Response: We carefully considered the MAP recommendations and took NQF endorsement status into consideration when making our CQM selections for reporting beginning with 2014. In order to align with other quality reporting programs and address recommendations by other Federal advisory committees, such as the HITPC, as well as consider CQMs endorsed by other multistakeholder groups, we considered CQMs that were not supported by the MAP. After consideration of the public comments received, we are finalizing the policies on criteria for selecting CQMs as proposed.

4. CQM Specification

We stated in the proposed rule that we do not intend to use notice and comment rulemaking as a means to update or modify CQM specifications. In general, it is the role of the measure steward to make changes to a CQM in terms of the initial patient population, numerator, denominator, and potential exclusions. We recognized that it may be necessary to update CQM specifications after they have been published to ensure their continued relevance, accuracy, and validity. Measure specifications updates may include administrative changes, such as adding the NQF endorsement number to a CQM, correcting faulty logic, adding or deleting codes as well as providing additional implementation guidance for a CQM.

These changes would be described in full through supplemental updates to the electronic specifications for EHR submission provided by CMS. We stated that measures would be tracked on a version basis as updates to those CQMs are made, and we would require EPs, eligible hospitals, and CAHs to submit the versions of the CQMs as identified on our Web site.

We stated in the proposed rule that the complete CQM specifications would be posted on our Web site (*https://www.cms.gov/QualityMeasures/03_ElectronicSpecifications.asp*) at or around the time of the final rule. In order to assist the public in considering the proposed CQMs, we published tables titled ''Proposed CQMs for 2014 CMS EHR Incentive Programs for Eligible Professionals'' and ''Proposed CQMs for 2014 CMS EHR Incentive Programs for Eligible Hospitals and CAHs'' on this Web site. These tables contain additional information for the EP, eligible hospital, and CAH CQMs, respectively, which may not be found on the NQF Web site. We noted that some of the CQMs were still being developed and that the additional descriptions provided in the tables may still change before the final rule is published. We noted that the titles and descriptions for the CQMs included in these tables were updated by the measure stewards and therefore may not match the information provided on the NQF Web site.

We proposed that, under certain circumstances, it may be necessary to remove a CQM from the EHR Incentive Programs between rulemaking cycles. We stated in the proposed rule that when there is reason to believe the continued collection of a CQM as it is currently specified raises potential patient safety concerns and/or is no longer scientifically valid, we would take immediate action to remove the CQM from the EHR Incentive Programs and not wait for the next rulemaking cycle. Likewise, we stated if a CQM undergoes a substantive change by the measure steward between rulemaking cycles such that the measure's intent has changed, we would remove the measure immediately from the EHR Incentive Programs until the next rulemaking cycle when we could propose the revised CQM for public comment. Under this proposed policy, we would promptly remove such CQMs from the set of CQMs available for EPs or eligible hospitals and CAHs to report under the EHR Incentive Programs, confirm the removal or propose the revised CQM, in the next EHR Incentive Programs rulemaking cycle, and notify providers (EPs, eligible hospitals, and CAHs) and the public of our decision to remove the CQM(s) through the usual communication channels (memos, email notification, web site postings).

Comment: Numerous commenters indicated the importance of having CQM specifications and implementation guides as soon as possible. Several commenters pointed out that CQMs without electronic specifications should be re-tooled as eMeasures prior to inclusion in meaningful use.

Response: We will provide complete CQM specifications at or around the time of the publication of this final rule on our Web site (*https://www.cms.gov/Medicare/Quality-Initiatives-Patient-Assessment-Instruments/QualityMeasures/Electronic Specifications.html*). All of the CQMs that we are finalizing will be fully specified.

Comment: Many commenters noted that more than 6 months is needed to deploy and adequately test upgrades that may affect clinician workflows and patient safety. Other commenters stated that software developers need at least 18 to 24 months to alter their systems and allow for installation of software to complete process updates, development, testing, error checks, training, and roll-out before the reporting periods begin. Multiple commenters requested notification and a scheduled approach to making changes to CQM specifications. Commenters suggested that CMS post the CQMs and updates in one place for easy reference.

Response: We understand health care providers and software developers need sufficient time to accommodate CQM specification updates. However, we must balance this with our policy priority for CQMs to remain consistent with clinical practice guidelines and any new scientific data related to efficacy. To address the timing concerns mentioned by commenters, we expect to make the updated specifications, which will be tracked on a version basis, publicly available through our Web site (*https://www.cms.gov/Medicare/Quality-Initiatives-Patient-Assessment-Instruments/QualityMeasures/ElectronicSpecifications.html*) approximately 6 months in advance of the beginning of the CY and FY for EPs and hospitals, respectively. We will make every effort to have updated specifications made available earlier and ensure that measure updates are limited in scope. In the event that we remove CQMs between rulemakings, we will post this information on the same Web site and notify the public through listserv and any additional communication channels that may be appropriate.

Comment: Many commenters stated that CQM specifications should not have to be updated in CEHRT during the period for which the EHR product is certified. Some commenters pointed out the burden and complexity of supporting multiple versions of the CQMs concurrently (that is, the specifications authorized for use within the current reporting period, and the updated specifications intended for implementation in the following reporting period).

Response: CQM specifications are updated to maintain alignment with current clinical guidelines and ensure that the CQM remains relevant and actionable within the clinical care setting. We believe the benefits of having the ability to update specifications more frequently than the rulemaking cycle for the EHR Incentive Programs outweighs the burden and complexity identified by commenters.

As a result of aligning with other quality reporting programs (for example, PQRS), the CQMs and specifications are being used in multiple programs. If we do not have the ability to update specifications annually, then our respective programs may no longer align. Furthermore, without having the ability to update the specifications at least annually, the CQMs could become obsolete and would not adequately reflect current best practices. The majority of the administrative changes expected in the annual specification updates would reflect updates that vendors would routinely push to their clients' EHR technologies (for example, drug code updates).

We did not receive any comments on our proposed policy to remove CQMs between rulemaking cycles under certain circumstances.

After consideration of the public comments received, we are finalizing the following policies on CQM specifications. Updates to CQM specifications may be provided annually approximately 6 months in advance of the FY/CY for hospitals and EPs, respectively. Providers will not be required to use the updated specifications for purposes of submitting the CQMs for the EHR Incentive Program unless specified in future rulemaking. We note that EPs choosing to submit CQMs through another quality reporting program (for example, PQRS) would need to use the updated specifications if required by the other program. We are finalizing the policy on removing CQMs between rulemaking cycles under certain circumstances as proposed. In the event that one or more CQMs are removed between rulemakings, the number of CQMs that an EP, eligible hospital, or CAH must report would be reduced by the number of CQMs removed. For example, if one EP CQM was removed from the set of CQMs finalized for EPs in Table 7, EPs would only be required to submit 8 CQMs instead of 9. Likewise, if a hospital CQM is removed from the set of CQMs finalized in Table 8, eligible hospitals and CAHs would only be required to submit 15 CQMs instead of 16. The requirement that the CQMs submitted cover at least 3 domains will remain the same unless all CQMs for a particular domain have been eliminated. EPs that are not affected by such a removal of a CQM between rulemakings and could report on other CQMs are expected to continue reporting on 9 CQMs. Likewise, eligible hospitals and CAHs that are not affected and could report on other CQMs are expected to continue reporting on 16 CQMs.

5. CQMs for EPs

(a) Statutory and Other Considerations

Sections 1848(o)(2)(A)(iii) and 1903(t)(6)(C) of the Act provide for the reporting of CQMs by EPs as part of demonstrating meaningful use of CEHRT. For further explanation of the statutory requirements, we refer readers to the discussion in our proposed and final rules for Stage 1 (75 FR 1870 through 1902 and 75 FR 44380 through 44435, respectively).

Under sections 1848(o)(1)(D)(iii) and 1903(t)(8) of the Act, the Secretary must seek, to the maximum extent practicable, to avoid duplicative requirements from federal and state governments for EPs to demonstrate meaningful use of CEHRT under Medicare and Medicaid. Therefore, to meet this requirement, we continued our practice from Stage 1 of proposing CQMs that would apply for both the Medicare and Medicaid EHR Incentive Programs, as listed in sections II.B.5.b. and II.B.5.c. of this final rule.

Section 1848(o)(2)(B)(iii) of the Act requires that in selecting CQMs for EPs, and in establishing the form and manner of reporting, the Secretary shall seek to avoid redundant or duplicative reporting otherwise required, including reporting under subsection (k)(2)(C) (that is, reporting under the PQRS). Consistent with that requirement, we proposed to select CQMs for EPs for the EHR Incentive Programs that align with other quality reporting programs mentioned in the proposed rule (77 FR 13745). We stated in the proposed rule that when a CQM is included in more than one CMS quality reporting program and is reported using CEHRT, we would seek to avoid requiring EPs to report the same CQM to separate programs through multiple transactions or mechanisms.

Section 1848(o)(2)(B)(i)(I) of the Act requires the Secretary to give preference to CQMs endorsed by the entity with a contract with the Secretary under section 1890(a) (namely, the NQF). We proposed CQMs for EPs for 2013, 2014, and 2015 (and potentially subsequent years) that reflect this preference,

although we note that the Act does not require the selection of NQF endorsed CQMs for the EHR Incentive Programs. CQMs listed in this final rule that do not have an NQF identifying number are not NQF endorsed, but are included in this final rule with the intent of eventually obtaining NQF endorsement of those CQMs determined to be critical to our program.

We stated our intent to increase the total number of CQMs for EPs to include areas such as behavioral health, dental care, long-term care, special needs populations, and care coordination. We proposed new pediatric CQMs, an obstetric CQM, behavioral/mental health CQMs, CQMs related to HIV medical visits and antiretroviral therapy, two oral health CQMs, as well as other CQMs that address NQS goals. Although we did not propose additional CQMs in the areas of long-term and post-acute care due to the lack of electronic specifications, we stated that we would continue to develop or identify CQMs for these areas for future years. We received public comments related to statutory and other considerations. We have responded to those comments in later sections of this final rule, including comments related to form and manner and the clinical areas covered by specific CQMs (see sections II.B.6.c. or II.B.6.d. of this final rule).

(b) CQMs for EPs for CY 2013

We proposed that for the EHR reporting periods in CY 2013, EPs must submit data for the CQMs that were finalized in the Stage 1 final rule for CYs 2011 and 2012 (75 FR 44398 through 44411, Tables 6 and 7). We stated that we expected to post updates to the CQMs' electronic specifications on the EHR Incentive Program Web site at least 6 months prior to the start of CY 2013. As required by the Stage 1 final rule, EPs must report on 3 core or alternate core CQMs, plus 3 additional CQMs. We referred readers to the discussion in the Stage 1 final rule for further explanation of the requirements for reporting those CQMs (75 FR 44398 through 44411).

We received no public comments and are finalizing these proposals for EPs for CY 2013. We have posted updates to the CQM specifications on the EHR Incentive Program Web site (*https://www.cms.gov/apps/ama/license.asp?file=/QualityMeasures/Downloads/QMEPSupplemental.zip*) and note that they will be optional with respect to CY 2013 reporting.

(c) CQMs and Reporting Options for EPs Beginning with CY 2014

(i) Reporting Options

We proposed two reporting options that would begin in CY 2014 for Medicare and Medicaid EPs, as described as follows: Options 1 and 2. We proposed the CQMs listed in Table 8 of the proposed rule (77 FR 13749 through 13757) for all EPs (Medicare and Medicaid) for the EHR reporting periods in CYs 2014, 2015, and potentially subsequent years, regardless of whether an EP is in Stage 1 or Stage 2 of meaningful use. We stated that the policies and CQMs proposed for CYs 2014 and 2015 would continue to apply in CY 2016 and subsequent years until a new rule is published. Therefore, we referred to CQMs that apply ''beginning with'' or ''beginning in'' CY 2014. We stated that for Medicaid EPs, although the reporting method for CQMs may vary by state, the set of CQMs from which to select would be the same as for Medicare EPs. We stated that Medicare EPs who are in their first year of Stage 1 may report CQMs by attestation.

For Option 1, we proposed two alternatives (Options 1a and 1b), but stated that we intended to finalize only a single method. We proposed that Medicare EPs who participate in both the PQRS EHR reporting option and the EHR Incentive Program may choose Option 2 instead of Option 1.

- Option 1a: We proposed that EPs would select and report 12 CQMs from those listed in Table 8 of the proposed rule (77 FR 13749 to 13757), including at least 1 CQM from each of the 6 domains, which are described in section II.B.3. of this final rule. EPs would select the CQMs that best apply to their scope of practice and/or unique patient population. If an EP's CEHRT does not contain patient data for at least 12 CQMs, then the EP must report the CQMs for which there is patient data and report the remaining required CQMs as ''zero denominators'' as displayed by the EPs CEHRT. If there are no CQMs applicable to the EP's scope of practice or unique patient populations, EPs must still report 12 CQMs even if zero is the result in either the numerator and/or the denominator of the CQM. If all applicable CQMs have a value of zero from their CEHRT, then EPs must report any 12 of the CQMs. We noted one advantage of this approach is that EPs can choose CQMs that best fit their practice and patient populations. However, because of the large number of CQMs to choose from, this approach would result in fewer EPs reporting on any given CQM, and likely only a small sample of patient data represented in each CQM. We proposed that EPs would submit the CQM data in an XML-based format on an aggregate basis reflective of all patients without regard to payer.
- Option 1b: We proposed that EPs would report 11 ''core'' CQMs listed in Table 6 of the proposed rule (77 FR 13746 to 13747), plus 1 ''menu'' CQM from Table 8 of the proposed rule (77 FR 13749 to 13757). We noted that the ''core'' CQM set reflected the national priorities outlined in section II.B.3. of the proposed rule. EPs would select 1 CQM to report from the ''menu'' set based on their respective scope of practice and/or unique patient population. We explained one advantage of this approach is that quality data would be collected on a smaller set of CQMs, so the resulting data for each CQM would represent a larger number of patients and therefore could be more accurate. However, this approach could mean that more CQMs are reported with zero denominators (if they are not applicable to certain practices or populations), making the data less comprehensive. We stated that the policy on reporting ''zeros'' in the numerator and/or denominator of a CQM, as discussed previously under Option 1a, would also apply for Option 1b.
- Option 2: Submit and satisfactorily report CQMs under the PQRS's EHR Reporting Option.

We proposed that Medicare EPs who participate in both the PQRS EHR reporting option and the EHR Incentive Program may choose Option 2 instead of Option 1. In order to streamline quality reporting options for EPs participating in both programs, we proposed that Medicare EPs who submit and satisfactorily report PQRS CQMs under the PQRS's EHR reporting option using CEHRT would satisfy the CQM reporting requirement under the Medicare EHR Incentive Program. We referred readers to 42 CFR 414.90 and the CY 2012 Medicare PFS final rule with comment period (76 FR 73314) for more information about the existing requirements of the PQRS and stated that EPs who choose this Option 2 would be required to comply with any changes to the requirements of the PQRS that may apply in future years.

Comment: Many commenters preferred Option 1a instead of 1b since it offers more flexibility and a larger selection of CQMs, especially for specialties including surgery, otolaryngology, urology, and psychiatry. However, they also indicated that it would be difficult to report 1 CQM from each of the 6 domains that apply to their scope of practice and/or unique patient population.

Other commenters supported Option 1b over 1a as long as it limits the number of CQMs to those that vendors would be required to support. A few commenters suggested removing the ''one menu CQM'' requirement entirely.

Many commenters suggested a modification of Options 1a and 1b to require reporting a specific number of core CQMs (fewer than the 11 proposed) and a specific number of menu CQMs (more than 1 as proposed) along with some changes to the domain requirement. Many commenters suggested a reporting option requiring EPs to report 6 clinically relevant CQMs covering at least 2 domains, and if no CQMs are clinically relevant for an EP, they must demonstrate zeros in the denominator for 6 CQMs covering at least 2 domains. A few commenters suggested requiring up to 9 CQMs covering a range of 2 to 4 domains. One commenter also advocated for the retention of all three reporting options (1a, 1b, and 2) so that EPs could select the one most appropriate to their practice.

Response: We agree that a modified approach for Option 1 would provide a more optimal reporting schema for most EPs. In our modified approach, we included the positive and minimized the negative components of each of the two proposed options where possible. The Option 1 that we are finalizing (as explained in detail later) decreases the number of CQMs that EPs must select to report, decreases the total number of domains required to be covered among the selected CQMs, recommends but does not require reporting from a ''core'' set of CQMs, and offers specialist EPs the flexibility to select CQMs that are applicable to their scope of practice.

We note the following CQMs in the finalized recommended core sets for adults and children were included in the proposed core set: NQF 0018, 0022, 0024, 0028, 0418, and TBD—Closing the referral loop: receipt of specialist report.

Comment: We also received many comments on Option 2. Numerous commenters supported Option 2, including the submission of CQM data via the PQRS program and receiving credit for both PQRS and meaningful use. However, some of these commenters indicated that not all EPs qualify to participate in PQRS. Another concern was that the patient population reported differs between the two programs in that PQRS requires reporting on Medicare patients only, whereas meaningful use reflects all patients without regard to payer.

Response: For the reporting of CQMs, we are finalizing Option 2 as proposed in order to reduce reporting burden on EPs who participate in both programs and attain the goal of alignment with the PQRS EHR reporting option. EPs who do not participate in PQRS may submit CQMs for the EHR Incentive Program using Option 1. Regardless of whether an EP chooses Option 1 or Option 2 for CQM reporting, we note that all EPs must also report the meaningful use objectives and measures through attestation, as well as meet all other meaningful use requirements.

We acknowledge that under the PQRS, only Medicare patient information is submitted. In general, our preference is to measure quality at the all patient level, based on samples of all patient data (that is, patients that meet the denominator criteria of each reported CQM). We believe this provides a better assessment of overall care quality rendered by EPs. However, although meaningful use reflects all patients without regard to payer, we believe Option 2 is appropriate because it is a step in the direction of the longer-term goal of a single, aligned mechanism for multiple CMS programs.

After consideration of the public comments received, and for the reasons discussed earlier, we are finalizing two reporting options beginning with CY 2014 for EPs in all stages of meaningful use. These options will continue to apply in the event that we have not engaged in another round of rulemaking by CY 2016.

Option 1: Report 9 CQMs covering at least 3 domains.

Medicare and Medicaid EPs selecting this reporting option will be required to submit a total of 9 CQMs covering at least 3 domains from Table 7. We expect EPs would select the CQMs that best apply to their scope of practice and/or unique patient population. For this reporting option, CQMs will be submitted on an aggregate basis reflective of all patients without regard to payer. We are not requiring the submission of a core set of CQMs, but we identify two recommended core sets, one for adults and one for children, that we encourage EPs to report to the extent those CQMs are applicable to an EP's scope of practice and patient population. If an EP's CEHRT does not contain patient data for at least 9 CQMs covering at least 3 domains, then the EP must report the CQMs for which there is patient data and report the remaining required CQMs as ''zero denominators'' as displayed by the EP's CEHRT. If there are no CQMs applicable to the EP's scope of practice and patient population, EPs must still report 9 CQMs even if zero is the result in either the numerator or the denominator of the measure. If all applicable CQMs have a value of zero from their CEHRT, then EPs must report any 9 CQMs from Table 7.

Option 2: Submit and satisfactorily report CQMs under the PQRS's EHR Reporting Option.

Under this option, Medicare EPs who participate in both the PQRS and the Medicare EHR Incentive Program will satisfy the CQM reporting component of meaningful use if they submit and satisfactorily report PQRS CQMs under the PQRS's EHR reporting option using CEHRT. EPs choosing to report under this option for purposes of the Medicare EHR Incentive Program will be subject to the reporting periods established for the PQRS EHR reporting option, which may be different from their EHR reporting period for the meaningful use objectives and measures. For example, in CY 2014, an EP who is beyond his or her first year of meaningful use will have a 3-month quarter EHR reporting period for the meaningful use objectives and measures, but the reporting periods for the PQRS EHR reporting option that fall within CY 2014 would apply for purposes of reporting CQMs. We emphasize that EPs who are in their first year of demonstrating meaningful use in the year immediately preceding a payment adjustment year cannot choose this Option 2 for reporting CQMs for the EHR Incentive Program. For purposes of avoiding a payment adjustment, they must submit their CQM data by attestation no later than October 1 of such preceding year. For more information on the requirements of the PQRS, we refer readers to 42 CFR 414.90 and the CY 2013 Medicare PFS proposed rule (77 FR 44805 through 44988). EPs who choose this option to satisfy the CQM reporting component of meaningful use under the Medicare EHR Incentive Program will be required to comply with any changes to the PQRS that may apply in future years.

(ii) CQMs

We proposed to remove three CQMs beginning with CY 2014 for EPs at all stages of meaningful use for the following reasons:

- NQF # 0013—The measure steward did not submit this CQM to the NQF for continued endorsement. We included other CQMs that address high blood pressure and hypertension in Table 8 in the proposed rule.
- NQF #0027—We determined this CQM is very similar to NQF #0028 a and b; therefore, to avoid duplication, we proposed to only retain NQF # 0028 a and b.
- NQF #0084—The measure steward did not submit this CQM to the NQF for continued endorsement. Additionally,

CMS has decided to remove this CQM because there are other FDA-approved anticoagulant therapies available in addition to Warfarin. We proposed to replace this measure, pending availability of electronic specifications, with NQF #1525—Atrial Fibrillation and Atrial Flutter: Chronic Anticoagulation Therapy.

We did not receive public comments and are finalizing the elimination of measures NQF #0013, NQF #0027, and NQF #0084 beginning with CY 2014 for EPs at all stages of meaningful use. We proposed to replace NQF #0084 with NQF #1525, which was determined to contain data elements that were difficult to capture in EHRs after additional feasibility testing. Therefore, we are implementing an Adverse Drug Events CQM to replace NQF #0084:

Title: ADE Prevention and Monitoring: Warfarin Time in Therapeutic Range.

Description: Average percentage of time in which individuals with atrial fibrillation who are on chronic anticoagulation have International Normalized Ratio (INR) test results within the therapeutic range during the measurement period.

For a list of all the CQMs proposed for EPs to report for the EHR Incentive Programs beginning with CY 2014, please refer to Table 8 in the Stage 2 proposed rule (77 FR 13749 to 13757). We stated that we expected to finalize only a subset of the CQMs listed in Table 8 based on public comments and the priorities discussed in section II.B.3. of the proposed rule.

We noted that some of these CQMs had not yet been submitted for consensus endorsement consideration or were under review for endorsement consideration by the NQF. We stated that we expect that any measure proposed in Table 8 for inclusion beginning with CY 2014 would be submitted for endorsement consideration by the measure steward. Because measure specifications may need to be updated more frequently than our expected rulemaking cycle will allow for, we stated that we would provide updates to the specifications at least 6 months prior to the beginning of the calendar year for which the measures would be required, and we expected to update specifications annually.

Comment: Many commenters indicated support for CMS's efforts to include CQMs that are broadly applicable across primary care and specialist EPs. However, many commenters also stated that most of the proposed CQMs apply to primary care practices and preventive medicine and requested more CQMs that apply to specialist practices or to adjust the reporting requirements to match the number of clinically available CQMs for nonprimary care EPs. Another commenter requested pediatricians be excluded from having to report on CQMs for patients older than 18 years old rather than having to demonstrate zero denominators on a population that does not apply to them.

Many commenters stated that there were too many CQMs, citing issues with implementation of such a large set of measures as well as diluting the impact of quality measurement. Some of these commenters believed that CMS should focus on a smaller set of CQMs to refine for accuracy in implementation. They also did not believe that they should have to build CQMs into their CEHRT if those CQMs did not apply to their scope of practice because those CQMs would only yield zero denominators. Some suggested alternatives to building out all CQMs included allowing EPs to attest to having a low denominator, such as 25 or fewer patients, or for CMS to assign the primary care or specialty fields that each CQM applies to, whereby EPs whose field is not listed for a particular CQM would be exempt from reporting that CQM.

Many of the proposed EP CQMs received support from the public. Some commenters gave feedback on specific proposed CQMs, including questions on the feasibility of reporting the CQM, issues with specific requirements of the CQM, and preferences for preventative CQMs. A few commenters did not support finalizing CQMs that were not NQF endorsed. We also received suggestions for additional CQMs that were not included in the list of 125 proposed EP CQMs. A few commenters expressed concern about the lack of transparency in the development of the CQMs.

Response: We stated in the Stage 2 proposed rule that we would be finalizing a subset of the proposed CQMs. We convened a Quality Measures Task Force (QMTF), which is made up of stakeholders from across the Department and includes representation from different quality reporting programs. Through the QMTF and with senior leadership, we considered public comments, feasibility of the electronic specifications to be captured in EHRs, and the goals stated in section II.B.3. of this final rule when selecting the finalized list of EP CQMs. By including such a large representation of stakeholders, we believe that we have prioritized CQMs that align with other programs, which includes CQMs that are not used in other programs currently but could be implemented in other programs as they include more electronically specified CQMs in their respective CQM lists. This will move us closer to our longer-term goal of having a single, aligned mechanism for CQM reporting.

Since the measure stewards are responsible for any information that affects the requirements of the CQM, we have shared the feedback on specific CQMs with the respective measure stewards. Consideration of both evidence and expert consensus are integral parts of the NQF's measure endorsement process. More information on this Consensus Development Process is available on the NQF Web site: *http://www.qualityforum.org/Measuring_Performance/Consensus_Development_Process.aspx.* Although we give preference to CQMs that have been endorsed by NQF, section 1848(o)(2)(B)(i)(I) of the Act does not require the selection of NQF-endorsed CQMs for the EHR Incentive Program. Please refer to section II.B.3. of this final rule for the discussion on criteria for inclusion of a CQM.

We appreciate the commenters' suggestions for additional CQMs that apply to specialties that may not have been as represented in the measure set as primary care or preventative medicine. Although we cannot in this final rule select CQMs that were not proposed in the proposed rule, we will consider the suggested CQMs for future inclusion. As for the commenters' request to adjust the reporting requirements or exclude certain specialties from reporting certain CQMs, we believe that our policy on allowing ''zero denominators'' to be reported allows specialists to meet the CQM reporting requirements of meaningful use and is a continuation of our policy from the Stage 1 final rule.

Comment/Response: Table 7 summarizes the public comments received on specific proposed EP CQMs and the CMS rationale (that is, our response to the CQM-specific comment(s)) for finalizing or not finalizing the CQM for reporting beginning with CY 2014.

TABLE 7—SUMMARY OF EP CQM-SPECIFIC COMMENTS AND RATIONALE TO FINALIZE OR NOT FINALIZE THE CQM

CQM No.	Commenters support finalization	Commenters do not support finalization	Finalized	Rationale
NQF 0002	No comments	No comments	Yes	Addresses efficient use of resources; alignment with other programs.
NQF 0004	Supports measure	Privacy concerns; concerned that it could be difficult to implement.	Yes	Addresses high priority agency goals and aligns with other quality reporting programs. We retained NQF 0004 in order to represent the important issue of alcohol or other drug dependence treatment in our measure set. We also believe that through our collaboration with ONC, we have addressed the issues associated with data collection.
NQF 0018	Public comment supports measure.	No comments	Yes	Supports high priority goals (controlling high blood pressure).
NQF 0022	No comments	Measure is not supported by evidence.	Yes	Addresses patient safety. NQF requires clinical evidence supporting a measure in order to achieve NQF endorsement.
NQF 0024	Support for measure but evidence only for overweight, obese, or underweight children and not ideal weight.	Contains data elements that are difficult to capture as structured data.	Yes	Supports high priority goals (weight assessment, nutrition, physical activity for children); received strong public support. Based on industry standards, CMS is collaborating with other federal agencies and private organizations to standardize data elements.
NQF 0028	Support for measure	Concerns about capturing discrete data.	Yes	Supports high priority goals (tobacco use cessation); alignment with other programs.
NQF 0031	No comments	Does not align with current clinical guidelines for frequency of screening.	Yes	This CQM is currently NQF endorsed.# This is a high priority prevention measure for breast cancer.
NQF 0032	No comments	Does not align with current clinical guidelines for frequency of screening.	Yes	This CQM is currently NQF endorsed# and will be updated for consistency with clinical guidelines as discussed earlier in this section. This is a high priority prevention measure for cervical cancer.
NQF 0033	No comments	Does not align with current clinical guidelines for frequency of screening.	Yes	This CQM is currently NQF endorsed# and will be updated for consistency with clinical guidelines as discussed earlier in this section. This is a high priority prevention measure.
NQF 0034	No comments	Does not align with current clinical guidelines.	Yes	This CQM is currently NQF endorsed# and will be updated for consistency with clinical guidelines as discussed earlier in this section. This is a high priority prevention measure.

TABLE 7—SUMMARY OF EP CQM-SPECIFIC COMMENTS AND RATIONALE TO FINALIZE OR NOT FINALIZE THE CQM—Continued

CQM No.	Commenters support finalization	Commenters do not support finalization	Finalized	Rationale
NQF 0036	No comments	Duplicative of other measures (duplicate measure not included).	Yes	Addresses high priority agency goals and aligns with other quality reporting programs. Some aspects of this measure may be considered duplicative of other CQMs, however we believe that there are unique aspects of this CQM that are important to measure.
NQF 0038	Supports measures to reduce rate of Hepatitis B.	No comments	Yes	Supports public health goals.
NQF 0041	Support for measure	No evidence to support influenza vaccinations for all patients; Concerns about capturing discrete data and accounting for alternative delivery locations.	Yes	This CQM is currently NQF endorsed.# This is a high priority prevention measure. Delivery of the vaccine should be captured in the EHR even if it was delivered in an alternate location.
NQF 0043	Support for measure	Concerns about capturing discrete data and accounting for alternative delivery locations.	Yes	Alignment with PQRS/ACOs/NCQA–PCMH Accreditation. This is a high priority prevention measure. Delivery of the vaccine should be captured in the EHR even if it was delivered in an alternate location. Passed feasibility testing for the data elements needed.
NQF 0052	Support with suggestions for improvements.	No comments	Yes	Addresses efficient use of resources.
NQF 0055	No comments	Inconsistent with evidence	Yes	This CQM is currently NQF endorsed.# This is a high priority prevention measure.
NQF 0056	Support for measure	Concerns about ability to collect discrete data.	Yes	Supports high priority goals (diabetes); alignment with other programs. Passed feasibility testing for the data elements needed.
NQF 0059	Support for measure	No comments	Yes	Supports high priority goals (diabetes); alignment with other programs.
NQF 0060	Support for measure	Concern that this measure is untested in a pediatric population.	Yes	Supports high priority goals (diabetes, pediatric population).
NQF 0062	Supports measure	No comments	Yes	Supports high priority goals (diabetes); alignment with other programs.
NQF 0064	Supports measure as a way to monitor overuse and non-evidence based therapies.	No comments	Yes	Supports high priority goals (diabetes); alignment with other programs.
NQF 0068	Support for measure	No comments	Yes	Supports high priority goals (heart disease); alignment with other programs.
NQF 0069	No comments	No comments	Yes	Addresses efficient use of resources; alignment with other programs.
NQF 0070	Support for measure	No comments	Yes	Supports high priority goals (heart disease); alignment with other programs.
NQF 0075	Support for measure	Denominator is complex and ability to capture prior year data is questioned.	Yes	Supports high priority goals (heart disease); alignment with other programs. We are also collaborating very closely with the ONC to ensure that these data are captured within CEHRT.

TABLE 7—SUMMARY OF EP CQM-SPECIFIC COMMENTS AND RATIONALE TO FINALIZE OR NOT FINALIZE THE CQM—Continued

CQM No.	Commenters support finalization	Commenters do not support finalization	Finalized	Rationale
NQF 0081	Support for measure	No comments	Yes	Supports high priority goals (heart disease); alignment with other programs.
NQF 0083	Support for measure	No comments	Yes	Supports high priority goals (heart disease); alignment with other programs.
NQF 0086	Support for measure	Does not advance quality of care.	Yes	This CQM is currently NQF endorsed.#
NQF 0088	Supports measure	Concerned about ability to transmit data between providers.	Yes	Supports high priority goals (diabetes); alignment with other programs. Data is not required to be electronically transmitted between providers.
NQF 0089	Supports measure	Does not advance quality of care; Concerned about ability to transmit data between providers.	Yes	This CQM is currently NQF endorsed.# Communication between eye specialist and the physician who manages diabetes care is important. Data is not required to be electronically transmitted between providers.
NQF 0101	Support for measure	Concerns about ability to collect discrete data.	Yes	Addresses patient safety. Passed feasibility testing for the data elements required.
NQF 0104	Support for measure	Duplicative of other measures; Concerns about ability to collect discrete data.	Yes	Supports public health goals; alignment with other programs. Duplicative measures have not been finalized. Takes initial steps toward collecting discrete data.
NQF 0105	Support for measure	Concerns about suggesting pharmacotherapy over other treatment options.	Yes	This CQM is currently NQF endorsed.#
NQF 0108	No comments	No comments	Yes	Addresses pediatric population.
NQF 0110	Support for measure	Concerns about complexity and confidentiality; Concerns about ability to collect discrete data.	Yes	We are collaborating very closely with the ONC to ensure that these data are captured within CEHRT.
NQF 0384	Support for measure	Concerns about ability to collect discrete data.	Yes	Addresses patient engagement; alignment with other programs.
NQF 0385	Supports measure	Concerns about ability to collect discrete data.	Yes	Addresses high priority agency goals and aligns with other quality reporting programs.
NQF 0387	Support for measure	Concerns about ability to collect discrete data.	Yes	Addresses high priority agency goals and aligns with other quality reporting programs.
NQF 0389	Support for measure	Concerns about complexity; Concerns about ability to collect discrete data.	Yes	We are collaborating very closely with the ONC to ensure that these data are captured within CEHRT.
NQF 0403	Support for measure	Concerns about ability to document AIDS status.	Yes	Addresses high priority agency goals and aligns with other quality reporting programs.
NQF 0405	Support for measure	Concerns about agreement with current clinical guidelines.	Yes	This CQM is currently NQF endorsed# and will be updated for consistency with clinical guidelines as discussed earlier in this section.
TBD (proposed as NQF 0407—HIV/AIDS RNA Control).	Support for measure	Concerns about ability to collect discrete data.	Yes	Alignment with other programs. This CQM will be updated for consistency with the clinical guidelines as discussed earlier in this section.

TABLE 7—SUMMARY OF EP CQM-SPECIFIC COMMENTS AND RATIONALE TO FINALIZE OR NOT FINALIZE THE CQM—Continued

CQM No.	Commenters support finalization	Commenters do not support finalization	Finalized	Rationale
NQF 0418	Support for assessment of depression.	Concern that patient refusal of screening could count against EP; Concerns about ability to collect discrete data.	Yes	Supports public health goals; alignment with other programs. We also recognize that patients may refuse the treatments measured within this CQM, but there are no performance thresholds established for the EHR Incentive Program.
NQF 0419	Support for measure with concerns about ability to capture discrete data.	Too check-boxy and does not advance quality of care.	Yes	This CQM is currently NQF endorsed.#
NQF 0421	Support for measure	Too check-boxy and does not advance quality of care; Concerns about ability to collect discrete data.	Yes	Supports public health goals. Alignment with PQRS/ACOs/UDS. This CQM is currently NQF endorsed.# Passed feasibility testing for the data elements needed.
NQF 0564	Supports measure that targets high priority condition to Medicare population and will add substantial value to the clinical quality measure set.	No comments	Yes	Addresses patient safety; alignment with other programs.
NQF 0565	Supports measure that targets high priority condition to Medicare population and will add substantial value to the clinical quality measure set.	No comments	Yes	Alignment with other programs.
NQF 0608	No comments	No comments	Yes	Addresses high priority agency goals.
NQF 0710	Supports measure concept but concerned metric is too high.	Privacy concerns	Yes	Addresses high priority agency goals. To protect patient confidentiality and adhere to HIPAA requirements, CMS and all contractors for CMS are held to maintaining and abiding by the IT Security Policy in the transmission of electronic data.
NQF 0712	Supports measure	Privacy concerns; Concerns about ability to collect discrete data.	Yes	Addresses high priority agency goals and takes initial steps towards collecting accurate discrete data. To protect patient confidentiality and adhere to HIPAA requirements, CMS and all contractors for CMS are held to maintaining and abiding by the IT Security Policy in the transmission of electronic data.
TBD (proposed as 1335 Children dental).	Supports measure	Concerns about collecting data via EHR and required changes to workflow; Concerns about ability to collect discrete data.	Yes	Addresses child health and dental measures not previously included in program. We are collaborating very closely with the ONC to ensure that these data are captured within CEHRT.
NQF 1365	Support for measure	Concerns about ability to collect discrete data.	Yes	Supports public health goals; alignment with other programs. Duplicative measures have not been finalized. Takes initial steps toward collecting discrete data.

TABLE 7—SUMMARY OF EP CQM-SPECIFIC COMMENTS AND RATIONALE TO FINALIZE OR NOT FINALIZE THE CQM—Continued

CQM No.	Commenters support finalization	Commenters do not support finalization	Finalized	Rationale
NQF 1401	No comments	Concerns about linking measure to age of child when measure relates to maternal depression and ability to capture discrete data.	Yes	Addresses public health goals. We are collaborating very closely with the ONC to ensure that these data are captured within CEHRT.
TBD (proposed as 1419 Primary caries prevention).	Support if revised to clarify numerator and denominator.	Concerns about whether measure reflects standard of care for medical providers.	Yes	Addresses child health and dental measures not previously included in program. Received strong public support. The CQM is currently NQF endorsed for medical providers.#
TBD (LDL)	Supports measure	Not NQF endorsed; Concerns about ability to collect discrete data.	Yes	Addresses high priority goal (high cholesterol); Though we gave preference to NQF endorsement, some measures selected that were not NQF endorsed based on their measurement of high priority conditions.
TBD (Fasting LDL)	Supports measure	Not NQF endorsed; Concerns about ability to collect discrete data.	Yes	Addresses high priority goal (high cholesterol); Though we gave preference to NQF endorsement, some measures selected that were not NQF endorsed based on their measurement of high priority conditions.
TBD (Dementia)	Supports measure	Not NQF endorsed; Concerns about ability to collect discrete data.	Yes	Addresses high priority agency goals and takes initial steps towards collecting accurate discrete data; Though we gave preference to NQF endorsement, some measures selected that were not NQF endorsed based on their measurement of high priority conditions.
TBD (Hypertension)	No comments	No comments	Yes	Addresses high priority goal (hypertension).
TBD (Closing referral loop)	Supports as an example of a core measure.	Concerns about ability to capture data exchange; not NQF endorsed.	Yes	Addresses care coordination; Though we gave preference to NQF endorsement, some measures selected that were not NQF endorsed based on their measurement of high priority conditions.
TBD (FSA knee)	Supports measure	Not NQF endorsed; Concerns about ability to collect discrete data.	Yes	Addresses functional status assessment and patient engagement; Though we gave preference to NQF endorsement, some measures selected that were not NQF endorsed based on their measurement of high priority conditions.
TBD (FSA hip)	Supports measure	Not NQF endorsed; Concerns about ability to collect discrete data.	Yes	Addresses functional status assessment and patient engagement; Though we gave preference to NQF endorsement, some measures selected that were not NQF endorsed based on their measurement of high priority conditions.

TABLE 7—SUMMARY OF EP CQM-SPECIFIC COMMENTS AND RATIONALE TO FINALIZE OR NOT FINALIZE THE CQM—Continued

CQM No.	Commenters support finalization	Commenters do not support finalization	Finalized	Rationale
TBD (FSA complex)	Supports measure	Not NQF endorsed; Concerns about ability to collect discrete data.	Yes	Addresses functional status assessment and patient engagement; Though we gave preference to NQF endorsement, some measures selected that were not NQF endorsed based on their measurement of high priority conditions.
TBD (ADE)	Supports	Not NQF endorsed; Concerns about ability to collect discrete data.	Yes	Addresses patient safety; Though we gave preference to NQF endorsement, some measures selected that were not NQF endorsed based on their measurement of high priority conditions.
TBD (HBP followup)	No comments	Measure focuses on limited population; not NQF endorsed.	Yes	Addresses high priority goals (hypertension); Though we gave preference to NQF endorsement, some measures selected that were not NQF endorsed based on their measurement of high priority conditions.
NQF 0001	Supports measure	Does not advance quality of care; Concerns about ability to collect discrete data.	No	Concur with public comment and complexity associated with collecting discrete data.
NQF 0012	Measure could be adapted to use EHRs to create more accurate quality measures.	No comments	No	Measure no longer supported by measure steward.
NQF 0014	No comments	Does not advance quality of care.	No	Measure no longer supported by measure steward.
NQF 0045	No comments	Measure is untested in part of population age range; focus on communications instead of outcomes.	No	Difficulty ensuring accurate and standard data collected.
NQF 0046	Supports measure	Concerns about ability to collect discrete data.	No	Difficulty ensuring accurate and standard data collected.
NQF 0047	Supports measure	Measure is complicated; concern about lack of look back period.	No	Difficulty ensuring accurate and standard data collected.
NQF 0048	Supports measure with suggested changes.	No comments	No	Difficulty ensuring accurate and standard data collected.
NQF 0050	Supports measure	Does not advance quality of care; Concerns about ability to collect discrete data.	No	Concur with public comment and complexity associated with collecting discrete data.
NQF 0051	Supports measure	Concerns about ability to collect discrete data.	No	Concur with public comment and complexity associated with collecting discrete data.
NQF 0058	No comments	Definition of condition too restrictive.	No	Concur with public comment that acute bronchitis is too restrictive for an antibiotic overuse CQM. Seek to limit measure set to reduce burden.
NQF 0061	Support for measure	No comments	No	Redundant with other measures assessing condition (e.g., NQF 0018).
NQF 0066	Support for measure	Measure contains two diagnoses and should separated into two measures; Concerns about ability to collect discrete data.	No	Concur with public comment and complexity associated with collecting discrete data.
NQF 0067	Support for measure	Concerns about ability to collect discrete data.	No	Concur with public comment and complexity associated with collecting discrete data.
NQF 0073	Support for measure and suggestion to adapt to further exploit EHRs.	No comments	No	Redundant with other measures assessing condition (e.g., NQF 0018).

TABLE 7—SUMMARY OF EP CQM-SPECIFIC COMMENTS AND RATIONALE TO FINALIZE OR NOT FINALIZE THE CQM—Continued

CQM No.	Commenters support finalization	Commenters do not support finalization	Finalized	Rationale
NQF 0074	Support for measure	Concerns about ability to collect discrete data.	No	Concur with public comment and complexity associated with collecting discrete data.
NQF 0097	Support for measure	Measure does not advance quality of care, too ''check boxy,'' reconciling across care settings; Concerns about ability to collect discrete data.	No	Concur with public comment and complexity associated with collecting discrete data.
NQF 0098	Support for measure	Measure is vague; ability to capture discrete data; need standardized tool for assessment; no evidence interventions support outcomes.	No	Concur with public comment and complexity associated with collecting discrete data.
NQF 0100	Support for measure	No evidence interventions support outcomes; Concerns about ability to collect discrete data.	No	Concur with public comment and complexity associated with collecting discrete data.
NQF 0102	Support for measure	Concerns about ability to collect discrete data and calculate measure.	No	Concur with public comment and complexity associated with collecting discrete data.
NQF 0103	Support for measure; harmonize with other measures.	Does not advance quality of care; privacy issues; Concerns about ability to collect discrete data.	No	Concur with concerns in public comments.
NQF 0106	Support for measure	Measure is too complex; concerns about ability to collect discrete data.	No	Concur with concerns in public comments that the measure is too complex; and agree with the concerns about ability to collect discrete data.
NQF 0107	No comments	Duplicative of other measures	No	Concur with concerns in public comments that it is duplicative of other measures.
NQF 0112	Support for measure	Measure is too complex; privacy issues; vague; concerns about ability to collect discrete data.	No	Concur with public comment and complexity associated with collecting discrete data.
NQF 0239	Support for measure	Concerns about ability to collect discrete data.	No	Concur with public comment and complexity associated with collecting discrete data.
Former NQF 0246	Support for measure	Does not advance quality of care; not NQF endorsed; Concerns about ability to collect discrete data.	No	Concur with public comment and complexity associated with collecting discrete data.
NQF 0271	Support for measure	Questions if appropriate for ambulatory setting; Concerns about ability to collect discrete data.	No	Concur with public comment and complexity associated with collecting discrete data.
NQF 0312	Support for measure	Measure is vague	No	Difficulty ensuring accurate and standard data collected.
NQF 0321	Support for measure	No comments	No	Complexity associated with collecting discrete data.
NQF 0322	Support for measure	Measure is vague; concerns about ability to capture discrete data.	No	Concur with public comment and complexity associated with collecting discrete data.
NQF 0323	Support for measure	Interoperability concerns	No	Concur with public comment and complexity associated with collecting discrete data.
NQF 0382	Support for measure	Concerns about ability to capture numerator data.	No	Concur with public comment and complexity associated with collecting discrete data.
NQF 0383	Support for measure	Concerns about ability to collect discrete data.	No	Concur with public comment and complexity associated with collecting discrete data.
NQF 0388	Support for measure	Concerns about ability to collect discrete data.	No	Measure retired by steward.

TABLE 7—SUMMARY OF EP CQM-SPECIFIC COMMENTS AND RATIONALE TO FINALIZE OR NOT FINALIZE THE CQM—Continued

CQM No.	Commenters support finalization	Commenters do not support finalization	Finalized	Rationale
NQF 0399	Support for measure	No comments	No	Seek to limit measure set to reduce burden.
NQF 0400	Support for measure	No comments	No	Seek to limit measure set to reduce burden.
NQF 0401	Support for measure	Concerns about ability to collect discrete data.	No	Concur with public comment and complexity associated with collecting discrete data.
NQF 0406	Support for measure	Concerns about keeping up-to-date with changing guidelines.	No	Concur with concerns from public comments with concerns about keeping up-to-date with changing guidelines.
NQF 0507	Support for measure	Does not advance quality of care.	No	Concur with public comment and complexity associated with collecting discrete data.
NQF 0508	Support for measure	Inability to capture screening results as discrete data.	No	Concur with public comment and complexity associated with collecting discrete data.
NQF 0510	Support for measure	Concerns about ability to collect discrete data.	No	Concur with public comment and complexity associated with collecting discrete data.
NQF 0513	Support for measure	Concerns about ability to collect discrete data.	No	Concur with public comment and complexity associated with collecting discrete data.
NQF 0519	Support for measure	Does not advance quality of care; Concerns about ability to collect discrete data.	No	Concur with public comment and complexity associated with collecting discrete data.
NQF 0561	Support for measure; supports care coordination and alignment with PQRS.	Does not advance quality of care; Concerns about ability to collect discrete data.	No	Concur with public comment and complexity associated with collecting discrete data.
NQF 0562	Support for measure	Concerns about ability to collect discrete data; important measure of overuse.	No	Concur with public comment and complexity associated with collecting discrete data.
NQF 0575	Support for measure with reasonable target regarding potential adverse effects of tight diabetes control.	No comments	No	Concur with concerns in public comments regarding potential adverse effects of tight diabetes control.
NQF 0711	Supports measure concept but concerned metric is too high.	Potentially duplicative; privacy issues.	No	Concur with concerns in public comments about potentially duplicative measure; and privacy issues.
NQF 1525	Support for measure	Concerns about ability to collect discrete data.	No	Concur with public comment and complexity associated with collecting these discrete data.
TBD (Risk Assessment for Falls).	Support for measure	Not NQF endorsed. Concerns about ability to collect discrete data.	No	Concur with public comment and complexity associated with collecting these discrete data.
TBD (Plan of Care for Falls)	Support for measure	Not NQF endorsed; questions evidence base for plan of care for falls.	No	Concur with public comment and complexity associated with collecting these discrete data.
TBD (ADK: BP Mgmt)	Support for measure	Not NQF endorsed. Concerns about ability to collect discrete data.	No	Concur with public comment and complexity associated with collecting these discrete data.
TBD (ADK: ESA)	Support for measure	Not NQF endorsed. Concerns about ability to collect discrete data.	No	Concur with public comment and complexity associated with collecting these discrete data.
TBD (Wound Wet to Dry)	Support for measure	Not NQF endorsed. Concerns about ability to collect discrete data.	No	Concur with public comment and complexity associated with collecting these discrete data.
TBD (Dementia Staging)	Support for measure	Not NQF endorsed; does not advance quality of care. Concerns about ability to collect discrete data.	No	Concur with public comment and complexity associated with collecting these discrete data.

TABLE 7—SUMMARY OF EP CQM-SPECIFIC COMMENTS AND RATIONALE TO FINALIZE OR NOT FINALIZE THE CQM—Continued

CQM No.	Commenters support finalization	Commenters do not support finalization	Finalized	Rationale
TBD (Dementia FSA)	Support for measure	Not NQF endorsed. Concerns about ability to collect discrete data.	No	Concur with public comment and complexity associated with collecting these discrete data.
TBD (Dementia Safety)	Support for measure	Not NQF endorsed. Concerns about ability to collect discrete data.	No	Concur with public comment and complexity associated with collecting these discrete data.
TBD (Dementia Driving)	Support for measure	Not NQF endorsed. Concerns about ability to collect discrete data.	No	Concur with public comment and complexity associated with collecting these discrete data.
TBD (Dementia Caregiver)	Support for measure	Not NQF endorsed. Concerns about ability to collect discrete data.	No	Concur with public comment and complexity associated with collecting these discrete data.
TBD (Wound Compression)	Support for measure	Not NQF endorsed. Concerns about ability to collect discrete data.	No	Concur with public comment and complexity associated with collecting these discrete data.
TBD (RA: FSA)	Support for measure	Not NQF endorsed. Concerns about ability to collect discrete data.	No	Concur with public comment and complexity associated with collecting these discrete data.
TBD (Glaucoma)	No comments	Not NQF endorsed	No	Concur with public comment and complexity associated with collecting these discrete data.
TBD (Wound Diabetic)	Support for measure	Not NQF endorsed. Concerns about ability to collect discrete data.	No	Concur with public comment and complexity associated with collecting these discrete data.
TBD (Hypertension: BPM)	No comments	Not NQF endorsed; questions appropriateness due to narrow population.	No	Prefer CQMs on the topic of hypertension with NQF endorsement.

NQF endorsement includes a consensus development process that takes into account clinical guidelines and scientific evidence. NQF describes its consensus development process at *http://www.qualityforum.org/Measuring_Performance/Consensus_Development_Process.aspx*.

After consideration of the public comments received and the CQM selection criteria discussed, we are finalizing the list of 64 CQMs for EPs included in Table 7. We note that the CQMs that do not have a CQM number in Table 7 are those that are not NQF endorsed. EPs will identify these CQMs by the eMeasure ID and version number that will be included in the CQM specifications that will be made available on our Web site.

We also note that three of the CQMs listed with a CQM number of TBD in Table 7 were proposed with NQF numbers but are changed to ''TBD'' in this final rule as follows:

- NQF 0407 is now HIV/AIDS: RNA control for Patients with HIV
- NQF 1335 is now Children who have dental decay or cavities
- NQF 1419 is now Primary Caries Prevention Intervention as Part of Well/Ill Child Care as Offered by Primary Care Medical Providers

NQF 0407 referenced antiretroviral therapy as the means for RNA control. This CQM is scheduled for NQF review and, due to changing clinical guidelines regarding therapies, significant change in this measure is expected. Due to the nature of HIV/AIDS, the virus mutates frequently, necessitating frequent changes in clinical guidelines with respect to treatments. By respecifying the CQM to remove antiretroviral therapy as the specific treatment and only focus on the outcome of RNA control, the intent of this CQM remains the same. The respecified CQM will be submitted to NQF for endorsement. NQF 1335 was endorsed as population-based CQMs rather than individual provider-level CQMs and will be respecified to include individual provider reporting, and NQF 1419 was endorsed at the individual provider level but only for primary care physicians and will be respecified to include dental providers. Both will undergo additional testing, and the results for each CQM will be submitted to NQF to determine whether the respecification warrants a new NQF number. However, the intent of each of these CQMs will remain the same as proposed.

The CQMs finalized in the recommended core sets are included in Table 7 and are denoted with a ''*'' for adult populations (9 CQMs) and ''**'' for pediatric populations (9 CQMs). We believe this approach supports the NQS and provides flexibility for specialists whose scope of practice may not be adequately represented in the proposed core CQM set. Controlling blood pressure has been and continues to be a high priority goal in many national health initiatives, including the Million Hearts campaign. Therefore, we emphasize the importance of reporting NQF #0018 as a primary recommended core CQM. We will monitor reporting on NQF #0018 and consider ways to increase its reporting. This may include, through future rulemaking, requiring EPs in relevant specialties such as primary care and cardiovascular care to report this CQM. We note that the designation of being recommended for

the adult population or pediatric population does not limit an EP from reporting the CQM only for those populations as long as the patients still fit the criteria to be included in the measure (for example, the CQM numbered ''TBD—Closing the referral loop: receipt of specialist report'' is designated as a recommended core CQM for adult populations, but it can apply to pediatric populations as well).

TABLE 8—CQMS FINALIZED FOR MEDICARE AND MEDICAID EPS BEGINNING WITH CY 2014

CQM No.	CQM title and description	Measure steward and contact information	Other quality measure programs that use the same CQM***	New CQM	Domain
NQF 0002**	Title: Appropriate Testing for Children with Pharyngitis. Description: Percentage of children 2–18 years of age who were diagnosed with pharyngitis, ordered an antibiotic and received a group A streptococcus (strep) test for the episode.	National Committee for Quality Assurance (NCQA) Contact information: *www.ncqa.org*.	EHR PQRS, CHIPRA.		Efficient Use of Healthcare Resources.
NQF 0004	Title: Initiation and Engagement of Alcohol and Other Drug Dependence Treatment. Description: Percentage of patients 13 years of age and older with a new episode of alcohol and other drug (AOD) dependence who received the following. Two rates are reported. a. Percentage of patients who initiated treatment within 14 days of the diagnosis. b. Percentage of patients who initiated treatment and who had two or more additional services with an AOD diagnosis within 30 days of the initiation visit.	NCQA *Contact Information: www.ncqa.org*.	EHR PQRS, HEDIS, state use, ACA 2701, NCQA–PCMH Recognition.		Clinical Process/Effectiveness.
NQF 0018*	Title: Controlling High Blood Pressure Description: Percentage of patients 18–85 years of age who had a diagnosis of hypertension and whose blood pressure was adequately controlled (<140/90mmHg) during the measurement =period.	NCQA *Contact Information: www.ncqa.org*.	EHR PQRS, ACO, Group Reporting PQRS, UDS.		Clinical Process/Effectiveness.
NQF 0022*	Title: Use of High-Risk Medications in the Elderly Description: Percentage of patients 66 years of age and older who were ordered high-risk medications. Two rates are reported. a. Percentage of patients who were ordered at least one high-risk medication. b. Percentage of patients who were ordered at least two different high-risk medications.	NCQA *Contact Information: www.ncqa.org*.	PQRS	New	Patient Safety
NQF 0024**	Title: Weight Assessment and Counseling for Nutrition and Physical Activity for Children and Adolescents. Description: Percentage of patients 3–17 years of age who had an outpatient visit with a Primary Care Physician (PCP) or Obstetrician/Gynecologist (OB/GYN) and who had evidence of the following during the measurement period. Three rates are reported. • Percentage of patients with height, weight, and body mass index (BMI) percentile documentation. • Percentage of patients with counseling for nutrition. • Percentage of patients with counseling for physical activity.	NCQA *Contact information: www.ncqa.org*.	EHR PQRS, UDS		Population/Public Health.
NQF 0028*	Title: Preventive Care and Screening: Tobacco Use: Screening and Cessation Intervention. Description: Percentage of patients aged 18 years and older who were screened for tobacco use one or more times within 24 months AND who received cessation counseling intervention if identified as a tobacco user.	AMA–PCPI *Contact Information: cpe@ama-assn.org*.	EHR PQRS, ACO, Group Reporting PQRS, UDS.		Population/Public Health.
NQF 0031	Title: Breast Cancer Screening Description: Percentage of women 40–69 years of age who had a mammogram to screen for breast cancer.	NCQA *Contact Information: www.ncqa.org*.	EHR PQRS, ACO, Group Reporting PQRS, ACA 2701, HEDIS, state use, NCQA–PCMH Recognition.		Clinical Process/Effectiveness.
NQF 0032	Title: Cervical Cancer Screening Description: Percentage of women 21–64 years of age, who received one or more Pap tests to screen for cervical cancer.	NCQA *Contact Information: www.ncqa.org*.	EHR PQRS, ACA 2701, HEDIS, state use, NCQA–PCMH Recognition, UDS.		Clinical Process/Effectiveness.
NQF 0033**	Title: Chlamydia Screening for Women Description: Percentage of women 16–24 years of age who were identified as sexually active and who had at least one test for chlamydia during the measurement period.	NCQA *Contact Information: www.ncqa.org*.	EHR PQRS, CHIPRA, ACA 2701, HEDIS, state use, NCQA–PCMH Recognition.		Population/Public Health.

TABLE 8—CQMS FINALIZED FOR MEDICARE AND MEDICAID EPS BEGINNING WITH CY 2014—Continued

CQM No.	CQM title and description	Measure steward and contact information	Other quality measure programs that use the same CQM***	New CQM	Domain
NQF 0034	Title: Colorectal Cancer Screening Description: Percentage of adults 50–75 years of age who had appropriate screening for colorectal cancer.	NCQA *Contact Information: www.ncqa.org*.	EHR PQRS, ACO, Group Reporting PQRS, NCQA–PCMH Recognition.		Clinical Process/Effectiveness.
NQF 0036**	Title: Use of Appropriate Medications for Asthma Description: Percentage of patients 5–64 years of age who were identified as having persistent asthma and were appropriately prescribed medication during the measurement period.	NCQA *Contact Information: www.ncqa.org*.	EHR PQRS		Clinical Process/Effectiveness.
NQF 0038**	Title: Childhood Immunization Status Description: Percentage of children 2 years of age who had four diphtheria, tetanus and acellular pertussis (DTaP); three polio (IPV), one measles, mumps and rubella (MMR); three H influenza type B (HiB); three hepatitis B (Hep B); one chicken pox (VZV); four pneumococcal conjugate (PCV); one hepatitis A (Hep A); two or three rotavirus (RV); and two influenza (flu) vaccines by their second birthday.	NCQA *Contact Information: www.ncqa.org*.	EHR PQRS, UDS		Population/Public Health.
NQF 0041	Title: Preventative Care and Screening: Influenza Immunization. Description: Percentage of patients aged 6 months and older seen for a visit between October 1 and March 31 who received an influenza immunization OR who reported previous receipt of an influenza immunization.	AMA–PCPI *Contact Information: cpe@ama-assn.org*.	EHR PQRS, ACO, Group Reporting PQRS.		Population/Public Health.
NQF 0043	Title: Pneumonia Vaccination Status for Older Adults. Description: Percentage of patients 65 years of age and older who have ever received a pneumococcal vaccine.	NCQA *Contact Information: www.ncqa.org*.	EHR PQRS, ACO, Group Reporting PQRS, NCQA–PCMH Recognition.		Clinical Process/Effectiveness.
NQF 0052*	Title: Use of Imaging Studies for Low Back Pain Description: Percentage of patients 18–50 years of age with a diagnosis of low back pain who did not have an imaging study (plain X-ray, MRI, CT scan) within 28 days of the diagnosis.	NCQA *Contact Information: www.ncqa.org*.	EHR PQRS		Efficient Use of Healthcare Resources.
NQF 0055	Title: Diabetes: Eye Exam Description: Percentage of patients 18–75 years of age with diabetes who had a retinal or dilated eye exam by an eye care professional during the measurement period or a negative retinal exam (no evidence of retinopathy) in the 12 months prior to the measurement period.	NCQA *Contact Information: www.ncqa.org*.	EHR PQRS, Group Reporting PQRS.		Clinical Process/Effectiveness.
NQF 0056	Title: Diabetes: Foot Exam Description: Percentage of patients aged 18–75 years of age with diabetes who had a foot exam during the measurement period.	NCQA *Contact Information: www.ncqa.org*.	EHR PQRS, Group Reporting PQRS.		Clinical Process/Effectiveness.
NQF 0059	Title: Diabetes: Hemoglobin A1c Poor Control Description: Percentage of patients 18–75 years of age with diabetes who had hemoglobin A1c >9.0% during the measurement period.	NCQA *Contact Information: www.ncqa.org*.	EHR PQRS, ACO, Group Reporting PQRS, UDS.		Clinical Process/Effectiveness.
NQF 0060	Title: Hemoglobin A1c Test for Pediatric Patients Description: Percentage of patients 5–17 years of age with diabetes with an HbA1c test during the measurement period.	NCQA Contact Information: *www.ncqa.org*.		New	Clinical Process/Effectiveness.
NQF 0062	Title: Diabetes: Urine Protein Screening Description: The percentage of patients 18–75 years of age with diabetes who had a nephropathy screening test or evidence of nephropathy during the measurement period.	NCQA *Contact Information: www.ncqa.org*.	EHR PQRS, Group Reporting PQRS.		Clinical Process/Effectiveness.
NQF 0064	Title: Diabetes: Low Density Lipoprotein (LDL) Management. Description: Percentage of patients 18–75 years of age with diabetes whose LDL–C was adequately controlled (<100 mg/dL) during the measurement period.	NCQA *Contact Information: www.ncqa.org*.	PQRS, Group Reporting PQRS.		Clinical Process/Effectiveness.
NQF 0068	Title: Ischemic Vascular Disease (IVD): Use of Aspirin or Another Antithrombotic. Description: Percentage of patients 18 years of age and older who were discharged alive for acute myocardial infarction (AMI), coronary artery bypass graft (CABG) or percutaneous coronary interventions (PCI) in the 12 months prior to the measurement period, or who had an active diagnosis of ischemic vascular disease (IVD) during the measurement period, and who had documentation of use of aspirin or another antithrombotic during the measurement period.	NCQA *Contact Information: www.ncqa.org*.	EHR PQRS, ACO, Group Reporting PQRS.		Clinical Process/Effectiveness.

6. Reporting Methods for CQMs for EPs

(a) Reporting Methods for Medicaid EPs

For Medicaid EPs, we stated in the proposed rule that states are, and will continue in Stage 2 to be, responsible for determining whether and how electronic reporting would occur, or whether they wish to continue to allow reporting through attestation. If a state does require such electronic reporting, the state is responsible for sharing the details of the process with its provider community. We stated that we anticipate that whatever means states have deployed for capturing Stage 1 CQMs electronically would be similar for reporting in CY 2013. However, we note that subject to our prior approval, this is within the states' purview. Beginning in CY 2014, we proposed that the states would establish the method and requirements, subject to CMS prior approval, for the electronic capture and reporting of CQMs from CEHRT.

Comment: Commenters suggested unified Medicaid CQM reporting to reduce the burden on EPs operating in multiple states.

Response: For the purposes of the Medicaid EHR Incentive Program, EPs report CQMs to the state making the EHR incentive payment. However, data from all practice locations that are equipped with CEHRT will be used for reporting CQMs, even if the practice locations are in different states.

After consideration of the public comments received, we are finalizing the policies for electronic reporting of CQMs for Medicaid EPs as proposed. As part of certification for EHR technology, ONC is including testing for data capture, CQM calculation, and electronic submission. For CQMs, this includes certification criteria for the QRDA Category I (QRDA–I) and QRDA Category III (QRDA–III) transmission formats. We expect the states that have electronic reporting options for CQMs might choose to adopt QRDA–I for patient-level data and/or QRDA–III for aggregate data as the form in which EPs would report CQM data. By adopting the same QRDA–I and/or QRDA–III that

CMS is requiring for CQM reporting, the states would be able to leverage the development of the specifications by CMS and the industry as well as the testing done by ONC for certification of EHR technology. This would reduce the burden on EHR vendors to implement and test different specifications.

(b) Reporting Methods for Medicare EPs in CY 2013

In the Stage 2 proposed rule, we did not propose any reporting methods for Medicare EPs in 2013. However, in the CY 2013 Medicare PFS proposed rule (77 FR 44988), we proposed that EPs may continue to report by attestation CQM results as calculated by CEHRT, as they did for 2011 and 2012. For further explanation of reporting CQMs by attestation, please see the Stage 1 final rule (75 FR 44430 through 44434). We also proposed in the CY 2013 Medicare PFS proposed rule (77 FR 44988) to continue the voluntary electronic reporting pilot for CQMs (the PQRS—Medicare EHR Incentive Pilot) for 2013, which we had previously established for 2012. We expect to finalize in the CY 2013 Medicare PFS final rule the reporting methods that would apply in 2013 for EPs participating in the Medicare EHR Incentive Program.

(c) Reporting Methods for Medicare EPs Beginning With CY 2014

Under section 1848(o)(2)(A)(iii) of the Act, EPs must submit information on the CQMs selected by the Secretary ''in a form and manner specified by the Secretary'' as part of demonstrating meaningful use of CEHRT. We proposed that Medicare EPs who are in their first year of Stage 1 may report CQMs through attestation for a continuous 90-day EHR reporting period. We proposed that Medicare EPs who choose Option 1 for reporting CQMs would submit through an aggregate reporting method, which would require the EP to log into a CMS-designated portal and submit through an upload process data produced as output from their CEHRT in an XML-based format specified by CMS. We proposed that Medicare EPs who choose to report CQMs as described in Option 2 would submit in accordance with the requirements of the PQRS program.

Comment: We received several comments on the proposal to use an XML-based format for transmitting aggregate results. Those commenters were generally in favor of using an aggregate XML and that the technical structure aligns with the PQRS registry reporting option. One commenter noted that the aggregate-level standard QRDA–III is not currently mature. Some commenters indicated a preference that the aggregate reporting method should only require submission of one data file instead of multiple files, citing that submitting multiple files is onerous and may not be manageable due to the number of files EPs would need to upload.

Response: We acknowledge that there is currently no consensus standard for the electronic transmission of aggregate results of CQMs. However, the 2014 Edition certification criteria adopt the QRDA–III specification. As a result, we expect to be able to receive data submitted using the QRDA–III specification.

We proposed to consider an ''interim submission'' option for Medicare EPs who are in their first year of Stage 1 and who participate in PQRS. Under this option, EPs would submit the PQRS CQM data for a continuous 90-day EHR reporting period, and the data must be received no later than October 1 to meet the requirements of the EHR Incentive Program. We proposed that the EP would report the remainder of his/her CQM data by the deadline specified for PQRS in order to meet the requirements of the PQRS program. We solicited public comment on this potential option.

Comment: Many commenters indicated the proposed interim submission option for Medicare EPs in their first year of Stage 1 is unclear and would involve a prohibitive amount of effort. The commenters also suggested removing this option. Other commenters supported the interim submission option.

Response: This option was intended to accommodate Medicare EPs who are demonstrating meaningful use for the first time in 2014 and want to choose Option 2 (the PQRS EHR reporting option) for reporting CQMs. As proposed, however, it would require two submissions. We agree with the commenters that the ''interim submission option'' is complex and potentially burdensome. We are not finalizing the interim submission option.

After consideration of the public comments received, we are finalizing the following reporting methods for Medicare EPs beginning in CY 2014:

- Option 1: Aggregate reporting through a CMS-designated electronic transmission method using CEHRT.

The format required for aggregate reporting will be the QRDA–III, which is an XML-based format. The electronic transmission method for aggregate reporting differs from reporting via attestation in that the QRDA–III report would be generated by the EPs CEHRT and transmitted electronically rather than the aggregate results manually input into the Registration and Attestation system. EPs who are in their first year of Stage 1 must report CQMs under Option 1 through attestation (please refer to the Stage 1 final rule for an explanation of reporting CQMs through attestation (75 FR 44430 through 44434)). Consistent with section 1848(o)(2)(B)(ii) of the Act, in the unlikely event that the Secretary does not have the capacity to receive CQM data electronically, EPs who are beyond the first year of Stage 1 may continue to report aggregate CQM results through attestation.

- Option 2: Patient-level reporting via PQRS through the transmission methods established for the PQRS EHR-based reporting mechanisms and using CEHRT.

Please refer to 42 CFR 414.90 and the CY 2013 Medicare PFS proposed rule (77 FR 44988) for more information on the PQRS.

(d) Group Reporting Option for Medicare and Medicaid EPs Beginning With CY 2014

For Stage 1, EPs were required to report the CQMs on an individual basis and did not have an option to report the CQMs as part of a group practice. Under section 1848(o)(2)(A) of the Act, the Secretary may provide for the use of alternative means for EPs furnishing covered professional services in a group practice (as defined by the Secretary) to meet the requirements of meaningful use. Beginning with CY 2014, we proposed three group reporting options to allow EPs within a single group practice to report CQM data on a group level. We proposed that all three methods would be available for Medicare EPs, while only the first one would be possible for Medicaid EPs, at states' discretion.

We proposed each of these options as an alternative to reporting CQM data as an individual EP under the proposed options and reporting methods discussed earlier in this rule. These group reporting options would only be available for reporting CQMs for purposes of the EHR Incentive Program and only if all EPs in the group are beyond the first year of Stage 1. EPs would not be able to use these group reporting options for any of the other meaningful use objectives and associated measures in the EHR Incentive Programs.

The three group reporting options that we proposed for EPs are as follows:

- Two or more EPs, each identified with a unique NPI associated with a group practice identified under one tax

identification number (TIN) may be considered an EHR Incentive Group for the purposes of reporting CQMs for the Medicare EHR Incentive Program. This group reporting option would only be available for electronic reporting of CQMs and would not be available for those EPs in their first year of Stage 1. The CQMs reported under this option would represent all EPs within the group. EPs who choose this group reporting option for CQMs would have to individually satisfy the objectives and associated measures for their respective stage of meaningful use. We proposed that states may also choose this option to accept group reporting for CQMs, based upon a predetermined definition of a ''group practice,'' such as sharing one TIN.

• Medicare EPs participating in the Medicare SSP and the testing of the Pioneer ACO model who use CEHRT to submit ACO measures in accordance with the requirements of the Medicare SSP would be considered to have satisfied their CQM reporting requirement as a group for the Medicare EHR Incentive Program. The Medicare SSP does not require the use of CEHRT. However, all CQM data would have to be extracted from CEHRT in order for the EP to qualify for the Medicare EHR Incentive Program if an EP intends to use this group reporting option. EPs would have to individually satisfy the objectives and associated measures for their respective stage of meaningful use, in addition to submitting CQMs as part of an ACO. EPs who are part of an ACO but do not enter the data used for reporting the CQMs (which excludes the survey tool or claims-based measures that are collected to calculate the quality performance score in the Medicare SSP) into CEHRT would not be able to meet meaningful use requirements. For more information about the requirements of the Medicare SSP, see 42 CFR 425 and the November 2, 2011 final rule (76 FR 67802). EPs who use this group reporting option for the Medicare EHR Incentive Program would be required to comply with any changes to the Medicare SSP that may apply in the future. EPs would be required to be part of a group practice (that is, two or more EPs, each identified with a unique NPI associated with a group practice identified under one TIN) to be able to use this group reporting option.

• Medicare EPs who satisfactorily report PQRS CQMs using CEHRT under the PQRS Group Practice Reporting Option (GPRO), would be considered to have satisfied their CQM reporting requirement as a group for the Medicare EHR Incentive Program. For more information about the PQRS GPRO, see 42 CFR 414.90 and the CY 2012 Medicare PFS final rule (76 FR 73314) and CY 2013 Medicare PFS proposed rule (77 FR 44805 through 44807). EPs who use this group reporting option for the Medicare EHR Incentive Program would be required to comply with any changes to the PQRS GPRO that may apply in the future and would have to individually satisfy the objectives and associated measures for their respective stage of meaningful use.

Comment: We received numerous comments on the proposed group reporting options. Generally, most commenters supported including group reporting. Many commenters indicated group reporting options are consistent with the intent of many of the measures and would promote a more patient focused healthcare experience. A commenter requested clarification regarding whether group reporting was confined to CQMs or other objectives in meaningful use as well. Other commenters requested more detail on how new EPs or EPs leaving group practices might affect reporting and validation. Commenters indicated the requirement that only EPs beyond Stage 1 be able to use this option be eliminated because new providers join practices frequently. A commenter requested that new members of a practice be able to report at the same level that the group is currently reporting. Many commenters requested greater specificity in the final rule and clarification whether all EPs under the same TIN need to submit as a group, or if some can submit as a group and others individually. A commenter recommended that not all EPs under the same TIN should have to have access to CEHRT at all group practice locations. Other commenters stated that the proposed option for group reporting is complex and suggested the files submitted contain only data related to providers within the group or practice that have met the measures. A commenter indicated that the addition of multiple reporting options has made it exceedingly difficult for providers already presented with multiple reporting options across state and federal programs.

Response: We agree with commenters as to the benefits of reporting and measurement at the group level. We believe it can lessen the complexity and burden of reporting and also promote a greater patient focus. Group level reporting can avoid the need for multiple professionals in the same practice to report the same information on single patient that they may each treat. It can promote team work and the recognition that quality care often depends on interplay of multiple professionals rather that solely on a particular individual professional. Therefore, we agree that we should include the option of group reporting of CQMs for the EHR Incentive Program.

With respect to applicability to measures other than CQMs, as proposed the group reporting options in section II.B.6.d. of the proposed rule (77 FR 13758) would apply only to CQM reporting and not to other meaningful use objectives and associated measures. EPs reporting CQMs under a group reporting option must still attest to the meaningful use objectives and associated measures individually or through the batch reporting process we are finalizing in section II.C.1.c of this final rule to successfully demonstrate meaningful use.

As for the three options for group reporting we proposed, we agree with the potential for complexity of group reporting under which different individuals within a group would be treated differently, such as the proposed requirement that all EPs in the group must be beyond their first year of meaningful use. We believe that this would be complex and difficult to operationalize, so we are not finalizing this requirement. We note that for the group reporting option under PQRS and for professionals participating in the Medicare SSP and the testing of the Pioneer ACO model, all individuals within a group are treated as being part of the group for the purposes of quality reporting.

As a result, for the Medicare EHR Incentive Program, we are finalizing the following two group reporting options for the purposes of CQM reporting:

• Medicare EPs participating in the Medicare SSP and the testing of the Pioneer ACO model who use CEHRT to submit ACO CQMs in accordance with the requirements of the Medicare SSP would be considered to have satisfied their CQM reporting requirement as a group for the Medicare EHR Incentive Program.

• Medicare EPs who satisfactorily report PQRS CQMs using CEHRT under the PQRS GPRO would be considered to have satisfied their CQM reporting requirement as a group for the Medicare EHR Incentive Program. Under the CY 2013 Medicare PFS proposed rule, additional group reporting options are proposed. We note that the proposed claims and registry options for GPRO, which do not involve the use of CEHRT, would not satisfy the CQM reporting requirement for the EHR Incentive Program. However, the options for GPRO involving the use of CEHRT, which include submissions from

CEHRT directly to CMS or through a data intermediary to CMS, could satisfy the CQM reporting requirement for the EHR Incentive Program. Under the PQRS GPRO, CQM submission is at the group level, not at the level of any individual EP that is part of the group. Each individual EP who is a member of the group would meet the CQM reporting requirement for the EHR Incentive Program if the group meets the requirements for PQRS, with the exception of the EPs in the group who are in their first year of demonstrating meaningful use as noted later in this section.

We do not finalize any additional requirements beyond those of the programs themselves for group reporting, with the exception that the group must use CEHRT in connection with submitting CQMs. Although a group may include EPs that are demonstrating meaningful use for the first time, we emphasize that these EPs cannot use either of these group reporting options for reporting CQMs for the EHR Incentive Program. CQM data collected by EPs that are part of a group and are in their first year of demonstrating meaningful use could still be part of the group's collective data submission. However, for purposes of avoiding a payment adjustment, EPs who are in their first year of demonstrating meaningful use in the year immediately preceding a payment adjustment year must individually submit their CQM data by attestation no later than October 1 of such preceding year. We encourage EPs who would like to use the group reporting options beginning in 2014 to become meaningful EHR users in 2013. Please see section II.D.2. of this final rule for more details on payment adjustments.

For the Medicaid EHR Incentive Program, the states will have the option to allow group reporting of CQMs through an update to their State Medicaid HIT plan, which must describe how they would address the issue of EPs who switch group practices during an EHR reporting period.

7. CQMs for Eligible Hospitals and Critical Access Hospitals

(a) Statutory and Other Considerations

Sections 1886(n)(3)(A)(iii) and 1903(t)(6)(C) of the Act provide for the reporting of CQMs by eligible hospitals and CAHs as part of demonstrating meaningful use of CEHRT. For further explanation of the statutory requirements, we refer readers to the discussion in our Stage 1 proposed and final rules (75 FR 1870 through 1902 and 75 FR 44380 through 44435, respectively).

Section 1886(n)(3)(B)(i)(I) of the Act requires the Secretary to give preference to CQMs that have been selected for the purpose of applying section 1886(b)(3)(B)(viii) of the Act (that is, measures that have been selected for the Hospital Inpatient Quality Reporting (IQR) Program) or that have been endorsed by the entity with a contract with the Secretary under section 1890(a) of the Act (namely, the NQF). We proposed CQMs for eligible hospitals and CAHs for 2013, 2014, and 2015 (and potentially subsequent years) that reflect this preference, although we note that the Act does not require the selection of such CQMs for the EHR Incentive Programs. CQMs listed in this final rule that do not have an NQF identifying number are not NQF endorsed.

Under section 1903(t)(8) of the Act, the Secretary must seek, to the maximum extent practicable, to avoid duplicative requirements from federal and state governments for eligible hospitals and CAHs to demonstrate meaningful use of CEHRT under Medicare and Medicaid. Therefore, to meet this requirement, we proposed to continue our practice from Stage 1 of proposed CQMs that would apply for both the Medicare and Medicaid EHR Incentive Programs.

In accordance with CMS and HHS quality goals as well as the HHS National Quality Strategy recommendations, the hospital CQMs that we proposed beginning with FY 2014 can be categorized into the following six domains, which are described in section II.B.3. of this final rule:

- Patient & Family Engagement.
- Patient Safety.
- Care Coordination.
- Population & Public Health.
- Efficient Use of Healthcare Resources.
- Clinical Process/Effectiveness.

The selection of CQMs we proposed for eligible hospitals and CAHs was based on statutory requirements, the HITPC's recommendations, alignment with other CMS and national hospital quality measurement programs such as the Joint Commission, the Medicare Hospital Inpatient Quality Reporting (IQR) Program and Hospital Value-Based Purchasing (HVBP) Program, the National Quality Strategy (NQS), and other considerations discussed in sections II.B.7.b. and II.B.7.c. of the proposed rule.

Section 1886(n)(3)(B)(iii) of the Act requires that in selecting measures for eligible hospitals and CAHs, and in establishing the form and manner of reporting, the Secretary shall seek to avoid redundant or duplicative reporting with reporting otherwise required. In consideration of the importance of alignment with other measure sets that apply to eligible hospitals and CAHs, we analyzed the Hospital IQR Program, hospital CQMs used by state Medicaid agencies, and the Joint Commission's hospital CQMs when selecting the proposed CQMs to be reported under the EHR Incentive Program. Furthermore, as we noted in the proposed rule, we placed emphasis on those CQMs that are in line with the NQS and the HITPC's recommendations.

Comment: Many commenters supported alignment of measure sets and reporting methods with other quality reporting programs and agency goals, such as Hospital IQR Program, HVBP, and NQS. These commenters commended CMS's intentions to reduce duplicative requirements between programs, prevent hospitals from calculating both electronic and paper-based reports for the same CQMs, avoid confusion and move towards a single, aligned quality reporting mechanism. However, several commenters requested that we provide a timeline for these alignment efforts as well as additional clarification regarding how we intend to pursue and achieve alignment across quality report programs and what this means operationally for eligible hospitals and CAHs. One commenter requested that we also align with the Center for Disease Control and Prevention's (CDC's) National Healthcare Safety Network (NHSN) to make hospital acquired infections (HAI) a national healthcare priority. Other commenters requested that we seek alignment and accuracy in other areas of quality measurement, including electronic specifications, data reporting methodologies, and vendor certification requirements. One commenter also urged that we continuously align electronic specifications for all CQMs across quality reporting programs as measure stewards update and maintain their CQMs.

Response: We appreciate the supportive comments regarding alignment. Our principal goals in alignment of the Hospital IQR, and the Medicare and Medicaid EHR Incentive Programs are to: (1) Provide a single set of CQMs for hospital reporting; (2) to the extent possible, avoid duplicate reporting by hospitals by using a single submission for multiple purposes as appropriate; and (3) transition from manual chart abstraction to automated extraction and electronic reporting based on the use of EHR technology.

In the FY 2012 Inpatient Prospective Payment Systems/Long-Term Care Hospital Prospective Payment System (IPPS/LTCH PPS) proposed rule (76 FR 25893), we stated our intention to explore mechanisms for Hospital IQR Program data collection using EHRs, and gave FY 2015 as an example of when hospitals might be able to switch to EHR-based reporting of manually chart-abstracted Hospital IQR measures. The CQMs we are finalizing beginning in 2014 for reporting under the EHR Incentive Program are electronically specified versions of current IQR chart abstracted CQMs. The 2015 target date would allow for at least 1 year of electronic submission of CQMs through the EHR Incentive Program prior to our targeted date to begin EHR-based reporting for IQR. We must assess any data collection mode differences between EHR-based reporting and chart abstracted measures using a diverse and robust sample of hospitals before proposing in rulemaking to use EHR data collection in the Hospital IQR program. Among other factors, our ability to transition to EHR-based reporting for IQR will depend on whether EHR-based reporting is accurate and reliable. Our goal would be to phase out manual chart abstraction for hospital reporting.

We did not propose the IQR CQMs on HAI for the EHR Incentive Program. Hospitals may electronically submit HAI information to the CDC, although this is not required. Information of electronic submission through the NHSN can be found at *http://www.cdc.gov/nhsn/CDA_eSurveillance.html*. NHSN data is based on surveillance data rather than chart abstraction. We will consider the NHSN measures for the EHR Incentive Program in future years.

(b) CQMs for Eligible Hospitals and CAHs for FY 2013

For the EHR reporting periods in FY 2013, we proposed to require that eligible hospitals and CAHs submit information on each of the 15 CQMs that were finalized for FYs 2011 and 2012 in the Stage 1 final rule (75 FR 44418 through 44420). We refer readers to the discussion in the Stage 1 final rule for further explanation of the requirements for reporting those CQMs (75 FR 44411 through 44422).

We did not receive any public comments on our proposals, and we are finalizing the CQMs for FY 2013 as proposed.

(c) CQMs for Eligible Hospitals and CAHs Beginning With FY 2014

(i) Reporting Options

We proposed to require eligible hospitals and CAHs to report 24 CQMs from a menu of 49 CQMs beginning with FY 2014, including at least 1 CQM from each of the following 6 domains, which are discussed in section II.B.3. of this final rule:

- Patient and Family Engagement.
- Patient Safety.
- Care Coordination.
- Population and Public Health.
- Efficient Use of Healthcare Resources.
- Clinical Process/Effectiveness.

For the remaining CQMs, we proposed that eligible hospitals and CAHs would select and report CQMs that best apply to their patient mix. We solicited comments on the number of CQMs and the appropriateness of the CQMs and domains for eligible hospitals and CAHs.

Comment: A few commenters stated that the requirement to report 24 CQMs was too difficult and adds to the administrative burden placed on eligible hospitals and CAHs, especially rural hospitals. Many commenters suggested that CQM reporting requirement beginning with 2014 remain at 15 CQMs due to the number of issues experienced by hospitals when implementing the Stage 1 CQMs, although other commenters stated that requiring up to 18 CQMs would be reasonable. A few commenters noted that CQMs were not evenly distributed among the 6 domains, making the requirement to report at least one CQM from each domain difficult for some hospitals. One commenter recommended that if a domain did not have at least 4 CQMs eligible hospitals and CAHs should not be required to report that domain. Multiple commenters stated that eligible hospitals and CAHs in Stage 1 in FY 2014 may have difficulty meeting the CQM requirement beginning in 2014 and recommend that the Stage 1 CQMs meet the requirements for those hospitals. Alternatively, the commenters recommended that if the CQMs beginning in 2014 are required, that the number of CQMs being reported be reduced for the eligible hospitals and CAHs in Stage 1 beginning in FY 2014. One commenter stated that CQM requirements failed to align with other meaningful use objectives.

Response: We acknowledge that increasing the number of CQMs required to be reported from 15 in 2011, 2012, and 2013 to 24 beginning in 2014 increases implementation burden on hospitals. We have stated our intention to implement EHR-based reporting of CQMs in other quality reporting programs, such as the Hospital IQR Program. One purpose of our proposal to increase the number of CQMs reported electronically for the EHR Incentive Program is to create an electronic reporting infrastructure that we can also use for other quality reporting programs. We also acknowledge that the requirement of reporting 24 CQMs for hospitals in their first year of Stage 1 in 2014 is a significant increase from the reporting requirement for hospitals that entered Stage 1 before 2014. We also acknowledge the difficulty in meeting the requirement to report at least 1 CQM in each of the 6 domains. For these reasons, we have finalized a policy that decreases the number of CQMs required from the proposal and decreases the total number of domains required to be covered among the selected CQMs.

After consideration of the public comments received and for the reasons discussed previously, we are finalizing the following policy on reporting requirements for CQMs for eligible hospitals and CAHs beginning in 2014:

Eligible hospitals and CAHs must report a total of 16 CQMs covering at least 3 domains from Table 8. We expect eligible hospitals and CAHs will select measures that best apply to their patient mix. As we proposed, if an eligible hospital's or CAH's CEHRT does not contain patient data for at least 16 CQMs covering at least 3 domains, then the eligible hospital or CAH must report the CQMs for which there is patient data and report the remaining required CQMs as ''zero denominators'' as displayed by their certified EHR technology. In the unlikely event that there are no CQMs applicable to the eligible hospital's or CAH's patient mix, eligible hospitals or CAHs must still report 16 CQMs even if zero is the result in either the numerator or the denominator of the measure. If all CQMs have a value of zero from their CEHRT, then eligible hospitals or CAHs must select any 16 CQMs from Table 8 to report. We stated in the proposed rule that our experience from Stage 1 in implementing the current set of 15 CQMs in specialty and low volume eligible hospitals illuminated several challenges. For example, children's hospitals rarely see patients 18 years or older. One of the exceptions to this generality is individuals with sickle cell disease. National Institutes of Health Guidelines (NIH Publication 02–2117) list the conditions under which thrombolytic therapy cannot be recommended for adults or children with sickle cell disease. This, plus the

fact that children's hospitals have on average two or fewer cases of stroke per year, have created workflow, cost, and clinical barriers to demonstrating meaningful use as it relates to the CQMs for stroke and VTE.

We proposed to consider whether a case number threshold would be appropriate, given the apparent burden on hospitals that very seldom have the types of cases addressed by certain CQMs such that hospitals that do not have enough cases to exceed the threshold would be exempt from reporting those CQMs. We solicited comments on what the numerical range of threshold should be, how hospitals would demonstrate to CMS or state Medicaid agencies that they have not exceeded this threshold, whether it should apply to only certain hospital CQMs (and if so, which ones), and the extent of the burden on hospitals if a case number threshold is not adopted given that they are allowed to report ''zeroes'' for the measures. We solicited comments on limiting the case threshold exemption to only children's, cancer hospitals, and a subset of hospitals in the Indian Health System as they have a much narrower patient base than acute care and critical access hospitals. We requested comments on whether such thresholds should be established for 2013, noting that the issue could be mitigated beginning in 2014 by our proposal to establish a larger menu set of CQMs from which hospitals would select.

Comment: Many commenters noted that the implementation of a case number threshold for CQM reporting would help reduce the burden placed on hospitals that very seldom have cases in the denominator of certain CQMs. However, commenters suggested differing mechanisms by which to implement a case number threshold. Many commenters suggested that we use Medicare claims data from the year prior to a hospital's CQM submission or another historical data source to determine whether a hospital should be exempt from reporting certain CQMs. Another commenter suggested that the simplest option would be to continue to allow hospitals to report zeroes in the denominators for CQMs. A few commenters requested that we implement a case number threshold for all hospital types, not just specialty hospitals or CAHs, since some acute care hospitals do not provide a full range of services. Another commenter suggested that we work with children's hospitals and CAHs and other types of hospitals with unique patient populations to ensure that meaningful use requirements are feasible for them. Some commenters stated that low volume eligible hospitals and CAHs would not know at the beginning of a reporting period which CQMs would not meet a case number threshold and therefore should not have to select the CQMs in advance based on this criterion. This commenter suggested that the hospitals select the CQMs to report that are most appropriate for their patient populations. One commenter requested that a case number threshold be implemented for all CQM reporting for FY 2013.

In terms of a specific case number threshold, one commenter suggested five or fewer cases per month as an appropriate threshold number to exempt any type of hospital from reporting a CQM. This same commenter also suggested that if a hospital does not have a least one CQM in a domain with a denominator greater than five, then that hospital should be exempt from reporting on that entire domain. Another commenter suggested exempting eligible hospitals and CAHs from reporting a CQM if the relevant patient population comprised less than 10 percent of their discharges. Other commenters suggested that children's hospitals be excluded from all CQMs that are only applicable to patients 18 years of age or older. Another commenter recommended that we set a case number threshold of 30 cases and require hospitals to validate this exemption through attestation. Other commenters did not suggest a specific case number threshold, but requested that we empirically derive this value and that it be aligned with values across quality reporting programs.

Response: We recognize the potential cost and work flow challenges when hospitals have a low volume of cases per year that apply to a particular CQM. We note that under the Hospital IQR Program, we do not require a hospital that has 5 or fewer inpatient discharges (Medicare and non-Medicare combined) in a topic area during a quarter in which data must be submitted to submit patient-level data for that topic area for the quarter (76 FR 51641). For the Hospital IQR Program, the hospital is still required to submit its aggregate population and sample size counts for Medicare and non-Medicare discharges for the topic areas each quarter, and hospitals that qualify for this exception for a particular topic can still elect to voluntarily submit their patient-level data. In order to align with the Hospital IQR Program, we will adopt a similar policy for all eligible hospitals and CAHs participating in the EHR Incentive Program, whereby hospitals with 5 or fewer inpatient discharges per quarter or 20 or fewer inpatient discharges per year (Medicare and non-Medicare combined) as defined by a CQM's denominator population would be exempted from reporting on that CQM.

After consideration of the public comments received and for the reasons discussed earlier, we are finalizing the following policy on case threshold exemptions for eligible hospitals and CAHs in all stages of meaningful use beginning in FY 2014. However, eligible hospitals and CAHs that are demonstrating meaningful use for the first time must submit their CQMs through attestation and will not be able to qualify for this exemption. The burden of submitting the aggregate population and sample size counts in order to qualify for the exemption would be at least equal to the effort required to obtain and attest to the calculated CQM data.

Eligible hospitals and CAHs that have 5 or fewer discharges per quarter in the same quarter as their reporting period in FY 2014, or 20 or fewer discharges per full FY reporting period beginning in FY 2015, for which data is being electronically submitted (Medicare and non-Medicare combined) as defined by the CQM's denominator population are exempted from reporting the CQM. For example, if the CQM's denominator population is ischemic stroke patients greater than or equal to 18 years of age, then the threshold would be 5 or fewer ischemic stroke patients aged 18 years or older discharged from the hospital in the quarter for which data is being submitted (the hospital's FY 2014 3-month quarter reporting period). To be eligible for the exemption, hospitals must submit their aggregate population and sample size counts for Medicare and non-Medicare discharges for the CQM for the reporting period no later than the 2-month submission period of October 1 through November 30 immediately following the reporting period (please see section II.B.1. of this final rule for a description of reporting and submission periods). Hospitals will report this information in the same manner as for the Hospital IQR Program (76 FR 51639 through 51641). Please refer to the QualityNet Web site (*www.qualitynet.org*) and the CMS/Joint Commission Specifications Manual for National Hospital Inpatient Quality Measures, located on the QualityNet Web site, for technical information about data submission requirements. Hospitals that do not seek an exemption under the EHR Incentive Program do not have to submit aggregate population and sample size counts for any CQMs for the purposes of the EHR Incentive Program.

(ii) Clinical Quality Measures

We proposed CQMs in Table 9 of the Stage 2 proposed rule (77 FR 13760 to 13763) that would apply for all eligible hospitals and CAHs beginning with FY 2014, regardless of whether an eligible hospital or CAH is in Stage 1 or Stage 2 of meaningful use. The set of 49 CQMs that we proposed included the current set of 15 CQMs that were finalized for FYs 2011 and 2012 in the Stage 1 final rule.

The CQM titles and descriptions in Table 8 reflect the most current updates, as provided by the measure stewards who are responsible for maintaining and updating the measure specifications, and therefore may not reflect the title and/or description as presented on the NQF Web site.

Comment: Many commenters requested that we finalize fewer than 49 CQMs. The most common reasons given for reducing the complete list of CQMs included limitations of the vendors to program and deploy systems and for hospitals to effectively implement those systems, especially among resource-limited organizations.

Several commenters recommended that CQMs that are suspended from the Hospital IQR program, not NQF endorsed, only apply to certain regions of the country or not electronically specified should not be considered for CQM reporting beginning in 2014. Additionally, some commenters suggested that no new CQMs be added until CEHRT can produce accurate calculations of the existing CQMs. A few commenters stated that increasing the number of CQMs in such a narrow timeframe would be challenging for organizations in terms of designing, creating, and implementing new workflows, building, testing and modifying configurations to ensure proper discrete data capture, and training staff. One of these commenters requested a phased-in approach for calculating CQMs through EHRs and requested that we do not add any new manually abstracted CQMs in other CMS quality reporting programs.

One commenter stated that it was unclear if mid-cycle modifications of measures would require hospitals to resubmit data and recommended that if a measure were modified or deleted mid-cycle that hospitals not have to modify measures selected.

Response: Some of the CQMs that were proposed but not finalized were not submitted by the measure stewards for continued NQF endorsement (NQF 0136 Heart Failure (HF)-1 Detailed Discharge Instructions, NQF 0481 First Temperature Measured within One Hour of Admission to the NICU, and NQF 0482 First NICU Temperature <36 degrees C). We are not finalizing NQF 0143 and NQF 0144, both related to pediatric asthma, for CQM reporting beginning in 2014 because hospital performance on these measures in the IQR program is at or near 100 percent. While pediatric asthma is a priority for CMS, we recognize that there are greater opportunities to improve care than in measuring the provision of relievers and systemic corticosteroids, which are now common practice. Our future quality measurement and improvement efforts will focus on other aspects of the clinical care for children with asthma, targeting for inclusion in CQM reporting with Stage 3 rulemaking. We have also taken into consideration the ability of the eligible hospitals and CAHs to report CQMs from CEHRT when selecting the set of CQMs for reporting beginning in 2014.

CQM specifications will be updated on an annual basis. We will not require resubmission of data as a result of these updates. If we remove a CQM from the program, we would not require data to be submitted on any additional CQMs nor would this affect data submitted prior to removal of the CQM. See section II.B.4. of this final rule for additional details on this policy.

Comment: Some commenters requested denominator definitions such as elective delivery vs. delivery based on a physician's order, and clarification on age ranges. A few commenters requested that some of the measure stewards listed in Table 9 of the proposed rule be corrected.

Response: Clarifications on denominator definitions will be provided in the electronic specifications that will be posted on or about the publication of the final rule. Any further clarification needed should be addressed to the measure steward. The measure stewards listed incorrectly in Table 9 of the proposed rule were corrected (the correction notice can be found at 77 FR 23195 through 23196).

Comment/Response: Table 9 summarizes the public comments received on specific proposed eligible hospital and CAH CQMs and the CMS rationale (that is, our response to the CQM-specific comment(s)) for finalizing or not finalizing the CQM for reporting beginning with FY 2014.

TABLE 9—SUMMARY OF ELIGIBLE HOSPITAL AND CAH CQM-SPECIFIC COMMENTS AND RATIONALE TO FINALIZE OR NOT FINALIZE THE CQM

CQM No.	Commenters support finalization	Commenters do not support finalization	Finalized	CMS rationale
ED Throughput: NQF 0495, 0497, 0496.	Many supported continuing with Stage 1 CQMs, instead of requiring additional CQMs for Stage 2 (ED-1&2). ED throughput measures are required by the Joint Commission.	Few stated factors affecting results are outside control of ED, difficult to implement without workflow changes and CPOE implemented hospital-wide, & may reflect negatively on hospitals routinely receiving complex patients. One commenter noted may not correlate with improved outcomes.	Yes	Continues with Stage 1 CQM reporting for ED-1&2, aligns with IQR/OQR/HVBP, retooled measures passed reliability, validity, & feasibility testing.
Stroke-2,3,4,5,6,8: NQF 0435, 0436, 0437, 0438, 0439, 0440.	Many supported continuing with Stage 1 CQMs, instead of requiring additional CQMs for Stage 2.	Few stated that it is difficult to capture certain data elements within current clinical workflows, and recommends delay to Stage 3 after further e-specification testing is completed.	Yes	Continues with Stage 1 CQM reporting, aligns with IQR/HVBP, retooled measures passed reliability, validity, & feasibility testing.

TABLE 9—SUMMARY OF ELIGIBLE HOSPITAL AND CAH CQM-SPECIFIC COMMENTS AND RATIONALE TO FINALIZE OR NOT FINALIZE THE CQM—Continued

CQM No.	Commenters support finalization	Commenters do not support finalization	Finalized	CMS rationale
Stroke-10: NQF 0441	Many supported continuing with Stage 1 CQMs, instead of requiring additional CQMs for Stage 2.	A commenter stated that this is a poor care coordination measure but provided no reasons.	Yes	Continues with Stage 1 CQM reporting, aligns with IQR/HVBP, retooled measures passed reliability, validity, & feasibility testing.
VTE-1,2,3,4,5,6: NQF 371, 0372, 0373, 0374, 0375, 0376.	Many supported continuing with Stage 1 CQMs, instead of requiring additional CQMs for Stage 2.	Few stated that it is difficult to capture certain data elements within current clinical workflows, one recommended delay to Stage 3 after further e-specification testing is completed.	Yes	Continues with Stage 1 CQM reporting, aligns with IQR/HVBP, retooled measures passed reliability, validity, & feasibility testing.
AMI-1, 3, 5: NQF 0132, 0137, 0160.	One commenter supported AMI-3, but for Stage 3 once CPOE is more widely implemented & e-specifications can be published in a timely manner to allow for inclusion of new guidelines. Inclusion will help tracking compliance.	Many stated these measures should not be finalized since they have been suspended from IQR, are not recommended by the MAP, are difficult to implement without CPOE implemented hospital-wide & one commenter stated it is difficult to capture unless an eMAR is implemented. AMI-1 & 5 are not included in CMS programs.	No	Suspended from IQR, thus not supportive of program alignment.
AMI-2, 7a: NQF 0142, 0164	A few commenters support including these measures for Stage 3 to allow for additional time for testing & implementation. AMI-2 is required by the Joint Commission. Inclusion will help tracking compliance.	One commenter requested delay to Stage 3 until CPOE is more widely implemented. One commenter noted AMI-2 is topped out.	Yes	Aligns with IQR/HVBP, which both consider it an important CQM on post-discharge AMI prevention for hospitals to report. Retooled measure passed reliability, validity, & feasibility testing.
AMI-8a,10: NQF 0163, 0639	N/A	One commenter stated it is difficult to capture certain data elements within current clinical workflows; one commenter stated it is difficult to capture if CPOE is not widely implemented.	Yes	Aligns with IQR/HVBP, retooled measure passed reliability, validity, & feasibility testing.
PN-3b: NQF 0148	One commenter supports including this measure for Stage 3 to allow additional time for testing & implementation. A few commenters support this measure if e-specifications are available in a timely manner. This is required by the Joint Commission.	Delay to Stage 3 after further e-specification testing is completed.	No	Retired from NQF endorsement.
PN-6: NQF 0147	N/A	One commenter states data collection is difficult due to absent decision support algorithm.	Yes	Aligns with IQR/HVBP, retooled measure passed reliability, validity, & feasibility testing.
Elective Delivery Prior to 39 Weeks: NQF 0469.	A commenter supports the inclusion of this safety-related CQM.	Not required in IQR, a commenter was concerned that labor and delivery applications are not part of certification.	Yes	Aligns with IQR, Medicaid Adult Core, & Strong Start programs, retooled measure passed reliability, validity, & feasibility testing.
Exclusive Breast Feeding at Discharge: NQF 0480.	Many commenters support this, noting that it will help improve maternity care practices and create an awareness of quality of care issues. A commenter supported this measure, but for Stage 3 once labor and delivery applications are part of certification.	Not required in IQR, highly subjective measure, specific to California only and not well vetted, and contains data elements difficult to capture.	Yes	Aligns with Medicaid reporting initiatives. Measure passed reliability, validity, & feasibility testing.

TABLE 9—SUMMARY OF ELIGIBLE HOSPITAL AND CAH CQM-SPECIFIC COMMENTS AND RATIONALE TO FINALIZE OR NOT FINALIZE THE CQM—Continued

CQM No.	Commenters support finalization	Commenters do not support finalization	Finalized	CMS rationale
Home Management Plan of Care, CAC-3: NQF 0338.	A commenter supports this measure, but not until documentation for peri-operative, intra-operative and anesthesia are parts of certification.	Not required in IQR, not supported by the MAP, and overly burdensome.	Yes	Aligns with Medicaid reporting initiatives. Measure passed reliability, validity, & feasibility testing.
Healthy Term Newborn: NQF 0716.	A commenter supports this measure. A commenter supports this measure, but for Stage 3 once labor and delivery applications are part of certification.	Not required in IQR	Yes	Aligns with Medicaid reporting initiatives. Measure passed reliability, validity, & feasibility testing.
Hearing Screening: NQF 1354	One commenter supports this measure if e-specifications are available in a timely manner.	Not required in IQR	Yes	Aligns with Medicaid reporting initiatives. Measure passed reliability, validity, & feasibility testing.
SCIP INF-1,2,9: NQF 0527, 0528, 0453.	A commenter supports these measures, but not until documentation for peri-operative, intra-operative and anesthesia are parts of certification. Inclusion will help tracking compliance.	N/A	Yes	Aligns with IQR/HVBP, re-tooled measure passed reliability, validity, & feasibility testing.
SCIP INF-3,4,6: NQF 0529, 0300, 0301.	A commenter supports this measure, but not until documentation for peri-operative, intra-operative and anesthesia are parts of certification. SCIP-INF-3 is required by the Joint Commission..	Not required in IQR and not recommended by the MAP. One commenter noted SCIP INF-6 may not correlate with improved outcomes.	No	SCIP-INF-3 reflects a limited patient population, keeps the total number of Stage 2 measure options reasonable. SCIP-INF-4 is being reworked by the steward. SCIP-INF-6 is suspended from reporting in IQR.
HF-1: NQF 0136	One commenter supported	One commenter did not support since being retired from NQF endorsement.	No	Retired from NQF endorsement.
First Temperature within 1 hour in NICU > 36° and <36°: NQF 0481, 0482.	One commenter supported if e-specifications are published in a timely manner.	A few commenters stated it is not required in IQR and not recommended by MAP.	No	Retired from NQF endorsement.
Global Immunizations Pneumonia & Influenza; NQF 1653, 1659.	N/A	A few commenters stated these are not consistent with current guidelines.	No	Required in IQR but not for HVBP, and keeps the total number of Stage 2 measure options reasonable.
Proportion of Infants 22-29 weeks old treated with Surfactant: NQF 0484.	N/A	Contains data elements difficult to capture.	No	Retired from NQF endorsement.

All hospital CQMs finalized in this rule are NQF-endorsed. NQF endorsement includes a consensus development process that takes into account clinical guidelines and scientific evidence. NQF describes its consensus development process at *http://www.qualityforum.org/Measuring_Performance/Consensus_Development_Process.aspx*.

After consideration of the public comments received and the measure selection criteria discussed, we are finalizing the list of 29 CQMs for eligible hospitals and CAHs included in Table 10.

TABLE 10—CQMS FINALIZED FOR ELIGIBLE HOSPITALS AND CAHS BEGINNING WITH FY 2014

8. Reporting Methods for Eligible Hospitals and Critical Access Hospitals

(a) Reporting Methods in FY 2013

In the Stage 2 proposed rule, we did not propose any reporting methods for Medicare eligible hospitals and CAHs in 2013. However, in the CY 2013 OPPS proposed rule (77 FR 45188), we stated that eligible hospitals and CAHs may continue to report by attestation CQM results as calculated by CEHRT, as they did for 2011 and 2012. For further explanation of reporting CQMs by attestation, please see the Stage 1 final rule (75 FR 44430 through 44434). We also proposed in the CY 2013 OPPS proposed rule (77 FR 45188) to continue for 2013 the voluntary electronic reporting pilot for CQMs (the Medicare EHR Incentive Program Electronic Reporting Pilot for Eligible Hospitals and CAHs), which we had previously established for 2012. We expect to finalize in the CY 2013 Hospital OPPS final rule the reporting methods that would apply in 2013 for eligible hospitals and CAHs participating in the Medicare EHR Incentive Program.

(b) Reporting Methods Beginning With FY 2014

Under section 1886(n)(3)(A)(iii) of the Act, eligible hospitals and CAHs must submit information on the CQMs selected by the Secretary ''in a form and manner specified by the Secretary'' as part of demonstrating meaningful use of CEHRT. We proposed that Medicare eligible hospitals and CAHs would select one of the following two options for submitting CQMs electronically.

- Option 1: Submit the selected 24 CQMs through a CMS-designated portal.

We proposed that CQM data would be submitted in an XML-based format on an aggregate basis reflective of all patients without regard to payer. This method would require eligible hospitals and CAHs to log into a CMS-designated portal and submit through an upload process data that is based on specified structures produced as output from their CEHRT.

- Option 2: Submit the selected 24 CQMs in a manner similar to the 2012 Medicare EHR Incentive Program Electronic Reporting Pilot for Eligible Hospitals and CAHs using CEHRT.

We proposed that, as an alternative to the aggregate-level reporting schema described previously under Option 1, Medicare eligible hospitals and CAHs that successfully report CQMs through an electronic reporting method similar to the 2012 Medicare EHR Incentive Program Electronic Reporting Pilot for Eligible Hospitals and CAHs using CEHRT would satisfy their CQMs reporting requirement under the Medicare EHR Incentive Program. Please refer to the CY 2012 OPPS final rule (76 FR 74489 through 74492) for details on the pilot.

We noted that the Hospital IQR program does not currently have an electronic reporting mechanism. We solicited comments on whether an electronic reporting option is appropriate for the Hospital IQR Program and whether it would provide further alignment with the EHR Incentive Program.

Comment: One commenter preferred Option 1 because it seems less burdensome. This commenter believed that a third party data warehouse to store patient-level data and aggregate the results would be necessary prior to implementing Option 1. The commenter also believed that the hospital should be able to calculate its own results.

Response: Hospitals have access to patient-level data. A hospital could use a CEHRT that can calculate CQM results and also directly report patient-level data to CMS, so these functions are not mutually exclusive. No data warehouse is necessary.

Comment: One commenter supported both the aggregate XML-based reporting option and the option similar to the 2012 Medicare EHR Incentive Program Electronic Reporting Pilot as well as the longer-term goal of attaining full automatic electronic reporting. Another commenter urged us to make the strategy for automating the reporting of CQM data clear, so that hospitals can avoid reporting the same quality data through multiple reporting mechanisms. One commenter urged us to make the necessary investment to establish the infrastructure for the flow of EHR data, with careful consideration given to how we will ensure reliable, valid, and complete CQM data.

Response: We are working to align the EHR Incentive Program with various other quality reporting programs in order to reduce duplicative reporting to the extent feasible and practical, beginning with the Hospital IQR Program. Under the Hospital IQR Program, hospitals report some

measures by submitting chart-abstracted patient-level data, reflective of all patients without regard to payer. More information on the Hospital IQR Program, including the chart-abstracted measure data submission process, can be found in the ''Guide to CMS Hospital IQR Program'' on the QualityNet Web site (*http://www.qualitynet.org/*, select ''Hospital Inpatient Quality Reporting Program'' from the ''Hospitals—Inpatient'' dropdown menu and click on the link to the guide from the ''Handbooks'' menu on the right side of the page). We expect to establish a similar mechanism for electronic submission of CQM data for the EHR Incentive Program.

The Hospital IQR Program does not currently have an EHR reporting option or requirement, but eligible hospitals and CAHs have been able to meet the CQM requirement for the EHR Incentive Program via the electronic reporting pilot. However, we expect that the Hospital IQR Program will transition to EHR-based reporting in a manner similar to the electronic reporting pilot, using an electronic transmission format such as the QRDA–I (for patient-level data). If the Hospital IQR Program establishes an EHR reporting option or requirement, we would consider whether we should allow hospitals to report CQMs through that mechanism using CEHRT for purposes of satisfying the CQM reporting component of the EHR Incentive Program.

We proposed to consider an ''interim submission'' option for Medicare eligible hospitals and CAHs that are in their first year of Stage 1 beginning in FY 2014 through an electronic reporting method similar to the 2012 Medicare EHR Incentive Program Electronic Reporting Pilot for Eligible Hospitals and CAHs. Under this option, eligible hospitals and CAHs would electronically submit CQM data for a continuous 90-day EHR reporting period, and the data would have to be received no later than July 1 to meet the requirements of the EHR Incentive Program for purposes of avoiding a payment adjustment in the following year. We solicited public comment on this potential option.

Comment: One commenter supported an ''interim submission'' option for those in their first year, which the commenter stated could also serve as a transitional step for those catching up.

Response: Since we are allowing eligible hospitals and CAHs to submit their CQM data through attestation if they are in their first year of Stage 1, we are not finalizing the proposed interim submission option.

After consideration of the public comments received, we are finalizing the following policy for CQM reporting methods for eligible hospitals and CAHs beginning in FY 2014.

Eligible hospitals and CAHs that are in their first year of Stage 1 must report the selected 16 CQMs through attestation (please refer to the Stage 1 final rule for an explanation of reporting CQMs through attestation (75 FR 44430 through 44434)). For purposes of avoiding a payment adjustment, eligible hospitals that are in their first year of demonstrating meaningful use in the year immediately preceding a payment adjustment year must submit their CQM data no later than July 1 of such preceding year. We note that this deadline does not apply to CAHs. For more details on submission deadlines specific to CAHs, please refer to section II.D.4. of this final rule.

Eligible hospitals and CAHs that are beyond their first year of meaningful use will be required to electronically submit the selected 16 CQMs using CEHRT using one of the options listed in this section of this final rule. Consistent with section 1886(n)(3)(B)(ii) of the Act, in the unlikely event that the Secretary does not have the capacity to receive CQM data electronically, eligible hospitals and CAHs may continue to report aggregate CQM results through attestation.

- Option 1: Submit the selected 16 CQMs on an aggregate basis through a CMS-designated transmission method using CEHRT.

The CQM data will be submitted in the QRDA–III format reflective of all patients without regard to payer. This method will require transmitting the data via a CMS-designated transmission method.

- Option 2: Submit the selected 16 CQMs on a patient-level basis in a manner similar to the 2012 Medicare EHR Incentive Program Electronic Reporting Pilot for Eligible Hospitals and CAHs using CEHRT. As long as the CQM data originates from CEHRT, it may be submitted directly from the hospital's CEHRT to CMS or through a data intermediary to CMS.

The electronically reported patient-level CQM data must use the QRDA category I (release 2) based on the Quality Data Model (QDM), which will include only patients that meet the denominator criteria of each reported CQM without regard to payer. For example, if a hospital selects NQF #0438 to report, the denominator criteria include ischemic stroke patients, so the QRDA–I for this CQM would include only ischemic stroke patients. This method will require submitting the data via a transmission method similar to the 2012 Medicare EHR Incentive Program Electronic Reporting Pilot for Eligible Hospitals and CAHs (76 FR 74122). The requirement that eligible hospitals and CAHs submit patient-level data under the EHR Incentive Program is consistent with the requirement that hospitals submit patient-level data under other quality reporting programs such as the Hospital IQR Program.

We proposed to consider the following 4 options of patient population—payer data submission characteristics:

- All patients—Medicare only.
- All patients—all payer.
- Sampling—Medicare only, or
- Sampling—all payer.

Currently, the Hospital IQR program uses the ''sampling—all payer'' data submission characteristic. We solicited public comment on each of these 4 sets of characteristics and the impact they may have to vendors and hospitals, including but not limited to potential issues with the respective size of data files for each characteristic. We proposed to select 1 of the 4 sets as the data submission characteristic for the electronic reporting method for eligible hospitals and CAHs beginning in FY 2014.

Comment: Many commenters favored the all patient-all payer submission option. Nearly all of these commenters supported this option because of challenges identifying whether a patient is covered by Medicare or not. One commenter also noted that sampling Medicare patients alone would severely decrease the population of patients reported in the denominator for many CQMs, and that it is difficult to validate that the sampling is being done correctly. The commenter also argued that since data is captured at the time of care, there should be no difficulty submitting the data and therefore no need for sampling. Another commenter advised against permitting sampling for CQM reporting beginning in 2014 as it adds an additional level of complexity. One commenter stated that the ideal solution would be having both—all patient-all payer, and all patient-Medicare only, which would allow for Medicare vs. non-Medicare comparisons.

Some commenters who favored the all patient-all payer data submission option suggested that sampling-all payer be made available as an alternative option, with one noting that a no-sampling method may be burdensome for hospital staff who must manually enter clinical data that is not captured electronically.

If sampling is adopted, the commenter asks that it align with existing Hospital IQR Program sampling methodologies. One commenter preferred the sampling-all payer submission option, noting that it aligns with the reporting method for the Hospital IQR Program.

Response: We acknowledge hospitals' concerns about accurately distinguishing Medicare patients from other patients in their populations, and recognize that reporting data on Medicare patients only would reduce the population of patients for whom data are reported in most cases. Since payer will be collected as a supplemental data element for all CQMs beginning in 2014, we will be able to stratify measure results by payer. In the 2014 Edition certification criteria, ONC has increased the focus on CEHRT's capability to capture the structured data elements required for reporting the CQMs finalized in this rule. Therefore, the burden on hospital staff to manually enter data from a source other than the CEHRT should be greatly reduced. We also expect to propose electronic sampling algorithms in future rulemaking.

After consideration of the public comments received, we are finalizing the ''sampling-all payer'' option for patient-level data. This submission characteristic will only include patients that meet the denominator criteria of the CQMs that the eligible hospital or CAH selects to report to CMS and only the data elements listed in the CQM and transmission specifications for those patients would be sent to CMS.

(c) Electronic Reporting of Clinical Quality Measures for Medicaid Eligible Hospitals

States that have launched their Medicaid EHR Incentive Programs plan to collect CQMs electronically from CEHRT used by eligible hospitals. Each state is responsible for sharing the details on the process for electronic reporting with its provider community. We anticipate that whatever means states have deployed for capturing CQMs included in the Stage 1 final rule electronically will be similar for CQMs beginning in 2014. However, we note that subject to our prior approval, the process, requirements, and the timeline is within the states' purview.

Comment: Commenters suggested unified Medicaid CQM reporting to reduce the burden on eligible hospitals operating in multiple states.

Response: For the purposes of the Medicaid EHR Incentive Program, eligible hospitals only have to report CQMs to the state making the EHR incentive payment. However, data from all practice locations that are equipped with CEHRT will be used for reporting CQMs, even if the practice locations are in different states.

After consideration of the public comments received, we are finalizing the policies for electronic reporting of CQMs for Medicaid eligible hospitals as proposed. We are clarifying that dually-eligible hospitals may submit their CQMs via the methods outlined in section II.B.8.b. of this final rule. As part of certification for EHR technology, ONC is including testing for data capture, CQM calculation, and electronic submission. For CQMs, this includes certification criteria for the QRDA–I and QRDA–III transmission format. We expect the states that have electronic reporting options for CQMs might choose to adopt QRDA–I for patient-level data and/or QRDA–III for aggregate data as the form in which eligible hospitals would report CQM data. By adopting the same QRDA–I and/or QRDA–III formats that CMS is requiring for CQM reporting, the states would be able to leverage the development of the specifications by CMS and the industry as well as the testing done by ONC for certification of EHR technology. This would reduce the burden on EHR vendors to implement and test different specifications.

C. Demonstration of Meaningful Use and Other Issues

1. Demonstration of Meaningful Use

a. Common Methods of Demonstration in Medicare and Medicaid

We proposed to continue our common method for demonstrating meaningful use in both the Medicare and Medicaid EHR Incentive Programs. The demonstration methods we adopt for Medicare will automatically be available to the states for use in their Medicaid programs. The Medicare methods are segmented into CQMs and meaningful use objectives, both of which meaningful users must meet. (We note that the discussion in this part of the preamble discuss the methods for meaningful use objectives. For the discussion on CQM reporting, please refer to II.B. of this final rule). We did not receive any comments on this general policy and for this final rule will continue the policy that was proposed (that is, common methods of demonstration with some flexibility for states as described in II.A.3.c of this final rule).

b. Methods for Demonstration of the Stage 2 Criteria of Meaningful Use

Except for the batch reporting option discussed in section II.C.1.c. of this final rule, we proposed no other changes to the attestation process for Stage 2 meaningful use objectives. We proposed several changes to reporting for CQMs beginning 2014, regardless of Stage, as discussed in section II.B. of this final rule. An EP, eligible hospital or CAH must successfully attest to the Stage 2 meaningful use objectives and successfully submit clinical quality measures to be a meaningful EHR user. We have revised § 495.8 to accommodate the Stage 2 objectives and measures, as well as changes to Stage 1.

As discussed in our proposed rule (77 FR 13764), as HIT matures we expect to base demonstration more on automated reporting by CEHRT, such as the direct electronic reporting of measures, both clinical and nonclinical, and documented participation in HIE. As this occurs, fewer objectives will be demonstrated through attestation. As explained in the proposed rule, however, we do not believe that the current advances in HIT and the certification of EHR technologies allow an alternative to attestation for the Stage 2 final rule. We will continue to evaluate possible alternatives to attestation and the accompanying changes to certification and meaningful use.

In addition, in lieu of EP-by-EP attestation, we proposed a batch file process for attestation. This batch file process would continue to require that meaningful use measures be assessed at the individual EP, eligible hospital or CAH level. It would be available no later than January 1, 2014. Batch reporting would allow large group practices to submit a large number of attestations at once, while still maintaining individual assessments of meaningful use. We proposed that a batch file process as discussed later would occur through the CMS attestation Web site. Each EP would still meet the required meaningful use thresholds independently; our proposal did not allow the use of group averages or any other method of group demonstration.

We explained that CMS and the states could continue to test options, such as registries or the direct electronic reporting of some measures; however, any such testing would be voluntary.

c. Group Reporting Option of Meaningful Use Core and Menu Objectives and Associated Measures for Medicare and Medicaid EPs Beginning With CY 2014

As explained previously, we proposed a batch reporting process that would allow groups of EPs to report each individual EP's core and menu objective data through a batch process, but would

maintain individual assessments of meaningful use. (We note that the discussion in this part of the preamble does not discuss CQM reporting, which is discussed in II.B. of this final rule).

Specifically, we proposed to establish a file format in which groups could submit core and menu objective information for individual Medicare EPs (including the stage of meaningful use the individual EP is in, numerator, denominator, exclusion, and yes/no information for each core and menu objective) as well as a process for uploading such batch files.

We proposed that states would have the option, but not be required to, offer batch reporting of meaningful use data for Medicaid EP, and that states would outline their approaches in their state Medicaid HIT Plans (under current regulatory requirements in § 495.332(c)(2) and (c)(3)).

We proposed the following policies would apply to batch reporting:

- Define a Medicare EHR Incentive Group as 2 or more EPs, each identified with a unique NPI associated with a group practice identified under one tax identification number (TIN) through the Provider Enrollment, Chain, and Ownership System (PECOS).
- States choosing to exercise this option will have to clearly define a Medicaid EHR Incentive Group via their state Medicaid HIT Plan.
- None of the EPs in either a Medicare or Medicaid EHR Incentive Group could be hospital-based according to the definition for these programs (see 42 CFR 495.4).
- Any EP that successfully attests as part of one Medicare EHR Incentive Group will not be permitted to also attest individually or attest as part of a batch report for another Medicare EHR Incentive Group.
- Because EPs can only participate in either the Medicare or Medicaid incentive programs in the same payment year, an EP that is part of a Medicare EHR Incentive Group will not be able to receive a Medicaid EHR incentive payment or be included as part of a batch report for a Medicaid EHR Incentive Group or vice versa.
- The group reporting option discussed in this section is limited to data for the core and menu objectives and does not include the reporting of clinical quality measures, which is also required to demonstrate meaningful use and receive an EHR incentive payment. Clinical quality measures must be reported separately through other electronic submission options. (These options are described in section II.B. of this final rule.).
- Because we proposed multiple group reporting methods for clinical quality measures, EPs will *not* have to report core and menu objective data in the same EHR Incentive Group as they report clinical quality measures. An EP will be able to submit the core and menu objectives as part of a group and the clinical quality measures as an individual or submit the core and menu objectives as an individual and the clinical quality measures as part of a group.
- Batch reporting would not be required by CMS and t EPs will be permitted to attest individually through the CMS attestation Web site (as long as they did not also report as part of a group).
- As in Stage 1, EPs will be required to individually meet all of the thresholds of the core and menu objectives and could not use group averages or any other method of group demonstration.
- Batch reporting would not change the policy that payment adjustments will be applied to individual EPs and not to Medicare EHR Incentive Groups. This policy is described in section II.D. of this final rule.
- Batch reporting would not change incentive payment assignment. That is, as with Stage 1, an EP's incentive payment will not be automatically assigned to the Medicare EHR Incentive Group with which they batch report under this option. The EP will still have to select the payee TIN during the registration process.
- An EP who chooses the group reporting option will be required to include in such reporting core and menu objective information on all outpatient encounters (that is, all encounters except those in the inpatient and emergency departments) where CEHRT is available, even if some encounters occurred at locations not associated with the EP's Medicare EHR Incentive Group. We explained that this policy is required because EPs who practice in multiple practices or locations are responsible for submitting complete information for all actions taken at practices/locations equipped with CEHRT. Under § 495.4, to be considered a meaningful EHR user, an EP must have 50 percent or more of their outpatient encounters in practice(s) or location(s) where CEHRT is available. In the July 28, 2010 final rule (75 FR 44329), we also made clear that an EP must include outpatient encounters for all locations equipped with CEHRT.
- There would not be a minimum participation threshold for reporting as part of an EHR Incentive Group; in other words, an EP who is able to meet the 50 percent threshold of patient encounters in locations equipped with CEHRT could report all of their core and menu objective data as part of an EHR Incentive Group in which they had only 5 percent of their patient encounters with that group, provided they report all of the data from the other locations through the same batch reporting process with the EHR Incentive Group.

Many commenters supported our proposal to institute a batch reporting process.

Some commenters offered comments or requested clarification. The summary of the comments and our responses follow:

Comment: A few commenters questioned the statement that a group for purposes of batch reporting is two or more EPs, each identified with a unique NPI associated with a group practice identified under one tax identification number (TIN) through the Provider Enrollment, Chain, and Ownership System (PECOS). These commenters suggested that the difference between this definition of a group and the one under the Physician Quality Reporting System (PQRS) is confusing and should be harmonized or aligned.

Response: Generally we agree with the principle of aligning definitions when possible. However, this rulemaking does not address PQRS definitions. Alignment with the current PQRS definition would entail changing our policy from 2 or more EPs to 25 or more EPs. We do not believe the benefits of alignment are greater than the administrative relief to group practices made up of 2 to 24 EPs. However, we note that in the Medicare Program; Revisions to Payment Policies Under the Physician Fee Schedule, DME Face-to-Face Encounters, Elimination of the Requirement for Termination of Non-Random Prepayment Complex Medical Review and Other Revisions to Part B for CY 2013 proposed rule (77 FR 44722) we proposed to revise the PQRS definitions to 2 or more EPs. If finalized, the PQRS definition would align with our policy. Therefore, we are finalizing our policy that would allow batch reporting for groups with 2 (or more) EPs that meet the rules for such reporting. After consideration of the comments, we will establish a file format in which groups could submit core and menu objective information for individual Medicare EPs (including the stage of meaningful use the individual EP is in, numerator, denominator, exclusion, and yes/no information for each core and menu objective) and also establish a process through which groups would submit this batch file for

upload as proposed. As noted previously, this batch file reporting process does not apply to CQM reporting, which is discussed in section II.B of this final rule.

After consideration of the public comments received, we are finalizing this option as proposed. There is no accompanying regulation text for this policy, as it governs the procedures for attestation, but not the meaningful use requirements.

We also sought public comment on a group reporting option that measures performance at a group, rather than at an individual, level (referred to as the ''group performance'' option.) Rather than proposing a set of rules for such group performance, we requested comment on a host of topics. Many commenters supported a group performance option; however, we received very few detailed comments on many of the specific issues we put forth for discussion. Therefore, we continue to believe that additional policy development is necessary to address specifically how group performance would operate. We are not finalizing the group performance policy at this time, as we wish to consider it further. EPs will continue to be required to individually meet all of the thresholds of the core and menu objectives. The following comments were received on issues relating to group performance.

We requested comments on the definition of ''group,'' noting that the PQRS Group Reporting Option requires a physician group practice to have a single tax payer identification number (TIN), with 25 or more individual eligible professionals who have reassigned their billing rights to the TIN. Commenters responded that 25 is too large a number, with some suggesting 4 to 6, or even 2 or more, as an appropriate range. Commenters recommended that each EP within the TIN, be given the choice of participation in the group or individually. Some commenters also questioned whether a consistent TIN indicates a coherent group practice with care coordination.

We requested comments on whether there should be a self-nomination process for groups, as in PQRS, or an alternative process for identifying groups. Commenters generally supported self-nomination, if it is a simple process.

We also asked whether groups should be required to use the same CEHRT. Some commenters believed such a requirement would be onerous, explaining that in some cases imaging providers, such as radiologists have their own CEHRT. Other commenters supported using the same CEHRT to ensure consistent reporting.

We questioned whether a group could be eligible for group reporting if CEHRT (same or different) were not available to all associated EPs at all locations. Some commenters responded yes, that in large systems clinics may be added or upgraded at different points in time and there may be transition times during which some clinics may not have CEHRT. Commenters stated that a threshold could be used to ensure that the EHR is available for most of the services provided by the group. Others stated that, no, groups should be held to the same standard; if the group as a whole is not eligible, individuals could still demonstrate meaningful use on an individual basis.

We requested comment on the appropriate policy when a group uses multiple certified EHR technologies that cannot share data easily. Some commenters stated that because the group as a whole should still have to meet the meaningful use objectives, interoperability should not be a barrier to group performance. These commenters stated that while interoperability is the ultimate goal of EHR technology, it should not become a requirement prematurely and providers and vendors are best positioned to remedy interoperability problems. Commenters also urged us to ensure that clearinghouses and software vendors are within the scope of the covered entities that must comply with the rule, although no authority was cited for requiring such compliance.

We questioned how meaningful use activities should be calculated, particularly when an EP practices individually and with a group, or in multiple group practices. Some commenters stated that meaningful use would always be at the group level. Others stated that if there are EPs practicing across two or more groups, then neither group should use the group reporting option, as this could result in different menu measure selections and other complications. Other commenters recommended that the EP's covered services be calculated as a whole to generate the incentive payment amount and separate payments be made to each TIN based on the percentage of the EP's covered services that were assigned to each TIN.

We noted that the HITECH Act provides EPs who are meaningful users an incentive payment equal to 75 percent of Medicare allowable charges for covered professional services furnished by the EP in a payment year. Thus, we questioned how covered professional services performed by EPs in some other practice could be assigned to another group's TIN. Commenters suggested that groups could submit lists of EPs covered under its group submission and that have reassigned payment to the TIN. The covered services should include all covered services for the EP, regardless of TIN under which the services were billed. Commenters asserted that this process is not different from the current method in which individual EPs that work for multiple TINs can still reassign their incentive payments to a single TIN. Others recommended that for purposes of determining the 75 percent, CMS should simply limit its analysis to those services furnished at that practice.

We solicited public comment on how meaningful use activities performed at other groups should be included. Some commenters stated that groups should attest only for the services within the group practice, not services outside of the group. These commenters expressed concern about not being able to validate outside data.

If meaningful use activities outside the group were not included in group performance, we asked what the CMS policy should be for these activities performed outside the group. Commenters recommended that only the group activities should be considered, and that those activities performed outside the group should essentially be ignored.

We solicited input on what our policy should be if an EP reports as part of a group, but he or she actually fails to meet a measure individually. Commenters generally stated that individual performance should be subsumed in the group performance. They assert that groups will have their own internal incentives to ensure that EPs are properly using the EHR system.

Along the same lines, we requested information on what should happen if an EP rejects a particular objective completely. Should such an EP be considered a meaningful EHR user as long as the EP's non-participation still allows group compliance with a percentage threshold? Again, commenters recommended measurement solely at the group level. Again, they stated that the group practice would have its own incentives to ensure EPs within the group properly use CEHRT.

We questioned how yes/no objectives should be handled in group reporting. Commenters again recommended measurement at the group level: A yes would mean that the group has ''enabled'' and is using that functionality of its CEHRT.

We questioned how group performance would operate in cases when some EPs in the group participate in Medicaid while others participate in Medicare. Commenters stated that groups could provide lists of EPs and indicate which EPs are covered under Medicare versus Medicaid. However, in any case we, could also encourage states to accept the group's submission as applying to Medicaid, as well as Medicare. While another commenter suggested that Medicare should be the default choice for a group, unless they all participate in Medicaid.

As to our question of whether any incentive payment would be reassigned to the group automatically, or whether the EP would assign it to the group at registration, commenters gave conflicting recommendations. Some stated that individual EPs could reassign incentive payments to a TIN, and that the group could, at the end of the period, present a list of EPs who are within the TIN and reassigned payment to such TIN. Others favored automatic reassignment to the group demonstrating group performance, particularly when an EP is employed or contracts with only one group, or when a state does not permit assignment to an entity promoting the adoption of EHR technology. A commenter requested clarification on how an EP joining midyear would be handled.

We requested comments on the policies that would apply if an EP participates in one group's performance and the incentive payment were reassigned to the group automatically, but the EP also has covered services billed to other TINs. Commenters stated that if an EP leaves a group, there should be a mechanism for reporting this and allowing the EP to report individually or become part of another group; regardless, the automatic reassignment should stand.

We solicited information on how to address situations when an EP leaves a group during an active EHR reporting period. Commenters recommended that incentives could be pro-rated on this basis, perhaps with ''beginning and ending dates'' included in the group performance file to streamline the proration.

We requested information regarding payment adjustments, and whether they should also be applied at the group level. Some stated that group performance should be consistent at the incentive and payment adjustment phases of the EHR Incentive Program. Thus, if groups can receive incentives based on group performance, then group performance should also dictate payment adjustments at a group level. Others favored maintaining payment adjustments at the individual EP level.

Finally, we solicited alternative options for reporting meaningful use, while capturing necessary data. One commenter recommended a ''sub-TIN'' group reporting option where a specific department, specialty or clinic could report performance on a group basis.

2. Data Collection for Online Posting, Program Coordination, and Accurate Payments

In addition to the data already being collected under our regulations at § 495.10, we proposed to collect the business email address of EPs, eligible hospitals and CAHs to facilitate communication with providers. We proposed to begin collecting the information as soon as the registration system can be updated following the publication of this final rule for both the Medicare and Medicaid EHR Incentive Programs. We did not propose to post this information online. In our preamble, we proposed to amend § 495.10 accordingly. However, no regulation text appeared. We did not receive any comments on our proposal. We are finalizing regulation text at § 495.10(a)(3) to collect business email address.

We note that we did not propose any changes to the registration for the Medicare and Medicaid EHR Incentive Programs, to the rules on EPs switching between programs, or to the record retention requirements in § 495.10.

We did not propose any changes to the registration for the Medicare and Medicaid EHR Incentive Programs, to the rules on EPs switching between programs, or to the record retention requirements in § 495.10.

We did not receive any comments and we are finalizing these provisions as proposed.

3. Hospital-Based Eligible Professionals

Our only proposed changes to the definition of hospital-based eligible professional were to allow the determination of hospital-based to continue once the payment adjustments go into effect, and to propose that the hospital-based analysis at the payment adjustment phase would, for Medicare, be based on federal FY 2 years prior to the payment adjustment year. (See proposed § 495.4 and section II.D.2. of this final rule.)

We also requested comments on whether the definition of hospital-based should be refined to exclude from the definition those EPs who are not furnishing professional services ''through the use of the facilities and equipment, including qualified electronic health records, of the hospital'' (section 1903(t)(3)(D) and 1848(o)(1)(C)(ii) of the Act). We noted that during implementation of Stage 1, we were asked about situations where clinicians may work in specialized hospital units, the clinicians have independently procured and utilize EHR technology that is completely distinct from that of the hospital, and the clinicians are capable, without the facilities and equipment of the hospital, of meeting the eligible professional (for example ambulatory, not inpatient) definition of meaningful use. We stated our belief that such situations would be uncommon and might not be generalized under the uniform definition used by place of service codes.

We specifically requested comments on the following subjects: (1) How to determine whether specialized hospital units are using stand-alone certified EHR technology separate from that of the hospital; and (2) how to determine whether EPs using stand-alone certified EHR technology separate from that of the hospital are truly not accessing the facilities and equipment of the hospital. We proposed that hospital facilities and equipment would include the physical environment needed to support the necessary hardware; internet connections and firewalls; the hardware itself, including servers; and system interfaces necessary for demonstrating meaningful use, for example, to health information exchanges, laboratory information systems, or pharmacies. We proposed possibly using attestation for such elements, and noted our belief that any such attestations would be subject to audit and the False Claims Act.

We also requested comments on whether the criteria for ambulatory EHRs and the meaningful use criteria that apply to EPs could be met in cases where EPs are primarily providing inpatient or Emergency Department services. By definition, the EPs affected by this issue are those who provide 90 percent or more of their services in the inpatient or emergency department, and who provide less than 10 percent of their services, and possibly none, in outpatient settings. However, since the beginning of the program, we have been clear that for EPs, meaningful use measures will not include patient encounters that occur within the inpatient or emergency departments (POS 21 or 23). See for example, FAQ 10068, 10466, and FAQ 10462 at *http://questions.cms.gov* or in section II.A.3.d.(2). of this final rule.

Some of our meaningful use criteria for EPs are measured based on office visits (clinical summaries) and others

assume an outpatient type of setting (patient reminders). The certification rules at 45 CFR part 170 differentiate between ambulatory and inpatient EHRs, and we requested comments on whether the EPs in this case would have inpatient or ambulatory technology.

Comment: We received detailed comments addressing the majority of the questions we asked about how EPs would demonstrate they are not hospital-based were we to revise our definition of hospital-based to exclude EPs using stand-alone CEHRT separate from that of the hospital. These comments explained in a comprehensive manner how EPs use stand-alone CEHRT separate from that of the hospital, and also provide the facilities and equipment that make the use of CEHRT possible, including internet connections and firewalls. Commenters supported using the ambulatory certification criteria and the EP meaningful use objectives and measures with the inclusion of inpatient and emergency department encounters in meeting such measures.

Response: Given such comprehensive comments, we believe that it is possible for EPs to provide CEHRT in the hospital environment, that is, sufficiently independent of the facilities and equipment, including qualified electronic health records, of the hospital. In the Stage 1 final rule, we explained why we were not interpreting the statute to provide for individualized determinations of whether EPs were hospital-based. We focused on language in the statute stating that ''The determination of whether an eligible professional is a hospital-based eligible professional shall be made on the basis of the site of service.'' (See 75 FR 44440 through 44441). We continue to believe that this interpretation was reasonable based on the Congressional directive regarding site of service. However, we are now persuaded that the statute is also capable of the interpretation advanced by the commenters. Thus, while we continue to believe our prior interpretation was proper, we are convinced that other permissible interpretations may also be put forward through rulemaking. Therefore, we have added a new § 495.5 to allow us to exclude EPs who can demonstrate to us that the EP funds the acquisition, implementation, and maintenance of Certified EHR Technology, including supporting hardware and any interfaces necessary to meet meaningful use without reimbursement from an eligible hospital or CAH; and uses such Certified EHR Technology in the inpatient or emergency department of a hospital (instead of the hospital's CEHRT).

Once an EP registers for a given year they will know whether they are hospital based or not. An EP who is designated as hospital based, but wishes to be determined non hospital-based due to their funding of the acquisition, implementation and maintenance of CEHRT, including supporting hardware; and use of such CEHRT at a hospital, in lieu of using the CEHRT of such hospital will utilize an administrative process throughout the incentive payment year (and extending 2 months after the end of the incentive payment year) to provide documentation and seek a non-hospital based determination. Following a successful non-hospital based determination, the EP must attest each subsequent year that they continue to be in the same situation of funding of the acquisition, implementation and maintenance of CEHRT, including supporting hardware; and use of such CEHRT at a hospital without reimbursement from an eligible hospital or CAH, in lieu of using the Certified EHR Technology of such hospital, but would not have to provide the supporting documentation again. If and when a nonhospital-based determination has been made, the EP would then have to meet the same requirements of the EHR incentive program as any other EP including being subject to payment adjustments if applicable with a sole exception: The EP would include in their attestation to meaningful use all encounters at all locations, including those in the inpatient and emergency departments of the hospital, rather than just outpatient locations (other than the emergency department) as is the case for all other EPs.

4. Interaction With Other Programs

There were no proposed changes to the ability of providers to participate in the Medicare and Medicaid EHR Incentive Programs and other CMS programs, and we are not finalizing any new policies in this area. We continue to work on aligning the data collection and reporting of the various CMS programs, especially in the area of clinical quality measurement. See section II.B. of this final rule for the proposed alignment initiatives for clinical quality measures.

Comment: Several commenters suggested changes to other CMS programs.

Response: Our proposed rule included policies for the EHR incentive program, and not other programs. Therefore, we are not addressing comments on rules other than the EHR incentive program, as these programs are outside the scope of this rulemaking.

D. Medicare Fee-for-Service

1. General Background and Statutory Basis

As we discussed in the Stage 1 final rule, sections 4101(b) and 4102(b) of the HITECH Act provide for reductions in payments to EPs, hospitals, and CAHs that are not meaningful users of CEHRT; beginning in CY 2015 for EPs, FY 2015 for hospitals, and in cost reporting periods beginning in FY 2015 for CAHs. We discuss the specific statutory requirements for each of these payment reductions in the following three sections. In these sections, we also present our specific policies for implementing these mandatory payment reductions.

2. Payment Adjustment Effective in CY 2015 and Subsequent Years for EPs Who Are Not Meaningful Users of CEHRT for an Applicable Reporting Period

Section 1848(a)(7) of the Act, as amended by section 4101(b) of the HITECH Act, provides for payment adjustments effective for CY 2015 and subsequent years for EPs, as defined in § 495.100 of the regulations, who are not meaningful EHR users during the relevant EHR reporting period for the year. In general, beginning in 2015, if an EP is not a meaningful EHR user for the EHR reporting period for the year, then the Medicare physician fee schedule (PFS) amount for covered professional services furnished by the EP during the year (including the fee schedule amount for purposes of determining a payment based on the fee schedule amount) is adjusted to equal the ''applicable percent'' (defined later) of the fee schedule amount that will otherwise apply. As we also discuss later, the HITECH Act includes an exception, which, if applicable, could exempt certain EPs from this payment adjustment. The payment adjustments do not apply to hospital-based EPs.

The term ''applicable percent'' is defined in the statute to mean: ''(I) for 2015, 99 percent (or, in the case of an eligible professional who was subject to the application of the payment adjustment [if the EP is not a successful electronic prescriber] under section 1848(a)(5) of the Act for 2014, 98 percent); (II) for 2016, 98 percent; and (III) for 2017 and each subsequent year, 97 percent.''

In addition, section 1848(a)(7)(iii) of the Act provides that if, for CY 2018 and subsequent years, the Secretary finds that the proportion of EPs who are meaningful EHR users is less than 75

percent, the applicable percent shall be decreased by 1 percentage point for EPs who are not meaningful EHR users from the applicable percent in the preceding year, but that in no case shall the applicable percent be less than 95 percent.

Section 1848(a)(7)(B) of the Act provides that the Secretary may, on a case-by-case basis, exempt an EP who is not a meaningful EHR user for the reporting period for the year from the application of the payment adjustment if the Secretary determines that compliance with the requirements for being a meaningful EHR user would result in a significant hardship, such as in the case of an EP who practices in a rural area without sufficient Internet access. The exception is subject to annual renewal, but in no case may an EP be granted an exception for more than 5 years.

a. Applicable Payment Adjustments in CY 2015 and Subsequent Calendar Years for EPs Who Are Not Meaningful Users of CEHRT

Consistent with these provisions, in the Stage 1 final rule (75 FR 44572), we provided in § 495.102(d)(1) and (2) that, beginning in CY 2015, if an EP is not a meaningful EHR user for an EHR reporting period for the year, then the Medicare PFS amount that will otherwise apply for covered professional services furnished by the EP during the year will be adjusted by the following percentages: for 2015, 99 percent (or, in the case of an EP who was subject to the application of the payment adjustment for e-prescribing under section 1848(a)(5) of the Act for 2014, 98 percent); (2) for 2016, 98 percent; and (3) for 2017 and each subsequent year, 97 percent.

However, while we discussed the application of the additional adjustment for CY 2018 and subsequent years if the Secretary finds that the proportion of EPs who are meaningful EHR users is less than 75 percent in the preamble to the final rule (75 FR 44447), we did not include a specific provision for this adjustment in the regulations text. Therefore, we proposed to revise the current regulations, to provide specifically that, beginning with CY 2018 and subsequent years, if the Secretary has found that the proportion of EPs who are meaningful EHR users under § 495.8 is less than 75 percent, the applicable percent is decreased by 1 percentage point for EPs who are not meaningful EHR users from the applicable percent in the preceding year, but that in no case is the applicable percent less than 95 percent. In the proposed rule, we stated our expectation that we would base the determination of the proportion of EPs each year on the most recent CY for which we have sufficient data (that is, most likely, the data available as of October 1, 2017, as this is the last date for EPs to register and attest to meaningful use to avoid a payment adjustment in CY 2018). We proposed that the computation will be based on the ratio of EPs who have qualified as meaningful users in the numerator, to Medicare-enrolled EPs in the denominator. In the proposed rule we also explained that because hospital-based EPs and EPs are granted an exception meet the definition of ''EP,'' we would not include such EPs in the denominator, because such EPs would not be subject to a determination of meaningful use status ''under subsection (o)(2).'' We also stated that we would provide more specific detail on this computation in future guidance after the final regulation is published.

In general terms, the two aforementioned provisions for payment adjustments to EPs who are not meaningful users of EHR technology have the following effects for CY 2015 and subsequent years. The adjustment to the Medicare PFS amount that will otherwise apply for covered professional services furnished by the EP will be 99 percent in CY 2015. However, for CY 2015 the adjustment for an EP who, in CY 2014, was subject to the application of the payment adjustment for e-prescribing under section 1848(a)(5) of the Act will be 98 percent of the Medicare PFS amount. In CY 2016, the adjustment to the Medicare PFS amount that will otherwise apply will be 98 percent. Similarly, the adjustment to the Medicare PFS amount that will otherwise apply will be 97 percent in CY 2017. Depending on whether the proportion of EPs who are meaningful EHR users is less than 75 percent, the adjustment to the Medicare PFS amount can be as low as 96 percent in CY 2018, and 95 percent in CY 2019 and subsequent years.

We did not receive any comments on our proposed methodology for making the determination of the applicable payment adjustment for Medicare EPs, including our proposed methodology for making the ''75 percent determination'' beginning for CY2018. Therefore, we are finalizing these provisions as proposed.

We noted in our proposed rule that some eligible professionals may be eligible for both the Medicare and Medicaid EHR incentives, and have opted for the Medicaid EHR incentive. Under that program, in the first year of their participation, EPs may be eligible for an incentive payment for having adopted, implemented, or upgraded (AIU) to CEHRT. However, AIU does not constitute meaningful use of CEHRT. Therefore, those EPs who receive an incentive payment for AIU will not be considered meaningful EHR users for purposes of determining whether EPs are subject to the Medicare payment adjustment. Medicaid EPs who meet the first year requirements through AIU in either 2013 or 2014 will still be subject to the Medicare payment adjustment in 2015 if they are not meaningful EHR users for the applicable reporting period. However, Medicaid EPs can, avoid this consequence by making sure that they meet meaningful use in 2013 (or 2014 if this is the first year of demonstrating meaningful use). Since the Medicaid EHR Incentive Program allows EPs to initiate as late as 2016, AIU can still be an important initial step for providers who missed the window to avoid the Medicare penalties, assuming they then demonstrate meaningful use in the subsequent year.

Comment: Commenters stated universal support for our proposal that EPs who are meaningful EHR users under the Medicaid EHR Incentive Program for an applicable reporting period will also be considered meaningful EHR users for that period for purposes of avoiding the Medicare payment adjustments.

Response: We agree with commenters and are finalizing this provision as proposed for the reasons outlined in the proposed rule.

Comment: A few commenters suggested that we allow Medicaid AIU to be used to avoid the payment adjustment.

Response: The statute (section 1848(a)(7) of the Act) specifically requires that the Medicare payment adjustment be applied to an EP ''who is not a meaningful EHR user * * * for an EHR reporting period for the payment year.'' As we have discussed previously, AIU does not involve the demonstration of meaningful use. Therefore, we cannot accept the commenters' recommendation that demonstration of AIU be accepted to allow an EP to avoid the Medicare payment adjustment.

After consideration of the public comments received, we are finalizing these provisions as proposed.

TABLE 11—PERCENT ADJUSTMENT FOR CY 2015 AND SUBSEQUENT YEARS, ASSUMING THAT, FOR CY 2018 AND SUBSEQUENT YEARS, THE SECRETARY FINDS THAT LESS THAN 75 PERCENT OF EPS ARE MEANINGFUL EHR USERS

EPs who are non-meaningful users	2015	2016	2017	2018	2019	2020+
EP is not subject to the payment adjustment for e-prescribing in 2014	99%	98%	97%	96%	95%	95%
EP is subject to the payment adjustment for e-prescribing in 2014	98	98	97	96	95	95

TABLE 12—PERCENT ADJUSTMENT FOR CY 2015 AND SUBSEQUENT YEARS, ASSUMING THAT THE SECRETARY ALWAYS FINDS THAT, FOR CY 2018 AND SUBSEQUENT YEARS, AT LEAST 75 PERCENT OF EPS ARE MEANINGFUL EHR USERS

EPs who are non-meaningful users	2015	2016	2017	2018	2019	2020+
EP is not subject to the payment adjustment for e-prescribing in 2014	99%	98%	97%	97%	97%	97%
EP is subject to the payment adjustment for e-prescribing in 2014	98	98	97	97	97	97

Comment: A commenter noted use of the word, ''during,'' in section 1848(a)(7) of the Act, which states: ''* * * if the eligible professional is not a meaningful EHR user (as determined under subsection (o)(2) for an EHR reporting period for the year, the fee schedule amount for such services furnished by such professional during the year (including the fee schedule amount for purposes of determining a payment based on such amount) shall be equal to the applicable percent of the fee schedule amount that would otherwise apply to such services under this subsection (determined after application of paragraph (3) but without regard to this paragraph).'' The commenter asserted that the phrase ''during the year'' allows the Secretary to apply the payment adjustment for any amount of time during the year and does not require that the payment adjustment be applied for the entire year.

Response: We disagree with this interpretation. Other parts of the statute clearly show the payment adjustment applies for a year at a time, and the Congress' intent was to have the physician fee schedule adjusted for an entire calendar year (that is, 99 percent (or 98 percent) in 2015, 98 percent in 2016, 97 percent in 2017, and so on.) The interpretation presented by the commenters would lead to absurd results, because it would allow the payment adjustment to be minimized to the point where it has no impact on the EP.

Therefore, we are finalizing the payment adjustment percentages and time periods as proposed.

b. EHR Reporting Period for Determining Whether an EP Is Subject to the Payment Adjustment for CY 2015 and Subsequent Calendar Years

In the Stage 1 final rule, we did not specifically discuss the EHR reporting periods that will apply for purposes of determining whether an EP is subject to the payment adjustments for CY 2015 and subsequent years. Section 1848(a)(7)(E)(ii) of the Act provides broad authority for the Secretary to choose the EHR reporting period for this purpose. Specifically, this section provides that ''term 'EHR reporting period' means, with respect to a year, a period (or periods) specified by the Secretary.'' Thus, the statute neither requires that such reporting period fall within the year of the payment adjustment, nor precludes the reporting period from falling within the year of the payment adjustment.

In developing our proposals in the case of EPs, we sought to establish appropriate reporting periods for purposes of the payment adjustments in CY 2015 and subsequent years to avoid creating a situation in which it might be necessary either to recoup overpayments or make additional payments after a determination is made about whether the payment adjustment should apply. We noted that this consideration is especially important in the case of EPs because, unlike the case with eligible hospitals and CAHs, there is not an existing mechanism for reconciliation or settlement of final payments subsequent to a payment year, based on the final data for the payment year. (Although, as we discussed in relation to our proposals on the payment adjustments for eligible hospitals in CY 2015 and subsequent years, this consideration also carries significant weight even where such a reconciliation or settlement mechanism is available.) Similarly, we did not want to create any scenarios under which providers would be required either to refund money, or to seek additional payment from beneficiaries, due to the need to recalculate beneficiary coinsurance after a determination of whether the payment adjustment should apply. If we were to establish EHR reporting periods that run concurrently with the payment adjustment year, we would not be able to safeguard against such retroactive adjustments (potentially including adjustments to beneficiary copayments, which are determined as a percentage of the Medicare PFS amount).

Therefore, we proposed that EHR reporting periods for payment adjustments will begin and end prior to the year of the payment adjustment. Furthermore, we proposed that the EHR reporting periods for purposes of such determinations will be far enough in advance of the payment adjustment year to give us sufficient time to implement the system edits necessary to apply any required adjustments correctly, and that EPs will know in advance of the payment adjustment year whether or not they are subject to the adjustments that we have discussed. Specifically, we proposed that the following rules would apply for establishing the appropriate reporting periods for purposes of determining whether EPs are subject to the payment adjustments in CY 2015 and subsequent years:

- Except as provided in the following bulleted paragraph for EPs who become meaningful users for the first time in 2014, we proposed that the EHR reporting period for the 2015 payment adjustment would be the same EHR reporting period that applies in order to receive the incentive for payment year

2013. We stated that this proposal would align reporting periods for multiple physician reporting programs. For EPs we proposed that the period would generally be a full calendar year of 2013 (unless 2013 is the first year of demonstrating meaningful use, in which case a 90-day EHR reporting period would apply). Under our proposed policy, an EP who receives an incentive for payment year 2013 would be exempt from the payment adjustment in 2015. An EP who received an incentive for payment years in 2011 or 2012 (or both), but who failed to demonstrate meaningful use in 2013 would be subject to a payment adjustment in 2015. (As all of these years will be for Stage 1 of meaningful use, we stated our belief that it is unnecessary to create a special process to accommodate providers that miss the 2013 year for meaningful use). For each year subsequent to CY 2015, we proposed an EHR reporting period for the payment adjustment that is the calendar year 2 years prior to the payment adjustment period, subject again to the special exception for new meaningful users of the CEHRT as follows:

- We proposed an exception for those EPs who never successfully attested to meaningful use prior to CY 2014. For these EPs, as it would be their first year of demonstrating meaningful use, for the 2015 payment adjustment, we proposed to allow a continuous 90-day reporting period that begins in 2014 and that ends at least 3 months before the end of CY 2014. In addition, the EP would have to successfully register for and attest to meaningful use no later than the date that occurs 3 months before the end of CY 2014. For EPs, we stated that under our proposal, the latest day the EP must successfully register for the incentive program and attest to meaningful use, and thereby avoid application of the adjustment in CY 2015, would be October 1, 2014. Thus, the EP's EHR reporting period would need to begin no later than July 3, 2014 (allowing the EP a 90-day EHR reporting period, followed by 1 extra day to successfully submit the attestation and any other information necessary to earn an incentive payment). We proposed that this policy would continue to apply in subsequent years for EPs who are in their first year of demonstrating meaningful use in the year immediately preceding the payment adjustment year.

Comment: Many commenters disagreed with our interpretation of the statute. These commenters asserted that both the Congressional intent and the language of the statute required an EHR reporting period aligned with the payment adjustment year. Thus, these commenters maintained that an EP should be subject to a payment adjustment during a payment year only if he or she fails to demonstrate meaningful use during that payment year. These commenters proposed several alternative methods for employing an EHR reporting period that is concurrent to the payment adjustment year for EPs. These recommended methods involved either making a determination of meaningful use early in a payment year, and then applying the payment adjustment (where applicable) for only a later part of the year, or developing a reconciliation process at the end of the year in which the payment adjustment is either collected from or refunded to the EP as appropriate.

Response: We disagree with the commenters' interpretation of the statutory language. As the commenters note, section 1848(a)(7) of the SSA specifically requires that the Medicare payment adjustment be applied to an EP ''who is not a meaningful EHR user * * * for an EHR reporting period for the payment year.'' However, as we discussed in the proposed rule, section 1848(a)(7)(E)(ii) of the Act specifically provides that ''term 'EHR reporting period' means, with respect to a year, a period (or periods) specified by the Secretary.'' Thus, the statute neither requires that such reporting period fall within the year of the payment adjustment, nor precludes the reporting period from falling within the year of the payment adjustment. Rather, the statute allows the Secretary the discretion to set the EHR reporting period and link to a year of payment adjustments. Indeed, given that Congress directed that the payment reduction that is applied to the physician fee schedule also apply for purposes of determining coinsurance, we believe there was an underlying intent to ensure that the physician fee schedule amount (and whether a percentage reduction applies) would be known at the time coinsurance is calculated. This would explain why Congress provided flexibility to the Secretary in determining which reporting period dictates whether the EP is subject to a payment adjustment. Finally, we note that other payment adjustment programs, such as the e-prescribing program, and the physician quality reporting system, also use a prior reporting period. Thus, it is consistent for us to adopt a prior reporting period for the EHR program as well.

Comment: Commenters also raised two more practical objections to our proposal to use a prior EHR reporting period. One objection is that there is insufficient vendor capacity for all providers to purchase CEHRT and achieve meaningful use prior to 2015, in order to avoid the payment adjustment in 2015. Some of these commenters asserted that the practical deadline for beginning the process of adopting and implementing CEHRT has already passed for some popular vendors; thus, vendor choice is limited by the proposed timeline. Commenters also assert that this issue is compounded because EHR vendors must upgrade current clients to 2014 CEHRT at roughly the same time.

Response: We understand the commenters' concerns. However, EPs have known for several years that they would face a payment adjustment beginning in 2015, and we believe that they have thus had adequate time to make appropriate preparations. During the last 2 years there has been a significant adoption of CEHRT with over 100,000 EPs receiving an incentive for adoption/implementation/upgrade or meaningful use. We also acknowledge the concerns expressed by many commenters about vendor capacity, and especially about whether every vendor will be available to every EP seeking to establish meaningful use. We note that to avoid the payment adjustment in 2015, all providers will be required to establish only Stage 1 of meaningful use in the applicable reporting period. For the payment adjustment in 2016, only those who first demonstrated meaningful use in 2011 or 2012 will have to demonstrate Stage 2 in the applicable reporting period and we are finalizing a shorter EHR reporting period for these EPs to account for the time limitations. We also believe other factors outweigh the concerns noted by commenters. As discussed previously, we do not believe the statute should be read to allow payment adjustments for only part of the year. Each of the other alternative suggestions presented by commenters would require reprocessing of claims for EPs, as well as addressing the difficult issue of how to adjust co-insurance in the context of this reprocessing (that is, to refund some coinsurance or to collect additional coinsurance, depending upon the results of the reprocessing on each claim). The administrative and financial cost of the reprocessing that would be required would be quite significant for both CMS and the affected EPs. Especially for smaller dollar claims, it is possible that in 2015 the cost of reprocessing for CMS and EPs could exceed that payment adjustment. For example, a claim of $100 will be

reduced $1 or $2 in CY 2015. If that claim was reprocessed, CMS Medicare Administrative Contractors (MACs) would have to reprocess the claim, utilize the banking system to send the payment; the EP's accounting process would have to accept the new payment and update the old claim and possibly incur the costs of collecting or refunding coinsurance. As the payment adjustments increase, the balance between the cost of the payment adjustments weighed against the cost of claim reprocessing may shift. In addition, as time passes we also anticipate that the supply of CEHRT and supporting services will increase to better match demand, lessening the concerns presented by the commenters. Therefore, we are finalizing the EHR reporting period for determining whether an EP is subject to the payment adjustment for CY 2015 and subsequent calendar years as proposed. The issue requiring all providers regardless of stage of meaningful use to upgrade to 2014 CEHRT is addressed by ONC in their final rule published elsewhere in this issue of the **Federal Register**. We note that all providers, regardless of stage, will use a 3-month EHR reporting period in 2014.

c. Exception to the Application of the Payment Adjustment to EPs in CY 2015 and Subsequent Calendar Years

As previously discussed, section 1848(a)(7)(B) of the Act provides that the Secretary may, on a case-by-case basis, exempt an EP from the application of the payment adjustments in CY 2015 and subsequent CYs if the Secretary determines that compliance with the requirements for being a meaningful EHR user will result in a significant hardship, such as in the case of an EP who practices in a rural area without sufficient Internet access. As provided in the statute, the exception is subject to annual renewal, but in no case may an EP be granted an exception for more than 5 years. We note that the HITECH Act does not obligate the Secretary to grant exceptions. Nonetheless, in the proposed rule, we expressed our belief that there are hardships for which an exception should be granted. We therefore proposed three types of exceptions in the proposed rule and discussed a potential fourth. The three proposed exceptions were, by definition, time limited and we stated that the circumstances justifying such exceptions should not be present for more than 5 years. The fourth exception related to certain EPs and did not, by definition, involve time limited circumstances. Nevertheless, we noted that the 5 year limitation is statutory and cannot be altered by regulations, and that barriers to achieving meaningful use should be minimized over time.

Comment: Some commenters suggested that the exception be granted for an all 5 years rather than an annual determination to reduce the burden on EPs seeking the exception and the burden on CMS to process the exceptions.

Response: Section 1848(a)(7)(B) of the Act makes the hardship exception subject to annual renewal. Therefore, we would not grant an exception for more than 1 year unless we are certain that the circumstances that qualify an EP for an exception will not change for 5 years. The only such definitive case is for new EPs, and we grant a 2-year exception for such new EPs, because the date when an individual becomes an EP is a fixed point in time and not subject to change. However, all other exceptions discussed in the proposed rule depend on variable circumstances and could change from year to year. For example, although the exception we are finalizing for certain EPs (see § 495.102(d)(4)(iv)) could depend on scope of practice, which may be relatively fixed, it also depends on the ability to control the availability of CEHRT, which could easily change from year to year. Therefore, for these cases, we are not adopting this recommendation, and are finalizing a requirement for annual renewal.

As mentioned previously, we proposed three specific exceptions and a potential fourth in the proposed rule. First, we proposed that the Secretary may grant an exception to EPs who practice in areas without sufficient Internet access. We noted that section 1848(a)(7)(B) of the Act specifically allows the Secretary to establish a significant hardship ''in the case of an eligible professional who practices in a rural area without sufficient Internet access.'' However, our proposal recognized that a nonrural area may also lack sufficient Internet access to make complying with the requirements for being a meaningful EHR user a significant hardship for an EP.

We noted that exceptions on the basis of insufficient Internet connectivity must intrinsically be considered on a case-by-case basis. Therefore, we proposed to require that EPs must demonstrate insufficient Internet connectivity to qualify for the exception through an application process. As we discussed in the proposed rule, the rationale for this exception is that lack of sufficient Internet connectivity renders compliance with the meaningful EHR use requirements a hardship, particularly for meeting those meaningful use objectives requiring Internet connectivity, such as, summary of care documents, electronic prescribing, making health information available online, and submission of public health information. Therefore, we proposed that the application must demonstrate insufficient Internet connectivity to comply with the meaningful use objectives and that there are insurmountable barriers to obtaining such infrastructure, such as a high cost of extending the Internet infrastructure to their facility. We also proposed that an EP must establish the existence of the hardship was for the year that is 2 years prior to the payment adjustment year. Therefore, we proposed to require that applications be submitted no later than July 1 of the calendar year before the payment adjustment year in order to provide sufficient time for a determination to be made and for the EP to be notified about whether an exception has been granted prior to the payment adjustment year. This proposed timeline for submission and consideration of hardship applications was intended to allow sufficient time to adjust our payment systems so that payment adjustments are not applied to EPs who have received an exception for a specific payment adjustment year.

In our proposed rule, we also encouraged EPs to apply for the exception as soon as possible, which is after the first 90 days (the earliest EHR reporting period) of CY 2013. If applications are submitted close to or on the latest date possible (that is, July 1, 2014 for the 2015 payment adjustment year), then the applications could not be processed in sufficient time to conduct an EHR reporting period in CY 2014 in the event that the application is denied.

Comment: Commenters stated universal support for this exception. However, commenters expressed the concern about the situation of an EP who might have sufficient internet access in the 2 years prior, but lose it in 2014.

Response: We are finalizing our proposed significant hardship exception for insufficient Internet connectivity with one modification. We believe that it is extremely unlikely that an EP would lose sufficient internet access at one location. However, an EP may relocate to a location without sufficient Internet access. Therefore, we are finalizing our proposal with the modification to allow for the demonstration of insufficient internet access for any 90-day continuous period between the start of the year 2 years prior to the payment adjustment year and through the application submission

date of July 1 of the year prior to the payment adjustment year. The 90-day period should be within this timeframe (for example, for payment adjustment year 2015, the hardship would need to be shown for any continuous 90-day period that begins on or after January 1, 2013 and ends on or before July 1, 2014.

Second, we proposed to provide an exception for new EPs for a limited period of time after the EP has begun practicing. Newly practicing EPs will not be able to demonstrate that they are meaningful EHR users for a reporting period that occurs prior to the payment adjustment year. Therefore, we proposed that for 2 years after they begin practicing, EPs could receive an exception from the payment adjustments that will otherwise apply in CY 2015 and thereafter. We also proposed that, for purposes of this exception, an EP who switches specialties and begins practicing under a new specialty will not be considered newly practicing. For example, an EP who begins practicing in CY 2015 will receive an exception from the payment adjustments in CYs 2015 and 2016. However, as discussed previously, the new EP will still be required to demonstrate meaningful use in CY 2016 in order to avoid being subject to the payment adjustment in CY 2017. In the absence of demonstrating meaningful use in CY 2016, an EP who had begun practicing in CY 2015 will be subject to the payment adjustment in CY 2017. We proposed to employ an application process for granting this exception, and will provide additional information on the timeline and form of the application in guidance subsequent to the publication of the final rule.

Comment: Commenters stated universal support for this exception in public comments, and we are finalizing this exception as proposed for the reasons outlined in the proposed rule.

Third, we proposed an additional exception in this final rule for extreme circumstances that make it impossible for an EP to demonstrate meaningful use requirements through no fault of her own during the reporting period. Such circumstances might include: a practice being closed down; a hospital closed; a natural disaster in which an EHR system is destroyed; EHR vendor going out of business; and similar circumstances. Because exceptions on extreme, uncontrollable circumstances must be evaluated on a case-by-case basis, we proposed to require EPs to qualify for the exception through an application process.

Comment: Many commenters supported this exception. However a number of the supporters requested that various circumstances be added to the list of example circumstances that we provided. These examples dealt primarily with concerns related to vendors of CEHRT. Specifically, commenters were concerned about vendors of CEHRT not maintaining their certification status, ability to meet implementation schedules, and ability to find a vendor of CEHRT willing to work with them. In addition, commenters suggested that the provider facing severe financial distress, such as bankruptcy or restructuring of debt should be included as an example.

Response: In evaluating these circumstances, we considered whether first and foremost they met the criteria of making it impossible for the EP to demonstrate meaningful use requirements through no fault of his or her own during the EHR reporting period. Second, we considered whether they establish a definitive circumstance that would always rise to the level of the exception or whether they would be dependent on the individual scenario. We are including two examples submitted by commenters in the preamble of the final rule that match the former criteria. First, we would consider the case an EP whose CEHRT loses its certification either through revocation or because the vendor did not upgrade their CEHRT to the latest requirements as an extreme circumstance that might qualify for this exception. Second, we would consider the case of an EP suffering severe financial distress resulting in a bankruptcy or restructuring of debt as an extreme circumstance that might qualify for this exception.

We require applications to be submitted no later than July 1 of the calendar year before the payment adjustment year in order to provide sufficient time for a determination to be made and for the EP to be notified about whether an exception has been granted prior to the payment adjustment year. This timeline for submission and consideration of hardship applications also allows for sufficient time to adjust our payment systems so that payment adjustments are not applied to EPs who have received an exception for a specific payment adjustment year.

The purpose of this exception is to accommodate EPs who would have otherwise been able to become a meaningful EHR user and avoid the payment adjustment for a given year in the absence of the extreme circumstances they face. Therefore, it is necessary to establish whether the relevant circumstances exist during the EHR reporting period for a given payment adjustment year rather than the payment adjustment year itself. In the proposed rule, we explained the inherently case-by-case nature of this exception request. While we discussed circumstances that arise in ''either of the 2 calendar years before the payment adjustment year,'' our intent was to ensure that the regulations recognized the two different EHR reporting periods for new meaningful users (that is, those demonstrating meaningful use for the first time in the year immediately prior to the payment adjustment year), versus current meaningful users (that is, those demonstrating meaningful use in the calendar year that is two years before the payment adjustment year). Obviously, a ''current'' meaningful user, who is required under our regulations to demonstrate meaningful use in the calendar year two years before the payment adjustment year, may not receive an exception for circumstances that occur after that reporting period. While a new meaningful user might be able to demonstrate that extreme circumstances that occurred prior to the reporting period continue to warrant an exception, we believe the case-by-case nature of the exception requests would allow such ''new'' meaningful users this opportunity to demonstrate that a significant hardship continues to exist during the reporting period. Therefore, in this final rule, we are clarifying our regulation to distinguish between new and current meaningful users, to be clear that the extreme circumstances must exist during the period in which the provider would otherwise be required to demonstrate meaningful use. EPs should apply for this exception on the basis of circumstances arising in the CY 2 years prior to the payment adjustment year, or, in the case of EPs who have never attested to meaningful use, the year immediately prior to the payment adjustment year.

Finally, we solicited comment on the appropriateness of granting a fourth exception for EPs meeting certain specific general criteria that might render demonstration of meaningful use very difficult. The criteria that we discussed were—

- Lack of face-to-face or telemedicine interaction with patients, thereby making compliance with meaningful use criteria more difficult. Meaningful use requires that a provider collect a considerable amount of information about the patient and is able transport information online (to a PHR, to another provider, or to a patient) and is significantly easier if the provider has direct contact with the patient and a need for follow up care or contact. Certain physicians often do not have a consultative interaction with the

patient. For example, pathologist and radiologists seldom have direct consultations with patients. Rather, they typically submit reports to other physicians who review the results with their patients;

• Lack of follow up with patients. Again, the meaningful use requirements for collecting information about the patient and transporting information online are significantly easier to meet if a provider has direct contact with a patient and a need to follow-up with the patient; and

• Lack of control over the availability of CEHRT at their practice locations.

In our proposed rule, we stated that we did not believe any one of these barriers taken independently would constitute an insurmountable hardship; however, our experience with Stage 1 of meaningful use suggests that, taken together, they may pose a substantial obstacle to achieving meaningful use. Therefore, we discussed several options in the proposed rule. One option was to provide a time-limited, 2-year payment adjustment exception for all EPs who meet the previous criteria. This approach would allow us to reconsider this issue in future rulemaking. Another option was to provide such an exception with no specific time limit. However, we noted that even under this less restrictive option, by statute no individual EP can receive an exception for more than 5 years. As discussed earlier, we believe the proliferation of both CEHRT and health information exchange will reduce the barriers faced by specialties with less CEHRT adoption over time as other providers may be providing the necessary data for these specialties to meet meaningful use. We particularly requested comment on how soon EPs who meet the previous criteria will reasonably be able to achieve meaningful use.

In the proposed rule, we encouraged comment on whether these criteria, or additional criteria not accounted for in the meaningful use exclusions, constitute a significant hardship to meeting meaningful use. We indicated that we that we would consider whether to adopt an exception based on these or similar criteria in the final rule, and, if so, whether such an exception should apply to individual EPs or across-the-board based on specialty or other groupings that generally meet the appropriate criteria.

Comment: Numerous commenters expressed support for including this exception. Some commenters agreed with CMS' assertion that all three barriers must be in place for this to be considered a significant hardship, while others maintained that any one of these barriers constitutes a significant hardship. Commenters from specific groups also presented arguments that they face one or more (up to all three) of the barriers presented in a sufficiently uniform way to have the exception apply across the board to their group.

Response: After reviewing the comments on this issue, we believe that the hardships presented are significant. Some EPs in the specialties that face all three barriers have already successfully attested to meaningful use. Thus, even when all three barriers are present, meaningful use may be difficult, but not impossible to achieve. In establishing the criteria for meaningful use itself, we have adopted exclusions and constructed the measures to lower the first two barriers as much as possible. For example, EPs with no office visits (that is, without direct patient contact) do not have to provide visit summaries, nor do they have to provider patient reminders. Due to both the allowances built into the meaningful use criteria and the fact at least a few EPs in nearly all specialties have attested to meaningful use, we do not believe that each barrier stands alone as a significant hardship. However, in considering the hardships and how they would be overcome there are significant differences between the first two and the latter (lack of control of CEHRT). Lack of face-to-face and need for follow up are both overcome through robust health information exchange. However, we do not believe that the existing availability health information exchange is sufficient to overcome these hardships. Therefore, we are finalizing an exception for those EPs who lack both face-to-face interactions with patients and those who lack the need to follow up with patients. An EP may apply for this exception only on the grounds that they meet both of these criteria (lack of face-to-face interactions and lack the to follow up with patients). We consider lack of face-to-face and need for follow-up care to be situations where the EP has no or nearly no face-to-face patient interactions or need for follow-up care. The EP would need to demonstrate either a complete lack of face-to-face interactions and follow-up or that cases of face-to-face interaction and follow-up are extremely rare and not part of normal scope of practice for that EP.

In reviewing the arguments presented for a group determination as well as considering common knowledge about the scope of practice of various specialties, we agree with commenters that the specialties of anesthesiology, radiology, and pathology lack face-to-face interactions and need to follow up with patients with sufficient frequency to warrant granting an exception to each EP with one of these primary specialties. We note that anesthesiologists do interact with patients, but not in a manner that is conducive to collecting the information needed for many aspects of meaningful use. As discussed previously, this exemption is subject to annual renewal. In future rulemaking we will consider whether the proliferation of health information exchange or any other developments are sufficient to remove lack of face-to-face interaction as a barrier, and whether the proliferation of CEHRT is sufficient to remove lack of control over the availability of CEHRT as a barrier. We will consider these issues in relation both to the exception itself and its application to the specialties of anesthesiology, radiology, and pathology. As such, physicians in these three specialties should not expect that this exception will continue indefinitely, nor should they expect that we will grant the exception for the full 5-year period permitted by statute. We will consider the extent to which these specialties continue to face these barriers in the Stage 3 rule and in other future rulemaking. We will also work to develop strategies to assist physicians who lack face-to-face interactions and the need to follow up with patients in demonstrating meaningful use. We may develop such strategies in the context of future rulemaking (for example, the Stage 3 rule) or in the form of additional guidance to physicians in these specialties. We also encourage all anesthesiologists, radiologists, and pathologists to continue to build out their ability to participate in health information exchange, adopt CEHRT and apply for the Medicare or Medicaid EHR incentives. Those seeking the Medicare EHR incentives can start through 2014, while those seeking the Medicaid EHR incentives can start through 2016.

As hospital-based anesthesiologists, radiologists, and pathologists are not eligible for the incentive and are thus exempted from the payment adjustment, the exception discussed in this section relates to these specialists in nonhospital settings.

With regard to the third barrier (lack of control over the availability of CEHRT at practice locations), we believe that in cases where an EP practices at multiple locations just this one barrier could be sufficient to constitute a significant hardship. In such cases, the EP would have to truly have no control over the availability of CEHRT. Control does not imply final decision-making authority. For example, we would

generally view EPs practicing in a large, corporate, group as having control over the availability of CEHRT, because they can influence the group's purchase of CEHRT, they may reassign their claims to the group, they may have a partnership/ownership stake in the group, or any payment adjustment would affect the group's earnings, and the entire impact would not be borne by the individual EP. These EPs can influence the availability of CEHRT and the group's earnings are directly affected by the payment adjustment. Thus, such EPs would not, as a general rule, be viewed as lacking control over the availability of CEHRT and would not be eligible for the hardship exception based solely on their membership in a group practice that has not adopted CEHRT.

On the other hand, there are EPs who practice at multiple locations who truly have little to no control over whether CEHRT is available at their locations. These might include, surgeons using ambulatory surgery centers or physicians treating patients in a nursing home. In these cases, the surgeon or physician likely would bear the entire impact of any payment adjustment—and such adjustment would not affect the earnings of the ambulatory surgery center or nursing home. In addition, because the surgeon or physician merely sees patients at the center or home, and does not have any other interest in the facility, we believe they would exert little to no influence over whether the nursing home, center, or other similar outpatient site adopts and implements CEHRT.

We note that we already have in place an eligibility requirement that allows for an EP to still qualify as a meaningful EHR user even if up to 49.9 percent of the EP's outpatient encounters are in locations that lack CEHRT. Thus, our exception would apply only in the case of EPs practicing in multiple locations where the lack of control (as discussed previously) exists for a majority (50 percent or more) of their outpatient encounters at such locations, causing such EPs to not be eligible to become meaningful EHR users. (In addition, we wish to make clear that we will not grant the exception to EPs that lack control in their practice locations but where those locations have adopted CEHRT would mean that the EP could become a meaningful EHR user.)

For the reasons discussed earlier, we have adopted a final regulation that allows an EP practicing at multiple locations to demonstrate that the EP was truly unable to control the availability of CEHRT at either one or a combination of locations that constitute more than 50 percent of their outpatient encounters. Inpatient hospital and emergency department encounters would not be included in either the numerator or the denominator for purposes determining whether the 50 percent threshold is met. This approach is consistent with the categories of encounters that are considered to be outpatient for purposes of determining hospital based status. (As noted previously, the locations cited by the EP for purposes of qualifying for this exception could not have CEHRT available—otherwise, we would view the EP as being potentially able to demonstrate meaningful use.)

After considering the public comments, we are finalizing an exception by adding a new § 495.102(d)(4)(iv) to the regulations. EPs whose primary specialty is listed in PECOS as anesthesiology, radiology or pathology 6 months prior to the first day of the year in which payment adjustments that would otherwise apply will be deemed to qualify for this exception, subject to the 5-year limit that applies to all exceptions under this paragraph.

Comment: Many commenters requested that these and other commenter proposed exceptions apply to other programs besides the Medicare EHR incentive program.

Response: This final rulemaking focuses on the EHR Incentive program, and we did not propose to make changes to other programs. We encourage interested parties to submit comments on proposed rules (if any) for those other programs.

Comment: Commenters suggested the following additional exceptions:

- All EPs over 60 or eligible for Social Security and for all practices with 5 or fewer physicians.
- EPs who make a good faith effort, but fail to reach the thresholds thereby making a distinction between those who make an effort and those who do not attempt to become meaningful EHR user.
- EP is not practicing for a significant period of time during the reporting period.
- EP working in a practice without CEHRT changes to a new practice that has CEHRT during the reporting period.

Response: We address each of these in turn. We agree that there is evidence that older EPs and those in smaller practices have been slower to adopt CEHRT.[6] [7] The HITECH Act even acknowledged the problems for smaller practices by creating assistance programs for EPs in individual or small practices in Title XIII, section 3012(c)(4) of the Act. However, based on attestation information submitted to us, EPs in both groups are successfully meeting meaningful use in significant numbers. Therefore, we do not believe that either an EP's age or practice size constitutes a significant hardship. In addition, we believe it would be problematic to exempt a category of EPs based on age or size of practice given that the intent of the payment adjustments and incentives is to ensure widespread modernization to electronic health records. We do not believe that these elements, in themselves, demonstrate that the EP experiences a ''significant hardship'' in becoming a meaningful EHR user.

The next exception suggested by commenters is for EPs who attempt to become a meaningful EHR user, but fail to do so. Because we have already adopted an exception for EPs who face circumstances beyond their control, the application of this suggested exception would necessarily be limited to EPs who face normal difficulties, rather than significant hardship, in becoming meaningful EHR users. Again, the statute requires demonstration of a significant hardship as the basis for an exception, and we do not believe that a good faith attempt, in and of itself, demonstrates the existence of a significant hardship exists sufficient to prevent the EP from becoming a meaningful EHR user. Furthermore, Congress set the benchmark for receiving full payment, without being subject to payment adjustment, on the achievement of meaningful use rather than on the attempt to achieve meaningful use. Therefore, we do not believe that EPs who attempt, but fail, to meet meaningful use and do not qualify for one of our other exceptions should be granted a significant hardship exception.

We also do not believe that it is appropriate to establish an exception for EPs not practicing for significant time periods during the EHR reporting period. First, we already proposed (and are finalizing) an exception for newly practicing EPs. Second, EPs who are not newly practicing, but only practice for part of the EHR reporting period should be able to report in the numerator and denominators simply the numbers that pertain to the time during which they

[6] Chun-Ju Hsiao, Sandra L. Decker, Esther Hing and Jane E. Sisk. Most Physicians Were Eligible For Federal Incentives In 2011, But Few Had EHR Systems That Met Meaningful Use Criteria, Health Affairs, 31, No. 5 (2012).

[7] Sandra L. Decker, Eric W. Jamoom and Jane E. Sisk. Physicians In Nonprimary Care And Small Practices And Those Age 55 And Older Lag In Adopting Electronic Health Records Systems, Health Affairs, 31, No. 5 (2012).

are practicing. For example, a measure based on number of patients seen or actions taken would include only those patients/actions during the time the EP is practicing during the applicable reporting period. We recognize that some meaningful use measures, such as drug-drug and drug-allergy interaction checks, require a functionality to be enabled for the entire EHR reporting period. In this case, the EP would have the functionality enabled for the period s/he is practicing.

The final exception suggested by commenters is for an EP working in a practice without CEHRT who changes to a new practice with CEHRT. Again, the commenters did not explain why such a circumstance, by itself, supports a significant hardship that prevents the EP from becoming a meaningful EHR user. Moreover, if the EP has never demonstrated meaningful use he or she should have an initial 90-day reporting period that allows the EP to demonstrate meaningful use in a shorter period. In addition, under current guidance, if the EP has more than 50 percent of their outpatient encounters at the new practice equipped with CEHRT then they would be able to exclude the old practice from their meaningful use measures.

After considering the public comments, we are not finalizing these exceptions recommended by the commenters. The following table summarizes the timeline for EPs to avoid the applicable payment adjustment by demonstrating meaningful use or qualifying for an exception from the application of the payment adjustment:

TABLE 13—TIMELINE FOR ELIGIBLE PROFESSIONALS (OTHER THAN HOSPITAL-BASED) TO AVOID PAYMENT ADJUSTMENT

EP payment adjustment year (calendar year)	Demonstrate MU during EHR reporting period 2 years prior to year of payment adjustment	or	For an EP demonstrating meaningful use for the first time in the year prior to the payment adjustment year, EHR reporting period is a continuous 90-day reporting period beginning no later than	or	Apply or otherwise qualify for an exception no later than
2015	CY 2013 (with submission no later than February 28, 2014).		July 3, 2014 (with submission no later than October 1, 2014).		July 1, 2014.
2016	CY 2014 (with submission no later than February 28, 2015).		July 3, 2015 (with submission no later than October 1, 2015).		July 1, 2015.
2017	CY 2015 (with submission no later than February 29, 2016).		July 3, 2016 (with submission no later than October 1, 2016).		July 1, 2016.
2018	CY 2016 (with submission no later than February 28, 2017).		July 3, 2017 (with submission no later than October 1, 2017).		July 1, 2017.
2019	CY 2017 with submission no later than February 28, 2018).		July 3, 2018 (with submission no later than October 1, 2018).		July 1, 2018.

Notes: (CY refers to the calendar year, January 1 through December 31 each year.)
The timelines for CY 2020 and subsequent calendar years will follow the same pattern.

TABLE 14—PERIOD HARDSHIP MUST BE SHOWN WITH APPLICATION DATE

Exception	Period of consideration for exception	Application for CY 2015 submitted no later than
Insufficient internet access	Demonstrate insufficient internet access for any continuous 90-day period from the start of the CY 2 years prior to the payment adjustment year to July 1 of the year prior to the payment adjustment year (For CY 2015—January 1, 2013–July 1, 2014).	July 1, 2014.
New EP	New EP granted an exception for the year they become an EP and the following year (For CY 2015, the EP would have to be new in either CY 2014 or CY 2015).	Guidance to be issued following publication of the final rule.
Extreme Circumstances outside of the EP's Control.	For an EP who has previously demonstrated meaningful use, the EP must demonstrate extreme circumstances that affect either of the CYs in the 2 years prior to the payment adjustment year. (For CY 2015–CY 2013). For EPs who have never demonstrated meaningful use, the EP must demonstrate extreme circumstances that affect the CY prior to the payment adjustment year. (For CY 2015–CY 2014).	July 1, 2014.
Lack of Face-Face/Telemedicine Patient Interactions and Lack of Need for Follow Up Care,.	The CY 2 years prior to the payment adjustment year (For CY 2015–CY 2013) through the application deadline..	For applications only: July 1, 2014.
Lack of Control Over Availability of CEHRT for EPs practicing in multiple locations.	For all EPs, if they are registered in PECOS with a primary specialty of anesthesiology, pathology or radiology 6 months prior to first day of the payment adjustment year they meet the exception. (For CY 2015—July 1, 2014)	

d. HPSA Bonus Technical Change

In this final rule we are also making a technical change to our regulations to correctly reflect our policy on EPs who predominantly furnish services in a geographic HPSA. This change is necessary to reflect the current policy that the 50 percent determination is based on the covered professional services provided during the payment year, in accordance with the preamble discussion in the Stage 1 final rule (75 FR 44444 through 44445). The current regulation erroneously uses the phrase ''the year prior to the payment year,'' which conflicts with our preamble discussion in both the proposed (75 FR 1908 through 1909) and final Stage 1 rules. We note that we are not changing the policy (already adopted) that the HPSA must be so designated by December 31 of the year prior to the payment year.

e. Payment Adjustment Not Applicable to Hospital-Based EPs

Section 1848(a)(7)(D) of the Act provides that no EHR payment adjustments otherwise applicable for CY 2015 and subsequent years ''may be made * * * in the case of a hospital-based eligible professional (as defined in subsection (o)(1)(C)(ii)) of the Act.'' We proposed that the same definition of hospital-based should apply during the incentive and payment adjustment phases of the Medicare EHR incentive program (that is, those eligible to receive incentives will also be subject to adjustments). Therefore, we proposed that our regulations at § 495.100 and § 495.102(d) would retain, during the payment adjustment phase of the EHR Incentive Program, the definition of hospital-based eligible professional at § 495.4. For purposes of the Medicare EHR incentive payment program, the determination of whether an EP is hospital-based is made on the basis of data from ''the Federal FY prior to the payment year.'' In the preamble to the Stage 1 final rule (75 FR 44442), we also stated that ''in order to provide information regarding the hospital-based status of each EP at the beginning of each payment year, we will need to use claims data from an earlier period. Therefore, we will use claims data from the prior fiscal year (October through September). Under this approach, the hospital-based status of each EP will be reassessed each year, using claims data from the fiscal year preceding the payment year. The hospital-based status will be available for viewing beginning in January of each payment year.''

We proposed to retain the concept established in the Stage 1 final rule (75 FR 44442) of making hospital-based determinations based upon a prior fiscal year of data. However, in the proposed rule we expressed concern about ensuring that EPs are aware of their hospital-based status in time to purchase EHR technology and meaningfully use it during the EHR reporting period that applies to a payment adjustment year. EPs who believe that they are not hospital based will have already either worked towards becoming meaningful EHR users or planned for the payment adjustment. EPs who believe that they will be determined hospital based may not have done so. EPs in these circumstances will need to know they are not hospital based in time to become a meaningful EHR user for a 90-day EHR reporting period in the year prior to the payment adjustment year. To use the example of the CY 2015 payment adjustment year, a determination based on FY 2013 data will allow an EP to know whether he or she is hospital-based by January 1, 2014. This timeline would give the EP approximately 6 months to begin the EHR reporting period, which could last from July through September of 2014. We stated in the proposed rule that we did not believe this to be sufficient time for the EP to implement CEHRT. Therefore, we proposed to base the hospital based determination for a payment adjustment year on determinations made 2 years prior. Again using CY 2015 payment adjustment year as an example, the determination would be available on January 1, 2013 based on FY 2012 data. This proposed determination date will give the EP up to 18 months to implement CEHRT and begin the EHR reporting period to avoid the CY 2015 payment adjustment. In the proposed rule, we asserted that this a reasonable time frame to accommodate a difficult situation for some EPs. However, we also are aware that there may be EPs who are determined nonhospital-based under this ''2-years prior'' policy when they will be determined hospital-based if we made the determination just 1-year prior. Again, using the example of the CY 2015 payment adjustment year, an EP determined nonhospital-based as of January 1, 2013 (using FY 2012 data) may be found to be hospital-based as of January 1, 2014 (using FY 2013 data). In this situation, we stated in the proposed rule that we did not believe the EP should be penalized for having been nonhospital-based as of January 1, 2013, especially if the EP has never demonstrated meaningful use, and the EP's first EHR reporting period will have fallen within CY 2014. Therefore, in the proposed rule we requested comments on expanding the hospital-based determination to encompass determinations made either 1 or 2 years prior. Under this alternative, if the EP were determined hospital based as of either one of those dates, then the EP would be exempt from the payment adjustments in the corresponding payment adjustment year. This would mean that for the CY 2015 payment adjustment year, an EP determined hospital based as of either January 1, 2013 (using FY 2012 data) or January 1, 2014 (using FY 2013 data) would not be subject to the payment adjustment. In all cases, we would need to know that the EP is considered hospital based in sufficient time for the payment adjustment year.

Comment: Commenters provided only general supportive comments on this proposal.

Response: We thank the commenters for the support. For the reasons stated in the proposed rule, we are finalizing a rule that will determine hospital based using either of the following fiscal year's data: (1) The fiscal year before the year that is 1 year prior to the payment adjustment year (for example, FY 2013 data for payment adjustment year 2015); or (2) the fiscal year before the year that is 2 years prior to the payment adjustment year (for example, FY 2012 data for payment adjustment year 2015). If the data from either year result in a hospital-based determination, then the EP would not be subject to the payment adjustments for the relevant year.

We discuss one aspect of determining hospital-based status, specifically the circumstances of EPs who fund the acquisition, implementation, and maintenance of their own CEHRT in a hospital-based setting, in section II.C.3. of the preamble to this final rule.

3. Incentive Market Basket Adjustment Effective in FY 2015 and Subsequent Years for Eligible Hospitals That Are Not Meaningful EHR Users for an Applicable Reporting Period

Section 1886(b)(3)(B)(ix)(I) of the Act, as amended by section 4102(b)(1) of the HITECH Act, provides for an adjustment to the applicable percentage increase to the IPPS payment rate for those eligible hospitals that are not meaningful EHR users for the associated EHR reporting period for a payment year, beginning in FY 2015. Specifically, section 1886(b)(3)(B)(ix)(I) of the Act provides that, ''for FY 2015 and each subsequent FY,'' an eligible hospital that is not ''a meaningful EHR user * * * for an EHR reporting period'' will receive a reduced update to the IPPS standardized amount. This reduction will apply to ''three-quarters of the percentage increase otherwise applicable.'' The reduction to three-quarters of the applicable update for an eligible hospital that is not a meaningful EHR user will be ''33⅓ percent for FY 2015, 66⅔ percent for FY 2016, and 100 percent for FY 2017 and each subsequent FY.'' In other words, for eligible hospitals that are not meaningful EHR users, the Secretary is required to reduce the percentage increases otherwise applicable by 25 percent (33⅓ percent of 75 percent) in 2015, 50 percent (66⅔ percent of 75 percent) in FY 2016, and 75 percent (100 percent of 75 percent) in FY 2017 and subsequent years. Section 4102(b)(1)(B) of the HITECH Act also provides that such ''reduction shall apply only with respect to the FY involved and the Secretary shall not take into account such reduction in computing the applicable percentage increase * * * for a subsequent FY.''

TABLE 15—PERCENTAGE DECREASE IN APPLICABLE HOSPITAL PERCENTAGE INCREASE FOR HOSPITALS THAT ARE NOT MEANINGFUL EHR USERS

	2015	2016	2017+
Hospital payment update is subject to EHR payment reduction	25%	50%	75%

Section 1886(b)(3)(B)(ix)(II) of the Act, as amended by section 4102(b)(1) of the HITECH Act, provides that the Secretary may, on a case-by-case basis exempt a hospital from the application of the percentage increase adjustment for a fiscal year if the Secretary determines that requiring such hospital to be a meaningful EHR user will result in a significant hardship, such as in the case of a hospital in a rural area without sufficient Internet access. This section also provides that such determinations are subject to annual renewal, and that in no case may a hospital be granted such an exemption for more than 5 years.

Finally section 1886(b)(3)(B)(ix)(III) of the Act, as amended by section 4102(b)(1) of the HITECH Act, provides that, for FY 2015 and each subsequent FY, a state in which hospitals are paid for services under section 1814(b)(3) of the Act shall adjust the payments to each eligible hospital in the state that is not a meaningful EHR user in a manner that is designed to result in an aggregate reduction in payments to hospitals in the state that is equivalent to the aggregate reduction that will have occurred if payments had been reduced to each eligible hospital in the state in a manner comparable to the reduction in section 1886(b)(3)(B)(ix)(I) of the Act. This section also requires that the state shall report to the Secretary the method it will use to make the required payment adjustment. (At present, section 1814(b)(3) of the Act applies to the State of Maryland.) As we discussed in the Stage 1 final rule establishing the EHR incentive program (75 FR 44448), for purposes of determining whether hospitals are eligible for receiving EHR incentive payments, we employ the CMS Certification Number (CCN). We also proposed to use CCNs to identify hospitals for purposes of determining whether the reduction to the percentage increase otherwise applicable for FY 2015 and subsequent years applies. (In other words, whether a hospital was a meaningful EHR user for the applicable EHR reporting period will be dependent on the CCN for the hospital.) We noted the results of this policy for certain cases in which hospitals change ownership, merge, or otherwise reorganize and the applicable CCN changes. In cases where a single hospital changes ownership, we determine whether to retain the previous CCN or to assign a new CCN depending upon whether the new owner accepts assignment of the provider's prior participation agreement. Where a change of ownership has occurred, and a new CCN is assigned due to the new owner's decision not to accept assignment of the prior provider agreement, we proposed not to recognize a meaningful use determination that was established under the prior CCN for purposes of determining whether the payment adjustment applies. Where the new owner accepts the prior provider agreement and is assigned the same CCN, we proposed to continue to recognize the demonstration of meaningful use under that CCN. The same policy was proposed for merging hospitals that use a single CCN. For example, if hospital A is not a meaningful EHR user (for the applicable reporting period), and it absorbs hospital B, which was a meaningful EHR user, then the entire hospital will be subject to a payment adjustment if hospital A's CCN is the surviving identifier. The converse is true as well—if it were hospital B's CCN that survived, the entire merged hospital will not be subject to a payment adjustment. (The guidelines for determining CCN assignment in the case of merged hospitals are described in the State Operations Manual, sections 2779Aff. *http://www.cms.gov/Regulations-and-Guidance/Guidance/Manuals/Internet-Only-Manuals-IOMs-Items/CMS1201984.html*) We advised hospitals that are changing ownership, merging, or otherwise reorganizing to take this policy into account.

Comments received on the treatment of CCNs and new hospitals are addressed in the context of discussing our exception for new hospitals later in this section.

a. Applicable Market Basket Adjustment for Eligible Hospitals Who Are Not Meaningful EHR Users for FY 2015 and Subsequent FYs

In the stage 1 final rule on the Medicare and Medicaid Electronic Health Record Incentive Payment Programs, we revised § 412.64 of the regulations to provide for an adjustment to the applicable percentage increase update to the IPPS payment rate for those eligible hospitals that are not meaningful EHR users for the EHR reporting period for a payment year, beginning in FY 2015. Specifically, § 412.64(d)(3) now provides that—

• Beginning in fiscal year 2015, in the case of a ''subsection (d) hospital,'' as defined under section 1886(d)(1)(B) of the Act, that is not a meaningful electronic health record (EHR) user as defined in part 495, three-fourths of the applicable percentage change specified in paragraph (d)(1) is reduced—

++ For fiscal year 2015, by 33⅓ percent;

++ For fiscal year 2016, by 66⅔ percent; and

++ For fiscal year 2017 and subsequent fiscal years, by 100 percent.

In order to conform with this new update reduction, as required in section 4102(b)(1)(A) of the HITECH Act, we also revised § 412.64(d)(2)(C) of our regulations to provide that, beginning with FY 2015, the reduction to the IPPS applicable percentage increase for failure to submit data on quality measures to the Secretary shall be one-quarter of the applicable percentage increase, rather than the 2 percentage point reduction that applies for FYs 2007 through 2014 in § 412.64(d)(2)(B). The effect of this revision is that the combined reductions to the applicable percentage increase for meaningful EHR use and quality data reporting will not produce an update of less than zero for a hospital in a given FY as long as the hospital applicable percentage increase remains a positive number.

We did not propose any changes to the establishment of the payment adjustment amounts. We did propose the applicable EHR reporting period, for purposes of determining whether a hospital is subject to the applicable percentage increase adjustment for FY 2015 and subsequent FYs, as a prior EHR reporting period (as defined in § 495.4 of the regulations). We also proposed an amendment to § 412.64(d) to provide for the hardship and other exceptions we discuss later, as well as the application of the applicable percentage increase adjustment in FY 2015 and subsequent FYs to a state operating under a payment waiver provided by section 1814(b)(3) of the Act. We discuss these proposals and the

comments relating to them in the following sections of this preamble.

b. EHR Reporting Period for Determining Whether a Hospital Is Subject to the Market Basket Adjustment for FY 2015 and Subsequent FYs

Section 1886(b)(3)(B)(ix)(IV) of the Act makes clear that the Secretary has discretion to ''specify'' as the EHR reporting period ''any period (or periods)'' that will apply ''with respect to a fiscal year.'' Thus, as in the case of designating the EHR reporting period for purposes of the EP payment adjustment, the statute governing the applicable percentage increase adjustment for hospitals that are not meaningful users of EHR technology neither requires that such reporting period fall within the year of the payment adjustment, nor precludes the reporting period from falling within the year of the payment adjustment.

As in the case of EPs, we sought to avoid creating a situation in which it might be necessary to make large payment adjustments, either to lower or to increase payments to a hospital, after a determination is made about whether the applicable percentage increase adjustment should apply. We stated in the proposed rule that we believe that this consideration remains compelling in the case of hospitals, despite the fact that the IPPS for acute care hospitals provides, unlike the case of EPs, a mechanism to make appropriate changes to hospital payments for a payment year through the cost reporting process. Despite the availability of the cost reporting process as a mechanism for correcting over- and underpayments made during a payment year, we seek to avoid wherever possible circumstances under which it may be necessary to make large adjustments to the rate-based payments that hospitals receive under the IPPS. Since the EHR payment adjustment in FYs 2015 and subsequent years is an adjustment to the applicable percentage increase used in determining prospective payments, we believe that it is far preferable to determine whether the adjustment applies on the basis of an EHR reporting period before the payment period, rather than to make the adjustment (where necessary) in a settlement process after the payment period on the basis of a determination concerning whether the hospital was a meaningful user during the payment period.

Therefore, we proposed, for purposes of determining whether the relevant applicable percentage increase adjustment applies to hospitals who are not meaningful users of EHR technology in FY 2015 and subsequent years, that we would establish EHR reporting periods that begin and end prior to the year of the payment adjustment. Furthermore, we proposed that the EHR reporting periods for purposes of such determinations would be far enough in advance of the payment year that we have sufficient time to implement the system edits necessary to apply any required applicable percentage increase adjustment correctly, and that hospitals will know in advance of the payment year whether or not they are subject to the applicable percentage increase adjustment. Specifically, we proposed the following rules establishing the appropriate reporting periods for purposes of determining whether hospitals are subject to the applicable percentage increase adjustment in FY 2015 and subsequent years (parallel to the rules that we proposed previously for determining whether EPs are subject to the payment adjustments in CY 2015 and subsequent years):

- Except as provided in second bulleted paragraph for eligible hospitals that become meaningful users for the first time in 2014, we proposed that the EHR reporting period for the FY 2015 applicable percentage increase adjustment will be the same EHR reporting period that applies in order to receive the incentive for FY 2013. For hospitals this will generally be the full fiscal year of 2013 (unless FY 2013 is the first year of demonstrating meaningful use, in which case a 90-day EHR reporting period will apply). Under our proposed policy, a hospital that receives an incentive for FY 2013 would be exempt from the payment adjustment in FY 2015. A hospital that received an incentive for FYs 2011 or 2012 (or both), but that failed to demonstrate meaningful use for FY 2013 will be subject to a payment adjustment in FY 2015. (As all of these years will be for Stage 1 of meaningful use, we do not believe that it is necessary to create a special process to accommodate providers that miss the 2013 year for meaningful use). For each year subsequent to FY 2015, the EHR reporting period payment adjustment will continue to be the FY 2 years before the payment adjustment period, subject again to the special provision for new meaningful users of CEHRT.
- We proposed an exception for those hospitals that have never successfully attested to meaningful use prior to FY 2014. For these hospitals, as it is their first year of demonstrating meaningful use, we proposed to allow a continuous 90-day reporting period that begins in 2014 and that ends at least 3 months prior to the end of FY 2014. In addition, the hospital would have to actually successfully register for and attest to meaningful use no later than the date that occurs 3 months before the end of the year. For hospitals, this means specifically that the latest day the hospital must successfully register for the incentive program and attest to meaningful use, and thereby avoid application of the adjustment in FY 2015, is July 1, 2014. Thus, the hospital's EHR reporting period must begin no later than April 2, 2014 (allowing the hospital a 90-day EHR reporting period, followed by 1 extra day to successfully submit the attestation and any other information necessary to earn an incentive payment). In the proposed rule we used the date April 3, 2014 which would only allow an 89-day period through June 30, 2014. The correct date is April 2, 2014 to allow September 30, 2014 to be the last day of the 90-day EHR reporting period with the extra day (Oct 1, 2014) to attest. This policy would continue to apply in subsequent years. If a hospital is demonstrating meaningful use for the first time for the fiscal year immediately before the applicable percentage increase adjustment year, then the reporting period will be a continuous 90-day period that begins in such prior fiscal year and ends at least 3 months before the end of such year. In addition, all attestation, registration, and any other details necessary to determine whether the hospital is subject to a applicable percentage increase adjustment for the upcoming year will need to be completed by July 1. (As we discuss later, exception requests will be due by the April 1 before the beginning of the payment adjustment fiscal year.)

In conjunction with adopting these rules for establishing the EHR Reporting Period for determining whether a hospital is subject to the applicable percentage increase adjustment for FY 2015 and subsequent FYs, we proposed to revise § 412.64(d)(3) of our regulations to insert the phrase ''for the applicable EHR reporting period,'' so that it is clear that the EHR reporting period will not fall within the year of the market basket adjustment.

We stated our belief that these proposed EHR reporting periods provide adequate time both for the systems changes that will be required for CMS to apply any applicable percentage increase adjustments in FY 2015 and subsequent years, and for hospitals to be informed in advance of the payment year whether any adjustment(s) will apply. They also provide appropriate flexibility by allowing more recent adopters of EHR technology a

reasonable opportunity to establish their meaningful use of the technology and to avoid application of the payment adjustments.

Comment: As with the comments on the EHR reporting period for EPs, many commenters made the same assertion that an EHR reporting period aligned with the payment adjustment year would be more consistent with the Congressional intent and the language of the statute. Some commenters contended that the statutory language requires the reporting period and payment adjustment year to coincide.

Response: We believe our response to this comment in the context of the EP payment adjustments applies equally to his eligible hospital comment. The language in section 1886(b)(3)(B)(ix)(I) of the Act is substantially similar to the language in section 1848(a)(7) of the Act. As in the case of EPs, Congress provided the Secretary with flexibility to determine the EHR reporting period applicable to the payment adjustment year. Section 1886(b)(3)(B)(ix)(IV) of the Act specifically provides that ''term 'EHR reporting period' means, with respect to a fiscal year, any period (or periods) specified by the Secretary.'' In addition, because the payment adjustment will be used to reduce the applicable percent increase that is used in the prospective ratesetting for hospitals, it is reasonable to conclude that this Secretarial flexibility was granted precisely because Congress understood that the Department needed to have final determinations on meaningful use prior to the fiscal year that is the payment adjustment year. As we have previously noted, other payment adjustment programs, such as the e-prescribing program, and the physician quality reporting system, also use a prior reporting period. Thus, it is consistent for us to adopt a prior reporting period for the EHR program as well.

Comment: Commenters made the same comments as they did for EPs (relating to insufficient vendor capacity; the practical deadline having passed for adopting and implementing CEHRT, especially for popular vendors; and the issues surrounding upgrading current clients to 2014 CEHRT). As with EPs, the options presented by commenters all involved a reconciliation process, in this case, using the cost reporting process.

Response: The issue of upgrading to 2014 CEHRT is addressed by ONC in their final rule published elsewhere in this issue of the **Federal Register**. We appreciate the concerns of vendor capacity raised by the commenters. We discuss this situation and the reasons we are not revising our timetables in our previous discussion of the parallel policy for EPs. In the hospital context, the commenters correctly point out the existence of a payment reconciliation method, the hospital cost report, that it unavailable within the payment systems for EPs. We have carefully considered whether it is feasible to adopt a later reporting period (perhaps even the payment year itself) as the basis for determining whether eligible hospitals are subject to the EHR payment adjustment, and then to employ the cost reporting process to correct over and under payments in regards to the payment adjustments, as a number of commenters recommended. As a matter of course in the rate setting system, the basic rates and applicable percentage increase updates are fixed in advance and are not matters that are taken into account in the settlement of final payment amounts under the cost report reconciliation process. As the payment adjustment directly affects this rate we believe that it would not be possible to employ a cost report settlement process, but that claims would have to be reprocessed.

It is true, as several commenters pointed out, that several components of the IPPS, including DSH and IME payments, are settled in the cost reporting process on the basis of final data (for example, bed days, resident FTEs) from the payment year. However, changes in other aspects of the payment system, such as outlier payments, cannot reconciled within the cost reporting process, but require reprocessing of claims. Application of the EHR payment adjustment changes the standardized amount upon which IPPS payments are based. Any change in the standardized amount applicable to a hospital changes the number of outlier payments the hospital would receive, and the amount of those payments. If we were to base final determination of whether the EHR payment adjustment should apply on meaningful use status during the payment year, it would be necessary to increase the standardized amount for some hospitals, that is, those that were assumed not to meet meaningful use requirements for purposes of making interim payments, but that subsequently established meaningful use during the payment year. Conversely, it would be necessary to decrease the standardized amount for those hospitals that had been assumed to meet meaningful use requirements for purposes of making interim payments, but that subsequently failed to meet those requirements during the payment year. In both cases, mass reprocessing of payments would be necessary in order to adjust outlier payments. Generally, hospitals whose standardized amounts are decreased at the time of final payment determination (due to application of a payment adjustment that was not applied to interim payments) would generally receive greater outlier payments. Conversely, hospitals whose standardized amounts are increased at the time of final payment determination (due to application of the full update that was not applied to interim payments) would generally receive lower outlier payments. (Reprocessing would also be necessary for new technology add-on payments, although the claims volume and dollar amounts involved in such reprocessing would be significantly lower.) Such reprocessing imposes significant costs on both the eligible hospital and CMS. As in the case of EPs, then, we continue to believe that the timeline we proposed is the most realistic approach to making payment adjustment determinations in an effective manner.

Therefore, we are finalizing the proposed EHR reporting period for determining whether an eligible hospital is subject to the payment adjustment for CY 2015 and subsequent calendar years as proposed.

c. Exception to the Application of the Market Basket Adjustment to Hospitals in FY 2015 and Subsequent FYs

As mentioned previously, section 1886(b)(3)(B)(ix)(II) of the Act, as amended by section 4102(b)(1) of the HITECH Act, provides that the Secretary may, on a case-by-case basis exempt a hospital from the application of the applicable percentage increase adjustment for a fiscal year if the Secretary determines that requiring such hospital to be a meaningful EHR user will result in a significant hardship, such as in the case of a hospital in a rural area without sufficient Internet access. This section also provides that such determinations are subject to annual renewal, and that in no case may a hospital be granted such an exception for more than 5 years.

We proposed to add a new § 412.64(d)(4), specifying the circumstances under which we will exempt a hospital from the application of the applicable percentage increase adjustment for a fiscal year. To be considered for an exception, a hospital must submit an application demonstrating that it meets one more of the exception criteria.

As noted previously, the statute does not mandate the circumstances under which an exception must be granted,

but (as in the case of a similar exception provided under the statute for EPs) it does state that the exception may be granted when ''requiring such hospital to be a meaningful EHR user during such fiscal year will result in a significant hardship, such as in the case of a hospital in a rural area without sufficient Internet access.'' Therefore, we proposed to provide in new § 412.64(d)(4) that the Secretary may grant an exception to a hospital that is located in an area without sufficient Internet access. Furthermore, while the statute specifically states that such an exception may be granted to hospitals in ''a rural area without sufficient Internet access,'' it does not require that such an exception be restricted only to rural areas without such access. While we believe that a lack of sufficient Internet access will rarely be an issue in an urban or suburban area, we do not believe that it is necessary to preclude the possibility that, in very rare and exceptional cases, a nonrural area may also lack sufficient Internet access to make complying with meaningful use requirements a significant hardship for a hospital. Therefore, we proposed that the Secretary may grant such an exception to a hospital in any area without sufficient Internet access.

Because exceptions on the basis of insufficient Internet connectivity must intrinsically be considered on a case-by-case basis, we proposed to require hospitals to demonstrate insufficient Internet connectivity to qualify for the exception through an application process. The rationale for this exception is that lack of sufficient Internet connectivity renders compliance with the meaningful EHR use requirements a hardship particularly those objectives requiring Internet connectivity, summary of care documents, electronic prescribing, making health information available online, and submission of public health information. Therefore, we proposed that such an application must demonstrate insufficient Internet connectivity to comply with the meaningful use objectives listed previously and insurmountable barriers to obtaining such Internet connectivity such as high cost to build out Internet to their facility. As with EPs, the hardship would be demonstrated for period that is 2-years prior to the payment adjustment year (for example, FY 2013 for the payment adjustment in FY 2015). As with EPs, we will require applications to be submitted 6 months before the beginning of the payment adjustment year (that is, by April 1 before the FY to which the adjustment will apply) in order to provide sufficient time for a determination to be made and for the hospital to be notified about whether an exception has been granted. This timeline for submission and consideration of hardship applications also allows for sufficient time to adjust our payment systems so that payment adjustments are not applied to hospitals who have received an exception for a specific FY. (Please also see our previous discussion of the parallel exception for EPs, with respect to encouraging providers to file these applications as early as possible, and the likelihood that there will not be an opportunity to subsequently demonstrate meaningful use if hospitals file close to or at the application deadline of April 1.)

Comment: Commenters provided universal support for this proposed exception. However, some commenters raised concern about the situation of hospitals that might have Internet access in the 2-years prior, but lose it in the next year.

Response: We are finalizing this exception as proposed with one modification. We appreciate the commenters' concern about hospitals that might have sufficient Internet access in the 2 years prior to the adjustment period, but lose it in next year. We believe this is even less likely for hospitals than EPs, but as there is no downside to extending the time, we are finalizing a modification of our proposal to allow for the demonstration of insufficient Internet access for any 90-day period between the start of the year 2 years prior to the payment adjustment year through the application submission date of April 1 of the year prior to the payment adjustment year.

For the same reasons we proposed an exception for new EPs, we proposed an exception for a new hospital for a limited period of time after it has begun services. We proposed to allow new hospitals an exception for at least 1 full year cost reporting period after they accept their first patient. For example, a hospital that accepted its first patient in March of 2015, but with a cost reporting period from July 1 through June 30, would receive an exception from payment adjustment for FY 2015, as well as for FY 2016. However, the new hospital would be required to demonstrate meaningful use within the 9 months of FY 2016 (register and attest by July 1, 2016) to avoid being subject to the payment adjustment in FY 2017.

In proposing such an exception for new hospitals, however, we wanted to ensure that the exception would not be available to hospitals that have already been in operation in one form or another, perhaps under a different owner or merely in a different location, and thus have in fact had an opportunity to demonstrate meaningful use of EHR technology. Therefore, for purposes of qualifying for this exception, we proposed that the following hospitals would not be considered new hospitals under the exception:

- A hospital that builds new or replacement facilities at the same or another location even if coincidental with a change of ownership, a change in management, or a lease arrangement.
- A hospital that closes and subsequently reopens.
- A hospital that has been in operation for more than 2 years but has participated in the Medicare program for less than 2 years.
- A hospital that changes its status from a CAH to a hospital that is subject to the Medicare hospital in patient prospective payment systems.

It is important to note that we proposed to consider a hospital that changes its status from a hospital (other than a CAH) that is excluded from the Medicare hospital inpatient prospective payment system (IPPS) to a hospital that is subject to the IPPS to be a new hospital for purposes of qualifying for the proposed exception. These IPPS-exempt hospitals, such as long-term care hospitals, inpatient psychiatric facilities, inpatient rehabilitation facilities, children's hospitals, and cancer hospitals, are excluded from the definition of ''eligible hospital'' for purposes of the Medicare EHR Incentive Program and have not necessarily had an opportunity to demonstrate meaningful use. On the other hand, CAHs are eligible for incentive payments and subject to payment adjustments. Under the guidelines for assigning CCNs to Medicare providers, a CAH that changes status to an IPPS hospital will necessarily receive a new CCN. This is because several digits of the CCN encode the provider's status (for example, IPPS, CAH) under the Medicare program, However, we proposed to allow the CAH to register its meaningful use designation obtained under its previous CCN in order to avoid being subject to the hospital payment adjustment. It is worth noting that we adapted the proposed definition of ''new hospital'' for these purposes from similar rules that have been employed in the capital prospective payment system in § 412.300(b) of our regulations. We invited comment concerning the appropriateness of adapting these rules to the exception under the EHR program, and about whether modifications or other

revisions to these rules will be appropriate in the EHR context.

Comment: Several commenters recommended that the new hospitals exception for at least 1 full year cost reporting period be triggered not when the hospital accepts its first patient, but rather when it accepts its first Medicare covered patient. These commenters point out that there can be significant lapse between the time when a hospital accepts its first patient and the time when it accepts its first Medicare covered patient. Because the EHR payment adjustment applies to the Medicare payments, the commenters argued it is more appropriate to base the beginning of the new hospital exception on the admission of its first Medicare covered patient.

Response: We agree with the commenters and are revising the new hospital exception in this final rule to run for at least one full year cost reporting period after the hospital accepts its first Medicare-covered patient. This change renders our third criterion (a hospital that has been in operation for more than 2 years but has participated in the Medicare program for less than 2 years) for not considering a hospital new moot as the exception is now based on the admission of the first Medicare-covered patient, which we believe is sufficiently analogous to starting participation in the Medicare program to allow us to remove this criterion.

Comment: Some commenters argued that a hospital that undergoes a change of ownership and has a new CCN assigned due to the new owner's decision not to accept the assignment of the prior provider agreement should be allowed to register its meaningful use designation for the old CCN in the same manner a CAH that becomes an inpatient PPS hospital would.

Response: When a hospital has a new CCN assigned due to the new owner's decision not to accept the assignment of the prior provider agreement it is not considered a change of ownership. Rather the hospital is terminated from the Medicare program and then reapplies for a new CCN. We disagree with the commenters that the history of the old CCN should carry forward in this case. In cases where a new owner decides not to accept the previous provider agreement and a new CCN is assigned by CMS, the new owner is in effect, making a conscious decision to create a rupture with significant, and relevant, aspects of the hospital's history. Specifically, when a new owner acquires a Medicare participating hospital, CMS automatically assigns the provider agreement to the new owner. The new owner must then decide whether to accept or reject assignment of the existing agreement. If the new owner accepts assignment, the provider agreement remains intact and the owner retains all the benefits and liabilities of that agreement (as provided under 42 CFR 489.18 of the regulations). If the new owner rejects assignment, the owner has voluntarily terminated the previous provider agreement, the CCN of the hospital is terminated, and the owner is not responsible for Medicare liabilities (known or unknown), as well as eligibility for Medicare payment. Under these circumstances, where the new owner has made a conscious decision to terminate the previous provider agreement, we believe it is appropriate not to recognize the meaningful use designation obtained under that provider agreement and CCN. We have consistently reminded new owners of hospitals that they cannot obtain the benefits of a decision not to accept assignment of the provider agreement without accepting the burdens of the decision as well. Unlike the case of a CAH that becomes an inpatient PPS hospital, the assignment of a new CCN follows from a voluntary decision of the new owner not to retain the previous provider agreement and CCN.

We believe a similar result should apply in other cases where acquisitions and/or combinations of hospitals lead to the discontinuation of a CCN under which meaningful use had been demonstrated. For example, in some cases there is a combination of two or more certified hospitals under one agreement and one CCN. If the combined hospital has multiple locations, one location becomes the ''main location,'' and all other locations become remote and/or provider based. The hospital is considered ''one hospital'' by Medicare and must be truly integrated at all levels, including its system for maintaining medical records. Where the new owner rejects the assignment of the provider agreement for one or more of the facilities that are being combined into the integrated hospital, known and unknown Medicare liabilities of those facilities do not transfer to the new owner. Under these circumstances, for the same reasons discussed in the previous case, it is appropriate not to recognize the meaningful use designation that was obtained under the provider agreement(s) and CCN(s) that have not been retained under the integrated hospital.

Even where the new owners retain the acquired hospital's Medicare provider agreement, the acquired hospital's agreement is subsumed (although not terminated) into the single provider agreement of the combined hospital, and the acquired hospital's CCN is retired (again, not terminated). The new owners are responsible for all known and unknown Medicare liabilities of previous owners of the hospital, and there is no break in Medicare payments, as is the case where assignment of the prior provider agreement is rejected. However, as noted previously, in these cases, if the combined hospital has multiple locations, one location becomes the ''main location,'' and all other locations become remote and/or provider based. The hospital is considered ''one hospital'' by Medicare and must be truly integrated at all levels. In these cases it is most appropriate to recognize the prior meaningful use status of the surviving CCN of the main location for purposes of determining whether the payment penalty applies to the newly integrated hospital. In that way, the meaningful use determination will be based on the prior status of the major portion of the newly integrated hospital. Otherwise, the meaningful use designation of a relatively minor remote and/or provider-based hospital may become the basis for the designation of a much larger combined and integrated hospital. Therefore, we are finalizing our proposed policy, in cases of various ownership changes, acquisitions, and combinations of hospitals, to employ the meaningful use status of the surviving CCN to determine whether the payment adjustment applies.

Finally, we proposed an additional exception in this final rule for extreme circumstances that make it impossible for a hospital to demonstrate meaningful use requirements through no fault of its own during the reporting period. Such circumstances might include: A hospital closed; a natural disaster in which an EHR system is destroyed; EHR vendor going out of business; and similar circumstances. Because exceptions on extreme, uncontrollable circumstances must be evaluated on a case-by-case basis, we believe that it is appropriate to require hospitals to qualify for the exception through an application process.

Comment: Commenters stated universal support for this exception. However many commenters requested various circumstances be added to the list of example circumstances. This list is very similar, but not entirely identical to that for EPs. These examples dealt primarily with concerns related to vendors of CEHRT. Specifically, commenters were concerned about vendors of CEHRT not maintaining their

certification status, ability to meet implementation schedules, and ability to find a vendor of CEHRT willing to work with them. In addition, commenters suggested that the provider facing severe financial distress, such as bankruptcy or restructuring of debt should be included as an example.

Response: We used the same evaluation criteria we used for EPs and came to the same conclusion to add two examples to the list that was proposed: (1) A hospital whose CEHRT (complete or modular) loses its certification either through revocation or because the vendor did not upgrade their CEHRT to the latest requirements; and (2) a hospital suffering severe financial distress resulting in a bankruptcy or restructuring of debt.

We will require applications to be submitted no later than April 1 of the year before the payment adjustment year in order to provide sufficient time for a determination to be made and for the hospital to be notified about whether an exception has been granted prior to the payment adjustment year. This timeline for submission and consideration of hardship applications also allows for sufficient time to adjust our payment systems so that payment adjustments are not applied to hospitals who have received an exception for a specific payment adjustment year. As discussed earlier, in relation to EPs, in order for a hospital to apply for this exception, extreme circumstances would need to exist for the period in which the hospital would otherwise demonstrate meaningful use (that is, the EHR reporting period). We have modified our regulation to be clear that the circumstances must exist during the EHR reporting period (that is, 2 years prior to the payment adjustment year or, for hospitals that have never attested to meaningful use before, in the year immediately prior to the payment adjustment year).

Comment: Commenters suggested the following additional exceptions:

- Hospitals who make a good faith effort to purchase CEHRT, but could not find a vendor willing to work with them.
- Hospitals that determine they must switch EHR vendors to achieve meaningful use.
- Hospitals unable to meet meaningful use requirements because of failures on the part of EHR vendors.

Response: For the first suggested exception, we do not believe that hospitals that attempt to purchase CEHRT but cannot find a vendor would warrant an exception. The mere failure of an attempt to purchase CEHRT does not demonstrate that the hospital faces hardship significant enough to prevent it from becoming a meaningful EHR user. We also believe it would be problematic to define the parameters for determining that no vendor was willing to work with a hospital. Moreover, we already have provided for an exception for hospitals that face extreme circumstances beyond their control. Under this exception, eligible hospitals could attempt to show that their situation is extreme and out of the ordinary and that failure to obtain CEHRT was truly beyond their control. We are skeptical that such showings could be made when all the hospital has done is to make an attempt to purchase CEHRT. However, this exception provides hospitals with the opportunity to demonstrate that their failure of attempts to obtain CEHRT was due to circumstances beyond their control.

The next two exceptions may fall under the exception for extreme circumstances beyond the hospital's control, but the hospital would need to demonstrate that it meets this extreme exception. Any determination would be highly dependent on individual circumstances and evaluation of whether it is truly necessary to switch vendors, whether the switching vendors would prevent the hospital from reaching meaningful use, and whether the ''failures'' of the EHR vendor are both outside the norm of EHR implementation and beyond the control of the hospital.

Table 16 summarizes the timeline for hospitals to avoid the applicable payment adjustment by demonstrating meaningful use or qualifying for an exception from the application of the adjustment.

TABLE 16—TIMELINE FOR ELIGIBLE HOSPITALS TO AVOID PAYMENT ADJUSTMENT

Hospital payment adjustment year (fiscal year)	Demonstrate MU during EHR reporting period 2 years prior to year of payment adjustment	Or	For an eligible hospital demonstrating meaningful use for the first time in the year prior to the payment adjustment year use a continuous 90-day reporting period beginning no later than:	Or	Apply for an exception no later than:
2015	FY 2013 (with submission no later than November 30, 2013).		April 2, 2014 (with submission no later than July 1, 2014).		April 1, 2014.
2016	FY 2014 (with submission no later than November 30, 2014).		April 2, 2015 (with submission no later than July 1, 2015).		April 1, 2015.
2017	FY 2015 (with submission no later than November 30, 2015).		April 2, 2016 (with submission no later than July 1, 2016).		April 1, 2016.
2018	FY 2016 (with submission no later than November 30, 2016).		April 2, 2017 (with submission no later than July 1, 2017).		April 1, 2017.
2019	FY 2017 (with submission no later than November 30, 2017).		April 2, 2018 (with submission no later than July 1, 2014).		April 1, 2018.

Notes: (FY refers to the Federal fiscal year: October 1 to September 30. For example, FY 2015 is October 1, 2014 through September 30, 2015.)

The timelines for FY 2020 and subsequent fiscal years follow the same pattern.

TABLE 17—PERIOD HARDSHIP MUST BE SHOWN WITH APPLICATION DATE

Exception	Period of consideration for exception	Submit application for FY 2015 no later than
Insufficient Internet access	Demonstrate insufficient Internet access for any 90 days from the start of the FY 2 years prior to the payment adjustment year to April 1 of the year prior to the payment adjustment year (For FY 2015–October 1, 2012–April 1, 2014).	April 1, 2014.

TABLE 17—PERIOD HARDSHIP MUST BE SHOWN WITH APPLICATION DATE—Continued

Exception	Period of consideration for exception	Submit application for FY 2015 no later than
New hospital	New hospital granted an exception for one full cost reporting period after they admit their first Medicare patient.	Guidance to be issued following publication of the final rule.
Extreme Circumstances outside of the hospital's Control.	For a hospital that has previously demonstrated meaningful use, the hospital must demonstrate extreme circumstances that affect the FY 2 years prior to the payment adjustment year. (For FY 2015–FY 2013). For a hospital that has never demonstrated meaningful use, the hospital must demonstrate extreme circumstances that affect the FY prior to the payment adjustment year. (For FY 2015–FY 2014).	April 1, 2014.

d. Application of Market Basket Adjustment in FY 2015 and Subsequent FYs to a State Operating Under a Payment Waiver Provided by Section 1814(b)(3) of the Act

As discussed previously, the statute requires payment adjustments for eligible hospitals in states where hospitals are paid under section 1814(b)(3) of the Act. The statute also requires such adjustments to be designed to result in an aggregate reduction in payments equivalent to the aggregate reduction that would have occurred if payments had been reduced under section 1886(b)(3)(B)(ix)(I) of the Act. We proposed that an aggregate reduction in payments would mean the same dollar amount in reduced Medicare payments that that would have occurred if payments had been reduced to each eligible hospital in the state in a manner comparable to the reduction under § 412.64(d)(3).

To implement this provision, we proposed a new § 412.64(d)(5) that includes this statutory requirement and that required states operating under a payment waiver under section 1814(b)(3) of the Act to provide to the Secretary, no later than January 1, 2013, a report on the method that it proposes to employ in order to make the requisite payment adjustment.

We did not receive any comments on this proposal; and therefore, we are finalizing these provisions as proposed.

4. Reduction of Reasonable Cost Reimbursement in FY 2015 and Subsequent Years for CAHs That Are Not Meaningful EHR Users

Section 4102(b)(2) of the HITECH Act amends section 1814(l) of the Act to include an adjustment to a CAH's Medicare reimbursement for inpatient services if the CAH has not met the meaningful EHR user definition for an EHR reporting period. The adjustment will be made for a cost reporting period that begins in FY 2015, FY 2016, FY 2017, and each subsequent FY thereafter. Specifically, sections 1814(l)(4)(A) and (B) of the Act now provide that, if a CAH has not demonstrated meaningful use of CEHRT for an applicable reporting period, then for a cost reporting period that begins in FY 2015, its reimbursement will be reduced from 101 percent of its reasonable costs to 100.66 percent. For a cost reporting period beginning in FY 2016, its reimbursement will be reduced to 100.33 percent of its reasonable costs. For a cost reporting period beginning in FY 2017 and each subsequent FY, its reimbursement will be reduced to 100 percent of reasonable costs.

However, as provided for eligible hospitals, a CAH may, on a case-by-case basis, be granted an exception from this adjustment if CMS or its Medicare contractor determines, on an annual basis, that a significant hardship exists, such as in the case of a CAH in a rural area without sufficient Internet access. However, in no case may a CAH be granted an exception under this provision for more than 5 years.

a. Applicable Reduction of Reasonable Cost Payment Reduction in FY 2015 and Subsequent Years for CAHs That Are Not Meaningful EHR Users

In the Stage 1 final rule (75 FR 44564), we finalized the regulations regarding the CAH adjustment at § 495.106(e) and § 413.70(a)(6).

b. EHR Reporting Period for Determining Whether a CAH Is Subject to the Applicable Reduction of Reasonable Cost Payment in FY 2015 and Subsequent Years

For CAHs we proposed an EHR reporting period that is aligned with the payment adjustment year. For example, if a CAH is not a meaningful EHR user in FY 2015, then its Medicare reimbursement will be reduced to 100.66 percent for its cost reporting period that begins in FY 2015. This differs from what was proposed for eligible hospitals: an EHR reporting period prior to the payment adjustment year. We stated in the proposed rule that we believed the Medicare cost report process would allow us to make the CAH reduction for the cost reporting period that begins in the payment adjustment year, with minimal disruptions to the CAH's cash flow and minimal administrative burden on the Medicare contractors as discussed later.

CAHs are required to file an annual Medicare cost report that is typically for a consecutive 12-month period. The cost report reflects the inpatient statistical and financial data that forms the basis of the CAH's Medicare reimbursement. Interim Medicare payments may be made to the CAH during the cost reporting period based on the previous year's data. Cost reports are filed with the CAH's Medicare contractor after the close of the cost reporting period and the data on the cost report are subject to reconciliation and a settlement process prior to a final Medicare payment being made.

We proposed to amend the definition of the EHR reporting period that will apply for purposes of payment adjustments under § 495.4. For CAHs this will be the full Federal fiscal year that is the same as the payment adjustment year (unless a CAH is in its first year of demonstrating meaningful use, in which case a continuous 90-day reporting period within the payment adjustment year will apply). The adjustment would then apply based upon the cost reporting period that begins in the payment adjustment year (that is, FY 2015 and thereafter). Thus, if a CAH is not a meaningful user for FY 2015, and thereafter, then the adjustment would be applied to the CAH's reasonable costs incurred in a cost reporting period that begins in that affected FY as described in § 413.70(a)(6)(i).

We proposed to require CAHs to submit their attestations on meaningful use by November 30th of the following FY. For example, if a CAH is attesting that it was a meaningful EHR user for FY 2015, the attestation must be submitted no later than November 30, 2015. Such an attestation (or lack

thereof) will then affect interim payments to the CAH made after December 1st of the applicable FY. If the cost reporting period ends prior to December 1st of the applicable FY then any applicable payment adjustment will be made through the cost report settlement process.

All comments received on this provision were in support. We thank commenters for their support and finalize as proposed for the reasons outlined in the proposed rule.

c. Exception to the Application of Reasonable Cost Payment Reductions to CAHs in FY 2015 and Subsequent FYs

As discussed previously, CAHs may receive exceptions from the payment adjustments for significant hardship. While our current regulations, in § 413.70(a)(6)(ii) and (iii) contain this hardship provision we proposed revising these regulations to align them with the exceptions being proposed for EPs and subsection (d) hospitals. As with EPs and subsection (d) hospitals we proposed that CAHs could apply for an exception on the basis of lack of sufficient Internet connectivity. Applications will be required to demonstrate insufficient Internet connectivity to comply with the meaningful use objectives requiring internet connectivity (that is, summary of care documents, electronic prescribing, making health information available online, and submission of public health information) and insurmountable barriers to obtaining such internet connectivity. As CAHs will have an EHR reporting period aligned with the payment adjustment year, we proposed that the insufficient Internet connectivity will need to be demonstrated for each applicable payment adjustment year. For example, as proposed, to avoid a payment adjustment for cost reporting periods that begin during FY 2015, the hardship would need to be demonstrated for FY 2015. For each year subsequent to FY 2015, the basis for an exception would continue to be for the hardship in the FY in which the affected cost reporting period begins. As stated in § 413.70(a)(6)(iii), any exception granted may not exceed 5 years. After 5 years, the exception will expire and the appropriate adjustment will apply if the CAH has not become a meaningful EHR user for the appropriate EHR reporting period.

Comment: Commenters have suggested that it is inappropriate to base the Internet connectivity exception on the same year that a CAH is expected to demonstrate meaningful use. They assert that it is impractical for a CAH to achieve sufficient internet connectivity and meet meaningful use all in 1 year. A few commenters recommended a 2-year prospective exception for Internet connectivity as used for the EPs and inpatient PPS hospitals.

Response: We agree with commenters that established sufficient Internet connectivity and meaningful use in the same year is not feasible. However, since the payment adjustment year is aligned with the CAH's EHR period, we believe that using a 2-year lookback period similar to EPs and eligible hospitals is inappropriate for CAHs. Therefore, we will base the insufficient internet access exception on the cost reporting period that begins prior to or during the payment adjustment year. For FY 2015, the CAH must submit the application by November 30, 2015, but eligibility for this exception would be based on the information for any 90-day period within the cost reporting period that begins prior to or during the payment adjustment year.

After consideration of the comments, we are revising this exception to base it on any 90-day period within the cost reporting period that begins prior to or during the payment adjustment year.

As with new EPs and new eligible hospitals, we proposed an exception for a new CAH for a limited period of time after it has begun services. We proposed to allow an exception for 1 year after they accept their first patient. For example, a CAH that is established in FY 2015 would be exempt from the penalty through its cost reporting period ending at least 1 year after the CAH accepts its first patient. If the CAH is established March 15, 2015 and its first cost reporting period is less than 12 months (for example, from March 15 through June 30, 2015), the exception would exist for both the short cost reporting period and the following 12-month cost reporting period lasting from July 1, 2015 through June 30, 2016. However, the new CAH would be required to submit its attestation that it was a meaningful EHR user for FY 2016 no later than November 30, 2016, in order to avoid being subject to the payment adjustment for the cost reporting period that begins in FY 2016 (in the previous example from July 1, 2016 through June 30, 2017).

We stated in the proposed rule that in proposing such an exception for newly established CAHs, it is important to ensure that the exception is not available to CAHs that have already been in operation in one form or another, perhaps under a different ownership or merely in a different location, and thus have in fact had an opportunity to demonstrate meaningful use of EHR technology. Therefore, we proposed that for the purposes of qualifying for this exception, a new CAH means a CAH that has operated (under previous or present ownership) for less than 1 year.

We stated in the proposed rule that in some cases an eligible hospital may convert to a CAH. An eligible hospital is a subsection (d) hospital that is a meaningful user and is paid under the inpatient hospital prospective payment systems as described in subpart A of Part 412 of the regulations. In these cases, eligible hospitals were able to qualify for purposes of the EHR hospital incentive payments by establishing meaningful use, and (as discussed previously) are also subject to a payment adjustment provision in FY 2015 and subsequent years if they fail to demonstrate meaningful use of EHR technology during an applicable reporting period. Therefore, we proposed not to treat a CAH that has converted from an eligible hospital as a newly established CAH for the purposes of this exception.

On the other hand, we stated in the proposed rule that other types of hospitals such as long-term care hospitals, psychiatric hospitals, and inpatient rehabilitation facilities are not subsection (d) hospitals. These other types of hospitals do not meet the definition of an ''eligible hospital'' for purposes of the Medicare EHR hospital incentive payments and the application of the proposed hospital market basket adjustment in FY 2015 and subsequent years under section 1886(n)(6)(B) of the Act. In some instances, a CAH may be converted from one of these types of hospitals. In that case, the CAH would not have had an opportunity to demonstrate meaningful use, and it is therefore appropriate to treat them as newly established CAHs if they convert from one of these other types of hospitals to a CAH for purposes of determining whether they should qualify for an exception from the application of the adjustment in FY 2015 and subsequent years. Thus, we proposed to consider a CAH that converts from one of these other types of hospitals to be a newly established CAH for the purposes of qualifying for this proposed exception from the application of the adjustment in FY 2015 and subsequent years.

In summary, we proposed for purposes of qualifying for the exception to revise § 413.70(a)(6)(ii) to state that a newly established CAH means a CAH that has operated (under previous or present ownership) for less than 1 year. We also proposed to revise § 413.70(a)(6)(ii) to state that the

following CAHs are not newly established CAHs for purposes of this exception:

- A CAH that builds new or replacement facilities at the same or another location even if coincidental with a change of ownership, a change in management, or a lease arrangement.
- A CAH that closes and subsequently reopens.
- A CAH that has been in operation for more than 1 year but has participated in the Medicare program for less than 1 year.
- A CAH that has been converted from an eligible subsection (d) hospital.

Comment: Identical to the concerns raised for subsection (d) hospitals, several comments stated that the new CAH exception for at least 1 full year cost reporting period be triggered not by when the hospital accepts its first patient, but rather when it accepts its first Medicare-covered patient.

Response: We agree with the commenters and revise the exception for new CAHs to be for at least 1 full year cost reporting period after they accept their first Medicare-covered patient. This change renders our third criteria (a CAH that has been in operation for more than 2 years but has participated in the Medicare program for less than 2 years) for not considering a CAH new moot as the exception is now based on the admission of the first Medicare-covered patient, which we believe is sufficiently analogous to starting participation in the Medicare program to allow us to remove this criteria.

After consideration of comments, we are revising this exception to base it on the point when the CAH accepts their first Medicare patient.

Finally, we proposed an additional exception in this final rule for extreme circumstances that make it impossible for a CAH to demonstrate meaningful use requirements through no fault of its own during the reporting period. Such circumstances might include: A CAH is closed; a natural disaster in which an EHR system is destroyed; EHR vendor going out of business; and similar circumstances. Because exceptions on extreme, uncontrollable circumstances must be evaluated on a case-by-case basis, we believe that it is appropriate to require CAHs to qualify for the exception through an application process.

Comment: Commenters supported this exception in principle. However, many commenters requested various circumstances be added to the list of example circumstances. This list is nearly entirely identical to that for EPs and subsection (d) hospitals as described earlier.

Response: We used the same evaluation criteria we used for EPs and came to the same conclusion to add two examples. First, a CAH whose CEHRT (complete or modular) loses its certification either through revocation or because the vendor did not upgrade their CEHRT to the latest requirements; and second, a CAH suffering severe financial distress resulting in a bankruptcy or restructuring of debt

As described previously, we are finalizing the policy to align a CAH's payment adjustment year with the applicable EHR reporting period. A CAH must submit their meaningful use attestation for a specific EHR reporting period no later than 60 days after the close of the EHR reporting period (no later than November 30th of the year) otherwise the payment penalty could be applied to the CAH's cost reporting period that begins in that payment adjustment year. We proposed to require a CAH to submit an application for an exception, as described previously, to its Medicare contractor by the same November 30th date that the meaningful use attestation is due. Therefore, we proposed that a CAH will be subject to the payment adjustment if it has not submitted its meaningful use attestation (or its attestation has been denied) and has not submitted an application for an exception by November 30th of the subsequent EHR reporting period. If a CAH's request for an exception is not granted by the Medicare contractor then we proposed that the payment adjustment will be applied. We stated in the proposed rule that if a CAH anticipates submitting an exception application we recommend that the CAH communicate with its Medicare contractor to determine the necessary supporting documentation to submit by the November 30th due date.

After consideration of public comments, we are finalizing these application deadlines exception as proposed.

Table 18, summarizes the timeline for CAHs to avoid the applicable payment adjustment by demonstrating meaningful use or qualifying for an exception from the application of the adjustment.

Comment: Commenters provided the same suggestions for additional exceptions for CAHs that they did for eligible hospitals.

Response: As we stated in our response to similar comments submitted for eligible hospitals these additional exceptions could have been suggested as examples for the exception for extreme circumstances. We encourage hospitals in these situations to utilize the extreme circumstances exception. We believe these exceptions are too subjective to be finalized as new exceptions as suggested by commenters.

TABLE 18—TIMELINE FOR CAHS TO AVOID PAYMENT ADJUSTMENT

CAH with cost reporting period beginning during payment adjustment year	Demonstrate MU for EHR reporting period	Or	For a CAH demonstrating MU for the first time, a continuous 90-day reporting period ending no later than	Or	Apply for an exception no later than
FY 2015	FY 2015 (with submission no later than November 30, 2015).		September 30, 2015 (with submission no later than November 30, 2015).		November 30, 2015.
FY 2016	FY 2016 (with submission no later than November 30, 2016).		September 30, 2016 (with submission no later than November 30, 2016).		November 30, 2016.
FY 2017	FY 2017 (with submission no later than November 30, 2017).		September 30, 2017 (with submission no later than November 30, 2017).		November 30, 2017.
FY 2018	FY 2018 (with submission no later than November 30, 2018).		September 30, 2018 (with submission no later than November 30, 2018).		November 30, 2018.
FY 2019	FY 2019 (with submission no later than November 30, 2019).		September 30, 2019 (with submission no later than November 30, 2019).		November 30, 2019.

Notes: (FY refers to the Federal fiscal year October 1 to September 30. For example, FY 2015 is October 1, 2014 to September 30, 2015.) The timelines for FY 2020 and subsequent fiscal years follow the same pattern.

TABLE 19—PERIOD HARDSHIP MUST BE SHOWN WITH APPLICATION DATE FOR CAHS

Exception	Period of consideration for exception	Submit application for FY 2015 no later than
Insufficient Internet access—CAHs	Demonstrate insufficient internet access for any 90 day period within the cost reporting period that begins prior to or during the payment adjustment year.	Nov 30, 2015.
New CAHI	New CAH granted an exception for one full cost reporting period after they admit their first Medicare patient.	Guidance to be issued following publication of the final rule.
Extreme Circumstances outside of the CAH's Control.	Oct 1 through Sept 30 of the payment adjustment year	Nov 30, 2015.

5. Administrative Review Process of Certain Electronic Health Record Incentive Program Determinations

In the Stage 2 proposed rule we proposed an administrative appeals process would apply to both Stage 1 and Stage 2 of meaningful use. We also posted guidance on the CMS Web site, *http://www.cms.gov/qualitymeasures/05_ehrincentiveprogramappeals.asp*, in the interim between the publication of this proposed rule and the publication of the final rule. We sought public comments both on the guidance and the proposed rule.

We proposed to limit permissible appeals to the following three types of appeals:

- Eligibility Appeals
- Meaningful Use Appeals
- Incentive Payment Appeals

We also proposed certain filing and other deadlines for such administrative appeals. We refer readers to our proposed rule at (77 FR 13779 through 13780) for a full explanation of these proposals.

We received several comments on our appeals proposals, which are discussed in this section of the preamble. However, after review of the public comments and the appeals filed as of the writing of this final rule, we believe the administrative review process is primarily procedural and does not need to be specified in regulation. The appeals process we proposed essentially constituted an agency reconsideration of certain types of determinations regarding eligibility for the program, meaningful use, or incentive payment amounts. We believe such an informal reconsideration process may be included in procedural guidance, rather than in our regulations. Therefore, our administrative appeals process will be included on our Web site at *www.cms.gov/EHRIncentivePrograms*.

We recognize that there is a procedural appeals process currently in effect, and in all cases, we will require that requests for appeals, all filings, and all supporting documentation and data be submitted through a mechanism and in a manner specified by us. We expect all providers to exhaust this administrative review process prior to seeking review in Federal Court.

As we stated in the proposed rule, we also note that the HITECH Act prohibits both administrative and judicial review of the standards and method used to determine eligibility and payment (including those governing meaningful use) (see 42 CFR 413.70(a)(7), 495.106(f), 495.110, 495.212). Our limited appeal process would not provide administrative review of these areas; but rather would involve cases of individual applicability; that is, where a provider is challenging not the standards and methods themselves, but whether the provider met the regulatory standards and methods promulgated by CMS in its rules.

While we are not finalizing regulations on appeals, we respond to comments we received on our proposals.

Comment: Several commenters requested CMS make more explicit information available to providers on the documentation that should be available in the event of an audit.

Response: In the event of an audit, at a minimum, providers should have available electronic or paper documentation that supports providers' completion of the Attestation Module responses, including the specific information that supports each measure. In addition, providers should have documentation to support the submission of CQMs, including the specific information that supports each measure. Providers should also maintain documentation to support their incentive payment calculations, for example data to support amounts included on their cost report, which are used in the calculation. As indicated in the Stage 1 final rule, providers should keep documentation for at least 6 years following the date of attestation.

Comment: A commenter noted that states may need to change their audit procedures or State Medicaid Health Information Technology (HIT) Plans (SMHPs) regarding audit and appeals by CMS for demonstrating meaningful use.

Response: We proposed that states would have an option to have CMS audit and conduct appeals of eligible hospitals' meaningful use. We finalize that proposal in our Medicaid regulations at § 495.332. We agree that SMHPs regarding audit and appeals may need revising. We are working closely with states to align principles regarding both audit and appeals process for both the Medicare and Medicaid EHR Incentive Programs. We intend to give states both technical support and program information to ensure consistency in the application of those audit and appeals principles.

Comment: A number of commenters asked for the addition of appeal categories beyond those we proposed. Several commenters requested CMS implement an appeals process for penalties and hardship exemptions. One commenter requested more comprehensive language to better define the requirements and circumstances under which appeals may be heard and acted upon. Another commenter requested CMS institute an appeals process relating to MACs' decisions regarding reasonable costs and determining incentive payments for CAHs.

Response: We appreciate the number of commenters that requested additional appeal categories. Since the writing and publication of the Stage 1 final rule, we have had the opportunity to review a number of appeals, and we note that many of these appeals do not necessarily fit easily into the categories we proposed. Based on the comments we received and the information we have regarding appeals that have already been filed, we are concerned that finalizing the categories we proposed for appeals could negatively impact providers and potentially add unnecessary burden and complexity. We are also concerned that specifying these categories could limit the flexibility we might otherwise have in addressing new or unanticipated appeal categories in the future, or in adding greater detail regarding the scope and requirements of particular types of

appeals. For example, a number of the appeals we have received are related neither to eligibility, meaningful use, or incentive payments directly, but instead address registration or attestation system changes that we are currently in the process of implementing for providers' benefit. Because of these concerns, we decline to finalize the categories of appeals as proposed and intend to issue guidance regarding types or categories of appeals and accompanying requirements on our Web site at *www.cms.gov/EHRIncentivePrograms*.

As stated earlier, the HITECH Act prohibits both administrative and judicial review of the standards and methods used to determine eligibility and payment (including those governing meaningful use) (see 42 CFR 413.70(a)(7), 495.106(f), 495.110, 495.212). Any procedures would not allow administrative appeals of these issues. As for reasonable costs reported by CAHs, we already stated in the Stage 1 final rule that a CAH ''may appeal the statistical and financial amounts from the Medicare cost report used to determine the CAH incentive payment,'' but that the CAH ''would utilize the current provider appeal process pursuant to section 1878 of the Act.'' (75 FR 44464)

Finally, we note that there will not be appeal reconsiderations of hardship exception or payment adjustment determinations. As specified in section II.D.2.c. of this final rule, the granting of a hardship exception will be through an application process, and we expect providers to make a full declaration of all relevant information at the time of filing of that application. We are concerned that there would not be adequate time to process hardship exception applications, render determinations, and also process appeals of those redeterminations. Therefore, we decline to allow appeal reconsiderations of hardship exception determinations. We note that the HITECH Act prohibits both administrative and judicial review of the standards and methods used to determine payment adjustments, including hardship exceptions to those payment adjustments.

Comment: A number of commenters noted concerns regarding the timelines proposed for filing appeals and forwarding documentation.

Response: We appreciate the many comments regarding the proposed timelines for appeals. However, we are not finalizing our appeal regulations in this final rule. We intend to issue guidance regarding timelines for types or categories of appeals on our Web site at *www.cms.gov/EHRIncentivePrograms*.

E. Medicare Advantage Organization Incentive Payments

1. Definitions (§ 495.200)

We proposed to add definitions of the terms ''Adverse eligibility determination,'' ''Adverse payment determination'' and ''MA payment adjustment year.'' We also proposed to add a definition for the term ''Potentially qualifying MA–EPs and potentially qualifying MA-affiliated eligible hospitals,'' to cross reference the existing definition at § 495.202(a)(4).

We proposed to clarify the application of ''hospital-based EP'' as that term is used in paragraph 5 of the definition of ''qualifying MA–EP'' in § 495.200, to make clear that the calculation is not based on FFS-covered professional services, but rather on MA plan enrollees. Otherwise, qualifying MA–EPs who provide at least 80 percent of their covered professional services to MA plan enrollees of a qualifying MA organization might be considered ''hospital based'' solely on the basis of 90 percent of their FFS-covered professional services being provided in a hospital setting. We provided an example of a qualifying MA–EP that might bill FFS 10 times over a year for emergency room services provided to various Medicare patients. Although the vast majority of the MA–EP's covered services were reimbursed under his or her arrangement with a qualifying MA organization, 100 percent (or 10) of the MA–EP's FFS-covered services would have been for hospital-based services, which would prohibit the MA organization from receiving reimbursement under the MA EHR incentive program for the MA–EP. We do not believe that we should exclude MA–EPs from the MA EHR Incentive Program due to only a few FFS claims. Therefore, we are clarifying the definition of ''qualifying MA–EP'' to state that for purposes of the MA EHR Incentive Program, a hospital-based MA–EP provides 90 percent or more of his or her covered professional services in a hospital setting to MA plan enrollees of the qualifying MA organization.

We did not receive any comments on these provisions and we are finalizing them as proposed with the exception of the definitions of the terms ''Adverse eligibility determination,'' and ''Adverse payment determination.'' As we explain later in this preamble discussion, we do not believe formal regulations for an informal reconsideration procedural rule are necessary and therefore, we are not finalizing these two definitions in our regulations.

2. Identification of Qualifying MA Organizations, MA–EPs, and MA-Affiliated Eligible Hospitals (§ 495.202)

We proposed a technical change to § 495.202(b)(1) to require that the qualifying MA organization identify those MA–EPs and MA-affiliated eligible hospitals that the qualifying MA organization believes would be meaningful users of CEHRT during the reporting period, when a qualifying MA organization intends to claim an incentive payment for a given qualifying MA–EP or MA-affiliated eligible hospital.

We also proposed an amendment to § 495.202(b)(2) to reflect current policy that qualifying MA organizations must report the CMS Certification Number (CCN) for qualifying MA-affiliated eligible hospitals. We explained that as the program matures, it is necessary to report this detail to effectively administer the program. We are adopting this change in this final rule (§ 495.202(b)(2)).

We proposed a new § 495.202(b)(3) to establish a reporting requirement to identify qualifying MA–EPs who have furnished more than 50 percent of their covered Medicare professional services to MA enrollees of the qualifying MA organization in a designated geographic Health Professional Shortage Area (HPSA) during the reporting period. We also proposed to redesignate the current § 495.202(b)(3) as (b)(4), and revised the introductory language in (b)(2) to reflect this redesignation.

We also proposed to require MA organizations to identify qualifying MA–EPs or MA-affiliated eligible hospitals within 2 months of the close of the payment year (rather than within 60 days) (previously § 495.202(b)(3), now newly redesignated § 495.202(b)(4)). We explained that this change would be consistent with the Medicare FFS EHR Incentive Program, but in nonleap years this would reduce the time for reporting revenue amounts to CMS for qualifying MA–EPs from 60 days to 59 days. We proposed conforming amendments to § 495.204(b)(2) and § 495.210(b) and (c).

We also explained that because the redesignated § 495.202(b)(4) relates to both the payment phase and the payment adjustment phase of the program, we are adding the word ''qualifying'' to the text of the regulation. Therefore, we explained, this regulation applies to both qualifying MA–EPs and MA-affiliated eligible hospitals (both payment and payment adjustment phases of the program) and

potentially qualifying MA–EPs and MA-affiliated eligible hospitals (only the payment adjustment phase of the program).

We proposed to redesignate the current § 495.202(b)(4) as § 495.202(b)(5), and to require a qualifying MA organization to identify the MA–EPs and MA-affiliated eligible hospitals that it believes would be both ''qualifying'' and ''potentially qualifying.'' To calculate the payment adjustment, we explained that we will need to know how many qualifying MA–EPs and MA-affiliated eligible hospitals are, and are not, meaningful users. We also proposed to correct a cross-reference.

We did not receive any comments on these provisions and we are finalizing them as proposed.

3. Incentive Payments to Qualifying MA Organizations for Qualifying MA–EPs and Qualifying MA-Affiliated Eligible Hospitals (§ 495.204)

a. Amount Payable to a Qualifying MA Organization for Its Qualifying MA–EPs

In § 495.204(b), we proposed to clarify that methods relating to overhead costs may be submitted for MA–EPs regardless of whether the MA–EPs are salaried or paid in another fashion, such as on a capitated basis.

As stated previously, we also proposed to require MA organizations, to submit revenue amounts relating to their qualifying MA–EPs within 2 months of the close of the payment year, (rather than within 60 days).

b. Increase in Incentive Payment for MA–EPs Who Predominantly Furnish Services in a Geographic Health Professional Shortage Area (HPSA)

In a new § 495.204(e) (we proposed to redesignate the current paragraph (e) as paragraph (f)), we proposed to add a provision clarifying the currently existing policy governing whether a qualifying MA organization is entitled to a HPSA increase for a given qualifying MA–EP. We explained that section 1848(o)(1)(B)(iv) of the Act, which is currently in effect, and as applied to the MA program, provides a 10-percent increase in the maximum incentive payment available for MA–EPs that predominantly furnish covered professional services during the MA EHR payment year in a geographic HPSA. We explained that consistent with the Medicare FFS EHR Incentive Program, we interpreted the term ''predominantly'' to mean more than 50 percent. For the MA EHR Incentive Program, we proposed to determine eligibility for the geographic HPSA increase on whether the qualifying MA–EP predominantly provided services to MA plan enrollees of the qualifying MA organization in a HPSA during the applicable MA EHR payment year.

Further, we explained that it is worth noting that an MA organization does not automatically receive a HPSA bonus merely because its qualifying MA–EPs predominantly served a geographic HPSA. We stated that in order for the MA organization to receive the 10 percent increase, the MA–EP needs to provide at least 10 percent or more of Medicare Part B covered professional services to MA plan enrollees of the qualifying MA organization. In other words, to qualify for the HPSA bonus an MA–EP needs to provide more than $24,000 of Medicare Part B covered professional services to MA plan enrollees of the qualifying MA organization. The MA–EP needs to provide up to $26,400 in covered services to earn the maximum HPSA-enhanced bonus of $19,800 if the first payment year is 2011 or 2012. Thus, for MA–EPs who predominantly furnish services in a geographic HPSA, the ''incentive payment limit'' in § 495.102(b) would be $19,800, instead of $18,000, if the first MA EHR payment year for the MA organization with respect to the MA–EP is 2011 or 2012. If an MA organization could show that an MA–EP predominantly served beneficiaries in a HPSA during the payment year and that that MA–EP provided, for example, for the 2011 payment year, at least $26,400 in Part B professional services to MA plan enrollees of the MA organization during the payment year, we stated that the MA organization could receive the entire $19,800 incentive payment for that MA–EP. If the MA–EP provided less than $26,400 in Part B professional services, the potential incentive payment for that MA–EP for that MA organization would be less than $19,800 for the payment year. We proposed a conforming amendment in § 495.202(b)(2)(ii) to require MA organizations to notify CMS whether the qualifying MA–EP predominantly provided covered services to MA plan enrollees in a HPSA.

We added a new paragraph (5) to redesignated paragraph (f). This new paragraph (5) clarifies that we would recoup the EHR incentive payment if one of the following entities fails to comply with an audit request to produce documents or data needed to audit the validity of an EHR incentive payment:—(1) A qualifying MA–EP, (2) an entity that employs a qualifying MA–EP (or in which a qualifying MA–EP had a partnership interest), (3) an MA-affiliated eligible hospital, or (4) any other party contracting with the qualifying MA organization. We explained that we already have the authority to do this under the current § 495.204(e)(4), (to be redesignated as (f)(4)); however, we proposed to amend the regulations to specifically address what would happen in the case of a failure to produce documents or data related to an audit request.

We added a new paragraph (g) to § 495.204 to clarify the current policy that in the unlikely event we paid a qualifying MA organization for a qualifying MA–EP, and it was later determined that the MA–EP—(1) was entitled to a full incentive payment under the Medicare FFS EHR Incentive Program; or (2) had received payment under the Medicaid EHR Incentive Program, we would recover the funds paid to the qualifying MA organization for such an MA–EP from the MA organization. (We stated that the former case would be in the unlikely event an MA–EP appeared to have earned an EHR incentive of less than the full amount under FFS, and then later was determined to have earned the full amount under FFS. In accordance with duplicate payment avoidance provisions in section 1853(l)(3)(B) of the Act and implementing regulations at § 495.208, we would recover the MA EHR incentive payment since a full FFS EHR payment was due.) If the organization still had an MA contract, we would recoup the amount from the MA organization's monthly payment under section 1853(a)(1)(A) of the Act. If the organization no longer had an MA contract, we would recoup any amounts through other means, such as formal collection. We stated that since duplicate and overpayments are prohibited by statute (sections 1853(l)(3)(B), 1853(m)(3)(B), and 1903(t)(2) of the Act), we believe that this policy must apply to all years of the program, beginning with payment year 2011. Thus, we would recover overpaid MA EHR incentive payments for all MA EHR payment years, including payment year 2011.

We also clarified that, in accordance with statutory requirements, if it is determined that an MA organization received an incentive payment for an MA-affiliated eligible hospital that also received a payment under the Medicare FFS EHR Incentive program or that otherwise should not have received such payment, we would similarly recover the funds paid to the qualifying MA organization for such MA-affiliated eligible hospital from either the MA organization's monthly payment under section 1853(a)(1)(A) of the Act, from

the MA-affiliated eligible hospital's CMS payment through the typical process for recouping Medicare funds from a ''subsection (d)'' hospital, or through other means such as a collection process, as necessary. As with EPs, as the statute prohibits us from making duplicate and overpayments, we explained that this policy does not constitute a new rule and must apply to all years of the program, beginning with payment year 2011.

We did not receive any comments on these provisions and are finalizing them as proposed.

4. Avoiding Duplicate Payments

We stated that qualifying MA–EPs are eligible for the Medicare FFS EHR incentive payment if they meet certain requirements under that program. However, we also stated that an EHR incentive payment is only allowed from one program. We believe that the requirement that MA organizations notify MA–EPs that the MA organization intended to claim them for the MA EHR Incentive Program would minimize misunderstandings among MA–EPs (particularly if they expected to receive an incentive payment under the Medicare FFS Incentive Program). We stated that it was important for MA–EPs to understand certain aspects of the program such as when a qualifying MA organization claimed an MA–EP under the MA EHR Incentive Program and the MA–EP was not entitled to a full FFS EHR Incentive payment, the MA organization claim would prevent a partial payment under the Medicare FFS EHR Incentive Program from being paid directly to the MA–EP.

We proposed to require each qualifying MA organization to attest that it notified the MA–EPs it intends to claim. We proposed to require that this attestation be submitted along with the MA organization's meaningful use attestation for the MA EHR payment year for which the MA organization is seeking payment.

Therefore, we proposed to revise § 495.208 by adding—(1) a new paragraph (a) that requires a qualifying MA organization to notify MA–EPs when the MA organization intends to claim them for the MA EHR Incentive Program prior to making its attestation of meaningful use to CMS; (2) a new paragraph (b) that requires a qualifying MA organization to notify MA–EPs when it is claiming them, that the MA–EPs may still receive an incentive payment under the Medicare FFS or Medicaid EHR Incentive Program, if certain requirements are met; and (3) a new paragraph (c) that requires a qualifying MA organization to attest to CMS that these notification requirements have been satisfied by the MA organization. We also proposed to redesignate the current paragraphs (a) through (c) of § 495.208 as (d) through (f), respectively.

As discussed previously, in § 495.210, we proposed to change the requirement that MA organizations attest to meaningful use within 60 days after the close of the MA EHR payment year for both MA–EPs and MA-affiliated eligible hospitals, to a requirement to do so within 2 months in order to provide consistency between the Medicare FFS and MA EHR Incentive Programs.

Comment: A commenter requested that CMS confirm that MA organization reporting to CMS under HEDIS, HOS, and CAHPS will continue to apply for purposes of the MA EHR Incentive Payment Program during Stage 2. The commenter questioned if MA organizations, for both qualifying MA–EPs and MA-affiliated eligible hospitals, will be permitted to continue to submit HEDIS, HOS, and CAHPS data in lieu of CQMs during Stage 2.

Response: We are confirming that during Stage 2 and subsequent stages of MA EHR Program implementation, we will continue to require qualifying MA organizations to successfully report HEDIS, HOS, and CAHPS measures in lieu of CQMs for purposes of meaningful use reporting for qualifying MA–EPs and MA-affiliated eligible hospitals.

After review of the public comments received, we are finalizing these provisions as proposed.

5. Payment Adjustments Effective for 2015 and Subsequent MA Payment Adjustment Years (§ 495.211)

In the proposed rule we explained that beginning in 2015, the law provides for adjustments to monthly MA payments under sections 1853(l)(4) and 1853(m)(4) of the Act if a qualifying MA organization's potentially qualifying MA–EPs or MA-affiliated eligible hospitals (or both) are not meaningful users of certified EHR technology. We proposed to add a definition of ''MA Payment Adjustment Year'' to the definitions in § 495.200. The definition was needed in part because the payment adjustment phase of the MA EHR program continued indefinitely—beyond the last year for which MA EHR incentive payments could be made to qualifying MA organizations. Additionally, since we proposed to operationalize MA EHR payment adjustments in a different manner than under the FFS Medicare program, we believed a definition was warranted.

We proposed that an MA organization would have to had at least initiated participation in the incentive payment phase of the program from 2011 through 2014 for MA–EPs or through 2015 for MA-affiliated eligible hospitals, to have its Part C payment under section 1853(a)(1)(A) of the Act adjusted during the payment adjustment phase of the program, and would have to continue to qualify for participation in the program as a ''qualifying MA organization'' as defined for purposes of this program. The imposition of a payment adjustment is also conditioned on the qualifying MA organization having potentially qualifying MA–EPs and MA-affiliated eligible hospitals for the respective payment adjustment years. We took this approach because we believed that it would be impossible to verify that a given MA organization is, in fact, a qualifying MA organization with potentially qualifying MA–EPs and MA-affiliated eligible hospitals, unless the MA organization had first demonstrated that it met these requirements through receipt of MA EHR incentive payments for at least one of the MA EHR payment years as defined for purposes of this program. We noted that although MA EHR payment years for both MA–EPs and MA-affiliated eligible hospitals could theoretically continue through 2016, the last first MA EHR payment year for which an MA organization could receive an EHR incentive payment is 2014 for MA–EPs, and 2015 for MA-affiliated hospitals.

Furthermore, we believe that payment adjustments under section 1853 of the Act would have limited applicability in the MA EHR Incentive Program because the HITECH Act limited the type of organization that would qualify as a ''qualifying MA organization'' for purposes of the MA EHR Incentive Program in both phases of the program (the phase of the program during which we make incentive payments, and the phase of the program when we adjust payments under sections 1853(l)(4) and 1853(m)(4) of the Act). We stated that section 1853(l)(5) of the Act limits which MA organizations may participate by defining the term ''qualifying MA organization.'' We explained that a ''qualifying MA organization'' must be organized as a health maintenance organization (HMO), as defined in section 2791(b)(3) of the Public Health Service (PHS) Act (42 U.S.C. 1395w–23(l)(5)). The PHS Act further defines an HMO as a ''federally qualified HMO, an organization recognized under state law as an HMO, or a similar organization regulated under state law for solvency in the same

manner and to the same extent as such an HMO.'' (See 42 U.S.C. 300gg–91). We explained that an MA organization participating in Medicare Part C might not be a federally qualified HMO, nor an organization recognized under state law as an HMO, nor a similar organization regulated under state law for solvency in the same manner and to the same extent as such an HMO. We noted that organizations that do not meet the PHS definition of ''HMO'' may not receive an incentive payment, nor would they be eligible to have their Part C payment adjusted for having potentially qualifying MA–EPs or MA-affiliated eligible hospitals that do not successfully demonstrate meaningful use of certified EHR technology.

Secondly, section 1853(l)(2) of the Act requires that MA–EPs be as described in that paragraph. We stated that the vast majority of MA organizations do not employ their physicians; nor do they use physicians who work for, or who are partners of, an entity that contracts nearly exclusively with the MA organization (as set out in the definition of a ''Qualifying MA–EP'' in § 495.200).

Thirdly, section 1853(m)(2) of the Act requires that a qualifying MA organization have common corporate governance with a hospital in order for it to be considered an MA-affiliated eligible hospital, and we did not expect many qualifying MA organizations to meet this test.

We explained that the current § 495.202(b)(4) (which we proposed to redesignate as § 495.202(b)(5)) requires all qualifying MA organizations that have potentially qualifying MA–EPs or MA-affiliated eligible hospitals that are not meaningful users to initially report that fact to us beginning in June of MA plan year 2015. We proposed that this reporting requirement would include only qualifying MA organizations that participated in and received MA EHR incentive payments.

Further, we discussed that there may be MA organizations that participated in the incentive payment phase of the program, but then ceased being qualifying MA organizations, or that no longer have any qualifying MA–EPs or MA-affiliated eligible hospitals. We provided an example of a qualifying MA organization that contracts with a specific entity to deliver physicians' services during the payment phase of the EHR Incentive Program, but then the entity changes, or the MA organization loses its contract with the entity. We explained that such changes could cause the MA organization's MA EPs to no longer meet the 80/80/20 rule due to loss of the contract, or the entity might begin contracting with additional MA organizations. (See § 495.200, for the definition of ''Qualifying MA–EP.'') Therefore, we explained, the MA organization would not necessarily have its monthly payment adjusted because it might no longer meet the basic requirements under which MA EHR incentive payments were made to it.

Therefore, we proposed to adjust payments, beginning for payment adjustment year 2015, only for qualifying MA organizations that received MA EHR payments and that had potentially qualifying MA–EPs or MA-affiliated eligible hospitals that were not meaningful EHR users. We proposed to rely on the existing self-reporting requirement in redesignated § 495.202(b)(5) and subsequent audits to ensure compliance.

Comment: A commenter recommended that CMS apply MA payment adjustments to qualifying MA organizations only for the category of MA provider (that is, MA–EP versus MA-affiliated hospital) for which it claimed and received MA EHR incentive payments. For example, if a qualifying MA organization claimed incentive payments during the payment phase of the program only for MA–EPs and not for any MA-affiliated eligible hospitals, then the MA organization should only be required to report on qualifying and potentially qualifying MA–EPs during the adjustment phase of the program, and should not be subject to payment adjustments for MA-affiliated hospitals.

Response: We agree with the commenter that we will apply payment adjustments only to qualifying MA organizations for the category (or categories) of MA provider (either MA–EP, MA-affiliated eligible hospital, or both) for which it claimed and received MA EHR incentive payments. To the same extent that qualifying MA organizations have identified themselves and their qualifying MA–EPs and/or MA-affiliated eligible hospitals during the payment phase of the MA EHR Incentive Program, we expect them to continue to identify themselves and their MA–EPs and MA-affiliated hospitals during the adjustment phase of the program. We are taking this approach because we believe it would be impossible to verify that a given qualifying MA organization has potentially qualifying MA–EPs or MA-affiliated eligible hospitals, unless it had first identified those providers to us. We have modified § 495.211(c) to clarify that MA EHR payment adjustments with respect to MA-affiliated hospitals will only apply to qualifying MA organizations that previously received incentive payments under the MA EHR Incentive Program for MA-affiliated hospitals, and similarly, that MA EHR payment adjustments with respect to MA–EPs will only apply to qualifying MA organizations that previously received incentive payments under the MA EHR Incentive Program for MA–EPs.

We proposed to collect payment adjustments made under sections 1853(l)(4) and 1853(m)(4) of the Act after meaningful use attestations have been made. Final attestations of meaningful use occur after the end of an EHR reporting period, which for MA–EPs would run concurrent with the payment adjustment year. In the case of potentially qualifying MA-affiliated eligible hospitals, attestations of meaningful use would occur by the end of November after the EHR reporting period. As noted previously, we proposed to amend § 495.202(b) to indicate that in addition to initial identification of potentially qualifying MA–EPs and MA-affiliated eligible hospitals that are not meaningful users (as required by redesignated § 495.202(b)(5)), qualifying MA organizations would also need to finally identify such MA–EPs and MA-affiliated eligible hospitals within 2 months of the close of the applicable EHR reporting period. Final identification by qualifying MA organizations of potentially qualifying MA–EPs and/or MA-affiliated eligible hospitals that are not meaningful users would then result in application of a payment adjustment by CMS. On the other hand, final identification of all qualifying MA–EPs and/or MA-affiliated eligible hospitals as meaningful users would obviate an adjustment. We stated that, through audit, we would verify the accuracy of an applicable MA organization's assertions or nonreporting.

We proposed to adjust one or more of the qualifying MA organization's monthly MA payments made under section 1853(a)(1)(A) of the Act after the qualifying MA organization attested to the percent of hospitals and professionals that either were, or were not, meaningful users of certified EHR technology. We stated that, to the extent a formerly qualifying MA organization did not report under § 495.202(b)(4) or (5), we would verify, upon audit, the accuracy of the applicable MA organization's nondisclosure of such qualifying and potentially qualifying users.

Under our proposed approach, the adjustment would be calculated based on Part C payment data made under section 1853(a)(1)(A) of the Act for the payment adjustment year. We stated

that since an MA-affiliated eligible hospital must attest to meaningful use by November 30th, we could use the Part C payment information in effect at the time of the attestation to calculate the payment adjustment for a specific potentially qualifying MA-affiliated eligible hospital with respect to a specific MA organization. Although we expected (and preferred) to make an adjustment to a single MA monthly payment totaling the adjustment for the year, we requested comment on whether more than one monthly payment should be adjusted. We stated that one possible approach would be to make this decision on a case-by-case basis depending upon a given qualifying MA organization's situation (for example, payment adjustment amount versus MA organization monthly payment).

For payment adjustments based on potentially qualifying MA–EPs that are not meaningful users of certified EHR technology, we also proposed to calculate the adjustment based on the Part C payment made under section 1853(a)(1)(A) of the Act for the payment adjustment year. Because attestations of meaningful use for qualifying MA–EPs occur in February of the calendar year following the EHR reporting year, we noted that we could calculate the payment adjustment based on the prior MA payment year's payment, and that we could apply that adjustment to one or more of the prospective Part C payments. While we preferred to make an adjustment to one MA prospective payment for the full amount of the payment adjustment when possible, we solicited comment on whether we should make adjustments over several months or in a single month (for the entire adjustment amount), when possible. We received no comments on this proposal and therefore we are adopting the policy of collecting payment adjustments as quickly as possible in a single month, when possible.

Thus, adjustments for MA payment adjustment year 2015 would be based on MA payment data under section 1853(a)(1)(A) of the Act. However, while the payment adjustment for the 2015 payment adjustment year would be collected as soon as possible, we stated that this might not be until CY 2016 through an adjustment to the MA organization's MA capitation payment or payments under section 1853(a)(1)(A) of the Act.

We stated that proposed § 495.211(c) made clear that the potentially qualifying MA–EP and MA-affiliated eligible hospital payment adjustments would be calculated separately, and that each adjustment was applied to the qualifying MA organization's monthly payment under section 1853(a)(1)(A) of the Act. As discussed previously, we are modifying § 495.211(c) to clarify that MA EHR payment adjustments for MA-affiliated hospitals only apply to qualifying MA organizations that previously received incentive payments under the MA EHR Incentive Program for MA-affiliated hospitals, and that payment adjustments for MA–EPs only apply to qualifying MA organizations that previously received incentive payments under the MA EHR Incentive Program for MA–EPs.

Proposed paragraphs (a) through (c) would apply to adjustments based on both potentially qualifying and qualifying MA–EPs and MA-affiliated eligible hospitals that were not meaningful EHR users. Proposed paragraph (d) would apply only to adjustments based on potentially qualifying and qualifying MA–EPs that were not meaningful users of certified EHR technology. We also stated that paragraph (d) makes it clear that if a potentially qualifying MA–EP was not a meaningful user of CEHRT in payment adjustment year 2015 (and subsequent payment adjustment years), the qualifying MA organization's monthly Part C payment would be adjusted accordingly.

During the payment phase of the MA EHR Incentive Program qualifying MA organizations attest to meaningful use for each qualifying MA–EP and MA-affiliated eligible hospital they claimed. We also stated that during the payment adjustment phase of the program, we would need to know the percentage of both qualifying and potentially qualifying MA–EPs and MA-affiliated eligible hospitals that were not meaningful users of certified EHR technology. This percentage could be derived by taking the total number of the qualifying MA organization's qualifying and potentially qualifying MA–EPs, or MA-affiliated eligible hospitals, and identifying the portion of those MA–EPs or MA-affiliated hospitals that were not meaningful EHR users. We would use this percentage to make the adjustment proportional to the percent that were not meaningful users for a given adjustment year and qualifying MA organization.

Moreover, in determining the proportion of potentially qualifying MA–EPs and potentially qualifying MA-affiliated eligible hospitals (those that were not meaningful users), we would exclude EPs and hospitals that were neither qualifying nor potentially qualifying in accordance with the definition of ''qualifying'' and ''potentially qualifying MA–EPs'' and ''MA-affiliated eligible hospitals'' in § 495.200. Thus, an MA–EP that was a hospital-based EP would not be a qualifying or potentially qualifying MA–EP since such an EP did not meet item (5) of the definition of qualifying MA–EP in § 495.200 and thus would not be used in our computation of the proportion of MA–EPs for purposes of applying the payment adjustment. We proposed the following formula to apply the payment adjustments proposed in § 495.211(d)(2) to MA–EPs:

[the total number of potentially qualifying MA–EPs]/[(the total number of potentially qualifying MA–EPs) + (the total number of qualifying MA–EPs)].

Similarly, the formula we proposed for purposes of applying payment adjustments in § 495.211(e)(2)(iii) with respect to MA-affiliated hospitals was:

[the total number of potentially qualifying MA-affiliated eligible hospitals]/[(the total number of potentially qualifying MA-affiliated eligible hospitals) + (the total number of qualifying MA-affiliated eligible hospitals)].

Keeping in mind that redesignated § 495.202(b)(4) and (5) required qualifying MA organizations to identify potentially qualifying MA–EPs and potentially qualifying MA-affiliated eligible hospitals and to provide other information beginning for plan year 2015, we solicited comment on the question of whether, in the payment adjustment phase of this program, qualifying MA organizations with potentially qualifying MA–EPs and MA-affiliated eligible hospitals should—(1) still be required to attest to the meaningful use objectives and measures; or (2) instead be required only to report the percent of MA–EPs and MA-affiliated eligible hospitals that are not meaningful users of certified EHR technology. We suggested that commenters take into account that MA-affiliated eligible hospitals would still be required to perform a reporting function on behalf of their MA-affiliated organization in the National Level Repository (NLR), and that they were generally bound to ''subsection (d)'' hospital reporting requirements of the NLR. Thus, we were primarily interested in comments related to MA–EPs.

We explained that while we wished to minimize burden, we were also concerned with our ability to audit the information reported to ensure compliance with MA program requirements. Having received no comments on this provision, we therefore adopt a final requirement to

use only percentage-based reporting and, require MA organizations to retain and produce data and records necessary to substantiate their submissions, including evidence of meaningful use by those MA–EPs and MA-affiliated eligible hospitals so reported.

We proposed that payment adjustments for MA–EPs would be calculated by multiplying: (1) The percent established under § 495.211(d)(4) (which, in accordance with the statute, increases the adjustment amount up until 2017 and potentially beyond); with (2) the Medicare Physician Expenditure Proportion; and (3) by the percent of the qualifying MA organization's qualifying and potentially qualifying MA–EPs that were not meaningful users. We explained that section 1853(l)(4)(B)(i) of the Act requires MA payments to be reduced using the ''percentage points'' reduction of section 1848(a)(7)(A)(ii) of the Act. As section 1848(a)(7)(A)(ii) of the Act is ''subject to clause (iii),'' and as clause (iii) of that same provision requires payment adjustments to increase when the proportion of EPs who are meaningful EHR users is less than 75 percent, we proposed to apply a similar policy for the MA program. Specifically, we proposed that if the proportion of MA–EPs of a qualifying MA organization did not meet the 75 percent threshold (as determined in proposed § 495.211(d)(2)) in 2018 and subsequent years, the percentage reduction could increase to 4 percent in 2018, and 5 percent in 2019 and subsequent years. We did not propose a possible 2 percent reduction for 2015 (consistent with the Medicare FFS EHR Incentive Program when an EP is subject to an adjustment in 2014 under the e-prescribing program), because MA organizations are not independently subject to e-prescribing payment adjustments.

We proposed that the Medicare Physician Expenditure Proportion for a year would be the Secretary's estimate of expenditures under Parts A and B not attributable to Part C that are attributable to expenditures for physician services. While we proposed a uniform portion for all MA organizations, we also proposed to adjust the proportion on a more individual basis to account for the fact that qualifying MA organizations may contract with a large number of EPs that are neither qualifying nor potentially qualifying. We explained that this individualized policy was based on the statutory language in section 1853(l)(1) of the Act, which states that the provisions of section 1848(a)(7) of the Act (that is, the payment adjustments) apply ''with respect to'' the EPs ''described in paragraph (2)'' of section 1853(l) of the Act. As section 1853(l)(2) of the Act creates several additional requirements for MA–EPs (that is, that they be employed by the qualifying MA organization, that they meet the 80/80/20 requirements, and so on), we proposed adjusting the Physician Expenditure Proportion to recognize that many EPs may not qualify as MA–EPs, regardless of meaningful use. Thus, we proposed to adjust each MA organization's Physician Expenditure Proportion to recognize that not all of the EPs would meet the technical (nonmeaningful use) requirements to be potentially qualifying or qualifying MA–EPs. Without our proposed adjustment, a small sample size of MA–EPs could magnify the reduction amount during the payment adjustment phase of the program, because the actions of a limited set of qualifying and potentially qualifying MA–EPs (and whether they meaningfully used certified EHR technology) would determine whether all of an MA organization's physician expenditure proportion was reduced.

We provided an example of our proposed MA payment adjustment for adjustment year 2015 as follows:

Assume the hypothetical Medicare Physician Expenditure Proportion, adjusted as described previously, is 10 percent for 2015;

The qualifying MA organization's percent of qualifying and potentially qualifying MA–EPs that are not meaningful users is 15 percent for 2015; and

The monthly payment in 2015 for the given qualifying MA organization is $10,000,000.

The proposed formula would read as follows:

0.01 (the payment adjustment for 2015) × 0.1 (the hypothetical Medicare Physician Expenditure Proportion) × 0.15 (the percentage of qualifying and potentially qualifying MA–EPs that are not meaningful EHR users) × $10,000,000 (monthly Part C payment) × 12 (number of months in the MA payment year) = $18,000 for the entire year, or $1,500 a month. We proposed that this adjustment would then be collected against one or more of the qualifying MA organization's payments under section 1853(a)(1)(A) of the Act.

In proposed § 495.211(e), we set out a formula for payment adjustments based on potentially qualifying MA-affiliated eligible hospitals that are not meaningful users of certified EHR technology.

We proposed an adjustment equal to the product of the following:

- Monthly Part C payment for the payment adjustment year;
- The percentage point reduction that applies to FFS hospitals as a result of section 1886(b)(3)(B)(ix)(I) of the Act;
- The Medicare hospital expenditure proportion, adjusted in the same manner as the Physician Expenditure Proportion to recognize that not all hospitals are necessarily qualifying or potentially qualifying MA-affiliated eligible hospitals; and
- The percentage of qualifying and potentially qualifying MA-affiliated eligible hospitals of a given qualifying MA organization that are not meaningful users of certified EHR technology.

We proposed that the percentage point reduction of the first bullet (that is, the reduction that applies as a result of section 1886(b)(3)(B)(ix)(I) of the Act) would be based on the point reduction that results when three-fourths of the otherwise applicable percentage increase for the fiscal year was reduced by 33⅓ percent for FY 2015, 66⅔ percent for FY 2016, and 100 percent for FY 2017 and subsequent fiscal years. We stated this had the result of decreasing the otherwise applicable market basket update by one-fourth (for 2015), one-half (for 2016), and three-fourths (for 2017 and subsequent payment adjustment years).

We stated that the Medicare Hospital Expenditure Proportion for a year was the Secretary's estimate of expenditures under Medicare Parts A and B that were not attributable to Part C, that were attributable to expenditures for inpatient hospital services. As mentioned previously, we proposed that this proportion reflects only the MA-affiliated eligible hospitals that were either qualifying or potentially qualifying MA-affiliated eligible hospitals.

We also proposed to use the market basket percentage increase that would otherwise apply to ''subsection (d)'' hospitals for an MA payment adjustment year. We provided the following hypothetical example. The market basket percentage increase for FY 2015 was hypothetically 4 percent. Three-quarters of one-third of 4 percent would be 1 percent. The hypothetical Medicare Hospital Expenditure proportion for the year was 15 percent, and one of two of the relevant MA-affiliated eligible hospitals was not a meaningful EHR user for the applicable period (FY 2015). The monthly payment to the MA organization in 2015 was $10,000,000 a month.

The calculation would be as follows:

0.01 (the market basket percentage point reduction) × 0.15 (the Medicare Hospital Expenditure Proportion) × 0.5 (percent of the qualifying MA organization's qualifying and potentially qualifying MA-affiliated eligible hospitals that are not meaningful users) × $10,000,000 (monthly Part C payment) × 12 (number of months in the MA payment year) = $90,000 for the year, or $7,500 a month. The payment adjustment would be applied on either a monthly basis, or in one adjustment. As stated previously, we requested comment on this aspect of the final rule.

Comment: A commenter stated that the formula for computing the Medicare Physician Expenditure Proportion percent in § 495.211(d)(3)(ii) was not clear on whether physicians who saw no Medicare patient at all would be excluded from the expenditure proportion calculation (for example, most pediatricians), and whether a distinction would be made between services provided by MA–EPs and potential MA–EPs of the organization, and other physicians and the services they provide. The commenter explained that under the model of reimbursement for physician services it uses, the ability to track Part A and Part B costs to individual physicians was limited. The commenter proposed an alternate method for computing the Medicare Physician Expenditure Proportion based on what it called a ''uniform distribution model as a proxy for the adjustment to the MPEP percent.''

Response: We believe it is unnecessary to specifically exclude physicians, such as pediatricians, who see no Medicare patients from the Medicare Physician Expenditure Proportion calculation. Expenditures that are provided by EPs that are neither qualifying nor potentially qualifying MA–EPs are already adjusted out. This would be true in two ways for physicians, such as pediatricians, who see no Medicare patients. First, these physicians would not meet item (2) of the definition of a ''qualifying MA–EP'' in § 495.200, since these physicians do not provide ''at least 80 percent'' of their Medicare-covered professional services to enrollees of the qualifying MA organization. Since they provide no Medicare-covered professional services to enrollees of the qualifying MA organization, they do not meet the ''80 percent'' requirement. Second, the Physician Expenditure Proportion is based only on Medicare expenditures for physician services (that is, the proportion of expenditures under Parts A and B not attributable to Part C that are attributable to expenditures for physician's services). Physician expenditures for non-Medicare services (like most services of a pediatrician) do not count in the calculation. Finally, we do not believe an alternative method of computing the Medicare Physician Expenditure Proportion is necessary and therefore are not considering the alternate approach proposed by this commenter in this final rule. It should be noted that tracking Part B costs to individual MA–EPs (physicians) is a critical part of determining the incentive payment due a qualifying MA organization (see 42 CFR 495.204(ff)). To the extent methodologies for estimating the portion of MA–EP compensation that is attributable to Part B professional services are used during the payment phase of the MA EHR Incentive Program, we believe these methodologies can also be successfully used during the adjustment phase of the Program.

Comment: A commenter questioned if section 3401 of the Affordable Care Act market basket update adjustment due to changes in economy-wide productivity for FY 2012 and each subsequent fiscal year would be included, or if any other adjustment would be included in the market basket update rate used in the penalty adjustment formula.

Response: Section 1853(m)(4)(B)(i) of the Act directs us to use the ''number of the percentage point reduction effected under section 1886(b)(3)(B)(ix)(I) for the period.'' That reduction is based off of a starting point of the applicable percentage increase otherwise applicable under clause (i), while mandating that this be ''determined without regard to clause (viii), (xi), or (xii)'' of section 1886(b)(3)(B) of the Act. Thus, the starting point for determining the percentage points by which the update is reduced is the applicable percentage increase in clause (i) of section 1886(b)(3)(B) of Act, before it has been further reduced for productivity (under clause (xi) for other statutory reductions (in clause (xii)), or for failure to report on certain measures (under clause (viii)). Currently, the applicable percentage increase in clause (i), before the other reductions have been made, is the market basket percentage increase for hospitals in all areas. Thus, such a market basket increase will be our starting point, and the percentage points by which that increase is reduced solely due to the application of EHR Program adjustments will be the point reduction we use in the MA formula.

Comment: A commenter proposed an alternate method for computing the Medicare Hospital Expenditure Proportion based on what they believe is ''consistent with fee-for-service hospital penalties.''

Response: We believe our proposed method is consistent with the method the Medicare fee-for-service program will use to implement EHR adjustments for ''subsection (d)'' hospitals.

Comment: One commenter expressed concern that CMS had proposed that payment adjustments would be based on an earlier payment period.

Response: We believe the commenter is confused, as we did not propose a prior EHR reporting period for the MA program.

We received no other comments on this section of the proposed rule. After consideration of the public comments received, we are finalizing these provisions as proposed with the one modification noted to § 495.211(c).

6. Reconsideration Process for MA Organizations

We proposed a reconsideration process in new section, § 495.213. We did not receive any comments on the proposed process. However, for the reasons stated in section II.D.5 of this final rule, we do not believe formal regulations for an informal reconsideration procedural rule are necessary and therefore we are not including this new section in this final rule.

As noted in the proposed rule and as required by statute, our administrative reconsideration process would not permit administrative review of the standards and methods used to determine eligibility and payment (see sections 1853(l)(8) and (m)(6) of the Act, and § 495.212 of the regulations). However, it would allow a reconsideration of the application of such standards and methods, in certain circumstances.

F. Revisions and Clarifications to the Medicaid EHR Incentive Program

Unless otherwise specified, the changes discussed in this section of the rule will take effect upon publication of this final rule.

1. Net Average Allowable Costs

In this final rule, we are formalizing through rulemaking the guidance that was shared with state Medicaid Directors in a letter on April 8, 2011 (available at: *http://www.cms.gov/smdl/downloads/SMD11002.pdf*). These technical changes are required to implement section 205(e) of the Medicare and Medicaid Extenders Act of 2010 (Extenders Act, Pub. L. 111–309). The Extenders Act, enacted on

December 15, 2010, amended sections 1903(t)(3)(E) and 1903(t)(6)(B) of the Act. The amended sections change the requirements for an EP to demonstrate the ''net average allowable costs,'' the contributions from other sources, and the 15 percent provider contribution requirements to participate in the Medicaid EHR Incentive Payment Program. The Extenders Act provided that an EP has met this responsibility, as long as the incentive payment is not in excess of 85 percent of the net average allowable cost ($21,250 for first year payments).

Before the Extenders Act, Medicaid EPs who wanted to participate in the EHR Incentive Payment Program were required to provide documentation of certain costs related to acquiring and implementing certified EHR technology. The Extenders Act amended the relevant statute by allowing for providers to simply document and attest that they have adopted, implemented, upgraded, or meaningfully used certified EHR technology, while allowing us to set these average costs.

As a result, rather than requiring each EP to calculate the payments received from outside sources, each will use the average costs and contribution amount we established. After conducting a meta-analysis of existing data of an EP's costs to adopt, implement, or upgrade certified EHR technology, we determined that average contributions from outside sources should not exceed $29,000. The documentation originally required by an EP to demonstrate that he or she contributed 15 percent (for example, $3,750 for year 1) of the ''net average allowable costs'' is also no longer needed. The Act now provides that an EP has met this responsibility as long as the incentive payment is not in excess of 85 percent of the net average allowable cost ($21,250). Given that this change is already in effect, we proposed to remove from the required content in the state Medicaid HIT Plan, the requirement that states describe the process in place to ensure that Medicaid EHR incentive payments are not paid at amounts higher than 85 percent of the net average allowable cost of certified EHR technology, as described in § 495.332.

We received no comments on our proposal to codify this already-existing policy, and we are finalizing our proposals without modification.

TABLE E1—DETERMINATION OF NET AVERAGE ALLOWABLE COSTS FOR THE FIRST PAYMENT YEAR

First year variables[1]	Amounts	Prior to Extenders Act changes	Currently
Average Allowable Costs.	$54,000	Determined through a CMS meta-analysis, described in both the proposed rule (75 FR 1844) and the final rule (75 FR 44314).	No change.
Contributions from Other Sources.	Does not exceed $29,000.	Subtracted from Average Allowable Costs to reach ''Net'' Average Allowable Costs. An EP was required to show documentation of all contributions from certain other sources.	No documentation is needed. We have determined that average contributions do not exceed $29,000.
Capped Amount of ''Net'' Average Allowable Costs.	$25,000	Capped by statute and designated in CMS final rule.	No change.
Contribution from the EP.	$3,750	An EP was required to demonstrate that he or she had contributed at least 15 percent of the net average allowable costs towards a certified EHR.	No documentation needed. Determined to have been met by virtue of EP receiving no more than $21,250 in the first payment year.
Incentive payment[2]	$21,250	85 percent of the Net Average Allowable Costs; determined through statute. An EP could receive less than this amount if he or she had contributions from other sources exceeding $29,000.	All EPs will receive the maximum incentive payment of $21,250, as all EPs will be determined to have contributions from other sources under $29,000.

[1] These same concepts (but not figures) apply to the second through sixth years, integrating the figures from the Stage 1 final rule. Ultimately, the incentive paid in the second through sixth years is still the statutory maximum of $8,500.

[2] This figure is further reduced to two-thirds for pediatricians qualifying with reduced Medicaid patient volumes. This is described at 42 CFR 495.310.

2. Definition of Adopt, Implement Upgrade

We are adding clarifying language that maintains our policy that to qualify for an AIU payment, a provider must adopt, implement or upgrade to certified EHR technology that would allow that provider to qualify as a meaningful user. Our regulation has always defined certified EHR technology by reference to the ONC definition at 45 CFR 170.102, and ONC's definition of certified EHR technology has consistently required the technology to support meaningful use. While ONC is changing the definition of certified EHR technology, we do not believe this change would allow a provider to receive an incentive for technology that could not support meaningful use (that is for purchasing only ''Base EHR'' technology). Nevertheless, in order to be absolutely clear in our regulations, we are amending them to ensure that providers do not receive Medicaid incentives for adopting technology that would not allow them to demonstrate meaningful use.

3. Eligibility Requirements for Children's Hospitals

We proposed to revise the definition of a children's hospital in § 495.302 to also include any separately certified hospital, either freestanding or hospital within hospital that predominately treats individuals under 21 years of age; and does not have a CMS certification number (CCN) because they do not serve any Medicare beneficiaries but has been provided an alternative number by CMS for purposes of enrollment in the Medicaid EHR Incentive Program. We will provide future guidance on how to obtain these alternative numbers.

The only comments we received on this proposal were favorable. We are finalizing these policies as proposed. Guidance to these hospitals and the states on enumeration and determining eligibility is also forthcoming.

4. Medicaid Professionals Program Eligibility

Section 1903(t) of the Act authorizes Medicaid payments to encourage the adoption and use of certified EHR

technology, and places Medicaid patient volume requirements on EPs to qualify for such payments under the Medicaid program. Patient volume requirements ensure that Medicaid funding is used to encourage the adoption and use of technology specifically to benefit the care of Medicaid populations. Therefore, we proposed that at least one of the clinical locations used for the calculation of an EP's patient volume have CEHRT during the payment year for which the EP is attesting to adoption, implementation or upgrade or meaningful use. This will ensure that Medicaid funding goes to EPs using CEHRT to improve Medicaid patients' care.

The only comments that we received on this proposal were in support of the proposal. For the reasons explained in the proposed rule, we are finalizing this policy as proposed. We have amended § 495.304 and § 495.332 accordingly.

a. Calculating Patient Volume Requirements

We proposed to revise § 495.306(c) to allow states the option for their providers to calculate total Medicaid encounters or total needy individual patient encounters in any representative, continuous 90-day period in the 12 months preceding the EP or eligible hospital's attestation. This option will be in addition to the current regulatory language that bases patient volume on the prior calendar or fiscal year. We believe this adjustment will provide greater flexibility in eligible providers' patient volume calculations.

Likewise, we proposed to revise § 495.306(d)(1)(i)(A) to allow for the calculation of the total Medicaid patients assigned to the EP's panel in any representative, continuous 90-day period in either the preceding calendar year, as is currently permitted, or in the 12 months preceding the EPs' attestation, when at least one Medicaid encounter took place with the Medicaid patient in the 24 months prior to the beginning of the 90-day period. We also proposed to revise § 495.306(d)(1)(ii)(A) accordingly, so that the numerator and denominator are using equivalent periods. We proposed conforming changes to § 495.306(d)(2)(i) and (ii) for needy individual patient volume. We proposed changing the period during which the encounter must take place from 12 months to 24 months to account for new clinical guidelines from the U.S. Preventive Health Services Task Force that allow greater spacing between some wellness visits. Therefore, in order for a patient to be considered ''active'' on a provider's panel, we proposed 24 months is more appropriate. This change is also in order to be consistent with the proposed Stage 2 meaningful use measure for patient reminders sent to ''active patients.''

The only comments we received on this proposal were supportive. For the reasons explained in the proposed rule, we are finalizing this policy as proposed. We note that as explained in the proposed rule, this will be an option for states to implement at their discretion. States must seek prior approval from CMS via an amendment to their state Medicaid HIT Plan before implementing this change.

We also proposed to expand the definition of ''encounter'' to include any service rendered on any one day to an individual enrolled in a Medicaid program. We explained that such a definition will ensure that patients enrolled in a Medicaid program are counted, even if the Medicaid program did not pay for the service (because, for example, a third party payer paid for the item or service, or the service is not covered under Medicaid). We also explained that the definition would include encounters for patients who are Title XIX eligible and who meet the definition of ''optional targeted low income children'' under section 1905(u)(2) of the Act. Thus, individuals in Title XXI-funded Medicaid expansions (but not separate CHIPs) could be counted in providers' patient volume calculations. We stated that this approach is consistent with existing policies that provide Title XIX protections to children enrolled in Title XXI-funded Medicaid expansions.

In the proposed rule, we noted that as of 2010, 33 states have Title XXI Medicaid expansions via approved state plan amendments. Therefore, under our proposed policy, providers in those states would be able to include encounters with individuals in such expansions in their patient volume calculation for purposes of this program. In 2010, over 2.1 million children were covered in Medicaid expansion programs. We stated that our proposed change would likely increase the number of eligible providers who qualify for the Medicaid EHR Incentive Program, particularly those serving children because it allows states to create a larger base of Medicaid patients to be counted toward the patient volume requirements than existed under the Stage 1 rule.

Comment: Some commenters were concerned about verifying patient volume requirements for patients seen for a service where Medicaid did not pay for all or part of the service. Commenters asked CMS to clarify the prepayment audit expectations of states with this broader definition.

Response: This final rule does not change states' obligations to complete due diligence to verify all eligibility criteria, including patient volume. Existing subregulatory guidance is available to states to assist in developing audit processes. We encourage states to take advantage of those materials, guidance, and technical assistance resources that we have made available to support their auditing activities.

Comment: Commenters, while supportive of these changes, inquired whether these changes would be retroactive and affect payments already disbursed. They asked, for example, whether EPs who attested to Medicare for CY 2011 would be able to refund Medicare incentive payments and qualify for the Medicaid payment; or whether pediatricians who received the incentive for a patient volume of 20 percent would be able to receive a replacement payment associated with the 30 percent patient volume.

Response: These changes are not retroactive. Patient volume requirements for 2011 and 2012 are not affected by these changes. Eligibility for the program is determined at the time of attestation and prior to payment. States should implement this new definition of an encounter no later than 6 months after this rule is published and only for providers attesting for the 2013 program year and subsequent program years. In no event will this definition apply to attestations for the 2012 program year.

Comment: Commenters also inquired whether these new eligibility changes meant that an EP or eligible hospital denied an incentive payment because of failure to satisfy patient volume requirements could reapply in the same program year.

Response: As explained in our response to the previous comment, these changes would not be retroactive. Existing rules permit an EP or eligible hospital to reapply if they fail to meet the requirements for an incentive payment. If a provider fails to meet the requirements in 2013 before their state has implemented this change, they may then reapply after the change is made to their state's systems. Additionally, an EP or eligible hospital denied eligibility in a previous year is always permitted to reapply for a subsequent year (subject to rules for EPs switching programs as explained in § 495.10).

For the reasons explained in the proposed rule, and because this change will help more Medicaid providers qualify for the program, we are finalizing this policy as proposed. The expanded definition of encounter will

include individuals enrolled in Medicaid who had a billable service on any one day during the 90-day patient volume timeframe.

In our proposed rule, we also clarified that we understand that multiple providers may submit an encounter for the same individual. For example, it may be common for a PA or NP to provide care to a patient, then a physician to also see, or invoice for services to that patient. We explained that it is acceptable in these and similar circumstances to count the same encounter for multiple providers for purposes of calculating each provider's patient volume when the encounters take place within the scope of practice. We did not receive any comments on this clarification and retain it for the final rule.

b. Practices Predominantly

Similar to our proposed revisions for patient volume, we proposed to revise the definition of ''practices predominantly'' at § 495.302 in order to provide more flexibility for eligible professionals and states. A state could choose to allow EPs to use either: (1) The most recent calendar year; or (2) the most recent 12 months prior to attestation. Also, as with the previously noted patient volume changes, these ''practices predominantly'' changes are not retroactive. Patient volume requirements for 2011 and 2012 are not affected by these changes. States should implement this new definition of an encounter no later than 6 months after this rule is published and only for providers attesting to meeting program requirements for the 2013 program year and subsequent program years. In no event will this definition apply to attestations for the 2012 program year.

Comment: Some commenters—commenting on the patient volume changes in § 495.306, the ''practice predominantly'' changes in § 495.302, and the revised definition of encounter—expressed concerns about the system challenges associated with such changes. They requested that CMS consider the burden on state systems to implement these changes.

Response: We recognize that system changes must be considered when enacting or revising policies. However, we note that much of what we have proposed would be optional for states, while some would be required. We believe our final rule strikes a balance between optional and required policies for states, and providing 6 months to make systems changes balances implementation timelines with the overall goal to promote EHR adoption through the Medicaid EHR Incentive Program. We note that states receive 90 percent Federal matching funds for administrative costs associated with the EHR Incentive Program.

Comment: Although we did not make any proposals on the subject, some commenters requested a more prescriptive definition of pediatrician be provided to the states that includes pediatric ophthalmologists.

Response: We did not make any proposals on the definition of pediatrician. This final rule does not change the previous flexibility that states had to define pediatrician. In some states, pediatric ophthalmologists are eligible for the program, but that is entirely dependent on how the state has chosen to define pediatrician. This suggestion is also outside the scope of this rulemaking.

After consideration of the public comments received, we are finalizing the revised definition of ''practices predominantly'' at § 495.302 as proposed; this revised definition is applicable to providers attesting to meeting program requirements for the 2013 program year and subsequent program years.

5. Medicaid Hospital Incentive Payment Calculation

a. Discharge Related Amount

In order to ensure that Medicaid regulations are consistent with Medicare, we proposed that the Medicaid calculation should be consistent with the Medicare calculation found in § 495.104(c)(2). Our current regulations at § 495.310(g)(1)(i)(B) require the use of the ''12-month period selected by the state, but ending in the Federal fiscal year before the hospital's fiscal year that serves as the first payment year.'' We also published a tip sheet with additional guidance on the Medicaid hospital incentive payment calculation, which can be found at: (*https://www.cms.gov/MLNProducts/downloads/Medicaid_Hosp_Incentive_Payments_Tip_Sheets.pdf*). However, some hospitals may not have a full 12 months of data ending with the Federal fiscal year immediately preceding the first payment year, or they may have a slightly older 12-month period that could be used. Therefore, we have revised our regulations at § 495.310(g)(1)(i)(B) to allow states to use, for the purpose of calculating the discharge related amount, and other determinations (such as inpatient bed days), the most recent continuous 12-month period for which data are available prior to the payment year. If such 12-month period is a cost report, it should be one, single 12-month cost reporting period (and not a consolidation of two separate cost reporting periods). If it is an alternative source different from the cost report, we will rely on the state to ensure that the source is an appropriate source, and that the period is a continuous 12 months, and that the state is using the most recent data that are available. States should implement these changes only for hospitals that begin participation in the program starting in federal fiscal year 2013 or subsequent federal fiscal years. Hospitals that began participation before federal fiscal year 2013 must use discharge data from the hospital fiscal year that ends during the federal fiscal year prior to the hospital fiscal year that serves as the first payment year.

Comment: Commenters were concerned that hospitals may not have a full 12 months of data available ending with the Federal fiscal year immediately preceding the first payment year, thus restricting hospitals participation in the program.

Response: We appreciate the commenters concern; however, the change in regulatory language does not require hospitals to use data immediately preceding the first payment year, but rather the most recent 12 consecutive months of data available to the hospital prior to the payment year. The intent of this regulatory change was to encourage timely participation in the program. For the base year, the former policy required hospitals to initiate participation using a 12-month period ending in the Federal fiscal year before the hospital's fiscal year that serves as the first payment year. In recognition of this challenge, we are changing the regulation at § 495.310(g)(1)(i)(B) to allow hospitals to use, for purposes of determining the base year for the Medicaid incentive payment calculation, the most recent continuous 12-month period for which data are available prior to the payment year. Only those hospitals that begin participation in program year 2013 and beyond will be affected by this change. Hospitals that began participation in the program before 2013 will not have to adjust previous calculations.

Comment: A commenter suggested that ''the most recent data that are available'' is ambiguous. Hospital cost report data are subject to significant audit and adjustments subsequent to their submission to the state, so the definition of ''available'' has a large impact on the reliability of the data used to calculate the incentive payment amount. The commenter noted that the state and CMS have a strong interest in ensuring that the data used to calculate

the hospital incentive payment is accurate, defensible, and final, and the use of data that are not properly audited would create a significant potential for issuing incentive payments that would later need to be adjusted. The commenter suggested that CMS clarify ''the most recent data that are available'' means the most recent data that, in the judgment of the state, are properly audited and finalized.

Response: We appreciate the commenters concern; however, we do not agree that the data needs to be audited and finalized in order to be used for the incentive payment calculation. It is our expectation that the hospital incentive payment is calculated using the most accurate data available at the time of calculation and it is the responsibility of the state to make the determination of which source is most accurate. We do not restrict data sources, as we believe the states are best positioned to balance the accuracy and timeliness of the data available. Medicare pays hospitals using preliminary, filed, cost report data and reconciles payment when the data is audited and finalized. Similarly, we allow states to adjust calculations and reconcile payments when audited and finalized data are available. State policy changes or proposals regarding reconciliation of hospital incentive payments must be reflected in the state' Medicaid Health Information Technology Plan (SMHP) and must be reviewed and approved by CMS.

b. Acute Care Inpatient Bed Days and Discharges for the Medicaid Share and Discharge-Related Amount

In order to ensure that the regulations accurately reflect our current policy, we proposed to amend the hospital payment regulations at § 495.310(g)(1)(i)(B) and (g)(2) to recognize that only acute-care discharges and bed-days are included in our calculations. We currently require that only discharges from the acute care part of the hospital may be counted in both the discharge-related amount and the Medicaid share. For example, in response to a frequently asked question (*https://questions.cms.gov*, FAQ #2991), we explained that nursery days and nursery discharges (for newborns) could not be counted in both the Medicare and Medicaid EHR incentive programs. We stated: ''[N]ursery days and discharges are not included in inpatient bed-day or discharge counts in calculating hospital incentives * * * because they are not considered acute inpatient services based on the level of care provided during a normal nursery stay.''

Such regulatory amendments do not represent a change in policy but rather a clarification of existing policy. The Medicaid share will count only those days that will count as inpatient-bed days for Medicare purposes under section 1886(n)(2)(D) of the Act. (See 75 FR 44498). In addition, in determining the overall EHR amount, section 1903(t)(5)(B) of the Act requires the use of applicable amounts specified in section 1886(n)(2)(A) of the Act.

Comment: A commenter expressed concern with the perceived removal of newborn nursery days from the hospital calculation. The commenter stated that this would create a disadvantage for some hospitals.

Response: We wish to be clear our policy on nursery days is not a new policy or a proposed change. The change in regulatory language on the use of acute inpatient bed days is to ensure that our regulation text clearly reflects our existing policy. The requirement to exclude non-acute inpatient bed days from the incentive payment calculation is consistent with both the Medicare and Medicaid regulations under Stage 1, as stated in our frequently asked questions (available at *https://questions.cms.gov*, FAQ #2991). In that FAQ, we explain that the Medicaid payment to hospitals is based largely on the method that applies to Medicare incentive payments. Because such nursery discharges and bed days would not be included in the Medicare calculation, and because the Medicaid statute incorporates Medicare concepts, they also would not be counted in the Medicaid formula. We are simply adding additional language to clarify that all bed days and discharges used in the calculation are strictly limited to the acute-inpatient portion of the hospital. All hospitals will continue to exclude nonacute bed days and discharges from the hospital incentive calculation.

Comment: A commenter suggested that CMS clarify and inform states and providers that neonatal intensive care days are considered acute, and should be included in the Medicaid hospital incentive payment calculation.

Response: We appreciate the commenter's suggestion and recognize that neonatal intensive care days are considered acute inpatient services that should be included in the hospital incentive calculation.

c. Hospitals Switching States

There may be a situation where a hospital changes participation in one state Medicaid EHR incentive program to participation in another state. We are clarifying that in no case will a hospital receive more than the aggregate incentive amount calculated by the state from which the hospital initiated participation in the program. Section 495.310(e) requires a hospital to choose only one state per payment year from which to receive an incentive payment. Additionally, § 495.310(f)(2) states that in no case can total incentives received by a hospital exceed the aggregate EHR incentive amount, as calculated in § 495.310(g).

In this scenario, both states will be required to work together to determine the remaining payments due to the hospital based on the aggregate incentive amount and incentive amounts already paid. The hospital will then assume the second state's payment cycle, less the money paid from the first state. States should consult with CMS before addressing this specific scenario.

We did not receive any comments and we are finalizing these provisions as proposed for the reasons provided in the proposed rule.

6. Hospital Demonstrations of Meaningful Use—Auditing and Appeals

We proposed revisions to § 495.312 under which states would have the option for CMS to conduct audits and handle any subsequent appeals of whether eligible hospitals are meaningful EHR users, on the state's behalf. (We note that the preamble text (at 77 FR 13788) did not reflect the proposed regulations.) We also proposed revisions to the SMHP requirements in § 495.332 by adding a new paragraph (g) that would allow the state, at the state's option, to include a signed agreement if the state has opted for CMS to conduct such audits and appeals. Under these proposals, the state electing the option would be required to (1) designate CMS to conduct all audits and appeals of eligible hospitals' meaningful use attestations; (2) be bound by the audit and appeal findings; (3) perform any necessary recoupments arising from the audits; and (4) be liable for any FFP granted the state to pay eligible hospitals that, upon audit (and any subsequent appeal) are determined not to have been meaningful EHR users. Finally, we proposed to revise our regulations at § 495.370 to make clear that results of any adverse CMS audits (for states that have made the election) would be subject to the CMS administrative appeals process and not the state appeals process.

Most hospitals are eligible for both Medicare and Medicaid incentive payments, submit attestations on meaningful use to us under the Medicare attestation system, and, if

successful, under the authority of section 1903(t)(8) of the Act, are deemed to have met the meaningful use requirements for Medicaid. Thus, we believe the revisions that were included in our proposed regulation text would provide states with the option to alleviate their burden to develop an audit process for hospitals and then perform audits on hospitals' meaningful use attestations. Because the regulation text made the CMS audits and appeals a state option, no state would be required to delegate the responsibility to CMS.

As discussed in the proposed rule preamble, many states indicated an interest in having CMS audit all hospitals' meaningful use attestations, and a majority of states have two or fewer Medicaid-only hospitals applying for incentive payments. Therefore, a state option for CMS to conduct audits and appeals will leverage the resources already devoted to auditing the vast majority of hospitals that are eligible for both incentive programs while retaining state flexibility to perform their own meaningful use audits and appeals for the Medicaid-only hospitals in states that choose to do so. (In cases where a state has made the election, meaningful use attestation data collected by states for the Medicaid-only eligible hospitals would be shared with our auditors to enable this process).

As discussed in the proposed rule, we note that this policy does not extend to Medicaid eligible professionals, given the anticipated large number of Medicaid eligible professionals demonstrating meaningful use solely under the Medicaid program. In addition, states that opt for CMS to conduct audits and appeals will remain responsible for auditing all other aspects of eligibility for both EPs and eligible hospitals for incentive payments, including, but not limited to—(1) adopt, implement or upgrade; (2) patient volume; (3) average stay length; and (4) calculation of payment amounts. States will also remain responsible for auditing EPs for compliance with meaningful use of certified EHR technology.

We did not receive any comments on either the preamble or the regulation text, and we are finalizing the proposed regulations for the reasons discussed previously.

7. State Flexibility for Stage 2 of Meaningful Use

We proposed to offer states flexibility with the public health measures in Stage 2, similar to that of Stage 1, subject to the same conditions and standards as the Stage 1 flexibility policy. This applies to the public health measures as well as the measure to generate lists of specific conditions to use for quality improvement, reduction of disparities, research or outreach. In addition, we proposed that whether moved to the core or left in the menu, states could also specify the means of transmission of the data or otherwise change the public health measure, as long as it does not require EHR functionality above and beyond that which is included in the ONC EHR certification criteria as finalized for Stage 2 of meaningful use.

We did not receive any comments on this policy. Although § 495.316(d)(2) already contains provisions for state flexibility, there are new public health measures for Stage 2 of meaningful use and some of the descriptions are changing slightly for Stage 2. Therefore, in this final rule, we have amended § 495.316(d)(2) to ensure that the objectives for which states will have flexibility are adequately represented for both Stage 1 and Stage 2.

8. State Medicaid Health Information Technology Plan (SMHP) and Implementation Advance Planning Document (IAPD)

a. Frequency of Health Information Technology (HIT) Implementation Advanced Planning Document (IAPD) Updates

We proposed to revise § 495.342 regarding the frequency of HIT IAPD updates. Rather than requiring each state to submit an annual HIT IAPD within 60 days from the HIT IAPD approved anniversary date, we proposed to require that a state's annual IAPD (also known as an IAPD Update (IAPD–U)) be submitted a minimum of 12 months from the date of the last CMS approved HIT IAPD. For example, if the initial HIT IAPD or previous IAPD–U was approved by CMS effective July 25, 2011, the state must submit their next HIT IAPD–U on or before July 25, 2012. Therefore, annual IAPD updates are required only if the state has not submitted an IAPD–U in the past 12 months, rather than on a fixed annual basis as currently reflected in § 495.342. We did not propose to change the requirements of the circumstances of ''as needed'' IAPD updates as defined by § 495.340.

Comment: Comments received on the change to the annual HIT IAPD submission deadline requirements were supportive of the change and the idea of reducing the administrative burden on states. A commenter requested that the phrase, ''minimum of 12 months'' be changed to ''maximum of 12 months.''

Response: We believe that a better solution would be to remove the word ''minimum'' from the text so it reads, ''Each state is required to submit the HIT IAPD Updates 12 months from the date of the last CMS approved HIT IAPD and must contain the following.'' This more accurately describes the intent to clarify the timeline in which the state must submit the annual HIT IAPD. Therefore, § 495.342 is revised accordingly.

b. Requirements of States Transitioning From HIT Planning Advanced Planning Documents (P–APDs) to HIT IAPDs

We proposed the following process for states that have an approved HIT P–APD and are ready to submit a HIT IAPD for review and approval. We do not allow states to have more than one HIT Advance Planning Document (APD) open at a time. If planning activities from the HIT P–APD have been completed, in their HIT IAPD the state should explain in a narrative format that all planning activities have been completed and the planning advanced planning document can be closed out. If there are HIT planning activities that the state determines will continue during the implementation period, these planning activities must be included as line items within the HIT IAPD budget.

We did not receive any comments on this discussion of the process states should use. We will use the previously-described process for states transitioning from a HIT P–APD to a HIT IAPD.

III. Waiver of Delayed Effective Date

We ordinarily provide a 60-day delay in the effective date of the provisions of a major rule in accordance with the Administrative Procedure Act (APA) (5 U.S.C. 553(d), which requires a 30-day delayed effective date, and the Congressional Review Act (5 U.S.C. 801(a)(3), which requires a 60-day delayed effective date for major rules. However, we can waive the delay in effective date if the Secretary finds, for good cause, that such delay is impracticable, unnecessary, or contrary to the public interest, and incorporates a statement of the finding and the reasons in the rule issued under 5 U.S.C. 553(d)(3) and 5 U.S.C. 808(2).

The Secretary finds that good cause exists to make certain regulatory provisions effective upon publication in the **Federal Register**.

Our revisions to § 495.6(f) and (g) change certain criteria for meaningful use beginning with FY 2013. Some eligible hospitals and CAHs will begin their EHR reporting period using the criteria under § 495.6(f) and (g)

beginning October 1, 2012. All of these changes are optional and are meant to provide greater flexibility in meeting these criteria. Because these revisions relieve a restriction on eligible hospitals and CAHs, a waiver of the delayed effective date is in order. It is both unnecessary to delay the effective date, and in the public's best interest to waive the delay in effective date for these changes. Furthermore, ensuring that these provisions are effective beginning with FY 2013 would mitigate any disadvantage experienced by eligible hospitals and CAHs beginning their EHR reporting periods at the beginning of the fiscal year, because it would allow them to use these revised criteria at the beginning of such period. Our revisions to § 495.6(f) include eliminating the reporting of clinical quality measures as a separate objective of meaningful use and instead including this reporting requirement as part of the definition of ''meaningful EHR user'' under § 495.4. Accordingly, the delayed effective date must also be waived with regard to the definition of ''meaningful EHR user'' under § 495.4 and the revisions to § 495.8. To allow these provisions to take effect with the beginning of FY 2013, it is impracticable to delay the effective date, which would occur after the beginning of the fiscal year.

We have also made a technical correction to § 495.102(c) so that it correctly reflects the policy we adopted in the Stage 1 final rule for EPs who predominantly furnish services in a geographic HPSA. This change is technical in nature and merely codifies our existing policy. Retaining current regulatory language would allow an error to persist. Therefore, it is unnecessary, impracticable, and contrary to the public interest to delay the effective date of this codification.

We are also waiving the delay in effective date for all of the changes we are making to subpart D of part 495. Some of these changes either codify or more clearly specify already existing policy (deletions of § 495.310(a)(1)(ii), § 495.310(a)(2)(ii), and § 495.332(d)(9) to reflect the existing policy on net average allowable cost under the Medicare and Medicaid Extenders Act of 2010; changes to § 495.310(g) to clarify that the rules are for ''acute-care inpatient discharges'' and ''acute care inpatient bed-days''; changes to § 495.310 to clarify policy on hospitals switching states). Therefore, it is unnecessary, impracticable, and contrary to the public interest to delay the effective date of these provisions as they are already in effect as CMS policies.

Others of these changes merely provide states or eligible providers with additional flexibility to adopt policies that will be of benefit to the states or providers, thus relieving a restriction (§ 495.302 change in definition for children's hospital and practices predominantly; § 495.304 regarding allowing EPs and eligible hospitals to include individuals enrolled in a Medicaid program in 2013; changes to § 495.306 regarding additional flexibility for determining patient volume in 2013; changes to § 495.312 and § 495.332(c) and (g) and § 495.370 regarding additional options for states in conducting audits and appeals of eligible hospitals' meaningful use; and changes to § 495.342 adding flexibility on submission of the HIT IAPD). These changes will be in the public interest of states or eligible providers or both, because they provide additional flexibility allowing states to relieve their burdens, or allowing additional providers to qualify for Medicaid incentives under the program. It is important that these changes be in place as soon as possible, and especially as of October 1, 2012 for eligible hospitals beginning their fiscal years. Therefore, a waiver in the delay in the effective date is both impracticable and contrary to the public interest, and the Secretary finds good cause not to delay the effective date of these provisions.

The final change to subpart D (in § 495.304(f) and § 495.332(b)(6)) applies to EPs, who will not begin payment year 2013 until the beginning of the calendar year in any case. However, in the interest of ensuring that states have a reasonable opportunity to amend their SMHPs and to ensure consistency in effective date for the entire subpart it is in the public interest to waive the delay in effective date for these changes as well. Again, the effect on EPs would not take place until January of 2013 in any case—well after a 60-day delay has occurred.

For all these reasons, we believe that a 60-day delay in the effective date of the previously discussed provisions would be unnecessary, impracticable, and contrary to the public interest. Therefore, we find good cause for waiving the 60-day delay in the effective date for these provisions and making the provisions effective upon publication.

IV. Collection of Information Requirements

Under the Paperwork Reduction Act of 1995, we are required to provide 30-day notice in the **Federal Register** and solicit public comment before a collection of information requirement is submitted to the Office of Management and Budget (OMB) for review and approval. In order to fairly evaluate whether an information collection should be approved by OMB, section 3506(c)(2)(A) of the Paperwork Reduction Act of 1995 requires that we solicit comment on the following issues:

- The need for the information collection and its usefulness in carrying out the proper functions of our agency.
- The accuracy of our estimate of the information collection burden.
- The quality, utility, and clarity of the information to be collected.
- Recommendations to minimize the information collection burden on the affected public, including automated collection techniques.

The following is a discussion of the requirements we believe are subject to the PRA and collection of information requirements (ICRs) as a result of this final rule. This analysis finalizes our projections which were proposed in the March 7, 2012 **Federal Register** (77 FR 13790 through 13800) in which we proposed a revision to the existing PRA package approved under OMB control number 0938–1158. The projected numbers of EPs, eligible hospitals, CAHs, MA organizations, MA EPs, and MA-affiliated hospitals are based on the numbers used in the impact analysis assumptions as well as estimated federal costs and savings in section V. of this final rule. The actual burden will remain constant for all of Stage 2 as EPs, eligible hospitals, and CAHs will only need to attest that they have successfully demonstrated meaningful use one time per year. The only variable from year to year in Stage 2 will be the number of respondents, as noted in the impact analysis assumptions. For the purposes of this analysis, we are focusing only on 2014, the first year in which a provider may participate in Stage 2 of the Medicare EHR Incentive Program. We do not believe the burden for EPs, eligible hospitals, and CAHs participating in Stage 1 prior to 2014 will be different from the agency information collection activities (75 FR 65354) based on this final rule. Beginning in 2012, Medicare EPs, eligible hospitals, and CAHs have the option to electronically report their clinical quality measures through the respective electronic reporting pilots. The burden for the EP pilot is discussed in the CY 2012 Medicare PFS final rule with comment period (76 FR 73450 through 73451). For eligible hospitals and CAHs, the burden is discussed in the CY 2012 OPPS final rule with comment period (76 FR 74489 through 74492).

A. ICR Regarding Demonstration of Meaningful Use Criteria (§ 495.6 and § 495.8)

In § 495.6 of the proposed rule, we proposed that to successfully demonstrate meaningful use of CEHRT for Stage 2, an EP, eligible hospital or CAH (collectively referred to as ''provider'' in this section) must attest, through a secure mechanism in a specified manner, to the following during the EHR reporting period: (1) The provider used CEHRT and specified the technology was used; and (2) the provider satisfied each of the applicable objectives and associated measures in § 495.6. In § 495.8, we proposed that a provider must also successfully report the clinical quality measures selected by CMS to CMS or the states, as applicable. We assumed that the CEHRT adopted by the provider would capture many of the objectives and associated measures and generate automated numerator and denominator information where required, or generate automated summary reports. We also expect that the provider would enable the functionality required to complete the objectives and associated measures that require the provider to attest that they have done so.

We proposed that EPs would be required to report on a total of 17 core objectives and associated measures, 3 of 5 menu set objectives and associated measures, and 12 ambulatory clinical quality measures. We estimated the total average annual cost burden for all 198,912 nonhospital-based EPs who may attest in 2014 to be $186,098,885 (198,912 EPs × 10 hours 24 minutes × $89.96 (mean hourly rate for physicians based on May 2010 Bureau of Labor Statistics (BLS) data)). We proposed that eligible hospitals and CAHs would be required to report on a total of 16 core objectives and associated measures, 2 of the 4 menu set objectives and associated measures, and 24 clinical quality measures. We estimated the total annual cost burden for all eligible hospitals and CAHs to attest to EHR technology, meaningful use core set and menu set criteria, and electronically submit the clinical quality measures would be $2,375,564 (4,993 eligible hospitals and CAHs × $62.23 (12 hours 14 minutes × $62.23 (mean hourly rate for lawyers based on May 2010 BLS) data)).

Comment: A commenter suggested CMS account for Web site responsiveness when estimating the burden for providers as they enter attestation data. The commenter noted that the Web site would take several minutes after entering data until the next page would become available.

Response: We cannot forecast technical difficulties with our Web sites, but strive to maintain a high level of responsiveness.

Comment: Some commenters suggested CMS underestimated the amount of time it takes providers to attest that they have successfully demonstrated meaningful use. They noted that providers see attestation as more than just reporting their data at the end of the reporting period, rather, a process that is continuously monitored throughout that time. Others noted that the operational burden that providers encounter on a per-patient basis will increase significantly in Stage 2.

Response: We appreciate the public comments on this burden analysis. However, this analysis specifically reflects the amount of time we estimate providers will take to prepare and report their meaningful use data through the Medicare and Medicaid EHR Incentive Programs Registration and Attestation System. We cannot account for individual providers' workflows or training needs to participate in these programs.

After consideration of the public comments received, we are finalizing these burden estimates as proposed but have updated them to reflect policy changes implemented through this final rule.

In this final rule, there are 13 core objectives and up to 3 menu set objectives that will require an EP to enter numerators and denominators during attestation. Eligible hospitals and CAHs will have to attest they have met 10 core objectives and 3 menu set objectives that require numerators and denominators. For objectives and associated measures requiring a numerator and denominator, we limit our estimates to actions taken in the presence of CEHRT. We do not anticipate a provider will maintain two recordkeeping systems when CEHRT is present. Therefore, we assume that all patient records that will be counted in the denominator will be kept using certified EHR technology. We expect it will take an individual provider or their designee approximately 10 minutes to attest to each meaningful use objective and associated measure that requires a numerator and denominator to be generated, as well as each CQM for providers attesting in their first year of the program.

Additionally, providers will be required to report they have completed objectives and associated measures that require a ''yes'' or ''no'' response during attestation. For EPs, there are 3 core objectives and up to 3 menu set objectives that will require a ''yes'' or ''no'' response during attestation. For eligible hospitals and CAHs, there are 5 core objectives and that will require a ''yes'' or ''no'' response during attestation and no such menu set objectives. We expect that it will take a provider or their designee 1 minute to attest to each objective that requires a ''yes'' or ''no'' response.

Providers will also be required to attest that they are protecting electronic health information. We estimate completion of the analysis required to successfully meet the associated measure for this objective will take approximately 6 hours, which is identical to our estimate for the Stage 1 requirement. This burden estimate assumes that covered entities are already conducting and reviewing these risk analyses under current HIPAA regulations. Therefore, we have not accounted for the additional burden associated with the conduct or review of such analyses.

Table 20 lists those objectives and associated measures for EPs, eligible hospitals and CAHs. We estimate the core set of objectives and associated measures will take an EP 8 hours and 13 minutes to complete, and will take an eligible hospital or CAH 7 hours and 45 minutes to complete. For EPs, we estimate the completion of 3 menu set objectives and associated measures will take between 3 minutes and 30 minutes to complete, depending on the combination of objectives they choose to attest to. We estimate the selection, preparation, and electronic submission of the 9 ambulatory clinical quality measures will take EPs 1 hour and 30 minutes. We estimate it will take eligible hospitals and CAHs 30 minutes to attest to the 3 menu set objectives they choose. For eligible hospitals and CAHs, we estimate the selection, preparation, and electronic submission of 16 required clinical quality measures will take 2 hours and 40 minutes.

TABLE 20—BURDEN ESTIMATES

Eligible professionals	Eligible hospitals and CAHs	Stage 2 measures	Burden estimate per respondent (EPs)	Burden estimate per respondent (hospitals)
CORE SET				
Use computerized provider order entry (CPOE) for medication, laboratory and radiology orders directly entered by any licensed healthcare professional who can enter orders into the medical record per state, local and professional guidelines.	Use computerized provider order entry (CPOE) for medication, laboratory and radiology orders directly entered by any licensed healthcare professional who can enter orders into the medical record per state, local and professional guidelines.	More than 60% of medication, 30% of laboratory, and 30% of radiology orders created by the EP or authorized providers of the eligible hospital's or CAH's inpatient or emergency department (POS 21 or 23) during the EHR reporting period are recorded using CPOE.	10 minutes	10 minutes.
Generate and transmit permissible prescriptions electronically (eRx).	.....	More than 50% of all permissible prescriptions, or all prescriptions written by the EP and queried for a drug formulary and transmitted electronically using CEHRT.	10 minutes.	
Record the following demographics. • Preferred language • Sex • Race • Ethnicity • Date of birth	Record the following demographics. • Preferred language • Sex • Race • Ethnicity • Date of birth • Date and preliminary cause of death in the event of mortality in the eligible hospital or CAH	More than 80% of all unique patients seen by the EP or admitted to the eligible hospital's or CAH's inpatient or emergency department (POS 21 or 23) have demographics recorded as structured data.	10 minutes	10 minutes.
Record and chart changes in vital signs:. • Height/length • Weight • Blood pressure (age 3 and over) • Calculate and display BMI • Plot and display growth charts for patients 0–20 years, including BMI	Record and chart changes in vital signs:. • Height/length • Weight • Blood pressure (age 3 and over) • Calculate and display BMI • Plot and display growth charts for patients 0–20 years, including BMI	More than 80% of all unique patients seen by the EP or admitted to the eligible hospital's or CAH's inpatient or emergency department (POS 21 or 23) during the EHR reporting period have blood pressure (for patients age 3 and over only) and height/length and weight (for all ages) recorded as structured data.	10 minutes	10 minutes.
Record smoking status for patients 13 years old or older.	Record smoking status for patients 13 years old or older.	More than 80% of all unique patients 13 years old or older seen by the EP or admitted to the eligible hospital's or CAH's inpatient or emergency departments (POS 21 or 23) have smoking status recorded as structured data.	10 minutes	10 minutes.
Use clinical decision support to improve performance on high-priority health conditions.	Use clinical decision support to improve performance on high-priority health conditions.	1. Implement five clinical decision support interventions related to four or more clinical quality measures at a relevant point in care for the entire EHR reporting period. Absent four clinical quality measures related to an EP, eligible hospital or CAH's scope of practice or patient population, the clinical decision support interventions must be related to improving healthcare efficiency.		

TABLE 20—BURDEN ESTIMATES—Continued

Eligible professionals	Eligible hospitals and CAHs	Stage 2 measures	Burden estimate per respondent (EPs)	Burden estimate per respondent (hospitals)
.....	.....	2. The EP, eligible hospital or CAH has enabled and implemented the functionality for drug-drug and drug-allergy interaction checks for the entire EHR reporting period.	1 minute	1 minute.
Incorporate clinical lab-test results as structured data.	Incorporate clinical lab-test results as structured data.	More than 55% of all clinical lab tests results ordered by the EP or by authorized providers of the eligible hospital or CAH for patients admitted to its inpatient or emergency department (POS 21 or 23) during the EHR reporting period whose results are either in a positive/negative affirmation or numerical format are incorporated in CEHRT as structured data.	10 minutes	10 minutes.
Generate lists of patients by specific conditions to use for quality improvement, reduction of disparities, research, or outreach.	Generate lists of patients by specific conditions to use for quality improvement, reduction of disparities, research, or outreach.	Generate at least one report listing patients of the EP, eligible hospital or CAH with a specific condition.	1 minute	1 minute.
Use clinically relevant information to identify patients who should receive reminders for preventive/follow-up care and send these patients the reminder, per patient preference.	.....	More than 10% of all unique patients who have had two or more office visits with the EP within the 24 months before the beginning of the EHR reporting period were sent a reminder, per patient preference when available.	10 minutes.	
	Automatically track medications from order to administration using assistive technologies in conjunction with an electronic medication administration record (eMAR).	More than 10% of medication orders created by authorized providers of the eligible hospital's or CAH's inpatient or emergency department (POS 21 or 23) during the EHR reporting period for which all doses are tracked using eMAR.	.....	10 minutes.
Provide patients the ability to view online, download, and transmit their health information within 4 business days of the information being available to the EP.	.....	1. More than 50% of all unique patients seen by the EP during the EHR reporting period are provided timely (within 4 business days after the information is available to the EP) online access to their health information subject to the EP's discretion to withhold certain information. 2. More than 5% of all unique patients seen by the EP during the EHR reporting period (or their authorized representatives) view, download, or transmit to a third party their health information.	10 minutes.	

TABLE 20—BURDEN ESTIMATES—Continued

Eligible professionals	Eligible hospitals and CAHs	Stage 2 measures	Burden estimate per respondent (EPs)	Burden estimate per respondent (hospitals)
	Provide patients the ability to view online, download, and transmit information about a hospital admission.	1. More than 50% of all patients who are discharged from the inpatient or emergency department (POS 21 or 23) of an eligible hospital or CAH have their information available online within 36 hours of discharge. 2. More than 5% of all patients (or their authorized representatives) who are discharged from the inpatient or emergency department (POS 21 or 23) of an eligible hospital or CAH view, download or transmit to a third party their information during the reporting period.	.....	10 minutes.
Provide clinical summaries for patients for each office visit.	.....	Clinical summaries provided to patients or patient-authorized representatives within 1 business day for more than 50% of office visits.	10 minutes.	
Use CEHRT to identify patient-specific education resources and provide those resources to the patient.	Use CEHRT to identify patient-specific education resources and provide those resources to the patient.	Patient-specific education resources identified by CEHRT are provided to patients for more than 10% of all unique patients with office visits seen by the EP during the EHR reporting period. More than 10% of all unique patients admitted to the eligible hospital's or CAH's inpatient or emergency departments (POS 21 or 23) are provided patient-specific education resources identified by CEHRT.	10 minutes	10 minutes.
Use secure electronic messaging to communicate with patients on relevant health information.	.....	A secure message was sent using the electronic messaging function of CEHRT by more than 5% of unique patients (or their authorized representatives) seen by the EP during the EHR reporting period.	10 minutes.	
The EP who receives a patient from another setting of care or provider of care or believes an encounter is relevant should perform medication reconciliation.	The eligible hospital or CAH who receives a patient from another setting of care or provider of care or believes an encounter is relevant should perform medication reconciliation.	The EP, eligible hospital or CAH performs medication reconciliation for more than 50% of transitions of care in which the patient is transitioned into the care of the EP or admitted to the eligible hospital's or CAH's inpatient or emergency department (POS 21 or 23).	10 minutes	10 minutes.

TABLE 20—BURDEN ESTIMATES—Continued

Eligible professionals	Eligible hospitals and CAHs	Stage 2 measures	Burden estimate per respondent (EPs)	Burden estimate per respondent (hospitals)
The EP who transitions their patient to another setting of care or provider of care or refers their patient to another provider of care provides a summary care record for each transition of care or referral.	The eligible hospital or CAH who transitions their patient to another setting of care or provider of care or refers their patient to another provider of care provides a summary care record for each transition of care or referral.	1. The EP, eligible hospital, or CAH that transitions or refers their patient to another setting of care or provider of care provides a summary of care record for more than 50% of transitions of care and referrals. 2. The EP, eligible hospital or CAH that transitions or refers their patient to another setting of care or provider of care provides a summary of care record for more than 10% of such transitions and referrals either (a) electronically transmitted using CEHRT to a recipient or (b) where the recipient receives the summary of care record via exchange facilitated by an organization that is a NwHIN Exchange participant or in a manner that is consistent with the governance mechanism ONC establishes for the nationwide health information network. 3. An EP, eligible hospital or CAH must satisfy one of the two following criteria: (A) conducts one or more successful electronic exchanges of a summary of care document, as part of which is counted in ''measure 2'' (for EPs the measure at § 495.6(j)(14)(ii)(B) and for eligible hospitals and CAHs the measure at § 495.6(l)(11)(ii)(B)) with a recipient who has EHR technology that was developed designed by a different EHR technology developer than the sender's EHR technology certified to 45 CFR 170.314(b)(2).	10 minutes	10 minutes.
Capability to submit electronic data to immunization registries or immunization information systems except where prohibited, and in accordance with applicable law and practice.	Capability to submit electronic data to immunization registries or immunization information systems except where prohibited, and in accordance with applicable law and practice.	Successful ongoing submission of electronic immunization data from CEHRT to an immunization registry or immunization information system for the entire EHR reporting period.	1 minute	1 minute.
	Capability to submit electronic reportable laboratory results to public health agencies, except where prohibited, and in accordance with applicable law and practice.	Successful ongoing submission of electronic reportable laboratory results from CEHRT to public health agencies for the entire EHR reporting period.	.....	1 minute.
	Capability to submit electronic syndromic surveillance data to public health agencies, except where prohibited, and in accordance with applicable law and practice.	Successful ongoing submission of electronic syndromic surveillance data from CEHRT to a public health agency for the entire EHR reporting period.	.....	1 minute.

Time to Attest and Report Clinical Quality Measures			1 hour 30 minutes	2 hours 40 minutes.
Total—Core Set (including CQMs) + Least Burdensome Menu Set Criteria			9 hours 46 minutes.	
Total—Core Set (including CQMs) + Most Burdensome Menu Set Criteria			10 hours 13 minutes.	10 hours 55 minutes.

First, we will discuss the burden associated with the EP attestation to meeting the core meaningful use objectives and associated measures. We estimate that it will take no longer than 8 hours and 13 minutes to attest that

during the EHR reporting period, they used the CEHRT, specify the EHR technology used, and satisfy each of the applicable core objectives and associated measures. We estimate it will take an EP 30 minutes if they choose to submit the most burdensome objectives and associated measures from the menu set. If an EP chooses to attest to the least burdensome menu set objectives and associated measures, we estimate this will take approximately 3 minutes. We also estimate that it will take an EP an additional 1 hour and 30 minutes to select, prepare, and electronically submit the ambulatory clinical quality measures. The total burden hours for an EP to attest to the most burdensome criteria previously specified is 10 hours and 13 minutes. The total burden hours for an EP to attest to the least burdensome criteria previously specified is 9 hours and 46 minutes. We estimate that there could be approximately 537,600 nonhospital-based Medicare and Medicaid EPs in 2014. We anticipate approximately 37 percent (198,912) of these EPs may attest to the information previously specified (after registration and completion of Stage 1) in CY 2014 to receive an incentive payment. We estimate the burden for the approximately 13,000 MA EPs in the MAO burden section. We estimate the total burden associated with these requirements for an EP is 10 hours and 13 minutes (8 hours 13 minutes + 30 minutes + 1 hour 30 minutes). The total estimated annual cost burden for all EPs to attest to EHR technology, meaningful use core set and most burdensome menu set criteria, and electronically submit the ambulatory clinical quality measures is $182,877,942 (198,912 EPs × 10 hours 13 minutes × $89.96 (mean hourly rate for physicians based on May 2010 Bureau of Labor Statistics (BLS) data)). We estimate the total burden associated with these requirements for an EP is 9 hours and 46 minutes (8 hours 13 minutes + 3 minutes + 1 hour 30 minutes). The total estimated cost burden for all EPs to attest to EHR technology, meaningful use core set and least burdensome menu set criteria, and electronically submit the ambulatory clinical quality measures is $174,825,587 (198,912 EPs × 9 hours 46 minutes × $89.96 (mean hourly rate for physicians based on May 2010 BLS data)).

Similarly, eligible hospitals and CAHs will attest that they have met the core meaningful use objectives and associated measures, and will electronically submit the clinical quality measures. We estimate that it will take no longer than 7 hours and 45 minutes to attest that during the EHR reporting period, they used the CEHRT, specify the EHR technology used, and satisfied each of the applicable core objectives and associated measures. We estimate it will take an eligible hospital or CAH 30 minutes to choose and submit the objectives and associated measures from the menu set. We also estimate that it will take an eligible hospital or CAH an additional 2 hours and 40 minutes to select, prepare, and electronically submit the clinical quality measures. Therefore, the total burden hours for an eligible hospital or CAH to attest to the aforementioned criteria is 10 hours, 55 minutes. We estimate that there are about 4,993 eligible hospitals and CAHs (3,573 acute care hospitals, 1,325 CAHs, 84 children's hospitals, and 11 cancer hospitals) that may attest to the aforementioned criteria (after registration and completion of Stage 1) in FY 2014 to receive an incentive payment. We estimate the burden for the 30 MA-affiliated hospitals in section III.B. of this final rule. We estimate the total burden associated with these requirements for an eligible hospital or CAH is 10 hours and 55 minutes (7 hours 45 minutes + 30 minutes + 2 hours 40 minutes). The total estimated annual cost burden for all eligible hospitals and CAHs to attest to EHR technology, meaningful use core set and menu set criteria, and electronically submit the clinical quality measures is $2,069,061 (4,993 eligible hospitals and CAHs × $62.23 (11 hours 4 minutes × $62.23 (mean hourly rate for lawyers based on May 2010 BLS) data)).

B. ICRs Regarding Qualifying MA Organizations (§ 495.210)

We estimate that the burden will be significantly less for qualifying MA organizations attesting to the meaningful use of their MA EPs in Stage 2, because—(1) qualifying MA organizations do not have to report the ambulatory clinical quality measures for their qualifying MA EPs; and (2) qualifying MA EPs use the EHR technology in place at a given location or system, so if CEHRT is in place and the qualifying MA organization requires its qualifying MA EPs to use the technology, qualifying MA organizations will be able to determine at a faster rate than individual FFS EPs, that its qualifying MA EPs meaningfully used CEHRT. In other words, qualifying MA organizations can make the determination en masse if the CEHRT is required to be used at its facilities, whereas under FFS, each EP likely must make the determination on an individual basis. We estimate that, on average, it will take an individual 45 minutes to collect information necessary to determine if a given qualifying MA EP has met the meaningful use objectives and measures, and 15 minutes for an individual to make the attestation for each MA EP. Furthermore, the individuals performing the assessment and attesting will not likely be eligible professionals, but non-clinical staff. We believe that the individual gathering the information could be equivalent to a GS 9, step 1, with an hourly rate of approximately $25.00/hour, and the person attesting (and who may bind the qualifying MA organization based on the attestation) could be equivalent to a GS 15, step 1, or approximately $59.00/hour. Therefore, for the approximately 13,000 potentially qualifying MA EPs, we believe it will cost the participating qualifying MA organizations approximately $435,500 annually to make the attestations ([9,750 hours × $25.00] + [3,250 hours × $59.00]).

Furthermore, MA-affiliated eligible hospitals will be able to complete the attestations slightly faster than eligible hospitals because MA-affiliated eligible hospitals do not have to report the hospital clinical quality measures. While it is estimated that it will take an eligible hospital or CAH approximately between 16 hours, 24 minutes and 16 hours, 33 minutes to attest to the applicable meaningful use objectives and associated measures, 8 of those hours are attributed to reporting clinical quality measures, which MA organizations do not have to report. Therefore, we estimate that it will take between 8 hours, 24 minutes and 8 hours, 33 minutes (which on average is 8 hours 29 minutes) for an MA organization's MA-affiliated eligible hospitals to make the attestations. We believe that the individual gathering the information could be equivalent to a GS 9, step 1, with an hourly rate of approximately $25.00/hour, and the person attesting (and who may bind the qualifying MA organization based on the attestation) could be equivalent to a GS 15, step 1, or approximately $59.00/hour. We believe that the person gathering the information could dedicate 7 of the estimated hours to gathering the information, and the individual certifying could take 1 hour and 29 minutes of the estimated time. Therefore, for the approximately 30 potentially qualifying MA-affiliated eligible hospitals, we believe it will cost the participating qualifying MA organizations in the aggregate approximately $7,870 annually to

successfully attest ([210 hrs × $25.00] + [44 hrs × $59.00]).

We did not receive any comments and we are finalizing these estimates as proposed.

C. ICRs Regarding State Medicaid Agency and Medicaid EP and Hospital Activities (§ 495.332 Through § 495.344)

The burden associated with this section is the time and effort associated with completing the single provider election repository and each state's process for the administration of the Medicaid incentive payments, including tracking of attestations and oversight; the submission of the state Medicaid HIT Plan and the additional planning and implementation documents; enrollment or reenrollment of providers, and collection and submission of the data for providers to demonstrate that they have adopted, implemented, or upgraded CEHRT or that they are meaningful users of such technology. We believe the burden associated with these requirements has already been accounted for in our discussion of the burden for § 495.316 in the Stage 1 final rule. However, we proposed to revise 42 CFR 495 regarding the frequency of HIT IAPD updates. Rather than requiring each state to submit an annual HIT IAPD within 60 days from the HIT IAPD approved anniversary date, we proposed to require that a state's annual IAPD or IAPD Update (IAPD–U) be submitted at a minimum of 12 months from the date of the last CMS approval. We are finalizing our proposed revision to 42 CFR 495; therefore, annual IAPD updates are only required if a state has not submitted an IAPD–U in the past 12 months, which will create less of a burden on the states. We expect that it will take a state 70 hours to update an annual IAPD. We believe that the requirement for states to agree to have CMS conduct audits and appeals for hospitals for meaningful use will reduce state burden, as they will not conduct their own audits. Also, the alternatives for calculating patient volume will alleviate state burden as patient volume will be more easily calculated.

We did not receive any comments and we are finalizing these estimates as proposed.

TABLE 21—ESTIMATED ANNUAL REPORTING AND RECORDKEEPING REQUIREMENTS

Reg section	OMB Control No.	Number of respondents	Number of responses	Burden per response (hours)	Total annual burden (hours)	Hourly labor cost of reporting ($)	Total cost ($)

V. Regulatory Impact Analysis

A. Statement of Need

This final rule will implement the provisions of the ARRA that provide incentive payments to EPs, eligible hospitals, and CAHs participating in Medicare and Medicaid programs that adopt and meaningfully use CEHRT. The final rule specifies applicable criteria for earning incentives and avoiding payment adjustments.

B. Overall Impact

We have examined the impacts of this rule as required by Executive Order 12866 on Regulatory Planning and Review (September 30, 1993), Executive Order 13563 on Improving Regulation and Regulatory Review (January 18, 2011), the Regulatory Flexibility Act (RFA) (September 19, 1980, Pub. L. 96–354), section 1102(b) of the Social Security Act, section 202 of the Unfunded Mandates Reform Act of 1995 (March 22, 1995; Pub. L. 104–4), Executive Order 13132 on Federalism (August 4, 1999) and the Congressional Review Act (5 U.S.C. 804(2)).

Executive Orders 12866 and 13563 direct agencies to assess all costs and benefits of available regulatory alternatives and, if regulation is necessary, to select regulatory approaches that maximize net benefits (including potential economic, environmental, public health and safety effects, distributive impacts, and equity). A regulatory impact analysis (RIA) must be prepared for major rules with economically significant effects ($100 million or more in any 1 year). This final rule is anticipated to have an annual effect on the economy of $100 million or more, making it an economically significant rule under the Executive Order and a major rule under the Congressional Review Act. Accordingly, we have prepared a Regulatory Impact Analysis that to the best of our ability presents the costs and benefits of the final rule.

As noted in section I. of this final rule, this final rule is one of two coordinated rules related to the adoption and meaningful use of CEHRT. The other is ONC's final rule, titled ''Health Information Technology: Standards, Implementation Specifications, and Certification Criteria for Electronic Health Record Technology, 2014 Edition; Revisions to the Permanent Certification Program for Health Information Technology'' published elsewhere in this **Federal Register**. This analysis focuses on the impact associated with Stage 1 meaningful use participation in 2014, Stage 2 requirements for meaningful use, the changes in quality measures that will take effect beginning in 2014, and other changes in the Medicare and Medicaid EHR Incentive Programs.

A number of factors will affect the adoption of EHR systems and demonstration of meaningful use. Many of these factors are addressed in this analysis and in the provisions of the final rule titled ''Health Information Technology: Standards, Implementation Specifications, and Certification Criteria for Electronic Health Record Technology, 2014 Edition; Revisions to the Permanent Certification Program for Health Information Technology'' published elsewhere in this **Federal Register**. Readers should understand that these forecasts are also subject to substantial uncertainty since demonstration of meaningful use will depend not only on the standards and requirements for FYs 2014 and 2015 for eligible hospitals and CYs 2014 and 2015 for EPs, but on future rulemakings issued by the HHS.

The Act provides Medicare and Medicaid incentive payments for the meaningful use of CEHRT. Additionally, the Medicaid program also provides incentives for the adoption, implementation, and upgrade of CEHRT. Payment adjustments are incorporated into the Medicare program for providers unable to demonstrate meaningful use. The absolute and relative strength of these is unclear. For example, a provider with relatively small Medicare billings will be less disadvantaged by payment adjustments than one with relatively large Medicare billings. Another uncertainty arises because there are likely to be ''bandwagon'' effects as the number of providers using EHRs rises, thereby inducing more participation in the

incentives program, as well as greater adoption by entities (for example, clinical laboratories) that are not eligible for incentives or subject to payment adjustments, but do business with EHR adopters. It is impossible to predict exactly if and when such effects may take hold.

One legislative uncertainty arises because under current law, physicians are scheduled for payment reductions under the sustainable growth rate (SGR) formula for determining Medicare payments. The current override of SGR payment reductions prevents any further reductions of Medicare physician payments throughout the rest of 2012. Any payment reductions implemented in CY 2013 and subsequent calendar years could cause major changes in physician behavior, enrollee care, and other Medicare provider payments, but the specific nature of these changes is exceptionally uncertain. Under a current law scenario, the EHR incentives or payment adjustments will exert only a minor influence on physician behavior relative to any large payment reductions. However, the Congress has legislatively avoided physician payment reductions for each year since 2002.

All of these factors taken together make it difficult to predict with precision the timing or rates of adoption and ultimately meaningful use. Further, new data regarding rates of adoption or costs of implementation is just starting to emerge. Because of this continued uncertainty, these estimates for adoption rates should be used with caution. Our estimate of meaningful use demonstration assumes that by 2019 nearly 100 percent of hospitals and nearly 70 percent of EPs will be meaningful users. This estimate is based on the substantial economic incentives created by the combined direct and indirect factors affecting providers.

Data from the EHR Incentive Program to date has shown that about 12 percent of EPs and 8 percent of hospitals received incentive payments in 2011, the first year. This may be because providers have taken a ''wait and see approach'' in the first year of implementation or that they have had problems receiving certified systems. Two thousand eleven was the first year of the program and saw initially slow, but rapidly accelerating, growth in qualification for and payment of meaningful use incentives. Given that this is very early data, and given the differences between Stage 1 and Stage 2 requirements, this data only indicates preliminary penetration rates.

Overall, we expect spending under the EHR incentive program for transfer payments to Medicare and Medicaid providers between 2014 and 2019 to be $15.4 billion (these estimates include payment adjustments for Medicare providers who do not achieve meaningful use in 2015 and subsequent years in the amount of $2.1 billion). We have also estimated ''per entity'' costs for EPs, eligible hospitals, and CAHs for implementation/maintenance and reporting requirement costs, not all costs. We believe also that adopting entities will achieve dollar savings at least equal to their total costs, and that there will be additional benefits to society. We believe that implementation costs are significant for each participating entity because providers must purchase CEHRT to qualify as meaningful users of EHRs. However, we believe that providers who have already purchased CEHRT and participated in Stage 1 of meaningful use will experience significantly lower costs for participation in the program. We continue to believe that the short-term costs to demonstrate meaningful use of CEHRT are outweighed by the long-term benefits, including practice efficiencies and improvements in medical outcomes. Although both cost and benefit estimates are highly uncertain, the RIA that we have prepared to the best of our ability presents the costs and benefits of this final rule.

Previously, the Stage 2 proposed rule and the Stage 1 final rule impact analyses showed two plausible scenarios for program costs. In this RIA, we are showing a scenario based on the FY 2013 Mid-Session Review of the President's budget. The estimates are based on the limited actual historical data that is now available for the EHR Incentive Programs. The new projections differ somewhat from the two scenarios presented previously. The major reasons for the differences are different assumed penetration rates based on more recent data and analysis, and revised assumptions as to the timing of payments in relation to when meaningful use is achieved based on the actual experience of the programs to date. When compared with the two illustrations from the Stage 2 proposed rule and Stage 1 final rule, the penetration rates for the current estimates are generally closer to those in the high cost scenario. In general, the actual program experience, which is included in the new estimates, showed somewhat lower payments early in the first year, and somewhat higher payments towards the end of the first year than assumed in the two previously-used scenarios. The accounting statement numbers under the 7-percent discount for the two scenarios from the previous estimates were $706 million and $2,346 million. The current accounting statement number under the 7-percent discount is $2,558 million. The current projections, while based on more up-to-date information, are still very uncertain and actual future outcomes are likely to differ somewhat from these projections.

Comment: A commenter suggested that the impact analysis should only address Stage 2 of the EHR Incentive Programs.

Response: Although we considered the idea of only addressing Stage 2 in this impact analysis, we do not believe that such an analysis would provide a comprehensive impact of this final rule. This final rule establishes not only Stage 2 criteria but also changes to Stage 1 criteria and both payment adjustments and hardship exceptions that could affect providers at all stages of meaningful use. In addition, providers in all payment years will be at differing stages of meaningful use, and any impact analysis that focused on a single stage would not accurately capture the costs and benefits that accrue from all providers who are participating in the EHR Incentive Programs during a given payment year. Therefore, we include all providers in this impact analysis.

C. Anticipated Effects

The objective of the remainder of this RIA is to summarize the costs and benefits of the HITECH Act incentive program for the Medicare FFS, Medicaid, and MA programs. We also provide assumptions and a narrative addressing the potential costs to the industry for implementation of this technology.

1. Overall Effects

a. Regulatory Flexibility Analysis and Small Entities

The Regulatory Flexibility Act (RFA) requires agencies to prepare a Final Regulatory Flexibility Analysis to describe and analyze the impact of the final rule on small entities unless the Secretary can certify that the regulation will not have a significant impact on a substantial number of small entities. In the healthcare sector, Small Business Administration (SBA) size standards define a small entity as one with between $7 million and $34 million in annual revenues. For the purposes of the RFA, essentially all non-profit organizations are considered small entities, regardless of size. Individuals and states are not included in the definition of a small entity. Since the vast majority of Medicare providers

(well over 90 percent) are small entities within the RFA's definitions, it is the normal practice of HHS simply to assume that all affected providers are ''small'' under the RFA. In this case, most EPs, eligible hospitals, and CAHs are either nonprofit or meet the SBA's size standard for small business. We also believe that the effects of the incentives program on many and probably most of these affected entities will be economically significant. Accordingly, this RIA section, in conjunction with the remainder of the preamble, constitutes the required Regulatory Flexibility Analysis. We believe that the adoption and meaningful use of EHRs will have an impact on virtually every EP and eligible hospital, as well as CAHs and some EPs and hospitals affiliated with MA organizations. While the program is voluntary, in the first 5 years it carries substantial positive incentives that will make it attractive to virtually all eligible entities. Furthermore, entities that do not demonstrate meaningful use of EHR technology for an applicable reporting period will be subject to significant Medicare payment reductions beginning with 2015. The anticipation of these Medicare payment adjustments are expected to motivate EPs, eligible hospitals, and CAHs to adopt and meaningfully use certified EHR technology.

For some EPs, CAHs and eligible hospitals the EHR technology they currently have could be upgraded to meet the criteria for certified EHR technology as defined for this program. These costs may be minimal, involving no more than a software upgrade. ''Home-grown'' EHR systems that might exist may also require an upgrade to meet the certification requirements. We believe many currently noncertified EHR systems will require significant changes to achieve certification and that EPs, CAHs, and eligible hospitals will have to make process changes to achieve meaningful use.

The most recent data available suggests that more providers have adopted EHR technology since the publication of the Stage 1 final rule. A 2011 survey conducted by the ONC and the AHA found that the percentage of U.S. hospitals which had adopted EHRs doubled from 16 to 35 percent between 2009 and 2011. In November 2011, a CDC survey found the percentage of physicians who adopted basic EHRs in their practice had doubled from 17 to 34 percent between 2008 and 2011, with the percent of primary care doctors using this technology nearly doubling from 20 to 39 percent. While these numbers are encouraging, they are still low relative to the overall population of providers. The majority of EPs still need to purchase certified EHR technology, implement this new technology, and train their staff on its use. The costs for implementation and complying with the criteria of meaningful use could lead to higher operational expenses. However, we believe that the combination of payment incentives and long-term overall gains in efficiency will compensate for the initial expenditures.

(1) Number of Small Entities

In total, we estimate that there are approximately 624,000 healthcare organizations (EPs, practices, eligible hospitals or CAHs) that will be affected by the incentive program. These include hospitals and physician practices as well as doctors of medicine or osteopathy, dental surgery or dental medicine, podiatric medicine, optometry or a chiropractor. Additionally, as many as 47,000 nonphysician practitioners (such as certified nurse-midwives, etc) will be eligible to receive the Medicaid incentive payments.

Of the 624,000 healthcare organizations we estimate will be affected by the incentive program, we estimate that 94.71 percent will be EPs, 0.8 percent will be hospitals, and 4.47 percent will be MA organization physicians or hospitals. We further estimate that EPs will spend approximately $54,000 to purchase and implement a certified EHR and $10,000 annually for ongoing maintenance according to the Congressional Budget Office (CBO). In the paper, Evidence on the Costs and Benefits of Health Information Technology, May 2008, in attempting to estimate the total cost of implementing health IT systems in office-based medical practices, recognized the complicating factors of EHR types, available features, and differences in characteristics of the practices that are adopting them. The CBO estimated a cost range of $25,000 to $45,000 per physician. For all eligible hospitals, the range is from $1 million to $100 million. Though reports vary widely, we anticipate that the average will be $5 million to achieve meaningful use. We estimate $1 million for maintenance, upgrades, and training each year.

(2) Conclusion

As discussed later in this analysis, we believe that there are many positive effects of adopting EHR on health care providers, quite apart from the incentive payments to be provided under this rule. While economically significant, we do not believe that the net effect on individual providers will be negative over time except in very rare cases. Accordingly, we believe that the object of the RFA to minimize burden on small entities is met by this rule.

b. Small Rural Hospitals

Section 1102(b) of the Act requires us to prepare a RIA if a rule will have a significant impact on the operations of a substantial number of small rural hospitals. This analysis must conform to the provisions of section 604 of the RFA. For purposes of section 1102(b) of the Act, we define a small rural hospital as a hospital that is located outside of a metropolitan statistical area and has fewer than 100 beds. This final rule will affect the operations of a substantial number of small rural hospitals because they may be subject to adjusted Medicare payments in 2015 if they fail to adopt certified EHR technology by the applicable reporting period. As stated previously, we have determined that this final rule will create a significant impact on a substantial number of small entities, and have prepared a Regulatory Flexibility Analysis as required by the RFA and, for small rural hospitals, section 1102(b) of the Act. Furthermore, any impacts that will arise from the implementation of certified EHR technology in a rural eligible hospital will be positive, with respect to the streamlining of care and the ease of sharing information with other EPs to avoid delays, duplication, or errors. However, we have statutory authority to make case-by-case exceptions for significant hardship, and proposed certain case-by-case applications that may be made when there are barriers to internet connectivity that will impact health information exchange.

c. Unfunded Mandates Reform Act

Section 202 of the Unfunded Mandates Reform Act of 1995 (UMRA) requires that agencies assess anticipated costs and benefits before issuing any rule whose mandates will require spending in any 1 year $100 million in 1995 dollars, updated annually for inflation. In 2012, that threshold is approximately $139 million. UMRA does not address the total cost of a rule. Rather, it focuses on certain categories of cost, mainly those ''Federal mandate'' costs resulting from—(1) imposing enforceable duties on State, local, or tribal governments, or on the private sector; or (2) increasing the stringency of conditions in, or decreasing the funding of, State, local, or tribal governments under entitlement programs.

This final rule imposes no substantial mandates on States. This program is voluntary for States and States offer the

incentives at their option. The State role in the incentive program is essentially to administer the Medicaid incentive program. While this entails certain procedural responsibilities, these do not involve substantial State expense. In general, each State Medicaid Agency that participates in the incentive program will be required to invest in systems and technology to comply. States will have to identify and educate providers, evaluate their attestations and pay the incentive. However, the Federal government will fund 90 percent of the State's related administrative costs, providing controls on the total State outlay.

The investments needed to meet the meaningful use standards and obtain incentive funding are voluntary, and hence not ''mandates'' within the meaning of the statute. However, the potential reductions in Medicare reimbursement beginning with FY 2015 will have a negative impact on providers that fail to meaningfully use certified EHR technology for the applicable reporting period. We note that we have no discretion as to the amount of those potential payment reductions. Private sector EPs that voluntarily choose not to participate in the program may anticipate potential costs in the aggregate that may exceed $139 million; however, because EPs may choose for various reasons not to participate in the program, we do not have firm data for the percentage of participation within the private sector. This RIA, taken together with the remainder of the preamble, constitutes the analysis required by UMRA.

d. Federalism

Executive Order 13132 establishes certain requirements that an agency must meet when it promulgates a final rule that imposes substantial direct requirement costs on State and local governments, preempts State law, or otherwise has Federalism implications. This final rule will not have a substantial direct effect on State or local governments, preempt State law, or otherwise have a Federalism implication. Importantly, State Medicaid agencies are receiving 100 percent match from the Federal government for incentives paid and a 90 percent match for expenses associated with administering the program. As previously stated, we believe that State administrative costs are minimal. We note that this final rule does add a new business requirement for States, because of the existing systems that will need to be modified to track and report on the new meaningful use requirements for provider attestations. We are providing 90 percent FFP to States for modifying their existing EHR Incentive Program systems. We believe the Federal share of the 90 percent match will protect the States from burdensome financial outlays and, as noted previously, States offer the Medicaid EHR incentive program at their option.

2. Effects on Eligible Professionals, Eligible Hospitals, and CAHs

a. Background and Assumptions

The principal costs of this final rule are the additional expenditures that will be undertaken by eligible entities in order to obtain the Medicare and Medicaid incentive payments to adopt, implement or upgrade and/or demonstrate meaningful use of certified EHR technology, and to avoid the Medicare payment adjustments that will ensue if they fail to do so. The estimates for the provisions affecting Medicare and Medicaid EPs, eligible hospitals, and CAHs are somewhat uncertain for several reasons: (1) The program is voluntary although payment adjustments will be imposed on Medicare providers beginning in 2015 if they are unable to demonstrate meaningful use for the applicable reporting period; (2) the Stage 1 and Stage 2 criteria for the demonstration of meaningful use of CEHRT has been finalized, but will change in Stage 3 and over time; and (3) the impact of the financial incentives and payment adjustments on the rate of adoption of certified EHR technology by EPs, eligible hospitals, and CAHs is difficult to predict based on the information we have currently collected. The net costs and savings shown for this program represent a possible scenario and actual impacts could differ substantially.

Based on input from a number of internal and external sources, including the Government Accountability Office (GAO) and CBO, we estimated the numbers of EPs and eligible hospitals, including CAHs under Medicare, Medicaid, and MA and used them throughout the analysis.

- About 568,900 Medicare FFS EPs in 2014 (some of whom will also be Medicaid EPs).
- About 14 percent of the total EPs are hospital-based Medicare EPs, and are not eligible for the program. This leaves approximately 491,000 nonhospital-based Medicare EPs in 2014.
- About 20 percent of the nonhospital-based Medicare EPs (approximately 98,200 Medicare EPs in 2014) are *also* eligible for Medicaid (meet the 30 percent Medicaid patient volume criteria), but can only be paid under one program. We assume that any EP in this situation will choose to receive the Medicaid incentive payment, because it is larger.
- About 46,600 non-Medicare eligible EPs (such as dentists, pediatricians, and eligible nonphysicians such as certified nurse-midwives, nurse practitioners and physicians assistants) will be eligible to receive the Medicaid incentive payments.
- 4,993 eligible hospitals comprised of the following:
  - ++ 3,573 acute care hospitals.
  - ++ 1,325 CAHs.
  - ++ 84 children's hospitals (Medicaid only).
  - ++ 11 cancer hospitals (Medicaid only).
- All eligible hospitals, except for children's and cancer hospitals, may qualify and apply for both Medicare and Medicaid incentive payments.
- 12 MA organizations (about 28,000 EPs, and 29 hospitals) will be eligible for incentive payments.

b. Industry Costs and Adoption Rates

In the Stage 1 final rule (75 FR 44545 through 44547), we estimated the impact on healthcare providers using information from the same four studies cited previously in this final rule. Based on these studies and current average costs for available certified EHR technology products, we continue to estimate for EPs that the average adopt/implement/upgrade cost is $54,000 per physician FTE, while annual maintenance costs average $10,000 per physician FTE.

For all eligible hospitals, the range is from $1 million to $100 million. Although reports vary widely, we anticipate that the average will be $5 million to achieve meaningful use, because providers who will like to qualify as meaningful users of EHRs will need to purchase certified EHRs. We further acknowledge ''certified EHRs'' may differ in many important respects from the EHRs currently in use and may differ in the functionalities they contain. We estimate $1 million for maintenance, upgrades, and training each year. Both of these estimates are based on average figures provided in the 2008 CBO report. Industry costs are important, in part, because EHR adoption rates will be a function of these industry costs and the extent to which the costs of ''certified EHRs'' are higher than the total value of EHR incentive payments available to EPs and eligible hospitals (as well as adjustments, in the case of the Medicare EHR incentive program) and any perceived benefits including societal benefits. Because of the uncertainties surrounding industry cost

estimates, we have made various assumptions about adoption rates in the following analysis in order to estimate the budgetary impact on the Medicare and Medicaid programs.

c. Costs of EHR Adoption for EPs

Since the publication of the Stage 1 final rule, there has been little data published regarding the cost of EHR adoption and implementation. A 2011 study (*http://content.healthaffairs.org/content/30/3/481.abstract*) estimated costs of implementation for a five-physician practice to be $162,000, with $85,500 in maintenance expenses in the first year. These estimates are similar to estimates made in the Stage 1 final rule. In the absence of additional data regarding the cost of adoption and implementation costs for certified EHR technology, we proposed to continue to estimate for EPs that the average adopt/implement/upgrade cost is $54,000 per physician FTE, while annual maintenance costs average $10,000 per physician FTE, based on the cost estimate of the Stage 1 final rule.

Comment: Some commenters suggested that specific costs and financial gains for each provider be recorded as part of attestation to inform the overall impact analysis. Another commenter suggested that the analysis should include costs associated with unintended consequences of the regulation, such as the loss of revenue to providers through the elimination of unnecessary or duplicative tests and the resistance of the market to improving patient care under such circumstances. The commenter also suggested that the impact analysis should be stratified according to primary care and specialty providers.

Response: Although we agree that a system that records the specific costs and benefits for each provider would yield a more accurate financial analysis, we believe that such a requirement would place a significant burden on providers and potentially limit participation in the EHR Incentive Programs. We also do not believe that there is an accurate method to calculate the loss of revenue due to the elimination of unnecessary or duplicative tests or market resistance to improving patient care. The reduction of costs while improving patient care is one of the goals of the EHR Incentive Programs, and we do not believe that these reductions should be classified as negative impacts for the healthcare system as they would also lead to lower overall health care costs. Nor do we believe it is possible for us to proactively estimate such savings at this time. Because both primary-care and specialty providers receive the same incentive payment amounts under this program, we do not believe there is a benefit to stratifying the impact analysis in this way.

d. Costs of EHR Adoption for Eligible Hospitals

AHA conducts annual surveys that among other measures, track hospital spending. This data reflects the latest figures from the 2008 AHA Survey. Costs at these levels of adoption were significantly higher in 2008 than in previous years. This may better reflect the costs of implementing additional functionalities. The range in yearly information technology spending among hospitals is large, from $36,000 to over $32 million based on the AHA data. EHR system costs specifically were reported by experts to run as high as $20 million to $100 million. HHS discussions with experts led to cost ranges for adoption that varied by hospital size and level of EHR system sophistication. Research to date has shown that adoption of comprehensive EHR systems is limited. In the aforementioned AHA study, 1.5 percent of these organizations had comprehensive systems, which were defined as hospital-wide clinical documentation of cases, test results, prescription and test ordering, plus support for decision-making that included treatment guidelines. Some 10.9 percent have a basic system that does not include physician and nursing notes, and can only be used in one area of the hospital. Applying a similar standard to the 2008 AHA data, results in roughly 3 to 4 percent of hospitals having comprehensive systems and 12 to 13 percent having basic systems. According to hospital CEOs, the main barrier to adoption is the cost of the systems, and the lack of capital. Hospitals have been concerned that they will not be able to recoup their investment, and they are already operating on limited margins. Because uptake of advanced systems is low, it is difficult to get a solid average estimate for implementation and maintenance costs that can be applied across the industry. In addition, we recognize that there are additional industry costs associated with adoption and implementation of EHR technology that are not captured in our estimates that eligible entities will incur. Because the impact of those activities, such as reduced staff productivity related to learning how to use the EHR technology, the need to add additional staff to work with HIT issues, and administrative costs related to reporting are unknown at this time and difficult to quantify.

Comment: Some commenters suggested that overall IT operating costs should be included as part of the analysis. These commenters also suggested that estimates for costs related to staff training were too low and should include time and resources devoted to understanding the EHR Incentive Programs regulations. Other commenters suggested that costs associated with the time and resources related to registration and attestation should be included as part of the analysis. Finally, some commenters suggested that costs associated with EHR products, consultants, and trained IT professionals have increased since the start of the EHR Incentive Programs and should be reflected in the analysis.

Response: As noted in this impact analysis, we based cost estimates for IT on peer-reviewed studies of EHR and health IT costs. These cost estimates included maintenance and operating costs specific to EHRs and staff training. There are many aspects of IT operating costs that are not directly related to the maintenance or operation of CEHRT, and we do not believe it would be appropriate to include those costs as part of the impact analysis of this regulation. We are not aware of any new data that suggests an overall increase in the costs of CEHRT or related implementation and maintenance costs since the start of the EHR Incentive Programs, and in many cases we believe that the product and maintenance costs of CEHRT can be significantly lower than our estimates. Therefore, we are continuing to use the estimates we proposed for this impact analysis. We also do not believe it is appropriate to include additional costs related to registration and attestation, as the cost for dedicating resources to these activities is addressed earlier in this final rule in our discussion of information collection requirements.

3. Medicare Incentive Program Costs

a. Medicare Eligible Professionals (EPs)

We continue the method of cost estimation we used to determine the estimated costs of the Medicare incentives for EPs in our Stage 1 final rule (75 FR 44549). In order to determine estimated costs, we first needed to determine the EPs with Medicare claims. Then, we calculated that about 14 percent of those EPs are hospital based according to the definition in § 495.4 (finalized in our Stage 1 final rule), and therefore, do not qualify for incentive payments. This percent of EPs was subtracted from the

total number of EPs who have claims with Medicare. These numbers were tabulated from Medicare claims data.

In the Stage 1 final rule, we also estimated that about 20 percent of EPs that were not hospital based will qualify for Medicaid incentive payments and will choose that program because the payments are higher. Current program data does not provide additional evidence regarding this, so we continued to use the 20 percent estimation in the current projections. Of the remaining EPs, we estimated the percentage which will be meaningful users each calendar year. As discussed previously, our estimates for the number of EPs that will successfully demonstrate meaningful use of CEHRT are uncertain. The percentage of Medicare EPs who will satisfy the criteria for demonstrating meaningful use of CEHRT and will qualify for incentive payments is a key, but a highly uncertain factor. Accordingly, the estimated number of nonhospital based Medicare EPs who will demonstrate meaningful use of CEHRT over the period CYs 2014 through 2019 is as shown in Table 22.

TABLE 22—MEDICARE EPS DEMONSTRATING MEANINGFUL USE OF CERTIFIED EHR TECHNOLOGY

	Calendar year					
	2014	2015	2016	2017	2018	2019
EPs who have claims with Medicare (thousands)	568.9	574.8	580.8	586.8	592.7	598.6
Nonhospital Based EPs (thousands)	491.0	496.1	501.3	506.4	511.5	516.7
EPs that are both Medicare and Medicaid EPs (thousands)	98.2	99.2	100.3	101.3	102.3	103.3
Percent of EPs who are Meaningful Users	37	46	52	57	62	67
Meaningful Users (thousands)	147.1	184.2	206.5	229.3	252.5	276.1

Our estimates of the incentive payments and payment adjustment savings are presented in Table 23. These payments reflect the Medicare and Medicaid incentive payments and payment adjustments included in 42 CFR Part 495 of our regulations. They reflect our assumptions about the proportion of EPs who will demonstrate meaningful use of CEHRT. These assumptions were developed based on a review of the studies presented in the Stage 1 impact analysis.

Specifically, our assumptions are based on literature estimating current rates of physician EHR adoption and rates of diffusion of EHRs and similar technologies. There are a number of studies that have attempted to measure the rate of adoption of electronic medical records (EMR) among physicians prior to the enactment of the HITECH Act (see, for example, Funky and Taylor (2005) The State and Pattern of Health Information Technology Adoption. RAND Monograph MG–409. Santa Monica: The RAND Corporation; Ford, E.W., Menachemi, N., Peterson, L.T., Huerta, T.R. (2009) ''Resistance is Futile: But it is Slowing the Pace of EHR Adoption Nonetheless'' Journal of the American Informatics Association 16(3): 274–281). More recently, there is also some data available to suggest that more providers have adopted EHR technology since the start of the EHR Incentive Programs. The 2011 ONC–AHA survey cited earlier found that the percentage of U.S. hospitals which had adopted EHRs increased from 16 to 35 percent between 2009 and 2011. In November 2011, the CDC survey cited earlier found the percentage of physicians who adopted basic (EHRs in their practice had doubled from 17 to 34 percent between 2008 and 2011. These survey results are in line with the estimated rate of EHR adoption presented in the Stage 1 impact analysis, but they constitute a relatively small sample on which to base new estimates. Therefore we maintain the estimates that were based on the study with the most rigorous definition, though we note again that neither the Stage 1 nor the Stage 2 meaningful use criteria are equivalent to a fully functional system as defined in this study. (DesRoches, CM, Campbell, EG, Rao, SR et al (2008) ''Electronic Health Records in Ambulatory Care-A National Survey of Physicians'' New England Journal of Medicine 359(1): 50–60. In addition, we note that the final penetration rates used in the initial estimates were developed in consensus with industry experts relying on the studies. Actual adoption trends could be different from these assumptions, given the elements of uncertainty we describe throughout this analysis.

Estimated net costs of the Medicare EP portion of the HITECH Act are shown in Table 23.

TABLE 23—ESTIMATED COSTS (+) AND SAVINGS (−) FOR MEDICARE EPS DEMONSTRATING MEANINGFUL USE OF CERTIFIED EHR TECHNOLOGY

[In billions]

2014	1.9	.....	.....	1.9
2015	2.0	−0.1	.....	1.9
2016	0.8	−0.1	.....	0.6
2017	0.3	−0.2	.....	0.1
2018	.....	−0.2	.....	−0.2
2019	.....	−0.2	.....	−0.2

b. Medicare Eligible Hospitals and CAHs

In brief, the estimates of hospital adoption were developed by calculating projected incentive payments (which are driven by discharges), comparing them to projected costs of attaining meaningful use, and then making assumptions about how rapidly hospitals will adopt given the fraction of their costs that were covered.

Specifically, the first step in preparing estimates of Medicare program costs for eligible hospitals was to determine the amount of Medicare incentive payments that each hospital in the country could potentially receive under the statutory formula, based on its discharge numbers (total patients and Medicare patients). The total incentive payments potentially payable over a 4-year period vary significantly by hospitals' inpatient caseloads, ranging from a low of about $11,000 to a high of $12.9 million, with the median being $3.8 million. The potential Medicare incentive payments for each eligible hospital were compared with the hospital's expected cost of purchasing and operating certified EHR technology. Costs of adoption for each hospital were estimated using data from the 2009 AHA survey and IT supplement. Estimated costs varied by size of hospital and by the likely status of EHR adoption in that class of hospitals. Hospitals were grouped first by size (CAHs, non-CAH hospitals under 400 beds, and hospitals with 400 or more beds) because EHR adoption costs do vary by size: namely, larger hospitals with more diverse service offerings and large physician staffs generally implement more customized systems than smaller hospitals that might purchase off-the-shelf products. We then calculated the proportion of hospitals within each class that were at one of three levels of EHR adoption: (1) Hospitals which had already implemented relatively advanced systems that included CPOE systems for medications; (2) hospitals which had implemented more basic systems through which lab results could be shared, but not CPOE for medications; and (3) hospitals starting from a base level with neither CPOE or lab reporting. The CPOE for medication standard was chosen for this estimate because expert input indicated that the CPOE standard in the final meaningful use definition will be the hardest one for hospitals to meet. Table 24 provides these proportions.

TABLE 24—HOSPITAL IT CAPABILITIES BY HOSPITAL SIZE

Hospital size	Levels of adoption							
	Any CPOE meds		Lab results		Neither		Total	
	Number of hospitals	Percentage	Number of hospitals	Percentage	Number of hospitals	Percentage	Number of hospitals	Percentage
CAHs	169	22	390	51	210	27	769	23
Small/Medium	834	37	1,051	47	348	16	2,233	67
Large (400+ beds)	200	56	145	41	10	3	355	10
Total	1,203	36	1,586	47	568	17	3,357	100

We then calculated the costs of moving from these stages to meaningful use for each class of hospital, assuming that even for hospitals with CPOE systems they will incur additional costs of at least 10 percent of their IT budgets. These costs were based on cross-sectional data from the AHA survey and thus do not likely represent the true costs of implementing systems. This data reflects the latest figures from the 2009 AHA Survey. Costs at these levels of adoption were significantly higher than in previous years. This may better reflect the costs of implementing additional functionalities. We have also updated the number of discharges using the most recent cost report data available. The payment incentives available to hospitals under the Medicare and Medicaid programs are included in our regulations at 42 CFR part 495. We estimate that there are 12 MAOs that might be eligible to participate in the incentive program. Those plans have 29 eligible hospitals. The costs for the MA program have been included in the overall Medicare estimates.

Our estimated net costs for section 4102 of the HITECH Act are shown in Table 25: Estimated costs (+) and savings (–) for eligible hospitals adopting certified EHRs. This provision is estimated to increase Medicare hospital expenditures by a net total of $5.3 billion during FYs 2014 through 2019.

TABLE 25—ESTIMATED COSTS (+) AND SAVINGS (−) FOR MEDICARE ELIGIBLE HOSPITALS DEMONSTRATING MEANINGFUL USE OF CERTIFIED EHR TECHNOLOGY

[In billions]

Fiscal year	Incentive payments	Payment adjustment receipts	Benefit payments	Net total
2014	$2.1	.....	(1)	$2.1
2015	2.2	−0.4	(1)	1.8
2016	1.7	−0.5	(1)	1.2
2017	0.5	−0.3	(1)	0.2
2018	.....	−0.1	(1)	−0.1
2019	.....	.....	(1)	(1)

[1] Savings of less than $50 million.

Based on the comparison of Medicare incentive payments and implementation/operating costs for each eligible hospital (described previously), we made the assumptions shown in Table 25, related to the prevalence of CEHRT for FYs 2014 through 2018. These assumptions are consistent with the actual program data for 2011. As indicated, eligible hospitals that could cover the full cost of an EHR system through Medicare incentive payments were assumed to implement them relatively rapidly, and vice versa. In other words, eligible hospitals will have an incentive to purchase and implement an EHR system if they perceive that a large portion of the costs will be covered by the incentive payments. Table 26 shows the assumptions that were used.

TABLE 26—ASSUMED PROPORTION OF ELIGIBLE HOSPITALS WITH CERTIFIED EHR TECHNOLOGY, BY PERCENTAGE OF SYSTEM COST COVERED BY MEDICARE INCENTIVE PAYMENTS

Fiscal year	Incentive payments as percentage of EHR technology cost				
	100+%	75–100%	50–75%	25–50%	0–25%
2014	1.0	0.95	0.85	0.5	0.3
2015	1.0	1.0	0.95	0.75	0.5
2016	1.0	1.0	1.0	0.9	0.75
2017	1.0	1.0	1.0	1.0	0.9
2018	1.0	1.0	1.0	1.0	1.0

For instance, 95 percent of eligible hospitals whose incentive payments will cover between 75 percent and 100 percent of the cost of a certified EHR system were assumed to have a certified system in FY 2014. All such hospitals were assumed to have a certified EHR system in FY 2015 and thereafter.

High rates of EHR adoption are anticipated in the years leading up to FY 2015 due to the payment adjustments that will be imposed on eligible hospitals. However, we know from industry experts that issues surrounding the capacity of vendors and expert consultants to support implementation, issues of access to capital, and competing priorities in responding to payer demand will limit the number of hospitals that can adopt advanced systems in the short term. Therefore, we cannot be certain of the adoption rate for hospitals due to these factors and others previously outlined in this preamble.

For large, organized facilities such as hospitals, we believe that the revenue losses caused by these payment adjustments will be a substantial incentive to adopt certified EHR technology, even in instances where the Medicare incentive payments will cover only a portion of the costs of purchasing, installing, populating, and operating the EHR system. Based on the assumptions about incentive payments as percentages of EHR technology costs in Table 26, we estimated that the great majority of eligible hospitals will qualify for at least a portion of the Medicare incentive payments that they could potentially receive, and only a modest number will incur payment adjustments. Nearly all eligible hospitals are projected to have implemented CEHRT by FY 2019. Table 27 shows our estimated percentages of the total potential incentive payments associated with eligible hospitals that could demonstrate meaningful use of EHR systems. Also shown are the estimated percentages of potential incentives that will actually be paid each year.

TABLE 27—ESTIMATED PERCENTAGE OF MEDICARE INCENTIVES WHICH COULD BE PAID FOR MEANINGFUL USE OF CERTIFIED EHR TECHNOLOGY ASSOCIATED WITH ELIGIBLE HOSPITALS AND ESTIMATED PERCENTAGE PAYABLE IN YEAR

Fiscal year	Percent associated with eligible hospitals	Percent payable in year
2014	66.1	66.1
2015	80.2	72.2
2016	91.3	48.8
2017	97.7	.....
2018	100.0	.....

For instance in FY 2014, 66.1 percent of the total amount of incentive payments which could be payable in that year will be for eligible hospitals who have demonstrated meaningful use of CEHRT and therefore will be paid. In FY 2015, 80.2 percent of the total amount of incentive payments which could be payable will be for hospitals who have certified EHR systems, but some of those eligible hospitals will have already received 4 years of incentive payments, and therefore 72.2 percent of all possible incentive payments actually paid in that year.

The estimated payments to eligible hospitals were calculated based on the hospitals' qualifying status and individual incentive amounts under the statutory formula. Similarly, the estimated payment adjustments for nonqualifying hospitals were based on the market basket reductions and Medicare revenues. The estimated savings in Medicare eligible hospital benefit expenditures resulting from the use of hospital certified EHR systems are discussed under ''general considerations'' at the end of this section. We assumed no future growth in the total number of hospitals in the U.S. because growth in acute care hospitals has been minimal in recent years.

c. Critical Access Hospitals (CAHs)

We estimate that there are 1,325 CAHs eligible to receive EHR incentive payments. In the Stage 1 impact analysis, we estimated that the 22 percent of CAHs with relatively advanced EHR systems will achieve meaningful use before 2016 given on the financial assistance available under HITECH for Regional Extension Centers, whose priorities include assisting CAHs in EHR adoption. We also estimated that most of the remaining CAHs that had already adopted some kind of EHR system at that time (51 percent of CAHs) will also achieve meaningful use by 2016. Current program payment data, as well as current data from the Regional Extension Centers, provides some more information for us to alter these estimates. Our new estimates regarding the incentives that will be paid to CAHs are incorporated into the overall Medicare and Medicaid program costs.

4. Medicaid Incentive Program Costs

Under section 4201 of the HITECH Act, states can voluntarily participate in the Medicaid incentive payment program. However, as of the writing of this final rule 48 states are already participating in the Medicaid incentive payment program and the remaining

states have indicated they will begin participation in 2012. Therefore we anticipate that all states will be participating by 2014, as we estimated in the Stage 1 impact analysis. The payment incentives available to EPs and hospitals under the Medicaid programs are included in our regulations at 42 CFR part 495. The Federal costs for Medicaid incentive payments to providers who can demonstrate meaningful use of EHR technology were estimated similarly to the estimates for Medicare eligible hospital and EP. Table 28 shows our estimates for the net Medicaid costs for eligible hospitals and EPs.

TABLE 28—ESTIMATED FEDERAL COSTS (+) AND SAVINGS (−) UNDER MEDICAID

[In billions]

Fiscal year	Incentive payments		Benefit payments	Net total
	Hospitals	Eligible professionals		
2014	0.6	0.5	(1)	1.1
2015	0.4	0.8	(1)	1.2
2016	0.5	0.8	(1)	1.2
2017	0.5	0.7	(1)	1.2
2018	0.1	0.7	(1)	0.8
2019	0.0	0.5	(1)	0.5

[1] Savings of less than $50 million.

a. Medicaid EPs

To determine the Medicaid EP incentive payments, we first determined the number of qualifying EPs. As indicated previously, we assumed that 20 percent of the nonhospital-based Medicare EPs will meet the requirements for Medicaid incentive payments (30 percent of patient volume from Medicaid). All of these EPs were assumed to choose the Medicaid incentive payments, as they are larger. In addition, the total number of Medicaid EPs was adjusted to include EPs who qualify for the Medicaid incentive payments but not for the Medicare incentive payments, such as most pediatricians, dentists, certified nurse-midwives, nurse practitioners, and physicians assistants. As noted previously, there is much uncertainty about the rates of demonstration of meaningful use that will be achieved. Our estimates are listed in Table 29.

TABLE 29—ASSUMED NUMBER OF NONHOSPITAL-BASED MEDICAID EPS WHO WILL BE MEANINGFUL USERS OF CERTIFIED EHR TECHNOLOGY

[All population figures are in thousands]

		Calendar year					
		2014	2015	2016	2017	2018	2019
	EPs who have claims with Medicare	568.9	574.8	580.8	586.8	592.7	598.6
	Nonhospital-based EPs	491.0	496.1	501.3	506.4	511.5	516.7
A	EPs who meet the Medicaid patient volume threshold.	98.2	99.2	100.3	101.3	102.3	103.3
B	Medicaid[1] only EPs	46.6	47.4	48.1	48.9	49.7	50.4
	Total Medicaid EPs (A + B)	144.8	146.6	148.4	150.2	152.0	153.8
	Percent of EPs receiving incentive payment during year.	49.2%	58.8%	64.0%	52.9%	29.5%	22.6%
	Number of EPs receiving incentive payment during year.	71.2	86.3	95.0	79.4	44.8	34.8
	Percent of EPs who have ever received incentive payment.	49.2%	58.8%	64.0%	68.9%	73.5%	77.9%
	Number of EPs who have ever received incentive payment.	71.2	86.3	95.0	103.4	111.7	119.8

It should be noted that since the Medicaid EHR incentive payment program provides that a Medicaid EP can receive an incentive payment in their first year because he or she has demonstrated a meaningful use or because he or she has adopted, implemented, or upgraded certified EHR technology, these participation rates include not only meaningful users but eligible providers implementing CEHRT as well.

b. Medicaid Hospitals

Medicaid incentive payments to most acute-care hospitals were estimated using the same adoption assumptions and method as described previously for Medicare eligible hospitals and shown in Table 30. Because hospitals' Medicare and Medicaid patient loads differ, we separately calculated the range of percentage of total potential incentives that could be associated with qualifying hospitals, year by year, and the corresponding actual percentages payable each year. Acute care hospitals may qualify to receive both the Medicare and Medicaid incentive payments.

As stated previously, the estimated eligible hospital incentive payments were calculated based on the hospitals' qualifying status and individual incentive amounts payable under the statutory formula. The estimated savings in Medicaid benefit expenditures resulting from the use of CEHRT are discussed under ''general considerations.'' Since we were using

Medicare cost report data and little data existed for children's hospitals, we estimated the Medicaid incentives payable to children's hospitals as an add-on to the base estimate, using data on the number of children's hospitals compared to nonchildren's hospitals.

TABLE 30—ESTIMATED PERCENTAGE OF POTENTIAL MEDICAID INCENTIVES ASSOCIATED WITH ELIGIBLE HOSPITALS AND ESTIMATED PERCENTAGE PAYABLE EACH YEAR

Fiscal year	Percent associated with eligible hospitals	Percent payable in year
2014	67.5	59.3
2015	81.1	37.9
2016	91.8	33.7
2017	97.7	24.3
2018	100.0	10.7
2019	100.0	0.0

5. Benefits for All EPs and All Eligible Hospitals

In this final rule we have not quantified the overall benefits to the industry, nor to eligible hospitals or EPs in the Medicare, Medicaid, or MA programs. Although information on the costs and benefits of adopting systems that specifically meet the requirements for the EHR Incentive Programs (for example, certified EHR technology) has not yet been collected, and although some studies question the benefits of health information technology, a 2011 study completed by ONC (Buntin et al. 2011 ''The Benefits of Health Information Technology: A Review of the Recent Literature Shows Predominantly Positive Results'' *Health Affairs*.) found that 92 percent of 154 articles published from July 2007 up to February 2010 reached conclusions that showed the overall positive effects of health information technology on key aspects of care, including quality and efficiency of health care. Among the positive results highlighted in these articles were decreases in patient mortality, reductions in staffing needs, correlation of clinical decision support to reduced transfusion and costs, reduction in complications for patients in hospitals with more advanced health IT, and a reduction in costs for hospitals with less advanced health IT. Another study, at one hospital emergency room in Delaware, showed the ability to download and create a file with a patient's medical history saved the ER $545 per use, mostly in reduced waiting times. A pilot study of ambulatory practices found a positive ROI within 16 months and annual savings thereafter (Greiger, et al. 2007, A Pilot Study to Document the Return on Investment for Implementing an Ambulatory Electronic Health Record at an Academic Medical Center *http://www.journalacs.org/article/S1072-7515%2807%2900390-0/abstract-article-footnote-1s*.) A study that compared the productivity of 75 providers within a large urban primary care practice over a 4-year period showed increases in productivity of 1.7 percent per month per provider after EHR adoption (DeLeon et al. 2010, ''The business end of health information technology. Can a fully integrated electronic health record increase provider productivity in a large community practice?'' *J Med Pract Manage*). Some vendors have estimated that EHRs could result in cost savings of between $100 and $200 per patient per year. At the time of the writing of this final rule, there was only limited information on participation in the EHR Incentive Programs and on adoption of Certified EHR Technology. As participation and adoption increases, there will be more opportunities to capture and report on cost savings and benefits. A number of relevant studies are required in the HITECH Act for this specific purpose, and the results will be made public, as they are available.

6. Benefits to Society

According to the recent CBO study ''Evidence on the Costs and Benefits of Health Information Technology'' (*http://www.cbo.gov//ftpdocs/91xx/doc9168/05-20-HealthIT.pdf*) when used effectively, EHRs can enable providers to deliver health care more efficiently. For example, the study states that EHRs can reduce the duplication of diagnostic tests, prompt providers to prescribe cost-effective generic medications, remind patients about preventive care reduce unnecessary office visits and assist in managing complex care. This is consistent with the findings in the ONC study cited previously. Further, the CBO report claims that there is a potential to gain both internal and external savings from widespread adoption of health IT, noting that internal savings will likely be in the reductions in the cost of providing care, and that external savings could accrue to the health insurance plan or even the patient, such as the ability to exchange information more efficiently. However, it is important to note that the CBO identifies the highest gains accruing to large provider systems and groups and claims that office-based physicians may not realize similar benefits from purchasing health IT products. At this time, there is limited data regarding the efficacy of health IT for smaller practices and groups, and the CBO report notes that this is a potential area of research and analysis that remains unexamined. The benefits resulting specifically from this final rule are even harder to quantify because they represent, in many cases, adding functionality to existing systems and reaping the network externalities created by larger numbers of providers participating in information exchange.

Since the CBO study, there has been additional research that has emerged documenting the association of EHRs with improved outcomes among diabetics (Hunt, JS et al. (2009) ''The impact of a physician-directed health information technology system on diabetes outcomes in primary care: A pre- and post-implementation study'' Informatics in Primary Care 17(3):165–74; Pollard, C et al. (2009) ''Electronic patient registries improve diabetes care and clinical outcomes in rural community health centers'' Journal of Rural Health 25(1):77–84) and trauma patients (Deckelbaum, D. et al. (2009) ''Electronic medical records and mortality in trauma patients'' The Journal of Trauma: Injury, Infection, and Critical Care 67(3): 634–636), enhanced efficiencies in ambulatory care settings (Chen, C et al. (2009) ''The Kaiser Permanente Electronic Health Record: Transforming and Streamlining Modalities of Care.''Health Affairs 28(2):323–333), and improved outcomes and lower costs in hospitals (Amarasingham, R. et al. (2009) ''Clinical information technologies and inpatient outcomes: A multiple hospital study'' Archives of Internal Medicine 169(2):108–14). However, data relating specifically to the EHR Incentive Programs is limited at this time.

7. General Considerations

The estimates for the HITECH Act provisions were based on the economic assumptions underlying the President's 2013 Budget. Under the statute, Medicare incentive payments for CEHRT are excluded from the determination of MA capitation benchmarks. As noted previously, there is considerable uncertainty about the rate at which eligible hospitals, CAHs and EPs are adopting EHRs and other HIT. Nonetheless, we believe that the Medicare incentive payments and the prospect of significant payment adjustments for not demonstrating meaningful use will result in the great majority of hospitals implementing CEHRT in the early years of the Medicare EHR incentive program. We expect that a steadily growing proportion of practices will implement CEHRT over the next 10 years, even in the absence of the Medicare incentives.

Actual future Medicare and Medicaid costs for eligible hospital and EP incentives will depend in part on the standards developed and applied for assessing meaningful use of certified EHR technology. We are administering the requirements in such a way as to encourage adoption of CEHRT and facilitate qualification for incentive payments, and expect to adopt progressively demanding standards at each stage year. Certified EHR technology has the potential to help reduce medical costs through efficiency improvements, such as prompter treatments, avoidance of duplicate or otherwise unnecessary services, and reduced administrative costs (once systems are in place), with most of these savings being realized by the providers rather than by Medicare or Medicaid. To the extent that this technology will have a net positive effect on efficiency, then more rapid adoption of such EHR systems will achieve these efficiencies sooner than will otherwise occur, without the EHR incentives. As noted, the possible efficiency savings from the adoption of EHR is expected to be realized by the providers rather than the payers. We expect a negligible impact on benefit payments to hospitals and EPs from Medicare and Medicaid as a result of the implementation of EHR technology.

In the process of preparing the estimates for this rule, we consulted with and/or relied on internal CMS sources, as well as the following sources:

- Congressional Budget Office (staff and publications).
- American Medical Association (staff and unpublished data).
- American Hospital Association.
- Actuarial Research Corporation.
- CMS Statistics 2011.
- RAND Health studies on:

++ ''The State and Pattern of Health Information Technology Adoption'' (Fonkych & Taylor, 2005);

++ ''Extrapolating Evidence of Health Information Technology Savings and Costs'' (Girosi, Meili, & Scoville, 2005); and

++ ''The Diffusion and Value of Healthcare Information Technology'' (Bower, 2005).

- Kaiser Permanente (staff and publications).
- Miscellaneous other sources (Health Affairs, American Enterprise Institute, ONC survey, Journal of Medical Practice Management, news articles and perspectives).

As noted at the beginning of this analysis, it is difficult to predict the actual impacts of the HITECH Act with much certainty. We believe the assumptions and methods described herein are reasonable for estimating the financial impact of the provisions on the Medicare and Medicaid programs, but acknowledge the wide range of possible outcomes.

8. Summary

The total cost to the Medicare and Medicaid programs between 2014 and 2019 is estimated to be $15.4 billion in transfers. We do not estimate total costs to the provider industry, but rather provide a possible per EP and per eligible hospital outlay for implementation and maintenance.

TABLE 31—ESTIMATED EHR INCENTIVE PAYMENTS AND BENEFITS IMPACTS ON THE MEDICARE AND MEDICAID PROGRAMS OF THE HITECH EHR INCENTIVE PROGRAM

[Fiscal year]—[In billions]

Fiscal year	Medicare eligible		Medicaid eligible		Total
	Hospitals	Professionals	Hospitals	Professionals	
2014	$2.1	$1.9	$0.6	$0.5	$5.1
2015	1.8	1.9	0.4	0.8	4.9
2016	1.2	0.6	0.5	0.8	3.1
2017	0.2	0.1	0.5	0.7	1.5
2018	−0.1	−0.2	0.1	0.7	0.5
2019		−0.2	0.0	0.5	0.3

9. Explanation of Benefits and Savings Calculations

In our analysis, we assume that benefits to the program will accrue in the form of savings to Medicare, through the Medicare payment adjustments. Expected qualitative benefits, such as improved quality of care, better health outcomes, and the like, are unable to be quantified at this time.

D. Accounting Statement

Whenever a rule is considered a significant rule under Executive Order 12866, we are required to develop an accounting statement indicating the classification of the expenditures associated with the provisions of this final rule. Monetary annualized benefits and nonbudgetary costs are presented as discounted flows using 3 percent and 7 percent factors. Additional expenditures that will be undertaken by eligible entities in order to obtain the Medicare and Medicaid incentive payments to adopt and demonstrate meaningful use of certified EHR technology, and to avoid the Medicare payment adjustments that will ensue if they fail to do so are noted by a placeholder in the accounting statement. We are not able to explicitly define the universe of those additional costs, nor specify what the high or low range might be to implement EHR technology in this final rule.

Expected qualitative benefits include improved quality of care, better health outcomes, reduced errors and the like. Private industry costs will include the impact of EHR activities such as temporary reduced staff productivity related to learning how to use the EHR, the need for additional staff to work with HIT issues, and administrative costs related to reporting.

TABLE 32—ACCOUNTING STATEMENT: CLASSIFICATION OF ESTIMATED EXPENDITURES CYS 2014 THROUGH 2019

[In millions]

Category					
	Benefits				
Qualitative	Expected qualitative benefits include improved quality of care, better health outcomes, reduced errors and the like.				
	Costs				
.	Year dollar	Estimates (in millions)	Unit discount rate	Period covered	
		Low estimate	High Estimate		
Annualized Monetized Costs to Private Industry Associated with Reporting Requirements.	2014	$178.0	$186.1	7%	CY 2014
		$178.0	$186.1	3%	
Qualitative—Other private industry costs associated with the adoption of EHR technology.	These costs will include the impact of EHR activities such as reduced staff productivity related to learning how to use the EHR technology, the need for additional staff to work with HIT issues, and administrative costs related to reporting.

From Whom To Whom?	Federal Government to Medicare- and Medicaid-eligible professionals and hospitals.				

E. Conclusion

The previous analysis, together with the remainder of this preamble, provides an RIA. We believe there are many positive effects of adopting EHR on health care providers, quite apart from the incentive payments to be provided under this rule. We believe there are benefits that can be obtained by eligible hospitals and EPs, including: reductions in medical recordkeeping costs, reductions in repeat tests, decreases in length of stay, and reduced errors. When used effectively, EHRs can enable providers to deliver health care more efficiently. For example, EHRs can reduce the duplication of diagnostic tests, prompt providers to prescribe cost-effective generic medications, remind patients about preventive care, reduce unnecessary office visits, and assist in managing complex care. We also believe that internal savings will likely come through the reductions in the cost of providing care. While economically significant, we do not believe that the net effect on individual providers will be negative over time except in very rare cases. Accordingly, we believe that the RFA objective to minimize burden on small entities is met by this final rule.

In accordance with the provisions of Executive Order 12866, this regulation was reviewed by the Office of Management and Budget.

List of Subjects

42 CFR Part 412

Administrative practice and procedure, Health facilities, Medicare, Puerto Rico, Reporting and recordkeeping requirements.

42 CFR Part 413

Health facilities, Kidney diseases, Medicare, Reporting and recordkeeping requirements.

42 CFR Part 495

Administrative practice and procedure, Electronic health records, Health facilities, Health professions, Health maintenance organizations (HMO), Medicaid, Medicare, Penalties, Privacy, Reporting and recordkeeping requirements.

For the reasons set forth in the preamble, the Centers for Medicare & Medicaid Services amends 42 CFR chapter IV as set forth below:

PART 412—PROSPECTIVE PAYMENT SYSTEMS FOR INPATIENT HOSPITAL SERVICES

■ 1. The authority citation for part 412 continues to read as follows:

Authority: Secs. 1102 and 1871 of the Social Security Act (42 U.S.C. 1302 and 1395hh).

Subpart D—Basic Method for Determining Prospective Payment Federal Rates for Inpatient Operating Costs

■ 2. Section 412.64 is amended as follows:

■ A. Revising paragraph (d)(3) introductory text.

■ B. Adding paragraphs (d)(4) and (5).

The revision and addition read as follows:

§ 412.64 Federal rates for inpatient operating costs for Federal fiscal year 2005 and subsequent fiscal years.

* * * * *

(d) * * *

(3) Beginning fiscal year 2015, in the case of a ''subsection (d) hospital,'' as defined under section 1886(d)(1)(B) of the Act, that is not a meaningful electronic health record (EHR) user as defined in part 495 of this chapter for the applicable EHR reporting period and does not receive an exception, three-fourths of the applicable percentage change specified in paragraph (d)(1) of this section is reduced—

* * * * *

(4) *Exception*–(i) *General rules.* The Secretary may, on a case-by-case basis, exempt an eligible hospital that is not a qualifying eligible hospital from the application of the reduction under paragraph (d)(3) of this section if the Secretary determines that compliance with the requirement for being a meaningful EHR user would result in a significant hardship for the eligible hospital.

(ii) To be considered for an exception, a hospital must submit an application, in the manner specified by CMS, demonstrating that it meets one or more than one of the criteria specified in this paragraph (d)(4) of this section. These types of exceptions are subject to annual renewal, but in no case may a hospital be granted this type of exception for more than 5 years. (See § 495.4 for definitions of payment adjustment year, EHR reporting period, and meaningful EHR user.)

(A) During any 90-day period from the beginning of the fiscal year that is 2 years before the payment adjustment year to April 1 of the year before the payment adjustment year, the hospital was located in an area without sufficient Internet access to comply with the meaningful use objectives requiring internet connectivity, and faced insurmountable barriers to obtaining such internet connectivity. Applications requesting this exception must be submitted by April 1 of the year before the applicable payment adjustment year.

(B)(*1*) During the fiscal year that is 2 fiscal years before the payment adjustment year, the hospital that has previously demonstrated meaningful use faces extreme and uncontrollable circumstances that prevent it from becoming a meaningful EHR user. Applications requesting this exception must be submitted by April 1 of the year before the applicable payment adjustment year.

(*2*) During the fiscal year preceding the payment adjustment year, the hospital that has not previously demonstrated meaningful use faces extreme and uncontrollable circumstances that prevent it from becoming a meaningful EHR user. Applications requesting this exception must be submitted by April 1 of the year before the applicable payment adjustment year.

(C) The hospital is new in the payment adjustment year, and has not previously operated (under previous or present ownership). This exception expires beginning with the first Federal fiscal year that begins on or after the hospital has had at least one 12-month (or longer) cost reporting period after they accept their first Medicare covered patient. For purposes of this exception, the following hospitals are not considered new hospitals:

(*1*) A hospital that builds new or replacement facilities at the same or another location even if coincidental with a change of ownership, a change in management, or a lease arrangement.

(*2*) A hospital that closes and subsequently reopens.

(*3*) A hospital that changes its status from a CAH to a hospital that is subject to the Medicare hospital inpatient prospective payment systems.

(5) A State in which hospitals are paid for services under section 1814(b)(3) of the Act must—

(i) Adjust the payments to each eligible hospital in the State that is not a meaningful EHR user in a manner that is designed to result in an aggregate reduction in payments to hospitals in the State that is equivalent to the aggregate reduction that would have occurred if payments had been reduced to each eligible hospital in the State in a manner comparable to the reduction under paragraph (d)(3) of this section; and

(ii) Provide to the Secretary, by January 1, 2013, a report on the method that it proposes to employ in order to make the requisite payment adjustment described in paragraph (d)(5)(i) of this section.

* * * * *

PART 413—PRINCIPLES OF REASONABLE COST REIMBURSEMENT; PAYMENT FOR END-STAGE RENAL DISEASE SERVICES; OPTIONAL PROSPECTIVELY DETERMINED PAYMENT RATES FOR SKILLED NURSING FACILITIES

■ 3. The authority citation for part 413 continues to read as follows:

Authority: Secs. 1102, 1812(d), 1814(b), 1815, 1833(a), (i), and (n), 1861(v), 1871, 1881, 1883, and 1886 of the Social Security Act (42 U.S.C. 1302, 1395d(d), 1395f(b), 1395g, 1395l(a), (i), and (n), 1395x(v), 1395hh, 1395rr, 1395tt, and 1395ww); and sec. 124 of Public Law 106–133 (113 Stat. 1501A–332).

■ 4. Section 413.70 is amended by revising paragraphs (a)(6)(i) introductory text, (a)(6)(ii), and (a)(6)(iii) to read as follows:

§ 413.70 Payment for services of a CAH.

(a) * * *

(6)(i) For cost reporting periods beginning in or after FY 2015, if a CAH is not a qualifying CAH for the applicable EHR reporting period, as defined in § 495.4 and § 495.106(a) of this chapter, then notwithstanding the percentage applicable in paragraph (a)(1) of this section, the reasonable costs of the CAH in providing CAH services to its inpatients are adjusted by the following applicable percentage:

* * * * *

(ii) The Secretary may on a case-by-case basis, exempt a CAH that is not a qualifying CAH from the application of the payment adjustment under paragraph (a)(6)(i) of this section if the Secretary determines that compliance with the requirement for being a meaningful user would result in a significant hardship for the CAH. In order to be considered for an exception, a CAH must submit an application demonstrating that it meets one or more of the criteria specified in this paragraph (a)(6) for the applicable payment adjustment year no later than November 30 after the close of the applicable EHR reporting period. The Secretary may grant an exception for one or more of the following:

(A) During any 90-day period from the beginning of the cost reporting period that begins in the fiscal year before the payment adjustment year to November 30 after the end of the payment adjustment year, the hospital was located in an area without sufficient Internet access to comply with the meaningful use objectives requiring Internet connectivity, and faced insurmountable barriers to obtaining such Internet connectivity.

(B) A CAH that faces extreme and uncontrollable circumstances that prevent it from becoming a meaningful EHR user during the payment adjustment year.

(C) The CAH is new in the payment adjustment year and has not previously operated (under previous or present ownership). This exception expires beginning with the first Federal fiscal year that begins on or after the hospital

has had at least one 12-month (or longer) cost reporting period after they accept their first Medicare-covered patient. For the purposes of this exception, the following CAHs are not considered new CAHs:

(*1*) A CAH that builds new or replacement facilities at the same or another location even if coincidental with a change of ownership, a change in management, or a lease arrangement.

(*2*) A CAH that closes and subsequently reopens.

(*3*) A CAH that has been converted from an eligible hospital as defined at § 495.4 of this chapter.

(iii) Exceptions granted under paragraph (a)(6)(ii) of this section are subject to annual renewal, but in no case may a CAH be granted such an exception for more than 5 years.

* * * * *

PART 495—STANDARDS FOR THE ELECTRONIC HEALTH RECORD TECHNOLOGY INCENTIVE PROGRAM

■ 5. The authority citation for part 495 continues to read as follows:

Authority: Secs. 1102 and 1871 of the Social Security Act (42 U.S.C. 1302 and 1395hh).

Subpart A—General Provisions

■ 6. Section 495.4 is amended as follows:

■ A. Revising the definition of ''EHR reporting period''.

■ B. Adding the definition of ''EHR reporting period for a payment adjustment year'' in alphabetical order.

■ C. Revising the definition of ''Hospital-based EP''.

■ D. Revising paragraphs (1) and (3) of the definition of ''Meaningful EHR user''.

■ E. Adding the definition of ''Payment adjustment year'' in alphabetical order.

The revisions and additions read as follows:

§ 495.4 Definitions.

* * * * *

EHR reporting period. Except with respect to payment adjustment years, EHR reporting period means either of the following:

(1) For an eligible EP—

(i) For the payment year in which the EP is first demonstrating he or she is a meaningful EHR user, any continuous 90-day period within the calendar year;

(ii) Except as specified in paragraphs (1)(iii) and (1)(iv) of this definition, for the subsequent payment years following the payment year in which the EP first successfully demonstrates he or she is a meaningful EHR user, the calendar year.

(iii) For an EP seeking to demonstrate he or she is a meaningful EHR user for the Medicare EHR incentive program for CY 2014, any of the following 3-month periods:

(A) January 1, 2014 through March 31, 2014.

(B) April 1, 2014 through June 30, 2014.

(C) July 1, 2014 through September 30, 2014.

(D) October 1, 2014 through December 31, 2014.

(iv) For an EP seeking to demonstrate he or she is a meaningful EHR user for the Medicaid EHR incentive program for CY 2014 any continuous 90-day period within CY 2014.

(2) For an eligible hospital or CAH—

(i) For the payment year in which the eligible hospital or CAH is first demonstrating it is a meaningful EHR user, any continuous 90-day period within the Federal fiscal year;

(ii) Except as specified in paragraph (2)(iii) of this definition, for the subsequent payment years following the payment year in which the eligible hospital or CAH first successfully demonstrates it is a meaningful EHR user, the Federal fiscal year.

(iii) For an eligible hospital or CAH seeking to demonstrate it is a meaningful EHR user for FY 2014, any of the following 3-month periods:

(A) October 1, 2013 through December 31, 2013.

(B) January 1, 2014 through March 31, 2014.

(C) April 1, 2014 through June 30, 2014.

(D) July 1, 2014 through September 30, 2014.

EHR reporting period for a payment adjustment year. For a payment adjustment year, the EHR reporting period means the following:

(1) For an EP—

(i)(A) Except as provided in paragraphs (1)(i)(B), (ii), and (iii) of this definition, the calendar year that is 2 years before the payment adjustment year.

(B) The special EHR reporting period for CY 2014 (specified in paragraph (1)(iii) or (1)(iv) of this definition, as applicable) of the definition of ''EHR Reporting Period'' that occurs within the calendar year that is 2 years before the payment adjustment year and is only for EHR reporting periods in CY 2014.

(ii) If an EP is demonstrating he or she is a meaningful EHR user for the first time in the calendar year, that is 2 years before the payment adjustment year, then any continuous 90-day period within such (2 years prior) calendar year.

(iii)(A) If in the calendar year that is 2 years before the payment adjustment year and in all prior calendar years, the EP has not successfully demonstrated he or she is a meaningful EHR user, then any continuous 90-day period that both begins in the calendar year 1 year before the payment adjustment year and ends at least 3 months before the end of such prior year.

(B) Under this exception, the provider must successfully register for and attest to meaningful use no later than the date October 1 of the year before the payment adjustment year.

(2) For an eligible hospital—

(i)(A) Except as provided in paragraphs (2)(i)(B), (ii), and (iii) of this definition, the Federal fiscal year that is 2 years before the payment adjustment year.

(B) The special EHR reporting period for FY 2014 (defined in paragraph (2)(iii) of the definition ''EHR Reporting Period'') that occurs within the fiscal year that is 2 years before the payment adjustment year and is only for EHR reporting periods in fiscal year 2014.

(ii) If an eligible hospital is demonstrating it is a meaningful EHR user for the first time in the Federal fiscal year that is 2 years before the payment adjustment year, then any continuous 90-day period within such (2 years prior) Federal fiscal year.

(iii)(A) If in the Federal fiscal year that is 2 years before the payment adjustment year and for all prior Federal fiscal years the eligible hospital has not successfully demonstrated it is a meaningful EHR user, then any continuous 90-day period that both begins in the Federal fiscal year that is 1 year before the payment adjustment year and ends at least 3 months before the end of such prior Federal fiscal year.

(B) Under this exception, the eligible hospital must successfully register for and attest to meaningful use no later than July 1 of the year before the payment adjustment year.

(3) For a CAH—

(i) Except as provided in paragraph (3)(ii) of this definition, the Federal fiscal year that is the payment adjustment year.

(ii) If the CAH is demonstrating it is a meaningful EHR user for the first time in the payment adjustment year, any continuous 90-day period within the Federal fiscal year that is the payment adjustment year.

* * * * *

Hospital-based EP. Unless it meets the requirements of § 495.5 of this part, a hospital-based EP means an EP who furnishes 90 percent or more of his or her covered professional services in

sites of service identified by the codes used in the HIPAA standard transaction as an inpatient hospital or emergency room setting in the year preceding the payment year, or in the case of a payment adjustment year, in either of the 2 years before such payment adjustment year.

(1) For Medicare, this is calculated based on—

(i) The FFY preceding the payment year; and

(ii) For the payment adjustments, on the—

(A) FFY preceding the payment adjustment year; or

(B) FFY 2 years before the payment adjustment year.

(2) For Medicaid, it is at the State's discretion if the data is gathered on the Federal fiscal year or calendar year preceding the payment year.

* * * * *

Meaningful EHR user * * *

(1) Subject to paragraph (3) of this definition, an EP, eligible hospital or CAH that, for an EHR reporting period for a payment year or payment adjustment year, demonstrates in accordance with § 495.8 meaningful use of Certified EHR Technology by meeting the applicable objectives and associated measures under § 495.6 and successfully reporting the clinical quality measures selected by CMS to CMS or the States, as applicable, in the form and manner specified by CMS or the States, as applicable; and

* * * * *

(3) To be considered a meaningful EHR user, at least 50 percent of an EP's patient encounters during an EHR reporting period for a payment year (or, in the case of a payment adjustment year, during an applicable EHR reporting period for such payment adjustment year) must occur at a practice/location or practices/locations equipped with Certified EHR Technology.

* * * * *

Payment adjustment year means either of the following:

(1) For an EP, a calendar year beginning with CY 2015.

(2) For a CAH or an eligible hospital, a Federal fiscal year beginning with FY 2015.

* * * * *

■ 7. Section 495.5 is added to read as follows:

§ 495.5 Requirements for EPs seeking to reverse a hospital-based determination under § 495.4.

(a) *Exception for certain EPs.* Beginning with payment year 2013, an EP who meets the definition of hospital-based EP specified in § 495.4 but who can demonstrate to CMS that the EP funds the acquisition, implementation, and maintenance of Certified EHR Technology, including supporting hardware and interfaces needed for meaningful use without reimbursement from an eligible hospital or CAH, and uses such Certified EHR Technology in the inpatient or emergency department of a hospital (instead of the hospital's Certified EHR Technology), may be determined by CMS to be a nonhospital-based EP.

(b) *Process for determining a nonhospital-based EP.* When an EP registers for a given payment year they should receive a determination of whether they have been determined ''hospital-based.''

(1) An EP determined ''hospital-based,'' but who wishes to be determined nonhospital-based as specified in paragraph (a) of section, may use an administrative process to provide documentation and seek a nonhospital-based determination. Such administrative process will be available throughout the incentive payment year and including the 2 months following the incentive payment year in which the EP may attest to being a meaningful EHR user.

(2) If an EP is determined nonhospital-based under paragraph (a) of this section, to be considered nonhospital-based for subsequent payment years, the EP must attest in such payment year (or by the time the EP must attest it is a meaningful EHR user for such year) that the EP continues to meet the criteria of paragraph (a) of this section.

(c) *Requirements for nonhospital-based EPs.* An EP determined nonhospital-based must—

(1) Continue to meet all applicable requirements to receive an incentive payment, including meeting all requirements for meaningful use; and

(2) Demonstrate meaningful use using all encounters at all locations equipped with Certified EHR Technology, including those in the inpatient and emergency departments of the hospital.

■ 8. Section 495.6 is amended as follows:

■ A. Redesignating paragraph (a)(2)(ii) as paragraph (a)(2)(ii)(A).

■ B. Adding paragraph (a)(2)(ii)(B).

■ C. Redesignating paragraph (b)(2)(ii) as paragraph (b)(2)(ii)(A).

■ D. Adding paragraph (b)(2)(ii)(B).

■ E. In paragraphs (c) introductory text and (c)(1), the references ''paragraphs (d) through (g)'' are removed and the references ''paragraphs (d) through (m)'' is added in their place.

■ F. Redesignating paragraph (d)(1)(ii) as paragraph (d)(1)(ii)(A).

■ G. Adding paragraph (d)(1)(ii)(B).

■ H. Redesignating paragraph (d)(4)(iii) as paragraph (d)(4)(iii)(A).

■ I. Adding a paragraph (d)(4)(iii)(B).

■ J. Redesignating paragraph (d)(8)(i)(E) as paragraph (d)(8)(i)(E)(*1*).

■ K. Adding paragraphs (d)(8)(i)(E)(*2*) and (*3*).

■ L. Redesignating paragraph (d)(8)(ii) as paragraph (d)(8)(ii)(A).

■ M. Adding paragraphs (d)(8)(ii)(B) and (C).

■ N. Redesignating paragraph (d)(8)(iii) as paragraph (d)(8)(iii)(A).

■ O. Adding paragraphs (d)(8)(iii)(B) and (C).

■ P. Redesignating paragraph (d)(10)(i) as paragraph (d)(10)(i)(A).

■ Q. Adding paragraph (d)(10)(i)(B).

■ R. Redesignating paragraph (d)(10)(ii) as paragraph (d)(10)(ii)(A).

■ S. Adding a paragraph (d)(10)(ii)(B).

■ T. Redesignating paragraph (d)(12)(i) as paragraph (d)(12)(i)(A).

■ U. Adding a paragraph (d)(12)(i)(B).

■ V. Redesignating paragraph (d)(12)(ii) as paragraph (d)(12)(ii)(A).

■ W. Adding a paragraph (d)(12)(ii)(B).

■ X. Redesignating paragraph (d)(12)(iii) as paragraph (d)(12)(iii)(A).

■ Y. Adding a paragraph (d)(12)(iii)(B).

■ Z. Redesignating paragraph (d)(14)(i) as paragraph (d)(14)(i)(A).

■ AA. Adding a paragraph (d)(14)(i)(B).

■ BB. Redesignating paragraph (d)(14)(ii) as paragraph (d)(14)(ii)(A).

■ CC. Adding a paragraph (d)(14)(ii)(B).

■ DD. In paragraph (e) introductory text—

■ i. Removing the colon and adding a period in its place.

■ ii. Adding a sentence at the end of the paragraph.

■ EE. Redesignating paragraph (e)(5)(i) as paragraph (e)(5)(i)(A).

■ FF. Adding a paragraph (e)(5)(i)(B).

■ GG. Redesignating paragraph (e)(5)(ii) as paragraph (e)(5)(ii)(A).

■ HH. Adding paragraph (e)(5)(ii)(B).

■ II. Redesignating paragraph (e)(9)(i) as (e)(9)(i)(A).

■ JJ. Adding paragraph (e)(9)(i)(B).

■ KK. Redesignating paragraph (e)(10)(i) as (e)(10)(i)(A).

■ LL. Adding paragraph (e)(10)(i)(B).

■ MM. Redesignating paragraph (f)(1)(ii) as paragraph (f)(1)(ii)(A).

■ NN. Adding paragraphs (f)(1)(ii)(B) and (C).

■ OO. Redesignating paragraph (f)(7)(i)(E) as paragraph (f)(7)(i)(E)(*1*).

■ PP. Adding a paragraphs (f)(7)(i)(E)(*2*) and (*3*).

■ QQ. Redesignating paragraph (f)(7)(ii) as (f)(7)(ii)(A).

■ RR. Adding paragraphs (f)(7)(ii)(B) and (C).

■ SS. Redesignating paragraph (f)(9)(i) as paragraph (f)(9)(i)(A).
■ TT. Adding a paragraph (f)(9)(i)(B).
■ UU. Redesignating paragraph (f)(9)(ii) as paragraph (f)(9)(ii)(A).
■ VV. Adding a paragraph (f)(9)(ii)(B).
■ WW. Redesignating paragraphs (f)(11)(i) and (ii) as paragraphs (f)(11)(i)(A) and (ii)(A), respectively.
■ XX. Adding paragraphs (f)(11)(i)(B) and (ii)(B).
■ YY. Redesignating paragraph (f)(12)(i) as paragraph (f)(12)(i)(A).
■ ZZ. Adding a paragraph (f)(12)(i)(B).
■ AAA. Redesignating paragraph (f)(12)(ii) as paragraph (f)(12)(ii)(A).
■ BBB. Adding a paragraph (f)(12)(ii)(B).
■ CCC. Redesignating paragraph (f)(12)(iii) as paragraph (f)(12)(iii)(A).
■ DDD. Adding a paragraph (f)(12)(iii)(B).
■ EEE. Redesignating paragraph (f)(13)(i) as paragraph (f)(13)(i)(A).
■ FFF. Adding a paragraph (f)(13)(i)(B).
■ GGG. Redesignating paragraph (f)(13)(ii) as paragraph (f)(13)(ii)(A).
■ HHH. Adding a paragraph (f)(13)(ii)(B).
■ III. In paragraph (g) introductory text—
■ i. Removing the colon and adding a period in its place.
■ ii. Adding a sentence at the end of the paragraph.
■ JJJ. Redesignating paragraph (g)(8)(i) as paragraph (g)(8)(i)(A).
■ KKK. Adding a paragraph (g)(8)(i)(B).
■ LLL. Redesignating paragraph (g)(9)(i) as paragraph (g)(9)(i)(A).
■ MMM. Adding a paragraph (g)(9)(i)(B).
■ NNN. Redesignating paragraph (g)(10)(i) as paragraph (g)(10)(i)(A).
■ OOO. Adding a paragraph (g)(10)(i)(B).
■ PPP. Revising paragraphs (h) and (i).
■ QQQ. Adding new paragraphs (j) through (m).

The additions and revisions read as follows:

§ 495.6 Meaningful use objectives and measures for EPs, eligible hospitals, and CAHs.

* * * * *

(a) * * *

(2) * * *

(ii) * * *

(B) Beginning 2014, an exclusion does not reduce (by the number of exclusions applicable) the number of objectives that would otherwise apply in paragraph (e) of this section unless five or more objectives can be excluded. An EP must meet five of the objectives and associated measures specified in paragraph (e) of this section, one of which must be either paragraph (e)(9) or (10) of this section, unless the EP has an exclusion from five or more objectives specified in paragraph (e) of this section, in which case the EP must meet all remaining objectives and associated measures in paragraph (e) of this section.

* * * * *

(b) * * *

(2) * * *

(ii) * * *

(B) Beginning 2014, an exclusion does not reduce (by the number of exclusions applicable) the number of objectives that would otherwise apply in paragraph (g) of this section. Eligible hospitals or CAHs must meet five of the objectives and associated measures specified in paragraph (g) of this section, one which must be specified in paragraph (g)(8), (9), or (10) of this section.

* * * * *

(d) * * *

(1) * * *

(ii) * * *

(B) Subject to paragraph (c) of this section, more than 30 percent of medication orders created by the EP during the EHR reporting period are recorded using computerized provider order entry, or the measure specified in paragraph (d)(1)(ii)(A) of this section.

* * * * *

(4) * * *

(iii) * * *

(B) Beginning 2013, any EP who does not have a pharmacy within their organization and there are no pharmacies that accept electronic prescriptions within 10 miles of the EP's practice location at the start of his/her EHR reporting period, or the exclusion specified in (d)(4)(iii)(A) of this section.

* * * * *

(8)(i) * * *

(E) * * *

(*2*) For 2013, plot and display growth charts for patients 0–20 years, including body mass index, or paragraph (d)(8)(i)(E)(*1*) of this section.

(*3*) Beginning 2014, plot and display growth charts for patients 0–20 years, including body mass index.

(ii) * * *

(B) For 2013—(*1*) Subject to paragraph (c) of this section, more than 50 percent of all unique patients seen by the EP during the EHR reporting period have blood pressure (for patients age 3 and over only) and height/length and weight (for all ages) recorded as structured data; or

(*2*) The measure specified in paragraph (d)(8)(ii)(A) of this section.

(C) Beginning 2014, only the measure specified in paragraph (d)(8)(ii)(B)(*1*) of this section.

(iii) * * *

(B) For 2013, either of the following:

(*1*) The exclusion specified in paragraph (d)(8)(iii)(A) of this section.

(*2*) The exclusion for an EP who—

(*i*) Sees no patients 3 years or older is excluded from recording blood pressure;

(*ii*) Believes that all three vital signs of height/length, weight, and blood pressure have no relevance to their scope of practice is excluded from recording them;

(*iii*) Believes that height/length and weight are relevant to their scope of practice, but blood pressure is not, is excluded from recording blood pressure; or

(*iv*) Believes that blood pressure is relevant to their scope of practice, but height/length and weight are not, is excluded from recording height/length and weight.

(C) Beginning 2014, only the exclusion specified in paragraph (d)(8)(iii)(B)(*2*) of this section.

* * * * *

(10)(i) * * *

(B) Beginning 2013, this objective is reflected in the definition of a meaningful EHR user in § 495.4 and is no longer listed as an objective in this paragraph (d).

(ii) * * *

(B) Beginning 2013, this measure is reflected in the definition of a meaningful EHR user in § 495.4 and no longer listed as a measure in this paragraph (d).

* * * * *

(12)(i) * * *

(B) Beginning 2014, provide patients the ability to view online, download, and transmit their health information within 4 business days of the information being available to the EP.

(ii) * * *

(B) Beginning 2014, subject to paragraph (c) of this section, more than 50 percent of all unique patients seen by the EP during the EHR reporting period are provided timely (available to the patient within 4 business days after the information is available to the EP) online access to their health information subject to the EP's discretion to withhold certain information.

(iii) * * *

(B) Beginning 2014, any EP who neither orders nor creates any of the information listed for inclusion as part of this measure.

* * * * *

(14)(i) * * *

(B) Beginning 2013, this objective is no longer required as part of the core set.

(ii) * * *

(B) Beginning 2013, this measure is no longer required as part of the core set.

* * * * *

(e) * * * Beginning 2014, an EP must meet five of the following objectives and associated measures, one of which must be either paragraph (e)(9) or (10) of this section unless the EP has an exclusion from five or more objectives in this paragraph (e), in which case the EP must meet all remaining objectives and associated measures in paragraph (e) of this section.

* * * * *

(5)(i) * * *

(B) Beginning 2014, this objective is no longer included in the menu set.

(ii) * * *

(B) Beginning 2014, this measure is no longer included in the menu set.

* * * * *

(9)(i) * * *

(B) Beginning 2013, capability to submit electronic data to immunization registries or immunization information systems and actual submission except where prohibited and according to applicable law and practice.

* * * * *

(10)(i) * * *

(B) Beginning 2013, capability to submit electronic syndromic surveillance data to public health agencies and actual submission except where prohibited and according to applicable law and practice.

* * * * *

(f) * * *

(1) * * *

(ii) * * *

(B) Subject to paragraph (c) of this section, more than 30 percent of medication orders created by the authorized providers of the eligible hospital or CAH for patients admitted to their inpatient or emergency departments (POS 21 or 23) during the EHR reporting period are recorded using computerized provider order entry, or the measure specified in paragraph (f)(1)(ii)(A) of this section.

* * * * *

(7) * * *

(i) * * *

(E) * * *

(*2*) For 2013, plot and display growth charts for patients 0–20 years, including body mass index, or paragraph (f)(*7*)(i)(E)(*1*) of this section.

(*3*) Beginning 2014, plot and display growth charts for patients 0–20 years, including body mass index.

(ii) * * *

(B) For 2013—(*1*) Subject to paragraph (c) of this section, more than 50 percent of all unique patients admitted to the eligible hospital's or CAH's inpatient or emergency department (POS 21 or 23) during the EHR reporting period have blood pressure (for patients age 3 and over only) and height/length and weight (for all ages) recorded as structured data; or

(*2*) The measure specified in paragraph (f)(7)(ii)(A) of this section.

(C) Beginning 2014, only the measure specified in paragraph (f)(7)(ii)(B)(*1*) of this section.

* * * * *

(9) * * *

(i) * * *

(B) Beginning 2013, this objective is reflected in the definition of a meaningful EHR user in § 495.4 and no longer listed as an objective in this paragraph (f).

(ii) * * *

(B) Beginning 2013, this measure is reflected in the definition of a meaningful EHR user in § 495.4 and no longer listed as a measure in this paragraph (f).

* * * * *

(11) * * *

(i) * * *

(B) Beginning 2014, this objective is no longer required as part of the core set.

(ii) * * *

(B) Beginning 2014, this measure is no longer required as part of the core set.

(12) * * *

(i) * * *

(B) Beginning 2014, provide patients the ability to view online, download, and transmit information about a hospital admission.

(ii) * * *

(B) Beginning 2014, subject to paragraph (c) of this section, more than 50 percent of all patients who are discharged from the inpatient or emergency department (POS 21 or 23) of an eligible hospital or CAH have their information available online within 36 hours of discharge.

(iii) * * *

(B) Beginning 2014, this exclusion is no longer available.

* * * * *

(13) * * *

(i) * * *

(B) Beginning 2013, this objective is no longer required as part of the core set.

(ii) * * *

(B) Beginning 2013, this measure is no longer required as part of the core set.

* * * * *

(g) * * * Beginning 2014, eligible hospitals or CAHs must meet five of the following objectives and associated measures, one which must be specified in paragraph (g)(8), (9), or (10) of this section:

* * * * *

(8)(i) * * *

(B) Beginning 2013, Capability to submit electronic data to immunization registries or immunization information systems and actual submission except where prohibited and according to applicable law and practice.

(9)(i) * * *

(B) Beginning 2013, capability to submit electronic data on reportable (as required by State or local law) lab results to public health agencies and actual submission except where prohibited according to applicable law and practice.

(10)(i) * * *

(B) Beginning 2013, capability to submit electronic syndromic surveillance data to public health agencies and actual submission except where prohibited and according to applicable law and practice.

* * * * *

(h) *Stage 2 criteria for EPs*–(1) *General rule regarding Stage 2 criteria for meaningful use for EPs.* Except as specified in paragraph (h)(2) of this section, EPs must meet all objectives and associated measures of the Stage 2 criteria specified in paragraph (j) of this section and 3 objectives of the EP's choice from paragraph (k) of this section to meet the definition of a meaningful EHR user.

(2) *Exclusion for nonapplicable objectives.* (i) An EP may exclude a particular objective contained in paragraph (j) or (k) of this section, if the EP meets all of the following requirements:

(A) Must ensure that the objective in paragraph (j) or (k) of this section includes an option for the EP to attest that the objective is not applicable.

(B) Meets the criteria in the applicable objective that would permit the attestation.

(C) Attests.

(ii)(A) An exclusion will reduce (by the number of exclusions applicable) the number of objectives that would otherwise apply in paragraph (j) of this section. For example, an EP that has an exclusion from one of the objectives in paragraph (j) of this section must meet 16 objectives from such paragraph to meet the definition of a meaningful EHR user.

(B) An exclusion does not reduce (by the number of exclusions applicable) the number of objectives that would otherwise apply in paragraph (k) of this section unless four or more exclusions apply. For example, an EP that has an exclusion for one of the objectives in paragraph (k) of this section must meet three of the five nonexcluded objectives from such paragraph to meet the definition of a meaningful EHR user. If an EP has an exclusion for four of the objectives in paragraph (k) of this

section, then he or she must meet the remaining two nonexcluded objectives from such paragraph to meet the definition of a meaningful EHR user.

(i) *Stage 2 criteria for eligible hospitals and CAHs*–(1) *General rule regarding Stage 2 criteria for meaningful use for eligible hospitals or CAHs.* Except as specified in paragraph (i)(2) of this section, eligible hospitals and CAHs must meet all objectives and associated measures of the Stage 2 criteria specified in paragraph (l) of this section and three objectives of the eligible hospital's or CAH's choice from paragraph (m) of this section to meet the definition of a meaningful EHR user.

(2) *Exclusions for nonapplicable objectives.* (i) An eligible hospital or CAH may exclude a particular objective that includes an option for exclusion contained in paragraphs (l) or (m) of this section, if the hospital meets all of the following requirements:

(A) The hospital meets the criteria in the applicable objective that would permit an exclusion.

(B) The hospital so attests.

(ii)(A) An exclusion will reduce (by the number of exclusions applicable) the number of objectives that would otherwise apply in paragraph (l) of this section. For example, an eligible hospital that has an exclusion from 1 of the objectives in paragraph (l) of this section must meet 15 objectives from such paragraph to meet the definition of a meaningful EHR user.

(B) An exclusion does not reduce (by the number of exclusions applicable) the number of objectives that would otherwise apply in paragraph (m) of this section. For example, an eligible hospital that has an exclusion for one of the objectives in paragraph (m) of this section must meet three of the five nonexcluded objectives from such paragraph to meet the definition of a meaningful EHR user.

(j) *Stage 2 core criteria for EPs.* An EP must satisfy the following objectives and associated measures, except those objectives and associated measures for which an EP qualifies for an exclusion under paragraph (h)(2) of this section specified in this paragraph (j).

(1)(i) *Objective.* Use computerized provider order entry for medication, laboratory, and radiology orders directly entered by any licensed healthcare professional who can enter orders into the medical record per State, local, and professional guidelines.

(ii) *Measures.* Subject to paragraph (c) of this section—

(A) More than 60 percent of medication orders created by the EP during the EHR reporting period are recorded using computerized provider order entry;

(B) More than 30 percent of laboratory orders created by the EP during the EHR reporting period are recorded using computerized provider order entry; and

(C) More than 30 percent of radiology orders created by the EP during the EHR reporting period are recorded using computerized provider order entry.

(iii) *Exclusions in accordance with paragraph (h)(2) of this section.* (A) For the measure specified in paragraph (j)(1)(ii)(A) of this section, any EP who writes fewer than 100 medication orders during the EHR reporting period.

(B) For the measure specified in paragraph (j)(1)(ii)(B) of this section, any EP who writes fewer than 100 laboratory orders during the EHR reporting period.

(C) For the measure specified in paragraph (j)(1)(ii)(C), any EP who writes fewer than 100 radiology orders during the EHR reporting period.

(2)(i) *Objective.* Generate and transmit permissible prescriptions electronically (eRx).

(ii) *Measure.* Subject to paragraph (c) of this section, more than 50 percent of all permissible prescriptions, or all prescriptions, written by the EP are queried for a drug formulary and transmitted electronically using Certified EHR Technology.

(iii) *Exclusion in accordance with paragraph (h)(2) of this section.* Any EP who—

(A) Writes fewer than 100 permissible prescriptions during the EHR reporting period; or (B) Does not have a pharmacy within their organization and there are no pharmacies that accept electronic prescriptions within 10 miles of the EP's practice location at the start of his or her EHR reporting period.

(3)(i) *Objective.* Record all of the following demographics:

(A) Preferred language.

(B) Sex.

(C) Race.

(D) Ethnicity.

(E) Date of birth.

(ii) *Measure.* More than 80 percent of all unique patients seen by the EP during the EHR reporting period have demographics recorded as structured data.

(4)(i) *Objective.* Record and chart changes in the following vital signs:

(A) Height/Length.

(B) Weight.

(C) Blood pressure (ages 3 and over).

(D) Calculate and display body mass index (BMI).

(E) Plot and display growth charts for patients 0–20 years, including body mass index.

(ii) *Measure.* Subject to paragraph (c) of this section, more than 80 percent of all unique patients seen by the EP during the EHR reporting period have blood pressure (for patients age 3 and over only) and height/length and weight (for all ages) recorded as structured data.

(iii) *Exclusion in accordance with paragraph (h)(2) of this section.* Any EP who—

(A) Sees no patients 3 years or older is excluded from recording blood pressure;

(B) Believes that all three vital signs of height/length, weight, and blood pressure have no relevance to their scope of practice is excluded from recording them;

(C) Believes that height/length and weight are relevant to their scope of practice, but blood pressure is not, is excluded from recording blood pressure; or

(D) Believes that blood pressure is relevant to their scope of practice, but height/length and weight are not, is excluded from recording height/length and weight.

(5)(i) *Objective.* Record smoking status for patients 13 years old or older.

(ii) *Measure.* Subject to paragraph (c) of this section, more than 80 percent of all unique patients 13 years old or older seen by the EP during the EHR reporting period have smoking status recorded as structured data.

(iii) *Exclusion in accordance with paragraph (h)(2) of this section.* Any EP who sees no patients 13 years old or older.

(6)(i) *Objective.* Use clinical decision support to improve performance on high priority health conditions.

(ii) *Measures.* (A) Implement five clinical decision support interventions related to four or more clinical quality measures at a relevant point in patient care for the entire EHR reporting period. Absent four clinical quality measures related to an EP's scope of practice or patient population, the clinical decision support interventions must be related to high-priority health conditions; and

(B) The EP has enabled and implemented the functionality for drug-drug and drug-allergy interaction checks for the entire EHR reporting period.

(iii) *Exclusion in accordance with paragraph (h)(2) of this section for paragraph (j)(6)(ii)(B) of this section.* An EP who writes fewer than 100 medication orders during the EHR reporting period.

(7)(i) *Objective.* Incorporate clinical lab test results into Certified EHR Technology as structured data.

(ii) *Measure.* Subject to paragraph (c) of this section, more than 55 percent of all clinical lab tests results ordered by the EP during the EHR reporting period whose results are either in a positive/

negative affirmation or numerical format are incorporated in Certified EHR Technology as structured data.

(iii) *Exclusion in accordance with paragraph (h)(2) of this section.* Any EP who orders no lab tests whose results are either in a positive/negative affirmation or numerical format during the EHR reporting period.

(8)(i) *Objective.* Generate lists of patients by specific conditions to use for quality improvement, reduction of disparities, research, or outreach.

(ii) *Measure.* Generate at least one report listing patients of the EP with a specific condition.

(9)(i) *Objective.* Use clinically relevant information to identify patients who should receive reminders for preventive/follow-up care and send these patients the reminder, per patient preference.

(ii) *Measure.* Subject to paragraph (c) of this section, more than 10 percent of all unique patients who have had two or more office visits with the EP within the 24 months before the beginning of the EHR reporting period were sent a reminder, per patient preference when available.

(iii) *Exclusion in accordance with paragraph (h)(2) of this section.* Any EP who has had no office visits in the 24 months before the beginning of the EHR reporting period.

(10)(i) *Objective.* Provide patients the ability to view online, download, and transmit their health information within 4 business days of the information being available to the EP.

(ii) *Measures.* (A) More than 50 percent of all unique patients seen by the EP during the EHR reporting period are provided timely (available to the patient within 4 business days after the information is available to the EP) online access to their health information subject to the EP's discretion to withhold certain information; and

(B) More than 5 percent of all unique patients seen by the EP during the EHR reporting period (or their authorized representatives) view, download or transmit to a third party their health information.

(iii) *Exclusion in accordance with paragraph (h)(2) of this section.* Any EP who—

(A) Neither orders nor creates any of the information listed for inclusion as part of the measures in paragraphs (j)(10)(ii)(A) and (B) of this section, except for ''Patient name'' and ''Provider's name and office contact information,'' is excluded from both paragraphs (j)(10)(ii)(A) and (B) of this section; or

(B) Conducts 50 percent or more of his or her patient encounters in a county that does not have 50 percent or more of its housing units with 3Mbps broadband availability according to the latest information available from the FCC on the first day of the EHR reporting period is excluded from paragraph (j)(10)(ii)(B) of this section.

(11)(i) *Objective.* Provide clinical summaries for patients for each office visit.

(ii) *Measure.* Subject to paragraph (c) of this section, clinical summaries provided to patients or patient-authorized representatives within 1 business day for more than 50 percent of office visits.

(iii) *Exclusion in accordance with paragraph (h)(2) of this section.* Any EP who has no office visits during the EHR reporting period.

(12)(i) *Objective.* Use clinically relevant information from Certified EHR Technology to identify patient-specific education resources and provide those resources to the patient.

(ii) *Measure.* Patient-specific education resources identified by Certified EHR Technology are provided to patients for more than 10 percent of all unique patients with office visits seen by the EP during the EHR reporting period.

(iii) *Exclusion in accordance with paragraph (h)(2) of this section.* Any EP who has no office visits during the EHR reporting period.

(13)(i) *Objective.* The EP who receives a patient from another setting of care or provider of care or believes an encounter is relevant should perform medication reconciliation.

(ii) *Measure.* Subject to paragraph (c) of this section, the EP performs medication reconciliation for more than 50 percent of transitions of care in which the patient is transitioned into the care of the EP.

(iii) *Exclusion in accordance with paragraph (h)(2) of this section.* Any EP who was not the recipient of any transitions of care during the EHR reporting period.

(14)(i) *Objective.* The EP who transitions their patient to another setting of care or provider of care or refers their patient to another provider of care provides a summary care record for each transition of care or referral.

(ii) *Measures.* (A) Subject to paragraph (c) of this section, the EP that transitions or refers their patient to another setting of care or provider of care provides a summary of care record for more than 50 percent of transitions of care and referrals;

(B) Subject to paragraph (c) of this section, the EP that transitions or refers their patient to another setting of care or provider of care provides a summary of care record for more than 10 percent of such transitions and referrals either—

(*1*) Electronically transmitted using Certified EHR Technology to a recipient; or

(*2*) Where the recipient receives the summary of care record via exchange facilitated by an organization that is a NwHIN Exchange participant or in a manner that is consistent with the governance mechanism ONC establishes for the nationwide health information network, and

(C) Subject to paragraph (c) of this section an EP must satisfy one of the following:

(*1*) Conducts one or more successful electronic exchanges of a summary of care record meeting the measure specified in paragraph (j)(14)(ii)(B) of this section with a recipient using technology to receive the summary of care record that was designed by a different EHR developer than the sender's EHR technology certified at 45 CFR 107.314(b)(2); or

(*2*) Conducts one or more successful tests with the CMS designated test EHR during the EHR reporting period.

(iii) *Exclusion in accordance with paragraph (h)(2) of this section.* Any EP who transfers a patient to another setting or refers a patient to another provider less than 100 times during the EHR reporting period.

(15)(i) *Objective.* Capability to submit electronic data to immunization registries or immunization information systems except where prohibited, and in accordance with applicable law and practice.

(ii) *Measure.* Successful ongoing submission of electronic immunization data from Certified EHR Technology to an immunization registry or immunization information system for the entire EHR reporting period.

(iii) *Exclusion in accordance with paragraph (h)(2) of this section.* Any EP that meets one or more of the following criteria:

(A) Does not administer any of the immunizations to any of the populations for which data is collected by their jurisdiction's immunization registry or immunization information system during the EHR reporting period.

(B) Operates in a jurisdiction for which no immunization registry or immunization information system is capable of accepting the specific standards required for Certified EHR Technology at the start of his or her EHR reporting period.

(C) Operates in a jurisdiction where no immunization registry or immunization information system provides information timely on capability to receive immunization data.

(D) Operates in a jurisdiction for which no immunization registry or immunization information system that is capable of accepting the specific standards required by Certified EHR Technology at the start of his or her EHR reporting period can enroll additional EPs.

(16)(i) *Objective.* Protect electronic health information created or maintained by the Certified EHR Technology through the implementation of appropriate technical capabilities.

(ii) *Measure.* Conduct or review a security risk analysis in accordance with the requirements under 45 CFR 164.308(a)(1), including addressing the encryption/security of data stored in Certified EHR Technology in accordance with requirements under 45 CFR 164.312(a)(2)(iv) and 45 CFR 164.306(d)(3), and implement security updates as necessary and correct identified security deficiencies as part of the EP's risk management process.

(17)(i) *Objective.* Use secure electronic messaging to communicate with patients on relevant health information.

(ii) *Measure.* A secure message was sent using the electronic messaging function of Certified EHR Technology by more than 5 percent of unique patients (or their authorized representatives) seen by the EP during the EHR reporting period.

(iii) *Exclusion in accordance with paragraph (h)(2) of this section.* Any EP who meets one or more of the following criteria:

(A) Has no office visits during the EHR reporting period.

(B) Who conducts 50 percent or more of his or her patient encounters in a county that does not have 50 percent or more of its housing units with 3Mbps broadband availability according to the latest information available from the FCC on the first day of their EHR reporting period.

(k) *Stage 2 menu set criteria for EPs.* An EP must meet 3 of the following objectives and associated measures, unless the EP has an exclusion from 4 or more objectives in this paragraph (k) of this section, in which case the EP must meet all remaining objectives and associated measures.

(1)(i) *Objective.* Imaging results consisting of the image itself and any explanation or other accompanying information are accessible through Certified EHR Technology.

(ii) *Measure.* Subject to paragraph (c) of this section, more than 10 percent of all tests whose result is one or more images ordered by the EP during the EHR reporting period are accessible through Certified EHR Technology.

(iii) *Exclusion in accordance with paragraph (h)(2) of this section.* Any EP who meets one or more of the following criteria.

(A) Orders less than 100 tests whose result is an image during the EHR reporting period.

(B) Has no access to electronic imaging results at the start of the EHR reporting period.

(2)(i) *Objective.* Record patient family health history as structured data.

(ii) *Measure.* More than 20 percent of all unique patients seen by the EP during the EHR reporting period have a structured data entry for one or more first-degree relatives.

(iii) *Exclusion in accordance with paragraph (h)(2) of this section.* Any EP who has no office visits during the EHR reporting period.

(3)(i) *Objective.* Capability to submit electronic syndromic surveillance data to public health agencies, except where prohibited, and in accordance with applicable law and practice.

(ii) *Measure.* Successful ongoing submission of electronic syndromic surveillance data from Certified EHR Technology to a public health agency for the entire EHR reporting period.

(iii) *Exclusion in accordance with paragraph (h)(2) of this section.* Any EP that meets one or more of the following criteria:

(A) Is not in a category of providers who collect ambulatory syndromic surveillance information on their patients during the EHR reporting period.

(B) Operates in a jurisdiction for which no public health agency is capable of receiving electronic syndromic surveillance data in the specific standards required for Certified EHR Technology at the start of their EHR reporting period.

(C) Operates in a jurisdiction where no public health agency provides information timely on capability to receive syndromic surveillance data.

(D) Operates in a jurisdiction for which no public health agency that is capable of accepting the specific standards required by Certified EHR Technology at the start of their EHR reporting period can enroll additional EPs.

(4)(i) *Objective.* Capability to identify and report cancer cases to a public health central cancer registry, except where prohibited, and in accordance with applicable law and practice.

(ii) *Measure.* Successful ongoing submission of cancer case information from Certified EHR Technology to a public health central cancer registry for the entire EHR reporting period.

(iii) *Exclusion in accordance with paragraph (h)(2) of this section.* Any EP who meets one or more of the following—

(A) Does not diagnose or directly treat cancer.

(B) Operates in a jurisdiction for which no public health agency is capable of receiving electronic cancer case information in the specific standards required for Certified EHR Technology at the start of their EHR reporting period.

(C) Operates in a jurisdiction where no public health agency provides information timely on capability to receive electronic cancer case information.

(D) Operates in a jurisdiction for which no public health agency that is capable of receiving electronic cancer case information in the specific standards required for Certified EHR Technology at the beginning of their EHR reporting period can enroll additional EPs.

(5)(i) *Objective.* Capability to identify and report specific cases to a specialized registry (other than a cancer registry), except where prohibited, and in accordance with applicable law and practice.

(ii) *Measure.* Successful ongoing submission of specific case information from Certified EHR Technology to a specialized registry for the entire EHR reporting period.

(iii) *Exclusion in accordance with paragraph (h)(2) of this section.* Any EP who meets one or more of the following criteria:

(A) Does not diagnose or directly treat any disease associated with a specialized registry sponsored by a national specialty society for which the EP is eligible, or the public health agencies in their jurisdiction;

(B) Operates in a jurisdiction for which no specialized registry sponsored by a public health agency or by a national specialty society for which the EP is eligible is capable of receiving electronic specific case information in the specific standards required by Certified EHR Technology at the beginning of their EHR reporting period;

(C) Operates in a jurisdiction where no public health agency or national specialty society for which the EP is eligible provides information timely on capability to receive information into their specialized registries; or

(D) Operates in a jurisdiction for which no specialized registry sponsored by a public health agency or by a national specialty society for which the EP is eligible that is capable of receiving electronic specific case information in the specific standards required by

Certified EHR Technology at the beginning of his or her EHR reporting period can enroll additional EPs.

(6)(i) *Objective.* Record electronic notes in patient records.

(ii) *Measure.* Enter at least one electronic progress note created, edited, and signed by an EP for more than 30 percent of unique patients with at least one office visit during the EHR reporting period. The text of the electronic note must be text-searchable and may contain drawings and other content.

(l) *Stage 2 core criteria for eligible hospitals or CAHs.* An eligible hospital or CAH must meet the following objectives and associated measures except those objectives and associated measures for which an eligible hospital or CAH qualifies for an exclusion under paragraph (i)(2) of this section.

(1)(i) *Objective.* Use computerized provider order entry for medication, laboratory, and radiology orders directly entered by any licensed healthcare professional who can enter orders into the medical record per State, local, and professional guidelines.

(ii) *Measures.* Subject to paragraph (c) of this section, more than—

(A) Sixty percent of medication orders created by authorized providers of the eligible hospital's or CAH's inpatient or emergency department (POS 21 or 23) during the EHR reporting period are recorded using computerized provider order entry,

(B) Thirty percent of laboratory orders created by authorized providers of the eligible hospital's or CAH's inpatient or emergency department (POS 21 or 23) during the EHR reporting period are recorded using computerized provider order entry, and

(C) Thirty percent of radiology orders created by authorized providers of the eligible hospital's or CAH's inpatient or emergency department (POS 21 or 23) during the EHR reporting period are recorded using computerized provider order entry.

(2)(i) *Objective.* Record all of the following demographics:

(A) Preferred language.

(B) Sex.

(C) Race.

(D) Ethnicity.

(E) Date of birth.

(F) Date and preliminary cause of death in the event of mortality in the eligible hospital or CAH.

(ii) *Measure.* More than 80 percent of all unique patients admitted to the eligible hospital's or CAH's inpatient or emergency department (POS 21 or 23) during the EHR reporting period have demographics recorded as structured data.

(3)(i) *Objective.* Record and chart changes in the following vital signs:

(A) Height/Length.

(B) Weight.

(C) Blood pressure (ages 3 and over).

(D) Calculate and display body mass index (BMI).

(E) Plot and display growth charts for patients 0–20 years, including body mass index.

(ii) *Measure.* Subject to paragraph (c) of this section, more than 80 percent of all unique patients admitted to the eligible hospital's or CAH's inpatient or emergency department (POS 21 or 23) during the EHR reporting period have blood pressure (for patients age 3 and over only) and height/length and weight (for all ages) recorded as structured data.

(4)(i) *Objective.* Record smoking status for patients 13 years old or older.

(ii) *Measure.* Subject to paragraph (c) of this section, more than 80 percent of all unique patients 13 years old or older admitted to the eligible hospital's or CAH's inpatient or emergency department (POS 21 or 23) during the EHR reporting period have smoking status recorded as structured data.

(iii) *Exclusion in accordance with paragraph (i)(2) of this section.* Any eligible hospital or CAH that admits no patients 13 years old or older to their inpatient or emergency department (POS 21 or 23) during the EHR reporting period.

(5)(i) *Objective.* Use clinical decision support to improve performance on high priority health conditions.

(ii) *Measures.* (A) Implement five clinical decision support interventions related to four or more clinical quality measures at a relevant point in patient care for the entire EHR reporting period. Absent four clinical quality measures related to an eligible hospital or CAH's patient population, the clinical decision support interventions must be related to high-priority health conditions; and

(B) The eligible hospital or CAH has enabled and implemented the functionality for drug-drug and drug-allergy interaction checks for the entire EHR reporting period.

(6)(i) *Objective.* Incorporate clinical lab test results into Certified EHR Technology as structured data.

(ii) *Measure.* More than 55 percent of all clinical lab tests results ordered by authorized providers of the eligible hospital or CAH for patients admitted to its inpatient or emergency department (POS 21 or 23) during the EHR reporting period whose results are either in a positive/negative affirmation or numerical format are incorporated in Certified EHR Technology as structured data.

(7)(i) *Objective.* Generate lists of patients by specific conditions to use for quality improvement, reduction of disparities, research or outreach.

(ii) *Measure.* Generate at least one report listing patients of the eligible hospital or CAH with a specific condition.

(8)(i) *Objective.* Provide patients the ability to view online, download, and transmit information about a hospital admission.

(ii) *Measures.* (A) More than 50 percent of all patients who are discharged from the inpatient or emergency department (POS 21 or 23) of an eligible hospital or CAH have their information available online within 36 hours of discharge; and

(B) More than 5 percent of all patients who are discharged from the inpatient or emergency department (POS 21 or 23) of an eligible hospital or CAH (or their authorized representative) view, download or transmit to a third party their information during the EHR reporting period.

(iii) *Exclusion in accordance with paragraph (i)(2) of this section.* Any eligible hospital or CAH that is located in a county that does not have 50 percent or more of its housing units with 3Mbps broadband availability according to the latest information available from the FCC on the first day of the EHR reporting period is excluded from paragraph (l)(8)(ii)(B) of this section.

(9)(i) *Objective.* Use clinically relevant information from Certified EHR Technology to identify patient-specific education resources and provide those resources to the patient.

(ii) *Measure.* More than 10 percent of all unique patients admitted to the eligible hospital's or CAH's inpatient or emergency department (POS 21 or 23) are provided patient-specific education resources identified by Certified EHR Technology.

(10)(i) *Objective.* The eligible hospital or CAH that receives a patient from another setting of care or provider of care or believes an encounter is relevant should perform medication reconciliation.

(ii) *Measure.* Subject to paragraph (c) of this section, the eligible hospital or CAH performs medication reconciliation for more than 50 percent of transitions of care in which the patient is admitted to the eligible hospital's or CAH's inpatient or emergency department (POS 21 or 23).

(11)(i) *Objective.* The eligible hospital or CAH that transitions their patient to another setting of care or provider of care or refers their patient to another provider of care provides a summary care record for each transition of care or referral.

(ii) *Measures.* (A) Subject to paragraph (c) in this section, the eligible hospital or CAH that transitions or refers their patient to another setting of care or provider of care provides a summary of care record for more than 50 percent of transitions of care and referrals,

(B) Subject to paragraph (c) in this section, the eligible hospital or CAH that transitions their patient to another setting of care or provider of care provides a summary of care record for more than 10 percent of such transitions and referrals either—

(*1*) Electronically transmitted using Certified EHR Technology to a recipient; or

(*2*) Where the recipient receives the summary of care record via exchange facilitated by an organization that is a NwHIN Exchange participant or in a manner that is consistent with the governance mechanism ONC establishes for the nationwide health information network; and

(C) Subject to paragraph (c) of this section an eligible hospital or CAH must satisfy one of the following:

(*1*) Conducts one or more successful electronic exchanges of a summary of care record meeting the measure specified in paragraph (l)(11)(ii)(B) of this section with a recipient using technology to receive the summary of care record that was designed by a different EHR developer than the sender's EHR technology certified at 45 CFR 107.314(b)(2); or

(*2*) Conducts one or more successful tests with the CMS designated test EHR during the EHR reporting period.

(12)(i) *Objective.* Capability to submit electronic data to immunization registries or immunization information systems except where prohibited, and in accordance with applicable law and practice.

(ii) *Measure.* Successful ongoing submission of electronic immunization data from Certified EHR Technology to an immunization registry or immunization information system for the entire EHR reporting period.

(iii) *Exclusion in accordance with paragraph (i)(2) of this section.* Any eligible hospital or CAH that meets one or more of the following criteria:

(A) The eligible hospital or CAH does not administer any of the immunizations to any of the populations for which data is collected by their jurisdiction's immunization registry or immunization information system during the EHR reporting period.

(B) The eligible hospital or CAH operates in a jurisdiction for which no immunization registry or immunization information system is capable of accepting the specific standards required for Certified EHR Technology at the start of their EHR reporting period.

(C) The eligible hospital or CAH operates in a jurisdiction where no immunization registry or immunization information system provides information timely on capability to receive immunization data.

(D) Operates in a jurisdiction for which no immunization registry or immunization information system that is capable of accepting the specific standards required by Certified EHR Technology at the start of their EHR reporting period can enroll additional eligible hospitals or CAHs.

(13)(i) *Objective.* Capability to submit electronic reportable laboratory results to public health agencies, where except where prohibited, and in accordance with applicable law and practice.

(ii) *Measure.* Successful ongoing submission of electronic reportable laboratory results from Certified EHR Technology to a public health agency for the entire EHR reporting period.

(iii) *Exclusion in accordance with paragraph (i)(2) of this section.* Any eligible hospital or CAH that meets one or more of the following criteria:

(A) Operates in a jurisdiction for which no public health agency is capable of receiving electronic reportable laboratory results in the specific standards required for Certified EHR Technology at the start of their EHR reporting period.

(B) Operates in a jurisdiction for which no public health agency provides information timely on capability to receive electronic reportable laboratory results.

(C) Operates in a jurisdiction for which no public health agency that is capable of accepting the specific standards required by Certified EHR Technology at the start of their EHR reporting period can enroll additional eligible hospitals or CAHs.

(14)(i) *Objective.* Capability to submit electronic syndromic surveillance data to public health agencies, except where prohibited, and in accordance with applicable law and practice.

(ii) *Measure.* Successful ongoing submission of electronic syndromic surveillance data from Certified EHR Technology to a public health agency for the entire EHR reporting period.

(iii) *Exclusion in accordance with paragraph (i)(2) of this section.* Any eligible hospital or CAH that meets one or more of the following criteria:

(A) Does not have an emergency or urgent care department.

(B) Operates in a jurisdiction for which no public health agency is capable of receiving electronic syndromic surveillance data in the specific standards required for Certified EHR Technology at the start of their EHR reporting period or can enroll additional eligible hospitals or CAHs.

(C) Operates in a jurisdiction for which no public health agency provides information timely on capability to receive syndromic surveillance data.

(D) Operates in a jurisdiction for which no public health agency that is capable of accepting the specific standards required by Certified EHR Technology at the start of their EHR reporting period can enroll additional eligible hospitals or CAHs.

(15)(i) *Objective.* Protect electronic health information created or maintained by the Certified EHR Technology through the implementation of appropriate technical capabilities.

(ii) *Measure.* Conduct or review a security risk analysis in accordance with the requirements under 45 CFR 164.308(a)(1), including addressing the encryption/security of data stored in Certified EHR Technology in accordance with requirements under 45 CFR 164.312(a)(2)(iv) and 45 CFR 164.306(d)(3), and implement security updates as necessary and correct identified security deficiencies as part of the eligible hospital's or CAH's risk management process.

(16)(i) *Objective.* Automatically track medications from order to administration using assistive technologies in conjunction with an electronic medication administration record (eMAR).

(ii) *Measure.* Subject to paragraph (c) of this section, more than 10 percent of medication orders created by authorized providers of the eligible hospital's or CAH's inpatient or emergency department (POS 21 or 23) during the EHR reporting period for which all doses are tracked using eMAR.

(iii) *Exclusion in accordance with paragraph (i)(2) of this section.* Any eligible hospital or CAH with an average daily inpatient census of fewer than 10 patients.

(m) *Stage 2 menu set criteria for eligible hospitals or CAHs.* An eligible hospital or CAH must meet the measure criteria for three of the following objectives and associated measures.

(1)(i) *Objective.* Record whether a patient 65 years old or older has an advance directive.

(ii) *Measure.* Subject to paragraph (c) of this section, more than 50 percent of all unique patients 65 years old or older admitted to the eligible hospital's or CAH's inpatient department (POS 21) during the EHR reporting period have an indication of an advance directive status recorded as structured data.

(iii) *Exclusion in accordance with paragraph (i)(2) of this section.* Any eligible hospital or CAH that admits no patients age 65 years old or older during the EHR reporting period.

(2)(i) *Objective.* Imaging results consisting of the image itself and any explanation or other accompanying information are accessible through Certified EHR Technology.

(ii) *Measure.* Subject to paragraph (c) of this section, more than 10 percent of all tests whose result is an image ordered by an authorized provider of the eligible hospital or CAH for patients admitted to its inpatient or emergency department (POS 21 or 23) during the EHR reporting period are accessible through Certified EHR Technology.

(3)(i) *Objective.* Record patient family health history as structured data.

(ii) *Measure.* More than 20 percent of all unique patients admitted to the eligible hospital or CAH's inpatient or emergency department (POS 21 or 23) during the EHR reporting period have a structured data entry for one or more first-degree relatives.

(4)(i) *Objective.* Generate and transmit permissible discharge prescriptions electronically (eRx).

(ii) *Measure.* More than 10 percent of hospital discharge medication orders for permissible prescriptions (for new, changed and refilled prescriptions) are queried for a drug formulary and transmitted electronically using Certified EHR Technology.

(iii) *Exclusion in accordance with paragraph (i)(2) of this section.* Any eligible hospital or CAH that does not have an internal pharmacy that can accept electronic prescriptions and there are no pharmacies that accept electronic prescriptions within 10 miles at the start of its EHR reporting period.

(5)(i) *Objective.* Record electronic notes in patient records.

(ii) *Measure:* Enter at least one electronic progress note created, edited and signed by an authorized provider of the eligible hospital's or CAH's inpatient or emergency department (POS 21 or 23) for more than 30 percent of unique patients admitted to the eligible hospital or CAH's inpatient or emergency department during the EHR reporting period. The text of the electronic note must be text-searchable and may contain drawings and other content.

(6)(i) *Objective.* Provide structured electronic lab results to ambulatory providers.

(ii) *Measure.* Hospital labs send structured electronic clinical lab results to the ordering provider for more than 20 percent of electronic lab orders received.

■ 9. Section 495.8 is amended as follows:

■ A. Revising paragraph (a)(2)(i)(B) and (a)(2)(ii).

■ B. Revising paragraphs (b)(2)(i)(B) and (b)(2)(ii).

§ 495.8 Demonstration of meaningful use criteria.

(a) * * *

(2) * * *

(i) * * *

(B) Satisfied the required objectives and associated measures under § 495.6 for the EP's stage of meaningful use.

* * * * *

(ii) *Reporting clinical quality information.* Successfully report the clinical quality measures selected by CMS to CMS or the States, as applicable, in the form and manner specified by CMS or the States, as applicable.

* * * * *

(b) * * *

(2) * * *

(i) * * *

(B) Satisfied the required objectives and associated measures under § 495.6 for the eligible hospital or CAH's stage of meaningful use.

* * * * *

(ii) *Reporting clinical quality information.* Successfully report the clinical quality measures selected by CMS to CMS or the States, as applicable, in the form and manner specified by CMS or the States, as applicable.

* * * * *

§ 495.10 [Amended]

■ 10. In § 495.10, paragraph (a)(3) is amended by removing the phrase ''Business address and'' and adding in its place the phrase ''Business address, business email address, and''.

■ 11. Section 495.100 is amended by revising the definitions of ''Qualifying CAH,'' ''Qualifying eligible professional (qualifying EP),'' and ''Qualifying hospital'' to read as follows:

§ 495.100 Definitions.

* * * * *

Qualifying CAH means a CAH that is a meaningful EHR user for the EHR reporting period applicable to a payment year or payment adjustment year in which a cost reporting period begins.

Qualifying eligible professional (qualifying EP) means an EP who is a meaningful EHR user for the EHR reporting period applicable to a payment or payment adjustment year and who is not a hospital-based EP, as determined for that payment or payment adjustment year.

Qualifying hospital means an eligible hospital that is a meaningful EHR user for the EHR reporting period applicable to a payment or payment adjustment year.

■ 10. Section 495.102 is amended as follows:

■ A. Revising paragraphs (c), (d)(1), and (d)(2)(iii).

■ B. Adding paragraph (d)(2)(iv).

■ C. Revising paragraph (d)(3).

■ D. Adding paragraphs (d)(4) and (5).

The revisions and additions read as follows:

§ 495.102 Incentive payments to EPs.

* * * * *

(c) *Increase in incentive payment limit for EPs who predominantly furnish services in a geographic HPSA.* In the case of a qualifying EP who furnishes more than 50 percent of his or her covered professional services during the payment year in a geographic HPSA that is designated as of December 31 of the prior year, the incentive payment limit determined under paragraph (b) of this section is to be increased by 10 percent.

(d) *Payment adjustment effective in CY 2015 and subsequent years for nonqualifying EPs.* (1)(i) Subject to paragraphs (d)(3) and (4) of this section, beginning 2015, for covered professional services furnished by an EP who is not hospital-based, and who is not a qualifying EP by virtue of not being a meaningful EHR user (for the EHR reporting period applicable to the payment adjustment year), the payment amount for such services is equal to the product of the applicable percent specified in paragraph (d)(2) of this section and the Medicare physician fee schedule amount for such services.

(2) * * *

(iii) For 2017, 97 percent.

(iv) For 2018 and subsequent years, 97 percent, except as provided in paragraph (d)(3) of this section.

(3) *Decrease in applicable percent in certain circumstances.* If, beginning CY 2018 and for each subsequent year, the Secretary finds that the proportion of EPs who are meaningful EHR users is less than 75 percent, the applicable percent must be decreased by 1 percentage point for EPs from the applicable percent in the preceding year, but in no case will the applicable percent be less than 95 percent.

(4) *Exceptions.* The Secretary may, on a case-by-case basis, exempt an EP from the application of the payment adjustment under paragraph (d)(1) of this section if the Secretary determines that compliance with the requirement for being a meaningful EHR user would result in a significant hardship for the EP. To be considered for an exception, an EP must submit, in the manner specified by CMS, an application

demonstrating that it meets one or more of the criteria in this paragraph (d)(4) unless otherwise specified in the criteria. The Secretary's determination to grant an EP an exemption may be renewed on an annual basis, provided that in no case may an EP be granted an exemption for more than 5 years.

(i) During any 90-day period from the beginning of the year that is 2 years before the payment adjustment year to July 1 of the year preceding the payment adjustment year, the EP was located in an area without sufficient Internet access to comply with the meaningful use objectives requiring internet connectivity, and faced insurmountable barriers to obtaining such internet connectivity. Applications requesting this exception must be submitted no later than July 1 of the year before the applicable payment adjustment year.

(ii) The EP has been practicing for less than 2 years.

(iii)(A) During the calendar year that is 2 calendar years before the payment adjustment year, the EP that has previously demonstrated meaningful use faces extreme and uncontrollable circumstances that prevent it from becoming a meaningful EHR user. Applications requesting this exception must be submitted no later than July 1 of the year before the applicable payment adjustment year.

(B) During the calendar year preceding the payment adjustment year, the EP that has not previously demonstrated meaningful use faces extreme and uncontrollable circumstances that prevent it from becoming a meaningful EHR user. Applications requesting this exception must be submitted by July 1 of the year before the applicable payment adjustment year.

(iv) An EP may request an exception through an application submitted by July 1 of the year before the applicable payment adjustment year due to difficulty in meeting meaningful use based on any one of the following during the period that begins 2 calendar years before the payment adjustment year through the application deadline:

(A) The EP practices at multiple locations and can demonstrate inability to control the availability of Certified EHR Technology at one such practice location or a combination of practice locations, and where the location or locations constitute more than 50 percent of their patient encounters.

(B) The EP can demonstrate difficulty in meeting meaningful use on the basis of lack of face-to-face or telemedicine interaction with patients and lack of need for follow up with patients.

(C) The EP has a primary specialty listed in PECOS as anesthesiology, radiology or pathology 6 months prior to the first day of the payment adjustments that would otherwise apply. Such an EP may be deemed to qualify for this exception, subject to the 5-year limit that applies to all exceptions under this paragraph.

(5) *Payment adjustments not applicable to hospital-based EPs.* No payment adjustment under paragraphs (d)(1) through (3) of this section may be made in the case of a hospital-based eligible professional, as defined in § 495.4.

§ 495.106 [Amended]

■ 12. In § 495.106, paragraph (e) is amended by removing the phrase ''for a payment year'' and adding the phrase ''for a payment adjustment year'' in its place.

■ 13. Section 495.200 is amended by—

■ A. Adding definitions for ''MA payment adjustment year,'' and ''Potentially qualifying MA EPs and potentially qualifying MA-affiliated eligible hospitals'' in alphabetical order.

■ B. Revising paragraph (5) of the definition of ''Qualifying MA EP''.

The additions and revision read as follows:

§ 495.200 Definitions.

* * * * *

MA payment adjustment year means—(1) For qualifying MA organizations that receive an MA EHR incentive payment for at least 1 payment year, calendar years beginning with CY 2015.

(2) For MA-affiliated eligible hospitals, the applicable EHR reporting period for purposes of determining whether the MA organization is subject to a payment adjustment is the federal fiscal year ending in the MA payment adjustment year.

(3) For MA EPs, the applicable EHR reporting period for purposes of determining whether the MA organization is subject to a payment adjustment is the calendar year concurrent with the payment adjustment year.

* * * * *

Potentially qualifying MA EPs and potentially qualifying MA-affiliated eligible hospitals are defined for purposes of this subpart in § 495.202(a)(4).

* * * * *

Qualifying MA EP * * *

(5) Is not a ''hospital-based EP'' (as defined in § 495.4 of this part) and in determining whether 90 percent or more of his or her covered professional services were furnished in a hospital setting, only covered professional services furnished to MA plan enrollees of the qualifying MA organization, in lieu of FFS patients, will be considered.

* * * * *

■ 14. Section 495.202 is amended as follows:

■ A. Revising paragraph (b)(1).

■ B. In paragraph (b)(2) introductory text, removing the cross-reference ''(b)(3)'' and adding the cross-reference ''(4)'' in its place.

■ C. Revising paragraph (b)(2)(iii).

■ D. Redesignating paragraphs (b)(3) and (4) as paragraphs (b)(4) and (5).

■ E. Adding a new paragraph (b)(3).

■ F. Revising newly redesignated paragraph (b)(4).

■ G. Revising newly redesignated paragraphs (b)(5)(i) and (ii).

The addition and revisions read as follows:

§ 495.202 Identification of qualifying MA organizations, MA–EPs and MA-affiliated eligible hospitals.

* * * * *

(b) * * *

(1) A qualifying MA organization, as part of its initial bid starting with plan year 2012, must make a preliminary identification of MA EPs and MA-affiliated eligible hospitals that the MA organization believes will be qualifying MA EPs and MA-affiliated eligible hospitals for which the organization is seeking incentive payments for the current plan year.

(2) * * *

(iii) NPI or CCN.

* * * * *

(3) When reporting under either paragraph (b)(1) or (4) of this section for purposes of receiving an incentive payment, a qualifying MA organization must also indicate whether more than 50 percent of the covered Medicare professional services being furnished by a qualifying MA EP to MA plan enrollees of the MA organization are being furnished in a designated geographic HPSA (as defined in § 495.100 of this part).

(4) Final identification of qualifying and potentially qualifying, as applicable, MA EPs and MA-affiliated eligible hospitals must be made within 2 months of the close of the payment year or the EHR reporting period that applies to the payment adjustment year as defined in § 495.200.

(5) * * *

(i) Identify all MA EPs and MA-affiliated eligible hospitals of the MA organization that the MA organization believes will be either qualifying or potentially qualifying;

(ii) Include information specified in paragraph (b)(2)(i) through (iii) of this section for each professional or hospital; and

* * * * *

■ 15. Section 495.204 is amended as follows:

■ A. Revising the section heading.

■ B. Revising paragraphs (b)(2) and (b)(4) introductory text, and (b)(4)(i) and (ii).

■ C. Redesignating paragraph (e) as paragraph (f).

■ D. Adding new paragraphs (e), (f)(5), and (g).

The revisions and additions read as follows:

§ 495.204 Incentive payments to qualifying MA organizations for qualifying MA–EPs and qualifying MA-affiliated eligible hospitals.

* * * * *

(b) * * *

(2) The qualifying MA organization must report to CMS within 2 months of the close of the calendar year, the aggregate annual amount of revenue attributable to providing services that would otherwise be covered as professional services under Part B received by each qualifying MA EP for enrollees in MA plans of the MA organization in the payment year.

* * * * *

(4) CMS requires the qualifying MA organization to develop a methodological proposal for estimating the portion of each qualifying MA EP's salary or revenue attributable to providing services that would otherwise be covered as professional services under Part B to MA plan enrollees of the MA organization in the payment year. The methodological proposal—

(i) Must be approved by CMS; and

(ii) May include an additional amount related to overhead, where appropriate, estimated to account for the MA-enrollee related Part B practice costs of the qualifying MA EP.

* * * * *

(e) *Potential increase in incentive payment for furnishing services in a geographic HPSA.* In the case of a qualifying MA EP who furnishes more than 50 percent of his or her covered professional services to MA plan enrollees of the qualifying MA organization during a payment year in a geographic HPSA, the maximum amounts referred to in paragraph (b)(3) of this section are increased by 10 percent.

(f) * * *

(5) If an MA EP, or entity that employs an MA EP, or in which an MA EP has a partnership interest, MA-affiliated eligible hospital, or other party contracting with the MA organization, fails to comply with an audit request to produce applicable documents or data, CMS recoups all or a portion of the incentive payment, based on the lack of applicable documents or data.

(g) *Coordination of payment with FFS or Medicaid EHR incentive programs.* (1) If, after payment is made to an MA organization for an MA EP, it is determined that the MA EP is eligible for the full incentive payment under the Medicare FFS EHR Incentive Program or has received a payment under the Medicaid EHR Incentive Program, CMS recoups amounts applicable to the given MA EP from the MA organization's monthly MA payment, or otherwise recoups the applicable amounts.

(2) If, after payment is made to an MA organization for an MA-affiliated eligible hospital, it is determined that the hospital is ineligible for the incentive payment under the MA EHR Incentive Program, or has received a payment under the Medicare FFS EHR Incentive Program, or if it is determined that all or part of the payment should not have been made on behalf of the MA-affiliated eligible hospital, CMS recoups amounts applicable to the given MA-affiliated eligible hospital from the MA organization's monthly MA payment, or otherwise recoups the applicable amounts.

■ 16. Section 495.208 is amended as follows:

■ A. Redesignating paragraphs (a) through (c) as paragraphs (d) through (f).

■ B. Adding new paragraphs (a) through (c).

The additions read as follows:

§ 495.208 Avoiding duplicate payment.

(a) CMS requires a qualifying MA organization that registers MA EPs for the purpose of participating in the MA EHR Incentive Program to notify each of the MA EPs for which it is claiming an incentive payment that the MA organization intends to claim, or has claimed, the MA EP for the current plan year under the MA EHR Incentive Program.

(b) The notice must make clear that the MA EP may still directly receive an EHR incentive payment if the MA EP is entitled to a full incentive payment under the FFS portion of the EHR Incentive Program, or if the MA EP registered to participate under the Medicaid portion of the EHR Incentive Program and is entitled to payment under that program—in both of which cases no payment would be made for the EP under the MA EHR incentive program.

(c) An attestation by the qualifying MA organization that the qualifying MA organization provided notice to its MA EPs in accordance with this section must be required at the time that meaningful use attestations are due with respect to MA EPs for the payment year.

* * * * *

■ 17. Section 495.210 is amended by revising paragraphs (b) and (c) to read as follows:

§ 495.210 Meaningful EHR user attestation

* * * * *

(b) Qualifying MA organizations are required to attest within 2 months after the close of a calendar year whether each qualifying MA EP is a meaningful EHR user.

(c) Qualifying MA organizations are required to attest within 2 months after close of the FY whether each qualifying MA-affiliated eligible hospital is a meaningful EHR user.

■ 18. Add § 495.211 to subpart C to read as follows:

§ 495.211 Payment adjustments effective for 2015 and subsequent MA payment years with respect to MA EPs and MA-affiliated eligible hospitals.

(a) *In general.* Beginning for MA payment adjustment year 2015, payment adjustments set forth in this section are made to prospective payments (issued under section 1853(a)(1)(A) of the Act) of qualifying MA organizations that previously received incentive payments under the MA EHR Incentive Program, if all or a portion of the MA–EPs and MA-affiliated eligible hospitals that would meet the definition of qualifying MA–EPs or qualifying MA-affiliated eligible hospitals (but for their demonstration of meaningful use) are not meaningful EHR users.

(b) *Adjustment based on payment adjustment year.* The payment adjustment is calculated based on the payment adjustment year.

(c) *Separate application of adjustments for MA EPs and MA-affiliated eligible hospitals.* The payment adjustments identified in paragraphs (d) and (e) of this section are applied separately. Paragraph (d) of this section applies only to qualifying MA organizations that received payment for any MA payment year for qualifying MA EPs under § 495.204. Paragraph (e) of this section applies only to qualifying MA organizations that received payment for any MA payment year for qualifying MA-affiliated eligible hospitals under § 495.204.

(d) *Payment adjustments effective for 2015 and subsequent years with respect to MA EPs.* (1) For payment adjustment year 2015, and subsequent payment

adjustment years, if a qualifying MA EP is not a meaningful EHR user during the payment adjustment year, CMS—

(i) Determines a payment adjustment based on data from the payment adjustment year; and

(ii) Collects the payment adjustment owed by adjusting a subsequent year's prospective payment or payments (issued under section 1853(a)(1)(A) of the Act), or by otherwise collecting the payment adjustment, if, in the year of collection, the MA organization does not have an MA contract with CMS.

(2) Beginning for payment adjustment year 2015, a qualifying MA organization that previously received incentive payments must, for each payment adjustment year, report to CMS the following:

[the total number of potentially qualifying MA EPs]/[(the total number of potentially qualifying MA EPs) + (the total number of qualifying MA EPs)].

(3) The monthly prospective payment amount paid under section 1853(a)(1)(A) of the Act for the payment adjustment year is adjusted by the product of—

(i) The percent calculated in accordance with paragraph (d)(2) of this section;

(ii) The Medicare Physician Expenditure Proportion percent, which is CMS's estimate of proportion of expenditures under Parts A and B that are not attributable to Part C that are attributable to expenditures for physicians' services, adjusted for the proportion of expenditures that are provided by EPs that are neither qualifying nor potentially qualifying MA EPs with respect to a qualifying MA organization; and

(iii) The applicable percent identified in paragraph (d)(4) of this section.

(4) *Applicable percent.* The applicable percent is as follows:

(i) For 2015, 1 percent;

(ii) For 2016, 2 percent;

(iii) For 2017, 3 percent.

(iv) For 2018, 3 percent, except, in the case described in paragraph (d)(4)(vi) of this section, 4 percent.

(v) For 2019 and each subsequent year, 3 percent, except, in the case described in paragraph (d)(4)(vi) of this section, the percent from the prior year plus 1 percent. In no case will the applicable percent be higher than 5 percent.

(vi) Beginning with payment adjustment year 2018, if the percentage in paragraph (d)(2) of this section is more than 25 percent, the applicable percent is increased in accordance with paragraphs (d)(4)(iv) and (v) of this section.

(e) *Payment adjustments effective for 2015 and subsequent years with respect to MA-affiliated eligible hospitals.* (1)(i) The payment adjustment set forth in this paragraph (e) applies if a qualifying MA organization that previously received an incentive payment (or a potentially qualifying MA-affiliated eligible hospital on behalf of its qualifying MA organization) attests that a qualifying MA-affiliated eligible hospital is not a meaningful EHR user for a payment adjustment year.

(ii) The payment adjustment is calculated by multiplying the qualifying MA organization's monthly prospective payment for the payment adjustment year under section 1853(a)(1)(A) of the Act by the percent set forth in paragraph (e)(2) of this section.

(2) The percent set forth in this paragraph (e) is the product of—

(i) The percentage point reduction to the applicable percentage increase in the market basket index for the relevant Federal fiscal year as a result of § 412.64(d)(3) of this chapter;

(ii) The Medicare Hospital Expenditure Proportion percent specified in paragraph (e)(3) of this section; and

(iii) The percent of qualifying and potentially qualifying MA-affiliated eligible hospitals that are not meaningful EHR users. Qualifying MA organizations are required to report to CMS

[the number of potentially qualifying MA-affiliated eligible hospitals]/[(the total number of potentially qualifying MA-affiliated eligible hospitals) + (the total number of qualifying MA-affiliated eligible hospitals)].

(3) The Medicare Hospital Expenditure Proportion for a year is the Secretary's estimate of expenditures under Parts A and B that are not attributable to Part C, that are attributable to expenditures for inpatient hospital services, adjusted for the proportion of expenditures that are provided by hospitals that are neither qualifying nor potentially qualifying MA-affiliated eligible hospitals with respect to a qualifying MA organization.

■ 19. Section 495.302 is amended as follows:

■ A. In the definition of ''Adopt, implement or upgrade,'' by revising paragraph (1).

■ B. In the definition of ''Children's hospital,'' by revising paragraph (1), redesignating paragraph (2) as paragraph (3), and adding a new paragraph (2).

■ C. In the definition of ''Practices predominantly,'' by removing the phrase ''in the most recent calendar year'' and adding the phrase ''(within the most recent calendar year or, as an optional State alternative beginning for payment year 2013, within the 12-month period preceding attestation)''.

The revisions and addition read as follows:

§ 495.302 Definitions.

* * * * *

Adopt, implement or upgrade * * *

(1) Acquire, purchase, or secure access to certified EHR technology capable of meeting meaningful use requirements;

* * * * *

Children's hospital * * *

(1) Has a CMS certification number (CCN), (previously known as the Medicare provider number), that has the last 4 digits in the series 3300–3399; or

(2) Does not have a CCN but has been provided an alternative number by CMS for purposes of enrollment in the Medicaid EHR Incentive Program as a children's hospital and;

* * * * *

■ 20. Section 495.304 is amended as follows:

■ A. In paragraphs (c)(1) and (2), by removing the phrase ''individuals receiving Medicaid'' and adding the phrase '' individuals enrolled in a Medicaid program'' in its place.

■ B. Adding paragraph (f).

The addition reads as follows:

§ 495.304 Medicaid provider scope and eligibility.

* * * * *

(f) *Further patient volume requirements for the Medicaid EP.* For payment year 2013 and all subsequent payment years, at least one clinical location used in the calculation of patient volume must have Certified EHR Technology—

(1) During the payment year for which the EP attests to having adopted, implemented or upgraded Certified EHR Technology (for the first payment year); or

(2) During the payment year for which the EP attests it is a meaningful EHR user.

■ 21. Section 495.306 is amended as follows;

■ A. Revising paragraphs (b), (c)(1)(i), (c)(2)(i), (c)(3)(i), (d)(1)(i)(A), (d)(1)(ii)(A), (d)(2)(i)(A), (d)(2)(ii)(A), and (e)(1) introductory text.

■ B. In paragraph (e)(1)(i), by removing ''; or'' and adding a period in its place.

■ C. Adding paragraph (e)(1)(iii).

■ D. Revising paragraph (e)(2)(i) introductory text.

■ E. In paragraph (e)(2)(i)(A), by removing ''; or'' and adding a period in its place.

■ F. Adding paragraph (e)(2)(i)(C).
■ G. Revising paragraph (e)(2)(ii) introductory text.
■ H. In paragraph (e)(2)(ii)(A), by removing ''; or'' and adding a period in its place.
■ I. Adding paragraph (e)(2)(ii)(C).
■ J. Revising paragraph (e)(3) introductory text.
■ K. In paragraphs (e)(3)(i) and (ii), by removing the semicolon and adding a period in its place.
■ L. In paragraph (e)(3)(iii), by removing ''; or'' and adding a period in its place.
■ M. Redesignating paragraphs (e)(3)(iii) and (e)(3)(iv) as paragraphs (e)(3)(iv) and (e)(3)(v).
■ N. Adding a new paragraph (e)(3)(iii).

The revisions and additions read as follows:

§ 495.306 Establishing patient volume.

* * * * *

(b) *State option(s) through SMHP.* (1) A State must submit through the SMHP the option or options it has selected for measuring patient volume.

(2)(i) A State must select the method described in either paragraph (c) or paragraph (d) of this section (or both methods).

(ii) Under paragraphs (c)(1)(i), (c)(2)(i), (c)(3)(i), (d)(1)(i), and (d)(2)(i) of this section, States may choose whether to allow eligible providers to calculate total Medicaid or total needy individual patient encounters in any representative continuous 90-day period in the 12 months preceding the EP or eligible hospital's attestation or based upon a representative, continuous 90-day period in the calendar year preceding the payment year for which the EP or eligible hospital is attesting.

(3) In addition, or as an alternative to the method selected in paragraph (b)(2) of this section, a State may select the method described in paragraph (g) of this section.

(c) * * *

(1) * * *

(i) The total Medicaid patient encounters in any representative, continuous 90-day period in the calendar year preceding the EP's payment year, or in the 12 months before the EP's attestation; by

* * * * *

(2) * * *

(i) The total Medicaid encounters in any representative, continuous 90-day period in the fiscal year preceding the hospitals' payment year or in the 12 months before the hospital's attestation; by

* * * * *

(3) * * *

(i) The total needy individual patient encounters in any representative, continuous 90-day period in the calendar year preceding the EP's payment year, or in the 12 months before the EP's attestation; by

* * * * *

(d) * * *

(1) * * *

(i)(A) The total Medicaid patients assigned to the EP's panel in any representative, continuous 90-day period in either the calendar year preceding the EP's payment year, or the 12 months before the EP's attestation when at least one Medicaid encounter took place with the individual in the 24 months before the beginning of the 90-day period; plus

* * * * *

(ii)(A) The total patients assigned to the provider in that same 90-day period with at least one encounter taking place with the patient during the 24 months before the beginning of the 90-day period; plus

* * * * *

(2) * * *

(i)(A) The total Needy Individual patients assigned to the EP's panel in any representative, continuous 90-day period in the either the calendar year preceding the EP's payment year, or the 12 months before the EP's attestation when at least one Needy Individual encounter took place with the individual in the 24 months before the beginning of the same 90-day period; plus

* * * * *

(ii)(A) The total patients assigned to the provider in that same 90-day period with at least one encounter taking place with the patient during the 24 months before the beginning of the 90-day period, plus

* * * * *

(e) * * *

(1) A Medicaid encounter means services rendered to an individual on any one day where:

* * * * *

(iii) The individual was enrolled in a Medicaid program (or a Medicaid demonstration project approved under section 1115 of the Act) at the time the billable service was provided.

(2) * * *

(i) A Medicaid encounter means services rendered to an individual per inpatient discharge when any of the following occur:

(C) The individual was enrolled in a Medicaid program (or a Medicaid demonstration project approved under section 1115 of the Act) at the time the billable service was provided.

(ii) A Medicaid encounter means services rendered in an emergency department on any 1 day if any of the following occur:

* * * * *

(C) The individual was enrolled in a Medicaid program (or a Medicaid demonstration project approved under section 1115 of the Act) at the time the billable service was provided.

(3) For purposes of calculating needy individual patient volume, a needy patient encounter means services rendered to an individual on any 1 day if any of the following occur:

* * * * *

(iii) The individual was enrolled in a Medicaid program (or a Medicaid demonstration project approved under section 1115 of the Act) at the time the billable service was provided.

* * * * *

■ 22. Section 495.310 is amended as follows:
■ A. Removing and reserving paragraphs (a)(1)(ii) and (a)(2)(ii).
■ B. Adding paragraph (f)(8).
■ C. Revising paragraph (g)(1)(i)(B) introductory text.
■ D. In paragraphs (g)(1)(i)(B)(*1*) through (g)(1)(i)(B)(*3*), by removing the term ''discharge'' wherever it appears and adding the term ''acute-care inpatient discharge'' in its place.
■ E. In paragraph (g)(1)(i)(C), by removing the term ''discharges'' and adding the term ''acute-care inpatient discharges'' in its place.
■ F. In paragraphs (g)(2)(i)(A) and (B), (g)(2)(ii)(A), and (g)(2)(iii), by removing the phrase ''inpatient-bed-days'' wherever it appears and adding the phrase ''acute care inpatient-bed-days'' in its place.

The addition and revision read as follows:

§ 495.310 Medicaid provider incentive payments.

* * * * *

(f) * * *

(8) The aggregate EHR hospital incentive amount calculated under paragraph (g) of this section is determined by the State from which the eligible hospital receives its first payment year incentive. If a hospital receives incentive payments from other States in subsequent years, total incentive payments received over all payment years of the program can be no greater than the aggregate EHR incentive amount calculated by the initial State.

(g) * * *

(1) * * *

(i) * * *

(B) The discharge-related amount for the most recent continuous 12-month period selected by the State, but ending before the federal fiscal year that serves

as the first payment year. The discharge-related amount is the sum of the following, with acute-care inpatient discharges over the 12-month period and based upon the total acute-care inpatient discharges for the eligible hospital (regardless of any source of payment):

* * * * *

■ 23. Section 495.312 is amended by revising paragraph (c) to read as follows:

§ 495.312 Process for payments.

* * * * *

(c) *State's role.* (1) Except as specified in paragraph (c)(2) of this section, the State determines the provider's eligibility for the EHR incentive payment under subparts A and D of this part and approves, processes, and makes timely payments using a process approved by CMS.

(2) At the State's option, CMS conducts the audits and handles any subsequent appeals, of whether eligible hospitals are meaningful EHR users on the States' behalf.

* * * * *

■ 24. Section 495.316 is amended by revising paragraph (d)(2) to read as follows:

§ 495.316 State monitoring and reporting regarding activities required to receive an incentive payment.

* * * * *

(d) * * *

(2)(i) Subject to § 495.332, the State may propose a revised definition for Stage 1 of meaningful use of certified EHR technology, subject to CMS prior approval, but only with respect to the following objectives:

(A) Generate lists of patients by specific conditions to use for quality improvement, reduction of disparities, research or outreach.

(B) Capability to submit electronic data to immunization registries or immunization information systems and actual submission except where prohibited, and according to applicable law and practice.

(C) Capability to submit electronic data on reportable (as required by State or local law) lab results to public health agencies and actual submission except where prohibited according to applicable law and practice.

(D) Capability to submit electronic syndromic surveillance data to public health agencies and actual submission except where prohibited and according to applicable law and practice.

(ii) Subject to § 495.332, the State may propose a revised definition for Stage 2 of meaningful use of certified EHR technology, subject to CMS prior approval, but only with respect to the following objectives:

(A) Generate lists of patients by specific conditions to use for quality improvement, reduction of disparities, research, or outreach.

(B) Capability to submit electronic data to immunization registries or immunization information systems, except where prohibited, and in accordance with applicable law and practice.

(C) Capability to submit electronic reportable laboratory results to public health agencies, except where prohibited, and in accordance with applicable law and practice.

(D) Capability to provide electronic syndromic surveillance data to public health agencies, except where prohibited, and in accordance with applicable law and practice.

(E) Capability to identify and report cancer cases to a public health central cancer registry, except where prohibited, and in accordance with applicable law and practice.

(F) Capability to identify and report specific cases to a specialized registry (other than a cancer registry), except where prohibited, and in accordance with applicable law and practice.

* * * * *

■ 23. Section 495.332 is amended by:

■ A. Adding paragraph (b)(6).

■ B. Revising paragraph (c) introductory text.

■ C. Removing paragraph (d)(9).

■ D. Adding paragraph (g).

The additions and revisions read as follows:

§ 495.332 State Medicaid health information technology (HIT) plan requirements.

* * * * *

(b) * * *

(6) For ensuring that at least one clinical location used for the calculation of the EP's patient volume has Certified EHR Technology during the payment year for which the EP is attesting.

(c) *Monitoring and validation.* Subject to paragraph (g) of this section, for monitoring and validation of information States must include the following:

* * * * *

(g) *Optional—signed agreement.* At the State's option, the State may include a signed agreement indicating that the State does all of the following:

(1) Designates CMS to conduct all audits and appeals of eligible hospitals' meaningful use attestations.

(2) Is bound by the audit and appeal findings described in paragraph (g)(1) of this section.

(3) Performs any necessary recoupments if audits (and any subsequent appeals) described in paragraph (g)(1) of this section determine that an eligible hospital was not a meaningful EHR user.

(4) Is liable for any FFP granted to the State to pay eligible hospitals that, upon audit (and any subsequent appeal) are determined not to have been meaningful EHR users.

■ 26. Section 495.342 is amended by revising the introductory text to read as follows:

§ 495.342 Annual HIT IAPD requirements.

Each State is required to submit the HIT IAPD Updates 12 months from the date of the last CMS approved HIT IAPD and must contain the following:

* * * * *

■ 27. Section 495.370 is amended by adding paragraph (d) to read as follows:

§ 495.370 Appeals process for a Medicaid provider receiving electronic health record incentive payments.

* * * * *

(d) This section does not apply in the case that CMS conducts the audits and handles any subsequent appeals under § 495.312(c)(2) of this part.

REQUEST FOR PROPOSALS

APPENDIX A (TRANSMITTAL LETTER)

November 15, 2011

Transmittal Letter

March 1, 2012

Re: Request for Proposals for the Electronic Health Records System (EHR System) RFP #KL2011.

The undersigned Proposer hereby represents and agrees as follows:

1. Proposer has read and understands the Request for Proposals for the Electronic Health Records System (EHR System) RFP #KL2011 ("**RFP**") dated November 15, 2011, in response to which this Proposal is being submitted.

2. Proposer has an affirmative duty to inquire about and seek clarification of any question or other item in the RFP that Proposer does not fully understand or that Proposer reasonably believes is susceptible to more than one interpretation.

3. Proposer's Proposal (including all subparts, including the Minimum Mandatory Requirements Proposal, Detailed RFP Requirements Proposal, and Price Proposal) complies with the instructions and conditions of the RFP.

4. Proposer's Proposal as modified (including any Appendices, Exhibits, and Addenda) shall be incorporated into the Agreement resulting from this RFP.

5. Proposer shall be bound by the representations, terms, and conditions contained in its Proposal. Proposer acknowledges and accepts all terms and conditions of the RFP, the Required Agreement, and all Appendices, Exhibits, and Addendums attached thereto, except as specified in its Proposal.

6. Proposer's proposed pricing was determined independently of other Proposers submitting Proposals in response to this RFP. Proposer acknowledges and agrees that the Agreement shall be a fixed fee agreement, and that it is able to complete the Services according to the project schedule specified in its Proposal at the price proposed.

7. Proposer's Proposal constitutes a firm offer to County which cannot be withdrawn for twelve (12) months from Proposal submission or the conclusion of good faith negotiations on the Required Agreement, whichever is later.

8. Proposer will bear sole and complete responsibility for all work as defined in the RFP.

Check the following box that applies:

☒ Proposer will perform the resultant Agreement as a single contractor by itself

☐ Proposer will perform the resultant Agreement as a single contractor with the use of the following subcontractor(s):

Subcontractor Name	Nature of Subcontractor Role

Proposer acknowledges that the RFP shall not be deemed an offer by County and recognizes that County reserves the right to accept or reject, at its sole discretion, any and all Proposals furnished in response to this RFP.

The undersigned below represents and warrants that he/she is authorized to make representations for Proposer, and authorized to sign for and on behalf of Proposer and to bind Proposer to an agreement. Proposals signed by other than the owner of a sole proprietorship, an authorized officer of a corporation, an authorized general partner of a general or limited partnership, or a manager or managing member of a limited liability company must include a power of attorney authorizing the signature.

Proposer's Company Name: Cerner

REQUEST FOR PROPOSALS

APPENDIX U

(DETAILED RFP REQUIREMENTS PROPOSAL RESPONSE FORM)

November 15, 2011

TABLE OF CONTENTS

Proposer must provide responses to the Detailed RFP Requirements seen in Section 6 (Detailed RFP Requirements Proposal) of the RFP by submitting a signed, completed version of this Appendix U (Detailed RFP Requirements Proposal Response Form) as well as providing several required documents and forms (e.g., Transmittal Letter, Proposer's Organization Questionnaire/Affidavit) that are included as Appendices to this RFP.

As noted in Section 6 (Detailed RFP Requirements Proposal) of the RFP, Proposer's response for each requirement must be limited to the space provided in this Appendix U (Detailed RFP Requirements Proposal Response Form) and must be entered using Calibri font style, 11 point font size.

Proposer's response must be limited to the space provided below for each requirement.

1. EXECUTIVE SUMMARY

Provide Proposer's Executive Summary, pursuant to Section 6.5 (Executive Summary) of the RFP. Proposer's response for this Section is limited to 3 pages.

*Provide a summary of the Proposer's understanding of the requested EHR System;

LAC DHS is seeking to make real improvements in population health, the patient's experience of care, and the cost of care through this procurement of an integrated EHR across your ambulatory and in patient healthcare delivery network.

*Discuss the Proposer's specific role and relevant qualifications for performing that role;

Cerner offers clients a dedicated exclusive focus on healthcare, an end-to-end solution and service portfolio, including comprehensive software solutions, full implementation services provided by Cerner's own team of professionals, Application Management Services (AMS) support services, and best in KLAS Remote Hosting Services (RHO).

*Provide a brief description of the Proposer's history, number of years the organization has been in business, and type of products and services it provides;

Since 1979, Cerner has focused exclusively on designing and deploying healthcare IT solutions that improve efficiency and quality of care. Our revolutionary person-centric Cerner Millennium architecture is designed to fundamentally transform healthcare delivery. Cerner solutions combine technology with knowledge to deliver vital data for effective, real-time decision-making across the enterprise. Healthcare has been our only focus from our inception—and our proven vision and results are a testament to our commitment to eliminate error, variance, waste, delay and friction for more efficient business management which optimizes clinical and financial outcomes. Around the world, health organizations ranging from single-doctor practices to entire countries turn to Cerner for our powerful yet intuitive solutions.

*Summarize the key qualifications of Proposer, distinguishing characteristics of the Proposal, the proposed solution, and Project approach, as well as the principal advantages to County;

•Comprehensive Software Solution: Cerner offers an unrivaled breadth and depth of solutions, spanning diverse healthcare venues such as ambulatory clinics and acute care hospitals. The majority of these solutions have been organically grown to ensure tight integration on a single, unified database. Our commitment in client partnerships is to develop industry standard protocols

and evidenced based content which contribute towards continued advancement to clinical excellence.

•Quality: Clients like LA County find assurance in the fact that Cerner is investing over $1 billion in the next five years in Research & Development, an investment that directly correlates to the improvements and new developments in the solutions we offer. As an organization we are continually innovating to find ways to improve clinical, operational and financial outcomes for our clients - enhancing and promoting their ability to provide excellent care. Largely this focus is based on reducing non-value labor to improve patient centric care and quality outcomes. We realize our clients are in the Healthcare business not the IT or reporting business. Only Cerner has developed a platform that allows for fully digitized hospitals; beds, monitors, pumps and patient access modules, all connected to the EMR on a Cerner developed device connectivity platform reducing nurse data entry by up to 90%. Cerner is also unique in its focus on meeting our clients' needs around quality measures submission requirements. Without third party solutions, Cerner offers real time dashboards to track Core Measures required for Meaningful Use and beyond as a bi-product of care versus retrospective reporting requiring manual abstraction and analysis. Additionally, all current clients receive a Sepsis intervention algorithm imbedded within our software to help prevent incidence of Sepsis within their patient populations by proactively identifying the early signs of Sepsis giving our clients the capability to proactively manage patient outcomes and quality. Dr. John Hensing, CIO of Banner Health, best summarizes the benefit Cerner brings: "The system tackled the deadly problem of sepsis two years ago by starting to flag at-risk patients through its electronic health-record system. An early alert system was created to identify patients most likely to develop the serious bloodstream infection. As a result, Banner Health has seen a substantial improvement. Out of all identified patients at risk of sepsis, 92% leave the hospital alive. "It's a combination of having clinicians respond promptly, creating a protocol of early intervention and using EHR technology to reduce overall mortality and improve outcomes."

In January of 2012, Thomson Reuters released its list of the Top 15 Health Systems in the United States. The top systems were determined by strict performance, outcomes and safety criteria. Six of the nation's top 15 health systems are Cerner clients, more than any other EHR supplier. But this honor rightfully belongs to our clients, and we will continue to innovate and deliver solutions as a clinical partner capable of helping our clients accomplish their goals.

Cerner has a high interest in partnering with organizations such as Los Angeles County DHS, and count as our partners similar county healthcare facilities in southern California, such as the Los Angeles County Sheriff and Probation Departments, the County of Orange Health Care Agency, Ventura County, Tri-City Medical Center and Palomar Pomerado Health System. Additionally, we have key partnerships and provide solutions to numerous other county agencies across the country, and the Department of Defense and the Veterans Association.

•Seamless Integration between Your Clinics and In-Patient Hospitals: LAC DHS requires a clinical information system that will span the needs of your diverse enterprise. The architecture must connect patients with care teams and care teams with one another, allowing seamless information sharing throughout the organization, whether in inpatient or ambulatory venues. Only Cerner offers a comprehensive, person-centric approach to align all aspects of the physician community and a proven "Medical Home" approach emphasizing continuity of care, collective responsibility, communication, disease management in the office and access to information, quality and safety. Because of our unwavering focus on this industry, we know the culture, the language, the nuances of healthcare, and we know how to make all the components work together. In fact, virtually all our installations include non-Cerner software should LAC DHS decide to maintain areas of current

investment.

•Information Exchange With Other Healthcare Providers in LA Area: The Cerner Network is an industry leading suite of connectivity solutions and services that makes electronic data exchange simple, fast and affordable which:

Allows providers to electronically share clinical information with one another

Makes it easier to stay in touch with your patients

Helps providers qualify for federal incentives

Supports health information exchange and improves patient care at a health system, community, state or federal level

Through Cerner's unique ability to connect both Cerner systems and foreign EMR's and well as our numerous established EMR's in the LA County area, such as CHLA, USC, Orange County, Ventura County, and Adventist, we believe that Cerner is best positioned to assist LA County in implementing the same award winning, data driven Health Information Exchange Network to meet its future needs.

•Proven Speed to Value and Efficiency: We understand that a smarter approach to implementation is required in order for a healthcare organization to remain fiscally sound in today's environment. With this reality in mind, we have created the Cerner Solutions Center, a comprehensive, best practices approach to implementing systems from start to finish. Our standardized event-based implementation approach draws upon more than 30 years of proven content from real clients to reduce project variance, increase efficiency and optimize resource use for greater implementation discipline and predictability, The Solution Center approach will allow you to realize benefits at an accelerated pace while minimizing the resources required to perform one-time build activities. With this methodology, Cerner, certified as a Complete EMR by the Certification Commission for Health Information Technology (CCHIT®), is committed to enabling your achievement of "meaningful use" standards in an optimal timeframe, allowing your organization to benefit from the American Recovery and Reinvestment Act's (ARRA) designation of Medicare and Medicaid payments.

•Cerner's Remote Hosting Managed Service Offering (RHO): represents a Best in KLAS offering 3 consecutive years running, 2009 – 2011. Through remote hosting Cerner clients are able to address the growing challenges a healthcare organization is faced in the IT realm, including: hiring and retaining skilled IT professionals, flat-lining capital expenditures relating to IT, managing and maintaining a complex computing environment continually requiring change, maintaining system stability and reliability for clinicians and physicians, and finally disaster prevention & recovery. Cerner remote hosting includes hardware and sublicensed software, proactive 24x7 system management, N+1 hardened datacenter usage, telecommunication between Cerner datacenter and client data center, and guaranteed system availability and response times. Primary benefits realized by Cerner remote hosted clients include: risk and price protection, reduction of FTE requirements associated with managing Cerner technology infrastructure, faster return on investment, and cash and capital retention. The preceding information has all been recognized by KLAS with additional positive notations being: highest satisfaction scores, highest scores for system uptime and performance, and the highest renewal rate for any vendor. Key to note is KLAS' acknowledgement that Cerner is the only vendor in which hosting services increased overall satisfaction with software.

•Account Management Services (AMS) provides production support of Millennium Solutions, resulting in improved solution operation and adoption, lower costs, and less disruption of end users enabling your team to focus on their organization's mission and vision. With AMS, an Engagement

Leader (EL) is assigned to proactively ensure service delivery. The EL is responsible for SLA metrics, client satisfaction, assigning resources, and the overall relationship between your hospital and our team. There are support requirements in the hosting exhibits that seem to indicate that DHS is asking for an AMS support model. Because this was not specifically identified however, Cerner has included it as an Optional service and provided pricing in the Optional Pricing Worksheets.

*Address any issue(s) that Proposer envisions to be associated with fulfilling the requirements of the RFP and cite specific suggestions for avoiding or mitigating these issues.

Cerner does not see risk in ultimately fulfilling all requirements of the RFP. The risk that Cerner would want to note is in the aggressive timeline that is needed to conclude contract negotiations and implement the EHR System at all facilities in order for the County to make the Meaningful Use Attestation dates. Cerner has a proven history of implementing complex systems for large organizations such as LAC DHS both on time and on budget. The risks involved with large system implementations for multi-facility organizations surround keeping the project on schedule and to the originally defined scope. The project resources from all facilities should agree on the overall EHR System design and workflow. There must be good communication and strong team cohesiveness around the vision and mission. It is critical that there be executive leadership involvement in the project for any key decisions that result from differing opinions among representatives from different facilities. The project should be staffed following Cerner's recommendations and it is imperative that clinicians that will participate in the project are back filled in their roles. These same clinicians that will be the project subject matter experts and super users must be involved in training the rest of the end users and actively support the conversion events as project resources. The clinician involvement in the design decisions will lead to a higher rate of end user acceptance and insure the successful adoption of the EHR System.

2. SYSTEM REQUIREMENTS

Provide Proposer's responses to County's system requirements detailed in Appendix H (Functional Requirements), Appendix H-1 (Functional Requirements Attachment), Appendix I (Technical Requirements), Appendix I-1 (Technical Requirements Attachment), Appendix J (Implementation Requirements) and Appendix K (Administrative Requirements), below.

2.1 APPENDIX H (FUNCTIONAL REQUIREMENTS)

2.1.1 CCHIT CRITERIA

Proposer must affirmatively confirm whether or not Proposer's Licensed Software complies with each CCHIT Ambulatory or Inpatient Criteria by noting "Yes" or "No" for each criteria identified below, pursuant to Section 1.1 (CCHIT Criteria) of Appendix H (Functional Requirements). Proposer must also provide any third party certification it has received regarding its proposed EHR System as Attachment H (Third Party Certification).

Ambulatory or Inpatient	CCHIT Criteria ID Number	Criteria	Proposer Licensed Software complies with the criteria

Ambulatory or Inpatient	CCHIT Criteria ID Number	Criteria	Proposer Licensed Software complies with the criteria
Ambulatory	AM 01.01	The system shall create a single patient record for each patient.	☒ Yes ☐ No
Ambulatory	AM 01.02	The system shall associate (store and link) key identifier information (e.g., system ID, medical record number) with each patient record.	☒ Yes ☐ No
Ambulatory	AM 01.03	The system shall provide the ability to store more than one identifier for each patient record.	☒ Yes ☐ No
Ambulatory	AM 01.04	The system shall provide a field which will identify patients as being exempt from reporting functions.	☒ Yes ☐ No
Ambulatory	AM 01.05	The system shall provide the ability to merge patient information from two patient records into a single patient record.	☒ Yes ☐ No
Ambulatory	AM 02.01	The system shall provide the ability to include demographic information in reports.	☒ Yes ☐ No
Ambulatory	AM 02.02	The system shall provide the ability to maintain and make available historic information for demographic data including prior names, addresses, phone numbers and email addresses.	☒ Yes ☐ No
Ambulatory	AM 02.04	The system shall provide the ability to modify demographic information about the patient.	☒ Yes ☐ No
Ambulatory	AM 02.05	The system shall store demographic information in the patient medical record in separate discrete data fields, such that data extraction tools can retrieve these data.	☒ Yes ☐ No
Ambulatory	FN 01.01	The system shall provide the ability to access demographic information such as name, date of birth and gender needed for patient care functions.	☒ Yes ☐ No

Ambulatory or Inpatient	CCHIT Criteria ID Number	Criteria	Proposer Licensed Software complies with the criteria
Ambulatory	FN 01.02	The system shall capture and maintain demographic information as discrete data elements as part of the patient record.	☒ Yes ☐ No
Ambulatory	FN 02.01	The system shall provide the ability to query for a patient by more than one form of identification.	☒ Yes ☐ No
Ambulatory	FN 03.01	The system shall provide the ability to capture and maintain, as discrete data elements, the identity of all providers associated with a specific patient encounter.	☒ Yes ☐ No
Ambulatory	FN 03.02	The system shall provide the ability to capture and maintain, as discrete data elements, the principal provider responsible for the care of an individual patient.	☒ Yes ☐ No
Ambulatory	FN 04.02	The system shall provide the ability to capture, maintain and display, as discrete data elements, all problems/diagnoses associated with a patient.	☒ Yes ☐ No
Ambulatory	AM 03.03	The system shall provide the ability to maintain the onset date of the problem/diagnosis.	☒ Yes ☐ No
Ambulatory	AM 03.04	The system shall provide the ability to maintain the resolution date of the problem/diagnosis.	☒ Yes ☐ No
Ambulatory	AM 03.05	The system shall provide the ability to record the chronicity (chronic, acute/self-limiting, etc.) of a problem/diagnosis.	☒ Yes ☐ No
Ambulatory	AM 03.06	The system shall provide the ability to record the user ID and date of all updates to the problem/diagnosis list.	☒ Yes ☐ No
Ambulatory	AM 03.07	The system shall provide the ability to associate orders, medications, and notes with one or more problems/diagnoses.	☒ Yes ☐ No

Ambulatory or Inpatient	CCHIT Criteria ID Number	Criteria	Proposer Licensed Software complies with the criteria
Ambulatory	AM 03.08.01	The system shall provide the ability to associate orders and medications with one or more codified problems/diagnoses.	☒ Yes ☐ No
Ambulatory	AM 03.09	The system shall provide the ability to maintain a coded list of problems/diagnoses.	☒ Yes ☐ No
Ambulatory	FN 04.06	The system shall provide the ability to display different views of the problem / diagnosis list based upon the status of the problem.	☒ Yes ☐ No
Ambulatory	FN 04.01	The system shall provide the ability to capture, maintain and display free text comments associated with the problem / diagnosis.	☒ Yes ☐ No
Ambulatory	AM 04.02	The system shall provide the ability to record the prescribing of medications including the identity of the prescriber.	☒ Yes ☐ No
Ambulatory	AM 04.03	The system shall provide the ability to maintain medication ordering dates.	☒ Yes ☐ No
Ambulatory	AM 04.04	The system shall provide the ability to maintain other dates associated with medications including start, modify, renewal and end dates as applicable.	☒ Yes ☐ No
Ambulatory	AM 04.05	The system shall provide the ability to display medication history for the patient.	☒ Yes ☐ No
Ambulatory	AM 04.06	The system shall provide the ability to capture medications entered by authorized users other than the prescriber.	☒ Yes ☐ No
Ambulatory	AM 04.07	The system shall store medication information in discrete data fields. At a minimum, there must be one field for each of the following: - medication name, form and strength; - dispense quantity; - refills; and - sig.	☒ Yes ☐ No

Ambulatory or Inpatient	CCHIT Criteria ID Number	Criteria	Proposer Licensed Software complies with the criteria
Ambulatory	AM 04.09	The system shall provide the ability to enter uncoded or free text medications when medications are not on the vendor-provided medication database or information is insufficient to completely identify the medication.	☒ Yes ☐ No
Ambulatory	AM 04.10	The system shall provide the ability to enter or further specify in a discrete field that the patient takes no medications.	☒ Yes ☐ No
Ambulatory	AM 04.11	The system shall provide the ability to record the date of changes made to a patient's medication list and the identity of the user who made the changes.	☒ Yes ☐ No
Ambulatory	FN 06.01	The system shall provide the ability to update and display a patient-specific medication list based on current medication orders or prescriptions.	☒ Yes ☐ No
Ambulatory	FN 06.02	The system shall provide the ability to display a view that includes only current medications.	☒ Yes ☐ No
Ambulatory	FN 06.03	The system shall provide the ability to exclude a medication from the current medication list (e.g. marked inactive, erroneous, completed, discontinued) and document reason for such action.	☒ Yes ☐ No
Ambulatory	FN 06.04	The system shall provide the ability to print a current medication list.	☒ Yes ☐ No
Ambulatory	FN 06.05	The system shall provide the ability to display that the patient takes no medications.	☒ Yes ☐ No
Ambulatory	FN 06.06	The system shall provide the ability to capture and maintain, as discrete data elements, all current medications including over-the-counter and complementary medications such as vitamins, herbs and supplements.	☒ Yes ☐ No
Ambulatory	FN 05.01	The system shall provide the ability to modify or	☒ Yes

Ambulatory or Inpatient	CCHIT Criteria ID Number	Criteria	Proposer Licensed Software complies with the criteria
		inactivate an item on the allergy and adverse reaction list.	☐ No
Ambulatory	AM 05.03	The system shall provide the ability to display information which has been inactivated or removed from the allergy and adverse reaction list.	☒ Yes ☐ No
Ambulatory	AM 05.04	The system shall provide the ability to specify the type of allergic or adverse reaction in a discrete data field.	☒ Yes ☐ No
Ambulatory	AM 05.05	The system shall provide the ability to capture and maintain, as discrete data, the identity of the user who added, modified, inactivated or removed items from the allergy and adverse reaction list, including attributes of the changed items. The user ID and date/time stamp shall be recorded.	☒ Yes ☐ No
Ambulatory	AM 05.07	The system shall provide the ability for a user to explicitly capture and maintain, as discrete data, that the allergy list was reviewed. The user ID and date/time stamp shall be recorded when the allergies reviewed option is selected.	☒ Yes ☐ No
Ambulatory	AM 05.09	The system shall provide the ability to explicitly indicate in a discrete field that a patient has no known drug allergies or adverse reactions.	☒ Yes ☐ No
Ambulatory	AM 05.12	The system shall provide the ability to display the allergy list, including date of entry.	☒ Yes ☐ No
Ambulatory	AM 05.13	The system shall provide the ability to capture, maintain and display, as discrete data, lists of medications and other agents to which the patient has had an allergic or other adverse reaction.	☒ Yes ☐ No
Ambulatory	AM 06.01	The system shall provide the ability to capture, store, display, and manage patient history.	☒ Yes ☐ No
Ambulatory	AM 06.02	The system shall provide the ability to capture structured data in the patient history.	☒ Yes

Ambulatory or Inpatient	CCHIT Criteria ID Number	Criteria	Proposer Licensed Software complies with the criteria
			☐ No
Ambulatory	AM 06.03	The system shall provide the ability to update a patient history by modifying, adding or removing items from the patient history as appropriate.	☒ Yes ☐ No
Ambulatory	AM 06.04	The system shall provide the ability to capture patient history as both a presence and absence of conditions, i.e., the specification of the absence of a personal or family history of a specific diagnosis, procedure or health risk behavior.	☒ Yes ☐ No
Ambulatory	AM 06.05	The system shall provide the ability to capture history collected from outside sources.	☒ Yes ☐ No
Ambulatory	AM 06.06	The system shall provide the ability to capture patient history in a standard coded form.	☒ Yes ☐ No
Ambulatory	AM 07.01	The system shall provide the ability to create and display a summary list for each patient that includes, at a minimum, the active problem/diagnosis list, current medication list, medication allergies and adverse reactions	☒ Yes ☐ No
Ambulatory	AM 08.01	The system shall provide the ability to create clinical documentation or notes (henceforth "documentation").	☒ Yes ☐ No
Ambulatory	AM 08.02	The system shall provide the ability to display documentation.	☒ Yes ☐ No
Ambulatory	AM 08.03	The system shall provide the ability to save a note in progress prior to finalizing the note.	☒ Yes ☐ No
Ambulatory	AM 08.04	The system shall provide the ability to finalize a note, i.e., change the status of the note from in progress to complete so that any subsequent changes are recorded as such.	☒ Yes ☐ No

Ambulatory or Inpatient	CCHIT Criteria ID Number	Criteria	Proposer Licensed Software complies with the criteria
Ambulatory	AM 08.05	The system shall provide the ability to record the identity of the user finalizing each note and the date and time of finalization.	☒ Yes ☐ No
Ambulatory	AM 08.06	The system shall provide the ability to cosign a note and record the date and time of signature.	☒ Yes ☐ No
Ambulatory	AM 08.07	The system shall provide the ability to addend and/or correct notes that have been finalized.	☒ Yes ☐ No
Ambulatory	AM 08.08	The system shall provide the ability to identify the full content of a modified note, both the original content and the content resulting after any changes, corrections, clarifications, addenda, etc. to a finalized note.	☒ Yes ☐ No
Ambulatory	AM 08.09	The system shall provide the ability to record and display the identity of the user who addended or corrected a note and the date and time of the change.	☒ Yes ☐ No
Ambulatory	AM 08.10	The system shall provide the ability to enter free text notes.	☒ Yes ☐ No
Ambulatory	AM 08.11	The system shall provide the ability to filter, search or order notes by the provider who finalized the note.	☒ Yes ☐ No
Ambulatory	AM 08.12	The system shall provide the ability to filter, search or order notes by associated diagnosis within a patient record.	☒ Yes ☐ No
Ambulatory	AM 08.13	The system shall provide the ability to capture patient vital signs, including blood pressure, heart rate, respiratory rate, height, and weight, as discrete data.	☒ Yes ☐ No
Ambulatory	AM 08.14	The system shall provide the ability to capture and display temperature, weight and height in both metric and English units	☒ Yes ☐ No

Ambulatory or Inpatient	CCHIT Criteria ID Number	Criteria	Proposer Licensed Software complies with the criteria
Ambulatory	AM 08.15	The system shall be capable of indicating to the user when a vital sign measurement falls outside a preset normal range as set by authorized users.	☒ Yes ☐ No
Ambulatory	AM 08.16	The system shall provide the ability to capture other clinical data elements as discrete data.	☒ Yes ☐ No
Ambulatory	AM 08.19	The system shall provide templates for inputting data in a structured format as part of clinical documentation.	☒ Yes ☐ No
Ambulatory	AM 08.20	The system shall provide the ability to customize clinical templates.	☒ Yes ☐ No
Ambulatory	AM 08.21	The system shall be capable of recording comments by the patient or the patient's representative regarding the accuracy or veracity of information in the patient record (henceforth 'patient annotations').	☒ Yes ☐ No
Ambulatory	AM 08.22	The system shall display patient annotations in a manner which distinguishes them from other content in the system.	☒ Yes ☐ No
Ambulatory	AM 08.24	The system shall provide the ability to graph height and weight over time.	☒ Yes ☐ No
Ambulatory	AM 08.25	The system shall provide the ability to calculate and display body mass index (BMI).	☒ Yes ☐ No
Ambulatory	AM 09.01	The system shall provide the ability to capture and store external documents.	☒ Yes ☐ No
Ambulatory	AM 09.03	The system shall provide the ability to save scanned documents as images.	☒ Yes ☐ No

Ambulatory or Inpatient	CCHIT Criteria ID Number	Criteria	Proposer Licensed Software complies with the criteria
Ambulatory	AM 09.04	The system shall provide the ability to receive, store in the patient's record, and display text-based outside reports.	☒ Yes ☐ No
Ambulatory	AM 09.05.01	The system shall provide the ability to index scanned documents and associate a date and document type to the document.	☒ Yes ☐ No
Ambulatory	AM 09.05.02	The system shall provide the ability to retrieve indexed scanned documents based on document type and date.	☒ Yes ☐ No
Ambulatory	AM 09.06	The system shall provide access to clinical images. They must be accessible from within the patient's chart and labeled and date-time stamped or included in a patient encounter document. These images may be stored within the system or be provided through direct linkage to external sources.	☒ Yes ☐ No
Ambulatory	AM 09.07	The system shall provide the ability to accept, store in the patient's record, and display clinical results received through an interface with an external source.	☒ Yes ☐ No
Ambulatory	FN 14.01	The system shall provide the ability to produce patient instructions and patient educational materials which may reside within the system or be provided through links to external source.	☒ Yes ☐ No
Ambulatory	AM 10.03	The system shall have the ability to provide access to patient-specific test and procedure instructions that can be modified by the physician or health organization; these instructions are to be given to the patient. These instructions may reside within the system or be provided through links to external sources.	☒ Yes ☐ No
Ambulatory	AM 10.04	The system shall have the ability to provide access to patient-specific test and procedure instructions that can be modified by the physician or health organization; these instructions are to be given to the filler of the order. These instructions may reside within the system or be provided through links to external sources.	☒ Yes ☐ No

Ambulatory or Inpatient	CCHIT Criteria ID Number	Criteria	Proposer Licensed Software complies with the criteria
Ambulatory	AM 10.05	The system shall provide the ability to record that patient specific instructions or educational material were provided to the patient.	☒ Yes ☐ No
Ambulatory	AM 10.06	The system shall provide the ability to create patient specific instructions.	☒ Yes ☐ No
Ambulatory	FN 17.01	The system shall provide the ability to access and review medication information (such as patient education material or drug monograph). This may reside within the system or be provided through links to external sources.	☒ Yes ☐ No
Ambulatory	AM 11.01	The system shall provide the ability to create prescription or other medication orders with sufficient information for correct filling and dispensing by a pharmacy.	☒ Yes ☐ No
Ambulatory	AM 11.02	The system shall provide the ability to record user and date stamp for prescription related events, such as initial creation, renewal, refills, discontinuation, and cancellation of a prescription.	☒ Yes ☐ No
Ambulatory	AM 11.03	The system shall provide the ability to capture the identity of the prescribing provider for all medication orders.	☒ Yes ☐ No
Ambulatory	AM 11.04	The system shall provide the ability to capture common content for prescription details including strength, sig, quantity, and refills to be selected by the ordering clinician.	☒ Yes ☐ No
Ambulatory	AM 11.05	The system shall provide the ability to receive and display information received through electronic prescription eligibility checking.	☒ Yes ☐ No
Ambulatory	AM 11.07	The system shall provide the ability to reorder a prior prescription without re-entering previous data (e.g. administration schedule, quantity).	☒ Yes ☐ No
Ambulatory	AM 11.08	The system shall provide the ability to print and electronically fax prescriptions.	☒ Yes

Ambulatory or Inpatient	CCHIT Criteria ID Number	Criteria	Proposer Licensed Software complies with the criteria
			☐ No
Ambulatory	AM 11.09	The system shall provide the ability to re-print and re-fax prescriptions.	☒ Yes ☐ No
Ambulatory	AM 11.11	The system shall provide the ability to display a dose calculator for patient-specific dosing based on weight.	☒ Yes ☐ No
Ambulatory	AM 11.12	The system shall provide the ability to identify medication samples dispensed, including lot number and expiration date.	☒ Yes ☐ No
Ambulatory	AM 11.13	The system shall provide the ability to prescribe fractional amounts of medication (e.g. 1/2 tsp, 1/2 tablet).	☒ Yes ☐ No
Ambulatory	AM 11.14	The system shall provide the ability to alert the user if the drug interaction information is outdated.	☒ Yes ☐ No
Ambulatory	AM 11.15	The system shall provide the ability to allow the user to configure prescriptions to incorporate fixed text according to the user's specifications.	☒ Yes ☐ No
Ambulatory	FN 09.04	The system shall provide the ability to capture and maintain, as discrete data, a diagnosis/problem code or description associated with an order of any type (including prescriptions and medications ordered for administration).	☒ Yes ☐ No
Ambulatory	AM 11.17	The system shall provide the ability to display the associated problem or diagnosis (indication) on the printed prescription.	☒ Yes ☐ No
Ambulatory	AM 11.19	The system shall provide the ability to create provider specific medication lists of the most commonly prescribed drugs with a default route, dose, frequency, and quantity.	☒ Yes ☐ No
Ambulatory	AM 11.20	The system shall provide the ability to add reminders for necessary follow up tests based on	☒ Yes

Ambulatory or Inpatient	CCHIT Criteria ID Number	Criteria	Proposer Licensed Software complies with the criteria
		medication prescribed.	☐ No
Ambulatory	FN 07.01	The system shall provide the ability to alert the user at the time a new medication is prescribed/ordered that drug interaction, allergy, and formulary checking will not be performed against the uncoded medication or free text medication.	☒ Yes ☐ No
Ambulatory	FN 07.02	The system shall provide the ability to prescribe/order uncoded and non-formulary medications.	☒ Yes ☐ No
Ambulatory	FN 07.03	The system shall provide the ability to maintain a coded list of medications including a unique identifier for each medication.	☒ Yes ☐ No
Ambulatory	FN 07.04	The system shall provide end-users the ability to search for medications by generic or brand name.	☒ Yes ☐ No
Ambulatory	FN 07.05	The system shall provide the ability to access reference information for prescribing/ordering.	☒ Yes ☐ No
Ambulatory	AM 12.01	The system shall provide the ability to order diagnostic tests, including labs and imaging studies.	☒ Yes ☐ No
Ambulatory	AM 12.02	The system shall provide the ability to capture the identity of the ordering provider for all test orders.	☒ Yes ☐ No
Ambulatory	AM 12.03	The system shall provide the ability to capture appropriate order entry detail, including associated diagnosis.	☒ Yes ☐ No
Ambulatory	AM 12.04	The system shall provide the ability to display user created instructions and/or prompts when ordering diagnostic tests or procedures.	☒ Yes ☐ No
Ambulatory	AM 12.05	The system shall provide the ability to relay orders for a diagnostic test to the correct destination for	☒ Yes

Ambulatory or Inpatient	CCHIT Criteria ID Number	Criteria	Proposer Licensed Software complies with the criteria
		completion.	☐ No
Ambulatory	AM 12.06	The system shall have the ability to provide a view of active orders for an individual patient.	☒ Yes ☐ No
Ambulatory	AM 12.07	The system shall have the ability to provide a view of orders by like or comparable type, e.g., all radiology or all lab orders.	☒ Yes ☐ No
Ambulatory	AM 12.08	The system shall provide the ability to display outstanding orders for multiple patients (as opposed to outstanding orders for a single patient).	☒ Yes ☐ No
Ambulatory	FN 09.01	The system shall provide the ability to require problem / diagnosis as an order component.	☒ Yes ☐ No
Ambulatory	FN 09.02	The system shall provide the ability to view status information for ordered services.	☒ Yes ☐ No
Ambulatory	FN 10.01	The system shall provide the ability to define a set of items to be ordered as a group.	☒ Yes ☐ No
Ambulatory	FN 10.02	The system shall provide the ability to modify order sets.	☒ Yes ☐ No
Ambulatory	FN 10.03	The system shall provide the ability to include in an order set order types including but not limited to medications, laboratory tests, imaging studies, procedures and referrals.	☒ Yes ☐ No
Ambulatory	FN 11.01	The system shall provide the ability for individual orders in an order set to be selected or deselected by the user.	☒ Yes ☐ No
Ambulatory	FN 11.04	The system shall provide the ability to display orders placed through an order set either individually or as a group.	☒ Yes

Ambulatory or Inpatient	CCHIT Criteria ID Number	Criteria	Proposer Licensed Software complies with the criteria
			☐ No
Ambulatory	AM 14.01	The system shall provide the ability to indicate normal and abnormal results based on data provided from the original data source.	☒ Yes ☐ No
Ambulatory	AM 14.02	The system shall provide the ability to display numerical results in flow sheets and graphical form in order to compare results, and shall provide the ability to display values graphed over time.	☒ Yes ☐ No
Ambulatory	AM 14.03	The system shall provide the ability to display non-numeric current and historical test results as textual data.	☒ Yes ☐ No
Ambulatory	AM 14.04	The system shall provide the ability to notify the relevant providers (ordering, copy to) that new results have been received.	☒ Yes ☐ No
Ambulatory	AM 14.05	The system shall provide the ability to filter or sort results by type of test and test date.	☒ Yes ☐ No
Ambulatory	AM 14.07	The system shall provide the ability to forward a result to other users.	☒ Yes ☐ No
Ambulatory	AM 14.08	The system shall provide the ability to link the results to the original order.	☒ Yes ☐ No
Ambulatory	AM 14.09	The system shall provide the ability for a user to attach a free text comment to a result that can be seen by another user who might subsequently view that result.	☒ Yes ☐ No
Ambulatory	AM 14.10	The system shall provide the ability to associate one or more images with a non-numerical result.	☒ Yes ☐ No
Ambulatory	AM 14.11	The system shall provide the ability for a user to whom a result is presented to acknowledge the	☒ Yes

Ambulatory or Inpatient	CCHIT Criteria ID Number	Criteria	Proposer Licensed Software complies with the criteria
		result.	☐ No
Ambulatory	AM 15.01	The system shall provide the ability to capture scanned paper consent documents (covered in DC.1.1.3.1).	☒ Yes ☐ No
Ambulatory	AM 15.02	The system shall provide the ability to store, display and print patient consent forms.	☒ Yes ☐ No
Ambulatory	AM 15.04	The system shall provide the ability to store and display administrative documents (e.g. privacy notices).	☒ Yes ☐ No
Ambulatory	AM 15.05	The system shall provide the ability to chronologically display consents and authorizations.	☒ Yes ☐ No
Ambulatory	AM 16.01	The system shall provide the ability to indicate that a patient has completed advance directive(s).	☒ Yes ☐ No
Ambulatory	AM 16.02	The system shall provide the ability to indicate the type of advance directives, such as living will, durable power of attorney, or a "Do Not Resuscitate" order.	☒ Yes ☐ No
Ambulatory	AM 16.03	The system shall provide the ability to indicate when advance directives were last reviewed.	☒ Yes ☐ No
Ambulatory	AM 17.01	The system shall have the ability to provide access to standard care plan, protocol and guideline documents when requested at the time of the clinical encounter. These documents may reside within the system or be provided through links to external sources.	☒ Yes ☐ No
Ambulatory	AM 17.02	The system shall provide the ability to create site-specific care plan, protocol, and guideline documents.	☒ Yes ☐ No
Ambulatory	AM 17.03	The system shall provide the ability to modify site-	☒ Yes

Ambulatory or Inpatient	CCHIT Criteria ID Number	Criteria	Proposer Licensed Software complies with the criteria
		specific standard care plan, protocol, and guideline documents obtained from outside sources.	☐ No
Ambulatory	FN 12.10	The system shall provide the ability to check for potential interactions between medications to be prescribed and medication allergies and intolerances listed in the record and alert the user at the time of medication prescribing/ordering if potential interactions exist.	☒ Yes ☐ No
Ambulatory	AM 19.05	The system shall provide the ability to set the severity level at which drug interaction warnings should be displayed.	☒ Yes ☐ No
Ambulatory	FN 12.04	The system shall provide the ability to display, on demand, potential drug-allergy interactions, drug-drug interactions and drug-diagnosis interactions based on current medications, active allergies and active problems.	☒ Yes ☐ No
Ambulatory	FN 13.01	The system shall provide drug-diagnosis interaction alerts at the time of medication prescribing/ordering.	☒ Yes ☐ No
Ambulatory	FN 12.11	The system shall provide the ability, when a new allergy is documented, to check for a potential interaction between the newly-documented allergy and the patient's current medications, and alert the user if such interactions exist.	☒ Yes ☐ No
Ambulatory	FN 12.01	The system shall provide the ability to check for potential interactions between medications to be prescribed/ordered and current medications and alert the user at the time of medication prescribing/ordering if potential interactions exist.	☒ Yes ☐ No
Ambulatory	FN 12.05	The system shall provide the ability to view the rationale for a drug interaction alert.	☒ Yes ☐ No
Ambulatory	FN 12.06	The system shall provide the ability to capture and maintain at least one reason for overriding any drug-drug or drug-allergy/intolerance interaction warning triggered at the time of medication	☒ Yes ☐ No

Ambulatory or Inpatient	CCHIT Criteria ID Number	Criteria	Proposer Licensed Software complies with the criteria
		prescribing/ordering.	
Ambulatory	FN 12.07	The system shall provide the ability to enter a structured response when overriding a drug-drug or drug-allergy/intolerance warning.	☒ Yes ☐ No
Ambulatory	FN 12.08	The system shall provide the ability to prescribe/order a medication despite alerts for interactions and/or allergies/intolerances being present.	☒ Yes ☐ No
Ambulatory	FN 12.09	The system shall provide the ability to accept updates to drug interaction databases	☒ Yes ☐ No
Ambulatory	FN 15.01	The system shall provide the ability to capture medication administration details as discrete data, including: (1) the medication name and dose; (2) date and time of administration; (3) route and site; (4) lot number and expiration date; (5) manufacturer; and (6) user ID.	☒ Yes ☐ No
Ambulatory	FN 16.02	The system shall provide the ability to capture, in a discrete field, an allergy/adverse reaction to a specific immunization.	☒ Yes ☐ No
Ambulatory	FN 16.03	The system shall provide the ability to capture immunization administration details as discrete data, including: (1) the immunization type and dose; (2) date and time of administration; (3) route and site; (4) lot number and expiration date; (5) manufacturer; and (6) user ID.	☒ Yes ☐ No
Ambulatory	AM 21.01	The system shall provide the ability to create referral orders with detail adequate for correct routing.	☒ Yes ☐ No
Ambulatory	AM 21.02	The system shall provide the ability to record user ID and date/time stamp for all referral related events.	☒ Yes ☐ No

Ambulatory or Inpatient	CCHIT Criteria ID Number	Criteria	Proposer Licensed Software complies with the criteria
Ambulatory	AM 22.01	The system shall provide the ability to establish criteria for disease management, wellness, and preventive services based on patient demographic data (minimally age and gender).	☒ Yes ☐ No
Ambulatory	AM 22.02	The system shall provide the ability to display alerts based on established guidelines.	☒ Yes ☐ No
Ambulatory	AM 22.03	The system shall provide the ability to establish criteria for disease management, wellness, and preventive services based on clinical data (problem/diagnosis list, current medications).	☒ Yes ☐ No
Ambulatory	AM 22.04	The system shall provide the ability to update disease management guidelines and any associated reference material.	☒ Yes ☐ No
Ambulatory	AM 22.05	The system shall provide the ability to update preventive services/wellness guidelines and any associated reference material.	☒ Yes ☐ No
Ambulatory	AM 22.06	The system shall provide the ability to override guidelines.	☒ Yes ☐ No
Ambulatory	AM 22.07	The system shall provide the ability to document reasons disease management or preventive services/wellness prompts were overridden.	☒ Yes ☐ No
Ambulatory	AM 22.08	The system shall provide the ability to modify the rules or parameters upon which guideline-related alerts are based.	☒ Yes ☐ No
Ambulatory	AM 22.09	The system shall provide the ability to document that a preventive or disease management service has been performed based on activities documented in the record (e.g., vitals signs taken).	☒ Yes ☐ No
Ambulatory	AM 22.10	The system shall provide the ability to document that a disease management or preventive service has been performed with associated dates or other relevant details recorded.	☒ Yes ☐ No

Ambulatory or Inpatient	CCHIT Criteria ID Number	Criteria	Proposer Licensed Software complies with the criteria
Ambulatory	AM 21.11	The system shall provide the ability to individualize alerts to address a patient's specific clinical situation.	☒ Yes ☐ No
Ambulatory	AM 23.01	The system shall provide the ability to identify preventive services, tests or counseling that are due on an individual patient.	☒ Yes ☐ No
Ambulatory	AM 23.02	The system shall provide the ability to display reminders for disease management, preventive and wellness services in the patient record.	☒ Yes ☐ No
Ambulatory	AM 23.03	The system shall provide the ability to identify criteria for disease management, preventive and wellness services based on patient demographic data (age, gender).	☒ Yes ☐ No
Ambulatory	AM 23.04	The system shall provide the ability to identify criteria for disease management, preventive, and wellness services based on clinical data (problem/diagnosis list, current medications, lab values).	☒ Yes ☐ No
Ambulatory	AM 23.05	The system shall provide the ability to modify the guidelines, criteria or rules that trigger the reminders.	☒ Yes ☐ No
Ambulatory	AM 23.06	The system shall provide the ability to notify the provider that patients are due or are overdue for disease management, preventive or wellness services.	☒ Yes ☐ No
Ambulatory	AM 23.07	The system shall provide the ability to produce a list of patients who are due or are overdue for disease management, preventive or wellness services.	☒ Yes ☐ No
Ambulatory	AM 23.09	The system shall provide the ability to automatically generate reminder letters for patients who are due or are overdue for disease management, preventive or wellness services.	☒ Yes ☐ No
Ambulatory	AM 24.01	The system shall provide the ability to create and assign tasks by user or user role.	☒ Yes

Ambulatory or Inpatient	CCHIT Criteria ID Number	Criteria	Proposer Licensed Software complies with the criteria
			☐ No
Ambulatory	AM 24.02	The system shall provide the ability to present a list of tasks by user or user role.	☒ Yes ☐ No
Ambulatory	AM 24.03	The system shall provide the ability to re-assign and route tasks from one user to another user.	☒ Yes ☐ No
Ambulatory	AM 24.04	The system shall provide the ability to designate a task as completed.	☒ Yes ☐ No
Ambulatory	AM 24.05	The system shall provide the ability to remove a task without completing the task.	☒ Yes ☐ No
Ambulatory	AM 25.01	The system shall provide the ability to document verbal/telephone communication into the patient record.	☒ Yes ☐ No
Ambulatory	AM 25.03	The system shall support messaging between users.	☒ Yes ☐ No
Ambulatory	AM 26.01	The system shall have the ability to provide electronic communication between prescribers and pharmacies or other intended recipients of the medication order.	☒ Yes ☐ No
Ambulatory	AM 27.01	The system shall provide the ability to maintain a directory of all clinical personnel who currently use or access the system.	☒ Yes ☐ No
Ambulatory	AM 27.02	The system shall provide the ability to maintain a directory which contains identifiers required for licensed clinicians to support the practice of medicine including at a minimum state medical license, DEA, and NPI.	☐ Yes ☒ No
Ambulatory	AM 27.03	The system shall allow authorized users to update the directory.	☒ Yes

Ambulatory or Inpatient	CCHIT Criteria ID Number	Criteria	Proposer Licensed Software complies with the criteria
			☐ No
Ambulatory	AM 27.04	The system shall provide the ability to create and maintain a directory of clinical personnel external to the organization who are not users of the system to facilitate communication and information exchange.	☐ Yes ☒ No
Ambulatory	AM 28.01	The system shall provide the ability to display a schedule of patient appointments, populated either through data entry in the system itself or through an external application interoperating with the system.	☒ Yes ☐ No
Ambulatory	AM 29.01	The system shall provide the ability to generate reports of clinical and administrative data using either internal or external reporting tools.	☒ Yes ☐ No
Ambulatory	AM 29.02	The system shall provide the ability to generate reports consisting of all or part of an individual patient's medical record (e.g. patient summary).	☒ Yes ☐ No
Ambulatory	AM 29.03	The system shall provide the ability to generate reports regarding multiple patients (e.g. diabetes roster).	☒ Yes ☐ No
Ambulatory	AM 29.04	The system shall provide the ability to specify report parameters (sort and filter criteria) based on patient demographic and clinical data (e.g., all male patients over 50 that are diabetic and have a HbA1c value of over 7.0 or that are on a certain medication).	☒ Yes ☐ No
Ambulatory	AM 29.05	The system shall provide the ability to access reports outside the EHR application.	☒ Yes ☐ No
Ambulatory	AM 29.06	The system shall provide the ability to produce reports based on the absence of a clinical data element (e.g., a lab test has not been performed or a blood pressure has not been measured in the last year).	☒ Yes ☐ No
Ambulatory	AM 29.07	The system shall provide the ability to save report	☒ Yes

Ambulatory or Inpatient	CCHIT Criteria ID Number	Criteria	Proposer Licensed Software complies with the criteria
		parameters for generating subsequent reports.	☐ No
Ambulatory	AM 29.08	The system shall provide the ability to modify one or more parameters of a saved report specification when generating a report using that specification.	☒ Yes ☐ No
Ambulatory	AM 30.01	The system shall provide the ability to define one or more reports as the formal health record for disclosure purposes.	☒ Yes ☐ No
Ambulatory	AM 30.02	The system shall provide the ability to generate hardcopy or electronic output of part or all of the individual patient's medical record.	☒ Yes ☐ No
Ambulatory	AM 30.03	The system shall provide the ability to generate hardcopy and electronic output by date and/or date range.	☒ Yes ☐ No
Ambulatory	AM 30.04	The system shall provide the ability to export structured data which removes those identifiers listed in the HIPAA definition of a limited dataset. This export on hardcopy and electronic output shall leave the actual PHI data unmodified in the original record.	☒ Yes ☐ No
Ambulatory	AM 30.05	The system shall provide the ability to create hardcopy and electronic report summary information (procedures, medications, labs, immunizations, allergies, and vital signs).	☒ Yes ☐ No
Ambulatory	AM 30.06	The system shall have the ability to provide support for disclosure management in compliance with HIPAA and applicable law.	☒ Yes ☐ No
Ambulatory	AM 31.02	The system shall provide the ability to document encounters by one or more of the following means: direct keyboard entry of text; structured data entry utilizing templates, forms, pick lists or macro substitution; dictation with subsequent transcription of voice to text, either manually or via voice recognition system.	☒ Yes ☐ No
Ambulatory	AM 31.03	The system shall provide the ability to associate	☒ Yes

Ambulatory or Inpatient	CCHIT Criteria ID Number	Criteria	Proposer Licensed Software complies with the criteria
		individual encounters with diagnoses.	☐ No
Ambulatory	AM 31.04	The system shall have the ability to provide filtered displays of encounters based on encounter characteristics, including date of service, encounter provider and associated diagnosis.	☒ Yes ☐ No
Ambulatory	AM 33.01	The system shall provide the ability to display medical eligibility obtained from patient's insurance carrier, populated either through data entry in the system itself or through an external application interoperating with the system.	☒ Yes ☐ No
Ambulatory	AM 34.02	The system shall provide the ability to specify the role of each provider associated with a patient, such as encounter provider, primary care provider, attending, resident, or consultant using structured data.	☒ Yes ☐ No
Ambulatory	AM 35.01	The system shall provide the ability to update the clinical content or rules utilized to generate clinical decision support reminders and alerts.	☒ Yes ☐ No
Ambulatory	AM 35.02	The system shall provide the ability to update clinical decision support guidelines and associated reference material.	☒ Yes ☐ No
Ambulatory	FN 18.02	The system shall provide the ability to capture and maintain, as discrete data, the reason for variation from rule-based clinical messages (for example alerts and reminders).	☒ Yes ☐ No
Ambulatory	AM 36.02	The system shall provide a means to document a patient's dispute with information currently in their chart.	☒ Yes ☐ No
Ambulatory	AM 36.04	The system shall provide the ability to identify certain information as confidential and only make that accessible by appropriately authorized users.	☒ Yes ☐ No
Ambulatory	AM 36.05	The system shall provide the ability to prevent specified user(s) from accessing a designated patient's chart.	☒ Yes ☐ No

Ambulatory or Inpatient	CCHIT Criteria ID Number	Criteria	Proposer Licensed Software complies with the criteria
Ambulatory	AM 36.06	When access to a chart is restricted, the system shall provide a means for appropriately authorized users to "break the glass" for emergency situations.	☒ Yes ☐ No
Ambulatory	AM 37.01	The system shall provide the ability to retain data until otherwise purged, deleted, archived or otherwise deliberately removed.	☒ Yes ☐ No
Ambulatory	AM 39.01	The system shall provide the ability to export (extract) pre-defined set(s) of data out of the system.	☒ Yes ☐ No
Ambulatory	AM 40.01	The system shall provide the ability for multiple users to interact concurrently with the EHR application.	☒ Yes ☐ No
Ambulatory	AM 40.02	The system shall provide the ability for concurrent users to simultaneously view the same record.	☒ Yes ☐ No
Ambulatory	AM 40.03	The system shall provide the ability for concurrent users to view the same clinical documentation or template.	☒ Yes ☐ No
Ambulatory	AM 40.04	The system shall provide protection to maintain the integrity of clinical data during concurrent access.	☒ Yes ☐ No
Ambulatory	IO-AM 07.01	The system shall provide the ability to receive and store general laboratory results using the HL7 v.2.5.1 ORU message standard	☒ Yes ☐ No
Ambulatory	IO-AM 09.06	The system shall provide the ability to send an electronic prescription to pharmacy	☒ Yes ☐ No
Ambulatory	IO-AM 09.09	The system shall provide the ability to respond to a request for a refill sent from a pharmacy	☒ Yes ☐ No
Ambulatory	IO-AM 09.13	The system shall provide the ability to send a query to verify prescription drug insurance	☒ Yes

Ambulatory or Inpatient	CCHIT Criteria ID Number	Criteria	Proposer Licensed Software complies with the criteria
		eligibility and apply response to formulary and benefit files to determine coverage	☐ No
Ambulatory	IO-AM 09.14	The system shall provide the ability to capture and display formulary information from pharmacy or PBM (Pharmacy Benefits Manager) by applying eligibility response	☒ Yes ☐ No
Ambulatory	IO-AM 09.15	The system shall provide the ability to send a query for medication history to PBM or pharmacy to capture and display medication list from the EHR	☒ Yes ☐ No
Ambulatory	IO-AM 10.10	The system shall provide the ability to display HITSP C32/CCD documents and file them as intact documents in the EHR. Summary patient record content information will include: patient demographics, medication list, medication allergy list.	☒ Yes ☐ No
Ambulatory	IO-AM 10.20	The system shall provide the ability to generate and format patient summary documents per the following specifications: HITSP C32 (v2.3 or v2.5) Summary patient record content information will include: patient demographics, medications, medication allergies Generated xml documents must demonstrate use of industry-standard vocabularies/terminologies. The intent is to test the Required (R) fields, including the product coded terminology for the medication and medication allergy.	☒ Yes ☐ No
Ambulatory	PC 01.11	The system shall provide the ability for a clinical or other authorized user to view the full content of a finalized note. The full content of a finalized note includes the finalized note and any finalized modifications to that note including finalized changes referred to as corrections, clarifications, addenda, etc. Finalizing is the act of publishing into the system in a way that others may access information that has changed.	☒ Yes ☐ No

Ambulatory or Inpatient	CCHIT Criteria ID Number	Criteria	Proposer Licensed Software complies with the criteria
Ambulatory	PC 04.08	The system shall provide the ability to save a note in progress prior to finalizing the note.	☒ Yes ☐ No
Ambulatory	PC 08.01	The system shall have the ability to record and display the identity and credentials of all users who entered all or part of a note even if they did not finalize the note.	☒ Yes ☐ No
Ambulatory	SC 01.01	The system shall enforce the most restrictive set of rights/privileges or accesses needed by users/groups (e.g. System Administration, Clerical, Nurse, Doctor, etc.), or processes acting on behalf of users, for the performance of specified tasks.	☒ Yes ☐ No
Ambulatory	SC 01.02	The system shall provide the ability for authorized administrators to assign restrictions or privileges to users/groups.	☒ Yes ☐ No
Ambulatory	SC 01.03	The system must be able to associate permissions with a user using one or more of the following access controls: 1) user-based (access rights assigned to each user); 2) role-based (users are grouped and access rights assigned to these groups); or 3) context-based (role-based with additional access rights assigned or restricted based on the context of the transaction such as time-of-day, workstation-location, emergency-mode, etc.)	☒ Yes ☐ No
Ambulatory	SC 01.04	The system shall support removal of a user's privileges without deleting the user from the system. The purpose of the criteria is to provide the ability to remove a user's privileges, but maintain a history of the user in the system.	☒ Yes ☐ No
Ambulatory	SC 02.01	The system shall allow an authorized administrator to set the inclusion or exclusion of auditable events in SC 02.03 based on organizational policy & operating requirements/limits.	☒ Yes ☐ No
Ambulatory	SC 02.02	The system shall support logging to a common audit engine using the schema and transports specified in the Audit Log specification of IHE Audit Trails and Node Authentication (ATNA)	☒ Yes ☐ No

Ambulatory or Inpatient	CCHIT Criteria ID Number	Criteria	Proposer Licensed Software complies with the criteria
		Profile.	
Ambulatory	SC 02.03	The system shall be able to detect security-relevant events that it mediates and generate audit records for them. At a minimum the events shall include those listed in the Appendix Audited Events. Note: The system is only responsible for auditing security events that it mediates. A mediated event is an event that the system has some active role in allowing or causing to happen or has opportunity to detect. The system is not expected to create audit logs entries for security events that it does not mediate.	☒ Yes ☐ No
Ambulatory	SC 02.04	The system shall record within each audit record the following information when it is available: (1) date and time of the event; (2) the component of the system (e.g. software component, hardware component) where the event occurred; (3) type of event (including: data description and patient identifier when relevant); (4) subject identity (e.g. user identity); and (5) the outcome (success or failure) of the event.	☒ Yes ☐ No
Ambulatory	SC 02.05	The system shall provide authorized administrators with the capability to read all audit information from the audit records in one of the following two ways: 1) The system shall provide the audit records in a manner suitable for the user to interpret the information. The system shall provide the capability to generate reports based on ranges of system date and time that audit records were collected. 2) The system shall be able to export logs into text format in such a manner as to allow correlation based on time (e.g. UTC synchronization).	☒ Yes ☐ No
Ambulatory	SC 02.06	The system shall be able to support time synchronization using NTP/SNTP, and use this synchronized time in all security records of time.	☒ Yes ☐ No
Ambulatory	SC 02.07	The system shall have the ability to format for export recorded time stamps using UTC based on ISO 8601. Example: "1994-11-05T13:15:30-05:00" corresponds to November 5, 1994, 8:15:30 am, US Eastern Standard Time.	☒ Yes ☐ No

Ambulatory or Inpatient	CCHIT Criteria ID Number	Criteria	Proposer Licensed Software complies with the criteria
Ambulatory	SC 02.08	The system shall prohibit all users read access to the audit records, except those users that have been granted explicit read-access. The system shall protect the stored audit records from unauthorized deletion. The system shall prevent modifications to the audit records.	☒ Yes ☐ No
Ambulatory	SC 03.01	The system shall authenticate the user before any access to Protected Resources (e.g. PHI) is allowed, including when not connected to a network e.g. mobile devices.	☒ Yes ☐ No
Ambulatory	SC 03.02	When passwords are used, the system shall support password strength rules that allow for minimum number of characters, and inclusion of alpha-numeric complexity.	☒ Yes ☐ No
Ambulatory	SC 03.03	The system upon detection of inactivity of an interactive session shall prevent further viewing and access to the system by that session by terminating the session, or by initiating a session lock that remains in effect until the user reestablishes access using appropriate identification and authentication procedures. The inactivity timeout shall be configurable.	☒ Yes ☐ No
Ambulatory	SC 03.04	The system shall enforce a limit of (configurable) consecutive invalid access attempts by a user. The system shall protect against further, possibly malicious, user authentication attempts using an appropriate mechanism (e.g. locks the account/node until released by an administrator, locks the account/node for a configurable time period, or delays the next login prompt according to a configurable delay algorithm).	☒ Yes ☐ No
Ambulatory	SC 03.05	When passwords are used, the system shall provide an administrative function that resets passwords.	☒ Yes ☐ No
Ambulatory	SC 03.06	When passwords are used, user accounts that have been reset by an administrator shall require the user to change the password at next successful logon.	☒ Yes ☐ No
Ambulatory	SC 03.07	The system shall provide only limited feedback	☒ Yes

Ambulatory or Inpatient	CCHIT Criteria ID Number	Criteria	Proposer Licensed Software complies with the criteria
		information to the user during the authentication.	☐ No
Ambulatory	SC 03.08	The system shall support case-insensitive usernames that contain typeable alpha-numeric characters in support of ISO-646/ECMA-6 (aka US ASCII).	☒ Yes ☐ No
Ambulatory	SC 03.09	When passwords are used, the system shall allow an authenticated user to change their password consistent with password strength rules (SC 03.02).	☒ Yes ☐ No
Ambulatory	SC 03.10	When passwords are used, the system shall support case-sensitive passwords that contain typeable alpha-numeric characters in support of ISO-646/ECMA-6 (aka US ASCII).	☒ Yes ☐ No
Ambulatory	SC 03.11	When passwords are used, the system shall use either standards-based encryption, e.g., 3DES, AES, or standards-based hashing, e.g., SHA1 to store or transport passwords.	☒ Yes ☐ No
Ambulatory	SC 03.12	When passwords are used, the system shall prevent the reuse of passwords previously used within a specific (configurable) timeframe (i.e., within the last X days, etc. - e.g. "last 180 days"), or shall prevent the reuse of a certain (configurable) number of the most recently used passwords (e.g. "last 5 passwords").	☒ Yes ☐ No
Ambulatory	SC 04.01	The system shall include documentation that describes the patch (hot-fix) handling process the vendor will use for EHR, operating system and underlying tools (e.g. a specific web site for notification of new patches, an approved patch list, special instructions for installation, and post-installation test).	☒ Yes ☐ No
Ambulatory	SC 04.02	The system shall include documentation that explains system error or performance messages to users and administrators, with the actions required.	☒ Yes ☐ No
Ambulatory	SC 04.03	The system shall include documentation of product capacities (e.g. number of users, number of transactions per second, number of records,	☒ Yes

Ambulatory or Inpatient	CCHIT Criteria ID Number	Criteria	Proposer Licensed Software complies with the criteria
		network load, etc.) and the baseline representative configurations assumed for these capacities (e.g. number or type of processors, server/workstation configuration and network capacity, etc).	☐ No
Ambulatory	SC 04.04	The system shall include documented procedures for product installation, start-up and/or connection.	☒ Yes ☐ No
Ambulatory	SC 04.05	The system shall include documentation of the minimal privileges necessary for each service and protocol necessary to provide EHR functionality and/or serviceability.	☒ Yes ☐ No
Ambulatory	SC 04.06	The system shall include documentation available to the customer stating whether or not there are known issues or conflicts with security services in at least the following service areas: antivirus, intrusion detection, malware eradication, host-based firewall and the resolution of that conflict (e.g. most systems should note that full virus scanning should be done outside of peak usage times and should exclude the databases.).	☒ Yes ☐ No
Ambulatory	SC 04.07	If the system includes hardware, the system shall include documentation that covers the expected physical environment necessary for proper secure and reliable operation of the system including: electrical, HVAC, sterilization, and work area.	☒ Yes ☐ No
Ambulatory	SC 04.08	The system shall include documentation that itemizes the services (e.g. PHP, web services) and network protocols/ports (e.g. HL-7, HTTP, FTP) that are necessary for proper operation and servicing of the system, including justification of the need for that service and protocol. This information may be used by the healthcare facility to properly configure their network defenses (firewalls and routers).	☒ Yes ☐ No
Ambulatory	SC 04.09	The system shall include documentation that describes the steps needed to confirm that the system installation was properly completed and that the system is operational.	☒ Yes ☐ No

Ambulatory or Inpatient	CCHIT Criteria ID Number	Criteria	Proposer Licensed Software complies with the criteria
Ambulatory	SC 04.10	The system shall include documentation available to the customer that provides guidelines for configuration and use of the security controls necessary to support secure and reliable operation of the system, including but not limited to: creation, modification, and deactivation of user accounts, management of roles, reset of passwords, configuration of password constraints, and audit logs.	☒ Yes ☐ No
Ambulatory	SC 05.01	The software used to install and update the system, independent of the mode or method of conveyance, shall be certified free of malevolent software ("malware"). Vendor may self-certify compliance with this standard through procedures that make use of commercial malware scanning software.	☒ Yes ☐ No
Ambulatory	SC 05.02	The system shall be configurable to prevent corruption or loss of data already accepted into the system in the event of a system failure (e.g. integrating with a UPS, etc.).	☒ Yes ☐ No
Ambulatory	SC 06.01	The system shall support protection of confidentiality of all Protected Health Information (PHI) delivered over the Internet or other known open networks via encryption using triple-DES (3DES) or the Advanced Encryption Standard (AES) and an open protocol such as TLS, SSL, IPSec, XML encryptions, or S/MIME or their successors.	☒ Yes ☐ No
Ambulatory	SC 06.02	When passwords are used, the system shall not display passwords while being entered.	☒ Yes ☐ No
Ambulatory	SC 06.03	For systems that provide access to PHI through a web browser interface (i.e. HTML over HTTP) shall include the capability to encrypt the data communicated over the network via SSL (HTML over HTTPS). Note: Web browser interfaces are often used beyond the perimeter of the protected enterprise network	☒ Yes ☐ No
Ambulatory	SC 06.04	The system shall support protection of integrity of all Protected Health Information (PHI) delivered over the Internet or other known open networks	☒ Yes ☐ No

Ambulatory or Inpatient	CCHIT Criteria ID Number	Criteria	Proposer Licensed Software complies with the criteria
		via SHA1 hashing and an open protocol such as TLS, SSL, IPSec, XML digital signature, or S/MIME or their successors.	
Ambulatory	SC 06.05	The system shall support ensuring the authenticity of remote nodes (mutual node authentication) when communicating Protected Health Information (PHI) over the Internet or other known open networks using an open protocol (e.g. TLS, SSL, IPSec, XML sig, S/MIME).	☒ Yes ☐ No
Ambulatory	SC 06.06	The system, when storing PHI on any device intended to be portable/removable (e.g. thumb-drives, CD-ROM, PDA, Notebook), shall support use of a standards based encrypted format using triple-DES (3DES), or the Advanced Encryption Standard (AES), or their successors.	☒ Yes ☐ No
Ambulatory	SC 06.07	The system, prior to access to any PHI, shall display a configurable warning or login banner (e.g. "The system should only be accessed by authorized users"). In the event that a system does not support pre-login capabilities, the system shall display the banner immediately following authorization.	☒ Yes ☐ No
Ambulatory	SC 08.01	The system shall be able to generate a backup copy of the application data, security credentials, and log/audit files.	☒ Yes ☐ No
Ambulatory	SC 08.02	The system restore functionality shall result in a fully operational and secure state. This state shall include the restoration of the application data, security credentials, and log/audit files to their previous state.	☒ Yes ☐ No
Ambulatory	SC 08.03	If the system claims to be available 24x7 then the system shall have ability to run a backup concurrently with the operation of the application.	☒ Yes ☐ No
Inpatient	IP 01.01	The system shall provide the ability to display bed assignment information including temporary bed assignment.	☒ Yes ☐ No

Ambulatory or Inpatient	CCHIT Criteria ID Number	Criteria	Proposer Licensed Software complies with the criteria
Inpatient	IP 01.02	The system shall provide the ability to identify the current physical location of any patient during their stay, to include the date and time the patient entered their current location.	☒ Yes ☐ No
Inpatient	IP 01.03	The system shall provide the ability to identify a patient record as restricted or no release of information.	☒ Yes ☐ No
Inpatient	FN 01.01	The system shall provide the ability to access demographic information such as name, date of birth and gender needed for patient care functions.	☒ Yes ☐ No
Inpatient	FN 01.02	The system shall capture and maintain demographic information as discrete data elements as part of the patient record.	☒ Yes ☐ No
Inpatient	FN 02.01	The system shall provide the ability to query for a patient by more than one form of identification.	☒ Yes ☐ No
Inpatient	IP 02.01	The system shall provide the ability to uniquely identify clinicians for the provision of care.	☒ Yes ☐ No
Inpatient	IP 02.02	The system shall provide the ability to assign clinicians to appropriate teams, where teams are defined as groups of clinicians who share responsibility for covering the same group of patients.	☒ Yes ☐ No
Inpatient	IP 02.04	The system shall provide the ability to specify the Admitting Physician.	☒ Yes ☐ No
Inpatient	IP 02.05	The system shall provide the ability to maintain a directory which identifies the physician by multiple unique identifiers.	☒ Yes ☐ No
Inpatient	FN 03.01	The system shall provide the ability to capture and maintain, as discrete data elements, the identity of all providers associated with a specific patient encounter.	☒ Yes ☐ No

Ambulatory or Inpatient	CCHIT Criteria ID Number	Criteria	Proposer Licensed Software complies with the criteria
Inpatient	FN 03.02	The system shall provide the ability to capture and maintain, as discrete data elements, the principal provider responsible for the care of an individual patient.	☒ Yes ☐ No
Inpatient	IP 03.01	The system shall provide for the ability to identify patients by status e.g. active, admitted patients or inactive, discharged patients.	☒ Yes ☐ No
Inpatient	FN 04.06	The system shall provide the ability to display different views of the problem / diagnosis list based upon the status of the problem.	☒ Yes ☐ No
Inpatient	IP 04.02	The system shall provide the ability to display the history of changes made to a specific problem / diagnosis, including clinician, date, and time.	☒ Yes ☐ No
Inpatient	IP 04.03	The system shall provide the ability to configure problem list documentation to allow the entry of free text problems and to display an alert of the implications of entering the free text (e.g. free text won't trigger decision support)	☒ Yes ☐ No
Inpatient	IP 04.05	When the display of the problem list exceeds the current screen or printed page, the system shall indicate that the list continues.	☒ Yes ☐ No
Inpatient	IP 04.06	The system shall provide the ability to modify documentation entered in error, maintaining a record of the original entry, identification of the clinician correcting the error and the date and time corrected.	☒ Yes ☐ No
Inpatient	IP 04.09	The system shall provide the ability to maintain a coded list of problems.	☒ Yes ☐ No
Inpatient	IP 04.11	The system shall provide the ability to search all patient records and identify individual patients with specific problems / diagnoses.	☒ Yes ☐ No
Inpatient	FN 04.01	The system shall provide the ability to capture, maintain and display free text comments associated with the problem / diagnosis.	☒ Yes

Ambulatory or Inpatient	CCHIT Criteria ID Number	Criteria	Proposer Licensed Software complies with the criteria
			☐ No
Inpatient	FN 04.02	The system shall provide the ability to capture, maintain and display, as discrete data elements, all problems associated with a patient.	☒ Yes ☐ No
Inpatient	FN 04.04	The system shall provide the ability to print a problem/diagnosis list.	☒ Yes ☐ No
Inpatient	FN 04.05	The system shall provide the ability to capture and maintain, as discrete data elements, the specific problem / diagnosis, user, date and time of all updates to the problem list.	☒ Yes ☐ No
Inpatient	FN 05.10	The system shall provide the ability to capture the source of the allergy information.	☒ Yes ☐ No
Inpatient	IP 05.02	The system shall provide the ability to capture the severity of an allergic or adverse reaction.	☒ Yes ☐ No
Inpatient	IP 05.03	The system shall provide the ability to record that the allergies are “Unknown” or “Unable to Assess Allergies.”	☒ Yes ☐ No
Inpatient	IP 05.04	The system shall provide the ability to require the documentation of patient allergies (inclusive of using such terms as Unknown or Unable to Assess) before completion of the medication order.	☒ Yes ☐ No
Inpatient	IP 05.05	When allergies are “Unknown” or “Unable to Assess Allergies,” the system shall provide the ability to require a reason to be documented.	☒ Yes ☐ No
Inpatient	IP 05.06	When allergies are “Unknown” or “Unable to Assess Allergies,” the system shall provide the ability to inform the clinician for the need of an update.	☒ Yes ☐ No
Inpatient	FN 05.12	The system shall provide the ability to display the	☒ Yes

Ambulatory or Inpatient	CCHIT Criteria ID Number	Criteria	Proposer Licensed Software complies with the criteria
		allergy list, including date of entry.	☐ No
Inpatient	IP 05.08	When the display of the allergy list exceeds the current screen or printed page, the system shall indicate that the list continues.	☒ Yes ☐ No
Inpatient	IP 05.09	The system shall provide the ability to print the allergy list.	☒ Yes ☐ No
Inpatient	IP 05.10	The system shall provide the ability to change / add allergies directly from the allergy list and during medication ordering.	☒ Yes ☐ No
Inpatient	IP 05.11	The system shall provide the configurable ability to enter free text allergies and display them in a manner that distinguishes them from coded allergy entries.	☒ Yes ☐ No
Inpatient	IP 05.12	The system shall provide the ability to indicate that interaction checking will not occur against free text allergies.	☒ Yes ☐ No
Inpatient	IP 05.13	The system shall provide a mechanism to correct erroneous allergy documentation, displaying it as erroneous with the identification of the clinician correcting the allergy and the date and time of the correction.	☒ Yes ☐ No
Inpatient	FN 05.01	The system shall provide the ability to modify or inactivate an item on the allergy and adverse reaction list.	☒ Yes ☐ No
Inpatient	FN 05.02	The system shall provide the ability to capture and maintain, as discrete data, the reason for inactivating or revising an item from the allergy and adverse reaction list.	☒ Yes ☐ No
Inpatient	FN 05.04	The system shall provide the ability to specify the type of allergic or adverse reaction in a discrete data field.	☒ Yes ☐ No
Inpatient	FN 05.05	The system shall provide the ability to capture and maintain, as discrete data, the identity of the user	☒ Yes

Ambulatory or Inpatient	CCHIT Criteria ID Number	Criteria	Proposer Licensed Software complies with the criteria
		who added, modified, inactivated or removed items from the allergy and adverse reaction list, including attributes of the changed items. The user ID and date/time stamp shall be recorded.	☐ No
Inpatient	FN 05.07	The system shall provide the ability for a user to explicitly capture and maintain, as discrete data, that the allergy list was reviewed. The user ID and date/time stamp shall be recorded when the allergies reviewed option is selected.	☒ Yes ☐ No
Inpatient	FN 05.09	The system shall provide the ability to explicitly indicate in a discrete field that a patient has no known drug allergies or adverse reactions.	☒ Yes ☐ No
Inpatient	FN 05.13	The system shall provide the ability to capture, maintain and display, as discrete data, lists of medications and other agents to which the patient has had an allergic or other adverse reaction.	☒ Yes ☐ No
Inpatient	IP 06.01	When the display of the medication list exceeds the current screen or printed page, the system shall indicate that the list continues.	☒ Yes ☐ No
Inpatient	IP 06.02	The system shall provide the ability to display the name of the ordering clinician, medication order (name, dose, route, and frequency), a start date and time, and an end date and time or duration for entries on the medication list.	☒ Yes ☐ No
Inpatient	IP 06.03	The system shall provide the ability to display on the medication list active medications that the patient brings from home to take while hospitalized, which the Pharmacy may not dispense.	☒ Yes ☐ No
Inpatient	IP 06.04	The system shall provide the ability to update the medication list with new medication orders, start date and time, end date and time or duration and pharmacy verification status.	☒ Yes ☐ No
Inpatient	FN 06.01	The system shall provide the ability to update and display a patient-specific medication list based on current medication orders or prescriptions.	☒ Yes ☐ No

Ambulatory or Inpatient	CCHIT Criteria ID Number	Criteria	Proposer Licensed Software complies with the criteria
Inpatient	IP 06.05	The system shall provide the ability to update the medication list with changes from pharmacist verification including pharmacist, date, and time.	☒ Yes ☐ No
Inpatient	IP 06.06	The system shall provide the ability to indicate the reason/ indication for the medication during order entry.	☒ Yes ☐ No
Inpatient	IP 06.07	The system shall provide the ability to record the reason or indication for the medication when recording historical or home medications.	☒ Yes ☐ No
Inpatient	IP 06.08	The system shall provide the ability to change / order medication directly from the medication list and that the same clinical decision support, alerts and interaction checking occurring during order entry also occur.	☒ Yes ☐ No
Inpatient	IP 06.09	The system shall provide the ability to change / order medication directly from med reconciliation.	☒ Yes ☐ No
Inpatient	IP 06.11	The system shall provide the ability to sort and filter the medication list.	☒ Yes ☐ No
Inpatient	IP 06.12	The system shall provide the configurable ability to enter free text medications and display them in a manner that distinguishes them from other medication entries.	☒ Yes ☐ No
Inpatient	IP 06.12.01	The system shall provide the ability to indicate that interaction checking will not occur against free text medications.	☒ Yes ☐ No
Inpatient	IP 06.16	The system shall provide the ability to display potential side effects of medications from the medication list.	☒ Yes ☐ No
Inpatient	FN 06.02	The system shall provide the ability to display a view that includes only active medications.	☒ Yes ☐ No

Ambulatory or Inpatient	CCHIT Criteria ID Number	Criteria	Proposer Licensed Software complies with the criteria
Inpatient	FN 06.04	The system shall provide the ability to print a current medication list.	☒ Yes ☐ No
Inpatient	FN 06.05	The system shall provide the ability to display that the patient takes no medications.	☒ Yes ☐ No
Inpatient	FN 06.06	The system shall provide the ability to capture and maintain, as discrete data elements, all current medications including over-the-counter and complementary medications such as vitamins, herbs and supplements.	☒ Yes ☐ No
Inpatient	IP 07.01	The system shall provide the ability to display test results during the ordering process.	☒ Yes ☐ No
Inpatient	IP 07.02	The system shall provide the ability to display test results during medication administration.	☒ Yes ☐ No
Inpatient	IP 08.01	The system shall provide the ability to display patient name, identification number, and age or date of birth on all order screens.	☒ Yes ☐ No
Inpatient	IP 08.04	The system shall provide the ability to display an indicator that the patient has allergies (allergies exist), or no known allergies, on all order screens.	☒ Yes ☐ No
Inpatient	IP 08.05	The system shall provide the ability to document a verbal order (including telephone orders); documentation shall include the ordering clinician as well as the clinician taking the verbal order.	☒ Yes ☐ No
Inpatient	IP 08.07	The system shall provide the ability to document a verification “read-back” of the complete order by the person receiving the telephone or verbal order.	☒ Yes ☐ No
Inpatient	IP 08.09	The system shall provide the ability to include urgency status in orders.	☒ Yes ☐ No

Ambulatory or Inpatient	CCHIT Criteria ID Number	Criteria	Proposer Licensed Software complies with the criteria
Inpatient	IP 08.10	The system shall provide the ability for clinicians to write all patient care orders electronically, including, but not limited to nursing care, medications / immunizations, diagnostic testing, nutrition and food service, consultation, and blood products.	☒ Yes ☐ No
Inpatient	IP 08.11	The system shall provide the ability to renew, modify, and discontinue orders.	☒ Yes ☐ No
Inpatient	IP 08.13	For each order type, the system shall provide the ability to capture and display the identity of the user, the date and the time when the order is signed, co-signed, renewed, modified or discontinued.	☒ Yes ☐ No
Inpatient	IP 08.14	The system shall provide the ability to display order history for any order, including the ordering clinician, order details, date, and time.	☒ Yes ☐ No
Inpatient	IP 08.15	The system shall provide the ability to set or configure the entry fields available for each order by order type.	☒ Yes ☐ No
Inpatient	IP 08.16	The system shall provide the ability to set or configure which fields are required for a complete order by order type.	☒ Yes ☐ No
Inpatient	IP 08.17	The system shall provide the ability to configure orders within order sets with default order details.	☒ Yes ☐ No
Inpatient	IP 08.18	The system shall provide the ability for the ordering provider to include free text comments or instructions in the order to be viewed by providers departments/services fulfilling the order or service.	☒ Yes ☐ No
Inpatient	IP 08.19	The system shall provide the ability to associate an order of any type (including medication order) with a related clinical problem(s) and/or diagnosis code(s) and description.	☒ Yes ☐ No

Ambulatory or Inpatient	CCHIT Criteria ID Number	Criteria	Proposer Licensed Software complies with the criteria
Inpatient	IP 08.20	The system shall provide the ability to allow the entry of orders to be activated at a future date and time including admission orders, discharge orders, and post-op orders.	☒ Yes ☐ No
Inpatient	IP 08.22	The system shall provide the ability to print orders for all order types.	☒ Yes ☐ No
Inpatient	IP 08.24	The system shall provide the ability to enter conditional orders that can be activated when certain criteria and conditions are met.	☒ Yes ☐ No
Inpatient	IP 08.26	The system shall provide the ability for a clinician to save frequently used and institutionally approved orderables or order sets as “favorites” or "preferences" to facilitate retrieval and ordering.	☒ Yes ☐ No
Inpatient	IP 08.27	The system shall provide the ability to display orders for a patient by different views.	☒ Yes ☐ No
Inpatient	FN 09.05	The system shall provide the ability for cosigned orders to retain and display the identities of all providers who co-sign the order.	☒ Yes ☐ No
Inpatient	IP 08.30	The system shall provide the ability to electronically communicate the order to the receiving departmental system.	☒ Yes ☐ No
Inpatient	FN 09.02	The system shall provide the ability to view status information for ordered services.	☒ Yes ☐ No
Inpatient	IP 08.32	The system shall provide the ability to designate access to entering individual orders by user role.	☒ Yes ☐ No
Inpatient	FN 09.01	The system shall provide the ability to require problem / diagnosis as an order component.	☒ Yes ☐ No

Ambulatory or Inpatient	CCHIT Criteria ID Number	Criteria	Proposer Licensed Software complies with the criteria
Inpatient	FN 09.04	The system shall provide the ability to capture and maintain, as discrete data, a diagnosis/problem code or description associated with an order of any type (including prescriptions and medications ordered for administration).	☒ Yes ☐ No
Inpatient	IP 12.30	The system shall be capable of designating explicit routes for medications and prohibit selection of other routes during the ordering process.	☒ Yes ☐ No
Inpatient	IP 09.01	The system shall provide the ability to define user roles with access to order set management.	☒ Yes ☐ No
Inpatient	IP 09.02	The system shall provide the ability to support the management of order sets to track history of updates including date and time.	☒ Yes ☐ No
Inpatient	IP 09.03	The system shall provide the ability to include date last modified in the display of order sets.	☒ Yes ☐ No
Inpatient	IP 09.04	The system shall provide the ability to configure order sets with pre-selected orders.	☒ Yes ☐ No
Inpatient	IP 09.05	The system shall provide the ability to incorporate multiple choices of medications or other types of orders within an order set for clinician selection.	☒ Yes ☐ No
Inpatient	IP 09.16	The system shall provide the ability to incorporate text instructions or recommendations within order sets.	☒ Yes ☐ No
Inpatient	IP 09.17	The system shall provide the ability to display individual orders in order sets with pre-selected order details.	☒ Yes ☐ No
Inpatient	IP 09.18	The system shall provide the ability to restrict access to individual order sets by user role or department	☒ Yes ☐ No

Ambulatory or Inpatient	CCHIT Criteria ID Number	Criteria	Proposer Licensed Software complies with the criteria
Inpatient	IP 09.19	The system shall provide the ability to display active links within an order set to applicable clinical standards and reference materials.	☒ Yes ☐ No
Inpatient	FN 11.02	The system shall provide the ability to allow users to search for order sets by name.	☒ Yes ☐ No
Inpatient	IP 09.22	The system shall provide the ability to display orders in an order set in the same manner as when the order is placed individually.	☒ Yes ☐ No
Inpatient	IP 09.28	The system shall provide the ability to embed order sets within other order sets.	☒ Yes ☐ No
Inpatient	FN 11.03	The system shall provide the ability to apply drug-drug and drug-allergy interaction checking in the same way to orders placed through an order set as to orders placed individually.	☒ Yes ☐ No
Inpatient	IP 09.32	The system shall provide the ability to report on the use of order sets, including data such as orders, ordering provider, date/time ordered and basic patient data (for example age, diagnoses).	☒ Yes ☐ No
Inpatient	FN 10.01	The system shall provide the ability to define a set of items to be ordered as a group.	☒ Yes ☐ No
Inpatient	FN 10.02	The system shall provide the ability to modify order sets.	☒ Yes ☐ No
Inpatient	FN 10.03	The system shall provide the ability to include in an order set order types including but not limited to medications, laboratory tests, imaging studies, procedures and referrals.	☒ Yes ☐ No
Inpatient	FN 11.01	The system shall provide the ability for individual orders in an order set to be selected or deselected by the user.	☒ Yes ☐ No

Ambulatory or Inpatient	CCHIT Criteria ID Number	Criteria	Proposer Licensed Software complies with the criteria
Inpatient	FN 11.04	The system shall provide the ability to display orders placed through an order set either individually or as a group.	☒ Yes ☐ No
Inpatient	IP 10.01	The system shall have the ability to report on the ordering of nonformulary medications	☒ Yes ☐ No
Inpatient	IP 08.02	The system shall provide the ability to display the patient's weight, or an indicator that the patient has a weight recorded, on medication ordering screens.	☒ Yes ☐ No
Inpatient	IP 08.03	The system shall provide the configurable ability to display the patient's body surface area, or an indicator that the patient has a body surface area recorded, on medication ordering screens.	☒ Yes ☐ No
Inpatient	IP 10.03	The system shall provide the ability to order medication doses in mg/kg and mL/kg.	☒ Yes ☐ No
Inpatient	IP 10.04	The system shall provide the ability to allow the clinician to order medication doses in mg/kg/min, microgram/kg, and microgram/kg/min.	☒ Yes ☐ No
Inpatient	IP 10.06	The system shall provide end-users with the ability to browse or search for a drug by therapeutic class when ordering a medication.	☒ Yes ☐ No
Inpatient	IP 10.08	The system shall provide the ability to renew an existing medication order without requiring re-entry of order information.	☒ Yes ☐ No
Inpatient	IP 10.09	The system shall provide the ability for order entry of medications that are brought in from home that the Pharmacy is not dispensing.	☒ Yes ☐ No
Inpatient	IP 10.10	The system shall provide the ability to document complex medication orders that include dosing based on either physical status or laboratory values.	☒ Yes ☐ No

Ambulatory or Inpatient	CCHIT Criteria ID Number	Criteria	Proposer Licensed Software complies with the criteria
Inpatient	IP 10.11	The system shall provide the ability to enter all order details for medication orders that include dosing adjustments and limits.	☒ Yes ☐ No
Inpatient	IP 10.12	The system shall provide the ability to display the eMAR without interrupting the ordering process.	☒ Yes ☐ No
Inpatient	IP 10.14	The system shall provide the ability to modify medication orders including dosing information without having to discontinue the order.	☒ Yes ☐ No
Inpatient	IP 10.15	The system shall provide the ability to configure orders that require co-signature.	☒ Yes ☐ No
Inpatient	IP 10.16	The system shall provide the ability to enter medication orders utilizing a sliding scale.	☒ Yes ☐ No
Inpatient	IP 10.26	The system shall provide the ability to compute drug doses, based on appropriate dosage ranges, using the patient's body surface area and ideal body weight.	☒ Yes ☐ No
Inpatient	IP 10.27	The system shall provide the ability to automatically alert the provider to missing or invalid data required to compute a dose.	☒ Yes ☐ No
Inpatient	FN 07.01	The system shall provide the ability to alert the user at the time a new medication is prescribed/ordered that drug interaction, allergy, and formulary checking will not be performed against the uncoded medication or free text medication.	☒ Yes ☐ No
Inpatient	FN 07.02	The system shall provide the ability to prescribe/order uncoded and non-formulary medications.	☒ Yes ☐ No
Inpatient	FN 07.03	The system shall provide the ability to maintain a coded list of medications including a unique identifier for each medication.	☒ Yes ☐ No

Ambulatory or Inpatient	CCHIT Criteria ID Number	Criteria	Proposer Licensed Software complies with the criteria
Inpatient	FN 07.04	The system shall provide end-users the ability to search for medications by generic or brand name.	☒ Yes ☐ No
Inpatient	FN 07.05	The system shall provide the ability to access reference information for prescribing/ordering.	☒ Yes ☐ No
Inpatient	FN 07.06	The system shall provide the ability to specify medication order details including dose, route, frequency and comments. Dose, route and frequency must be captured and maintained as discrete data.	☒ Yes ☐ No
Inpatient	FN 12.01	The system shall provide the ability to check for potential interactions between medications to be prescribed/ordered and current medications and alert the user at the time of medication prescribing/ordering if potential interactions exist.	☒ Yes ☐ No
Inpatient	FN 12.04	The system shall provide the ability to display, on demand, potential allergies and drug-drug interactions between current medications.	☒ Yes ☐ No
Inpatient	FN 12.05	The system shall provide the ability to view the rationale for a drug interaction alert.	☒ Yes ☐ No
Inpatient	FN 12.06	The system shall provide the ability to capture and maintain at least one reason for overriding any drug-drug or drug-allergy interaction warning triggered at the time of medication prescribing/ordering.	☒ Yes ☐ No
Inpatient	FN 12.07	The system shall provide the ability to enter a structured response when overriding a drug-drug or drug-allergy warning.	☒ Yes ☐ No
Inpatient	FN 12.08	The system shall provide the ability to prescribe/order a medication despite alerts for interactions and/or allergies being present.	☒ Yes ☐ No
Inpatient	FN 12.09	The system shall provide the ability to accept updates to drug interaction databases	☒ Yes

Ambulatory or Inpatient	CCHIT Criteria ID Number	Criteria	Proposer Licensed Software complies with the criteria
			☐ No
Inpatient	IP 11.01	The system shall provide the ability to allow the designation of the source of information on home medications.	☒ Yes ☐ No
Inpatient	IP 11.07	The system shall provide the ability to display home medications for provider review for medication reconciliation during writing of admission orders.	☒ Yes ☐ No
Inpatient	IP 11.08	At admission and discharge from the hospital, the system shall provide the ability to permit the clinician to designate which home medications are being continued / discontinued.	☒ Yes ☐ No
Inpatient	IP 11.09	At admission, the system shall provide the ability to display corresponding inpatient orders for home medications the provider designates as being continued.	☒ Yes ☐ No
Inpatient	IP 11.10	At each change in level of care (to ICU, to surgery, discharge), the system shall display prior, active medication orders for provider review during writing of admission/transfer orders.	☒ Yes ☐ No
Inpatient	IP 11.11	At discharge and each change in level of care, the system shall provide the ability to designate which current medications are continued / discontinued, and to display the orders for continued medications.	☒ Yes ☐ No
Inpatient	IP 11.13	At admission, discharge, and each change in level of care during the hospital stay, the system shall capture signature that medication reconciliation has been completed.	☒ Yes ☐ No
Inpatient	IP 11.14	At admission, discharge, and each change in level of care, the system shall provide the ability to retain the history of medication reconciliation (including prior medications reviewed, medications continued/discontinued, new medication orders, signature of each provider completing review) for subsequent review.	☒ Yes ☐ No

Ambulatory or Inpatient	CCHIT Criteria ID Number	Criteria	Proposer Licensed Software complies with the criteria
Inpatient	IP 11.15	At discharge, the system shall provide the ability to communicate, both electronically and via paper, discharge medications and allergies.	☒ Yes ☐ No
Inpatient	IP 11.16	At discharge, the system shall provide the ability to communicate, both electronically and via paper, current weight (including date and time of measurement).	☒ Yes ☐ No
Inpatient	IP 12.01	The system shall provide the ability to detect a drug dose that falls outside the min-max range for a single dose for the medication and to inform the clinician during ordering.	☒ Yes ☐ No
Inpatient	FN 08.01	The system shall provide the ability to detect a daily dose that exceeds the recommended range for patient age and inform the user during ordering.	☒ Yes ☐ No
Inpatient	IP 12.04	The system shall provide the ability to detect a cumulative dose (across inpatient stays and lifetime) that exceeds the recommended dose and inform the clinician during ordering.	☒ Yes ☐ No
Inpatient	IP 12.11	The system shall be capable of providing advance notification during ordering, for patients on a given medication, when they are due for required laboratory or other diagnostic studies to monitor for therapeutic or adverse effects of the medication.	☒ Yes ☐ No
Inpatient	IP 12.12	The system shall provide the ability to search from medication lists which use “Tall Man” letters.	☒ Yes ☐ No
Inpatient	IP 12.14	The system shall provide the ability to identify when multiple medications of the same therapeutic or pharmacologic class are ordered and inform the user when medications are selected during prescribing / ordering.	☒ Yes ☐ No
Inpatient	IP 12.15	The system shall provide the ability to exclude therapeutic categories and drug pairs from drug-drug interaction and therapeutic overlap checking.	☒ Yes ☐ No

Ambulatory or Inpatient	CCHIT Criteria ID Number	Criteria	Proposer Licensed Software complies with the criteria
Inpatient	IP 12.16	The system shall provide the ability to assign the level of medication checking based upon user role.	☒ Yes ☐ No
Inpatient	FN 12.10	The system shall provide the ability to check for potential interactions between medications to be prescribed/ordered and medication allergies listed in the record and alert the user at the time of medication prescribing/ordering if potential interactions exist.	☒ Yes ☐ No
Inpatient	FN 12.11	The system shall provide the ability, when a new allergy is documented, to check for a potential interaction between the newly-documented allergy and the patient's current medications, and alert the user if such interactions exist.	☒ Yes ☐ No
Inpatient	IP 12.23	The system shall provide the ability to set the severity level at which drug interaction warnings should be displayed.	☒ Yes ☐ No
Inpatient	FN 12.02	The system shall provide the ability to check immunization orders against documented patient allergies (medication and non-medication) and inform the user during prescribing/ordering.	☒ Yes ☐ No
Inpatient	IP 12.25	The system shall provide the configurable ability to require documentation of information regarding patient weight, inclusive of using such terms as Unknown, before entering medication orders.	☒ Yes ☐ No
Inpatient	IP 12.26	The system shall provide the ability to inform the clinician about potential drug-food interactions.	☒ Yes ☐ No
Inpatient	IP 12.27	The system shall provide the ability to check contraindications based on pregnancy status	☒ Yes ☐ No
Inpatient	IP 12.28	The system shall provide the ability to check contraindications based on lactation status	☒ Yes ☐ No

Ambulatory or Inpatient	CCHIT Criteria ID Number	Criteria	Proposer Licensed Software complies with the criteria
Inpatient	IP 12.29	The system shall provide the ability to check for inappropriate route of administration and alert the user at time of medication prescribing / ordering.	☒ Yes ☐ No
Inpatient	IP 12.31	The system shall provide the ability to display recommended medication for substitution (based on cost or clinical policy).	☒ Yes ☐ No
Inpatient	IP 12.33	The system shall provide the ability to transmit to Pharmacy the order override justification with the order and clinician, date, and time.	☒ Yes ☐ No
Inpatient	IP 12.35	The system shall provide the ability to capture and store information concerning alerts following screening of medication orders and the response (place, modify or cancel order).	☒ Yes ☐ No
Inpatient	IP 12.36.01	The system shall have the ability to report on alerts and provider response occurring during the medication ordering process (place, modify, cancel)	☒ Yes ☐ No
Inpatient	IP 12.41	The system shall provide the ability to enter new vaccine dosing schedules into the system in advance of official CDC schedule updates.	☒ Yes ☐ No
Inpatient	FN 08.03	The system shall provide the ability to check for dose ranges based on patient age.	☒ Yes ☐ No
Inpatient	FN 08.04	The system shall provide the ability to display a dose calculator for patient-specific dosing based on weight.	☒ Yes ☐ No
Inpatient	FN 08.05	The system shall provide the ability to display patient specific dosing recommendations based on age and weight.	☒ Yes ☐ No
Inpatient	FN 08.06	The system shall provide the ability to check for medication contraindications based on patient age and alert the user during prescribing/ordering.	☒ Yes ☐ No

Ambulatory or Inpatient	CCHIT Criteria ID Number	Criteria	Proposer Licensed Software complies with the criteria
Inpatient	FN 13.01	The system shall provide drug-diagnosis interaction alerts at the time of medication prescribing/ordering.	☒ Yes ☐ No
Inpatient	IP 13.01	The system shall provide the ability to display relevant, patient-specific laboratory test results when entering an order.	☒ Yes ☐ No
Inpatient	IP 13.04	The system shall provide the ability to display for selection a secondary, or corollary, order that is recommended in conjunction with the primary order.	☒ Yes ☐ No
Inpatient	IP 13.05	The system shall allow demographic criteria to be used as a data element in clinical decision support rules.	☒ Yes ☐ No
Inpatient	FN 18.02	The system shall provide the ability to capture and maintain, as discrete data, the reason for variation from rule-based clinical messages (for example alerts and reminders).	☒ Yes ☐ No
Inpatient	IP 13.08	The system shall provide the ability to set elapsed time parameters for purposes of duplicate order checking.	☒ Yes ☐ No
Inpatient	IP 14.01	The system shall provide the ability to present medications to be administered over a selectable date/time range during the current hospital stay.	☒ Yes ☐ No
Inpatient	IP 14.02	The system shall provide the ability to display the medication administration history including administering clinician, date, and time.	☒ Yes ☐ No
Inpatient	IP 14.03	The system shall provide the ability to display the ordered date, time, route of administration and dose of all scheduled medications.	☒ Yes ☐ No
Inpatient	IP 14.05	The system shall allow the clinician to identify and display due and overdue medications.	☒ Yes ☐ No

Ambulatory or Inpatient	CCHIT Criteria ID Number	Criteria	Proposer Licensed Software complies with the criteria
Inpatient	IP 14.06	The system shall provide the ability to display continuous infusions in a manner that distinguishes them from other medications.	☒ Yes ☐ No
Inpatient	IP 14.07	The system shall provide the ability to display PRN medications in a manner that distinguishes them from other medications.	☒ Yes ☐ No
Inpatient	IP 14.08	The system shall provide the ability to record the effectiveness of PRN or "as needed" doses after they have been administered on the eMAR.	☒ Yes ☐ No
Inpatient	IP 14.10	The system shall have the ability to view on the eMAR medications as dispensed (including dose and quantity of dispensed units of medication).	☒ Yes ☐ No
Inpatient	IP 14.11	The system shall provide the ability to indicate any clinical interventions or assessments associated with medication administration.	☒ Yes ☐ No
Inpatient	IP 14.12	The system shall provide the ability to attach a comment to an individual scheduled medication dose and include as part of the legal medical record.	☒ Yes ☐ No
Inpatient	IP 14.13	The system shall provide the ability to capture medication administration details as discrete data, including: (1) the medication name, strength and dose; (2) date and time of administration; (3) route and site; (4) user name and credentials.	☒ Yes ☐ No
Inpatient	IP 14.14	The system shall provide the ability to view the medication order as written during administration.	☒ Yes ☐ No
Inpatient	IP 14.15	The system shall provide the ability to document clinical assessment pertinent to medication administration.	☒ Yes ☐ No
Inpatient	IP 14.16	The system shall provide the ability to display, from the eMAR, the location of the medication on the unit.	☐ Yes ☒ No

Ambulatory or Inpatient	CCHIT Criteria ID Number	Criteria	Proposer Licensed Software complies with the criteria
Inpatient	IP 14.17	The system shall allow the user to capture and display patient specific instructions or other free text on the eMAR.	☒ Yes ☐ No
Inpatient	IP 14.18	The system shall provide ability for a second provider to witness and co-document administration.	☒ Yes ☐ No
Inpatient	IP 14.19	The system shall provide the ability to document medication administration using a barcode and scanner for positive patient identification, patient name, med name, med dose, correct time of admin, route and positive identification of care giver administering medication.	☒ Yes ☐ No
Inpatient	IP 14.20	When using barcode scanners, the system shall provide the ability to alert the end user that the medication being administered has triggered one or more of the following errors: wrong patient, wrong med, wrong time, wrong route or wrong dose.	☒ Yes ☐ No
Inpatient	IP 14.23	The system shall provide the ability to modify medication administration schedules on the eMAR.	☒ Yes ☐ No
Inpatient	IP 14.24	The system shall provide the ability to notify the Pharmacy of changes in schedules on the eMAR.	☒ Yes ☐ No
Inpatient	IP 14.25	The system shall provide the ability to acknowledge medication orders prior to administration, capturing the date, time and user performing action.	☒ Yes ☐ No
Inpatient	IP 14.26	The system shall provide the ability to allow documentation of medication administration prior to pharmacy review.	☒ Yes ☐ No
Inpatient	IP 14.27	The system shall provide the ability to document on the eMAR that a medication was given by another provider.	☒ Yes ☐ No

Ambulatory or Inpatient	CCHIT Criteria ID Number	Criteria	Proposer Licensed Software complies with the criteria
Inpatient	IP 14.28	The system shall provide the ability for the hospital to provide links to reference information / knowledge resources for any medication on the eMAR.	☒ Yes ☐ No
Inpatient	IP 14.29	The system shall provide the ability to capture and maintain, as discrete data, the reason a medication was not given.	☒ Yes ☐ No
Inpatient	IP 14.30	The system shall provide the ability to amend medication administration documentation and include as part of the legal medical record.	☒ Yes ☐ No
Inpatient	IP 06.13	The system shall provide the ability to correct medication administration documentation entered in error, maintaining a record of the original entry, identification of the clinician correcting the error and the date and time of the correction.	☒ Yes ☐ No
Inpatient	IP 14.31	The system shall provide ability to document a reaction / response to medication administration.	☒ Yes ☐ No
Inpatient	IP 14.32	The system shall maintain and display as part of the medication administration profile the dates and times associated with the medication orders such as start, modify, and stop dates.	☒ Yes ☐ No
Inpatient	IP 14.34	The system shall provide the ability for the eMAR to be printed.	☒ Yes ☐ No
Inpatient	FN 14.01	The system shall provide the ability to produce patient instructions and patient educational materials which may reside within the system or be provided through links to external source.	☒ Yes ☐ No
Inpatient	IP 15.01	The system shall provide the ability to display immunization administration history including; administering clinician, date and time, immunization name, lot number, manufacturer and expiration date.	☒ Yes ☐ No

Ambulatory or Inpatient	CCHIT Criteria ID Number	Criteria	Proposer Licensed Software complies with the criteria
Inpatient	IP 15.03	The system shall provide the ability to identify and display due and overdue ordered immunizations.	☒ Yes ☐ No
Inpatient	IP 15.04	The system shall provide the ability to indicate any tasks/assessments associated with immunization administration.	☒ Yes ☐ No
Inpatient	IP 15.05	The system shall provide the ability to attach a comment to an individual scheduled immunization dose and include as part of the legal medical record.	☒ Yes ☐ No
Inpatient	IP 15.06	The system shall provide the ability to display the immunization order as written during administration.	☒ Yes ☐ No
Inpatient	IP 15.07	The system shall provide the ability to document clinical assessment pertinent to immunization administration.	☒ Yes ☐ No
Inpatient	IP 15.09	The system shall provide the ability to amend immunization administration documentation and include as part of the legal medical record.	☒ Yes ☐ No
Inpatient	IP 15.10	The system shall provide the ability to document that a Vaccine Information Statement (VIS) was given including the version or edition date of the VIS.	☒ Yes ☐ No
Inpatient	IP 15.11	The system shall provide the ability to print the immunization administration record.	☒ Yes ☐ No
Inpatient	IP 15.12	The system shall have the ability to record the consent, refusal, or deferral status as it relates to the administration of each immunization at the time of each encounter, including: the date and time, the decision (consent, refusal or deferral), name of decider and status of decider (e.g. parent, self, legal guardian, medical power of attorney).	☒ Yes ☐ No

Ambulatory or Inpatient	CCHIT Criteria ID Number	Criteria	Proposer Licensed Software complies with the criteria
Inpatient	FN 16.02	The system shall provide the ability to capture, in a discrete field, an allergy/adverse reaction to a specific immunization.	☒ Yes ☐ No
Inpatient	FN 16.03	The system shall provide the ability to capture immunization administration details as discrete data, including: (1) the immunization type and dose; (2) date and time of administration; (3) route and site; (4) lot number and expiration date; (5) manufacturer; and (6) user ID.	☒ Yes ☐ No
Inpatient	IP 16.01	The system shall provide the ability to display, in the eMAR, drug-allergy interactions at the time of administration.	☒ Yes ☐ No
Inpatient	IP 16.02	System shall provide the ability to require entry of physiological parameters or task completion that must be checked and recorded prior to medication administration	☒ Yes ☐ No
Inpatient	IP 16.03	The system shall provide the ability to display, at the time of medication administration, that an alert was triggered during medication ordering.	☒ Yes ☐ No
Inpatient	IP 16.05	The system shall provide the ability for medication screening alerts to be displayed from the eMAR.	☒ Yes ☐ No
Inpatient	IP 16.08	The system shall provide the ability to capture medication identification for five rights checking, at a minimum, from linear bar code labels encoding the NDC number.	☒ Yes ☐ No
Inpatient	IP 16.09	The system shall provide the ability to document medication administration using a positive ID technology to confirm right patient, right medication, right dose, right time, and right route.	☒ Yes ☐ No
Inpatient	IP 16.10	The system shall have the ability to document "manual" methods verifying Five Rights information (e.g., Bar code does not work; the bar code reader is not working).	☒ Yes ☐ No

Ambulatory or Inpatient	CCHIT Criteria ID Number	Criteria	Proposer Licensed Software complies with the criteria
Inpatient	IP 16.11	The system shall provide the ability to record the medication NDC number or other identification number of the drug actually administered to the patient.	☒ Yes ☐ No
Inpatient	IP 16.12	The system shall be able to identify all patients on a specific medication.	☒ Yes ☐ No
Inpatient	IP 17.01	The system shall provide the ability to establish time periods for designating medication administration tasks overdue.	☒ Yes ☐ No
Inpatient	IP 17.02	The system shall provide the ability to establish time periods and recipients for notification of overdue medication administrations.	☒ Yes ☐ No
Inpatient	IP 17.03	The system shall provide the ability to notify the clinician of overdue medication administrations.	☒ Yes ☐ No
Inpatient	IP 17.04	The system shall provide the ability to establish time periods for order expiration for types of orders.	☒ Yes ☐ No
Inpatient	IP 17.05	The system shall provide the ability to notify the ordering clinician concerning orders due to expire.	☒ Yes ☐ No
Inpatient	IP 17.08	The system shall provide the ability to notify the ordering clinician concerning orders requiring signature (verbal and telephone orders, co signature).	☒ Yes ☐ No
Inpatient	FN 17.01	The system shall provide the ability to access and review medication information (such as drug monograph). This may reside within the system or be provided through links to external sources.	☒ Yes ☐ No
Inpatient	FN 17.02	The system shall provide the ability to provide access to test and procedure instructions that can be modified by the end user.	☒ Yes ☐ No

Ambulatory or Inpatient	CCHIT Criteria ID Number	Criteria	Proposer Licensed Software complies with the criteria
Inpatient	IP 19.01	The system shall provide the ability to display patient data from previous admissions.	☒ Yes ☐ No
Inpatient	IP 19.02	The system shall provide the ability to include patient identifying information as well as time and date report printed, on each page of individual patient-specific reports generated.	☒ Yes ☐ No
Inpatient	IP 19.08	The system shall provide the ability to indicate that advance directive(s) have been completed.	☒ Yes ☐ No
Inpatient	IO-IP 01.01	The system shall provide the ability to receive the Current Medication List from Pharmacy (directly), PBM (directly) or via intermediary network (e.g. SureScripts, RxHub, etc.)	☒ Yes ☐ No
Inpatient	IO-IP 01.20	The system shall provide the ability to display HITSP C32/CCD documents and file them as intact documents in the EHR. Summary patient record content information will include: patient demographics, medication list, medication allergy list	☒ Yes ☐ No
Inpatient	IO-IP 01.22	The system shall provide the ability to generate and format patient summary documents per the following specifications: HITSP C32 (v2.3 or v2.5) Summary patient record content information will include: patient demographics, medications, medication allergies Generated xml documents must demonstrate use of industry-standard vocabularies/terminologies. The intent is to test the Required (R) fields including the product coded terminology for the medication and medication allergy.	☒ Yes ☐ No
Inpatient	IO-IP 03.01	The system shall provide the ability to receive Patient Demographics and Administrative Information from inpatient IT systems (e.g., name,	☒ Yes

Ambulatory or Inpatient	CCHIT Criteria ID Number	Criteria	Proposer Licensed Software complies with the criteria
		age, DOB, gender)	☐ No
Inpatient	IO-IP 03.04	The system shall provide the ability to send Non-Medication Orders and Updates to receiving system (e.g., LIS, RIS, Dietary)	☒ Yes ☐ No
Inpatient	IO-IP 03.05	The system shall provide the ability to send Medication Orders and Updates to Pharmacy IT system utilizing a coding system for medications	☐ Yes ☒ No
Inpatient	IO-IP 03.06	The system shall provide the ability to receive Status Updates from Pharmacy	☐ Yes ☒ No
Inpatient	IO-IP 03.07	The system shall provide the ability to provide access and view capabilities for relevant lab results for medication ordering or administration	☒ Yes ☐ No
Inpatient	IO-IP 03.10	The system shall provide the ability to Integrate with bar-code technology to capture information from linear bar code labels and wristbands	☒ Yes ☐ No
Inpatient	IO-IP 04.01	The system shall provide the ability to send an electronic prescription of discharge medications	☒ Yes ☐ No
Inpatient	SC 01.01	The system shall enforce the most restrictive set of rights/privileges or accesses needed by users/groups (e.g. System Administration, Clerical, Nurse, Doctor, etc.), or processes acting on behalf of users, for the performance of specified tasks.	☒ Yes ☐ No
Inpatient	SC 01.02	The system shall provide the ability for authorized administrators to assign restrictions or privileges to users/groups.	☒ Yes ☐ No
Inpatient	SC 01.03	The system must be able to associate permissions with a user using one or more of the following access controls: 1) user-based (access rights assigned to each user); 2) role-based (users are grouped and access rights assigned to these groups); or 3) context-based (role-based with additional access rights assigned or restricted	☒ Yes ☐ No

Ambulatory or Inpatient	CCHIT Criteria ID Number	Criteria	Proposer Licensed Software complies with the criteria
		based on the context of the transaction such as time-of-day, workstation-location, emergency-mode, etc.)	
Inpatient	SC 01.04	The system shall support removal of a user's privileges without deleting the user from the system. The purpose of the criteria is to provide the ability to remove a user's privileges, but maintain a history of the user in the system.	☒ Yes ☐ No
Inpatient	SC 02.01	The system shall allow an authorized administrator to set the inclusion or exclusion of auditable events in SC 02.03 based on organizational policy & operating requirements/limits.	☒ Yes ☐ No
Inpatient	SC 02.02	The system shall support logging to a common audit engine using the schema and transports specified in the Audit Log specification of IHE Audit Trails and Node Authentication (ATNA) Profile.	☒ Yes ☐ No
Inpatient	SC 02.03	The system shall be able to detect security-relevant events that it mediates and generate audit records for them. At a minimum the events shall include those listed in the Appendix Audited Events. Note: The system is only responsible for auditing security events that it mediates. A mediated event is an event that the system has some active role in allowing or causing to happen or has opportunity to detect. The system is not expected to create audit logs entries for security events that it does not mediate.	☒ Yes ☐ No
Inpatient	SC 02.04	The system shall record within each audit record the following information when it is available: (1) date and time of the event; (2) the component of the system (e.g. software component, hardware component) where the event occurred; (3) type of event (including: data description and patient identifier when relevant); (4) subject identity (e.g. user identity); and (5) the outcome (success or failure) of the event.	☒ Yes ☐ No
Inpatient	SC 02.05	The system shall provide authorized administrators with the capability to read all audit information from the audit records in one of the	☒ Yes

Ambulatory or Inpatient	CCHIT Criteria ID Number	Criteria	Proposer Licensed Software complies with the criteria
		following two ways: 1) The system shall provide the audit records in a manner suitable for the user to interpret the information. The system shall provide the capability to generate reports based on ranges of system date and time that audit records were collected. 2) The system shall be able to export logs into text format in such a manner as to allow correlation based on time (e.g. UTC synchronization).	☐ No
Inpatient	SC 02.06	The system shall be able to support time synchronization using NTP/SNTP, and use this synchronized time in all security records of time.	☒ Yes ☐ No
Inpatient	SC 02.07	The system shall have the ability to format for export recorded time stamps using UTC based on ISO 8601. Example: "1994-11-05T08:15:30-05:00" corresponds to November 5, 1994, 8:15:30 am, US Eastern Standard Time.	☒ Yes ☐ No
Inpatient	SC 02.08	The system shall prohibit all users read access to the audit records, except those users that have been granted explicit read-access. The system shall protect the stored audit records from unauthorized deletion. The system shall prevent modifications to the audit records.	☒ Yes ☐ No
Inpatient	SC 03.01	The system shall authenticate the user before any access to Protected Resources (e.g. PHI) is allowed, including when not connected to a network e.g. mobile devices.	☒ Yes ☐ No
Inpatient	SC 03.02	When passwords are used, the system shall support password strength rules that allow for minimum number of characters, and inclusion of alpha-numeric complexity.	☒ Yes ☐ No
Inpatient	SC 03.03	The system upon detection of inactivity of an interactive session shall prevent further viewing and access to the system by that session by terminating the session, or by initiating a session lock that remains in effect until the user reestablishes access using appropriate identification and authentication procedures. The inactivity timeout shall be configurable.	☒ Yes ☐ No

Ambulatory or Inpatient	CCHIT Criteria ID Number	Criteria	Proposer Licensed Software complies with the criteria
Inpatient	SC 03.04	The system shall enforce a limit of (configurable) consecutive invalid access attempts by a user. The system shall protect against further, possibly malicious, user authentication attempts using an appropriate mechanism (e.g. locks the account/node until released by an administrator, locks the account/node for a configurable time period, or delays the next login prompt according to a configurable delay algorithm).	☒ Yes ☐ No
Inpatient	SC 03.05	When passwords are used, the system shall provide an administrative function that resets passwords.	☒ Yes ☐ No
Inpatient	SC 03.06	When passwords are used, user accounts that have been reset by an administrator shall require the user to change the password at next successful logon.	☒ Yes ☐ No
Inpatient	SC 03.07	The system shall provide only limited feedback information to the user during the authentication.	☒ Yes ☐ No
Inpatient	SC 03.08	The system shall support case-insensitive usernames that contain typeable alpha-numeric characters in support of ISO-646/ECMA-6 (aka US ASCII).	☒ Yes ☐ No
Inpatient	SC 03.09	When passwords are used, the system shall allow an authenticated user to change their password consistent with password strength rules (SC 03.02).	☒ Yes ☐ No
Inpatient	SC 03.10	When passwords are used, the system shall support case-sensitive passwords that contain typeable alpha-numeric characters in support of ISO-646/ECMA-6 (aka US ASCII).	☒ Yes ☐ No
Inpatient	SC 03.11	When passwords are used, the system shall use either standards-based encryption, e.g., 3DES, AES, or standards-based hashing, e.g., SHA1 to store or transport passwords.	☒ Yes ☐ No
Inpatient	SC 03.12	When passwords are used, the system shall prevent the reuse of passwords previously used within a specific (configurable) timeframe (i.e.,	☒ Yes

Ambulatory or Inpatient	CCHIT Criteria ID Number	Criteria	Proposer Licensed Software complies with the criteria
		within the last X days, etc. - e.g. "last 180 days"), or shall prevent the reuse of a certain (configurable) number of the most recently used passwords (e.g. "last 5 passwords").	☐ No
Inpatient	SC 04.01	The system shall include documentation that describes the patch (hot-fix) handling process the vendor will use for EHR, operating system and underlying tools (e.g. a specific web site for notification of new patches, an approved patch list, special instructions for installation, and post-installation test).	☒ Yes ☐ No
Inpatient	SC 04.02	The system shall include documentation that explains system error or performance messages to users and administrators, with the actions required.	☒ Yes ☐ No
Inpatient	SC 04.03	The system shall include documentation of product capacities (e.g. number of users, number of transactions per second, number of records, network load, etc.) and the baseline representative configurations assumed for these capacities (e.g. number or type of processors, server/workstation configuration and network capacity, etc).	☒ Yes ☐ No
Inpatient	SC 04.04	The system shall include documented procedures for product installation, start-up and/or connection.	☒ Yes ☐ No
Inpatient	SC 04.05	The system shall include documentation of the minimal privileges necessary for each service and protocol necessary to provide EHR functionality and/or serviceability.	☒ Yes ☐ No
Inpatient	SC 04.06	The system shall include documentation available to the customer stating whether or not there are known issues or conflicts with security services in at least the following service areas: antivirus, intrusion detection, malware eradication, host-based firewall and the resolution of that conflict (e.g. most systems should note that full virus scanning should be done outside of peak usage times and should exclude the databases.).	☒ Yes ☐ No

Ambulatory or Inpatient	CCHIT Criteria ID Number	Criteria	Proposer Licensed Software complies with the criteria
Inpatient	SC 04.07	If the system includes hardware, the system shall include documentation that covers the expected physical environment necessary for proper secure and reliable operation of the system including: electrical, HVAC, sterilization, and work area.	☒ Yes ☐ No
Inpatient	SC 04.08	The system shall include documentation that itemizes the services (e.g. PHP, web services) and network protocols/ports (e.g. HL-7, HTTP, FTP) that are necessary for proper operation and servicing of the system, including justification of the need for that service and protocol. This information may be used by the healthcare facility to properly configure their network defenses (firewalls and routers).	☒ Yes ☐ No
Inpatient	SC 04.09	The system shall include documentation that describes the steps needed to confirm that the system installation was properly completed and that the system is operational.	☒ Yes ☐ No
Inpatient	SC 04.10	The system shall include documentation available to the customer that provides guidelines for configuration and use of the security controls necessary to support secure and reliable operation of the system, including but not limited to: creation, modification, and deactivation of user accounts, management of roles, reset of passwords, configuration of password constraints, and audit logs.	☒ Yes ☐ No
Inpatient	SC 05.01	The software used to install and update the system, independent of the mode or method of conveyance, shall be certified free of malevolent software ("malware"). Vendor may self-certify compliance with this standard through procedures that make use of commercial malware scanning software.	☒ Yes ☐ No
Inpatient	SC 05.02	The system shall be configurable to prevent corruption or loss of data already accepted into the system in the event of a system failure (e.g. integrating with a UPS, etc.).	☒ Yes ☐ No
Inpatient	SC 06.01	The system shall support protection of confidentiality of all Protected Health Information (PHI) delivered over the Internet or other known	☒ Yes

Ambulatory or Inpatient	CCHIT Criteria ID Number	Criteria	Proposer Licensed Software complies with the criteria
		open networks via encryption using triple-DES (3DES) or the Advanced Encryption Standard (AES) and an open protocol such as TLS, SSL, IPSec, XML encryptions, or S/MIME or their successors.	☐ No
Inpatient	SC 06.02	When passwords are used, the system shall not display passwords while being entered.	☒ Yes ☐ No
Inpatient	SC 06.03	For systems that provide access to PHI through a web browser interface (i.e. HTML over HTTP) shall include the capability to encrypt the data communicated over the network via SSL (HTML over HTTPS). Note: Web browser interfaces are often used beyond the perimeter of the protected enterprise network	☒ Yes ☐ No
Inpatient	SC 06.04	The system shall support protection of integrity of all Protected Health Information (PHI) delivered over the Internet or other known open networks via SHA1 hashing and an open protocol such as TLS, SSL, IPSec, XML digital signature, or S/MIME or their successors.	☒ Yes ☐ No
Inpatient	SC 06.05	The system shall support ensuring the authenticity of remote nodes (mutual node authentication) when communicating Protected Health Information (PHI) over the Internet or other known open networks using an open protocol (e.g. TLS, SSL, IPSec, XML sig, S/MIME).	☒ Yes ☐ No
Inpatient	SC 06.06	The system, when storing PHI on any device intended to be portable/removable (e.g. thumb-drives, CD-ROM, PDA, Notebook), shall support use of a standards based encrypted format using triple-DES (3DES), or the Advanced Encryption Standard (AES), or their successors.	☒ Yes ☐ No
Inpatient	SC 06.07	The system, prior to access to any PHI, shall display a configurable warning or login banner (e.g. "The system should only be accessed by authorized users"). In the event that a system does not support pre-login capabilities, the system shall display the banner immediately following authorization.	☒ Yes ☐ No

Ambulatory or Inpatient	CCHIT Criteria ID Number	Criteria	Proposer Licensed Software complies with the criteria
Inpatient	SC 08.01	The system shall be able to generate a backup copy of the application data, security credentials, and log/audit files.	☒ Yes ☐ No
Inpatient	SC 08.02	The system restore functionality shall result in a fully operational and secure state. This state shall include the restoration of the application data, security credentials, and log/audit files to their previous state.	☒ Yes ☐ No
Inpatient	SC 08.03	If the system claims to be available 24x7 then the system shall have ability to run a backup concurrently with the operation of the application.	☒ Yes ☐ No

2.1.2 BEST PRACTICES

Provide Proposer's overall summary description of how it has leveraged best practices for EHR implementations, pursuant to Section 1.2 (Best Practices) of Appendix H (Functional Requirements). Proposer's response for this Section is limited to 1 page.

MethodM is Cerner's implementation approach to working with clients to deliver value through our Millennium solutions. MethodM is more than an implementation approach and this modular methodology draws upon proven practices from a host of past client experiences. With it, a team is able to deliver the intended outcomes of a project with discipline, predictability and efficiency.

MethodM provides a disciplined approach to implementation, system adoption and value realization. The proven methodology provides a clearly defined project scope that aligns with your project's clinical and operational imperatives and comprehensive education and training objectives. MethodM also incorporates Cerner's recommended practices in the management of crucial project milestones and detailed solution-level content to provide guidance and overall support throughout the project. The content has been designed to provide the correct information at the right point in the engagement to help you make sound decisions and guide you through every stage of your project. Additionally, the content provides a framework for the various processes required to manage and execute your project.

As you maintain, upgrade, and enhance Cerner Millennium, MethodM will continue to improve the quality of outcomes and lower your total cost of ownership.

Cerner MethodM is an integrated platform, providing these important features:

1. Outcomes-based approach
2. Aligning with your organizational imperatives
3. Disciplined and predictable processes
4. Providing the right resource at the right time
5. Leveraged client interaction and experience
6. Proven to reduce risk and variability
7. A logical continuum
8. From procurement to clinical transformation

2.1.3 GENERAL REQUIREMENTS

Provide Proposer's overall summary description of how its proposed EHR System meets the needs of DHS for ambulatory care, pursuant to Section 1.3 (General Requirements) of Appendix H (Functional Requirements). Proposer's response for this Section is limited to 6 pages.

The strength of Cerner Millennium begins with the power of its architecture, which is based on one comprehensive database. Cerner Millennium solutions are structured around a single design, which allows information sharing across multiple facilities and across the continuum of healthcare. With our single data structure, Cerner Millennium provides real-time access to all information across multiple applications, such as laboratory, pharmacy, nursing and physicians, to all of those needing such access, regardless of location. Other suppliers' systems that are based on differing architectures and data structures must be interfaced together, and rely on these interfaces to transmit, modify and arrange data exchanged between them. This limits the data's usefulness across multiple systems and inhibits real-time access.

Only Cerner Millennium offers proven, person-centric, integrated clinical technologies that connect all areas of a healthcare organization to leverage patient data and best practices for better quality of care. Any clinical information that is gathered in any care setting is populated in the single integrated longitudinal electronic medical record. The clinical data repository viewer is designed to support communication across the health system by providing a cross- departmental cross-disciplinary, person focused view of clinical information. Because it is built from the common, open platform for all Cerner solutions, we can provide the only readily available solution that closes the loop with other clinical domains.

Flexible display features within the Cerner Millennium applications allow the clinician to create optimal views of the data. A multitude of viewing and navigation preferences can be utilized to maximize the communication of information to the clinician, both as predefined views as well as interactively during real-time record viewing. These tailored summary views and custom flowsheets can be defined to meet the needs of various disciplines within your organization.

Cerner offers a variety of applications and features that enable our client organizations to become HIPAA compliant. However, compliance requirements in the areas of Privacy and Security rules also are very much contingent on your organization's policies and procedures regarding patient information and how it is to be used or disclosed.

Under ARRA HITECH, the patient has the right to ask for disclosure of their record to be restricted

from their health plan if the patient has paid for the services out of pocket. We embed capabilities to leverage existing system capabilities for disclosure management to complement the necessary policies and procedures within HIM to assure that such disclosure restrictions can be honored.

Also, as required for meaningful use Stage 1, the patient has the right to ask for an electronic copy of their record in a readable format (and as required by Stage 1 certification criteria, in the form of a structured electronic clinical document using either the HL7 Continuity of Care Document (CCD) or the ASTM Continuity of Care Record (CCR) format). Cerner supports these requirements through the use of the Clinical Document Generator (CDG) which is a common service that can be called from within PowerChart to enable a provider requested on demand generation of the CCD, from within Clinical Reporting, and through the patient portal into the electronic health record, IQHealth, where a patient can generate their own CCD if desired, and otherwise have access online into their electronic health record. Cerner also enables the CCD to be sent to the Cerner Health Record which can be made available as a personal health record (PHR) to the patient.

Cerner Millennium is based on an integrated common architecture and data structure, thus improving communication of information across the health care enterprise. Common information spans inpatient, outpatient, specialty clinics and even home care, with no redundant entry of clinical or administrative information. Any clinical information that is gathered in any care setting, from the first encounter to the last, is populated in the electronic medical record and is seamlessly integrated. Therefore, clinical data captured within various care settings is automatically and transparently accessible to the entire care team via our electronic medical record. This integrated system enables all care providers sharing a common care process to function as a team. Upon an inpatient admission, users with proper security can fluidly access any information regarding the patient's current encounter or past encounters. Similarly, if an emergency Department (ED) patient is admitted all medications and activities are available throughout your system once they are documented in the Electronic Medical Record. The record a physician views in the hospital is the exact same record in an office setting, thereby creating "one single source of truth" patient record.

Cerner Millennium software is built around the patient. The technology enables health organizations to automate clinical, financial and decision support functions on a common platform. This approach allows Cerner to infuse decision support (Executable Knowledge) throughout the care process, guiding clinicians to the latest evidence at the point of care via order sets, plans of care, alerts and notifications, and documentation.

For example, during order entry, Cerner's order management and decision support solution ensure that information and alerts are available to all users at the appropriate time and in the appropriate venue such as duplicate order checking, an integrated drug database, dose-range checking, and adverse drug event content. In addition, your organization can define actions required within an order, order set, or care plan such as automatically route for co-signature.

Cerner's rules engine, Discern Expert, provides a view of the big picture to make the most knowledgeable decisions. That is why Discern Expert does not just keep track of physician orders, it obtains and uses patient data from across your entire organization – lab, pharmacy, nursing, radiology – and across multiple facilities within your health care system, to provide the most accurate decision support and alerts system available. The sophisticated decision-support functionality is offered within a rules logic model and a simple and intuitive user interface design that simplifies the everyday use and management of this critical function for the organization. Alerts can be designed based on various parameters and triggers, and can be adjusted by those with appropriate security within your organization. When an order triggers an alert, the alert message

describes the potential problem and offers specific suggestions for revising the order. The alert can also prompt the clinician for more information to determine if a particular guideline applies. The clinician can review a documented explanation of the alert, select an alternative order, or override the alternative order guidelines while recording a reason. Such decision-support can reduce clinical errors, improve physicians' management of medication use, imaging studies, and lab tests, provide long-term savings by recommending preventive screenings, and track physicians' compliance.

Cerner Millennium supports interdisciplinary care and enhanced workflow options. Additionally, multiple features benefit teaching and residency programs such as the physician rounds report, easily accessible evidence-based condition- specific protocol information, and enhanced routing for supervisor signatures. Furthermore, our CareCompass provides an innovative, interdisciplinary workflow tool that guides the collaborative care team in the organization and prioritization of patient care-giving the right information at the right time. With CareCompass, clinicians see all tasks and overdue tasks are highlighted. For example, an admission assessment requiring interdisciplinary documentation and co-signature can indicate that tasks exist for the attending physician's review and signature.

The unique scalability of Cerner Millennium® allows us to connect communities and integrate healthcare on a massive scale – integration that is necessary to improve the standard of care as people increasingly move and receive treatment from multiple providers in different cities and countries. Krames Staywell instruction comes in the following languages: English, Spanish, Russian, Vietnamese, Tagalog, Chinese, Korean, Hmong, Farsi, Arabic, Portuguese and Armenian. ExitCare titles come in the following languages: English, Spanish, Russian, Vietnamese, Tagalog, Portuguese, Bosnian, and Haitian Creole. All titles may not be available in all languages. Krames provides every handout in Spanish and English. Cerner is a leader in supporting NCQA's PCMH criteria as seen by being awarded the 2008 CHIME award for enabling a medical home with the University of Missouri. Further, we have 9 clients that have achieved recognition from NCQA and many more going thru the process today.

The tracking and audit capabilities of the system are comprehensive as well as flexible. You can perform an audit trail query to access data specific to the patient's record or chart, who obtained successful access, the date and time of the attempt and information regarding the access event, including events that change or modify patient information. It should be noted that any actual change to patient data is considered part of the clinical record and the history of any such change is maintained within the patient's record.

We support incoming and outgoing HL7 ADT messaging with multiple registration systems. Each system can send individual transactions, or transactions from multiple facilities can be combined in an interface engine and sent to Cerner Millennium in one feed. We store the facility that generates the transaction.

Position-level security logic, sets permission to access an application or a task within an application, or a task group based on a user's position. Positions are defined for every user in the system.

A user is assigned to a position through the user maintenance tool. A user's position is designed to include all the tasks that might be needed to perform his or her job. Multiple users with similar job requirements can be associated with a single position, which aids in the maintenance of security profiles. Only users with appropriate privileges are granted access to the user maintenance tool.

You can perform an audit trail query to access data specific to the patient's record or chart, who obtained successful access, the date and time of the attempt and information regarding the access event, including events that change or modify patient information.

Cerner provides a comprehensive documentation solution, not specific to a particular care setting, through which direct care providers document patient care activities. We provide a catalog of forms that support documentation across multiple disciplines. Your organization can use these forms as defined or customize to meet your individual needs. The assessment forms capture appropriate data elements and can include charting by exception, predefined drop-down lists, defaulting of the last charted value, grid formats, yes/no responses, pick lists, and check boxes for point and click responses. The data elements captured can then populate the other areas of the chart. When used with Cerner Millennium's clinical systems, such as Cerner ED solution FirstNet, INet Critical Care, PathNet for lab, PharmNet for pharmacy, Clinical Office with PowerNote, Health Information Management, RadNet, and SurgiNet, the information provided by the areas employing these systems is accessible automatically and transparently to the care team member via the graphical results viewer within the electronic medical record. The clinical data repository viewer provides a cross-departmental, cross-disciplinary, person focused view of clinical information with the ability to view, endorse, and correct documentation.

Cerner Millennium is well suited for supporting pediatrics, as well as other specialties. For example, we supply pediatric documentation including growth charts and forms, notes and care plans, specifically tailored views and flowsheets, and related referential content. By infusing Cerner's solutions with pediatric specific content and capabilities, caregivers can enhance the care of children, close the research and education gap and share the expertise of the pediatric community. Some examples include: Special terminology and information includes a full pediatric lexicon that can be invoked at age appropriate times and includes developmental milestones, physical findings, social, and environmental factors. Age based normal ranges are part of our standard content. Time of birth is captured and can be used to calculate age in hours, days, months, and years. A large variety of pediatric dosing calculators exist including body surface area, body mass index, weight, age, gestational age, hepatic function, and problem and diagnosis.

Cerner Millennium aggregates clinical and financial information from a variety of sources, therefore all information, from the first encounter to the last, whether in an ambulatory or in patient setting, resides in our longitudinal relational database. Users at your organization have immediate access to the entire patient record, including information from current and past visits. For example lab results, reports of diagnostic tests, documentation, orders, and more are all viewable immediately upon entry into the system by multiple users. The record a physician views in the hospital is the exact same record in an office setting, thereby creating "one single source of truth" patient record.

Cerner's careplan solution, PowerPlan, provides clinicians with the ability to individualize diagnosis and problem-driven plans of care, including multidisciplinary clinical pathways and care protocols. Plans of care can relate to problems/diagnoses in the build tool. Once a problem or diagnoses has been documented, the system can prompt clinicians with suggested care plans to address the identified problem. The clinician can view the suggested plans of care then accept or reject the plan. The diagnosis or problem focused/driven plan can then be initiated and customized to meet the needs of the patient. In addition, an assessment with calculated results and embedded rules can trigger orders that can include an order for a plan of care.

When activated, plans of care initiate orders and orders populate the CareCompass with tasks to be completed and the MAR with medications. Clinical documentation from the CareCompass, Document in Plan tab, the MAR, as well as new results , auto update the plan of care as appropriate. The plan provides alerts with visual indicators of outcomes not met (red bold circled "X") and a green check for met. The CareCompass and MAR provide prompts and alerts associated with the plan outcomes, interventions, and indicators. Summary views provide a concise view of outcomes

indicating the patient's progress toward goals and discharge readiness. In addition, evidence links are present in outcome and intervention sections. Clicking a link takes the clinician to referential information about potential interventions to support the plan of care.

Cerner's Women's Health solution, PowerChart Maternity, provides clinicians across role and venue the ability to leverage information captured, stored and presented for review at the appropriate time for the purpose to reduce the risk of injury to the pregnant woman and her infant. The solution is integrated with the patient's medical record, condition specific, and helps automate the nursing and provider workflows. In addition, FetaLink is our software application intended to support the display needs of obstetrical clinicians through the rendering, visualization, recording, and optional storage and retrieval of fetal and maternal data acquired from fetal monitoring devices and their peripheral equipment. Cerner FetaLink also provides the capability for management of supplemental user-definable visual and audible alert thresholds. Cerner FetaLink can be used to show graphically the relationship between uterine contractions and fetal heart rate data at the bedside or at remote locations as a surveillance method. The device connectivity portion of FetaLink is the conduit through which the data flows into the FetaLink/CareAware architecture to provide the data to the application from the fetal monitor. FetaLink is dependent upon a device network infrastructure that provides fetal monitor device connectivity (CareAware iBus). In addition, if exercising the storage capabilities of the application, it is necessary to have an archival system to provide storage and retrieval of the archived records (CareAware MultiMedia Archive).

Documents such as facesheets and wristbands can be produced at admission time. The content and number of each document is customizable and can include barcoding.

Label functionality is available with Cerner's registration solution. Additionally, creating and printing labels is available with Cerner's scheduling solution with custom reporting. Customized reports can be created by your organization using the reporting tools included.

Cerner will provide you with solutions and services that enable organizational HIPAA compliance. We have taken steps to train our client-facing associates regarding HIPAA Privacy and Security requirements, and we have instituted corporate security, privacy, patient information handling, and remote access policies to support those responsibilities.

Cerner is continually developing our solutions using a solution management model approach to analyze client requests, market demands, industry standards, trends, and client feedback to define requirements and priorities for future solution enhancements. Our mobile solutions continue to evolve with focus on access to patient information, workflow and ease of use functionality, and identified clinician process models. Future enhancements and upgrades continue to be developed and released on a regular basis. We would be happy to demonstrate our current capabilities and further discuss future enhancements in the mobile access arena.

Cerner's comprehensive order management solution is one part of the Cerner approach to managing patient information effectively. Our orders solution coordinates order management and communication across all licensed, hospital-based facilities and forms the basis for Cerner's computerized provider order entry (CPOE) solution. With the physician workflow in mind, you can view existing orders and perform all order actions, such as repeating or canceling an order, without ever leaving the orders section. During the ordering process, the system performs a series of checks to evaluate for contraindications, duplication, or conflicts. When necessary, an alert will open allowing you to decide whether to continue. In combination with Cerner's pharmacy offering and nursing solutions Cerner's CPOE solution provides a powerful tool to connect the closed loop medication management process, linking physicians, nurses, and pharmacies to improve patient

safety.

Cerner Millennium solutions offer a flexible design that can be customized on three levels: system, institution, and end user. Throughout the various workflows alerts, windows, prompts, screens and data entry fields can be defined to meet your needs. For example, Cerner has developed over 500 alerts and rules in addition to documentation and reports to support evidenced-based workflows. All of the Cerner developed rules and alerts are embedded within the application, and are actionable at the point of care within the workflow of the care provider. In addition, your organization can create additional alerts and rules, as well as additional user-defined data fields to meet your documentation needs.

We provide an Advanced Growth Chart used to assess a child's development against statistical ranges of values for children of various ages, comparing the child's growth to other children of the same age. You can also use advanced growth chart to plot other developmental data such as bone age and mid-parental height. Our growth chart content is representative of the 2000 CDC growth charts. Clinicians document height, weight, and head circumference on the growth chart. The chart displays percentiles based on statistics gathered across the United States (2000 CDC statistics). The percentiles are 97%, 95%, 90%, 75%, 50%, 25%, 10%, 5%, and 3%. The patient's values are plotted against national percentiles and displayed in a linear graph format. Comparing these values to national figures can help the clinician determine how the child's development compares to normative rates of development. The charts can display values for male and female, and two different age ranges (along the x-axis): 0 to 36 months and 2 to 20 years. In addition, we provide the tanis fenton premature growth chart.

A referral to another physician can be initiated with a message sent from the Message Center if the consulting physician is a user within your organization. Due to the true integration of Cerner Millennium, the appropriate referral forms can be forwarded to physicians within your organization. As a result, the consulting physician is able to use order entry functionality to generate any orders. A subsequent letter can be sent back to the primary care physician with documentation of the encounter. Users can also create referral letters that can be printed and sent to outside clinicians.

2.1.4 REGISTRATION REQUIREMENTS

Provide Proposer's detailed description of how its proposed EHR System meets the needs of DHS for registration, pursuant to Section 1.4 (Registration Requirements) of Appendix H (Functional Requirements). Proposer's response for this Section is limited to 2 pages.

Cerner's registration solution is an online Admit-Discharge-Transfer (ADT) system for automating the workflow and process of registration, admitting, transfers, and discharges in any clinical domain, including hospitals, physician offices, and clinics. Cerner registration solution creates the encounter and a Cerner Enterprise Master Person Index (EMPI) that become the basis for coordinating the person's movement across an integrated or disparate health system.

Within Cerner's registration solution, each person entering the healthcare system is automatically assigned a lifetime medical record number (MRN), or "account" number.

All persons added to the system are added to the Cerner Enterprise Master Person Index. This includes next-of-kin, guarantors, subscribers, and emergency contacts. All visit activity has a relationship to a record within the Cerner Enterprise Master Person Index. The Cerner Enterprise Master Person Index can be used as the foundation of each encounter. The Cerner Enterprise Master Person Index information captured within Cerner's registration solution is the same data used

throughout Cerner Millennium. Modifications within Cerner's registration solution are immediately viewable within such Cerner solutions as PowerChart, Cerner Order Management, and Cerner Scheduling Management.

Cerner's registration solution provides multiple rules functionality options, as follows: interfield rule; finish level rule; start rule. Within Cerner's registration solution, an interfield rule is a rule that is placed behind a particular prompt in the registration conversation, for example behind the date of birth prompt. A finish level rule is placed at the end of the registration conversation and it is activated when OK is selected to save the data. A start level rule is placed at the beginning of the registration conversation (before any prompts) and activates as the conversation is opening.

Customized registration screens enable you to enter insurance plan information at both the person and encounter levels. Insurance data can be gathered at the person level, which is the starting point for visits to facilities within the enterprise. Up to six subscriber insurance plans can be captured per person and per encounter.

Employment and plan sponsor information can be entered into the database to expedite billing and reimbursement. The Insurance tool provided allows you to enter health plan information for insurance organizations and associate those health plans with sponsors (employers).

Membership uploads can be performed with payer-provided information to assign relationships between persons and their health plans.

Label functionality is available with Cerner's registration solution. Additionally, creating and printing labels is available with Cerner's scheduling solution with custom reporting. Customized reports can be created by your organization using the reporting tools included.

Documents such as facesheets and wristbands can be produced at admission time. Standard documents/reports are available. Additionally, the content and number of each document is customizable and can include bar coding. Admission, transfer, and discharge notices can be produced at the time of admission/transfer/discharge.

Cerner's registration solution supports the modification of an encounter type through the utilization of various screen types that automate tasks or ADT transactions. Your organization can configure screens that perform additions/updates to encounters.

The pre-registration (pre-admission) conversation functionality provides the ability to gather and verify the minimum required information prior to booking an appointment or non-scheduled encounter.

Cerner's registration solution provides an Episode Manager tool that is used to group related encounters in an episode type. The grouping of encounters makes it easier to view registration information for a particular course of treatment. You can add an episode type and include encounters in it or give a new name to an existing episode type. An encounter can be moved from one episode type to another episode type or designated as an unattached encounter. If an episode type is deleted, its encounters display in a list of unattached encounters.

Cerner's registration solution screen building tool supports the creation of a quick registration with minimal required fields.

With the implementation of Cerner's Master Person Index solution, the Combine tool's online work queue includes a percent column, which reflects the probability that two people in the queue are a match. You can manually display potential duplicates side by side to review what information is the same and what information is different. Potential duplicates that meet the report threshold are written to the appropriate database table. The system reads this table to populate the work queue.

The Combine Tool that is provided is used to eliminate duplicate records by combining persons and encounters in the database. You can also separate (un-combine) person and encounter records that were combined in error. Combine also provides the ability to remove a single encounter from one person's record and add it to another person's record. This can be necessary if an encounter was mistakenly assigned to the wrong person.

Cerner's registration solution work queue manager is used to build worklists to aid in task management. This application allows you to create a worklist, which is launched out of the Access Management Office application. The worklists can be built as a simple task list, an associated conversation, or as a list only. The simple task list has the ability for a custom update script to be created by your organization to perform an update in the database when an item on the worklist is selected. The associated conversation allows a registration conversation to be launched from the worklist which in turn allows you to modify the visit or person information. A list-only worklist provides the ability to drop the row off of the query upon selection; thereby performing a database update.

Ad hoc filtering functionality is also available during the build process of the worklists. Ad hoc filtering allows you to designate a specific field value, date, location, organization, person, provider, or text to be filtered upon.

The tasks in the work queues are automatically assigned task numbers. The numbers can then be used to grant or restrict access to a task in the Task Access application. You can select a worklist and then launch an application to perform appropriate transactions for a selected person or item. List-only work queues can also be created. These work queues do not require that you launch an application to perform a task.

Cerner's registration solution provides an encounter location history viewer which provides the ability to view admit, transfer, and discharge history for a person's visit. Cerner's registration solution also provides the ability to display the temporary/current location as well as assigned location via a column in the bed board. The historical tracking of the temporary location is provided within the History Maintenance module.

Additionally, within Cerner's Bed Board application or a registration conversation, the ability to assign or remove the assignment of a temporary location to a person is supported. Within the Bed Board, the person displays in the assigned nurse unit/room/bed. A temporary location column is available that can be added as a bed board column to view the temporary location of the person. Additionally, your organization can define a user-defined field to designate the status of the person. User-defined fields can also be added as bed board columns. In reference to tracking persons from pre-admission to discharge, the location history is viewable for the person in the Location History tool or using the History Maintenance module in Access Office. The dirty bed worklist can be used monitor bed statuses. Additionally, within Cerner's scheduling solution, the check-in, check-out, and person wait time is provided to assist with person tracking functionality.

Cerner's registration and benefit solutions provide easy-to-use, front-end tools that can be used to create the reference database for insurance carriers, health plans, and benefits. Within the tools provided the information is as easy to modify as it is to build. For example, if a payer makes some type of change (i.e. change in phone number) you can access the specific tool for that information and make the change accordingly.

2.1.5 SCHEDULING REQUIREMENTS

Provide Proposer's overall summary description of how its proposed EHR System meets the needs of DHS for scheduling, pursuant to Section 1.5 (Scheduling Requirements) of Appendix H (Functional Requirements). Proposer's response for this Section is limited to 2 pages.

Cerner Scheduling Management coordinates appointment scheduling across an integrated or disparate health system. It is used to establish and maintain person appointments for resources with defined availability.

Protocol appointment types can be defined to allow you to schedule one appointment type that in turn schedules multiple appointments with predefined time ranges separating them.

Appointment types include recurring. You define the sequence and the number of instances needed for the appointment. The system automatically calculates the appropriate days based on entered data.

Group scheduling functionality provides the ability to schedule and specify the number of persons to be scheduled for a specific appointment type.

Within Cerner's scheduling solution, CPT 4 codes can be associated to the appointment type or orderable as part of the database build. During scheduling the user can then enter the appropriate IDC9/10 diagnosis.

Integration between Cerner applications is seamless.

Cerner's scheduling solution supports the ability to define data fields to capture appointment specific information. This information can be defined by department or specialty.

Client-defined preparations and post appointment instructions can be associated to appointment types.

Scheduling guidelines are guidelines that are displayed to users during various stages of the scheduling process such as confirm, reschedule, and cancel.

The flexing functionality provided allows you to define rules at the appointment type, resource, orders, and slot type level. These rules are evaluated to determine how appointments should be scheduled in certain circumstances. Appointment details captured are flexed due to the accept format associated. The ability to define different fields for inclusion is supported. The accept format can be defined at the appointment level or various scheduling actions, allowing for the same accept format to be flexed to display different fields based upon the scheduling action for the appointment type. We do not limit the number of details that can be present on an accept format. Most clients average between 3-5. We recommend you add the amount needed to be able to book appropriately without impacting the users workflow.

Cerner's benefits solution maintains the terms and conditions of relationships among members, employers, providers, and payers to enable integration of these relationships within clinical and financial processes. This solution manages information related to insurance plans and member demographics, EDI eligibility verification, detailed coverage and benefit information, and referral and authorization management for members and provider networking. Cerner's benefits solution includes Cerner's eligibility solution, which provides the initiation and storage of the Electronic Data Interchange (EDI) for specific and relative information related to the health plan. An EDI transaction is sent via the Cerner application to a third party clearinghouse in order to capture the health plan eligibility verification information. The status of the verification is returned as part of the appropriate application and is displayed and stored for reference. History, audit and reporting tools are available as applicable within each application.

Within Cerner's scheduling solution, CPT 4 codes are associated to the appointment type or orderable as part of the build. The user can then enter the appropriate IDC9/10 diagnosis when entering the information specific to the patient and appointment. With this information, the system can perform a medical necessity check using 3M's Medicare Medical Necessity content. The content contains the Local Medical Review Policies (LMRP) and the National Coverage Determinations (NCD). As part of the workflow, the user is notified if an Advance Beneficiary Notification (ABN) is required to be signed. The user has the option to print the ABN form immediately or to print the ABN form at a later time in the process, from Cerner's scheduling solution. All appointments that require an ABN can have an icon displayed or users can view from a worklist. We also offer a standalone Medical Necessity Checking Tool that allows the user to enter the diagnosis and procedure codes to be checked against the 3M Medical Necessity Content. The ABN form can also be printed from this standalone tool.

Each appointment type is associated with an unlimited number of schedulable resources (person, place, or thing, including patient). The system automatically takes into account the availability of each of the resources when determining if the appointment can be scheduled at the requested time.Tight integration of Cerner's scheduling solution with underlying Cerner applications ensures optimum use of resources and promotes patient satisfaction with timely, sequenced care. Costs are reduced, since coordinated scheduling ensures proper resource utilization.

Revenues can be increased, because streamlined scheduling increases operational efficiencies and patient throughput, freeing up more time in the day to schedule additional appointments.

Cerner supports 5,000+ default schedules. The number of default schedules recommended is dependent on how your organization defines other scheduling factors such as slot types, appointment types, and locations for clinics. The more these factors are individualized, the more default schedules are potentially needed. Your organization can define and build a virtually unlimited number of schedule templates for individual resources, or one template can be used for multiple resources. A schedule template is made up of slots of time that are applied to a day or range of days. Schedule templates can be created by facility for resources and procedures.

Limitations to resources created is applicable if a resource is built but then not properly associated to a resource role, without the role present the resource cannot be scheduled.

Resource roles are typically based on the clinic type or service as a starting point for the grouping. The same resource can be associated to many different resource roles. Based on the statistics provided, we would recommend your organization have 100+ resource roles defined.

Reception module in Cerner is a combination of Departmental Order Entry (DOE) for managing direct attenders and the Scheduling day book to view daylists and arrive scheduled patients as they attend. Both applications are available to the receptionist through a single sign-on using the App Bar. The App Bar allows the receptionist, and all users, to have all the functions they require through a single click, with no need to re-logon each time. DOE supports procedure order entry and review functionality. The functions provided help you accomplish the following tasks:

- Admit a patient and order procedures using a single function.
- Place orders and request additional procedures.
- Cancel procedures.
- List each patient's ordered procedures, exam status, and patient, order, or result comments.
- Scan any paper documents related to the patients attendance.

The Appointment book provides the receptionist with a graphical day book, displaying current patient status and other details as defined locally. Day book views are defined locally and can be for single locations/resources, groups of locations/resources or all locations/resources. The receptionist can arrive the patient directly from the graphical view indicating electronically to the radiographer that the patient has arrived and is ready for their procedure.

Cerner's perioperative solution also includes an integrated scheduling component that shares the same database and architecture as all Cerner Millennium solutions. Surgery scheduling performs conflict checking on all schedulable resources for the appointment. With block scheduling capabilities, you can define blocks of time that particular resources and appointments can be scheduled into. These blocks can be defined at the surgeon, surgeon group, patient type, procedure, and/or specialty/service levels. Blocks can be layered and automatically released at user-defined points in time to another block, or to open scheduling. We also provide detailed reporting to analyze block utilization. Other surgery scheduling features include automatic case-duration calculation based on historical case information, request list capabilities, suggestions for appointment times, appointment notifications, and linked appointments. Surgical preference cards are surgeon/procedure-specific and store items needed for the procedure, as well as procedure-specific documentation templates and defined defaults. During scheduling, the surgical case number is automatically created, and the appropriate preference card is assigned based on the surgeon and procedure selected. Since the surgical items and documentation templates/defaults are included on the preference card, the case-specific pick list and needed documentation automatically pull into the case, where the nurse can edit/complete by exception.

2.1.6 CLINICAL DOCUMENTATION REQUIREMENTS

Provide Proposer's overall summary description of how its proposed EHR System meets the needs of DHS for Clinical Documentation, pursuant to Section 1.6 (Scheduling Requirements) of Appendix H (Functional Requirements). Proposer's response for this Section is limited to 2 pages.

PowerChart is a family of system solutions for a wide assortment of health care providers designed to automate care delivery. As an electronic medical record system, PowerChart supports enterprise-wide viewing of clinical information. Cerner Millennium solutions create a single source of truth for the entire care delivery team providing real-time access to the same information regardless of role, venue or condition. As a result, we are able to support the full scope of practice for each clinician with automated protocols, optimize handoffs from clinician to clinician, venue to venue, as well as meet quality and regulatory requirements captured as a natural by-product of documentation. It includes process automation functions for viewing clinical information and activities from any department or system; ordering of nursing or multidisciplinary care team procedures; clinical documentation in forms-based, template, or free-text and structured-text approaches; and coordinated care pathways. In addition, entry of demographic and visit data can be made using a basic patient registration function. PowerChart and its related solutions can automate many tasks associated with providing optimal patient care. PowerChart automates the processes necessary to coordinate patient care and document at the point in which it was delivered in both acute inpatient and outpatient settings.

Our comprehensive documentation management solution is designed to automate discrete data documentation related to care delivery anywhere within a health system. This includes information obtained from the delivery of care documented in such forms as textual documents, vital signs,

assessments, height, and weight. Cerner provides a library of standard documentation forms, interactive views, notes, and templates which can be modified by your organization. As orders, results, and documentation are completed in the system, task lists and workflow views are updated appropriately. Our interdisciplinary workflow tool guides collaboration and provides clinicians a face-up view of critical patient information, patient status, and activity data with both a single patient and multi-patient context in order to proactively manage patient care. As a result, communication is enhanced, redundant charting is eliminated, pertinent results are integrated into documentation, charting standards are upheld, and quality of care is improved while errors are reduced.

Various methods of viewing results are available; the Patient List, Order details, the Chart Summary, the Message Center, the Electronic Medication Administration Record, flowsheets such as I&O, and clinical notes. The results viewing process is designed to provide the clinician with the most pertinent results first. The care provider then can seek additional results if necessary. New, as well as abnormal results can be defined to prompt clinicians and the appropriate task lists updated. Cerner Millennium can also integrate with mobile devices. Our solution is device agnostic based on virtualization capabilities. As long as the device is adequately configured for processor speed, memory requirements and screen resolution for example, you can run Cerner Millennium applications.

Health care is complex and demands multidimensional coordination, communication and collaboration across the care delivery team. Our system can support the charting, viewing, ordering, and care planning/pathway needs of the multiple specialties within your organization. You can define custom flowsheets, online forms, clinical note templates, plans, and pathways to meet the specific needs of the various specialties. The system provides the flexibility to completely customize your order catalog to accommodate all the areas or departments within your organization. Multiple views/screen formats can be customized for departments, units, providers, specialties, and more.

For example, the flowsheet allows clinicians of all specialties to efficiently review result data and documents from Cerner's integrated clinical systems as well as interfaced foreign systems within a single spreadsheet view as soon as they are recorded. A virtually unlimited number of online flowsheets can be designed for use in different specialty areas and can include any or all data or a select subset of the data captured. Flexible display features allow you to create an optimal view. You can select the format of the flowsheet interactively, maximizing the communications of information to the clinician as appropriate for a given clinician and patient.

The Cerner solution provides an online problem list, representing the patient's lifetime problems which are maintained across the network, and can include diagnoses, conditions, and anything that presents as a problem to the patient's overall health. Problems are codified and include the nature of the problem, its status, onset and duration. Database links to the associated clinical events provide detailed documentation of the basis and course of a specific problem. Problem list information is collected and entered into the system within the problem list view which can be embedded into documentation templates.

The Cerner solutions provide a wealth and variety of standard reports such as Active Orders, All Tasks, and I&O's to name a few. In addition, your organization can also define and build a virtually unlimited number of Discern Explorer reports to report on any discrete data captured in the Clinical Data Repository.

Cerner Millennium offers cross-discipline shared servers for registration, scheduling, ordering, results, documentation and charging that eliminates duplication, leverages processing power across the organization, and allows flexibility to meet the demands of departments. For example, charges can be dropped based upon order placement and documentation. Charge capture can occur at order

entry, collection, order completion, task completion, result entry, and at the result or observation level in documentation. You can easily retrieve online charge information through the Charge Viewer.

2.1.7 ORDER MANAGEMENT REQUIREMENTS

Provide Proposer's overall summary description of how its proposed EHR System meets the needs of DHS for Order Management, pursuant to Section 1.7 (Order Management Requirements) of Appendix H (Functional Requirements). Proposer's response for this Section is limited to 2 pages.

Cerner Millennium includes not only the Clinical Data Repository, but also the viewer into each patient's electronic medical record. Cerner's EMR includes familiar views containing functions such as the patient demographics view, growth chart view, Message Center, flowsheet, patient list, multipatient task list, and various summary and workflow views. By using additional Cerner Millennium solutions, corresponding views are added to the EMR viewer. For example, the addition of Power Note, order management, and documentation functionality adds views to support order entry, forms and notes documentation, and the MAR. Whether the clinician is in an inpatient or ambulatory venue, they simply click the view corresponding to the function they desire, or set default views. Furthermore, you can create meaningful views of information to support the vast needs of all types of roles, areas, and user level preferences. Much of our development efforts have focused on providing clinician views that support workflow processes. Summary screens, predefined views, flowsheets, patient lists, Message Center, orders, interactive view, structured documentation templates, pathways, problem list, clinical, documentation forms, clinical summary and task list are all examples of views that can be customized by area and/ or role to meet your needs. Flexible display features and a multitude of viewing and navigation preferences can be utilized to maximize the communication of information to the clinician, both as predefined views as well as interactively during real-time record viewing.

These multiple views/screen formats can be customized for departments, units, providers, and specialties. Your organization can determine which views are available to each clinician by position. If your organization wants to restrict clinician access, you can set that position security to not include those views. For example, clinical results views can be customized to display the most pertinent results first within various formats such as flowsheets, patient list, order details, chart summary, Message Center, MAR, I&O flowsheet, and clinical notes. These customized summary views and custom flowsheets can be defined to meet the needs of various workflows within your organization.

Cerner's orders management solution coordinates communication and order management across the continuum of care and across facilities and was tailored specifically with physician and clinicians workflow in mind. It forms the basis for Cerner's computerized provider order entry (CPOE) solution. Along with physicians, other care providers including nurses, clerks and other clinicians are able to support order entry, review, validation, interdepartmental communication, inquiry, and reporting of clinical orders.

Our order management solution addresses the needs of each of your clinical roles and can be utilized for patient ordering needs across all venues of care-Inpatient, Ambulatory-In Office, and Prescriptions. PowerOrders presents a view of the ordering process in a display similar to the Flowsheet and also handles medications, dose range checking, and continuous infusion orders. Order modifications are streamlined with an edit-on-the-line feature and patient allergies and diagnoses

can be accessed from the order window.

Providers can review, validate, inquire, and report on clinical orders based on security. It allows physicians and other clinicians to place new orders, suspend/resume orders, view existing orders, modify, review, renew, and cosign orders. Many convenient timesaving features are provided, including pre-built order sentences, favorite orders folders, and linked reference text. During the ordering conversation, the clinician has the ability to see relevant data from the repository within the order entry screen. The point and click ease of ordering and viewing enables providers to spend less time with the patient chart and more time providing care. Task lists and orders queues are updated real-time as new orders are posted and new results become available. They will be posted in the applicable views, worklists, and flowsheets.

Our CPOE solution ensures that information and alerts are available to all users at the appropriate time and in the appropriate venue. Information entered "downstream" (as well as information written to the patient's record from previous visits) is available to the departmental user, helping that user make the best and most-informed decisions possible. For example, the pharmacist can view clinical notes and laboratory results directly from the pharmacy system and in appropriate workflows.

Cerner's decision support solution, Discern Expert, can look across multiple workflow environments. Our rules engine can interact with orders, documentation, pharmacy, laboratory, radiology, surgery, cardiology, registration, scheduling and other ancillary environments. Cerner's decision support tools are not limited by patient type. Data can be evaluated across encounters including inpatient, outpatient, and any of your facilities or locations providing clinicians with feedback inside and outside of the ordering process.

During installation, orderables are entered into the build spreadsheet and imported. Also, a standard order catalog is provided by Cerner and can be uploaded to your system. With Order Catalog Tool, you can add new orderables, modify existing orderables, and make batch changes to sets of orderables. To speed the process, you can copy the parameters for a previously defined orderable into a new orderable and then make necessary changes. Your organization can use the tools to tailor a virtually unlimited amount of orders to meet the needs of all clinical settings within your organization.

2.1.8 CLINICAL DECISION SUPPORT REQUIREMENTS

Provide Proposer's overall summary description of how its proposed EHR System meets the needs of DHS for Clinical Decision Support, pursuant to Section 1.8 (Clinical Decision Support Requirements) of Appendix H (Functional Requirements). Proposer's response for this Section is limited to 1 page.

Cerner Millennium solutions feature clinical decision support throughout the continuum of care. With our knowledge solutions we provide the most current and relevant medical decision support, which is embedded in the actual workflow of providers and clinicians from the very first assessment, placing content-based on the latest clinical evidence, empirical data, and optimal practices at the clinician's fingertips at the appropriate time and place in the care process.

Alerts, reminders, and other decisions are built into each Cerner solution where they make the most sense, such as duplicate order checking, abnormal results indicators, immunization reminders, or auto verification, to name a few. Utilizing Discern Expert, specific patient parameters and events can

trigger and fire notifications which can prompt clinicians with guidance and/or to enable intervention. In addition, your organization can use Discern Expert to easily write additional rules to meet your needs.

Consult orders can allow a clinician to place an order and direct it to a specific medical service. Clinicians associated with that medical service can view the list of consult and accept if applicable. In addition, clinicians have the ability to forward results and documents to support consult request to clinicians. These requests appear in the Message Center.

Our clients have also used our solutions to improve the quality of care, costs and lives of the rapidly growing number of individuals with chronic illnesses. As such, our solutions include condition summary screens, which present the user with contextual summaries and evidence-based treatment algorithms based on the patient's condition. Our solutions also provide population and provider performance reports that aggregate performance metrics. These measures help physicians compare and improve their individual clinical performance against standardized performance targets and peers' performance. We are helping our clients improve care for these patients by drawing on the information doctors and nurses put into the EMR and comparing the care provided against quality measures from nationally recognized organizations such as the National Center for Quality Assurance.

Advisors (interactive reports) have been developed for VAP, BSI, UTI, and SSI. Much of the content on these advisors are extracted from the Cerner Millennium platform and follow the algorithms as defined by the CDC and NHSN. Infection Control has four Advisors which follow CDC and NHSN guidelines for Urinary tract infections, Blood stream (Central Line) infections, Pneumonia (VAP), and Surgical Site infections. Advisors help guide the clinician by extracting objective data from Cerner Millennium and allow the end user to fill in the subjective data to arrive at a final conclusion. Once completed, the clinical data documented within the Advisor can be saved as a CSV file for upload to agencies such as NHSN.

With our Core Measures solutions, data elements that can be discretely identified within your system will populate based on normal, everyday workflow, eliminating redundant documentation. Outcome measures are then available in real-time at the patient level, within the Quality Measures PowerPlan, or at the population level, within the Quality Measures MPage. Our solutions offer Web-based reporting screens and summary reports within an intuitive graphical interface. Additionally, content and reporting packages are updated in alignment with the CMS/TJC and Meaningful Use versions as mandated by the individual reporting programs.

2.1.9 PHARMACY REQUIREMENTS

Provide Proposer's overall summary description of how its proposed EHR System meets the needs of DHS for Pharmacy, pursuant to Section 1.9 (Pharmacy Requirements) of Appendix H (Functional Requirements). Proposer's response for this Section is limited to 2 pages.

Cerner's Clinical Data Repository (CDR) contains patient demographic and clinical data in a single, consolidated longitudinal electronic medical record. In our PharmNet Inpatient Pharmacy solution, lab values are available automatically in the results tab with integration to our lab solution, or via an HL7 interface to a foreign lab system. You can define how lab values show by flagging them in different colors, or by letters H, L or C (High, Low, or Critical), or both.

Our pharmacy solution stores all medication history from previous encounters, which can be viewed

via a history action. The clinical documentation feature provides for more thorough and complete documentation of clinical notes, task lists, and activities within the pharmacy department. The medication profile is updated real time with medication orders captured by history on admission, as well as outpatient prescriptions and inpatient orders. The medication history is viewable at any point by all authorized users. Our pharmacy solution supports TallMan lettering for look alike, sound alike drugs, using MediSource which has certain medications recommended for TallMan. Dose range checking content is provided by MediSource, and can be customized to meet your unique practice standards. Customization supports adjusting the safe minimum and maximum dosage range at the specific generic drug, age and route of administration context. Cumulative Lifetime dose range checking provides system-automated verification that the dose you are ordering will not result in the patient receiving excessive amounts of meds. Cumulative dosing is calculated based on dispensed doses from PharmNet, documented medication administration from Cerner's electronic medical record, or documented therapy received outside of the Cerner system. Pharmacists have full access to documentation of allergies, which can be viewed in all Cerner Millennium solutions. PharmNet supports allergy checking and notices. When appropriate, a system-generated alert will display on the user screen during order entry. Hard and soft stops built at the orderable level present clinicians with visual notification in our orders solution that the order is reaching its stop date/time. If a hard stop order is not renewed prior to its stop date/time, the order is discontinued. A soft stop continues past its stop date/time. Controlled substances are included in the formulary. There are multiple standard management reports that offer reporting of user-defined parameters to provide data including medication utilization. Also, Discern Analytics reports allow you to create ad hoc reports for medication utilization.

PharmNet's order entry determines if another user is accessing the medication profile. If not, you are granted the record lock when the patient is selected. This is not an order specific lock, as any other orders, if changed, can have a negative clinical impact on the order being acted upon without the clinician's knowledge. In the clinical data repository, you can perform other actions in the chart and place orders for other catalog types. If you initiate an order while the profile is locked by the pharmacy user, you receive a warning and, based on preference, can proceed. If physicians have initiated medications orders, they are granted the medication lock until signed. The pharmacist, upon selection of a patient which is locked, is notified medication orders are being added by another user. The message indicates who the other user is, and the remaining time on a client defined lock expiration setting. Pharmacists can inquire on any details without affecting the lock, or based on security, break the lock to begin entering orders. Pharmacy order entry locks when the patient is selected and releases the lock when leaving the patient record as the workflow in MedManager is related to medications. The clinical data repository does not lock the patient until a medication order is initiated, at which time the lock is attempted to be acquired.

IV charting is provided with the our eMAR. Multiple ingredient IVs are available. TPNs are built as order sets and can be loaded in PharmNet after calculations are done. Our pharmacy solution supports performing an IV compatibility check of the ingredients being added into the same multi-ingredient IV order at the time or order entry. IV compatibility checking is performed as part of the clinical checking and decision support process using King's content. Checking is done on drug/drug and drug/diluents pairs. Interaction information is displayed, along with other reference information pertinent to the medication and administration. Order changes are reflected on the eMAR and activities list in real time. Patient medication leaflets are provided with our MediSource database. You can enter orders as a template non-formulary item, which allows you to free text any item in.

For a medication orderable synonym, you can select a specific Rx mask based on options defined for

the synonym in Order Catalog Tool. Selection of an Rx mask defines its medication type and prevents the front-end application from prompting for this information later. Virtual View settings determine which synonyms are visible in order management. Via Virtual View, Tylenol, for example, can be visible in Facility A, but not Facility B.

Your organization defines when in the life of the order a charge is posted. You can generate a charge on order, and credit the charge if the order is canceled. Charges can be captured upon medication dispense or medication administration.

The medication list contains a patient's current and past med orders. Using headings, columns, symbols, and brief descriptions, the medication profile provides a quick, in-line summary of essential information about each order. The medication list view is divided into three categories, each of which is identified by a heading: pending, medications being given, and prescriptions/home medications. The latter two categories are divided into current and past subcategories. Arranged in a tree format, each category and subcategory can be expanded or collapsed, allowing you to see order details as needed. The orders view is used to place new orders, view existing orders, renew, modify, review, cosign orders and generally work with various types of orders, such as sliding scale orders, weight based orders, medication orders and more. The three main sections of the orders view are the Navigator, the Order Profile, the Order History and Medication Reconciliation area. Our orders solution provides robust medical student order entry functionality. Prior to placing any order, the medical student is prompted to enter a physician's name (who receives the prompt to sign the orders). The orders can then be held in the solution until the physician co-signs the orders. These orders can be seen in the orders profile view as "held pending signature". The orders are automatically routed to the "signing" physician's message center/review queue. Once the orders are signed, they are automatically processed.

Dose calculator functionality and dose range checking provide a safe and effective check for dosing medications. Comments can be defined and presented during an under or overdose alert message. Cerner supports dose range checking based on age, weight, body surface area, and renal function. Dose range checking functionality, validates single dose, daily dose, therapy limit dosing, continuous infusion additive-rate checking, renal dysfunction checking and lifetime burden checking for medications with a literature published lifetime burden. Also, dose range checking parameters include gestational age-based dose range checking, hepatic dysfunction and problem/diagnosis dose range checking. Discern Expert rules validate that patients have a height, weight or allergies entered. The most recent values for height, weight, and serum creatinine are viewable from the order profile, and are used by the system for dose range checking, dose calculations, and calculation of BSA, IBW and CRCL values. Result date, time, and method of calculation are available. Dose range checking supports renal checking against Creatinine Clearance estimated from a Serum Creatinine result. When ordering renally excreted, or nephrotoxic medication for a patient with a recent creatinine result that indicates impaired renal function, a dosage adjustment is recommended. An alert evokes when a renally excreted drug is ordered. Recent lab results are checked for low creatinine clearance levels. This rule is done assuming capturing height in centimeters. The Cockroft/Gault formula is used for patients between the ages of 18 and 92 years, and the Schwartz formula is used for patients between 6 months and 20 years of age. Our pharmacy and rules catalog provides Standard IV/PO WBC Switch. This rule recommends a switch from an expensive IV medication to a more cost effective oral equivalent. Documents such as facesheets, labels, and wristbands can be produced at admission and can include barcoding. Please refer to the Additional Reference Materials section for examples of barcodes.

2.1.10 MEDICATION ADMINISTRATION REQUIREMENTS

Provide Proposer's overall summary description of how its proposed EHR System meets the needs of DHS for Medication Administration, pursuant to Section 1.10 (Medication Administration Requirements) of Appendix H (Functional Requirements). Proposer's response for this Section is limited to 1 page.

Cerner Millennium Medication Reconciliation supports identifying the most accurate list of all medications that a patient is taking - including the name, dosage, frequency, and route- and using this list to provide correct medications for patients anywhere in the health care system. Our reconciliation process involves comparing the patient's current list of medications against the physician's admission, transfer, and or discharge orders. During each transition from one venue to another, clinicians should review previous medication orders alongside new orders and plans for care, and reconcile any differences.

Central to the reconciliation process we provide a single source of up-to-date medications with all necessary order details. An efficient process is also very important. Our tools support reconciliation of current medications and addition of new medication orders within the same screen or user interface. Cerner Millennium supports the medication reconciliation process for all transition types during an encounter; admission, transfer or discharge.

Cerner's medication reconciliation is an enhanced way for physicians and clinicians to document patient medication history and reconciliation. The components include documented medications by history, admission, transfer and discharge medication reconciliation. We provide prescription actions such as convert to inpatient and convert to prescription within the reconciliation window as well as a view of therapeutic alternative selection. Specific functionality includes the ability to:

- Receive automatic notifications (through tasks) when patients' medication histories have not been completed.
- See when and by whom a patient's medication history was last updated for a given encounter and view when a patient's medication history has not been completed for a given encounter from the order profile's medication list.
- Define whether a patient's medication history is considered complete, including active and inactive medications based on documented medications and their respective compliance.
- Document when there are no changes to a patient's medication history and compliance
- Reconcile medications upon admission, transfer, and discharge of patients
- Add orders for medication reconciliation
- Select therapeutic alternatives
- Convert medications to inpatient administration orders (active or inactive)
- Convert inpatient medications to prescription orders (active or inactive)
- Add and search for Care Plans

Our orders display in the reconciliation process with the order status such as ordered, suspended, incomplete, cancelled, discontinued, completed, pending complete, voided with results, and cancelled to easily recognize if the medication needs to be continued upon transfer or discharge.

2.1.11 LABORATORY REQUIREMENTS

Provide Proposer's overall summary description of how its proposed EHR System meets the needs of DHS for Laboratory, pursuant to Section 1.11 (Laboratory Requirements) of Appendix H (Functional Requirements). Proposer's response for this Section is limited to 1 page.

The major components of the PathNet product line address the clinical information needs of the various laboratory sections and include General Laboratory, Microbiology, Blood Bank Transfusion, Anatomic Pathology, HLA and Outreach Services. Since its market introduction, PathNet has attained significant success in the marketplace, and is recognized as the industry's leading LIS. Based on its robust functionality, PathNet provides benefits for integrated health organizations as well as clinics, commercial laboratories, and hospital groups worldwide.

Our clinical solutions continue to evolve with focus on workflow and ease of use functionality, and identified laboratory business process models. The Cerner PathNet laboratory information system offers clinicians comprehensive, fully integrated technology to automate the operational and managerial sides of the laboratory, and because the PathNet family of solutions operates on the unified Cerner Millennium architecture, information links seamlessly with the patient's electronic medical record.

Clinical and laboratory data can be charted in our solutions. With our single data structure, Cerner Millennium provides real-time access to all charted information across multiple applications, such as laboratory, pharmacy, nursing and physicians, to all of those needing such access, regardless of location.

All results are associated to the order set. For example, a CBC can have results for hemoglobin, hematocrit, wbc, rbc, and more. All of these results can be associated to the one order (CBC).

Microbiology results display within Cerner's micro viewer, which includes a susceptibilities grid format view of the organism and related drug susceptibilities. Depending on the types of tests performed by the lab, the results are listed in columns. The result indicators can be defined by your organization. Some examples include these common symbols: R = Resistant, S = Susceptible, and I = Intermediate.

Your organization can define rules that can trigger an order based off of the positive result.

2.1.12 RADIOLOGY REQUIREMENTS

Provide Proposer's overall summary description of how its proposed EHR System meets the needs of DHS for Radiology, pursuant to Section 1.12 (Radiology Requirements) of Appendix H (Functional Requirements). Proposer's response for this Section is limited to 2 pages.

Cerner's RIS system, RadNet, streamlines departmental operations, such as registration, order entry, patient tracking, film tracking, transcription, electronic signatures and report distribution. Pertinent data, such as allergy information or lab values, is available to radiology staff at the click of a mouse. In addition, RadNet provides unparalleled efficiency in exam scheduling and ICD correlation, as well as tools to streamline documentation, optimizing revenues and profitability. Our integrated solutions provide the ability to work with multiple modalities and worklist to enhance the workflow of the technician as well as the provider. We support the work flows as mentioned, CAT SCAN; Ultrasound; Nuclear Medicine; General Radiology; Mammography; Cardiology; and MRI. The scheduling

capabilities include reason for exam as well as cancellation with reason and the ability to schedule/reschedule multiple resources, and exams in the appropriate order and time span. Orders can include reference text as well as links to your specific reference sites. In addition, we support technical comments and the ability to capture that section on reports as well as in our chart search capabilities. Provided adverse reactions are documented in our allergy and adverse reaction module, our system can check radiology orders against the recorded information as well as perform MediSource interaction checking. Your radiology staff can access the allergy/Adverse Reaction module to view, edit , and add reactions depending on assigned security. All medications ordered in the radiology module can appear on the MAR and be documented as administered on the MAR. Our integrated orders provide one source of truth for placing all orders, interaction checking, and integration with the MAR.

Technical comments is an open-ended data collection online form that allows you to define what data is collected and provides control over the formatting of the data. Data entered can be included within the exam report.

Reports providing volume, utilization, and performance statistics are available to department managers to assist in planning and management of the radiology department. These reports provide the means of evaluating the performance statistics within and across the entities of the organization, such as institution, department, and section-level comparisons.

The following is a list of reports you can create easily using the inherent Discern Analytics tool.

Actual turnaround time log, Turnaround time report, Exam activity report, Order activity report, Detail activity report, Transcriptionist activity report, Procedure classification report, Repeat analysis report, Medication documentation report, Technical comments report, Mammography report, Workload report, Canceled Exam Report, Wet Read Report, Peer Review Report

The trending functionality within our reporting tool, allows long or short-term trends to be easily identified and analyzed. Discern Analytics also includes the ability to graph statistical information into numerous graphing styles allowing for quick analysis of volume and turnaround time information. You can save these reports for future use.

In the area of patient outcomes, radiology usually contributes data to a health system-wide plan for evaluating outcomes. Cerner's radiology solution offers mammography statistical reports that give outcome statistics by radiologist, and patient age group. The standard indicators are true/false positive/negatives, accuracy, sensitivity, and specificity.

Mammography management is an integral part of the RadNet solution that prevents patients from being lost to follow up, as well as ensuring the specific data collection requirements are met. Follow-up case records are created in RadNet each time a technologist completes a mammography procedure. This eliminates interfaces or dual maintenance of separate databases that can lead to delayed results or lost cases. Data collection can be performed at the time the procedure is completed, at the time of transcription, and at electronic signature by the radiologist. Historical patient medical information is transferred from one visit to the next to eliminate re-entry. Online breast diagram is available to record annotations and study-specific markings. The technologist only needs to enter the information that has changed since the patient's last visit. RadNet's Mammography application provides for patient notification and follow up, medical outcome reporting and Discern Analytics reporting for all BI-RAD codes as well as any client-defined data elements. Overall Breast Composition information and all Required MQSA data exists in the Study tab of the Mammography Case Maintenance window.

When a patient returns for follow-up exams, the system creates a new follow-up period. Data

exchange is transparent across every institution in a multi-facility setting. Access to all previous results and statistical fields is available to the technologist, transcriptionist, and radiologist.

Number of biopsies recommended, number of biopsies performed, number of cancers found, biopsy yield of malignancy, and cancer detection rate are all statistical report fields that can be reported by individual radiologist, all radiologists, and patient age group.

The following reports are available with mammography management:

Follow-up reports, Assessment by patient age group report, Recommendation by patient age group report, Outcome summary report, Summary report by radiologist report, Follow up reports, Assignment based on Pathology Information, Standard Management Report

The Cerner RIS provides for the scheduling of patients, exam rooms, and equipment, as well as the personnel needed to perform the exam. The scheduling system provides interaction or conflict checking, and procedure sequencing to ensure that all procedures are performed in a safe manner. Online inquiries and reports are provided by department, section, exam room, procedure, and patient

Each appointment type can have a procedure code associated, based on database build. The charges would be generated based on the procedure code associated to the appointment type. The same can also be accomplished via a generic appointment type with orders, the user manually selects the order specific to the need, screening versus actual treatment, as determined by the diagnosis.

Scheduling security allows you to associate specific personnel into groups that have defined privileges concerning what actions can be taken within the appointment book. Scheduling security can also determine override capabilities.

Patient Schedule Inquiry can be restricted to a particular scheduled resource or group of scheduled resources, or you can inquire about all appointments for a patient. For those with scheduling security, Patient Schedule Inquiry can be used to schedule, reschedule, cancel, hold for rescheduling, or modify appointments.

For viewing PACS images with the Rad report an exchange of information between Cerner's radiology solution and the PACS via an interface conforms to HL7 standards. A Cerner integrated solution seamlessly displays information for the order, person history, study history, reports and images within the technicians and physicians workflow.

2.1.13 OPERATING ROOM REQUIREMENTS

Provide Proposer's overall summary description of how its proposed EHR System meets the needs of DHS for the Operating Room, pursuant to Section 1.13 (Radiology Room Requirements) of Appendix H (Functional Requirements). Proposer's response for this Section is limited to 1 page.

Cerner's perioperative solution addresses the complex needs of the surgical service by providing a point-of-care, patient-focused solution that encompasses the surgical and anesthesia records, and integrates clinical patient information throughout the perioperative encounter. You can schedule and document multiple surgical procedures within a single case. Resources needed for the case are checked for conflicts during scheduling and can include surgeons, anesthesia providers, rooms, the patient, and schedulable equipment. You can also assign surgical personnel to rooms or cases.

Preference cards consist of pick list items, multiple comment fields, and documentation. These

preference cards can be generic procedure-based, or surgeon and procedure specific. Our user-friendly preference card wizard helps you build general procedure and surgeon-specific preference cards. The wizard assists you in creating preference card pick lists, procedure-specific documentation forms, procedure comments, and surgeon comments. You can create general procedure-level preference cards as a template for building surgeon-specific cards. If your current system contains up-to-date preference cards that can be extracted, we also provide an upload utility that can be used to create your preference card pick lists and comments. Your organization is responsible for the extraction of data from the historical system. Cerner will provide support to populate the extracted data into standard Cerner Upload Templates in order to facilitate a successful upload.

Unique to Cerner, the configuration of documentation on the preference card filters procedure-relevant fields to the clinician for documentation, thereby streamlining the charting process. Structured data, maintained on the preference card, automatically defaults to the patient's documentation when appropriate, allowing for documentation by exception.

When a case is scheduled, the correct preference card(s) is automatically associated with the surgical case based on the procedure(s) scheduled. At a predetermined point in time prior to the day of surgery, the solution automatically generates patient-specific case pick lists from the associated preference cards. These case pick lists automatically pull into case documentation, where you can document by exception and perform any patient-specific modification for materials used during the case.

We provide flexible, focused, forms-based data collection to support your perioperative documentation needs. Our starter set of documentation includes standard case information, case times, case attendees, surgical procedures, delays, counts, prosthetic devices, patient positioning, skin prep, intake/output, transport, laser data, and many others. If needed, your organization can also create forms and fields to fulfill additional specific requirements. Information obtained at the time of scheduling or available from the preference card defaults to the intraoperative record wherever possible, reducing redundant data entry, while simplifying and speeding the documentation process. All case attendees and times are easily recorded within the perioperative record. Charging is accomplished as a by-product of case documentation and supplies used. The tiering logic in Cerner's charge capture solution contains the rules that bill items pass through in order to attach prices and bill codes.

2.1.14 INTENSIVE CARE UNIT REQUIREMENTS

Provide Proposer's overall summary description of how its proposed EHR System meets the needs of DHS for Intensive Care Unit (ICU), pursuant to Section 1.14 (Intensive Care Unit Requirements) of Appendix H (Functional Requirements). Proposer's response for this Section is limited to 1 page.

Our Critical Care solution provides a complete workflow and documentation solution for the entire team including physicians. With CareAware iBus, we provide a true plug-and-play device connectivity into the electronic health record, including patient beds, vital signs monitors, ventilators, anesthesia machines, infusion pumps, and more. Our interactive flowsheets provide the ability to perform prebuilt simple to complex calculations, store the results as discrete data, and create line graphs using numeric data. In addition, the clinicians can use our clinical calculator accessible from the menu. Our Intake & Output flowsheet shows the entire intake and output information available on

a particular patient divided into time ranges that display subtotals as well as display the balance. Our I&O flowsheet can display in chronological and reverse chronological order.

Patient information drives the delivery of care with alerts, prompts and embedded knowledge all focused on the data entered and received about the patient. Diagnoses and medical problems prompt for specific plans of care; vital signs, height, weight, and lab results drive order selection and prompts for appropriate documentation. Our structured enterprisewide repository, of all clinical information, can originate from numerous sources, such as various labs, and is maintained in an easily accessible, standardized format. You can create views grouping the stored data as desired to record and/or view the continuum of care. Our advanced graphing capabilities support the creation of graphs that can display results from intake and output measurements, bedside medical devices, numeric lab results, assessments, and medication dosages such as vasoactive agents. Our graphing supports comparative data using multiple y- axis lines and unique point indicators. Multiple data items in a graph can be viewed together for identification of trends, copy paste into progress notes, and print on demand.

Our system can integrate with bed side point of care equipment providing immediate results. Our point of care solution supports verification of the correct patient, medication, dose, route, and date/time.

2.1.15 REHABILITATION REQUIREMENTS

Provide Proposer's overall summary description of how its proposed EHR System meets the needs of DHS for Rehabilitation, pursuant to Section 1.15 (Rehabilitation Requirements) of Appendix H (Functional Requirements). Proposer's response for this Section is limited to 1 page.

Cerner's Clinical Data Repository is the foundation for a multitude of Cerner point-of-care-specific solutions, including those for home care, physician offices, clinics, acute patient care, critical care, and long-term and rehabilitation services.

For example, we offer Executable Knowledge for both inpatient and outpatient rehabilitation care. Executable Knowledge for Inpatient Rehabilitation is Cerner's interdisciplinary care documentation solution for the adult and pediatric patient population. The content enabling this solution meets the requirements of submission of Inpatient Rehabilitation-Patient Assessment Instrument (IRF-PAI) data to CMS. We developed this content through a partnership with the Rehabilitation Institute of Chicago (RIC). Our Rehabilitation content provides a number of PowerForms, PowerNotes, PowerPlans, and Patient Care Summary Views, as well as an IRF -PAI Data report. Executable Knowledge for Rehabilitation supports the following services, Physical therapy, Occupational therapy, Speech language pathology, Care management, Physician workflow for orders and documentation, and clinician workflow. Furthermore, our outpatient rehabilitation content also supports the following disciplines: vocational, wheelchair and seating, and psychology.

With our rehabilitation content and work flows IRF-PAI data points are collected as a bi-product of documentation and includes built-in reference and interpretations to assure accurate documentation and calculation of the scores for admission and discharge and creates a .csv file with the scores that can be sent to CMS or a third party system for submission.

Charges are captured at the point of care for timely and accurate billing. Our Interdisciplinary documentation includes team conferences, discharge documentation, and interdisciplinary care plans. Team conference documentation is easily completed and pre-populated from previously

documented information. Current and previously documented information auto populates notes and forms for accurate and rapid completion of documentation. Staff and clinicians have easy and direct access to reference text built in various sections within the system for published definitions and standardized procedures. Our content includes many forms and notes specific to rehabilitation including the documentation and calculation of functional independence measures scoring. The form uses branching logic to arrive at the scores for OT, PT, SLP, and Nursing.

For internal physician approvals, the order/requisition can route to specific inboxes in our message center. The provider can approve the request on a specific form or note and resend the approval to the requesting provider/department inboxes. For external physician approvals (external to our system), the order or requisition can print to selected fax devices. The approver can mail or fax the completed form back to the organization. With our Scanning solution, the scanned document can become a permanent part of the medical record and attach to the patient's electronic medical record and the specific rehabilitation encounter. Cerner offers a scanning solution, Document Imaging, but is has not been proposed at this time. Because sizing can vary significantly among clients depending on their existing page volume and/or transition strategy to an EMR, we will need additional information to provide you an accurate cost proposal and transition strategy.

2.1.16 ENTERPRISE MASTER PATIENT INDEX (EMPI) REQUIREMENTS

Provide Proposer's overall summary description of how its proposed EHR System meets the needs of DHS for Enterprise Master Patient Index, pursuant to Section 1.16 (Enterprise Master Patient Index (EMPI) Requirements) of Appendix H (Functional Requirements). Proposer's response for this Section is limited to 1 page.

Cerner's registration and EMPI solutions generate an EMPI number in real-time. Cerner's EMPI solution provides the ability to correlate identifiers from multiple contributors using advanced matching algorithms. The data model stores all person identifiers coming from all contributing sources.

The Combine Tool is used to eliminate duplicate records by combining persons and encounters in the database. You can separate person and encounter records that were combined in error, or move a single encounter from one record to another. An online work queue includes a percent column that reflects the probability of a match. A safety mechanism exists to prevent accidental combining of encounters for two different persons. Cerner's EMPI provides additional probabilistic suggest logic to the search process and scripts/reporting mechanisms used to identify duplicate records. This logic recommends persons for potential combination due to errors in the key data fields or name changes. Recommendations are assigned linkage proximity, (confidence levels) through the use of SOUNDEX and NYSIIS phonetic encoding of first and last names, nickname pools, birth date range qualifiers, and transposition fuzzy logic. User-defined weight tables can be used to calculate the confidence levels. Duplicate record creation is prevented with the initial search of the database for a person or encounter. Depending upon match criteria defined, the search returns potential matches to the person/encounter entered. Auto-combine capabilities and potential match reports are also provided.

The Phonetic Search option, an advanced search algorithm, includes the ability to perform inexact matching of the data provided from the Cerner Millennium common person search through all Cerner Millennium applications, passively through the inbound ADT interface match and reconcile processes. Errors such as misspellings, complex transpositions, name swapping, extra characters, and

missing characters are all taken into consideration. Thresholds for reconciliation of records or posting to the manual queue can be set by contributor system or a general default.

Passive implementation involves the behind the scenes interfacing in both a real-time and batch interface mode. It contains logic to match on local identifiers and reconcile persons across the enterprise. Probabilistic suggest logic can also be implemented. This is reactive, catching duplicates and exceptions after the registration process is complete.

Eligibility verification allows for a transaction to be sent to registration. Cerner supports clearinghouses/payors that are HIPAA compliant using the ANSI 4010/5010 270/271 transaction set or ANSI 5010 270/71 transaction set. The eligibility request is launched on demand via manual intervention. The response returns to your screen and displays the information retrieved from the clearinghouse/payor. Discrete data elements are posted at the person encounter level. The number of insurance company profiles is unlimited.

Cerner supports the Medical Home/Accountable Care Organization with our integrated, patient-centric, evidence-based solutions designed to enhance the workflow of the provider, improving the ability to provide optimal, safe health care. All information, from the first encounter to the last, resides in our longitudinal relational database. As clinicians, staff, and providers collect information, it becomes a permanent part of the patient‘s medical record and is immediately available to other care providers. We provide clinicians with the necessary, most current and relevant medical decision support at the point of care in views that fit clinician workflows. Components include:

*Health Maintenance: Provides prompts around health maintenance needs and provides a proactive approach for assessing patient needs through the year, based on the patient‘s age, procedure, diagnosis, gender, or documented problem.

*Chronic Condition Management: Includes contextual summaries and evidence-based treatment. Population and provider performance reports aggregate performance metrics, permitting physicians to compare and improve their individual clinical performances against standardized performance targets and peer performance.

Our package of solutions enhances the quality of care, decreases costs, and improves overall patient outcomes. Cerner systems provide you with the means to manage your community‘s health care requirements more effectively, efficiently, and transparently than ever.

2.1.17 HEALTH INFORMATION MANAGEMENT (HIM) REQUIREMENTS

Provide Proposer’s overall summary description of how its proposed EHR System meets the needs of DHS for Health Information Management, pursuant to Section 1.17 (Health Information Management (HIM) Requirements) of Appendix H (Functional Requirements). Proposer’s response for this Section is limited to 1 page.

Cerner’s HIM solution focuses on attaining increased productivity and operational management in the medical records department, whether addressing health information needs locally or across your health care organization. Cerner Millennium's single architecture provides an integrated set of functionality committed to benefiting your organization by eliminating redundant data entry and minimizing manual activities, including task management, chart tracking, deficiency analysis, and comprehensive reporting.

Cerner’s HIM solution’s patient deficiency analysis and physician deficiency analysis application

manages the life cycle of the documents needing chart completion, including chart aging, management assignments, tag color, deficiency slips and pull lists. All types of documents can be managed regardless if they are in paper, electronic or scanned format. You can generate form letters notifying health care providers of deficiencies. Your organization designs the content of the letter and enters the qualifying parameters for its recipients. Notification of document deficiencies can be sent to the clinician's inbox and can be automatically completed through recognition of electronic document capture and signature events within PowerChart.

A variety of ways that deficiencies are assigned is provided. Your system administrator defines the time ranges for the chart and document ages that constitute deficiencies, delinquencies, and suspension.

Cerner's HIM solution's chart tracking application is used to manage the paper chart. Chart tracking provides you with the tools to manage the movement of patient chart media throughout your organization. You can create new chart volumes using a system of filing by patient chart, as well as by unit record. You can perform an inquiry to locate a specific chart volume, or record the movement of a group of charts from one location to another. You can select a patient and view the patient's visits with a list of each visit's corresponding chart media, or you can select a location and view a list of all the chart media from various patients currently at the location.

With the chart abstracting application provided in Cerner's HIM solution, you are provided with a wizard tool that allows you to determine what data elements to collect as well as a forms tool that allows you to design the form on which the data elements are captured. There is no limit to the number of user-defined fields allowed. You can identify timeframes for capturing data elements. Additionally, you can define which fields are required and which are optional.

With the chart coding application provided in Cerner's HIM solution, diagnosis, grouper, procedure codes and related information for a patient visit is captured. Chart Coding is integrated with Cerner's Encoder/Grouper powered by OptumInsight. Chart coding provides the basis for initiating the concurrent coding process by having coders select from working diagnoses and procedures identified and passed in from other Cerner solutions. Additionally, Cerner's HIM solution can be interfaced to a third party encoder.

Cerner's HIM solution provides a release of information (ROI) application that is used to manage your ROI process. Our ROI features include the ability to notate received requests, validate the authorization for the release of information, provide historical documentation of the information released, and support for the management of any associated reimbursement receivables. ROI has the ability to track both paper based and electronic documents that have been requested and mailed and allows for specification for which requests apply to accounting of disclosures. Tracking/reporting can be applied to all requests or just those applicable to accounting of disclosure reporting.

Cerner does not offer a transcription solution. Cerner supports a bidirectional transcription interface between the Cerner system and a foreign transcription system.

2.1.18 EMERGENCY DEPARTMENT REQUIREMENTS

Provide Proposer's overall summary description of how its proposed EHR System meets the needs of DHS for Emergency Department, pursuant to Section 1.18 (Emergency Department Requirements) of Appendix H (Functional Requirements). Proposer's response for this Section is limited to 1 page.

Cerner's Emergency Department solution creates an environment of readily accessible information that allows you to track patients and events in your Emergency Department in a timely fashion, particularly during peak flow periods. In designing your system, you can define any number of Emergency Departments and/or number of areas within an Emergency Department.

Our tracking board provides a detailed view of all emergency patients and can include information such as acuity, length of stay, assigned providers, patient location, results generated by ancillary departments, and other information.

With our quick registration, you can immediately begin patient assessment and treatment. For patients who are en route to your facility, our pre-arrival functionality allows you to document patient information without having to create an encounter. This includes information such as name, gender, reason for visit, DOB, age, pre-arrival mode, estimated arrival, and primary care physician. The patient name, gender, and reason for visit populate the tracking board. You can use free text to collect additional information such as vital signs and required orders/protocols. When the patient arrives, you can easily attach the pre-arrival documentation to the patient encounter during registration.

For trauma situations or mass casualties, you can define a quick registration screen that allows the triage nurse to enter multiple patients into the solution and display them on the electronic tracking board immediately so that care is not delayed. Our solution has a virtually unlimited capacity for the number of patients received and allows you to add beds, stretchers, and chairs to the tracking screen on the fly.

Our Emergency Department nursing documentation includes assessment forms, flowsheets, orders, results viewing, medication administration charting, intake and output worksheets, immunization records, clinical notes, data captured from bedside medical devices, and other documentation formats to support your needs. Clinicians can quickly access the patient's history, such as diagnoses, orders, results, documentation, and disposition. Ready access to the complete patient chart and streamlined communications help decrease length of stay and time to diagnosis.

Our Emergency Department physician documentation addresses more than 700 age- and gender-specific presenting problems. Template documentation enables clinicians to address multiple patient complaints while omitting redundant questions. Previously documented information can pull forward into current documentation if desired. For example, you can pull allergies, past medical history, previous medications, into the current visit. Charting is simple, quick, and customizable.

Our solution provides access to current visit information as well as the complete patient history. With the Cerner Millennium architecture, all patient data is stored within a single electronic medical record and is available to all clinicians with the appropriate security. Because Cerner Millennium solutions share a single database, transfer of patients is simplified.

2.1.19 CARDIOLOGY REQUIREMENTS

Provide Proposer's overall summary description of how its proposed EHR System meets the needs of DHS for Cardiology Department, pursuant to Section 1.19 (Cardiology Requirements) of Appendix H (Functional Requirements). Proposer's response for this Section is limited to 1 page.

With the interfacing capabilities built into the Cerner Millennium architecture, Cerner can help you make your cardiology processes smarter, greatly improving care and managing costs.

Major Features of our Cardiology system include:

- Multi resource scheduling
- Clinical documentation
- Physician documentation
- Template driven procedure reports
- Management reporting
- Inventory management
- Order management
- Charge capturing/generation
- Image management
- Electronic medical record
- FSI interfacing
- MDI interfacing
- National registry certification

Cerner's cardiology system is a knowledge system that enhances outcomes measurement. As data is gathered from multiple departments, the Cerner system transforms this data into knowledge, which is used to give the user informed suggestions and report summaries.

Cerner provides a variety of data entry options. Data may be captured discretely in forms via multiple field options such as numeric, grids, pick lists, combo boxes, alpha responses (single select, multi-select), date/time, yes/no, and so on. A free text field can be built into any form to allow capture of free text information within the form. An unlimited number of templates can be defined by your organization within Clinical Notes. Clinical Notes are free text notes, and Smart Templates allow data to be pulled from the clinical data repository into the note. Documentation on custom flowsheets is also supported, in which data may be captured discretely or as free text. We offer cardiology specific templates that include a coronary arteries graphic to assist with documentation of artery occlusions and collateral circulation.

The Cerner system provides multiple options to support notification of clinicians of results within PowerChart. Rules can be defined to send defined providers a message to a pager, inbox, email or printer based on a test results. Test results can be viewed in the flowsheet. Clinicians can also view all new results in a new results folder of the inbox.

2.1.20 MANAGED CARE REQUIREMENTS (OPTIONAL)

Provide Proposer's overall summary description of how its proposed EHR System meets the needs of DHS for Managed Care, pursuant to Section 1.20 (Managed Care Requirements) of Appendix H (Functional Requirements). Proposer's response for this Section is limited to 1 page.

Benefit Administration Services provides the foundation for a robust health plan benefit administration service for members of the employer's health plan. Plan contracts are managed through Benefits Management solution; maintains terms and conditions of relationships; manages information related to insurance plans, member demographics, EDI eligibility verification, detailed coverage and benefit information, referral and authorization management, initiation and storage of

Electronic Data Interchange related to the health plan. EDI transactions are sent via clearinghouse for eligibility verification; status of verification is displayed and stored. History, audit, and reporting tools are available. Information about members is stored and linked to a community-based provider directory and non-network providers for analysis of physician panels.

Cerner's Eligibility and Benefits Verification Service with Registration provide; current eligibility verification functionality, support third-party clearinghouse or individual payor that is HIPAA compliant using ANSI 4010/5010 270/271 or ANSI 5010 270/71 transaction set. Eligibility request can launch on demand, response returns in a window format and displays the information and can print the response. Returned information posts discrete data elements at the person encounter level. Registration initiates an eligibility request using a proprietary structure with a web service and is converted to an X12(ASC) 270 Eligibility Request (covered HIPAA transaction) before routed to payors. Cerner has connectivity to over 700 payors/health plans through three major healthcare clearinghouses. Cerner's Eligibility & Benefits Verification Service offers enhanced EDI including transaction caching, cascading searches, alter request by add service types, and filter response by limiting service types.

Cerner's medical administration functions comprise a care coordination/management approach and includes utilization management, case management, disease/health/condition management components. Disease Management is patient centric including health management across venues and encounters within Cerner including; Health Maintenance, Condition management, Readmission prevention, Care management. Care Management translates clinical and financial data to improve performance, care coordination, efficiency, and outcomes. Included in Care Management; Utilization Management, Discharge Case Management, Denial Avoidance Management, Document Integrity/Quality and a natural language processing (NLP) engine for automated inpatient criteria and identifying a working DRG. Power Chart functionality enables a work list and patient list view.

Health Maintenance allows for proactive and future directed care based on the patient's specific condition(s), diagnoses, demographics, needs and scheduled screenings. Invitations and scheduling of appointments can be done through the Health Maintenance function.

Condition management allows for specific protocol, orders and plans of care in managing a patient's condition across the continuum and encounters. Summaries provide clinicians with a consolidated view of key information and evidence-based treatment algorithms. The Readmission prevention works with the Care Management, plan of care and discharge functions to assist in managing high cost, high volume readmissions. Case managers in the ambulatory setting can then follow through with the patient post discharge and across visits.

Another component that would assist Managed Care programs would be the Cerner Health functions that include wellness advisors, coaches and the Patient portal that would allow communication to and from the patient/provider directly.

2.1.21 ANESTHESIOLOGY REQUIREMENTS (OPTIONAL)

Provide Proposer's overall summary description of how its proposed EHR System meets the needs of DHS for the Anesthesiology Department, pursuant to Section 1.21 (Anesthesiology Requirements) of Appendix H (Functional Requirements). Proposer's response for this Section is limited to 1 page.

Cerner's Anesthesia Management provides complete access to both inpatient and outpatient data

within the patient's electronic chart to help you adequately prepare for cases, create an anesthesia plan, assess risk, set daily priorities, and accurately complete documentation.

Because it operates on the Cerner Millennium architecture, our solution is the only one that unifies anesthesia care with related nursing documentation, and shares information with other Cerner Millennium solutions. An interface is not required.

With our solution, you can obtain and/or review tests and consultations, past medical history, and current medications – which are all necessary to prepare for administering anesthesia. You can also document the proposed anesthesia plan including invasive monitors and special techniques required. You can review drug therapy, as well as order and/or document administration of preoperative medications. The ASA and anesthesia type, once documented in anesthesia, updates the surgery record with the correct information.

Drug and allergy checking provides the ability to check allergies and current medications against a list of drugs built in anesthesia, and alert the provider to those which may cause a drug/allergy or drug/drug reaction. You can hover on the warning icon, click on the tooltip, and launch the interaction window to display the detailed information.

The anesthesia preop note allows for the documentation of anesthesia history, review of systems, allergies, current meds and problems, medical history, family history, social history, physical exam, pain assessment, airway assessment, results review, ASA classification, anesthesia plan, and others.

You can create an anesthesia record for patients receiving any type of anesthesia. Since Cerner Millennium solutions share a single database, patient identification automatically populates and is uniform across the patient's single electronic medical record. Any personnel, actions, device data, medications, input, output, and times can be easily recorded within the time-based view of the intra-anesthesia record.

Providers can document quickly and accurately throughout the procedure. Bedside medical device interfaces default collected values from the patient monitors onto the anesthesia record. These values can be modified if needed for accurate charting. Charting efficiency is increased with point and click, click and drag, touch screen methods, and macros. Macros allow for several events (such as a medication, fluid, or actions) to be documented with a single execution. As part of the macro, you can select to specify the values associated with each event, or leave them blank to document individual values directly on the case record.

You can also record any complications, adverse reactions, or problems that occur, along with the time and description of symptoms, vital signs, treatments provided, and response to treatment.

2.2 APPENDIX H-1 (FUNCTIONAL REQUIREMENTS ATTACHMENT) AND APPENDIX I-1 (TECHNICAL REQUIREMENTS ATTACHMENT)

Affirmatively confirm whether or not Proposer has responded to all the requirements in the checklist in Appendix H-1 (Functional Requirements Attachment) and Appendix I-1 (Technical Requirements Attachment).

Requirement	Yes	No
Proposer has responded to all the requirements in the checklist in Appendix H-1 (Functional Requirements Attachment)	☒	☐

Requirement	Yes	No
Proposer has responded to all the requirements in the checklist in Appendix I-1 (Technical Requirements Attachment)	☒	☐

2.3 APPENDIX I (TECHNICAL REQUIREMENTS)

2.3.1 ARCHITECTURE

Provide Proposer's architecture for the proposed EHR System, pursuant to Section 1.1 (Architecture) of Appendix I (Technical Requirements). Provide any high-level diagrams showing major system components, their interrelationships, and supporting diagrams and materials in response to this Section as Attachment I (Architecture). Proposer's response for this Section is limited to 8 pages.

Our architecture is a multi-tier, client/server system. Core processing (security, messaging, etc.) is separated from varied application servers, which are separate from client presentation devices. Our architecture is comprised of Presentation Software – using Microsoft Windows and Millennium Application Software, and Data Management Software – using Oracle's relational database management system. Cerner developed our distributed transaction, client/server architecture to provide higher levels of security, data integrity, greater reliability, load balancing, scalability, and better performance than that of distributed or clustered hardware.

With Cerner's system design, rather than the Windows Client application directly accessing the database, it communicates with a Millennium application server, which in turn communicates with the database. Application server communications (sometimes referred to as middleware) is the key to the high performance processing needs of physicians, nurses, and other providers in clinical care settings.

Multi-tiered, client/server systems can support thousands of concurrent users and is therefore scalable to full enterprise or nationwide roll out. Multi-tiered, client/server architecture allows you to both distribute workload across multiple servers, as well as better manage system-wide growth and performance. Additionally, a multi-tiered architecture is a critical component of adapting Web services technology to the broader audience. Application solutions that are not based on an N-tiered model will have to be redesigned to take advantage of this latest advance in technology in a graceful and cost efficient manner.

Our solutions can be deployed on a variety of hardware and operating system platforms. The client component is deployed on a Microsoft Windows 32 bit operating system; for example, Windows XP, Windows Vista, Windows 7 and/or Windows Terminal server with Citrix Presentation Server. The distributed application servers are deployed on Windows Server 2003 or Server 2008 32 bit or 64 bit. The database engine servers are currently deployed on 64 bit IBM AIX, 64 bit HP's HP-UX, or Red Hat Enterprise Linux operating systems.

Cerner assumes all responsibility for hardware in the data center with the Remote Hosting Option (RHO) model. Your institution still owns/manages your desktops and peripherals at your location. For Thin and Fat client requirements, please refer to the Cerner_Workstation_Requirements.pdf located in the Additional Reference Material section. Mobile device support falls under three categories:

Mobile PC [Devices] on rolling carts or wireless laptops. The deployment of Millennium on these

kinds of devices is typically the placement of a shortcut or icon on the desktop or toolbar that launches a Citrix session. Clients can use any technique to place such shortcut/icon that Windows supports.

Fat client with wireless card. Client may use any technique compatible with Windows to place the Cerner code on the device.

For PDA type devices [such as Motorola, Honeywell, Hand Held Products, etc.] that have embedded radios and bar code readers, Cerner offers two applications: one for nursing and meds administration and another for specimen collection. Both of these applications are very different from the Windows versions which offer equivalent and in some cases additional functionality. Cerner mobile solutions are written specifically for the attributes and real estate of the mobile device and the work flow. To manage the software component of the PDA device, Cerner recommends and supports the use of SOTI MobiControl which uses a server to store the code that is eventually pushed to the physical device. http://www.soti.net/

For smart phones, IPhone, Blackberry, IPAD, and other web enabled end user devices, Cerner's strategy is based on HTML and other web standards. Currently, these devices can launch a number of web based Millennium patient summary views and dashboards which are specifically designed for a "single click" view of the patient's current condition.

Currently Cerner supports IBM AIX operating system on Power servers, HP's HP-UX operating system on Integrity servers, Microsoft Windows Server on Intel-based servers, and Linux on Intel and AMD based servers, depending on the solution being utilized. With the remote hosting option Cerner will manage the deployment of the database server on the platform of our choosing.

Our objective is to design a system architecture that meets the needs of your current processing environment while planning for potential growth and expansion requirements. We focus on specific technology attributes, such as performance, availability, scalability, and integration, when determining the best possible system solution. In selecting a technology platform for use with our applications, Cerner evaluates the extent to which it is capable of scaling. We currently configure systems using data center equipment from HP and IBM. Both HP and IBM design and manufacture systems that scale well.

With our Remote Hosted Option (RHO), Cerner will scale the system as needed. A 10% or 20% increase in users will not affect performance. Cerner's multi-tiered, client/server systems can support thousands of concurrent users and is therefore scalable to full enterprise or nationwide roll out.

Cerner builds overhead allowances into production systems through our standard redundancy configurations. We can also take advantage of non-production system resources for utilization in the event of an emergency and usage spikes

Cerner no longer publishes documentation using the old paradigm of writing static documents and distributing these to clients in hard copy or even electronic form. Cerner has adapted social networking technology to communicate and publish all types of solution documentation to clients licensing our various solutions.

You can create meaningful customized views of information from the clinical data repository to support the vast needs of all types of roles, areas and user level preferences. Summary screens, predefined views, flowsheets, patient lists, Message Center, orders, interactive view, structured documentation templates, pathways, problem list, clinical, documentation forms, clinical summary and task list are all examples of views that can be customized by area and/ or role to meet your

needs. For example, your organization can build documentation forms to support the capture of all pertinent data describing the patient event or condition in a clear, easy-to-complete format. Your organization can define the discrete data fields within the forms and the appearance of the forms, including sections of the form and layout of the data fields. Data fields can be defined as required fields

Remote user access to a Cerner Millennium domain can be provided with Windows standard Dial-up Networking utility and third-party products such as Microsoft's Remote Access Server (RAS) or any other technology that provides a TCP/IP network connection between the Cerner client code and the Cerner server code.

Cerner designs high availability into each system using component redundancy. For maximum reliability, we are able to offer clustered solutions that provide extremely high levels of availability and continuous access for critical data and applications. For clients requesting high availability solutions, we take advantage of multi-system clustering technology in combination with software features of Cerner Millennium that allow us to provide the necessary application recovery on a clustered machine. Cerner has selected HP ServiceGuard for HP-UX and IBM PowerHA for AIX to provide the best operating system capabilities for automatically reconfiguring the available replicated resources when hardware failures or outages occur. In the event of a complete failure of a cluster, the failover or restart of the Cerner Millennium applications may be accomplished on a surviving node in the cluster. This failover and recovery/restart is generated through the modifications of supplied scripts to meet our clients' application requirements.

For high availability in the storage farm, Cerner Millennium is able to utilize multiple paths offered in the latest switched fiber channel storage area network and virtual storage arrays. All recorded information can be protected by RAID 1, RAID 0+1, or RAID 5. Cerner uses a combination of these technologies and hot spare disk drives to provide a balance of performance, reliability, and availability.

For the most demanding high availability environments, Cerner also offers solutions that can include standby databases and disaster tolerance.

Cerner uses a variety of monitoring tools such as Cerner Olympus and specific knowledge modules to proactively monitor the system around the clock.

Cerner Millennium is an online, real-time system that is designed for continuous operation. No routine downtime is required for backups, reporting, or other day to day activities. Downtime may be required for major system upgrades such as an Oracle upgrade. The client can schedule upgrades at their convenience.

Telemetry data is available for client viewing via Cerner's Lights On Dashboard Reporting System. Lights On is a systematic approach to improving system stability through collective knowledge and proven practices acquired through the continual monitoring and management of the Cerner Millennium environments by CernerWorks (Cerner's remote hosting organization). This Cerner led engagement will install, configure, and demonstrate the use of a set of tools designed to provide additional information about your production Cerner Millennium technical environment.

Cerner's Response Time Measurement System (RTMS) for Millennium provides the ability to view and trend application response times from the time a user clicks a button in a Millennium application, to the time the transaction is processed and focus returned to the user. These RTMS timers capture the amount of time that transactions are processed by middleware or database components – the user's wait time experience. The RTMS timers are written to flat files on each

application back-end server and can be viewed in several ways:

• A standalone RTMS viewer provided by Cerner to its clients, that allows viewing of the raw RTMS data

• Cerner Olympus, which allows for viewing, trending, sorting, and searching on the raw RTMS data

• Cerner Lights On Network, which is populated nightly for each client and shows the long-term trending statistics for each client's RTMS data.

Cerner has selected HP ServiceGuard for HP-UX and IBM PowerHA for AIX to provide the best operating system capabilities for automatically reconfiguring the available replicated resources when hardware failures or outages occur.

For clients who take advantage of Cerner's Remote Hosting option, Cerner's primary defense against unplanned outages is prevention. Cerner utilizes a state-of-the-art technology center to host Cerner Millennium systems, complete with multiple power feeds from two different power generating sources, backed up by multiple UPSs, backed up by multiple generators with enough fuel storage capacity to run for several days. Likewise, for telecommunications Cerner utilizes redundant carriers and installs redundant circuits (each circuit is sized to carry the full load). Our technology center is fed by 4 different central offices and is fed by 2 different SONET rings. Cerner does not rely on Internet connectivity for any mission-critical functions due to its variations in availability, stability, and performance; however, in the unlikely event the dedicated frame circuits are unavailable, the Internet can be used as a backup.

Also available as an optional service, for an additional fee, are Hot Site Disaster Recovery services. Hot Site Disaster Recovery services add an additional layer of redundancy and protection. With this service, a mirrored system is set up in an alternate data center, constantly being updated by transactions from the primary production database. In the event the primary production system is unavailable for any reason, the Hot Site Disaster Recovery system can be activated quickly as the primary system, providing even greater protection.

Software components are located in Appendix Q (Pricing) document. Cerner's application tier is split across the PC client and host server cluster. The client is programmed in Visual Basic, Visual C, and Java. These languages utilize many Microsoft Foundation classes, COM, and OCX objects. On the host cluster where the application servers and Oracle database resides, Cerner programs in C++, enterprise Java, and Cerner's adhoc report writing tool's scripting language. For our Internet browser development, we use Dynamic HTML, Java Script, and enterprise Java. Cerner uses Oracle 11g as our RDMBS. The Cerner Message Bus (CMB) is our inter-server/inter-nodal communications medium for client/server applications. It is a message passing middleware, which ensures reliable information exchange using a request-reply structure. Our supplied reporting tool is Discern. Discern Explorer is a full-featured, fourth-generation programming language, patterned after Structured Query Language (SQL). All Cerner Millennium applications use Discern Explorer to select, insert, update, and delete data. The planned

With the remote hosted option, clients will connect through Citrix options. Bandwidth Formulas (for network planning purposes only):

• Medical Device Instruments:

The formula listed below is the minimum requirement for instrument interfaces:

Number of Instruments * 1.2 Kilobits/second

Example: 14 instruments * 1.2 = 16.8 Kilobits/second

- Barcode Printers:

The formula listed below is the minimum requirement for bar code printers:

Number of Bar Code Printers * 1.5 Kilobits/second

Example: 10 Bar Code Printers * 1.5 = 15 Kilobits/second

- Laser Printers:

The formula listed below is the minimum requirement for laser printers:

Number of Postscript Pages/minute * 1.3 Kilobits/second

Example: Four 17 page per minute laser printers

Four * 17 pages/minute * 1.3 Kilobits/second = 88.4 Kilobits/second

- Microsoft Windows Devices for thick client PC deployments of Cerner Millennium:

The formula listed below is the minimum requirement for PCs running Cerner solutions on Microsoft Windows:

Number of Microsoft Windows devices * 32 Kilobits/second

Example: 40 Microsoft Windows devices * 32 = 1280 Kilobits/second

- Microsoft Windows Devices: for thin client PC deployments of Cerner Millennium using Citrix:

The formula listed below is the minimum requirement for PCs running Cerner on Microsoft Windows:

Number of Microsoft Windows thin devices * 20 Kilobits/second

Example: 40 Microsoft Windows devices * 20 = 800 Kilobits/second

The formulas above are averages that can be helpful in estimating individual network bandwidth requirements for any Cerner Millennium Microsoft Windows-based application. The client agrees to provide a minimum of 128 Kilobits/second bandwidth per circuit on any given segment end-to-end.

With our optional Application Management Service (AMS) offering, County would submit requested changes to Cerner. Cerner would make the modifications to the system as needed. If the optional offering is not selected, County would be required to make the changes to business rules.

2.3.2 INFORMATION MANAGEMENT

Provide Proposer's proposed information management strategy for the EHR System, pursuant to Section 1.2 (Information Management) of Appendix I (Technical Requirements). Proposer's response for this Section is limited to 2 pages.

Oracle 11g is the current standard

Two levels of storage are supported. The first is the use of the SAN storage configured in an applicable RAID format followed by offline storage as tape, DVD, CD or MOD.

Please refer to section 3.1 of Exhibit N.2-1

Contractor will utilize its own back-up and recovery policy. Policy can be provided upon request.

Three primary environments will be configured to support your Cerner System:

- Certification -- Test changes prior to implementing in production
- Production -- Daily transactions

- Training -- Training is typically a mirror of production

With Cerner's System Design, there is no need to purge or archive patient result data.

Since patient result data is not purged from the Cerner Millennium database, users at your organization have immediate access to the entire patient record, including information from current and past visits. The workflow tables containing data that is no longer required can be purged according to specific selections that the client can make.

Cerner's DM Purge Job Manager is the tool we use to purge that data using user input as criteria. This tool uses purge templates that are created for each Millennium solution that is given client defined criteria to determine what data is to be purged. Cerner Millennium Operations allow clients to schedule when purge templates defined in DM Purge Job Manager will execute. Each and every purge template in the DM Purge Job Manager will have a section in the DM Purge Job Manager help file describing the following:

- High level description of information that will be purged
- Tables impacted by the purge
- Details on criterion that must be configured

Cerner is considered an open system and can readily communicate with foreign systems by either sending or receiving data. Most of the data exchange is accomplished via electronic interfaces, but data can be extracted from the Cerner Millennium database and sent in an agreed upon format to a foreign system or database. Such an example would be data exportation to a comma-separated value file. All data will be transported under encrypted pathways.

Cerner applications utilize an Oracle Relational database system and gain the benefit of Oracle's row level locking capability, which allows multiple users to access and view a patient's chart concurrently. In the event that more than one user attempts to update the same field at the same time, the system will lock the field and allow one user to make their change, and then unlock it for the next user to change. The changes are sequential rather than concurrent, averting the situation of a locked chart. This feature works regardless of the type of change being made.

2.3.3 SYSTEM SECURITY

Provide Proposer's proposed security strategy for the EHR System pursuant to Section 1.3 (System Security) of Appendix I (Technical Requirements). Proposer's response for this Section is limited to 2 pages.

Position-level security logic, sets permission to access an application or a task within an application, or a task group based on a user's position. Positions are defined for every user in the system.

A user is assigned to a position through the user maintenance tool. A user's position is designed to include all the tasks that might be needed to perform his or her job. Multiple users with similar job requirements can be associated with a single position, which aids in the maintenance of security profiles. Only users with appropriate privileges are granted access to the user maintenance tool.

Positions are created as reference data. Employee position assignments within the system may or may not be similar to employee titles within an organization. All positions associated with an application group have the same access to an application, although application groups can be edited to grant/revoke access at any time.

The Cerner Millennium architecture provides access at the individual task level. Each function that a user can perform within a Cerner Millennium application is defined as a task, and each of these tasks can be included or excluded from the application group associated with a user's position. This enables flexibility within the system, as well as improving ease of maintenance.

For applications involved in ancillary departments, access to data is managed through tasks (for the data types accessible) and through the association of users to the organization where patients are registered or admitted for service (for access to visits). Ancillary users can further be limited to access to only certain performing sites where they are assigned to work. Access to specific data elements is further managed through data privileges for direct patient care applications.

Cerner Millennium architecture provides access at the individual task level. Each function that a user can perform within a Cerner Millennium application is defined as a task and each of these tasks can be included or excluded from a user's position. This enables flexibility within the system, as well as improving ease of maintenance. Access to patient information is role based, on a need to know basis. System support and maintenance personnel do not have access to patient information.

With our optional Application Management Service (AMS) offering, County would submit requested changes to Cerner. Cerner would make the modifications to the system as needed. If the optional offering is not selected, County would be required to make the changes to business rules.

2.3.4 HOSTING

Provide Proposer's proposed hosting strategy for the management, security and performance of the computing systems required to operate the EHR System pursuant to Section 1.4 (Hosting) of Appendix I (Technical Requirements). Proposer's response for this Section is limited to 5 pages.

When employing our Remote Hosted Option (RHO), CernerWorks acts as the client's remote IT department, providing the functionality, management, and support of Cerner's solutions while minimizing the client's investment of capital and human resources. RHO is available to all Cerner clients.

An RHO client purchases Cerner software, as well as their desktops and peripherals, and contracts with CernerWorks for customer support and implementation services. The organization also contracts for the use of system hardware and related network services in one of our Cerner Technology Centers (CTC). The CTC provides the hardware, secure hosting, connectivity, and IT expertise that keeps the systems running.

Application processing and data storage is hosted at the CTC and is maintained by a staff of Cerner system experts. CernerWorks takes responsibility for system maintenance, backups, upgrades, and client support. Continuous system monitoring identifies potential issues before they arise and ensures optimum system performance.

RHO provides superior performance, security, reliability, and scalability with a lower up-front financial commitment from the client by combining hardware, networking technologies, and technical expertise. It allows healthcare organizations to leverage the most sophisticated and powerful IT solutions available today. RHO can provide significant cost savings and competitive advantages. It helps avoid depreciation and obsolescence and frees your IT department to focus on core issues.

Cerner's RHO solution provides the following:

- Necessary technology skill sets
- Cold site disaster recovery
- System redundancy
- Rapid addition of clinical sites/scalability
- Allows business focus on "core competency"
- Guaranteed system availability and performance

For remote hosting, Contractor does not calculate support availability; however, system availability is calculated per section 4.3 of Exhibit N.2-1.The Immediate Response Center is available 24x7x365 for critical issues.

Contractor will not agree to an SLA of 99.99%, Contractor will agree to a maximum of 99.9%, reference section 4.3 of Exhibit N.2-1; Contractor does not have information which can be shared as part of an RFP; however, once an NDA is in place, then details are capable of being provided validating Contractor's ability to maintain 99.9% system availability.

Severity levels and commensurate response times related to performance issues, incidents, and loss of service are not determined during the proposal process. These items are discussed during contract negotiations.

Our Monitoring tool, Olympus, provides many functions to monitor the overall health of the system at the different layers. CernerWorks will provide monthly up-time reporting statistics.

Multiple layers of physical security exist, beginning with the off-site location of the alternate data center. The structure has perimeter security, facility security, and biometric authentication security throughout. More advanced whitepapers can be provided that elaborate on physical security. The Cerner database is secured through the Cerner application servers with end users accessing the Cerner application server rather than the database directly. We rely on Oracle security for the central database to provide security to the data in Oracle.

Methodology: All systems not specifically identified in the "Exclusions" portion of the RHO backup policy will be backed up on a daily basis to minimize the exposure to loss of mission critical or project sensitive data.

Systems and Utilities

Open VMS, Windows, and Linux: An appropriate backup solution will be used to perform backup and recovery operations of operating system and non-operating system data.

AIX: AIX backup utilities are used to perform mksysb (image) backup and recovery of AIX Operating Systems. An appropriate backup solution will be used to perform backup and recovery on all systems configuration information and non-operating system data.

HPUX: HPUX backup utility mk_net_recover will be used to perform a backup and recovery of the HPUX Operating Systems. An appropriate backup solution will be used to perform backup and recovery on all systems configuration information and non-operating system data.

Oracle: Oracle RMAN utility will be used to perform database backup and recovery of Oracle databases. The RMAN utility will integrate with an appropriate backup solution to provide a transport to backup media.

Backup Window: Backups (full or incremental) will be conducted daily during off-peak business hours in the client's time zone. Backup jobs will be staggered throughout the window to ensure optimal performance and reliability.

Maintenance Window: A weekly window will be scheduled to perform maintenance on the backup system. Scheduled restores will not take place during this window; however, emergency requests will be evaluated as requested.

Full Backup: Full backups will be conducted a minimum of once per week.

Incremental Backup: Incremental backups will be conducted daily with the exception of the day when a full backup is conducted.

On-Demand Backup: On-demand backups, outside of the normal schedule, can be conducted to support project work with prior approval from the Infrastructure Services team.

Cerner's Kansas City data center is a 113,000 square-foot facility; housing 3 separate 7,500 square foot Data Centers, and is a dual-fed, redundant data operation. Cerner's Lee's Summit data center is a 70,000+ square-foot, dual-fed, redundant data operation. Both facilities operate under supervision 24 hours a day, 365 days a year and are intended to provide uninterrupted power and service for Cerner clients in a secure environment, specifically designed to eliminate client downtime. Contractor ensures redundancy through High Availability of production system servers, also reference section 3.2 of Exhibit N.1-1. Transference/fail-over to Contractor's alternate datacenter is pendant upon County contracting for a Disaster Recovery service. If contracted for DR, Contractor and County will establish the process which will be followed and the circumstances dictating a failover occur.

With our Remote Hosted Option (RHO), your production system is under constant monitoring. Our operations staff is alerted in the event of a problem via an automated toolset. If the issue cannot be resolved promptly, Cerner escalates the issue on your behalf at the 30 minute mark with our internal Immediate Response Center (IRC) and, if appropriate, engages a special escalation team. If you feel you need or warrant additional service than what is being offered, Cerner offers several channels for you to escalate the issue. The Client Relationship Executive (CRE) has ultimate responsibility to your organization. Your CRE is kept abreast of any situations and is your initial point of escalation for you. In addition, there is a geography-based leadership team available to you when needed to handle any service issue you might have, including a Service Delivery Manager who is assigned to your facility.

Cerner installs the service packages in coordination with the client's application management team (or Cerner Consulting). There are several points of monitoring within the hosted solution that we provide. At a high level, both front-end and back-end servers are monitored for utilization, networks are monitored for dropped packet rate and round-trip latency, databases are monitored, interfaces queue depths are monitored, and key aspects of the applications themselves are monitored. Automated response systems and our 24x7 support teams are in place to respond to various alarms.

Cerner publishes major releases every 1-2 years. We offer monthly support updates for our releases. Cerner installs the service packages in coordination with the client's application management team (or Cerner Consulting). Your organization is responsible for testing the new release/update. Typical procedures for moving updated software, such as new service packages, to production require the software to be tested in a non-production domain. Once all software changes have been tested the software is moved from the certification domain to the production domain. Each software package has specific instructions included regarding how the software should be rolled out to the production domain, should the need arise.

Any Change Request that will result in a deviation in the agreed upon design, or additional code to be developed or loaded into the any of the secure BUILD/TRAIN/CERT/PROD environments will be analyzed through the Change Control Process outlined below.

Objectives:

- Ensure consistency in process of documenting change requests

- Define standards for reviewing requests

- Provide mechanism for impact assessment

- Determine necessary approvals needed for sign-off

- To document when change occurred, who executed the change and measures that were taken to ensure the change was successfully applied.

The process steps that will be utilized during the project are provided below.

1. The client identifies an issue or necessary change. They fill out the change request form, which includes an explanation of the need/issue, description/reference number, a proposed solution if known, and suggested integration points, which will be verified by the Cerner Solution Delivery Consultant (SDC).

2. The change request forms are collected and discussed during a weekly team meeting surrounding change control issues. Agenda items for this meeting will include prioritizing issues and discussing any points of integration. This meeting will determine whether these changes will be approved or not approved. It is an internal client meeting with the Cerner Integration Architect in attendance.

3. The approved change requests are tracked on the Change Request Log spreadsheet and then logged as a Service Request to the appropriate Cerner Solution Team via Navigator (our online service request tracking tool). After maintenance training, the Cerner SDC will notify the Client to make the Cerner approved changes.

4. Any additional costs, work effort, scope changes, or timeline impacts will be documented in the Service Request. The Cerner SDC will follow the escalation management process for such issues.

5. The Cerner SDC will communicate to the Client the resolution and the projected implementation timeframe.

6. The Cerner SDC or Client will institute the change in the appropriate environment (BUILD, CERT).

7. The Client Team Leader will be responsible for testing the change according to Unit/System/Integration validation standards laid down in the Test Plan.

8. Once tested, Cerner or Client will move the change to the appropriate domain. The Cerner SDC will follow the Production Environment Change Authorization (PECA) process if the change is needed in the production domain.

9. The Cerner SDC updates the issue/resolution on the SR. The Client updates the issue/resolution on the Change Request Log.

10. The Change Request Log is to be reviewed on a weekly basis by the Cerner Integration Architect and the Client.

11. The Client Team Leader will be responsible for informing the appropriate people regarding training issues, change updates to facility staff, as it relates to the completed change.

12. The Client will retain the paper Change Request forms, along with any supporting documentation, emails, or screen shots (before and after) as a record of change. The Change Request Log will be retained on SharePoint.

Your organization will define needed credentials, and delete specific accounts. Our AMS Service can offer help with any needed additional support.

Discern Explorer can generate output file in many formats including text output that could be imported into Word, and .csv that can be imported into Excel. You can also create .pdf and other types of output.

Should County need to migrate off of the proposed EHR system, we will work with you to establish a data conversion plan. Depending on the other vendor's requirements, Cerner can either send information via HL7 or download table data to .csv that can be imported into Excel.

We have real-time monitoring of the network for intrusion detection. Any breaches or vulnerabilities are acted upon in accordance with their risk and potential impact. Intrusion detection is a core component of the data center infrastructure and data traffic is continually monitored for attacks and anomalies.

Vendor patches are analyzed upon announcement. If the vulnerability is identified as a critical risk factor, and the vulnerability exists within our environment, patch deployment takes place immediately. Otherwise, deployment is deferred until routine distributions are performed.

Information regarding systematic enforcement of access controls is provided in Sections 3.3 and 3.4 of Exhibit N.1-1.

With Cerner's Remote Hosting Option, as opposed to an ASP model, client environments are secured using firewall and router access control layers separating clients into different PVLANS on separate secured systems. Within each system, authorizations to data are managed by application level security. Account information and privileges are stored within the client's database.

P2 Sentinel is our preferred auditing tool for this type of incident.

2.3.5 INTERFACES

Provide Proposer's proposed interface strategy for the EHR System pursuant to Section 1.5 (Interfaces) of Appendix I (Technical Requirements). Proposer's response for this Section is limited to 3 pages.

Our interfaces are based upon the Universal Interface Specifications documents which are designed from the various chapters of the HL7 standard. We do not implement off-the-shelf interfaces for a particular vendor/product, but generic interfaces that are configurable and may require some custom scripting. A specification meeting is held early in the implementation phase to discuss functionality of each specific interface. The main objective of the specification meeting is to create a specification document that can be used as a blueprint by the FSI System Analyst (FSI-SA) and as a site-specific reference for our clients. The meeting will detail configurable settings associated with each interface for the client. In some cases, we will implement an ANSI X.12 interface or perhaps a custom interface, if required.Our previous clients utilize the same formats listed above.

Cerner applications use one or more interfaces to communicate with other foreign (non-Cerner) systems that exist within a healthcare organization or to send or receive data from a foreign entity. A specific area in a healthcare organization such as patient registration generally has a "master system" which collects all the data that is required to admit or register the person, such as demographics, insurance and guarantor data, allergies, and so forth. Other systems in various ancillary areas within this healthcare setting have a need to know this information in a timely manner so they can place orders, perform procedures, administer drugs, and so forth.

Interfaces implemented for a specific client are determined by the mix of Cerner and non-Cerner

systems and the data that needs to be exchanged among these systems.

Cerner has implemented approximately 6,000 Millennium interfaces with the major suppliers in the healthcare marketplace for the following types of systems:

- Admission, Discharge, Transfer, (ADT)
- IT or HIS
- Patient care (including medical devices)
- Scheduling
- Physician office
- Financial
- Eligibility checking (stored at the encounter level)
- Transcription
- Coding/Abstracting
- Dietary
- Radiology
- PACs (via Mitra Broker)
- Laboratory
- Reference labs
- Pharmacy dispensing and robotics
- Laboratory devices (instruments) and robotics
- Supply chain

Our integration engine currently meets basic interface monitoring, routing, and customization requirements. Our monitoring tools enable users to easily start, stop, and troubleshoot interface problems. Messages are saved for investigation and can be replayed as needed.

System Integration Manager is a Cerner GUI tool that provides easy access to build, configure, and troubleshoot interfaces. This includes the ability to view message content, errors, and the timestamp.

Sometimes, the most difficult interface problem Cerner faces is an interface specification language barrier between the Cerner system and the foreign system. Cerner may have different terminology for the same issue, or similar terminology for different issues. Another challenge is insuring client has adequate staffing committed to perform the testing required. Cerner has provided the recommended client staffing that is needed for the project to insure success.

Another issue can occur with the timing of the implementation.Too many times we are asked to make the interfaces work before there is a sufficient build of the database on either side(It is important to insure that there is a sufficient build of the testing databases on both sides of the interfaces to insure that the interfaces can be tested properly in integration testing).

Cerner continually reviews their processes to make them better. We continue to add education training programs, literature, and take client advice into consideration to improve our processes.

Cerner's integration strategy uses the same three-layer architecture structure as the other modules of the Millennium system. Our suite of interface software, known as Open Port, can run on the same server as other Millennium applications, or it can run on a separate server, depending on the

configuration of a client system. No third party software is required, but if the client has a third party interface engine, such as eGate, Cerner's interfaces can communicate with it, by sending and receiving transactions.

Cerner's CareAware iBus is the evolution of BMDI's, creating a continuous available and fault tolerant architecture, to support the complete integration of bedside medical devices.

We designed our device architecture to bridge the gap between medical devices and patient information by connecting information from various monitoring devices to the clinician workflow and electronic medical record. As a result, clients can achieve the following:

- Streamlined nursing workflow by incorporating documentation at the point of care
- Consolidated medical device information to support patient safety
- Platform independent, if the devices push data via a network connection or serial port, we can consume data from the device.
- Two-way communication depends on the monitoring medical devices ability to send and receive data.
- Support at least 1000 device connections at the same time without problems
- True plug-and-play device connectivity into the electronic health record

2.3.6 REPORTING APPROACH

Provide Proposer's proposed reporting and analysis capabilities pursuant to Section 1.6 (Reporting Approach) of Appendix I (Technical Requirements). Proposer's response for this Section is limited to 2 pages.

Discern Explorer is a full-featured, fourth-generation programming language, patterned after Structured Query Language (SQL); therefore, it includes a wide range of powerful commands. Discern Explorer provides over 250 built-in functions and commands specifically written for Cerner Millennium transactions.

All data captured and stored in Cerner Millennium can be accessed using Discern Explorer since all Cerner Millennium solutions use Discern Explorer to write to the Cerner Millennium database. This provides unlimited possibilities for using Discern Explorer to query and report on the Cerner Millennium data. With Discern Explorer you can create anything from simple ad hoc queries, to formatted reports, to complex programs that execute multiple queries, create temporary tables, combine information from multiple queries, flex queries based on user input, create complex expressions, calculate aggregates, and everything in between. The Discern Explorer language is an SQL based language that is proprietary.

Using Discern Explorer, you can extract user-selected information from Cerner Millennium data. You can create extract files in practically any format. Extract files in common formats like comma separated (.csv), fixed column width, and tab or character delimited, are often created using Discern Explorer. The output of Discern Explorer queries can be sent to files such as ASCII, PostScript, .PDF, HTML, as well as label printers such as Zebra and Intermec, and other common file formats. The data then can be imported into other PC applications that use third-party spreadsheet, database, or statistical packages. Discern Explorer allows creation of graphs directly in a report using the Layout Builder. This function eliminates the need to export the data into a third party tool to create graphs.

You can still export the data to third party tools and create graphs if desired.

There are two options to meet the reporting standards required by CCHIT. First, CCL based reports that can be used to meet the reporting needs. These are not very detailed but meet CCHIT requirements. Second, our Audit logging solution, P2Sentinel, provides more detailed reports that meet CCHIT requirements.

Cerner believes that oversight by regulatory agencies is important for ensuring that healthcare environments are reasonably free of risk to patients, visitors, and employees. Cerner is committed to meeting the applicable requirements established by federal law or other applicable regulations. The licensed software will, upon first productive use and during the term of the agreement (so long as your organization is on support), enable your organization to meet the requirements of any applicable federal or state laws in effect on the effective date.

Your organization can use Discern Explorer to write custom reports using any discreet data in the Millennium system.

Cerner has developed a proactive monitoring tool called the Lights On Network. Lights On is a systematic approach to improving system stability through collective knowledge and proven practices acquired through the continual monitoring and management of the Cerner Millennium environments by CernerWorks (Cerner's remote hosting organization).

Our data structure is a relational database, RDBMS. We provide data dictionary information and tools for researching the data models.

The output of Discern Explorer queries can be displayed on the screen and then saved as a comma separated (.csv) file for importing into PC applications. You can create extract files in practically any format using Discern Explorer.

All data in the Cerner Millennium system or custom tables created by your organization can be used in Discern Explorer ad hoc queries. These ad hoc queries can be stored in a file for future use; they also can be created as compiled programs that can be accessed and executed as required.

2.4 APPENDIX J (IMPLEMENTATION REQUIREMENTS)

2.4.1 PROJECT MANAGEMENT

(i) Methodologies and Tools

Provide Proposer's proposed project management methodology for the EHR project, pursuant to Section 1.1(a) (Methodologies and Tools) of Appendix J (Implementation Requirements). Proposer's response for this Section is limited to 4 pages.

Cerner's implementation methodology, MethodM, is our approach to working with clients to deliver value through our Cerner Millennium solutions. MethodM has been used in healthcare organizations ranging in size from single-doctor practices, to health systems, to entire countries. This modular methodology draws upon proven practices from a host of past client experiences. With it, a team is able to deliver the intended outcomes of a project with discipline, predictability and efficiency. But the utility of MethodM goes far beyond your initial deployment. As you maintain, upgrade, and enhance Cerner Millennium, MethodM will continue to improve the quality of outcomes and lower

your total cost of ownership.

Cerner MethodM is an integrated platform, providing these important features:

1. Outcomes-based approach
2. Aligning with your organizational imperatives
3. Disciplined and predictable processes
4. Providing the right resource at the right time
5. Leveraged client interaction and experience
6. Proven to reduce risk and variability
7. A logical continuum
8. From procurement to clinical transformation

The benefits of MethodM as an implementation methodology include the following:

1. Predictable/Structured Methodology: Cerner's professional services methodology, MethodM, bolstered by 30-plus years of implementation experience, offers a fixed-fee pricing model- one that provides our clients with predictable cost of ownership. Cerner's methodology was established to support the execution of a standardized, event-based implementation approach to deliver predictable results and to accelerate the speed at which value can be achieved from Cerner solutions.

Our proven approach utilizes an event-based, disciplined methodology with prescribed design choices. Milestones have clear prerequisites and objectives which result in homework deliverables. By isolating sources of project variance and by creating appropriate controls, the event-based methodology ensures a predictable project experience. Predictability stems from a clearly defined project scope that leverages standard content.

2. Better Outcomes: MethodM enables your team to draw upon the collective experiences gained from more than 1,500 clients, over 5,000 conversions, and 2,100 Cerner consultants. No other health care technology provider has invested as much to bring you real-time access to such practical subject matter- expertise. These lessons-learned are integrated into a rich methodology allowing you to leverage that depth of knowledge—every day.

3. Lower Total Cost: The MethodM Approach includes access to tools such as MethodM Online. This capability features integrated project management, collaboration and workflow specifically created to help you contain costs by reducing on-going project variance, increasing workflow efficiency, and optimizing human resource utilization. But the utility of MethodM goes far beyond your initial deployment. As you maintain, upgrade, and enhance Cerner Millennium, MethodM will continue to improve the quality of outcomes and lower your total cost of ownership.

4. Integrated Platform: Cerner MethodM is an integrated platform, providing these important features:

- Outcomes-based approach - Aligning with your organizational imperatives

- Disciplined and predictable processes - Providing the right resource at the right time

- Leveraged client interaction and experience - Proven to reduce risk and variability

- A logical continuum - From procurement to clinical transformation

- Online Toolset: MethodM is more than just an approach, it is a rich online toolset that project teams use to design, build, and manage implementation projects. MethodM Online includes

Enterprise Microsoft Project, which allows multiple users to access the project plans. This is a very powerful aid that gives individuals the ability to track and log their project tasks. MethodM Online also contains data collection tools, including the Design Decision Tool, which tracks critical design decisions and their compliance with known best practices. Other features of MethodM Online include an issues tracking system, a documentation library, a project SharePoint repository, and management reporting.

6. Automated Implementation Tools: Finally-we provide an automated toolkit –Bedrock--that eliminates much of the variance and error in building and maintenance tasks. Bedrock uses tools, known as "wizards," to configure the system based on survey questions, forms, work charts, legacy data and graphical displays. The tool, through the use of a natural language approach, reduces learning curves and time required to master implementation build tools. Embedded in the tool are common medical terminologies that leverage Cerner's executable knowledge content and capabilities. It also is designed to understand the dependencies among build tasks, resulting in cleaner implementations with less variance.

The capability of MethodM continues to evolve based upon the ever changing needs of our clients, the growth and sophistication of Cerner Millennium, and industry demands for dramatic cost-reduction and simplicity.

We agree that an extensive level of current state documentation isn't worth the effort. We focus on understanding the key aspects of the client's workflow that will drive design decisions through our Strategic Workflow Assessment process. We close out defining our future state using a Stop, Start, Continue method which identifies which current key activities will no longer be done, which will continue and which new activities will be completed per role.

Clinical Automation is Cerner's approach to automating Clinical and business workflows with Cerner solutions. Our clinical automation experts facilitate the design and implementation of clinical systems that impact nursing, physician and ancillary departmental workflow. It is part of our MethodM Implementation methodology and brings both clinical and solution design expertise to our implementations. Best practice models are embedded in our implementation methodology as well as in our MethodM Online tool. As a part of MethodM, we will do a walk through to validate current workflow/ processes and offer suggestions for improvement to said workflows based on best practices and client expected outcomes. Additionally, MethodM Online contains data collection tools, including the Design Decision Tool, which tracks critical design decisions and their compliance with known best practices.

Throughout the configuration phase of the implementation, the Cerner Solution Architect and the Cerner Solution Delivery Consultant will assist County in determining the best solution configuration for your system. They will assist with design sessions that identify key design decisions that need to be made, assist County in working through complex design concepts, and provide context around data collection materials.

All project documentation is stored in the MethodM Online tool. The MethodM online web application sets clear expectations and accountability for engagement teams by defining the roles for

each team member and providing customized task lists along with links to documentation that are relevant to the tasks. All team members have access to upload and download project artifacts such as worksheets and client-customized materials.

As stated previously, MethodM has been used in healthcare organizations ranging in size from single-doctor practices, to health systems, to entire countries. This modular methodology draws upon proven practices from a host of past client experiences. The events and sessions are the same regardless of the size of the project.

The Statement of Work is included with our response as Exhibit A.

As we encounter challenges during any aspect of a project, we develop strategies to minimize the risk and immediately incorporate those strategies into our implementation methodology. Cerner uses a best practice approach and we are consistently updating our lessons learned so that we can pass this information along to the next implementation. Cerner also has a team dedicated that analyzes the issues and problems that arise during implementations and then creates action plans around the documented challenges. This information is incorporated into the process to hopefully lessen the impact of that issue going forward.

(ii) Change Management Methodology

Provide Proposer's proposed change management methodology, pursuant to Section 1.1(b) (Change Management Methodology) of Appendix J (Implementation Requirements). Proposer's response for this Section is limited to 4 pages.

Embedded within our methodology, which is used on all client engagements, is a Leading Strategic Change Workshop. The Leading Strategic Change Workshop is a two-day event that improves your organization's ability to create an organizational change campaign to influence behaviors and realize benefits. To help define and execute effective change strategies, the workshop guides the workshop's participants through the process of introducing and managing change in an organization. Day one of the workshop covers necessary skills, tools, techniques, measurements, and processes to ensure success in managing change. Day two of the workshop identifies a strategy to prepare end users for implementation of Cerner solutions. It addresses the timeline, gap analysis, equipment requirements, and supplemental resources to educate end users. A baseline for focused discussions and helping guide the organization in preparing end users is delivered to you in the learning plan document, which is a living plan that should be revisited and updated to support each stage of the project.

In addition to the Workshop, Cerner will engage a Clinical Strategist for the implementation. The Clinical Strategist is the Cerner counterpart to the client Transformation Coordinator and works with the Executive Sponsor, Physician Leader, Project Manager and other client leaders to develop and implement strategies to manage the organizational change associated with system implementation. Change management activities include data gathering and analysis, change planning, coaching, measurement planning, and developing clinician engagement and adoption strategies.

Clinical Automation is Cerner's approach to automating clinical and business workflows with Cerner solutions. Our clinical automation experts facilitate the design and implementation of clinical systems that impact nursing, physician and ancillary departmental workflow. It is part of our MethodM Implementation methodology and brings both clinical and solution design expertise to our implementations. The clinical automation team includes physicians, nurses, and solution architects that consult on both workflow and solution design, ensuring an integrated approach to clinical systems implementation. Clinical automation promotes a state of profound, fundamental, and lasting change. Clinical automation is aligned with your strategic imperatives, is focused on both individual and organizational behavior practices and is enabled through the automation of clinical and business workflows. Clinical automation uses a series of disciplined events and activities led by Cerner's clinical experts. This service is embraced by clinicians because is ensures patient safety, promotes continuous improvement and significantly enhances clinical outcomes.

Our methodology includes several adoption events throughout. The adoption events include the following:

- Strategic Assessment Stakeholder Analysis
- Governance Planning
- Communication Planning
- Benefits Workshop
- Onsite Walkthrough Assessment
- Benefits Finalization
- Governance Review.
- Benefits Presentation
- Clinical Design Guidance
- Order Set Workshop
- Medication Integration Session.
- Workflow Localization: Change Management
- Physician Documentation Workshop
- Job Impact Analysis
- Policies and Procedures
- Role-focused Education
- Downtime Procedures
- Clinical Conversion Readiness Assessment
- Benefits Status Check
- Training
- Clinical Conversion Support
- Clinical Post Conversion Assessment
- Post Conversion Benefits Check

Additional Clinical Automation service offerings include:

- Strategic Assessments and Executive Alignment
- Communication Planning and Delivery
- Project Governance and Accountability Models
- Outcomes driven Role, Venue, Condition Design
- Workflow localization –Disciplined and standardized sessions to validate future state, completion of all collateral (Start/Stop/Continue) gap analysis, and preparation for workflow training sessions.
- Physician workflow Physician Support and Adoption Programs
- Post-Conversion Adoption Assessment and alignment – Assuring End User Adoption
- Clinical and Business Process Optimization

For an additional fee, Cerner's Continuous Adoption Services package provides the resources your organization needs to meet Meaningful Use through successful adoption. A team of Cerner experts delivers a package of services and solutions to lead you through adoption planning and reporting. The package includes onsite meaningful use readiness workshops to analyze your system, identify behavior change opportunities, and plan for adoption support. Also included is the LearningLIVE solution, offering clinicians relevant learning resources in the context of their workflow. A team of dedicated learning experts leverages actionable end-user adoption reports and delivers adoption coaching and support throughout the entire process.

Benefits to the client

1. Understand Meaningful Use requirements to maximize benefits from the federal economic stimulus package
2. Create a change management campaign to realize measurable adoption results
3. Provide immediate coaching and education targeted towards areas of need
4. Increase end user adoption and system knowledge

As we encounter challenges during any aspect of a project, we develop strategies to minimize the risk and immediately incorporate those strategies into our implementation methodology. Cerner uses a best practice approach and we are consistently updating our lessons learned so that we can pass this information along to the next implementation. Cerner also has a team dedicated that analyzes the issues and problems that arise during implementations and then creates action plans around the documented challenges. This information is incorporated into the process to hopefully lessen the impact of that issue going forward.

For additional strategies on change management please refer to section iv Project Management Plan.

(iii) Configuration/Adaptation Methodology

Provide Proposer's proposed configuration/adaptation methodology that will be utilized in Proposer's project approach, pursuant to Section 1.1(c) (Configuration/Adaptation Methodology) of Appendix J (Implementation Requirements). Proposer's response for this Section is limited to 3 pages.

As previously stated, MethodM is our approach to working with clients to deliver value through our Cerner Millennium solutions. This modular methodology draws upon proven practices from a host of past client experiences. With it, a team is able to deliver the intended outcomes of a project with discipline, predictability and efficiency. As you maintain, upgrade, and enhance Cerner Millennium, MethodM will continue to improve the quality of outcomes and lower your total cost of ownership.

Cerner MethodM is an integrated platform, providing these important features:

1. Outcomes-based approach
2. Aligning with your organizational imperatives
3. Disciplined and predictable processes
4. Providing the right resource at the right time
5. Leveraged client interaction and experience
6. Proven to reduce risk and variability
7. A logical continuum
8. From procurement to clinical transformation

The MethodM online web application sets clear expectations and accountability for engagement teams by defining the roles for each team member and providing customized task lists along with links to documentation that are relevant to the tasks. All team members have access to upload and download project artifacts such as worksheets and client-customized materials.

As part of MethodM, Cerner uses our innovative Bedrock system. Cerner Bedrock is an innovative technology of intuitive wizards using natural language to guide you through the process of designing, building, and maintaining your Cerner Millennium system. Bedrock uses tools to configure the system based on survey questions, forms, work charts, legacy data and graphical displays. These wizards make data collection more of an integrated approach. This tool uses a natural language approach to reduce learning curves.

Embedded in this tool are common medical terminologies that leverage Cerner's Executable Knowledge content and capabilities. In addition, Bedrock is designed to help you understand the dependencies among build tasks resulting in cleaner implementations with less variance and greater supportability. It incorporates real-time viewing and testing because configuration happens as design happens. It also reduces the design and configuration errors by replacing manual steps (spreadsheets) required for data collection with embedded pre-defined content options presented within the wizards. Most importantly, clients who leverage Bedrock realize a reduction in time to implement between 35 - 50% from those who do not use the tools.

Rather than build data from scratch, Bedrock uses a foundational layer of data developed from lessons learned through more than 8,600 Cerner Millennium implementations. This foundation layer simplifies and expedites the implementation process, allowing you extra time to tailor the data to fit your requirements. Some of the major benefits of this tool and wizard include:

1. Reduces design and configuration errors by replacing manual data collection with embedded, predefined content
2. Wizards are conveniently categorized into logical solution groups
3. Each wizard has a list of descriptive tasks to help guide the user
4. Improves predictability with recommended practices
5. Assures corporate compliance based on survey questions, forms, and legacy data
6. Recognizes dependencies among build tasks

You will also have access to the complete START database content for the purposes of deploying the rapid implementation approach. The pre-built tables and forms facilitate database design and build, and help the continuity of testing repeatable processes.

We have utilized MethodM Online, Bedrock, and the START database content on projects of all scopes and sizes. These tools have proven to provide a reduced implementation time than those projects who do not utilize these tools.

As we encounter challenges during any aspect of a project, we develop strategies to minimize the risk and immediately incorporate those strategies into our implementation methodology. Cerner uses a best practice approach and we are consistently updating our lessons learned so that we can pass this information along to the next implementation. Cerner also has a team dedicated that analyzes the issues and problems that arise during implementations and then creates action plans around the documented challenges. This information is incorporated into the process to hopefully lessen the impact of that issue going forward.

(iv) Project Management Plan

Provide Proposer's process and standards followed for a Project Management Plan (PMP), pursuant to Section 1.1(d) (Project Management Plan) of Appendix J (Implementation Requirements). Proposer's response for this Section is limited to 3 pages.

Schedule Management: The implementation events are scheduled out in advance, allowing time for County and Cerner to schedule the appropriate resources for each event. There is visibility to all major events from Project Kickoff to Conversion. The MethodM Online tool provides a calendar that shows the resource and events schedules. A project plan identifying the roles and tasks is included with our response as Attachment J-1.1(g).

Issues and Action items: Issues and actions taken on those issues are tracked in the MethodM Online tool. Issues may be entered by project team members and actions taken on those issues are documented in the tool. Issues are also tracked through our online service request tool, eService.

Cost Management: We are proposing a fixed fee model and, as such, the project will be managed based on the scope and timeline. In this model, the project will have a fixed scope and a fixed duration. If the project goes outside of the agreed-upon scope or duration, additional costs will apply. If Cerner is at fault, we are still responsible for delivering.

Staff Management: We have included the Client Guide to Cerner Roles and the Recommended Client Roles documents with our response. These documents identify the typical roles required for the project and the responsibilities for each role. You may refer to the Event Description Guide to identify which role is needed for each event throughout the implementation effort. The Project Management team has extensive experience with managing staff for complex projects. They are onsite every week and keep in constant communication with staff though meetings, structured events, status reporting and through MethodM. The MethodM project plan will alert the Project Manager and assigned staff to tasks that are due and have been completed.

Communications Management: Cerner will work with County to develop a Communications Plan. A sample plan is included with our response for your review. Cerner will be responsible for the following:

- Assist County in project identity and branding.

- Coach County on communication planning and auditing

- Determine key messages and content appropriate to stakeholder groups

- Determine inter-team communication strategies

- Analyze current communication channels, identify and leverage successful channels already in place, and define new channels required to support the initiative.

County will be responsible for the following:

- Create thorough communication plan to build individual and organizational commitment to execute the transformation journey.

- Identify and align communication vehicles, media, and messengers with project governance and operational leadership.

- Create communications grids for staging communication messages and events.

- Provide model for rolling editorial calendars for significant production work.

Configuration Management: Cerner will perform the build in the proposed implementation approach. Cerner will guide County in completing the necessary data collection materials and tools. Cerner uses the data from those materials tools to conduct the build. County participates in testing of the build to ensure all configurations meet County's expectations.

Risk Management: All project risks are track in our MethodM Online tool. Project team members may enter project risks directly in the tool. The information tied to each risk includes:

- Title of risk

- Owner of risk

- Assignment of risk

- Status of risk

- Category

- Due date

- Probability score

- Magnitude of impact should the risk actually happen

- Cost impact should the risk actually happen

- An exposure score will help prioritize the risks for the project so the project team is not managing to just the high impact or high probability risks. The exposure score equals the probability score times the impact score assigned to the risk.

Risk reports can be run for project management review and discussion.

Large organizations with multiple facilities have to agree on the overall EHR design and workflow. There must be executive leadership involvement in the project for any key decisions that result from differing opinions among representatives from different facilities.

There must be very good communication, and strong team cohesion around the vision and the mission.

The County has to ensure that the staffing that Cerner recommends for this project is available and that clinicians that are needed for the project have their positions back filled so they have time to participate.

Quality Management: The Quality Center is a Cerner Consulting Practice that performs build quality assessments for MethodM projects. The Quality Center, comprised of Testing Integration Architects and Test Analysts, engages closely with the project team during the testing cycles.

Change Management: In addition to the Change Management described in 2.4.1 (ii), we also follow a change management process as it relates to build and changes in the system.

The Cerner Millennium Health Information System includes several management and clinical information solutions integrated through a common architecture and data repository. As a result of the integrated nature of the Cerner system, it is critical that at the end of the paper Design Phase, strict Change Control procedures be enforced for the remaining implementation time and post Conversion. No changes should ever be made without first analyzing the impact of those changes. As such, the following Change Control Process should be rigidly adhered to by all staff.

Change Control is designed to ensure appropriate communication takes place, and to provide a formal process to request, assess, review, and approve changes to project elements. During the implementation, the Project Management Team is responsible for facilitating communication, with the objective of approving, disapproving or deferring requested changes. Post implementation the client will continue this process.

The intention of this policy is to define the steps and procedures required to present a Change Request to project management for approval. The steps are designed to ensure communication to, and sign off by, all affected departments regarding the nature of the request, impact assessment, and final decision.

Any Change Request that will result in a deviation in the agreed upon design, or additional code to be developed or loaded into the any of the secure BUILD/TRAIN/CERT/PROD environments will be analyzed through the Change Control Process outlined below.

Objectives:

- Ensure consistency in process of documenting change requests

- Define standards for reviewing requests

- Provide mechanism for impact assessment

- Determine necessary approvals needed for sign-off

- To document when change occurred, who executed the change and measures that were taken to ensure the change was successfully applied.

The process steps that will be utilized during the project are provided below.

1. The client identifies an issue or necessary change. They fill out the change request form, which includes an explanation of the need/issue, description/reference number, a proposed solution if known, and suggested integration points, which will be verified by the Cerner Solution Delivery Consultant (SDC).

2. The change request forms are collected and discussed during a weekly team meeting surrounding change control issues. Agenda items for this meeting will include prioritizing issues and discussing any points of integration. This meeting will determine whether these changes will be approved or not approved. It is an internal client meeting with the Cerner Integration Architect in attendance.

3. The approved change requests are tracked on the Change Request Log spreadsheet and then logged as a Service Request to the appropriate Cerner Solution Team via Navigator (our online service request tracking tool). After maintenance training, the Cerner SDC will notify the Client to make the Cerner approved changes.

4. Any additional costs, work effort, scope changes, or timeline impacts will be documented in the Service Request. The Cerner SDC will follow the escalation management process for such issues.

5. The Cerner SDC will communicate to the Client the resolution and the projected implementation timeframe.

6. The Cerner SDC or Client will institute the change in the appropriate environment (BUILD, CERT).

7. The Client Team Leader will be responsible for testing the change according to Unit/System/Integration validation standards laid down in the Test Plan.

8. Once tested, Cerner or Client will move the change to the appropriate domain. The Cerner SDC will follow the Production Environment Change Authorization (PECA) process if the change is needed in the production domain.

9. The Cerner SDC updates the issue/resolution on the SR. The Client updates the issue/resolution on the Change Request Log.

10. The Change Request Log is to be reviewed on a weekly basis by the Cerner Integration Architect and the Client.

11. The Client Team Leader will be responsible for informing the appropriate people regarding training issues, change updates to facility staff, as it relates to the completed change.

12. The Client will retain the paper Change Request forms, along with any supporting documentation, emails, or screen shots (before and after) as a record of change. The Change Request Log will be retained on SharePoint.

After live patient data is loaded into the production domain, any change made into this domain by a Cerner SDC will require a PECA. These changes can be encompassed into a daily blanket PECA, weekly blanket PECA, or individual PECA.

Cerner will work with your organization to adapt the ongoing change control process to meet your organization's needs. The Change Control Session is an event that will assist your organization with the creation or modification of the change control process that will be utilized during system validation and throughout the life of the system. The Change Control Session is a Cerner-lead

discussion performed directly after the System Validation Event. The goal of this event is to provide your organization with the Cerner recommended approach to Change Control and work alongside your team to create a process that is best for your organization.

(v) Data Conversion Plan

Provide Proposer's approach and components of a comprehensive Data Conversion Plan, pursuant to Section 1.1(e) (Data Conversion Plan) of Appendix J (Implementation Requirements). Proposer's response for this Section is limited to 1 page.

Our approach to data conversions includes the following phases:

- Design: Identifying what and how much history data needs to be loaded into Cerner Millennium.
- Build: Build the HL7 interfaces that will process the historical loads.
- Test: Run a sample extract from the foreign system and perform an upload test.
- Convert: Start data conversions one to six weeks prior to conversion, depending upon the number of conversions required.

Additional details regarding our approach for data conversions can be found in section 2.4.7 of this document.

The data conversions planned for phase one include: Master Patient Index/ADT, Historical Abstract Data, Historical Coded Data, Visit History/Encounter, Transcription, Mammography, Radiology Reports, Pharmacy Allergies, Pharmacy Immunization, Pharmacy Inpatient, and Clinical Repository/EMR.

The data conversions planned for phase two include: Master Patient Index/ADT, Anatomic Pathology, Blood Bank Transfusion, General Laboratory, Microbiology (discrete data), Microbiology (displayable text), and Human Leukocyte Antigen (HLA).

(vi) High-Level Project Schedule

Provide Proposer's high-level project schedule, pursuant to Section 1.1(f) (High-Level Project Schedule) of Appendix J (Implementation Requirements). Proposer's response for this Section is limited to 1 page.

Below is the high-level schedule for the overall project plan. A time chart depicting the schedule is included with our response as well as a collapsed view of a draft project plan. Note: These dates are estimates based on a contract execution date of June 1, 2012.

CONTRACT EXECUTION 6/4/12 -/8/12

STRATEGIC ASSESSMENT 7/9/12 -7/11/12

CLIENT EXECUTIVE SESSION 7/23/12- Fri 7/27/12

PROJECT PREPARATION 8/13/12-Fri 8/17/12

PROJECT KICKOFF 9/3/12- 9/7/12

SYSTEM REVIEW 10/8/12-10/12/12

DESIGN REVIEW 12/3/12- Fri 12/7/12

SYSTEM VALIDATION SESSION 1/21/13 -1/25/13

TRAINER AND CONVERSION PREP 3/4/13- 3/8/13

MAINTENANCE TRAINING 4/1/13- 4/5/13

INTEGRATION TESTING 1 4/29/13-Fri 5/3/13

INTEGRATION TESTING 2 5/27/13- 5/31/13

CONVERSION - Facility 1 and Rollout of Clinics in Cluster 1 (includes training) 7/8/13- 8/9/13

POST CONVERSION REVIEW Facility 1 Cluster 7/15/13- 7/19/13

POSSIBLE ICD10 PHASE (Could be removed based on uncertainty from Health and Human Services 8/5/13 -10/18/13

CONVERSION Facility 2 and Rollout of Clinics in Cluster 2 (includes training)10/28/13-2/21/14

POST CONVERSION REVIEW Facility 2 Cluster 3/24/14- 3/28/14

CONVERSION Facility 3 and Rollout of Clinics in Cluster 3 (includes training) 3/3/14- 6/20/14

POST CONVERSION REVIEW Facility 3 Cluster 7/21/14- /25/14

CONVERSION Facility 4 and Rollout of Clinics in Cluster 4 (includes training) 7/7/14- 8/22/14

POST CONVERSION REVIEW Facility 4 Cluster 9/22/14- 9/26/14

CONVERSION Facility 5 and Rollout of Clinics in Cluster 5 (includes training) 9/1/14- 2/19/14

POST CONVERSION REVIEW Cluster 5 1/19/15- 1/19/15

CONVERSION Facility 6 (includes training) 9/1/14- 12/19/14

POST CONVERSION REVIEW Facility 6 1/19/15- 1/23/15

(vii) Detailed Project Schedule

Provide Proposer's project schedule and resource plan, pursuant to Section 1.1(g) (Detailed Project Schedule) of Appendix J (Implementation Requirements), as "Attachment J-1.1(g) (Project Schedule)."

(viii) Staffing Plan

Provide Proposer's detailed staffing plan, pursuant to Section 1.1(h) (Staffing Plan) of Appendix J (Implementation Requirements). Proposer's response for this Section is limited to 1 page. Provide Proposer's Project organizational chart, separately as "Attachment J-1.1(h) (Proposer's Project Organizational Chart)."

A project organization chart is included with our response.

The following Cerner roles will be engaged:

- Client Results Executive

- Clinical Strategist
- Delivery Consultants
- Engagement Controller
- Senior Engagement Leader
- Engagement Leader
- Healthcare Executive
- Integration Architect
- Interface Architect
- Learning Consultant
- Software Architect
- Software Engineer
- Solution Architect
- Senior Scientist
- System Architect
- System Engineer
- System Engineer - FSI
- Technical Engagement Leader
- Test Engineer

The following County roles are recommended:

- Chief Executive Sponsor
- Chief Financial Officer
- Chief Information Officer
- Chief Medical Information Officer
- Chief Medical Officer
- Chief Nursing Information Officer
- Chief Nursing Officer
- Chief Quality Officer
- Clinical Leader for each discipline
- Director of Finance
- Director of IT
- Director of Quality/Compliance
- Meaningful User Project Manager
- Operations Leaders for HIM/Medical Records, Patient Accounting, Case Management, and Patient Management
- Process/Integration Architect

- Project Manager
- Technical Manager
- Physicians by discipline
- Transformation/Adoption Coordinator
- Education Coordinator
- Super users
- Desktop Technician
- Interface Manager
- Network Technician
- Operations Monitoring Specialist
- Peripherals Coordinator
- Analysts by discipline
- Communications Coordinator
- Analyst - Metrics and Reporting
- Subject Matter Experts by discipline

(ix) Benefits of Proposed Account and Project Organization

Describe in detail the benefits of Proposer's proposed account and project organization and the time frame for implementation, pursuant to Section 1.1(i) (Benefits of Proposed Account and Project Organization) of Appendix J (Implementation Requirements). Proposer's response for this Section is limited to 1/2 page.

As you will see from the Client Guide to Cerner Roles and the Guide to Recommended Client Roles documents, we utilize a variety of roles on both the Cerner and client side throughout our projects. The project leadership for both the client and Cerner teams is focused on the risks, benefits, and outcomes of the project, ensuring the scope and project plan remain on track to achieve the expected outcomes.

Each team member has specific and defined tasks and deliverables to achieve during the project. This approach allows those team members to remain focused and dedicated to their role in the project. Their responsibilities are clearly outlined and understood from the beginning of the project.

Our approach to resource utilization allows us to utilize the right resources at the right time throughout the project. We pull the necessary resources in for specific tasks and deliverables to ensure we are using both the client and Cerner resource time efficiently. This approach ensures your organization access to our solution experts at the appropriate time for your project.

2.4.2 CONTRACTOR KEY PERSONNEL

(i) Contractor Project Manager

Identify and provide Proposer's key skills and qualifications for the Contractor Project Director, pursuant to Section 1.2 (Contractor Project Director) of Appendix J (Implementation Requirements). Proposer's response for this Section is limited to 1 page.

The Senior Engagement Leader is responsible for working with County to develop and communicate the program strategy, direction, changes, and project plan. Additionally, this associate manages the day-to-day activities of the project for Cerner. The Senior Engagement Leader works to obtain the necessary resources to support the project and manage service delivery.

Responsibilities:

- Leading project implementation planning
- Developing global work plan and schedules, developing or delegating and monitoring development of product implementation work plans, where appropriate
- Planning and evaluating contracted project service delivery and cost management
- Identifying and managing risk and quality assurance issues which arise during the project
- Reviewing project progress regularly with Client and Cerner management
- Organizing and day to day oversight of the Cerner Project Team
- Coordinating Cerner project resources and other Cerner support groups and resolving resource conflicts as needed
- Monitoring overall project progress and milestone
- Monitoring project budget from a cost and time perspective
- Ensuring project compliance with contract and Cerner quality assurance standards
- Attending Project Management Office meetings
- Managing issue escalation and resolution
- Complete Cerner Consulting standard status reports and Event Activity Reports
- Own all technical tasks including domain creation and technical staffing. These activities should be coordinated through the Technical Engagement Leader
- Other tasks as needed by the project

(ii) Contractor Project Manager

Identify and provide Proposer's key skills and qualifications for the Contractor Project Manager, pursuant to Section 1.2 (Contractor Project Manager) of Appendix J (Implementation Requirements). Proposer's response for this Section is limited to 1 page.

The Engagement Leader manages the day-to-day activities of the project for Cerner. The Engagement Leader works to obtain the necessary resources to support the project and manage service delivery.

Responsibilities:

- Leading project implementation planning
- Developing global work plan and schedules, developing or delegating and monitoring development of product implementation work plans, where appropriate
- Planning and evaluating contracted project service delivery and cost management
- Identifying and managing risk and quality assurance issues which arise during the project
- Reviewing project progress regularly with Client and Cerner management

- Organizing and day to day oversight of the Cerner Project Team
- Coordinating Cerner project resources and other Cerner support groups and resolving resource conflicts as needed
- Monitoring overall project progress and milestone
- Monitoring project budget from a cost and time perspective
- Ensuring project compliance with contract and Cerner quality assurance standards
- Attending Project Management Office meetings
- Managing issue escalation and resolution
- Complete Cerner Consulting standard status reports and Event Activity Reports
- Own all technical tasks including domain creation and technical staffing. These activities should be coordinated through the Technical Engagement Leader
- Other tasks as needed by the project

(iii) Technical Lead

Identify and provide Proposer's key skills and qualifications for the Technical Lead, pursuant to Section 1.2 (Technical Lead) of Appendix J (Implementation Requirements). Proposer's response for this Section is limited to 1 page.

The Integration Architect (IA) works across multiple solutions and interacts with the Client throughout multiple project phases. They are involved in scope decisions, process assessment, design and build, testing, training and delivering business results. This role identifies key application integration points that may affect design decisions and supports the management of domain strategies, change management and control, and issue management. They function as the application team lead for the Cerner project team and provide associate mentoring and coaching.

Responsibilities

- Serve as the integration expert across solutions and interfaces providing troubleshooting and process expertise
- Assist with the development of implementation strategies and work plans
- Support environment/domain planning and management including regression testing after code installs, domain copies, reference data domain synchs (RDDS), and activity deletes
- Ensure design decisions include considerations across solutions and fall within scope
- Maintain responsibility for Distribution Package analysis and installation
- Mentor and coach project team members
- Drive the system validation process and provide guidelines for all levels of implementation testing
- Assist client in developing appropriate policies and procedures for issue management and change control
- Monitor Cerner Navigator (eService) for integration points and ensure all issues are getting resolved in a timely fashion
- Provide leadership for Integration Testing, Reference Data Domain Sync (RDDS), and Conversion

Readiness

- Assist with peripheral implementation strategy
- Attending Project Management Office meetings
- Other tasks as needed by the project

(iv) Functional Lead

Identify and provide Proposer's key skills and qualifications for the Functional Lead, pursuant to Section 1.2 (Functional Lead) of Appendix J (Implementation Requirements). Proposer's response for this Section is limited to a 1/2 page.

The Solution Architect is responsible for providing Cerner solution expertise needed for successful product implementation at a Client site. The Solution Architect is heavily involved in the design process to ensure recommended practices are utilized.

Responsibilities

- Provide solution expertise to Cerner project team members, as needed
- Serve as source for Recommended Practices, both Clinical and Implementation
- Work with Project Team to identify project risks and provide resolution
- Conduct client Current State Analysis and Scope Review Sessions at client facility during Project Kickoff event
- Work to evaluate associate progress and capabilities, build status, and project staffing when necessary
- Review Conversion Readiness Assessment and provide feedback to Delivery Consultants
- Conducts QA Checkpoints after Design Review, Trainer and Conversion Preparation and Integration Testing
- Conduct Post-conversion Assessment providing feedback to client and appropriate Cerner organizations and/or individuals
- Other tasks as needed by the project

(v) EHR Subject Matter Expert

Identify and provide Proposer's key skills and qualifications for the EHR Subject Matter Experts, pursuant to Section 1.2 (EHR Subject Matter Experts) of Appendix J (Implementation Requirements). Proposer's response for this Section is limited to a 1/2 page.

Responsible for providing Cerner solution expertise needed for successful product implementation at a Client site. The Delivery Consultant may belong to one or more teams and works with project leadership to coordinate his/her activities with other members of the team(s). The Delivery Consultant is the primary contact for the client's solution troubleshooting and consultation.

Responsibilities

- Implementing solution design decisions; tailoring application database to meet the unique requirements of the department and Client institution

- Assisting in testing system functionality as well as validating database integrity
- Providing consultation on process design
- Providing product specific help to departmental/functional team leaders
- Instructing Client on database build tools
- Helping plan and organize Client train the trainer and end user training
- Assisting in the development, management and execution of application and medical device and foreign system interface testing
- Providing on site conversion support
- Investigating/resolving application problems
- Escalating major application or systems issues to appropriate Project Team members
- Working closely with the Integration Architect to coordinate/resolve cross department design and implementation issues
- Coordinate client calls and supporting documentation
- Meet build and test completion targets for project
- Complete and own the Conversion Readiness Assessment process. Review it with the client during Trainer and Conversion Preparation and Integration Testing
- Effectively communicate solution knowledge, clinical process, progress, status, and resolution to all involved parties
- Other tasks as needed by the project

(vi) Transition/Deployment Lead

Identify and provide Proposer's key skills and qualifications for the Transition/Deployment Lead, pursuant to Section 1.2 (Transition/Deployment Lead) of Appendix J (Implementation Requirements). Proposer's response for this Section is limited to a 1/2 page.

The responsibilities for the Transition/Deployment Lead are split among the Contractor roles of Integration Architect and Clinical Strategist.

(vii) Conversion and Interface Lead

Identify and provide Proposer's key skills and qualifications for the Conversion and Interface Lead, pursuant to Section 1.2 (Conversion and Interface Lead) of Appendix J (Implementation Requirements). Proposer's response for this Section is limited to a 1/2 page.

The responsibilities for the Conversion and Interface Lead are split between the Interface Architect and the Engagement Controller.

The Interface Architect is responsible for working with counterparts from Cerner, Client and other suppliers to ensure effective and efficient system integration is accomplished.

Responsibilities

- Develop interface specifications for system level interfaces

- Reviewing architecture design for all interfaces
- Helping Client personnel design environment management, operational procedures, interfaces, and other "system" software
- Acting as the escalation point for interface issues that arise at Client site
- Providing technology support for testing and conversion activities

The Engagement Controller role is a key component to the Engagement Management team. This role provides critical project management tasks for the project to insure project execution is on schedule, under budget, and within the planned scope. They support the Cerner Engagement Management team by having a detailed view of project summary and progress.

Responsibilities

- Coordinates event preparations by solidify resources, creates agendas and reserves training rooms
- Supports Engagement Management team with issue escalation
- Support environment/domain planning and management including regression testing after code installs, domain copies, reference data domain synchs (RDDS), and activity deletes
- Monitors the Scope Management Process
- Lead and document checkpoint meetings during events and document wrap-ups
- Monitor session leaders Visit Summaries for consistency and accuracy after each event
- Monitor the client's Integration Testing issues list and escalate as necessary
- Monitor the client's conversion readiness assessments
- Monitor Cerner Navigator (eService) for integration points and ensure all issues are getting resolved in a timely fashion
- Reviews Client Satisfaction Surveys and provides feedback to Cerner Engagement Management team
- Other tasks as needed by the project

(viii) Training Lead

Identify and provide Proposer's key skills and qualifications for the Training Lead, pursuant to Section 1.2 (Training Lead) of Appendix J (Implementation Requirements). Proposer's response for this Section is limited to a 1/2 page.

The Learning Consultant (LC) is a liaison between KnowledgeWorks, the Cerner project team and Client's project team, stakeholders and end users. Individuals in this role have a strong understanding of learning theory and are able to analyze large amounts of data to create both detail-level and strategic-level plans. The Learning Consultant strives to create both executive-level and individual buy-in to the learning plan. They can also supplement Client's education/training team or provide complete outsourcing solutions.

As part of our standard proposal, Cerner Learning Consultant will provide the following services

- Conducting learning needs assessments

- Assisting in development of learning strategy

The following additional servies are not part of our standard contract but can be provided by a Cerner Learning consultant:

- Developing End-user learning tools (e.g., job aides, workbooks, etc.)
- Assisting Client in developing course scheduling, registration and participant tracking procedures, if these learning administration systems are not available
- Recommending training facility changes needed in order to meet Client's objectives
- Coordinating Client IS team class enrollment
- Investigating end user solutions (i.e. CBT)
- Coordinating additional training outside of contract
- Providing physician training
- Conducting/proctoring end user training
- Supporting end users during First Productive Use (conversion) support

(ix) Organizational Change Management Lead

Identify and provide Proposer's key skills and qualifications for the Organizational Change Management Lead, pursuant to Section 1.2 (Organizational and Change Management Lead) of Appendix J (Implementation Requirements). Proposer's response for this Section is limited to a 1/2 page.

The Clinical Strategist is the Cerner counterpart to the Client Transformation coordinator and works with the Executive Sponsor, Physician Champion, Project Manager and other Client leaders to develop and implement strategies to manage the organizational change associated with system implementation. Change management activities include data gathering and analysis, change planning, coaching, measurement planning, and developing clinician engagement and adoption strategies.

Responsibilities

- Works with Client and Project leadership to develop a comprehensive plan for organizational transformation and coordinating that plan with all other Cerner system project activities
- Assists Cerner and Client project leadership in profiling and risk analysis
- Supports organizational kick-off events
- Works with the Communications Team Lead to identify key stakeholder groups and ensure the communication strategy meets their information needs
- Works with operational and clinical leadership to develop and implement a clinician engagement strategy
- Facilitates gap analysis and change management activities including job impact analysis and policy/procedure analysis
- Supports business case development and on-going benefits measurement
- Serves as the PMO subject matter expert on organizational culture and processes

- Works with Education Coordinator to ensure learning plan is responsive to the various learning needs and styles of the client
- Identifies and manage risks and change-related issues that arise during the project
- Reviews project progress regularly with Client and Cerner management
- Other tasks as needed by the project

(x) Additional Contractor Key Personnel

Identify and indicate additional Contractor Key Personnel project role(s) and responsibilities proposed by Contractor. Proposer's response for this Section is limited to 1 page.

The main role of the Client Results Executive (CRE) is to provide guidance around project planning, project scope, risk management, and professional service deployment. The Client Results Executive serves as the Cerner Senior Executive for escalation of project related issues and client satisfaction.

Responsibilities:

- Maintains executive relationships with senior Client management
- Provides the connection and thought leadership between the client's business strategies and Cerner's core values proposition
- Participate in monthly Project Reviews with project leadership
- Overseeing accounts for risk assessment, executive satisfaction, and project status
- Works with Project Manager and Engagement Leader on project implementation planning
- Planning and evaluating contracted project service delivery and cost management
- Attending EMR Steering Committee and Project Management Office meetings
- Procuring and managing resources to meet contracted project plan deliverables
- Works with senior Client management to address strategic project related issues, scope, solution, timing, staffing, organizational impact, communications, business process transformation vis-à-vis solution design and capability
- Serves as the Cerner person responsible for escalation of project related issues, service delivery and Client satisfaction
- Responsible for making contractual agreements and commitments on behalf of Cerner Corporation
- Participates in analysis of processes, procedures, and outcomes to seek continuous improvement of assigned projects
- Provides feedback mechanism back into Cerner to improve its processes, procedures and solution for the purpose of building improved levels of ongoing Client satisfaction
- Ensuring the efficiency of the professional services business by monitoring appropriate metrics and adjusting practices accordingly
- Responsible for maintaining quality and consistency of solution and professional services delivered to Client
- Acts as Client advocate to Cerner's engineering, solution support, technology services, consulting

services, executive management and other groups

- Responsible for Cerner Corporation's project performance
- Other tasks as needed by the project

Healthcare Executive: The Cerner Physician Executive serves as the liaison to the Client, medical staff and project leadership. Responsibilities:

- Providing expert consultation to Client physician leadership to facilitate implementation
- Providing training and expertise for the Physician Champions
- Sharing physician experiences from other client sites
- Setting physician expectations on long and short-term system plans and capabilities
- Providing expertise in leveraging EMR to improve care delivery
- Attends Physician Advisory Group meetings, upon request

Additional roles are provided in the Client Guide to Cerner Roles document located in the Additional Reference Materials section

2.4.3 COUNTY ROLES

Describe any roles County executives and County employees are expected to fill, pursuant to Section 1.3 (County Roles) of Appendix J (Implementation Requirements). Proposer's response for this Section is limited to 3/4 page.

Executive Leadership: The client executive leadership team commissions the project by allocating funds, providing ongoing support to the project sponsors, setting clear direction and expectations at the project's onset. They also provide ongoing support for the client project team. Their involvement will be great in the beginning and end phases of the project.

Clinical / Operations Leader: Clinical and Operations leaders are Director or sometimes Manager level people who provide departmental support and guidance throughout the project.

Project Manager: The Project Manager manages the overall implementation effort for the Client. The Project Manager works with the Executive Leadership Team and Project Management Office to obtain the necessary resources to support the project and manage organizational change required achieving project objectives and realizing benefits.

Physician Champions: The role of the Physician Champion is a unique and vital one. They are charged with positively influencing the other physicians to participate in and embrace the technical and operational changes that will result from the deployment of the Cerner system. Characteristics to be exhibited by the Physician Champion include: availability and willingness to participate, enthusiasm for the organization and project, comfort with technology, and, most importantly, the respect of his or her fellow physicians and clinicians.

Transformation/Adoption Coordinator: The Transformation/Adoption Coordinator works with the Executive Sponsor, Physician Champions, Project Manager and other Client leaders to develop and implement strategies to manage the organizational change associated with system implementation. The individual performing this role should have significant work experience in clinical practice and be a respected member of the organization's management team. The Clinical Adoption Coordinator

reports to the Executive Leadership Team. This role is most effective when aligned with clinical operations instead of the IT department.

Education and Learning: The Education and Learning Team works under the direction of the Education Coordinator. It is accountable for adapting the Learning Plan and delivering training to end users.

Education Coordinator: The Education Coordinator develops the Client's training plan for Super User and End User Training in conjunction with Project leadership.

Technical Team: Technical roles vary depending on the hosting strategy (Remote Hosted vs. Client Hosted) Cerner has proposed a Remote Hosted model.

Additional Roles and more detailed descriptions are provided in the Guide to Recommended Client Roles document located in the Additional Reference Materials section.

2.4.4 KNOWLEDGE TRANSFER APPROACH

Provide Proposer's knowledge transfer approach that it will employ for its project approach, pursuant to Section 1.4 (Knowledge Transfer Approach) of Appendix J (Implementation Requirements). Proposer's response for this Section is limited to 1 page.

Based on our years of experience, Cerner has developed a client build process titled MethodM. Within each stage of the process, key stakeholders have identified tasks and responsibilities which are tracked on a web-based tool. Simultaneously, project team members are provided the training necessary to complete each task thereby learning the system within its context. Cerner believes that adherence to the MethodM process will produce a knowledgeable project team and a completed system which reflects the goals of the client organization. As part of the MethodM process, the project team will also receive two formal classes which provide the foundation for their training. Millennium Fundamentals is conducted at the beginning of the project and Architecture, Troubleshooting and Issue Management is conducted in the Launch phase of MethodM.

MethodM Overview

Vision Stage: Provides the tools to identify the goals of the client and determine how Cerner will partner with the client to reach those goals.

Engage Stage: Process of bringing together the project team players for the activities and tasks that will prepare them to assume their project roles and responsibilities.

Configure Stage: The events and activities that move the client's project toward the launch phase, leading to the realization of the system value. It includes designing, building and testing activities.

Launch Stage: Final steps of preparation necessary to bring the client's solution to life in their everyday operations.

Enhance Stage: Review for improvement opportunities, optimization opportunities, an evaluation of the success of the project, and evaluation of benefits measurements and their progress toward target goals.

Transform Stage: Helps position clients to take their healthcare organization to another level.

Post conversion, the project team is encouraged to continue their training by accessing the complete catalog of continuing education courses offered for each Millennium Solution. Over 100 courses encompass solution-specific and technical curricula offered in Kansas City, client site, regional

locations, and virtual. The annual Cerner Health Conference offers more than 200 accredited education workshops.

The typical challenges to achieving successful knowledge transfer center around resource availability and end-user preparation. It is critical that staff is available to actively engage in the project sessions and formal classes when they are held. Additional, super –user participation is important throughout the entire project. Great attention must be placed on event specific training.

It is important that County develops contingency plans to cover project team responsibilities should certain resources not be available for various sessions. Cerner also recommends County assign an Education Coordinator to plan and manage the organization's end-user education and training.

We will work with County to ensure the approach in place will meet the needs of County and will achieve the expected outcomes. As we proceed further in the selection process, we will discuss any special needs of the County and how to adjust our approach as necessary. Some clients elect to engage a Cerner Learning Services Consultant for the purpose of coordinating education events.

2.4.5 TRAINING

Provide Proposer's training approach for the EHR project, pursuant to Section 1.5 (Training) of Appendix J (Implementation Requirements). Proposer's response for this Section is limited to 4 pages.

Cerner Learning Services offers a full spectrum of learning solutions and consulting services to address implementation education and adoption, as well as end-user training needs. These strategies are developed from our most successful best practices and are delivered by experienced learning consultants and educators who intimately understand Cerner Millennium and offer expertise in instructional design, adult education theory, and clinical workflow.

Cerner Millennium project team and technical personnel can chose from a comprehensive solution and technical curricula to help them effectively design, build, maintain, and troubleshoot Cerner solutions. Those who desire deeper solution or IT knowledge can complete the Cerner Millennium Certificate program.

For end-user training, Cerner utilizes a blended learning approach that includes a combination of WBTs, instructor-led training, activities performed in a training domain, and job aids. The specific needs of end users and the organization drive the mix of components involved in the blended learning approach and combine a variety of learning methodologies to minimize time to competency.

We will work with County to determine the specific needs of your organization. The Leading Strategic Change Workshop is an on-site working session co-facilitated by one learning consultant and a clinical strategist and results in the development of a behavior change campaign, learning plan and education roadmap that details the client's approach to their end-user learning and adoption. The first day of the workshop will guide you through the process of introducing and managing change in your organization. In the second day of the workshop you will identify learning goals and create a learning plan for your organization.

Additional preparation for end-user training is addressed during the Trainer and Conversion Preparation Event. During this event, the client project team will deliver application demonstrations to the Cerner team to ensure they have the ability to use the Cerner system to facilitate department

workflow effectively. Once this is complete, the client has the option of utilizing their project team members to deliver training to the trainers in order to minimize costs. Alternatively, Cerner Learning Services can be contracted to deliver Train-the-Trainer sessions, including workshops covering effective facilitation and training skills.

Cerner's approach to training can be simply summarized: to get people competent, quickly. It is important that an educational strategy reach across phases and beyond Millennium implementations. Cerner recommends that clients adopt a Learning Forward TM approach to education and learning with relation to their Millennium solutions. A Learning Forward approach is rooted in the idea that learning and education should be viewed as an ongoing process as opposed to a one-time event (preparation for go-live). Central to that thought is that educational content and delivery mediums should be created in a form that can be utilized to continuously improve the performance of the people building and supporting the system as well as the providers utilizing the system to deliver care well beyond the event of "go-live".

Cerner recommends that client incorporate all of the approaches described below. The extent to which each tool will be utilized will be solidified during the Leading Strategic Change workshop.

Informal Education: Job Aids; LearningLIVE (Quoted in RFP) Description below

Coached Learning: Computer learning labs. Description in "vi" below; Practice Scenarios. Description below; Conversion coaches; LearningLIVE

Formal Learning: Web-based courses (Standard WBTs quoted in RFP); Computer learning labs; Practice Scenarios; Instructor-led training classes

Comprehensive: Instructor led training classes provides the opportunity to train end users on every aspect of their new system workflow and functionality. Cerner recommends that instructor-led training classes only include that workflow that is core to the end user; Practice Scenarios provide the client the opportunity to develop a practice scenario that is specific and comprehensive to each specific role.

Innovative: LearningLIVE tool – see below

Cost Effective: LearningLIVE reduces the need for additional super users to be on the floor post conversion. A reduction to Help Desk calls may be experienced as a result of end users accessing LearningLIVE as their first point of support; Computer Learning Labs provide many end users, the opportunity to consume their training and validate competency without having to attend a lengthy formal classroom event.

Post Conversion Training - After Go-Live completion, new training needs arise such as documentation of best practices, learning materials maintenance, new hire training, advanced role-based training, and refresher training for project team members, Cerner has a complete catalog of continuing education courses offered for each Millennium Solution. Over 100 courses encompass solution-specific and technical curricula offered in multiple locations and virtual. The annual Cerner Health Conference offers more than 200 accredited education workshops.

For end users, client will continue to utilize the standard WBTs and developed classroom materials to support new hire orientation. Cerner recommends, and has included in this quote, a tool to deliver just-in-time learning at the point-of-need. LearningLIVE™ offers clinicians relevant learning resources in the context of their workflow. Available within PowerChart®, LearningLIVE™ is accessible from the organizer and patient's chart. By offering a searchable collection of resources, it provides clinicians with the opportunity to seek and apply knowledge in real time, thus reducing the time to competency. The flexible design facilitates dynamic delivery and quick-turn updates,

allowing the organization to disseminate knowledge in real-time. LearningLIVE supports long-term use and expansion of learning content. The creation of customized dashboards provides the education team with data to apply training to areas of deficiency.

Quoted in RFP: Implementation of LearningLIVE solution tool within PowerChart; Development of one clinical and one provider focused LearningLIVE page; Knowledge transfer of how to update the LearningLIVE views, dashboards, and asset development; Development of initial 20 custom assets

Cerner recommends that clients train one super user for every twenty end users for each solution. Cerner recommends that super users, as much as possible, include project team members. There are specific tasks that super users may be asked to perform as part of their role. It is important to note that every super user will not perform every task defined in Attachment XX

End Users participation begins with the delivery of training. Our experience has shown that clients who present a strong communication and marketing plan outlining the benefits of the upcoming conversion, have end users who are anxious and willing to learn their new tasks. Cerner recommends that all end users complete the client training program and pass a competency assessment prior to being assigned password and logon credentials. Post conversion, end users should be encouraged to share their concerns and suggestions for potential system upgrades.

Methods, tools, and types of training

Electronic learning strategy and eLearning creation: Cerner recommends the use of web-based training solutions (WBTs) as the first training point for all end users. The WBTs allows all end users to advance through a course at their own pace. In addition, the WBTs provide a ready source of reference post conversion.

Quoted in RFP: All standard WBTs appropriate for the solutions described in this RFP. Phase I/Ia WBTs will be available to end users for a period of 36 months; Phase II WBTs will be made available to end users for a period of 12 months.; Cerner will provide client the ability to run WBT completion reports.; All standard WBTs will reside on Cerner servers with access via internet.

Many organizations choose to develop customized WBTs to more fully reflect their specific workflow processes. By customizing electronic materials, organizations create relevant training tools that can be utilized as part of their overall training strategy. All custom WBTs have the ability to reside on a County server in Los Angeles. If desired, Cerner will provide proposals to develop custom WBTs for your organization.

TRAIN domain strategy and maintenance: A TRAIN domain is used primarily in instructor-led training and extra-curricular practice. It is important that the domain's use be considered in its population and ongoing maintenance. Cerner recommends that clients create scripts to ensure their TRAIN data is fresh so that instructor-led training utilizes relevant data that replicates system use for delivery of care. Cerner has developed automated tools to assist in this process and will provide quote if desired.

RFP Assumptions: Client will develop and load to TRAIN domain all patient data sets to support end user training.

Paper Learning Materials Development: End User training materials typically include a role or application-specific facilitator guide, participant guide, performance-based assessment, and supporting materials such as job aids. Cerner provides a complete reference library of content for our clients to use in the development of their learning materials. All content, located on UCern, may be downloaded and edited for client use. These reference guides become the foundation for the client to develop workflow specific training materials for each role impacted by the EMR conversion.

At the completion of the end user training, performance assessments become the initial measurement of competency.

Quoted in RFP: Full access to UCern reference library of materials for each solution.

If desired, Cerner will provide a proposal to develop all role based end user training materials delivered as a live source file.

LearningLIVE™ See description in above.

Practice Scenarios: See description above

Computer Learning Labs: A Learning lab is a training room that is staffed with one or more client trainers during specified hours. Cerner recommends that the learning lab be open and staffed six weeks prior to conversion. The Learning Lab serves several functions: End users may come to the learning lab and complete their WBTs; End users will come to the learning lab and complete their practice scenarios for competency validation; In the example of a CPOE conversion, one week before conversion, we encourage physicians to drop into the learning lab to obtain assistance in developing their "favorites" and "macros" in the live environment.

Training Tools Pros and Cons

Web based training (WBT) Pros: Easy access; Flexibility of use; Can be accessed anytime, anywhere; Promotes consistency of content to all end users.

Web based training Cons: Standard WBTs do not reflect client workflow process; Standard WBTs are not role based; No person in attendance to provide support or ask questions; Cons can be eliminated by using custom developed WBTs

Instructor-Led Classroom Training Pros: Focused training with Individual attention to the end user; Consistency in the delivery of content to end user; Department workflow changes can be addressed.

Instructor-Led Classroom Training Cons: Costs associated with end user time and backfill costs; Individuals cannot train at their own pace; Fatigue of end users attending class after completion of shift.

Computer Learning Lab Pros: End users learn at their own pace and supports independent learners; Less resource intensive than formal classroom training; Multiple opportunities for practice which improves retention

Computer Learning Lab Cons: Requires additional devices which may not be 100% utilized; No immediate feedback for questions; Challenging to track attendance.

Sample of training materials are found in Attachment XXX

Cerner recommended best practices for instructor-led end user training: Training not to begin earlier than five to six weeks prior to conversion; Training class should not exceed 12 participants; Performance assessments should be completed in the TRAIN domain at the end of class to demonstrate competency; Class instruction times will vary depending upon role and impact of solutions.

Sample class times: Registration staff: 4 hours; Radiology techs: 4 hours; Ambulatory clinic Nursing: 8 hours; General Nursing: 8-16 hours; Physicians: 8 hours total. Cerner recommends that alternative methods for training physicians to include staffing physician lounges with trainers for the three weeks prior to go-live; schedule one-on-one time with influential physicians during the three weeks prior to go-live.

Additional education (above MethodM) encouraged for technical and functional staff.

Analysts: Millennium Fundamentals (Quoted in RFP); Architecture, Troubleshooting and Issue Management (Quoted in RFP); Building and Maintain course for each solution the analyst has oversight. Example: Building and Maintain Documentation Management; Building and Maintaining Order Management; Standard WBTs for each solution the analyst has oversight. (Quoted in RFP)

Technical staff: Millennium Fundamentals (Quoted in RFP); Architecture, Troubleshooting and Issue Management (Quoted in RFP); Discern Explorer 1, 2, and 3; Discern Analytics Overview; Open Port – those who are responsible for interfaces; Open Engine – those who are responsible for interfaces.

2.4.6 REQUIREMENTS, DESIGN, CONFIGURATION AND CUSTOMIZATION

Provide Proposer's proposed system design, development and testing approach for the EHR project, pursuant to Section 1.6 (Requirements, Design, Configuration and Customization) of Appendix J (Implementation Requirements). Proposer's response for this Section is limited to 4 pages.

Project Preparation Session: The Project Preparation Session is targeted at delivering knowledge transfer to the client project team and other critical client participants to prepare them for their Cerner implementation.

Project Kickoff: The Project Kickoff event consists of three distinct activities: The Project Kickoff presentation, which is an opportunity for the Client Executives and Project Leadership to create enthusiasm for the project; the kickoff is akin to a pep rally in honor of the project's beginning. Additionally, during the Project Kickoff event, the Current State Assessment is conducted, which reviews client's current workflow and processes. This identifies both workflow risks and opportunities relative to Cerner's recommended workflows. The Scope Review Sessions is an opportunity to provide one final review of the scope document to ensure collective agreement regarding what will be implemented.

System Review: The System Review Event provides a guided overview of the solution relative to Cerner recommended workflow and introduces clients to and/or continues the support of the client in data collection activities. This event provides a guided overview of the solution and the concept of workflow. It introduces and supports the client in data collection activities that will be assigned to them to complete.

Design Review: The Design Review event provides a review of recommended workflow and begins the final processes in client data collection activities and their design decisions for their new system. During Design Review, system design and build are also validated for accuracy. Additionally, during this event the Learning Plan Development Session is conducted, working with clients to outline a plan for identifying and meeting their unique learning needs.

System Validation Session: This one-week session focuses primarily on two areas; first, to further familiarizing the client with the applications to confirm system design and to help them learn more about how to use the system and second, to prepare the client to be able to test their system effectively using test scripts they will develop. Over the course of the implementation, the system

will be thoroughly tested. Testing includes unit, functional, and integration testing. There are at least two rounds of integration testing that occur during the project. Detailed information regarding testing is provided in section 2.4.9 System Testing.

Trainer and Conversion Preparation: The Trainer and Conversion Preparation event is the portal for transitioning complete system ownership from Cerner to the client. With Cerner's guidance, Client Project Team members will use the provided demo scripts to complete application demos to the project team. The learning plan is validated and finalized, along with the Integration Test plan and Integration Testing Readiness. Conversion planning is officially kicked off during this event.

Maintenance Training: The primary focus of Maintenance Training is to transfer knowledge of how to perform updates to the client system using the database build tools. The emphasis of this session is on common maintenance activities, not design and build. After this session, the client is equipped to make modifications to the reference database. This event is specific to a Cerner Build project.

Integration Testing: Integration testing allows for validation of a complete integrated system build. It incorporates validating a day in the life of a patient across systems, departments, and workflow processes.

Conversion: Licensed solutions are moved to production use.

Post Conversion Review: The Post Conversion Review focuses on solution and workflow analysis and assesses end user satisfaction, current utilization of the implemented solutions, and the accompanying workflow. The Executive Summary will include recommendations for optimizing use of the system and potential design enhancements, based on interviews and observations conducted and data points gathered. The Executive Summary will facilitate and enhance the ability to plan next phases of automation.

2.4.7 DATA CONVERSIONS

Provide Proposer's proposed data conversion methodology for the EHR project, pursuant to Section 1.7 (Data Conversions) of Appendix J (Implementation Requirements). Proposer's response for this Section is limited to 2 pages.

The history upload process includes the following steps:

Design

- Identify what activity history is going to be loaded into Cerner Millennium.
- Determine if it is possible to extract the data from the current system.
- Participate in a Cerner Millennium spec meeting to review the Universal Interface specs and map data from the current system to Cerner Millennium Universal Interface data elements.
- Determine if the information will go through a TCP/IP socket feed or if it will be provided in files.
- Identify a process for doing catch-up data. This will involve either capturing triggers real-time for

changes, or having the ability to run the extract and only pull new or updated information.

• Decide how much history data needs to be brought forward. This will include identifying legal requirements for maintaining historical data, and may involve alternative solutions for data that is not going to be loaded into Cerner Millennium.

• Document the outcomes from the spec meeting.

Build

• Contract for the extract of the data and mapping into the Universal Interface HL7 specifications.

• Provide formatted sample transactions to the Cerner System Engineer for FSI. The System Engineer will review the transactions for appropriate formatting and report back on any changes that are needed.

• Provide a list of the possible values for any coded data elements that are going to Cerner Millennium. Crosswalk information may also be required.

• The crosswalk information will be built into the Cerner Millennium database.

Test

• The client will then run a sample extract from the foreign system and provide the data to the Cerner System Engineer for an upload test. This step is to ensure the data will post into the Cerner Millennium database.

• Client should review the sample data in Cerner Millennium to validate that the information was posted correctly.

• Integration testing should include using some of historical upload samples.

• A volume test will be performed after the first integration test to set expectations of total time needed, adjust the size of tablespaces used in the database, and to performance tune the system for the historical load.

Convert

• Depending on total volume, the history loads will be started 1-6 weeks prior to conversion.

• Ideally, the included history data will be completed prior to conversion. In some instances, it may be necessary to continue feeding history after conversion.

Typical challenges include getting the other vendor to commit dedicated resources to the project. Another challenge would be extracting data from systems that are not able to use HL7 or other common standards. The most effective way to address the challenges is to get all necessary vendors involved early in the data conversion plan, especially if the data will be extracted in a non-standard format.

Cerner has extensive experience working with clients and other systems. Our engineers use a methodology which incorporates the learning we've gathered over time. We continually update the methodology to ensure that we take advantage of our recent experience and leverage the learning gained from each new challenge across all team members.

Data conversion work is typically handled directly in the system. Instances requiring additional tools outside of connecting to the sending system typically only come into play when the sending format for the data is non-standard.

2.4.8 QUALITY CONTROL PLAN

Provide Proposer's comprehensive Quality Control Plan, pursuant to Section 1.8 (Quality Assurance) of Appendix J (Implementation Requirements). Proposer's response for this Section is limited to 3 pages.

Quality Center Overview

Vision: To deliver quality implementations to our clients and provide measurable outcomes for tracking improvement of design and build

Mission: To ensure Cerner implementations meet the requirements of each client's design and build and achieve uniformity in the delivery of systems

The Quality Center is made up of experienced testing coordinators and analysts who ensure objectivity when completing testing of your database. Solution Architects and Delivery Consultants are engaged to understand process and localized build that may reside outside of our testing plan.

Validation Strategy

Purpose: To systematically verify and document, prior to conversion, the functionality of software, integrity of data and compatibility with business processes within all Cerner Millennium® applications to be utilized.

Objectives: To plan and organize tests, review the expected outcome against the actual outcome, and revise/update future test scenarios based on feedback from the Cerner Team Leaders.

The Quality Center will assist with the following areas in the following types of testing:

- Build Quality Assessments
- Design Quality Assessments
- Internal Integration testing

Roles and Responsibilities

Quality Center Testing Coordinator:

- Oversees localization of the test plans..
- Manages automated and manual testing runs.
- Sends testing progress and results.
- Conducts Testing Review with Cerner Project Manager.

Quality Center Test Analysts:

- Execute manual testing.
- Record Pass/Fails and document issues.

Cerner Project Manager:

- Works directly with Cerner Testing Coordinator to:
- Plan Testing strategy/timeline.

- Participate in testing progress and results communications.

Solution Architect/Delivery Consultant:

- Review Bedrock reports.
- Help client localize unit test plan and system testing scripts.
- Review testing results and resolve issues.

Validation Phases

Build Quality Assessments: Build Quality Assessments ensure that the data provided in Bedrock wizards and in the Data Collection Workbooks is functioning correctly and is built accurately in the system.

Design Quality Assessments: Design Quality Assessments ensure that the system configuration meets Cerner recommendations and the client's workflow requirements, per the client-defined system testing scripts.

Internal Integration testing: Internal Integration testing is completed by the Cerner project team and facilitated by the Testing Coordinator in order to fully prepare for the onsite Integration testing events. This allows the Cerner project team to resolve build-related issues prior to the event.

Methodology

Quality Assessments: Prior to the Unit and Functional Testing phases, the Unit Test Plan is posted to client's MethodM > Project Documents site for the Cerner project team (Solution Architects and Delivery Consultants) to communicate build readiness for testing.

The Unit Test Plan includes the following information:

- Solution
- Deliverable
- Build Items
- Audit/Testing Steps & Additional Front-End testing (if applicable)

The Cerner project team is responsible for indicating the following information in the Unit Test Plan:

- Is the build item included in the client's design?
- If the build is included in the client's design, is it ready to be tested?
- Is an up-to-date DCW on MethodM>Project Deliverables?
- Additional Testing Comments

The Unit Test Plan references unit test scripts that are utilized by the Quality Center to perform testing. Unit test scripts are not customized per client because the approach of validating for discrete elements is consistent across all Millennium clients. The Data Collection Workbooks and Design Decision Matrix are utilized during unit testing to ensure the appropriate discrete elements are tested.

Design Assessments: System Test scripts must be customized per the departmental workflow for each solution. System Test scripts are located on MethodM > Project Deliverables > Testing – System and can be utilized for a starting point. As the System Testing phase approaches, the Cerner Solution Architects and Delivery Consultants along with client counterparts, must post finalized system test scripts to MethodM > Project Documents site for the Quality Center to utilize for testing.

HP Quality Center: The Quality Center utilizes HP Quality Center tool to track test scripts and record testing outcomes. Test analysts will update test runs with specific details, including Pass/Fail and actual results. The Testing Coordinator will provide testing status updates on weekly basis during validation phases utilizing HP Quality Center reporting capabilities and Quality Center scorecard templates.

Issue Tracking: Quality Center's process for documenting testing defects is to record the failure in HP Quality Center for Cerner internal tracking and sent to the solution teams to address. As issues are resolved, the test analysts will retest and close issues as appropriate.

The MethodM Approach includes access to tools such as MethodM Online. This capability features integrated project management, collaboration and workflow specifically created to help you contain costs by reducing on-going project variance, increasing workflow efficiency, and optimizing human resource utilization. But the utility of MethodM goes far beyond your initial deployment. As you maintain, upgrade, and enhance Cerner Millennium, MethodM will continue to improve the quality of outcomes and lower your total cost of ownership.

MethodM Online includes Enterprise Microsoft Project, which allows multiple users to access the project plans. This is a very powerful aid that gives individuals the ability to track and log their project tasks. MethodM Online also contains data collection tools, including the Design Decision Tool, which tracks critical design decisions and their compliance with known best practices. Other features of MethodM Online include an issues tracking system, a documentation library, a project SharePoint repository, and management reporting.

Our methodology, MethodM, is unique because it delivers predictable results and accelerates the speed at which value can be achieved. MethodM reduces variance thereby ensuring that the implementation design supports strategic goals. It contains a rich on-line project record called MethodM Online. This interactive, sophisticated tool set includes:

1. Access for all sponsors and project team contributors
2. Graphical Management Dashboards
3. Interactive communication
4. "Current Review" and "Future View of Tasks" in context of any critical path
5. "Design Decision Tool" that recommends best practice and documents variation from best practice.
6. Documentation library
7. Project SharePoint
8. Graphical Management Dashboards

Continuous Process Improvement (CPI) Green Belt Program: The Cerner Continuous Process Improvement (Green Belt) Certification is a program that includes workshops and working sessions lead by Black Belts and application of concepts to a project supported by Black Belt and Green Belt mentors.

The program's outcome is intended to certify Consulting Associates with the capability to support or drive Cerner Clients' quality improvement efforts through the use of a variety of continuous improvement tools (e.g., Six Sigma, LEAN, and WorkOut).

After successful completion of the program, presentation of project results, and approval by a certification committee, the associates will be positioned to help show our clients that we are the knowledge and industry experts.

Continuous Process Improvement (CPI) Yellow Belt Program: The Cerner Continuous Process Improvement Yellow Belt Training Plan is a self-study program that includes an online course and an assessment of the associate's knowledge of the material. This online course consists of five modules of study presented by Black/Green Belts. The training plan is to be completed within four months of being assigned. As Black Belts and Green Belts begin Continuous Process Improvement projects, they will need Yellow Belt team members to complete a mature Continuous Process Improvement team.

2.4.9 SYSTEM TESTING

Provide Proposer's proposed system testing methodology, pursuant to Section 1.9 (System Testing) of Appendix J (Implementation Requirements). Proposer's response for this Section is limited to 4 pages.

We complete Quality Assessments for all projects by performing a combination of functional testing, auditing, and light unit testing. This begins prior to the client's testing and continues throughout the remainder of the project.

There are many phases involved in our system testing methodology. The testing phases include the following:

Functional Testing: Functional testing focuses on the individual functions within the application. It is the first phase of system validation. It establishes usability and validates the process design, the database design, and the application. The objective of this test is to validate the process and database design decisions reflected in the sample data built. It is intended to allow the user to see how the system will functional. The functional test is critical because databases are highly individualized to reflect process requirements. It is important that all functionality be tested against your sample database before proceeding with completion of your database build in order to minimize the risk of redesign and rebuilt of the database later in the project. Another use for the functional test is to ensure that a newly created or recently refreshed domain is operational.

The functional testing is done at the completion of the sample database build. It is recommended that someone other than the database builder is responsible for testing the sample build.

Documentation for the functional test includes a test plan, test script, and test results. Documentation should be retained in accordance with County's interpretations of regulatory guidelines.

Unit Testing: Unit testing focuses on each of the data elements built within the system. During the unit test, County will confirm that each item has been built correctly and is working correctly. The purpose of the unit test is to test that constructed database is fully functional and to test every variable is built.

Unit testing is usually conducted after the database build is complete. However, it is common for a site to complete unit testing as database build is progressing. The database builders and County will participate in unit testing.

Documentation for the unit test includes a test plan, test script, and test results. Documentation should be retained in accordance with County's interpretations of regulatory guidelines.

System Testing: System testing is based on patient scenarios and focuses on the testing of a single department's workflow and system use. The testing scenarios reflect departmental processes, but should also include any cross-departmental processes. In addition to the departmental Cerner applications, foreign system interfaces and medical device interfaces (MDI) may be tested. The process is tested from start to finish.

The purpose of the system test is to:

- Ensure the system, as implemented, meets user requirements for the process flows within the departments.

- Test departmental policies and procedures and how these relate to other hospital departments.

- Ensure that interfaces (foreign and MDI) are functioning properly.

- Test application level security.

System testing is done upon completion of the database build for the department. The department database builders and end users are responsible for this test. Because departmental processes may include personnel for users outside the department, coordination with other database builders/testers may be necessary. Super users and trainers can also assist in this phase of testing.

Documentation for the system test includes a test plan, test script, any system outputs (charts, reports), documented test results, and an issues log. Documentation should be retained in accordance with County's interpretations of regulatory guidelines.

Integration Testing: The purpose of the integration test is to validate the interaction of multiple Cerner solutions and foreign systems in the context of actual patient care situations. A typical integration testing cycle consists of multiple rounds of testing, followed by issues resolution and then retesting. Integration test scripts usually involve multi-day patient scenarios. These multi-disciplinary patient level scripts would run for several hours to several days and reflect common situations for the institution.

The integration test ensures that information is properly shared across Cerner solutions and across systems. It ensures that, based on actual patient scenarios, the system as a whole functions correctly and as designed. Testing of the following components is included in the integration test:

- Foreign system interfaces (FSI)

- Systems operations jobs

- Data security

- Patient and management reports

- Document routing

- Security

- Other peripheral devices

- Cross-departmental policies and procedures

- Typical patient stay scenarios.

The database builders, end users, operators, system manager, representatives from the FSIs, and CernerWorks will be involved in integration testing. Super users and trainers could also participate if they are not engaged in other project activities.

Documentation for the integration tests includes a detailed test plan, test scripts, examples of outputs (charts, reports), issues log, change control documentation, and test results. Also included are any type of validation spreadsheets and checklists. The requirements of government agencies and accreditation organizations vary so documentation requirements will vary. Documentation should be retained in accordance with County's interpretations of regulatory guidelines.

Parallel Testing: The objective of the parallel test is to duplicate functionality and processing on the current system with respect to the new Cerner system. Because the implementation of Cerner solutions is often the impetus for reengineering processes, the ability to conduct a true parallel test is often limited in that the processes and functionality vary enormously between the current system and the new Cerner system.

Parallel testing is done in order to document that the end result is the same from the old system to the new system. Another reason for this test is to validate the process flows and procedures using real data. Parallel testing also allows the end users to practice the new processes and applications, which in turn helps the project team identify training issues and necessary policy and procedure refinements.

Parallel testing is done upon completion of integration testing and after a requisite portion of end users are trained. The end users execute the parallel test; the database builders monitor the process and analyze the results. Ideally, representatives from all shifts participate. A parallel test may take several days to complete because some of the processes to be tested may span multiple days.

The outputs from the old system (charts, billing reports) and the outputs form the new system will be needed. Because it is difficult to duplicate all activity, documentation of what was done with the new process is needed to analyze results. Documentation should be retained in accordance with County's interpretations of regulatory guidelines.

Peripheral Device Testing: Cerner recommends that one of each type of device be setup and tested early in the implementation cycle. In addition, at each phase of testing, it is recommended that the actual type of device (and setup) to be used by end users be utilized in testing.

Customized printed documents, such as face sheets, specimen labels, fill lists, requisitions, are often designed to be printed on a particular printer model. It is important that these documents be tested on the appropriate printer as soon as the site specific code used to format them is delivered. Issues identified in this testing can then be forwarded to the Cerner team responsible for creating the document so that they are resolved well before go live.

In addition to testing the devices themselves, several applications involve routing logic. Adequate devices need to be set up in order to test this routing logic.

When rolling out new devices, it is important to test them to make sure they work correctly with the applications. Another common gotcha encountered during go live is that devices are not setup properly or end users are not trained in the use of devices. Testing each device and providing

adequate training to the end users help eliminate these problems during go live.

Testing is done whenever a new device or a new setup of a device is implemented. testing usually requires both technical and application resources.

As device configurations are finalized, document the details of the device setup, paper stock requirements, printer locations, and printer names. These will enable your technical staff to better support any reported problems or to quickly setup additional devices. It is also important to thoroughly document any printer routing design. This will help in troubleshooting printer routing issues.

Performance Benchmark Testing/Volume Testing: Performance benchmark testing focuses on the system performance of the workstations, networks, servers, and host. Performance benchmark testing is conducted to ensure that acceptable system performance results when system loads are increased beyond peak anticipated levels both for interactive processing and batch functions. This testing is critical as slower than expected performance time is a common gotcha during go live.

Performance benchmark testing is conducted at any time after the database is built and complete. This test should be conducted sufficiently prior to the go live phase to troubleshoot any performance issues. The performance benchmark testing is a combined effort consisting of database builders, the system manager, CernerWorks administrator, network specialists, operations personnel, and interface personnel.

Spreadsheets will be utilized as well as checklists, timers, or other recording devices to document system response time.

Operational Readiness Testing: In an operational readiness test, all system and operations functions and processes are tested including database backup and restore, downtime procedures, parallel server/failover testing, and help desk functions.

Operational readiness is conducted to ensure the system remains operational during any planned or unexpected downtime events and that tools, processes, and personnel supporting the system operation are functioning effectively. This test also validates whether database backup data is accurate.

The operational readiness test may be conducted in conjunction with the integration test. This phase of testing can be conducted any time prior to going live. Operational readiness testing is a combined effort consisting of the system manager, CernerWorks administrator, network specialists, and operations personnel.

Policies and procedures for backups, recovery steps, failover, etc. are some of the documentation required for operational readiness. To assist in preparing for this step, Cerner facilitates a discussion to help your institution begin to develop these strategies.

Post Conversion Production System Validation: Post conversion system validation is really a reality check regarding whether the production use of the system is meeting expectations in key high volume/high risk areas such as billing, requisition, and label printing. Prior to conversion, County will identify the areas to monitor to confirm the system is functioning as required.

it is important to identify these key check points for crisis prevention, allowing for early intervention in problems in key areas. Knowledge of key operational parameters based on data from the old system can assist the users in identifying production problems with new system.

During the first week of conversion and periodically thereafter, check points should be established to confirm that the system is functional. These may include audits, small tests, or reviewing end users.

Department managers, IS staff, and super users may all be involved in these checks.

Regression Testing: Regression testing is a phase of validation that is required when any new variable has been introduced which may invalidate a previous test. It is important to conduct a validation test to confirm the new variable has not adversely affected the expected outcomes. Regression testing may occur at several times, including:

- New code has been implemented.

- Database modifications (major) have been introduced.

- Creation of a new domain.

The regression test is usually based on previous test plans and scripts.

Throughout the project implementation cycle, Cerner and the client share many responsibilities. It is important that the responsibilities for system validation be clearly understood. Responsibility for the validation testing of a Cerner system lies both with Cerner and with County. Internally, our Solution groups test the system using a generic database procedures and test plans. Because of client-defined options and the inherent flexibility of a Cerner system, it is impossible to test each combination of database options. It is necessary for County to test the software to ensure it meets the defined technical specifications and is (using FDA's phrase) 'reasonably free of defects'. Also, most regulatory agencies emphasize the institution is ultimately responsible for the operation and integrity of their system.

Cerner has two primary responsibilities related to system validation:

1. Develop and deliver high quality solutions that meet the technical specifications.

2. Provide direction for County in validating Cerner solutions for use in their organizations.

County's validation protocols should be designed to verify the system does what County expects it to do based on your design and build decisions and when used in conjunction with your database, internal policies and procedures, and your interpretation of local and federal regulations. You are the most knowledgeable about what you expect your Cerner system to do. Therefore, it is important that you design your validation strategy to verify the system does what you are expecting it to do.

County is responsible for the following:

- Creating the system validation strategy

- Creating a test plan for each level of testing

- Performing functional testing

- Validating the database

- Executing the various test cycles, as defined by County

- Coordination of resources and personnel to prepare, conduct the testing, and to participate in issue resolution

- Develop practices for issues management

- Preparing and storing site specific testing documentation

- Completing thorough testing documentation

- Monitoring the system after conversion

- Conducting appropriate validation testing after conversion when changes are introduced

- Ensuring all government regulation requirements are addressed/met.

Cerner will assist in each of these activities, providing guidance and suggestions. Coordination of these events with the entire project team is important to ensure that appropriate Cerner and client resources are available to support the activities.

Cerner primarily uses two solutions to assist with testing Cerner Millennium software: AutoTester, a GUI tool that enables clients to easily build, modify, execute and view workflow-oriented test scripts using underlying Mercury WinRunner technology; and HP Quality Center, a "control panel" approach to the organization and monitoring of complex test cases used for manual and automated testing. Cerner also provides consulting services for these solutions including implementation, training, and project management. These tools are not included in our proposal but we would be happy to quote them upon request.

2.4.10 GO LIVE PREPARATION

Provide Proposer's specific approach and methodology for completing the rollout and post implementation support effort, pursuant to Section 1.10 (Go Live Preparation) of Appendix J (Implementation Requirements). Proposer's response for this Section is limited to 4 pages.

Our approach to go-live preparation is broken up into four main areas: Project Management, Solution, Learning, and Technical. We have used our vast implementation experience to identify the specific tasks that lead to a successful conversion. Those tasks are identified below.

Project Management:

- Confirming facilities, PCs, network access and sign-ons for conversion staff are ready.
- Finalize conversion staffing needs and cutover plan.
- Finalize conversion issues triage and tracking process.
- Verify Client help desk coverage.
- Finalize conversion change control/PECA process.
- Track show-stopper issues via Go/No Go status report.
- Customize the Solution Turnover documentation and distribute to the project team.
- Coordinate the Diagnostic Center Reviews across the teams.
- Send conversion guide and logistics to the team.
- Ensure ACE support is scheduled.
- Ensure the escalation process is understood across the team.
- Client training on logging and tracking service records has been completed and communicated.
- Ensure the client HIM, client contact, and client contract information is complete and accessible in applicable tools.
- Ensure any entitlements are added to client information. Client has a defined and documented change management strategy and process in place.
- Verify all operations cycles and chart runs have run successfully.

• Validate that client's service and maintenance contracts are complete.

• Validate that Cerner application license fees for all solutions being turned over for support have been activated.

• Ensure all backup procedures are defined, documented, and tested.

• Document any custom code in the client's environment and set expectations regarding Cerner support.

• Schedule Architecture, Troubleshooting and Issue Management course.

• Provide Operation Stage guide to client.

• Direct the client to complete the client care survey on Cerner.com.

• Customize the Turnover Presentation and Agenda to be presented on the Turnover call.

• Schedule Support Turnover call.

• Review the CernerWorks contract, and optional AMS contract if applicable, and discuss ongoing level of support.

• Attach project plan to Turnover Activity Plan in Navigator.

• Compile documentation and/or audit of MethodM tasks for Turnover to review on Turnover call.

• Send call agenda to Turnover call participants.

• Complete Turnover activity in Navigator on completion of MethodM activities.

Solution:

• Review the Conversion Readiness Assessment for each solution.

• Review and update the Conversion Cutover Plan for each solution.

• Complete the Turnover Process documentation for each solution.

Learning:

• Ensure super users are trained to deliver end-user training.

• Review Learning Conversion Readiness Assessment and update in the project plan.

• Review

Technical

• Begin history uploads.

• Review the Technical Conversion Readiness Assessment.

• Complete the volume test with end-users to simulate the production load.

• Complete the high availability test with the client.

• Freeze code and database.

• Activity data delete and system reboot.

We work very closely with County to ensure every aspect of the project is ready for conversion. The

County staff that will be directly involved in the go-live preparation tasks are identified in the tasks listed above. The staff includes Project Team Staff, End-users, Super Users, Trainers, Clinical Staff, and IT/Help Desk staff. Their levels of participation vary based on each task.

In addition to the tasks listed above, County will participate in a Trainer and Conversion Preparation Session that takes place in the middle to end of the project. The Trainer and Conversion Preparation event is the portal for transitioning project ownership from Cerner to County. Solution and Project Management sessions during this week focus on assessing the County's knowledge of the system as well as preparing the County for training events and conversion.

The majority of the information supplied by the County should be built by this time with a few outliers. Unit Testing should be near completion and System Testing should be in progress. The rest of the Cerner project team participates via conference call.

Solution-Specific Activities and Objectives

- Demonstrate a clear understanding of system and departmental processes using the TCP Client Demo Script.
- Begin preparation for conversion.
- Understand existing open issues in eService and escalate as appropriate.
- Develop the Solution Education Strategy document using the Client Leading Strategic Change Workshop and Sample Training Materials document.

Project Management Activities and Objectives

- Initiate process of Ownership Transition.
- Confirm unit and system testing is in process, on track, and scheduled for completion before Integration Testing.
- Review and Validate Integration Test Scripts.
- Identify any and all outstanding items required for Integration Testing and create action plan.
- Confirm facilities and hardware are in place to support integration testing.
- Confirm adequate number of users will be trained and available for integration testing.
- Initiate development of Action Plan for Deployment.
- Finalize Integration Test Plan.
- Initiate Conversion Plan.

Location: Client Site

Duration: Four to five days (dependent on the number of solutions being implemented)

Solution-Specific Activities Conducted by: Cerner Solution Delivery Consultant, Project Management

Project Management Activities Conducted by: Cerner Engagement Leader, Cerner Technical Engagement Leader, and Cerner Integration Architect

County Participants: County Analysts, County Project Manager, County Process Architect, County Testing Coordinator, County Education Coordinator, County Peripherals Coordinator, County System Engineer, County Clinical Managers, County Transformation Coordinator, County Technical Engagement Leader

County Responsibilities:

• Demonstrate understanding of system and departmental processes by leading a demonstration(s) of the applications

• Finalize Training Strategy

• Finalize Integration Test Scripts and Integration Test Plan

• Develop and own the conversion plan

• Provide adequate training facilities (one PC per person) for the end users

• Schedule training

• Schedule and perform end-user training

• Confirm adequate number of user will be trained and available for Integration Testing

• Sign off Event Summary

Cerner Participants: Cerner Solution Delivery Consultants, Cerner Solution Architects, Cerner Engagement Leader, Cerner Integration Architect, Cerner Technical Engagement Leader, Cerner System Engineer

Cerner Responsibilities:

• Provide demo scripts

• Validate County has thorough understanding of applications and system workflow

• Document and review Solution and Project Management Conversion Readiness Assessments with County

• Assist County in finalizing their Training Strategy by reviewing the Leading Strategic Change Workshop Summary and Trainer Handbook

• Provide sample integration test script and assist with integration test planning

• Provide sample conversion cutover plan and assist with conversion planning

• Review technical readiness assessment

2.4.11 PRODUCT SUPPORT AND TRANSITION

Provide Proposer's proposed production support and transition approach for the EHR project, pursuant to Section 1.11 (Product Support and Transition) of Appendix J (Implementation Requirements). Proposer's response for this Section is limited to 2 pages.

After conversion to production, your Cerner project team will continue to provide support for non-critical patient care issues until your site has been transitioned to SolutionWorks. For critical patient care issues, the Immediate Response Center (IRC) is available. Your Cerner Engagement Management team will work with your Project Management team to coordinate the transition process.

To get your organization prepared for ongoing maintenance and support, we have incorporated the Maintenance Training Session into our implementation methodology. During the Maintenance Training Session, your organization learns how to maintain the system using database build and maintenance tools. the session encompasses common maintenance activities. The objectives of the

session include:

- Equip the client representatives to make common database updates.

- Locate supporting documentation and educate the client on the tools used to troubleshoot the system and database build issues.

- Identify the process for maintaining and modifying the database.

In addition to the database maintenance tools, your organization will have access to cerner.com. Cerner.com offers clients the freedom and flexibility to access valuable information about their business relationship with Cerner, complete business transactions, research solution issues, track ongoing service records, and connect with other clients and Cerner associates through uCern.

Cerner's Application Management Services (AMS) is an optional offering that provides direct and continuous support for the day-to-day operational management of Cerner solutions. AMS works closely with Client Staff, CernerWorks, the Immediate Response Center, and SolutionWorks.

Service Options include Level 2 Application Management and Application Monitoring as described below.

Level 2 Application Management:

- Issue Management - Service which focuses to address reporting failures of previously working functionality within Cerner Applications. Service ensures applications are working effectively, efficiently, and as designed by bridging the gap between the client's Help Desk and SolutionWorks (leve-3 support).

- Application Maintenance - Service which maintains client applications by designing, building, and testing requested changes to existing implemented Millennium functionality.

- Content Management - AMS performance content uploads, occurring on a scheduled basis (x times per month, per quarter, per year).

- Change Management - This process ensures that changes occur in a controlled environment so that all parties understand the potential impact of an impending change and identifies potentially affected systems and processes prior to implementation of the change(s).

Application Monitoring:

Service which monitors client's Cerner applications to find and correct issues before the end user is impacted. AMS monitors and maintains chart requests, print queues, faxes, interface transaction queues, operations jobs, and other application-related items.

The duration of services is flexible based upon client needs and is established as a part of the scoping process.

2.4.12 ANTICIPATED RISKS/ASSUMPTIONS

Provide areas of the EHR System implementation, including Services, which constitute the highest risks and discuss Proposer's approach to management and mitigation of those risks.

Identify assumptions and dependencies on which proposer has based its proposal, pursuant to Section 1.12 (Anticipated Risks/Assumptions) of Appendix J (Implementation Requirements). Proposer's response for this Section is limited to 1 page.

The following risk factors should be discussed and evaluated with the client at every project as early as possible. Developing a plan to mitigate issues and project risk is fundamental. Each of the risks identified below may result in extended project duration, additional professional services fees and/or low adoption rates.

The schedule for project events is set far in advance of the actual event taking place. Missing a deadline may result in an event needing to be delayed. Delayed events are rescheduled for the next available time slot, which could be several weeks out. A delay of any event may result in a deferred conversion and/or additional professional services fees.

The County has to ensure that the staffing that Cerner recommends for this project is available and that clinicians that are needed for the project have their positions back filled so they have time to participate. Contingency plans to cover project team departmental responsibilities are recommended. Not having appropriate staff available for required events may results in a deferred conversion and/or additional professional services.

Per Gartner, lack of end-user participation is the single reason that IT projects fail. Cerner recommends that the client assign an Education Coordinator to plan and manage the organization's end-user education and training. Lack of end-user participation in education and training may result in low adoption levels of the new system and require additional training, thereby increasing the professional services for the system if Cerner is selected to do the additional training.

Blood Bank Transfusion (BBT) Validation is a 12-week exercise that occurs only after BBT build is complete. This requires dedicated staffing by the BBT department or third party involvement at additional expense. Plans for this process must begin early in the project.

By their nature and dependencies, foreign system interfaces and history uploads are critical to the project from the point of kickoff. Connectivity to all systems must be established early. Usually, this requires coordination with other vendors. Furthermore, FSI should be included in every test plan according to the organization testing strategy. Access to resources from vendors must be provided in a timely manner to avoid delays with interfaces, which could result in delays in the timeline.

Cerner recommends that at least one person per solution be assigned to the project for the success of resource allocation. Failure to staff the project with the right numbers or skill set results in missed dates and frustrated team members. Solution specific resource requirements are identified later in this guide.

Making sure label and report printers, label stock, desktops, bar code readers and wands are appropriately selected, properly placed, correctly configured, installed on time, and testing is one key to a successful implementation. Not having these items in place and tested on time may result in a delay in the timeline and additional professional services. Cerner recommends that the client assign a Peripherals Coordinator to plan and manage this important area of the implementation strategy.

Large organizations with multiple facilities have to agree on the overall EHR design and workflow. There must be executive leadership involvement in the project for any key decisions that result from differing opinions among representatives from different facilities.

There must be very good communication, and strong team cohesion around the vision and the

mission.

If any metrics provided for the number of facilities or scope of the project are incorrect, the duration may extend or additional professional services may be required.

Project Gateways serve as means to evaluate a project's progress against key deliverables. The intent is to manage project risk and ensure quality implementations. The framework of Project Gateways is to evaluate a project at five points within a project lifecycle to ensure key deliverable completion. It also offers a mechanism and process to track risk response plans for deliverables that are incomplete by the prescribed due date. Projects not meeting minimum Gateway criteria will have risk response plans and timelines documented. Projects not making sufficient progress on keys deliverables outlined in the Project Gateways may have the potential to not pass on to the next "phase" of work until deliverables are complete and/or the subsequent risks have been mitigated. Delays to the timeline could require additional professional services.

2.5 APPENDIX K (ADMINISTRATIVE REQUIREMENTS)

2.5.1 GENERAL QUALIFICATIONS

(i) Experience and Background

Provide Proposer's response regarding experience and background pursuant to Section 1.1.1 (Experience and Background) of Appendix K (Administrative Requirements). Proposer's response to this Section is limited to 4 pages.

Since 1979, Cerner has focused exclusively on designing and deploying healthcare IT solutions that improve efficiency and quality of care. Cerner is the leading U.S. supplier of healthcare information technology solutions that optimize clinical and financial outcomes. Around the world with more than 9,300 facilities in 23 countries, health organizations ranging from single-doctor practices to entire countries turn to Cerner for our powerful yet intuitive solutions. Cerner offers clients a dedicated focus on healthcare, an end-to-end solution and service portfolio, and proven market leadership.

Barb Brown brings 25 years of Healthcare IT consulting experience; progressive responsibility in account management and system implementation. She has 17 years of Cerner experience and is PMP certified. Barb has expertise in managing system implementation from initiation through productive use following structured methodology. Proven experience with a broad spectrum of Cerner Solutions such as: CPOE, Clinical Documentation, Ancillary Systems and Technology solutions. Barb also has Knowledge of and experience with LA County Hospital policies, processes and systems.

Cerner participates in a variety of certification programs with the Certification Commission for Health Information Technology (CCHIT) for both ambulatory and hospital certification. CCHIT is a recognized certifying body for Meaningful Use with the Office of the National Coordinator (ONC) of the U.S. Department of Health and Human Services, and is an ONC Accredited Temporary Certifying Body (ONC-ATCB) for the ONC-ATCB 2011/2012 certification program. CCHIT continues to administer its traditional version, which was rebranded as a comprehensive "good housekeeping seal" for certification of inpatient, ED and ambulatory EHRs. This certification is no longer considered a necessary certification, as the ONC-ATCB 2011/2012 program is the only certification recognized by ONC as the accredited program for federal HIT programs including meaningful use and the Stark/Anti-Kickback Law HIT safe harbors.

Cerner's certifications with CCHIT under the traditional comprehensive program are:

CCHIT Certified 08 – Emergency Department EHR – 4/22/09

CCHIT Certified 08 Ambulatory EHR – Cerner Millennium PowerChart/PowerWorks EMR 2007.19 – 4/22/09

In 2001, Cerner elected to have all operational organizations included under Cerner's ISO certifications. Most Cerner locations are certified. These are listed below and on the certificates.

For Cerner's Complete EHR certification and modular EHR certified solutions for both Eligible Provider and Hospital for Meaningful Use – see http://www.cchit.org/products/onc-atcb or http://onc-chpl.force.com/ehrcert for full listings across 2007.19.12, 2010.01.07 and 2010.02.01.

Cerner takes its obligations to the public's health very seriously. We believe adherence to the FDA's Quality System Regulation (QSR) is a minimum requirement for any activity in the medical device software industry. To go beyond QSR and broaden our commitment to quality, safety, and effectiveness for our clients and their patients, we have created and distributed the Cerner Quality Statement, established and implemented a quality system with associated performance objectives and metrics, and promote continuous improvement. Cerner has achieved ISO 9001:2000 and ISO 13485:2003 quality system certifications for specific locations.

At every stage in Cerner's 33-year history, the view from the competitive field has appeared to be roughly the same for us. There has always been one strong competitor showing up consistently in the face-off situations, and our current state is no exception. When we back away and look at the same race over three decades, however, the view looks very different. A new truth emerges. It hasn't been the same competitor. In each era, it has been a different company. Not only have most of our one-time rivals fallen behind, many don't even exist as companies today. The outcome is never certain, but we believe the road ahead, ultimately, has some sharp bends; if you miss just one, you are history. The key to staying in the race is having a vision for the future … even while you're competing in the present. Our vision for the future has always remained a key Cerner differentiator. Cerner has and continues to execute its vision to make health care safer and more efficient.

Cerner believes that the clinical benefits and operational efficiencies that health care information technology facilitates should be available to all patients and providers, large and small. Therefore, Cerner has focused its line of solutions to scale from critical access hospitals to community hospitals, academic medical centers, large IDNs and entire countries. Other vendors in the industry, because of business decisions or functional limitation, focus on individual market segments.

Black Book, Gartner, analyst reports all agrees; we lead the pack. Cerner's breadth and depth of solutions is best positioned to get our clients to Stage 2 meaningful use. In fact, today we are leading in the number of hospital attestations. Other companies are focused on 'automating the paper chart' while Cerner is focused on delivering value to our clients by helping them improve efficiencies and outcomes, helping to control costs and helping them manage their population health.

108 clients have completed EHR System software implementations from the past three (3) years. The number of those clients with 600+ beds or 1000 physicians is not tracked.

Cerner does not break down status to the module. We currently have 1,888 associates assigned to development , 3,679 associates in the Consulting role, and 963 associates in Support.

There are 25 Public Health clients at 35 sites that have purchased Cerner Millennium.

Please find detailed profiles for the following clients: Cook County, IU Health, Truman & Banner Health. Additional information requested above is not kept on our clients, and could not be released

without their consent. These clients are available to host a call or visit from you to discuss these specific questions.

Predictable/Structured Methodology/Fixed Fee-Cerner's professional services methodology, MethodM, bolstered by 30-plus years of implementation experience, offers a fixed-fee pricing model- one that provides our clients with predictable cost of ownership. Cerner's methodology was established to support the execution of a standardized, event-based implementation approach to deliver predictable results and to accelerate the speed at which value can be achieved from Cerner solutions.

Lower Total Cost-The MethodM Approach includes access to tools such as MethodM Online. This capability features integrated project management, collaboration and workflow specifically created to help you contain costs by reducing on-going project variance, increasing workflow efficiency, and optimizing human resource utilization. But the utility of MethodM goes far beyond your initial deployment. As you maintain, upgrade, and enhance Cerner Millennium, MethodM will continue to improve the quality of outcomes and lower your total cost of ownership. The top 5 differentiators in Cerner's project approach are:

Integrated Platform-Cerner MethodM is an integrated platform, providing these important features:

Outcomes-based approach - Aligning with your organizational imperatives

Disciplined and predictable processes - Providing the right resource at the right time

Leveraged client interaction and experience - Proven to reduce risk and variability

A logical continuum - From procurement to clinical transformation

Online Toolset-MethodM is more than just an approach, it is a rich online toolset that project teams use to design, build, and manage implementation projects. MethodM Online includes Enterprise Microsoft Project, which allows multiple users to access the project plans. This is a very powerful aid that gives individuals the ability to track and log their project tasks. MethodM Online also contains data collection tools, including the Design Decision Tool, which tracks critical design decisions and their compliance with known best practices. Other features of MethodM Online include issues tracking system, a documentation library, a project SharePoint repository, and management reporting.

Automated Implementation Tools-Finally-we provide an automated toolkit –Bedrock--that eliminates much of the variance and error in building and maintenance tasks. Bedrock uses tools, known as "wizards," to configure the system based on survey questions, forms, work charts, legacy data and graphical displays. The tool, through the use of a natural language approach, reduces learning curves and time required to master implementation build tools. Embedded in the tool are common medical terminologies that leverage Cerner's executable knowledge content and capabilities. It also is designed to understand the dependencies among build tasks, resulting in cleaner implementations with less variance.

a 100% b.We don't have an outside certification. c.Cerner has received Training Magazine's Top 125 recognition for 13 consecutive years.

This award recognizes organizations around the world for their outstanding efforts in human capital development, as determined by Training Magazine, a publication focused on training best practices, benchmarking, and standards for a global audience.

The data provided in the Top 125 applications is scored and evaluated quantitatively and qualitatively by Training. Each organization's ranking is based on many factors, including financial

commitment, new training initiatives and best practices, evaluation and measurement, and a wide variety of statistics such as turnover/retention and number of training hours per employee.

We require all new associates to complete training.

Cerner's Solutions Center partners with health care organizations to envision, design, build and deploy Cerner solutions. These deployments occur within a defined scope. They include highly skilled consultants and project management tools created specifically for each type of project.

Whether implementing Cerner solutions for the first time or subsequent phases, our Solutions Center will help you streamline your implementations, reduce costs and optimize resources for greater discipline, predictability and quality.

The Solutions Center offers expert solution consultants, repeatability, efficiency and speed to value. Its approach to deployment—aligning the right people, processes, solutions, methods and technology—ensures your implementation projects are completed on-time and within budget. Through the Solutions Center, proven processes scale across many health care venues, including:

•Integrated delivery networks (IDN)

• Pediatric

• Academic

• Regional hospitals

• Specialty hospitals

• Community health care

• Correctional

The Solutions Center helps organizations speed implementations and enhance safety. We organize design sessions that bring together the right roles to make workflow and system decisions.

Solutions Center services include embedded adoption activities, such as governance structure, communication strategy and resource planning. Our projects can be either remote- or client-hosted.

The Solutions Center uses Cerner's implementation approach, MethodM®, which is the culmination of experiences and best practices gained from hundreds of Solutions Center projects.

MethodM gives you access to the valuable lessons learned by your peers, who have had successful implementations. MethodM seamlessly integrates communications to alleviate many of the challenges project teams face to guarantee the right resources are doing the right work at the right time.

For example, MethodM includes an online design decision management system, which automatically alerts your leadership if a decision deviates from the recommended system design.

In addition, we manage project deliverables and documents centrally in a project-focused site and make them available to the entire project team.

Since its inception, the Solutions Center has experienced rapid growth, implementing approximately 3,535 solutions across more than 415 projects.

Cerner continuously improves processes based on client feedback, incorporating lessons learned. Based on these responses, we now provide expanded offerings with a well-defined scope and starter test scripts.

Also, we have more clinical resources with greater levels of experience.

You can rely on our team for successful project management and improved resource continuity. The

Solutions Center approach provides a structured implementation experience, reducing variance and lowering your total cost of ownership. We deliver predictable Cerner Millennium® engagements with accountability and reduced complexity, allowing you to realize the full value of your Cerner solutions over time.

For more than 30 years, Cerner has transformed health care by eliminating error, variance and waste for providers and consumers around the world. As we enter our fourth decade, we remain focused on developing innovations that will improve our entire system.

Health care is too important to stay the same, so we're changing the way people:

-Use and share information

-Pay for health and care

-Think about health

(ii) Performance History

Provide Proposer's response regarding performance history pursuant to Section 1.1.2 (Performance History) of Appendix K (Administrative Requirements). Proposer's response to this Section is limited to 3 pages.

1.a.b.c.d.:Please refer to in Appendix O (County Required Forms), Exhibit O 2 (Prospective Contractor References).

Please refer to in Appendix O (County Required Forms), Exhibit O 3 (Prospective Contractor References).

Please refer to in Appendix O (County Required Forms), Exhibit O 4 (Prospective Contractor List of Terminated Contracts for Non-Performance).

Cerner has not been excluded in participating in a government payor program such as Medicare. Cerner is not aware, to the best of its knowledge as of the date of this RFP response, that any of Cerner's officers or directors has been excluded from participating in a government payor program such as Medicare.

No. Cerner has never been suspended from participation in bidding on any public (e.g., federal, State, County, city) contracts.

Cerner is not aware of any current investigations of Cerner by any such government agencies; however, we have been subject to routine investigations over the years by governmental entities such as the FDA. Cerner does not actively monitor its clients to determine whether they are subject to investigation by such governmental enforcement agencies.

As of the date of this response, there is no existing litigation pending against Cerner that would have a material adverse effect upon our ability to provide the solutions and services quoted in this response.

There is no third party software and hardware (including the owner, licensor, and/or seller thereof) that is bundled into or is a component of the proposed EHR System and Services.

There are no failures or refusals to complete a contract.

(iii) Financial Strength

Provide Proposer's response regarding financial strength, pursuant to Section 1.1.3 (Financial Strength) of Appendix K (Administrative Requirements). Proposer's response to this Section is limited to 2 3/4 page.

Please refer to the following documents: Attachment K.A. Cerner Annual Report 2010, Attachment K.B. Cerner Annual Report 2009, and Attachment K.C. Cerner Annual Report 2008.

As of the date of this response, there are no potential commitment that would impact assets, lines of credit, guarantor letters, etc. that may affect the Cerner's ability to perform the Agreement.

Cerner banks with US Bank Corp. US bank Corp is located 9900 West 87th in Overland Park, Kansas 66213.

This is not applicable to Cerner.

Cerner's Dun & Bradstreet number is 04-241-0688. With this number you can request a D&B report. Our credit rating is 5A1.

Cerner's mission and focus is to transform healthcare by delivering solutions and services to our clients that increase the quality of care, enable greater efficiencies, and improve patient safety. In considering an acquisition, we assess only deals that would complement Cerner's core clinical, management and financial suite of integrated solutions and leverage our investments to new market segments.

Cerner understands that the "Best of Breed" approach has evolved with the increasing capabilities of technology and the need for sharing data in a timely, meaningful and appropriate way. In some cases, there are niche companies that could not survive in the marketplace on their own but had missions that aligned with Cerner's quest to transform healthcare through technology. By joining forces with Cerner, these companies provide our clients with access to world-class, integrated systems and service. These acquisitions allow us to better serve the consistently changing needs of current and future clients by enhancing our core Cerner Millennium solutions with very specific functionality, integrating content as executable knowledge, and increasing our market share within a given segment.

IMC Health Care, Inc. January 4, 2010 Cerner Health Connections, Inc. Provider of employer sponsored on-site health centers to expand Cerner's employer health initiatives, such as on-site employer health centers, pharmacies and wellness programs-Merger

Triplett & Adams Enterprises, Inc., d/b/a Resource Systems.May 23, 2011.Merged into Cerner Corporation Solutions for the long term care market, including skilled nursing facilities, nursing homes, hospice, home health, developmentally disabled, continuing care communities, retirement communities and personal care/rest homes. CareTracker® and MDS Director™-Merger

Clairvia, Incorporated October 17, 2011.Merged into Cerner Corporation.Health care workforce management solutions for patient and staff management, including Care Value Management™ and Physician Scheduler™-Merger

Cerner will agree that neither party may assign the contract or the licenses and privileges granted under it. Cerner may, however, assign and delegate in conjunction with a reorganization or merger, or in conjunction with the sale of substantially all of its assets to which the Agreement pertains, or in conjunction with any other assignment or transfer to which Client consents in writing.

To better serve you, Cerner establishes alliances with the "best in the business" - companies like Cerner with the proven vision to help transform your organization through healthcare IT solutions. As leaders in their respective industries, Cerner's partners bring an established track record of

innovation and results that will make your Cerner solutions even more effective.

Some partners include: Dell,IBM,HP,Oracle,BMC,Sprint.

We commit significant resources to developing new health information system solutions. As of the end of 2010, approximately 2,400 associates were engaged in research and development activities. Total expenditures for the development and enhancement of our software solutions were approximately $284.8 million, $285.2 million and $291.4 million during the 2010, 2009 and 2008 fiscal years, respectively. These figures include both capitalized and non-capitalized portions and exclude amounts amortized for financial reporting purposes.

(iv) Internal Controls, Audit Coverage, and Insurance Requirements

Provide Proposer's response regarding internal controls, audit coverage, and insurance requirements, pursuant to Section 1.1.4 (Internal Controls, Audit Coverage, and Insurance Requirements). Proposer's response to this Section is limited to 1 page.

Cerner conducts the SSAE. The SSAE-16 supersedes the familiar SAS 70 report beginning with reporting periods ending on or after June 15, 2011. SSAE-16 continues the focus on reporting on controls at service organizations when those controls are likely to be relevant to their user entities' internal control over financial reporting. However, we do not release this report without an NDA signed.Cerner is willing to work with County to provide additional information if necessary.

(v) Willingness to Provide Other Information

Provide Proposer's statement regarding its willingness to provide County with any other information County determines is necessary for an accurate determination of the prospective Proposer's qualifications to provide the EHR System and Services, pursuant to Section 1.1.4 (Internal Controls, Audit Coverage, and Insurance Requirements) of Appendix K (Administrative Requirements). Proposer's response to this Section is limited to 1/4 page.

Cerner is willing to work with County to provide additional information if necessary.

2.5.2 PROPOSER USE OF SUBCONTRACTORS

Provide information regarding Proposer's use of subcontractors, pursuant to Section 1.2 (Proposer Use of Subcontractors) of Appendix K (Administrative Requirements). Proposer's response to this Section is limited to 1 page.

We are not using subcontractors.

2.5.3 PERFORMANCE OF SERVICES OUTSIDE THE UNITED STATES

If Proposer intends to use resources outside the United States, including Proposer affiliates and subcontractors, provide required information, pursuant to Section 1.3 (Performance of Services Outside the United States) of Appendix K (Administrative Requirements). Proposer's response to this Section is limited to 1 page.

We do not use first line services provided outside the United States.

2.5.4 PROPOSER OUTSIDE THE UNITED STATES AND OFF-SITE SECURITY PRACTICES AND RECOMMENDATIONS

As to any Service provided outside the United States or off-site, provide Proposer's responses to each of the security questions in Section 1.4 (Proposer Outside the United States and Off-Site Security Practices and Recommendations) of Appendix K (Administrative Requirements). Proposer's response to this Section is limited to 1 page.

Please see above. Not applicable.

The undersigned below represents and warrants that he/she is authorized to make representations for Proposer, that the representations are true and correct, and that he/she is authorized to sign for and on behalf of Proposer. Proposals signed by other than the owner of a sole proprietorship, an authorized officer of a corporation, an authorized general partner of a general or limited partnership, or a manager or managing member of a limited liability company must include a power of attorney authorizing the signature.

Note: Confirmation of receipt does not constitute an approved/accepted filing. We recommend that you print or save this screen as a record of your E-file transaction and credit card payment.

Copies of filings after submission may be requested using our Business Entities Records Order Form.

If you are representing a business, we want you to be aware of a deceptive solicitation sent to many companies implying they have to go through a private, third party vendor – and pay an exorbitant fee – in order to file official documents with our office.

These solicitations are asking for fees of up to $495 to file various documents with our office – documents that, in most cases, have a filing fee of $25 for Statements of Information at most and $0 for termination documents.

A Customer Alert on our website at www.sos.ca.gov/business/be/alert-misleading-solicitations.htm has more details about these deceptive ploys, as well as information on how you can file documents

REQUEST FOR PROPOSALS

APPENDIX T

(MINIMUM MANDATORY REQUIREMENTS PROPOSAL)

November 15, 2011

1. REQUISITE EXPERIENCE

In order for a Proposal to pass Evaluation Phase 1 (Evaluation of Minimum Mandatory Requirements Proposals) and be considered for the remaining phases of the evaluation process, Proposers shall submit a completed, signed version of this Appendix T (Minimum Mandatory Requirements) ("Minimum Mandatory Requirements") as their Minimum Mandatory Requirements Proposal and submit pertinent documentation and/or written responses as part of their Minimum Mandatory Requirements Proposal in support of the such Minimum Mandatory Requirements, as requested. Therefore, Proposer's Minimum Mandatory Requirements Proposal will consist entirely and solely of its completed, signed version of this Appendix T, all applicable documentation and/or written responses in support of the Minimum Mandatory Requirements, as requested, and its completed, signed version of Appendix T-1 (Minimum Mandatory Requirements Proposal Checklist). Failure to meet any of the Minimum Mandatory Requirements shall result in a rejection of a Proposal.

Please submit the pertinent documentation and/or written responses in support of each applicable Minimum Mandatory Requirement as separate Attachments to this Appendix T with a specific reference to the Minimum Mandatory Requirement section number pursuant to which such documentation and/or written response is provided.

Proposer must submit one (1) original Minimum Mandatory Requirements Proposal, three (3) hard copies, and two (2) electronic copy in the format specified in Section 4.5.3 (Formatting) of the RFP on Universal Serial Bus (USB) memory drive, in a separately sealed envelope or box, plainly marked in the upper left-hand corner with the name and address of Proposer and bearing the words "Minimum Mandatory Requirements Proposal, Request for Proposal for Electronic Health Records (EHR) RFP # KL2011, Proposal due by December 9, 2011, 12:00 p.m. Pacific Time," as provided in Section 1.3 (Schedule of Events) of the RFP.

2. PROPOSER QUALIFICATIONS

The Minimum Mandatory Requirements, as detailed in this Section 2 (Proposer Qualifications), are:

- ONC-ATCB Certified
- Comprehensive
- Integrated
- Implemented in customers with similar scope and scale to LA DHS
- Ongoing support to customers with similar scope and scale to LA DHS
- Market Penetration

2.1 ONC-ATCB CERTIFIED

The Secretary of the Department of Health and Human Services (HHS) has determined that certification by an ONC-Authorized Testing and Certification Body (ONC-ATCB) will signify to eligible professionals, hospitals, and critical access hospitals that an EHR technology has the capabilities necessary to support their efforts to meet the goals and

objectives of meaningful use. The ONC-ATCBs are required to test and certify EHRs to the applicable certification criteria adopted by the Secretary under subpart C of Part 170 Part II and Part III as stipulated in the Standards and Certification Criteria Final Rule.

The Proposer must provide evidence that verifies that the proposed EHR technology has been tested by an ONC-ATCB in accordance with the applicable certification criteria adopted by the Secretary of Health and Human Services (HHS), and certified by them to be compliant for ambulatory and inpatient practice settings.

The Proposer must identify each of the following for the (a) ambulatory product, and (b) inpatient product:

- the name of Proposer's EHR technology product and the product version number,
- the date of certification,
- the name of the certifying ONC-Authorized Testing and Certification Body (ONC-ATCB),
- the ONC certification number,
- whether Proposer's EHR technology product is a "Complete EHR" (a system that provides all certification functionality) or an "EHR Module" (a separate module that provides a component or components of certification functionality to be combined with other EHR products that, taken together, provide all certification functionality and meet the definition of Certified EHR Technology),
- in the event that Proposer's EHR technology product is an EHR Module (not a Complete EHR), identify which, if any, third party EHR technology products that Proposer currently anticipates, that when combined with Proposer's EHR Module, will interoperate, integrate, and meet the definition of "Certified EHR Technology," and
- list of the clinical quality measures with which the product was tested and certified as being compliant.

Proposer's response to Minimum Mandatory Requirements in Section 2.1 (ONC-ATCB Certified) is to be provided in the table below:

#	Minimum Mandatory Requirements	Ambulatory Product	Inpatient Product
2.1.1	The proposed EHR solution has been certified by an ONC-ATCB to be compliant for the applicable practice setting	Yes ☒ No ☐	Yes ☒ No ☐
2.1.2	Proposer has provided documentation verifying that the proposed EHR solution has been	Yes ☒ No ☐	Yes ☒ No ☐

#	Minimum Mandatory Requirements	Ambulatory Product	Inpatient Product
	certified by an ONC-ATCB as "**Attachment 2.1.2**"

2.2 COMPREHENSIVE

The Proposer must provide documentation and/or written responses that verify that 15 customers in the U.S. are using either the current version of the proposed EHR Licensed Software or the version immediately preceding the current version of the proposed EHR Licensed Software to support the following functionalities:

- Care Venues
  - Inpatient
  - Ambulatory specialty clinics
  - Ambulatory primary care practices
  - Emergency Department
  - Critical Care Units
  - Operating Room
- Ancillaries
  - Pharmacy
  - Laboratory
  - Radiology Information System (RIS) (this functionality does not include picture archiving and communication systems (PACS))
- Functionality
  - CPOE
  - Physician Documentation
  - Nursing Documentation
  - Admission, Discharge and Transfer
  - Scheduling
  - Registration
  - Full Cycle Medication Administration
  - Chronic Disease Management

Proposer's response to Minimum Mandatory Requirements in Section 2.2 (Comprehensive) is to be provided in the table below:

#	Minimum Mandatory Requirements	Yes	No
	Care Venues		
2.2.1	15 customers in the U.S. are using either the current version of the proposed EHR Licensed Software or the version immediately preceding the current version of	☒	☐

#	Minimum Mandatory Requirements	Yes	No
	the proposed EHR Licensed Software to support inpatient functionality.		
2.2.1(a)	Proposer has provided documentation and/or written responses that verify its response to Minimum Mandatory Requirement #2.2.1 as "**Attachment 2.2.1**".	☒	☐
2.2.2	15 customers in the U.S. are using the current version of the proposed EHR Licensed Software or the version immediately preceding the current version of the proposed EHR Licensed Software to support ambulatory specialty clinics functionality.	☒	☐
2.2.2(a)	Proposer has provided documentation and/or written responses that verify its response to Minimum Mandatory Requirement #2.2.2 as "**Attachment 2.2.2**".	☒	☐
2.2.3	15 customers in the U.S. are using the current version of the proposed EHR Licensed Software or the version immediately preceding the current version of the proposed EHR Licensed Software to support Ambulatory primary care practices functionality.	☒	☐
2.2.3(a)	Proposer has provided documentation and/or written responses that verify its response to Minimum Mandatory Requirement #2.2.3 as "**Attachment 2.2.3**".	☒	☐
2.2.4	15 customers in the U.S. are using the current version of the proposed EHR Licensed Software or the version immediately preceding the current version of the proposed EHR Licensed Software to support Emergency Department functionality.	☒	☐
2.2.4(a)	Proposer has provided documentation and/or written responses that verify its response to Minimum Mandatory Requirement #2.2.4 as "**Attachment 2.2.4**".	☒	☐
2.2.5	15 customers in the U.S. are using the current version of the proposed EHR Licensed Software or the version immediately preceding the current version of the proposed EHR Licensed Software to support Critical Care Units functionality.	☒	☐
2.2.5(a)	Proposer has provided documentation and/or written responses that verify its response to Minimum Mandatory Requirement #2.2.5 as "**Attachment 2.2.5**".	☒	☐
2.2.6	15 customers in the U.S. are using the current version of the proposed EHR Licensed Software or the version immediately preceding the current version of the proposed EHR Licensed Software to support Operating	☒	☐

#	Minimum Mandatory Requirements	Yes	No
	Room functionality.		
2.2.6(a)	Proposer has provided documentation and/or written responses that verify its response to Minimum Mandatory Requirement #2.2.6 as "**Attachment 2.2.6**".	☒	☐
	Ancillaries		
2.2.7	15 customers in the U.S. are using the current version of the proposed EHR Licensed Software or the version immediately preceding the current version of the proposed EHR Licensed Software to support Pharmacy functionality.	☒	☐
2.2.7(a)	Proposer has provided documentation and/or written responses that verify its response to Minimum Mandatory Requirement #2.2.7 as "**Attachment 2.2.7**".	☒	☐
2.2.8	15 customers in the U.S. are using the current version of the proposed EHR Licensed Software or the version immediately preceding the current version of the proposed EHR Licensed Software to support Laboratory functionality.	☒	☐
2.2.8(a)	Proposer has provided documentation and/or written responses that verify its response to Minimum Mandatory Requirement #2.2.8 as "**Attachment 2.2.8**".	☒	☐
2.2.9	15 customers in the U.S. are using the current version of the proposed EHR Licensed Software or the version immediately preceding the current version of the proposed EHR Licensed Software to support Radiology Information System (RIS) functionality (this functionality does not include picture archiving and communication systems (PACS)).	☒	☐
2.2.9(a)	Proposer has provided documentation and/or written responses that verify its response to Minimum Mandatory Requirement #2.2.9 as "**Attachment 2.2.9**".	☒	☐
	Functionality		
2.2.10	15 customers in the U.S. are using the current version of the proposed EHR Licensed Software or the version immediately preceding the current version of the proposed EHR Licensed Software to support CPOE functionality.	☒	☐

#	Minimum Mandatory Requirements	Yes	No
	2.2.10".		
2.2.11	15 customers in the U.S. are using the current version of the proposed EHR Licensed Software or the version immediately preceding the current version of the proposed EHR Licensed Software to support Physician Documentation functionality.	☒	☐
2.2.11(a)	Proposer has provided documentation and/or written responses that verify its response to Minimum Mandatory Requirement #2.2.11 as "**Attachment 2.2.11**".	☒	☐
2.2.12	15 customers in the U.S. are using the current version of the proposed EHR Licensed Software or the version immediately preceding the current version of the proposed EHR Licensed Software to support Nursing Documentation functionality.	☒	☐
2.2.12(a)	Proposer has provided documentation and/or written responses that verify its response to Minimum Mandatory Requirement #2.2.12 as "**Attachment 2.2.12**".	☒	☐
2.2.13	15 customers in the U.S. are using the current version of the proposed EHR Licensed Software or the version immediately preceding the current version of the proposed EHR Licensed Software, to support Admission, Discharge and Transfer functionality.	☒	☐
2.2.13(a)	Proposer has provided documentation and/or written responses that verify its response to Minimum Mandatory Requirement #2.2.13 as "**Attachment 2.2.13**".	☒	☐
2.2.14	15 customers in the U.S. are using the current version of the proposed EHR Licensed Software or the version immediately preceding the current version of the proposed EHR Licensed Software to support Scheduling functionality.	☒	☐
2.2.14(a)	Proposer has provided documentation and/or written responses that verify its response to Minimum Mandatory Requirement #2.2.14 as "**Attachment 2.2.14**".	☒	☐
2.2.15	15 customers in the U.S. are using the current version of the proposed EHR Licensed Software or the version immediately preceding the current version of the proposed EHR Licensed Software to support Registration functionality.	☒	☐

#	Minimum Mandatory Requirements	Yes	No
2.2.15(a)	Proposer has provided documentation and/or written responses that verify its response to Minimum Mandatory Requirement #2.2.15 as "**Attachment 2.2.15**".	☒	☐
2.2.16	15 customers in the U.S. are using the current version of the proposed EHR Licensed Software or the version immediately preceding the current version of the proposed EHR Licensed Software to support Full Cycle Medication Administration functionality.	☒	☐
2.2.16(a)	Proposer has provided documentation and/or written responses that verify its response to Minimum Mandatory Requirement #2.2.16 as "**Attachment 2.2.16**".	☒	☐
2.2.17	15 customers in the U.S. are using the current version of the proposed EHR Licensed Software or the version immediately preceding the current version of the proposed EHR Licensed Software to support Chronic Disease Management functionality.	☒	☐
2.2.17(a)	Proposer has provided documentation and/or written responses that verify its response to Minimum Mandatory Requirement #2.2.17 as "**Attachment 2.2.17**".	☒	☐

2.3 INTEGRATED SOLUTION

The Proposer must provide documentation and/or written responses that verify that the EHR Licensed Software meets each of the following and is:

- Comprised of software components designed to work together using a single set of data integrity rules and constraints
- Using a common application infrastructure
- A single database supports the EHR Licensed Software such that the same data is shared directly, without copying, transfer, or exchange by all of the EHR Licensed Software modules across ambulatory and inpatient care venues
- Based on a common database schema
- Able to provide "one single source for truth" for patient information
- Capable of being deployed across ambulatory and inpatient care venues and geographically distributed facilities with a single underlying database
- Able to provide computable real time decision support based on operational and clinical meaning of relevant data regardless of the original care provider and the original source of the data

- Not using software, hardware, or software and hardware tools to provide data exchange among software components that were designed and developed separately with differing architectures, data structures, and user interfaces

Proposer's response to Minimum Mandatory Requirements in Section 2.3 (Integrated Solution) is to be provided in the table below:

#	Minimum Mandatory Requirements	Yes	No
2.3.1	Proposer's EHR Licensed Software is comprised of software components designed to work together using a single set of data integrity rules and constraints.	☒	☐
2.3.1(a)	Proposer has provided documentation and/or written responses that verify its response to Minimum Mandatory Requirement #2.3.1 as "**Attachment 2.3.1**".	☒	☐
2.3.2	Proposer's EHR Licensed Software is using a common application infrastructure.	☒	☐
2.3.2(a)	Proposer has provided documentation and/or written responses that verify its response to Minimum Mandatory Requirement #2.3.2 as "**Attachment 2.3.2**".	☒	☐
2.3.3	Proposer's EHR Licensed Software has a single database that supports the EHR Licensed Software such that the same data is shared directly, without copying, transfer, or exchange by all of the EHR Licensed Software modules across all care venues.	☒	☐
2.3.3(a)	Proposer has provided documentation and/or written responses that verify its response to Minimum Mandatory Requirement #2.3.3 as "**Attachment 2.3.3**".	☒	☐
2.3.4	Proposer's EHR Licensed Software is based on a common database schema.	☒	☐
2.3.4(a)	Proposer has provided documentation and/or written responses that verify its response to Minimum Mandatory Requirement #2.3.4 as "**Attachment 2.3.4**".	☒	☐
2.3.5	Proposer's EHR Licensed Software is able to provide "one single source for truth" for patient information.	☒	☐
2.3.5(a)	Proposer has provided documentation and/or written responses that verify its response to Minimum Mandatory Requirement #2.3.5 as "**Attachment 2.3.5**".	☒	☐
2.3.6	Proposer's EHR Licensed Software is capable of being deployed across ambulatory and inpatient care venues and geographically distributed facilities with a single underlying database.	☒	☐
2.3.6(a)	Proposer has provided documentation and/or written responses that verify its response to Minimum	☒	☐

#	Minimum Mandatory Requirements	Yes	No
	been in production at 10 hospital systems for the last five (5) years including a successful history of migration to newer releases.		
2.5.2(a)	Proposer has provided documentation and/or written responses that verify its response to Minimum Mandatory Requirement #2.5.2 as "**Attachment 2.5.2**".	☒	☐
2.5.3	A version of Proposer's EHR Licensed Software has been in production at 10 hospital systems for the last five (5) years including a successful history of expansion to additional modules and functionality.	☒	☐
2.5.3(a)	Proposer has provided documentation and/or written responses that verify its response to Minimum Mandatory Requirement #2.5.3 as "**Attachment 2.5.3**".	☒	☐
2.5.4	Proposer is currently providing ongoing support for its EHR Licensed Software (or a version of the EHR Licensed Software) to 3 organizations with similar size and complexity to the Los Angeles County Department of Health Services (LA DHS).	☒	☐
2.5.4(a)	Proposer has provided documentation and/or written responses that verify its response to Minimum Mandatory Requirement #2.5.4 as "**Attachment 2.5.4**".	☒	☐

2.6 MARKET PENETRATION AND MOMENTUM

The Proposer must provide documentation and/or written responses that verify that the proposed EHR Licensed Software has the following market penetration:

- At least 10 net new contracts between July 2009 and the present for its EHR Licensed Software or its immediate predecessor version (net new contracts does not include any renewals of existing maintenance and support agreements)
- Currently have at least 75 contracts in 200 sites/hospitals for physician documentation, nursing documentation, and CPOE

Proposer's response to Minimum Mandatory Requirements in Section 2.6 (Market Penetration and Momentum) is to be provided in the table below:

#	Minimum Mandatory Requirements	Yes	No
2.6.1	Proposer has at least 10 net new contracts between July 2009 and the present (net new contracts does not include any renewals of existing maintenance and support agreements) for the proposed EHR Licensed	☒	☐

#	Minimum Mandatory Requirements	Yes	No
	Software or its immediately predecessor version.		
2.6.1(a)	Proposer has provided documentation and/or written responses that verify its response to Minimum Mandatory Requirement #2.6.1 as "**Attachment 2.6.1**".	☒	☐
2.6.2	Proposer currently has at least 75 contracts in 200 sites/hospitals for physician documentation, nursing documentation, and CPOE for the proposed EHR Licensed Software or a prior version of the Licensed Software.	☒	☐
2.6.2(a)	Proposer has provided documentation and/or written responses that verify its response to Minimum Mandatory Requirement #2.6.2 as "**Attachment 2.6.2**".	☒	☐

#	Minimum Mandatory Requirements	Yes	No
	Mandatory Requirement #2.3.6 as "**Attachment 2.3.6**".		
2.3.7	Proposer's EHR Licensed Software is able to provide computable real time decision support based on operational and clinical meaning of relevant data regardless of the original care provider and the original source of the data.	☒	☐
2.3.7(a)	Proposer has provided documentation and/or written responses that verify its response to Minimum Mandatory Requirement #2.3.7 as "**Attachment 2.3.7**".	☒	☐
2.3.8	Proposer's EHR Licensed Software is not using software or hardware tools to provide data exchange among software components that were designed and developed separately with differing architectures, data structures, and user interfaces.	☒	☐
2.3.8(a)	Proposer has provided documentation and/or written responses that verify its response to Minimum Mandatory Requirement #2.3.8 as "**Attachment 2.3.8**".	☒	☐

2.4 IMPLEMENTATION TRACK RECORD

The Proposer must provide documentation and/or written responses that verify that the proposed EHR Licensed Software has the following implementation track record:

- At least 15 fully implemented sites in the United States using either the current version of the EHR Licensed Software, or the version immediately preceding the current version of the EHR Licensed Software
- 3 Academic Medical Centers using either the current, or one prior version of the EHR Licensed Software
- 3 public sector (state, county, or municipal) hospitals using either the current, or one prior version of the EHR Licensed Software

Proposer's response to Minimum Mandatory Requirements in Section 2.4 (Implementation Track Record) is to be provided in the table below:

#	Minimum Mandatory Requirements	Yes	No
2.4.1	Proposer's EHR Licensed Software has at least 15 fully implemented sites in the United States using either the current version of the EHR Licensed Software, or the version immediately preceding the current version of the EHR Licensed Software.	☒	☐
2.4.1(a)	Proposer has provided documentation and/or written responses that verify its response to Minimum	☒	☐

#	Minimum Mandatory Requirements	Yes	No
	Mandatory Requirement #2.4.1 as "**Attachment 2.4.1**".		
2.4.2	Proposer's EHR Licensed Software has 3 Academic Medical Centers using either the current, or one prior version of the EHR Licensed Software.	☒	☐
2.4.2(a)	Proposer has provided documentation and/or written responses that verify its response to Minimum Mandatory Requirement #2.4.2 as "**Attachment 2.4.2**".	☒	☐
2.4.3	Proposer's EHR Licensed Software has 3 public sector (state, county, or municipal) hospitals using either the current, or one prior version of the EHR Licensed Software.	☒	☐
2.4.3(a)	Proposer has provided documentation and/or written responses that verify its response to Minimum Mandatory Requirement #2.4.3 as "**Attachment 2.4.3**".	☒	☐

2.5 SUPPORT TRACK RECORD

The Proposer must provide documentation and/or written responses that verify that the proposed EHR Licensed Software has the following support track record:

- The proposed EHR Licensed Software has been in production at 10 hospital systems for the last five (5) years including
  - Successful history of migration to newer releases
  - Successful history of expansion to additional modules and functionality
- The Proposer is currently providing ongoing support for its EHR Licensed Software (or a version of the EHR Licensed Software) to 3 organizations with similar size and complexity to the Los Angeles County Department of Health Services (LA DHS)

Proposer's response to Minimum Mandatory Requirements in Section 2.5 (Support Track Record) is to be provided in the table below:

#	Minimum Mandatory Requirements	Yes	No
2.5.1	A version of Proposer's EHR Licensed Software has been in production at 10 hospital systems for the last five (5) years.	☒	☐
2.5.1(a)	Proposer has provided documentation and/or written responses that verify its response to Minimum Mandatory Requirement #2.5.1 as "**Attachment 2.5.1**".	☒	☐
2.5.2	A version of Proposer's EHR Licensed Software has	☒	☐

The undersigned below represents and warrants that he/she is authorized to make representations for Proposer, that the representations are true and correct, and that he/she is authorized to sign for and on behalf of Proposer. Proposals signed by other than the owner of a sole proprietorship, an authorized officer of a corporation, an authorized general partner of a general or limited partnership, or a manager or managing member of a limited liability company must include a power of attorney authorizing the signature.

Exhibit Z (Pre-Approved Subcontractors)

to the

Electronic Health Records System and Services Agreement

EXHIBIT Z

PRE-APPROVED SUBCONTRACTORS

This Exhibit Z (Pre-Approved Subcontractors) is an attachment and addition to the Electronic Health Records System and Services Agreement dated December 21, 2012 (the "**Agreement**") entered into by and between the County of Los Angeles ("**County**") and Cerner Corporation ("**Contractor**") and is incorporated into the Agreement by reference hereof. Unless specifically defined in this Exhibit, capitalized terms shall have the meanings set forth in the Agreement.

As provided in Section 2.1 (Contractor; Subcontracting) of the Agreement, no performance of the Agreement, or any portion thereof, shall be subcontracted by Contractor without the prior written consent of County as provided in Section 2.1 (Contractor; Subcontracting) of the Agreement, which consent shall not be unreasonably withheld or delayed. The following subcontractors that have been pre-Approved by County:

No subcontractors have been added to this Exhibit as of the Effective Date.

Exhibit AA (Hardware Subcontractors Exempt from Approval)

to the

Electronic Health Records System and Services Agreement

EXHIBIT AA

HARDWARE SUBCONTRACTORS EXEMPT FROM APPROVAL

This Exhibit AA (Hardware Subcontractors Exempt from Approval) is an attachment and addition to the Electronic Health Records System and Services Agreement dated December 21, 2012 (the "**Agreement**") entered into by and between the County of Los Angeles ("**County**") and Cerner Corporation ("**Contractor**") and is incorporated into the Agreement by reference hereof. Unless specifically defined in this Exhibit, capitalized terms shall have the meanings set forth in the Agreement.

As provided in Section 2.1 (Contractor; Subcontracting) of the Agreement, County's prior written consent shall not be required prior to Contractor subcontracting with any of the following third-party manufacturers of any Hardware for purposes of providing maintenance and support, provided that (a) such third-party manufacturers are not required to come onsite to any County Facility or access any patient records for purposes of providing such maintenance and support, (b) no staff of such third-party manufacturers are named in or otherwise dedicated to this Agreement, and (c) Contractor invoices County as part of the Contract Sum directly for any and all services provided by such third-party manufacturers:

1. Brocade Communications Systems, Inc.
2. Cisco Systems, Inc.
3. Data Span
4. EMC
5. Harland Technology Services.
6. Hewlett-Packard Company.
7. International Business Machines Corporation.

COUNTY-APPROVED ENTITIES AND COUNTRIES

This Exhibit BB (County-Approved Entities and Countries) is an attachment and addition to the Electronic Health Records System and Services Agreement dated December 21, 2012 (the "**Agreement**") entered into by and between the County of Los Angeles ("**County**") and Cerner Corporation ("**Contractor**") and is incorporated into the Agreement by reference hereof. Unless specifically defined in this Exhibit, capitalized terms shall have the meanings set forth in the Agreement.

1. **County-Approved Entities**. As provided in Section 2.1 (Contractor; Subcontracting) of the Agreement, unless specifically authorized by County as provided in the Agreement, Contractor shall perform the obligations described in this Agreement and in the Statement(s) of Work itself, and through the following direct wholly-owned subsidiaries:

   (a) Cerner Galt, Inc.

   (b) Cerner Healthcare Solutions, Inc.

   (c) Cerner Innovation, Inc.

   (d) Cerner Multum, Inc.

2. **County-Approved Entities and Countries.** As provided in Section 17.1.15 (No Offshore Work) of the Agreement, all Hosting Services shall be performed and rendered within the United States. Contractor warrants that it will not transmit or make available any of County's Confidential Information, County's intellectual property or any County Property to any entity or individual outside the United States without prior written County Approval of such transmittal to an entity or person outside of the United States. County has Approved transmittal of such information to the entities in Section 1 (County-Approved Entities) of this Exhibit while operating in the following countries:

   (a) Ireland.

   (b) India.

Exhibit DD (Form Subcontractor Agreement)

to the

Electronic Health Records System and Services Agreement

AGREEMENT REGARDING SUBCONTRACTED SERVICES

THIS AGREEMENT REGARDING SUBCONTRACTED SERVICES, dated as of [_____] [__], 20[__] (as together with all exhibits, all as amended from time to time in accordance with the terms and conditions hereof, this "**Agreement**"), is entered into between Cerner Corporation, a Delaware corporation ("**Prime Contractor**"), and [insert subcontractor's legal name], a [insert state of incorporation] corporation ("**Subcontractor**"), and is made in reference to the Electronic Health Records System and Services Agreement, Los Angeles County Contract No. [_____], dated as of December 21, 2012, for an Electronic Health Records System and Services (together with all exhibits and attachments, all as amended from time to time in accordance with the terms and conditions thereof, the "**Prime Agreement**"), between Prime Contractor and the County of Los Angeles ("**County**"). Capitalized terms used herein (including in this introductory paragraph) without definition shall have the meanings given to such terms in the Prime Agreement.

WHEREAS, County and Prime Contractor have entered into the Prime Agreement pursuant to which Prime Contractor, in its capacity as "Contractor" thereunder, will provide all elements of the EHR System, including the Licensed Software, Third-Party Products, Integral Third-Party Software, Hosting Software, Hardware, and Services including, Implementation Services, Hosting Services, Support Services, and any Optional Work (the "**Work**") under and as defined in the Prime Agreement;

WHEREAS, Prime Contractor desires to engage Subcontractor to provide a subset of such Work, the scope of which Work is further described in the attached Exhibit B (Subcontracted Work) (as the same may be amended from time-to-time in accordance with the terms and conditions hereof, "**Subcontracted Work**"); and

WHEREAS, Prime Contractor and Subcontractor desire to set forth below the terms and conditions under which Subcontractor will perform the Work described in the attached Exhibit B (Subcontracted Work) and to make County a third-party beneficiary of this Agreement.

NOW THEREFORE, for good and valuable consideration, the receipt and sufficiency of which is acknowledged, Prime Contractor and Subcontractor agree as follows:

1. Incorporation of Terms and Conditions of the Prime Agreement. Prime Contractor and Subcontractor agree that, to the extent of, and with respect to, Subcontractor's provision of the Subcontracted Work:

(a) With respect solely to those terms and conditions of the Prime Agreement set forth in the attached Exhibit A (Specified Additional Terms and Conditions), such terms and conditions are hereby incorporated by this reference as if set forth herein, Subcontractor agrees to be bound by such terms and conditions directly to County as if Subcontractor were the "Contractor" under the Prime Agreement, and County shall have all of the rights and remedies under the Prime Agreement of "County" under the Prime Agreement, except that (1) the scope of Work to be performed by Subcontractor shall be the Subcontracted Work, (2) the amount of any payments paid or payable to Subcontractor for the performance of such Subcontracted Work shall be solely as determined between Prime Contractor and Subcontractor, and (3) the payment process for

the payments to Subcontractor shall be solely as determined between Prime Contractor and Subcontractor.

Except with respect to the exceptions set forth in Section 1 above, in the event of any conflict or inconsistency between the terms and conditions of (A) the Prime Agreement or any exhibit or attachment thereto, and (B) the attached Exhibit B (Subcontracted Work), such conflict or inconsistency shall be resolved by giving precedence first to the terms and conditions of the Prime Agreement and any exhibits and attachments thereto, and then to the terms and conditions of the attached Exhibit B (Subcontracted Work).

2. Agreement Regarding Subcontracted Work. Subcontractor agrees to provide the Subcontracted Work to County on behalf of Prime Contractor in accordance with the terms and conditions of this Agreement. Subcontractor agrees and represents and warrants that: (a) Prime Contractor shall be solely liable and responsible to Subcontractor for payment of any and all payments and other compensation due under this Agreement, (b) Subcontractor is qualified to perform the work for which Subcontractor has been hired, and (c) Subcontractor shall be solely liable and responsible for any and all of its taxes, payments and other compensation due, including compensation to its employees and agents, arising out of Subcontractor's performance of the Subcontracted Work.

Exhibit B (Subcontracted Work) shall set forth the following details with regard to the Subcontracted Work: (i) the scope of Subcontracted Work, (ii) the reason(s) for the particular subcontract, (iii) an explanation of why and how the proposed subcontractor was selected, and (iv) the confidentiality provisions applicable to the proposed subcontractor's officers, employees, and agents, which would be incorporated into the subcontract.

The following documents shall be executed by the Subcontractor and attached hereto as Exhibits: (1) certificates of insurance from the proposed subcontractor, which establish that the subcontractor maintains the minimum programs of insurance required by County and set forth in the Prime Agreement; (2) an executed Confidentiality and Assignment Agreement substantially similar to the Confidentiality and Assignment Agreement attached as Exhibit D (Confidentiality and Assignment Agreement), (3) to the extent such subcontractor will have access to PHI, an executed Business Associate Agreement substantially similar to Exhibit E (Prime Contractor's Business Associate Agreement with Subcontractor), (4) an executed EEO Certification substantially similar to Exhibit F (Subcontractor's EEO Certification) , (5) Exhibit G (Safely Surrendered Baby Law), and (6) any other standard County required agreements, forms, and provisions attached as Exhibit H (Additional Provisions) or as agreed to in writing by the Parties.

3. County as Third-Party Beneficiary. Prime Contractor and Subcontractor agree that this Agreement is entered into for the benefit of County and that County expressly is made a third-party beneficiary of this Agreement. Accordingly, at any time and from time-to-time, County may compel Prime Contractor to enforce against Subcontractor and on County's behalf, any and all rights and remedies Prime Contractor may have with respect to Subcontractor's breach of this Agreement.

4. Representations and Warranties. Each of Prime Contractor and Subcontractor represents and warrants to the other party (and to County as third-party beneficiary under this Agreement) that this Agreement has been duly authorized, executed, and delivered by such party, and that such party has all necessary corporate power and authority to enter into this Agreement and to perform its respective obligations under this Agreement.

5. Amendments. Notwithstanding anything to the contrary in this Agreement, no amendment, modification, termination or waiver of any provision of this Agreement (including the exhibits attached hereto) shall be effective unless the same shall be in writing, signed by Prime Contractor and Subcontractor, and acknowledged by County. Notwithstanding anything to the contrary in this Agreement, Subcontractor expressly acknowledges and agrees the Prime Agreement may be amended, modified and/or terminated and provisions of the Prime Agreement may be waived without prior notice to or consent of Subcontractor.

6. Assignment. Except as set forth in Section 32.17.1 (Assignment by Contractor) of the Prime Agreement, neither party may assign its rights and obligations under this Agreement (including the exhibits attached hereto) without prior written consent of the other party and prior written acknowledgement of County.

7. Effect on Prime Agreement. Except as expressly set forth in Section 1(a) hereto, as between Prime Contractor and Subcontractor, nothing contained herein shall be construed as amending or modifying in any fashion any term or condition set forth in the Prime Agreement or any exhibit, schedule, attachment or appendix thereto. Prime Contractor expressly ratifies and affirms its rights and obligations under the Prime Agreement.

8. Counterparts. This Agreement may be executed in any number of original or facsimile counterparts, each of which when taken together shall constitute an original.

9. Governing Law. This Agreement shall be governed by, and construed in accordance with, the substantive and procedural laws of the state of California applicable to agreements made and to be performed within that state.

IN WITNESS WHEREOF, Prime Contractor and Subcontractor have caused this Agreement to be executed as of the day and year first above written.

Exhibit F

Subcontractor's EEO Certification

Exhibit G

Safely Surrendered Baby Law

Exhibit H

Additional Provisions

Exhibit EE (Interoperability Functionality)

to the

Electronic Health Records System and Services Agreement

Contractor's offering to County includes, at no charge, an interoperability toolkit to be used under the Existing Agreements and which comprises solutions, including software and services, that will allow the various County organizations, using Contractor's EHR to query and respond with patient documents automatically to:

1. LAC DHS EHR System, Sheriff Jail Health Information System ("**JHIS**"), Probation Electronic Medical Record System ("**PEMRS**")
2. LANES, if it complies with national connectivity standards - Integrating the Healthcare Enterprise ("**IHE**") standard profiles, and Cross Community Access ("**XCA**") Gateway standards.
3. other Contractor clients EHR systems

The following capabilities would require payment of additional fees:

1. Pushing of patient data from JHIS and PEMRS to LANES HIE;
2. If LANES does not use the national interoperability standards described above; or
3. Connecting to HIEs other than LANES, and the ability to connect to an HIE that does not use the national interoperability standards described above.

Contractor refers to the solution it is providing at no charge as set forth in this Exhibit EE (Interoperability Functionality) as the "Clinical Exchange Network."

Exhibit FF (Independent Conditions)

to the

Electronic Health Records System and Services Agreement

SURESCRIPTS END USER AGREEMENT

The following provisions shall be included in any End User Agreement, and SureScripts shall be a third party beneficiary thereof:. If there is any conflict between the Agreement between End User and Cerner Corporation ("EHR Agreement") the EHR Agreement shall control.

The following are and shall be referred to as the Certification Guidelines. End User shall not use, alter, or modify the SureScripts Messenger Service in any manner that would encourage a physician or a patient to prescribe or use a specific pharmaceutical, or to use a specific pharmacy, as compared to other pharmaceuticals or pharmacies. End User shall not use any means, program, or device, or knowingly permit any other person to use any means, program, or device, including, but not limited to, advertising, instant messaging, and pop up ads, to influence or attempt to influence, through economic incentives or otherwise, the prescribing decision, as defined below, of a physician at the point of care, as defined below, or make more difficult the act of a physician or patient of selecting any particular pharmacy or pharmaceutical as compared to any other pharmacy or pharmaceutical if (i) such means, program, or device (as described above) is triggered by, initiated by, or is in specific response to, the input, selection, and/or act of a physician or his/her agent prescribing a pharmaceutical or selecting a pharmacy for a patient and (ii) that prescription will be delivered via the SureScripts Messenger Service. "Prescribing decision" means a physician's decision to prescribe a certain pharmaceutical or direct the patient to a certain pharmacy. Point of care shall mean the time that a physician or his/her agent is in the act of prescribing a pharmaceutical for a patient.

Notwithstanding the above, End User may use software that (A) shows information regarding a payer's formulary and benefit plan design, including patient lowest cost options, on/off tier, prior authorization, step therapy, coverage status and co-pay information, and/or (B) deliver or have delivered to End Users clinical alerts that are sourced from and are attributed to generally recognized and reputable sources providing clinical information to the prescribing physician, so long as no person or entity provides any compensation or remuneration to Aggregator for the delivery of such clinical alerts, even if, in the event of either (A) or (B), such information influences the patient or physician's choice of pharmacy or other prescribing decisions, so long as (i) the End User may access all pharmaceuticals known through generally available sources used in the industry, and all pharmacies, including all retail and mail service pharmacy options available, and (ii) nothing is designed to preclude a physician or patient from selecting any particular pharmacy or pharmaceutical. Any custom lists created and maintained by End Users within Aggregator's software product including but not limited to (i) an individual End User's most often prescribed medication lists, (ii) an individual End User's most often used pharmacy list, (iii) an individual End User's most often used SIGs (i.e., instructions for the use of medications), would not be considered a violation of this paragraph. In addition, to the extent that the Medicare Modernization Act, or any successor act, or any regulations promulgated thereunder, specifically authorize delivery of information to a physician at the point of care, such delivery in compliance with such law or regulation shall not be deemed a breach of this provision.

End User acknowledges that the SureScripts Messenger Service is not intended to serve as a replacement for (i) a written prescription where it is required by law or where such written prescription is required for record keeping purposes, or (ii) applicable prescription documentation. End User acknowledges that use of the SureScripts Messenger Service is not a substitute for a health care provider's standard practice or professional judgment. Any decision with regard to the appropriateness of treatment, or the validity or reliability of information is the sole responsibility of the End User.

MPages Development Toolkit

The provisions set forth below apply to the MPages Licensed Software and MPages Toolkit) licensed under this Cerner System Schedule. In the event there is any conflict between this Attachment X and the Electronic Health Records System and Services Agreement between the County of Los Angeles ("Client") and Cerner, (the "EHR Agreement"), the terms of the EHR Agreement shall control.

1. Definitions. For purposes of this Attachment X, these terms have the following meanings:

1.1 "**Customized Data Presentation Component**" means any data presentation component(s) developed solely by Client using the MPages Toolkit.

1.2 [Intentionally Deleted]

1.3 "**MPages Toolkit**" means the commercially available toolkit with the MPages trademark that is delivered with the MPages Licensed Software.

1.4 [Intentionally Deleted]

2. License

2.1 The MPages Toolkit is Integral Licensed Software as set forth in the EHR Agreement.

2.2 [Intentionally Deleted]

2.3 [Intentionally Deleted]

2.4 Cerner also grants to Client a non-exclusive, non-transferable license to use the Work Product supplied to Client by Cerner in connection with the use of the EHR System as set forth in the Electronic Health Records System and Services Agreement by and between Customer and Cerner

3. [Intentionally Deleted]

4. General

4.1 Client assumes all responsibility for the Customized Data Presentation Component.

4.2 Client acknowledges and agrees that Cerner will not Support, certify or localize any Customized Data Presentation Component.

SCHEDULE 3 SYNTEGRITY™ STANDARDIZED PERIOPERATIVE FRAMEWORK CONTENT END USER TERMS

1. DEFINITIONS

1.1 "AORN" means the Association of Perioperative Registered Nurses, the owners of the Syntegrity Standardized Perioperative Framework and Companion Guide being licensed by End User hereunder.

1.2 "Companion Guide" means a web-based adjunct to the Syntegrity Standardized Perioperative Framework (SPF), providing clinical resources , technical specifications and related clinical workflow and data. This guide supports understanding of the SPF and benefits associated with the integration of the data record set into perioperative information systems for the health care clinician, vendor clinical nursing and technical specialist.

1.3 "CSC" means Computer Sciences Corporation.

1.4 "End User" means County of Los Angeles, licensee of the Syntegrity Standardized Perioperative Framework and Companion Guide as resold and sublicensed by Cerner Corporation.

1.5 "Syntegrity Standardized Perioperative Framework" means the referenced data set, including the XML schema and its content value set in XML data files.

1.6 "Use" means use of the Syntegrity Standardized Perioperative Framework by End User with the EHR System in accordance with the Electronic Health Records System and Services Agreement by and between End User and Cerner (the "EHR Agreement").

2. GRANT OF LICENSE AND END USER RESTRICTIONS

2.1 License Grant. AORN hereby grants to End User, and End User hereby accepts a limited, non-assignable, non-exclusive, non-transferable license to: (i) Use the Syntegrity Standardized Perioperative Framework; and (ii) access and use the Companion Guide solely in connection with the EHR System as set forth in the EHR Agreement.

2.2 License Restrictions.

A. The Syntegrity Standardized Perioperative Framework is licensed to End User for its use with the EHR System in accordance with the EHR Agreement between Client and Cerner. Except as provided in the EHR Agreement, End User shall not, nor shall it permit any third party to: (i) offer for sale, sell, lease, license, sublicense or encumber the Syntegrity Standardized Perioperative Framework or Companion Guide; (ii) decompile, disassemble, reverse engineer or otherwise attempt to derive all or any portion of the Syntegrity Standardized Perioperative Framework; ; (iv) modify the Syntegrity Standardized Perioperative Framework,; or (vi) use the Syntegrity Standardized Perioperative Framework or Companion Guide in any way other than as expressly granted in Section 2.1 above.

B. The Syntegrity Standardized Perioperative Framework, the Companion Guide and all intellectual property rights therein are owned by AORN and CSC has an exclusive right to license the Syntegrity Standardized Perioperative Framework, the Companion Guide on AORN's behalf. The Syntegrity Standardized Perioperative Framework and Companion Guide are protected by U.S. copyright laws. AORN may, at any time and at its sole election, replace, modify, alter, improve, enhance or change the Syntegrity Standardized Perioperative Framework and Companion Guide. Further, the license of Syntegrity Standardized Perioperative Framework and Companion Guide is not a sale and does not transfer to End User any title or ownership interest in or to the Syntegrity Standardized Perioperative Framework and Companion Guide or any patent, copyright, trade secret, trade name, trademark or other proprietary intellectual property right related to the Syntegrity Standardized Perioperative Framework and Companion Guide. Except for the limited rights granted in Section 2.1, AORN retains all right, title, and interest in and to the Syntegrity Standardized Perioperative Framework and Companion Guide.

C. End User acknowledges that the Licensed Syntegrity Standardized Perioperative Framework and Companion Guide constitute valuable trade secrets of AORN. All rights in and to the Syntegrity Standardized Perioperative Framework and Companion Guide not expressly granted to End User by this Agreement are reserved by CSC or AORN. End User shall not print screens, take pictures of screens or otherwise convey the content of any portion of the Syntegrity Standardized Perioperative Framework, the Companion Guide to any third party; provided, however, End User may make copies of select screens of the Syntegrity Standardized Perioperative Framework and Companion for use in internal training materials, trouble shooting, and for educational purposes only.

3. SUPPORT

3.1 Updates. The Syntegrity Standardized Perioperative Framework and Companion Guide are periodically updated by CSC and AORN (each an "Update") to keep current with changes in regulations, accreditation standards, recommended practices and standards. Periodically these Updates shall be released to Cerner Corporation to facilitate updates to End Users.

4. CONFIDENTIAL INFORMATION

4.1 Nondisclosure of Confidential Information. All parties acknowledge that the Confidential Information obtained by another party pursuant to use of the Syntegrity Standardized Perioperative Framework and Companion Guide constitutes valuable trade secrets of the disclosing party. All parties agree that they shall undertake reasonable efforts to protect the secrecy of, and avoid disclosure and unauthorized use of, the Confidential Information of any other party. Without limiting the foregoing, each party shall take at least those measures that it takes to protect its own most highly confidential information.

5. WARRANTY

AORN warrants that to the best of its knowledge that the Syntegrity Standardized Perioperative Framework and Companion Guide is true, accurate and up-to-date at the time of its release to Cerner Corporation, is compiled consistent with widely accepted industry practices and has been developed and reviewed based upon published data and the experiences of qualified professionals. OTHER THAN THE FOREGOING WARRANTY(IES), THE SYNTEGRITY STANDARDIZED PERIOERATIVE FRAMEWORK AND COMPANION GUIDE ARE PROVIDED "AS IS" WITHOUT WARRANTY OF ANY KIND AND NEITHER CSC NOR AORN MAKE ANY WARRANTIES OR CONDITIONS TO END USER OR ANY OTHER THIRD PARTY, WHETHER EXPRESS, STATUTORY, IMPLIED, OR OTHERWISE. AORN AND CSC EACH DISCLAIMS THE IMPLIED WARRANTIES OF MERCHANTABILITY, FITNESS FOR A PARTICULAR PURPOSE AND NON-INFRINGEMENT WITH RESPECT TO THE REFERENCED DATA SET AND DOCUMENTATION, AND WITH RESPECT TO THE USE OF ANY OF THE FOREGOING.

6. INDEMNITY

6.1 Non-Infringement Indemnity. AORN shall defend and hold End User harmless from any third party claim, action or proceeding brought against End User alleging that the Syntegrity Standardized Perioperative Framework and/or Companion Guide as delivered to End User and used as authorized in these Content End User Terms, infringes any copyright or trade secret or trademark right of a third party and AORN shall pay any final judgments awarded or settlements entered into; provided that the End User provides AORN with: (a) prompt written notice of such claim; (b) sole control over the defense and settlement of such claim; and (c) all necessary information and assistance (at AORN's expense) to defend and/or settle such claim. End User may participate in the defense of a claim asserted hereunder after AORN has assumed the defense or settlement, provided that End User shall bear any legal fees and expenses or other costs it incurs in so participating. AORN and shall not be liable for any costs or expenses incurred without its prior written authorization.

6.2 Limit on Indemnity. Notwithstanding the foregoing, AORN will have no liability for infringement claims arising from: (a) combination of the Syntegrity Standardized Perioperative Framework with other referenced data sets or products not provided by AORN, which claim would have been avoided if the Syntegrity Standardized Perioperative Framework had not been so combined; (b) the unauthorized modification of the Syntegrity Standardized Perioperative Framework, in whole or in part, by anyone other than AORN and CSC; or (c) use by End User of any specified release of the Syntegrity Standardized Perioperative Framework after AORN or CSC notifies End User that continued use may subject End User to such claim of infringement, provided AORN provides End User with a replacement release.

6.3 Entire Liability. THE FOREGOING STATES THE ENTIRE LIABILITY AND OBLIGATION OF AORN, AND THE SOLE AND EXCLUSIVE REMEDY OF LICENSEE WITH RESPECT TO ANY ACTUAL OR ALLEGED INFRINGEMENT OF ANY INTELLECTUAL PROPERTY RIGHT BY THE SYNTEGRITY STANDARDIZED PERIOPERATIVE FRAMEWORK AND COMPANION GUIDE.

7. TERM; TERMINATION

7.1 Term. The term of the license grant as described in Section 2.1 shall be determined by the EHR Agreement.

7.2 AORN's and CSC's Right to Terminate. Notwithstanding Section 7.1, AORN and CSC reserve the right to terminate the license grant as described in Section 2.1 in accordance with terms of the EHR Agreement if End User materially violates one of the restricted uses as described in Section 2.2.

8. LIMITATIONS OF LIABILITY

8.1 Consequential Damages. EXCEPT FOR A BREACH OF SECTION 2.2 OR SECTION 4 OR AS OTHERWISE PROVIDED IN ARTICLE 6, IN NO EVENT SHALL EITHER PARTY (EXCLUDING CERNER) HAVE ANY LIABILITY IN CONNECTION WITH

THE SYNTEGRITY LICENSE FOR INDIRECT, SPECIAL, INCIDENTAL, CONSEQUENTIAL OR PUNITIVE DAMAGES OF ANY NATURE, INCLUDING LOSS OF DATA, LOST PROFITS, OR COST OF COVER, HOWEVER CAUSED AND ON ANY THEORY OF LIABILITY, WHETHER FOR BREACH OF WARRANTY OR CONTRACT, TORT (INCLUDING NEGLIGENCE), OR OTHERWISE, ARISING OUT OF OR RELATED TO THESE ARRANGEMENTS, EVEN IF THE PARTY HAS BEEN ADVISED OF THE POSSIBILITY OF SUCH DAMAGES, AND NOTWITHSTANDING THE FAILURE OF ESSENTIAL PURPOSE OF ANY LIMITED REMEDY STATED HEREIN.

8.2 Direct Damages. EXCEPT FOR A BREACH OF SECTION 4 OR AS OTHERWISE PROVIDED IN ARTICLE 6, IN NO EVENT SHALL AORN'S OR CSC'S TOTAL LIABILITY EXCEED THE AMOUNTS ACTUALLY PAID BY END USER TO CERNER CORPORATION IN CONNECTION WITH THE SYNTEGRITY LICENSE. IN NO EVENT SHALL AORN OR CSC HAVE ANY LIABILITY WHATSOEVER FOR ANY USE BY END USER OF THE SYNTEGRITY STANDARDIZED PERIOPERATIVE FRAMEWORK OR ANY ACTIONS TAKEN IN RELIANCE ON THE CONTENT DERIVED THEREFROM.

SNOMED PASS-THROUGH PROVISIONS

The following provisions apply with respect to the software and content ("SNOMED") provided to the Client by the College of American Pathologists ("CAP").

1. Copyright and Trademark Ownership. Client acknowledges that CAP owns and shall retain ownership of the copyright in and trademark of SNOMED. Client shall not take any action adverse to the CAP's rights in the trademark "SNOMED" and shall not apply for any trademark or service mark registrations for the title of Client's product(s) or services that includes the trademark "SNOMED".

2. Notices and Acknowledgments. Client shall identify in informational materials that SNOMED contains SNOMED® International. In addition, Client shall include the following notice of copyright and acknowledgment on SNOMED and any associated materials that include portions of SNOMED or references to CAP or SNOMED, including advertising and promotional materials: "**This product incorporates SNOMED® International --The Systematized Nomenclature of Medicine, used by permission of the College of American Pathologists. © 200_ College of American Pathologists. SNOMED is a registered trademark of the College of American Pathologists, all rights reserved."** The year of first publication of the latest update of SNOMED shall be included as the year specified in the above acknowledgement.

3. FAR/DFAR Regulations. With respect to products provided to United States government entities, the following applies:

This product includes commercial technical data and/or computer data bases developed exclusively at private expense by SNOMED International, a division of the College of American Pathologists with offices at 325 Waukegan Road, Northfield, Illinois 60093-2750. U.S. Government rights to use, modify, reproduce, release, perform, display, or disclose these technical data and/or computer data bases are subject to the limited rights restrictions of DFARS 252.227-7015(b) (2) (June 1995) for U.S. Department of Defense procurements and the limited rights restrictions of FAR 52.227-14 (June 1987), and any applicable agency FAR Supplements, for non-Department of Defense Federal procurements.

4. FEES. In consideration of the rights granted herein, Client shall pay the fees specified in Client's agreement with reseller.

HEALTH LANGUAGE, INC. PASS-THROUGH PROVISIONS

1 **SUBLICENSE**. Health Language, Inc. (HLI) hereby grants a limited nonexclusive and nontransferable sublicense for certain HLI Technology through the Sublicensor to the end-user Sublicensee to use the certain HLI Technology solely with the EHR System as set forth in the written agreement between Sublicensor and Sublicensee ("EHR Agreement"). Sublicensee acknowledges that HLI owns the HLI Technology subject to the sublicense.

2 **PROTECTIONS AND NONDISCLOSURE**. Sublicensee agrees that it shall protect all Intellectual properties in the HLI Technology, including without limitation, patents, copyrights, and trade secrets. Further, Sublicensee shall not disclose any HLI Technology to any third parties, nor reverse engineer any HLI Technology.

3 **WARRANTY DISCLAIMER.** HLI MAKES THE FOLLOWING DISCLAIMERS. SUBLICENSORS WARRANTIES ARE AS SET FORTH IN THE EHR AGREEMENT. ANY USE BY SUBLICENSEE OF THE HLI TECHNOLOGY IS AT SUBLICENSEE'S OWN RISK. THE HLI TECHNOLOGY IS PROVIDED FOR USE "AS IS" WITHOUT WARRANTY OF ANY KIND. TO THE MAXIMUM EXTENT PERMITTED BY LAW, HEALTH LANGUAGE, INC. AND ITS SUPPLIERS (AS USED IN THIS SUBLICENSE "SUPPLIERS" EXCLDES CERNER CORPORATION) DISCLAIM ALL WARRANTIES OF ANY KIND, EXPRESS, STATUTORY OR IMPLIED, INCLUDING, WITHOUT LIMITATION, ANY IMPLIED WARRANTIES OF MERCHANTABILITY, FITNESS FOR A PARTICULAR PURPOSE AND NONNINFRINGEMENT.

4 **LIMITATION OF LIABILITY.** IN NO EVENT SHALL HEALTH LANGUAGE, INC. OR ITS SUPPLIERS HAVE ANY LIABILITY FOR ANY INDIRECT, INCIDENTAL, SPECIAL OR CONSEQUENTIAL DAMAGES IN ANY WAY ARISING OUT OF THE USE OR INABILITY TO USE ANY PRODUCT AND HOWEVER CAUSED AND UNDER ANY THEORY OF LIABILITY, INCLUDING BUT NOT LIMITED TO LOSS OF PROFITS OR LOSS OF DATA, EVEN IF SUCH PARTY HAS BEEN ADVISED OF THE POSSIBILITY OF SUCH DAMAGES. IN NO EVENT SHALL HLI'S CUMULATIVE LIABILITY ARISING OUT OF THIS SUBLICENSE EXCEED THE AMOUNTS ACTUALLY PAID BY SUBLICENSEE TO SUBLICENSOR OR HLI PURSUANT TO THIS SUBLICENSE.

Mortara Warranty Statement

This Agreement is the entire agreement between you, the End User and Mortara Instrument, Inc. (hereinafter referred to as "Mortara") relating to the Mortara products (hereinafter referred to as the "Products"). The terms of this Agreement shall prevail over any conflicting or additional terms of any order, acknowledgement, click-through agreement, or similar communication between the parties during the term of this Agreement. No modification to this Agreement will be binding, unless in writing and signed on paper by a duly authorized representative of each party.

IF YOU DO NOT AGREE TO THE TERMS OF THIS AGREEMENT, DO NOT USE THE PRODUCTS. PROMPTLY RETURN THEM TO MORTARA.

Mortara hereby warrants that Products, excluding the Stress and Holter products shall be free from defects in material and workmanship under normal use, service and maintenance for a period of twenty-four (24) months from the date of installation of such Product from Mortara or an authorized distributor or representative of Mortara. Stress and Holter products shall have a warranty period of twelve (12) months from such date of installation. Normal use, service and maintenance mean operation and maintenance in accordance with appropriate instructions and/or information guides. This Warranty does not apply to damage to the Products caused by any or all of the following circumstances or conditions:

(a) Freight damage;

(b) Parts and/or accessories of the Products not obtained from or approved by Mortara;

(c) Misapplication, misuse, abuse and/or failure to follow the Product instructions sheets and/or information guides;

(d) Accident or disaster affecting the Products;

(e) Alternations or modifications to the Products not authorized by Mortara.

AS TO MORTARA, THE REMEDY UNDER THIS WARRANTY IS LIMITED TO THE REPAIR OR REPLACEMENT WITHOUT CHARGE FOR MATERIALS, OF ANY PRODUCTS FOUND UPON EXAMINATION BY MORTARA TO HAVE BEEN DEFECTIVE. ALL LABOR CHARGES INCURRED FOR THE REPAIR OF PRODUCTS WITHIN THE WARRANTY PERIOD ARE THE SOLE RESPONSIBILITY OF MORTARA This remedy shall be conditioned upon receipt of notice by Mortara of any alleged defects after discovery thereof within the warranty period. Mortara's obligations under the foregoing warranty will further be conditioned upon the assumption by the C of the Products (i) of all carrier charges with respect to any Products returned to Mortara's principal place of business or any other place as specifically designated by Mortara or an authorized distributor or representative of Mortara, and (ii) all risk of loss in transit. It is expressly agreed that the liability of Mortara is limited and that Mortara does not function as an insurer.

Title and Completeness. Mortara warrants that it has clean, marketable and unencumbered title to all Products.

Non-Infringement Warranty. Mortara warrants that the Products and End User's use of the Products in accordance with the documentation will not constitute an infringement or other violation of any patent, trademark, copyright, trade secret or other property right. Mortara will indemnify, defend, and hold harmless the End User Indemnitees from and against all Damages arising out of any claim that the Product(s) or use of the Product(s) constitutes an infringement of any patent, trademark or copyright of any country or the misappropriation of any trade secret or other property right. If an injunction is obtained against End Users use of the Products by reason of an infringement, as to Mortara, the End User's sole and exclusive remedy shall be, at the expense of Mortara, either to (a) procure for End User the right to continue using the Products; (b) replace or modify the Products with Products of substantially equivalent functionality so that they become non-infringing; or at the option of End User (c) to grant the End User a refund for the infringing Products.

EXCLUDED FROM THE LIMITED WARRANTIES SET FORTH ABOVE ARE CONSUMABLE ITEMS SUCH AS PAPER, BATTERIES, ELECTRODES, PATIENT CABLES, LEAD WIRES AND MAGNETIC STORAGE MEDIUMS.

EXCEPT FOR MORTARA'S INDEMNIFICATION OBLIGATIONS, IN NO EVENT, INCLUDING THE CLAIM FOR NEGLIGENCE, SHALL MORTARA BE LIABLE FOR INCIDENTAL, SPECIAL OR CONSEQUENTIAL DAMAGES, OR FOR ANY OTHER LOSS, DAMAGE OR EXPENSE OF ANY KIND, INCLUDING LOSS OF PROFITS, WHETHER UNDER TORT, NEGLIGENCE OR STRICT LIABILITY THEORIES OF LAW, OR OTHERWISE. THE WARRANTIES ARE EXPRESSLY IN LIEU OF ANY OTHER WARRANTIES, EXPRESS OR IMPLIED, INCLUDING, BUT NOT LIMITED TO THE IMPLIED WARRANTY OF MERCHANTABILITY AND THE WARRANTY OF FITNESS FOR A PARTICULAR PURPOSE.

Indemnification. Mortara will indemnify, defend, and hold harmless End User and its directors, officers, agents, employees and licensees (each, an “End User Indemnitee”) from and against all claims, damages, costs, expenses, fees incurred by End User as a result of intellectual property infringement by Mortara and reasonable attorney fees (collectively "Damages") arising out of a claim by a third party against an End User Indemnitee for (i) injury to persons or loss or damage to property to the extent resulting from any intentional or negligent act or omission of Mortara, and (ii) violations of applicable laws by Mortara.

PASS-THROUGH PROVISIONS – MULTUM

With respect to the proprietary drug information service (for purposes of this particular attachment only, the "Service") provided to Client by Multum, the following provisions shall apply:

Client may use the service only in connection with EHR System as set forth in the Electronic Health Records System and Services Agreement between Client and Cerner ("EHR Agreement"). Every effort has been made to ensure that the information provided in the Service is accurate, up-to-date, and complete, but no guarantee is made to that effect. In addition, the drug information contained herein may be time sensitive. The Service is intended for use by consumers in the United States.
The Service does not endorse drugs, diagnose patients, or recommend therapy. The Service is an informational resource designed to assist licensed healthcare practitioners in caring for their patients; however, it is not a substitute for the care provided by licensed healthcare practitioners. The absence of a warning for a given drug or drug combination in no way should be construed to indicate that the drug or drug combination is safe, effective or appropriate for any given patient. Multum does not assume any responsibility for any aspect of healthcare administered with the aid of information the Service provides.

Disclaimer of Warranties

EXCEPT AS OTHERWISE SET FORTH IN THE EHR AGREEMENT, CLIENT ACKNOWLEDGES THAT THE SERVICE IS PROVIDED ON AN "AS IS" BASIS. EXCEPT FOR WARRANTIES WHICH MAY NOT BE DISCLAIMED AS A MATTER OF LAW, MULTUM MAKES NO REPRESENTATIONS OR WARRANTIES WHATSOEVER, EXPRESS OR IMPLIED, INCLUDING BUT NOT LIMITED TO REPRESENTATIONS OR WARRANTIES REGARDING THE ACCURACY OR NATURE OF THE CONTENT OF THE SERVICE, WARRANTIES OF TITLE, NONINFRINGEMENT, MERCHANTABILITY OR FITNESS FOR A PARTICULAR PURPOSE.
IN ADDITION, WITHOUT LIMITING THE FOREGOING, THE SERVICE HAS BEEN DESIGNED FOR USE IN THE UNITED STATES ONLY AND COVERS THE DRUG PRODUCTS USED IN PRACTICE IN THE UNITED STATES. MULTUM PROVIDES NO CLINICAL INFORMATION OR CHECKS FOR DRUGS NOT AVAILABLE FOR SALE IN THE UNITED STATES AND CLINICAL PRACTICE PATTERNS OUTSIDE THE UNITED STATES MAY DIFFER SUBSTANTIALLY FROM INFORMATION SUPPLIED BY THE SERVICE. MULTUM DOES NOT WARRANT THAT USES OUTSIDE THE UNITED STATES ARE APPROPRIATE.

Client acknowledges that updates to the Service are at the sole discretion of Multum. Multum makes no representations or warranties whatsoever, express or implied, with respect to the compatibility of the Service, or future releases thereof, with any computer hardware or software, nor does Multum represent or warrant the continuity of the features or the facilities provided by or through the Service as between various releases thereof.

Assumption of Risk, Disclaimer of Liability, Indemnity

EXCEPT AS OTHERWISE SET FORTH IN THE EHR AGREEMENT, CLIENT ASSUMES ALL RISK FOR SELECTION AND USE OF THE SERVICE AND CONTENT PROVIDED THEREON. MULTUM SHALL NOT BE RESPONSIBLE FOR ANY ERRORS, MISSTATEMENTS, INACCURACIES OR OMISSIONS REGARDING CONTENT DELIVERED THROUGH THE SERVICE OR ANY DELAYS IN OR INTERRUPTIONS OF SUCH DELIVERY.

CLIENT ACKNOWLEDGES THAT MULTUM: (A) HAS NO CONTROL OF OR RESPONSIBILITY FOR THE CLIENT'S USE OF THE SERVICE OR CONTENT PROVIDED THEREON, (B) HAS NO KNOWLEDGE OF THE SPECIFIC OR UNIQUE CIRCUMSTANCES UNDER WHICH THE SERVICE OR CONTENT PROVIDED THEREON MAY BE USED BY THE CLIENT, (C) UNDERTAKES NO OBLIGATION TO SUPPLEMENT OR UPDATE CONTENT OF THE SERVICE, AND (D) HAS NO LIABILITY TO ANY PERSON FOR ANY DATA OR INFORMATION INPUT ON THE SERVICE BY THE CLIENT TO THE SERVICE.

MULTUM SHALL NOT BE LIABLE TO ANY PERSON (INCLUDING BUT NOT LIMITED TO CLIENT AND PERSONS TREATED BY OR ON BEHALF OF CLIENT) FOR, DAMAGES OR OTHER LOSSES (COLLECTIVELY, "LOSSES") ARISING OUT OF OR RELATING TO (A) CLIENT'S USE OF THE SERVICE OR CONTENT PROVIDED THEREON AND (B) ANY DATA OR INFORMATION INPUT ON THE SERVICE BY ANY PERSON OR ENTITY OTHER THAN MULTUM, IN ALL CASES INCLUDING BUT NOT LIMITED TO LOSSES FOR TORT, PERSONAL INJURY, MEDICAL MALPRACTICE OR PRODUCT LIABILITY. FURTHER, WITHOUT LIMITING THE FOREGOING, IN NO EVENT SHALL MULTUM BE LIABLE FOR ANY DIRECT, EXEMPLARY, SPECIAL, INCIDENTAL, CONSEQUENTIAL, OR INDIRECT DAMAGES, INCLUDING DAMAGES FOR LOSS OF PROFITS, LOSS OF BUSINESS, OR DOWN TIME, EVEN IF MULTUM HAS BEEN ADVISED OF THE POSSIBILITY OF SUCH DAMAGES. THE INFORMATION CONTAINED WITHIN THE SERVICE IS INTENDED FOR USE ONLY BY PHYSICIANS AND OTHER HEALTHCARE PROFESSIONALS WHO SHOULD RELY ON THEIR CLINICAL DISCRETION AND JUDGMENT IN DIAGNOSIS AND TREATMENT. AS BETWEEN CLIENT AND MULTUM, THE CLIENT HEREBY ASSUMES FULL RESPONSIBILITY FOR INSURING THE APPROPRIATENESS OF USING AND RELYING UPON THE INFORMATION IN VIEW OF ALL ATTENDANT CIRCUMSTANCES, INDICATIONS, AND CONTRAINDICATIONS.

MULTUM PASS-THROUGH PROVISIONS

Multum's total liabilities in connection with this agreement, whether arising under contract or otherwise, are limited to the fees received by Multum under this agreement specifically relating to the Client’s service or product which is the subject of the claim.

PASS THROUGH PROVISIONS—Rehabilitation Institute of Chicago (RIC)

The following terms apply to the Rehabilitation Content (both inpatient and outpatient):

- Customer and its affiliates shall only use the RIC Content with the EHR System as set forth in the Electronic Health Records System and Services Agreement by and between Customer and Cerner (EHR Agreement").
- Except as set forth in the EHR Agreement, Customer expressly acknowledges that: (i) it shall not have the right to manufacture, sell, or otherwise commercially exploit the RIC Content; and (ii) Customer may not copy, modify the RIC Content or allow others to do so; nor shall Customer alter, change, or remove from the RIC Content any identifications, including without limitation trademark and copyright notices. Customer shall have and acquire no rights in or to intellectual property rights of RIC, or any right to use the same, except as may be expressly permitted hereunder, by the EHR Agreement, or with the written permission of RIC. Customer shall not recreate the rehab content in whole or in part during or after any license period. This restriction shall survive termination of the agreement.
- Except as set forth in the EHR Agreement, Customer shall hold the RIC Content in strict confidence and not disclose them to any third party.
- Customer shall comply with all applicable laws and regulations and any written and electronic instructions for use. RIC reserves the right to terminate this license if RIC determines that use of the RIC Content is not in accordance with this Agreement.
- THE RIC CONTENT AND ANY OTHER SERVICES PROVIDED BY RIC ARE PROVIDED TO CUSTOMER "AS IS", AND RIC EXPRESSLY DISCLAIMS ALL WARRANTIES, WHETHER EXPRESS, IMPLIED OR STATUTORY AS TO ANY ASPECTS OF THE RIC CONTENT, INCLUDING WARRANTIES OF NONINFRNIGEMENT, MERCHANTABILITY AND FITNESS FOR A PARTICULAR PURPOSE.
- RIC SHALL NOT BE LIABLE TO THE CUSTOMER FOR ANY DIRECT, INDIRECT, INCIDENTAL, SPECIAL, CONSEQUENTIAL OR OTHER DAMAGES EVEN IF AWARE OF THE POSSIBILITY OF SUCH DAMAGES ARISING.
- Customer aggress and acknowledges that RIC is not providing medical advice or treatment, and that the content and/or data included in the product is not intended to supersede or replace the end users' independent medical judgment;
-
- Except as set forth in the EHR Agreement, Customer agrees that during the term of this Agreement and for a period of one (1) year following its termination, Customer shall not solicit, recruit, employ or engage, either directly or indirectly, as an employee, independent contractor, consultant, subcontractor or otherwise, any employee of RIC, without RIC's prior written consent. If this provision is violated, Customer shall immediately notify RIC and pay RIC an amount equal to one year's salary for that individual.
- Customer shall not use RIC's name, logo or marks in any manner whatsoever, without RIC's prior written consent.
- RIC shall be a third party beneficiary of these terms.

Mpages Limited Use Runtime License

Client acknowledges and agrees that Cerner grants Client a limited runtime only license to MPages for the sole purpose of executing MPage Applications that have been Cerner Developed and/or Cerner Certified. MPage Applications are not included with this runtime license and must be purchased separately. Client is not licensed or authorized to create or execute MPage Applications beyond those that have been Cerner Developed and/or Cerner Certified. Furthermore, Client is not authorized to modify the source code of any MPage Applications without upgrading to the MPages Full Use license.

Definition of Terms

MPage Application means a CCL/web technology based program that leverages the MPages code set for execution.

Cerner Developed means an MPage Application that was purchased from Cerner or developed by Cerner professional services.

Cerner Certified means an MPage Application that has been certified by Cerner.

PASS-THROUGH PROVISIONS
BROWERSOFT, INC.

SOFTWARE SUPPORT AGREEMENT

1. TERM

1.1. THIS SUPPORT AGREEMENT IS EFFECTIVE FOR AN INTIAL TERM OF ONE YEAR, BEGINNING ON THE DATE OF FIRST PRODUCTIVE USE OF THE SOFTWARE HEREOF (the "SUPPORT EFFECTIVE DATE") AND SHALL AUTOMATICALLY RENEW FOR SUBSEQUENT ONE YEAR TERMS UNLESS NOTICE OF NON-RENEWAL IS SENT BY ONE PARTY TO THE OTHER NOT LESS THAN SIXTY (60) DAYS PRIOR TO THE APPLICABLE ANNIVERSARY OF THE SUPPORT EFFECTIVE DATE. This Support Agreement only applies to Client's use of the Software licensed by Browsersoft Inc to the Client, pursuant to a current support agreement between Browsersoft, Inc. and Client.

2. CHARGES/PAYMENT

2.1. Client shall pay the Quarterly support charge on the Support Effective Date of this Support Agreement and each anniversary thereafter during the term ("Maintenance Fees"). Browsersoft reserves the right to increase the Maintenance Fees provided for herein on an annual basis by delivery of written notice to Client. Client shall pay all taxes or duties levied in connection with this support Agreement, except those based on Browsersoft's net income.

3. SERVICE REINSTATEMENT

3.1. In the event this Support Agreement is allowed to lapse (other than for breach by Browsersoft) and is later renewed, Client shall be required to pay back charges for all months that the Support Agreement has lapsed. Client may be responsible for expenses incurred to inspect hardware or reload software to the current release version after any lapse in maintenance.

4. SERVICES PROVIDED

4.1. Subject to the terms and conditions of this Support Agreement, Browsersoft shall provide standard maintenance services to Client for the Licensed Software, including modules and components. For purposes of this Support Agreement, "standard maintenance services" shall include efforts to repair or provide a patch or work around for all Program errors that Browsersoft is able to reproduce. Standard maintenance services shall also include providing all new releases, updates, changes, error corrections, fixes, patches, and work-arounds ("Updates"), including those modifications or enhancements made to the Licensed Software as required to comply with federal laws and regulations.

5. TECHNICAL CONSULTATION

5.1. Service Contracts

5.1.1. Browsersoft provides two-levels of support services based on the needs of the Client. "Platinum Service" provides 24 x 7 x 365 support with a two-hour response time. Browsersoft's "Gold Service" provides business hour support from 8 AM to 6 PM Central time Monday - Friday with a two-hour response commitment.

5.1.2. Annual support costs are applicable only after the identified components are in production use.

5.2. Priority Levels

5.2.1. Client may request and Browsersoft shall provide technical consultation by telephone during contracted support hours. Browsersoft shall maintain a log of technical consultation requests in a tracking system, with a unique number assigned to Client's requests. Browsersoft shall provide this unique number to the Client for reference and future communications. Browsersoft will assign reported reproducible problems one of three levels of priority:

5.2.2. Priority 1 is the most severe program error and represents a situation where all features and functions of the Licensed Software are unavailable and no practical alternate mode of operation is available. Priority 1 problems are worked on immediately and continuously until the problem is resolved or a fix or work-around acceptable to the Client is implemented.

5.2.3. Priority 2 indicates a problem in which major features and functionality are not available and no practical alternate mode of operation is available. In this instance, the request is assigned to the next available technician.

5.2.4. Priority 3 indicates a problem where normal features and functionality remain functional. At this level, requests are worked in the order in which they are received.

5.3. Problem Resolution

5.3.1. Priority 1 and 2 problem solutions will be sent to the Client as soon as available. Priority 3 problem solutions are made available in subsequent major or minor releases of the License Software. Priority 3 solutions are provided only for the current release level of the Licensed Software.

5.4. Service Location

5.4.1. Browsersoft shall provide technical consultation from its business premises, except that Browsersoft, at its own discretion and expense, may dispatch a technical services representative to Client's facility for all program errors that Browsersoft is unable to correct by providing technical consultation from Browsersoft's premises. If Browsersoft personnel perform such travel and it is determined that the cause of the malfunction was Client or user error, negligence or software or hardware not provided by Browsersoft, Client will be responsible for paying the labor costs at Browsersoft's then standard rates and shall reimburse Browsersoft for all reasonable travel and living expenses incurred.

UPDATES

6.1. During the Term of this Support Agreement, Browsersoft shall make all Updates available to Client. Browsersoft reserves the right to determine the content and availability of all software, including without limitation, Updates. For purposes or clarification, the Parties agree that Updates shall not include new features that are offered by Browsersoft as separate modules or software packages for a separate fee. Interface services provided under this Support Agreement are designed to keep the application in good working order and comply with interface specifications agreed to by Browsersoft and Client. Documentation updates shall generally be distributed to Client with each Update. All Updates may be loaded only based upon instructions provided by Browsersoft Client Services personnel. Browsersoft must be notified, in writing, before the loading of operating system software updates, third party software updates or installing new hardware to the System. Browsersoft shall assist Clients making Updates by telephone during normal business hours.

7. EXCLUSIONS

7.1. The following items are not covered by this Support Agreement but may be obtained from Browsersoft for additional fees:

7.1.1. Custom programs developed by Browsersoft for Client which are not included in general releases to the Licensed Software;

7.1.2. Custom programs developed by Client using system tools or commercially available software programs;

7.1.3. Additional hardware that may be required to operate Licensed Software enhancements at an acceptable performance level;

7.1.4. Malfunctions caused by Client or user error or negligence;

7.1.5. Annual update fees, if any, for third party software Licenses or Sublicensed Software not included in the Licensed Software. The software publisher or equipment manufacturer may charge such fees to the Client. All associated installation charges for updates to third party software or Sublicensed Software shall be the responsibility of Client;

7.1.6. Travel and living expenses incurred by Browsersoft employees in conjunction with performing non-standard Browsersoft services;

7.1.7. Software products not shown in the Schedule of Licensed Software;

7.1.8. Any major releases related to the operating system and database software;

7.1.9. Data restoration and/or data migration; and

7.1.10. Support for a release of the Licensed Software that is not the then-current or immediately preceding release.

7.2. Although Browsersoft may assist Client from time to time by answering questions or providing information regarding IT administration, preventative maintenance and operating systems, such services are outside the scope of this Support Agreement.

8. CLIENT PARTICIPATION

8.1. Browsersoft obligations are conditioned on Client fulfilling its obligations hereunder, including, without limitation:

8.1.1. Providing Browsersoft with all information and assistance necessary to detect, simulate/reproduce, and correct any Program Errors.

8.1.2. Providing Browsersoft access to the System and its related operating environment, including without limitation access to the system and the Licensed Software for the purpose of providing all Browsersoft services and confirming compliance with the terms and conditions of this Support Agreement; providing a suitable physical environment including but not limited to, heat, light, ventilation, air conditioning, proper electrical power and grounding.

8.1.3. Procuring, installation and maintenance of all non-Browsersoft communications media, including, but not limited to, a telephone within operational reach of the central installation site for diagnostic purposes and telephone equipment and lines for remote transmission of information.

8.1.4. Causing all equipment and facilities that are used in connection with the operation or security of the Licensed Software and System to be maintained properly and in good operating condition as specified by the applicable manufacturer. All charges for such media and services shall be the sole responsibility of Client.

8.1.5. Installing Licensed Software Updates within ninety (90) days of their release. Browsersoft has no obligation to support more than two (2) versions of the Licensed Software; therefore, Client must use the then-current or immediately preceding release.

8.1.6. Maintaining regular back-ups of data files, application code and operating system software.

8.1.7. If, upon Client's request, Browsersoft personnel travel to Client's site to perform any support services (other than those set forth in Section 5.3) Client shall pay for such personnel at Browsersoft then standard rates and shall reimburse Browsersoft for all reasonable travel and living expenses incurred in accordance with Client's Travel Reimbursement Guidelines.

8.1.8. Providing Browsersoft at least sixty (60) days prior written notice of its intention to relocate the central site, or any portion thereof, from the site set forth in the Arrangement Letter. Such approval shall not be unreasonably withheld if otherwise permitted by the License Agreement.

Strict compliance with the terms and conditions of the Agreement, including without limitation, the terms and restrictions on the license grant.
