

Bighorn Sheep Capture Tagging Sheep for Wildlife Research October 10, 2007

(Pictured below):

Chairman Hybarger with bighorn sheep,
ready for tagging.

Winter captures mean cold mountain temperatures.
Hoods keep the sheep calm during their capture time.

The sheep gets checked completely—from front to back. The captured sheep were tagged and given collars. The purpose of collaring sheep is to collect data regarding wildlife in the Southern California mountain areas.

The sheep capture was at the South Fork of Lydell
Creek area of Mount Baldy.

When it's for a good cause, hard work brings a
smile to a volunteer's face.
