / Temple Ave | Signalized | HCM 6th <br> Edition | NB Right | 0.921 | 99.7 | F |
| 4 | California Ave / Temple Ave | Signalized | HCM 6th <br> Edition | NB Thru | 0.590 | 37.1 | D |
| 5 | Site Driveway Intersection | Two-way stop | HCM 6th <br> Edition | EB Thru | 0.012 | 0.0 | A |

V/C, Delay, LOS: For two-way stop, these values are taken from the movement with the worst (highest) delay value. For all other control types, they are taken for the whole intersection.

# Intersection Level Of Service Report Intersection 1: California Ave / Amar Rd

| 1 | California Ave / Amar Rd | Signalized | HCM 6th <br> Edition | SB Thru | 0.669 | 40.8 | D |
| 2 | California Ave / Giordano St | All-way stop | HCM 6th <br> Edition | NB Thru | 0.270 | 8.6 | A |
| 3 | Sunset Ave / Temple Ave | Signalized | HCM 6th <br> Edition | NB Right | 0.734 | 60.0 | E |
| 4 | California Ave / Temple Ave | Signalized | HCM 6th <br> Edition | NB Thru | 0.425 | 32.1 | C |
| 5 | Site Driveway Intersection | Two-way stop | HCM 6th <br> Edition | SB Left | 0.008 | 8.7 | A |

V/C, Delay, LOS: For two-way stop, these values are taken from the movement with the worst (highest) delay value. For all other control types, they are taken for the whole intersection.

Intersection Analysis Summary

| ID | Intersection Name | Control Type | Method | Worst Mvmt | V/C | Delay (s/veh) | LOS |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| 1 | California Ave / Amar Rd | Signalized | HCM 6th <br> Edition | SB Thru | 0.665 | 29.5 | C |
| 2 | California Ave / Giordano St | All-way stop | HCM 6th <br> Edition | NB Thru | 0.151 | 7.9 | A |
| 3 | Sunset Ave / Temple Ave | Signalized | HCM 6th <br> Edition | SB Right | 0.847 | 70.5 | E |
| 4 | California Ave / Temple Ave | Signalized | HCM 6th <br> Edition | SB Thru | 0.465 | 34.2 | C |
| 5 | Site Driveway Intersection | Two-way stop | HCM 6th <br> Edition | SB Left | 0.073 | 36.1 | E |

V/C, Delay, LOS: For two-way stop, these values are taken from the movement with the worst (highest) delay value. For all other control types, they are taken for the whole intersection.

# Intersection Level Of Service Report Intersection 1: California Ave / Amar Rd

| 2 | California Ave / Giordano St | All-way stop | HCM 6th <br> Edition | SB Thru | 0.457 | 10.2 | B |
| 3 | Sunset Ave / Temple Ave | Signalized | HCM 6th <br> Edition | NB Right | 0.929 | 100.5 | F |
| 4 | California Ave / Temple Ave | Signalized | HCM 6th <br> Edition | NB Thru | 0.600 | 37.5 | D |
| 5 | Site Driveway Intersection | Two-way stop | HCM 6th <br> Edition | SB Left | 0.132 | 31.7 | D |

V/C, Delay, LOS: For two-way stop, these values are taken from the movement with the worst (highest) delay value. For all other control types, they are taken for the whole intersection.
