EXECUTIVE SUMMARY

EFI Global, Inc. has performed a Phase I Environmental Site Assessment (Phase I ESA) for Sirius Environmental (Client) for an educational property located at 635 North California Avenue, in Los Angeles County, within the City of La Puente, California, Assessor's Parcel Number (APN): 8212-011-901. The research conducted for this study and the report prepared are in conformance with the United States Environmental Protection Agency (USEPA) All Appropriate Inquiry (AAI) standard and the ASTM International E1527-13 scope of work.

SITE DESCRIPTION

According to our research and information provided by the Client, the following address has been found to be associated with the subject property: 635 North California Avenue, La Puente, California. The subject property is located on the north side of North California Avenue and East Temple Avenue, in Los Angeles County, and within the City of La Puente. The subject property is approximately 9.35 acres in size and is developed with several school structures on the east and south portions. The subject property is currently occupied by Temple Elementary School. The remaining portions of the property consist of an asphalt paved parking lot enclosed with a chain-link fence on the west portion and a recreational field in the remainder. A proposed San Gabriel Valley Aquatic Center is to be developed in the current parking lot and ballfield area on the northern and western portions, and will include an 8,000 to 12,000 square-foot pool building, a large competitive swimming pool, a smaller practice pool, signage, fencing, a 1-acre park area, central plaza, and a parking lot. It should be noted that this Phase I ESA includes information relating to the entirety of the subject property, however, the site reconnaissance, findings, and conclusions are solely focused on the proposed project area, see Figure 3 Site Plan. The surrounding area is used for educational, residential, and recreational purposes. Groundwater is estimated to be approximately 75 to 80 feet below ground surface (bgs) in the area of the site and is assumed to flow towards the northwest.

- No hazardous material storage or recognized environmental conditions were observed at the site. Those interviewed, as persons familiar with the site were not aware of any negative environmental conditions associated with the property.

HISTORICAL LAND USE

According to EFI Global, Inc.'s interpretation of the historical research data, the subject property was undeveloped land from sometime prior to 1894 through at least 1904. Later in 1904, the subject property was developed with a residential structure on the southern corner and agricultural land in the remainder from sometime prior to 1928 through at least 1953. By 1957, the subject property was redeveloped with eight of the existing school structures and associated yards on the southeast portion, with vacant land in the remainder, through at least 1994. By 2002, the subject property was developed with two additional school structures on the southeast and western portions, and the vacant areas were utilized for recreational activities. The subject property has remained in this configuration through the present. The subject property has solely been occupied by Temple Elementary School since construction through this report date.

- The subject property was historically used for agricultural purposes from sometime prior to 1928 through at least 1952. There is a potential that during this period agricultural chemicals, such as pesticides, herbicides, and fertilizers, were applied to site soils consistent with normal application practices. Agricultural chemicals tend to accumulate in the

near-surface soils. As the subject property has been redeveloped, which typically involves grading (soil mixing) of the first few feet of soil, it is likely that the agricultural chemicals, if any were present, have been homogenized and redistributed, which likely reduced any residual concentrations to within acceptable screening levels for the continued educational use of the subject property. Furthermore, the proposed redevelopment will include a large excavation as part of the redevelopment with an 8,000 to 12,000 square-foot pool building, a large competitive swimming pool, a smaller practice pool. Based on the foregoing, it is our opinion that a risk to human health or the environment from the historical agricultural use of the subject property is unlikely, and therefore, the historical agricultural use is not considered a significant environmental concern.

- Based on our review of the historical data, no data gaps were encountered during our research.

ENVIRONMENTAL DATA SEARCH

Hacienda La Puente Unified School District - Temple Academy (635 California Avenue) - The subject property is listed on the Hazardous Waste Tracking System (HWTS) and Facility and Manifest Data (HAZNET) databases. According to the listings, this facility was issued the following six United States Environmental Protection Agency (USEPA) IDs: CAC002343055 from November 2000 through September 2001, CAC002569216 from August 2003 through June 2004, CAC002618027 from June 2007 through December 2007, CAC002767241 from April 2014 through July 2014, CAC002840150 from December 2015 through March 2016, and CAC002859622 from May 2016 through August 2016. Under USEPA ID CAC002767241, this facility disposed of 3.2 tons of asbestos containing waste to a landfill in 2014. Based on the type of waste disposed and evidence of proper disposal, the generated hazardous waste is not expected to represent a significant environmental concern for the subject property.

San Gabriel Valley (Baldwin Park, California) - The subject property is within the Baldwin Park San Gabriel Valley California Areas of Concern (AOCONCERN). According to the database listing, this is an area within San Gabriel Valley where Volatile Organic Compound (VOC) contamination is at or above the maximum contaminant level (MCL) designated by the USEPA Region 9 office. No further information was provided. This area of concern is further discussed below.

San Gabriel Valley (Area 4) (Stimson Avenue & Old Valley Boulevard) - San Gabriel Valley is listed on the National Priority List (NPL), Superfund Enterprise Management System (SEMS), Engineering Controls Sites List (US ENG CONTROLS), Records of Decision (ROD), Integrated Compliance Information System (ICIS), Facility Index System/Facility Registry System (FINDS), Enforcement Compliance History Online (ECHO), and Potentially Responsible Parties (PRP) databases. According to the information provided, regional groundwater throughout the San Gabriel Valley has been documented as being impacted by trichloroethylene (TCE), tetrachloroethylene (PCE), 1,1-dichloroethene (1,1-DCE), and 1,4-dioxane. The groundwater plume is approximately 5 square miles in size and exists along the axis of the San Jose Creek in the San Gabriel groundwater basin in La Puente. The USEPA, Los Angeles Regional Water Quality Control Board (LARWQCB), Department of Toxic Substances Control (DTSC), the Main San Gabriel Basin Watermaster, and the San Gabriel Basin Water Quality Authority are the lead agencies responsible for investigations and remedial activities. Remedial solutions adopted thus far have included an extraction and treatment system which consists of extraction wells. The subject property is not included in the list of significant or responsible parties. It should be noted that EFI Global observed three wells adjacent to the subject

property, as discussed in Section 3.1.1. Additional wells were observed adjacent to the northeast and southeast of the adjoining Allen J. Martin city park. According to the San Gabriel Valley Basin Groundwater Quality Management and Remediation Plan, dated March 18, 2020 by the San Gabriel Basin Water Quality Authority, these well are associated to the Puente Valley Operable Unit for the monitoring of shallow and intermediate zone groundwater. According to the figures in the report, updated February 13, 2020, the contaminant plume that underlies the subject property contains volatile organic compounds (VOCs) that are greater than one times the maximum contaminant level (MCL). Given the identification of groundwater impacted with VOCs and shallow groundwater (less than 100 feet bgs), EFI Global cannot rule out the potential for this plume to be underlying the subject property which is a Vapor Encroachment Condition (VEC) and represents a recognized environmental condition (REC) for the subject property. The groundwater plume is depicted in Figure 4 of the Illustrations section of this report.

- In our opinion, none of the other sites listed on the regulatory database report pose a significant threat to the subject property as there is no indication of a release at the respective sites, a release has occurred but groundwater has not been impacted, a release has occurred but the case is closed, or the sites are located cross or down gradient of the subject property and in excess of 1/10 mile from the subject property.

The Los Angeles Regional Water Quality Control Board (LARWQCB), Department of Toxic Substances Control (DTSC), South Coast Air Quality Management District (SCAQMD), Los Angeles County Fire Department Health and Hazardous Materials Division (LACFD HHMD), Los Angeles County Sanitation District (LACSD), and the Los Angeles County Department of Public Works (LACDPW) were contacted regarding air emissions permits, site investigation files, hazardous materials, underground storage tank, and industrial waste discharge records for the subject property. Additionally, the State Water Resources Control Board's (SWRCB) GeoTracker, DTSC's EnviroStor and Hazardous Waste Tracking System (HWTS), SCAQMD's Facility Information Detail (FIND), the LACFD HHMD Active and Inactive Certified Unified Program Agency (CUPA) Program Records, Site Mitigation Unit (SMU) Case Records, and California Accidental Release Program (CalARP) online databases were reviewed for information pertaining to the subject property.

- According to the responses to our requests from the LARWQCB, DTSC, SCAQMD, LACFD HHMD, LACSD, and LACDPW, there are no files for the subject property. Furthermore, the subject property was not listed on the GeoTracker, EnviroStor, FIND, and LACFD HHMD online databases.
- According to information available on the HWTS online database, Temple Academy was issued six USEPA IDs. The USEPA ID listings and hazardous wastes manifests are primarily consistent with those previously discussed in the regulatory database report above, with the exception of 1.38 tons of asbestos-containing waste generated under USEPA ID CAC002840150 in 2015. Based on the type of waste disposed and evidence of proper disposal, the generated hazardous waste is not expected to represent a significant environmental concern for the subject property.
- No significant data gaps were encountered during our agency file reviews.

The California Department of Conservation, Geologic Energy Management Division (CalGEM) Well Finder Online Mapping System was reviewed for information pertaining to oil and gas exploration on or nearby the subject property. No oil wells were identified within 500 feet of the subject property.

- The User did not provide EFI Global any information either verbally or in writing (i.e. Title Report) regarding environmental cleanup liens or activity and use limitations encumbering the subject property. An environmental lien search was not requested by the User; however, based on our review of the DTSC EnviroStor Database, no environmental liens enforced by the DTSC were identified. Additionally, the site was not found on any lists indicative of solid wastes disposal, hazardous materials release (such as leaking underground storage tank sites) or hazardous wastes facilities complied by the DTSC, State Water Resources Control Board, or any other local enforcement agency pursuant to Government Code Section 65962.5.

ADDITIONAL ISSUES

- Based on the lack of permanent structures currently on the subject property parking lot, the potential for asbestos-containing materials and lead-based paint is considered to be low.
- Based on our research, the potential for radon at the subject property is considered to be low.
- Based on the lack of permanent structures currently on the subject property parking lot, no mold observations were made during this assessment.
- The Los Angeles County Department of Public Works, Solid Waste Information Management System was reviewed to determine if the property is within 1,000 feet of a landfill or 300 feet of an oil well. According to the information reviewed, the subject property is not located within 1,000 feet of a landfill or 300 feet of an oil well. Therefore, the potential for the presence of methane beneath the property is considered low.

CONCLUSIONS

EFI Global, Inc. has performed a Phase I in conformance with the scope and limitations of ASTM International E1527-13, at 635 North California Avenue, La Puente, California, the subject property. Any exceptions to or deletions from this practice are described in the individual sections of this report. This assessment has revealed no evidence of recognized environmental conditions or *de minimis* conditions in connection with the subject property, except for the following:

RECOGNIZED ENVIRONMENTAL CONDITIONS (REC)

The identification of VOCs in groundwater in the vicinity of the subject property, associated to the San Gabriel Valley (Area 4) NPL, represents a REC as a VEC exists.

HISTORICAL RECOGNIZED ENVIRONMENTAL CONDITIONS (HREC)

In our opinion, no HRECs were identified during the course of this assessment.

CONTROLLED RECOGNIZED ENVIRONMENTAL CONDITIONS (CREC)

In our opinion, no CRECs were identified during the course of this assessment.

DE MINIMIS CONDITIONS

In our opinion, no *de minimis* conditions were identified during the course of this assessment.

RECOMMENDATIONS

Based upon the foregoing, a Phase II Environmental Site Assessment is recommended.

1.0 INTRODUCTION

EFI Global, Inc. has performed a Phase I Environmental Site Assessment (Phase I) for the property located at 635 North California Avenue, in an unincorporated area of Los Angeles County, near the City of La Puente, California (Subject Property). This report has been prepared for the sole use of Sirius Environmental (Client).

The research conducted for this study and the report prepared are in general conformance with the United States Environmental Protection Agency (USEPA) All Appropriate Inquiry (AAI) standard and the ASTM International E1527-13 "Standard Practices for Environmental Site Assessments: Phase I Environmental Site Assessment Process". The primary purpose for performing a Phase I ESA is to "...permit a user to satisfy one of the requirements to qualify for the innocent landowner, contiguous property owner, or bona fide prospective purchaser limitations (commonly known as landowner liability protections) on Comprehensive Environmental Response Compensation and Liability Act (CERCLA) liability." (ASTM, 2013) An environmental site assessment meeting or exceeding this practice and completed less than 180 days prior to the date of acquisition is presumed to be valid under this standard. In order to maintain landowner liability protections, the User also has a "continuing obligation to not interfere with activity and use limitations associated with the property," must take "reasonable steps to prevent releases" and must "comply with legal release reporting obligations." (ASTM, 2013) Further, it is the goal of this study to identify business risks related to the property associated with environmental conditions. This investigation is not an environmental compliance audit and is not designed to determine if the operations of an existing facility are in compliance with applicable environmental laws and regulations.

The goal of this process is to identify any (1) recognized environmental conditions (RECs), (2) historic recognized environmental conditions (HRECs), (3) controlled recognized environmental conditions (CRECs), and/or (4) *de minimis* conditions associated with the subject property.

- A **recognized environmental condition** is defined as "...the presence or likely presence of any hazardous substances or petroleum products in, on, or at a property: (1) due to any release to the environment; (2) under conditions indicative of a release to the environment; or (3) under conditions that pose a material threat of a future release to the environment." This definition does not include *de minimis* conditions defined as "a condition that generally does not present a threat to human health or the environment and that generally would not be the subject of an enforcement action if brought to the attention of appropriate governmental agencies" (ASTM, 2013).
- A **historical recognized environmental condition** is defined as "a past release of any hazardous substances or petroleum products that has occurred in connection with the property and has been addressed to the satisfaction of the applicable regulatory authority or meeting unrestricted use criteria established by a regulatory authority, without subjecting the property to any required controls (for example, property use restrictions, activity and use limitations, institutional controls, or engineering controls)." (ASTM, 2013). The HREC designation requires the comparison of residual contamination concentrations, if any, to current regulatory standards.
- A **controlled recognized environmental condition** is defined as "a recognized environmental condition resulting from a past release of hazardous substances or petroleum products that has been addressed to the satisfaction of the applicable regulatory

authority (for example, as evidenced by the issuance of a no further action letter or equivalent, or meeting risk-based criteria established by regulatory authority), with hazardous substances or petroleum products allowed to remain in place subject to the implementation of required controls (for example, property use restrictions, activity and use limitations, institutional controls, or engineering controls)" (ASTM, 2013).

- A ***de minimis condition*** is defined as "a condition that generally does not present a threat to human health or the environment and that generally would not be the subject of an enforcement action if brought to the attention of appropriate governmental agencies. Conditions determined to be *de minimis* conditions are not recognized environmental conditions nor controlled recognized environmental conditions" (ASTM, 2013).

In order to identify environmental conditions at the site, the Phase I ESA includes a site inspection, interviews with parties familiar with the property, historical research into the past uses of the property, and an environmental records search with regard to the subject property, adjoining and immediately surrounding properties, and the surrounding area. In addition, EFI Global, Inc. provides an opinion regarding the potential for asbestos containing materials, lead-based paints, mold, radon, oil and gas exploration, and methane as they relate to the subject property. Reviewing those documents that are publicly available, reasonably ascertainable, and practically reviewable controls the completeness of this assessment. The inability to review documents which do not exist or are not publicly available, reasonably ascertainable, or practically reviewable may result in a data gap.

1.1 Significant Assumptions

While this report provides an overview of potential environmental concerns, both past and present, the environmental assessment is limited by the availability of information at the time of the assessment. It is possible that unreported disposal of waste or illegal activities impairing the environmental status of the property may have occurred which could not be identified. The conclusions and recommendations regarding environmental conditions that are presented in this report are based on a scope of work authorized by the Client. Note, however, that virtually no scope of work, no matter how exhaustive, can identify all contaminants or all conditions above and below ground.

1.2 Limitations and Exceptions

This report has been prepared in accordance with generally accepted environmental methodologies referred to in ASTM E1527-13, and contains all of the limitations inherent in these methodologies. No other warranties, expressed or implied, are made as to the professional services provided under the terms of our contract and included in this report. The conclusions of this report are based in part, on the information provided by others. The possibility remains that unexpected environmental conditions may be encountered at the site in locations not specifically investigated. The services performed and outlined in this report were based, in part, upon visual observations of the site and attendant structures. Our opinion cannot be extended to portions of the site that were unavailable for direct observation, reasonably beyond the control of EFI Global, Inc. The objective of this report was to assess environmental conditions at the site, within the context of our contract and existing environmental regulations within the applicable jurisdiction. Evaluating compliance of past or future owners with applicable local, provincial, and federal government laws and regulations was not

included in our contract for services. Our observations relating to the condition of environmental media at the site are described in this report. It should be noted that compounds or materials other than those described could be present in the site environment.

1.3 Reliance

This report has been prepared for the sole use of Sirius Environmental. The contents should not be relied upon by any other parties without the express written consent of Sirius Environmental and EFI Global, Inc.

1.4 User Responsibilities

The USEPA AAI and ASTM International E1527-13 Phase I Standards require that the User conduct independent research and consider certain information before purchasing a property. The User is defined as the party seeking to use Practice E1527 to complete an environmental site assessment of the property. A user may include, without limitation, a potential purchaser of property, a potential tenant of property, an owner of property, a lender, or a property manager. These considerations include the following:

- Obtain a recent (less than 180 days old) title report prepared for the subject property. The report should be reviewed to obtain information regarding environmental clean-up liens or activity and use limitations (AULs) with regard to the subject property. If environmental cleanup liens or AULs encumbering the subject property or in connection with the subject property are identified, the User should provide that information to the Environmental Professional (EFI Global, Inc.). If the User has actual knowledge of environmental cleanup liens or AULs encumbering the subject property or in connection with the subject property, the User should provide that information to the Environmental Professional (EFI Global, Inc.).
- The User should provide the Environmental Professional (EFI Global, Inc.) with any specialized knowledge the User has with regard to recognized environmental conditions in connection with the property.
- If the User is aware of any commonly known information in the community about the subject property with respect to recognized environmental conditions, the User should provide the information to the Environmental Professional (EFI Global, Inc.).
- If this Phase I ESA was prepared as due diligence for a property transaction, it is the responsibility of the User to consider the relationship of the purchase price to the fair market value of the property. If the purchase price is significantly lower than the fair market value, the User should identify the alternate reason for the low purchase price if the lower purchase price is not related to the property being affected by hazardous substances or petroleum products.

2.0 SITE DESCRIPTION

EFI Global, Inc. has performed a Phase I for a educational property located at 635 North California Avenue, in an unincorporated area of Los Angeles County, near the City of La Puente, California. The subject property is located on the north side of North California Avenue and East Temple Avenue, in an unincorporated area of Los Angeles County near the City of La Puente. The subject property is approximately 9.35 acres in size and is developed with several school structures on the east and south portions. The subject property is currently occupied by Temple Elementary School. The remaining portions of the property consist of an asphalt paved parking lot enclosed with a chain-link fence on the west portion and a recreational field in the remainder. A proposed Aquatic Center is to be developed in the current parking lot area on the western portion, and will include an 8,000 to 12,000 square-foot pool building, a large competitive swimming pool, a smaller practice pool, signage, fencing, a 1-acre park area, central plaza, and a parking lot. It should be noted that this Phase I ESA includes information relating to the entirety of the subject property, however, the site reconnaissance, findings, and conclusions are solely focused on the proposed project area. The surrounding area is used for educational, residential, and recreational purposes.

Natural gas and electrical services are provided to the subject property by Southern California Gas and Southern California Edison, respectively. Potable water and sewer services are provided by the Suburban W Systems - San Jose Hills District and Los Angeles County Department of Public Works, respectively.

2.1 Current and Historical Addresses

According to our research and information provided by the Client, the following address has been found to be associated with the subject property: 635 North California Avenue, La Puente, California.

2.2 Legal Description

According to the Los Angeles County Assessor's Office, the subject property is located in Los Angeles County and with the City of La Puente and is described by the Assessor's Parcel Number: 8212-011-901.

2.3 Physical Setting

The elevation of the subject property is approximately 315 feet above mean sea level (United States Geological Survey Baldwin Park, California 7.5 minute topographic quadrangle). Based on our review of the GeoCheck Section of the Environmental Data Resources, Inc. (EDR) Radius report, the subject property is not situated within a 100-year Federal Environmental Management Agency (FEMA) Flood Zone. No wetlands were identified at the property or adjoining/immediately surrounding properties. Based on our review of groundwater data presented in the State Water Resources Control Board (SWRCB) GeoTracker website, groundwater was detected at a leaking underground storage tank site (15135 East Amar Road) approximately 0.35 mile southwest of the subject property at approximately 75 to 80 feet bgs. However, perched and semi-perched aquifers may be present beneath the site. Based on regional groundwater data, the regional groundwater flow direction is estimated to be towards the northwest; however, local groundwater flow direction may vary.

3.0 SITE RECONNAISSANCE/INTERVIEWS

3.1 Site Reconnaissance

On March 17, 2021, Mr. Christopher Rude with EFI Global, Inc. conducted a site reconnaissance of the subject property. The site inspection was conducted to attempt to identify current site use(s), current hazardous materials storage, and evidence of past site uses and hazardous material storage and to identify evidence of other recognized environmental conditions. The following table summarizes our Site Reconnaissance observations:

Yes	No	Observed Feature(s)
	✓	Hazardous Substances and Petroleum Products Containers
	✓	Underground and/or Aboveground Storage Tanks
	✓	Drains/Sumps/Clarifiers/Sewer Interceptors/Septic Systems
	✓	Stained or Corroded Surfaces/Stained Soil or Stressed Vegetation
	✓	Pits/Ponds/Lagoons/Wetlands
	✓	Electrical Equipment with the Potential to contain Fluids
✓		Production or Monitoring Wells
	✓	Evidence of Solid Waste Disposal/Dumping/Fill Areas

3.1.1 Exterior Observations

The exterior portions of the site consist of an asphalt-paved parking lot enclosed with a chain-link fence on the western portion and a large recreational field utilized by the Temple Elementary school on the north portion. The parking lot is accessible via a driveway along the southwest portion, along East Temple Avenue. The paved areas were observed in good condition with minor cracking areas observed. The recreational field consisted of low lying grass. No hazardous material disposal was observed.

EFI Global observed three monitoring wells adjacent to the subject property, referred to as S07, VCW-01 and MW-10. These wells are associated to the ongoing San Gabriel Valley (Area 4) National Priority List (NPL). Additional groundwater wells were observed within Evanwood Avenue to the northwest, the parking lot for the adjoining Allen J. Martin Park to the northeast, and Giordano Street to the northeast. For further discussion, refer to Section 5.1.

No pole or pad mounted transformers or poly-chlorinated biphenyls (PCB) containing equipment were observed on-site.

3.1.2 Interior Observations

The subject property is a part of the Temple Academy School, however for the purpose of this assessment, only the proposed Aquatic Center (currently a parking lot) and the recreational field was inspected as part of the site reconnaissance. Based on the foregoing, no interior observations were made during this assessment.

3.1.3 Reconnaissance Limitations

No significant limitations were encountered during our reconnaissance of the subject property.

3.2 Adjoining and Immediately Surrounding Properties

The adjoining and immediately surrounding properties (within 100-feet of the subject property boundary) were visually and physically observed from public right-of ways and the subject property in an attempt to identify recognized environmental conditions. Our observations are summarized in the following table:

Location	Address(es)	Uses/ Observations
Northeast	14830 East Giordano Street	Allen J. Martin Park
Southeast	602-656 North California Avenue	Single-family residential
Northwest	604-660 Evanwood Avenue	Single-family residential
Southwest	546 and 547 Glenshaw Drive, 551 Greenberry Drive, and 14834, 14844, and 14862 Temple Avenue	Single-family residential

No recognized environmental conditions were readily observable at the adjoining/immediately surrounding properties.

3.3 Surrounding Area Observations

3.3.1 Surrounding Property Uses

The surrounding area is developed for educational, residential, and recreational purposes.

3.3.2 Surrounding Geography

The surrounding area is mostly flat with a slight topographic slope to the west-southwest. No nearby hills or bedrock outcroppings were observed in the area of the site. No lakes, ponds, rivers or streams were observed in the surrounding area.

3.4 Interviews

3.4.1 Property Owner

The property owner was provided an environmental questionnaire, which has not been returned prior to issuance of the report. Based on the quality of information obtained from other sources, this limitation is not expected to alter the findings of this investigation.

3.4.2 Key Site Manager

A key site manager was not available for interview during the completion of this report.

3.4.3 Property Occupants

No occupants were available for interview during the completion of this report.

3.4.4 Past Owners, Operators and Occupants

Past owners, operators and occupants were not able to be identified for an interview for this report.

3.4.5 Prospective Purchaser

As the User of this report is the owner of the property performing due diligence on the subject property for financing purposes, there is no prospective purchaser included in the transaction.

3.4.6 Neighboring Property Owners/Tenants

Per ASTM, an attempt to interview neighboring property owners/tenants should be conducted when the subject property is vacant and unsecured land.

As the subject property is currently developed and utilized for educational purposes, no neighboring property owners/tenants were interviewed during this assessment.

3.5 User Provided Information

The USEPA AAI and ASTM International E1527-13 Phase I Standards require that the User conduct independent research and consider certain information before purchasing a property. EFI Global, Inc. recommends that the User documents completion of the following items:

3.5.1 Lien Search

The User is required to obtain a recent (less than 180 days old) title report prepared for the subject property. The report should be reviewed to obtain information regarding environmental clean-up liens or activity and use limitations with regard to the subject property. If environmental cleanup liens or activity and use limitations encumbering the subject property or in connection with the subject property are identified, the User should provide that information to the Environmental Professional (EFI Global, Inc.). If the User has actual knowledge of environmental cleanup liens or activity and use limitations encumbering the subject property or in connection with the subject property, the User should provide that information to the Environmental Professional (EFI Global, Inc.).

- The User did not provide EFI Global any information either verbally or in writing (i.e. Title Report) regarding environmental cleanup liens or activity and use limitations encumbering the subject property. An environmental lien search was not requested by the User; however, based on our review of the DTSC EnviroStor Database, no environmental liens enforced by the DTSC were identified. Additionally, the site was not found on any lists indicative of solid wastes disposal, hazardous materials release (such as leaking underground storage tank sites) or hazardous wastes facilities complied by the DTSC, State Water Resources Control Board, or any other local enforcement agency pursuant to Government Code Section 65962.5.

3.5.2 Specialized Knowledge

The User should provide the Environmental Professional (EFI Global, Inc.) with any specialized knowledge the User has with regard to recognized environmental conditions in connection with the property.

- The User has no specialized knowledge with respect to recognized environmental conditions in connection with the property.

3.5.3 Commonly Known or Reasonably Ascertainable

Information

If the User is aware of any commonly known information in the community about the subject property with respect to recognized environmental conditions, the User should provide the information to the Environmental Professional (EFI Global, Inc.).

- The User is not aware of any commonly known information in the community about the subject property with respect to recognized environmental conditions.

3.5.4 Property Valuation

If this Phase I ESA was prepared as due diligence for a property transaction, it is the responsibility of the User to consider the relationship of the purchase price to the fair market value of the property. If the purchase price is significantly lower than the fair market value, the User should identify the alternate reason for the low purchase price if the lower purchase price is not related to the property being affected by hazardous substances or petroleum products.

- As the User of this report is the owner of the property performing due diligence on the subject property in contemplation of a future sale or refinance, there is no prospective purchaser included in the transaction.

3.5.5 Purpose of Performing Phase I ESA

According to the User, the User is the owner of the property performing due diligence on the subject property in contemplation of a future sale.

3.6 User Provided Documents

No documents were provided to EFI Global, Inc. by the User.

4.0 HISTORICAL LAND USE

A review of historical data derived from standard historical resources is provided in this section. The objective of consulting historical sources is to develop a history of the previous uses of the property and surrounding area, in order to help identify the likelihood of past uses having led to recognized environmental conditions in connection with the property. During our historical review, acute attention is paid to the subject property. Data relating to the adjoining and immediately surrounding properties (within 100-feet of the subject property boundary) and the surrounding area is reviewed to the extent that it is revealed in the course of researching the property itself.

4.1 Aerial Photography Review

Aerial Photography of many portions of the United States dates back to the 1920's. Items searched for in each photograph included, but were not limited to: evidence of tanks, gas stations, industrial site usage, water drainage pathways, areas which show evidence of drums or excessive debris, discolored or stained soils, areas of distressed vegetation, et cetera.

Aerial Photograph Coverage was available from EDR for the years: 1928, 1938, 1948, 1952, 1964, 1972, 1977, 1981, 1983, 1990, 1994, 2002, 2005, 2009, 2012, and 2016. A summary of our observations is presented in the following table.

Year	Subject Property	Notable Adjoining Property Observations	Notable Observations of the Surrounding Area
1928, 1938, 1948, and 1952	Appears to be developed with a residential structure on the southern corner. The remaining portions appear to be agricultural land.	North: Agricultural land Northeast: Agricultural land Northwest: Agricultural land South: Agricultural land beyond intersection Southeast: Agricultural land beyond road Southwest: Agricultural land beyond road; Agricultural land and residential by 1938	Appears to be primarily agricultural land with sparse residential development.

Year	Subject Property	Notable Adjoining Property Observations	Notable Observations of the Surrounding Area
1964, 1972, 1977, 1981, 1983, 1990, and 1994	Appears to be developed with eight of the existing school structures and associated yards on the southeastern portion. The remaining portions appear to be vacant land.	North: Residential Northeast: Vacant land; Park by 1972 Northwest: Residential South: Residential beyond intersection Southeast: Residential land beyond road Southwest: Residential beyond road	Appears to be primarily residential.
2002, 2005, 2009, 2012, and 2016	Appears to be developed with nine of the existing school structures and associated yards on the southeastern portion and an additional structure and parking area on the western corner. The remaining portions appear to be vacant land, which is used as a playing field.	North: Residential Northeast: Park Northwest: Residential South: Residential beyond intersection Southeast: Residential land beyond road Southwest: Residential beyond road	Appears to be primarily residential.

- Aerial photographs indicate that the subject property was developed for agricultural purposes from at least 1928 through 1952. For further discussion, refer to Section 4.6.1.

4.2 Topographic Map Review

Topographic Maps of many portions of the United States dates back to the 1879 and the series of 7.5-minute quadrangles was officially completed in 1992. More than 55,000 7.5-minute maps were made to cover the 48 conterminous States. This is the only uniform map series that covers the entire area of the United States in considerable detail. Traditionally topographic maps show both natural and man-made features. Items searched for in each topographic map included, but were not limited to: evidence of tanks, landfills, water drainage pathways, or areas which show significant evidence of fill, et cetera.

Topographic Map Coverage was available from Environmental Data Resources (EDR) for the years: 1894, 1897, 1898, 1904, 1927, 1953, 1966, 1972, 1981, and 2012. A summary of our observations for the remaining maps are presented in the following table.

Year	Subject Property	Notable Adjoining Property Observations	Notable Observations of the Surrounding Area
1894, 1897, 1898, and 1904	The subject property is depicted as vacant land.	All: Vacant land	The surrounding area is depicted with sparse residential development and vacant land.
1927 and 1953	The subject property is depicted with a small structure on the southern portion.	Northeast: Residential structure Southeast: Vacant land Southwest: Residential structure Northwest: Vacant land	The surrounding area is depicted with sparse residential and commercial development and vacant land.
1966, 1972, and 1981	The subject property is depicted with the Temple School, with seven school structures.	Northeast: Park Southeast: Shaded to indicate structural development, however no structures are depicted Southwest: Shaded to indicate structural development, however no structures are depicted Northwest: Shaded to indicate structural development, however no structures are depicted	The surrounding area is depicted with residential and commercial development.
2012	The subject property is depicted in an area of urban development.	All: Depicted in an area of urban development	The surrounding area is depicted as an area of urban development.

- Topographic Maps that were created in 2012 do not depict any structures and only indicate street development and street names. This does not mean that structures were not present at that time.

4.3 Building Department Records Review

The subject property address was researched at the Los Angeles County Department of Public Works (LACDPW) - Building and Safety Division. According to a response to our request from the LACDPW Building and Safety Division, no building permits were identified for the subject property.

4.4 City Directory Review

City directories have been published since the 1800's and provide detailed occupant information for the property and its surrounding area at five-year intervals. The purpose of the City Directory research is to attempt to determine the businesses that historically occupied the subject property. Historical City Directories provided by EDR and reviewed by EFI Global, Inc. are listed below.

635 North California Avenue	
Date	Listing
1961, 1964, 1969, 1992, 1995, 2005, 2010, and 2014	Temple Elementary School

- Listings for adjoining and immediately surrounding properties reviewed during the course of researching the subject property did not reveal any uses of concern.

4.5 Sanborn Map Review

Originally compiled by the Sanborn Map Company of Pelham, New York for fire insurance companies to assess fire risks related to building materials and hazardous materials storage, today Sanborn Maps are an invaluable tool for Environmental Professionals in determining historical site use and the potential for environmental conditions. Sanborn Map Coverage is available from as early as 1867 in some cities. Although Sanborn maps were created for approximately twelve thousand cities and towns in the United States, Canada, and Mexico, Sanborn Map Coverage is not available in newer and more rural communities.

- Sanborn Map Coverage was not available for the subject property. The remaining Historical Land Use data in our opinion is sufficient to accurately ascertain the historical site use.

4.6 Historical Summary

4.6.1 Subject Property

According to EFI Global, Inc.'s interpretation of the historical research data, the subject property was undeveloped land from sometime prior to 1894 through at least 1904. Later in 1904, the subject property was developed with a residential structure on the southern corner and agricultural land in the remainder from sometime prior to 1928 through at least 1953. By 1957, the subject property was redeveloped with eight of the existing school structures and associated yards on the southeast portion, with vacant land in the remainder, through at least 1994. By 2002, the subject property was developed with two additional school structures on the southeast and western portions, and the vacant areas were utilized for recreational activities. The subject property has remained in this configuration through the present. The subject property has solely been occupied by Temple Elementary School since construction through this report date.

- The subject property was historically used for agricultural purposes from sometime prior to 1928 through at least 1952. There is a potential that during this period agricultural chemicals, such as pesticides, herbicides, and fertilizers, were applied to site soils consistent with normal application practices. Agricultural chemicals tend to accumulate in the near-surface soils. As the subject property has been redeveloped, which typically involves grading (soil mixing) of the first few feet of soil, it is likely that the agricultural chemicals, if any were present, have been homogenized and redistributed, which likely reduced any residual concentrations to within acceptable screening levels for the continued educational use of the subject property. Furthermore, the proposed redevelopment will include a large excavation as part of the redevelopment with an 8,000 to 12,000 square-foot pool building, a large competitive

swimming pool, a smaller practice pool. Based on the foregoing, it is our opinion that a risk to human health or the environment from the historical agricultural use of the subject property is unlikely, and therefore, the historical agricultural use is not considered a significant environmental concern.

4.7 Historical Data Gaps

Based on our review of the historical data, no data gaps were encountered during our research.

5.0 REGULATORY DATABASE REPORT

A radial database search was conducted in accordance with the specifications defined in ASTM International E1527-13 which sets the radial search distances for each regulatory database. The radial database search was conducted by EDR on November 20, 2020. A copy of the database report is presented in Appendix III of this report. The following table summarizes required databases reviewed, the approximate search distances, and indicates if the subject site, adjoining/immediately surrounding properties or surrounding sites are listed on the respective database.

Following the table are summaries of the information found in the relevant database listings and our opinion regarding the potential for the subject property to be impacted. Our opinion is based on the information found in the database listings, through other historical and regulatory resources, "Standard Guide for Vapor Encroachment Screening on Property Involved in Real Estate Transactions" (ASTM International E2600-15), and assumed groundwater flow direction. As discussed in Section 2.3, groundwater is estimated to be approximately 75 to 80 feet below ground surface in the area of the site and is assumed to flow towards the northwest.

DATABASE	Search Distance (Miles)	Subject Site (Yes/No)	Adjacent Site (Yes/No)	Total Listings (#)
Federal National Priorities List (NPL)	1.0	Yes	No	2
Federal De-listed NPL	1.0	No	No	0
Federal CERCLIS	0.5	Yes	No	2
Federal CERCLIS NFRAP	0.5	No	No	0
Federal RCRA CORRACTS	1.0	No	No	0
Federal RCRA non-CORRACTS TSD	0.5	No	No	0
Federal RCRA Generators	0.25	No	No	1
Federal Institutional/Engineering Controls	0.5	Yes	No	1
Federal ERNS	Property	No	No	0
State/Tribal Equivalent NPL	1.0	No	No	0
State/Tribal Equivalent CERCLIS	1.0	No	No	3
State/Tribal Landfill	0.5	No	No	0
State/Tribal Underground Storage Tank (UST)	0.25	No	No	3
State/Tribal Leaking Underground Storage Tank (LUST/ CPS-SLIC)	0.5	No	No	36
State/Tribal Institutional/Engineering Controls	0.5	No	No	0
State/Tribal Voluntary Clean-up Sites	0.5	No	No	0
State/Tribal Brownfield Sites	0.5	No	No	0

5.1 Subject Property

Hacienda La Puente Unified School District - Temple Academy (635 California Avenue) - The subject property is listed on the Hazardous Waste Tracking System (HWTS) and Facility and Manifest Data (HAZNET) databases. According to the listings, this facility was issued the following six United States Environmental Protection Agency (USEPA) IDs: CAC002343055 from November 2000 through September 2001, CAC002569216 from August 2003 through June 2004, CAC002618027 from June 2007 through December 2007, CAC002767241 from April 2014 through July 2014, CAC002840150

from December 2015 through March 2016, and CAC002859622 from May 2016 through August 2016. Under USEPA ID CAC002767241, this facility disposed of 3.2 tons of asbestos containing waste to a landfill in 2014. Based on the type of waste disposed and evidence of proper disposal, the generated hazardous waste is not expected to represent a significant environmental concern for the subject property.

San Gabriel Valley (Baldwin Park, California) - The subject property is within the Baldwin Park San Gabriel Valley California Areas of Concern (AOCONCERN). According to the database listing, this is an area within San Gabriel Valley where Volatile Organic Compound (VOC) contamination is at or above the maximum contaminant level (MCL) designated by the USEPA Region 9 office. No further information was provided. This area of concern is further discussed below.

San Gabriel Valley (Area 4) (Stimson Avenue & Old Valley Boulevard) - San Gabriel Valley is listed on the National Priority List (NPL), Superfund Enterprise Management System (SEMS), Engineering Controls Sites List (US ENG CONTROLS), Records of Decision (ROD), Integrated Compliance Information System (ICIS), Facility Index System/Facility Registry System (FINDS), Enforcement Compliance History Online (ECHO), and Potentially Responsible Parties (PRP) databases. According to the information provided, regional groundwater throughout the San Gabriel Valley has been documented as being impacted by trichloroethylene (TCE), tetrachloroethylene (PCE), 1,1-dichloroethene (1,1-DCE), and 1,4-dioxane. The groundwater plume is approximately 5 square miles in size and exists along the axis of the San Jose Creek in the San Gabriel groundwater basin in La Puente. The USEPA, Los Angeles Regional Water Quality Control Board (LARWQCB), Department of Toxic Substances Control (DTSC), the Main San Gabriel Basin Watermaster, and the San Gabriel Basin Water Quality Authority are the lead agencies responsible for investigations and remedial activities. Remedial solutions adopted thus far have included an extraction and treatment system which consists of extraction wells. The subject property is not included in the list of significant or responsible parties. It should be noted that EFI Global observed three wells adjacent to the subject property, as discussed in Section 3.1.1. Additional wells were observed adjacent to the northeast and southeast of the adjoining Allen J. Martin city park. According to the San Gabriel Valley Basin Groundwater Quality Management and Remediation Plan, dated March 18, 2020 by the San Gabriel Basin Water Quality Authority, these well are associated to the Puente Valley Operable Unit for the monitoring of shallow and intermediate zone groundwater. According to the figures in the report, updated February 13, 2020, the contaminant plume that underlies the subject property contains volatile organic compounds (VOCs) that are greater than one times the maximum contaminant level (MCL). Given the identification of groundwater impacted with VOCs and shallow groundwater (less than 100 feet bgs), EFI Global cannot rule out the potential for this plume to be underlying the subject property which is a Vapor Encroachment Condition (VEC) and represents a recognized environmental condition (REC) for the subject property. The groundwater plume is depicted in Figure 4 of the Illustrations section of this report.

5.2 Adjoining and Immediately Surrounding Properties

No adjoining/immediately surrounding properties (within 100-feet) were listed on any of the regulatory databases researched.

5.3 Surrounding Area

In our opinion, none of the other sites listed on the regulatory database report pose a significant threat to the subject property as there is no indication of a release at the respective sites, a release has occurred but groundwater has not been impacted, a release has occurred but the case is closed, or the sites are located cross or down gradient of the subject property and in excess of 1/10 mile from the subject property.

5.4 Orphan Sites

Orphan sites are unmappable sites which appear in a list form in the Radius Map Report rather than on the standard Radius Map. Three orphan sites were identified in the Radius Map Report prepared for this site. The sites were manually mapped to determine the location of the site relative to the subject property and groundwater gradient. The following conclusions were made:

In our opinion, none of the orphan sites listed pose a significant threat to the subject property as the sites are located cross or down gradient of the subject property and in excess of 1/10 mile from the subject property.

6.0 AGENCY FILE REVIEWS

6.1 State Agencies

The Los Angeles Regional Water Quality Control Board (LARWQCB), Department of Toxic Substances Control (DTSC), and South Coast Air Quality Management District (SCAQMD) were contacted regarding air emissions permits and site investigation files for the subject property. Additionally, the State Water Resources Control Board's (SWRCB) GeoTracker, DTSC's EnviroStor and Hazardous Waste Tracking System (HWTS), and SCAQMD's Facility Information Detail (FIND) online databases were searched for information on the subject property to identify any evidence of previous or current hazardous material usage.

- According to the responses to our requests from the LARWQCB, DTSC, and SCAQMD, there are no files for the subject property. Furthermore, the subject property was not listed on the GeoTracker, EnviroStor, or FIND online databases.
- According to information available on the HWTS online database, Temple Academy was issued six USEPA IDs. The USEPA ID listings and hazardous wastes manifests are primarily consistent with those previously discussed in Section 5.1, with the exception of 1.38 tons of asbestos-containing waste generated under USEPA ID CAC002840150 in 2015. Based on the type of waste disposed and evidence of proper disposal, the generated hazardous waste is not expected to represent a significant environmental concern for the subject property.

The California Department of Conservation, Geologic Energy Management Division (CalGEM) Well Finder Online Mapping System was reviewed for information pertaining to oil and gas exploration on or nearby the subject property.

- No oil wells were identified within 500 feet of the subject property.

6.2 City/County Agencies

The Los Angeles County Fire Department Health and Hazardous Materials Division (LACFD HHMD), Los Angeles County Sanitation District (LACSD), and the Los Angeles County Department of Public Works (LACDPW) were contacted regarding hazardous materials, underground storage tank, and industrial waste discharge records for the subject property. Additionally, the LACFD HHMD Active and Inactive Certified Unified Program Agency (CUPA) Program Records, Site Mitigation Unit (SMU) Case Records, and California Accidental Release Program (CalARP) online databases were reviewed for information pertaining to the subject property.

- According to the responses to our requests from the LACFD HHMD, LACSD, and LACDPW, there are no files for the subject property. Furthermore, the subject property is not listed on any of the LACFD HHMD online databases.

6.3 Agency File Review Limitations

No significant data gaps were encountered during our agency file reviews.

7.0 NON-SCOPE ENVIRONMENTAL RISKS

ASTM International E1527-13 identifies additional conditions which, should they exist at the subject property, may create a human health risk to the occupants of the site. These risks may also create additional costs to the property owner in the form of identification, operations & maintenance, and cleanup or remediation.

7.1 Asbestos Containing Building Materials

Asbestos is a group of naturally occurring minerals used in many products, including building materials vehicle brakes, insulation and other products that require resistance to heat and corrosion. Asbestos includes: chrysotile, amosite, crocidolite, tremolite asbestos, anthophyllite asbestos, actinolite asbestos, and any of these materials that have been chemically treated and/or altered.

The inhalation of asbestos fibers by workers can cause cancer and other serious diseases of the lungs and other organs that may not appear until years after the exposure has occurred. For instance, asbestosis can cause a buildup of scar-like tissue in the lungs and result in loss of lung function. Asbestos fibers associated with these health risks are too small to be seen with the naked eye, and smokers are at higher risk of developing some asbestos-related diseases.

Asbestos-containing materials (ACM) do not always pose a hazard to occupants and workers in buildings that contain these materials. Intact, undisturbed ACMs generally do not pose a health risk. ACMs may become hazardous and pose an inhalation risk when they are damaged, disturbed in some manner, or deteriorate over time and asbestos fibers are released into building air.

ACM can be found in a multitude of building products which include decorative and acoustical plaster texture, fire-proofing (Monokote), joint compound, attic and wall insulation, resilient floor covering, mastic, recessed lighting fixtures, wiring, elevator brakes, fire doors, pipe insulation, pipe gaskets, duct insulation, duct tape, siding and roofing materials (tar/shingles), textured paint, stucco, concrete, asphalt underlayment (Petromat) and plaster.

Local jurisdictions have specific laws and regulations regarding asbestos and actions including building renovations and building demolition.

- Based on the lack of permanent structures currently on the subject property parking lot and recreational field, the potential for asbestos-containing materials is considered to be low.

7.2 Lead-Based Paint

Although the use of lead-based paint in residential structures has been prohibited since 1978, it may still be used in commercial and industrial buildings. It is approximated that 80 percent of buildings built prior to 1978 contain lead paint. Even at low levels, lead poisoning can cause IQ deficiencies, reading and learning disabilities, impaired hearing, reduced attention spans, hyperactivity and other behavior problems with children under 6 years old being most at risk.

Lead is a highly toxic metal that was used for many years in products found in and around our homes and commercial buildings. Lead can be found in dust from friction surfaces of windows and doors that are painted with lead-based paint and from building components coated with lead-based paint that has begun peeling, flaking and chalking. There is also the potential for soil to have elevated lead levels due to leaching from lead based paint on nearby structures and deposition of airborne lead when leaded fuel was in use prior to the 1976 ban and phase out.

Since the 1980's, lead has been phased out in gasoline, reduced in drinking water, reduced in industrial air pollution, and banned or has been limited in use in consumer products.

Between the local, State and Federal agencies, including the Environmental Protection Agency (EPA), Department of Housing and Urban Development (HUD), Occupational Safety & Health Administration (OSHA) and the California Department of Public Health (CDPH), each state has various action limits that have been enacted with the intent to prevent human exposure and contamination of the surrounding environment.

- Based on the lack of permanent structures currently on the subject property parking lot and recreational field, the potential for lead-based paint at the site is considered to be low.

7.3 Radon

Radon is a radioactive gas that has been found in structures all over the United States. Radon is produced from the natural breakdown of uranium in soil, rock, and water. Radon typically moves up through the ground and into structures through cracks and other holes in the foundation. Movement of radon through the earth is strongly influenced by moisture content and permeability of soil, porosity, and degree of fracturing in rocks, as well as surface meteorological conditions. High levels of radon have been discovered in every state.

Radon cannot be seen, smelled, or tasted. Breathing air-containing radon may increase the risk of getting lung cancer. The Surgeon General of the United States has warned that radon is the second leading cause of lung cancer in the United States today after smoking.

Testing for the presence of radon is fairly inexpensive, simple and is the only way to be certain of the on-site concentrations. Various types of sampling methods exist to determine the concentration. On-site radon sampling was not performed during the completion of this assessment.

- Based on our research at the United States Environmental Protection Agency (USEPA), the average radon concentrations for Los Angeles County are between 2.0 picocuries per liter (pCi/L) and 4.0 pCi/L, which is below the 4.0 pCi/L action level set by the USEPA. Further, the California Geological Survey *Radon Potential Radon Zone Map for Southern California*, dated January 2005, shows low concentrations of radon in the vicinity of the subject property. Site specific radon levels vary greatly within the EPA radon zones and on-site radon measurements would need to be collected in order to determine the radon levels at the subject property.

7.4 Wetlands

According to the Clean Water Act, a wetland is "those areas that are inundated or saturated by surface or groundwater at a frequency and duration sufficient to support, and that under normal circumstances do support, a prevalence of vegetation typically adapted for life in saturated soil conditions." Wetland areas have been identified as ecologically diverse and sensitive areas and are generally subject to more stringent development, re-development, and building regulations.

- The U.S. Fish and Wildlife Service (USFWS) National Wetlands Inventory was reviewed to determine if the subject property is situated within an identified wetland. According to the USFWS, the subject property is not located within a wetland area.

7.5 Mold

Mold and mildew are simple, microscopic organisms in the Fungi kingdom that can grow virtually anywhere if they have adequate moisture, nutrients, air and appropriate temperatures. Depending on the particular mold or fungus, growing colonies can be almost any color. Most household molds and fungi (mildews) are white, black, grey, or brown colored. Spores of dozens of kinds of mold and fungus (mildew) are present at all times in indoor and outdoor air. These spores can settle, germinate and grow wherever good growth conditions are found. They can grow on soil, plants, dead plant materials, foods, fabrics, paper, wood and many other materials found within buildings. Many molds are not harmful and actually have a beneficial role in the environment and in living systems. In soil, molds play a crucial part in decomposition of organic matter and in making nutrients available to plants.

When mold and fungi (mildews) growth occurs in buildings, it can be very destructive to the materials on which they grow and cause high levels of airborne mold spores and volatile organic compounds associated with the characteristic musty / moldy odor. They cause staining, decomposition (rotting of materials) and objectionable, musty odors. Where colonies are extensive they can also produce enough spores, and by-products to be harmful to health. Many of the by-products of mold and fungus (mildew) are irritating to skin, eyes and respiratory tracts. Some molds produce true allergic sensitization and allergic reactions in susceptible people. Some molds produce toxic by-products that could be harmful to skin, and poisonous if ingested or inhaled in quantity. Persons with compromised immune systems may even experience systemic fungal infections of the respiratory tract.

- Based on the lack of permanent structures currently on the subject property parking lot and recreational field, no mold observations were made during this assessment.

7.6 Methane Gas

In response to growing concern regarding methane intrusion into buildings and to the potential for methane build-up underneath buildings, certain municipalities have established methane requirements for structures based on the proximity to oil wells and landfills. If a subject property is located in the proximity of active or abandoned oil wells or landfills, methane mitigation devices installed prior to construction activities at a subject property may be necessary.

- The Los Angeles County Department of Public Works, Solid Waste Information Management System was reviewed to determine if the property is within 1,000 feet of a landfill or 300 feet of an oil well. According to the information reviewed, the subject property is not located within 1,000 feet of a landfill or 300 feet of an oil well. Therefore, the potential for the presence of methane beneath the property is considered low.

8.0 FINDINGS

EFI Global, Inc. has performed a Phase I for Sirius Environmental (Client) for an educational property located at 635 North California Avenue, in an unincorporated area of Los Angeles County, near the City of La Puente, California, Assessor's Parcel Number: 8212-011-901. The research conducted for this study and the report prepared are in conformance with the USEPA AAI standard and the ASTM International E1527-13 scope of work.

8.1 CONCLUSIONS

EFI Global, Inc. has performed a Phase I Environmental Site Assessment in conformance with the scope and limitations of ASTM International E1527-13, at 635 North California Avenue, La Puente, California, the subject property. Any exceptions to or deletions from this practice are described in the individual sections of this report. This assessment has revealed no evidence of recognized environmental conditions or *de minimis* conditions in connection with the subject property, except for the following:

Recognized Environmental Condition (REC)

The identification of VOCs in groundwater in the vicinity of the subject property, associated to the San Gabriel Valley (Area 4) NPL, represents a REC as a VEC exists.

Historical Recognized Environmental Condition (HREC)

In our opinion, no HRECs were identified during the course of this assessment.

Controlled Recognized Environmental Condition (CREC)

In our opinion, no CRECs were identified during the course of this assessment.

De Minimis Condition

In our opinion, no *de minimis* conditions were identified during the course of this assessment.

8.2 RECOMMENDATIONS

Based upon the foregoing, a Phase II Environmental Site Assessment is recommended.

9.0 SIGNATURES

I have the specific qualifications based on education, training, and experience to assess a property of the nature, history, and setting of the subject property. I have developed and performed the all appropriate inquiries in conformance with the standards and practices set forth in 40 CFR Part 312.

EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E 1527-13), the ASTM Standard Practice for Environmental Site Assessments for Forestland or Rural Property (E 2247-16), the ASTM Standard Practice for Limited Environmental Due Diligence: Transaction Screen Process (E 1528-14) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

EXECUTIVE SUMMARY

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.

Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

STANDARD ENVIRONMENTAL RECORDS

Federal NPL site list

NPL: Also known as Superfund, the National Priority List database is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund program. The source of this database is the U.S. EPA.

A review of the NPL list, as provided by EDR, and dated 07/29/2020 has revealed that there is 1 NPL site within approximately 1 mile of the target property.

<u>Equal/Higher Elevation</u>	<u>Address</u>	<u>Direction / Distance</u>	<u>Map ID</u>	<u>Page</u>
<i>SAN GABRIEL VALLEY A</i> Cerclis ID:: 902092 EPA Id: CAD980818512	<i>SUNSET & SAN BERNARD</i>	<i>NNW 1/2 - 1 (0.992 mi.)</i>	<i>0</i>	<i>39</i>

Federal CERCLIS list

SEMS: SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly known as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

A review of the SEMS list, as provided by EDR, and dated 07/29/2020 has revealed that there is 1 SEMS site within approximately 0.5 miles of the target property.

<u>Lower Elevation</u>	<u>Address</u>	<u>Direction / Distance</u>	<u>Map ID</u>	<u>Page</u>

EXECUTIVE SUMMARY

Federal RCRA generators list

RCRA-SQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

A review of the RCRA-SQG list, as provided by EDR, and dated 06/15/2020 has revealed that there is 1 RCRA-SQG site within approximately 0.25 miles of the target property.

State- and tribal - equivalent CERCLIS

ENVIROSTOR: The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifies sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

A review of the ENVIROSTOR list, as provided by EDR, and dated 07/27/2020 has revealed that there are 3 ENVIROSTOR sites within approximately 1 mile of the target property.

EXECUTIVE SUMMARY

State and tribal leaking storage tank lists

LUST: Leaking Underground Storage Tank (LUST) Sites included in GeoTracker. GeoTracker is the Water Boards data management system for sites that impact, or have the potential to impact, water quality in California, with emphasis on groundwater.

A review of the LUST list, as provided by EDR, has revealed that there are 17 LUST sites within approximately 0.5 miles of the target property.

EXECUTIVE SUMMARY

ADDITIONAL ENVIRONMENTAL RECORDS

Local Lists of Registered Storage Tanks

SWEEPS UST: Statewide Environmental Evaluation and Planning System. This underground storage tank listing was updated and maintained by a company contacted by the SWRCB in the early 1990's. The listing is no longer updated or maintained. The local agency is the contact for more information on a site on the SWEEPS list.

A review of the SWEEPS UST list, as provided by EDR, and dated 06/01/1994 has revealed that there is 1 SWEEPS UST site within approximately 0.25 miles of the target property.

Other Ascertainable Records

RCRA NonGen / NLR: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

A review of the RCRA NonGen / NLR list, as provided by EDR, and dated 06/15/2020 has revealed that there are 8 RCRA NonGen / NLR sites within approximately 0.25 miles of the target property.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR Hist Auto: EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR Hist Auto list, as provided by EDR, has revealed that there are 2 EDR Hist Auto sites within approximately 0.125 miles of the target property.

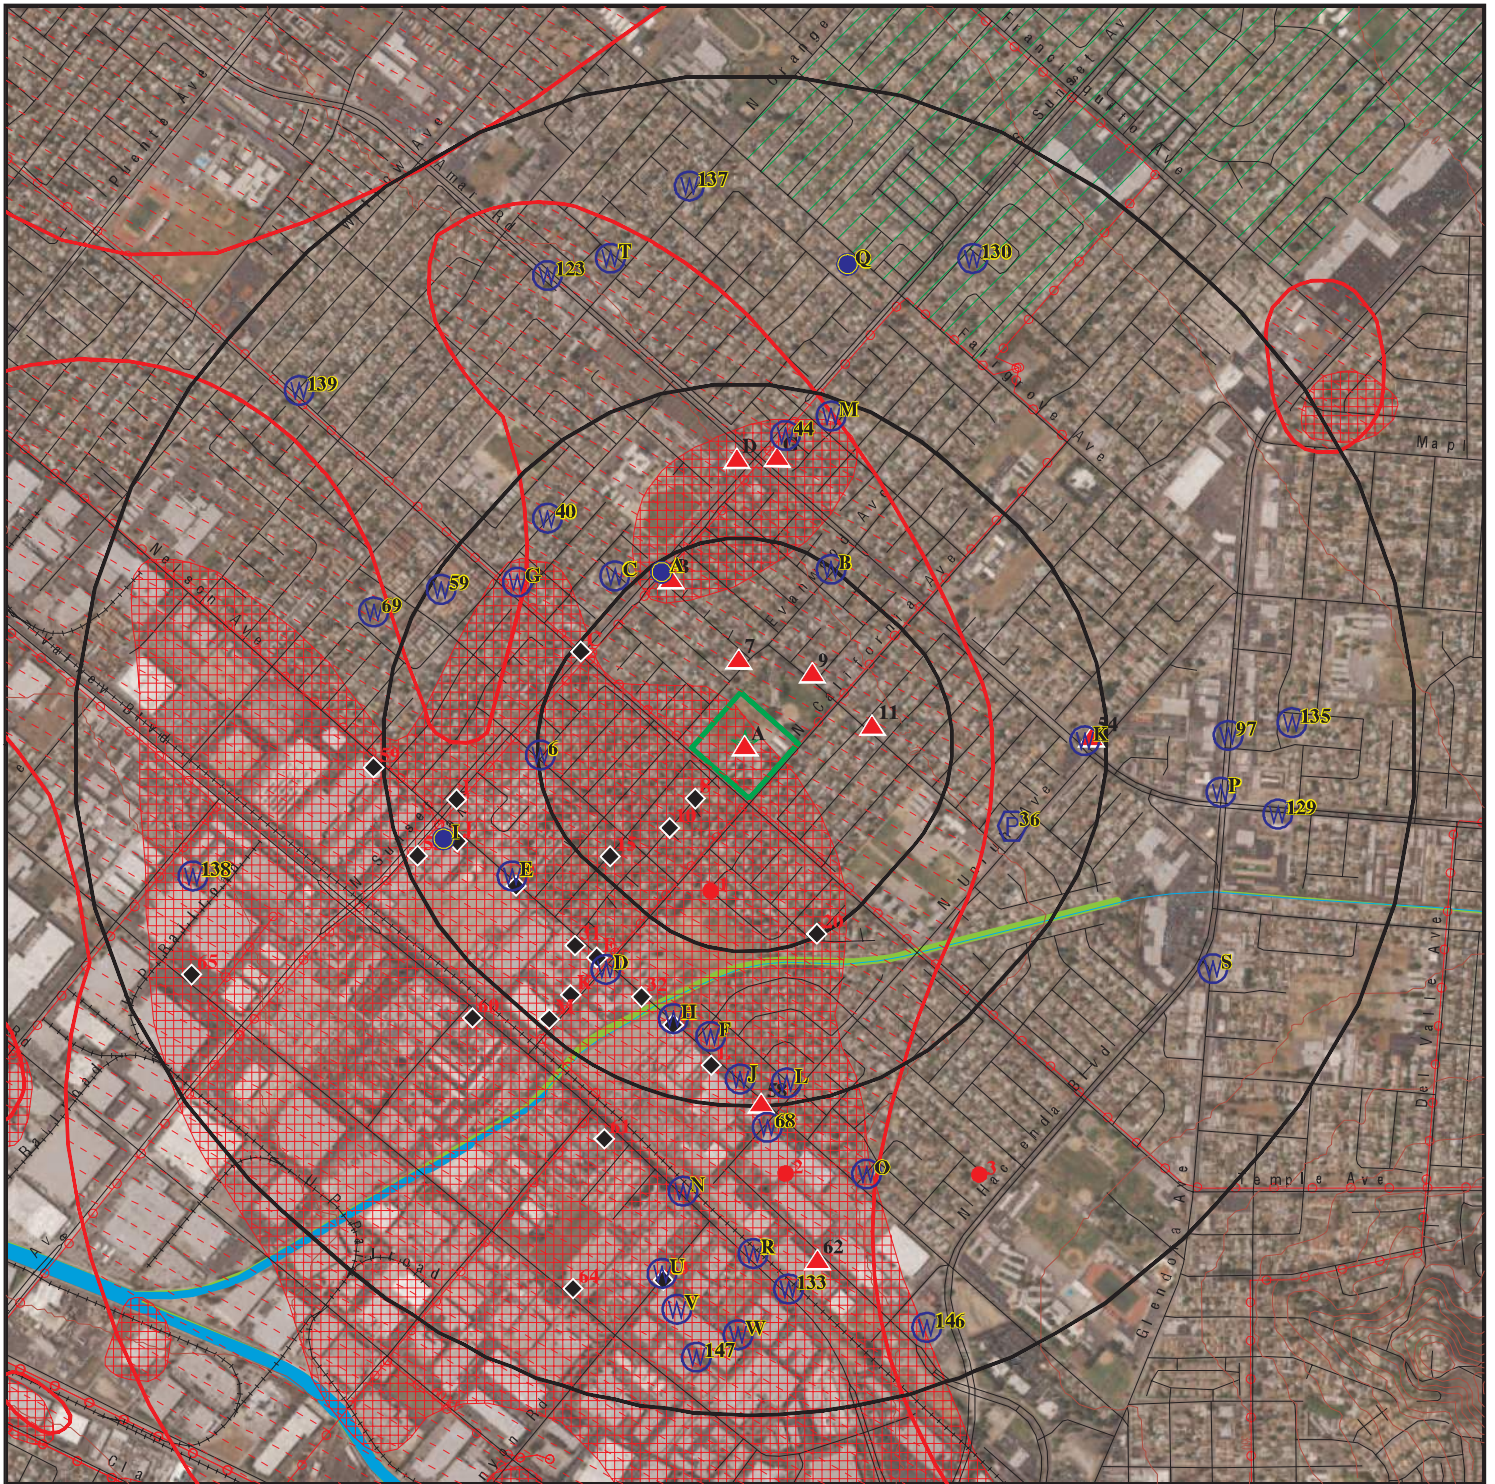

<u>Lower Elevation</u>	<u>Address</u>	<u>Direction / Distance</u>	<u>Map ID</u>	<u>Page</u>

Substance ID: U210
Substance: TETRACHLOROETHENE
CAS #: 127-18-4
Pathway: GROUND WATER PATHWAY
Scoring: 4

EPA ID: CAD980817985
NPL Status: Currently on the Final NPL
Substance ID: U228
Substance: TRICHLOROETHYLENE (TCE)
CAS #: 79-01-6
Pathway: GROUND WATER PATHWAY
Scoring: 4

Summary Details:

Conditions at listing September 1983): San Gabriel Valley Area 4) is a ground water plume that runs along the axis of the San Jose Creek in the San Gabriel ground water basin in La Puente, Los Angeles County, California. The plume is about 1 mile long and 1 mile wide. Ground water is contaminated with trichloroethylene (TCE) and perchloroethylene (PCE), according to analyses by State agencies and local water companies. Many public wells in the area exceed the EPA Suggested No Adverse Response Levels (SNARL) for TCE and PCE. Approximately 100,000 people are affected. Cities and public water companies in the area have tested to ensure that their water supplies contain less than 5 parts per billion (ppb) of TCE, a level considered safe for human consumption. When alternative methods of reducing the TCE level below 5 ppb are not effective, wells are removed from service. Status June 1984): A supplemental sampling program of contaminated wells will begin soon to get a snapshot view of the degree of contamination. The State Department of Health Services and EPA are preparing to initiate a remedial investigation/feasibility study to determine the aerial and vertical extent of contamination and to develop alternatives for treatment and management of the problem. EPA continues its investigation to identify sources of the contamination. This site, along with the three other San Gabriel Valley sites, was added to the NPL in May 1984 because it involves a serious problem that required taking immediate remedial action.

Environmental Interest/Information System:

SUPERFUND NPL
ICIS (Integrated Compliance Information System) is the Integrated Compliance Information System and provides a database that, when complete, will contain integrated Enforcement and Compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain Enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and it Headquarters. A future release of ICIS will replace the Permit Compliance System (PCS) which supports the NPDES and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities occurring in the Region that support Compliance and Enforcement programs. These include; Incident Tracking, Compliance Assistance, and Compliance Monitoring.

Substance: CARBON TETRACHLORIDE
CAS #: 56-23-5
Pathway: GROUND WATER PATHWAY
Scoring: 4

EPA ID: CAD980818512
NPL Status: Currently on the Final NPL
Substance ID: U228
Substance: TRICHLOROETHYLENE (TCE)
CAS #: 79-01-6
Pathway: GROUND WATER PATHWAY
Scoring: 2

Summary Details:

Conditions at listing September 1983): San Gabriel Valley Area 2) is a ground water plume that parallels the San Gabriel River to the west in the San Gabriel ground water basin in the Baldwin Park area of Los Angeles County, California. The plume is about 7.5 miles long and 1.5 miles wide. Ground water is contaminated with trichloroethylene TCE), perchloroethylene PCE), and carbon tetrachloride, according to analyses by State agencies and local water companies. Many public wells in the area exceed the EPA Suggested No Adverse Response Levels SNARL) for TCE and PCE. Approximately 100,000 people are affected. Cities and public water companies in the area have tested to ensure that their water supplies contain less than 5 parts per billion ppb) of TCE, a level considered safe for human consumption. When alternative methods of reducing the TCE level below 5 ppb are not effective, wells are removed from service. Status June 1984): A supplemental sampling program of contaminated wells will begin soon to get a snapshot view of the degree of contamination. The State Department of Health Services and EPA are preparing to initiate a remedial investigation/ feasibility study to determine the aerial and vertical extent of contamination and to develop alternatives for treatment and management of the problem. EPA continues its investigation to identify sources of the contamination. This site, along with the three other San Gabriel Valley sites, was added to the NPL in May 1984 because it involves a serious problem that required taking immediate remedial action.

Site Status:
EPA ID: CAD980818512
NPL Status: Final
Proposed Date: 09/08/1983
Final Date: 05/08/1984

Environmental Interest/Information System:

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Secondary Waste Type: Not reported
Design Flow: 0
Baseline Flow: 0
Reclamation: Not reported
POTW: The facility is not a POTW.
Treat To Water: Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.

Complexity: Category C - Facilities having no waste treatment systems, such as cooling water dischargers or those who must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as dairy waste ponds.

PUENTE READY MIX (Continued)

S101618904

Facility Type: Other - Does not fall into the category of Municipal/Domestic, Industrial, Agricultural or Solid Waste (Class I, II or III)

Facility Status: Active - Any facility with a continuous or seasonal discharge that is under Waste Discharge Requirements.

NPDES Number: CAS000001 The 1st 2 characters designate the state. The remaining 7 are assigned by the Regional Board

Subregion: 4

Facility Telephone: 6269680711

Facility Contact: Ron Bian

Agency Name: PUENTE READY MIX INC.

Agency Address: Not reported

Agency City,St,Zip: 0

Agency Contact: Not reported

Agency Telephone: Not reported

Agency Type: Private

SIC Code: 3273

SIC Code 2: Not reported

Primary Waste Type: Designated/Influent or Solid Wastes that pose a significant threat to water quality because of their high concentrations (E.G., BOD, Hardness, TRF, Chloride). 'Manageable' hazardous wastes (E.G., inorganic salts and heavy metals) are included in this category.

Primary Waste: STORMS

Waste Type2: Not reported

Waste2: Stormwater Runoff

Primary Waste Type: Designated/Influent or Solid Wastes that pose a significant threat to water quality because of their high concentrations (E.G., BOD, Hardness, TRF, Chloride). 'Manageable' hazardous wastes (E.G., inorganic salts and heavy metals) are included in this category.

Secondary Waste: Not reported

Secondary Waste Type: Not reported

Design Flow: 0

Baseline Flow: 0

Reclamation: No reclamation requirements associated with this facility.

POTW: The facility is not a POTW.

Treat To Water: Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.

Complexity: Category C - Facilities having no waste treatment systems, such as cooling water dischargers or those who must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as dairy waste ponds.

Citation: 23 CCR 16 2712(b)(1)(G) - California Code of Regulations, Title 23, Chapter 16, Section(s) 2712(b)(1)(G)

Violation Description: Failure to comply with one or more of the following overfill prevention equipment requirements: Alert the transfer operator when the tank is 90 percent full by restricting the flow into the tank or triggering an audible and visual alarm; or Restrict delivery of flow to the tank at least 30 minutes before the tank overfills, provided the restriction occurs when the tank is filled to no more than 95 percent of capacity; and activate an audible alarm at least five minutes before the tank overfills; or Provide positive shut-off of flow to the tank when the tank is filled to no more than 95 percent of capacity; or Provide positive shut-off of flow to the tank so that none of the fittings located on the top of the tank are exposed to product due to overfilling. Install/retrofit overfill prevention equipment that does not use flow restrictors on vent piping to meet overfill prevention equipment requirements when the overfill prevention equipment is installed, repaired, or replaced on and after October 1, - 2018. For USTs installed before October 1, 2018, perform an inspection by October 13, 2018 and every 36 months thereafter. For USTs installed on and after October- 1,- 2018, perform an inspection at installation and every 36 months thereafter. Inspected within 30 days after a repair to the overfill prevention equipment. Inspected using an applicable manufacturer guidelines, industry codes, engineering standards, or a method approved by a professional engineer. Inspected by a certified UST service technician. Maintain records of overfill prevention equipment inspection for 36 months.

Site History: The Site is a 4.74-acre property located at 15100 East Nelson Avenue in the City of Industry, California. The Site was formerly occupied by LA Signal Construction, Inc. (LA Signal) whose operations included manufacturing and installation of traffic signals between approximately 1997 until 2008. Regional Board case files indicate that LA Signal's operations involved the use of chlorinated solvents including tetrachloroethylene (PCE). The Site is located in the Puente Valley Operable Unit of the San Gabriel Valley Superfund Site.

Environmental Interest/Information System:

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

[Click this hyperlink](#) while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Environmental Interest/Information System:

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

water quality because of their high concentrations (E.G., BOD, Hardness, TRF, Chloride). 'Manageable' hazardous wastes (E.G., inorganic salts and heavy metals) are included in this category.

Secondary Waste: Not reported

Secondary Waste Type: Not reported

Design Flow: 0

Baseline Flow: 0

Reclamation: No reclamation requirements associated with this facility.

POTW: The facility is not a POTW.

Treat To Water: Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.

Complexity: Category C - Facilities having no waste treatment systems, such as cooling water dischargers or those who must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as dairy waste ponds.

Count: 3 records.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

STANDARD ENVIRONMENTAL RECORDS

Federal NPL site list

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

Federal Delisted NPL site list

Delisted NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

SEMS: Superfund Enterprise Management System

SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly known as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

Federal CERCLIS NFRAP site list

SEMS-ARCHIVE: Superfund Enterprise Management System Archive

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be potential NPL site.

Federal RCRA non-CORRACTS TSD facilities list

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

Federal RCRA generators list

RCRA-LQG: RCRA - Large Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

RCRA-SQG: RCRA - Small Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

Date of Government Version: 06/15/2020	Source: Environmental Protection Agency
Date Data Arrived at EDR: 06/22/2020	Telephone: (415) 495-8895

RCRA-VSQG: RCRA - Very Small Quantity Generators (Formerly Conditionally Exempt Small Quantity Generators)

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Very small quantity generators (VSQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

ENVIROSTOR: EnviroStor Database

The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifies sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

ADDITIONAL ENVIRONMENTAL RECORDS

Local Brownfield lists

US BROWNFIELDS: A Listing of Brownfields Sites

Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

US CDL: Clandestine Drug Labs

A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.

DEED: Deed Restriction Listing

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

Site Mitigation and Brownfields Reuse Program Facility Sites with Deed Restrictions & Hazardous Waste Management Program Facility Sites with Deed / Land Use Restriction. The DTSC Site Mitigation and Brownfields Reuse Program (SMBRP) list includes sites cleaned up under the program's oversight and generally does not include current or former hazardous waste facilities that required a hazardous waste facility permit. The list represents deed restrictions that are active. Some sites have multiple deed restrictions. The DTSC Hazardous Waste Management Program (HWMP) has developed a list of current or former hazardous waste facilities that have a recorded land use restriction at the local county recorder's office. The land use restrictions on this list were required by the DTSC HWMP as a result of the presence of hazardous substances that remain on site after the facility (or part of the facility) has been closed or cleaned up. The types of land use restriction include deed notice, deed restriction, or a land use restriction that binds current and future owners.

EPA WATCH LIST: EPA WATCH LIST

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

PRP: Potentially Responsible Parties

A listing of verified Potentially Responsible Parties

Date of Government Version: 04/27/2020	Source: EPA
Date Data Arrived at EDR: 05/06/2020	Telephone: 202-564-6023
Date Made Active in Reports: 06/09/2020	Last EDR Contact: 11/05/2020
Number of Days to Update: 34	Next Scheduled EDR Contact: 02/15/2021
	Data Release Frequency: Quarterly

PADS: PCB Activity Database System

PCB Activity Database. PADS Identifies generators, transporters, commercial storers and/or brokers and disposers of PCB's who are required to notify the EPA of such activities.

Date of Government Version: 10/09/2019	Source: EPA
Date Data Arrived at EDR: 10/11/2019	Telephone: 202-566-0500
Date Made Active in Reports: 12/20/2019	Last EDR Contact: 10/02/2020
Number of Days to Update: 70	Next Scheduled EDR Contact: 01/18/2021
	Data Release Frequency: Annually

ICIS: Integrated Compliance Information System

The Integrated Compliance Information System (ICIS) supports the information needs of the national enforcement and compliance program as well as the unique needs of the National Pollutant Discharge Elimination System (NPDES) program.

Date of Government Version: 11/18/2016	Source: Environmental Protection Agency
Date Data Arrived at EDR: 11/23/2016	Telephone: 202-564-2501
Date Made Active in Reports: 02/10/2017	Last EDR Contact: 10/01/2020
Number of Days to Update: 79	Next Scheduled EDR Contact: 01/18/2021
	Data Release Frequency: Quarterly

FTTS: FIFRA/ TSCA Tracking System - FIFRA (Federal Insecticide, Fungicide, & Rodenticide Act)/TSCA (Toxic Substances Control Act)

FTTS tracks administrative cases and pesticide enforcement actions and compliance activities related to FIFRA, TSCA and EPCRA (Emergency Planning and Community Right-to-Know Act). To maintain currency, EDR contacts the Agency on a quarterly basis.

Date of Government Version: 04/09/2009	Source: EPA/Office of Prevention, Pesticides and Toxic Substances
Date Data Arrived at EDR: 04/16/2009	Telephone: 202-566-1667
Date Made Active in Reports: 05/11/2009	Last EDR Contact: 08/18/2017
Number of Days to Update: 25	Next Scheduled EDR Contact: 12/04/2017
	Data Release Frequency: No Update Planned

FTTS INSP: FIFRA/ TSCA Tracking System - FIFRA (Federal Insecticide, Fungicide, & Rodenticide Act)/TSCA (Toxic Substances Control Act)

A listing of FIFRA/TSCA Tracking System (FTTS) inspections and enforcements.

Date of Government Version: 04/09/2009	Source: EPA
Date Data Arrived at EDR: 04/16/2009	Telephone: 202-566-1667
Date Made Active in Reports: 05/11/2009	Last EDR Contact: 08/18/2017
Number of Days to Update: 25	Next Scheduled EDR Contact: 12/04/2017
	Data Release Frequency: No Update Planned

MLTS: Material Licensing Tracking System

MLTS is maintained by the Nuclear Regulatory Commission and contains a list of approximately 8,100 sites which possess or use radioactive materials and which are subject to NRC licensing requirements. To maintain currency, EDR contacts the Agency on a quarterly basis.

Date of Government Version: 08/05/2020	Source: Nuclear Regulatory Commission
Date Data Arrived at EDR: 08/10/2020	Telephone: 301-415-7169
Date Made Active in Reports: 10/08/2020	Last EDR Contact: 10/13/2020
Number of Days to Update: 59	Next Scheduled EDR Contact: 01/31/2021
	Data Release Frequency: Quarterly

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

COAL ASH DOE: Steam-Electric Plant Operation Data

A listing of power plants that store ash in surface ponds.

Date of Government Version: 12/31/2018	Source: Department of Energy
Date Data Arrived at EDR: 12/04/2019	Telephone: 202-586-8719
Date Made Active in Reports: 01/15/2020	Last EDR Contact: 09/04/2020
Number of Days to Update: 42	Next Scheduled EDR Contact: 12/14/2020
	Data Release Frequency: Varies

COAL ASH EPA: Coal Combustion Residues Surface Impoundments List

A listing of coal combustion residues surface impoundments with high hazard potential ratings.

Date of Government Version: 01/12/2017	Source: Environmental Protection Agency
Date Data Arrived at EDR: 03/05/2019	Telephone: N/A
Date Made Active in Reports: 11/11/2019	Last EDR Contact: 08/31/2020
Number of Days to Update: 251	Next Scheduled EDR Contact: 12/14/2020
	Data Release Frequency: Varies

PCB TRANSFORMER: PCB Transformer Registration Database

The database of PCB transformer registrations that includes all PCB registration submittals.

Date of Government Version: 09/13/2019	Source: Environmental Protection Agency
Date Data Arrived at EDR: 11/06/2019	Telephone: 202-566-0517
Date Made Active in Reports: 02/10/2020	Last EDR Contact: 11/06/2021
Number of Days to Update: 96	Next Scheduled EDR Contact: 02/15/2021
	Data Release Frequency: Varies

RADINFO: Radiation Information Database

The Radiation Information Database (RADINFO) contains information about facilities that are regulated by U.S. Environmental Protection Agency (EPA) regulations for radiation and radioactivity.

Date of Government Version: 07/01/2019	Source: Environmental Protection Agency
Date Data Arrived at EDR: 07/01/2019	Telephone: 202-343-9775
Date Made Active in Reports: 09/23/2019	Last EDR Contact: 09/24/2020
Number of Days to Update: 84	Next Scheduled EDR Contact: 01/11/2021
	Data Release Frequency: Quarterly

HIST FTTS: FIFRA/TSCA Tracking System Administrative Case Listing

A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

Date of Government Version: 10/19/2006	Source: Environmental Protection Agency
Date Data Arrived at EDR: 03/01/2007	Telephone: 202-564-2501
Date Made Active in Reports: 04/10/2007	Last EDR Contact: 12/17/2007
Number of Days to Update: 40	Next Scheduled EDR Contact: 03/17/2008
	Data Release Frequency: No Update Planned

HIST FTTS INSP: FIFRA/TSCA Tracking System Inspection & Enforcement Case Listing

A complete inspection and enforcement case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

Data Release Frequency: Varies

UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

US AIRS (AFS): Aerometric Information Retrieval System Facility Subsystem (AFS)

The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

ABANDONED MINES: Abandoned Mines

An inventory of land and water impacted by past mining (primarily coal mining) is maintained by OSMRE to provide information needed to implement the Surface Mining Control and Reclamation Act of 1977 (SMCRA). The inventory contains information on the location, type, and extent of AML impacts, as well as, information on the cost associated with the reclamation of those problems. The inventory is based upon field surveys by State, Tribal, and OSMRE program officials. It is dynamic to the extent that it is modified as new problems are identified and existing problems are reclaimed.

HAZNET: Facility and Manifest Data

Facility and Manifest Data. The data is extracted from the copies of hazardous waste manifests received each year by the DTSC. The annual volume of manifests is typically 700,000 - 1,000,000 annually, representing approximately 350,000 - 500,000 shipments. Data are from the manifests submitted without correction, and therefore many contain some invalid values for data elements such as generator ID, TSD ID, waste category, and disposal method. This database begins with calendar year 1993.

WASTEWATER PITS: Oil Wastewater Pits Listing

Water officials discovered that oil producers have been dumping chemical-laden wastewater into hundreds of unlined pits that are operating without proper permits. Inspections completed by the Central Valley Regional Water Quality Control Board revealed the existence of previously unidentified waste sites. The water boards review found that more than one-third of the region's active disposal pits are operating without permission.

WDR: Waste Discharge Requirements Listing

In general, the Waste Discharge Requirements (WDRs) Program (sometimes also referred to as the "Non Chapter 15 (Non 15) Program") regulates point discharges that are exempt pursuant to Subsection 20090 of Title 27 and not subject to the Federal Water Pollution Control Act. Exemptions from Title 27 may be granted for nine categories of discharges (e.g., sewage, wastewater, etc.) that meet, and continue to meet, the preconditions listed for each specific exemption. The scope of the WDRs Program also includes the discharge of wastes classified as inert, pursuant to section 20230 of Title 27.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: EDR Proprietary Manufactured Gas Plants

The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

EDR Hist Auto: EDR Exclusive Historical Auto Stations

EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

CT MANIFEST: Hazardous Waste Manifest Data

Facility and manifest data. Manifest is a document that lists and tracks hazardous waste from the generator through transporters to a tsd facility.

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

AHA Hospitals:

UTM Y (Meters):	3766655.8
Elevation:	315 ft. above sea level

USGS TOPOGRAPHIC MAP

Target Property Map:	5619056 BALDWIN PARK, CA
Version Date:	2012

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principle investigative components:

1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).

TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General WSW

SURROUNDING TOPOGRAPHY: ELEVATION PROFILES

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

FEMA FLOOD ZONE

<u>Flood Plain Panel at Target Property</u>	<u>FEMA Source Type</u>
06037C1700F	FEMA FIRM Flood data
<u>Additional Panels in search area:</u>	<u>FEMA Source Type</u>
Not Reported	

NATIONAL WETLAND INVENTORY

<u>NWI Quad at Target Property</u>	<u>NWI Electronic Data Coverage</u>
BALDWIN PARK	YES - refer to the Overview Map and Detail Map

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Site-Specific Hydrogeological Data*:

Search Radius:	1.25 miles
Location Relative to TP:	1/2 - 1 Mile South
Site Name:	Brough Industries Inc.
Site EPA ID Number:	CAD983633710
Groundwater Flow Direction:	NOT AVAILABLE.
Measured Depth to Water:	not available.
Hydraulic Connection:	Aquifers under the site are most likely hydraulically connected.
Sole Source Aquifer:	No information about a sole source aquifer is available
Data Quality:	Information is inferred in the CERCLIS investigation report(s)

AQUIFLOW®

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

<u>MAP ID</u>	<u>LOCATION FROM TP</u>	<u>GENERAL DIRECTION GROUNDWATER FLOW</u>
Not Reported		

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

ROCK STRATIGRAPHIC UNIT

Era:	Cenozoic
System:	Quaternary
Series:	Quaternary
Code:	Q (decoded above as Era, System & Series)

GEOLOGIC AGE IDENTIFICATION

Category: Stratified Sequence

Geologic Age and Rock Stratigraphic Unit Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - a digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps. The following information is based on Soil Conservation Service STATSGO data.

Soil Component Name: URBAN LAND

Soil Surface Texture: variable

Hydrologic Group: Not reported

Soil Drainage Class: Not reported

Hydric Status: Soil does not meet the requirements for a hydric soil.

Corrosion Potential - Uncoated Steel: Not Reported

Depth to Bedrock Min: > 10 inches

Depth to Bedrock Max: > 10 inches

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

Soil Layer Information							
Layer	Boundary		Soil Texture Class	Classification		Permeability Rate (in/hr)	Soil Reaction (pH)
	Upper	Lower		AASHTO Group	Unified Soil		
1	0 inches	6 inches	variable	Not reported	Not reported	Max: 0.00 Min: 0.00	Max: 0.00 Min: 0.00

OTHER SOIL TYPES IN AREA

Based on Soil Conservation Service STATSGO data, the following additional subordinant soil types may appear within the general area of target property.

Soil Surface Textures: loam
clay
silt loam
loamy sand
sandy loam
fine sand
clay loam
gravelly - sandy loam
coarse sand
gravelly - sand
sand

Surficial Soil Types: loam
clay
silt loam
loamy sand
sandy loam
fine sand
clay loam
gravelly - sandy loam
coarse sand
gravelly - sand
sand

Shallow Soil Types: fine sandy loam
gravelly - loam
sand
silty clay

Deeper Soil Types: stratified
clay loam
silty clay loam
gravelly - sandy loam
coarse sand
sand
weathered bedrock
very fine sandy loam

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

LOCAL / REGIONAL WATER AGENCY RECORDS

EDR Local/Regional Water Agency records provide water well information to assist the environmental professional in assessing sources that may impact ground water flow direction, and in forming an opinion about the impact of contaminant migration on nearby drinking water wells.

PHYSICAL SETTING SOURCE RECORDS SEARCHED

TOPOGRAPHIC INFORMATION

USGS 7.5' Digital Elevation Model (DEM)

Source: United States Geologic Survey

EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5 minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

Current USGS 7.5 Minute Topographic Map

Source: U.S. Geological Survey

HYDROLOGIC INFORMATION

Flood Zone Data: This data was obtained from the Federal Emergency Management Agency (FEMA). It depicts 100-year and 500-year flood zones as defined by FEMA. It includes the National Flood Hazard Layer (NFHL) which incorporates Flood Insurance Rate Map (FIRM) data and Q3 data from FEMA in areas not covered by NFHL.

Source: FEMA

Telephone: 877-336-2627

Date of Government Version: 2003, 2015

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002, 2005 and 2010 from the U.S. Fish and Wildlife Service.

State Wetlands Data: Wetland Inventory

Source: Department of Fish and Wildlife

Telephone: 916-445-0411

HYDROGEOLOGIC INFORMATION

AQUIFLOW^R Information System

Source: EDR proprietary database of groundwater flow information

EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

GEOLOGIC INFORMATION

Geologic Age and Rock Stratigraphic Unit

Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - A digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

STATSGO: State Soil Geographic Database

Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)

The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database

Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)

Telephone: 800-672-5559

SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Service, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

PHYSICAL SETTING SOURCE RECORDS SEARCHED

LOCAL / REGIONAL WATER AGENCY RECORDS

FEDERAL WATER WELLS

PWS: Public Water Systems

Source: EPA/Office of Drinking Water

Telephone: 202-564-3750

Public Water System data from the Federal Reporting Data System. A PWS is any water system which provides water to at least 25 people for at least 60 days annually. PWSs provide water from wells, rivers and other sources.

PWS ENF: Public Water Systems Violation and Enforcement Data

Source: EPA/Office of Drinking Water

Telephone: 202-564-3750

Violation and Enforcement data for Public Water Systems from the Safe Drinking Water Information System (SDWIS) after August 1995. Prior to August 1995, the data came from the Federal Reporting Data System (FRDS).

USGS Water Wells: USGS National Water Inventory System (NWIS)

This database contains descriptive information on sites where the USGS collects or has collected data on surface water and/or groundwater. The groundwater data includes information on wells, springs, and other sources of groundwater.

OTHER STATE DATABASE INFORMATION

Groundwater Ambient Monitoring & Assessment Program

State Water Resources Control Board

Telephone: 916-341-5577

The GAMA Program is California's comprehensive groundwater quality monitoring program. GAMA collects data by testing the untreated, raw water in different types of wells for naturally-occurring and man-made chemicals. The GAMA data includes Domestic, Monitoring and Municipal well types from the following sources, Department of Water Resources, Department of Health Services, EDF, Agricultural Lands, Lawrence Livermore National Laboratory, Department of Pesticide Regulation, United States Geological Survey, Groundwater Ambient Monitoring and Assessment Program and Local Groundwater Projects.

Water Well Database

Source: Department of Water Resources

Telephone: 916-651-9648

California Drinking Water Quality Database

Source: Department of Public Health

Telephone: 916-324-2319

The database includes all drinking water compliance and special studies monitoring for the state of California since 1984. It consists of over 3,200,000 individual analyses along with well and water system information.

California Oil and Gas Well Locations

Source: Dept of Conservation, Geologic Energy Management Division

Telephone: 916-323-1779

Oil and Gas well locations in the state.

California Earthquake Fault Lines

Source: California Division of Mines and Geology

The fault lines displayed on EDR's Topographic map are digitized quaternary fault lines prepared in 1975 by the United States Geological Survey. Additional information (also from 1975) regarding activity at specific fault lines comes from California's Preliminary Fault Activity Map prepared by the California Division of Mines and Geology.

RADON

State Database: CA Radon

Environmental Data Resources, Inc. (EDR) Aerial Photo Decade Package is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's professional researchers provide digitally reproduced historical aerial photographs, and when available, provide one photo per decade.

EXECUTIVE SUMMARY

DESCRIPTION

Environmental Data Resources, Inc.'s (EDR) City Directory Report is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's City Directory Report includes a search of available city directory data at 5 year intervals.

RECORD SOURCES

EDR's Digital Archive combines historical directory listings from sources such as Cole Information and Dun & Bradstreet. These standard sources of property information complement and enhance each other to provide a more comprehensive report.

EDR is licensed to reproduce certain City Directory works by the copyright holders of those works. The purchaser of this EDR City Directory Report may include it in report(s) delivered to a customer. Reproduction of City Directories without permission of the publisher or licensed vendor may be a violation of copyright.

EDR Topographic Map Library has been searched by EDR and maps covering the target property location as provided by EFI Global Inc. were identified for the years listed below. EDR's Historical Topo Map Report is designed to assist professionals in evaluating potential liability on a target property resulting from past activities. EDR's Historical Topo Map Report includes a search of a collection of public and private color historical topographic maps, dating back to the late 1800s.

The Sanborn Library has been searched by EDR and maps covering the target property location as provided by EFI Global Inc. were identified for the years listed below. The Sanborn Library is the largest, most complete collection of fire insurance maps. The collection includes maps from Sanborn, Bromley, Perris & Browne, Hopkins, Barlow, and others. Only Environmental Data Resources Inc. (EDR) is authorized to grant rights for commercial reproduction of maps by the Sanborn Library LLC, the copyright holder for the collection. Results can be authenticated by visiting www.edrnet.com/sanborn.

The Sanborn Library is continually enhanced with newly identified map archives. This report accesses all maps in the collection as of the day this report was generated.

Certified Sanborn Results:

Certification # CA6D-4EAA-B0B8

PO # NA

Project 045.05245

UNMAPED PROPERTY

This report certifies that the complete holdings of the Sanborn Library, LLC collection have been searched based on client supplied target property information, and fire insurance maps covering the target property were not found.

Sanborn® Library search results

Certification #: CA6D-4EAA-B0B8

The Sanborn Library includes more than 1.2 million fire insurance maps from Sanborn, Bromley, Perris & Browne, Hopkins, Barlow and others which track historical property usage in approximately 12,000 American cities and towns. Collections searched:

- ☒ Library of Congress
- ☒ University Publications of America

Public Records Request Number: PR3-111920-07
Location: 635 North California Ave., La Puente, CA 91744

Dear Ms. Corletto:

On November 19, 2020 the Department of Toxic Substances Control (DTSC) received your email of the same date requesting records under the Public Records Act. After a thorough review of our files, no site records were found pertaining to the site/facility referenced above.

DTSC's Hazardous Waste Tracking System (HWTS) may have records that pertain to this request. This unit tracks toxic waste generators, transporters (manifests), and disposal facilities. If you are interested in this type of information, it can be identified by accessing the HWTS database at http://hwts.dtsc.ca.gov/report_search.cfm?id=5. If you are interested in retrieving detailed reports, additional charges may apply. Please contact the HWTS unit by email at hwtsreports@dtsc.ca.gov or by phone at (800) 618-6942 for further information. For copies of manifests, please send an email to mcr@dtsc.ca.gov.

DTSC's E-Waste unit may also have records that pertain to this request. "E-Waste" refers to any unwanted [electronic device](#) or Cathode Ray Tube (CRT) and is classified as universal waste. E-Waste frequently contains [hazardous materials](#), predominantly lead and mercury, and is produced by households, businesses, governments, and industries. I have forwarded your Public Records Act request to that unit for further processing. Please contact them by email at electronicwaste@dtsc.ca.gov if you are interested in this information.

Many of our records are available on EnviroStor, an online database that provides non-confidential, public access to DTSC's data management system. It tracks our cleanup, permitting, enforcement, and investigation efforts at hazardous waste facilities and sites with known or suspected contamination issues. EnviroStor is available 24/7, 365 days a year. The data reflects the latest updates as they are entered in the system. Access it from your computer or smartphone, the local library – anywhere Internet access is available. Just go to www.envirostor.dtsc.ca.gov. You'll find a step-by-step tour of EnviroStor under the "How to Use EnviroStor" menu on the website.

If you have any questions or would like further information regarding your request, please contact me at 818-717-6521 or via email at ChatsworthFileRoom@dtsc.ca.gov.

Sincerely,

Robert Hardison

The Department of Toxics Substances Control (DTSC) takes every precaution to ensure the accuracy of data in the Hazardous Waste Tracking System (HWTS). However, because of the large number of manifests handled, inaccuracies in the submitted data, limitations of the manifest system and the technical limitations of the database, DTSC cannot guarantee that the data accurately reflect what was actually transported or produced.

Subject: Public Records Request
Attachments: LACSD Form.pdf

Hello,

This firm is requesting a review of all current and historical files/reports for the address in the attached form.

Please feel free to contact me with any questions or concerns at 310-854-6300. Thank you for your assistance with this information.

Best regards,

Susana Corletto | Project Manager
EFI Global, Inc.
Los Angeles, CA
CELL 310.425.6087
CSLB License #: 885902
www.efiglobal.com | Caring counts®

Covid-19 Note: EFI Global is fully operational and committed to providing essential services during the COVID-19 outbreak as established by applicable guidelines and supporting critical properties related to healthcare, education, defense, hospitality, and telecom industries, as well as private industry, and the property insurance and real estate finance marketplaces. Many of our professional team are working from home offices and are equipped to manage requests for new assignments and to provide comprehensive on-site services. Our national industrial hygiene division continues to develop best practices and site-specific disinfection protocols for clients with direct physical property impacted from Covid-19. *If you have any needs, please email me or assignaproject@efiglobal.com.*

PUBLIC RECORDS REQUEST FORM

ATTENTION REQUESTOR: To fulfill your request for records, please fill out this form completely, and identify specifically the type of records you are requesting. Requests must reasonably describe identifiable records prepared, owned, used, or retained by the Sanitation Districts.

REQUESTOR INFORMATION

Name: Susana Corletto	Date: 11/19/2020
Company: EFI Global, Inc.	
Mailing Address: 5261 West Imperial Highway	
City: Los Angeles	State: CA Zip Code: 90045
Phone Number: 310-854-6300	Fax Number (optional): 310-854-0199
Email Address (recommended): susana.corletto@efiglobal.com	

REQUESTED RECORDS

*Please clearly describe each requested record or document
(use additional copies of this form, as necessary)**

In preparation for a Phase I Environmental Site Assessment this firm is requesting all files/records pertaining to below address: 635 North California Avenue, La Puente, California 91744 APN: 8212-011-901 We are requesting all records pertaining to industrial wastewater discharge, clarifiers, and storm water/waste water.		
Time Period of Document Requested	From: Earliest	To: Present

Time Period of Document Requested	From:	To:

Time Period of Document Requested	From:	To:

** Requests that are not specific and focused will be returned for more information. If requested, the Sanitation Districts will assist you in making focused and effective requests for identifiable records. The Sanitation Districts will not create new documents or records in response to a request.*

Note: Please use the above button for attaching additional documents that will help define your public records request.

INSTRUCTIONS FOR REQUESTING RECORDS

(California Public Records Act, Govt. Code Sections 6250-6276.48)

1. In order to expedite your request, please fill out the form completely. Requests may also be submitted by phone at (909) 396-3700, by facsimile to (909) 396-3330, or by email to PublicRecordsRequests@aqmd.gov.

2. Requests must be for records prepared, owned, used, or retained by the District (Gov. Code Sec. 6252(e)). Requests should be for clearly identifiable records. The District is not required to create a new record in response to a request. The District will assist the requestor in making a request that describes reasonably identifiable records (Gov. Code Sec. 6253.1). Documents will not be provided if disclosure would infringe upon a copyright, trade secret, or is otherwise exempt in accordance with state law.

3. A search for facility records can only be conducted by one or all of the following:

- a) Facility Name, Address, or Identification Number
- b) Facility Application Number, or Permit to Operate Number; or
- c) Facility Notice of Violation/Notice to Comply Number.

4. You will be notified within ten (10) days whether your request seeks copies of disclosable public records prepared, owned, used, or retained by this agency. In some cases, the District may need an additional 14 days to respond. If so, you will be notified in writing. You will also be provided an estimated date of when the records will be made available.

5. Communications regarding your request, and any records, will be provided by email, unless specified otherwise.

6. If the search for records finds the records voluminous, you will be notified of the approximate number of pages and/or length of time it will take to process your request.

7. If the records you requested have been marked confidential by the source of the record, you will be notified and given the option of continuing with the District's Trade Secret process.

8. If your request is to review records, rather than receive copies, the District will notify you once the records are gathered, and arrangements will be made for your review.

9. The charge for the direct cost of duplication is as follows: Paper Copies, \$0.15/page each over 10 pages (first 10 pages are free); Copied CD's or flash drives, no charge; and Copied Audio Tapes, \$5.00 each. After a preliminary estimate, advance payment may be required.

10. If the request is for information in an electronic format, the requestor shall bear the cost of producing a copy of the record, including the cost to construct the record and the cost of programming and computer services necessary to produce a copy of the record, when either of the following applies: (1) the District would be required to produce a copy of an electronic record and the record is one that is produced only at otherwise regularly scheduled intervals, or (2) the request would require data compilation, extraction, or programming to produce the record. (Gov. Code Sec. 6253.9(b)). The transfer of gathered electronic records onto CD, DVD or flash drive typically costs \$10.00 each. An invoice will accompany your records when completed.

Note: For further information, please refer to the District's Guidelines for Implementing the California Public Records Act. The Guidelines are available in the lobby of the District Headquarters or on the District's web site at www.aqmd.gov.

Note: If you have questions pertaining to the submittal of a Public Records Act request, you may contact the Public Records Unit, (909) 396-3700, Tuesday through Friday, 7:00 a.m. to 5:30 p.m. Our Fax number is (909) 396-3330. Our email address is PublicRecordsRequests@aqmd.gov.

RE: PRA of November 19, 2020, Reference # H030963-111920.

Dear ,

The Los Angeles County Fire Department, Health Hazardous Materials Division, being the custodian or keeper of records, certify that a thorough search for the records you requested has been carried out.

**Re: 635 N CALIFORNIA AVE
La Puente CA 91744**

The search revealed that your noted address did not match our database.

It should be understood that this does not mean that the records you requested do not exist. It is possible that such records may be misfiled; exist under another spelling, another name, or may have been destroyed based on this Department's Record Retention Policy. However, with the information furnished to our office, and to the best of our knowledge, no records were located.

WSPSD	West Side Performing Settling Defendants

Summary:

As in previous years, the San Gabriel Basin Water Quality Authority (“WQA”) is revising its San Gabriel Basin Groundwater Quality Management and Remediation Plan (“§406 Plan”). The §406 Plan, which is required by this agency’s enabling act (“WQA Act”), Statutes 1992, Chapter 776 (West’s California Water Code Appendix, §134-101 et seq.), as amended by Chapter 370 of the Statutes of 2019, promotes improvement of groundwater quality in the San Gabriel Basin (“Basin”) by setting forth: (1) a general process under which this plan shall be developed and implemented; (2) remedial goals; and (3) a restatement of existing regulatory authority governing cleanup within the Basin in addition to requirements of the United States Environmental Protection Agency (“USEPA”). Additionally, elements of the §406 Plan fit into a framework of overarching remedial principals and sets forth specific projects proposed to be facilitated by the WQA or by others within the Basin.

Date:

This §406 Plan is effective March 18, 2020.

Address:

Supporting materials are available for viewing at WQA offices, located at 1720 W. Cameron Avenue, Suite 100, West Covina, CA 91790. WQA offices are open from 8:00 a.m. to 5:00 p.m., Monday through Friday, excluding recognized holidays. It is recommended that an appointment be made to review these materials by calling (626) 338-5555.

General Information:

For general information, WQA may be contacted at (626) 338-5555 between the hours of 8:00 a.m. to 5:00 p.m., Monday through Friday, excluding recognized holidays. Various materials may also be viewed at www.wqa.com.

I. Legal Authority

This §406 Plan is developed and adopted under the authority of the WQA Act. §406 of the WQA Act requires the WQA to “develop and adopt a basinwide groundwater quality management and remediation plan” that is consistent with the USEPA’s National Contingency Plan (“NCP”) and applicable Records of Decision (“ROD”), and all requirements of the Los Angeles Regional Water Quality Control Board (“LARWQCB”). According to the WQA Act, the §406 Plan must include:

- 1) Characterization of Basin contamination;
- 2) A comprehensive cleanup plan;
- 3) Strategies for financing the design, construction, operation and maintenance of groundwater cleanup facilities;
- 4) Provision for a public information and involvement program; and
- 5) Coordination of activities with federal, state, and local entities.

Furthermore, §406 requires WQA to, on an annual basis, incorporate a status report on activities undertaken by the WQA pursuant to the §406 Plan. The status report must also include:

- 1) An overview of groundwater contamination in the San Gabriel Basin;
- 2) Goals for the basin groundwater;
- 3) Coordination with other agencies;
- 4) Public outreach and information;
- 5) Funding from potentially responsible parties and other sources;
- 6) Status of non-operable unit specific plans;
- 7) For each operable unit:
 - a. Treatment and remediation plans;
 - b. Description of contamination plan;
 - c. Costs incurred ;
 - d. Beneficial uses of recovered water; and

- e. Projected activities for the next reporting period.
- 8) A description of the manner in which projects are prioritized and selected for funding and the manner in which contractors are selected, including identification of projects in disadvantaged communities and those which further human right to water; and
- 9) Criteria used to quantitatively evaluate projects for effectiveness.

In support of the §406 Plan, the WQA shall adopt an annual fiscal year budget (July 1 through June 30) which shall include all projects (actual or planned) that WQA is facilitating through its participation during that time period. The budget shall identify various funding sources and combinations thereof to ensure that full funding for each project (capital and/or O&M) can be achieved.

II. Policy Statement for Year 2020

The WQA general policy statement is the foundation of the §406 Plan. Therefore, the first steps in revising the §406 Plan are to review the past year's activities and to identify successes as well as challenges and obstacles that may have delayed or hindered cleanup progress. Using that information as a basis, WQA can apply current conditions and determine WQA's direction for the coming year.

WQA continues to engage and participate with regulatory agencies USEPA, State Water Resources Control Board – Division of Drinking Water (“DDW”), Los Angeles County Flood Control District (“LACFCD”), LARWQCB and the Department of Toxic Substances Control (“DTSC”) to facilitate solutions in many areas of the Basin. For example, a long-standing impediment to groundwater cleanup was removed recently as WQA was successful in its efforts to secure a general temporary discharge permit to facilitate the construction and testing of new extraction wells and treatment facilities in the Basin. The approval of the permit was the culmination of years of cooperative discussions with these agencies and served as a demonstration of an effective policy that should continue.

Additionally the LARWQCB approved a new MS4 permit that provides greater flexibility for city permittees to meet their obligations. The new permit could also benefit

water purveyors with treatment facilities that require temporary discharges and WQA will continue to facilitate long-term solutions in this area.

POLICY STATEMENT 2020

The WQA was created and authorized by the State Legislature to address the critical need for coordinated and accelerated groundwater cleanup programs in the Basin.

The WQA is committed: 1) to protecting public health and safety; 2) to prioritizing, facilitating, and coordinating groundwater cleanup/supply programs with local water providers, DDW, LARWQCB, LACFCD, DTSC and USEPA; and 3) to minimizing local financial and economic impacts, including impacts on local groundwater consumers.

The WQA recognizes that groundwater contamination issues in the Basin are complex and that the USEPA Superfund response alone may not adequately address the environmental, regulatory and financial issues that affect the one million residents and the many thousands of businesses who rely primarily on the Basin for potable water.

In addition, the WQA recognizes the critical nature of developing strategies that ensure the Basin's long-term reliability while reducing our reliance on imported water and enhancing the Basin's potential to meet regional strategic groundwater storage demands.

In order to effectively coordinate the local water supply needs with cleanup, containment, reliability and storage goals, the WQA will promote and participate in technical, financial and regional partnerships, including partnerships with responsible parties, wherever possible. Where partnerships with responsible parties cannot be voluntarily formed, WQA will seek ways to move forward and implement the necessary groundwater cleanup projects and will consider all options to require financial participation from those responsible for the contamination.

Recent court cases and severe drought have contributed to a significant reduction of replenishment water available from MWD. Due to the fragility of the Delta water system, the WQA should continue to promote the Basin as a strategic regional groundwater storage solution for supply reliability and the vital role it could play if all imported supplies were suspended to the region by either a natural disaster or institutional decisions. When viewed from this perspective, the Basin's viability as part

of the region-wide strategic water supply plan rests on the ability to move cleanup forward and assure its completion.

The WQA will continue to pro-actively address the growing problems of emerging chemicals (“EC”), such as 1,4-Dioxane, 1,2,3-Trichloropropane (“TCP”) and Chromium VI (“CrVI”) and the impact they have on the overall cleanup goals of the WQA.

In 2015, the Office of Environmental Health Hazard Assessment (“OEHHA”) lowered the Public Health Goal for perchlorate to 1 ppb, and in 2017 DDW began the process of re-evaluating the current 6 ppb MCL for perchlorate by studying the feasibility of lowering the laboratory reporting limit for perchlorate to 1 ppb. Should DDW ultimately decide to lower the MCL as well additional perchlorate treatment will be required in the Basin. While the USEPA has announced that they will establish a federal MCL their process is not expected to be completed prior to DDW’s process. USEPA would most likely target an MCL close to the 1 ppb that was suggested by their draft risk assessment released in 2002.

On July 1, 2014 an MCL of 10 ppb for CrVI became effective as the only CrVI drinking water standard in the country. In 2015, SB385 was passed by the legislature to establish compliance timeframes and assist water purveyors to come into compliance with the new regulation. However, in May 2017 the Superior Court of Sacramento County invalidated the MCL noting that the “state failed to properly consider the economic feasibility of complying with the MCL.” As a result, DDW has embarked on creating a new CrVI regulation that is expected to take between 18 and 24 months to complete.

On December 14, 2017 an MCL of 5 ppt for 1,2,3-TCP became effective. A Notification Level of 5 ppt existed previously and several wells in the Basin already have treatment in place for this contaminant.

WQA will continue to coordinate activities while reviewing the potential impact of these regulatory standards on current and planned treatment projects throughout the Basin.

The WQA will continue to address orphan sites such as the shallow 1,4-Dioxane plume in the SEMOU. WQA operates and maintains the Whitmore Street Groundwater Remediation Facility to contain the 1,4-Dioxane contamination that threatens to further degrade downgradient water supply wells and increase the cost of cleanup to residents.

The WQA will continue to coordinate with regulatory agencies to implement long-term funding solutions.

While cleanup costs have grown, so have requests and competition for federal and state funding (primarily due to nationwide perchlorate problems). At the same time, local groundwater providers continue to face growing ambiguity and sometimes conflicting federal and state requirements. WQA will continue to assist water entities access state and federal funding.

The Policy Statement will become effective with the adoption of this document and will remain in effect until institutional, environmental or other changes necessitate a revision of the Policy Statement.

III. Background Information

A. OVERVIEW OF THE GROUNDWATER CONTAMINATION

The San Gabriel Valley's groundwater Basin has the dubious distinction of being one of the most contaminated in the nation. The Basin's groundwater is contaminated from the ground disposal—dating back to World War II— of volatile organic compounds used primarily as solvents in industrial and commercial activities.

The seriousness of the groundwater contamination problem became evident when high concentrations of volatile organic compounds ("VOCs") were discovered in Azusa in 1979 near a major industrial complex. Over the next four years, further investigation revealed widespread VOC contamination significantly impacting the Basin. This discovery led USEPA to place four portions of the Basin on the National Priorities List ("NPL") under authority of Comprehensive Environmental Response, Compensation, and Liability Act of 1980 ("CERCLA"), also known as the Superfund program. These areas are referred to as Operable Units ("OUs") under CERCLA. Currently, there are six active OUs: Baldwin Park, El Monte, South El Monte, Puente Valley, Area 3 and Whittier Narrows.

Unfortunately, in 1997, newly detected contaminants, perchlorate and N-Nitrosodimethylamine ("NDMA") liquid/solid rocket fuel, complicated and delayed progress of cleanup activities. Most notably affected was the Baldwin Park Operable

Unit (“BPOU”) which has the largest geographical area in the San Gabriel Valley. This led USEPA, state and local agencies to conduct further investigation of the sources and treatment technologies available for remediating groundwater for potable use.

In prior years, several VOC treatment/supply projects were expanded at significant costs to treat perchlorate and other emerging compounds. More recently, many of these multiple treatment train projects were further burdened with increased levels of VOCs. As a result, additional VOC treatment, also known as a secondary barrier, was needed to meet DDW permitting requirements under their Technical Memorandum 97-005. While the additional treatment is necessary, each step has incrementally increased the costs of capital construction and operations and maintenance resulting in an overall project cost 4 to 5 times the original VOC treatment/supply project.

Beginning in the mid-2000’s Basin cleanup became impacted in terms of delayed construction and increased costs by the growing concern for the surface water quality in southern California. As environment groups filed subsequent lawsuits against the LACFCD, the County in turn withdrew treatment facility access to many of its flood control channels by the water purveyors. The channels are used temporarily during start-up and testing procedures of treatment facilities.

While some significant projects remain, the overall cleanup focus in the Basin is shifting from one of capital construction to one of treatment and remediation. However, even in the Treatment & Remediation phase projects may still require capital improvements dictated by new technology and new regulations. With cleanup projects spanning multiple decades it makes sense in a lot of situations to install newer technology when cost estimates can demonstrate a significant cost-savings over the life of the project. A similar capital expense may be necessary when new regulations, such as the establishment of a new MCL for an existing contaminant or the discovery and regulation of a new contaminant, make it necessary to add treatment equipment to the existing facilities.

B. OVERVIEW OF WQA AUTHORITY

The WQA was formed by special act of the California Legislature (Senate Bill 1679, Russell). The WQA Act gives WQA authority, *inter alia*, to plan for and to coordinate among several agencies with authority affecting cleanup of the Basin. §406 of the WQA Act requires WQA to develop and adopt a basinwide groundwater quality management and remediation plan. §406 further requires the plan to provide for: (1) a characterization of the Basin's contamination; (2) the development and implementation of a comprehensive Basin cleanup plan; (3) the financing of the design, construction, operation, and maintenance of groundwater cleanup facilities; (4) provisions for a public information and participation program; (5) the coordination with federal, state and local entities, including WQA member agencies; and (6) the maintaining of consistency with the NCP, any applicable USEPA RODs, all LARWQCB requirements, and all applicable cleanup agreements with federal, state and local agencies. The §406 Plan has to be developed with an eye toward the statutory requirement that "the basinwide plan shall consider the benefits to be achieved by the plan or any proposed project in relation to its economic impact on persons or entities within the boundaries of the authority."

C. HISTORY OF WQA PLANNING

As required by §406, WQA first adopted the §406 Plan in June of 1993. This plan identified a mission and eight goals and served as the guiding principles over the next six years of early action projects to remove and contain contamination (well ahead of the Superfund-mandated process) and to characterize the extent and movement of contamination.

Once the data, necessary to design and construct projects on a regional basis, was available, including information on the extent and movement of groundwater contamination, the WQA officially adopted the first amended §406 Plan on March 6, 2000. Since that time, the WQA, using the §406 Plan as its implementation guide, facilitated the design and/or construction of several treatment facilities described within the §406 Plan. A listing of WQA's major activities and milestones can be found in Table 1.

As in previous years, the WQA will continue to assist USEPA with its response efforts by engaging the authority of other agencies. Section 102(b) of the WQA Act declares legislative intent directing the WQA to coordinate among state and federal government agencies to plan and implement groundwater cleanup. The Remedial Standards (Section V.B) established by the §406 Plan (as required by Section 406 of the WQA Act) incorporate rules, regulations and standards previously adopted by other agencies of the State of California. The Remedial Standards harmonize and coordinate the requirements of the Main San Gabriel Basin Watermaster ("MSGBW"), the SWRCB, the LARWQCB, and the DDW. One purpose of the Remedial Standards is to help integrate groundwater cleanup objectives with water supply objectives, according to the legislative intent directive set forth in Section 102(a) of the WQA Act.

The USEPA has recognized some of these Remedial Standards as applicable or relevant and appropriate requirements ("ARARs"). Federal Superfund Law requires parties responsible for pollution to comply with ARARs in the process of carrying out federal cleanup orders. ARARs include any State standard that is (1) more stringent than any Federal requirement, (2) validly promulgated, (3) either "applicable" or "relevant and appropriate" and has been identified by the State to the USEPA. Due in part to the efforts of the WQA, the USEPA's Unilateral Administrative Order (No. 2003-17) for remedial design and remedial action in the SEMOU of the San Gabriel Valley Superfund Sites, issued on August 28, 2003, (1) encourages the parties identified as responsible for the pollution to integrate their cleanup obligations with water supply projects that exist or are under development and (2) directs compliance with ARARs, such as meeting water quality standards for potable water service established by DDW and/or for discharge of the product water established by the LARWQCB.

IV. Goals of the WQA §406 Plan

Originally, WQA's goals were developed as a result of discussions with federal, state and local agencies, various stakeholders, and comments heard at public workshops and hearings. Each year, the goals are re-evaluated to determine applicability and whether any additional goals should be added. While these goals have

remained unchanged, WQA has expanded the descriptions under the four goals to further validate WQA's focus. The four goals are:

- Accelerate Removal of Contaminant Mass in the Basin;
- Prevent Migration of Contamination into Critical Groundwater Supplies;
- Integrate Cleanup with Water Supply; and
- Minimize Economic Impact to the Public.

In the following sections, each of the four goals are described in more detail.

A. ACCELERATE REMOVAL OF CONTAMINANT MASS IN THE BASIN

In recent years, it has become increasingly apparent that cleanup actions, implemented earlier than CERCLA provides, are needed to address the immediate threats to the local water supplies. The goal of accelerating the removal of contaminant mass is fulfilled primarily by engaging the regulatory processes of other agencies of the State, and, wherever possible, prompting the implementation of activities ahead of the time required under the applicable regulatory process.

In the past, the WQA identified and focused its accelerated removal activities on projects that could immediately be implemented to remove contaminant mass. In more recent years, the focus has changed due to the ever-growing list of impacted water supply wells. This widespread impact has necessitated the early implementation of several treatment facilities by water purveyors, individually and jointly with the WQA and/or other agencies well ahead of the mandate from regulatory agencies.

With the rapid migration of contamination towards critical water supplies, the WQA now primarily focuses on projects that will accelerate and advance cleanup activities while providing a clean water supply or protecting a nearby water source.

More of these types of early actions are necessary to either (1) remove contaminant mass to immediately prevent further degradation of downgradient aquifers, (2) contain the spread of contamination to protect critical water supplies, (3) restore critical water supplies, or (4) combine the aforementioned.

Although early actions are implemented before a regulatory mandate, there has and will continue to be extensive coordination with USEPA, DTSC, DDW and the LARWQCB to link the early action to the eventual mandate. By working closely with USEPA, the WQA and other local stakeholders can affect USEPA's decision-making and identify certain high priority cleanup projects that are consistent with USEPA's objectives. Although USEPA cannot formally endorse and mandate cleanup until a rigorous process is completed, WQA can facilitate and assist in the implementation of the required action well before the mandate. Several crisis situations exist within the Basin that demand this type of immediate action as described in Appendix A. Waiting on mandated actions have already had severe impacts in many parts of the Basin.

B. PREVENT MIGRATION OF CONTAMINATION INTO CRITICAL GROUNDWATER SUPPLIES

In many parts of the Basin, the contamination continues to spread towards, and threaten groundwater supply wells. Given that so many supply wells have already been shut down, the current situation continues to represent a significant threat to the Basin's water supply. Therefore, priority must be given to implementing cleanup projects that will prevent the loss of water supplies. In order to meet this goal, contaminant migration controls must be implemented quickly so that constituents will be prevented from entering clean supplies. Further, this action must also prevent constituents from entering supplies with existing treatment not built or suited to treat the threatening contaminant(s). The goal to contain the contamination is supported with actions that specifically address threats to groundwater pumping centers. Loss of major production centers will continue to impair the water supply unless these types of threats are immediately addressed in a cleanup plan. In furtherance of this goal WQA has allocated funding to assist purveyors in discrete well destruction activities to ensure that non-producing wells do not act as a conduit for contaminant migration

The MSGBW has existing rules and regulations which govern the location and production of water wells for water quality purposes. The WQA under this §406 Plan will work with the MSGBW and its existing rules and regulations to help contain and control the migration of contaminants within the Basin.

C. INTEGRATE CLEANUP WITH WATER SUPPLY

With so much of the state and local water supply impaired, it is essential that water treated from the cleanup projects be put to its highest and best use. Putting the treated water back into the supply system will serve to enhance the overall water supply situation in the Basin and help many water purveyors mitigate the threat to their water supply. The desired objectives can be achieved by maximizing the use of existing facilities that have either been shut down or have been impaired. When new facilities are needed, these should be integrated into the supply of the appropriate water purveyor.

If cleanup facilities are built without the consideration of the local supply, then many water purveyors will be forced to build redundant treatment facilities on impaired wells or import increasingly scarce surface supplies from other areas. Currently, water purveyors only use treated surface water sources when they are readily available or when groundwater sources become impaired or unavailable; otherwise the predominant source of supply is from the local groundwater.

Although cleanup projects that put treated water to beneficial use will provide localized benefits, there are, of course, broad benefits that impact the regional water supply situation in California. The necessity to develop new sources and to fully utilize existing sources is very evident in court decisions within the State and the Colorado River Watershed. For example, the 2003 Quantification Settlement Agreement (“QSA”) between the United States Department of the Interior and Southern California Colorado River users restricts the State’s withdrawal of Colorado River water to its original allotment of 4.4 million acre-ft per year in non-surplus years. In addition, the dependability of the State Water Project (“SWP”) is decreasing as a result of a lack of storage facilities. Furthermore, in 2007, United States District Court Judge Oliver Wanger ordered that the California Department of Water Resources and the United

States Bureau of Reclamation (“USBR”) must reduce pumping from the Sacramento Delta in order enhance the Delta Smelt population. This decision and his subsequent decisions have the effect of significantly reducing SWP availability. Now more than ever, it is critical to protect and develop the groundwater resources so that both groundwater and surface waters of the State can be managed more effectively. Critical to this statewide need is the full utilization and restoration of the Basin groundwater.

The Los Angeles County Superior Court has Constitutional authority, through its continuing jurisdiction under the Judgment in the case of *Upper San Gabriel Valley Municipal Water District v. City of Alhambra*, LACSC 924128, to promote the beneficial use of water and to prevent the waste of water in the Basin. Through the Court’s continuing jurisdiction under the Judgment, the MSGBW has adopted rules and regulations governing the location and production of water wells for water quality purposes. The LARWQCB has Constitutional, statutory and regulatory authority to regulate discharges to waters of the State, to promote the beneficial use of water, and to prevent the waste of water. DDW has statutory and regulatory authority to set and enforce standards for public drinking water systems, including acceptable water treatment processes. The WQA intends to engage the existing rules, regulations and standards of these agencies of the State to coordinate and promote the reasonable and beneficial use of water produced and treated under mandate from the USEPA. The WQA recognizes that a number of voluntary or consensual arrangements ultimately will be required to implement the objective to integrate water cleanup operations and water supply operations in the Basin. In addition to engaging existing regulatory authority held by other agencies, WQA intends to encourage the needed voluntary or consensual arrangements through the exercise of authority under the WQA Act, including its authority to seek recovery of WQA’s costs to respond to and cleanup groundwater contamination in the Basin.

D. MINIMIZE ECONOMIC IMPACT TO THE PUBLIC

The issue of who pays for the cleanup is often the biggest obstacle in initiating the necessary cleanup programs. Although PRPs may be held completely liable for the costs of a response action under the CERCLA mandate, actions normally do not occur

until a lengthy process is completed. Equally detrimental to the water supply crisis is the fact that there is no assurance that the immediate water supply concerns will be addressed under CERCLA. Therefore, many water purveyors may still need to construct and bear the expense of operating their own treatment facilities or look for alternative supplies at their own expense even after the PRPs fulfill their obligation under CERCLA.

Adding to the economic complexity of the situation is the fact that USEPA conducts its own detailed financial evaluation of PRPs and may settle for a reduced amount. And even then, many businesses cannot fully absorb the financial liability without detrimentally impacting their businesses. In the meantime, the spread of contamination continues to impact more water supply sources and, by extension, the basic reliability of plentiful water to support the economic basis and vitality of the Basin. To address this goal, WQA has pursued and continues to aggressively pursue sources of funding from responsible parties and the federal/state government. Despite these efforts, organizations like WQA and some of the local water purveyors have had to pool their own resources to immediately initiate many of the required response actions. This has required a financial commitment on behalf of the local public (at least initially). Early actions financed outside of the CERCLA process have been necessary to assure that many of the critical projects are implemented quickly. In addition, cleanup projects such as those prescribed by WQA are designed from a local perspective to address groundwater cleanup in conjunction with the water supply. However, costs borne by the public for this effort would have to be absorbed or recovered through litigation.

To accommodate potentially conflicting goals between accelerating cleanup and minimizing impact to water rate payers, WQA has identified high priority response actions that can be implemented ahead of USEPA's mandate using available financial resources, including federal reimbursement funding, and in some cases, financial participation from PRPs. If a required project lacks sufficient funding, a commitment by the affected water purveyors and/or WQA through its assessment, along with other potential local sources, will be required. Where WQA is required to use its own assessment to quickly assist in the development of a project, WQA will always consider cost recovery actions to minimize costs borne by the public. To that end, WQA has filed

two cost recovery actions and may be considering other cost recovery actions against those responsible entities that chose not to participate in the sponsored early remedial actions.

V. §406 Plan

A. DEFINITIONS

1. This §406 Plan incorporates by reference the definitions of “facility,” “hazardous substance,” “national contingency plan,” and “person”. The terms “remedial action,” or “remedy,” or “cleanup,” or “remediation,” are used interchangeably herein. Additionally, such terms are intended to be encompassed by the definitions of “remove,” “removal,” “remedy,” “remedial action,” “respond,” or “response,” as appropriate and as those terms are defined in Title 42 (CERCLA) of the United States Code, § 9601, as amended.

2. This §406 Plan incorporates by reference Title 42 of the United States Code, §9607 (a), as amended, the class of persons who are PRPs for the cleanup of hazardous substances.

B. REMEDIAL STANDARDS

The WQA has identified certain appropriate rules, regulations and standards for the management of Basin remedial actions from among the rules, regulations and standards promulgated by the MSGBW, LARWQCB and DDW. The rules, regulations and standards specified below are incorporated by reference in this §406 Plan and adopted as the Remedial Standards of the WQA.

These Remedial Standards, and the underlying existing rules, regulations and standards of the MSGBW, LARWQCB and DDW are additional requirements of the State which are ARARs to remedial actions ordered by the USEPA in the Basin. (See Appendix C-2).

The WQA will engage the existing procedures of the MSGBW, LARWQCB and DDW to implement the following Remedial Standards so that all remedial actions affecting Basin groundwater shall be conducted accordingly.

1. MSGBW SECTION 28

In furtherance of two objectives of this §406 Plan to prevent migration of contamination into critical groundwater supplies and to integrate cleanup activities with water supply operations, production of Basin water for remedial action purposes shall be carried out in conformance with Section 28 of the Rules and Regulations adopted by the MSGBW under authority of the Amended Judgment in *Upper San Gabriel Valley Municipal Water District vs. City of Alhambra*, Los Angeles County Superior Court Case No. 924128. (See Appendix D-1). Under this Remedial Standard water wells used for remedial action purposes shall be located, with the approval of the MSGBW, both to prevent migration of contaminated groundwater and to best integrate the water produced for remedial action with water supply operations in the Basin. If necessary, WQA will engage the existing implementation and enforcement procedures of the MSGBW to carry out this Remedial Standard. Section 28 of the MSGBW Rules and Regulations is attached as Appendix D-1 and incorporated herein.

2. LARWQCB DISCHARGE REQUIREMENTS

In furtherance of an objective of this §406 Plan to integrate cleanup activities with water supply operations, disposal of Basin water produced for remedial action purposes shall be carried out in conformance with discharge requirements issued by the LARWQCB and, if necessary, approved by the SWRCB. (See Appendix D-2). Under this Remedial Standard, Basin water produced and treated for remedial action purposes shall not be wasted and such water shall be put to the greatest reasonable and beneficial use of which it is capable. Conversely, the waste and unreasonable use or unreasonable method of use of such waters shall be prohibited. Additionally, under this Remedial Standard, Basin water produced and treated for remedial action purposes shall not be discharged to the environment except in conformance with discharge requirements issued by the LARWQCB.

The SWRCB and the LARWQCB are both subject to the requirements of the California State Constitution and California Water Code § 100 *et seq.* to promote the greatest reasonable and beneficial uses of the waters of the State and to prevent the waste and unreasonable use and unreasonable method of use of those waters.

SWRCB's express statutory authority to prevent the waste and unreasonable use of water is set forth in Water Code § 275 which provides as follows:

“The department and board shall take all appropriate proceedings or actions before executive, legislative, or judicial agencies to prevent waste, unreasonable use, unreasonable method of use, or unreasonable method of diversion of water in this state”

The LARWQCB exists, pursuant to Water Code §§ 13200-13201, as a branch of the SWRCB. The LARWQCB exercises its authority to regulate discharges to promote the beneficial use of water and prevent waste through the issuance of waste discharge requirements. Waste discharge requirements are predicated upon the water quality control plan (“Basin Plan”) that each regional board is required to promulgate according to Water Code § 13241. Water Code § 13263(a) requires each regional board to issue discharge permits in conformity with its adopted Basin Plan.

Discharge requirements issued by the LARWQCB must be conditioned, taking into consideration the beneficial use of water, pursuant to Water Code § 13263(a), as follows:

“The regional board, after any necessary hearing, shall prescribe requirements as to the nature of any proposed discharge, existing discharge, or material change in an existing discharge, except discharges into a community sewer system, with relation to the conditions existing in the disposal area or receiving waters upon, or into which, the discharge is made or proposed. The requirements shall implement any relevant water quality control plans that have been adopted, and shall take into consideration the beneficial uses to be protected, the water quality objectives reasonably required for that purpose, other waste

discharges, the need to prevent nuisance, and the provisions of Section 13241.”

Thus, in enacting Water Code §§ 13241 and 13263, the State has expressly stated its intent that the regional boards exercise their authority to regulate discharges to promote the beneficial use of water and prevent waste through the issuance of waste discharge requirements. Pursuant to the express terms of these statutes, this authority includes the prohibition on any discharge that is wasteful and does not promote the beneficial use of water.

The State has been approved to issue National Pollutant Discharge Elimination System (“NPDES”) Program permits under the Federal Clean Water Act. Under that authority, the LARWQCB issued General NPDES Permit No. CAG914001 (the “General Permit”), adopted by Order No. R4-2018-0087 on June 14, 2018. The General Permit establishes Waste Discharge Requirements for discharges of Treated Groundwater from Investigation and/or Cleanup of Volatile Organic Compounds Contaminated-Sites to Surface Waters in Coastal Watersheds of Los Angeles and Ventura Counties. The General Permit prohibits, for example, the daily discharge of an effluent containing more than 6 ppb perchlorate (See General Permit, Attachment F, Table 6 (Effluent Limitations)).

The standards contained in the General Permit are ARARs. They were properly promulgated because they were adopted pursuant to the authority granted to the State under 40 CFR parts 122 and 123 and Section 402 of the Clean Water Act and other State authorities, including Water Code § 13263. The General Permit is generally applicable – it serves as a general NPDES permit and covers discharges to all surface waters in the Los Angeles Region (See General Permit, ¶23.). It is enforceable both administratively and through the Superior Court (See Water Code §§ 13300 et seq.). Finally, the General Permit standards are legally applicable or relevant and appropriate as state standards stricter than current federal standards. Thus, the standards set forth in the General Permit are ARARs.

If necessary, WQA will engage the implementation and enforcement procedures of SWRCB and LARWQCB to carry out this Remedial Standard. The applicable rules,

regulations and standards of SWRCB and LARWQCB are attached as Appendix D-2 and incorporated herein.

3. DDW TREATMENT STANDARDS

In furtherance of an objective of this §406 Plan to integrate cleanup activities with water supply operations, water treatment for remedial action purposes shall be carried out in conformance with treatment standards for public drinking water systems adopted by the DDW. (See Appendix D-3). Under this Remedial Standard, Basin water produced and treated for remedial action purposes shall not be wasted and such water shall be put to the greatest reasonable and beneficial use of which it is capable. Conversely, the waste and unreasonable use or unreasonable method of use of such waters shall be prohibited. Under authority of §106 of the California Water Code, domestic use is the highest beneficial use of water. Unless discharge or other use of the Basin water produced and treated for remedial action purposes is approved by the LARWQCB, all such water shall be made available for domestic use through public drinking water systems or recycled water systems. Under this Remedial Standard, Basin water produced for remedial action, with the approval of the DDW, shall be integrated into water supply operations in the Basin.

The California Safe Drinking Water Act (Health & Safety Code §§ 116275 *et seq.*) (the “Act”), contains public water supply permitting provisions which authorize DDW to set permit conditions for water delivered by public water systems. In Section 116270(e) of the Act, the Legislature declared its intent to “ensure that the water delivered by public water systems of this state shall at all times be pure, wholesome, and potable.” In addition, in Section 116270(g) of the Act, the Legislature declared its intent “to establish a drinking water regulatory program within the DDW in order to provide for the orderly and efficient delivery of safe drinking water within the state and to give the establishment of drinking water standards and public health goals greater emphasis and visibility within the state department.”

In 1997, the then Chief of the Division of Drinking Water and Environmental Management of the California Department of Public Health drafted a “Guidance for Direct Use of Extremely Impaired Sources” memorandum known as Policy Memo 97-005. This memorandum provides guidance to DDW staff on the evaluation of extremely

impaired sources of water for use as a supply of drinking water. In 2015, DDW staff produced a draft update version of the memo entitling it “Addressing the Direct Domestic Use of Extremely Impaired Sources Process Memo 97-005 Initially Established November 5, 2015” (“Process Memo 97-005”).

Pursuant to Process Memo 97-005, the following findings are required of DDW for approval to use an extremely impaired source¹:

- (1) Drinking water MCLs, action levels for lead and copper, and Notification Levels² (formerly Action Levels) will not be exceeded if the permit is complied with; and
- (2) The potential for human health risk is minimized by treatment, and the risk from treatment failure is minimized through good engineering practices that may involve redundancies in treatment, and efficiencies in maintenance, inspections, monitoring, and alarms.

As set forth in Appendix C-2, the permit conditions in Process Memo 97-005 will be considered state ARARs if (1) they are more stringent than federal standards (2) they are properly promulgated standards, requirements, criteria or limitations, and (3) they are legally applicable or relevant and appropriate. The Process Memo 97-005 permit requirements are more stringent than federal standards. The requirements were

¹ An extremely impaired source, according to Process Memo 97-005, is one that meets two or more of the following criteria: 1) exceeds 10 times an MCL or action level (AL) based on chronic health effects, 2) exceeds 3 times an MCL or AL based on acute health effects, 3) contains one or more contaminants meeting criteria (1) or (2) above and the source has not been adequately characterized by responsible parties, 4) is a surface water that requires more than 4 log *Giardia*/5 log virus reduction, 5) is a surface water source that contains more than 5% treated waste water, unless associated with approved drinking water-related surface water augmentation project, 6) is extremely threatened with contamination due to proximity to known contaminating activities, 7) contains a mixture of contaminants of health concern or 8) is designed to intercept known contaminants of health concern.

² As a result of an amendment in 2005 to Health & Safety Code § 116455, Action Levels have now been replaced by Notification Levels. As defined in Section 116455, a “Notification Levels” are “nonregulatory, health-based advisory levels established by the department for contaminants in drinking water for which maximum contaminant levels have not been established. Notification levels are established as precautionary measures for contaminants that may be considered candidates for establishment of maximum contaminant levels, but have not yet undergone or completed the regulatory standard setting process prescribed for the development of maximum contaminant levels and are not drinking water standards.”

“properly promulgated” because they are based on laws adopted by the California Legislature and administrative standards developed by the DDW. Finally, they are of general applicability to anyone who introduces water from extremely impaired sources into the drinking water system. Thus, the permit conditions in Process Memo 97-005 are ARARs.

If necessary, WQA will engage the implementation and enforcement procedures of the DDW to carry out this Remedial Standard. A copy of Process Memo 97-005 and the applicable rules, regulations and standards of DDW are attached as Appendix D-3 and incorporated herein.

C. OVERARCHING REMEDIAL PRINCIPLES

These principles represent the general guidelines that will steer the implementation of the strategies and tactics contained in this §406 Plan.

1. Consensual participation in remedial activities shall be maximized.
2. Consistency with USEPA actions and MSGBW Section 28 shall be maintained.
3. Control of decisions by the local public (i.e., producers and the water consumers/rate payers they represent) affecting groundwater quality and water supplies shall be maintained.
4. Expedite remedial activities, as appropriate, by providing incentives, such as (a) avoiding litigation costs and risks (e.g. adverse judgment, exposure to other PRPs/agencies, etc.), (b) providing funds from federal, state, the WQA or other sources, and (c) utilizing existing water producing/treatment equipment, where appropriate.
5. The overall economic impact to water consumers shall be minimized for all response actions by requiring financial participation from any party responsible for the contamination. Within the discretion of the WQA, a cost recovery action, including, but not limited to, a request for joint and several liability, will be initiated against any responsible party not participating at a financial level acceptable to WQA.
6. WQA shall facilitate the acceleration of the removal of contaminant mass in the Basin by working with the USEPA, DTSC, LARWQCB, DDW, water purveyors and PRPs to (a) identify high priority cleanup projects that are consistent with USEPA

objectives, and (b) begin implementation of the required remedy as soon as possible. Cleanup projects that prevent or otherwise restrict the lateral or vertical migration of contamination shall be given higher ranking over those cleanup projects that do not prevent such migration.

7. Treated water shall be used for its highest and best use.

D. OPERABLE UNIT SPECIFIC PLANS

After more than 20 years of studies and investigations, USEPA's CERCLA activities have progressed to a point where the configuration of the required remedies, in conjunction with local needs, can be determined in most areas. In general, these remedies include multiple groundwater extraction and treatment facilities designed to remove and contain the spread of contamination. Appendix A summarizes WQA's specific plans for the individual OUs including key components and OU specific issues. Table 2 identifies the annual estimated costs of each project within the Basin OU boundaries through FY21/22.

E. EVALUATING PROJECT EFFECTIVENESS

During the initial stages of a potential treatment project extensive studies are conducted to ensure the project is located in the appropriate area to achieve:

- an effective contaminant capture and containment zone
- the halting of contamination migration into adjacent clean water supplies
- meeting the water supply objectives of the affected water purveyor

WQA plays a key role during this evaluation process to ensure that each project provides the greatest protection to the water supply of the residents of the Basin while minimizing any economic impact. WQA has developed the following criteria to evaluate projects for effectiveness:

- How much contaminant mass is removed from the Basin?
- How much of the treated water is used for beneficial purposes?
- How many downgradient wells are being protected?
- Does the project integrate cleanup with water supply?

WQA also considers that overall impact of the combined cleanup projects. Figure 12 demonstrates the number of treatment plants coming online has grown steadily since WQA's inception in 1993. The total pounds of contaminants removed and acre-feet of water treated are shown in Figure 13.

VI. Project Funding

The WQA has and continues to be committed to accelerating cleanup, integrating cleanup with water supply, preventing migration, and minimizing the financial impact to the public through its annual assessment. In order to meet these goals, adequate funds, primarily from PRPs, state and/or federal programs, are necessary for implementation. And as can be discerned in the project section of this Plan, much of the Basin's needs are now focused on long-term remediation costs which make up most of the \$499 million funding gap in Table 3. While the WQA recognizes that PRPs must fulfill their CERCLA liabilities, it is often a very slow process - a process that jeopardizes the time and cost of implementing projects. In addition, even though USEPA has urged PRPs to consider affected water supplies, the CERCLA process does not allow USEPA to require it. It is for these reasons that WQA is determined to aggressively seek funds from PRPs before, during and after project implementation, either voluntarily, through mandated CERCLA actions or through litigation measures. If funds cannot be generated from PRPs to begin an identified early action project, WQA will work with individual purveyors, MSGBW and/or other local agencies to develop funding for the project using federal and/or state funds, WQA member agency funds, including individual purveyors, and only if necessary, its own assessment. This section prioritizes

each potential source of funding in the order of which it will be sought for a particular early response action.

A. POTENTIALLY RESPONSIBLE PARTIES

As stated previously, WQA will seek voluntary funds from those responsible for the contamination. If the process of acquiring those funds is unilaterally stalemating or delaying the project, the WQA will move forward without this source of funds to ensure necessary cleanup/water supply projects are implemented.

The WQA is committed to securing PRP funding for any given project by providing incentives for PRPs to participate financially. In the absence of sufficient PRP funds, WQA and others may be required to combine its resources to fund a project. In this event, WQA may choose to initiate cost recovery actions. This was the case in the BPOU, in which WQA brought two separate legal actions against PRPs in the year 2000 to recover costs incurred from the La Puente Valley County Water District (“LPVCWD”) Treatment Plant and the Big Dalton Well Treatment Facility.

In 2002, WQA along with three affected purveyors (“water entities”) jointly settled with 13 of the more than 60 PRPs in the SEMOU. Thereafter, the WQA and water entities initiated litigation against the remaining PRPs in order to maximize the recoverable dollars in an operable unit with very high estimated costs and very little potential funding from PRPs. As part of the overall financial and technical process, the USEPA and the DTSC were engaged due to their respective roles in the SEMOU. A portion of the PRP settlements cover ROD costs and are provided to the water entities via a cooperative agreement between WQA and the USEPA. The settlements also include some direct funding for non-ROD costs. Nevertheless, these early settlements did not fully cover the project costs. In recognition of the funding shortfall, the USEPA obtained \$2.65 million in gap funding from their Superfund program to help offset a portion of the water entity ROD costs. In total, \$35.3 million in settlements have been negotiated and obtained from the PRPs. DTSC is expected to take on the longer term regulatory responsibility once it is declared a fund-lead operable unit by the USEPA and the State of California.

B. FEDERAL GOVERNMENT

The WQA, with the support and assistance of other local agencies, has sought and continues to seek all funding that may be available for projects in the Basin. As a result of those efforts, two federal programs have been authorized by Congress specifically for the Basin. Both of these reimbursement programs are administered through the USBR directly to the WQA. In February of 2002, WQA adopted a set of procedures called the Federal Funding Program Administration (Appendix F) to guide the allocation process for both programs.

Both sources of federal funding will be used to the maximum extent possible to accelerate cleanup and to provide incentives for PRPs to address affected water suppliers while implementing cleanup actions in the Basin under CERCLA.

C. RESTORATION FUND (DREIER)

In December of 2000, through the leadership of former Congressman David Dreier, Congress authorized the San Gabriel Basin Restoration Fund ("Restoration Fund"). The original authorization of the Restoration Fund provided \$85 million for groundwater cleanup of which \$10 million was for use by the Central Basin Municipal Water District ("CBMWD") to cleanup the Central Basin and \$75 million was for use by the WQA to cleanup the Basin. In March 2009, Dreier successfully led an effort to increase the total authorization to \$142.6 million. That increased the respective Restoration Fund authorizations to \$125 million for WQA and \$17.2 million for CBMWD. To date, the CBMWD has received \$10 million and WQA has received \$70,567,509¹. The WQA Board has already allocated the \$70,567,509 for cleanup projects throughout the Basin based on criteria found in its Federal Funding Program Administration guidelines.

This program requires a 35% non-federal match deposited into the Restoration Fund to reimburse the WQA up to a maximum of 65% from federal sources. Non-federal funds are classified as funds that are not from the Department of the Interior, but

¹ The first year appropriation was \$25 million but \$2 million was retained by the Army Corp for costs related to an independent study and \$10 thousand was retained for administrative costs which resulted in a reduced FY 2001 appropriation of \$22.99 million.

rather PRP funds, state funds, local municipality funds, purveyor funds, WQA assessment funds or non-profit funds. Funds from this program may be used for design, construction and operation & maintenance for up to 10 years following construction. The Restoration Fund is administered via the USBR in conjunction with the WQA for use within the Basin.

Congress acknowledged that millions of dollars had already been spent to protect the Basin by remediating the groundwater and preventing further contamination. Due to the emergency nature of the contamination and the threat it posed to the local groundwater supply, Congress allowed the use of those past expenditures as a credit towards the 35% non-federal matching requirement under this program. The USBR is responsible for approving all qualifying prior expenditures. However, the WQA, at its discretion, will use this credit to meet the 35% matching requirement and eliminate the need to deposit additional funds into the Restoration Fund.

As of 2008, WQA had accumulated past cleanup cost information totaling more than \$47 million. This amount was sufficient to meet the 35% non-federal matching requirement for the original \$75 million authorization. Based on more recent information, it is clear that additional funding will be required to continue the progress of ensuring that remedial activities will be combined with local water supply needs.

D. TITLE XVI

In 1992, Congress authorized the San Gabriel Basin Demonstration Project to implement conjunctive use projects in the Basin. By implementing cleanup projects that provide a reliable source of water and reduce the need for outside sources of water, many of the Basin's cleanup projects are eligible for this program.

This program requires a 75% match from non-federal sources to reimburse the project up to a maximum of 25% from federal sources. Funds from this program may be used for design and construction only. The Title XVI fund is administered via the USBR directly to the WQA for use within the Basin.

In 2004, Congresswoman Grace Napolitano authored H.R. 1284 which was passed and signed into law. The legislation raised the cap on the Title XVI program by \$6.5 million. The total authorization for the Title XVI program is now \$44.5 million.

Based on the Basin's enormous need for funds, the WQA will (1) continue to work to secure full appropriation of the remaining funds in the Title XVI authorization, and (2) work with Congress to seek legislation authorizing the transfer of any unobligated funds in the Title XVI program to the Restoration Fund.

E. STATE GOVERNMENT

California voters have passed several Propositions over the past two decades that contain funding for various water-type projects. WQA has aggressively sought and been successful in securing funding from these Propositions for Basin projects. The list includes: Proposition 13 – the Safe Drinking Water, Clean Water, Watershed Protection, Flood Protection Bond Act of 2000; Proposition 50 – the Water Security, Clean Drinking Water, Coastal and Beach Protection Act of 2002; and Proposition 84 – the Safe Drinking Water, Water Quality and Supply, Flood Control, River and Coastal Protection Bond Act of 2006.

In 2014, voters passed Proposition 1 – the Safe, Clean, and Reliable Drinking Water Supply Act of 2014. The Proposition requires a 50% match and includes language that would allow funding to be used for both Capital and Treatment & Remediation components of cleanup projects. The groundwater section also contains language that is favorable to the WQA's efforts by giving preference to NPL- listed sites such as the San Gabriel Basin.

In 2018, voters passed Proposition 68 – the Parks, Environment and Water Bond. This bond requires a 50% match and contains language to effectively clarify and authorize the use of \$80M in Prop 1 funding for Treatment and Remediation activities. Similar to previous years, WQA will closely monitor the implementation process and provide input as appropriate. Additionally, WQA will assist water purveyors with application preparation and support to maximize the funding opportunities.

Furthermore, the WQA will seek to place similar language in any future water bond ballot measures. Working with other water entities in the Basin, the WQA will continue to lead efforts to formulate a comprehensive approach to water infrastructure in the Basin. The WQA will look to any future proposed bond packages for much needed funding for cleanup projects in the Basin.

The WQA will work to educate State agencies on the merits of financial participation in the near-term and the very real impacts which could result from inadequate State financial assistance. The WQA will emphasize that stemming the flow and mitigating the spread of contamination will be more cost effective and have less of an impact on both the State and local ratepayers.

One example of a beneficial impact is WQA's Whitmore Street Groundwater Remediation Facility ("WSGRF"). In 2007, the SWRCB awarded WQA a \$1.42 million grant from their Cleanup and Abatement Account ("CAA") to the orphan project. The grant included construction costs and up to five years of operation. The treatment facility was completed in 2007 and is currently operational. In 2012, WQA secured an additional \$950,646 in CAA funding through September 2018. WQA has continued funding the project temporarily until an alternative funding source can be obtained. The project is located within the SEMOU and removes significant concentrations of 1,4-dioxane and VOCs (see Appendix A). WQA will actively continue to identify projects that could qualify for similar funding streams from the SWRCB.

The WQA is also actively involved in hosting, representing and financially supporting the Upper San Gabriel River and Rio Hondo River ("USGRHR") sub-regional area of the Greater Los Angeles County ("GLAC") Region IRWMP. The state IRWMP program is overseen by the California Department of Water Resources ("DWR") in accordance with the IRWMP Act of 2002. As the Vice-Chair of the USGRHR steering committee, the WQA provides and solicits input and opportunities for local stakeholders to network and develop multi-benefit projects. This in turn increases the likelihood of funding from IRWMP bond funds. For example, what may have been a single-purpose project to increase water supply, could become a project that enhances nearby open space, cleans-up water supply and/or provides more water storage.

In addition, WQA is also a member of the GLAC IRWMP Leadership Committee which acts as a Regional Water Management Group under the IRWMP program. This committee includes two members from each of the five sub-regions in the GLAC Region plus representatives from several resource management areas. The duties of this committee includes the development, administration and updating of the IRWMP. The

committee also selects priority projects for funding applications that represent and benefit the needs of the entire GLAC Region.

F. WATER QUALITY AUTHORITY

The WQA may impose an annual assessment for capital and operational costs not to exceed \$10 per acre-foot. In the past, it has been WQA's policy to utilize assessment dollars to provide incentives for PRPs to move forward on a given project. With the availability of significant federal funds, these funds will only be utilized if sufficient federal and/or state dollars are or will not be available in addition to PRP funds. If PRPs do not voluntarily provide funds to a project, then the WQA will, on a project-by-project basis, consider the use of assessment funds to underwrite the project costs with or without other local dollars. However, the WQA is committed to recovering its costs from non-participating PRPs at a later date, so that the cost to the local consumer will ultimately be minimized.

The WQA Act provides that WQA may issue bonds for a term not to exceed 20 years for any purpose authorized by it. Additionally, the WQA Act authorizes the State Treasurer to continue to collect assessments to payoff bond obligations in the event that WQA sunsets prior to the bonds' maturity dates. WQA has begun exploring this option in addition to the other funding mechanisms available as a means to augment treatment and remediation costs over the next several decades.

G. WATER PURVEYORS/CITIES/MEMBER AGENCIES/OTHER LOCAL WATER AGENCIES

As of January 2001, all potential projects requesting WQA participation must go through WQA's Procedure No. 38, "WQA Project Participation". As part of that procedure, the WQA requires the impacted water purveyor to fund or secure funds other than WQA's assessment representing a minimum of 25% of capital costs. In the event projects cannot be otherwise fully funded using any or all of the above funding sources, WQA will work with an affected city, member water agency and/or other local water agencies to develop potential funding sources. The WQA will pursue the recovery of these funds on behalf of the participating agency, if necessary.

VII. Project Prioritization

WQA utilizes a number of tools to prioritize projects for funding. To be eligible for funding consideration, proposed projects must meet all of the following conditions:

- *Project must be located within the jurisdictional boundaries of the WQA*
- *Applicant(s) must demonstrate, through WQA's Procedure No. 38 process, (described in the following section) that the project in the area of the proposed groundwater remediation project removes contamination, and protects and/or prevents groundwater contamination from spreading into clean areas*
- *Applicant(s) must demonstrate that the project water will be put to beneficial use, with priority given to those projects which include an affected water purveyor and provides potable water, if applicable*
- *Project must conform and further the objectives of the WQA §406 Plan or the intent thereof*
- *Project must be consistent with the legislative intent of the statute(s) authorizing or appropriating the public funds used for project funding reimbursement*
- *Project cannot have been used in calculating the 35% credit provision in the Restoration Funds*
- *Project cannot have begun operating prior to July 1, 1999 (this provision may be waived by the WQA Board)*
- *Start of project construction for a new project must be anticipated within 18 months of executed agreement between WQA and applicant(s)*
- *Applicant(s) must provide a plan that commits 100% of the required funds in WQA's account in advance of each payment owed on the project and prior to each reimbursement request.*

Criteria to which a proposed project shall be measured, but not required, are as follows:

- Project conforms and furthers the objectives of WQA's §406 Plan or the intent thereof
- Ranking on priority list if multiple requests are competing for available funds
- Project is "necessary" and "consistent" with the NCP

- Requesting party to pay no less than 25% of capital costs
- Funding for operation and maintenance secured from funds other than WQA assessment
- Implementation of construction anticipated within one year of executed agreement

Projects are scored according to the questions and corresponding scores listed in Table 2 – Project Scoring. Once scored, the projects are then ranked according to the criteria in Table 3 – Project Ranking. The higher scores represent a higher ranked priority position within each category for available funding.

A. PROCEDURE NO. 38

San Gabriel Basin WQA Policy and Procedures Manual - Administrative Procedure 38 - WQA evaluates projects submitted to determine whether the projects are “necessary” and “consistent” with the National Oil and Hazardous Substances Pollution Contingency Plan (NCP). For cost recovery purposes, remediation projects are considered “necessary” if there is evidence of a release of hazardous substances, the project is designed to mitigate the impact of such releases and the project is needed to meet regulatory requirements for remediation and/or water supply. The determination of necessity shall be based on data of sufficient quality and quantity to satisfy the WQA. Remediation projects are considered “consistent” with the NCP if the remediation project is in substantial compliance with the applicable requirements of the NCP and results in a CERCLA-quality clean-up. Specific potentially applicable NCP requirements are addressed below.

B. HUMAN RIGHT TO WATER

In recognition of AB685 (Chapter 524, Statutes of 2015), which declares that it is the “established policy of the state of California that every human being has the right to safe clean, affordable, and accessible water adequate for human consumption”, the WQA, consistent with its mission and goals, will identify projects to further this policy. There are no public water systems in the San Gabriel Valley operating in violation of their operating permits.

C. DISADVANTAGED COMMUNITIES

Disadvantaged communities (DACs) are defined by the state as a community with an annual median household income (MHI) less than 80% of the Statewide annual MHI. Figure 11 contains a map of the San Gabriel Basin overlaid with census block groups matching that definition. Together the block groups represent approximately 410,000 residents living in DACs. WQA will identify projects located in DACs and provide recommendations for the appropriate state funding.

VIII. Contractor Selection

Competitive bids are typically used for contractor selection for capital projects when funding sources include WQA assessments, local water funds, or funding from the state or federal government. Projects with federal and state dollars follow their respective contracting guidelines regarding competitive bids. Sole source awards may occur, consistent with either federal and state guidelines, or the criteria established by the individual water purveyor.

IX. Public Information

The WQA has succeeded over a number of years in building public support for cleaning up contaminated groundwater in the Basin. The public information program will continue to build on that effort to foster understanding of the WQA's mission, projects and accomplishments and plans, and to encourage public participation in the cleanup process. The WQA will undertake efforts to ensure that all stakeholders, including the general public, understand projects that involve the WQA and have ample opportunity to contribute ideas and opinions.

The program will employ a variety of methods to reach everyone from specialized audiences, such as the local water community and legislators in Sacramento and Washington, to the general public in the Basin and beyond. The WQA will constantly update its web site and social media outlets including Facebook (facebook.com/SGBWQA), Twitter (@SGBWQA) and YouTube (youtube.com/SGBWQA) to provide instant access to public information, including news

releases, publications, agendas, minutes of meetings, and reports on projects. In addition to WQA-specific issues, the WQA web site links to local, state and federal water agencies and organizations, giving the public immediate access to information on many local water issues, including groundwater contamination and cleanup activities. It also gives access to the names of officials who can be contacted for further information.

The WQA will work to keep the local offices of federal and state legislators informed of any developments and the progress of water cleanup issues in the Basin. These efforts will include office visits, tours of treatment facilities and an invitation to participate in the WQA legislative committee. The WQA has continued to host the Legislative Water Forum Luncheon in which local legislators are invited to provide updates on state legislation as it pertains to the Basin water community. Speakers in the series to date have included United States Senator Dianne Feinstein, former Senator Barbara Boxer, former Congressman David Dreier, former Congresswoman and U.S. Secretary of Labor Hilda Solis (now Los Angeles County Supervisor, District 1), Congresswoman Lucille Roybal-Allard, former Attorney General and State Treasurer Bill Lockyer, former Secretary of State Bruce McPherson and former Board of Equalization Member Judy Chu (now Congresswoman).

In 2006, the WQA developed a DVD presentation that features Senator Dianne Feinstein and former Congressman David Dreier. The DVD is being used in Sacramento and Washington, D.C to educate legislators, bureaucrats and other stakeholders to the strategic importance of the Basin. Senator Feinstein and Congressman Dreier implore the state and the state legislators to become full participants in the cleanup of the Basin.

In 2007, KCET's *Life & Times* program produced a segment on the Basin. The segment focused on the status of the cleanup, the impact of the contamination on the City of Monterey Park's water supply, the potential impact on ratepayers, and the need for more state involvement. A DVD of the segment is also used to educate local stakeholders on the cleanup of the Basin.

In 2012, WQA published its first annual report. The full color annual publication also serves as an executive summary of the §406 Plan.

The public information program uses a variety of written publications to carry its message. These may include annual reports, brochures, bulletins for specific projects and periodic news inserts in the *Los Angeles Times*, *San Gabriel Valley Tribune*, *Pasadena Star News* and the *Whittier Daily News*. The inserts are distributed throughout the Basin, through home and business delivery and general sales. The WQA will continue to provide the public with the latest information on its projects and programs

The WQA will continue to work closely with the news media and other organizations to reach the public. It will distribute press releases, contact and meet with reporters and editors to inform them of activities respond to press inquiries and take other steps to encourage media interest. The WQA will continue to work with major news outlets, such as the Los Angeles News Group, *Los Angeles Times*, and foreign language publications, such as *La Opinion* and the *Chinese Daily News*. It also will continue to provide information to other local newspapers, city and chambers of commerce newsletters and publications directed at water and environmental interests, the business press and the electronic media.

The WQA Board, through a variety of means, including public meetings and workshops, also interacts with the public to provide information and to solicit input. In addition, the WQA will continue to work with other agencies on information projects and participate with other water agencies on public outreach efforts.

All projects involving WQA will follow an established process, including all applicable federal, state and local regulations. Because the Basin is a Superfund site, the process will always include meeting requirements under the NCP, including its public participation component, in order to ensure maximum cost recovery potential. In addition, whenever needed or requested, WQA will work closely with water purveyors to help them meet the extensive public outreach requirements set forth in the DDW Technical Memorandum 97-005. However, absent regulatory requirements, the WQA continues to be committed to informing the public of all of its activities.

X. Coordination with Other Agencies

The WQA was created to fulfill a need to coordinate response actions to the contamination in the Basin. The WQA continues to call for the involved federal, state, and local agencies to unite with all stakeholders to work more effectively and efficiently. Stakeholders include but are not limited to the USEPA, the USBR, the DTSC, the SWRCB, the LARWQCB, the DDW, the WQA and each of its member water districts, the MSGBW, cities affected by the Basin groundwater contamination, San Gabriel Valley Water Association, water purveyors in the Basin, and PRPs.

Response actions alone cannot fulfill the long-term need of creating a sustainable and reliable source of water supply in the Basin. The State of California requires water districts to develop and adopt an Urban Water Management Plan (“UWMP”). WQA, in coordination with its three member water districts, the Upper San Gabriel Valley Municipal Water District (“Upper District”), the Three Valleys Municipal Water District (“TVMWD”), and the San Gabriel Valley Municipal Water District (“SGVMWD”), shall incorporate water reliability projects identified in each of their UWMPs into the §406 Plan. Their respective sponsorship and administration of these projects is a vital part of enhancing the long-term reliability of the Basin’s water supply. These projects, listed in Appendix G, directly benefit the Basin and help augment WQA’s groundwater cleanup activities.

XI. Litigation Plan

The WQA Act authorizes the WQA to bring legal action, including against responsible parties to recover from them the response costs incurred in connection with removal and remedial actions in the Basin.

Among other claims the WQA can assert for cost recovery, the WQA may bring suit under CERCLA, which provides that any person or entity who owns or operates a facility from which there has been an actual or threatened release of a hazardous substance which has caused the WQA to incur response costs, is liable for the costs of response. Liability similarly is imposed on persons and entities, among others, who

previously owned or operated a facility at the time such hazardous substance(s) were released.

CERCLA further allows the WQA to seek to hold all PRPs jointly and severally liable for these response costs, recover prejudgment interest, and obtain a declaration from the court that the responsible parties are liable for future response costs. In addition, the WQA may seek to recover its attorneys' fees incurred in bringing legal action. A more detailed discussion of the WQA's legal options is included in Appendix C- 3.

XII. Future Activities

Over the next year WQA will continue to play an integral role in protecting the groundwater supplies of the Basin by actively participating in all operable unit remedies to ensure that the necessary facilities are constructed and treatment and remediation continues to occur in a manner that provides the greatest benefit to the residents of the Basin.

BPOU - Additional modifications necessary to operate the BPOU remedy project in the most cost effective way possible will continue. Once all modifications are complete the BPOU projects combine to provide up to 25,900 gpm of potable supply. WQA will continue to participate in decisions that affect project treatment and remediation activities as a member of the project committee.

SEMOU – The WQA received a Proposition 1 planning grant from the SWRCB to conduct additional site investigation activities upgradient of the WSGRF. The activities include several hydropunch locations along with cone penetration testing to further delineate plume boundaries while providing invaluable aquifer lithology. It is anticipated that the additional site investigation work will lead to an implementation grant that will ensure the optimization of the WSGRF. In addition, WQA will be applying for additional Prop 1 funds to assist the LARWQCB with contaminant source investigation activities at various locations within the SEMOU.

EMOU - WQA will continue to participate in the remedial activities including but not limited to remedial design, project oversight and federal reimbursement activities associated with the EMOU. In 2012, the westside workparty finished construction of the shallow zone remedy and will continue operation as required by the USEPA. In late 2015, the eastside workparty's shallow zone remedy became operational. In 2019, the city of El Monte received its 97-005 amended water supply permit for the operation of eastside deep zone remedy. In addition, WQA will encourage that the end use of the treated water be put for beneficial use whenever possible.

PVOU - WQA will continue to participate in the remedial activities, including but not limited to, remedial design and project oversight associated with the PVOU remedy. In early 2019, the PVOU IZ Remedy will began construction of the centralized treatment facility. Construction activities will continue throughout the next reporting period. In addition, it is anticipated that the shallow zone north remedy will ramp up its remedial design activities. WQA will continue to assist the workparties in developing an enhanced alternative end use discharge plan that will have a regional benefit to the San Gabriel Valley water supply.

Area 3 - It is anticipated that the City of Alhambra will continue to operate its Phase I and Phase II treatment facilities, and the the City of South Pasadena will continue to operate its 1,2,3-TCP treatment facility at their Wilson wellsite. In addition, WQA will assist USEPA and LARWQCB whenever possible to further characterize contamination within the Area 3 boundaries.

WNOU – WQA will continue to assist the DTSC in its oversight of the WNOU remedy to guarantee the continued operation and to ensure that the remedy is performing as required by the WNOU IROD.

Non-Operable Unit Projects – All non-operable unit projects mentioned above are anticipated to remain in service and continue to mitigate contaminate migration.

Volume II

APPENDIX A

Appendix A - Operable Unit Area plans

1. BALDWIN PARK OPERABLE UNIT

Of the six areas of contamination in the Basin, the BPOU is considered the most significant because of the geographic size and degree of contamination. For this reason USEPA prioritized this area for investigation back in the late 1980's. Located in eastern Los Angeles County and covering 10 square miles, the BPOU includes portions of the cities of Azusa, Industry, Irwindale, Baldwin Park, West Covina and the unincorporated areas in Los Angeles County. The area of groundwater contamination is more than 8 miles long and 1 mile wide, reflecting multiple, commingled groundwater contaminant plumes. By 1994, there was a general consensus on the technical approach including a financial arrangement whereby sales from the water produced by the treatment plant would be used to offset the costs of the project. However, just as designs were being prepared, the discovery of new contaminants prompted a complete reevaluation of cleanup plans.

In 1997, perchlorate, a contaminant derived from solid rocket fuel, was discovered in many of the active production wells within the OU. This discovery had widespread impacts, primarily because traditional treatment methods were ineffective in removing perchlorate from the groundwater. The new discovery not only disrupted the design of the CERCLA remedy, but also shut down many of the existing treatment plants that had been operating for water supply purposes. In one case, a water purveyor's (LPVCWD) complete water supply was shut down due to excessive concentrations of perchlorate that could not be removed by treatment facilities currently in place. This forced the water purveyor to buy alternative groundwater supply from neighboring water purveyors and supplemental imported water costing five times the cost of groundwater before the discovery of perchlorate.

Based on the discovery of perchlorate, USEPA chose to update its ROD and issue a plan update (Appendix E). This update was similar to the original ROD except that the containment requirement in the southern portion of the OU unit was shifted

further downgradient to address the new contaminants and the larger VOC plume resulting from several years of movement since the original ROD was issued. USEPA's plan required that about 22,000 gpm of contaminated groundwater be extracted and treated. The update did not, however, specify how the water was to be used.

In 1998, although USEPA had recently accepted a "good faith offer" from a portion of the BPOU PRPs to conduct the required cleanup, the specifics of the offer suggested that the PRPs intended to construct cleanup facilities without addressing the local water supply needs. The promise of the good faith offer was to extract water from the specified locations, treat the water at centralized facilities using emerging (unapproved) treatment technology and then discharge the water into nearby surface water channels. This approach was met with strong resistance that could have resulted in further delays and continuance of the existing water supply crisis. In addition, USEPA's approach focused on overall containment of the plume and did not include projects that were outside of USEPA's primary objectives that would have beneficial effects on both cleanup and water supply.

In response to this situation, WQA prescribed a cleanup plan developed by the MSGBW (Figure 2) that integrates cleanup and water supply objectives. The first phase of this plan focused on the southern portion of the plume where the priority is highest to contain the plume, protect critical water supplies and restore critical water supplies.

In 1999, due to the critical need for immediate action, WQA, MSGBW and Upper District joined resources and began implementation of the plan by constructing the first facility to treat both perchlorate and NDMA for drinking water at the LPVCWD well site. Following the success of the LPVCWD project, WQA prescribed additional early actions that build on the LPVCWD project development model.

In 2002, eight of the 20 BPOU PRPs entered into a comprehensive project agreement with WQA, MSGBW and local purveyors to fund the prescribed remedy described in this section.

To achieve rapid implementation in the BPOU, only treatment processes that are approved as Best Available Treatment Technologies ("BATT") by DDW shall be used to meet drinking water requirements. This requirement is necessary to assure that lengthy approval processes normally associated with emerging technologies are eliminated.

Use of BATTs will be necessary to accelerate removal of contaminant mass from the Basin and to restore impacted potable water supplies. However, wherever practical, other technologies may be considered if significant and exceptional benefits are shown to outweigh the need for urgency.

In addition, as new technologies become available, the WQA prescribes that cost effective studies and pilot programs are pursued in order to maximize the potential savings in cleanup costs over the life of the projects. For example, multiple projects are using an ion exchange technology that may be outdated and costly. New resin technology has been introduced that could provide alternatives to the existing technology, and studies have been undertaken to assess the benefits of switching over if the lifetime benefits appear to be substantial.

In the cases where existing technology remains in place, careful optimization will be performed regularly on the equipment in order to achieve the best effective operation and the lowest operating cost possible.

➤ *Southern Remedy*

In conjunction with the LPVCWD treatment project constructed in 2000, a new treatment facility located at the San Gabriel Valley Water Company (“SGVWC”) Plant B6 treatment facility near the southern extension of the plume was prescribed for immediate implementation. The project also included the construction of four new extraction wells (B25A, B25B, B26A and B26B) and transmission pipelines connecting the extraction wells to the Plant B6 treatment facility.

The project finished construction in 2004 and received its 97-005 amended water supply permit from the DDW in June 2005. The water extracted from this facility is needed by SGVWC to replace production capacity lost when contamination forced the closure of the then operating water treatment facilities that lacked the ability to remove the newly discovered contaminants, perchlorate and NDMA. The project has the ancillary benefit of protecting downgradient water supply wells by halting the southeastern migration of contaminant mass.

In 2009, efficiency studies have led to changing out the existing ion exchange treatment technologies at LPVCWD’s treatment facility and SGVWC’s Plant B6

treatment facility from a regenerable resin technology to a more efficient single-pass resin technology. As a result of changing from a regenerable resin ion exchange technology to a single-pass technology SGVWC lost the ancillary benefit of some nominal nitrate treatment. Therefore, DDW required SGVWC to construct additional nitrate treatment at its Plant B6 to ensure continued operation of the treatment facility. The new nitrate treatment utilizes a regenerable ion exchange treatment system but will be designed specifically for nitrate removal.

In 2020, SGVWC plans to replace its existing UV treatment equipment with new more efficient 3rd generation UV treatment technology.

The next component of the remedy prescribed for the southern area is a new treatment facility that is located at the SGVWC Plant B5. The project finished construction and began testing in 2007. In April 2008, the Plant B5 treatment facility received its amended water supply permit from DDW. The Plant B5 treatment facility treats water from an existing well (B5B), from a new extraction well drilled on site (B5E) and from an existing City of Industry well located in the San Fidel Well Field. The Plant B5 facility is necessary to meet water supply demand and to serve as a final containment point to prevent the further degradation of clean aquifers resulting from the migrating BPOU contamination plume.

This plan prescribes immediate implementation and long term operation of the southern remedies for the BPOU including all of the necessary facilities to achieve full containment of the BPOU plume at the downgradient edge. In June 2008, the last component of the BPOU remedy became operational. These facilities will accelerate removal of contaminant mass in the Basin, prevent migration of contamination into critical groundwater water supplies, and through the integration of cleanup with water supply objectives, mitigate the existing water supply crisis in the area.

As of September 30, 2019, the southern remedy projects have treated approximately 317,562.71 acre-feet of contaminated groundwater and have removed approximately 42,324.90 lbs. of VOCs, perchlorate, NDMA and 1,4-Dioxane.

➤ Northern Remedy

In 2005 construction was completed on a new treatment facility at the VCWD Arrow/Lante wellfield. The new treatment facility known as the Subarea 1 (“SA1”) treatment facility will consist of all necessary treatment technology and two new extraction wells (SA1-1 and SA1-2) that were constructed east of the treatment facility which will deliver raw water to the facility via new transmission pipelines. The plan also includes a treated water pipeline to deliver all of the treated water to SWS. In 2007, VCWD discovered TCP in its SA1 extraction wells and was forced to construct additional Liquid Phase Granular Activated Carbon (“LPGAC”) treatment at SA1 to combat the new found contamination.

Similarly to LPVCWD and SGVWC in 2008, VCWD initiated the process to replace the ion-exchange regenerable treatment system with single pass ion-exchange treatment equipment. Design and construction of the single pass ion-exchange system was completed in 2009.

In 2014, VCWD approved the nitrate management plan which will provide ancillary nitrate blend capabilities to ensure compliance with drinking water standards.

In 2015, VCWD will begin construction of a new extraction well that will replace existing offsite extraction wells SA1-1 and SA1-2. The new extraction well along with existing SA1-3 will provide enough capacity to achieve the revised extraction rate of 6,000 gpm.

As of September 30, 2019, the northern remedy project has treated approximately 77,414.27 acre-feet of contaminated groundwater and has removed approximately 42,820.10 lbs. of VOCs, perchlorate, NDMA and 1,4-Dioxane.

➤ *Other Remedies*

California Domestic Water Company’s (“CDWC”) Well No. 14 was affected by contamination emanating from the BPOU, including perchlorate and NDMA. CDWC expanded their existing VOC and NDMA treatment systems by including a perchlorate treatment system. The project is also designed to protect CDWC’s downgradient wells. Construction was completed in June of 2002.

Recently DDW informed CDWC that blending for VOCs would no longer be allowed and treatment for VOC removal will be mandatory. In addition, DDW stated that

Well No. 10 will not be allowed to operate as a blending source for perchlorate if upstream perchlorate levels are shown to be increasing. Therefore, CDWC intends to construct dedicated VOC and perchlorate treatment systems for its Well No. 10.

As of September 30, 2019, the CDWC project has treated approximately 373,162.93 acre-feet of contaminated groundwater and has removed approximately 18,837.70 lbs. of VOCs, perchlorate and NDMA.

After losing their Plant 139 and Plant 140 wellfields to the BPOU contamination, SWS constructed new production wells at their Plant 121, Plant 142 and Plant 151 properties. The interim project also included the construction of pipelines that will allow for better operational flexibility and provide additional supply to their affected service area.

In addition to operating the SA1 treatment facility as part of the BPOU remedy, VCWD also has two additional treatment facilities that they own and operate for their immediate water supply. In 1990, VCWD constructed the Maine East and West treatment facility and in 2004 the Nixon East and West treatment facility.

As of September 30, 2019, the VCWD's Maine and Nixon treatment facilities have treated approximately 113,761.39 acre-ft of contaminated groundwater and have removed approximately 2,163.80 lbs. of contamination.

Finally, WQA endorses the construction of the Covina Irrigation Company's ("CICs") Baldwin Pumping Plant. In 2014, WQA assisted CIC in receiving a DDW grant for the construction of the treatment facility. In 2020, it is anticipated that CIC will finish construction and begin start-up testing.

2. SOUTH EL MONTE OPERABLE UNIT

The SEMOU covers approximately 8 square miles. It encompasses all of the city of South El Monte and portions of El Monte and Rosemead. The SEMOU is generally bounded by Interstate 10 to the north, Highway 60 to the south, Interstate 605 to the east, and San Gabriel Blvd to the west. Contamination in the SEMOU is predominantly VOCs 1,4-dioxane, and perchlorate. In general, VOC concentrations are highest in shallow groundwater near industrial facility source areas where releases have occurred. VOCs have also migrated downward into the intermediate aquifer zone. The VOCs

have migrated westward toward drinking water production wells as well as southward toward the WNOU. Some drinking water production wells have been impacted by groundwater contaminants and either shut down or equipped with wellhead treatment to reduce contaminant levels to drinking water standards.

The threat to the northwest has already impacted several critical water supply wells, primarily those owned by the City of Monterey Park (“CMP”), SGVWC and Golden State Water Company (“GSWC”). These water purveyors have had to implement treatment facilities in order to resolve their water supply crises. The other predominant threat is from contamination in the shallow aquifers that provide a continuous source of contamination that has traveled as far south as the Whittier Narrows Dam. Continued migration of the contamination past the Whittier Narrows Dam threatens many production wells and the sensitive recharge areas within the Central Basin. Immediate action is clearly needed to address these imminent threats.

To address the VOC groundwater contamination in the SEMOU, USEPA released its Interim ROD (“IROD”) (Appendix E) in September 2000. The IROD specifies extraction from the intermediate zone at or near CMP’s existing well No. 5, CMP’s existing well No. 12, SGVWC’s existing Plant No. 8 wellfield, and GSWC’s existing San Gabriel (SG1 & SG2) wellfield. USEPA’s plan also includes a new extraction well (CMP No. 15) northeast of CMP No. 12. USEPA’s goal is to contain the flow of contaminants and prevent exposure to downgradient pumping centers operated by CMP, SGVWC, and other purveyors. Although USEPA recommends the use of existing water supply facilities, the PRPs are not mandated to use these facilities in their response, nor are they obligated to integrate water supply with the required remedy.

In 2005 USEPA issued an ESD (Appendix E) for the SEMOU to include treatment of perchlorate in the intermediate zone and reserved the right to include treatment for 1,4-Dioxane and other ECs at a later date.

With the exception of perchlorate treatment, WQA’s prescribed actions for the SEMOU have, for the most part, been put into place and are consistent with USEPA’s proposed plan. They address specific concerns that (1) action needed to take place immediately to halt further migration into critical water supplies, (2) complications in the negotiations with the PRPs would delay USEPA’s implementation schedule, and (3)

PRPs may choose to fulfill their CERCLA responsibility to USEPA without addressing the need to restore water supplies. Specifically, the prescribed actions referenced below have and will address both the immediate threat and water supply crisis prevalent in the northwest portion of the OU and the long-term threat to Central Basin to the south.

To date, USEPA has lodged nine Consent Decrees (“CDs”) embodying settlements with 72 PRPs for costs associated with implementation of the SEMOU remedy. The funds recovered by USEPA will be used to reimburse affected water purveyors for future treatment and remediation costs associated with the continued operation of remedy wells and treatment facilities as described in the SEMOU remedy through a cooperative agreement between USEPA and WQA.

➤ *Intermediate Zone Remedy*

To address the threat presented in the northwest portion of the OU, WQA’s prescribed action (Figure 3) includes the existing VOC and perchlorate blending treatment facility at CMP No. 5 along with the existing VOC treatment facilities at CMP No. 12, SGVWC Plant 8 and GSWC SG1 & SG2. Additionally, the plan specifies that water from CMP remediation Well No. 15 be treated at the existing treatment facility at CMP No. 12.

This plan promotes the beneficial use of the treated water by the appropriate water purveyors. To that end, WQA entered into funding contracts in the year 2000 with CMP, GSWC and SGVWC to construct VOC treatment projects ahead of enforcement action by USEPA.

SGVWC’s Plant No. 8 VOC treatment facility was completed in October 2000 and is currently operating. Rising levels of VOCs in the wells at Plant 8 caused the DDW to require SGVWC to install a secondary barrier treatment system. Construction of a LPGAC secondary barrier treatment system to polish the air stripper effluent was completed in 2005. As part of the amended water supply permit issued to SGVWC by DDW to operate the Plant No. 8 VOC treatment facility, a sentinel well, SEMW09 had to be installed upgradient and within two years travel time of the Plant No. 8 wells. The primary purpose of the sentinel well is to provide an “early warning” of emerging

contaminants that might affect the operation of the Plant No. 8 VOC treatment facility. A 2005 sample of SEMW09 detected 1,4-Dioxane below 1 ppb however, all subsequent sampling events for 1,4-Dioxane have been non-detect.

SGVWC's recent analyses of onsite production well 8D revealed and continued to confirm the presence of perchlorate and 1,4-Dioxane at concentrations just below the DDW MCL and Notification Level ("NL"), respectively. Because the current Plant No. 8 VOC treatment facility is not capable of removing perchlorate or 1,4-Dioxane, SGVWC has designed and plans to construct a 5,000 gpm, single pass ion exchange treatment facility for the removal of perchlorate when levels reach 50% of the MCL. In addition, SGVWC constructed an advanced oxidation ultraviolet ("UV") light treatment facility for the removal of 1,4-Dioxane. The addition of the UV light treatment facility will ensure continued operation of the Plant No. 8 VOC treatment facility and continued remediation of the SEMOU groundwater. The UV system is undergoing testing for a 97-005 amended water supply permit.

Both CMP's and GSWC's VOC treatment facilities for Well No. 12 and SG1 & SG2, respectively, were completed. However, the wells for both plants were subsequently found to be contaminated with perchlorate and immediately shut down. In 2004, CMP completed construction of a perchlorate treatment plant for Well No. 12. In addition to the VOC treatment, GSWC operated an interim perchlorate treatment facility for Well SG1 only SG2 was removed from service. However, based on two years of non-detects for perchlorate contamination, GSWC and CMP have deactivated their perchlorate treatment systems.

In 2012, GSWC returned Well SG2 to service and restore plant capacity. CMP has constructed additional piping to bypass their perchlorate treatment equipment while maintaining it in a state of readiness if future perchlorate treatment is needed. Both projects are endorsed as they are designed to restore lost water supply and protect existing downgradient production wells.

In 2018, CMP finished construction of its centralized UV treatment facility at its Delta site. The centralized treatment facility will end the need for redundant VOC wellhead treatment and address 1,4 dioxane issues. Additionally, this new facility will

streamline CMP's production and distribution while providing an overall decrease in CMP's treatment and remediation costs.

As of September 30, 2019, the intermediate zone remedy projects have treated approximately 175,545.07 acre-feet of contaminated groundwater and have removed approximately 23,890 lbs. of VOCs and perchlorate.

➤ Other Intermediate Zone Remedies

In addition to the extraction and containment projects identified in the SEMOU IROD, purveyors in the SEMOU had to construct treatment facilities at several of their wells to ensure a safe and reliable water supply in the event that the IROD projects are temporarily removed from service. Although these projects are not identified as SEMOU remedy projects by USEPA they do contribute to the remedy by removing mass contamination within the groundwater thus improving the regional groundwater basin as a whole.

In 2004, CMP constructed a VOC treatment facility at its Delta Plant to treat VOC contamination that was recently discovered in CMP Well Nos. 1, 3, 10 and Fern.

In 2005, SGVWC has constructed a VOC treatment facility at its Plant G4 located within the SEMOU.

In 2016, GSWC finished construction of its Garvey Well No. 3 VOC treatment facility.

These actions, as prescribed by this plan, will accelerate removal of contaminant mass and help to prevent migration of contamination into critical water supplies. In addition, integrating the cleanup action with the surrounding water supply will mitigate the current water supply crisis caused by the presence of the contamination.

As of September 30, 2019, other intermediate zone projects have treated approximately 36,854.34 acre-feet of contaminated groundwater and have removed approximately 1,826.50 lbs. of VOCs.

➤ Shallow Zone Extraction

Part of WQA's prescribed response to address the threat to Central Basin was the South El Monte Shallow Extraction Barrier ("South El Monte Barrier"). The South El

Monte Barrier was constructed under a voluntary partnership including WQA, several of the local businesses and the City of South El Monte. The objective of the response action was to halt the flow of contaminants near the primary source areas within the SEMOU.

The project consisted of two extraction wells, treatment facilities and discharge pipes which allow the treated water to infiltrate back into the aquifer downgradient of the extraction. The project was originally constructed to remove VOCs and later modified with ozone/peroxide treatment to remove 1,4-Dioxane. Given that there are no water supply wells directly affected in the immediate areas and that water from the shallow aquifer is not normally used for potable use by the purveyors, low priority was given to mandating beneficial use of the water.

In 2004, the WQA discontinued operation of the South El Monte Barrier after it was determined that USEPA's fund-led Whittier Narrows project (see the Whittier Narrows Operable Unit ("WNOU") portion of this plan) would halt the contaminant migration farther downgradient. While this situation was not the preferred alternative, the WQA determined that no water supplies would be affected by discontinuing the project. Additionally, funds made available by discontinuing the South El Monte Barrier were redirected to contain an alternate source of contaminants that was threatening water supplies.

In 2005, the WQA initiated design on a shallow groundwater barrier to be constructed in and around the area of the former J.A. Bozung facility. The WSGRF project will remove a hot spot plume of VOCs and 1,4-Dioxane that threatens downgradient water supplies. The WSGRF started full-time operation in December of 2008 with treatment and remediation estimated to continue through 2020.

In June of 2019, WQA completed field work of its Proposition 1 Expanded Site Investigation Planning Project upgradient of the WSGRF. The project consisted of seven Hydropunch and CPT locations along with some compound specific isotopic analysis of selected contaminants. It is anticipated that the results of the project will lead to a robust enhancement of the WSGRF.

As of September 30, 2019, the treatment facility has treated approximately 325.60 acre-feet of contaminated groundwater and has removed approximately 187.10 lbs. of VOCs and 1,4-Dioxane.

3. EL MONTE OPERABLE UNIT

The El Monte Operable Unit (“EMOU”) covers approximately 10 square miles in the south central portion of the San Gabriel Basin in eastern Los Angeles County. The OU is generally bounded by Interstate 10 to the south, Rosemead Blvd to the west, and Santa Anita Ave and the Rio Hondo to the east. The El Monte OU includes portions of the cities of El Monte, Rosemead and Temple City. This OU is generally characterized by shallow groundwater VOC contamination that is mostly contained in the upper 100 feet of the aquifer. VOCs have also spread downward into the deep zone. VOCs in the deep zone have migrated downgradient towards some drinking water production wells which necessitated that some wells be shut down or equipped with wellhead treatment to reduce contaminant levels.

The City of El Monte (“CEM”), in particular, lost several wells and experienced a shortage of supply. New sources of supply, either from new cleanup facilities or reactivation of existing supplies are greatly needed to enhance and secure the local water supply situation. WQA has provided assistance by leasing the CEM four surplus LPGAC vessels from past WQA projects.

To provide long-term protection of these supplies, immediate actions were needed to cut off and contain the movement of contaminants in the shallow aquifer. Elimination of the high concentrations of contaminants near the sources is necessary to provide for rapid reduction of mass from the aquifer and establish long-term protection of downgradient water supplies. To address this emergency need in 1997 WQA prescribed the immediate implementation of two shallow extraction barriers to stop the flow of contamination on the western and eastern portion of the OU. Anticipating that this type of removal would be required, WQA and many of the PRPs for the EMOU executed agreements to fund the construction of these projects. As part of this early

response, WQA sponsored three components (extraction and treatment at the Clayton Manufacturing facility and individual extractions with centralized treatment for Hermetic Seal, and Crown City Plating facilities) which operated for several years. Immediate implementation of the shallow extraction barriers ahead of USEPA's mandate will complement these other early responses and help to accelerate the removal of mass from the Basin and prevent the further migration of contamination into critical groundwater supplies.

In June 1999, USEPA released its IROD (Appendix E) which requires containment of the shallow contaminant plume on the western and eastern sides of the OU and containment of the deep contaminant plume on the northwestern and southeastern edges of the OU. In 2002, USEPA released an ESD (Appendix E) that requires the containment of emerging chemicals in addition to VOCs. In 2004, due to unrest within the EMOU PRP group, USEPA entered into a CD effectively dividing the PRPs into two distinct work parties, the West Side Performing Settling Defendants ("WSPSD") and the East Side Performing Settling Defendants ("ESPSD").

As a result of the elevated levels of Nitrates and Total Dissolved Solids ("TDS") in both west and east shallow zone extraction projects, local water purveyors cannot integrate the treated water into the local supply. Thus, WQA prescribes that, to the extent possible, the water extracted from the shallow extraction projects be put to beneficial use for one of the following alternatives: (1) potable source through blending, (2) industrial reuse, (3) re-injection to the groundwater basin, or (4) used as a reclaimed water source. If no beneficial end use is available and all alternatives have been exhausted the treated water may be discharged to a nearby channel if permitted by LARWQCB and MSGBW's rules and regulations.

For the shallow zone remediation, the WSPSD is discharging its treated water to the adjacent Eaton Wash under an NPDES permit issued by the LARWQCB and the ESPSD will be re-injecting all shallow zone treated water upgradient of the extraction wells under an LARWQCB permit.

Together, all of these facilities will serve to contain the migration of the contamination in the intermediate (potable) aquifers and prevent the further spread of contamination into critical groundwater supplies. Requiring the beneficial use of shallow

zone treated water will enhance the local water supply and help to mitigate the current water shortage caused by impairment of water supply wells.

In 2016, USEPA required both work parties to work together and develop a comprehensive workplan to address regional CrVI contamination within the EMOU. WQA is supportive of this joint effort and will provide any and all assistance necessary to fully characterize CrVI contamination within the EMOU.

➤ West Side Remedy

The WSPSD is responsible for containment of the western shallow zone contaminant plume (Figure 4) and the containment of the northwestern deep zone plume (Figure 5). Containment of the western shallow plume will be accomplished via six extraction wells and a centralized treatment facility. The treatment facility will be designed to treat not only VOCs but all emergent chemicals (“ECs”) to below drinking water standards. Construction of the western shallow zone treatment facility, extraction wells and pipeline was completed in January 2012.

In 2018, due to the decline in the water table in the area the WSPSD’s plan to enhance the shallow zone remedy by installing 8 new extraction wells.

As of September 30, 2019 the WSPSD shallow zone treatment system has treated approximately 418.83 acre-feet of contaminated groundwater and has removed approximately 39.30 lbs. of VOCs, perchlorate, nitrate and hexavalent chromium.

The existing GSWC Encinita Plant treatment facilities, owned and operated by GSWC and partially funded by the WSPSD, along with a VOC treatment facility, previously owned and operated by Adams Ranch Mutual Water Company (“ARMWC”), will help address the deep zone contaminant plume in the northwestern sector. Both deep zone projects received federal reimbursement from WQA.

In 2016, ARMWC was acquired by the California American Water Company which has ceased operation of the VOC treatment facility. That leaves GSWC’s Encinita Plant as the singular operating deep zone remedy project on the west side of the EMOU.

As of September 30, 2019, the west side deep zone remedy project has treated approximately 31,314.09 acre-feet of contaminated groundwater and has removed 750.40 lbs. of VOCs.

➤ East Side Remedy

The ESPSD is responsible for containment of the eastern shallow zone contaminant plume (Figure 4) and the containment of the southeastern deep zone contaminant plume (Figure 5). Containment of the eastern shallow plume will be accomplished via five extraction wells, a centralized treatment facility and three re-injection wells. The treatment facility will be designed to treat not only VOCs but all ECs. The east side shallow zone remedy became operational in March 2015.

As of September 30, 2019, the east side shallow zone remedy project has treated approximately 132.94 acre-feet of contaminated groundwater and has removed 25.00 lbs. of VOCs.

In 2013, ESPSD in conjunction with CEM installed three extraction wells in the intermediate zone aquifer in the southeastern sector and constructed a centralized treatment facility to control migration of low levels of VOCs. The treated water will be conveyed into CEM's existing distribution system in the area. WQA has provided the ESPSD federal reimbursements for their projects. The east side deep zone remedy project finished construction and is in the process of the required 97-005 amended water supply permit testing.

In 2019, CEM received its 97-005 amended water supply permit for the treatment facility and is using the treated water in its domestic supply. As of September 30, 2019, the east side deep zone remedy project has treated approximately 3,353.90 acre-feet of contaminated groundwater and has removed 172.80 lbs. of VOCs.

➤ Other Intermediate Zone Remedies

Similar to the SEMOU, affected purveyors in the EMOU had to construct additional treatment facilities. Specifically, the CEM constructed three VOC treatment facilities at wells 2A, 10 and 12 to ensure safe and reliable supply to their customers. Although these projects are not identified as EMOU remedy projects by USEPA they do

contribute to the remedy by removing mass contamination within the groundwater thus improving the regional groundwater basin as a whole.

As of September 30, 2019, CEM wells 2, 10 and 12 have treated approximately 34,031.37 acre-feet of contaminated groundwater and have remove 1,366.60 lbs. of VOCs.

4. WHITTIER NARROWS OPERABLE UNIT

Whittier Narrows is a 1.5-mile gap in the bedrock hills that separates the San Gabriel and Central Basins and represents the primary discharge point for groundwater and surface water flow exiting the Main San Gabriel Basin. USEPA designated Whittier Narrows as an OU specifically to address groundwater contamination flowing out of the Main San Gabriel Basin, through Whittier Narrows, into the Montebello Forebay portion of the Central Basin. The WNOU is bounded to the north by the South El Monte OU (at Highway 60) and to the south by the Montebello Forebay portion of the Central Basin (near the Whittier Narrows Dam).

VOCs, 1,4-dioxane, and NDMA are the primary groundwater contaminants found in the Whittier Narrows Operable Unit (WNOU). USEPA has not identified any significant sources of VOC and 1,4-dioxane contamination in the WNOU. Hence, the VOC and 1,4-dioxane contamination is migrating into the WNOU from upgradient industrial sources within the Main San Gabriel Basin. The contamination being addressed by the interim remedy largely appears to originate from the South El Monte OU, located immediately north of the WNOU.

In 1999, USEPA issued an amendment to the ROD for the WNOU which identifies the need for a groundwater extraction barrier approximately ¼ mile north of the Whittier Narrows Dam (Appendix E) to halt the flow of contamination traveling towards Central Basin. To form an effective containment barrier, five or six extraction sites were required to remove and treat a total of about 12,000 gpm extracting from both the shallow and intermediate zone aquifers. Because USEPA was implementing this remedy under its “fund lead” authority, the responsibility for administering the design, construction and operation of the comprehensive cleanup facility was USEPA. In 2002, USEPA finished construction of the comprehensive cleanup facility.

In recognition of the immediate threat to downgradient water supplies in Central Basin and the potential for significant delays associated with a large-scale treatment facility, WQA had prescribed a phased approach (Figure 6) that addressed the most severe threats first with an immediate early action at well EW4-3. WQA prescribed that well EW4-3 be integrated into the comprehensive potable treatment facility proposed by USEPA. WQA implemented the first component of this early action with the construction of a temporary treatment facility located at well EW4-3. Water from well EW4-3 was treated and temporarily discharged into nearby surface drainages until the full-scale remedy could be implemented. USEPA has completed construction of their centralized treatment facility and integrated well EW4-3 into their extraction system.

In 2002, the City of Whittier reached an agreement with USEPA to take most of the water extracted from the intermediate zone aquifer and use it as a potable supply for its customers. Water from the shallow zone is extracted at a reduced rate and is being discharged into Legg Lake.

In 2006, USEPA conducted a five-year review of the WNOU remedy to ensure that it remains protective of human health and the environment. USEPA concluded that the remedy for the WNOU is protective of human health and the environment.

In 2011, USEPA conducted its second five-year review of the WNOU remedy. USEPA concluded that in the shallow zone the extent of contamination has shrunk dramatically since the remedy construction was completed in 2002 and that contaminant concentrations have continued to decline consistently over the last five years (2006 to 2010). There are currently no shallow zone MCL exceedances in the WNOU, indicating that continued extraction is not needed to meet the goals of the remedy and was ceased in 2013.

As of September 30, 2019, the WNOU shallow zone remedy project has treated approximately 30,066 acre-feet of contaminated groundwater and has removed approximately 1,619 lbs. of VOCs.

USEPA's second five-year review also reports that in the intermediate zone the extent of intermediate zone contamination downgradient of the WNOU extraction wells has declined dramatically since remedy extraction began in 2002. These continued concentration declines have occurred despite intermediate zone extraction averaging

less than 3,300 gpm over the last five years. This provides strong evidence that the remedial objectives (hydraulic control of migrating contamination) can be met at a lower extraction rate than the current intermediate zone target extraction rate of 6,000 gpm.

In May of 2013, DTSC assumed operation of the WNOU remedy from USEPA. DTSC subsequently entered into a long term operational agreement with SGVWC in which SGVWC will use the treated intermediate zone water supply in its service area. Currently SGVWC is operating the treatment facility and discharging the water into Legg Lake while additional infrastructure is being constructed to allow SGVWC to take the treated water into its existing distribution system.

In 2018, DTSC received Proposition 1 funding that will be used to add additional infrastructure to return the WNOU intermediate zone remedy back to a potable water supply project.

As of September 30, 2019, the WNOU intermediate zone remedy project has treated approximately 56,458.65 acre-feet of contaminated groundwater and has removed approximately 1,832.20 lbs. of VOCs.

5. PUENTE VALLEY OPERABLE UNIT

The Puente Valley Operable Unit (“PVOU”) includes most of the City of Industry, portions of the City of La Puente, and portions of unincorporated Los Angeles County. Groundwater and soil are contaminated with various VOCs, 1,4-dioxane, perchlorate, and hexavalent chromium. Groundwater contamination occurs primarily in the shallow and intermediate groundwater zones of the aquifer, with most of the contaminant mass found in the shallow groundwater zone. VOC concentrations exceed drinking water standards in both the shallow and intermediate zones.

In 1998, the USEPA released the Interim ROD for the Puente Valley Operable Unit (“PVOU”) that described, in part, USEPA’s selected remedy for both shallow and intermediate zone contamination. It stated that the remedial action for the shallow zone shall prevent contaminated groundwater from migrating beyond its current lateral and vertical extent as described in the Remedial Investigation/Feasibility Study (“RI/FS”). The remedial action selected by USEPA for the intermediate zone shall prevent contaminated groundwater from migrating beyond the SGVWC B7 Well Field Area (an

area defined by 14 wells in the immediate area of SGVWC's B7 Well Field).

Furthermore, perchlorate was recently discovered in the B7 Well Field Area causing USEPA to further evaluate remedy options.

In 2005 USEPA issued an ESD for the PVOU mandating treatment for all ECs in both the shallow and intermediate zones (Appendix E).

In 2009, the PVOU remedial activity was stalled due to conflicting interpretations by two separate divisions of the USEPA, namely the Superfund Division and the Water Division which enforces the Clean Water Act. As a result, USEPA required additional feasibility studies to be conducted to re-evaluate alternatives for the disposition of the treated water in both the shallow and intermediate zone remedies.

➤ *Shallow Zone North Remedy*

In 2005 USEPA entered into a CD with United Technologies Corporation ("UTC") to perform the shallow zone remedy north of Puente Creek in the PVOU. The shallow zone remedy will consist of the installation of ten extraction wells, associated pipelines and a centralized treatment facility at the mouth of the valley (Figure 7). In 2008, UTC completed the installation of all extraction wells and is currently securing pipeline access agreements. Since water from the shallow zone is not suitable for potable use due to high Nitrates and TDS, UTC originally planned to discharge the treated water into a neighboring creek under a discharge waiver from the LARWQCB. However, recent changes to regulations have eliminated that discharge option. .

In 2011, due to the continued migration of the contaminant plume USEPA requested that the shallow zone remedy be completed in phases. Phase I consists of migration control of the eastern plume via extraction from well S05, treatment for VOCs and ECs and re-injection of the treated water into the shallow zone aquifer.

In 2019, UTC amended its Consent Decree with the USEPA to allow re-injection as a potential end use. With this modification UTC has ramped up its remedial design of the shallow zone north remedy.

➤ *Shallow Zone South Remedy*

The Northrop Grumman Systems Corporation (“Northrop”) is responsible for cleanup of the shallow contamination south of Puente Creek emanating from the former Benchmark Technology Facility. The Benchmark facility is understood to be the largest single source of VOC and 1,4-Dioxane contamination in the eastern portion of the shallow aquifer at the mouth of the Puente Valley. This portion of the shallow zone remedial action was part of the remedy in the 1998 ROD. In 2003, the groundwater contamination downgradient of the former Benchmark facility was to be addressed by a facility-specific cleanup through a Cleanup and Abatement Order (“CAO”) administered by the LARWCQB. However, the cleanup was never implemented and in May 2010, lead agency status was transferred to USEPA. Therefore, the groundwater contamination downgradient of the Benchmark facility is again being addressed as part of the shallow zone remedy.

➤ *Intermediate Zone Remedy*

In 2008, Northrop finished construction of the six extraction wells and a portion of the pipeline that were approved by USEPA as part of the intermediate zone remedy at the mouth of the valley (Figure 8). At that time the remedy called for contaminated water to be treated at SGVWC’s existing Plant B7 VOC facility. Treatment would consist of an existing air-stripper, liquid phase granular activated carbon, ion-exchange and advanced oxidation/ultraviolet technologies for the treatment of VOCs and all ECs. In addition, Northrop has reached an agreement in principal for SGVWC to accept the treated water and to provide a blending component with SGVWC’s Plant B24 wells. SGVWC has constructed a transmission main from its B6 service area to its Plant B24 to facilitate blending of the PVOU treated water.

In 2013, water quality samples indicated elevated levels of TDS and nitrates that would require a much greater volume of blend water to be compatible with SGVWC’s distribution system. As a result it was determined that additional treatment consisting of reverse osmosis would be required. As a result SGVWC’s Plant B7 site is not likely to accommodate the additional treatment because of its size. Northrop immediately began working with the City of Industry to purchase an alternative site that would be large enough for all treatment facilities.

In 2014, Northrop acquired a property from the City of Industry large enough to site both Intermediate Zone and Shallow Zone South treatment facilities. The current conceptual plan is to have LPVCWD operate the Intermediate Zone Remedy and utilize the treated water in its distribution system.

Pursuant to USEPA's request and agreement with Northrop, SGVWC in October 2016, properly destroyed Well B7C and decommissioned the accompanying treatment system. SGVWC's Well B11B and accompanying treatment system continues to operate in the PVOU.

In 2018, Northrop will complete the construction of an additional extraction well for a total of 7 wells to capture contamination at the toe of the plume. In addition it is anticipated that Northrop will begin construction of the treatment facility.

As of September 30, 2019, Plants B7 and B11 have treated approximately 96,678.98 acre-feet and have removed approximately 5,159.40 lbs. of VOCs.

6. AREA 3 OPERABLE UNIT

The Area Three Operable Unit ("ATOU") covers 19 square miles in the western portion of the San Gabriel Valley, Area 3 is located west of Rosemead Blvd, north of I-10, and south of the Raymond Fault (which separates the main San Gabriel Basin from the Raymond Basin to the northwest). Area 3 includes all of the City of San Gabriel, as well as portions of the Cities of Alhambra, Rosemead, Temple City, San Marino and South Pasadena. VOCs have been detected in production wells and safeguards are in place to ensure acceptable drinking water quality.

ATOU groundwater is contaminated with VOCs, perchlorate, and nitrate at concentrations exceeding state and federal water quality standards.

In 1999, USEPA began RI/FS investigations in the ATOU. The purpose of the RI/FS is to determine the nature and extent of soil and groundwater contamination and to identify likely sources. USEPA has completed the installation of additional monitoring wells in order to collect additional data to assess the extent of the contamination and its relationship to suspected source areas. USEPA released the RI in 2010 and is currently evaluating the results to identify cleanup options. Conclusions of the RI will form the basis of an FS to evaluate cleanup alternatives to prevent and eliminate the

release or threat of release of contaminants at the site. USEPA anticipates the release of the FS sometime mid-2020. The focus of the FS is to develop, screen and evaluate cleanup alternatives. During development of the FS, USEPA continues investigations to address remaining uncertainties identified in the RI

ATOU VOC contamination has impacted a number of the City of Alhambra's ("Alhambra") wells. In 2001, Alhambra started operation of Phase I of its pump and treat program. Phase I consists of a VOC treatment facility at Well No. 7. In 2008, Alhambra finished most of the construction of Phase II of its pump and treat program. Phase II consists of VOC and Nitrate treatment technologies at Well No. 8 and has the ability to treat contaminated groundwater from Wells Nos. 8, 11 and 12. Alhambra finished construction of Phase II in 2008 and it is operational. All water treated from both Phase I and Phase II projects is used by Alhambra in its distribution system (Figure 9). Both phases of the Alhambra's pump and treat program received reimbursement from WQA's federal funding programs. In addition, California American Water Company (CAWC) has informed USEPA of its rising contamination found at its Rosemead and Grand wells located in the south eastern ATOU.

In 2019, the City of South Pasadena ("CSP") responded to new regulations that more strictly limit the MCL of 1,2,3-TCP. The CSP completed construction of its 1,2,3-TCP treatment facility at the Wilson wellsite.

As of September 30, 2019, Alhambra's treatment facilities have treated approximately 35,286.25 acre-feet of contaminated groundwater and have removed approximately 1,162.30 lbs. of VOCs and nitrates.

APPENDIX B

Appendix B

NON-OPERABLE UNIT SPECIFIC PLANS

The overwhelming amount of time spent planning remedial actions is understandably focused on projects that are related to a specific OU, i.e., Baldwin Park, El Monte, South El Monte, Whittier Narrows, and Puente Valley. This is because USEPA's enforcement actions in these areas make headlines and demand public attention. However, necessity for cleanup in the Basin is not limited to the specific locations designated by USEPA. Because the USEPA mandate is limited to defining only how a plume of contamination may be contained, their RODs fail to address the remedial actions necessary to restore water supply wells that are not a part of their official cleanup plan. Furthermore, many contaminated water supply wells are facing imminent shutdown or have already been shut down and remain in this state largely due to overburdened regulatory agencies. WQA prescribes the treatment of the water at these wells to restore the water supplies and to remove contaminant mass from the Basin thus enhancing future water supplies. Table 4 provides a list of contaminated wells that are not part of any OU specific plan. Figure 10 shows the locations of these wells relative to Basin contamination.

Over the past several years the City of Monrovia ("Monrovia") has experienced rising levels of VOCs at their Myrtle Well Field. In 2007, Monrovia finished construction of a VOC treatment facility to help contain contamination and restore lost water supply.

As of September 30, 2018, Monrovia's treatment facility has treated approximately 68,407.88 acre-feet of contaminated groundwater and has removed approximately 1,165.00 lbs. of VOCs.

In addition to Monrovia, the City of Arcadia had to construct a VOC treatment facility at their Longden Well Field directly down gradient from the Monrovia Well Field and is currently investigating the need for additional treatment at their Live Oak Well.

As of September 30, 2018, Arcadia's Longden treatment facility has treated approximately 70,385.37 acre-feet of contaminated groundwater and has removed approximately 740.50 lbs. of VOCs.

APPENDIX F

SAN GABRIEL BASIN WATER QUALITY AUTHORITY
Policy and Procedures Manual

ADMINISTRATIVE PROCEDURES

No. 38

Date: 2/12/01 Revised: 11/21/05

WQA PROJECT PARTICIPATION

Purpose

WQA's focused role is primarily to facilitate projects and to seek and provide funds for remediation projects in the San Gabriel Valley. As a public agency, WQA is accountable to the general public. Therefore, the WQA shall apply a consistent process to provide opportunities for input by the public and to qualify projects for WQA participation.

The WQA will also seek to recover costs from potentially responsible parties (PRPs), whenever practicable and consistent with the policies and procedures of the WQA. To assist in the success of such cost recoveries, the WQA will evaluate the projects submitted to determine whether the projects are "necessary" and "consistent" with the National Oil and Hazardous Substances Pollution Contingency Plan (NCP). For cost recovery purposes, remediation projects will be considered "necessary" if there is evidence of a release of hazardous substances, the project is designed to mitigate the impact of such releases and the project is needed to meet regulatory requirements for remediation and/or water supply. The determination of necessity shall be based on data of sufficient quality and quantity to satisfy the WQA. Remediation projects will be considered "consistent" with the NCP if the remediation project is in substantial compliance with the applicable requirements of the NCP and results in a CERCLA-quality clean-up. Specific potentially applicable NCP requirements are addressed below.

Criteria to which a proposed project shall be measured, but not required, are as follows:

- Project conforms and furthers the objectives of WQA's Section 406 Plan or the intent thereof
- Ranking on priority list if multiple requests are competing for available funds
- Project is "necessary" and "consistent" with the NCP
- Requesting party to pay no less than 25% of capital costs
- Funding for operation and maintenance secured from funds other than WQA assessment
- Implementation of construction anticipated within one year of executed agreement

Phase I

A written request for WQA project participation by a Project Committee or any other entity shall be considered by the full board on a preliminary basis. Staff shall identify potential funding sources and shall identify all of the criteria the proposed project meets. If approved by a simple majority of the full board, staff will then allocate resources to implement Phase II. Staff shall begin the process of determining whether the project is a California Environmental Quality Act (“CEQA”) Project and, if so, whether it is exempt from CEQA requirements.

Phase II

- WQA’s staff engineer shall prepare a technical report for review by the WQA Engineering Committee.
 - The report shall analyze and review all pertinent documentation, including, but not limited to, WQA’s Section 406 Plan, U.S. EPA’s documents, whether the project is “necessary” and “consistent” with the NCP, Watermaster’s Section 28 Application and documentation supporting project cost estimates provided by the project owner.
 - The report shall present the alternatives considered and an analysis of the cost and feasibility of such alternatives.
 - The report shall also present the basis for the selection of the proposed alternative.
- In the event costs are recovered for project capital and/or O&M from PRPs, a separate agreement may be developed, independent of or jointly with, the affected water purveyor(s). Such agreement and the terms thereof shall supersede any of the terms contained within this procedure. This may include allocation of direct and/or indirect labor costs, overhead, etc. If such agreement is silent, then terms contained within this section (Phase II) shall have primacy.
- WQA staff, in coordination with WQA legal counsel and the requesting party or project committee, shall develop a funding agreement or FFPA letter agreement for review by the WQA Administrative/Finance Committee.
 - As part of the agreement, legal counsel shall identify project components which may not be legally recoverable from responsible parties, under CERCLA or the WQA Act, or reimbursable from proposed funding source(s), if any. Staff shall provide oral communications to the committee regarding legal counsel’s review and provide recommendations, if appropriate, for modifications to the project to address NCP requirements. The agreement may include the following minimum components:
 - A project description;
 - A statement of project costs which shall include an estimate for the major components of the project as well as estimates for internal costs such as direct labor, fringe benefits, and overhead.
 - Definition of capital and O&M costs (i.e., overhead, legal costs, contingency, etc.)
 - Allowable costs are those costs included in “WQA’s Allowable Project Capital and Operations and Maintenance Costs”, included as Attachment “A”.

- Internal overhead of all parties to the agreement may be included in the capital and O&M costs but cannot exceed **5% (Five percent)** of the total costs of the project. Each party shall be responsible for determining the legally acceptable rate of their respective overhead and for the documentation and accounting thereof.
- A maximum 10% contingency shall be considered a part of capital cost
- WQA's costs for CEQA compliance will be considered capital costs, unless expressly excluded.
- A process for payment of invoices;
- An agreement termination date;
- Change order provisions shall require approval by the project committee or parties to the agreement;
- Funding apportionments;
- Project owner shall be responsible for compliance with all state and federal regulatory requirements, contract bidding, and any other regulations pertinent to the respective funding sources [i.e., CEQA, USBR, competitive bidding, etc.]. WQA shall be responsible for the coordination of federal environmental requirements, if applicable, and will also assist the requesting party with any project-related required process to the extent needed, including serving as the lead agency for purposes of CEQA.
- The project owner shall work with the WQA to ensure that the project is managed consistent with the requirements of the NCP for remedial design, construction and operation and maintenance, if applicable.
- The project owner shall work with the WQA to assure that the remediation project conforms with a health and safety program consistent with 29 CFR 1910.120, if applicable.
- Modification to the agreement shall require approval by parties to the agreement.

PHASE III

- In conjunction with the preparation of the staff engineer report and funding agreement, if the project is not exempt from CEQA requirements, staff shall begin an initial study required by CEQA. All required CEQA documentation shall be completed before the implementation of Phase III.
- A public notice of the proposed project will be mailed, by the WQA, to interested individuals and published in a local newspaper. The notice will include a brief summary of the proposed project and the proposed funding for the project and describe how interested individuals can provide input to the WQA. A public meeting shall be held, within the comment period, to describe the proposed project and the proposed funding by the WQA. At least 30 days notice shall be provided to receive public comments. A summary of the WQA staff engineer's report, describing the proposed project, will be made available to interested members of the community, and be available at the public meeting and at the WQA offices.

- A record of the public meeting shall be kept and a written summary of the significant public comments shall be prepared and presented to the WQA Board.
- Based on the original proposal and any modifications needed as a result of public input the final proposed agreement will be presented to the WQA Board.
- If the proposed project changes significantly, based on public comments, another public comment period will be afforded to interested parties.

Phase IV

- Approval for execution of a proposed agreement by the Executive Director shall be provided by a simple majority of the full board.
 - A written agenda submittal providing background and project summary and the comments received from the public shall be provided to the full board and shall include a draft funding agreement and the staff engineer report. The submittal shall certify that legal counsel has approved the draft agreement, unless a final review is required. In this case, staff may recommend approval contingent upon legal counsel's final approval. Any material changes shall require a subsequent approval by a simple majority of the board.

Phase V

- Project implementation shall require continuous WQA staff oversight.
 - Project invoices, regardless of the presence of a project committee, shall be processed through WQA's internal, multi-level review process to provide redundant oversight.
 - Bid documents shall be reviewed by WQA staff to verify that the project requirements are met by responsible bidders and that the chosen bidder is selected considering technical and managerial qualifications, experience, proposed costs and other relevant factors.
 - The remediation project will be designed, constructed and operated consistent with the proposal approved by the WQA Board.
 - If the remediation project that is constructed differs significantly from the proposed remediation project submitted for public comment, an explanation of significant differences shall be prepared and presented to the public for comment in a manner consistent with the original proposal.
 - The project owner shall work with the WQA to verify that the remediation project continues to conform with a health and safety program consistent with 29 CFR 1910.120
 - The project owner shall work with the WQA to establish a system for project implementation that includes accurate accounting of costs, proof of payment of and maintenance of invoices and other cost accounting documentation.
 - Progress reports shall be provided by WQA's staff engineer at Engineering Committee and full board meetings once per month minimum.

ATTACHMENT A

SAN GABRIEL BASIN WATER QUALITY AUTHORITY ALLOWABLE PROJECT CAPITAL AND OPERATION AND MAINTENANCE COSTS

ALLOWABLE PROJECT CAPITAL COSTS

(Copies of Invoices Required on Items 1-9)

1. Outside Engineering & Design
2. Equipment
3. Contractor/Sub-Contractor
4. Energy/Utilities
5. Permit Fees
6. Laboratory Costs
7. Additional Required Property & Liability Insurance
8. Outside Legal Fees
 - a. General preparation and review of project documents (RFPs, contracts, etc.)
9. Land/Property
10. Interest
11. Direct Labor & Fringe (Summary Breakdown Req'd.)
 - a. Directly tracked labor (timesheets req'd.)
 - b. Medical benefits
 - c. Worker's Compensation
 - d. Payroll taxes
 - e. Pension/Retirement
 - f. Other employee benefits
12. Overhead (Summary Breakdown Req'd.)
 - a. Property taxes
 - b. General Property & Liability Insurance
 - c. Administrative & Management Salaries & Benefits
 - d. Vehicle Expense (not mileage)
13. Other Tracked Direct Costs (Breakdown Documentation Req'd.)
 - a. Postage
 - b. Shipping
 - c. Copies/Facsimiles
 - d. Phone
 - e. Vehicle mileage
 - f. Other tracked direct costs
14. Unique cost items for a specific project (Requires approval by WQA)

ALLOWABLE PROJECT OPERATION & MAINTENANCE COSTS

(Copies of Invoices Required on Items 1-9)

1. Laboratory Costs
2. Consumables
3. Energy/Utilities

4. Incremental energy/utilities costs (Treatment Plant)
5. Permit Fees
6. Contractor/Sub-Contractor
7. Outside Legal Fees
 - a. General preparation and review of project documents (RFPs, contracts, etc.)
8. Equipment
9. Additional Required Property & Liability Insurance
10. Direct Labor & Fringe (Summary Breakdown Req'd.)
 - a. Directly tracked labor (timesheets req'd.)
 - b. Medical benefits
 - c. Worker's Compensation
 - d. Payroll taxes
 - e. Pension/Retirement
 - f. Other employee benefits
11. Overhead (Summary Breakdown Req'd.)
 - a. Property taxes
 - b. General Property & Liability Insurance
 - c. Administrative & Management Salaries & Benefits
 - d. Vehicle Expense (not mileage)
12. Other Tracked Direct Costs (Breakdown Documentation Req'd.)
 - a. Postage
 - b. Shipping
 - c. Copies/Facsimiles
 - d. Phone
 - e. Vehicle mileage
 - f. Other tracked direct costs

APPENDIX G

Appendix G

MEMBER WATER DISTRICT PROJECTS

The WQA, in coordination with its three member water districts, USGMWD, TVMWD and SGVMWD, incorporates the following projects by reference. The projects are sponsored, administered and implemented by the water districts. It is WQA's determination that these projects: 1) directly benefit the Basin; 2) help augment WQA's groundwater cleanup activities; and therefore 3) help enhance the long-term reliability of the Basin's water supply.

<u>Description</u>	<u>Estimated Budget</u>
1) <u>Fulton Plant Water Resource Enhancements</u> Utilization of District's Fulton Property to develop groundwater well, nitrate removal facility, 1.0 MG reservoir, and appurtenant piping. (TVMWD)	\$4,000,000
2) <u>Covina Irrigating Company Water Treatment & Supply Plan</u> Upgrade of surface water treatment processes at Temple Plant and addition of a groundwater treatment facility and transmission pipelines. (TVMWD)	\$7,000,000
3) <u>Imported Water Spreading Connection at San Dimas Wash</u> Raw water service connection to MWD's Foothill Feeder to replenish groundwater in the Basin on behalf of Golden State Water Company. (TVMWD)	\$1,500,000
4) <u>Extension of PM-26 Replenishment Service Connection</u> Pipeline facilities and turnout from existing connection in Little Dalton Wash to Big Dalton Wash for enhanced groundwater replenishment opportunities in the Basin. (TVMWD)	\$2,000,000
5) <u>TVMWD – SGVMWD Interconnection</u> Raw water connection between District's Miramar Plant and nearby Azusa~Devil's Canyon Pipeline. (TVMWD)	\$1,750,000

- | | | |
|-----|---|--------------|
| 6) | <u>Alostia Connection</u>
Provide operational flexibility to Upper District/MWD to provide untreated imported water to Canyon Basin area. (SGVMWD) | \$2,000,000 |
| 7) | <u>Extension of SGVMWD Pipeline</u>
Provide groundwater recharge to Raymond Basin and to Eaton S.B. (SGVMWD) | \$10,000,000 |
| 8) | <u>Wellfield Outside of Alhambra Pumping Hole</u>
Provide alternative sources of supply to various purveyors to reduce the drawdown in the pumping hole area. Consists of new wells, pumps and transmission pipeline. (SGVMWD & USGVMWD) | \$10,000,000 |
| 9) | <u>Suburban Water Systems Improvements</u>
Infrastructure improvements including well(s) and transmission pipelines to convey groundwater. (USGVMWD) | \$5,000,000 |
| 10) | <u>New Spreading Ground Development</u>
Infrastructure improvements including well(s) and transmission pipeline to convey groundwater. (USGVMWD) | \$10,000,000 |

SAN GABRIEL BASIN WATER QUALITY AUTHORITY
SAN GABRIEL BASIN GROUNDWATER QUALITY MANAGEMENT AND REMEDIATION PLAN

Table 1 - Major WQA Activities and Milestones

Month	Year	Area	Activity/Milestone
Sept.	2018		WQA Participates as a founding partner of the 5th San Gabriel Valley Water Forum
Sept.	2018	PVOU	WQA held a groundbreaking ceremony for the Intermediate Zone Remedy**
Mar.	2018	SEMOU	SWRCB awards \$118,264 in Proposition 1 funding for the Whitmore Street Groundwater Remediation Facility Expanded Site Investigation**
Mar.	2018		WQA celebrates its 25th anniversary
Feb.	2018	EMOU	Eastside Intermediate Zone Remedy facilities completed
May	2018	BPOU	BPOU Project Agreement Extension Completed
Sept.	2016		WQA Participates as a founding partner of the 4th San Gabriel Valley Water Forum
Jan.	2016	EMOU	Eastside Shallow Zone Remedy facilities completed
Nov.	2015	All	Initiated comprehensive basinwide database cooperation between WQA, USEPA and Watermaster
Jul.	2015	All	Final Award for IRWMP funding from Prop 84
Apr.	2015	BPOU	Initiated BPOU Project Agreement Extension Negotiations
Nov	2014	ALL	WQA re-allocates \$5.9M in federal funding to qualified projects
Nov	2014	ALL	Proposition 1 approved by voters
Oct	2014		WQA Participates as a founding partner of the 3rd annual San Gabriel Valley Water Forum
July	2014	ALL	Los Angeles Regional Water Quality Control Board adopts WQA's basinwide NPDES Discharge Permit
April	2014	BPOU	WQA partners with Covina Irrigating Company in hosting a groundbreaking ceremony for CIC Baldwin Pumping Plant
Oct.	2013		WQA participates as a founding partner of the 2nd annual San Gabriel Valley Water Forum
Sept.	2013		Governor signs SB 429 extending WQA's sunset date to July 1, 2030
Jan.	2013	SEMOU	WQA concluded settlement agreements with 72 responsible parties encompassing 9 Consent Decrees
Dec.	2012	SEMOU	SWRCB awards \$950,646 to WQA for Whitmore Street Groundwater Remediation Facility**
Oct.	2012	EMOU	Dedication of the El Monte Operable Unit Westside Shallow Zone Remedy Project
Aug.	2012		WQA participates as a founding partner of the 1st annual San Gabriel Valley Water Forum
Apr.	2012	ALL	Secured \$10M in Proposition 84 funding for four projects
Jan.	2012	EMOU	Westside Shallow Zone Remedy facilities completed
Aug.	2011	ALL	WQA submitted applications on behalf of 5 projects for the second round of Proposition 84 funding
Jun.	2011	ALL	WQA launched its social media campaign on Facebook, Twitter and YouTube
Sept.	2010	ALL	AB153 passes to allow future WQA bond funding to be used for treatment and remediation
Mar.	2010	SEMOU	Initiated reimbursements from Consent Decree settlements
Mar.	2009	ALL	Congress passed H.R. 146 which included an additional \$50 million for the Restoration Fund
Oct.	2008	ATOU	City of Alhambra's Phase II treatment facility completed
Oct.	2008	SEMOU	Dedication of WQA's Whitmore Street groundwater remediation treatment facility
Nov.	2007	SEMOU	1-4 Dioxane & VOC Treatment Project completed at Bozung site**
Nov.	2007	SEMOU	Two Consent Decrees filed by U.S. EPA as a result of settlements between WQA, affected purveyors, several PRPs, U.S. EPA & DTSC.
Oct.	2007		Governor signs AB 1010 extending WQA's sunset date to July 1, 2017
Sept.	2007	SEMOU	SWRCB awards \$1.4M to WQA for project at Bozung site (capital & O&M)**
Jan.	2007	BPOU	San Gabriel Valley Water Company B5 treatment facility completed
Jan.	2007		Congressman Dreier Introduced HR 123 to raise authorization cap of the Restoration Fund by \$50M
Oct.	2007		City of Monrovia's Myrtle Wellfield treatment facility completed
Jun.	2006	SEMOU	Monterey Park Well No. 5 perchlorate blending facility completed
Aug.	2005	BPOU	Valley County Water District SA-1 treatment facility completed
Nov.	2004	SEMOU	San Gabriel Valley Water Company Plant No. 8 secondary barrier completed
Apr.	2004	SEMOU	Plant No. 8 sentinel well completed
Feb.	2004	SEMOU	Monterey Park Well No. 12 secondary barrier completed
Jan.	2004	SEMOU	Monterey Park Well No. 15 completed
Jul.	2004	BPOU	San Gabriel Valley Water Company B6 treatment facility completed
Jun.	2004		Proposition 50 passes and includes \$7M loan for WQA

Note: Groundwater remediation projects in **BOLD** were completed with funding participation from WQA. **Projects solely funded and operated by WQA.

SAN GABRIEL BASIN WATER QUALITY AUTHORITY
SAN GABRIEL BASIN GROUNDWATER QUALITY MANAGEMENT AND REMEDIATION PLAN

Table 1 (cont.) - Major WQA Activities and Milestones

Month	Year	Area	Activity/Milestone
Nov.	2003	SEMOU	Monterey Park Well Nos. 1,3,10 treatment facility completed
Oct.	2003	SEMOU	Monterey Park Well No. 12 Delta Plant perchlorate treatment facility completed
May	2003		Governor signs AB 334 extending WQA's sunset date to July 1, 2010
Apr.	2003	SEMOU	San Gabriel Valley Water Company G4 treatment facility completed
Mar.	2003	BPOU	BPOU Project Agreement completed
Feb.	2003	EMOU	Golden State Water Company Encinita Phase III treatment facility completed
Apr.	2002	SEMOU	Led negotiations with settling parties (G10 & G13) and administered settlement funds
Mar.	2001	SEMOU	Golden State Water Company SG1 & SG2 treatment facility completed
Apr.	2000	SEMOU	San Gabriel Valley Water Company Plant No. 8 treatment facility completed
Mar.	2000		WQA Board adopts the Amended San Gabriel Basin Groundwater Quality Management & Remediation Plan and updates it annually thereafter
Feb.	2000	BPOU	LPVCWD treatment plant construction completed
Jan.	2000	WNOU	Whittier Narrows Barrier project completed**
Aug.	1999	Area 3	Alhambra Phase I treatment facility completed
May	1999	SEMOU	Led development of ROD and implementation of projects
Apr.	1999	SEMOU	WQA-sponsored investigation and design study completed
Jan.	1999	ALL	Spear-headed legislative effort (H.R. 910) with San Gabriel Valley Water Association to acquire \$75M in federal funding to accelerate cleanup
Jul.	1999	SEMOU	Monterey Park Well No. 5 treatment facility completed
Jul.	1999	SEMOU	South El Monte Barrier project completed**
Jun.	1999	SEMOU	Monterey Park Well No. 12 air stripping treatment facility completed
Nov.	1998	EMOU	Golden State Water Company Encinita Phase I & II treatment facility completed
Oct.	1998	BPOU	WQA first to authorize \$1.5M to expedite LPVCWD Perchlorate and NDMA treatment facility construction and acquires 25% USBR funding
Mar.	1998	EMOU	Clayton Manufacturing treatment facility construction completed
Jul.	1998	EMOU	WQA sponsored investigation and design study completed
Jul.	1998	EMOU	WQA and PRPs form partnership to conduct voluntary design and implementation of early action cleanup
Sep.	1997	BPOU	WQA successfully acquires \$1.7M from a state administered escrow funds and reimburses BPOU producer for cleanup costs
Nov.	1996	EMOU	Crown City Plating/Hermetic Seal treatment facility construction completed
Feb.	1996	BPOU	State and Federal Environmental Documentation Completed for BPOU cleanup
Feb.	1996	BPOU	Final design and construction administration transferred to Three Valleys MWD
Jun.	1996	BPOU	Discovery of perchlorate contamination
Nov.	1995	SEMOU	WQA and PRPs form partnership to conduct voluntary investigations and remedy design study
May	1995	BPOU	Big Dalton treatment facility completed
Apr.	1995	BPOU	WQA and PRPs form partnership for voluntary pre-design leading to \$4.39M in contributions from PRPs
Feb.	1995	Monrovia	Monrovia treatment facility completed
Feb.	1995	EMOU	WQA and PRPs form partnership to conduct voluntary investigations and remedy design study
Aug.	1994	BPOU	WQA develops Consensus Approach plan integrating water supply and cleanup
Jun.	1993		WQA Board adopted the San Gabriel Basin Groundwater Quality Management & Remediation Plan (406 Plan)
Jan.	1992	BPOU	Arrow Well treatment facility completed
Sep.	1992		Governor signs SB 1679 which establishes WQA

Note: Groundwater remediation projects in **BOLD** were completed with funding participation from WQA. **Projects solely funded and operated by WQA.

ANNOTATIONS

- 1 Funding for Capital Projects and Treatment & Remediation ("T & R") Costs reflects funding obligations per current agreements including funds received to date and future anticipated funds.
- 2 The dollar amounts for future anticipated funds and estimated costs do not include an inflation factor. Although there are currently agreements in place for the funding of future Capital Projects and T & R Costs, the agreements do not specify the timing of the funding contributions, nor is the funding itself guaranteed.
- 3 The U.S. Environmental Protection Agency ("EPA") and the U.S. Department of Justice have lodged Consent Decrees which require Responsible Parties to pay a certain amount. WQA has entered into Cooperative Agreements with EPA for \$15.27M of these funds. EPA also granted \$2.65M of additional Superfund funding to the Cooperative Agreement. EPA is holding an additional \$5.75M from the Consent Decrees which will be added to the cooperative agreement at a future date.
- 4 The BPOU agreement covers Capital Projects as well as T & R Costs for operations through 2027. Treatment costs shown above are projected to be ongoing for an additional 5 to 10 years.
- 5 Area Three Operable Unit (ATOU) does not currently have a source of funding for T & R Costs. Treatment is projected for 15 years.
- 6 Funding for Capital Projects and T & R has been provided for treatment facilities that are located within the San Gabriel Basin boundaries but are operating outside the bounds of known operable units.
- 7 State Loan - DTSC, shown above as a source of funding, is being repaid to the State of California by the BPOU Responsible Parties.
- 8 Funding for Capital Projects includes \$9.40M from the second round of Proposition 84, Section 75025, as well as \$5.25M in a Proposition 84 IRWMP grant.
- 9 Responsible Parties are projected to fund T & R Costs for the EMOU and the PVOU for 8 years as required by the Consent Decrees. Treatment Costs shown above are projected to be ongoing for 30 years, therefore the remaining years are considered unfunded.
- 10 State funding for SEMOU includes \$5.0M of Proposition 1 funding which requires a match ranging from 10% to 50%.

(5) UV TREATMENT NOT INCLUDED IN ESTIMATED COSTS

(6) EXISTING PROPERTY CANNOT ACCOMMODATE TREATMENT FACILITY

Table 5 – Project Scoring

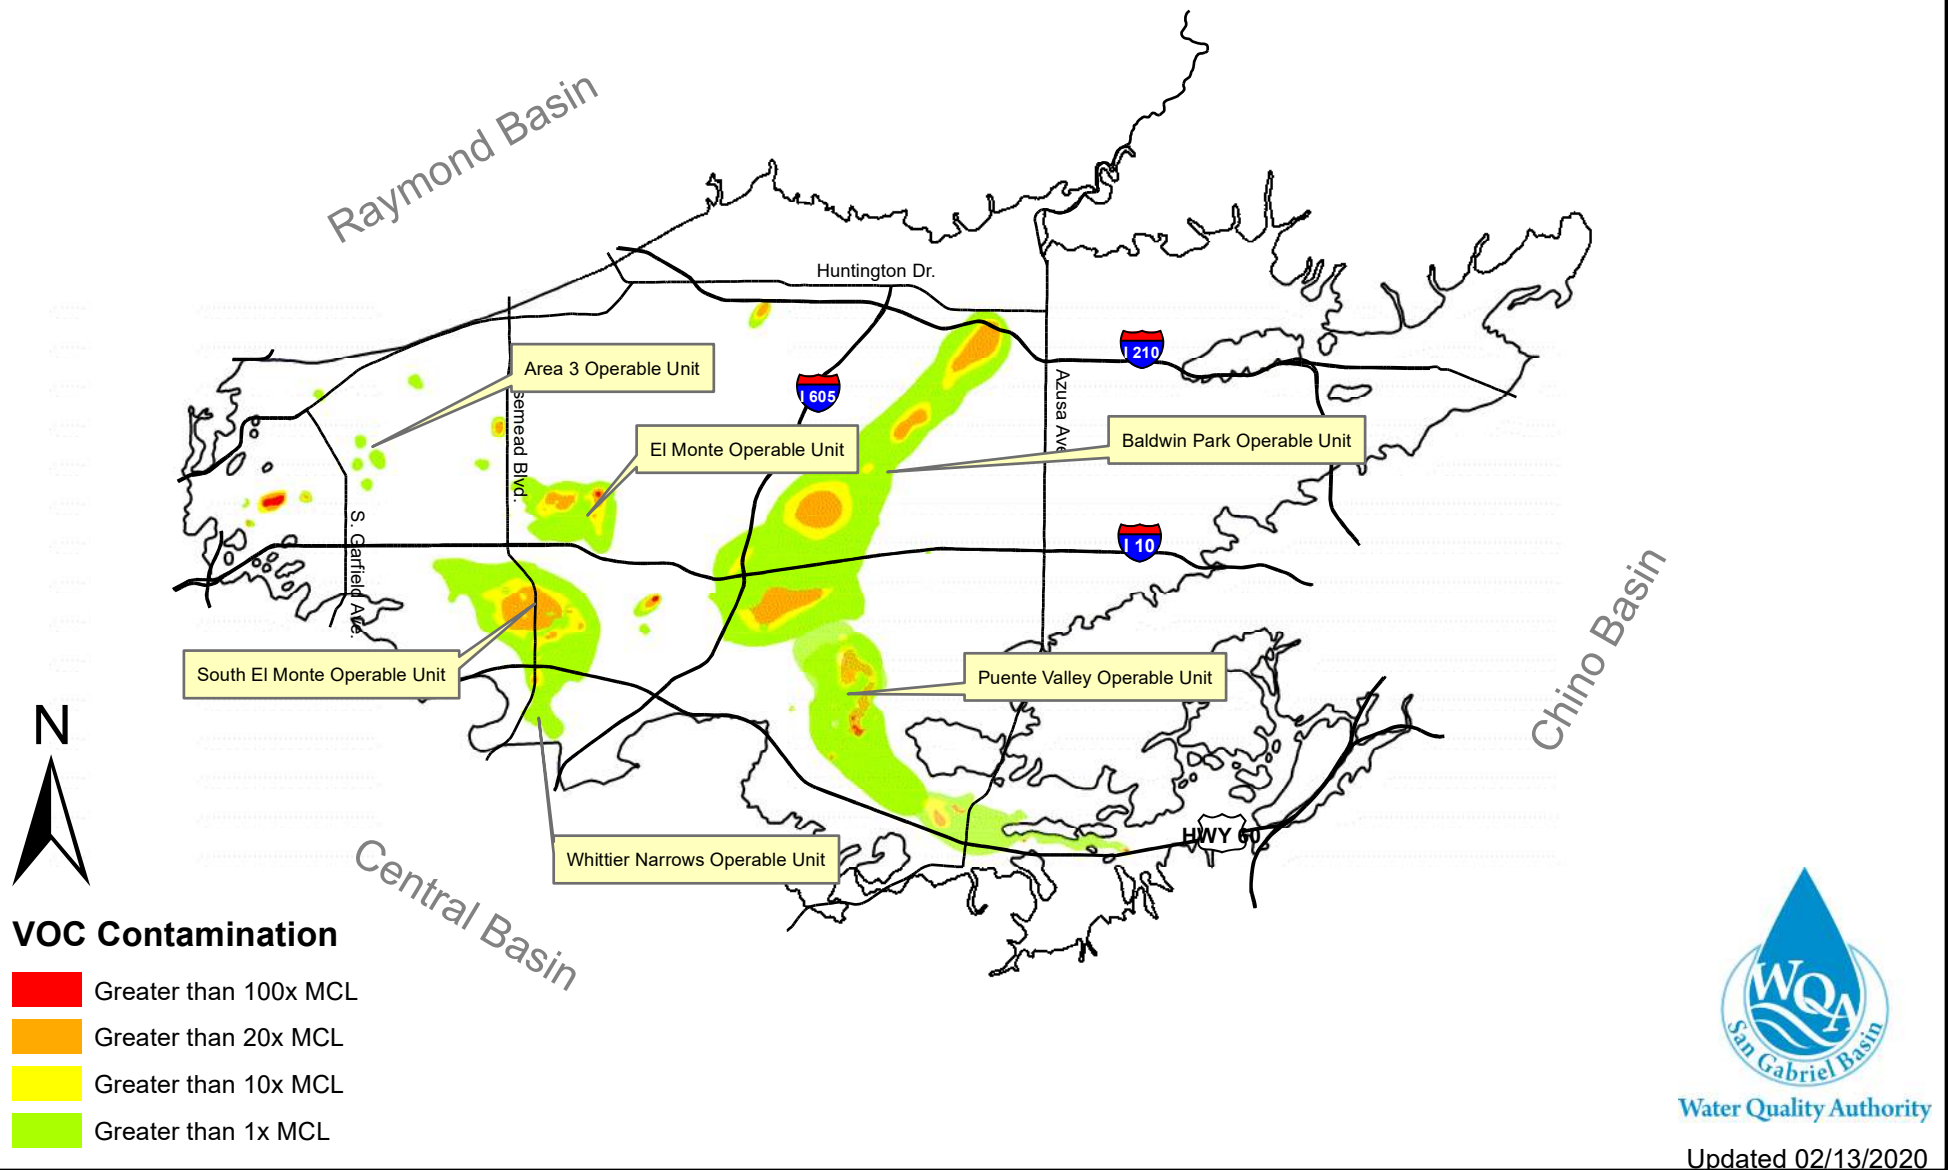

QUESTION	PTS.	RESPONSE
Is applicant(s) ready to proceed with the groundwater remediation project?	0	Not fully ready to proceed
	10	Yes, ready to proceed
Does the project complement U.S. USEPA's plans? Is it consistent with USEPA's plans and the NCP?	0	Does not complement plan and is not consistent
	5	Complements and is consistent with USEPA plans
	10	Complements and is consistent with USEPA plans and NCP
How effective is project relative to amount of water treated and made available for use? Does the project use technology consistent with BAT?	0	Not effective relative to amount treated & available for use
	5	Somewhat effective and consistent with BAT
	10	Effective relative to amount treated & available for use, consistent with BAT
What are the impacts or potential impacts to the plume within the Main San Gabriel Basin?	0	No
	5	Some impact
	15	Very significant impact
Is project a joint cleanup and water supply project?	0	Not a joint cleanup and supply project
	5	Only a cleanup project
	15	Yes, project is a joint cleanup/supply project
Is project partially or solely funded by affected purveyor(s)?	0	N/A
	5	Yes, partially funded by purveyor(s)
	10	Yes, solely funded by purveyor(s)
Does the project address immediate water supply needs in the MSG Basin?	0	No
	15	Yes
Does the project address a need for migration control?	0	No
	15	Yes
Is project partially or solely funded by PRPs through an executed agreement?	0	No PRP agreement
	5	Yes, partially funded by PRPs with an agreement
	10	Yes, solely funded by PRPs with an agreement

Table 6 – Priority Ranking

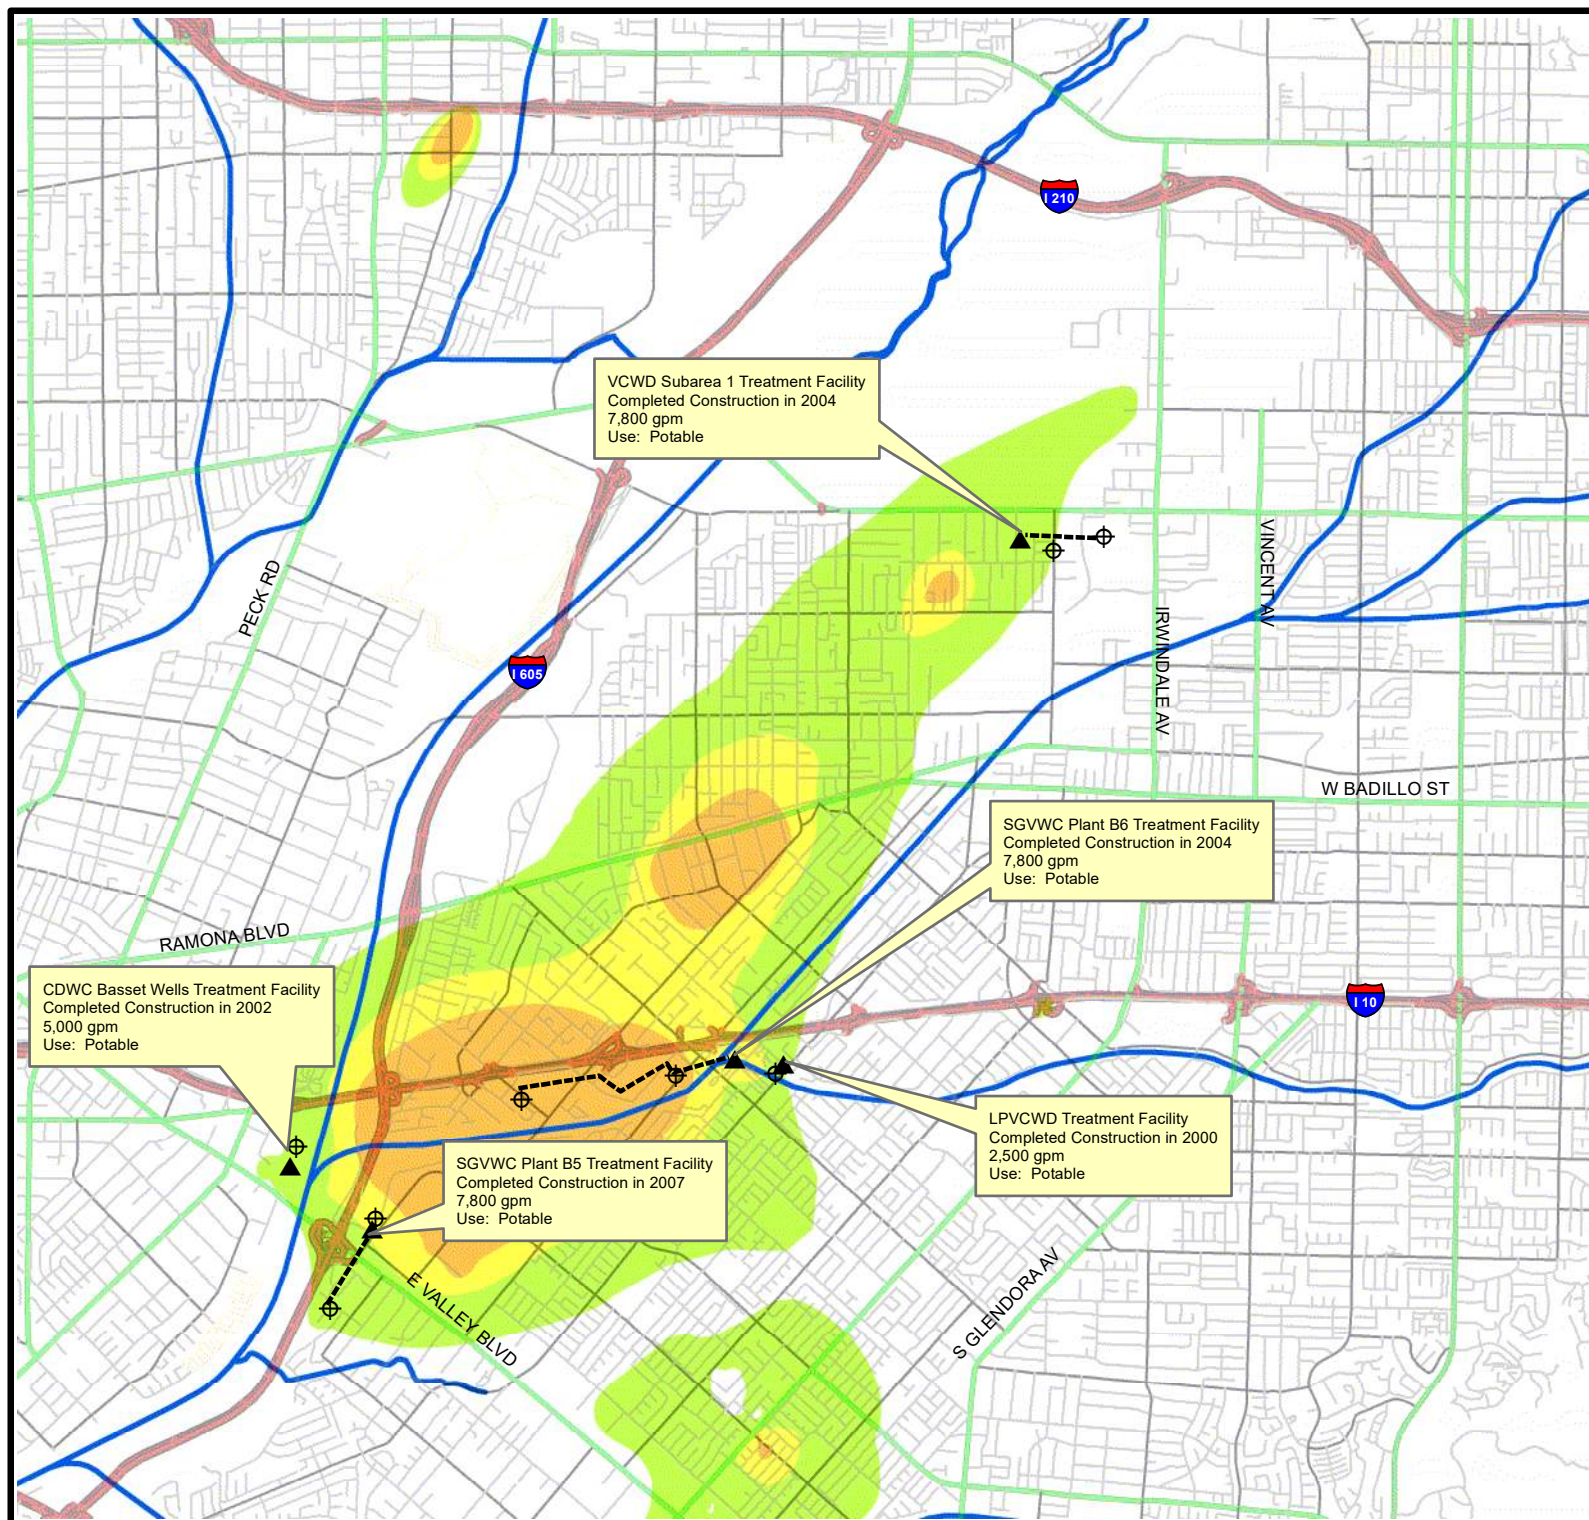

CATEGORY	SCORING RANGE	TITLE XVI	RESTORATION FUNDS
Category 1	90-100	0 to 25%	up to 65% capital and/or T&R
Category 2	80-89	0 to 25%	up to 50% capital and/or T&R
Category 3	70-79	based upon availability	up to 40% capital and/or T&R
Category 4	0-69	based upon availability	up to 30% capital and/or T&R

RESUMES

Diana Arellano | Phase I Project Manager

5261 West Imperial Highway, Los Angeles, CA, 90045

310-854-6300 ext. 237
Diana.Arellano@efiglobal.com

Professional Summary:

Ms. Arellano has been in the environmental industry since 2017 and works directly with clients and regulatory bodies to investigate historical and current site uses of properties, assess environmental conditions, and assist in the development plans by which to resolve such conditions. Ms. Arellano's experience includes management of all stages of environmental projects, including Phase I Environmental Site Assessments, Transaction Screen Assessments, and Database Reviews.

Licenses and Certifications:

OSHA 8-Hour Hazardous Waste Operations Certified Refresher, Safety Unlimited, California, Certification No. 2004165209066

OSHA 40-Hour Hazardous Waste Operations Certified, Safety Unlimited, California, Certification No. 1709111209066

Project Experience:

Department of Toxic Substances Control (DTSC), Los Angeles, CA EXIDE Battery Plant

Ms. Arellano assisted in the report preparation for more than 2,000 homes that were sampled to determine the presence of lead contamination through air dispersion. This project was in a heavily populated section of East Los Angeles.

Phase I Environmental Site Assessment at El Cajon, California

Served as the Project Manager of a Phase I Environmental Site Assessment for a six-acre property with historical chlorinated solvent usage, several former underground storage tanks, solid waste management units (SWMUs), and areas of concerns (AOCs) as determined by the DTSC. EFI global was able to identify closure for all SWMUSs and AOCs onsite and as well recommend additional investigation of a few underground storage tanks that were not properly abandoned under regulatory oversight.

Phase I / II Environmental Site Assessment at North Hollywood, California

Served as the Project Manager of a Phase I Environmental Site Assessment which was completed concurrently with a Phase II Environmental Site Assessment. The site was assessed due to former onsite die casting operations and chlorinated solvent usage by multiple tenants. After review of historical and regulatory resources, and results of a soil and soil vapor assessment, it was determined that the former operations and associated hazardous material usage did not represent an unacceptable risk to human health for continued industrial use.

Dry-Cleaning Projects, Throughout California

Served as the Project Manager for several Phase I Environmental Site Assessments of properties with former and active dry-cleaning operations. Specific challenges included obtaining and reviewing environmental sampling, remediation, and closure proceedings. EFI Global was able to determine if additional investigations were warranted for each site.

Gasoline Service Station Projects, Throughout California

Served as the Project Manager for several Phase I Environmental Site Assessments of gasoline service station properties throughout the state. Specific challenges included obtaining and reviewing UST integrity documentation, and reviewing environmental sampling, remediation, and closure proceedings for prior UST removals and/or unauthorized releases.

Professional Experience:

EFI Global, Inc., Los Angeles, CA, Project Manager, 2019 - present

EFI Global, Inc., Los Angeles, CA, Environmental Specialist, 2017 – 2018

Education:

Bachelor's Degree in Environmental Studies, University of California, Santa Barbara, Santa Barbara, CA, 2016

Christopher Rude | Senior Project Manager

5261 West Imperial Highway, Los Angeles, California

310-854-6300

Christopher.rude@efiglobal.com

Professional Summary:

Mr. Christopher Rude is an Environmental Professional with approximately twenty-eight years of experience in hazardous materials, lab packing of hazardous wastes, Phase I Environmental Site Assessments, and Phase II Environmental Site Assessments throughout the country. Mr. Rude has worked directly with clients and regulatory agencies' to determine and assess environmental impacts, develop plans by which mitigate such conditions, and carry out the planned approach for closure. Mr. Rude's experience includes all aspects of environmental projects including Phase I Environmental Site Assessments, soil, soil vapor and groundwater sampling - Phase II Subsurface Site Assessments, site characterization, removal of Underground Storage Tanks (USTs) and multi-stage clarifiers, and remedial cleanups of properties impacted by arsenic, organochlorine pesticides, chlorinated solvents, and fuel hydrocarbons. Mr. Rude has successfully obtained closure for numerous Brownfield sites on behalf of clients from DTSC, Los Angeles Regional Water Quality Control Board, Los Angeles County, Los Angeles City, and Ventura County Environmental Health. Mr. Rude has conducted numerous soot sampling assessments for insurance companies associated with the wildfires in Southern California.

- Environmental Consulting
- Environmental Compliance
- Management of all stages of environmental projects including Phase I/II environmental site assessments

Licenses and Certifications:

OSHA 40-Hour Hazardous Waste Operations Certified

OSHA 8-Hour Hazardous Waste Operations and Emergency Response Certified –

Supervisor Refresher Training, CA, #150110572348

American Council for Accredited Certification - Council Certified Fire & Smoke Damage Technician

Environmental Professional, per the CFR Title 40, Chapter I, Subchapter J, Part 312, Subpart C, Section

Project Experience:

Current responsibilities as Senior Project Manager include the preparation of Phase I and Phase II Environmental Site Assessments within Los Angeles, Ventura, Santa Barbara, San Luis Obispo, Tulare, Kern, Fresno, and Kings Counties. Additional responsibilities include managing, mentoring and training Project Managers in all aspects of Phase I Environmental Site Assessments, marketing, and client relations, business development and project management.

Sunflower Valley Farms LLC, Multiple Locations in Kings and Kerns Counties, CA

Phase I Environmental Site Assessment

Senior Project Manager of a Phase I Environmental Site Assessment for a 12,685 acre ranch developed with agricultural land, 120 active or abandoned oil wells, active oil sumps, hazardous materials, pesticide storage areas, and aboveground storage tanks. Phase II recommendations were made for active oil wells and oil sumps.

Primestor Development, Inc.**Phase I Environmental Site Assessment**

Served as the Senior Project Manager of a Phase I ESA and Asbestos/Lead Based Paint Survey of a 31-acre retail-commercial mall developed with twelve retail structures and medical clinic totaling approximately 383,000 square feet. The retail mall had undergone numerous subsurface assessments and remedial cleanup associated with a Leaking Underground Storage Tank (LUST) and Spills, Leaks, Investigations, and Cleanups (SLIC) cases associated with a former gasoline service station and former dry cleaning facilities. Case closure was issued by the overseeing regulatory agency for the LUST case. Review of available documentation indicated that the SLIC case was to be issued case closure for soil and groundwater.

LS Realty Group, Los Angeles, CA**Phase I / II Environmental Site Assessment**

Served as the Senior Project Manager of a Phase I Environmental Site Assessment report which was completed concurrently with a Phase II Environmental Site Assessment. The site was assessed due to the former underground storage tanks and long-term auto repair use of the property by multiple tenants. Results of the soil and soil vapor sampling assessment indicated that the former/current uses did not represent an unacceptable risk to human health for commercial use.

Has performed and provided project management on numerous Phase II Subsurface Site Assessments on properties impacted by chlorinated solvents, fuel hydrocarbons, agricultural pesticides, and heavy metals. Assessment activities also included oversight of geophysical surveys, sampling of soil, soil vapor, and groundwater using Geoprobe, hollow stem augers, and/or dual percussion air rotary rigs. Assessments also included monitoring for vapor intrusion and fixed gases. Conducted and prepared quarterly groundwater monitoring reports.

Professional Experience:

EFI Global Inc., Los Angeles, CA, Senior Project Manager, 2012 - Present
California Environmental, Agoura Hills, CA, Environmental Scientist, 1997 – 2012
MSE Environmental, Camarillo, CA, Environmental Specialist, 1992 – 1996

Specialized Education:

Assessment of LNAPL Volume, Mobility, and Recoverability for Recovery Systems;
Design and Risk-Based Corrective Action
National Groundwater Association, Houston Texas – November 2007

Seminar on National Pollutant Discharge Elimination Systems (NPDES)
Law Offices of Burke Williams & Sorensen LLP
Riverside, California – 2004

Education:

Bachelors of Art, Environmental Studies and Planning, Sonoma State University,
Rohnert Park, California, 1992
