Subtask 8.2 Perform Regression Testing Contractor will provide Services to assist County in performing Regression Testing activities. Contractor Services will include: • Provide support during County Regression Testing activities in accordance with Test Plan and test scripts; • Review County log of Errors and defects; • Resolve all Errors and defects and support County personnel in trouble shooting issues, as applicable; • Assist County with re-testing defect fixes; • Regularly communicate with County regarding status and schedule of regression testing; and • Document test results.	**Deliverable 8.2 Completed Regression Testing** • Regression Testing complete. • Test documentation including complete Error and defect log with documented resolution and Regression Testing Summary Reports. **Acceptance Criteria:** • Contractor validated completion of regression testing and resolution of all Errors and defects. • County Approved test documentation.

Task 8 Perform Regression Testing	
Contractor will monitor status and schedule of Regression Testing and support re-testing resolved Defects. Contractor will Regression Testing Summary Reports that include: • Regression testing progress update; • Review of open issues; and • Strategy and schedule for resolution of Defects.	

Task 9 Perform Load Testing
Task Description
Contractor will support County Load Testing activities (i.e., stress and volume testing) in accordance with the Test Plan developed in subtask 2.1 (Develop Test Plan) to ensure the Licensed Software and Hosting Services perform in accordance with the Specifications and Service Levels during times of high system demand.
Personnel Requirements

• Contractor Key Employees
  ○ Contractor Project Director;
  ○ Contractor Project Manager;
  ○ Contractor Clinical Strategist;
  ○ Contractor Integration Architect;
  ○ Contractor Solution Delivery Consultants;
  ○ Contractor Interface Architect;
  ○ Contractor Hosting Services Technical Engagement Leader;
  ○ Contractor Hosting Services System Engineer; and
  ○ Contractor Technical Engagement Leader.
• County Key Employees
  ○ County Project Director;
  ○ County Project Manager;
  ○ County Interface Manager;
  ○ County Desktop Technicians;
  ○ County SOW Leads;
  ○ County SMEs;
  ○ Third-Party System County Analyst and, if needed, Third-Party System Vendor Analyst;
  ○ County Network Technician;
  ○ County Testing Coordinator; and
  ○ Super Users, as determined by County to be necessary to perform Load Testing.

Task 9 Perform Load Testing	
Subtasks/Deliverables	
Subtask 9.1 Identify Load Test Scripts, Test Scenarios, Test Cycles, and Common Test Data Contractor will: • Assist County in identifying appropriate Load Test scripts from the test scripts developed in subtask 4.1 (Develop Test Scripts, Test Scenarios, Test Cycles and Common Test Data) and in developing any further test scripts that may be required for Load Testing; • Assess selected test scripts for completeness and accuracy related to Load Testing and document gaps; • Identify additional test scenarios, test scripts and test data to address gaps; • Assist County in developing additional tests scripts for Load Testing; • Develop draft test cycle control sheet detailing when and by whom test cycles will be executed and submit it to County for feedback; • Provide support by responding to all County ad hoc calls and emails in a timely manner to address questions as they arise; and • Deliver additional training on Load Test script and common test data development to County personnel as needed.	**Deliverable 9.1 Load Test Scripts, Test Scenarios, Test Cycles, and Common Test Data** • Load Test scripts. • Test cycle control sheet. • Common test data loaded into test environment database. **Acceptance Criteria:** • County Approved test scripts and test scenarios. • County verification that common test data required to complete all test scripts has been identified, developed and loaded. • County Approved test cycle control sheets.
Subtask 9.2 Perform Load Testing Contractor will provide Services to assist County in performing Load Testing activities. Contractor Services will include: • Provide on-site support during County Load Testing activities in accordance with test plan and test scripts; • Review County log of Errors and defects; • Resolve all Errors and Defects and support County personnel in trouble shooting issues, as applicable; • Develop and implement plans to resolve performance and other technical issues identified as a result of the Load Testing • Assist County with re-testing defect fixes	**Deliverable 9.2 Completed Load Testing** • Load Testing complete. • Test documentation including complete Error and Defect log with documented resolution. • Corrected performance or technical issues arising from Load Testing. **Acceptance Criteria:** • Contractor validated completion of Load Testing and resolution of all Errors, defects, and performance and other technical issues identified. • County Approved test documentation.

Task 9 Perform Load Testing	
• Regularly communicate with County regarding status and schedule of Load Testing; and • Document test results. Contractor will monitor status and schedule of Load Testing and support re-testing resolved Defects. Contractor will conduct daily wrap up sessions that include: o Load Testing progress update; o Review of open issues; and o Strategy and schedule for resolution of defects.	

Task 10 Perform Parallel Testing
Task Description
Contractor will support County Parallel Testing activities in accordance with the Test Plan developed in subtask 2.1 (Develop Test Plan) to ensure that changes to the Licensed Software do not produce outcomes that produce different than expected business results compared to the current environment.
Personnel Requirements
• Contractor Key Employees o Contractor Project Director; o Contractor Project Manager; o Contractor Clinical Strategist; o Contractor Integration Architect; o Contractor Solution Delivery Consultants; o Contractor Interface Architect; o Contractor Hosting Services Technical Engagement Leader; o Contractor Hosting Services System Engineer; and o Contractor Technical Engagement Leader. • County Key Employees o County Project Director; o County Project Manager; o County Interface Manager; o County Desktop Technicians; o County SOW Leads; o County SMEs; o Third-Party System County Analyst and, if needed, Third-Party System Vendor Analyst; o County Network Technician; o County Testing Coordinator; and o Super Users, as determined by County.

Task 10 Perform Parallel Testing	
Subtasks/Deliverables	
Subtask 10.1 Select Parallel Test Scripts, Test Scenarios, Test Cycles, and Common Test Data Contractor will: • Assist County in identifying appropriate Parallel Test scripts for the Licensed Software from the test scripts developed in subtask 4.1 (Develop Test Scripts, Test Scenarios, Test Cycles and Common Test Data) and in developing any further test scripts for the Licensed Software necessary for Parallel Testing; • Assess selected test scripts for completeness and accuracy related to Parallel Testing and document gaps; • Identify additional test scenarios, test scripts and test data to address gaps; • Assist County in developing additional test scripts for the Licensed Software for Parallel Testing; • Develop draft test cycle control sheet detailing when and by whom test cycles will be executed and submit it to County for feedback; • Provide support by responding to all County ad hoc calls and emails in a timely manner to address questions as they arise; and • Deliver additional training on Parallel Test script and common test data development to County personnel as needed.	**Deliverable 10.1 Parallel Test Scripts, Test Scenarios, Test Cycles, and Common Test Data** • Parallel Test scripts. • Test cycle control sheet. • Common test data loaded into test environment database. **Acceptance Criteria:** • County Approved test scripts and test scenarios. • County verification that common test data required to complete all test scripts has been identified, developed and loaded. • County Approved test cycle control sheets.
Subtask 10.2 Perform Parallel Testing Contractor will provide Services to assist County in performing Parallel Testing activities for the Licensed Software. Contractor Services will include: • In conjunction with User Acceptance Testing, provide on-site support during County Parallel Testing activities in accordance with Test Plan and test scripts; • Review County log of Errors and defects; • Resolve all Errors and defects and support County personnel in trouble shooting issues, as	**Deliverable 10.2 Parallel Testing** • Parallel Testing complete. • Test documentation including complete Error and defect log with documented resolution. **Acceptance Criteria:** • Contractor validated completion of Parallel Testing and resolution of all Errors and defects. • County Approved test documentation.

Task 10 Perform Parallel Testing	
applicable; • Assist County with re-testing defect fixes • Regularly communicate with County regarding status and schedule of Parallel Testing; and • Document test results for the Licensed Software. Contractor will monitor status and schedule of Parallel Testing and support re-testing resolved Defects. Contractor will conduct daily wrap up sessions that include: • Parallel Testing progress update; • Review of open issues; and • Strategy and schedule for resolution of defects.

Exhibit A.22 (Training and Knowledge Transfer Statement of Work)

to the

Electronic Health Records System and Services Agreement

Table of Contents

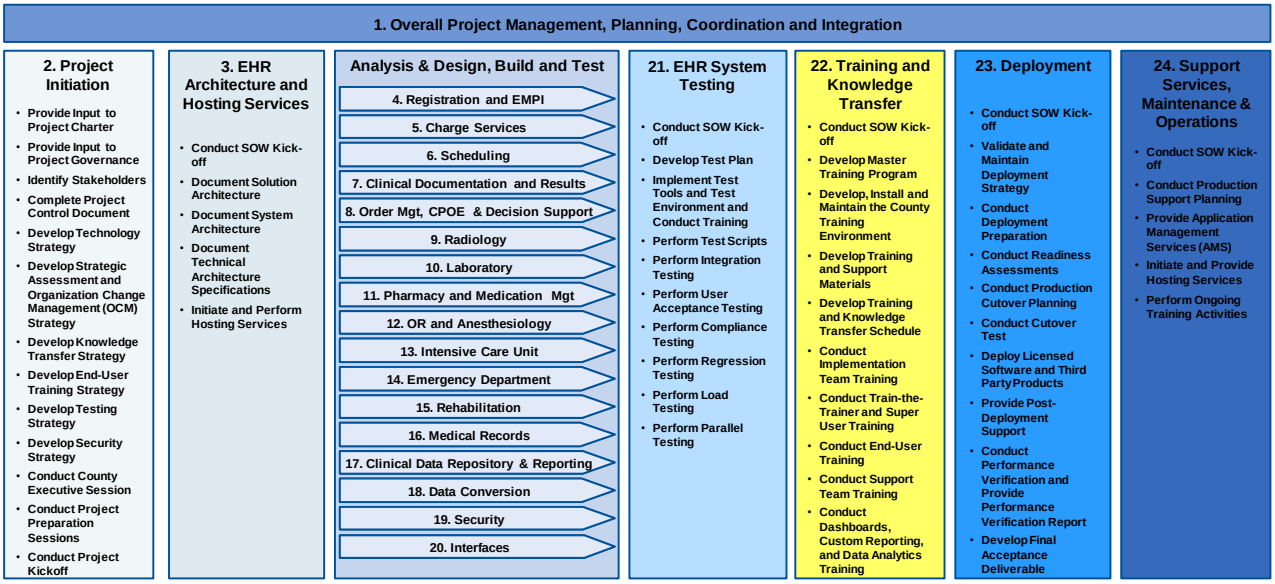
1. Introduction

This Exhibit A.22 (Training and Knowledge Transfer Statement of Work) (sometimes referred to in this Exhibit as "**this SOW**") is an attachment and addition to the Electronic Health System and Services Agreement dated December 21, 2012 (hereinafter "**Agreement**") entered into by and between the County of Los Angeles ("**County**") and Cerner Corporation ("**Contractor**") and is incorporated into the Agreement by reference hereof. In the event of conflicting terms between the Agreement and this SOW, the terms of the Agreement shall prevail and nothing in this SOW shall modify or amend any provisions of the Agreement (including all components such as Statements of Work, Service Level Agreements, Exhibits, etc.) unless such modifications or amendments and the provisions of the Agreement which they modify or amend are specifically identified in this SOW and are Approved. This SOW includes any attachments hereto. Any capitalized terms not defined in this SOW shall have the same meanings as used in the Agreement.

All of the all the tasks, subtasks, Deliverables, goods, and other services required or requested by County below are included as part of the Services. This SOW aggregates tasks and subtasks that are a subset of both the broad definition of Services set forth in Exhibit G (Glossary) of the Agreement, and the specific Services associated with this SOW. Whether or not additional Services, not specifically included in any SOW, are needed to successfully deliver the EHR System as required under the Agreement, such Services are required to be delivered by Contractor and are included in the Contract Sum.

This SOW provides a description of the nature of the work required, but does not provide an exhaustive list of every task or subtask necessary for completion of this Exhibit A.22 (Training and Knowledge Transfer Statement of Work). The completion of any phase in a period of time shorter or longer than that specified below shall not increase the Contract Sum.

This is Exhibit A.22 (Training and Knowledge Transfer Statement of Work). It is one of a series of twenty-four (24) SOWs, which describe all of the key work elements and Deliverables of the EHR Project. The twenty-four (24) SOWs are as follows:



2. Business Objectives Supported

This SOW will provide the framework which will be used to perform training and knowledge transfer for this EHR System implementation.

3. SOW Summary

3.1 Overview

Completion of this SOW will provide (a) the designated Workgroup training and preparation in the fundamentals of the use of the Licensed Software and Third-Party Products, as used in conjunction with the Licensed Software and EHR System, (b) analysis of current state workflow, (c) recommendations from Contractor for the design, configuration, and testing approach, and (d) some implementation elements of the Licensed Software and Third-Party Products components which are necessary to deliver Training and Knowledge Transfer as part of the EHR System.

3.2 SOW Team Structure and Resources

Contractor will provide a Project Staffing and Resource Management Plan. This plan will be utilized to establish fully loaded (identification of FTE equivalent or hours for all resources by Key Milestone) Contractor resource staffing commitments and to detail specific County resources which will guide County on how best to allocate and deploy staff to this Project. Notwithstanding the foregoing, this is a fixed fee engagement and the Contractor resources identified in the Project Staffing and Resource Management Plan do not limit the resources that may be required by Contractor.

3.3 Dependencies with Other SOWs

Contractor acknowledges and accepts that this SOW is one in a series of SOWs, all of which are inter-related, and the performance of which is integral to the overall success of this Project. Deliverables are created in other SOWs, which provide the foundation for this SOW, including but not limited to:

- Exhibit A.1 (Overall Project Management, Planning, Coordination and Integration Statement of Work) provides the framework that will be used to manage the overall Project, including this SOW.
- Exhibit A.2 (Project Initiation Statement of Work) provide Deliverables which create the foundation for all SOWs, including this SOW.
- Deliverables from the domain specific analysis, design, and build SOWs (Exhibits A.4 – A.17) will provide information on the content and audience of the training to be delivered as part of this SOW.

3.4 Critical Success Factors

A number of factors are deemed critical to overall Project success. The Parties acknowledge that the following factors are critical to the success of this Project:

Strong Project Management – Effectively managing the Services provided under the Agreement to the Project Schedule and results to be achieved, and managing issues, driving decisions, risk, dependencies, and resources in a manner to achieve the Project Schedule and the results.

Open Communication and Governance Structure Clearly Defined –Good and open communication must be established early. Governance, committee structure, and committee members must be defined early. Meeting schedules must also be established for the length of the Project.

Executive Leadership Involvement – Executive leadership from Contractor, DHS, and the DHS CIO must be involved in the Project and meet at regular intervals to discuss the Project's progress and reach agreement on decisions that have been escalated to their level.

3.5 Schedule

The commencement date for Exhibit A.22 (Training and Knowledge Transfer Statement of Work) will be determined by the Project Work Plan developed as part of Exhibit A.2 (Project Initiation Statement of Work) and will continue throughout the duration of the Project. This SOW is scheduled to be completed upon completion of final Cluster deployment and upon Final Acceptance by the County Project Director of the Deliverables in this Exhibit A.22 (Training and Knowledge Transfer Statement of Work).

Scheduled commencement dates, scheduled completion dates, and anticipated durations for Milestones, including a Key Milestone table, will be developed as part of the Project Control Document. The durations for tasks and subtasks are in the detailed Project Work Plan.

4. General Responsibilities

For the Services described in this SOW:

(1) The Services will be performed by Contractor on-site at sites designated by County and at off-site location(s) as agreed by the Parties in writing for specific activities.

(2) Contractor will provide designated full-time on-site key Project leadership members to deliver the Services during normal business hours, 8:00 AM to 5:00 PM, Pacific Time, Monday through Thursday (accommodating for travel on Mondays), except County and Contractor recognized holidays, unless otherwise agreed by the Parties in writing. Project leadership that is not on-site will also be available during normal business hours, 7:00 AM to 3:30 PM, Pacific Time, unless otherwise agreed by the Parties in writing.

(3) Contractor will utilize its MethodM implementation methodology, templates, and other tools as required to support the efficient and cost-effective execution of the Services defined in this SOW to the extent MethodM is not inconsistent with the Agreement. This includes use of Contractor's knowledge capital databases and other repositories of deliverables and intellectual capital from previous client experiences.

(4) Contractor will provide all Services in English.

4.1 Contractor Delivery Consultant Responsibilities

Contractor will designate a Contractor Delivery Consultant for this SOW (referred to in this Exhibit as the "**Contractor Training and Knowledge Transfer Delivery Consultant**" or "**Contractor Delivery Consultant**") to whom all County communications may be addressed and who has the authority to represent and commit Contractor in connection with all aspects of this SOW.

The Contractor Delivery Consultant's obligations include:

(1) Establish and maintain communications through the County SOW Lead and Project governance structure;

(2) Manage the delivery of Services and Service interdependencies;

(3) Notify County of any Contractor focal point or contacts for specific activities or tasks;

(4) Manage and maintain a sub-Project Work Plan for this SOW which lists, as appropriate, the activities, tasks, assignments, Service Interdependencies, Key Milestones and Deliverables, and schedule;

(5) Measure, track, and evaluate progress against the Project Schedule;

(6) Work with the County SOW Lead to resolve deviations, if any, from the Project Schedule;

(7) Coordinate and manage the activities of Contractor Personnel;

(8) Report to the County SOW Lead problems and issues impacting Contractor's provision of the Services that require County's attention and resolution;

(9) Coordinate resolution of all Service issues including those raised by the County SOW Lead and, as necessary, escalate such issues within the Contractor organization;

(10) Administer the Project Control Document with the County SOW Lead;

(11) Conduct regularly scheduled Project Status Meetings and prepare weekly Status Reports for the Services defined in this SOW; and

(12) Assist in the preparation and conduct of monthly steering committee updates.

Contractor will perform these activities throughout the provision of the Services.

4.2 Specific County Tasks

4.2.1 County SOW Lead Responsibilities

The County will assign a lead for this SOW (referred to in this Exhibit as the "**County Training and Knowledge Transfer SOW Lead**" or "**County SOW Lead**"). The County SOW Lead will:

(1) Serve as the primary interface between the Contractor Delivery Consultant and County for the tasks and Deliverables set forth in this SOW;

(2) Review this SOW and the responsibilities of both County and Contractor with the Contractor Delivery Consultant;

(3) Coordinate, manage, and be responsible for the control of the activities of County personnel for this SOW;

(4) Communicate to the Contractor Delivery Consultant any changes that may materially affect Contractor's provision of the Services set forth in this SOW;

(5) Coordinate with Contractor Delivery Consultant on Contractor's efforts to resolve problems and issues related to the Services set forth in this SOW;

(6) Work with the Contractor Delivery Consultant to resolve deviations, if any, from the Project Work Plan related to this SOW;

(7) Coordinate resolution of issues raised by the Contractor Delivery Consultant pertaining to this SOW and, as necessary, escalate such issues within the County organization;

(8) Serve as the interface between Contractor's Project team and all County departments participating in activities for the Services set forth in this SOW;

(9) Notify Contractor of any County focal point or contacts for specific activities or tasks related to this SOW;

(10) Ensure that tasks related to this SOW assigned to personnel within the County organization will be completed according to the timetable in the Project Schedule;

(11) Participate in selected Project status meetings with Contractor's Project team members and schedule and coordinate attendance and participation of County personnel for interviews, meetings, and work sessions related to the completion of this SOW.

County may change the County SOW Lead by providing notification to the Contractor Delivery Consultant with an introduction and handoff meeting to establish plans for a smooth transition.

4.2.2 Other County Responsibilities

County agrees to comply with its responsibilities as described in this SOW. Such obligations are to be performed at no charge to Contractor.

County will:

(1) Provide County standard and available office space, basic office furniture, and access to the Internet supporting VPN for Contractor Personnel while working at County's facilities;

(2) Locate the Contractor Personnel in an area near County subject matter experts and technical personnel;

(3) Provide necessary security badges and clearances for Contractor Personnel working at County's facilities; and

(4) Make available staff with appropriate skills and experience to deliver County tasks as specifically set forth in this SOW.

5. Services and Deliverables

The Services and Deliverables to be provided under this SOW include:

Task/Subtask Name	Deliverables
Task 1 Conduct SOW Kick-off	
Subtask 1.1 Develop Sub-Project Work Plan for Training and Knowledge Transfer	Deliverable 1.1 Sub-Project Work Plan for Training and Knowledge Transfer (Key Deliverable)
Subtask 1.2 Conduct Initiation Session for Training and Knowledge Transfer Workgroup	Deliverable 1.2 Training and Knowledge Transfer Initiation Session (Key Deliverable)
Task 2 Develop Master Training Program	
Subtask 2.1 Develop and Maintain Master Training Program	Deliverable 2.1 Master Training Program (Key Deliverable)

Task/Subtask Name	Deliverables
Subtask 2.2 Provide a Web Based Training Curriculum	Deliverable 2.2 Web Based Training Curriculum (Key Deliverable)
Subtask 2.3 Develop Instructor-Led Training Framework	Deliverable 2.3 Instructor-Led Training Curriculum and Framework (Key Deliverable)
Subtask 2.4 Develop Knowledge Transfer Plan	Deliverable 2.4 Knowledge Transfer Plan (Key Deliverable)
Subtask 2.5 Develop Training Development Standards	Deliverable 2.5 Training Development Standards (Key Deliverable)
Task 3 Develop, Install and Maintain the County Training Environment	
Subtask 3.1 Develop Plan for the Training Environment	Deliverable 3.1 Training Environment Plan (Key Deliverable)
Subtask 3.2 Install and Maintain the County Training Environment	Deliverable 3.2 Training Environments (Key Deliverable)
Task 4 Develop Training and Support Materials	
Subtask 4.1 Develop Training Materials	Deliverable 4.1 Training Materials (Key Deliverable)
Subtask 4.2 Implement and Deploy the LearningLIVE Environment	Deliverable 4.2 LearningLIVE Environment (Key Deliverable)
Task 5 Develop Training and Knowledge Transfer Schedule	
Subtask 5.1 Develop Training and Knowledge Transfer Schedule	Deliverable 5.1 Training and Knowledge Transfer Schedule (Key Deliverable)
Task 6 Conduct Implementation Team Training	
Subtask 6.1 Conduct Implementation Team Training	Deliverable 6.1 Implementation Team Training (Key Deliverable)
Task 7 Conduct Train-the-Trainer and Super User Training	
Subtask 7.1 Conduct Train-the-Trainer and Super User Training	Deliverable 7.1 Train-the-Trainer and Super User Training (Key Deliverable)
Task 8 Support End-User Training	
Subtask 8.1 Conduct End-User Training	Deliverable 8.1 End-User Training (Key Deliverable)
Subtask 8.2 Conduct End-User Survey and Develop End-User Training Effectiveness Reports	Deliverable 8.2 End-User Survey and End-User Training Effectiveness Reports (Key Deliverable)
Subtask 8.3 Post Go-Live Evaluation of Training Efficacy	Deliverable 8.3 Post Go-Live Training Efficacy Report (Key Deliverable)

Task/Subtask Name	Deliverables
Task 9 Conduct Support Team Training	
Subtask 9.1 Develop Help Desk Scripts	Deliverable 9.1 Help Desk Scripts (Key Deliverable)
Subtask 9.2 Conduct Support Training	Deliverable 9.2 Support Training (Key Deliverable)
Subtask 9.3 Conduct Coaching Sessions for County Personnel Responsible for Maintaining System	Deliverable 9.3 Coaching Sessions (Key Deliverable)
Task 10 Conduct Dashboards, Custom Reporting, and Data Analytics Training	
Subtask 10.1 Conduct Dashboards, Custom Reporting, and Data Analytics Training	Deliverable 10.1 Dashboards, Custom Reporting, and Data Analytics Training (Key Deliverable)
Subtask 10.2 Conduct Coaching Sessions for Data Analytics and Report Writing Team	Deliverable 10.2 Coaching Sessions (Key Deliverable)

5.1 Deliverable Development and Approval Process

This section specifies a repeating process for developing Deliverables for this SOW. Each Deliverable will be developed in accordance with the following Contractor's obligations, which will be sub-tasks to each individual task:

(1) All Deliverables must be developed in the form and format agreed to by County and Contractor using a Deliverable Expectations Document (also referred to as a "**DED**") Approved by County. No work will be performed on any Deliverable associated with a payment Milestone until the DED has been Approved by County. As each Project Deliverable is submitted, Contractor must include a copy of the Project DED as the cover sheet. A template to be used for each DED during this Project can be found in Section 5.3 (Project Deliverable Expectations Document Template) of this SOW.

(2) Develop agendas, and coordinate scheduling, for all necessary events (e.g., workshops, meetings) for the production of the Deliverable.

(3) Facilitate events (e.g., workshops, meetings) as required for the development of each Deliverable.

(4) Record and analyze the input received from all events (e.g., workshops, meetings) and distribute results or minutes for review to event participants.

(5) Prepare drafts of the Deliverables for County for review.

(6) Provide a structured process for County to provide feedback on drafts, including events, as appropriate.

(7) Compile and analyze County feedback to the draft Deliverables and prepare revised Deliverables.

(8) Distribute the revised Deliverables to County for review; obtain and analyze County feedback as above, and repeat if necessary.

(9) Complete a final version of the Deliverables including, prior to distribution for Approval by County, validation by Contractor that the Deliverables conform to the Specifications and meets the Acceptance Criteria.

(10) Provide both the clinical and workflow subject matter expertise to support the completion of Deliverables.

After receipt of a Deliverable from Contractor, the County SOW Lead or designee will notify the Contractor Delivery Consultant and assigned Project team resources in writing as to any specific changes requested (together with a reasonably detailed explanation of the reasons why the Deliverable should be modified) in as expeditious a time frame as possible given the nature of the Deliverable and the schedule. Unless a change is disputed, Contractor will make the changes described in a timely manner so as to not adversely impact the schedule under the Project Work Plan. Upon completion of such changes, the Deliverable will be provided to County with a request for Acceptance. County will notify Contractor of its Acceptance or rejection/issues in a time that is practical and reasonable given the nature, criticality, and complexity associated with the Acceptance Testing/review.

5.2 Tasks

Contractor shall be responsible for performing the following Services in this SOW for each of the SOWs as well as training regarding AMS, Support Services, and Hosting Services.

Task 1 Conduct SOW Kick-off
Task Description
The team members from Contractor, County, and external stakeholders will be introduced and their specific roles will be described. Training and Knowledge Transfer-specific training on the Licensed Software and Third-Party Products will be provided for the County personnel working on this SOW (referred to in this Exhibit as the "**County Training and Knowledge Transfer Workgroup**" or "**County Workgroup**" and the Training and Knowledge Transfer Workgroup will be introduced to various Contractor tools and methodologies, and Best Practice recommendations that will be used throughout this SOW.
Personnel Requirements

• Contractor Key Employees
  ○ Contractor Project Director;
  ○ Contractor Project Manager;
  ○ Contractor Training and Knowledge Transfer Delivery Consultant;
  ○ Contractor Solution Architect;
  ○ Contractor Solution Delivery Consultants; and
  ○ Contractor Learning Consultant.
• County Key Employees
  ○ Project Director;
  ○ Project Manager; and
  ○ Project SOW Leads.

Task 1 Conduct SOW Kick-off	
Subtasks/Deliverables	
Subtask 1.1 Develop Sub-Project Work Plan for Training and Knowledge Transfer As part of the Project Control Document, Contractor will develop and maintain an overall Project Work Plan. The Project Work Plan will include a Training and Knowledge Transfer-specific section. The overall Project Work Plan will include a Project Schedule, and will be developed in a MethodM Online compatible version of Microsoft Project, which shall include: • Deliverables, tasks, and subtasks; • Associated dependencies among Deliverables, tasks, and subtasks both within this SOW and across all related SOWs and work streams; • Resources (effort hours and roles) required for each Deliverable, task, and subtask; • Start date and date of completion for each Deliverable, task, and subtask; • County review period for each Deliverable; • Acceptance Criteria for each Deliverable; and • Milestones and Key Milestones. Contractor will adapt the Training and Knowledge Transfer-specific section of the Project Work Plan to create a specific sub-Project Work Plan which includes timelines, activities, Deliverables, and Milestones specific to this Exhibit A.22 (Training and Knowledge Transfer Statement of Work) and subject to County Approval.	**Deliverable 1.1 Sub-Project Work Plan for Training and Knowledge Transfer** • Training and Knowledge Transfer-specific section of Project Work Plan. **Acceptance Criteria:** • The Training and Knowledge Transfer-specific section of the Project Work Plan incorporates, and is consistent with, County-provided input. • The Training and Knowledge Transfer-specific section of the Project Work Plan addresses all elements described in subtask 1.1 (Develop Sub-Project Work Plan for Training and Knowledge Transfer). • The Training and Knowledge Transfer-specific section of the Project Work Plan has been Approved by County. • Timelines detailed in the Training and Knowledge Transfer-specific section of the Project Work Plan and sub-Project Work Plan are realistically achievable with reasonable effort as determined by County. • Elements of the Training and Knowledge Transfer-specific section of the Project Work Plan are consistent with tasks, subtasks, and Deliverables as outlined in this and other SOWs. • Plan for interacting with other SOW teams to ensure training is considered in those SOWs and relevant materials are developed. • Confirmed availability of Contractor resources required to implement the Training and Knowledge Transfer Project Work Plan.
Subtask 1.2 Conduct Initiation Session for Training and Knowledge Transfer Workgroup Contractor will conduct an initiation session to provide and introduction to the County Workgroup to the Services covered by this Exhibit	**Deliverable 1.2 Training and Knowledge Transfer Initiation Session** • Training and Knowledge Transfer initiation session materials for County review one (1) week prior to Training and Knowledge

Task 1 Conduct SOW Kick-off	
A.22 (Training and Knowledge Transfer Statement of Work), including the timelines and nature of the work effort that will be required to implement this SOW. Before the Training and Knowledge Transfer Initiation Session, Contractor will: • Work with County to identify all Contractor and County resources required to complete the tasks outlined in this SOW; • Provide County with a roster of kick-off participants; • Conduct a Project Management Workshop; and • Develop an agenda/schedule for the Training and Knowledge Transfer initiation session. Contractor will conduct the Training and Knowledge Transfer initiation session as follows: • Review and document Licensed Software and Third-Party-Products, Domains, Venues, and Locations for which Training and Knowledge Transfer must be delivered within County; • Provide background and overview of Project team training and knowledge transfer, including challenges and success criteria; • Provide an overview of training documents, tools, and methodologies and of the existing Contractor Course catalog; • Review tasks, Deliverables, and Milestones for the development of Training and Knowledge Transfer materials and activities; • Illustrate and document dependencies between this SOW and any other SOWs and Project work streams, including at a minimum: o Requirements gathering and functional/technical specifications during System Review, Design Review, and System Validation; o Transition to AMS, Support Services, and Hosting Services; o Testing, including Integration Testing, Peripheral Device Testing and User	Transfer initiation session. • Initial list of County Domains, Venues, and Locations for which Training and Knowledge Transfer capabilities must be delivered for review during Training and Knowledge Transfer initiation session. • Report documenting Training and Knowledge Transfer SOW dependencies. • List of County Workgroup members who attended the Training and Knowledge Transfer initiation session. • List of assignments and roles associated with those assignments for members of County Workgroup. • Initiation Session Event Summary Report. • Agenda/Schedule for Training and Knowledge Transfer SOW kick-off. • Attendance sheet/roster of participants for Training and Knowledge Transfer SOW kick-off. • Training and Knowledge Transfer SOW kick-off presentation materials. • Training and Knowledge Transfer SOW kick-off Event Summary Report. **Acceptance Criteria:** • The Initiation Session Event Summary Report from Contractor documents that the Training and Knowledge Transfer initiation session (a) has been completed and (b) includes accurate documentation of the content, outcomes, and next steps agreed upon at the Training and Knowledge Transfer initiation session event. • The Training and Knowledge Transfer Initiation Session Event Summary Report has been Approved by County. • Report documenting Training and Knowledge Transfer SOW dependencies addresses all elements described in subtask

Task 1 Conduct SOW Kick-off	
Acceptance Testing; ○ Go-Live readiness assessment; and ○ Post-Go-Live assessment; and • Review and develop plans to address dependencies of training and knowledge transfer with other SOWs and Project work streams. After the initiation session, Contractor will prepare an Initiation Session Event Summary Report for review and Approval by County.	1.2 (Conduct Initiation Session for Training and Knowledge Transfer Workgroup). • Report documenting Training and Knowledge Transfer SOW dependencies has been Approved by County. • Agreed upon and understood learning objectives for County personnel. • Contractor evidence that County personnel have achieved stated learning objectives required for Project progression according to stated timelines.

Task 2 Develop Master Training Program	
Task Description	
Contractor will develop a Master Training Program for training trainers, users, and other stakeholders in using and/or supporting the EHR System, including the Licensed Software, Third-Party Products, and Hosting Services in accordance with Section 9.5.2 (Training) of the Agreement.	
Personnel Requirements	
• Contractor Key Employees ○ Contractor Learning Consultant; ○ Contractor Project Director; ○ Contractor Project Manager; ○ Contractor Solution Architects; and ○ Contractor Integration Architect. • County Key Employees ○ County Education Coordinator; and ○ County Clinical Strategist.	
Subtasks/Deliverables	
Subtask 2.1 Develop and Maintain Master Training Program Contractor will develop a Master Training Program which includes plans for training trainers, super users, end users (e.g., clinical, risk and quality management, administration), architects, technical support personnel, and other stakeholders in using and/or supporting the EHR System, including the Licensed Software, Third-Party Products, and Hosting Services in accordance with Section 9.5.2 (Training) of the Agreement. The Master Training Program will be developed in	**Deliverable 2.1 Master Training Program** • Draft Master Training Program. • Final Master Training Program. • Updates to Master Training Program and training plans. **Acceptance Criteria:** • Deliverable addresses all elements described in subtask 2.1 (Develop and Maintain Master Training Program).

Task 2 Develop Master Training Program	
conjunction with the initial Leading Strategic Change workshop, and will be refined during the five Leading Strategic Change update or touch point sessions. The Master Training Program, to be developed after completion of the Leading Strategic Change Workshop, will at a minimum: • Provide an overview of the strategy for training for the EHR System, including the Licensed Software, Third-Party Products, and Hosting Services, including written guidance and training sessions about training content and organization and an overall description of training which aligns with the County-defined strategy and schedule; • Define, for each training effort, the training subject areas, audience, objectives, approach, development timelines, and Milestones; • Define minimum competencies for County trainers and super users including approach for remediation of deficiencies related to County personnel skills; • Define approach for access to training tools, materials, and domains; • Define components required in individual SOW training plans, such as course outline, schedule, etc.; • Define approach, evaluation processes, and materials to confirm that trainees have absorbed necessary knowledge and information across all training modalities; • Identify approach to evaluating basic computer skills, literacy, and language proficiency; • Define a high-level training schedule for all target audiences based on the logical sequence of how the content should be delivered, availability of the participants, and deployment timing; • Incorporate input from Exhibit A.23 (Deployment Statement of Work) to account	• County-Approved Master Training Program. • County-Approved updates to Master Training Program.

Task 2 Develop Master Training Program	

for deployment sequence and approach;
• Identify touch points and coordination efforts with AMS, Support Services, and Hosting Services;
• Incorporate input (if it is available) or a plan to obtain input (if it is not yet available) from the materials from workflow localization activities of Exhibits A.4 – A.18 to:
  ○ Identify current policies and procedures that will be created, stopped, or standardized to create a DHS-wide standard as a result of data gathering and decision-making workshops with County participation;
  ○ Support County to identify new policies and procedures that require training; and
  ○ Address the training issues raised by the crosswalks between the SOWs which identify interactions and interdependencies;
• Document a process to develop an inventory of policy and procedure changes and document a plan for addressing these in the Master Training Program.
• Document the recommended training materials that will be developed and provided;
• Include a strategy for post Go-Live training (e.g., new staff, temporary staff, new residents, and students from teaching facilities);
• Include a strategy and requirements for training and certifying contracted staff (e.g., registry agencies and individual contractors);
• Include a strategy for identifying and acquiring backfill resources (including projected high-level budgets);
• Provide high-level projections for the physical facilities required; and
• Highlight overall dependencies, Milestones, assumptions, and risks.
Contractor will conduct a review session of the	

Task 2 Develop Master Training Program	
draft Master Training Program with County. Contractor will incorporate County feedback and proposed changes into the Master Training Program and submit a final version to County for Approval. Throughout the Project, Contractor will modify and update the Master Training Program as: • The implementation continues; • Issues arise and are addressed; • New training materials are developed; and • Approaches are refined to incorporate lessons learned through experience and as a result of input provided by members of the Project team, user groups, or Subject Matter Experts.	
Subtask 2.2 Provide a Web Based Training Curriculum Contractor will document the Web Based Training (also referred to as "**WBT**") curriculum, which will be used to provide training to trainers and to end-users. The framework will include at a minimum an overview of the approach, and details on the WBT modules to be provided (including for each module: module name, objective, description, intended audience, course outline, length, co-requisites, and pre-requisites). Contractor will conduct a review session of the draft WBT curriculum with County to identify and address Licensed Software and Third-Party Product subject matter and training gaps in the draft WBT curriculum.	**Deliverable 2.2 Web based training Curriculum** • Draft WBT curriculum including, but not limited to: ○ Registration Management; ○ Scheduling Management; ○ Message Center; ○ RadNet; ○ Perioperative Solution; ○ Order Management; ○ PowerPlans; ○ Clinical Documentation; ○ Pharmnet Inpatient; ○ Health Information Management; ○ PowerChart Maternity Acute; ○ PowerChart; ○ PowerChart Office; ○ PathNet Anatomic Pathology; ○ PathNet Blood Bank Transfusion; ○ PathNet Common Services; ○ PathNet General Laboratory; ○ PathNet Laboratory Management; ○ PathNet Microbiology; ○ PathNet Outreach;

Task 2 Develop Master Training Program	
	○ Emergency; and ○ Anesthesia Management. • Final WBT curriculum. **Acceptance Criteria:** • County-Approved WBT curriculum.
Subtask 2.3 Develop Instructor-Led Training Framework Contractor will develop an Instructor-Led Training Framework and Curriculum that outlines how the Contractor baseline training materials will be modified by County and used for instructor-led training. The Instructor-Led Training Framework and Curriculum will, at a minimum, include: • A description of the different types of training (e.g., train-the-trainer, end-user groups, one-on-one end-user); • Number of different type of trainers required and strategy for acquiring training resources; • The list of courses and events for each type of training (e.g., architecture, troubleshooting, maintenance, technical training, and scenario and role-based end-user, super user, and train-the-trainer); • Details for each recommended course or event, including: ○ Course/event name; ○ Objective; ○ Description and outline; ○ Delivery method and activities, including classroom (onsite or offsite), video, and other media; ○ Duration; ○ Intended audience; ○ Maximum number of participants in each instance of the course or event; ○ Co-requisites and pre-requisites; ○ Evaluation methodology; and	**Deliverable 2.3 Instructor-Led Training Curriculum and Framework** • Draft recommended Instructor-Led Training Framework and Curriculum. • Final Instructor-Led Training Framework and Curriculum.. • Documented plan for developing or changing courses and events to address County feedback. **Acceptance Criteria:** • Deliverable addresses all elements described in subtask 2.3 (Develop Instructor-Led Training Framework). • County-Approved Instructor-Led Training Framework and Curriculum.

Task 2 Develop Master Training Program	
○ Implication for privileging (i.e., will demonstration of proficiency be required and what are the implications of failure to successfully complete the course). • Whether the course or event is part of the current Contractor curriculum or needs to be developed specifically for County resources; and • Physical facilities required for delivering the training. Contractor will conduct a review session of the draft Instructor-Led Training Framework and Curriculum with County. Contractor will identify courses and events which need to be developed or modified to address County feedback and provide a recommended approach and schedule for the development and delivery of those additions and changes. Contractor will incorporate County feedback and proposed changes into the Instructor-Led Training Framework and Curriculum and submit a final version to County for Approval.	
Subtask 2.4 Develop Knowledge Transfer Plan Contractor will develop and execute a plan for transferring knowledge on the functional and technical aspects of the Licensed Software and Third-Party Products to the County's information technology and functional personnel, other Subject Matter Experts, and especially to those individuals and groups who will conduct Level 1 and Level 2 support. Contractor will draft a Knowledge Transfer Plan based on the Knowledge Transfer Strategy developed in Exhibit A.2 (Project Initiation Statement of Work). This plan will, at a minimum, include: • Target audiences (e.g., information technology and functional personnel, support teams, other Subject Matter Experts, and trainers); • Approaches for transferring knowledge and measuring effectiveness; and	**Deliverable 2.4 Knowledge Transfer Plan** • Draft Knowledge Transfer Plan. • Final Knowledge Transfer Plan. **Acceptance Criteria:** • Deliverable addresses all elements described in subtask 2.4 (Develop Knowledge Transfer Plan). • County-Approved Knowledge Transfer Plan.

Task 2 Develop Master Training Program	
• Mitigation strategies or steps to address the County-specific or typical challenges that the Contractor has faced in successfully transferring knowledge. Contractor will conduct a review session of the draft Knowledge Transfer Plan with County. Contractor will incorporate County feedback and proposed changes into the Knowledge Transfer Plan and submit a final version to County for Approval. Throughout the Project, Contractor will continuously update the Knowledge Transfer Plan as required (e.g., as the Licensed Software implementation continues, as issues arise and are addressed, and as a result of input provided by members of the Project team, users, or Subject Matter Experts).	
Subtask 2.5 Develop Training Development Standards Contractor will document Training Development Standards to be used when developing training materials. These standards provide a common set of rules to make the end product uniform and include items such as language, graphics standards, color schemes, font type and size, naming conventions, and graphic usage. Contractor will review the Training Development Standards with County. Contractor will incorporate County feedback and proposed changes into the Training Development Standards and submit a final version to County for Approval.	**Deliverable 2.5 Training Development Standards** • Draft Training Development Standards. • Final Training Development Standards. **Acceptance Criteria:** • Deliverable addresses all elements described in subtask 2.5 (Develop Training Development Standards). • County-Approved Training Development Standards.

Task 3 Develop, Install and Maintain the County Training Environment
Task Description
Contractor will develop, install, and maintain a technical environment (e.g., servers, software, Web Based Training, repository for training materials) to support training and knowledge transfer activities.
Personnel Requirements
• Contractor Key Employees   ○ Contractor Hosting Services System Engineer; and

Task 3 Develop, Install and Maintain the County Training Environment	
○ Contractor Learning Consultant. • County Key Employees ○ County Education Coordinator; ○ County Training Team Leads; ○ County SMEs; and ○ County SOW Leads.	
Subtasks/Deliverables	
Subtask 3.1 Develop Plan for the Training Environment Contractor will develop a Training Environment Plan that includes, at a minimum: • Description of Licensed Software and Third-Party Products, training domains, and technical infrastructure required by County; • Description of infrastructure required by County and to be provided by Contractor to support other training environments (e.g., WBT, LearningLIVE, uCern, mock patient treatment environment); and • Approach to maintaining and managing the training content, including County roles and responsibilities for entering initial data and updating it on an ongoing basis. Contractor will review the draft Training Environment Plan with County. Contractor will incorporate County feedback and proposed changes into the Training Environment Plan and submit a final version to County for Approval.	**Deliverable 3.1 Training Environment Plan** • Draft Training Environment Plan. • Final Training Environment Plan. **Acceptance Criteria:** • County-Approved Training Environment Plan. • County-Approved Training Environment Session Event Summary Report.
Subtask 3.2 Install and Maintain the County Training Environment Contractor will implement a training environment to support training and knowledge transfer activities. Contractor will install and test the training environment using County-entered data, including, at a minimum: • Hardware and operating software; • Networking and communications infrastructure;	**Deliverable 3.2 Training Environments** • Implemented and ongoing management of training environments. • Appropriate County access to training environments. **Acceptance Criteria:** • Deliverable addresses all elements described in subtask 3.2 (Install and Maintain the County Training Environment). • County-Approved training environments and

Task 3 Develop, Install and Maintain the County Training Environment	
• Training version of Licensed Software and Third-Party Products; and • Other hardware and software required to conduct training (e.g., for uCern, LearningLIVE, mock patient training environments). Contractor will ensure: • Timely provision of access to County users to: ○ Support, collaboration, and documentation help (e.g., uCern); ○ Online context-driven user help (e.g., LearningLIVE); ○ Hosted training environments; and ○ Nightly refreshes of training environment. • Timely access to Web Based Training (e.g., trial access for Workgroups during early Project stages, full production use for trainers during development of training plans and during deployment, and for relevant users before their facility or Cluster goes live). Contractor will maintain the training environment throughout the duration of the Project.	use thereof.

Task 4 Develop Training and Support Materials	
Task Description	
Contractor will develop Training and Support Materials for all Licensed Software and Third-Party Products as well as training regarding AMS, Support Services, and Hosting Services.	
Personnel Requirements	
• Contractor Key Employees ○ Contractor Learning Consultant; and ○ Contractor Delivery Consultants. • County Key Employees ○ County Education Coordinator; ○ County Training and Knowledge Transfer SOW Lead; and ○ County SMEs.	
Subtasks/Deliverables	
Subtask 4.1 Develop Training Materials Contractor will: • Provide access to example Training and Support Materials and guides which County	**Deliverable 4.1 Training Materials** • Example Training and Support Materials for technical and support staff, architects, trainers, super-users, and end-users.

Task 4 Develop Training and Support Materials	
can customize to address the needs identified in the task 2 (Develop Master Training Program); and • Provide example Training and Support Materials (e.g., lesson plans, scenarios, reference guides, scripts, videos, FAQs) that County can localize to the County-specific build. Contractor will provide County with access to Training and Support Materials to enhance training, knowledge transfer, and adoption including: • Sample demonstration scripts, which will be used by County and Contractor staff to be customized and deliver application demonstrations for end-users and other key stakeholders; • Access to user guides in the form of booklets, one page checklists, and pocket or reference guides that County can customize for its build; and • Sample checklists and scripts to be used by County helpdesk personnel to triage problems and issues, and to help to deliver Level 1 support. For all activities Contractor will: • Review County activities, and Deliverables as County makes changes and creates new training materials; • Provide advice and direction to enhance effectiveness of such materials; • Identify systemic issues related to completion of training materials (e.g., capacity and capability of resources, complexity of approach, adequacy of tools) and provide County with recommendation for addressing them (e.g., through additional tools, training, resources); and • Provide additional resources (as approved through the governance process defined in Exhibit A.2 (Project Initiation Statement of Work)) to address issues and	• Review of, and advice for, enhancing County Training and Support Materials. • Recommendations and support for successful development and delivery of Training and Support Materials. **Acceptance Criteria:** • Deliverable addresses all elements described in subtask 4.1 (Develop Training Materials). • County receipt and Approval of Training and Support Materials. • County receipt and Approval of Training and Support Material review and recommendation reports.

Task 4 Develop Training and Support Materials	
recommendations above.	
Subtask 4.2 – Implement and Deploy the LearningLIVE Environment Contractor will deploy the LearningLIVE solution, which provides real-time, contextual learning. Contractor's implementation of LearningLIVE will include: • Installation, design, configuration, maintenance training, and validation of the LearningLIVE solution; • Design, configuration, maintenance training, and validation of the LearningLIVE reporting dashboard; • Administrator access to Cerner Learning Manager to retrieve LearningLIVE activity data; and • Cerner Learning Manager administrative access to reports. Contractor will provide the following for LearningLIVE deployment: • LearningLIVE Project Kickoff; • LearningLIVE Design Review - Review design recommendations and decisions, best practices, and data (learning asset) collection; • LearningLIVE Configuration - Configure the LearningLIVE view(s) in County's domain; • Learning Asset Development and Data Collection - Develop up to 80 learning assets (job aids and videos) and complete the DCW to facilitate the design and build; • LearningLIVE Maintenance Training - Knowledge transfer of how to update the LearningLIVE view(s) and dashboard; • LearningLIVE Integration Testing and Go-Live Preparation - Validate LearningLIVE configuration and integration with Cerner Learning Manager, complete Go-Live readiness assessment, review Project tasks, and discuss communication plan;	**Deliverable 4.2 – LearningLIVE Environment** • Operational LearningLIVE environment. • LearningLIVE assets integrated with Licensed Software. • LearningLIVE dashboard. • County personnel trained and capable of developing LearningLIVE assets and incorporating them into the County solution. **Acceptance Criteria:** • Deliverable addresses all elements described in subtask 4.2 (Implement and Deploy the LearningLIVE environment). • County Approval of operational LearningLIVE environment and staff capabilities for its use.

Task 4 Develop Training and Support Materials	
• LearningLIVE Go-Live - Delivery of LearningLIVE view(s) and LearningLIVE dashboard; and • LearningLIVE Post-Go-Live Review - Evaluation of LearningLIVE outcomes and County satisfaction.	

Task 5 Develop Training and Knowledge Transfer Schedule	
Task Description	
Contractor will support County to develop a detailed Training and Knowledge Transfer Schedule for trainers, technical and support staff, super users, and end-users for each Cluster deployment.	
Personnel Requirements	

• Contractor Key Resources
  ○ Contractor Learning Consultant; and
  ○ Contractor Engagement Controller.
• County Key Resources
  ○ County Education Coordinator; and
  ○ County Training Leads.	

Subtasks/Deliverables	
Subtask 5.1 Develop Training and Knowledge Transfer Schedule Contractor will draft a detailed Training and Knowledge Transfer Schedule for all types of training and all audiences for each Cluster deployment that includes, at a minimum: • Target audiences for each Domain, Venue, and Location; • Content, format (e.g., instructor led and web-based) and methodology (e.g., on the job training) to be delivered for each audience in logical sequence; • Required availability of trainees (including County-provided accommodation for participants from all shifts – day, swing, overnight); • Requirements for physical facilities for training at each facility and other County-specified locations for end-user training; • Requirements for physical facilities for training	**Deliverable 5.1 Training and Knowledge Transfer Schedule** • Draft overall maintenance and support training schedule. • Draft up-front train-the-trainer training schedule. • Draft template for Cluster and facility-based deployment Training and Knowledge Transfer Schedules. • Specific schedules for training for each Cluster or facility-based Go-Live. • Final Training and Knowledge Transfer Schedules incorporating County feedback. • Updates to Training and Knowledge Transfer Schedules incorporating lessons learned and risks and issues. **Acceptance Criteria:** • Deliverable addresses all elements described

Task 5 Develop Training and Knowledge Transfer Schedule	
to address: ○ Overall maintenance and support training; ○ Up-front train-the-trainer training; and ○ Cluster and facility based deployment training. Contractor will review the draft Training and Knowledge Transfer Schedules with County. Contractor will incorporate County feedback and proposed changes into each deployment-specific Training and Knowledge Transfer Schedule and submit a final version to County for Approval. Throughout each Cluster deployment, Contractor will support County to maintain and update the Training and Knowledge Transfer Schedule identifying risks and making recommendations to address identified risks and issues.	in subtask 5.1 (Develop Training and Knowledge Transfer Schedule). • County Approved Training and Knowledge Transfer Schedule.

Task 6 Conduct Implementation Team Training	
Task Description	
Contractor will conduct training for the implementation team.	
Personnel Requirements	
• Contractor Key Employees ○ Contractor Project Director; ○ Contractor Project Manager; ○ Contractor Solution Architects; ○ Contractor Delivery Consultants; ○ Contractor Learning Consultant; and ○ Contractor Integration Architect. • County Key Employees ○ County SOW Leads; ○ County Education Coordinator; ○ County Training Team Leads; and ○ County SMEs.	
Subtasks/Deliverables	
Subtask 6.1 Conduct Implementation Team Training Contractor will conduct training on the Licensed Software, Third-Party Products, and Hosting Services for the implementation team. This will include the Millennium Fundamentals course.	**Deliverable 6.1 Implementation Team Training** • Agenda for Implementation Team Training. • Implementation Team Training roster of participants. • Proficient implementers ready to start work

Task 6 Conduct Implementation Team Training	
Contractor will: • Develop and distribute an Implementation Team Training agenda; • Identify appropriate audience for Implementation Team Training; and • Provide County with a roster of participants. The Implementation Team Training will cover at a minimum: • The architecture, terminology, and fundamental components of the Licensed Software and Third-Party Products; • Basic key technical concepts and design considerations for Licensed Software and Third-Party Products solutions; • Navigating front-end applications, including PowerChart; • Navigating backend applications, including Reflections and Discern Explorer, to perform queries; • Patient care hierarchy and locations; • Interpreting incoming HL7 messages; • Alias pools in the database build tools; • Match and reconcile processes; • Order catalog and the synonym types; • Results storage and display ; and • Security including authentication, authorization, positions, relationships, application groups, and privileges. Contractor will: • Ensure that all identified individuals complete the necessary Implementation Team Training and achieve the necessary proficiency scores on all evaluations; • Track completion of the Implementation Team Training and report progress to County on a regular basis and by user role, location, and other attributes as specified by County; • Identify systemic issues related to Implementation Team Training (e.g., time	on the design and configuration. • Proficiency assessment. • Documented progress reviews and recommendations for enhancing training and addressing identified issues. **Acceptance Criteria:** • Deliverable addresses all elements described in subtask 6.1 (Conduct Implementation Team Training.) • Successful completion of training of all County Workgroup members responsible for implementation (based on results documented in training proficiency assessment). • County-Approved progress reviews.

Task 6 Conduct Implementation Team Training	
management, complexity, facilities, tools, materials) and provide County with recommendation for addressing them (e.g., through additional training, augmenting resources); and • Provide additional resources to address issues and recommendations above (the resources are to be as determined necessary to support the Project through the governance process defined in Exhibit A.2 (Project Initiation Statement of Work)).	

Task 7 Conduct Train-the-Trainer and Super User Training	
Task Description	
Contractor will conduct Train-the-Trainer and Super User Training in accordance with the Master Training Program developed in task 2 (Develop Master Training Program).	
Personnel Requirements	

• Contractor Key Employees
  ○ Contractor Training and Knowledge Transfer Delivery Consultant;
  ○ Contractor Solution Architect;
  ○ Contractor Integration Architect;
  ○ Contractor Learning Consultants;
  ○ Contractor Project Director; and
  ○ Contractor Project Manager.
• County Key Employees
  ○ County Education Coordinator;
  ○ County Training Leads;
  ○ County SOW Leads;
  ○ County Project Director;
  ○ County Project Manager;
  ○ County SMEs; and
  ○ County Super Users.	

Subtasks/Deliverables	
Subtask 7.1 Conduct Train-the-Trainer and Super User Training Contractor will conduct Train-the-Trainer during the System Validation event for the IT analysts and County SMEs. Contractor will conduct additional onsite Train-the-Trainer classes as defined in the Master Training Program developed in task 2 (Develop Master Training Program). Additionally,	**Deliverable 7.1 Train-the-Trainer and Super User Training** • Proficient trainers ready to deliver necessary end-user training. • Proficiency Assessment. • Documented progress reviews and recommendations for enhancing training

Task 7 Conduct Train-the-Trainer and Super User Training	
Contractor will conduct additional onsite super user training ("**Super User Training**") classes for up to three hundred (300) super users as defined in the Master Training Program developed in task 2 (Develop Master Training Program). Super User Training shall be provided at no additional charge to County, except for Approved Supplemental Travel as set forth in Exhibit C (Fees; Contractor Professional Services Rates). Super users are individuals who are selected by County to obtain and maintain enhanced knowledge and abilities in the use of the EHR System. They are often called upon to support their colleagues and peers with the use of the EHR System, and may also support training during the initial training and implementation period and on an on-going basis. Contractor will: • Ensure that SMEs, SOW leads, IT leads, and 300 super users complete the necessary training courses, attend the required instructor led training, and achieve the necessary proficiency scores on all evaluations; • Track completion of the training and report progress to County on a regular basis and by user role, location, and other attributes as specified by County; • Identify systemic issues related to training the trainers (e.g., time management, complexity, facilities, tools, materials) and provide County with recommendation for addressing them (e.g., through additional training, augmenting resources); and • Provide additional resources to address issues and recommendations above related to the SMEs, SOW leads, IT leads and 300 super users initially identified by County and scheduled for initial training sessions (the resources are to be as determined necessary to support the Project through the governance process defined in Exhibit A.2 (Project Initiation Statement of Work)).	and addressing identified issues. **Acceptance Criteria:** • Successful completion of training of all identified trainers (based on results documented in training proficiency assessment). • Deliverables address all required elements described in Task 7.1 (Conduct Train-the-Trainer and Super User Training). • County-Approved progress reviews.

Task 8 Support End-User Training	
Task Description	
For each Cluster deployment, Contractor will support end-user training in accordance with the Master Training Program developed in task 2 (Develop Master Training Program) and the Training and Knowledge Transfer Schedule identified in task 5 (Develop Training and Knowledge Transfer Schedule.	
Personnel Requirements	

• Contractor Key Resources
  ○ Contractor Learning Consultants; and
  ○ Contractor Education Coordinator.
• County Key Resource
  ○ County Training Leads;
  ○ County Education Coordinator;
  ○ County Super Users; and
  ○ County SMEs.	

Subtasks/Deliverables	
Subtask 8.1 Support End-User Training Contractor will support end-user training as defined in the Master Training Program developed in task 2 (Develop Master Training Program). Contractor will: • Track completion of the training and assess proficiency using tracking tool; • Identify specific user roles who may need specialized training (e.g., one-on-one training, at-the-elbow-support, post Go-Live additional training or support) based on Contractor's prior experience and on industry and Contractor Best Practices; • Make recommendations for delivery of the specialized training needs; • Identify systemic issues related to training end-users (e.g., time management, complexity, facilities, tools, materials) and provide County with recommendation for addressing them (e.g., through additional training, augmenting resources); and • Provide additional resources to address issues and recommendations above (the resources are to be as determined necessary to support the Project through the governance process	**Deliverable 8.1 Support End-User Training** • Proficiency assessment tool(s). • Results of proficiency assessment. • Documented training progress reviews including identification of systemic issues related to training end-users. • Recommendations for enhancing training and addressing identified issues. • Remediation plan and additional resources to address issues and recommendations above. **Acceptance Criteria:** • Deliverable addresses all elements described in subtask 8.1 (Support End User Training). • Successful completion of training of all identified end-users for each Cluster deployment (based on results documented in training proficiency assessment). • County-Approved progress reviews.

Task 8 Support End-User Training	
defined in Exhibit A.2 (Project Initiation Statement of Work)).	
Subtask 8.2 Support End-User Survey and Develop End-User Training Effectiveness Reports Following the completion of end-user training and the initial deployment period, Contractor will develop an End-User Survey and conduct an analysis of the results from a County-administered survey of end-users. This survey will include at a minimum evaluation of the following: • Training materials; • Training methodology; • Instructor; • Training session; • New skills acquired; and • Ability to use the Licensed Software application on a daily basis. Contractor will compile and analyze the survey results and provide County with an End-User Training Effectiveness Report. Contractor will develop recommendations on how to improve on training deficiencies discovered as part of the End-User Training Effectiveness Report. Contractor will review End-User Training Effectiveness Report and recommendations with County.	**Deliverable 8.2 End-User Survey and End-User Training Effectiveness Reports** • End-User Survey. • End-User Training Effectiveness Report. **Acceptance Criteria:** • Deliverable addresses all elements described in subtask 8.2 (Support End-User Survey and Develop End-User Training Effectiveness Reports). • County-Approved End-User Survey summary results report. • County-Approved Training Effectiveness Report.
Subtask 8.3 – Post Go-Live Evaluation of Training Efficacy Following Go-Live, Contractor will assess the training effectiveness as measured by such means as reported and observed ease of EHR System usage, help desk calls, analysis of LearningLIVE dashboards, and activity reports, etc. Contractor will compile and analyze the post Go-Live training assessment and will develop recommendations on how to improve on training. Contractor will review End-User Training Effectiveness Report and recommendations with County. Contractor will provide additional resources to	**Deliverable 8.3 Post Go-Live Training Efficacy Report** • Post Go-Live Training Efficacy Report. • Recommendations for enhancing training effectiveness. • Recommendations for enhancing training and addressing identified issues. • Remediation plan and additional resources to address issues and recommendations above. **Acceptance Criteria:** • Deliverable addresses all elements described

Task 8 Support End-User Training	
address issues and recommendations above (the resources will be those determined necessary to support the Project through the governance process defined in Exhibit A.2 (Project Initiation Statement of Work)).	in subtask 8.3 (Post Go-Live Evaluation of Training Efficacy). • County Approved Post Go-Live Training Efficacy Report.

Task 9 Conduct Support Team Training	
Task Description	
Contractor will conduct training for technical support teams (e.g., individuals delivering Level 1 and 2 support, maintaining system configuration, maintaining solution architecture, etc.) in accordance with the Master Training Program developed in task 2 (Develop Master Training Program).	
Personnel Requirements	

• Contractor Key Employees
  ○ Contractor Delivery Consultants;
  ○ Contractor Project Manager;
  ○ Contractor AMS Project Manager;
  ○ Contractor Hosting Services Project Manager; and
  ○ Contractor Hosting Services System Engineer.
• County Key Employees
  ○ County SOW Leads;
  ○ County Project Manager;
  ○ County Help Desk Leads;
  ○ County Technical Manager; and
  ○ County Desktop Technicians.	

Subtasks/Deliverables	
Subtask 9.1 Develop Help Desk Scripts Contractor will support County in the creation of help desk scripts by providing sample Level 1 and Level 2 Help Desk Scripts and tip sheets, including: • County and Contractor roles and responsibilities related to provisioning of Level 1 and Level 2 Help Desk support; • Procedures for logging and tracking issues; • Procedures for handing off tickets from County to Contractor for resolution (including closure of tickets and related communications); • Procedures for handing off tickets from Contractor to County for resolution (including closure of tickets and related	**Deliverable 9.1 Go-Live Help Desk Scripts** • Level 1 Help Desk Scripts. • Level 2 Help Desk Scripts. **Acceptance Criteria:** • Level 1 and Level 2 Help Desk Scripts incorporate, and are consistent with, County provided input. • Level 1 and Level 2 Help Desk Scripts have been Approved by County.

Task 9 Conduct Support Team Training	
communications); and • Update after each deployment. Contractor will review the County developed Level 1 and Level 2 Help Desk Scripts with County. County will incorporate Contractor feedback and proposed changes into the Level 1 and Level 2 Help Desk Scripts.	
Subtask 9.2 Conduct Support Training Contractor will conduct general maintenance training for County resources that will be responsible for common maintenance activities. This training will be delivered through existing Contractor courses: • Application troubleshooting and issues management; and • Technical training. The Support Training will include: • Licensed Software architecture terminology and tier functions; • Basic troubleshooting techniques; • Issue resolution process; • Submitting service records; • Conducting data gathering for issue resolution; • Tier functions; • Coordination and hand-offs to Contractor AMS and Hosting Services; and • Using Licensed Software information resources including the eService Knowledge Base, UCern, and other resources. The Technical Training will include: • Overview of CernerWorks remote hosting organization; • Problem Management; • Cerner Technology Center overview; • Technology roadmap; • Overview of Licensed Software environments and their purpose;	**Deliverable 9.2 Support Training** • Proficient individuals ready to provide support and conduct general maintenance and operations. • Proficiency assessment. • Recommendations for enhancing training and addressing identified issues. • Remediation plan and additional resources to address issues and recommendations above. **Acceptance Criteria:** • Deliverables address all elements described in subtask 9.2 (Conduct Support Training). • Successful completion of training of all identified relevant technical staff (based on results documented in training proficiency assessment).

Task 9 Conduct Support Team Training	
• Implementation and production domain strategies; • High level overview of Licensed Software architecture; • Connectivity overview; • On-going communication with Contractor Personnel responsible for Hosting Services; • How to receive technical support; • Weekly and monthly service reporting; • Proper identification and classification of service requests; • Critical effects classifications and severity levels of incident; • Change management process and requirements; • System maintenance; • Domain refreshes; • Code upgrades; • Lights On Network; and • Support tools overview for County IT and help desk staff. In addition, Contractor will: • Track completion of the training using a tool and will report progress to County on a regular basis and by user role, location, and other attributes as specified by County; • Conduct proficiency assessments and provide additional training as necessary until all County personnel have achieved a sufficient level of understanding; • Make recommendations and support the delivery of the specialized training needs; and • Identify systemic issues related to training end-users (e.g., time management, complexity, facilities) and provide County with recommendation for addressing them (e.g., through additional training, augmenting resources).	

Task 9 Conduct Support Team Training	
Subtask 9.3 Conduct Coaching Sessions for County Personnel Responsible for Maintaining System During design and configuration and during the period surrounding Go-Lives, the Contractor Solution Architect and Contractor Training and Knowledge Transfer Delivery Consultant will conduct weekly coaching sessions for County personnel responsible for Licensed Software and Third-Party Product application components and content maintenance. These sessions will at a minimum include: • Coverage of one maintenance topic per week; • Hands-on practice; and • Review of sample support activities. Contractor will develop a report summarizing the information provided during the coaching sessions.	**Deliverable 9.3 Coaching Sessions** • Weekly coaching sessions. • Summary report on coaching sessions. **Acceptance Criteria:** • Deliverable addresses all elements described in subtask 9.3 (Conduct Coaching Sessions for County Personnel Responsible for Maintaining System). • Delivery of weekly coaching sessions.

Task 10 Conduct Dashboards, Custom Reporting, and Data Analytics Training
Task Description
Contractor will conduct training for the County analytics team in accordance with the Master Training Program developed in task 2 (Develop Master Training Program).
Personnel Requirements

• Contractor Key Employees
  ○ Contractor Learning Consultant;
  ○ Contractor Project Manager;
  ○ Contractor CCL System Engineer;
  ○ Contractor Training and Knowledge Transfer Delivery Consultant; and
  ○ Contractor Education Coordinator.
• County Key Employees
  ○ County Project Manager;
  ○ County Education Coordinator;
  ○ County Training Leads;
  ○ County Super Users;
  ○ County SOW Leads;
  ○ County PowerInsight Leads; and
  ○ County Reporting Leads.

Task 10 Conduct Dashboards, Custom Reporting, and Data Analytics Training	
Subtasks/Deliverables	
Subtask 10.1 Conduct Dashboards, Custom Reporting, and Data Analytics Training Contractor will provide Dashboards, Custom Reporting and Data Analytics Training to the County analytics team responsible for custom queries, report writing, and maintenance of dashboards. Contractor will: • Develop and distribute a Dashboards, Custom Reporting, and Data Analytics Training agenda; • Work with County to identify appropriate audience for Dashboards, Custom Reporting, and Data Analytics Training; • Provide County with a roster of participants; • Provide training on analytics tools including Cerner Command Language ("**CCL**"), PowerInsight, Dashboard Modification, queries and custom reporting, and creation of Continuity of Care Documents; • Provide an initial library of reports, queries, and dashboards for all components of Licensed Software; and • Provide training on how to use and modify the initial set of queries and dashboards. Contractor will: • Track completion of the training using a tool and will report progress to County on a regular basis by user role, location, and other attributes as specified by County; • Conduct proficiency assessments and provide additional training as necessary until the designated County staff have achieved a sufficient level of understanding; • Make recommendations and support the delivery of the specialized training needs required for proficient custom reporting and data analytics; and • Identify systemic issues related to training analytics team (e.g., time management,	**Deliverable 10.1 Dashboards, Custom Reporting, and Data Analytics Training** • Agenda for Dashboards, Custom Reporting, and Data Analytics Training. • List of participants in Dashboards, Custom Reporting, and Data Analytics Training. • Proficient individuals ready to develop queries, deliver custom reports, and conduct relevant data analytics. • Proficiency assessment. • Recommendations for enhancing training and addressing identified issues. • Remediation plan and additional resources to address issues and recommendations above. • Weekly calls to answer questions and provide additional training. **Acceptance Criteria:** • Deliverables address all elements described in subtask 10.1 (Conduct Dashboards, Custom Reporting, and Data Analytics Training). • Successful completion of training of the County data analytics and report writing team.

Task 10 Conduct Dashboards, Custom Reporting, and Data Analytics Training	
complexity, facilities) and provide County with recommendation for addressing them (e.g., through additional training, augmenting resources). Contractor will conduct a training proficiency assessment and provide a weekly sixty (60) minute call to answer questions and provide additional training until the identified County analytics personnel have achieved a sufficient level of understanding.	
Subtask 10.2 Conduct Coaching Sessions for Data Analytics and Report Writing Team During the period surrounding the initial Go-Live Contractor will conduct coaching sessions for County staff responsible for data analytics, query, and reporting. These sessions will at a minimum include: • Question and answer and issue resolution; and • Review of sample query and reporting support activities using the training environment. Contractor will develop a report summarizing the information provided during the coaching sessions.	**Deliverable 10.2 Coaching Sessions** • Weekly coaching sessions. • Coaching session summary reports. **Acceptance Criteria:** • Deliverables address all elements described in subtask 10.2 (Conduct Coaching Sessions for Data Analytics and Report Writing Team). • Delivery of weekly coaching sessions.

Exhibit A.23 (Deployment Statement of Work)

to the

Electronic Health Records System and Services Agreement

Table of Contents

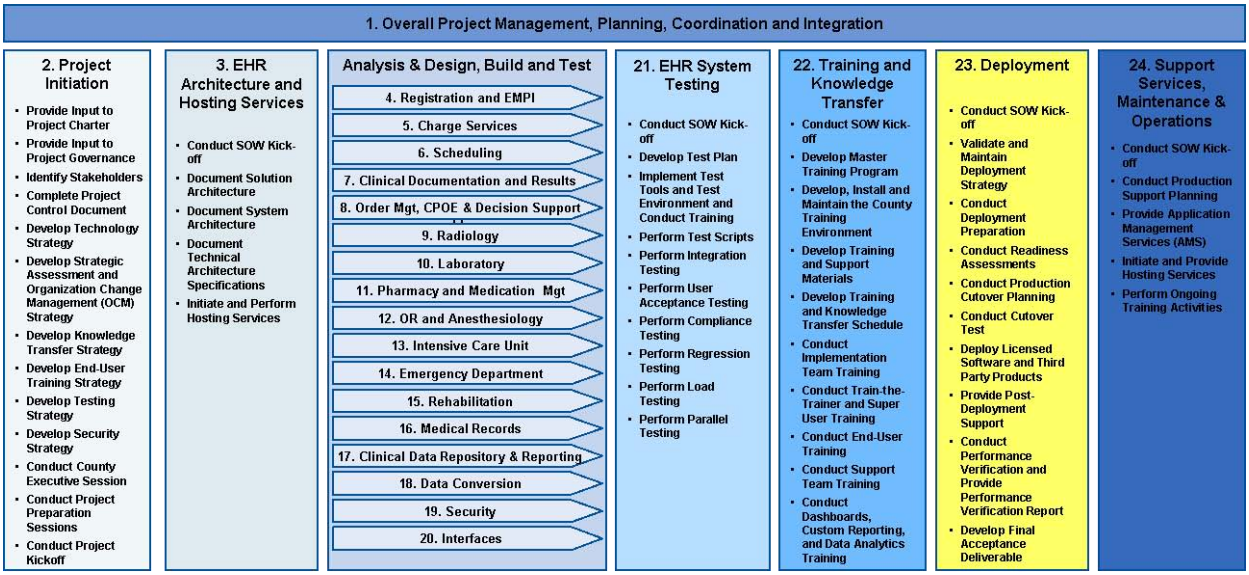
1. Introduction

This Exhibit A.23 (Deployment Statement of Work) (sometimes referred to in this Exhibit as "**this SOW**") is an attachment and addition to the Electronic Health Records System and Services Agreement dated December 21, 2012 (hereinafter "**Agreement**") entered into by and between the County of Los Angeles ("**County**") and Cerner Corporation ("**Contractor**") and is incorporated into the Agreement by reference hereof. In the event of conflicting terms between the Agreement and this SOW, the terms of the Agreement will prevail and nothing in this SOW will modify or amend any provisions of the Agreement (including all components such as Statements of Work, Service Level Agreements, Exhibits, etc.) unless such modifications or amendments and the provisions of the Agreement which they modify or amend are specifically identified in this SOW and are Approved. This SOW includes any attachments hereto. Any capitalized terms not defined in this SOW will have the same meanings as used in the Agreement.

All of the tasks, subtasks, Deliverables, goods, and other services required or requested by County below are included as part of the Services. This SOW aggregates tasks and subtasks that are a subset of both the broad definition of Services set forth in Exhibit G (Glossary) of the Agreement, and the specific Services associated with this SOW. Whether or not additional Services, not specifically included in any SOW, are needed to successfully deliver the EHR System, as required under this Agreement, such Services are required to be delivered by Contractor and are included in the Contract Sum.

This SOW provides a description of the nature of the work required, but does not provide an exhaustive list of every task or subtask necessary for completion of this Exhibit A.23 (Deployment Statement of Work). The completion of any phase in a period of time shorter or longer than that specified below shall not increase the Contract Sum.

This is Exhibit A.23 (Deployment Statement of Work). It is one of a series of twenty-four (24) SOWs, which describe all of the key work elements and Deliverables of the Project. The twenty-four (24) SOWs are as follows:



2. Business Objectives Supported

Completion of this SOW will provide the framework which will be used to deploy all Clusters of the EHR System implementation over the course of the Project.

3. SOW Summary

3.1 Overview

This SOW addresses Services related to the deployment of the Licensed Software to County inpatient hospitals and ambulatory clinics across all six (6) Clusters, including readiness assessments, post-deployment Services and performance verification.

The Project will be conducted using the key steps and Deliverables defined in the Contractor's MethodM implementation methodology, as adapted by this SOW, including:

- ***Stop, Start, Continue Method*** to identify which current key activities will no longer be performed, which will continue, and which new activities will be completed per role;
- ***Clinical Automation*** to automate clinical and business workflows based on current Contractor Best Practices and recommendations;
- ***Walk-throughs*** to validate current workflow/processes and develop recommendations for improvement;
- ***MethodM Online tool*** to collect data and track critical design decisions;
- ***Contractor Bedrock wizards*** to guide the process of designing and building the Licensed Software; and
- ***START database content*** which provides pre-built tables and forms to facilitate database design and build, and help the continuity of testing repeatable processes.

3.2 SOW Team Structure and Resources

Contractor will provide a Project Staffing and Resource Management Plan. This plan will be utilized to establish fully loaded (identification of FTE equivalent or hours for all resources by Key Milestone) Contractor resource staffing commitments and to detail specific County resources which will guide County on how best to allocate and deploy staff to this Project. Notwithstanding the foregoing, this is a fixed fee engagement and the Contractor resources identified in the Project Staffing and Resource Management Plan do not limit the resources that may be required by Contractor.

3.3 Dependencies with Other SOWs

Contractor acknowledges and accepts that this SOW is one in a series of SOWs, all of which are inter-related, and the performance of which is integral to the overall success of this Project. Deliverables are created in other SOWs, which provide the foundation for this SOW, including but not limited to:

- Exhibit A.1 (Overall Project Management, Planning, Coordination and Integration Statement of Work) provides the framework that will be used to manage the overall Project, including this SOW.
- Exhibit A.2 (Project Initiation Statement of Work) provides Deliverables which create the foundation for all SOWs, including this SOW.
- Deliverables from the domain specific analysis, design, and build SOWs (Exhibits A.4 – A.20) will provide the functionality and content of Licensed Software and Third-Party Products that is required for this SOW.

3.4 Critical Success Factors

A number of factors are deemed critical to overall Project success. The Parties acknowledge that the following factors are critical to the success of this Project:

Strong Project Management – Effectively managing the Services provided under the Agreement to the Project Schedule and results to be achieved and managing issues, driving decisions, risk, dependencies, and resources in a manner to achieve the Project Schedule and the results.

Open Communication and Governance Structure Clearly Defined –Good and open communication must be established early. Governance, committee structure, and committee members must be defined early. Meeting schedules must also be established for the length of the Project.

Executive Leadership Involvement – It is imperative that executive leadership from Contractor, DHS, and the DHS CIO be involved in the Project governance and meet at regular intervals to discuss the Project's progress and reach agreement on any key decisions that have been escalated to their level.

3.5 Schedule

The commencement date for this Exhibit A.23 (Deployment Statement of Work) will begin as indicated in the Project Work Plan. The Services under this SOW is scheduled to be completed as indicated in the Project Work Plan, and upon Acceptance by the County Project Director of the Deliverables in this Exhibit A.23 (Deployment Statement of Work).

Scheduled commencement dates, scheduled completion dates, and anticipated durations for Milestones, including a Key Milestone table will be developed as part of the Project Control Document. The durations for tasks and subtasks are in the detailed Project Work Plan.

4. General Responsibilities

For the Services described in this SOW:

(1) The Services will be performed by Contractor on-site at sites designated by County and at off-site location(s) as agreed by the Parties in writing for specific activities.

(2) Contractor will provide designated full-time on-site key Project leadership members to deliver the Services during normal business hours, 8:00 AM to 5:00 PM, Pacific Time, Monday through Thursday (accommodating for travel on Mondays), except County and Contractor recognized holidays, unless otherwise agreed by the Parties in writing. Project leadership that is not on-site will also be available during normal business hours, 7:00 AM to 3:30 PM, Pacific Time, unless otherwise agreed by the Parties in writing. During deployment to each Cluster the core Project team will be available around the clock as necessary.

(3) Contractor will utilize its MethodM implementation methodology, templates, and other tools as required to support the efficient and cost effective execution of the Services defined in this SOW to the extent MethodM is not inconsistent with this Agreement. This includes use of Contractor's knowledge capital databases and other repositories of deliverables and intellectual capital from previous client experiences.

(4) Contractor will provide all Services in English.

4.1 Contractor Delivery Consultant Responsibilities

Contractor will designate a Contractor Delivery Consultant for this SOW (referred to in this Exhibit as the "**Contractor Delivery Consultant**") to whom all County communications may be

addressed and who has the authority to represent and commit Contractor in connection with all aspects of this SOW.

The Contractor Delivery Consultant's obligations include:

(1) Establish and maintain communications through the County SOW Lead and Project governance structure;

(2) Manage the delivery of Services and Service interdependencies;

(3) Notify County of any Contractor focal point or contacts for specific activities or tasks;

(4) Manage and maintain the sub-Project Work Plan for this SOW which lists, as appropriate, the activities, tasks, assignments, Service Interdependencies, Key Milestones and Deliverables, and schedule;

(5) Measure, track, and evaluate progress against the Project Schedule;

(6) Work with the County SOW Lead to resolve deviations, if any, from the Project Schedule;

(7) Coordinate and manage the activities of Contractor Personnel;

(8) Report to the County SOW Lead problems and issues impacting Contractor's provision of the Services that require County's attention and resolution;

(9) Coordinate resolution of all Service issues including those raised by the County SOW Lead and, as necessary, escalate such issues within the Contractor organization;

(10) Administer the Project Control Document with the County SOW Lead;

(11) Conduct regularly scheduled Project Status Meetings and prepare weekly Status Reports for the Services defined in this SOW; and

(12) Assist in the preparation and conduct of monthly steering committee updates.

Contractor will perform these activities throughout the provision of the Services.

4.2 Specific County Tasks

4.2.1 County SOW Lead Responsibilities

The County will assign a lead for this SOW (referred to in this Exhibit as the "**County Deployment SOW Lead**" or "**County SOW Lead**". The County SOW Lead will:

(1) Serve as the primary interface between the Contractor Delivery Consultant and County for the tasks and Deliverables set forth in this SOW;

(2) Review this SOW and the responsibilities of both County and Contractor with the Contractor Delivery Consultant;

(3) Coordinate, manage, and be responsible for the control of the activities of County personnel for this SOW;

(4) Communicate to the Contractor Delivery Consultant any changes that may materially affect Contractor's provision of the Services set forth in this SOW;

(5) Coordinate with Contractor Delivery Consultant on Contractor's efforts to resolve problems and issues related to the Services set forth in this SOW;

(6) Work with the Contractor Delivery Consultant to resolve deviations, if any, from the Project Work Plan related to this SOW;

(7) Coordinate resolution of issues raised by the Contractor Delivery Consultant pertaining to this SOW and, as necessary, escalate such issues within the County organization;

(8) Serve as the interface between Contractor's Project team and all County departments participating in activities for the Services set forth in this SOW;

(9) Notify Contractor of any County focal point or contacts for specific activities or tasks related to this SOW;

(10) Ensure that tasks related to this SOW assigned to personnel within the County organization will be completed according to the timetable in the Project Schedule; and

(11) Participate in selected Project status meetings with Contractor's Project team members, and schedule and coordinate attendance and participation of County personnel for interviews, meetings, and work sessions related to the completion of this SOW.

County may change the County SOW Lead by providing notification to the Contractor Delivery Consultant with an introduction and handoff meeting to establish plans for a smooth transition.

4.2.2 Other County Responsibilities

County agrees to comply with its responsibilities as described in this SOW. Such obligations are to be performed at no charge to Contractor.

County will:

(1) Provide County standard and available office space, basic office furniture, and access to the Internet supporting VPN for Contractor Personnel while working at County's facilities;

(2) Locate the Contractor Personnel in an area near County subject matter experts and technical personnel;

(3) Provide necessary security badges and clearances for Contractor personnel working at County's facilities; and

(4) Make available staff with appropriate skills and experience to deliver County tasks as specifically set forth in this SOW.

5. Services and Deliverables

The Services and Deliverables to be provided under this SOW include:

Task/Subtask Name	Deliverables
Task 1 Conduct SOW Kick-off	
Subtask 1.1 Develop Detailed Deployment-Specific Section of the Sub-Project Work Plan	Deliverable 1.1 Deployment-Specific Section of the Sub-Project Work Plan (Key Deliverable)

Task/Subtask Name	Deliverables
Subtask 1.2 Conduct Initiation Session for Deployment Workgroup	Deliverable 1.2 Deployment Initiation Session (Key Deliverable)
Task 2 Validate and Maintain Deployment Strategy	
Subtask 2.1 Validate and Maintain Deployment Strategy	Deliverable 2.1 Deployment Strategy (Key Deliverable)
Task 3 Conduct Deployment Preparation	
Subtask 3.1 Develop Go-Live Go/No-Go Decision Framework and Processes	Deliverable 3.1 Go-Live Go/No-Go Decision Framework and Processes (Key Deliverable)
Subtask 3.2 Develop Backfill Procedures	Deliverable 3.2 Backfill Procedures (Key Deliverable)
Subtask 3.3 Develop Go-Live Event Staffing and Support Model	Deliverable 3.3 Go-Live Event Staffing and Support Model (Key Deliverable)
Subtask 3.4 Develop Go-Live Help Desk Scripts	Deliverable 3.4 Go-Live Help Desk Scripts (Key Deliverable)
Subtask 3.5 Develop Operations and Administration Procedures Related to the Deployment	Deliverable 3.5 Operations and Administration Procedures Related to the Deployment (Key Deliverable)
Subtask 3.6 Develop Deployment and Project Close-out Checklist	Deliverable 3.6 Deployment and Project Close-out Checklist (Key Deliverable)
Subtask 3.7 Develop Solution Readiness Framework	Deliverable 3.7 Solution Readiness Framework (Key Deliverable)
Task 4 Conduct Readiness Assessments	
Subtask 4.1 Conduct Technical Readiness Assessment	Deliverable 4.1 Technical Readiness Assessment (Key Deliverable)
Subtask 4.2 Conduct Functional Readiness Assessment	Deliverable 4.2 Functional Readiness Assessment (Key Deliverable)
Subtask 4.3 Conduct Location Readiness Assessment	Deliverable 4.3 Location Readiness Assessment (Key Deliverable)
Task 5 Conduct Production Cutover Planning	
Subtask 5.1 Develop Production Cutover Plan	Deliverable 5.1 Production Cutover Plan (Key Deliverable)
Subtask 5.2 Develop Emergency Roll-back Plan	Deliverable 5.2 Emergency Roll-back Plan (Key Deliverable)
Subtask 5.3 Conduct Go-Live Go/No-Go Meetings	Deliverable 5.3 Go-Live Go/No-Go Meetings (Key Deliverable)

Task/Subtask Name	Deliverables
Task 6 Initiate Hosting Services for Production Environment	
Subtask 6.1 Initiate Remote Hosting Services for Production Environment	Deliverable 6.1 Remote Hosting Services for Production Environment (Key Deliverable)
Task 7 Conduct Cutover Simulation	
Subtask 7.1 Conduct Cutover Test	Deliverable 7.1 Cutover Test Conducted and Documented (Key Deliverable)
Task 8 Deploy Licensed Software and Third-Party Products	
Subtask 8.1 Conduct Deployment	Deliverable 8.1 Successful Deployment (Key Deliverable)
Task 9 Provide Post-Deployment Support	
Subtask 9.1 Provide Post Go-Live Support	Deliverable 9.1 Post Go-Live Support (Key Deliverable)
Subtask 9.2 Transition to Application Management Services	Deliverable 9.2 Application Management Services (Key Deliverable)
Subtask 9.3 Conduct Post Go-Live Assessment	Deliverable 9.2 Post Go-Live Assessment (Key Deliverable)
Task 10 Conduct Performance Verification and Provide Performance Verification Report	
Subtask 10.1 Conduct Performance Verification Activities	Deliverable 10.1 Performance Verification Activities (Key Deliverable)
Task 11 Develop Final Acceptance Deliverable	
Subtask 11.1 Provide Documented Final Acceptance Deliverable	Deliverable 11.1 Final Acceptance Deliverable

5.1 Deliverable Development and Approval Process

This section specifies a repeating process for developing Deliverables for this SOW. Each Deliverable will be developed in accordance with the following Contractor obligations, which will be sub-tasks to each individual task:

(1) All Deliverables must be developed in the form and format agreed to by County and Contractor using a Deliverable Expectations Document ("**DED**") approved by County. No work will be performed on any Deliverable associated with a payment Milestone until the DED has been Approved by County. As each Project Deliverable is submitted, Contractor must include a copy of the Project DED as the cover sheet. A template to be used for each DED during this Project can be found in Section 5.3 (Project Deliverable Expectations Document Template) of this SOW.

(2) Develop agendas, and coordinate scheduling with County, for all necessary events (e.g., workshops, meetings) for the production of the Deliverables.

(3) Facilitate events (e.g., workshops, meetings) as required for the development of each Deliverable.

(4) Record and analyze the input received from all events (e.g., workshops, meetings) and distribute results or minutes for review to event participants.

(5) Prepare drafts of the Deliverables for County for review.

(6) Provide a structured process for County to provide feedback on drafts, including events, as appropriate.

(7) Compile and analyze County feedback to the draft Deliverables and prepare revised Deliverables.

(8) Distribute the revised Deliverables to County for review; obtain and analyze County feedback as above, and repeat if necessary.

(9) Complete a final version of the Deliverables including, prior to distribution for Approval by County, validation by Contractor that the Deliverables conform to the Specifications and meets the Acceptance Criteria.

After receipt of a Deliverable from Contractor, the County SOW Lead or designee will notify the Contractor Delivery Consultant and assigned Project team resources in writing as to any specific changes requested (together with a reasonably detailed explanation of the reasons why the Deliverable should be modified) in as expeditious a time frame as possible given the nature of the Deliverable and the schedule. Unless a change is disputed, Contractor will make the changes described in a timely manner so as to not adversely impact the schedule under the Project Work Plan. Upon completion of such changes, the Deliverable will be provided to County with a request for Acceptance. County will notify Contractor of its Acceptance or rejection in a time that is practical and reasonable given the nature, criticality, and complexity associated with the Acceptance Testing/review.

5.2 Tasks

Contractor will be responsible for performing the following tasks as to the Services to be provided under this SOW.

Task 1 Conduct SOW Kick-off
Task Description
The team members from Contractor, County, and external stakeholders will be introduced and their specific roles will be described. Deployment-specific training on the Licensed Software will be provided for the County personnel working on this SOW (referred to in this Exhibit as the "**County Deployment Workgroup**" or "**County Workgroup**" and the County Deployment Workgroup will be introduced to various Contractor tools, methodologies and Best Practices that will be used throughout this SOW.
Personnel Requirements

All roles previously involved in the Project are engaged in the deployment activities including the following.
• Contractor Key Resources
  ○ Contractor Project Director;
  ○ Contractor Project Manager;
  ○ Contractor Integration Architect;
  ○ Contractor Clinical Strategist;
  ○ Contractor Interface Architect;
  ○ Contractor Solution Architects;
  ○ Contractor Delivery Consultants;

Task 1 Conduct SOW Kick-off

- Contractor Hosting Services Engagement Leader;
- Contractor Technical Engagement Leader;
- Contractor Hosting Services System Engineer;
- Contractor Hosting Services Network Engineer; and
- Contractor AMS Services Engagement Leader.

- County Key Resources
  - County Project Director;
  - County Project Manager;
  - County SOW Team Leads;
  - County Technical Manager;
  - County Desktop Technicians;
  - County Network Engineers;
  - County Helpdesk; and
  - County Interface Lead.

Subtasks/Deliverables

Subtask 1.1 Develop Detailed Deployment-Specific Section of the Sub-Project Work Plan

As part of the Project Control Documentation, Contractor will develop and maintain an overall Project Work Plan. The Project Work Plan will include a Deployment-specific section. The overall Project Work Plan will include a Project Schedule, and will be developed in a MethodM Online compatible version of Microsoft Project, which will include:

- Deliverables, tasks, and subtasks;
- Associated dependencies among Deliverables, tasks, and subtasks both within this SOW and across all related SOWs and work streams;
- Resources (effort – days and shifts, and roles) from Contractor, County, and potential third-party or foreign system vendors required for each Deliverable, task, and subtask;
- Start date and date of completion for each Deliverable, task, and subtask;
- County review period for each Deliverable;
- Acceptance Criteria for each Deliverable; and
- Milestones and Key Milestones.

Contractor will adapt the Deployment-specific section of the Project Work Plan to create a

Deliverable 1.1 Deployment-Specific Section of the Sub-Project Work Plan

- Deployment-specific section of Project Work Plan.
- Sub-Project Work Plan for Deployment.

Acceptance Criteria:

- The Deployment-specific section of the Project Work Plan incorporates, and is consistent with, County-provided input.
- The Deployment-specific section of the Project addresses all elements described in subtask 1.1 (Develop Detailed Deployment-Specific Section of the sub-Project Work Plan) and includes requirements for involvement of any potential third-party or foreign system vendors.
- The Deployment-specific section of the Project Work Plan has been Approved by County.
- Timelines detailed in the Deployment-specific section of the Project Work Plan and sub-Project Work Plans are realistically achievable with reasonable effort as determined by County.
- Elements of the Deployment-specific section of the Project Work Plan are consistent with tasks, subtasks, and Deliverables as outlined

Task 1 Conduct SOW Kick-off	
specific sub-Project Work Plan which includes timelines, activities, Deliverables, and Milestones specific to this SOW and subject to County Approval. Contractor will update the Deployment-specific section of the Project Work Plan after each deployment to incorporate experience and lessons learned from prior deployments.	in this and other SOWs. • Confirmed availability of Contractor resources required to implement the Deployment Project Work Plan.
Subtask 1.2 Conduct Initiation Session for Deployment Workgroup Contractor will conduct a Deployment initiation session to provide an introduction to the County Workgroup to the Services covered by this SOW, including the timelines and nature of the work effort that will be required to implement this SOW. Before the Deployment Initiation Session, Contractor will: • Work with County to identify all Contractor, County, and any potential third-party vendor resources, should they be required to complete the tasks outlined in this SOW; • Provide County with a roster of kick-off participants; • Conduct a Project Management Workshop as described in task 12 (Conduct Project Preparation Sessions) of Exhibit A.2 (Project Initiation); and • Develop an agenda/schedule for the Deployment Initiation Session. The Deployment Initiation Session will include at least the following: • Illustrate and document dependencies between this SOW and any other SOWs and Project work streams; • Review Cutover Plan and Post-Go-Live support approach; • Review tasks, Deliverables, and Milestones for the deployments; and • Train the County Workgroup on the required process and tools used to support Contractor in the deployment and related activities. After the Deployment Initiation Session,	**Deliverable 1.2 Deployment Initiation Session** • Deployment Initiation Session materials for County review. • Report documenting Deployment SOW dependencies. • Deployment Initiation Session Event Summary Report. • Deployment SOW kick-off presentation materials. • Deployment Initiation Session Event Summary Report. **Acceptance Criteria:** • The Deployment Initiation Session Event Summary Report from Contractor documents that the Deployment initiation session (a) has been completed and (b) includes accurate documentation of the content, outcomes, and next steps agreed upon at the Deployment Initiation Session. • The Deployment Initiation Session Event Summary Report has been Approved by County. • Report documenting Deployment SOW dependencies addresses all elements described in subtask 1.2 (Conduct Initiation Session for Deployment Workgroup). • Report documenting Deployment SOW dependencies has been Approved by County. • Agreed upon and understood learning objectives for County personnel. • Contractor evidence that County personnel have achieved stated learning objectives required for Project progression according to

Task 1 Conduct SOW Kick-off	
Contractor will prepare a Deployment Initiation Session Event Summary Report for review and Approval by County.	stated timelines.

Task 2 Validate and Maintain Deployment Strategy	
Task Description	
During this task Contractor will review and provide feedback to County's Deployment Strategy for the implementation of the EHR System to the inpatient hospitals and hospital-based and outlying ambulatory clinics.	
Personnel Requirements	

• Contractor Key Resources
  ○ Contractor Project Director;
  ○ Contractor Project Manager; and
  ○ Contractor Integration Architect.
• County Key Resources
  ○ County Project Director; and
  ○ County Project Manager.	

Subtasks/Deliverables	
Subtask 2.1 Validate and Maintain Deployment Strategy Contractor will validate the County established Deployment Strategy. On an ongoing basis, and after each deployment, Contractor will conduct an assessment of the Deployment Strategy. Contractor will: • Validate the Deployment Strategy against the staffing and support model, data conversion model, and training plan; • Conduct assessment to identify risks and issues related to the deployment; • Provide recommendations for addressing risks and issues; and • Provide written recommendations regarding changes to the Deployment Strategy. Contractor will review the Deployment Strategy with County. Contractor will incorporate all relevant changes into applicable Project Control Documents, which result from County-Approved changes to the	**Deliverable 2.1 Deployment Strategy** • Input into Deployment Strategy. • Updated Deployment Strategy. **Acceptance Criteria** • County-Approved Deployment Strategy.

Task 2 Validate and Maintain Deployment Strategy	
Deployment Strategy.	

Task 3 Conduct Deployment Preparation	
Task Description	
Contractor will conduct general deployment preparations for all deployments. The general deployment preparations will include development of Go-Live Go/No-Go Decision Framework and Processes, Backfill Staffing Procedures, Go-Live Event Staffing and Support Model, conduct deployment strategy assessment, Go-Live help Desk Scripts, Operations and Administration Procedures for deployment, and the Deployment and Project Close-out Checklist.	
Personnel Requirements	

• Contractor Key Resources
  ○ Contractor Project Director;
  ○ Contractor Project Manager;
  ○ Contractor Integration Architect;
  ○ Contractor Clinical Strategist;
  ○ Contractor Learning Consultant ("**ACE**");
  ○ Contractor Technical Engagement Leader;
  ○ Contractor Hosting Services Engagement Leader; and
  ○ Contractor AMS Engagement Leader.
• County Key Resources
  ○ County Project Director;
  ○ County Project Manager;
  ○ County Help Desk Analyst; and
  ○ County Technical Manager.	

Subtasks/Deliverables	

Subtask 3.1 Develop Go-Live Go/No-Go Decision Framework and Processes
Contractor will provide a Go-Live Go/No-Go Decision Framework and Processes document which includes:
• Definition of criteria for Go/No-Go decision;
• Description of the Go/No-Go decision process;
• Description of Go/No-Go governance (roles and responsibilities, escalation process, etc.);
• Description of AMS involvement in Go/No-Go decision; and
• Go/No-Go checklist including:
  ○ Location readiness assessment;
  ○ Solution readiness assessment ; and
	Deliverable 3.1 Go-Live Go/No-Go Decision Framework and Processes
	• Go-Live Go/No-Go Decision Framework and Processes document.
	
	Acceptance Criteria:
	• The Go-Live Go/No-Go Decision Framework and Processes document incorporates, and is consistent with, County-provided input.
	• The Go-Live Go/No-Go Decision Framework and Processes document has been Approved by County.

Task 3 Conduct Deployment Preparation	
○ Technical readiness assessment. Contractor will review the Go-Live Go/No-Go Decision Framework and Processes document with County. Contractor will incorporate County feedback and proposed changes into the Go-Live Go/No-Go Decision Framework and Processes document and submit a final version to County for Approval.	
Subtask 3.2 Develop Backfill Procedures Contractor will provide County personnel Backfill Staffing Procedures document which include recommendations and Best Practices regarding: ● Backfill staffing model during training and deployment; ● Approach for scheduling backfill staff; and ● Cross training approach for County and Contractor deployment resources. Contractor will review the Backfill Staffing Procedures document with County and submit to County for Approval.	**Deliverable 3.2 Backfill Procedures** ● Backfill Staffing Procedures document. **Acceptance Criteria:** ● The Backfill Staffing Procedures document incorporates, and is consistent with, County-provided input. ● The Backfill Staffing Procedures document has been Approved by County.
Subtask 3.3 Develop Go-Live Event Staffing and Support Model Contractor will provide a Go-Live Event Staffing and Support Model based upon Contractor experience and Best Practices, including: ● Roles of Contractor and County support teams including super users, Project consultants, clinicians, end-users and Advancing Conversion Excellence Team ("**ACE Team**"). (Contractor's use of the ACE Team in its implementations represents an emerging best practice that is atypical of Contractor's standard implementations. Notwithstanding the foregoing, Contractor has provided ACE Team conversion resources within the Implementation Services, and has estimated the appropriate amount of those Services for the County to be five hundred and twenty-six (526), twelve (12) hour shifts. Based on the circumstances existing prior to deployment of the ACE Team at each Cluster, Contractor, in	**Deliverable 3.3 Go-Live Event Staffing and Support Model** ● Go-Live Event Staffing and Support Model. **Acceptance Criteria:** ● The Go-Live Event Staffing and Support Model has been Approved by County.

Task 3 Conduct Deployment Preparation	

its sole discretion, will validate that its estimate of the ACE Team resources is appropriate for the needs of the County and determine whether an adjustment is needed in light of its Implementation Service obligations under this Agreement. If the County requires additional ACE Team resources beyond the greater of (i) five hundred and twenty-six (526), twelve (12) hour shifts, or (ii) Contractor's validated amount, then County must Approve such Services as Optional Work).
• County and Contractor staffing requirements and support staff ratios for Go-Live central command center, satellite command facilities, if any, and on the floor, including metrics for determination of support staff to user ratios;
• Issue management process including issue communication and issue resolution;
• Contractor's requirements and processes for Contractor Personnel access to County facilities, accommodating County policies and timelines (e.g., for LiveScan, health clearances, ID badges);
• Support model logistics, including:
  ○ Hotline to Contractor; and
  ○ Shift change processes for Contractor and County resources.
• Required training and support materials for Contractor resources;
• County infrastructure and facilities required to support Contractor and County personnel during Go-Live;
• Approach to determine duration of Contractor on-site support staff;
• Transition-out criteria and transition-out process for Contractor on-site support staff;
• Requirements for central and facility based command center location, infrastructure, communications procedures, and issue management; and	

Task 3 Conduct Deployment Preparation	
• Identification of criteria for transitioning support to maintenance and operations support in accordance with Exhibit A.24 (Maintenance and Operations Statement of Work). Contractor will review the Go-Live Event Staffing and Support Model with County. Contractor will incorporate County feedback and proposed changes into the Go-Live Event Staffing and Support Model and submit a final version to County for Approval.	
Subtask 3.4 Develop Go-Live Help Desk Scripts Contractor will support County in the creation of Go-Live Help Desk Scripts by providing sample help desk scripts and tip sheets, including: • County and Contractor roles and responsibilities related to provisioning of Go-Live help desk support; • Procedures for logging and tracking issues; and • Procedures for handing off tickets from Contractor to County for resolution (including closure of tickets and related communications). Contractor will review the County developed Go-Live Help Desk Scripts with County and provide written recommendations for improvement after each deployment.	**Deliverable 3.4 Go-Live Help Desk Scripts** • Go-Live Help Desk Scripts. **Acceptance Criteria:** • The Go-Live Help Desk Scripts incorporate, and are consistent with, County-provided input. • The Go-Live Help Desk Scripts have been Approved by County.
Subtask 3.5 Develop Operations and Administration Procedures Related to the Deployment Contractor will provide an Operations and Administration Procedures document that will be used for each deployment, including: • Implications for operations based on data conversion considerations (appointments, planned orders, instructions for last orders, scheduling of orders post Go-Live, etc.); • Change control process during deployment, including code freezes at prior deployments and production environment change authorization ("**PECA**") process;	**Deliverable 3.5 Operations and Administration Procedures Related to the Deployment** • Operations and Administration Procedures document. **Acceptance Criteria:** • The Operations and Administration Procedures document incorporates, and is consistent with, County-provided input. • The Operations and Administration Procedures document has been Approved by County.

Task 3 Conduct Deployment Preparation	
• Downtimes during deployment; • Communications protocols that Contractor and County IT personnel will use to inform County personnel of important Go-Live events and issues (e.g., automated messages, offline, Project website); • Operations documentation (e.g., batch schedule, runtime procedures); • Guidelines to determine what will be the impact on patient and personnel scheduling; and • Guidelines to determine impacts on productivity. Contractor will review the Operations and Administration Procedures document with County. Contractor will incorporate County feedback and proposed changes into the Operations and Administration Procedures document and submit a final version to County for Approval. Contractor will update the Operations and Administration Procedures document after each deployment to address the specific needs of the upcoming deployment and to include lessons learned from prior deployments.	
Subtask 3.6 Develop Deployment and Project Close-out Checklist Contractor will provide a Deployment and Project Close-out Checklist. In addition, Contractor will provide an overall Project Close-out checklist, which will be used for each deployment. The checklists will include: • System tuning activities; • Completion of knowledge transfer to County support resources; • Timing of archival of MethodM Online (transfer project artifacts to Project repository); • Lessons learned document; • All design documents updated to reflect Go-Live build;	**Deliverable 3.6 Deployment and Project Close-out Checklist** • Deployment and Project Close-out Checklists. **Acceptance Criteria:** • The Deployment and Project Close-out Checklists incorporate, and are consistent with, County-provided input. • The Deployment and Project Close-out Checklists have been Approved by County.

Task 3 Conduct Deployment Preparation	
• Transition of support activities to County where applicable; • Completion of all tasks and Deliverables in Exhibits A.1 – A.23; • County self-sufficiency in logging issues into AMS Services; • Closing of all deployment and Project issue logs and transition remaining issues to Contractor production support; and • Completion of performance verification report. Contractor will review the Deployment and Project Close-out Checklist with County. Contractor will incorporate County feedback and proposed changes into the Deployment and Project Close-out Checklist and submit a final version to County for Approval. Contractor will update the Deployment and Project Close-out Checklist after each deployment to include lessons learned from prior deployments.	

Subtask 3.7 Develop Solution Readiness Framework
Contractor will develop a Solution Readiness Framework that will allow Contractor and County to assess Go-Live readiness from a functional, technical, and location specific perspective.
The Solution Readiness Framework will include:
• Functional readiness assessment framework, including:
  ○ Status of Licensed Software solution;
  ○ Plan for resolution of remaining issues;
  ○ Production Support Plan;
  ○ Scheduled Downtime Plan;
  ○ Help desk infrastructure;
  ○ Help desk staff readiness; and
  ○ Communication with deployment team and AMS.
• Technical readiness framework will include:
  ○ Guidelines for County assessment of
	Deliverable 3.7 Solution Readiness Framework
	• Solution Readiness Framework.
	
	Acceptance Criteria:
	• The Solution Readiness Framework incorporates, and is consistent with, County-provided input.
	• The Solution Readiness Assessment Framework has been Approved by County.

Task 3 Conduct Deployment Preparation	
County infrastructure; ○ Hosting infrastructure, including Hardware and Hosting Software; ○ Revision Management Plan; ○ System Backup/Restore Plan; ○ System Security Plan; ○ Fall-back Procedures; and ○ System Performance Monitoring Plan. • Location readiness assessment framework for deployment to each Domain, Venue, and Location, including: ○ Approach and staffing for transition of support to County support personnel and AMS Services; ○ Data conversion; ○ Deployment backfill; ○ Production support plan; and ○ User proficiency. Contractor will review Solution Readiness Framework with County and incorporate County feedback and proposed changes into Solution Readiness Framework and submit a final version to County for Approval. Contractor will update Solution Readiness Framework prior to each deployment to include findings and lessons learned from prior deployments.	

Task 4 Conduct Readiness Assessments
Task Description
Contractor will conduct a Solution Readiness Assessment, which includes a Technical Readiness Assessment, a Functional Readiness Assessment, and a Location Readiness Assessment for the Licensed Software, the Hosting Services, and the AMS Services for all Domains, Venues, and Locations.
Personnel Requirements
• Contractor Key Resources ○ Contractor Project Director; ○ Contractor Project Manager; ○ Contractor Integration Architect; ○ Contractor Solution Architects; ○ Contractor Delivery Consultants;

<table>

<tr><td>Subtask 4.1 Conduct Technical Readiness Assessment
Contractor will conduct a Technical Readiness Assessment in accordance with the framework developed in subtask 3.7 (Develop Solution Readiness Framework).
Contractor will document and review the Technical Readiness Assessment with County and:
Provide recommendations for changes based on the results from the Technical Readiness Assessment.
Identify systemic issues that could inhibit County from achieving a sufficient level of readiness (e.g., time management, complexity, data quality, training issues) and provide County with recommendations for addressing them (e.g., through additional training, augmenting resources).
Provide additional resources to address issues and recommendations above (the resources are to be determined necessary to support the Project through the governance process defined in Exhibit A.2 (Project Initiation Statement of Work).
Contractor will incorporate County feedback and proposed changes into the Technical Readiness</td><td>Deliverable 4.1 Technical Readiness Assessment
Technical Readiness Assessment report.

Task 4 Conduct Readiness Assessments	
Assessment report and submit a final version to County for Approval. Contractor will update Technical Readiness Assessment prior to each deployment.	
Subtask 4.2 Conduct Functional Readiness Assessment Contractor will conduct a Functional Readiness Assessment in accordance with the framework developed in subtask 3.7 (Develop Solution Readiness Framework). Contractor will document and review the Readiness Assessment with County and: • Provide recommendations for changes based on the results from the Functional Readiness Assessment. • Identify systemic issues that could inhibit County from achieving a sufficient level of readiness (e.g., time management, complexity, data quality, training issues) and provide County with recommendations for addressing them (e.g., through additional training, augmenting resources). • Provide additional resources to address issues and recommendations above (the resources are to be determined necessary to support the Project through the governance process defined in Exhibit A.2 (Project Initiation Statement of Work). Contractor will document Functional Readiness Assessment outcomes and will submit final versions to County for Approval. Contractor will complete Functional Readiness Assessment prior to each deployment.	**Deliverable 4.2 Functional Readiness Assessment** • Functional Readiness Assessment. **Acceptance Criteria:** • The Functional Readiness Assessment incorporates, and is consistent with, County-provided input. • The Functional Readiness Assessment has been Approved by County.
Subtask 4.3 Conduct Location Readiness Assessment Contractor will conduct the Location Readiness Assessment in accordance with the framework developed in subtask 3.7 (Develop Solution Readiness Framework). Contractor will document and review the Location Readiness Assessment with County and: • Provide recommendations for changes based	**Deliverable 4.3 Location Readiness Assessment** • Location Readiness Assessment. **Acceptance Criteria:** • Tests for the Location Readiness Assessment are complete. • The Location Readiness Assessment incorporates, and is consistent with, County-

Task 4 Conduct Readiness Assessments	
on the results from the Location Readiness Assessment. • Identify systemic issues that could inhibit County from achieving a sufficient level of readiness (e.g., time management, complexity, data quality, training issues) and provide County with recommendations for addressing them (e.g., through additional training, augmenting resources). • Provide additional command center resources to address issues and recommendations above (the resources are to be determined necessary to support the Project through the governance process defined in Exhibit A.2 (Project Initiation Statement of Work). Contractor will incorporate County feedback and proposed changes into the Location Readiness Assessment and submit a final version to County for Approval.	provided input. • The Location Readiness Assessment has been Approved by County.

Task 5 Conduct Production Cutover Planning
Task Description
Contractor will develop a Production Cutover Plan that will be used for the first Go-Live and refined for subsequent deployments to each Cluster. It will identify the steps required to perform all activities required as part of the production cutover process, including the steps necessary for loading existing and manual data, and the steps that will need to be followed by the Contractor and County for activating the successfully tested Licensed Software, Third-Party Products, Hosting Services, and Interfaces.
Personnel Requirements

• Contractor Key Resources
  ○ Contractor Project Director;
  ○ Contractor Project Manager;
  ○ Contractor Integration Architect;
  ○ Contractor Hosting Services Engagement Leader;
  ○ Contractor Technical Engagement Leader;
  ○ Contractor Integration Architect;
  ○ Contractor Solution Architects;
  ○ Contractor Interface Architect;
  ○ Contractor Delivery Consultants; and
  ○ Contractor Clinical Strategist.
• County Key Resources
  ○ County Project Director;

Task 5 Conduct Production Cutover Planning	
○ County Project Manager; ○ County SOW Leads; ○ County Interface Manager; and ○ County Technical Manager;	
Subtasks/Deliverables	
Subtask 5.1 Develop Production Cutover Plan Contractor will develop and maintain a Production Cutover Plan, including: • Task list and timeline; • Logical order of cutover activities (interdependencies between tasks); • Owner, backup owner; • Start time, check points, end time; • Interdependencies; • Preconditions; • Cross task communication; • County and Contractor resources required for production cutover; • County and Contractor roles and responsibilities; • PECA process during Go-Live; • Go-Live checklist; and • Processes, policies, and procedures for AMS Services. Contractor will conduct a review session of the Production Cutover Plan. Contractor will incorporate County feedback and proposed changes into the Production Cutover Plan and submit a final version to County for Approval. Contractor will track status of Production Cutover Plan development and escalate any issues through the governance process. Contractor will update the Production Cutover Plan for each deployment, including items specific to the deployment being planned, and incorporating lessons learned from prior deployments.	**Deliverable 5.1 Production Cutover Plan** • Production Cutover Plan. **Acceptance Criteria:** • The Production Cutover Plan incorporates, and is consistent with, County-provided input. • The Production Cutover Plan has been Approved by County.

Task 5 Conduct Production Cutover Planning	

Subtask 5.2 Develop Emergency Roll-back Plan
Contractor will develop the Emergency Roll-back Plan which includes:
• Approach for documenting patient records during initial rollout (manual notes, parallel data entry);
• Rollback procedure should they be necessary, including when and how they should be invoked including:
  ○ System for classifying the severity of problems;
  ○ Description of which levels warrant roll-back; and
  ○ Decision-making process for activating Emergency Roll-back Plan; and
• Documented procedures for recovering from roll-back.
Contractor will review the Emergency Roll-back Plan with County.
Contractor will incorporate County feedback and proposed changes into the Emergency Roll-back Plan and submit a final version to County for Approval.
Contractor will update the Emergency Roll-back Plan for each deployment, including items specific to the deployment being planned, and incorporating lessons learned from prior deployments.
	Deliverable 5.2 Emergency Roll-back Plan
	• Emergency Roll-back Plan.
	
	Acceptance Criteria:
	• The Emergency Roll-back Plan incorporates, and is consistent with, County provided input.
	• The Emergency Roll-back Plan has been Approved by County.

Subtask 5.3 Conduct Go-Live Go/No-Go Meetings Contractor will coordinate Go-Live Go/No-Go meetings in accordance with the Production Cutover Plan. Contractor will conduct Go-Live Go/No-Go meetings as jointly determined with County. The meetings will include: • Confirmation of the status of all criteria on the Go/No-Go checklist (e.g., site readiness, operational readiness, any relevant test results); • Reviews of all readiness assessments; and	**Deliverable 5.3 Go-Live Go/No-Go Meetings** • Go-Live Go/No-Go meetings. • Status of all Go-Live checklist criteria. **Acceptance Criteria:** • Go-Live Go/No-Go meetings are held in accordance with Go/No-Go Decision Framework and Processes as determined in subtask 3.1 (Develop Go-Live Go/No-Go Decision Framework and Processes). • Reported status of all criteria on Go/No-Go checklist accurately reflects readiness and test results.

Task 5 Conduct Production Cutover Planning	
• Confirmation of Go/No-Go decision in accordance with Go/No-Go decision process and governance.	

Task 6 Initiate Hosting Services for Production Environment	
Task Description	
Contractor will initiate Hosting Services for Production Environment in accordance with the Specifications. The Hosting Services for Production Environment will include documentation of account management, operations and administration, database administration, change management, capacity management, performance management, and Service Level monitoring and reporting.	
Personnel Requirements	

• Contractor Key Resources
  ○ Contractor Project Director;
  ○ Contractor Project Manager;
  ○ Contractor Integration Architect;
  ○ Contractor Hosting Services Engagement Leader;
  ○ Contractor Hosting Services System Engineer;
  ○ Contractor Hosting Services Network Engineer;
  ○ Contractor Technical Engagement Leader; and
  ○ Contractor AMS Services Engagement Leader.
• County Key Resources
  ○ County Project Director;
  ○ County Project Manager;
  ○ County Technical Manager;
  ○ County Network Manager; and
  ○ County Technical Manager.	

Subtasks/Deliverables	
Subtask 6.1 Initiate Remote Hosting Services for Production Environment Contractor will initiate Hosting Services in accordance with the Hosting Services Plan developed in Exhibit A.24 (Maintenance and Operations) and the Production Cutover Plan developed in subtask 5.1 (Develop Production Cutover Plan). The Hosting Services will comply with the requirements of Exhibit N (Required Remote Hosting Services Terms and Conditions), Exhibit N.1 (Hosting Services), Exhibit E (Service Levels and Performance Standards), and the Agreement.	**Deliverable 6.1 Remote Hosting Services for Production Environment** • Hosting Services for production environment initiated. **Acceptance Criteria:** • Hosting Services comply with Specifications. • Hosting Services have been Approved by County.

Task 7 Conduct Cutover Simulation	
Task Description	
As defined in the Production Cutover Plan (subtask 5 of this SOW), Cutover test will be conducted and documented. For identified issues, corrective actions will be incorporated into a revised Production Cutover Plan.	
Personnel Requirements	

• Contractor Key Resources
  ○ Contractor Project Director;
  ○ Contractor Project Manager;
  ○ Contractor Integration Architect;
  ○ Contractor Clinical Strategist;
  ○ Contractor Delivery Consultants;
  ○ Contractor Solution Architects;
  ○ Contractor Hosting Services Engagement Leader; and
  ○ Contractor AMS Services Engagement Leader.
• County Key Resources
  ○ County Project Director;
  ○ County Project Manager;
  ○ County SOW Leads;
  ○ County Interface Manager;
  ○ County Desktop Technicians;
  ○ County Network Manger; and
  ○ County Technical Manager.	

Subtasks/Deliverables	
Subtask 7.1 Conduct Cutover Simulation Contractor will support County in developing cutover simulation scenarios which will include Integration Test scripts and additional cutover simulation specific test scenarios. Contractor will provide County with requirements to set up a simulation environment (i.e., test room and test bed) with all hardware to walk through test scenarios and conduct end-to-end simulation of: • Workstations and devices; • Data conversion (manual processes); • Interfaces; and • Workflows. Contractor will assist County in conducting cutover simulation (i.e., testing of processes on current systems and Licensed Software and	**Deliverable 7.1 Cutover Simulation Conducted and Documented** • Simulation environment setup requirements. • Documented outcomes of cutover simulation. • Updated Production Cutover Plan. **Acceptance Criteria:** • Cutover simulation outcomes Approved by County. • Updated Production Cutover Plan incorporates, and is consistent with, County-provided input. • The Production Cutover Plan has been Approved by County.

Task 7 Conduct Cutover Simulation	
Third-Party Products). Contractor will conduct timing of cutover simulation to estimate downtime requirements during cutover. Contractor will document the outcomes of the cutover simulation and submit to County for Approval. Contractor will provide recommendations for revisions to the Production Cutover Plan based on cutover testing. Contractor will review recommendations with County and incorporate Approved changes into the Production Cutover Plan.	

Task 8 Deploy Licensed Software and Third-Party Products
Task Description
Contractor and County will iteratively deploy Licensed Software and Third-Party Products in accordance with the deployment strategy and cutover plan. Deployment will include cutover to Licensed Software and Third-Party products, data conversion (including catch-up transactions), activation of interfaces, providing Go-Live support, issue resolution, and conducting Post-Go-Live assessment.
Personnel Requirements

• Contractor Key Resources
  ○ Contractor Project Director;
  ○ Contractor Project Manager;
  ○ Contractor Integration Architect;
  ○ Contractor Clinical Strategist;
  ○ Contractor Solution Architects;
  ○ Contractor ACE Resources;
  ○ Contractor Additional Command Center Staff, (duplicates of rolls for night shift);
  ○ Contractor Interface Architect;
  ○ Contractor Clinical Strategist;
  ○ Contractor Technical Engagement Leader;
  ○ Contractor Hosting Services Engagement Leader;
  ○ Contractor AMS Engagement Leader;
  ○ Contractor Hosting Services System Engineer;
  ○ Contractor Hosting Services Network Engineer; and
  ○ Contractor Delivery Consultants.
• County Key Resources
  ○ County Project Director;
  ○ County Project Manager;
  ○ County SOW Leads;

Task 8 Deploy Licensed Software and Third-Party Products	
○ County SMEs; ○ County Super Users; ○ County End Users; ○ County Interface Manager; ○ County Network Manager; ○ County Desktop Technicians; ○ County Help Desk Analysts; and ○ County Technical Manager.	
Subtasks/Deliverables	
Subtask 8.1 Conduct Deployment Contractor will deploy Licensed Software to the Clusters. Contractor will: • Implement the Production Cutover Plans; • Track and monitor progress; and • Identify, escalate, and resolve issues. Recommend adjustments to deployment and Production Cutover Plans as necessary.	**Deliverable 8.1 Successful Deployment to each Cluster identified in Exhibit U (Clusters), including:** • Harbor-UCLA Inpatient deployment; • LAC-USC Inpatient deployment; • Olive View Inpatient deployment; • Rancho Los Amigos Inpatient deployment; • Harbor-UCLA Outlying and Hospital Based Ambulatory Clinics deployment; • High Desert Outlying and MACC Based Ambulatory Clinics deployment; • LAC-USC Outlying and Hospital Based Ambulatory Clinics deployment; • MLK Outlying and MACC Based Ambulatory Clinics deployment; • Olive View Outlying and Hospital Based Ambulatory Clinics deployment; and • Rancho Los Amigos Hospital Based Ambulatory Clinics deployment. **Acceptance Criteria:** • Each Cluster deployment has been Accepted by County.

Task 9 Provide Post-Deployment Support
Task Description
Contractor's post-deployment support team will monitor the deployed system and user activity, assign resources to resolve issues, detect and escalate issues, and resolve and communicate resolution.

Task 9 Provide Post-Deployment Support	
Personnel Requirements	

• Contractor Key Resources
  ○ Contractor Project Director;
  ○ Contractor Project Manager;
  ○ Contractor Integration Architect;
  ○ Contractor Clinical Strategist;
  ○ Contractor Solution Architect;
  ○ Contractor Interface Architect;
  ○ Contractor AMS Engagement Leader
  ○ Contractor Hosting Services Production Owner Technical Manager;
  ○ Contractor Hosting Services Production Owner System Engineer; and
  ○ Contractor Delivery Consultants.
• County Key Resources
  ○ County Project Director;
  ○ County Project Manager;
  ○ County Interface Manager;
  ○ County Technical Manager;
  ○ County Help Desk Analysts;
  ○ County SOW Team Leads; and
  ○ County SMEs.	

Subtasks/Deliverables	
Subtask 9.1 Provide Post Go-Live Support Contractor will track deployment status and resolve issues by: • Working with County to track deployment status, and identify and escalate issues; • Assigning appropriate resources to resolve issues; • Communicating issue resolution; and • Providing additional resources to the address issues and recommendations above (the resources are to be as determined necessary to support the Project through the governance process defined in Exhibit A.2 (Project Initiation Statement of Work). Contractor will track progress on achieving exit criteria. Contractor will regularly assess the status of the deployment prior to the end of the support period. Contractor will provide Post-Go Live support until exit criteria are achieved.	**Deliverable 9.1 Post Go-Live Support** • Issues identified, escalated, and resolved by Contractor. • Issue resolution communicated to County. **Acceptance Criteria:** • Post-Go Live exit criteria achieved.

Task 9 Provide Post-Deployment Support	
Subtask 9.2 Transition to Application Management Services Contractor Project team will coordinate transition to AMS Services upon achieving exit criteria. Contractor AMS Services staff will alert County Workgroups of issues and risks related to the County build. Prior to the first deployment, Contractor's transition team will develop processes, policies, and procedures for AMS Services. Contractor will initiate AMS Services to include: • Application management and monitoring; • 24x7x365 application support; • Operations management; • Report creation and maintenance; • Maintenance checks; • Licensed Software configuration requests; • Incident/problem management; • Revisions, New Releases and Licensed Software Upgrades; • Content management; • Service Level monitoring and reporting; • Change management; • Application configuration management; • Interface support; and • Authorization controls and processes. Contractor will review the processes, policies, and procedures for AMS Services with County. Contractor will incorporate County feedback and proposed changes into the processes, policies, and procedures for AMS Services and submit a final version to County for Approval.	**Deliverable 9.2 Application Management Services** • AMS Services staff participation in Design Review and System Validation phases of Exhibits A.4 – A.18. • Successful transition to AMS Services. **Acceptance Criteria:** • County transitioned to steady state maintenance and support (AMS Services and County help desk).
Subtask 9.3 Conduct Post Go-Live Assessment After each deployment, Contractor will conduct a post Go-Live Assessment with County input, including: • User interviews; and	**Deliverable 9.3 Post Go-Live Assessment** • Post Go-Live Assessment reports. **Acceptance Criteria:** • The Post Go-Live Assessment reports

Task 9 Provide Post-Deployment Support	
• Written report of findings with Contractor advice and recommendations to enhance benefits to County of Licensed Software use. Contractor will review the Post Go-Live Assessment reports with County. Contractor will incorporate County feedback and proposed changes into the Post Go-Live Assessment reports and submit a final version to County for Approval.	incorporate, and are consistent with, County-provided input; and • The Post Go-Live Assessment reports have been Approved by County.

Task 10 Conduct Performance Verification and Provide Performance Verification Report	
Task Description	
After each deployment, Contractor will diagnose, propose solutions to, and correct Errors in accordance with Section 12 (Acceptance) of the Agreement. Contractor will conduct a review session with County after Productive Use of each Cluster and will provide the performance verification report described in Section 12.5.2 (Performance Verification Report) of the Agreement	
Personnel Requirements	
• Contractor Key Resources ○ Contractor Project Director; ○ Contractor Project Manager; ○ Contractor Integration Architect; ○ Contractor Clinical Strategist; ○ Contractor Hosting Services Production Owner Technical Engagement Leader; ○ Contractor Hosting Services Production Owner System Engineer; ○ Contractor Hosting Services Engagement Leader; and ○ Contractor AMS Services Engagement Leader. • County Key Resources ○ County Project Director; ○ County Project Manager; and ○ County Technical Manager.	
Subtasks/Deliverables	
Subtask 10.1 Conduct Performance Verification Activities After each deployment, Contractor will perform all performance verification activities required by the Agreement. Contractor will develop a performance verification report which includes: • Summary of activities, results, and outcomes; • Summary of Errors and issues identified by Contractor or County;	**Deliverable 10.1 Performance Verification Activities** • Diagnosis and resolution of Errors in accordance with the Agreement. • Review sessions after Productive Use of each Cluster. • Performance verification reports. **Acceptance Criteria:**

• Summary of lessons learned; • Recommendations for any improvements of the deployment methodology, including specific suggestions for modification of Project planning documents; • Recommendations for process changes to improve the effectiveness of the Productive Use; • Recommendations for any improvements of the Licensed Software; and • Confirmed compliance with Service Levels specified in Exhibit E (Services Levels) to the Agreement. Contractor will conduct review sessions with County after Productive Use of each Cluster and develop a performance verification report. Contractor will incorporate County feedback and proposed changes into the performance verification report and submit a final version to County for Approval. Contractor will incorporate County Approved changes into the Project planning documents.	• Final Acceptance of the License Software. • County-Approved performance verification reports.

Task 11 Develop Final Acceptance Report
Task Description
After Productive Use of the final Cluster, Contractor will notify County when the Licensed Software, Third-Party Products, and Hosting Software has been successfully implemented and is functioning in accordance with the Specifications at each Cluster, and is ready for Acceptance Testing. Contractor will provide County with a Certification of Performance Verification and Final Acceptance in accordance with Section 12.5.3 (Final Acceptance) of the Agreement that includes the performance verification reports for each Cluster prepared in subtask 10.1 (Conduct Performance Verification Activities) and documents the review with County under Section 12.5.2 (Performance Verification Report) of the Agreement.
Personnel Requirements

• Contractor Key Resources
  ○ Contractor Project Director;
  ○ Contractor Project Manager;
  ○ Contractor Integration Architect;
  ○ Contractor Clinical Strategist;
  ○ Contractor Hosting Services Production Owner Technical Engagement Leader; and
  ○ Contractor Hosting Services Production Owner System Engineer.
• County Key Resources
  ○ County Project Director;

Task 11 Develop Final Acceptance Report	
○ County Project Manager; and ○ County Technical Manager.	
Subtasks/Deliverables	
Subtask 11.1 Provide Final Acceptance Report Contractor will provide a Final Acceptance Report which includes: ● Certification of Performance Verification and Final Acceptance; ● Performance verification reports for all Clusters; ● Confirmation that all Clusters are in Productive Use and that critical and high issues are resolved directly or with acceptable workarounds; ● List of all unresolved issues; ● Plan for resolution of unresolved issues; and ● Confirmation of compliance with response times and other Service Levels. Contractor will review the draft Final Acceptance Report with County. Contractor will incorporate County feedback and proposed changes into the Final Acceptance Report and submit a final version to County for Approval.	**Deliverable 11.1 Final Acceptance Deliverable** ● Final Acceptance Report. **Acceptance Criteria:** ● The Final Acceptance Report incorporates, and is consistent with, County-provided input. ● The Final Acceptance Report has been Approved by County. ● Successful completion of County Acceptance Testing. ● Final Acceptance by County.

Exhibit A.24 (Support Services, Maintenance, and Operations Statement of Work)

to the

Electronic Health Records System and Services Agreement

Table of Contents

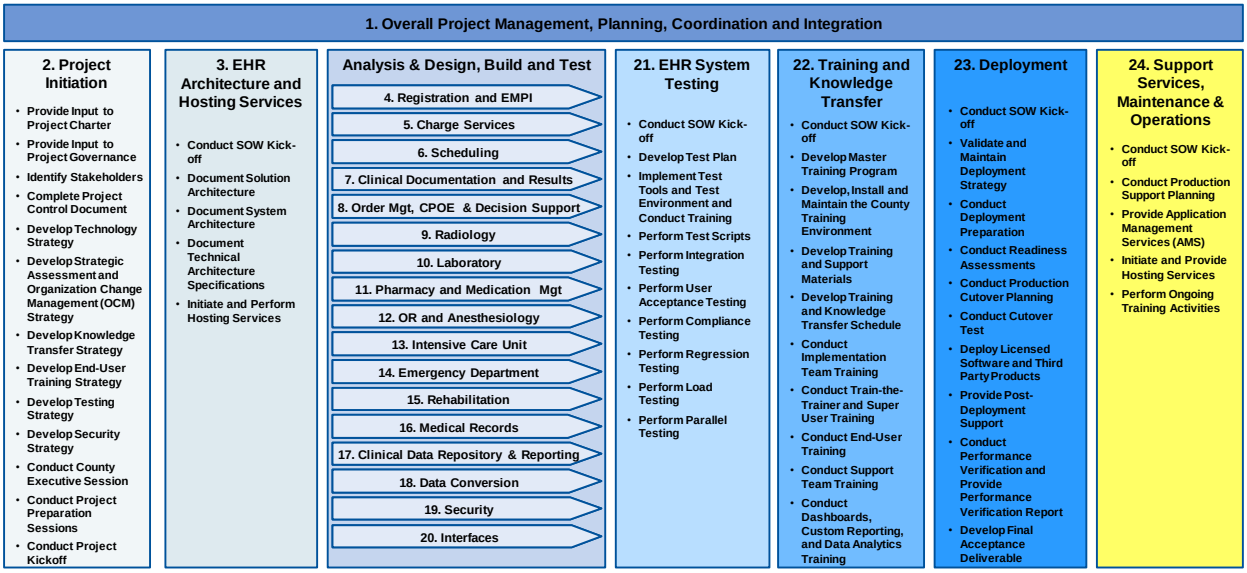
1. Introduction

This Exhibit A.24 (Support Services, Maintenance, and Operations Statement of Work (sometimes referred to in this Exhibit as "**this SOW**") is an attachment and addition to the Electronic Health Records System and Services Agreement dated December 21, 2012 (hereinafter "**Agreement**") entered into by and between the County of Los Angeles ("**County**") and Cerner Corporation ("**Contractor**") and is incorporated into the Agreement by reference hereof. In the event of conflicting terms between the Agreement and this SOW, the terms of the Agreement shall prevail and nothing in this SOW shall modify or amend any provisions of the Agreement (including all components such as Statements of Work, Service Level Agreements, Exhibits, etc.) unless such modifications or amendments and the provisions of the Agreement which they modify or amend are specifically identified in this SOW and are Approved. This SOW includes any attachments hereto. Any capitalized terms not defined in this SOW shall have the same meanings as used in the Agreement.

All of the all the tasks, subtasks, Deliverables, goods, and other services required or requested by County below are included as part of the Services. This SOW aggregates tasks and subtasks that are a subset of both the broad definition of Services set forth in Exhibit G (Glossary) of the Agreement, and the specific Services associated with this SOW. Whether or not additional Services, not specifically included in any SOW, are needed to successfully deliver the EHR System as required under the Agreement, such Services are required to be delivered by Contractor and are included in the Contract Sum.

This SOW provides a description of the nature of the work required, but does not provide an exhaustive list of every task or subtask necessary for completion of this Exhibit A.24 (Support Services, Maintenance, and Operations Statement of Work). The completion of any phase in a period of time shorter or longer that that specified below shall not increase the Contract Sum.

This is Exhibit A.24 (Support Services, Maintenance, and Operations Statement of Work. It is one of a series of twenty four (24) SOWs, which describe all of the key work elements and Deliverables of the Project. The twenty four (24) SOWs are as follows:



2. Business Objectives Supported

This SOW will describe the Services to be delivered and provide the framework which will be used to perform Support Services, Maintenance and Operations for the EHR System.

3. SOW Summary

3.1 Overview

This SOW describes the Support Services, Maintenance, and Operations tasks, subtasks, and Deliverables required to successfully support, maintain and operate the EHR System. It describes the sub-Project Work Plan and initiation session for this sub-Project; production support planning, including Documentation and notification processes; provision of Application Management Services ("**AMS**"); initiation of Hosting Services and management of the Hosting Environment; and ongoing training activities to support the EHR System.

3.2 SOW Team Structure and Resources

Contractor will provide a Project Staffing and Resource Management Plan. This plan will be utilized to establish fully loaded (identification of FTE equivalent or hours for all resources by Key Milestone) Contractor resource staffing commitments and to detail specific County resources which will guide County on how best to allocate and deploy personnel to this Project. Notwithstanding the foregoing, this is a fixed fee engagement and the Contractor resources identified in the Project Staffing and Resource Management Plan do not limit the resources that may be required by Contractor.

3.3 Dependencies with Other SOWs

Contractor acknowledges and accepts that this SOW is one in a series of SOWs, all of which are inter-related, and the performance of which is integral to the overall success of this Project. Deliverables are created in other SOWs, which provide the foundation for this SOW, including but not limited to:

- Exhibit A.1 (Overall Project Management, Planning, Coordination and Integration Statement of Work) provides the framework that will be used to manage the overall Project, including this SOW.
- Exhibit A.2 (Project Initiation Statement of Work) provides Deliverables which create the foundation for all SOWs, including this SOW.
- Exhibits A.4 – A.20, the Analysis and Design, Build and Test domains Statements of Work produce the development/build and test environments that are required for this SOW.

3.4 Critical Success Factors

A number of factors are deemed critical to overall Project success. The Parties acknowledge that the following factors are critical to the success of this Project:

Strong Project Management – Effectively managing the Services provided under the Agreement to the Project Schedule and results to be achieved and managing issues, driving decisions, risk, dependencies, and resources in a manner to achieve the Project Schedule and the results.

Open Communication and Governance Structure Clearly Defined – Good and open communication must be established early. Governance, committee structure, and committee members must be defined early. Meeting schedules must also be established for the length of the Project.

Executive Leadership Involvement – It is imperative that executive leadership from Contractor, DHS, and the DHS CIO be involved in the Project governance and meet at regular intervals to discuss the Project's progress and reach agreement on any key decisions that have been escalated to their level.

County Managed Level 1 Help Desk– It is required that County provides an internal Client help desk that serves as the initial point of contact for end users. This function: answers basic system questions, routes

service request to the appropriate parties, and gathers relevant contact information to be logged with the service request.

3.5 Schedule

The commencement date for this Exhibit A.24 (Support Services, Maintenance, and Operations Statement of Work) will begin upon completion of Exhibit A.2 (Project Initiation Statement of Work) and will continue throughout the Support Term.

Scheduled commencement dates, scheduled completion dates, and anticipated durations for Milestones, including a Key Milestone table, will be developed as part of the Project Control Document. The durations for tasks and subtasks are in the detailed Project Work Plan.

4. General Responsibilities

For the Services described in this SOW:

(1) The Services will be performed by Contractor on-site at sites designated by County and at off-site location(s) as agreed by the Parties in writing for specific activities.

(2) Contractor will provide designated resources to deliver the Services 7x24x365.

(3) Contractor will utilize its MethodM implementation methodology, templates, and other tools as required to support the efficient and cost effective execution of the Services defined in this SOW to the extent MethodM is not inconsistent with the Agreement. This includes use of Contractor's knowledge capital databases and other repositories of deliverables and intellectual capital from previous client experiences.

(4) Contractor will provide all Services in English.

4.1 Contractor Delivery Consultant Responsibilities

Contractor will designate a Contractor Delivery Consultant for this SOW (referred to in this Exhibit as the "**Support Services, Maintenance and Operations Delivery Consultant**" or "**Contractor Delivery Consultant**") to whom all County communications may be addressed and who has the authority to represent and commit Contractor in connection with all aspects of this SOW.

The Contractor Delivery Consultant's obligations include:

(1) Establish and maintain communications through the County SOW Lead and Project governance structure;

(2) Manage the delivery of Services and service interdependencies;

(3) Notify County of any Contractor focal point or contacts for specific activities or tasks;

(4) Manage and maintain the sub-Project Work Plan for this SOW which lists, as appropriate, the activities, tasks, assignments, service interdependencies, Key Milestones and Deliverables, and schedule;

(5) Measure, track and evaluate progress against the Project Schedule;

(6) Work with the County SOW Lead to resolve deviations, if any, from the Project Schedule;

(7) Coordinate and manage the activities of Contractor Personnel;

(8) Report to the County SOW Lead problems and issues impacting Contractor's provision of the Services that require County's attention and resolution;

(9) Coordinate resolution of all Service issues including those raised by the County SOW Lead and, as necessary, escalate such issues within the Contractor organization;

(10) Administer the Project Control Document with the County SOW Lead;

(11) Conduct regularly scheduled Project Status Meetings and prepare weekly Status Reports for the Services defined in this SOW; and

(12) Assist in the preparation and conduct of monthly steering committee updates.

Contractor will perform these activities throughout the provision of the Services.

4.2 Specific County Tasks

4.2.1 County SOW Lead Responsibilities

County will assign a lead for this SOW (referred to in this Exhibit as the "**Support Services, Maintenance, and Operations SOW Lead**" or "**County SOW Lead**"). The County SOW Lead will:

(1) Serve as the primary interface between the Contractor Delivery Consultant and County for the tasks and Deliverables set forth in this SOW;

(2) Review this SOW and the responsibilities of both County and Contractor with the Contractor Delivery Consultant;

(3) Coordinate, manage, and be responsible for the control of the activities of County personnel for this SOW;

(4) Communicate to the Contractor Delivery Consultant any changes that may materially affect Contractor's provision of the Services set forth in this SOW;

(5) Coordinate with Contractor Delivery Consultant on Contractor's efforts to resolve problems and issues related to the Services set forth in this SOW;

(6) Work with the Contractor Delivery Consultant to resolve deviations, if any, from the Project Work Plan related to this SOW;

(7) Coordinate resolution of issues raised by the Contractor Delivery Consultant pertaining to this SOW and, as necessary, escalate such issues within the County organization;

(8) Serve as the interface between Contractor's Project team and all County departments participating in activities for the Services set forth in this SOW;

(9) Notify Contractor of any County focal point or contacts for specific activities or tasks related to this SOW;

(10) Ensure that tasks related to this SOW assigned to personnel within the County organization will be completed according to the timetable in the Project Schedule;

(11) Participate in selected Project Status Meetings with Contractor Project team members and schedule and coordinate attendance and participation of County personnel for interviews, meetings and work sessions related to the completion of this SOW.

County may change the County SOW Lead by providing notification to the Contractor Delivery Consultant with an introduction and handoff meeting to establish plans for a smooth transition.

4.2.2 Other County Responsibilities

County agrees to comply with its responsibilities as described in this SOW. Such obligations are to be performed at no charge to Contractor.

County will:

(1) Provide County standard and available office space, basic office furniture, and access to the Internet supporting VPN for Contractor personnel while working at County's facilities;

(2) Locate Contractor Personnel in an area near County subject matter experts and technical personnel;

(3) Provide necessary security badges and clearances for Contractor Personnel working at County's facilities;

(4) Make available staff with appropriate skills and experience to deliver County tasks as specifically set forth in this SOW.

5. Services and Deliverables

The Services and Deliverables to be provided under this SOW include:

Task/Subtask Name	Deliverables
Task 1 Conduct SOW Kick-off	
Subtask 1.1 Develop Sub-Project Work Plan for Support Services, Maintenance, and Operations	Deliverable 1.1 Sub-Project Work Plan for Support Services, Maintenance, and Operations
Subtask 1.2 Conduct Initiation Session for Support Services, Maintenance, and Operations Workgroup	Deliverable 1.2 Support Services, Maintenance, and Operations Initiation Session
Task 2 Conduct Production Support Planning	
Subtask 2.1 Develop and Maintain Production Support Plan	Deliverable 2.1 Production Support Plan
Subtask 2.2 Compile EHR System and User Documentation for Handover to Production Support	Deliverable 2.2 EHR System and User Documentation
Subtask 2.3 Define Contractor Process for Notifying County of Security Issues	Deliverable 2.3 Contractor Notification Process for Security Issues
Subtask 2.4 Define Contractor Process for Notifying County of Issues and Events impacting Operations	Deliverable 2.4 Contractor Process for Notifying County of Issues and Events Impacting Operations

Task/Subtask Name	Deliverables
Subtask 2.5 Define Requirements for Systems, Tools and Interfaces for IT Service Management	Deliverable 2.5 Requirements for Systems, Tools and Interfaces for IT Service Management (Key Deliverable)
Task 3 Provide Application Management Services	
Subtask 3.1 Establish AMS Delivery Model for County	Deliverable 3.1 AMS Delivery Model for County (Key Deliverable)
Subtask 3.2 Provide Application Monitoring and Management	Deliverable 3.2 Application Monitoring
Subtask 3.3 Provide 24x7x365 Application Support	Deliverable 3.3 24x7x365 Application Support
Subtask 3.4 Provide Operations Management	Deliverable 3.4 Operations Management
Subtask 3.5 Provide Report Creation and Maintenance	Deliverable 3.5 Report Creation and Maintenance
Subtask 3.6 Conduct Maintenance Checks	Deliverable 3.6 Maintenance Checks
Subtask 3.7 Implement Licensed Software Configuration Requests	Deliverable 3.7 Implemented Licensed Software Configuration Requests
Subtask 3.8 Provide Incident/Problem Management and Resolution	Deliverable 3.8 Incident/Problem Management Report
Subtask 3.9 Implement New Releases and Licensed Software Upgrades	Deliverable 3.9 New Releases and Licensed Software Upgrades
Subtask 3.10 Provide Content Management	Deliverable 3.10 Content Management
Subtask 3.11 Conduct Service Level Monitoring and Reporting	Deliverable 3.11 Service Level Monitoring and Reporting
Subtask 3.12 Provide Technology Change Management	Deliverable 3.12 Technology Change Management
Subtask 3.13 Provide Configuration Management	Deliverable 3.13 Configuration Management
Subtask 3.14 Provide Interface Support	Deliverable 3.14 Interface Support
Subtask 3.15 Maintain Security and Manage Authorization Controls and Processes	Deliverable 3.15 Security Services and Authorization Controls
Task 4 Initiate and Provide Hosting Services	
Subtask 4.1 Prepare Hosting Services delivery document	Deliverable 4.1 Hosting Services delivery document (Key Deliverable)
Subtask 4.2 Provide Hosting Services	Deliverable 4.2 Hosting Services

Task/Subtask Name	Deliverables
Subtask 4.3 Conduct Service Level Monitoring and Reporting	Deliverable 4.3 Service Level Reports
Subtask 4.4 Respond to Support Service Requests	Deliverable 4.4 Support Services
Subtask 4.5 Maintain Security	Deliverable 4.5 Security Services
Subtask 4.6 Conduct Backups and Restores	Deliverable 4.6 Backups Validation Report
Subtask 4.7 Provide Business Continuity and Disaster Recovery Services	Deliverable 4.7 Business Continuity and Disaster Recovery
Task 5 Conduct Ongoing Training Activities	
Subtask 5.1 Support Training on Revisions	Deliverable 5.1 Training Support on Revisions
Subtask 5.2 Maintain LearningLIVE Environment	Deliverable 5.2 LearningLIVE Environment and Training

5.1 Deliverable Development and Approval Process

This section specifies a repeating process for developing Deliverables for this SOW. Each Deliverable shall be developed in accordance with the following Contractor obligations, which shall be sub-tasks to each individual task:

(1) All Deliverables must be developed in the form and format agreed to by County and Contractor using a Deliverable Expectations Document (also referred to as a "**DED**") Approved by County. No work will be performed on any Deliverable associated with a payment Milestone until the DED has been Approved by County. As each Project Deliverable is submitted, Contractor must include a copy of the Project DED as the cover sheet. A template to be used for each DED during this Project can be found in Section 5.3 (Project Deliverable Expectations Document Template)the Appendix of this SOW.

(2) Develop agendas, and coordinate scheduling with County, for all necessary events (e.g., workshops, meetings) for the production of the Deliverables.

(3) Facilitate events (e.g., workshops, meetings) as required for the development of each Deliverable.

(4) Record and analyze the input received from all events (e.g., workshops, meetings) and distribute results or minutes for review to event participants.

(5) Prepare drafts of the Deliverable for County for review.

(6) Provide a structured process for County to provide feedback on drafts, including events, as appropriate.

(7) Compile and incorporate County feedback to the draft Deliverable and prepare a revised Deliverable.

(8) Distribute the revised Deliverable to County for review; obtain and analyze County feedback as above, and repeat if necessary.

(9) Complete a final version of the Deliverable including, prior to distribution for Approval by County, validation by Contractor that the Deliverable conforms to the Specifications and meets the Acceptance Criteria.

(10) Provide both the clinical and workflow subject matter expertise to support the completion of Deliverables.

After receipt of a Deliverable from Contractor, the County SOW Lead or designee shall notify Contractor Delivery Consultant and assigned Project team resources in writing as to any specific changes requested (together with a reasonably detailed explanation of the reasons why the Deliverable should be modified) in as expeditious a time frame as possible given the nature of the Deliverable and the schedule. Unless a change is disputed, Contractor shall make the changes described in a timely manner so as to not adversely impact the schedule under the Project Work Plan. Upon completion of such changes, the Deliverable shall be provided to County with a request for Acceptance. County shall notify Contractor of its Acceptance or rejection in a timeframe that is practical and reasonable given the nature, criticality, and complexity associated with the Acceptance Testing/review.

5.2 Tasks

Contractor shall be responsible for performing the following tasks as to the Services to be provided under this SOW.

Task 1 Conduct SOW Kick-off
Task Description
The team members from Contractor, County, and external stakeholders will be introduced and their specific roles will be described. Support Services, Maintenance, and Operations-specific training on the Licensed Software and Third-Party Products, as used in conjunction with the Licensed Software and EHR System, will be provided for the County personnel working on this SOW (referred to in this Exhibit as the "**County Support Services, Maintenance, and Operations Workgroup**" or "**County Workgroup**" and the County Support Services, Maintenance, and Operations Workgroup will be introduced to various Contractor tools, existing Support Services, Maintenance, and Operations-related artifacts, Support Services, Maintenance, and Operations methodologies, and Best Practices that will be used throughout this SOW.
Personnel Requirements

• Contractor Key Employees
  ○ Contractor AMS Engagement Leader;
  ○ Contractor AMS Engagement Controller;
  ○ Contractor AMS Integration Architect;
  ○ Contractor AMS Solution Architect;
  ○ Contractor AMS Delivery Consultant;
  ○ Contractor AMS Solution Analyst;
  ○ Contractor Hosting Services Service Delivery Manager;
  ○ Contractor Hosting Services Production Owner;
  ○ Contractor Hosting Services System Engineer; and
  ○ Contractor Hosting Services Database Administrator.
• County Key Employees
  ○ County Project Director;
  ○ County Project Manager;

Task 1 Conduct SOW Kick-off	
○ County SOW Team Leads; ○ County Technical Manager; ○ County Desktop Technicians; ○ County Network Engineers; ○ County Helpdesk Analysts; and ○ County Interface Manager.	
Subtasks/Deliverables	
Subtask 1.1 Develop Sub-Project Work Plan for Support Services, Maintenance, and Operations As part of the Project Control Document, Contractor will develop and maintain an overall Project Work Plan. The Project Work Plan will include a Support Services, Maintenance, and Operations-specific section. The overall Project Work Plan will include a Project Schedule, and will be developed in MethodM Online compatible version of Microsoft Project, which will include: • Deliverables, tasks, and subtasks; • Associated dependencies among Deliverables, tasks, and subtasks both within this SOW and across all related SOWs and work streams; • Resources (effort hours and roles) required for each Deliverable, task, and subtask; • Start date and date of completion for each Deliverable, task, and subtask; • County review period for each Deliverable; • Acceptance Criteria for each Deliverable; and • Milestones and Key Milestones. Contractor will adapt the Support Services, Maintenance, and Operations-specific section of the Project Work Plan to create a specific sub-Project Work Plan which includes timelines, activities, Deliverables, and milestones specific to this Exhibit A.24 (Support Services, Maintenance, and Operations Statement of Work) and subject to County Approval.	**Deliverable 1.1 Sub-Project Work Plan for Support Services, Maintenance, and Operations** • Support Services, Maintenance, and Operations-specific section of Project Work Plan. • Sub-Project Plan for Support Services, Maintenance, and Operations. **Acceptance Criteria:** • The Support Services, Maintenance, and Operations-specific section of the Project Work Plan incorporates, and is consistent with, County-provided input. • The Support Services, Maintenance, and Operations-specific section of the Project Work Plan addresses all elements described in subtask 1.1 (Develop Sub-Project Work Plan for Support Services, Maintenance, and Operations). • The Support Services, Maintenance, and Operations-specific section of the Project Work Plan has been Approved by County. • Timelines detailed in the Support Services, Maintenance, and Operations-specific section of the Project Work Plan and sub-Project Work Plan are realistically achievable with reasonable effort as determined by County. • Elements of the Support Services, Maintenance, and Operations-specific section of the Project Work Plan are consistent with tasks, subtasks, and Deliverables as outlined in this and other SOWs. • Confirmed availability of Contractor resources required to implement the Support Services, Maintenance, and Operations sub-Project Work Plan.

Task 1 Conduct SOW Kick-off	
Subtask 1.2 Conduct Initiation Session for Support Services, Maintenance, and Operations Workgroup Contractor will conduct a Support Services, Maintenance, and Operations Initiation Session to provide an introduction to the County Workgroup to the Services covered by this SOW, including the timelines and nature of work effort that will be required to implement this SOW. Before the Support Services, Maintenance, and Operations Initiation Session, Contractor will: • Work with County to identify all Contractor and County resources required to complete the tasks outlined in this SOW; • Provide County with a roster of Support Services, Maintenance, and Operations Initiation Session participants; and • Develop a written agenda/schedule for the Support Services, Maintenance, and Operations Initiation Session. The Support Services, Maintenance, and Operations Initiation Session will include the following: • Review and document Support Services, Maintenance, and Operations Services, including Hosting Services and AMS (among others), and Licensed Software Modules and Third Party Products, Domains, Venues, and Locations for which Support Services, Maintenance, and Operations capabilities must be delivered within County. • Review tasks, Deliverables, and Milestones for the planning and initiation of Support Services, Maintenance, and Operations. After the Support Services, Maintenance, and Operations Initiation Session, Contractor will prepare a Support Services, Maintenance, and Operations Initiation Session Event Summary Report for review and Approval by County.	**Deliverable 1.2 Support Services, Maintenance, and Operations Initiation Session** • Support Services, Maintenance, and Operations Initiation Session Materials for County. • Initial list of County Domains, Venues, and Locations for which Support Services, Maintenance, and Operations capabilities must be delivered. • Report documenting Support Services, Maintenance, and Operations SOW dependencies. • List of County Workgroup members who attended the Support Services, Maintenance, and Operations Initiation Session. • List of Assignments and roles associated with those assignments for members of the County Workgroup. • Support Services, Maintenance, and Operations Initiation Session Event Activity Report. • Support Services, Maintenance, and Operations Support Services, Maintenance, and Operations Initiation Session presentation materials. • Support Services, Maintenance, and Operations SOW Initiation Session Event Summary Report. **Acceptance Criteria:** • The Support Services, Maintenance, and Operations Initiation Session Event Summary Report from Contractor documenting that Initiation Session (a) has been completed and (b) includes accurate documentation of the content, outcomes, and next steps agreed upon at the Support Services, Maintenance, and Operations Initiation Session Event. • The Support Services, Maintenance, and Operations Initiation Session Event Summary Report has been Approved by County.

Task 1 Conduct SOW Kick-off	
	• Report documenting Support Services, Maintenance, and Operations SOW dependencies and a plan to identify and address all others as described in subtask 1.2 (Conduct Initiation Session for Support Services, Maintenance, and Operations Workgroup). • Report documenting Support Services, Maintenance, and Operations SOW dependencies has been Approved by County.

Task 2 Conduct Production Support Planning	
Task Description	
Contractor will prepare production support planning documents, including development of a Production Support Plan, definition of Support Services, Maintenance, and Operations Services, communication methods, and delivery of Support Services, Maintenance, and Operations Services.	
Personnel Requirements	

• Contractor Key Employees
  ○ Contractor AMS Engagement Leader;
  ○ Contractor AMS Engagement Controller;
  ○ Contractor AMS Integration Architect;
  ○ Contractor AMS Solution Architect;
  ○ Contractor AMS Delivery Consultant;
  ○ Contractor AMS Solution Analyst;
  ○ Contractor Hosting Services Delivery Manager;
  ○ Contractor Hosting Services Production Owner;
  ○ Contractor Hosting Services System Engineer; and
  ○ Contractor Hosting Services Database Administrator.
• County Key Employees
  ○ County Project Director;
  ○ County Project Manager;
  ○ County SOW Team Leads;
  ○ County Technical Manager;
  ○ County Desktop Technicians;
  ○ County Network Engineers;
  ○ County Helpdesk Analysts; and
  ○ County Interface Manager.	

Subtasks/Deliverables	
Subtask 2.1 Develop and Maintain Production Support Plan Contractor will develop a Production Support	**Deliverable 2.1 Production Support Plan** • Production Support Plan.

Task 2 Conduct Production Support Planning	
Plan that includes a detailed description of: • Contractor-provided Support Services; • AMS Delivery Model; • Hosting Services Delivery Model; • Maintenance of EHR System and user documentation; and • Maintenance of Production Support Plan. Contractor will update the Production Support Plan as required to provide for new Releases, Upgrades, and Revisions. Contractor will review the initial and updated Production Support Plan with County. Contractor will incorporate County feedback and proposed changes into the initial and updated Production Support Plan and submit a final version to County for Approval.	**Acceptance Criteria:** • Production Support Plan addresses all elements described in subtask 2.1 (Develop and Maintain Production Support Plan). • County-Approved Production Support Plan.
Subtask 2.2 Compile EHR System and User Documentation for Handover to Production Support Contractor will develop EHR System and User Documentation that is compatible with County systems and applications, including: • EHR System solution architecture and design documents; • Training materials and user guides as developed in Exhibit A.22 (Training and Knowledge Transfer); • Production Support Plan; and • Help Desk procedures and scripts as developed in Subtask 9.1 (Provide Post Go-Live Support) of Exhibit A.23 (Deployment). Contractor will maintain an archive of the EHR System and user documentation in a shared location accessible to County. Contractor will update the EHR System and User Documentation as needed to ensure complete documentation of all Revisions and other changes. Contractor will review the initial and updated EHR System and User Documentation with County.	**Deliverable 2.2 EHR System and User Documentation** • EHR System and User Documentation. **Acceptance Criteria:** • EHR System and User Documentation addresses all elements described in subtask 2.2 (Compile EHR System and User Documentation for Handover to Production Support). • County-Approved EHR System and User Documentation.

Task 2 Conduct Production Support Planning	
Contractor will incorporate County feedback and proposed changes into the EHR System and User Documentation and submit a final version to County for Approval.	
Subtask 2.3 Define Contractor Process for Notifying County of Security Issues Contractor will define the Contractor process for notifying County of security issues and incidents in accordance with Exhibit K (Information Security Requirements) and Section 20 (Security) of the Agreement, including: • Breaches of Licensed Software, and Contractor systems and databases; • Unauthorized exposure or transmission of County Data held by Contractor; and • Unauthorized physical access to Contractor facilities where County Data is held. Contractor's process for notifying County will include: • Timeline for notifying County of the security issue; • Method of notifying County; • County recipient of Contractor notifications; and • Contractor Personnel responsible for notifying County. Contractor will, with input from County, define levels of severity for security issues and incidents. Contractor will review the Security Issues and Incidents Notification Processes with County. Contractor will incorporate County feedback and proposed changes into the Security Issues and Incidents Notification Processes and submit a final version to County for Approval.	**Deliverable 2.3 Contractor Notification Process for Security Issues** • Contractor Security Issues and Incidents Notification Processes. **Acceptance Criteria:** • Contractor Security Issues and Incidents Notification Processes address all elements described in subtask 2.1 (Define Contractor Process for Notifying County of Security Issues). • Contractor Security Issues and Incidents Notification Processes have been Approved by County.
Subtask 2.4 Define Contractor Process for Notifying County of Issues and Events Impacting Operations Contractor will define Contractor processes for notifying County of issues, events, incidents, and problems impacting operations, including: • Issue, event, incident, and problem types and	**Deliverable 2.4 Contractor Process for Notifying County of Issues and Events Impacting Operations** • Contractor processes for notifying County of issues, events, incidents, and problems impacting operations.

Task 2 Conduct Production Support Planning	
severity definitions; • Contractor required maintenance windows and downtimes, including Contractor's scheduled outages in accordance with Section 7.1 (Scheduled Outages) of Exhibit E (Services Levels and Performance Standards); • County required maintenance windows and downtimes; • Timeline for notifying County of issues, events, incidents, and problems based on severity; • Method of notifying County; • County recipient of notification; and • Contractor Personnel responsible for notifying County. Contractor will review with County the Contractor processes for notifying County of issues, events, incidents, and problems impacting operations. Contractor will incorporate County feedback and proposed changes into Contractor's processes for notifying County of issues, events, incidents, and problems impacting operations and submit a final version to County for Approval.	**Acceptance Criteria:** • County-Approved Contractor processes for notifying County of issues, events, incidents, and problems impacting operations.
Subtask 2.5 Define Requirements for Systems, Tools, and Interfaces for IT Service Management Contractor will work with County to define and document Requirements for Systems, Tools, and Interfaces for IT Service Management, including: • Help Desk Ticketing system to be use by County and AMS for issues and requests (current County system is Numara Footprints); • Tools and methods for County to access and view performance data related to AMS and Hosting Services; • Interface requirements necessary to intercommunicate between County service management and monitoring systems and Contractor service management and monitoring systems; and • Technical specifications which County can use	**Deliverable 2.5 Requirements for Systems, Tools and Interfaces for IT Service Management** • Requirements for Systems, Tools, and Interfaces for IT Service Management. **Acceptance Criteria:** • County-Approved Requirements for Systems, Tools and Interfaces for IT Service Management.

Task 2 Conduct Production Support Planning	
to interface County service management and reporting tools to Contractor service management tools if they are distinct and this is necessary. Where applicable, Contractor will provide County with recommendations for tools. Contractor will review and incorporate County feedback and proposed changes into Requirements for Systems, Tools and Interfaces for IT Service Management and submit a final version to County for Approval.	

Task 3 Provide Application and System Management Services

Task Description

Contractor will provide Application Management Services ("**AMS**") for the Term of the Agreement. Contractor will provide AMS Services as provided in the Agreement, including, as applicable, the SOWs. Contractor will establish an AMS delivery model ("**AMS Delivery Model**") for County and deliver AMS in accordance with the Agreement and this SOW 24 (Support Services, Maintenance and Operations). County use of and requests for AMS Services, including those described in this Exhibit A.24 (Support Services, Maintenance, and Operations Statement of Work) will be unlimited in nature and County's use of the AMS Services will not affect the Contract Sum.

Personnel Requirements

- Contractor Key Employees
  - Contractor AMS Engagement Leader;
  - Contractor AMS Engagement Controller;
  - Contractor AMS Integration Architect;
  - Contractor AMS Solution Architect;
  - Contractor AMS Delivery Consultant;
  - Contractor AMS Solution Analyst;
  - Contractor Meaningful Use Consultant;
  - Contractor Hosting Services Service Delivery Manager;
  - Contractor Hosting Services Production Owner;
  - Contractor Hosting Services System Engineer; and
  - Contractor Hosting Services Database Administrator.
- County Key Employees
  - County Project Director;
  - County Project Manager;
  - County SOW Team Leads;
  - County Technical Manager;
  - County Desktop Technicians;
  - County Network Engineers;
  - County Helpdesk Analysts; and
  - County Interface Manager.

Task 3 Provide Application and System Management Services	
Subtasks/Deliverables	
Subtask 3.1 Establish AMS Delivery Model for County Contractor will develop an AMS Delivery Model, including: ○ Description of AMS Services as listed in subtasks 3.2 – 3.15 of this SOW; ○ Develop, provide, and update Contractor staffing model for each AMS service, Licensed Software Module, and Third-Party Product; ○ Contractor and County roles and responsibilities for AMS Services; ○ AMS Services governance model for interaction with County; ○ Approach to ensure continuity and knowledge transfer as AMS Services resources change; ○ Service Level requirements; ○ Reporting frequency and method, including approach for updating changes as metrics, requirements, and applications evolve; ○ Scheduling approach and County review for maintenance windows; ○ Approach for Regression Testing, including: ○ Selection/development of Regression Test scripts; ○ Testing process; and ○ Testing exit criteria; ● Methodology for review and updating AMS Delivery Model; and ● Process for issue resolution. Throughout the Term, Contractor will maintain, and may update, the AMS Delivery Model. Contractor will review the AMS Delivery Model with County. Contractor will incorporate County feedback and proposed changes into the County-specific AMS Delivery Model and submit a final version to County for Approval.	**Deliverable 3.1 AMS Delivery Model for County** ○ AMS Delivery Model. **Acceptance Criteria:** ● AMS Delivery Model addresses all elements described in subtask 3.1 (Establish AMS Delivery Model for County). ○ AMS Delivery Model has been Approved by County.

Task 3 Provide Application and System Management Services	
Subtask 3.2 Provide Application Monitoring and Management Contractor will provide application monitoring and management services, including: • Monitoring and managing all Licensed Software and Third-Party Products used in the EHR System; • Proactively and reactively notifying County help desk of issues, incidents, and problems found by Contractor that affect or may affect the Service, and of any required County intervention to avoid or resolve the issue, incident, or problem; • Removing or deactivating non-current items monitored or managed by AMS, after obtaining County Approval; • Monitoring and managing the following activities related to Interfaces: outbound Interface queue counts, status and settings, and inbound Interface status and settings; • Monitoring and managing activities related to chart requests, including chart request status, settings, and resubmitting unsuccessful charts; • Monitoring and managing remote report distribution ("**RRD**") server and service status; • Monitoring and managing RRD com port status; • Investigating RRD fax errors and retransmit as needed; • Assisting County in managing RRD hardware; • Monitoring and managing back-end print queues for hung processes; • Review and provide feedback on County proposed changes to County's Interface engine; • Enabling down or cycling hung back-end print queues; and • Monitoring and managing clinical reporting WebSphere Application Server and report	**Deliverable 3.2 Application Monitoring** • Application monitoring and management services. • Weekly calls and monthly reports. **Acceptance Criteria:** • Application monitoring and management services addresses all elements described in subtask 3.2 (Provide Application Monitoring and Management).

Task 3 Provide Application and System Management Services	
request statuses. Contractor will conduct weekly calls with County to discuss applications monitoring and management activities and related issues. Contractor will report monthly on applications monitoring and management, including the tracking and reporting of any issues.	
Subtask 3.3 Provide 24x7x365 Application Support Contractor will provide 24x7x365 application support for all Licensed Software and Third Party Product issues and County support requests. Contractor will: • Develop and maintain the Interface to County's ticket system as between both Contractor and County systems. County will cooperate and support, as appropriate, the Contractor activities to build and maintain the Interface. In the event Contractor is precluded from fulfilling its responsibilities by a third-party, County is responsible for obtaining the cooperation of a third-party. To the extent fees are to be paid to the County's ticket system vendor in connection with the Interface, County shall be responsible for such fees; • Integrate with the County help desk and ticketing system to ensure tracking and resolution of tickets routed to Contractor AMS team for resolution; • Address issues escalated from County help desk related to Licensed Software and Third Party Products; • Provide a single point of contact for application support issues; • Support County help desk incident resolution as needed; • Participate in the process for "hand off" from the County help desk to Contractor; • Maintain a record of incidents handed off from County help desk; • Monitor County help desk tickets to identify	**Deliverable 3.3 24x7x365 Application Support** • 24x7x365 application support. • Weekly calls and monthly reports. **Acceptance Criteria:** • 24x7x365 application support addresses all elements described in subtask 3.3 (Provide 24x7x365 Application Support).

Task 3 Provide Application and System Management Services	

patterns and improve services;
• Electronically document resolution through an Interface to County's help desk and ticketing system (currently Numara Footprints);
• Conduct root cause analysis on frequently recurring calls on the same topic;
• Provide monthly service reports that include:
  ○ Number of service requests;
  ○ Description of issues;
  ○ Root cause analysis; and
  ○ Resolutions implemented;
• Identify recurring issues, proactively recommend solutions, and implement based on County's request;
• Support County in addressing recurring issues as needed and agreed upon;
• Perform Daylight Saving Time management activities for the Licensed Software and Third Party Products ;
• Troubleshoot and resolve foreign system and medical device Interface errors that originate in Contractor systems;
• Participate in the resolution of Interface errors that originate in County systems or third-party systems;
• Maintain remote report distribution settings;
• Develop and maintain workflow documentation;
• Review and provide input to help desk scripts as necessary to improve the efficiency and effectiveness of incident resolution processes;
• Build and maintain reference database elements;
• Performing event code and event set changes as required; and
• Maintain application level Windows Terminal Services location.
Contractor will conduct weekly calls with County	

Task 3 Provide Application and System Management Services	
to discuss application support activities and related issues. Contractor will report monthly on application support activities, including the tracking and reporting of any issues.	
Subtask 3.4 Provide Operations Management Contractor will provide operations management services, including: • Monitoring scheduled operations jobs to ensure scheduled tasks start and process without error; • Detection of abnormal conditions or alarms; • Logging of failed operations jobs, and corrective action taken; • Restarting operations jobs as required; • Documenting and reporting operations job issues; • Monitoring purge job activity to ensure purges are completed successfully; • Assist County in developing purge retention criteria; • Setting County-defined purge retention criteria and scheduling purge jobs in accordance with subtask 3.12 (Provide Technology Change Management); and • Adding and removing operations jobs. Contractor will conduct weekly calls with County to discuss operations management services activities and related issues. Contractor will report monthly on Operations management services, including the tracking and reporting of any issues.	**Deliverable 3.4 Operations Management** • Operations management services. • Weekly calls and monthly reports. **Acceptance Criteria:** • Operations management services address all elements described in subtask 3.4 (Provide Operations Management).
Subtask 3.5 Provide Report Creation and Maintenance Contractor will implement County requests for custom report creation and maintenance, including: • Providing an inventory of all reports and discern rules used in County's production system;	**Deliverable 3.5 Report Creation and Maintenance** • Report creation and maintenance. • Weekly calls. **Acceptance Criteria:** • Report creation and maintenance addresses

Task 3 Provide Application and System Management Services	
• Modifications to existing production reports or rules to address County requests; • Changes required for release upgrades and content updates in accordance with subtask 3.12 (Provide Technology Change Management), if applicable; • Troubleshooting issues with custom reports in production; • Managing requests using a tracking tool; • Reporting status of custom report requests to County; • Modifying and testing reports and rules; and • Development and localization of customized workflows within PowerChart (mPages) utilizing a Bedrock Wizard. For each custom report request, Contractor will work with County to prioritize requests and provide County with an estimated time to implementation. On an ongoing basis, Contractor will identify data, information, and reports to ensure the County can meet Meaningful Use requirements. Contractor will optimize the design and build of the Licensed Software and Third-Party Products to deliver the information, data, and reports necessary to report on achieving Meaningful Use. Contractor will support County in the development if reports, including review and validation of County-created reports. Contactor will report weekly on the status of requests and alert County of any issues affecting report creation or maintenance. Contractor will submit CCL reports to County for validation and signoff on CCL Reports, ensuring that the report meets requested intent.	all elements described in subtask 3.5 (Provide Report Creation and Maintenance).
Subtask 3.6 Conduct Maintenance Checks Contractor will conduct Licensed Software Maintenance check activities, including: • Monitor Licensed Software and Third-Party Product notifications (i.e., flashes, advisories, Cerner Knowledge Network) and take	**Deliverable 3.6 Maintenance Checks** • Maintenance checks. • Weekly calls and monthly reports. **Acceptance Criteria:** • Maintenance checks address all elements

Task 3 Provide Application and System Management Services	

necessary action;
• Perform service package/software change certification as needed, including:
  ○ Review of service package certification guidelines released with each package;
  ○ Test service packages and fixes in non-production domain; and
  ○ Validation of code packages upon the install of the package testing to verify a software change;
• Implement service package in accordance with subtask 3.9 (Implement New Releases and Licensed Software Upgrades); and
• Validate service packages/application enhancements and fixes.
Contractor will conduct weekly calls with County to discuss maintenance check activities and related issues.
Contractor will report monthly on maintenance check activities, including the tracking and reporting of any issues.
	described in subtask 3.6 (Conduct Maintenance Checks).

Subtask 3.7 Implement Licensed Software and Third-Party Product Configuration Requests Contractor will implement County Licensed Software and Third-Party Product configuration and other approved non-source code requests in accordance with change management processes developed in subtask 3.12 (Provide Technology Change Management) as requested by County, including: • Modification to existing orders, tasks, preferences, users, etc.; • Addition of code sets and aliases; • Building PowerForms, DTA's, Orders, PowerNotes, PowerPlans, CareSets, OrderSets, etc. • Adding event sets, forms, formularies, results, flow sheets, etc.; and • Bundled Licensed Software configuration requests resulting from changes to County Domains, Venues, or Locations and which	**Deliverable 3.7 Implemented Licensed Software and Third-Party Configuration Requests** • Implemented Licensed Software and Third-Party Product configuration requests. • Weekly calls and monthly reports. **Acceptance Criteria:** • Licensed Software configuration requests are implemented as described in subtask 3.7 (Implement Licensed Software Configuration Requests).

Task 3 Provide Application and System Management Services	
require multiple configuration modifications (e.g., remodeling a floor in a County facility). Contractor will provide County with a detailed requirements document for requested configuration changes and other non-source code changes that are requested to the Licensed Software and Third-Party Products. The design document will include: • Design considerations; • Build steps; • Integration points; and • Steps to validate the change, including training, and communication needs. Contractor will analyze each request and provide County with a proposed implementation schedule. Contractor will implement requests based on County-Approved prioritization and implementation schedule, and work with County to coordinate the move to production. Contractor will provide a centralized tracking system to track requests. Contractor will conduct weekly calls with County to discuss configuration request activities and related issues. Contractor will report monthly on configuration requests, including the tracking and reporting of any issues.	
Subtask 3.8 Provide Incident/Problem Management and Resolution Contractor will provide incident/problem management and resolution services using a structured IT service management methodology, including: • Response to Contractor or County-identified incident/problems; • Assessment of impact on County operations; • Triaging; • Tracking; • Escalation;	**Deliverable 3.8 Incident/Problem Management Report** • Incident/ problem management and resolution services. • Weekly calls. • Monthly Incident/Problem Management Report. **Acceptance Criteria:** • Incidents and problems are resolved as described in subtask 3.8 (Provide Incident/Problem Management and Resolution).

Task 3 Provide Application and System Management Services	
• Notification; and • Resolution. In providing the incident/problem management and resolution services, Contractor will: • Provide a single point of contact for incident reporting, resolution, and escalation; • Provide multiple channels for problem or incident reporting (e.g., online, email, telephone) to single point of contact; • Maintain ownership of all problems through resolution and closure; • Perform root cause analysis on problems; • Notify County help desk of incidents or problems found by Contractor; • Staff operations and provide on-call incident and problem management and resolution staff 24x7x365; and • Ensure notification and escalation of incidents in accordance with the production support plan, service level agreements, and Section 9.7 (Support Services) of the Agreement. Contractor will provide County with a monthly report on incident/problem management, including: • Number of incidents; • List of all open problems; • Priority of problems; • Owner of problems; • Progress on open problems; • Estimated time to resolution of open problems; and • Root cause analysis for resolved problems as requested by County. Contractor will conduct weekly calls with County to discuss configuration request activities and related issues.	

Task 3 Provide Application and System Management Services	
Subtask 3.9 Implement New Releases and Licensed Software Upgrades Contractor will manage and implement Licensed Software and Third-Party Product Revisions. Contractor will create Revision Plans, including: • Revision Management Plan; • Technical assessment of all Domains, Venues, and Locations affected by Revision; • Functional assessment of all Domains, Venues, and Locations affected by Revision; • Impact of the change, including required County workflow changes and training needs; • Test plan; • Back out plan; • Test Scripts; and • Validation of code packages upon the install of the package. Contractor and County will jointly determine Revision schedule and time of implementation. Contractor will install Revisions to all relevant Domains with County Approval and sync all Domains as necessary. On an ongoing basis Contractor will identify data, information, and reports to ensure the County can meet Meaningful Use requirements. Contractor will optimize the design and build of the Licensed Software and Third-Party Products to deliver the information, data and reports necessary to report on achieving Meaningful Use. Contractor will conduct Regression Testing. County will conduct Integration Testing with remote support form Contractor. Contractor will resolve problems/incidents found in Regression or Integration Testing. Contractor will provide a list of changes that may require County to update its training in accordance with subtask 5.1 (Support Training on Revisions). Contractor will provide a dedicated Revision team (upgrade center) to manage all Contractor processes and activities related to the Revision.	**Deliverable 3.9 New Releases and Licensed Software Upgrades** • Revision Management Plan. • New releases, Licensed Software Upgrades and other Revisions. • Regression Testing. **Acceptance Criteria:** • New Releases, Licensed Software Upgrades, and other Revisions are implemented as described in subtask 3.9 (Implement New Releases and Licensed Software Upgrades).

Task 3 Provide Application and System Management Services	
Subtask 3.10 Provide Content Management Contractor will provide services required for updates to content packages, including: • Standard content (e.g., Multum, ICD-10, CPT-4); and • Code content. Contractor will recommend content updates and update content items as requested by County. Contractor will provide package management services, including: • Maintaining standard content updates; • Installing content and service packages and performing technical special instructions; • Performing front-end special instructions for service package loads; • Monitoring Licensed Software and Third-Party Products notifications and taking all appropriate and necessary action to address the subject of the notification; • Developing service package certification guidelines; • Performing service package certification; • Testing service packages and fixes in non-production domain; • Installing content and service packages; • Validating service packages and application enhancements/fixes; and • Support County-performed fat client installation of Licensed Software on County PCs. Contractor will conduct weekly calls with County to discuss content management activities and related issues. Contractor will report monthly on content management, including the tracking and reporting of any issues. County will review and validate the integrity of the resulting data in accordance with the Acceptance Testing procedures set forth in Section 12 (Acceptance) of the Agreement.	**Deliverable 3.10 Content Management** • Content management. • Weekly calls and monthly reports. **Acceptance Criteria:** • Content is updated as described in subtask 3.10 (Provide Content Management).

Task 3 Provide Application and System Management Services	
Subtask 3.11 Conduct Service Level Monitoring and Reporting Contractor will conduct Service Level monitoring and reporting in accordance with Exhibit E (Service Levels and Performance Standard) of the Agreement. Service Level monitoring and reporting will include: • Ongoing monitoring of Contractor adherence to Service Levels; • Any issues that could impact an agreed-upon Service Level; • Resolution of any root-causes impacting Contractor's ability to meet agreed-upon Service Levels; and • Providing monthly statistics and management reports to County on Service Level attainment. Contractor will conduct weekly calls with County to discuss Service Levels and related issues.	**Deliverable 3.11 Service Level Monitoring and Reporting** • Service Level monitoring and reporting. • Weekly calls. **Acceptance Criteria:** • Service Level monitoring and reporting addresses all elements described in subtask 3.11 (Conduct Service Level Monitoring and Reporting).
Subtask 3.12 Provide Technology Change Management Contractor will design and implement a formal process for managing configuration and technology changes made to Licensed Software and Third-Party Products, including: • Coordination of configuration and technology changes with build and deployment teams during the Project; • Communication between AMS and Project team during deployment; • Criteria and processes for "hand off" of configuration and technology change management procedures from Contractor's Project team to Contractor's AMS team; • Production Environment Change Authorization ("**PECA**") process; • Configuration and technology change management procedure including submission, analysis and prioritization of requests; • Weekly configuration and technology change	**Deliverable 3.12 Technology Change Management** • Configuration and technology change management. • Weekly calls and monthly reports. • Configuration and Technology Change Control Board. **Acceptance Criteria:** • Configuration and technology change Management addresses all elements described in subtask 3.12 (Provide Technology Change Management).

Task 3 Provide Application and System Management Services	
Approval meetings; • Execution of configuration and technology change; and • Validation of configuration and technology change. Contractor will assist County in establishing a Configuration and Technology Change Control Board, including: • Criteria for identifying representatives to comprise County's Configuration and Technology Change Control Board and County responsibilities; and • Recommendations for governance structure and processes to support configuration and technology change management activities and meetings. Contractor will work with County to establish and mutually agree upon configuration and technology change control process. Contractor will provide Configuration and technology change management services, including: • Participating on Configuration and Technology Change Control Board to provide advice and direction to change requests; • Providing and maintaining an automated change management system to report and track changes made by Contractor; • Providing ongoing management, including Project plans and transition plan; • Providing reporting to County on change management; • Developing a production change schedule and review with County; • Providing risk management analysis, mitigation, and remediation; • Testing all changes to Licensed Software prior to moving them to production in accordance with the requirements of Exhibit A.21 (EHR System Testing Statement of Work); • Testing application Enhancements, Error	

Task 3 Provide Application and System Management Services	
Corrections, Upgrades and other Revisions in accordance with the requirements of Exhibit A.21 (EHR System Testing Statement of Work); • Developing test scripts and test data in accordance with the requirements of Exhibit A.22 (EHR System Testing Statement of Work); and • Developing training materials as specified in subtask 5.1 (Support Training on Revisions). Contractor will develop communication and processes for Approval of Production Environment Change Authorization. Contractor will submit PECA process for County Approval. Contractor will manage PECA process for Licensed Software. Contractor affirms that PECA forms relate to technical changes only and are not an authorization for Optional Work that would impact the Contract Sum. Contractor will conduct weekly calls with County to discuss configuration and technology change management activities and related issues. Contractor will report monthly on configuration and technology change management, including the tracking and reporting of any issues.	
Subtask 3.13 Provide Configuration Management Contractor will provide configuration management of the EHR System, including: • Identifying, controlling, maintaining, and verifying installed hardware, Licensed Software and Third-Party Products; • Verifying configuration records against the infrastructure and correcting any exceptions, and provide configuration records in centralized location; • Developing and maintaining configuration management policies, and procedures; • Establishing and maintaining process for tracking configuration changes; • Establishing and maintaining guidelines for	**Deliverable 3.13 Configuration Management** • Configuration management. • Configuration Management Reports. • Weekly calls and monthly reports. **Acceptance Criteria:** • Configuration Management addresses all elements described in subtask 3.13 (Provide Configuration Management).

Task 3 Provide Application and System Management Services	
physical and logical separation between development, test, and production domains; • Establishing and maintaining process for deploying and backing out of configuration items; • Establishing and maintaining configuration baselines as reference points for rebuilds; • Providing ability to revert to stable configuration states; • Establishing and maintaining process for verifying the accuracy of configuration items, adherence to configuration management processes and identifying process deficiencies; and • Providing County Configuration Management Reports as required and defined by County configuration management. Contractor will conduct weekly calls with County to discuss configuration management activities and related issues. Contractor will report monthly on configuration management activities, including the tracking and reporting of any issues.	
Subtask 3.14 Provide Interface Support Contractor will provide County with Interface support for the EHR System, including: • Monitoring outbound Interface queue counts and status to ensure active outbound Interfaces are operational; • Monitoring inbound Interfaces status to ensure active inbound Interfaces are operational; • Monitoring server status for medical device Interfaces and bedside medical device Interfaces; • Maintaining and updating Interfaces; • Developing Interface Documentation including diagrams and schematics; • Providing feedback on Interface specifications for new Interfaces and Supporting County with development of project plan for new	**Deliverable 3.14 Interface Support** • Interface support. • Weekly calls and monthly reports. **Acceptance Criteria:** • Interface Support addresses all elements described in subtask 3.14 (Provide Interface Support).

Task 3 Provide Application and System Management Services	
Interface support. Contractor will conduct weekly calls with County to discuss Interface management activities and related issues. Contractor will report monthly on Interface management, including the tracking and reporting of any issues.	
Subtask 3.15 Maintain Security and Manage Authorization Controls and Processes Contractor will provide application specific security services based on County guidelines in accordance with Exhibit K (Information Security Requirements) and Section 20 (Security) of the Agreement, including; • Provide and maintain virus protection; • Monitor for EHR System security errors, exceptions, and attempted violations; • Report security violations to County per County policies; and • Monitor legal and regulatory requirements, conduct compliance testing, and provide compliance and certification review in accordance with task 7 (Perform Compliance Testing) of Exhibit A.21 (EHR System Testing). Contractor will provide Security services in compliance with applicable federal, state, County, and payor requirements. Contractor will manage and implement authorization controls and processes, including: • Maintaining and updating security technology architecture; • Providing and maintaining a user database for application-specific security including task access, positions, and roles (e.g., build form); • Conducting batch user account provisioning for Licensed Software accounts as requested by County and in accordance with Exhibit A.20 (Security Statement of Work); and • Creating and managing Contractor's user accounts. Contractor will develop a change control process	**Deliverable 3.15 Security Services and Authorization Controls** • Security services and authorization controls. • Weekly calls and monthly reports. **Acceptance Criteria:** • Security services contain all elements required by Subtask 3.15 (Maintain Security and Manage Authorization Controls and Processes).

Task 3 Provide Application and System Management Services	
for the creation and modification of Contractor user accounts, and submit it for County Approval. Contractor will conduct weekly calls with County to discuss security and authorization management activities and related issues. Contractor will report monthly on security and authorization management, including the tracking and reporting of any issues.	

Task 4 Initiate and Provide Hosting Services

Task Description

Contractor will initiate and provide the Hosting Services, and manage, monitor, and maintain the Hosting Environment in accordance with the requirements of Exhibit N (Required Remote Hosted Software Terms and Conditions), Exhibit N.1 (Hosting Services), Exhibit E (Service Levels and Performance Standards), Exhibit K (Information Security Requirements), the Agreement, and applicable SOWs. The Hosting Services will include documentation of account management, operations and administration, database administration, change management, capacity management, performance management, and Service Level monitoring and reporting.

Personnel Requirements

- Contractor Key Employees
  - Contractor AMS Engagement Leader;
  - Contractor AMS Engagement Controller;
  - Contractor AMS Integration Architect;
  - Contractor AMS Solution Architect;
  - Contractor AMS Delivery Consultant;
  - Contractor AMS Solution Analyst;
  - Contractor Hosting Services Service Delivery Manager;
  - Contractor Hosting Services Production Owner;
  - Contractor Hosting Services System Engineer; and
  - Contractor Hosting Services Database Administrator.
- County Key Employees
  - County Project Director;
  - County Project Manager;
  - County SOW Team Leads;
  - County Technical Manager;
  - County Desktop Technicians;
  - County Network Engineers;
  - County Helpdesk Analysts; and
  - County Interface Manager.

Task 4 Initiate and Provide Hosting Services	
Subtasks/Deliverables	

Subtask 4.1 Prepare Hosting Services Delivery Document
Contractor will develop, maintain, and update a Hosting Services Delivery Document in accordance with Exhibit A.3 (EHR Architecture and Hosting Services Statement of Work) which includes Contractor's approach to the following:
• Transition of Licensed Software from responsibility of Contractor Project implementation team to Contractor Hosting Services team;
• Access management in accordance with subtask 3.14 (Provide Interface Support), including:
  ○ County user accounts; and
  ○ Contractor Personnel accounts;
• Operations and Administration, including:
  ○ Contractor infrastructure;
  ○ Initial and ongoing evaluation and monitoring of County infrastructure and operations;
  ○ At County's request, diagnostics and validation of County infrastructure and operations;
  ○ Recommendations for improvements to County infrastructure; and
  ○ Contractor and County roles and responsibilities;
• Capacity planning and management, including:
  ○ Storage, network, and processing capabilities; and
  ○ Monitoring performance;
• Management of Contractor-provided servers; including:
  ○ Monitoring;
  ○ Updating; and
  ○ Optimizing performance;
• Maintaining Service Levels
	Deliverable 4.1 Hosting Services Delivery Document
	• Hosting Services Delivery Document.
	
	Acceptance Criteria:
	• The Hosting Services Delivery Document incorporates, and is consistent with, County-provided input;
	• The Hosting Services Delivery Document address all elements described in subtask 4.1 (Prepare Hosting Services Delivery Document).
	• The Hosting Services Delivery Document has been Approved by County.

Task 4 Initiate and Provide Hosting Services	

• Defining and developing alerts (network latency alert, saturation alert, etc.);
• Service Level monitoring and reporting, including:
  ○ Alerts;
  ○ Service metrics;
  ○ Monitoring tools;
  ○ Service request tracking system;
  ○ Audits;
  ○ Weekly Contractor meetings with County; and
  ○ Processes for communicating scheduled outages;
• Maintaining security, including:
  ○ Physical security; and
  ○ Logical security;
• Preventative maintenance, including technology refreshes to remain current with applicable industry standards;
• Defining procedures for backups and restores, including:
  ○ Frequency;
  ○ Method;
  ○ Validation; and
  ○ Defining restore checkpoints; and
• Providing business continuity and disaster recovery services.
Contractor will review the draft Hosting Services Delivery Document with County.
Contractor will incorporate County feedback and proposed changes as appropriate into the County Hosting Services Delivery Document and submit a final version to County for Approval.	

Subtask 4.2 Provide Hosting Services Throughout the Term of the Agreement, Contractor will provide Hosting Services in accordance with the Production Support Plan and Exhibit A.3 (EHR Architecture and Hosting Services Statement of Work). The Hosting Services will comply with the	**Deliverable 4.2 Hosting Services** • Hosting Services. • Weekly calls and monthly reports. **Acceptance Criteria:** • The Hosting Services comply with the

Task 4 Initiate and Provide Hosting Services	
requirements of Exhibit N (Required Remote Hosted Software Terms and Conditions), Exhibit N.1 (Hosting Services), Exhibit E (Service Levels and Performance Standards), Exhibit K (Information Security Requirements), the Agreement, and applicable SOWs. Contractor will: • Operate the Licensed Software and the Hosting Services on a 24x7x365 basis; • Provide County with access to the Licensed Software and Hosting Services over a pair of dedicated network connections from the Hosting Environment on a 24x7x365 basis; • Provide, monitor, and maintain Hosting Services hardware, software, and communications infrastructure, including: o Physical infrastructure for data center (e.g., facility, environment, power); o Shared networking and application infrastructure; and o Computer systems, network equipment, and Contractor WAN; • In coordination with AMS, provide and update list of Contractor-certified devices and provide mechanism to process requests to certify additional devices; • Manage, monitor, and maintain Contractor-owned equipment in County facilities; • Provide technical support in the installation of network termination devices; • In coordination with AMS, monitor all inbound and outbound Interfaces and provide County with notice of inactive Interfaces or other potential connectivity issues; and • In coordination with AMS, provide and maintain all Licensed Software, Hosting Software, and Third-Party Product licenses and sublicenses, and Documentation required to provide the Hosting Services. Contractor will conduct weekly calls with County to discuss Hosting Services activities and related	Specifications. • The Hosting Services address all elements described in subtask 4.2 (Provide Hosting Services).

Task 4 Initiate and Provide Hosting Services	
issues. Contractor will report monthly on Hosting Services activities, including the tracking and reporting of any issues.	
Subtask 4.3 Conduct Service Level Monitoring and Reporting Contractor will conduct monitoring and reporting of Service Levels to County, including: • Continuously monitoring the Hosting Environment in accordance with Section 2 (Service Monitoring and Management) of Exhibit E (Service Levels and Performance Standards); • Developing and delivering to County monthly reports showing Service Level performance in accordance with Section 4.6 (Reporting Service Level) of Exhibit E (Service Levels and Performance Standards); and • Providing County with tools to measure Licensed Software and Hosting Services response time. Contractor will provide Service Level reports (e.g., performance metrics and system accounting information) to the designated County representatives in a format agreed to by County. Contractor will conduct weekly calls with County to discuss Service Level monitoring activities and related issues.	**Deliverable 4.3 Service Level Reports** • Weekly calls. • Monthly Service Level Reports. • Response time measurement tool. **Acceptance Criteria:** • Monthly Service Level Reports include sufficient detail to verify compliance with Service Levels and are County Approved.
Subtask 4.4 Respond to Support Service Requests In coordination with AMS, Contractor will provide Support Services as required in the Agreement. Contractor will: • Participate in weekly meetings with County to discuss status of, and improvement of response time to, service requests; • Provide technical guidance to County on configuration of County internal network and workstations, peripheral devices, and other County hardware to enable connectivity to Hosting Services;	**Deliverable 4.4 Support Services** • Support Services. • Weekly calls and monthly reports. • Service Report Tracking System. **Acceptance Criteria:** • Support Services contain all elements required by Subtask 4.4 (Respond to Support Service Requests), and are County Approved.

Task 4 Initiate and Provide Hosting Services	
• Provide recommendations to County for issue identification and resolution procedures, including steps to diagnose whether issues originate in County-owned or Contractor-hosted systems; • Notify County of any issues Contractor discovers that may adversely impact the Hosted Services; • Notify County of any planned outages within the timeframes specified in Exhibit N (Required Remote Hosting Software Terms and Conditions), and the Agreement; • Provide, manage, and maintain a method for proper notification and escalation of issues; • Log all incidents and problems; and • Provide incident and management reports and statistics to County as requested by County but in no event less than once per month. Contractor will set up a Service Request Tracking System as required by Section 4.1 (Service Request Tracking System) of Exhibit E (Service Levels and Performance Standards). Contractor will conduct weekly calls with County to discuss service requests and related issues. Contractor will report monthly on service requests, including the tracking and reporting of any issues.	
Subtask 4.5 Maintain Security Contractor will provide security management services in accordance with Exhibit A.20 (Security Statement of Work), Exhibit K (Information Security Requirements), and Section 3 (Hosting Environment) of Exhibit N.1 (Hosting Services). Contractor will: • On an ongoing basis, provide input and written recommendations into County security plan. • Provide data center physical security measures and controls; • Govern physical access to Contractor facilities with access entitlement control;	**Deliverable 4.5 Security Services** • Security management services. • Input to update County security plan. • Weekly and monthly reports. **Acceptance Criteria:** • Security Management Services contain all elements required by subtask 4.5 (Maintain Security).

Task 4 Initiate and Provide Hosting Services	
• Utilize encryption in storing and transmitting County Data; • Provide physical and logical security of all service components (hardware and software) and data; • Monitor for EHR System security errors, exceptions, and attempted violations; • Implement and monitor network intrusion and virus detection systems throughout Hosted Services network and computing infrastructure; • Provide and maintain virus protection; • Provide dedicated security manager to enforce security procedures and resolve issues; • Provide and manage URL access to Internet sites approved for appropriate business purposes; • Provide Hosting Environment security plan and infrastructure based on security requirements, standards, procedures, policies, County, federal, state, and local requirements and risks; • Implement physical and logical security plans for all Hosting Environment components consistent with Contractor security policies and industry standards; • Implement logical security plans for all Hosting Environment components consistent with applicable County security policies as it relates to the EHR System; • Report security violations to County per County policies and in accordance with subtask 2.3 (Define Contractor Process for Notifying County of Security Issues); and • Provide and maintain all documentation required for security audits and internal control and control testing. Contractor will provide all Security Management Services in compliance with all applicable federal, state, County, and payor requirements. Contractor will conduct weekly calls with County	

Task 4 Initiate and Provide Hosting Services	
to discuss security activities and related issues. Contractor will report monthly on security activities and alert County of any issues.	
Subtask 4.6 Conduct Backups and Restores Contractor will conduct the backups and restores required by subtask 4.1 (Prepare Hosting Services Delivery Document) and Section 3 (Backups) of Exhibit E (Service Levels and Performance Standards), including: • Regular backups of all County Data; • Backups of Licensed Software and Third-Party Products in accordance with the Hosting Services Delivery Document; and • Backup validation. Contractor will conduct weekly calls with County to discuss backup and restore activities and related issues. Contractor will provide County with monthly reports certifying successful backup validation.	**Deliverable 4.6 Backups Validation Report** • Backups validation report. • Weekly calls and monthly reports. **Acceptance Criteria:** • The Backups validation report address all elements described in subtask 4.6 (Conduct Backups and Restores).
Subtask 4.7 Provide Business Continuity and Disaster Recovery Services Contractor will provide prioritized business continuity and disaster recovery services for the Hosting Services and associated infrastructure (e.g., servers, network connection) in accordance with Section 22 (Disaster Recovery/Business Continuity) of the Agreement. Contractor will: • Maintain and provide access to 7x24 Downtime Viewer; • Maintain and provide access to the 7x24 Access Read Only Domain for Citrix applications: (i) immediately for Scheduled Downtime; and (ii) for Unscheduled Downtime, within thirty (30) minutes from: (a) the earliest point in time that such Outage is or reasonably should be detected by Contractor, or (b) the time County notifies Contractor to enable access; • Develop and maintain detailed Business Continuity Plan and Disaster Recovery Plan;	**Deliverable 4.7 Business Continuity and Disaster Recovery** • Contractor's current Business Continuity Plan and Disaster Recovery Plan. • Report of Business Continuity Plan and Disaster Recovery Plan test results. • Updated Business Continuity Plan and Disaster Recovery Plan. • Weekly calls and monthly reports. **Acceptance Criteria:** • County-Approved Business Continuity Plan and Disaster Recovery Plans. • County-Approved Business Continuity Plan and Disaster Recovery Plan test results.

Task 4 Initiate and Provide Hosting Services	
• Provide County with a copy of Contractor's current Business Continuity Plan and Disaster Recovery Plans; • Review and update the Business Continuity Plan and Disaster Recovery Plans on at least an annual basis; • Develop action plan to mitigate risks and issues discovered during the Business Continuity Plan and Disaster Recovery Plan review; • Notify County if Contractor conducts fail over; and • Provide County with copies of all updates to the Business Continuity Plan and Contractor's standard Disaster Recovery Plan. Contractor will initiate the Disaster Recovery Plan in the event of a Contractor disaster recovery situation and notify County per the Agreement and disaster recovery policies and procedures. Contractor will coordinate with County during a Contractor disaster recovery situation per the Agreement and disaster recovery policies and procedures. Contractor will conduct weekly calls with County to discuss business continuity and disaster recovery activities and related issues. Contractor will report monthly on business continuity and disaster recovery activities and alert County of any issues.	

Task 5 Conduct Ongoing Training Activities
Task Description
Contractor will conduct ongoing training activities necessary to support County in maintaining and operating the EHR System.
Personnel Requirements

• Contractor Key Employees
  ○ Contractor AMS Engagement Leader;
  ○ Contractor AMS Engagement Controller;
  ○ Contractor AMS Integration Architect;
  ○ Contractor AMS Solution Architect;
  ○ Contractor AMS Delivery Consultant;

Task 5 Conduct Ongoing Training Activities	
○ Contractor AMS Solution Analyst; ○ Contractor Hosting Services Service Delivery Manager; ○ Contractor Hosting Services Production Owner; ○ Contractor Hosting Services System Engineer; and ○ Contractor Hosting Services Database Administrator. • County Key Employees ○ County Project Director; ○ County Project Manager; ○ County SOW Team Leads; ○ County Technical Manager; ○ County Desktop Technicians; ○ County Network Engineers; ○ County Helpdesk Analysts; and ○ County Interface Manager.	
Subtasks/Deliverables	
Subtask 5.1 Support Training on Revisions In preparation for Revisions, Contractor will conduct training for County support personnel and trainers on Revisions, including: • For each Revision, develop a training plan, including: ○ Content; ○ Tools; and ○ Delivery methods; • Provide County with sample training materials and sample help desk scripts; • Provide guidance to the County in developing training materials, including County help desk scripts as they relate to the EHR System; • Review County training materials for completeness and accuracy; • Provide any existing WBTs to County support staff and trainers; and • Provide County with training resources for training of County support personnel and trainers, as requested by County and mutually agreed on as per governance structure identified in Exhibit A.2 (Project Initiation Statement of Work).	**Deliverable 5.1 Training on Revisions** • Training on Revisions. • Sample training materials. • Review and validation of County developed training materials. **Acceptance Criteria:** • The training on Revisions support addresses all elements described in subtask 5.1 (Support Training on Revisions).

Task 5 Conduct Ongoing Training Activities	
Subtask 5.2 Maintain LearningLIVE Environment Contractor will maintain the LearningLIVE environment for County, including: • Hosting the LearningLIVE environment; • Providing County personnel with access to LearningLIVE environment; • Providing periodic updates to LearningLIVE code; and • Providing periodic web-based training for County personnel on new features and functionality of the LearningLIVE environment; and • Providing ongoing support via the uLearn portal.	**Deliverable 5.2 Learning LIVE Environment and Training** • LearningLIVE environment. • LearningLIVE training. **Acceptance Criteria:** • The LearningLIVE Environment and training support address all elements described in subtask 5.2 (Maintain LearningLIVE Environment).

Exhibit A.25 (Project Control Document)

to the

Electronic Health Records System and Services Agreement

1. Introduction

This Exhibit A.25 (Project Control Document) (sometimes referred to in this Exhibit as "**this PCD**") is an attachment and addition to the Electronic Health System and Services Agreement dated December 21, 2012 (hereinafter "**Agreement**") entered into by and between the County of Los Angeles ("**County**") and Cerner Corporation ("**Contractor**") and is incorporated into the Agreement by reference hereof. In the event of conflicting terms between the Agreement and this PCD, the terms of the Agreement shall prevail and nothing in this PCD shall modify or amend any provisions of the Agreement (including all components such as Statements of Work, Service Level Agreements, Exhibits, etc.) unless such modifications or amendments and the provisions of the Agreement which they modify or amend are specifically identified in this PCD and are Approved. This PCD includes any attachments hereto. Any capitalized terms not defined in this PCD shall have the same meanings as used in the Agreement.

2. Overview

This PCD is to be completed by the Contractor with input from the appropriate County executive and clinician stakeholders in accordance with task 4 (Complete Project Control Document) of Exhibit A.2 (Project Initiation Statement of Work). This PCD will be used by Contractor and County to manage, track, and evaluate Project performance and is comprised of a number key Project documents. This PCD and its sub-component documents will be maintained and updated throughout the life of the Project in accordance with the Agreement and the applicable Statements of Work.

3. PCD Components

The following Project documents are components of this PCD and are attached to the Agreement as Exhibits A.25.1 through A.25.11. Documents marked with a * are required to be completed prior to submission of the Agreement to the Board for Approval. All other documents will be completed within thirty (30) days of the Effective Date.

- Project Work Plan ("**PWP**")*
- Error Management Plan ("**EMP**")
- Project Communications Strategy
- Risk Management Plan
- Project Staffing and Resource Management Plan (**"SRMP"**)*
- Configuration and Technology Change Management Plan ("**CTCMP**")
- Project Team Organization Plan
- Issue Management Plan
- Project Change Management Plan
- Quality Management Plan
- Deliverables Management Plan
- Project Work Plan Management Document
- Procedures for Status Meetings / Reporting

4. Key Deliverables

The Project Key Deliverables are listed in Exhibit C.6 (Key Milestones and Key Deliverables Table) of the Agreement.

Exhibit A.25.1 (Project Work Plan)

146	Downtime Strategy Planning	2 wks	Mon 2/17/14	Fri 2/28/14	12
147	Conversion Readiness Assessment - Project Management	1 wk	Mon 2/17/14	Fri 2/21/14	12
148	Review Event Summary Report and Objectives from Event Agenda with Cerner Consultant	1 wk	Mon 2/17/14	Fri 2/21/14	12
149	Follow-up on Change Control Process w/ Cerner and Client Team	1 wk	Mon 2/17/14	Fri 2/21/14	12
150	Complete Domain Tasks	1 wk	Mon 2/17/14	Fri 2/21/14	12
151	Schedule APACHE Clinical End-User Training Support	1 wk	Mon 2/17/14	Fri 2/21/14	12
152	Review Conversion Cutover Plan and Update As Needed	1 wk	Mon 2/17/14	Fri 2/21/14	12
153	**MAINTENANCE TRAINING**	**4 wks**	**Mon 3/17/14**	**Fri 4/11/14**	
154	Review Progress of Build Coaching Sessions in the Client Education Tracking List / Ensure all are completed by MT	2 wks	Mon 3/17/14	Fri 3/28/14	13

ID	Task Name	Duration	Start	Finish	Predecessors
155	Meet with CWx Project Mgr or Client Domain Mgr to verify TRAIN domain readiness and client domain access (remote & in KC)	1 wk	Mon 3/17/14	Fri 3/21/14	13
156	Customize conversion cutover plan	2 wks	Mon 3/17/14	Fri 3/28/14	13
157	Complete Domain Tasks	1 wk	Mon 3/17/14	Fri 3/21/14	13
158	Ensure Cerner/Client teams are following the defined change control policy	4 wks	Mon 3/17/14	Fri 4/11/14	13
159	Review/modify conversion cutover plan w/ each Client and Cerner team	3 wks	Mon 3/17/14	Fri 4/4/14	13
160	**INTEGRATION TESTING 1**	**3 wks**	**Mon 4/21/14**	**Fri 5/9/14**	
161	Finalize issue tracking and test script tracking process for IT1	2 wks	Mon 4/21/14	Fri 5/2/14	14
162	Review/distribute final IT scripts to Cerner teams to review in anticipation of Internal IT	1 wk	Mon 4/21/14	Fri 4/25/14	14
163	Downtime Strategy	3 wks	Mon 4/21/14	Fri 5/9/14	14
164	Facilitate Internal Integration Testing w/ Project Team	1 wk	Mon 4/28/14	Fri 5/2/14	14
165	Generate Open Issues Report from Navigator/eService - Work w/ Team to Clean Up Issues	1 wk	Mon 4/21/14	Fri 4/25/14	14
166	Generate Tasks by Event Report and Review with Client	1 wk	Mon 4/21/14	Fri 4/25/14	14
167	Ensure all final design decisions are documented and reviewed by client	1 wk	Mon 4/21/14	Fri 4/25/14	14
168	Begin Conversion Cutover Planning - Customize Cutover Plan & Send to Cerner Team for Review	1 wk	Mon 4/21/14	Fri 4/25/14	14
169	Create a Turnover Activity Plan in Navigator	2 wks	Mon 4/21/14	Fri 5/2/14	14
170	Ensure the client has installed MSA/MTA and it is set up correctly	2 wks	Mon 4/21/14	Fri 5/2/14	14
171	Ensure the client has installed the most recent Admin packages	2 wks	Mon 4/21/14	Fri 5/2/14	14
172	Review all flashes with client (Technical and Priority Review)	2 wks	Mon 4/21/14	Fri 5/2/14	14
173	Review & Update Conversion Readiness Assessment - PrjMgmt	1 wk	Mon 4/28/14	Fri 5/2/14	14
174	**INTEGRATION TESTING 2**	**3 wks**	**Mon 6/9/14**	**Fri 6/27/14**	
175	Ensure Resources are Scheduled for RDDS Cutover Event	1 wk	Mon 6/9/14	Fri 6/13/14	16
176	Prepare and Customize Materials for RDDS Cutover Event	3 wks	Mon 6/9/14	Fri 6/27/14	16
177	Ensure all build changes have been moved to PROD and turn RDDS off	1 wk	Mon 6/9/14	Fri 6/13/14	16
178	Verify MOCK is created from PROD including PROD temp tables	1 wk	Mon 6/9/14	Fri 6/13/14	16
179	Regression test "interim state" in MOCK (Time after RDDS cutover to PROD, but before conv). Coordinate w/ Client to validate existing s.	1 wk	Mon 6/9/14	Fri 6/13/14	16
180	Finalize issue tracking and test script tracking process for IT2	1 wk	Mon 6/9/14	Fri 6/13/14	16
181	Schedule call with SWx APACHE Team for client turnover	1 wk	Mon 6/9/14	Fri 6/13/14	16
182	Schedule call with SWx Team for client turnover	1 wk	Mon 6/9/14	Fri 6/13/14	16

ID	Task Name	Duration	Start	Finish	Predecessors
183	Simulate conversion cutover in MOCK w/ Cerner teams and Cerner/Client technical teams, resetting phase X build to end state. Gather timings for all tasks for PROD cutover.	1 wk	Mon 6/9/14	Fri 6/13/14	16
184	Review Activity Delete Guide on Cerner.com	2 wks	Mon 6/9/14	Fri 6/20/14	16
185	Schedule activity delete in PROD	2 wks	Mon 6/9/14	Fri 6/20/14	16
186	Generate Tasks by Event Report and Review with Client	1 wk	Mon 6/9/14	Fri 6/13/14	16
187	Review Live Production Sign Off form process. Prepare for sign off due 2 weeks post IT2	1 wk	Mon 6/9/14	Fri 6/13/14	16
188	Generate (and load on MethodM site) Event Summary Report and review it and the objectives from the event agenda with the client	1 wk	Mon 6/9/14	Fri 6/13/14	16
189	Review Issues List and identify any Go Live show stopper issues	3 wks	Mon 6/9/14	Fri 6/27/14	16
190	Review client's Internal Services Strategy and set support expectations	3 wks	Mon 6/9/14	Fri 6/27/14	16
191	Register client for ATIM Course (if purchased)	3 wks	Mon 6/9/14	Fri 6/27/14	16
192	Add client contact for remote connectivity questions and support to Navigator as an Intellinet Alert	3 wks	Mon 6/9/14	Fri 6/27/14	16
193	Assist client in defining access policies and procedures	3 wks	Mon 6/9/14	Fri 6/27/14	16
194	Review client information in Intellinet database	3 wks	Mon 6/9/14	Fri 6/27/14	16
195	Cerner code release schedule review	3 wks	Mon 6/9/14	Fri 6/27/14	16
196	Ensure that the Client Help Desk/Technical team roles are identified & have completed all required training	3 wks	Mon 6/9/14	Fri 6/27/14	16
197	Review & Update Conversion Readiness Assessment - PrjMgmt	1 wk	Mon 6/9/14	Fri 6/13/14	16
198	DELIVERABLE: Obtain client sign-off of Live Production Form	2 wks	Mon 6/9/14	Fri 6/20/14	16
199	**CONVERSION**	**5 wks**	**Mon 6/9/14**	**Fri 7/11/14**	
200	DELIVERABLE: Pre-Conversion Quality Center Assessment	4 wks	Mon 6/9/14	Fri 7/4/14	16
201	Confirm facilities, PCs, network access, and sign-ons for conversion staff.	2 wks	Mon 6/30/14	Fri 7/11/14	18
202	Finalize conversion staffing needs and cutover plan.	1 wk	Mon 6/30/14	Fri 7/4/14	18
203	Ensure a Pt. Accounting-only domain is available after conversion to test 835's.	1 wk	Mon 6/30/14	Fri 7/4/14	18
204	Finalize conversion issues triage and tracking process. Verify client help desk coverage.	1 wk	Mon 6/30/14	Fri 7/4/14	18
205	Finalize conversion change control/PECA process.	2 wks	Mon 6/30/14	Fri 7/11/14	18
206	Track show-stopper issues via Go/No Go status report	2 wks	Mon 6/30/14	Fri 7/11/14	18
207	Customize the Solution Turnover documentation and distribute to project team.	2 wks	Mon 6/30/14	Fri 7/11/14	18

ID	Task Name	Duration	Start	Finish	Predecessors
208	Coordinate Diagnostic Center Reviews Across the Teams	1 wk	Mon 6/30/14	Fri 7/4/14	18
209	Send conversion guide and logistics to team. Ensure travel is booked.	1 wk	Mon 6/30/14	Fri 7/4/14	18
210	Client training on logging and tracking service records has been completed and communicated	2 wks	Mon 6/30/14	Fri 7/11/14	18
211	Ensure any Entitlements are added to client information.	2 wks	Mon 6/30/14	Fri 7/11/14	18
212	Client has a defined and documented change management strategy and process in place	2 wks	Mon 6/30/14	Fri 7/11/14	18
213	Validate that client's service and maintenance contracts are complete.	2 wks	Mon 6/30/14	Fri 7/11/14	18
214	Validate that Cerner application license fees for all solutions have been activated	2 wks	Mon 6/30/14	Fri 7/11/14	18
215	Ensure that all backup procedures are defined, documented, and tested.	2 wks	Mon 6/30/14	Fri 7/11/14	18
216	Document any custom code in the client's environment, and set expectations regarding Cerner support.	2 wks	Mon 6/30/14	Fri 7/11/14	18
217	Schedule Architecture, Troubleshooting and Issue Management course	1 wk	Mon 6/30/14	Fri 7/4/14	18
218	Provide Operation Stage guide to client	1 wk	Mon 6/30/14	Fri 7/4/14	18
219	**CONVERSION - Rollout1 Ambulatory**	**2 wks**	**Mon 6/30/14**	**Fri 7/11/14**	
220	Reduce clinic schedules	5 days	Mon 6/30/14	Fri 7/4/14	18
221	Confirm facilities, PCs, network access, and sign-ons for conversion staff.	2 wks	Mon 6/30/14	Fri 7/11/14	18
222	Ensure scanners are in place for abstraction team	1 day	Mon 6/30/14	Mon 6/30/14	18
223	Track show-stopper issues via Go/No Go status report	2 wks	Mon 6/30/14	Fri 7/11/14	18
224	Send conversion guide and logistics to team. Ensure travel is booked.	1 wk	Mon 6/30/14	Fri 7/4/14	18
225	Begin data abstraction at clinics	5 days	Mon 6/30/14	Fri 7/4/14	18
226	**POST CONVERSION REVIEW**	**16 wks**	**Mon 6/30/14**	**Fri 10/17/14**	
227	DELIVERABLE: Quality Center Post Conversion Assessment	4 wks	Mon 6/30/14	Fri 7/25/14	18
228	DELIVERABLE: Post Conversion Assessment Survey	1 wk	Mon 7/21/14	Fri 7/25/14	18FS+3 wks
229	DELIVERABLE: Post Conversion Assessment - PM	1 wk	Mon 9/15/14	Fri 9/19/14	24
230	Track Meaningful Use Functional reports for compliance	2 wks	Mon 9/15/14	Fri 9/26/14	24
231	Perform APACHE Report Training	1 wk	Mon 9/15/14	Fri 9/19/14	24
232	Coordinate Post Conversion Assessment Results Review Calls	1 wk	Mon 9/15/14	Fri 9/19/14	24
233	Close out Project	1 wk	Mon 9/15/14	Fri 9/19/14	24
234	Customize Turnover Presentation & Agenda to be presented on the Turnover call	2 wks	Mon 9/15/14	Fri 9/26/14	24
235	Schedule Support Turnover call	2 wks	Mon 9/15/14	Fri 9/26/14	24
236	Attach project plan to Turnover Activity Plan in Navigator	3 wks	Mon 9/15/14	Fri 10/3/14	24

ID	Task Name	Duration	Start	Finish	Predecessors
237	Compile documentation and/or audit of MethodM tasks for Turnover to review on Turnover call.	3 wks	Mon 9/15/14	Fri 10/3/14	24
238	Complete Turnover activity in Navigator on completion on MethodM activities	5 wks	Mon 9/15/14	Fri 10/17/14	24
239	**Task 7 Conduct Project Close-out Activities**	**1 wk**	**Mon 11/30/15**	**Fri 12/4/15**	**32**
240	Subtask 7.1 Develop Project Close-out Checklist	1 wk	Mon 11/30/15	Fri 12/4/15	
241	Subtask 7.2 Conduct Project Close-out	0.5 days	Mon 11/30/15	Mon 11/30/15	
242	**ADOPTION**	**90 wks**	**Mon 1/28/13**	**Fri 10/17/14**	
243	**Task 1 Conduct Governance Assessments**	**17 wks**	**Mon 1/28/13**	**Fri 5/24/13**	
244	Attend Clinical Nursing Leadership Breakout Session / Strategic Assessment Results	1 wk	Mon 2/4/13	Fri 2/8/13	2FS+1 mon
245	Attend Physician Session - Physician Outcomes	1 wk	Mon 1/28/13	Fri 2/1/13	2FS+1 mon
246	Deliver Sample Physician Advisory Group Charter	1 wk	Mon 1/28/13	Fri 2/1/13	2FS+1 mon
247	Discuss Physician Adoption Responsibility Communication (review template letter)	1 wk	Mon 1/28/13	Fri 2/1/13	2FS+1 mon
248	Introduce Influential Physician Tracking Tool	1 wk	Mon 1/28/13	Fri 2/1/13	2FS+1 mon
249	Conduct Influential Physician Tracking	7 wks	Mon 1/28/13	Fri 3/15/13	2FS+1 mon
250	Identify Communication Needs for Stakeholder Groups	4 wks	Mon 4/8/13	Fri 5/3/13	4
251	Identify Responsibilities for Oversight and Advisory Teams	2 wks	Mon 4/8/13	Fri 4/19/13	4

Exhibit A.25.2 (Project Staffing and Resource Management Plan)

to the

Electronic Health Records System and Services Agreement

Table of Contents

1. Project Staffing and Resource Management Plan

This is the Project Staffing and Resource Management Plan developed by Contractor. This Project Staffing and Resource Management Plan will be utilized to establish fully loaded (identification of FTE equivalent or hours for all resources by Key Milestone) Contractor resource staffing commitments and to detail specific County resources which will guide County on how best to allocate and deploy personnel to this Project. Notwithstanding the foregoing, this is a fixed fee engagement and the Contractor resources identified in the Project Staffing and Resource Management Plan do not limit the resources that may be required by Contractor. This Project Staffing and Resource Management Plan is a resource and tool to assist Contractor and County during the Project. The Project Staffing and Resource Management Plan is governed by the Agreement (including the Exhibits, Statements of Work, Attachments, and Schedules) and will not reduce, change, modify or alter Contractor's obligations under the Agreement. Contractor may be subject to additional requirements pursuant to the Agreement. In the event of conflicting terms between the Agreement and this Project Staffing and Resource Management Plan, the terms of the Agreement shall prevail and nothing in the Project Staffing and Resource Management Plan shall modify or amend any provisions of the Agreement (including all components such as Statements of Work, Service Level Agreements, Exhibits, etc.).

This Project Staffing and Resource Management Plan provides a description of:

- Fully loaded Contractor resource staffing commitments (i.e., identification of FTE equivalent or hours for all resources by Key Milestone);
- Project organizational chart that aligns with Contractor Licensed Software, Third-Party Products, and work streams documented in the SOWs;
- Mapping of staffing to the roles, responsibilities, and activities of the PWP;
- Reporting relationships;
- Description of other resources such as conference rooms, training rooms, connectivity, calendars, etc.;
- Education Tracker to monitor training received or required for specific County staff/roles;
- Guidelines for knowledge transfer between County personnel as they change roles, leave, or join the project.

2. Fully loaded Contractor resource staffing commitments

Contractor will assign a half time Client Results Executive to own Project execution and results.

Contractor will provide full time Engagement Leadership that consists of the following: Project Director, Engagement Leader, Integration Architect and Clinical Strategist.

A Practice Manager and Engagement Controller will also be a part of the Engagement Leadership and will support mainly from Kansas City.

A Healthcare Executive and Physician Strategist will be half time on the Project and will assist in the Physician adoption space.

Contractor will assign a Learning Consultant half time to assist with training. Contractor will also provide Delivery Consultants and Solution Architects as part of the implementation team who are responsible for providing Contractor solution expertise needed for a successful implementation.

During key events the Delivery Consultants and Solution Architects will be fully dedicated. During non-event weeks, Contractor will use a leveraged resource model. The leveraged resource model consists of a number of resources working full-time or part time as a team to complete the specific Deliverable. The FTE count provided for the leveraged model activities is the projected aggregate of the effort expended by a larger group of people, not individuals working full time.

Contractor will also provide a technology team that consists of Interface Architects, System Engineers and Technology Consultants. This team will be led by a Technical Engagement Leader and Hosting Services Technical Engagement Leader.

A description of the Contractor roles and responsibilities can be found in Appendix A to this Exhibit A.25.2 (Staffing and Resource Management Plan).

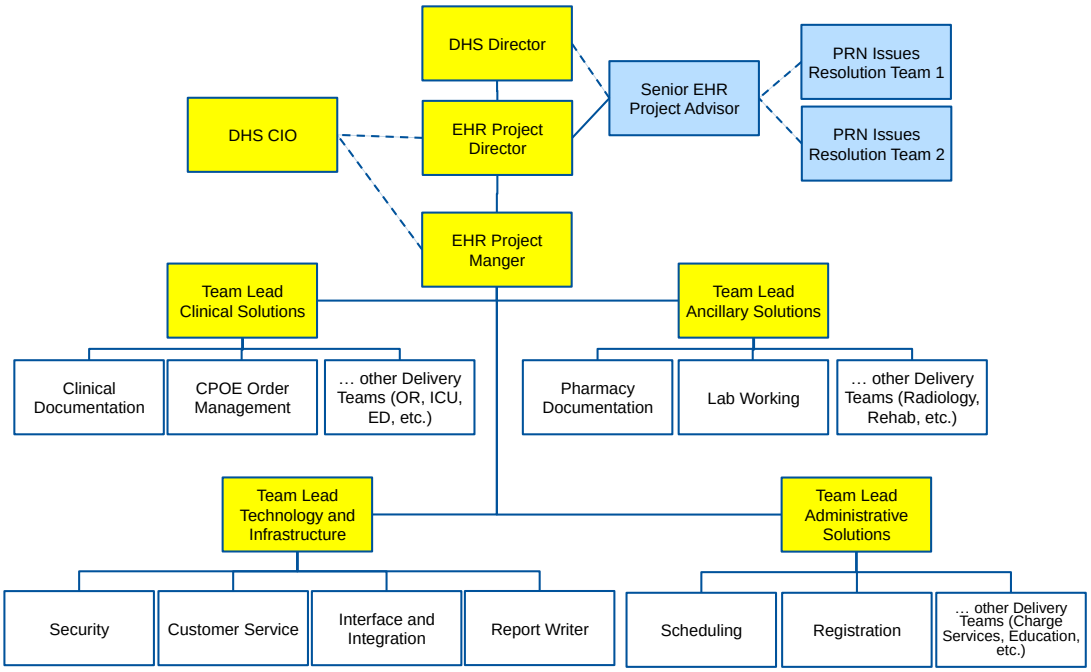
An initial version of the projected time allocation of these roles can be found in Attachment A to this Exhibit A.25.2 (Staffing and Resource Management Plan). The allocations will be validated and refined for each SOW as part of the development of the SOW specific Sub-Project Work Plans as described in subtask 1.1 of Exhibit A.2 – A.22.

3. Project Organizational Chart

The Project will have both an integrated structure which provides both management and direction for day-to-day Project delivery, and an overall mechanism for providing decision and direction in an expedited manner.

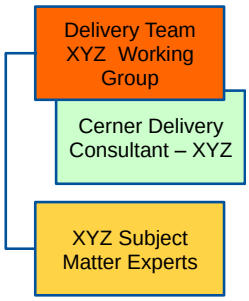
There will be an overall Project management office staffed by a Project manager and the necessary administrative and logistical support. Reporting in to the Project manager will be a number of teams.

The structure of the teams and their reporting relationships will be as follows (the blue boxes are decision making groups, the yellow boxes are management and leadership individuals, the white boxes are the delivery teams):



The delivery teams will be made up of three components as follows:

The County Workgroups are comprised of County resources including a team lead (also referred to as an IT Analyst) and key members who will be responsible for data gathering, design decisions, and content decisions. The Subject Matter Experts are County resources who provide information and advice to the County Workgroup on an as- and when-needed basis. The Contractor Delivery Consultant is a Contractor resource that provides facilitation and direction for the County Workgroup, and provides direction and leadership for the Contractor build team.



The decision-making groups provide consistent management, cohesive policies, guidance, processes and key resources. They optimize communication across teams, and support integration across disciplines and arrive at decisions. The senior EHR Project advisor is a senior knowledgeable individual, who will take input from all relevant avenues and provide advice and direction to the EHR Project Director related to overall DHS enterprise level EHR Project questions and issues. The PRN Issue Resolution Teams (PIRTs) are constituted of senior practitioners and thought leaders in specific subject matter or practice areas. County Workgroup leads and the County Project Director will escalate questions of practice, design, and policy for rapid resolution by these teams.

4. Mapping of Staffing to the Roles, Responsibilities, and Activities of the PWP

The spreadsheet provided in Attachment A provides the mapping of staffing to the roles, responsibilities, and activities of the PWP.

5. Reporting Relationships

Contractor will partner with County to align resources to ensure that the team is in communication and working towards common goals.

The below tables helps to identify suggested County resources and their Contractor counterparts:

County	Contractor
Executive Leadership	Client Results Executive
County Project Director	Contractor Project Director
County Project Manager	Engagement Leader (Contractor Project Manager)
Process/Integration Architect	Integration Architect
Physician Champions	Health Care Executive/Physician Strategist
Transformation/Adoption Coordinator	Clinical Strategist
Subject Matter Experts/Analysts (County Workgroups)	Solution Architect/Delivery Consultant
Education Coordinator	Learning Consultant

Other reporting relationships are described in the Project operational structure and the Project governance structure above.

6. Description of Other Resources Such as Conference Rooms, Training Rooms, Connectivity, Calendars

The following table provides a sample outline of the types of facilities and resources that the Contractor Project team will need for all of its on-site work. This table is for illustrative purposes only to aid the Parties in the deployment of County facilities resources. Actual available County facilities resources will be allocated by County in consultation with Contractor.

Contractor

Sample Hospital Space Requirements				
Type	**Quantity**	**Contents**	**Identified Location**	**Note**

Packager space **in Pharmacy**	**1**	40 5/8 in wide and 31 1/8 in depth, 77 3/8in high		Packager needs to be located in pharmacy workspace. This is the maximum space requirement. Exact space requirements will be determined pursuant to the applicable Statements of Work.
Training	**1 room for duration of project**	1 - 3 tables/room		
	1 - 4 additional rooms for Super User and End User training **(See Training Plan)**	4 - 10 Chairs/room 4 - 8 PC's, 1 Cart (covered by Global budget)/room 1 Printer (covered by Global budget) 1 Phone/per room Cabling for printer and PC's		Training and knowledge transfer will occur as set forth in Exhibit A.22 (Training and Knowledge Transfer Statement of Work)
Delivery Team Workroom	**1**	2 Tables 6 - 10 Chairs 1 Printer (covered by Global budget) 1 speaker phone		Needed for duration of Project.
Meeting Room	**1**	Table and Chairs enough for all project dept managers and project leads.		Ad hoc for duration of Project.
Command Center	**1**	Conference room large enough for 25 - 40 resources		Command Center resources will be required as set forth in Exhibit A.23 (Deployment Statement of Work)

7. Education Tracker

The Education Tracker list will be found as a link on the navigation panel under MethodM Project home.

This list is used to provide the County Project team with a list of education assignments they will need to complete during the Project such as Fundamentals, WBTs, Open House domain review and build coaching sessions leading up to the Contractor build maintenance event.

Assignments will be marked as complete and the list will serve as a tracking mechanism that can be leveraged by the County education coordinator.

Edit	Solution	Delivery Order	Expected Completion Date	Topic	Education Item	Assigned To	Status	Activities	Comments/Type
	Care Documentation	01		Attend Millennium Fundamentals Session	Millennium Fundamentals		New		
	Care Documentation	02		Access Open House Scripts and the domain to become familiar with your solution	Open House Scripts		New		
	Care Documentation	03		Complete the Web Based Training for your solution	Solution WBTs		New		
	Care Documentation	BCS Topic 01		Nomenclature, DTA	Build Coaching Sessions		New		
	Care Documentation	BCS Topic 02		IView Band Build, Prefs (Bedrock)	Build Coaching Sessions		New		
	Care Documentation	BCS Topic 03		IV Drips, Advanced Graphing	Build Coaching Sessions		New		
	Care Documentation	BCS Topic 04		Powerform Sections	Build Coaching Sessions		New		
	Care Documentation	BCS Topic 05		Powerform Form Build	Build Coaching Sessions		New		
	Care Documentation	BCS Topic 06		Clinical Doc Management Tool	Build Coaching Sessions		New		

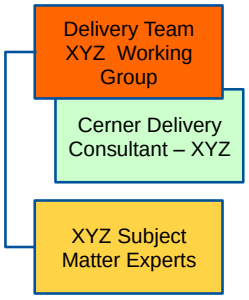
8. Guidelines for Knowledge Transfer between County Personnel as They Change Roles, Leave, or Join the Project.

8.1 Overview

Knowledge transfer takes place when subject matter expertise and information are passed from one person to another person (e.g., County staff to County staff, or Contractor staff to County staff). Knowledge transfer will be incorporated into many aspects of the Project through the use of collaborative teams, shared responsibility, proven methodologies and processes, and Project infrastructure. This approach will support and facilitate ongoing information sharing and team member collaboration and will provide for immediate and continuous knowledge transfer in both directions, as needed.

8.2 Knowledge Transfer Mechanisms

(a) Project Team Structure



Particular attention has been paid to pairing the County Workgroup Leads with a Contractor Delivery Consultant and pairing County Workgroups with Contractor delivery and build teams.

Not only have collaborative teams and pairings been defined, but also the physical location of Contractor and County team members will be taken into consideration. This supports a collaborative approach to analysis and decision-making that ensures that the necessary parties are not only well informed, but also understand the implications of decisions.

(b) Team Meetings

Weekly Project team lead meetings provide opportunities for communication and knowledge transfer, by Project members reviewing status updates and sharing information regarding outstanding issues. Similar meetings will also occur within the individual teams on a regular basis, to review team specific issues and concerns.

(c) Documentation Strategy and Guidelines

The Contractor documentation strategy will be implemented to ensure complete and consistent access to documentation for the Project. The MethodM repository, structure, and guidelines make the Project documentation easily accessible to all team members and all relevant County staff and leadership. Every

event and Key Deliverable will result in a report which is reviewed by County and revised by Contractor to incorporate County feedback.

(d) **Data Collection Workbooks (DCWs), Design Decision Matrix (DDM), and Partial System Build**

The DCW, DDM, and Initial Partial System Build are all mechanisms whereby the Contractor educates County staff on the process and then facilitates an active engagement in requirements definition and confirmation of the fit between the functionality delivered and the requirements. The County Workgroups are comprised of individuals who have the necessary knowledge on the particular topic, and significant interest in the outcome of decisions. Since not all interested parties can be included, the participants have a responsibility to keep their constituents apprised of the proceedings.

(e) **Work Transition**

During the early stages of the Project, Contractor will, of necessity, carry the bulk of the workload, in terms of research, creation of presentation materials and leadership during the sessions. As the requirements gathering process progresses and then again through the implementation process, more of the responsibility will shift to the County teams. This transition will allow the Project team members to gain credibility and legitimacy within the County so that the team members will be able to play a role in supporting and encouraging use of the solution in their functional areas of expertise.

(f) **Project Communications Strategy**

A Project Communications Strategy is a Deliverable for the Project. It will be used to ensure the timely and effective communication of information to help staff prepare for the changes introduced by the Project. Effective Project communication will facilitate the identification of knowledge transfer and training issues.

(g) **Training**

Web and instructor-led training will provide the primary source of knowledge transfer for the bulk of the County's users. Targeted training courses will be scheduled using a "just in time" approach, so that knowledge learned will be put to use in a timely fashion and not forgotten.

(h) **Requirements and Design Reviews**

All designs and the iterative release of functionality will be reviewed and approved by the County teams. This provides the County not only with the opportunity to provide input to the design, but also provides another opportunity for knowledge transfer at key points in the Project.

(i) **Regular knowledge transfer review and update**

A recurring topic of knowledge transfer will be added to the County Workgroup Leads meetings to generate discussion and provide a check point to measure our success in the knowledge transfer area. During these discussions, the tools and methods will be critiqued and adjusted as necessary.

Attachment A

Contractor Roles and Responsibilities

Client Results Executive

The main role of the Client Results Executive is to provide guidance around project planning, project scope, risk management, and professional service deployment. The Client Results Executive serves as the Contractor Senior Executive for escalation of project related issues and County satisfaction.

Client Results Executive responsibilities include:

- Maintains executive relationships with senior County management;
- Provides the connection and thought leadership between the County's business strategies and Contractor's core values proposition;
- Participate in monthly Project reviews with Project leadership;
- Overseeing accounts for risk assessment, executive satisfaction, and Project status;
- Works with County Project Manager and Engagement Leader on Project implementation planning;
- Planning and evaluating contracted Project service delivery and cost management;
- Attending steering committee and Project management office meetings;
- Procuring and managing resources to meet contracted Project Deliverables;
- Works with senior County management to address strategic Project related issues, scope, solution, timing, staffing, organizational impact, communications, business process transformation vis-à-vis solution design and capability;
- Serves as the Contractor person responsible for escalation of Project related issues, service delivery and County satisfaction;
- Responsible for making contractual agreements and commitments on behalf of Contractor;
- Participates in analysis of processes, procedures, and outcomes to seek continuous improvement of assigned projects;
- Provides feedback mechanism back into Contractor to improve its processes, procedures and solution for the purpose of building improved levels of ongoing County satisfaction;
- Ensuring the efficiency of the professional services business by monitoring appropriate metrics and adjusting practices accordingly;
- Responsible for maintaining quality and consistency of solution and professional services delivered to County;
- Acts as County advocate to Contractor's engineering, solution support, technology services, consulting services, executive management and other groups;
- Responsible for Contractor's Project performance; and
- Other tasks as needed by the Project.

Engagement Leader

The Engagement Leader manages the day-to-day activities of the Project for Contractor. The Engagement Leader works to obtain the necessary resources to support the Project and manage Service delivery.

Engagement Leader responsibilities include:

- Leading Project implementation planning;
- Developing Project Work Plan and Project Schedule, developing or delegating and monitoring development of product implementation work plans, where appropriate;
- Planning and evaluating contracted Project service delivery and cost management;
- Identifying and managing risk and quality assurance issues which arise during the Project;
- Reviewing Project progress regularly with County and Contractor management;
- Organizing and day-to-day oversight of the Contractor Project team;
- Coordinating Contractor Project resources and other Contractor support groups and resolving resource conflicts as needed;
- Monitoring overall Project progress and Milestones;
- Monitoring Project budget from a cost and time perspective;
- Ensuring Project compliance with contract and Contractor quality assurance standards;
- Attending Project management office meetings;
- Managing issue escalation and resolution;
- Complete Contractor consulting standard status reports and Event Summary Reports;
- Own all technical tasks including domain creation and technical staffing. These activities should be coordinated through the Technical Engagement Leader; and
- Other tasks as needed by the Project.

Practice Manager

Works closely with the Contractor engagement management team to ensure Project and delivery priorities are aligned.

Practice Manager responsibilities include:

- Accountable for Project delivery and meeting County expectations;
- Liaison between solutions center and engagement management;
- Assist in initial Project organization, start-up and planning;
- Escalation point for Project delivery;
- Ensure appropriate staffing;
- Monitor and maintain scope alignment;
- Review and update delivery processes to ensure quality measures are supported; and
- Other tasks as needed by the Project.

Engagement Controller

The Engagement Controller role is a key component to the engagement management team. This role provides critical Project management tasks for the Project to insure Project execution is on schedule,

under budget, and within the planned scope. They support the Contractor engagement management team by having a detailed view of Project summary and progress.

Engagement Controller responsibilities include:

- Coordinates event preparations by solidify resources, creates agendas and reserves training rooms;
- Supports engagement management team with issue escalation;
- Support environment/domain planning and management including Regression Testing after code installs, domain copies, reference data domain synchs, and activity deletes;
- Monitors the scope management process;
- Lead and document checkpoint meetings during events and document wrap-ups;
- Monitor session leaders visit summaries for consistency and accuracy after each event;
- Monitor the County's Integration Testing issues list and escalate as necessary;
- Monitor the County's Go-Live readiness assessments;
- Monitor Contractor Navigator (eService) for integration points and ensure all issues are getting resolved in a timely fashion;
- Reviews County satisfaction surveys and provides feedback to Contractor engagement management team; and
- Other tasks as needed by the Project.

Integration Architect

The Integration Architect works across multiple solutions and interacts with the County throughout the Project. They are involved in scope decisions, process assessment, design and build, testing, training and delivering business results. This role identifies key application integration points that may affect design decisions and supports the management of domain strategies, change management and control, and issue management. They function as the application team lead for the Contractor Project team and provide associate mentoring and coaching.

Integration Architect responsibilities include:

- Serve as the integration expert across solutions and Interfaces providing troubleshooting and process expertise;
- Assist with the development of implementation strategies and work plans;
- Support environment/domain planning and management including Regression Testing after code installs, domain copies, reference data domain synchs, and activity deletes;
- Ensure design decisions include considerations across solutions and fall within scope;
- Maintain responsibility for distribution package analysis and installation;
- Mentor and coach Project team members;
- Drive the system validation process and provide guidelines for all levels of implementation testing;
- Assist County in developing appropriate policies and procedures for issue management and change control;
- Monitor Contractor Navigator (eService) for integration points and ensure all issues are getting resolved in a timely fashion;

- Provide leadership for Integration Testing, Reference Data Domain Sync, and Go-Live Readiness;
- Assist with peripheral implementation strategy;
- Attending Project management office meetings; and
- Other tasks as needed by the Project.

Healthcare Executive

The Contractor Healthcare Executive serves as the liaison to the Contractor, medical staff and Project leadership.

Healthcare Executive responsibilities include:

- Providing expert consultation to County physician leadership to facilitate implementation;
- Providing training and expertise for the Physician Champions;
- Sharing physician experiences from other client sites;
- Setting physician expectations on long and short-term EHR System plans and capabilities;
- Providing expertise in leveraging electronic medical records to improve care delivery; and
- Attends physician advisory group meetings, upon request.

Clinical Strategist

The Clinical Strategist is the Contractor counterpart to the County transformation coordinator and works with the Executive Sponsor, Physician Champion, County Project Manager and other County leaders to develop and implement strategies to manage the organizational change associated with system implementation. Change management activities include data gathering and analysis, change planning, coaching, measurement planning, and developing clinician engagement and adoption strategies.

Clinical Strategist responsibilities include:

- Works with Contractor and Project leadership to develop a comprehensive plan for organizational transformation and coordinating that plan with all other Contractor system project activities;
- Assists Contractor and County Project leadership in profiling and risk analysis;
- Supports organizational kick-off events;
- Works with the communications team Lead to identify key stakeholder groups and ensure the Project Communication Strategy meets their information needs;
- Works with operational and clinical leadership to develop and implement a clinician engagement strategy;
- Facilitates gap analysis and change management activities including job impact analysis and policy/procedure analysis;
- Supports business case development and on-going benefits measurement;
- Serves as the PMO subject matter expert on organizational culture and processes;
- Works with education coordinator to ensure learning plan is responsive to the various learning needs and styles of County;
- Identifies and manage risks and change-related issues that arise during the Project;

- Reviews Project progress regularly with County and Contractor management; and
- Other tasks as needed by the Project.

Technical Engagement Leader

The Technical Engagement Leader is the Contractor associate responsible for the overall definition and delivery of technical installation work during the implementation effort. The Technical Engagement Leader is the primary contact for technical issues and provides consultation on technical risk factors that must be addressed to achieve a successful implementation and ensure on-going availability of systems.

Technical Engagement Leader responsibilities include:

- Preparing technical work plan including definition of tasks, task dependencies, estimates and resource requirements;
- Assists the Integration Architect and County Technical Team documenting and communicating their respective architectural and organizational requirements as they relate to the implementation;
- Leading technical assessment of County environment;
- Coordinating and leading all technical knowledge transfer activities with County;
- Consulting with County to establish standardized desktop workstation configuration, software distribution methodology and login procedures;
- Identifying time requirements and working with the Engagement Leader and Technical Manager to schedule appropriate resources;
- Monitoring progress of technology implementation work plan; documents and reports issues to Project management office, as required;
- Ensuring that plans and scripts are prepared for backup and recovery of environments and database;
- Attending Project management office meetings, as technology agenda items required;
- Provide remote support when domain refreshes are performed on County sites;
- Coordinate resources to perform domain refreshes;
- Serve as technical liaison between Project team and Contractor Hosting Services team; and
- Other tasks as needed by the Project

System Engineer

System Engineers are responsible for managing the hardware and system software activities. The System Engineer role can be specialized to software and system install, foreign system Interfaces, and medical device Interfaces. The System Engineer is part of the central technology team and reports to the Contractor Technical Engagement Leader.

System Engineer responsibilities include:

- Performing site preparation analysis with hardware supplier and County personnel;
- Providing installation and site environmental requirements and performing quality assurance management for the hardware and network installation;
- Assisting capacity planning teams in performing capacity analysis;
- Develop Interface specifications for device and system level Interfaces;

- Installing software required for device Interfaces and foreign system Interfaces;
- Helping County personnel implement environment management, operational procedures, Interfaces, and other EHR System software;
- Acting as the primary contact for Interface issues that arise at the County site;
- Provide technical support for installation of Licensed software;
- Providing technology support for testing and Go-Live activities;
- Troubleshooting and resolving system problems and assists in the investigation and resolution of application failures/problems; and
- Other tasks as needed by the Project

Solution Architect

The Solution Architect is responsible for providing Contractor solution expertise needed for successful Licensed Software implementation at a County site. The Solution Architect is heavily involved in the design process to ensure recommended practices are utilized.

Solution Architect responsibilities include:

- Provide solution expertise to Contractor Project team members, as needed;
- Serve as source for recommended practices, both clinical and implementation;
- Work with Project team to identify Project risks and provide resolution;
- Conduct County Current State Assessment and scope review sessions at County facilities during Project Kickoff event;
- Work to evaluate associate progress and capabilities, build status, and project staffing when necessary;
- Review Go-Live Readiness Assessment and provide feedback to Delivery Consultants;
- Conducts QA Checkpoints after design review, trainer and Go-Live preparation and Integration Testing;
- Conduct post-Go-Live Assessment providing feedback to County and appropriate Contractor organizations and/or individuals; and
- Other tasks as needed by the Project.

Delivery Consultant

Responsible for providing Contractor solution expertise needed for successful Licensed Software implementation at a County site. The Delivery Consultant may belong to one or more teams and works with Project leadership to coordinate his/her activities with other members of the team(s). The Delivery Consultant is the primary contact for the County's solution troubleshooting and consultation.

Delivery Consultant responsibilities include:

- Implementing solution design decisions; tailoring application database to meet the unique requirements of the department and County institution;
- Assisting in testing system functionality as well as validating database integrity;
- Providing consultation on process design;
- Providing product specific help to departmental/functional team leaders;
- Instructing County on database build tools;

- Helping plan and organize County train the trainer and end user training;
- Assisting in the development, management and execution of application and medical device and foreign system Interface testing;
- Providing on site Go-Live support;
- Investigating/resolving application problems;
- Escalating major application or systems issues to appropriate Project team members;
- Working closely with the Integration Architect to coordinate/resolve cross department design and implementation issues;
- Coordinate County calls and supporting documentation;
- Meet build and test completion targets for Project;
- Complete and own the Go-Live Readiness Assessment process. Review it with the County during trainer and Go-Live preparation and Integration Testing;
- Effectively communicate solution knowledge, clinical process, progress, status, and resolution to all involved parties; and
- Other tasks as needed by the Project.

8.3 Learning Consultant

The Learning Consultant is a liaison between Contractor's KnowledgeWorks team, the Contractor Project team and County's Project team, stakeholders and end users. Individuals in this role have a strong understanding of learning theory and are able to analyze large amounts of data to create both detail-level and strategic-level plans. The Learning Consultant strives to create both executive-level and individual buy-in to the learning plan. They can also supplement County's education/training team or provide complete outsourcing solutions.

Learning Consultant responsibilities include:

- Conducting learning needs assessments;
- Assisting in development of learning strategy;
- Developing end-user learning tools (e.g., job aides, workbooks, etc.);
- Assisting County in developing course scheduling, registration and participant tracking procedures, if these learning administration systems are not available;
- Recommending training facility changes needed in order to meet County's objectives;
- Coordinating County IS team class enrollment;
- Investigating end user solutions (i.e., CBT);
- Coordinating additional training outside of Agreement;
- Providing physician training;
- Conducting/proctoring end user training; and
- Supporting end users during Go-Live support.

Interface Architect

The Interface Architect is responsible for working with counterparts from Contractor, County and other suppliers to ensure effective and efficient system integration is accomplished.

Interface Architect responsibilities include:

- Develop Interface specifications for EHR System level Interfaces;

- Reviewing architecture design for all Interfaces;
- Helping County personnel design environment management, operational procedures, Interfaces, and other EHR System software
- Acting as the escalation point for Interface issues that arise at County site; and
- Providing technology support for testing and Go-Live activities.

Assumptions

From a Resource Management Perspective, Project Manager, Project Director, Integration Architect, and Clinical Strategist are accounted for in SOWs 1 and 2. In case of overlapping tasks between SOWs 1 and 2, it is assumed that one full time PM, PD, IA, and CS will suffice.
The numbers in the cells indicate the time commitment of Contractor resources in terms of Full Time Equivalents (FTEs). As an example, "1" indicates that one full resource will be dedicated for the duration of the Task, "0.5" indicates that one resource will be dedicated 50% of their time to the task, "5" means that five resources will be full time dedicated to the task.
Unless otherwise indicated, resources are dedicated for the time commitment indicated.

"See SOW X" indicates that resources may be engaged in more than one of the SOWs (4-20), and the total FTE will only be referenced on one of the SOWs.
SOWs 21-24 in the Solution Architect/Delivery Consultant and Interface Architect/System Engineer roles are a summation of all solution FTEs for each Task outlined.

Some Tasks within in the SOWs span across multiple weeks. FTEs noted should be interrupted as weekly FTEs.

LICENSED SOFTWARE REQUIREMENTS

The following documents submitted by Contractor in response to County's RFP are attached to this Exhibit A.26 (Licensed Software Requirements) and are hereby incorporated by reference:

1 Appendix H(Functional Requirements) and Appendix I (Technical Requirements) of Appendix U (Detailed RFP Requirements Response Form)

2 Appendix H-1 (Functional Requirements Attachment)

3 Appendix I-1 (Technical Requirements Attachment)

1. **Managed Care Requirements**. The managed care requirements option described in Section 2.1.20 (Managed Care Requirements (Optional)) of Appendix H (Functional Requirements) was not selected by County.

2. **Anesthesiology Requirements**. The anesthesiology requirements option described in Section 2.1.21 (Anesthesiology Requirements (Optional)) of Appendix H (Functional Requirements) was selected by County and is a part of the Licensed Software.

ELECTRONIC HEALTH RECORDS SYSTEM (EHR SYSTEM)

REQUEST FOR PROPOSALS

APPENDIX U

(DETAILED RFP REQUIREMENTS PROPOSAL RESPONSE FORM)

November 15, 2011

TABLE OF CONTENTS

Proposer must provide responses to the Detailed RFP Requirements seen in Section 6 (Detailed RFP Requirements Proposal) of the RFP by submitting a signed, completed version of this Appendix U (Detailed RFP Requirements Proposal Response Form) as well as providing several required documents and forms (e.g., Transmittal Letter, Proposer's Organization Questionnaire/Affidavit) that are included as Appendices to this RFP.

As noted in Section 6 (Detailed RFP Requirements Proposal) of the RFP, Proposer's response for each requirement must be limited to the space provided in this Appendix U (Detailed RFP Requirements Proposal Response Form) and must be entered using Calibri font style, 11 point font size.

Proposer's response must be limited to the space provided below for each requirement.

1. EXECUTIVE SUMMARY

Provide Proposer's Executive Summary, pursuant to Section 6.5 (Executive Summary) of the RFP. Proposer's response for this Section is limited to 3 pages.

*Provide a summary of the Proposer's understanding of the requested EHR System;

LAC DHS is seeking to make real improvements in population health, the patient's experience of care, and the cost of care through this procurement of an integrated EHR across your ambulatory and in patient healthcare delivery network.

*Discuss the Proposer's specific role and relevant qualifications for performing that role;

Cerner offers clients a dedicated exclusive focus on healthcare, an end-to-end solution and service portfolio, including comprehensive software solutions, full implementation services provided by Cerner's own team of professionals, Application Management Services (AMS) support services, and best in KLAS Remote Hosting Services (RHO).

*Provide a brief description of the Proposer's history, number of years the organization has been in business, and type of products and services it provides;

Since 1979, Cerner has focused exclusively on designing and deploying healthcare IT solutions that improve efficiency and quality of care. Our revolutionary person-centric Cerner Millennium architecture is designed to fundamentally transform healthcare delivery. Cerner solutions combine technology with knowledge to deliver vital data for effective, real-time decision-making across the enterprise. Healthcare has been our only focus from our inception—and our proven vision and results are a testament to our commitment to eliminate error, variance, waste, delay and friction for more efficient business management which optimizes clinical and financial outcomes. Around the world, health organizations ranging from single-doctor practices to entire countries turn to Cerner for our powerful yet intuitive solutions.

*Summarize the key qualifications of Proposer, distinguishing characteristics of the Proposal, the proposed solution, and Project approach, as well as the principal advantages to County;

•Comprehensive Software Solution: Cerner offers an unrivaled breadth and depth of solutions, spanning diverse healthcare venues such as ambulatory clinics and acute care hospitals. The majority of these solutions have been organically grown to ensure tight integration on a single, unified database. Our commitment in client partnerships is to develop industry standard protocols

and evidenced based content which contribute towards continued advancement to clinical excellence.

•Quality: Clients like LA County find assurance in the fact that Cerner is investing over $1 billion in the next five years in Research & Development, an investment that directly correlates to the improvements and new developments in the solutions we offer. As an organization we are continually innovating to find ways to improve clinical, operational and financial outcomes for our clients - enhancing and promoting their ability to provide excellent care. Largely this focus is based on reducing non-value labor to improve patient centric care and quality outcomes. We realize our clients are in the Healthcare business not the IT or reporting business. Only Cerner has developed a platform that allows for fully digitized hospitals; beds, monitors, pumps and patient access modules, all connected to the EMR on a Cerner developed device connectivity platform reducing nurse data entry by up to 90%. Cerner is also unique in its focus on meeting our clients' needs around quality measures submission requirements. Without third party solutions, Cerner offers real time dashboards to track Core Measures required for Meaningful Use and beyond as a bi-product of care versus retrospective reporting requiring manual abstraction and analysis. Additionally, all current clients receive a Sepsis intervention algorithm imbedded within our software to help prevent incidence of Sepsis within their patient populations by proactively identifying the early signs of Sepsis giving our clients the capability to proactively manage patient outcomes and quality. Dr. John Hensing, CIO of Banner Health, best summarizes the benefit Cerner brings: "The system tackled the deadly problem of sepsis two years ago by starting to flag at-risk patients through its electronic health-record system. An early alert system was created to identify patients most likely to develop the serious bloodstream infection. As a result, Banner Health has seen a substantial improvement. Out of all identified patients at risk of sepsis, 92% leave the hospital alive. "It's a combination of having clinicians respond promptly, creating a protocol of early intervention and using EHR technology to reduce overall mortality and improve outcomes."

In January of 2012, Thomson Reuters released its list of the Top 15 Health Systems in the United States. The top systems were determined by strict performance, outcomes and safety criteria. Six of the nation's top 15 health systems are Cerner clients, more than any other EHR supplier. But this honor rightfully belongs to our clients, and we will continue to innovate and deliver solutions as a clinical partner capable of helping our clients accomplish their goals.

Cerner has a high interest in partnering with organizations such as Los Angeles County DHS, and count as our partners similar county healthcare facilities in southern California, such as the Los Angeles County Sheriff and Probation Departments, the County of Orange Health Care Agency, Ventura County, Tri-City Medical Center and Palomar Pomerado Health System. Additionally, we have key partnerships and provide solutions to numerous other county agencies across the country, and the Department of Defense and the Veterans Association.

•Seamless Integration between Your Clinics and In-Patient Hospitals: LAC DHS requires a clinical information system that will span the needs of your diverse enterprise. The architecture must connect patients with care teams and care teams with one another, allowing seamless information sharing throughout the organization, whether in inpatient or ambulatory venues. Only Cerner offers a comprehensive, person-centric approach to align all aspects of the physician community and a proven "Medical Home" approach emphasizing continuity of care, collective responsibility, communication, disease management in the office and access to information, quality and safety. Because of our unwavering focus on this industry, we know the culture, the language, the nuances of healthcare, and we know how to make all the components work together. In fact, virtually all our installations include non-Cerner software should LAC DHS decide to maintain areas of current

investment.

•Information Exchange With Other Healthcare Providers in LA Area: The Cerner Network is an industry leading suite of connectivity solutions and services that makes electronic data exchange simple, fast and affordable which:

Allows providers to electronically share clinical information with one another

Makes it easier to stay in touch with your patients

Helps providers qualify for federal incentives

Supports health information exchange and improves patient care at a health system, community, state or federal level

Through Cerner's unique ability to connect both Cerner systems and foreign EMR's and well as our numerous established EMR's in the LA County area, such as CHLA, USC, Orange County, Ventura County, and Adventist, we believe that Cerner is best positioned to assist LA County in implementing the same award winning, data driven Health Information Exchange Network to meet its future needs.

•Proven Speed to Value and Efficiency: We understand that a smarter approach to implementation is required in order for a healthcare organization to remain fiscally sound in today's environment. With this reality in mind, we have created the Cerner Solutions Center, a comprehensive, best practices approach to implementing systems from start to finish. Our standardized event-based implementation approach draws upon more than 30 years of proven content from real clients to reduce project variance, increase efficiency and optimize resource use for greater implementation discipline and predictability, The Solution Center approach will allow you to realize benefits at an accelerated pace while minimizing the resources required to perform one-time build activities. With this methodology, Cerner, certified as a Complete EMR by the Certification Commission for Health Information Technology (CCHIT®), is committed to enabling your achievement of "meaningful use" standards in an optimal timeframe, allowing your organization to benefit from the American Recovery and Reinvestment Act's (ARRA) designation of Medicare and Medicaid payments.

•Cerner's Remote Hosting Managed Service Offering (RHO): represents a Best in KLAS offering 3 consecutive years running, 2009 – 2011. Through remote hosting Cerner clients are able to address the growing challenges a healthcare organization is faced in the IT realm, including: hiring and retaining skilled IT professionals, flat-lining capital expenditures relating to IT, managing and maintaining a complex computing environment continually requiring change, maintaining system stability and reliability for clinicians and physicians, and finally disaster prevention & recovery. Cerner remote hosting includes hardware and sublicensed software, proactive 24x7 system management, N+1 hardened datacenter usage, telecommunication between Cerner datacenter and client data center, and guaranteed system availability and response times. Primary benefits realized by Cerner remote hosted clients include: risk and price protection, reduction of FTE requirements associated with managing Cerner technology infrastructure, faster return on investment, and cash and capital retention. The preceding information has all been recognized by KLAS with additional positive notations being: highest satisfaction scores, highest scores for system uptime and performance, and the highest renewal rate for any vendor. Key to note is KLAS' acknowledgement that Cerner is the only vendor in which hosting services increased overall satisfaction with software.

•Account Management Services (AMS) provides production support of Millennium Solutions, resulting in improved solution operation and adoption, lower costs, and less disruption of end users enabling your team to focus on their organization's mission and vision. With AMS, an Engagement

Leader (EL) is assigned to proactively ensure service delivery. The EL is responsible for SLA metrics, client satisfaction, assigning resources, and the overall relationship between your hospital and our team. There are support requirements in the hosting exhibits that seem to indicate that DHS is asking for an AMS support model. Because this was not specifically identified however, Cerner has included it as an Optional service and provided pricing in the Optional Pricing Worksheets.

*Address any issue(s) that Proposer envisions to be associated with fulfilling the requirements of the RFP and cite specific suggestions for avoiding or mitigating these issues.

Cerner does not see risk in ultimately fulfilling all requirements of the RFP. The risk that Cerner would want to note is in the aggressive timeline that is needed to conclude contract negotiations and implement the EHR System at all facilities in order for the County to make the Meaningful Use Attestation dates. Cerner has a proven history of implementing complex systems for large organizations such as LAC DHS both on time and on budget. The risks involved with large system implementations for multi-facility organizations surround keeping the project on schedule and to the originally defined scope. The project resources from all facilities should agree on the overall EHR System design and workflow. There must be good communication and strong team cohesiveness around the vision and mission. It is critical that there be executive leadership involvement in the project for any key decisions that result from differing opinions among representatives from different facilities. The project should be staffed following Cerner's recommendations and it is imperative that clinicians that will participate in the project are back filled in their roles. These same clinicians that will be the project subject matter experts and super users must be involved in training the rest of the end users and actively support the conversion events as project resources. The clinician involvement in the design decisions will lead to a higher rate of end user acceptance and insure the successful adoption of the EHR System.

2. SYSTEM REQUIREMENTS

Provide Proposer's responses to County's system requirements detailed in Appendix H (Functional Requirements), Appendix H-1 (Functional Requirements Attachment), Appendix I (Technical Requirements), Appendix I-1 (Technical Requirements Attachment), Appendix J (Implementation Requirements) and Appendix K (Administrative Requirements), below.

2.1 APPENDIX H (FUNCTIONAL REQUIREMENTS)

2.1.1 CCHIT CRITERIA

Proposer must affirmatively confirm whether or not Proposer's Licensed Software complies with each CCHIT Ambulatory or Inpatient Criteria by noting "Yes" or "No" for each criteria identified below, pursuant to Section 1.1 (CCHIT Criteria) of Appendix H (Functional Requirements). Proposer must also provide any third party certification it has received regarding its proposed EHR System as Attachment H (Third Party Certification).

Ambulatory or Inpatient	CCHIT Criteria ID Number	Criteria	Proposer Licensed Software complies with the criteria

Ambulatory or Inpatient	CCHIT Criteria ID Number	Criteria	Proposer Licensed Software complies with the criteria
Ambulatory	AM 01.01	The system shall create a single patient record for each patient.	☒ Yes ☐ No
Ambulatory	AM 01.02	The system shall associate (store and link) key identifier information (e.g., system ID, medical record number) with each patient record.	☒ Yes ☐ No
Ambulatory	AM 01.03	The system shall provide the ability to store more than one identifier for each patient record.	☒ Yes ☐ No
Ambulatory	AM 01.04	The system shall provide a field which will identify patients as being exempt from reporting functions.	☒ Yes ☐ No
Ambulatory	AM 01.05	The system shall provide the ability to merge patient information from two patient records into a single patient record.	☒ Yes ☐ No
Ambulatory	AM 02.01	The system shall provide the ability to include demographic information in reports.	☒ Yes ☐ No
Ambulatory	AM 02.02	The system shall provide the ability to maintain and make available historic information for demographic data including prior names, addresses, phone numbers and email addresses.	☒ Yes ☐ No
Ambulatory	AM 02.04	The system shall provide the ability to modify demographic information about the patient.	☒ Yes ☐ No
Ambulatory	AM 02.05	The system shall store demographic information in the patient medical record in separate discrete data fields, such that data extraction tools can retrieve these data.	☒ Yes ☐ No
Ambulatory	FN 01.01	The system shall provide the ability to access demographic information such as name, date of birth and gender needed for patient care functions.	☒ Yes ☐ No

Ambulatory or Inpatient	CCHIT Criteria ID Number	Criteria	Proposer Licensed Software complies with the criteria
Ambulatory	FN 01.02	The system shall capture and maintain demographic information as discrete data elements as part of the patient record.	☒ Yes ☐ No
Ambulatory	FN 02.01	The system shall provide the ability to query for a patient by more than one form of identification.	☒ Yes ☐ No
Ambulatory	FN 03.01	The system shall provide the ability to capture and maintain, as discrete data elements, the identity of all providers associated with a specific patient encounter.	☒ Yes ☐ No
Ambulatory	FN 03.02	The system shall provide the ability to capture and maintain, as discrete data elements, the principal provider responsible for the care of an individual patient.	☒ Yes ☐ No
Ambulatory	FN 04.02	The system shall provide the ability to capture, maintain and display, as discrete data elements, all problems/diagnoses associated with a patient.	☒ Yes ☐ No
Ambulatory	AM 03.03	The system shall provide the ability to maintain the onset date of the problem/diagnosis.	☒ Yes ☐ No
Ambulatory	AM 03.04	The system shall provide the ability to maintain the resolution date of the problem/diagnosis.	☒ Yes ☐ No
Ambulatory	AM 03.05	The system shall provide the ability to record the chronicity (chronic, acute/self-limiting, etc.) of a problem/diagnosis.	☒ Yes ☐ No
Ambulatory	AM 03.06	The system shall provide the ability to record the user ID and date of all updates to the problem/diagnosis list.	☒ Yes ☐ No
Ambulatory	AM 03.07	The system shall provide the ability to associate orders, medications, and notes with one or more problems/diagnoses.	☒ Yes ☐ No

Ambulatory or Inpatient	CCHIT Criteria ID Number	Criteria	Proposer Licensed Software complies with the criteria
Ambulatory	AM 03.08.01	The system shall provide the ability to associate orders and medications with one or more codified problems/diagnoses.	☒ Yes ☐ No
Ambulatory	AM 03.09	The system shall provide the ability to maintain a coded list of problems/diagnoses.	☒ Yes ☐ No
Ambulatory	FN 04.06	The system shall provide the ability to display different views of the problem / diagnosis list based upon the status of the problem.	☒ Yes ☐ No
Ambulatory	FN 04.01	The system shall provide the ability to capture, maintain and display free text comments associated with the problem / diagnosis.	☒ Yes ☐ No
Ambulatory	AM 04.02	The system shall provide the ability to record the prescribing of medications including the identity of the prescriber.	☒ Yes ☐ No
Ambulatory	AM 04.03	The system shall provide the ability to maintain medication ordering dates.	☒ Yes ☐ No
Ambulatory	AM 04.04	The system shall provide the ability to maintain other dates associated with medications including start, modify, renewal and end dates as applicable.	☒ Yes ☐ No
Ambulatory	AM 04.05	The system shall provide the ability to display medication history for the patient.	☒ Yes ☐ No
Ambulatory	AM 04.06	The system shall provide the ability to capture medications entered by authorized users other than the prescriber.	☒ Yes ☐ No
Ambulatory	AM 04.07	The system shall store medication information in discrete data fields. At a minimum, there must be one field for each of the following: - medication name, form and strength; - dispense quantity; - refills; and - sig.	☒ Yes ☐ No

Ambulatory or Inpatient	CCHIT Criteria ID Number	Criteria	Proposer Licensed Software complies with the criteria
Ambulatory	AM 04.09	The system shall provide the ability to enter uncoded or free text medications when medications are not on the vendor-provided medication database or information is insufficient to completely identify the medication.	☒ Yes ☐ No
Ambulatory	AM 04.10	The system shall provide the ability to enter or further specify in a discrete field that the patient takes no medications.	☒ Yes ☐ No
Ambulatory	AM 04.11	The system shall provide the ability to record the date of changes made to a patient's medication list and the identity of the user who made the changes.	☒ Yes ☐ No
Ambulatory	FN 06.01	The system shall provide the ability to update and display a patient-specific medication list based on current medication orders or prescriptions.	☒ Yes ☐ No
Ambulatory	FN 06.02	The system shall provide the ability to display a view that includes only current medications.	☒ Yes ☐ No
Ambulatory	FN 06.03	The system shall provide the ability to exclude a medication from the current medication list (e.g. marked inactive, erroneous, completed, discontinued) and document reason for such action.	☒ Yes ☐ No
Ambulatory	FN 06.04	The system shall provide the ability to print a current medication list.	☒ Yes ☐ No
Ambulatory	FN 06.05	The system shall provide the ability to display that the patient takes no medications.	☒ Yes ☐ No
Ambulatory	FN 06.06	The system shall provide the ability to capture and maintain, as discrete data elements, all current medications including over-the-counter and complementary medications such as vitamins, herbs and supplements.	☒ Yes ☐ No
Ambulatory	FN 05.01	The system shall provide the ability to modify or	☒ Yes

Ambulatory or Inpatient	CCHIT Criteria ID Number	Criteria	Proposer Licensed Software complies with the criteria
		inactivate an item on the allergy and adverse reaction list.	☐ No
Ambulatory	AM 05.03	The system shall provide the ability to display information which has been inactivated or removed from the allergy and adverse reaction list.	☒ Yes ☐ No
Ambulatory	AM 05.04	The system shall provide the ability to specify the type of allergic or adverse reaction in a discrete data field.	☒ Yes ☐ No
Ambulatory	AM 05.05	The system shall provide the ability to capture and maintain, as discrete data, the identity of the user who added, modified, inactivated or removed items from the allergy and adverse reaction list, including attributes of the changed items. The user ID and date/time stamp shall be recorded.	☒ Yes ☐ No
Ambulatory	AM 05.07	The system shall provide the ability for a user to explicitly capture and maintain, as discrete data, that the allergy list was reviewed. The user ID and date/time stamp shall be recorded when the allergies reviewed option is selected.	☒ Yes ☐ No
Ambulatory	AM 05.09	The system shall provide the ability to explicitly indicate in a discrete field that a patient has no known drug allergies or adverse reactions.	☒ Yes ☐ No
Ambulatory	AM 05.12	The system shall provide the ability to display the allergy list, including date of entry.	☒ Yes ☐ No
Ambulatory	AM 05.13	The system shall provide the ability to capture, maintain and display, as discrete data, lists of medications and other agents to which the patient has had an allergic or other adverse reaction.	☒ Yes ☐ No
Ambulatory	AM 06.01	The system shall provide the ability to capture, store, display, and manage patient history.	☒ Yes ☐ No
Ambulatory	AM 06.02	The system shall provide the ability to capture structured data in the patient history.	☒ Yes

Ambulatory or Inpatient	CCHIT Criteria ID Number	Criteria	Proposer Licensed Software complies with the criteria
			☐ No
Ambulatory	AM 06.03	The system shall provide the ability to update a patient history by modifying, adding or removing items from the patient history as appropriate.	☒ Yes ☐ No
Ambulatory	AM 06.04	The system shall provide the ability to capture patient history as both a presence and absence of conditions, i.e., the specification of the absence of a personal or family history of a specific diagnosis, procedure or health risk behavior.	☒ Yes ☐ No
Ambulatory	AM 06.05	The system shall provide the ability to capture history collected from outside sources.	☒ Yes ☐ No
Ambulatory	AM 06.06	The system shall provide the ability to capture patient history in a standard coded form.	☒ Yes ☐ No
Ambulatory	AM 07.01	The system shall provide the ability to create and display a summary list for each patient that includes, at a minimum, the active problem/diagnosis list, current medication list, medication allergies and adverse reactions	☒ Yes ☐ No
Ambulatory	AM 08.01	The system shall provide the ability to create clinical documentation or notes (henceforth "documentation").	☒ Yes ☐ No
Ambulatory	AM 08.02	The system shall provide the ability to display documentation.	☒ Yes ☐ No
Ambulatory	AM 08.03	The system shall provide the ability to save a note in progress prior to finalizing the note.	☒ Yes ☐ No
Ambulatory	AM 08.04	The system shall provide the ability to finalize a note, i.e., change the status of the note from in progress to complete so that any subsequent changes are recorded as such.	☒ Yes ☐ No

Ambulatory or Inpatient	CCHIT Criteria ID Number	Criteria	Proposer Licensed Software complies with the criteria
Ambulatory	AM 08.05	The system shall provide the ability to record the identity of the user finalizing each note and the date and time of finalization.	☒ Yes ☐ No
Ambulatory	AM 08.06	The system shall provide the ability to cosign a note and record the date and time of signature.	☒ Yes ☐ No
Ambulatory	AM 08.07	The system shall provide the ability to addend and/or correct notes that have been finalized.	☒ Yes ☐ No
Ambulatory	AM 08.08	The system shall provide the ability to identify the full content of a modified note, both the original content and the content resulting after any changes, corrections, clarifications, addenda, etc. to a finalized note.	☒ Yes ☐ No
Ambulatory	AM 08.09	The system shall provide the ability to record and display the identity of the user who addended or corrected a note and the date and time of the change.	☒ Yes ☐ No
Ambulatory	AM 08.10	The system shall provide the ability to enter free text notes.	☒ Yes ☐ No
Ambulatory	AM 08.11	The system shall provide the ability to filter, search or order notes by the provider who finalized the note.	☒ Yes ☐ No
Ambulatory	AM 08.12	The system shall provide the ability to filter, search or order notes by associated diagnosis within a patient record.	☒ Yes ☐ No
Ambulatory	AM 08.13	The system shall provide the ability to capture patient vital signs, including blood pressure, heart rate, respiratory rate, height, and weight, as discrete data.	☒ Yes ☐ No
Ambulatory	AM 08.14	The system shall provide the ability to capture and display temperature, weight and height in both metric and English units	☒ Yes ☐ No

Ambulatory or Inpatient	CCHIT Criteria ID Number	Criteria	Proposer Licensed Software complies with the criteria
Ambulatory	AM 08.15	The system shall be capable of indicating to the user when a vital sign measurement falls outside a preset normal range as set by authorized users.	☒ Yes ☐ No
Ambulatory	AM 08.16	The system shall provide the ability to capture other clinical data elements as discrete data.	☒ Yes ☐ No
Ambulatory	AM 08.19	The system shall provide templates for inputting data in a structured format as part of clinical documentation.	☒ Yes ☐ No
Ambulatory	AM 08.20	The system shall provide the ability to customize clinical templates.	☒ Yes ☐ No
Ambulatory	AM 08.21	The system shall be capable of recording comments by the patient or the patient's representative regarding the accuracy or veracity of information in the patient record (henceforth 'patient annotations').	☒ Yes ☐ No
Ambulatory	AM 08.22	The system shall display patient annotations in a manner which distinguishes them from other content in the system.	☒ Yes ☐ No
Ambulatory	AM 08.24	The system shall provide the ability to graph height and weight over time.	☒ Yes ☐ No
Ambulatory	AM 08.25	The system shall provide the ability to calculate and display body mass index (BMI).	☒ Yes ☐ No
Ambulatory	AM 09.01	The system shall provide the ability to capture and store external documents.	☒ Yes ☐ No
Ambulatory	AM 09.03	The system shall provide the ability to save scanned documents as images.	☒ Yes ☐ No

Ambulatory or Inpatient	CCHIT Criteria ID Number	Criteria	Proposer Licensed Software complies with the criteria
Ambulatory	AM 09.04	The system shall provide the ability to receive, store in the patient's record, and display text-based outside reports.	☒ Yes ☐ No
Ambulatory	AM 09.05.01	The system shall provide the ability to index scanned documents and associate a date and document type to the document.	☒ Yes ☐ No
Ambulatory	AM 09.05.02	The system shall provide the ability to retrieve indexed scanned documents based on document type and date.	☒ Yes ☐ No
Ambulatory	AM 09.06	The system shall provide access to clinical images. They must be accessible from within the patient's chart and labeled and date-time stamped or included in a patient encounter document. These images may be stored within the system or be provided through direct linkage to external sources.	☒ Yes ☐ No
Ambulatory	AM 09.07	The system shall provide the ability to accept, store in the patient's record, and display clinical results received through an interface with an external source.	☒ Yes ☐ No
Ambulatory	FN 14.01	The system shall provide the ability to produce patient instructions and patient educational materials which may reside within the system or be provided through links to external source.	☒ Yes ☐ No
Ambulatory	AM 10.03	The system shall have the ability to provide access to patient-specific test and procedure instructions that can be modified by the physician or health organization; these instructions are to be given to the patient. These instructions may reside within the system or be provided through links to external sources.	☒ Yes ☐ No
Ambulatory	AM 10.04	The system shall have the ability to provide access to patient-specific test and procedure instructions that can be modified by the physician or health organization; these instructions are to be given to the filler of the order. These instructions may reside within the system or be provided through links to external sources.	☒ Yes ☐ No

Ambulatory or Inpatient	CCHIT Criteria ID Number	Criteria	Proposer Licensed Software complies with the criteria
Ambulatory	AM 10.05	The system shall provide the ability to record that patient specific instructions or educational material were provided to the patient.	☒ Yes ☐ No
Ambulatory	AM 10.06	The system shall provide the ability to create patient specific instructions.	☒ Yes ☐ No
Ambulatory	FN 17.01	The system shall provide the ability to access and review medication information (such as patient education material or drug monograph). This may reside within the system or be provided through links to external sources.	☒ Yes ☐ No
Ambulatory	AM 11.01	The system shall provide the ability to create prescription or other medication orders with sufficient information for correct filling and dispensing by a pharmacy.	☒ Yes ☐ No
Ambulatory	AM 11.02	The system shall provide the ability to record user and date stamp for prescription related events, such as initial creation, renewal, refills, discontinuation, and cancellation of a prescription.	☒ Yes ☐ No
Ambulatory	AM 11.03	The system shall provide the ability to capture the identity of the prescribing provider for all medication orders.	☒ Yes ☐ No
Ambulatory	AM 11.04	The system shall provide the ability to capture common content for prescription details including strength, sig, quantity, and refills to be selected by the ordering clinician.	☒ Yes ☐ No
Ambulatory	AM 11.05	The system shall provide the ability to receive and display information received through electronic prescription eligibility checking.	☒ Yes ☐ No
Ambulatory	AM 11.07	The system shall provide the ability to reorder a prior prescription without re-entering previous data (e.g. administration schedule, quantity).	☒ Yes ☐ No
Ambulatory	AM 11.08	The system shall provide the ability to print and electronically fax prescriptions.	☒ Yes

Ambulatory or Inpatient	CCHIT Criteria ID Number	Criteria	Proposer Licensed Software complies with the criteria
			☐ No
Ambulatory	AM 11.09	The system shall provide the ability to re-print and re-fax prescriptions.	☒ Yes ☐ No
Ambulatory	AM 11.11	The system shall provide the ability to display a dose calculator for patient-specific dosing based on weight.	☒ Yes ☐ No
Ambulatory	AM 11.12	The system shall provide the ability to identify medication samples dispensed, including lot number and expiration date.	☒ Yes ☐ No
Ambulatory	AM 11.13	The system shall provide the ability to prescribe fractional amounts of medication (e.g. 1/2 tsp, 1/2 tablet).	☒ Yes ☐ No
Ambulatory	AM 11.14	The system shall provide the ability to alert the user if the drug interaction information is outdated.	☒ Yes ☐ No
Ambulatory	AM 11.15	The system shall provide the ability to allow the user to configure prescriptions to incorporate fixed text according to the user's specifications.	☒ Yes ☐ No
Ambulatory	FN 09.04	The system shall provide the ability to capture and maintain, as discrete data, a diagnosis/problem code or description associated with an order of any type (including prescriptions and medications ordered for administration).	☒ Yes ☐ No
Ambulatory	AM 11.17	The system shall provide the ability to display the associated problem or diagnosis (indication) on the printed prescription.	☒ Yes ☐ No
Ambulatory	AM 11.19	The system shall provide the ability to create provider specific medication lists of the most commonly prescribed drugs with a default route, dose, frequency, and quantity.	☒ Yes ☐ No
Ambulatory	AM 11.20	The system shall provide the ability to add reminders for necessary follow up tests based on	☒ Yes

Ambulatory or Inpatient	CCHIT Criteria ID Number	Criteria	Proposer Licensed Software complies with the criteria
		medication prescribed.	☐ No
Ambulatory	FN 07.01	The system shall provide the ability to alert the user at the time a new medication is prescribed/ordered that drug interaction, allergy, and formulary checking will not be performed against the uncoded medication or free text medication.	☒ Yes ☐ No
Ambulatory	FN 07.02	The system shall provide the ability to prescribe/order uncoded and non-formulary medications.	☒ Yes ☐ No
Ambulatory	FN 07.03	The system shall provide the ability to maintain a coded list of medications including a unique identifier for each medication.	☒ Yes ☐ No
Ambulatory	FN 07.04	The system shall provide end-users the ability to search for medications by generic or brand name.	☒ Yes ☐ No
Ambulatory	FN 07.05	The system shall provide the ability to access reference information for prescribing/ordering.	☒ Yes ☐ No
Ambulatory	AM 12.01	The system shall provide the ability to order diagnostic tests, including labs and imaging studies.	☒ Yes ☐ No
Ambulatory	AM 12.02	The system shall provide the ability to capture the identity of the ordering provider for all test orders.	☒ Yes ☐ No
Ambulatory	AM 12.03	The system shall provide the ability to capture appropriate order entry detail, including associated diagnosis.	☒ Yes ☐ No
Ambulatory	AM 12.04	The system shall provide the ability to display user created instructions and/or prompts when ordering diagnostic tests or procedures.	☒ Yes ☐ No
Ambulatory	AM 12.05	The system shall provide the ability to relay orders for a diagnostic test to the correct destination for	☒ Yes

Ambulatory or Inpatient	CCHIT Criteria ID Number	Criteria	Proposer Licensed Software complies with the criteria
		completion.	☐ No
Ambulatory	AM 12.06	The system shall have the ability to provide a view of active orders for an individual patient.	☒ Yes ☐ No
Ambulatory	AM 12.07	The system shall have the ability to provide a view of orders by like or comparable type, e.g., all radiology or all lab orders.	☒ Yes ☐ No
Ambulatory	AM 12.08	The system shall provide the ability to display outstanding orders for multiple patients (as opposed to outstanding orders for a single patient).	☒ Yes ☐ No
Ambulatory	FN 09.01	The system shall provide the ability to require problem / diagnosis as an order component.	☒ Yes ☐ No
Ambulatory	FN 09.02	The system shall provide the ability to view status information for ordered services.	☒ Yes ☐ No
Ambulatory	FN 10.01	The system shall provide the ability to define a set of items to be ordered as a group.	☒ Yes ☐ No
Ambulatory	FN 10.02	The system shall provide the ability to modify order sets.	☒ Yes ☐ No
Ambulatory	FN 10.03	The system shall provide the ability to include in an order set order types including but not limited to medications, laboratory tests, imaging studies, procedures and referrals.	☒ Yes ☐ No
Ambulatory	FN 11.01	The system shall provide the ability for individual orders in an order set to be selected or deselected by the user.	☒ Yes ☐ No
Ambulatory	FN 11.04	The system shall provide the ability to display orders placed through an order set either individually or as a group.	☒ Yes

Ambulatory or Inpatient	CCHIT Criteria ID Number	Criteria	Proposer Licensed Software complies with the criteria
			☐ No
Ambulatory	AM 14.01	The system shall provide the ability to indicate normal and abnormal results based on data provided from the original data source.	☒ Yes ☐ No
Ambulatory	AM 14.02	The system shall provide the ability to display numerical results in flow sheets and graphical form in order to compare results, and shall provide the ability to display values graphed over time.	☒ Yes ☐ No
Ambulatory	AM 14.03	The system shall provide the ability to display non-numeric current and historical test results as textual data.	☒ Yes ☐ No
Ambulatory	AM 14.04	The system shall provide the ability to notify the relevant providers (ordering, copy to) that new results have been received.	☒ Yes ☐ No
Ambulatory	AM 14.05	The system shall provide the ability to filter or sort results by type of test and test date.	☒ Yes ☐ No
Ambulatory	AM 14.07	The system shall provide the ability to forward a result to other users.	☒ Yes ☐ No
Ambulatory	AM 14.08	The system shall provide the ability to link the results to the original order.	☒ Yes ☐ No
Ambulatory	AM 14.09	The system shall provide the ability for a user to attach a free text comment to a result that can be seen by another user who might subsequently view that result.	☒ Yes ☐ No
Ambulatory	AM 14.10	The system shall provide the ability to associate one or more images with a non-numerical result.	☒ Yes ☐ No
Ambulatory	AM 14.11	The system shall provide the ability for a user to whom a result is presented to acknowledge the	☒ Yes

Ambulatory or Inpatient	CCHIT Criteria ID Number	Criteria	Proposer Licensed Software complies with the criteria
		result.	☐ No
Ambulatory	AM 15.01	The system shall provide the ability to capture scanned paper consent documents (covered in DC.1.1.3.1).	☒ Yes ☐ No
Ambulatory	AM 15.02	The system shall provide the ability to store, display and print patient consent forms.	☒ Yes ☐ No
Ambulatory	AM 15.04	The system shall provide the ability to store and display administrative documents (e.g. privacy notices).	☒ Yes ☐ No
Ambulatory	AM 15.05	The system shall provide the ability to chronologically display consents and authorizations.	☒ Yes ☐ No
Ambulatory	AM 16.01	The system shall provide the ability to indicate that a patient has completed advance directive(s).	☒ Yes ☐ No
Ambulatory	AM 16.02	The system shall provide the ability to indicate the type of advance directives, such as living will, durable power of attorney, or a "Do Not Resuscitate" order.	☒ Yes ☐ No
Ambulatory	AM 16.03	The system shall provide the ability to indicate when advance directives were last reviewed.	☒ Yes ☐ No
Ambulatory	AM 17.01	The system shall have the ability to provide access to standard care plan, protocol and guideline documents when requested at the time of the clinical encounter. These documents may reside within the system or be provided through links to external sources.	☒ Yes ☐ No
Ambulatory	AM 17.02	The system shall provide the ability to create site-specific care plan, protocol, and guideline documents.	☒ Yes ☐ No
Ambulatory	AM 17.03	The system shall provide the ability to modify site-	☒ Yes

Ambulatory or Inpatient	CCHIT Criteria ID Number	Criteria	Proposer Licensed Software complies with the criteria
		specific standard care plan, protocol, and guideline documents obtained from outside sources.	☐ No
Ambulatory	FN 12.10	The system shall provide the ability to check for potential interactions between medications to be prescribed and medication allergies and intolerances listed in the record and alert the user at the time of medication prescribing/ordering if potential interactions exist.	☒ Yes ☐ No
Ambulatory	AM 19.05	The system shall provide the ability to set the severity level at which drug interaction warnings should be displayed.	☒ Yes ☐ No
Ambulatory	FN 12.04	The system shall provide the ability to display, on demand, potential drug-allergy interactions, drug-drug interactions and drug-diagnosis interactions based on current medications, active allergies and active problems.	☒ Yes ☐ No
Ambulatory	FN 13.01	The system shall provide drug-diagnosis interaction alerts at the time of medication prescribing/ordering.	☒ Yes ☐ No
Ambulatory	FN 12.11	The system shall provide the ability, when a new allergy is documented, to check for a potential interaction between the newly-documented allergy and the patient's current medications, and alert the user if such interactions exist.	☒ Yes ☐ No
Ambulatory	FN 12.01	The system shall provide the ability to check for potential interactions between medications to be prescribed/ordered and current medications and alert the user at the time of medication prescribing/ordering if potential interactions exist.	☒ Yes ☐ No
Ambulatory	FN 12.05	The system shall provide the ability to view the rationale for a drug interaction alert.	☒ Yes ☐ No
Ambulatory	FN 12.06	The system shall provide the ability to capture and maintain at least one reason for overriding any drug-drug or drug-allergy/intolerance interaction warning triggered at the time of medication	☒ Yes ☐ No

Ambulatory or Inpatient	CCHIT Criteria ID Number	Criteria	Proposer Licensed Software complies with the criteria
		prescribing/ordering.	
Ambulatory	FN 12.07	The system shall provide the ability to enter a structured response when overriding a drug-drug or drug-allergy/intolerance warning.	☒ Yes ☐ No
Ambulatory	FN 12.08	The system shall provide the ability to prescribe/order a medication despite alerts for interactions and/or allergies/intolerances being present.	☒ Yes ☐ No
Ambulatory	FN 12.09	The system shall provide the ability to accept updates to drug interaction databases	☒ Yes ☐ No
Ambulatory	FN 15.01	The system shall provide the ability to capture medication administration details as discrete data, including: (1) the medication name and dose; (2) date and time of administration; (3) route and site; (4) lot number and expiration date; (5) manufacturer; and (6) user ID.	☒ Yes ☐ No
Ambulatory	FN 16.02	The system shall provide the ability to capture, in a discrete field, an allergy/adverse reaction to a specific immunization.	☒ Yes ☐ No
Ambulatory	FN 16.03	The system shall provide the ability to capture immunization administration details as discrete data, including: (1) the immunization type and dose; (2) date and time of administration; (3) route and site; (4) lot number and expiration date; (5) manufacturer; and (6) user ID.	☒ Yes ☐ No
Ambulatory	AM 21.01	The system shall provide the ability to create referral orders with detail adequate for correct routing.	☒ Yes ☐ No
Ambulatory	AM 21.02	The system shall provide the ability to record user ID and date/time stamp for all referral related events.	☒ Yes ☐ No

Ambulatory or Inpatient	CCHIT Criteria ID Number	Criteria	Proposer Licensed Software complies with the criteria
Ambulatory	AM 22.01	The system shall provide the ability to establish criteria for disease management, wellness, and preventive services based on patient demographic data (minimally age and gender).	☒ Yes ☐ No
Ambulatory	AM 22.02	The system shall provide the ability to display alerts based on established guidelines.	☒ Yes ☐ No
Ambulatory	AM 22.03	The system shall provide the ability to establish criteria for disease management, wellness, and preventive services based on clinical data (problem/diagnosis list, current medications).	☒ Yes ☐ No
Ambulatory	AM 22.04	The system shall provide the ability to update disease management guidelines and any associated reference material.	☒ Yes ☐ No
Ambulatory	AM 22.05	The system shall provide the ability to update preventive services/wellness guidelines and any associated reference material.	☒ Yes ☐ No
Ambulatory	AM 22.06	The system shall provide the ability to override guidelines.	☒ Yes ☐ No
Ambulatory	AM 22.07	The system shall provide the ability to document reasons disease management or preventive services/wellness prompts were overridden.	☒ Yes ☐ No
Ambulatory	AM 22.08	The system shall provide the ability to modify the rules or parameters upon which guideline-related alerts are based.	☒ Yes ☐ No
Ambulatory	AM 22.09	The system shall provide the ability to document that a preventive or disease management service has been performed based on activities documented in the record (e.g., vitals signs taken).	☒ Yes ☐ No
Ambulatory	AM 22.10	The system shall provide the ability to document that a disease management or preventive service has been performed with associated dates or other relevant details recorded.	☒ Yes ☐ No

Ambulatory or Inpatient	CCHIT Criteria ID Number	Criteria	Proposer Licensed Software complies with the criteria
Ambulatory	AM 21.11	The system shall provide the ability to individualize alerts to address a patient's specific clinical situation.	☒ Yes ☐ No
Ambulatory	AM 23.01	The system shall provide the ability to identify preventive services, tests or counseling that are due on an individual patient.	☒ Yes ☐ No
Ambulatory	AM 23.02	The system shall provide the ability to display reminders for disease management, preventive and wellness services in the patient record.	☒ Yes ☐ No
Ambulatory	AM 23.03	The system shall provide the ability to identify criteria for disease management, preventive and wellness services based on patient demographic data (age, gender).	☒ Yes ☐ No
Ambulatory	AM 23.04	The system shall provide the ability to identify criteria for disease management, preventive, and wellness services based on clinical data (problem/diagnosis list, current medications, lab values).	☒ Yes ☐ No
Ambulatory	AM 23.05	The system shall provide the ability to modify the guidelines, criteria or rules that trigger the reminders.	☒ Yes ☐ No
Ambulatory	AM 23.06	The system shall provide the ability to notify the provider that patients are due or are overdue for disease management, preventive or wellness services.	☒ Yes ☐ No
Ambulatory	AM 23.07	The system shall provide the ability to produce a list of patients who are due or are overdue for disease management, preventive or wellness services.	☒ Yes ☐ No
Ambulatory	AM 23.09	The system shall provide the ability to automatically generate reminder letters for patients who are due or are overdue for disease management, preventive or wellness services.	☒ Yes ☐ No
Ambulatory	AM 24.01	The system shall provide the ability to create and assign tasks by user or user role.	☒ Yes

Ambulatory or Inpatient	CCHIT Criteria ID Number	Criteria	Proposer Licensed Software complies with the criteria
			☐ No
Ambulatory	AM 24.02	The system shall provide the ability to present a list of tasks by user or user role.	☒ Yes ☐ No
Ambulatory	AM 24.03	The system shall provide the ability to re-assign and route tasks from one user to another user.	☒ Yes ☐ No
Ambulatory	AM 24.04	The system shall provide the ability to designate a task as completed.	☒ Yes ☐ No
Ambulatory	AM 24.05	The system shall provide the ability to remove a task without completing the task.	☒ Yes ☐ No
Ambulatory	AM 25.01	The system shall provide the ability to document verbal/telephone communication into the patient record.	☒ Yes ☐ No
Ambulatory	AM 25.03	The system shall support messaging between users.	☒ Yes ☐ No
Ambulatory	AM 26.01	The system shall have the ability to provide electronic communication between prescribers and pharmacies or other intended recipients of the medication order.	☒ Yes ☐ No
Ambulatory	AM 27.01	The system shall provide the ability to maintain a directory of all clinical personnel who currently use or access the system.	☒ Yes ☐ No
Ambulatory	AM 27.02	The system shall provide the ability to maintain a directory which contains identifiers required for licensed clinicians to support the practice of medicine including at a minimum state medical license, DEA, and NPI.	☐ Yes ☒ No
Ambulatory	AM 27.03	The system shall allow authorized users to update the directory.	☒ Yes

Ambulatory or Inpatient	CCHIT Criteria ID Number	Criteria	Proposer Licensed Software complies with the criteria
			☐ No
Ambulatory	AM 27.04	The system shall provide the ability to create and maintain a directory of clinical personnel external to the organization who are not users of the system to facilitate communication and information exchange.	☐ Yes ☒ No
Ambulatory	AM 28.01	The system shall provide the ability to display a schedule of patient appointments, populated either through data entry in the system itself or through an external application interoperating with the system.	☒ Yes ☐ No
Ambulatory	AM 29.01	The system shall provide the ability to generate reports of clinical and administrative data using either internal or external reporting tools.	☒ Yes ☐ No
Ambulatory	AM 29.02	The system shall provide the ability to generate reports consisting of all or part of an individual patient's medical record (e.g. patient summary).	☒ Yes ☐ No
Ambulatory	AM 29.03	The system shall provide the ability to generate reports regarding multiple patients (e.g. diabetes roster).	☒ Yes ☐ No
Ambulatory	AM 29.04	The system shall provide the ability to specify report parameters (sort and filter criteria) based on patient demographic and clinical data (e.g., all male patients over 50 that are diabetic and have a HbA1c value of over 7.0 or that are on a certain medication).	☒ Yes ☐ No
Ambulatory	AM 29.05	The system shall provide the ability to access reports outside the EHR application.	☒ Yes ☐ No
Ambulatory	AM 29.06	The system shall provide the ability to produce reports based on the absence of a clinical data element (e.g., a lab test has not been performed or a blood pressure has not been measured in the last year).	☒ Yes ☐ No
Ambulatory	AM 29.07	The system shall provide the ability to save report	☒ Yes

Ambulatory or Inpatient	CCHIT Criteria ID Number	Criteria	Proposer Licensed Software complies with the criteria
		parameters for generating subsequent reports.	☐ No
Ambulatory	AM 29.08	The system shall provide the ability to modify one or more parameters of a saved report specification when generating a report using that specification.	☒ Yes ☐ No
Ambulatory	AM 30.01	The system shall provide the ability to define one or more reports as the formal health record for disclosure purposes.	☒ Yes ☐ No
Ambulatory	AM 30.02	The system shall provide the ability to generate hardcopy or electronic output of part or all of the individual patient's medical record.	☒ Yes ☐ No
Ambulatory	AM 30.03	The system shall provide the ability to generate hardcopy and electronic output by date and/or date range.	☒ Yes ☐ No
Ambulatory	AM 30.04	The system shall provide the ability to export structured data which removes those identifiers listed in the HIPAA definition of a limited dataset. This export on hardcopy and electronic output shall leave the actual PHI data unmodified in the original record.	☒ Yes ☐ No
Ambulatory	AM 30.05	The system shall provide the ability to create hardcopy and electronic report summary information (procedures, medications, labs, immunizations, allergies, and vital signs).	☒ Yes ☐ No
Ambulatory	AM 30.06	The system shall have the ability to provide support for disclosure management in compliance with HIPAA and applicable law.	☒ Yes ☐ No
Ambulatory	AM 31.02	The system shall provide the ability to document encounters by one or more of the following means: direct keyboard entry of text; structured data entry utilizing templates, forms, pick lists or macro substitution; dictation with subsequent transcription of voice to text, either manually or via voice recognition system.	☒ Yes ☐ No
Ambulatory	AM 31.03	The system shall provide the ability to associate	☒ Yes

Ambulatory or Inpatient	CCHIT Criteria ID Number	Criteria	Proposer Licensed Software complies with the criteria
		individual encounters with diagnoses.	☐ No
Ambulatory	AM 31.04	The system shall have the ability to provide filtered displays of encounters based on encounter characteristics, including date of service, encounter provider and associated diagnosis.	☒ Yes ☐ No
Ambulatory	AM 33.01	The system shall provide the ability to display medical eligibility obtained from patient's insurance carrier, populated either through data entry in the system itself or through an external application interoperating with the system.	☒ Yes ☐ No
Ambulatory	AM 34.02	The system shall provide the ability to specify the role of each provider associated with a patient, such as encounter provider, primary care provider, attending, resident, or consultant using structured data.	☒ Yes ☐ No
Ambulatory	AM 35.01	The system shall provide the ability to update the clinical content or rules utilized to generate clinical decision support reminders and alerts.	☒ Yes ☐ No
Ambulatory	AM 35.02	The system shall provide the ability to update clinical decision support guidelines and associated reference material.	☒ Yes ☐ No
Ambulatory	FN 18.02	The system shall provide the ability to capture and maintain, as discrete data, the reason for variation from rule-based clinical messages (for example alerts and reminders).	☒ Yes ☐ No
Ambulatory	AM 36.02	The system shall provide a means to document a patient's dispute with information currently in their chart.	☒ Yes ☐ No
Ambulatory	AM 36.04	The system shall provide the ability to identify certain information as confidential and only make that accessible by appropriately authorized users.	☒ Yes ☐ No
Ambulatory	AM 36.05	The system shall provide the ability to prevent specified user(s) from accessing a designated patient's chart.	☒ Yes ☐ No

Ambulatory or Inpatient	CCHIT Criteria ID Number	Criteria	Proposer Licensed Software complies with the criteria
Ambulatory	AM 36.06	When access to a chart is restricted, the system shall provide a means for appropriately authorized users to "break the glass" for emergency situations.	☒ Yes ☐ No
Ambulatory	AM 37.01	The system shall provide the ability to retain data until otherwise purged, deleted, archived or otherwise deliberately removed.	☒ Yes ☐ No
Ambulatory	AM 39.01	The system shall provide the ability to export (extract) pre-defined set(s) of data out of the system.	☒ Yes ☐ No
Ambulatory	AM 40.01	The system shall provide the ability for multiple users to interact concurrently with the EHR application.	☒ Yes ☐ No
Ambulatory	AM 40.02	The system shall provide the ability for concurrent users to simultaneously view the same record.	☒ Yes ☐ No
Ambulatory	AM 40.03	The system shall provide the ability for concurrent users to view the same clinical documentation or template.	☒ Yes ☐ No
Ambulatory	AM 40.04	The system shall provide protection to maintain the integrity of clinical data during concurrent access.	☒ Yes ☐ No
Ambulatory	IO-AM 07.01	The system shall provide the ability to receive and store general laboratory results using the HL7 v.2.5.1 ORU message standard	☒ Yes ☐ No
Ambulatory	IO-AM 09.06	The system shall provide the ability to send an electronic prescription to pharmacy	☒ Yes ☐ No
Ambulatory	IO-AM 09.09	The system shall provide the ability to respond to a request for a refill sent from a pharmacy	☒ Yes ☐ No
Ambulatory	IO-AM 09.13	The system shall provide the ability to send a query to verify prescription drug insurance	☒ Yes

Ambulatory or Inpatient	CCHIT Criteria ID Number	Criteria	Proposer Licensed Software complies with the criteria
		eligibility and apply response to formulary and benefit files to determine coverage	☐ No
Ambulatory	IO-AM 09.14	The system shall provide the ability to capture and display formulary information from pharmacy or PBM (Pharmacy Benefits Manager) by applying eligibility response	☒ Yes ☐ No
Ambulatory	IO-AM 09.15	The system shall provide the ability to send a query for medication history to PBM or pharmacy to capture and display medication list from the EHR	☒ Yes ☐ No
Ambulatory	IO-AM 10.10	The system shall provide the ability to display HITSP C32/CCD documents and file them as intact documents in the EHR. Summary patient record content information will include: patient demographics, medication list, medication allergy list.	☒ Yes ☐ No
Ambulatory	IO-AM 10.20	The system shall provide the ability to generate and format patient summary documents per the following specifications: HITSP C32 (v2.3 or v2.5) Summary patient record content information will include: patient demographics, medications, medication allergies Generated xml documents must demonstrate use of industry-standard vocabularies/terminologies. The intent is to test the Required (R) fields, including the product coded terminology for the medication and medication allergy.	☒ Yes ☐ No
Ambulatory	PC 01.11	The system shall provide the ability for a clinical or other authorized user to view the full content of a finalized note. The full content of a finalized note includes the finalized note and any finalized modifications to that note including finalized changes referred to as corrections, clarifications, addenda, etc. Finalizing is the act of publishing into the system in a way that others may access information that has changed.	☒ Yes ☐ No

Ambulatory or Inpatient	CCHIT Criteria ID Number	Criteria	Proposer Licensed Software complies with the criteria
Ambulatory	PC 04.08	The system shall provide the ability to save a note in progress prior to finalizing the note.	☒ Yes ☐ No
Ambulatory	PC 08.01	The system shall have the ability to record and display the identity and credentials of all users who entered all or part of a note even if they did not finalize the note.	☒ Yes ☐ No
Ambulatory	SC 01.01	The system shall enforce the most restrictive set of rights/privileges or accesses needed by users/groups (e.g. System Administration, Clerical, Nurse, Doctor, etc.), or processes acting on behalf of users, for the performance of specified tasks.	☒ Yes ☐ No
Ambulatory	SC 01.02	The system shall provide the ability for authorized administrators to assign restrictions or privileges to users/groups.	☒ Yes ☐ No
Ambulatory	SC 01.03	The system must be able to associate permissions with a user using one or more of the following access controls: 1) user-based (access rights assigned to each user); 2) role-based (users are grouped and access rights assigned to these groups); or 3) context-based (role-based with additional access rights assigned or restricted based on the context of the transaction such as time-of-day, workstation-location, emergency-mode, etc.)	☒ Yes ☐ No
Ambulatory	SC 01.04	The system shall support removal of a user's privileges without deleting the user from the system. The purpose of the criteria is to provide the ability to remove a user's privileges, but maintain a history of the user in the system.	☒ Yes ☐ No
Ambulatory	SC 02.01	The system shall allow an authorized administrator to set the inclusion or exclusion of auditable events in SC 02.03 based on organizational policy & operating requirements/limits.	☒ Yes ☐ No
Ambulatory	SC 02.02	The system shall support logging to a common audit engine using the schema and transports specified in the Audit Log specification of IHE Audit Trails and Node Authentication (ATNA)	☒ Yes ☐ No

Ambulatory or Inpatient	CCHIT Criteria ID Number	Criteria	Proposer Licensed Software complies with the criteria
		Profile.	
Ambulatory	SC 02.03	The system shall be able to detect security-relevant events that it mediates and generate audit records for them. At a minimum the events shall include those listed in the Appendix Audited Events. Note: The system is only responsible for auditing security events that it mediates. A mediated event is an event that the system has some active role in allowing or causing to happen or has opportunity to detect. The system is not expected to create audit logs entries for security events that it does not mediate.	☒ Yes ☐ No
Ambulatory	SC 02.04	The system shall record within each audit record the following information when it is available: (1) date and time of the event; (2) the component of the system (e.g. software component, hardware component) where the event occurred; (3) type of event (including: data description and patient identifier when relevant); (4) subject identity (e.g. user identity); and (5) the outcome (success or failure) of the event.	☒ Yes ☐ No
Ambulatory	SC 02.05	The system shall provide authorized administrators with the capability to read all audit information from the audit records in one of the following two ways: 1) The system shall provide the audit records in a manner suitable for the user to interpret the information. The system shall provide the capability to generate reports based on ranges of system date and time that audit records were collected. 2) The system shall be able to export logs into text format in such a manner as to allow correlation based on time (e.g. UTC synchronization).	☒ Yes ☐ No
Ambulatory	SC 02.06	The system shall be able to support time synchronization using NTP/SNTP, and use this synchronized time in all security records of time.	☒ Yes ☐ No
Ambulatory	SC 02.07	The system shall have the ability to format for export recorded time stamps using UTC based on ISO 8601. Example: "1994-11-05T13:15:30-05:00" corresponds to November 5, 1994, 8:15:30 am, US Eastern Standard Time.	☒ Yes ☐ No

Ambulatory or Inpatient	CCHIT Criteria ID Number	Criteria	Proposer Licensed Software complies with the criteria
Ambulatory	SC 02.08	The system shall prohibit all users read access to the audit records, except those users that have been granted explicit read-access. The system shall protect the stored audit records from unauthorized deletion. The system shall prevent modifications to the audit records.	☒ Yes ☐ No
Ambulatory	SC 03.01	The system shall authenticate the user before any access to Protected Resources (e.g. PHI) is allowed, including when not connected to a network e.g. mobile devices.	☒ Yes ☐ No
Ambulatory	SC 03.02	When passwords are used, the system shall support password strength rules that allow for minimum number of characters, and inclusion of alpha-numeric complexity.	☒ Yes ☐ No
Ambulatory	SC 03.03	The system upon detection of inactivity of an interactive session shall prevent further viewing and access to the system by that session by terminating the session, or by initiating a session lock that remains in effect until the user reestablishes access using appropriate identification and authentication procedures. The inactivity timeout shall be configurable.	☒ Yes ☐ No
Ambulatory	SC 03.04	The system shall enforce a limit of (configurable) consecutive invalid access attempts by a user. The system shall protect against further, possibly malicious, user authentication attempts using an appropriate mechanism (e.g. locks the account/node until released by an administrator, locks the account/node for a configurable time period, or delays the next login prompt according to a configurable delay algorithm).	☒ Yes ☐ No
Ambulatory	SC 03.05	When passwords are used, the system shall provide an administrative function that resets passwords.	☒ Yes ☐ No
Ambulatory	SC 03.06	When passwords are used, user accounts that have been reset by an administrator shall require the user to change the password at next successful logon.	☒ Yes ☐ No
Ambulatory	SC 03.07	The system shall provide only limited feedback	☒ Yes

Ambulatory or Inpatient	CCHIT Criteria ID Number	Criteria	Proposer Licensed Software complies with the criteria
		information to the user during the authentication.	☐ No
Ambulatory	SC 03.08	The system shall support case-insensitive usernames that contain typeable alpha-numeric characters in support of ISO-646/ECMA-6 (aka US ASCII).	☒ Yes ☐ No
Ambulatory	SC 03.09	When passwords are used, the system shall allow an authenticated user to change their password consistent with password strength rules (SC 03.02).	☒ Yes ☐ No
Ambulatory	SC 03.10	When passwords are used, the system shall support case-sensitive passwords that contain typeable alpha-numeric characters in support of ISO-646/ECMA-6 (aka US ASCII).	☒ Yes ☐ No
Ambulatory	SC 03.11	When passwords are used, the system shall use either standards-based encryption, e.g., 3DES, AES, or standards-based hashing, e.g., SHA1 to store or transport passwords.	☒ Yes ☐ No
Ambulatory	SC 03.12	When passwords are used, the system shall prevent the reuse of passwords previously used within a specific (configurable) timeframe (i.e., within the last X days, etc. - e.g. "last 180 days"), or shall prevent the reuse of a certain (configurable) number of the most recently used passwords (e.g. "last 5 passwords").	☒ Yes ☐ No
Ambulatory	SC 04.01	The system shall include documentation that describes the patch (hot-fix) handling process the vendor will use for EHR, operating system and underlying tools (e.g. a specific web site for notification of new patches, an approved patch list, special instructions for installation, and post-installation test).	☒ Yes ☐ No
Ambulatory	SC 04.02	The system shall include documentation that explains system error or performance messages to users and administrators, with the actions required.	☒ Yes ☐ No
Ambulatory	SC 04.03	The system shall include documentation of product capacities (e.g. number of users, number of transactions per second, number of records,	☒ Yes

Ambulatory or Inpatient	CCHIT Criteria ID Number	Criteria	Proposer Licensed Software complies with the criteria
		network load, etc.) and the baseline representative configurations assumed for these capacities (e.g. number or type of processors, server/workstation configuration and network capacity, etc).	☐ No
Ambulatory	SC 04.04	The system shall include documented procedures for product installation, start-up and/or connection.	☒ Yes ☐ No
Ambulatory	SC 04.05	The system shall include documentation of the minimal privileges necessary for each service and protocol necessary to provide EHR functionality and/or serviceability.	☒ Yes ☐ No
Ambulatory	SC 04.06	The system shall include documentation available to the customer stating whether or not there are known issues or conflicts with security services in at least the following service areas: antivirus, intrusion detection, malware eradication, host-based firewall and the resolution of that conflict (e.g. most systems should note that full virus scanning should be done outside of peak usage times and should exclude the databases.).	☒ Yes ☐ No
Ambulatory	SC 04.07	If the system includes hardware, the system shall include documentation that covers the expected physical environment necessary for proper secure and reliable operation of the system including: electrical, HVAC, sterilization, and work area.	☒ Yes ☐ No
Ambulatory	SC 04.08	The system shall include documentation that itemizes the services (e.g. PHP, web services) and network protocols/ports (e.g. HL-7, HTTP, FTP) that are necessary for proper operation and servicing of the system, including justification of the need for that service and protocol. This information may be used by the healthcare facility to properly configure their network defenses (firewalls and routers).	☒ Yes ☐ No
Ambulatory	SC 04.09	The system shall include documentation that describes the steps needed to confirm that the system installation was properly completed and that the system is operational.	☒ Yes ☐ No

Ambulatory or Inpatient	CCHIT Criteria ID Number	Criteria	Proposer Licensed Software complies with the criteria
Ambulatory	SC 04.10	The system shall include documentation available to the customer that provides guidelines for configuration and use of the security controls necessary to support secure and reliable operation of the system, including but not limited to: creation, modification, and deactivation of user accounts, management of roles, reset of passwords, configuration of password constraints, and audit logs.	☒ Yes ☐ No
Ambulatory	SC 05.01	The software used to install and update the system, independent of the mode or method of conveyance, shall be certified free of malevolent software ("malware"). Vendor may self-certify compliance with this standard through procedures that make use of commercial malware scanning software.	☒ Yes ☐ No
Ambulatory	SC 05.02	The system shall be configurable to prevent corruption or loss of data already accepted into the system in the event of a system failure (e.g. integrating with a UPS, etc.).	☒ Yes ☐ No
Ambulatory	SC 06.01	The system shall support protection of confidentiality of all Protected Health Information (PHI) delivered over the Internet or other known open networks via encryption using triple-DES (3DES) or the Advanced Encryption Standard (AES) and an open protocol such as TLS, SSL, IPSec, XML encryptions, or S/MIME or their successors.	☒ Yes ☐ No
Ambulatory	SC 06.02	When passwords are used, the system shall not display passwords while being entered.	☒ Yes ☐ No
Ambulatory	SC 06.03	For systems that provide access to PHI through a web browser interface (i.e. HTML over HTTP) shall include the capability to encrypt the data communicated over the network via SSL (HTML over HTTPS). Note: Web browser interfaces are often used beyond the perimeter of the protected enterprise network	☒ Yes ☐ No
Ambulatory	SC 06.04	The system shall support protection of integrity of all Protected Health Information (PHI) delivered over the Internet or other known open networks	☒ Yes ☐ No

Ambulatory or Inpatient	CCHIT Criteria ID Number	Criteria	Proposer Licensed Software complies with the criteria
		via SHA1 hashing and an open protocol such as TLS, SSL, IPSec, XML digital signature, or S/MIME or their successors.	
Ambulatory	SC 06.05	The system shall support ensuring the authenticity of remote nodes (mutual node authentication) when communicating Protected Health Information (PHI) over the Internet or other known open networks using an open protocol (e.g. TLS, SSL, IPSec, XML sig, S/MIME).	☒ Yes ☐ No
Ambulatory	SC 06.06	The system, when storing PHI on any device intended to be portable/removable (e.g. thumb-drives, CD-ROM, PDA, Notebook), shall support use of a standards based encrypted format using triple-DES (3DES), or the Advanced Encryption Standard (AES), or their successors.	☒ Yes ☐ No
Ambulatory	SC 06.07	The system, prior to access to any PHI, shall display a configurable warning or login banner (e.g. "The system should only be accessed by authorized users"). In the event that a system does not support pre-login capabilities, the system shall display the banner immediately following authorization.	☒ Yes ☐ No
Ambulatory	SC 08.01	The system shall be able to generate a backup copy of the application data, security credentials, and log/audit files.	☒ Yes ☐ No
Ambulatory	SC 08.02	The system restore functionality shall result in a fully operational and secure state. This state shall include the restoration of the application data, security credentials, and log/audit files to their previous state.	☒ Yes ☐ No
Ambulatory	SC 08.03	If the system claims to be available 24x7 then the system shall have ability to run a backup concurrently with the operation of the application.	☒ Yes ☐ No
Inpatient	IP 01.01	The system shall provide the ability to display bed assignment information including temporary bed assignment.	☒ Yes ☐ No

Ambulatory or Inpatient	CCHIT Criteria ID Number	Criteria	Proposer Licensed Software complies with the criteria
Inpatient	IP 01.02	The system shall provide the ability to identify the current physical location of any patient during their stay, to include the date and time the patient entered their current location.	☒ Yes ☐ No
Inpatient	IP 01.03	The system shall provide the ability to identify a patient record as restricted or no release of information.	☒ Yes ☐ No
Inpatient	FN 01.01	The system shall provide the ability to access demographic information such as name, date of birth and gender needed for patient care functions.	☒ Yes ☐ No
Inpatient	FN 01.02	The system shall capture and maintain demographic information as discrete data elements as part of the patient record.	☒ Yes ☐ No
Inpatient	FN 02.01	The system shall provide the ability to query for a patient by more than one form of identification.	☒ Yes ☐ No
Inpatient	IP 02.01	The system shall provide the ability to uniquely identify clinicians for the provision of care.	☒ Yes ☐ No
Inpatient	IP 02.02	The system shall provide the ability to assign clinicians to appropriate teams, where teams are defined as groups of clinicians who share responsibility for covering the same group of patients.	☒ Yes ☐ No
Inpatient	IP 02.04	The system shall provide the ability to specify the Admitting Physician.	☒ Yes ☐ No
Inpatient	IP 02.05	The system shall provide the ability to maintain a directory which identifies the physician by multiple unique identifiers.	☒ Yes ☐ No
Inpatient	FN 03.01	The system shall provide the ability to capture and maintain, as discrete data elements, the identity of all providers associated with a specific patient encounter.	☒ Yes ☐ No

Ambulatory or Inpatient	CCHIT Criteria ID Number	Criteria	Proposer Licensed Software complies with the criteria
Inpatient	FN 03.02	The system shall provide the ability to capture and maintain, as discrete data elements, the principal provider responsible for the care of an individual patient.	☒ Yes ☐ No
Inpatient	IP 03.01	The system shall provide for the ability to identify patients by status e.g. active, admitted patients or inactive, discharged patients.	☒ Yes ☐ No
Inpatient	FN 04.06	The system shall provide the ability to display different views of the problem / diagnosis list based upon the status of the problem.	☒ Yes ☐ No
Inpatient	IP 04.02	The system shall provide the ability to display the history of changes made to a specific problem / diagnosis, including clinician, date, and time.	☒ Yes ☐ No
Inpatient	IP 04.03	The system shall provide the ability to configure problem list documentation to allow the entry of free text problems and to display an alert of the implications of entering the free text (e.g. free text won't trigger decision support)	☒ Yes ☐ No
Inpatient	IP 04.05	When the display of the problem list exceeds the current screen or printed page, the system shall indicate that the list continues.	☒ Yes ☐ No
Inpatient	IP 04.06	The system shall provide the ability to modify documentation entered in error, maintaining a record of the original entry, identification of the clinician correcting the error and the date and time corrected.	☒ Yes ☐ No
Inpatient	IP 04.09	The system shall provide the ability to maintain a coded list of problems.	☒ Yes ☐ No
Inpatient	IP 04.11	The system shall provide the ability to search all patient records and identify individual patients with specific problems / diagnoses.	☒ Yes ☐ No
Inpatient	FN 04.01	The system shall provide the ability to capture, maintain and display free text comments associated with the problem / diagnosis.	☒ Yes

Ambulatory or Inpatient	CCHIT Criteria ID Number	Criteria	Proposer Licensed Software complies with the criteria
			☐ No
Inpatient	FN 04.02	The system shall provide the ability to capture, maintain and display, as discrete data elements, all problems associated with a patient.	☒ Yes ☐ No
Inpatient	FN 04.04	The system shall provide the ability to print a problem/diagnosis list.	☒ Yes ☐ No
Inpatient	FN 04.05	The system shall provide the ability to capture and maintain, as discrete data elements, the specific problem / diagnosis, user, date and time of all updates to the problem list.	☒ Yes ☐ No
Inpatient	FN 05.10	The system shall provide the ability to capture the source of the allergy information.	☒ Yes ☐ No
Inpatient	IP 05.02	The system shall provide the ability to capture the severity of an allergic or adverse reaction.	☒ Yes ☐ No
Inpatient	IP 05.03	The system shall provide the ability to record that the allergies are “Unknown” or “Unable to Assess Allergies.”	☒ Yes ☐ No
Inpatient	IP 05.04	The system shall provide the ability to require the documentation of patient allergies (inclusive of using such terms as Unknown or Unable to Assess) before completion of the medication order.	☒ Yes ☐ No
Inpatient	IP 05.05	When allergies are “Unknown” or “Unable to Assess Allergies,” the system shall provide the ability to require a reason to be documented.	☒ Yes ☐ No
Inpatient	IP 05.06	When allergies are “Unknown” or “Unable to Assess Allergies,” the system shall provide the ability to inform the clinician for the need of an update.	☒ Yes ☐ No
Inpatient	FN 05.12	The system shall provide the ability to display the	☒ Yes

Ambulatory or Inpatient	CCHIT Criteria ID Number	Criteria	Proposer Licensed Software complies with the criteria
		allergy list, including date of entry.	☐ No
Inpatient	IP 05.08	When the display of the allergy list exceeds the current screen or printed page, the system shall indicate that the list continues.	☒ Yes ☐ No
Inpatient	IP 05.09	The system shall provide the ability to print the allergy list.	☒ Yes ☐ No
Inpatient	IP 05.10	The system shall provide the ability to change / add allergies directly from the allergy list and during medication ordering.	☒ Yes ☐ No
Inpatient	IP 05.11	The system shall provide the configurable ability to enter free text allergies and display them in a manner that distinguishes them from coded allergy entries.	☒ Yes ☐ No
Inpatient	IP 05.12	The system shall provide the ability to indicate that interaction checking will not occur against free text allergies.	☒ Yes ☐ No
Inpatient	IP 05.13	The system shall provide a mechanism to correct erroneous allergy documentation, displaying it as erroneous with the identification of the clinician correcting the allergy and the date and time of the correction.	☒ Yes ☐ No
Inpatient	FN 05.01	The system shall provide the ability to modify or inactivate an item on the allergy and adverse reaction list.	☒ Yes ☐ No
Inpatient	FN 05.02	The system shall provide the ability to capture and maintain, as discrete data, the reason for inactivating or revising an item from the allergy and adverse reaction list.	☒ Yes ☐ No
Inpatient	FN 05.04	The system shall provide the ability to specify the type of allergic or adverse reaction in a discrete data field.	☒ Yes ☐ No
Inpatient	FN 05.05	The system shall provide the ability to capture and maintain, as discrete data, the identity of the user	☒ Yes

Ambulatory or Inpatient	CCHIT Criteria ID Number	Criteria	Proposer Licensed Software complies with the criteria
		who added, modified, inactivated or removed items from the allergy and adverse reaction list, including attributes of the changed items. The user ID and date/time stamp shall be recorded.	☐ No
Inpatient	FN 05.07	The system shall provide the ability for a user to explicitly capture and maintain, as discrete data, that the allergy list was reviewed. The user ID and date/time stamp shall be recorded when the allergies reviewed option is selected.	☒ Yes ☐ No
Inpatient	FN 05.09	The system shall provide the ability to explicitly indicate in a discrete field that a patient has no known drug allergies or adverse reactions.	☒ Yes ☐ No
Inpatient	FN 05.13	The system shall provide the ability to capture, maintain and display, as discrete data, lists of medications and other agents to which the patient has had an allergic or other adverse reaction.	☒ Yes ☐ No
Inpatient	IP 06.01	When the display of the medication list exceeds the current screen or printed page, the system shall indicate that the list continues.	☒ Yes ☐ No
Inpatient	IP 06.02	The system shall provide the ability to display the name of the ordering clinician, medication order (name, dose, route, and frequency), a start date and time, and an end date and time or duration for entries on the medication list.	☒ Yes ☐ No
Inpatient	IP 06.03	The system shall provide the ability to display on the medication list active medications that the patient brings from home to take while hospitalized, which the Pharmacy may not dispense.	☒ Yes ☐ No
Inpatient	IP 06.04	The system shall provide the ability to update the medication list with new medication orders, start date and time, end date and time or duration and pharmacy verification status.	☒ Yes ☐ No
Inpatient	FN 06.01	The system shall provide the ability to update and display a patient-specific medication list based on current medication orders or prescriptions.	☒ Yes ☐ No

Ambulatory or Inpatient	CCHIT Criteria ID Number	Criteria	Proposer Licensed Software complies with the criteria
Inpatient	IP 06.05	The system shall provide the ability to update the medication list with changes from pharmacist verification including pharmacist, date, and time.	☒ Yes ☐ No
Inpatient	IP 06.06	The system shall provide the ability to indicate the reason/ indication for the medication during order entry.	☒ Yes ☐ No
Inpatient	IP 06.07	The system shall provide the ability to record the reason or indication for the medication when recording historical or home medications.	☒ Yes ☐ No
Inpatient	IP 06.08	The system shall provide the ability to change / order medication directly from the medication list and that the same clinical decision support, alerts and interaction checking occurring during order entry also occur.	☒ Yes ☐ No
Inpatient	IP 06.09	The system shall provide the ability to change / order medication directly from med reconciliation.	☒ Yes ☐ No
Inpatient	IP 06.11	The system shall provide the ability to sort and filter the medication list.	☒ Yes ☐ No
Inpatient	IP 06.12	The system shall provide the configurable ability to enter free text medications and display them in a manner that distinguishes them from other medication entries.	☒ Yes ☐ No
Inpatient	IP 06.12.01	The system shall provide the ability to indicate that interaction checking will not occur against free text medications.	☒ Yes ☐ No
Inpatient	IP 06.16	The system shall provide the ability to display potential side effects of medications from the medication list.	☒ Yes ☐ No
Inpatient	FN 06.02	The system shall provide the ability to display a view that includes only active medications.	☒ Yes ☐ No

Ambulatory or Inpatient	CCHIT Criteria ID Number	Criteria	Proposer Licensed Software complies with the criteria
Inpatient	FN 06.04	The system shall provide the ability to print a current medication list.	☒ Yes ☐ No
Inpatient	FN 06.05	The system shall provide the ability to display that the patient takes no medications.	☒ Yes ☐ No
Inpatient	FN 06.06	The system shall provide the ability to capture and maintain, as discrete data elements, all current medications including over-the-counter and complementary medications such as vitamins, herbs and supplements.	☒ Yes ☐ No
Inpatient	IP 07.01	The system shall provide the ability to display test results during the ordering process.	☒ Yes ☐ No
Inpatient	IP 07.02	The system shall provide the ability to display test results during medication administration.	☒ Yes ☐ No
Inpatient	IP 08.01	The system shall provide the ability to display patient name, identification number, and age or date of birth on all order screens.	☒ Yes ☐ No
Inpatient	IP 08.04	The system shall provide the ability to display an indicator that the patient has allergies (allergies exist), or no known allergies, on all order screens.	☒ Yes ☐ No
Inpatient	IP 08.05	The system shall provide the ability to document a verbal order (including telephone orders); documentation shall include the ordering clinician as well as the clinician taking the verbal order.	☒ Yes ☐ No
Inpatient	IP 08.07	The system shall provide the ability to document a verification “read-back” of the complete order by the person receiving the telephone or verbal order.	☒ Yes ☐ No
Inpatient	IP 08.09	The system shall provide the ability to include urgency status in orders.	☒ Yes ☐ No

Ambulatory or Inpatient	CCHIT Criteria ID Number	Criteria	Proposer Licensed Software complies with the criteria
Inpatient	IP 08.10	The system shall provide the ability for clinicians to write all patient care orders electronically, including, but not limited to nursing care, medications / immunizations, diagnostic testing, nutrition and food service, consultation, and blood products.	☒ Yes ☐ No
Inpatient	IP 08.11	The system shall provide the ability to renew, modify, and discontinue orders.	☒ Yes ☐ No
Inpatient	IP 08.13	For each order type, the system shall provide the ability to capture and display the identity of the user, the date and the time when the order is signed, co-signed, renewed, modified or discontinued.	☒ Yes ☐ No
Inpatient	IP 08.14	The system shall provide the ability to display order history for any order, including the ordering clinician, order details, date, and time.	☒ Yes ☐ No
Inpatient	IP 08.15	The system shall provide the ability to set or configure the entry fields available for each order by order type.	☒ Yes ☐ No
Inpatient	IP 08.16	The system shall provide the ability to set or configure which fields are required for a complete order by order type.	☒ Yes ☐ No
Inpatient	IP 08.17	The system shall provide the ability to configure orders within order sets with default order details.	☒ Yes ☐ No
Inpatient	IP 08.18	The system shall provide the ability for the ordering provider to include free text comments or instructions in the order to be viewed by providers departments/services fulfilling the order or service.	☒ Yes ☐ No
Inpatient	IP 08.19	The system shall provide the ability to associate an order of any type (including medication order) with a related clinical problem(s) and/or diagnosis code(s) and description.	☒ Yes ☐ No

Ambulatory or Inpatient	CCHIT Criteria ID Number	Criteria	Proposer Licensed Software complies with the criteria
Inpatient	IP 08.20	The system shall provide the ability to allow the entry of orders to be activated at a future date and time including admission orders, discharge orders, and post-op orders.	☒ Yes ☐ No
Inpatient	IP 08.22	The system shall provide the ability to print orders for all order types.	☒ Yes ☐ No
Inpatient	IP 08.24	The system shall provide the ability to enter conditional orders that can be activated when certain criteria and conditions are met.	☒ Yes ☐ No
Inpatient	IP 08.26	The system shall provide the ability for a clinician to save frequently used and institutionally approved orderables or order sets as “favorites” or "preferences" to facilitate retrieval and ordering.	☒ Yes ☐ No
Inpatient	IP 08.27	The system shall provide the ability to display orders for a patient by different views.	☒ Yes ☐ No
Inpatient	FN 09.05	The system shall provide the ability for cosigned orders to retain and display the identities of all providers who co-sign the order.	☒ Yes ☐ No
Inpatient	IP 08.30	The system shall provide the ability to electronically communicate the order to the receiving departmental system.	☒ Yes ☐ No
Inpatient	FN 09.02	The system shall provide the ability to view status information for ordered services.	☒ Yes ☐ No
Inpatient	IP 08.32	The system shall provide the ability to designate access to entering individual orders by user role.	☒ Yes ☐ No
Inpatient	FN 09.01	The system shall provide the ability to require problem / diagnosis as an order component.	☒ Yes ☐ No

Ambulatory or Inpatient	CCHIT Criteria ID Number	Criteria	Proposer Licensed Software complies with the criteria
Inpatient	FN 09.04	The system shall provide the ability to capture and maintain, as discrete data, a diagnosis/problem code or description associated with an order of any type (including prescriptions and medications ordered for administration).	☒ Yes ☐ No
Inpatient	IP 12.30	The system shall be capable of designating explicit routes for medications and prohibit selection of other routes during the ordering process.	☒ Yes ☐ No
Inpatient	IP 09.01	The system shall provide the ability to define user roles with access to order set management.	☒ Yes ☐ No
Inpatient	IP 09.02	The system shall provide the ability to support the management of order sets to track history of updates including date and time.	☒ Yes ☐ No
Inpatient	IP 09.03	The system shall provide the ability to include date last modified in the display of order sets.	☒ Yes ☐ No
Inpatient	IP 09.04	The system shall provide the ability to configure order sets with pre-selected orders.	☒ Yes ☐ No
Inpatient	IP 09.05	The system shall provide the ability to incorporate multiple choices of medications or other types of orders within an order set for clinician selection.	☒ Yes ☐ No
Inpatient	IP 09.16	The system shall provide the ability to incorporate text instructions or recommendations within order sets.	☒ Yes ☐ No
Inpatient	IP 09.17	The system shall provide the ability to display individual orders in order sets with pre-selected order details.	☒ Yes ☐ No
Inpatient	IP 09.18	The system shall provide the ability to restrict access to individual order sets by user role or department	☒ Yes ☐ No

Ambulatory or Inpatient	CCHIT Criteria ID Number	Criteria	Proposer Licensed Software complies with the criteria
Inpatient	IP 09.19	The system shall provide the ability to display active links within an order set to applicable clinical standards and reference materials.	☒ Yes ☐ No
Inpatient	FN 11.02	The system shall provide the ability to allow users to search for order sets by name.	☒ Yes ☐ No
Inpatient	IP 09.22	The system shall provide the ability to display orders in an order set in the same manner as when the order is placed individually.	☒ Yes ☐ No
Inpatient	IP 09.28	The system shall provide the ability to embed order sets within other order sets.	☒ Yes ☐ No
Inpatient	FN 11.03	The system shall provide the ability to apply drug-drug and drug-allergy interaction checking in the same way to orders placed through an order set as to orders placed individually.	☒ Yes ☐ No
Inpatient	IP 09.32	The system shall provide the ability to report on the use of order sets, including data such as orders, ordering provider, date/time ordered and basic patient data (for example age, diagnoses).	☒ Yes ☐ No
Inpatient	FN 10.01	The system shall provide the ability to define a set of items to be ordered as a group.	☒ Yes ☐ No
Inpatient	FN 10.02	The system shall provide the ability to modify order sets.	☒ Yes ☐ No
Inpatient	FN 10.03	The system shall provide the ability to include in an order set order types including but not limited to medications, laboratory tests, imaging studies, procedures and referrals.	☒ Yes ☐ No
Inpatient	FN 11.01	The system shall provide the ability for individual orders in an order set to be selected or deselected by the user.	☒ Yes ☐ No

Ambulatory or Inpatient	CCHIT Criteria ID Number	Criteria	Proposer Licensed Software complies with the criteria
Inpatient	FN 11.04	The system shall provide the ability to display orders placed through an order set either individually or as a group.	☒ Yes ☐ No
Inpatient	IP 10.01	The system shall have the ability to report on the ordering of nonformulary medications	☒ Yes ☐ No
Inpatient	IP 08.02	The system shall provide the ability to display the patient's weight, or an indicator that the patient has a weight recorded, on medication ordering screens.	☒ Yes ☐ No
Inpatient	IP 08.03	The system shall provide the configurable ability to display the patient's body surface area, or an indicator that the patient has a body surface area recorded, on medication ordering screens.	☒ Yes ☐ No
Inpatient	IP 10.03	The system shall provide the ability to order medication doses in mg/kg and mL/kg.	☒ Yes ☐ No
Inpatient	IP 10.04	The system shall provide the ability to allow the clinician to order medication doses in mg/kg/min, microgram/kg, and microgram/kg/min.	☒ Yes ☐ No
Inpatient	IP 10.06	The system shall provide end-users with the ability to browse or search for a drug by therapeutic class when ordering a medication.	☒ Yes ☐ No
Inpatient	IP 10.08	The system shall provide the ability to renew an existing medication order without requiring re-entry of order information.	☒ Yes ☐ No
Inpatient	IP 10.09	The system shall provide the ability for order entry of medications that are brought in from home that the Pharmacy is not dispensing.	☒ Yes ☐ No
Inpatient	IP 10.10	The system shall provide the ability to document complex medication orders that include dosing based on either physical status or laboratory values.	☒ Yes ☐ No

Ambulatory or Inpatient	CCHIT Criteria ID Number	Criteria	Proposer Licensed Software complies with the criteria
Inpatient	IP 10.11	The system shall provide the ability to enter all order details for medication orders that include dosing adjustments and limits.	☒ Yes ☐ No
Inpatient	IP 10.12	The system shall provide the ability to display the eMAR without interrupting the ordering process.	☒ Yes ☐ No
Inpatient	IP 10.14	The system shall provide the ability to modify medication orders including dosing information without having to discontinue the order.	☒ Yes ☐ No
Inpatient	IP 10.15	The system shall provide the ability to configure orders that require co-signature.	☒ Yes ☐ No
Inpatient	IP 10.16	The system shall provide the ability to enter medication orders utilizing a sliding scale.	☒ Yes ☐ No
Inpatient	IP 10.26	The system shall provide the ability to compute drug doses, based on appropriate dosage ranges, using the patient's body surface area and ideal body weight.	☒ Yes ☐ No
Inpatient	IP 10.27	The system shall provide the ability to automatically alert the provider to missing or invalid data required to compute a dose.	☒ Yes ☐ No
Inpatient	FN 07.01	The system shall provide the ability to alert the user at the time a new medication is prescribed/ordered that drug interaction, allergy, and formulary checking will not be performed against the uncoded medication or free text medication.	☒ Yes ☐ No
Inpatient	FN 07.02	The system shall provide the ability to prescribe/order uncoded and non-formulary medications.	☒ Yes ☐ No
Inpatient	FN 07.03	The system shall provide the ability to maintain a coded list of medications including a unique identifier for each medication.	☒ Yes ☐ No

Ambulatory or Inpatient	CCHIT Criteria ID Number	Criteria	Proposer Licensed Software complies with the criteria
Inpatient	FN 07.04	The system shall provide end-users the ability to search for medications by generic or brand name.	☒ Yes ☐ No
Inpatient	FN 07.05	The system shall provide the ability to access reference information for prescribing/ordering.	☒ Yes ☐ No
Inpatient	FN 07.06	The system shall provide the ability to specify medication order details including dose, route, frequency and comments. Dose, route and frequency must be captured and maintained as discrete data.	☒ Yes ☐ No
Inpatient	FN 12.01	The system shall provide the ability to check for potential interactions between medications to be prescribed/ordered and current medications and alert the user at the time of medication prescribing/ordering if potential interactions exist.	☒ Yes ☐ No
Inpatient	FN 12.04	The system shall provide the ability to display, on demand, potential allergies and drug-drug interactions between current medications.	☒ Yes ☐ No
Inpatient	FN 12.05	The system shall provide the ability to view the rationale for a drug interaction alert.	☒ Yes ☐ No
Inpatient	FN 12.06	The system shall provide the ability to capture and maintain at least one reason for overriding any drug-drug or drug-allergy interaction warning triggered at the time of medication prescribing/ordering.	☒ Yes ☐ No
Inpatient	FN 12.07	The system shall provide the ability to enter a structured response when overriding a drug-drug or drug-allergy warning.	☒ Yes ☐ No
Inpatient	FN 12.08	The system shall provide the ability to prescribe/order a medication despite alerts for interactions and/or allergies being present.	☒ Yes ☐ No
Inpatient	FN 12.09	The system shall provide the ability to accept updates to drug interaction databases	☒ Yes

Ambulatory or Inpatient	CCHIT Criteria ID Number	Criteria	Proposer Licensed Software complies with the criteria
			☐ No
Inpatient	IP 11.01	The system shall provide the ability to allow the designation of the source of information on home medications.	☒ Yes ☐ No
Inpatient	IP 11.07	The system shall provide the ability to display home medications for provider review for medication reconciliation during writing of admission orders.	☒ Yes ☐ No
Inpatient	IP 11.08	At admission and discharge from the hospital, the system shall provide the ability to permit the clinician to designate which home medications are being continued / discontinued.	☒ Yes ☐ No
Inpatient	IP 11.09	At admission, the system shall provide the ability to display corresponding inpatient orders for home medications the provider designates as being continued.	☒ Yes ☐ No
Inpatient	IP 11.10	At each change in level of care (to ICU, to surgery, discharge), the system shall display prior, active medication orders for provider review during writing of admission/transfer orders.	☒ Yes ☐ No
Inpatient	IP 11.11	At discharge and each change in level of care, the system shall provide the ability to designate which current medications are continued / discontinued, and to display the orders for continued medications.	☒ Yes ☐ No
Inpatient	IP 11.13	At admission, discharge, and each change in level of care during the hospital stay, the system shall capture signature that medication reconciliation has been completed.	☒ Yes ☐ No
Inpatient	IP 11.14	At admission, discharge, and each change in level of care, the system shall provide the ability to retain the history of medication reconciliation (including prior medications reviewed, medications continued/discontinued, new medication orders, signature of each provider completing review) for subsequent review.	☒ Yes ☐ No

Ambulatory or Inpatient	CCHIT Criteria ID Number	Criteria	Proposer Licensed Software complies with the criteria
Inpatient	IP 11.15	At discharge, the system shall provide the ability to communicate, both electronically and via paper, discharge medications and allergies.	☒ Yes ☐ No
Inpatient	IP 11.16	At discharge, the system shall provide the ability to communicate, both electronically and via paper, current weight (including date and time of measurement).	☒ Yes ☐ No
Inpatient	IP 12.01	The system shall provide the ability to detect a drug dose that falls outside the min-max range for a single dose for the medication and to inform the clinician during ordering.	☒ Yes ☐ No
Inpatient	FN 08.01	The system shall provide the ability to detect a daily dose that exceeds the recommended range for patient age and inform the user during ordering.	☒ Yes ☐ No
Inpatient	IP 12.04	The system shall provide the ability to detect a cumulative dose (across inpatient stays and lifetime) that exceeds the recommended dose and inform the clinician during ordering.	☒ Yes ☐ No
Inpatient	IP 12.11	The system shall be capable of providing advance notification during ordering, for patients on a given medication, when they are due for required laboratory or other diagnostic studies to monitor for therapeutic or adverse effects of the medication.	☒ Yes ☐ No
Inpatient	IP 12.12	The system shall provide the ability to search from medication lists which use “Tall Man” letters.	☒ Yes ☐ No
Inpatient	IP 12.14	The system shall provide the ability to identify when multiple medications of the same therapeutic or pharmacologic class are ordered and inform the user when medications are selected during prescribing / ordering.	☒ Yes ☐ No
Inpatient	IP 12.15	The system shall provide the ability to exclude therapeutic categories and drug pairs from drug-drug interaction and therapeutic overlap checking.	☒ Yes ☐ No

Ambulatory or Inpatient	CCHIT Criteria ID Number	Criteria	Proposer Licensed Software complies with the criteria
Inpatient	IP 12.16	The system shall provide the ability to assign the level of medication checking based upon user role.	☒ Yes ☐ No
Inpatient	FN 12.10	The system shall provide the ability to check for potential interactions between medications to be prescribed/ordered and medication allergies listed in the record and alert the user at the time of medication prescribing/ordering if potential interactions exist.	☒ Yes ☐ No
Inpatient	FN 12.11	The system shall provide the ability, when a new allergy is documented, to check for a potential interaction between the newly-documented allergy and the patient's current medications, and alert the user if such interactions exist.	☒ Yes ☐ No
Inpatient	IP 12.23	The system shall provide the ability to set the severity level at which drug interaction warnings should be displayed.	☒ Yes ☐ No
Inpatient	FN 12.02	The system shall provide the ability to check immunization orders against documented patient allergies (medication and non-medication) and inform the user during prescribing/ordering.	☒ Yes ☐ No
Inpatient	IP 12.25	The system shall provide the configurable ability to require documentation of information regarding patient weight, inclusive of using such terms as Unknown, before entering medication orders.	☒ Yes ☐ No
Inpatient	IP 12.26	The system shall provide the ability to inform the clinician about potential drug-food interactions.	☒ Yes ☐ No
Inpatient	IP 12.27	The system shall provide the ability to check contraindications based on pregnancy status	☒ Yes ☐ No
Inpatient	IP 12.28	The system shall provide the ability to check contraindications based on lactation status	☒ Yes ☐ No

Ambulatory or Inpatient	CCHIT Criteria ID Number	Criteria	Proposer Licensed Software complies with the criteria
Inpatient	IP 12.29	The system shall provide the ability to check for inappropriate route of administration and alert the user at time of medication prescribing / ordering.	☒ Yes ☐ No
Inpatient	IP 12.31	The system shall provide the ability to display recommended medication for substitution (based on cost or clinical policy).	☒ Yes ☐ No
Inpatient	IP 12.33	The system shall provide the ability to transmit to Pharmacy the order override justification with the order and clinician, date, and time.	☒ Yes ☐ No
Inpatient	IP 12.35	The system shall provide the ability to capture and store information concerning alerts following screening of medication orders and the response (place, modify or cancel order).	☒ Yes ☐ No
Inpatient	IP 12.36.01	The system shall have the ability to report on alerts and provider response occurring during the medication ordering process (place, modify, cancel)	☒ Yes ☐ No
Inpatient	IP 12.41	The system shall provide the ability to enter new vaccine dosing schedules into the system in advance of official CDC schedule updates.	☒ Yes ☐ No
Inpatient	FN 08.03	The system shall provide the ability to check for dose ranges based on patient age.	☒ Yes ☐ No
Inpatient	FN 08.04	The system shall provide the ability to display a dose calculator for patient-specific dosing based on weight.	☒ Yes ☐ No
Inpatient	FN 08.05	The system shall provide the ability to display patient specific dosing recommendations based on age and weight.	☒ Yes ☐ No
Inpatient	FN 08.06	The system shall provide the ability to check for medication contraindications based on patient age and alert the user during prescribing/ordering.	☒ Yes ☐ No

Ambulatory or Inpatient	CCHIT Criteria ID Number	Criteria	Proposer Licensed Software complies with the criteria
Inpatient	FN 13.01	The system shall provide drug-diagnosis interaction alerts at the time of medication prescribing/ordering.	☒ Yes ☐ No
Inpatient	IP 13.01	The system shall provide the ability to display relevant, patient-specific laboratory test results when entering an order.	☒ Yes ☐ No
Inpatient	IP 13.04	The system shall provide the ability to display for selection a secondary, or corollary, order that is recommended in conjunction with the primary order.	☒ Yes ☐ No
Inpatient	IP 13.05	The system shall allow demographic criteria to be used as a data element in clinical decision support rules.	☒ Yes ☐ No
Inpatient	FN 18.02	The system shall provide the ability to capture and maintain, as discrete data, the reason for variation from rule-based clinical messages (for example alerts and reminders).	☒ Yes ☐ No
Inpatient	IP 13.08	The system shall provide the ability to set elapsed time parameters for purposes of duplicate order checking.	☒ Yes ☐ No
Inpatient	IP 14.01	The system shall provide the ability to present medications to be administered over a selectable date/time range during the current hospital stay.	☒ Yes ☐ No
Inpatient	IP 14.02	The system shall provide the ability to display the medication administration history including administering clinician, date, and time.	☒ Yes ☐ No
Inpatient	IP 14.03	The system shall provide the ability to display the ordered date, time, route of administration and dose of all scheduled medications.	☒ Yes ☐ No
Inpatient	IP 14.05	The system shall allow the clinician to identify and display due and overdue medications.	☒ Yes ☐ No

Ambulatory or Inpatient	CCHIT Criteria ID Number	Criteria	Proposer Licensed Software complies with the criteria
Inpatient	IP 14.06	The system shall provide the ability to display continuous infusions in a manner that distinguishes them from other medications.	☒ Yes ☐ No
Inpatient	IP 14.07	The system shall provide the ability to display PRN medications in a manner that distinguishes them from other medications.	☒ Yes ☐ No
Inpatient	IP 14.08	The system shall provide the ability to record the effectiveness of PRN or "as needed" doses after they have been administered on the eMAR.	☒ Yes ☐ No
Inpatient	IP 14.10	The system shall have the ability to view on the eMAR medications as dispensed (including dose and quantity of dispensed units of medication).	☒ Yes ☐ No
Inpatient	IP 14.11	The system shall provide the ability to indicate any clinical interventions or assessments associated with medication administration.	☒ Yes ☐ No
Inpatient	IP 14.12	The system shall provide the ability to attach a comment to an individual scheduled medication dose and include as part of the legal medical record.	☒ Yes ☐ No
Inpatient	IP 14.13	The system shall provide the ability to capture medication administration details as discrete data, including: (1) the medication name, strength and dose; (2) date and time of administration; (3) route and site; (4) user name and credentials.	☒ Yes ☐ No
Inpatient	IP 14.14	The system shall provide the ability to view the medication order as written during administration.	☒ Yes ☐ No
Inpatient	IP 14.15	The system shall provide the ability to document clinical assessment pertinent to medication administration.	☒ Yes ☐ No
Inpatient	IP 14.16	The system shall provide the ability to display, from the eMAR, the location of the medication on the unit.	☐ Yes ☒ No

Ambulatory or Inpatient	CCHIT Criteria ID Number	Criteria	Proposer Licensed Software complies with the criteria
Inpatient	IP 14.17	The system shall allow the user to capture and display patient specific instructions or other free text on the eMAR.	☒ Yes ☐ No
Inpatient	IP 14.18	The system shall provide ability for a second provider to witness and co-document administration.	☒ Yes ☐ No
Inpatient	IP 14.19	The system shall provide the ability to document medication administration using a barcode and scanner for positive patient identification, patient name, med name, med dose, correct time of admin, route and positive identification of care giver administering medication.	☒ Yes ☐ No
Inpatient	IP 14.20	When using barcode scanners, the system shall provide the ability to alert the end user that the medication being administered has triggered one or more of the following errors: wrong patient, wrong med, wrong time, wrong route or wrong dose.	☒ Yes ☐ No
Inpatient	IP 14.23	The system shall provide the ability to modify medication administration schedules on the eMAR.	☒ Yes ☐ No
Inpatient	IP 14.24	The system shall provide the ability to notify the Pharmacy of changes in schedules on the eMAR.	☒ Yes ☐ No
Inpatient	IP 14.25	The system shall provide the ability to acknowledge medication orders prior to administration, capturing the date, time and user performing action.	☒ Yes ☐ No
Inpatient	IP 14.26	The system shall provide the ability to allow documentation of medication administration prior to pharmacy review.	☒ Yes ☐ No
Inpatient	IP 14.27	The system shall provide the ability to document on the eMAR that a medication was given by another provider.	☒ Yes ☐ No

Ambulatory or Inpatient	CCHIT Criteria ID Number	Criteria	Proposer Licensed Software complies with the criteria
Inpatient	IP 14.28	The system shall provide the ability for the hospital to provide links to reference information / knowledge resources for any medication on the eMAR.	☒ Yes ☐ No
Inpatient	IP 14.29	The system shall provide the ability to capture and maintain, as discrete data, the reason a medication was not given.	☒ Yes ☐ No
Inpatient	IP 14.30	The system shall provide the ability to amend medication administration documentation and include as part of the legal medical record.	☒ Yes ☐ No
Inpatient	IP 06.13	The system shall provide the ability to correct medication administration documentation entered in error, maintaining a record of the original entry, identification of the clinician correcting the error and the date and time of the correction.	☒ Yes ☐ No
Inpatient	IP 14.31	The system shall provide ability to document a reaction / response to medication administration.	☒ Yes ☐ No
Inpatient	IP 14.32	The system shall maintain and display as part of the medication administration profile the dates and times associated with the medication orders such as start, modify, and stop dates.	☒ Yes ☐ No
Inpatient	IP 14.34	The system shall provide the ability for the eMAR to be printed.	☒ Yes ☐ No
Inpatient	FN 14.01	The system shall provide the ability to produce patient instructions and patient educational materials which may reside within the system or be provided through links to external source.	☒ Yes ☐ No
Inpatient	IP 15.01	The system shall provide the ability to display immunization administration history including; administering clinician, date and time, immunization name, lot number, manufacturer and expiration date.	☒ Yes ☐ No

Ambulatory or Inpatient	CCHIT Criteria ID Number	Criteria	Proposer Licensed Software complies with the criteria
Inpatient	IP 15.03	The system shall provide the ability to identify and display due and overdue ordered immunizations.	☒ Yes ☐ No
Inpatient	IP 15.04	The system shall provide the ability to indicate any tasks/assessments associated with immunization administration.	☒ Yes ☐ No
Inpatient	IP 15.05	The system shall provide the ability to attach a comment to an individual scheduled immunization dose and include as part of the legal medical record.	☒ Yes ☐ No
Inpatient	IP 15.06	The system shall provide the ability to display the immunization order as written during administration.	☒ Yes ☐ No
Inpatient	IP 15.07	The system shall provide the ability to document clinical assessment pertinent to immunization administration.	☒ Yes ☐ No
Inpatient	IP 15.09	The system shall provide the ability to amend immunization administration documentation and include as part of the legal medical record.	☒ Yes ☐ No
Inpatient	IP 15.10	The system shall provide the ability to document that a Vaccine Information Statement (VIS) was given including the version or edition date of the VIS.	☒ Yes ☐ No
Inpatient	IP 15.11	The system shall provide the ability to print the immunization administration record.	☒ Yes ☐ No
Inpatient	IP 15.12	The system shall have the ability to record the consent, refusal, or deferral status as it relates to the administration of each immunization at the time of each encounter, including: the date and time, the decision (consent, refusal or deferral), name of decider and status of decider (e.g. parent, self, legal guardian, medical power of attorney).	☒ Yes ☐ No

Ambulatory or Inpatient	CCHIT Criteria ID Number	Criteria	Proposer Licensed Software complies with the criteria
Inpatient	FN 16.02	The system shall provide the ability to capture, in a discrete field, an allergy/adverse reaction to a specific immunization.	☒ Yes ☐ No
Inpatient	FN 16.03	The system shall provide the ability to capture immunization administration details as discrete data, including: (1) the immunization type and dose; (2) date and time of administration; (3) route and site; (4) lot number and expiration date; (5) manufacturer; and (6) user ID.	☒ Yes ☐ No
Inpatient	IP 16.01	The system shall provide the ability to display, in the eMAR, drug-allergy interactions at the time of administration.	☒ Yes ☐ No
Inpatient	IP 16.02	System shall provide the ability to require entry of physiological parameters or task completion that must be checked and recorded prior to medication administration	☒ Yes ☐ No
Inpatient	IP 16.03	The system shall provide the ability to display, at the time of medication administration, that an alert was triggered during medication ordering.	☒ Yes ☐ No
Inpatient	IP 16.05	The system shall provide the ability for medication screening alerts to be displayed from the eMAR.	☒ Yes ☐ No
Inpatient	IP 16.08	The system shall provide the ability to capture medication identification for five rights checking, at a minimum, from linear bar code labels encoding the NDC number.	☒ Yes ☐ No
Inpatient	IP 16.09	The system shall provide the ability to document medication administration using a positive ID technology to confirm right patient, right medication, right dose, right time, and right route.	☒ Yes ☐ No
Inpatient	IP 16.10	The system shall have the ability to document "manual" methods verifying Five Rights information (e.g., Bar code does not work; the bar code reader is not working).	☒ Yes ☐ No

Ambulatory or Inpatient	CCHIT Criteria ID Number	Criteria	Proposer Licensed Software complies with the criteria
Inpatient	IP 16.11	The system shall provide the ability to record the medication NDC number or other identification number of the drug actually administered to the patient.	☒ Yes ☐ No
Inpatient	IP 16.12	The system shall be able to identify all patients on a specific medication.	☒ Yes ☐ No
Inpatient	IP 17.01	The system shall provide the ability to establish time periods for designating medication administration tasks overdue.	☒ Yes ☐ No
Inpatient	IP 17.02	The system shall provide the ability to establish time periods and recipients for notification of overdue medication administrations.	☒ Yes ☐ No
Inpatient	IP 17.03	The system shall provide the ability to notify the clinician of overdue medication administrations.	☒ Yes ☐ No
Inpatient	IP 17.04	The system shall provide the ability to establish time periods for order expiration for types of orders.	☒ Yes ☐ No
Inpatient	IP 17.05	The system shall provide the ability to notify the ordering clinician concerning orders due to expire.	☒ Yes ☐ No
Inpatient	IP 17.08	The system shall provide the ability to notify the ordering clinician concerning orders requiring signature (verbal and telephone orders, co signature).	☒ Yes ☐ No
Inpatient	FN 17.01	The system shall provide the ability to access and review medication information (such as drug monograph). This may reside within the system or be provided through links to external sources.	☒ Yes ☐ No
Inpatient	FN 17.02	The system shall provide the ability to provide access to test and procedure instructions that can be modified by the end user.	☒ Yes ☐ No

Ambulatory or Inpatient	CCHIT Criteria ID Number	Criteria	Proposer Licensed Software complies with the criteria
Inpatient	IP 19.01	The system shall provide the ability to display patient data from previous admissions.	☒ Yes ☐ No
Inpatient	IP 19.02	The system shall provide the ability to include patient identifying information as well as time and date report printed, on each page of individual patient-specific reports generated.	☒ Yes ☐ No
Inpatient	IP 19.08	The system shall provide the ability to indicate that advance directive(s) have been completed.	☒ Yes ☐ No
Inpatient	IO-IP 01.01	The system shall provide the ability to receive the Current Medication List from Pharmacy (directly), PBM (directly) or via intermediary network (e.g. SureScripts, RxHub, etc.)	☒ Yes ☐ No
Inpatient	IO-IP 01.20	The system shall provide the ability to display HITSP C32/CCD documents and file them as intact documents in the EHR. Summary patient record content information will include: patient demographics, medication list, medication allergy list	☒ Yes ☐ No
Inpatient	IO-IP 01.22	The system shall provide the ability to generate and format patient summary documents per the following specifications: HITSP C32 (v2.3 or v2.5) Summary patient record content information will include: patient demographics, medications, medication allergies Generated xml documents must demonstrate use of industry-standard vocabularies/terminologies. The intent is to test the Required (R) fields including the product coded terminology for the medication and medication allergy.	☒ Yes ☐ No
Inpatient	IO-IP 03.01	The system shall provide the ability to receive Patient Demographics and Administrative Information from inpatient IT systems (e.g., name,	☒ Yes

Ambulatory or Inpatient	CCHIT Criteria ID Number	Criteria	Proposer Licensed Software complies with the criteria
		age, DOB, gender)	☐ No
Inpatient	IO-IP 03.04	The system shall provide the ability to send Non-Medication Orders and Updates to receiving system (e.g., LIS, RIS, Dietary)	☒ Yes ☐ No
Inpatient	IO-IP 03.05	The system shall provide the ability to send Medication Orders and Updates to Pharmacy IT system utilizing a coding system for medications	☐ Yes ☒ No
Inpatient	IO-IP 03.06	The system shall provide the ability to receive Status Updates from Pharmacy	☐ Yes ☒ No
Inpatient	IO-IP 03.07	The system shall provide the ability to provide access and view capabilities for relevant lab results for medication ordering or administration	☒ Yes ☐ No
Inpatient	IO-IP 03.10	The system shall provide the ability to Integrate with bar-code technology to capture information from linear bar code labels and wristbands	☒ Yes ☐ No
Inpatient	IO-IP 04.01	The system shall provide the ability to send an electronic prescription of discharge medications	☒ Yes ☐ No
Inpatient	SC 01.01	The system shall enforce the most restrictive set of rights/privileges or accesses needed by users/groups (e.g. System Administration, Clerical, Nurse, Doctor, etc.), or processes acting on behalf of users, for the performance of specified tasks.	☒ Yes ☐ No
Inpatient	SC 01.02	The system shall provide the ability for authorized administrators to assign restrictions or privileges to users/groups.	☒ Yes ☐ No
Inpatient	SC 01.03	The system must be able to associate permissions with a user using one or more of the following access controls: 1) user-based (access rights assigned to each user); 2) role-based (users are grouped and access rights assigned to these groups); or 3) context-based (role-based with additional access rights assigned or restricted	☒ Yes ☐ No

Ambulatory or Inpatient	CCHIT Criteria ID Number	Criteria	Proposer Licensed Software complies with the criteria
		based on the context of the transaction such as time-of-day, workstation-location, emergency-mode, etc.)	
Inpatient	SC 01.04	The system shall support removal of a user's privileges without deleting the user from the system. The purpose of the criteria is to provide the ability to remove a user's privileges, but maintain a history of the user in the system.	☒ Yes ☐ No
Inpatient	SC 02.01	The system shall allow an authorized administrator to set the inclusion or exclusion of auditable events in SC 02.03 based on organizational policy & operating requirements/limits.	☒ Yes ☐ No
Inpatient	SC 02.02	The system shall support logging to a common audit engine using the schema and transports specified in the Audit Log specification of IHE Audit Trails and Node Authentication (ATNA) Profile.	☒ Yes ☐ No
Inpatient	SC 02.03	The system shall be able to detect security-relevant events that it mediates and generate audit records for them. At a minimum the events shall include those listed in the Appendix Audited Events. Note: The system is only responsible for auditing security events that it mediates. A mediated event is an event that the system has some active role in allowing or causing to happen or has opportunity to detect. The system is not expected to create audit logs entries for security events that it does not mediate.	☒ Yes ☐ No
Inpatient	SC 02.04	The system shall record within each audit record the following information when it is available: (1) date and time of the event; (2) the component of the system (e.g. software component, hardware component) where the event occurred; (3) type of event (including: data description and patient identifier when relevant); (4) subject identity (e.g. user identity); and (5) the outcome (success or failure) of the event.	☒ Yes ☐ No
Inpatient	SC 02.05	The system shall provide authorized administrators with the capability to read all audit information from the audit records in one of the	☒ Yes

Ambulatory or Inpatient	CCHIT Criteria ID Number	Criteria	Proposer Licensed Software complies with the criteria
		following two ways: 1) The system shall provide the audit records in a manner suitable for the user to interpret the information. The system shall provide the capability to generate reports based on ranges of system date and time that audit records were collected. 2) The system shall be able to export logs into text format in such a manner as to allow correlation based on time (e.g. UTC synchronization).	☐ No
Inpatient	SC 02.06	The system shall be able to support time synchronization using NTP/SNTP, and use this synchronized time in all security records of time.	☒ Yes ☐ No
Inpatient	SC 02.07	The system shall have the ability to format for export recorded time stamps using UTC based on ISO 8601. Example: "1994-11-05T08:15:30-05:00" corresponds to November 5, 1994, 8:15:30 am, US Eastern Standard Time.	☒ Yes ☐ No
Inpatient	SC 02.08	The system shall prohibit all users read access to the audit records, except those users that have been granted explicit read-access. The system shall protect the stored audit records from unauthorized deletion. The system shall prevent modifications to the audit records.	☒ Yes ☐ No
Inpatient	SC 03.01	The system shall authenticate the user before any access to Protected Resources (e.g. PHI) is allowed, including when not connected to a network e.g. mobile devices.	☒ Yes ☐ No
Inpatient	SC 03.02	When passwords are used, the system shall support password strength rules that allow for minimum number of characters, and inclusion of alpha-numeric complexity.	☒ Yes ☐ No
Inpatient	SC 03.03	The system upon detection of inactivity of an interactive session shall prevent further viewing and access to the system by that session by terminating the session, or by initiating a session lock that remains in effect until the user reestablishes access using appropriate identification and authentication procedures. The inactivity timeout shall be configurable.	☒ Yes ☐ No

Ambulatory or Inpatient	CCHIT Criteria ID Number	Criteria	Proposer Licensed Software complies with the criteria
Inpatient	SC 03.04	The system shall enforce a limit of (configurable) consecutive invalid access attempts by a user. The system shall protect against further, possibly malicious, user authentication attempts using an appropriate mechanism (e.g. locks the account/node until released by an administrator, locks the account/node for a configurable time period, or delays the next login prompt according to a configurable delay algorithm).	☒ Yes ☐ No
Inpatient	SC 03.05	When passwords are used, the system shall provide an administrative function that resets passwords.	☒ Yes ☐ No
Inpatient	SC 03.06	When passwords are used, user accounts that have been reset by an administrator shall require the user to change the password at next successful logon.	☒ Yes ☐ No
Inpatient	SC 03.07	The system shall provide only limited feedback information to the user during the authentication.	☒ Yes ☐ No
Inpatient	SC 03.08	The system shall support case-insensitive usernames that contain typeable alpha-numeric characters in support of ISO-646/ECMA-6 (aka US ASCII).	☒ Yes ☐ No
Inpatient	SC 03.09	When passwords are used, the system shall allow an authenticated user to change their password consistent with password strength rules (SC 03.02).	☒ Yes ☐ No
Inpatient	SC 03.10	When passwords are used, the system shall support case-sensitive passwords that contain typeable alpha-numeric characters in support of ISO-646/ECMA-6 (aka US ASCII).	☒ Yes ☐ No
Inpatient	SC 03.11	When passwords are used, the system shall use either standards-based encryption, e.g., 3DES, AES, or standards-based hashing, e.g., SHA1 to store or transport passwords.	☒ Yes ☐ No
Inpatient	SC 03.12	When passwords are used, the system shall prevent the reuse of passwords previously used within a specific (configurable) timeframe (i.e.,	☒ Yes

Ambulatory or Inpatient	CCHIT Criteria ID Number	Criteria	Proposer Licensed Software complies with the criteria
		within the last X days, etc. - e.g. "last 180 days"), or shall prevent the reuse of a certain (configurable) number of the most recently used passwords (e.g. "last 5 passwords").	☐ No
Inpatient	SC 04.01	The system shall include documentation that describes the patch (hot-fix) handling process the vendor will use for EHR, operating system and underlying tools (e.g. a specific web site for notification of new patches, an approved patch list, special instructions for installation, and post-installation test).	☒ Yes ☐ No
Inpatient	SC 04.02	The system shall include documentation that explains system error or performance messages to users and administrators, with the actions required.	☒ Yes ☐ No
Inpatient	SC 04.03	The system shall include documentation of product capacities (e.g. number of users, number of transactions per second, number of records, network load, etc.) and the baseline representative configurations assumed for these capacities (e.g. number or type of processors, server/workstation configuration and network capacity, etc).	☒ Yes ☐ No
Inpatient	SC 04.04	The system shall include documented procedures for product installation, start-up and/or connection.	☒ Yes ☐ No
Inpatient	SC 04.05	The system shall include documentation of the minimal privileges necessary for each service and protocol necessary to provide EHR functionality and/or serviceability.	☒ Yes ☐ No
Inpatient	SC 04.06	The system shall include documentation available to the customer stating whether or not there are known issues or conflicts with security services in at least the following service areas: antivirus, intrusion detection, malware eradication, host-based firewall and the resolution of that conflict (e.g. most systems should note that full virus scanning should be done outside of peak usage times and should exclude the databases.).	☒ Yes ☐ No

Ambulatory or Inpatient	CCHIT Criteria ID Number	Criteria	Proposer Licensed Software complies with the criteria
Inpatient	SC 04.07	If the system includes hardware, the system shall include documentation that covers the expected physical environment necessary for proper secure and reliable operation of the system including: electrical, HVAC, sterilization, and work area.	☒ Yes ☐ No
Inpatient	SC 04.08	The system shall include documentation that itemizes the services (e.g. PHP, web services) and network protocols/ports (e.g. HL-7, HTTP, FTP) that are necessary for proper operation and servicing of the system, including justification of the need for that service and protocol. This information may be used by the healthcare facility to properly configure their network defenses (firewalls and routers).	☒ Yes ☐ No
Inpatient	SC 04.09	The system shall include documentation that describes the steps needed to confirm that the system installation was properly completed and that the system is operational.	☒ Yes ☐ No
Inpatient	SC 04.10	The system shall include documentation available to the customer that provides guidelines for configuration and use of the security controls necessary to support secure and reliable operation of the system, including but not limited to: creation, modification, and deactivation of user accounts, management of roles, reset of passwords, configuration of password constraints, and audit logs.	☒ Yes ☐ No
Inpatient	SC 05.01	The software used to install and update the system, independent of the mode or method of conveyance, shall be certified free of malevolent software ("malware"). Vendor may self-certify compliance with this standard through procedures that make use of commercial malware scanning software.	☒ Yes ☐ No
Inpatient	SC 05.02	The system shall be configurable to prevent corruption or loss of data already accepted into the system in the event of a system failure (e.g. integrating with a UPS, etc.).	☒ Yes ☐ No
Inpatient	SC 06.01	The system shall support protection of confidentiality of all Protected Health Information (PHI) delivered over the Internet or other known	☒ Yes

Ambulatory or Inpatient	CCHIT Criteria ID Number	Criteria	Proposer Licensed Software complies with the criteria
		open networks via encryption using triple-DES (3DES) or the Advanced Encryption Standard (AES) and an open protocol such as TLS, SSL, IPSec, XML encryptions, or S/MIME or their successors.	☐ No
Inpatient	SC 06.02	When passwords are used, the system shall not display passwords while being entered.	☒ Yes ☐ No
Inpatient	SC 06.03	For systems that provide access to PHI through a web browser interface (i.e. HTML over HTTP) shall include the capability to encrypt the data communicated over the network via SSL (HTML over HTTPS). Note: Web browser interfaces are often used beyond the perimeter of the protected enterprise network	☒ Yes ☐ No
Inpatient	SC 06.04	The system shall support protection of integrity of all Protected Health Information (PHI) delivered over the Internet or other known open networks via SHA1 hashing and an open protocol such as TLS, SSL, IPSec, XML digital signature, or S/MIME or their successors.	☒ Yes ☐ No
Inpatient	SC 06.05	The system shall support ensuring the authenticity of remote nodes (mutual node authentication) when communicating Protected Health Information (PHI) over the Internet or other known open networks using an open protocol (e.g. TLS, SSL, IPSec, XML sig, S/MIME).	☒ Yes ☐ No
Inpatient	SC 06.06	The system, when storing PHI on any device intended to be portable/removable (e.g. thumb-drives, CD-ROM, PDA, Notebook), shall support use of a standards based encrypted format using triple-DES (3DES), or the Advanced Encryption Standard (AES), or their successors.	☒ Yes ☐ No
Inpatient	SC 06.07	The system, prior to access to any PHI, shall display a configurable warning or login banner (e.g. "The system should only be accessed by authorized users"). In the event that a system does not support pre-login capabilities, the system shall display the banner immediately following authorization.	☒ Yes ☐ No

Ambulatory or Inpatient	CCHIT Criteria ID Number	Criteria	Proposer Licensed Software complies with the criteria
Inpatient	SC 08.01	The system shall be able to generate a backup copy of the application data, security credentials, and log/audit files.	☒ Yes ☐ No
Inpatient	SC 08.02	The system restore functionality shall result in a fully operational and secure state. This state shall include the restoration of the application data, security credentials, and log/audit files to their previous state.	☒ Yes ☐ No
Inpatient	SC 08.03	If the system claims to be available 24x7 then the system shall have ability to run a backup concurrently with the operation of the application.	☒ Yes ☐ No

2.1.2 BEST PRACTICES

Provide Proposer's overall summary description of how it has leveraged best practices for EHR implementations, pursuant to Section 1.2 (Best Practices) of Appendix H (Functional Requirements). Proposer's response for this Section is limited to 1 page.

MethodM is Cerner's implementation approach to working with clients to deliver value through our Millennium solutions. MethodM is more than an implementation approach and this modular methodology draws upon proven practices from a host of past client experiences. With it, a team is able to deliver the intended outcomes of a project with discipline, predictability and efficiency.

MethodM provides a disciplined approach to implementation, system adoption and value realization. The proven methodology provides a clearly defined project scope that aligns with your project's clinical and operational imperatives and comprehensive education and training objectives. MethodM also incorporates Cerner's recommended practices in the management of crucial project milestones and detailed solution-level content to provide guidance and overall support throughout the project. The content has been designed to provide the correct information at the right point in the engagement to help you make sound decisions and guide you through every stage of your project. Additionally, the content provides a framework for the various processes required to manage and execute your project.

As you maintain, upgrade, and enhance Cerner Millennium, MethodM will continue to improve the quality of outcomes and lower your total cost of ownership.

Cerner MethodM is an integrated platform, providing these important features:

1. Outcomes-based approach
2. Aligning with your organizational imperatives
3. Disciplined and predictable processes
4. Providing the right resource at the right time
5. Leveraged client interaction and experience
6. Proven to reduce risk and variability
7. A logical continuum
8. From procurement to clinical transformation

2.1.3 GENERAL REQUIREMENTS

Provide Proposer's overall summary description of how its proposed EHR System meets the needs of DHS for ambulatory care, pursuant to Section 1.3 (General Requirements) of Appendix H (Functional Requirements). Proposer's response for this Section is limited to 6 pages.

The strength of Cerner Millennium begins with the power of its architecture, which is based on one comprehensive database. Cerner Millennium solutions are structured around a single design, which allows information sharing across multiple facilities and across the continuum of healthcare. With our single data structure, Cerner Millennium provides real-time access to all information across multiple applications, such as laboratory, pharmacy, nursing and physicians, to all of those needing such access, regardless of location. Other suppliers' systems that are based on differing architectures and data structures must be interfaced together, and rely on these interfaces to transmit, modify and arrange data exchanged between them. This limits the data's usefulness across multiple systems and inhibits real-time access.

Only Cerner Millennium offers proven, person-centric, integrated clinical technologies that connect all areas of a healthcare organization to leverage patient data and best practices for better quality of care. Any clinical information that is gathered in any care setting is populated in the single integrated longitudinal electronic medical record. The clinical data repository viewer is designed to support communication across the health system by providing a cross- departmental cross-disciplinary, person focused view of clinical information. Because it is built from the common, open platform for all Cerner solutions, we can provide the only readily available solution that closes the loop with other clinical domains.

Flexible display features within the Cerner Millennium applications allow the clinician to create optimal views of the data. A multitude of viewing and navigation preferences can be utilized to maximize the communication of information to the clinician, both as predefined views as well as interactively during real-time record viewing. These tailored summary views and custom flowsheets can be defined to meet the needs of various disciplines within your organization.

Cerner offers a variety of applications and features that enable our client organizations to become HIPAA compliant. However, compliance requirements in the areas of Privacy and Security rules also are very much contingent on your organization's policies and procedures regarding patient information and how it is to be used or disclosed.

Under ARRA HITECH, the patient has the right to ask for disclosure of their record to be restricted

from their health plan if the patient has paid for the services out of pocket. We embed capabilities to leverage existing system capabilities for disclosure management to complement the necessary policies and procedures within HIM to assure that such disclosure restrictions can be honored.

Also, as required for meaningful use Stage 1, the patient has the right to ask for an electronic copy of their record in a readable format (and as required by Stage 1 certification criteria, in the form of a structured electronic clinical document using either the HL7 Continuity of Care Document (CCD) or the ASTM Continuity of Care Record (CCR) format). Cerner supports these requirements through the use of the Clinical Document Generator (CDG) which is a common service that can be called from within PowerChart to enable a provider requested on demand generation of the CCD, from within Clinical Reporting, and through the patient portal into the electronic health record, IQHealth, where a patient can generate their own CCD if desired, and otherwise have access online into their electronic health record. Cerner also enables the CCD to be sent to the Cerner Health Record which can be made available as a personal health record (PHR) to the patient.

Cerner Millennium is based on an integrated common architecture and data structure, thus improving communication of information across the health care enterprise. Common information spans inpatient, outpatient, specialty clinics and even home care, with no redundant entry of clinical or administrative information. Any clinical information that is gathered in any care setting, from the first encounter to the last, is populated in the electronic medical record and is seamlessly integrated. Therefore, clinical data captured within various care settings is automatically and transparently accessible to the entire care team via our electronic medical record. This integrated system enables all care providers sharing a common care process to function as a team. Upon an inpatient admission, users with proper security can fluidly access any information regarding the patient's current encounter or past encounters. Similarly, if an emergency Department (ED) patient is admitted all medications and activities are available throughout your system once they are documented in the Electronic Medical Record. The record a physician views in the hospital is the exact same record in an office setting, thereby creating "one single source of truth" patient record.

Cerner Millennium software is built around the patient. The technology enables health organizations to automate clinical, financial and decision support functions on a common platform. This approach allows Cerner to infuse decision support (Executable Knowledge) throughout the care process, guiding clinicians to the latest evidence at the point of care via order sets, plans of care, alerts and notifications, and documentation.

For example, during order entry, Cerner's order management and decision support solution ensure that information and alerts are available to all users at the appropriate time and in the appropriate venue such as duplicate order checking, an integrated drug database, dose-range checking, and adverse drug event content. In addition, your organization can define actions required within an order, order set, or care plan such as automatically route for co-signature.

Cerner's rules engine, Discern Expert, provides a view of the big picture to make the most knowledgeable decisions. That is why Discern Expert does not just keep track of physician orders, it obtains and uses patient data from across your entire organization – lab, pharmacy, nursing, radiology – and across multiple facilities within your health care system, to provide the most accurate decision support and alerts system available. The sophisticated decision-support functionality is offered within a rules logic model and a simple and intuitive user interface design that simplifies the everyday use and management of this critical function for the organization. Alerts can be designed based on various parameters and triggers, and can be adjusted by those with appropriate security within your organization. When an order triggers an alert, the alert message

describes the potential problem and offers specific suggestions for revising the order. The alert can also prompt the clinician for more information to determine if a particular guideline applies. The clinician can review a documented explanation of the alert, select an alternative order, or override the alternative order guidelines while recording a reason. Such decision-support can reduce clinical errors, improve physicians' management of medication use, imaging studies, and lab tests, provide long-term savings by recommending preventive screenings, and track physicians' compliance.

Cerner Millennium supports interdisciplinary care and enhanced workflow options. Additionally, multiple features benefit teaching and residency programs such as the physician rounds report, easily accessible evidence-based condition- specific protocol information, and enhanced routing for supervisor signatures. Furthermore, our CareCompass provides an innovative, interdisciplinary workflow tool that guides the collaborative care team in the organization and prioritization of patient care-giving the right information at the right time. With CareCompass, clinicians see all tasks and overdue tasks are highlighted. For example, an admission assessment requiring interdisciplinary documentation and co-signature can indicate that tasks exist for the attending physician's review and signature.

The unique scalability of Cerner Millennium® allows us to connect communities and integrate healthcare on a massive scale – integration that is necessary to improve the standard of care as people increasingly move and receive treatment from multiple providers in different cities and countries. Krames Staywell instruction comes in the following languages: English, Spanish, Russian, Vietnamese, Tagalog, Chinese, Korean, Hmong, Farsi, Arabic, Portuguese and Armenian. ExitCare titles come in the following languages: English, Spanish, Russian, Vietnamese, Tagalog, Portuguese, Bosnian, and Haitian Creole. All titles may not be available in all languages. Krames provides every handout in Spanish and English. Cerner is a leader in supporting NCQA's PCMH criteria as seen by being awarded the 2008 CHIME award for enabling a medical home with the University of Missouri. Further, we have 9 clients that have achieved recognition from NCQA and many more going thru the process today.

The tracking and audit capabilities of the system are comprehensive as well as flexible. You can perform an audit trail query to access data specific to the patient's record or chart, who obtained successful access, the date and time of the attempt and information regarding the access event, including events that change or modify patient information. It should be noted that any actual change to patient data is considered part of the clinical record and the history of any such change is maintained within the patient's record.

We support incoming and outgoing HL7 ADT messaging with multiple registration systems. Each system can send individual transactions, or transactions from multiple facilities can be combined in an interface engine and sent to Cerner Millennium in one feed. We store the facility that generates the transaction.

Position-level security logic, sets permission to access an application or a task within an application, or a task group based on a user's position. Positions are defined for every user in the system.

A user is assigned to a position through the user maintenance tool. A user's position is designed to include all the tasks that might be needed to perform his or her job. Multiple users with similar job requirements can be associated with a single position, which aids in the maintenance of security profiles. Only users with appropriate privileges are granted access to the user maintenance tool.

You can perform an audit trail query to access data specific to the patient's record or chart, who obtained successful access, the date and time of the attempt and information regarding the access event, including events that change or modify patient information.

Cerner provides a comprehensive documentation solution, not specific to a particular care setting, through which direct care providers document patient care activities. We provide a catalog of forms that support documentation across multiple disciplines. Your organization can use these forms as defined or customize to meet your individual needs. The assessment forms capture appropriate data elements and can include charting by exception, predefined drop-down lists, defaulting of the last charted value, grid formats, yes/no responses, pick lists, and check boxes for point and click responses. The data elements captured can then populate the other areas of the chart. When used with Cerner Millennium's clinical systems, such as Cerner ED solution FirstNet, INet Critical Care, PathNet for lab, PharmNet for pharmacy, Clinical Office with PowerNote, Health Information Management, RadNet, and SurgiNet, the information provided by the areas employing these systems is accessible automatically and transparently to the care team member via the graphical results viewer within the electronic medical record. The clinical data repository viewer provides a cross-departmental, cross-disciplinary, person focused view of clinical information with the ability to view, endorse, and correct documentation.

Cerner Millennium is well suited for supporting pediatrics, as well as other specialties. For example, we supply pediatric documentation including growth charts and forms, notes and care plans, specifically tailored views and flowsheets, and related referential content. By infusing Cerner's solutions with pediatric specific content and capabilities, caregivers can enhance the care of children, close the research and education gap and share the expertise of the pediatric community. Some examples include: Special terminology and information includes a full pediatric lexicon that can be invoked at age appropriate times and includes developmental milestones, physical findings, social, and environmental factors. Age based normal ranges are part of our standard content. Time of birth is captured and can be used to calculate age in hours, days, months, and years. A large variety of pediatric dosing calculators exist including body surface area, body mass index, weight, age, gestational age, hepatic function, and problem and diagnosis.

Cerner Millennium aggregates clinical and financial information from a variety of sources, therefore all information, from the first encounter to the last, whether in an ambulatory or in patient setting, resides in our longitudinal relational database. Users at your organization have immediate access to the entire patient record, including information from current and past visits. For example lab results, reports of diagnostic tests, documentation, orders, and more are all viewable immediately upon entry into the system by multiple users. The record a physician views in the hospital is the exact same record in an office setting, thereby creating "one single source of truth" patient record.

Cerner's careplan solution, PowerPlan, provides clinicians with the ability to individualize diagnosis and problem-driven plans of care, including multidisciplinary clinical pathways and care protocols. Plans of care can relate to problems/diagnoses in the build tool. Once a problem or diagnoses has been documented, the system can prompt clinicians with suggested care plans to address the identified problem. The clinician can view the suggested plans of care then accept or reject the plan. The diagnosis or problem focused/driven plan can then be initiated and customized to meet the needs of the patient. In addition, an assessment with calculated results and embedded rules can trigger orders that can include an order for a plan of care.

When activated, plans of care initiate orders and orders populate the CareCompass with tasks to be completed and the MAR with medications. Clinical documentation from the CareCompass, Document in Plan tab, the MAR, as well as new results , auto update the plan of care as appropriate. The plan provides alerts with visual indicators of outcomes not met (red bold circled "X") and a green check for met. The CareCompass and MAR provide prompts and alerts associated with the plan outcomes, interventions, and indicators. Summary views provide a concise view of outcomes

indicating the patient's progress toward goals and discharge readiness. In addition, evidence links are present in outcome and intervention sections. Clicking a link takes the clinician to referential information about potential interventions to support the plan of care.

Cerner's Women's Health solution, PowerChart Maternity, provides clinicians across role and venue the ability to leverage information captured, stored and presented for review at the appropriate time for the purpose to reduce the risk of injury to the pregnant woman and her infant. The solution is integrated with the patient's medical record, condition specific, and helps automate the nursing and provider workflows. In addition, FetaLink is our software application intended to support the display needs of obstetrical clinicians through the rendering, visualization, recording, and optional storage and retrieval of fetal and maternal data acquired from fetal monitoring devices and their peripheral equipment. Cerner FetaLink also provides the capability for management of supplemental user-definable visual and audible alert thresholds. Cerner FetaLink can be used to show graphically the relationship between uterine contractions and fetal heart rate data at the bedside or at remote locations as a surveillance method. The device connectivity portion of FetaLink is the conduit through which the data flows into the FetaLink/CareAware architecture to provide the data to the application from the fetal monitor. FetaLink is dependent upon a device network infrastructure that provides fetal monitor device connectivity (CareAware iBus). In addition, if exercising the storage capabilities of the application, it is necessary to have an archival system to provide storage and retrieval of the archived records (CareAware MultiMedia Archive).

Documents such as facesheets and wristbands can be produced at admission time. The content and number of each document is customizable and can include barcoding.

Label functionality is available with Cerner's registration solution. Additionally, creating and printing labels is available with Cerner's scheduling solution with custom reporting. Customized reports can be created by your organization using the reporting tools included.

Cerner will provide you with solutions and services that enable organizational HIPAA compliance. We have taken steps to train our client-facing associates regarding HIPAA Privacy and Security requirements, and we have instituted corporate security, privacy, patient information handling, and remote access policies to support those responsibilities.

Cerner is continually developing our solutions using a solution management model approach to analyze client requests, market demands, industry standards, trends, and client feedback to define requirements and priorities for future solution enhancements. Our mobile solutions continue to evolve with focus on access to patient information, workflow and ease of use functionality, and identified clinician process models. Future enhancements and upgrades continue to be developed and released on a regular basis. We would be happy to demonstrate our current capabilities and further discuss future enhancements in the mobile access arena.

Cerner's comprehensive order management solution is one part of the Cerner approach to managing patient information effectively. Our orders solution coordinates order management and communication across all licensed, hospital-based facilities and forms the basis for Cerner's computerized provider order entry (CPOE) solution. With the physician workflow in mind, you can view existing orders and perform all order actions, such as repeating or canceling an order, without ever leaving the orders section. During the ordering process, the system performs a series of checks to evaluate for contraindications, duplication, or conflicts. When necessary, an alert will open allowing you to decide whether to continue. In combination with Cerner's pharmacy offering and nursing solutions Cerner's CPOE solution provides a powerful tool to connect the closed loop medication management process, linking physicians, nurses, and pharmacies to improve patient

safety.

Cerner Millennium solutions offer a flexible design that can be customized on three levels: system, institution, and end user. Throughout the various workflows alerts, windows, prompts, screens and data entry fields can be defined to meet your needs. For example, Cerner has developed over 500 alerts and rules in addition to documentation and reports to support evidenced-based workflows. All of the Cerner developed rules and alerts are embedded within the application, and are actionable at the point of care within the workflow of the care provider. In addition, your organization can create additional alerts and rules, as well as additional user-defined data fields to meet your documentation needs.

We provide an Advanced Growth Chart used to assess a child's development against statistical ranges of values for children of various ages, comparing the child's growth to other children of the same age. You can also use advanced growth chart to plot other developmental data such as bone age and mid-parental height. Our growth chart content is representative of the 2000 CDC growth charts. Clinicians document height, weight, and head circumference on the growth chart. The chart displays percentiles based on statistics gathered across the United States (2000 CDC statistics). The percentiles are 97%, 95%, 90%, 75%, 50%, 25%, 10%, 5%, and 3%. The patient's values are plotted against national percentiles and displayed in a linear graph format. Comparing these values to national figures can help the clinician determine how the child's development compares to normative rates of development. The charts can display values for male and female, and two different age ranges (along the x-axis): 0 to 36 months and 2 to 20 years. In addition, we provide the tanis fenton premature growth chart.

A referral to another physician can be initiated with a message sent from the Message Center if the consulting physician is a user within your organization. Due to the true integration of Cerner Millennium, the appropriate referral forms can be forwarded to physicians within your organization. As a result, the consulting physician is able to use order entry functionality to generate any orders. A subsequent letter can be sent back to the primary care physician with documentation of the encounter. Users can also create referral letters that can be printed and sent to outside clinicians.

2.1.4 REGISTRATION REQUIREMENTS

Provide Proposer's detailed description of how its proposed EHR System meets the needs of DHS for registration, pursuant to Section 1.4 (Registration Requirements) of Appendix H (Functional Requirements). Proposer's response for this Section is limited to 2 pages.

Cerner's registration solution is an online Admit-Discharge-Transfer (ADT) system for automating the workflow and process of registration, admitting, transfers, and discharges in any clinical domain, including hospitals, physician offices, and clinics. Cerner registration solution creates the encounter and a Cerner Enterprise Master Person Index (EMPI) that become the basis for coordinating the person's movement across an integrated or disparate health system.

Within Cerner's registration solution, each person entering the healthcare system is automatically assigned a lifetime medical record number (MRN), or "account" number.

All persons added to the system are added to the Cerner Enterprise Master Person Index. This includes next-of-kin, guarantors, subscribers, and emergency contacts. All visit activity has a relationship to a record within the Cerner Enterprise Master Person Index. The Cerner Enterprise Master Person Index can be used as the foundation of each encounter. The Cerner Enterprise Master Person Index information captured within Cerner's registration solution is the same data used

throughout Cerner Millennium. Modifications within Cerner's registration solution are immediately viewable within such Cerner solutions as PowerChart, Cerner Order Management, and Cerner Scheduling Management.

Cerner's registration solution provides multiple rules functionality options, as follows: interfield rule; finish level rule; start rule. Within Cerner's registration solution, an interfield rule is a rule that is placed behind a particular prompt in the registration conversation, for example behind the date of birth prompt. A finish level rule is placed at the end of the registration conversation and it is activated when OK is selected to save the data. A start level rule is placed at the beginning of the registration conversation (before any prompts) and activates as the conversation is opening.

Customized registration screens enable you to enter insurance plan information at both the person and encounter levels. Insurance data can be gathered at the person level, which is the starting point for visits to facilities within the enterprise. Up to six subscriber insurance plans can be captured per person and per encounter.

Employment and plan sponsor information can be entered into the database to expedite billing and reimbursement. The Insurance tool provided allows you to enter health plan information for insurance organizations and associate those health plans with sponsors (employers).

Membership uploads can be performed with payer-provided information to assign relationships between persons and their health plans.

Label functionality is available with Cerner's registration solution. Additionally, creating and printing labels is available with Cerner's scheduling solution with custom reporting. Customized reports can be created by your organization using the reporting tools included.

Documents such as facesheets and wristbands can be produced at admission time. Standard documents/reports are available. Additionally, the content and number of each document is customizable and can include bar coding. Admission, transfer, and discharge notices can be produced at the time of admission/transfer/discharge.

Cerner's registration solution supports the modification of an encounter type through the utilization of various screen types that automate tasks or ADT transactions. Your organization can configure screens that perform additions/updates to encounters.

The pre-registration (pre-admission) conversation functionality provides the ability to gather and verify the minimum required information prior to booking an appointment or non-scheduled encounter.

Cerner's registration solution provides an Episode Manager tool that is used to group related encounters in an episode type. The grouping of encounters makes it easier to view registration information for a particular course of treatment. You can add an episode type and include encounters in it or give a new name to an existing episode type. An encounter can be moved from one episode type to another episode type or designated as an unattached encounter. If an episode type is deleted, its encounters display in a list of unattached encounters.

Cerner's registration solution screen building tool supports the creation of a quick registration with minimal required fields.

With the implementation of Cerner's Master Person Index solution, the Combine tool's online work queue includes a percent column, which reflects the probability that two people in the queue are a match. You can manually display potential duplicates side by side to review what information is the same and what information is different. Potential duplicates that meet the report threshold are written to the appropriate database table. The system reads this table to populate the work queue.

The Combine Tool that is provided is used to eliminate duplicate records by combining persons and encounters in the database. You can also separate (un-combine) person and encounter records that were combined in error. Combine also provides the ability to remove a single encounter from one person's record and add it to another person's record. This can be necessary if an encounter was mistakenly assigned to the wrong person.

Cerner's registration solution work queue manager is used to build worklists to aid in task management. This application allows you to create a worklist, which is launched out of the Access Management Office application. The worklists can be built as a simple task list, an associated conversation, or as a list only. The simple task list has the ability for a custom update script to be created by your organization to perform an update in the database when an item on the worklist is selected. The associated conversation allows a registration conversation to be launched from the worklist which in turn allows you to modify the visit or person information. A list-only worklist provides the ability to drop the row off of the query upon selection; thereby performing a database update.

Ad hoc filtering functionality is also available during the build process of the worklists. Ad hoc filtering allows you to designate a specific field value, date, location, organization, person, provider, or text to be filtered upon.

The tasks in the work queues are automatically assigned task numbers. The numbers can then be used to grant or restrict access to a task in the Task Access application. You can select a worklist and then launch an application to perform appropriate transactions for a selected person or item. List-only work queues can also be created. These work queues do not require that you launch an application to perform a task.

Cerner's registration solution provides an encounter location history viewer which provides the ability to view admit, transfer, and discharge history for a person's visit. Cerner's registration solution also provides the ability to display the temporary/current location as well as assigned location via a column in the bed board. The historical tracking of the temporary location is provided within the History Maintenance module.

Additionally, within Cerner's Bed Board application or a registration conversation, the ability to assign or remove the assignment of a temporary location to a person is supported. Within the Bed Board, the person displays in the assigned nurse unit/room/bed. A temporary location column is available that can be added as a bed board column to view the temporary location of the person. Additionally, your organization can define a user-defined field to designate the status of the person. User-defined fields can also be added as bed board columns. In reference to tracking persons from pre-admission to discharge, the location history is viewable for the person in the Location History tool or using the History Maintenance module in Access Office. The dirty bed worklist can be used monitor bed statuses. Additionally, within Cerner's scheduling solution, the check-in, check-out, and person wait time is provided to assist with person tracking functionality.

Cerner's registration and benefit solutions provide easy-to-use, front-end tools that can be used to create the reference database for insurance carriers, health plans, and benefits. Within the tools provided the information is as easy to modify as it is to build. For example, if a payer makes some type of change (i.e. change in phone number) you can access the specific tool for that information and make the change accordingly.

2.1.5 SCHEDULING REQUIREMENTS

Provide Proposer's overall summary description of how its proposed EHR System meets the needs of DHS for scheduling, pursuant to Section 1.5 (Scheduling Requirements) of Appendix H (Functional Requirements). Proposer's response for this Section is limited to 2 pages.

Cerner Scheduling Management coordinates appointment scheduling across an integrated or disparate health system. It is used to establish and maintain person appointments for resources with defined availability.

Protocol appointment types can be defined to allow you to schedule one appointment type that in turn schedules multiple appointments with predefined time ranges separating them.

Appointment types include recurring. You define the sequence and the number of instances needed for the appointment. The system automatically calculates the appropriate days based on entered data.

Group scheduling functionality provides the ability to schedule and specify the number of persons to be scheduled for a specific appointment type.

Within Cerner's scheduling solution, CPT 4 codes can be associated to the appointment type or orderable as part of the database build. During scheduling the user can then enter the appropriate IDC9/10 diagnosis.

Integration between Cerner applications is seamless.

Cerner's scheduling solution supports the ability to define data fields to capture appointment specific information. This information can be defined by department or specialty.

Client-defined preparations and post appointment instructions can be associated to appointment types.

Scheduling guidelines are guidelines that are displayed to users during various stages of the scheduling process such as confirm, reschedule, and cancel.

The flexing functionality provided allows you to define rules at the appointment type, resource, orders, and slot type level. These rules are evaluated to determine how appointments should be scheduled in certain circumstances. Appointment details captured are flexed due to the accept format associated. The ability to define different fields for inclusion is supported. The accept format can be defined at the appointment level or various scheduling actions, allowing for the same accept format to be flexed to display different fields based upon the scheduling action for the appointment type. We do not limit the number of details that can be present on an accept format. Most clients average between 3-5. We recommend you add the amount needed to be able to book appropriately without impacting the users workflow.

Cerner's benefits solution maintains the terms and conditions of relationships among members, employers, providers, and payers to enable integration of these relationships within clinical and financial processes. This solution manages information related to insurance plans and member demographics, EDI eligibility verification, detailed coverage and benefit information, and referral and authorization management for members and provider networking. Cerner's benefits solution includes Cerner's eligibility solution, which provides the initiation and storage of the Electronic Data Interchange (EDI) for specific and relative information related to the health plan. An EDI transaction is sent via the Cerner application to a third party clearinghouse in order to capture the health plan eligibility verification information. The status of the verification is returned as part of the appropriate application and is displayed and stored for reference. History, audit and reporting tools are available as applicable within each application.

Within Cerner's scheduling solution, CPT 4 codes are associated to the appointment type or orderable as part of the build. The user can then enter the appropriate IDC9/10 diagnosis when entering the information specific to the patient and appointment. With this information, the system can perform a medical necessity check using 3M's Medicare Medical Necessity content. The content contains the Local Medical Review Policies (LMRP) and the National Coverage Determinations (NCD). As part of the workflow, the user is notified if an Advance Beneficiary Notification (ABN) is required to be signed. The user has the option to print the ABN form immediately or to print the ABN form at a later time in the process, from Cerner's scheduling solution. All appointments that require an ABN can have an icon displayed or users can view from a worklist. We also offer a standalone Medical Necessity Checking Tool that allows the user to enter the diagnosis and procedure codes to be checked against the 3M Medical Necessity Content. The ABN form can also be printed from this standalone tool.

Each appointment type is associated with an unlimited number of schedulable resources (person, place, or thing, including patient). The system automatically takes into account the availability of each of the resources when determining if the appointment can be scheduled at the requested time.Tight integration of Cerner's scheduling solution with underlying Cerner applications ensures optimum use of resources and promotes patient satisfaction with timely, sequenced care. Costs are reduced, since coordinated scheduling ensures proper resource utilization.

Revenues can be increased, because streamlined scheduling increases operational efficiencies and patient throughput, freeing up more time in the day to schedule additional appointments.

Cerner supports 5,000+ default schedules. The number of default schedules recommended is dependent on how your organization defines other scheduling factors such as slot types, appointment types, and locations for clinics. The more these factors are individualized, the more default schedules are potentially needed. Your organization can define and build a virtually unlimited number of schedule templates for individual resources, or one template can be used for multiple resources. A schedule template is made up of slots of time that are applied to a day or range of days. Schedule templates can be created by facility for resources and procedures.

Limitations to resources created is applicable if a resource is built but then not properly associated to a resource role, without the role present the resource cannot be scheduled.

Resource roles are typically based on the clinic type or service as a starting point for the grouping. The same resource can be associated to many different resource roles. Based on the statistics provided, we would recommend your organization have 100+ resource roles defined.

Reception module in Cerner is a combination of Departmental Order Entry (DOE) for managing direct attenders and the Scheduling day book to view daylists and arrive scheduled patients as they attend. Both applications are available to the receptionist through a single sign-on using the App Bar. The App Bar allows the receptionist, and all users, to have all the functions they require through a single click, with no need to re-logon each time. DOE supports procedure order entry and review functionality. The functions provided help you accomplish the following tasks:

- Admit a patient and order procedures using a single function.
- Place orders and request additional procedures.
- Cancel procedures.
- List each patient's ordered procedures, exam status, and patient, order, or result comments.
- Scan any paper documents related to the patients attendance.

The Appointment book provides the receptionist with a graphical day book, displaying current patient status and other details as defined locally. Day book views are defined locally and can be for single locations/resources, groups of locations/resources or all locations/resources. The receptionist can arrive the patient directly from the graphical view indicating electronically to the radiographer that the patient has arrived and is ready for their procedure.

Cerner's perioperative solution also includes an integrated scheduling component that shares the same database and architecture as all Cerner Millennium solutions. Surgery scheduling performs conflict checking on all schedulable resources for the appointment. With block scheduling capabilities, you can define blocks of time that particular resources and appointments can be scheduled into. These blocks can be defined at the surgeon, surgeon group, patient type, procedure, and/or specialty/service levels. Blocks can be layered and automatically released at user-defined points in time to another block, or to open scheduling. We also provide detailed reporting to analyze block utilization. Other surgery scheduling features include automatic case-duration calculation based on historical case information, request list capabilities, suggestions for appointment times, appointment notifications, and linked appointments. Surgical preference cards are surgeon/procedure-specific and store items needed for the procedure, as well as procedure-specific documentation templates and defined defaults. During scheduling, the surgical case number is automatically created, and the appropriate preference card is assigned based on the surgeon and procedure selected. Since the surgical items and documentation templates/defaults are included on the preference card, the case-specific pick list and needed documentation automatically pull into the case, where the nurse can edit/complete by exception.

2.1.6 CLINICAL DOCUMENTATION REQUIREMENTS

Provide Proposer's overall summary description of how its proposed EHR System meets the needs of DHS for Clinical Documentation, pursuant to Section 1.6 (Scheduling Requirements) of Appendix H (Functional Requirements). Proposer's response for this Section is limited to 2 pages.

PowerChart is a family of system solutions for a wide assortment of health care providers designed to automate care delivery. As an electronic medical record system, PowerChart supports enterprise-wide viewing of clinical information. Cerner Millennium solutions create a single source of truth for the entire care delivery team providing real-time access to the same information regardless of role, venue or condition. As a result, we are able to support the full scope of practice for each clinician with automated protocols, optimize handoffs from clinician to clinician, venue to venue, as well as meet quality and regulatory requirements captured as a natural by-product of documentation. It includes process automation functions for viewing clinical information and activities from any department or system; ordering of nursing or multidisciplinary care team procedures; clinical documentation in forms-based, template, or free-text and structured-text approaches; and coordinated care pathways. In addition, entry of demographic and visit data can be made using a basic patient registration function. PowerChart and its related solutions can automate many tasks associated with providing optimal patient care. PowerChart automates the processes necessary to coordinate patient care and document at the point in which it was delivered in both acute inpatient and outpatient settings.

Our comprehensive documentation management solution is designed to automate discrete data documentation related to care delivery anywhere within a health system. This includes information obtained from the delivery of care documented in such forms as textual documents, vital signs,

assessments, height, and weight. Cerner provides a library of standard documentation forms, interactive views, notes, and templates which can be modified by your organization. As orders, results, and documentation are completed in the system, task lists and workflow views are updated appropriately. Our interdisciplinary workflow tool guides collaboration and provides clinicians a face-up view of critical patient information, patient status, and activity data with both a single patient and multi-patient context in order to proactively manage patient care. As a result, communication is enhanced, redundant charting is eliminated, pertinent results are integrated into documentation, charting standards are upheld, and quality of care is improved while errors are reduced.

Various methods of viewing results are available; the Patient List, Order details, the Chart Summary, the Message Center, the Electronic Medication Administration Record, flowsheets such as I&O, and clinical notes. The results viewing process is designed to provide the clinician with the most pertinent results first. The care provider then can seek additional results if necessary. New, as well as abnormal results can be defined to prompt clinicians and the appropriate task lists updated. Cerner Millennium can also integrate with mobile devices. Our solution is device agnostic based on virtualization capabilities. As long as the device is adequately configured for processor speed, memory requirements and screen resolution for example, you can run Cerner Millennium applications.

Health care is complex and demands multidimensional coordination, communication and collaboration across the care delivery team. Our system can support the charting, viewing, ordering, and care planning/pathway needs of the multiple specialties within your organization. You can define custom flowsheets, online forms, clinical note templates, plans, and pathways to meet the specific needs of the various specialties. The system provides the flexibility to completely customize your order catalog to accommodate all the areas or departments within your organization. Multiple views/screen formats can be customized for departments, units, providers, specialties, and more.

For example, the flowsheet allows clinicians of all specialties to efficiently review result data and documents from Cerner's integrated clinical systems as well as interfaced foreign systems within a single spreadsheet view as soon as they are recorded. A virtually unlimited number of online flowsheets can be designed for use in different specialty areas and can include any or all data or a select subset of the data captured. Flexible display features allow you to create an optimal view. You can select the format of the flowsheet interactively, maximizing the communications of information to the clinician as appropriate for a given clinician and patient.

The Cerner solution provides an online problem list, representing the patient's lifetime problems which are maintained across the network, and can include diagnoses, conditions, and anything that presents as a problem to the patient's overall health. Problems are codified and include the nature of the problem, its status, onset and duration. Database links to the associated clinical events provide detailed documentation of the basis and course of a specific problem. Problem list information is collected and entered into the system within the problem list view which can be embedded into documentation templates.

The Cerner solutions provide a wealth and variety of standard reports such as Active Orders, All Tasks, and I&O's to name a few. In addition, your organization can also define and build a virtually unlimited number of Discern Explorer reports to report on any discrete data captured in the Clinical Data Repository.

Cerner Millennium offers cross-discipline shared servers for registration, scheduling, ordering, results, documentation and charging that eliminates duplication, leverages processing power across the organization, and allows flexibility to meet the demands of departments. For example, charges can be dropped based upon order placement and documentation. Charge capture can occur at order

entry, collection, order completion, task completion, result entry, and at the result or observation level in documentation. You can easily retrieve online charge information through the Charge Viewer.

2.1.7 ORDER MANAGEMENT REQUIREMENTS

Provide Proposer's overall summary description of how its proposed EHR System meets the needs of DHS for Order Management, pursuant to Section 1.7 (Order Management Requirements) of Appendix H (Functional Requirements). Proposer's response for this Section is limited to 2 pages.

Cerner Millennium includes not only the Clinical Data Repository, but also the viewer into each patient's electronic medical record. Cerner's EMR includes familiar views containing functions such as the patient demographics view, growth chart view, Message Center, flowsheet, patient list, multipatient task list, and various summary and workflow views. By using additional Cerner Millennium solutions, corresponding views are added to the EMR viewer. For example, the addition of Power Note, order management, and documentation functionality adds views to support order entry, forms and notes documentation, and the MAR. Whether the clinician is in an inpatient or ambulatory venue, they simply click the view corresponding to the function they desire, or set default views. Furthermore, you can create meaningful views of information to support the vast needs of all types of roles, areas, and user level preferences. Much of our development efforts have focused on providing clinician views that support workflow processes. Summary screens, predefined views, flowsheets, patient lists, Message Center, orders, interactive view, structured documentation templates, pathways, problem list, clinical, documentation forms, clinical summary and task list are all examples of views that can be customized by area and/ or role to meet your needs. Flexible display features and a multitude of viewing and navigation preferences can be utilized to maximize the communication of information to the clinician, both as predefined views as well as interactively during real-time record viewing.

These multiple views/screen formats can be customized for departments, units, providers, and specialties. Your organization can determine which views are available to each clinician by position. If your organization wants to restrict clinician access, you can set that position security to not include those views. For example, clinical results views can be customized to display the most pertinent results first within various formats such as flowsheets, patient list, order details, chart summary, Message Center, MAR, I&O flowsheet, and clinical notes. These customized summary views and custom flowsheets can be defined to meet the needs of various workflows within your organization.

Cerner's orders management solution coordinates communication and order management across the continuum of care and across facilities and was tailored specifically with physician and clinicians workflow in mind. It forms the basis for Cerner's computerized provider order entry (CPOE) solution. Along with physicians, other care providers including nurses, clerks and other clinicians are able to support order entry, review, validation, interdepartmental communication, inquiry, and reporting of clinical orders.

Our order management solution addresses the needs of each of your clinical roles and can be utilized for patient ordering needs across all venues of care-Inpatient, Ambulatory-In Office, and Prescriptions. PowerOrders presents a view of the ordering process in a display similar to the Flowsheet and also handles medications, dose range checking, and continuous infusion orders. Order modifications are streamlined with an edit-on-the-line feature and patient allergies and diagnoses

can be accessed from the order window.

Providers can review, validate, inquire, and report on clinical orders based on security. It allows physicians and other clinicians to place new orders, suspend/resume orders, view existing orders, modify, review, renew, and cosign orders. Many convenient timesaving features are provided, including pre-built order sentences, favorite orders folders, and linked reference text. During the ordering conversation, the clinician has the ability to see relevant data from the repository within the order entry screen. The point and click ease of ordering and viewing enables providers to spend less time with the patient chart and more time providing care. Task lists and orders queues are updated real-time as new orders are posted and new results become available. They will be posted in the applicable views, worklists, and flowsheets.

Our CPOE solution ensures that information and alerts are available to all users at the appropriate time and in the appropriate venue. Information entered "downstream" (as well as information written to the patient's record from previous visits) is available to the departmental user, helping that user make the best and most-informed decisions possible. For example, the pharmacist can view clinical notes and laboratory results directly from the pharmacy system and in appropriate workflows.

Cerner's decision support solution, Discern Expert, can look across multiple workflow environments. Our rules engine can interact with orders, documentation, pharmacy, laboratory, radiology, surgery, cardiology, registration, scheduling and other ancillary environments. Cerner's decision support tools are not limited by patient type. Data can be evaluated across encounters including inpatient, outpatient, and any of your facilities or locations providing clinicians with feedback inside and outside of the ordering process.

During installation, orderables are entered into the build spreadsheet and imported. Also, a standard order catalog is provided by Cerner and can be uploaded to your system. With Order Catalog Tool, you can add new orderables, modify existing orderables, and make batch changes to sets of orderables. To speed the process, you can copy the parameters for a previously defined orderable into a new orderable and then make necessary changes. Your organization can use the tools to tailor a virtually unlimited amount of orders to meet the needs of all clinical settings within your organization.

2.1.8 CLINICAL DECISION SUPPORT REQUIREMENTS

Provide Proposer's overall summary description of how its proposed EHR System meets the needs of DHS for Clinical Decision Support, pursuant to Section 1.8 (Clinical Decision Support Requirements) of Appendix H (Functional Requirements). Proposer's response for this Section is limited to 1 page.

Cerner Millennium solutions feature clinical decision support throughout the continuum of care. With our knowledge solutions we provide the most current and relevant medical decision support, which is embedded in the actual workflow of providers and clinicians from the very first assessment, placing content-based on the latest clinical evidence, empirical data, and optimal practices at the clinician's fingertips at the appropriate time and place in the care process.

Alerts, reminders, and other decisions are built into each Cerner solution where they make the most sense, such as duplicate order checking, abnormal results indicators, immunization reminders, or auto verification, to name a few. Utilizing Discern Expert, specific patient parameters and events can

trigger and fire notifications which can prompt clinicians with guidance and/or to enable intervention. In addition, your organization can use Discern Expert to easily write additional rules to meet your needs.

Consult orders can allow a clinician to place an order and direct it to a specific medical service. Clinicians associated with that medical service can view the list of consult and accept if applicable. In addition, clinicians have the ability to forward results and documents to support consult request to clinicians. These requests appear in the Message Center.

Our clients have also used our solutions to improve the quality of care, costs and lives of the rapidly growing number of individuals with chronic illnesses. As such, our solutions include condition summary screens, which present the user with contextual summaries and evidence-based treatment algorithms based on the patient's condition. Our solutions also provide population and provider performance reports that aggregate performance metrics. These measures help physicians compare and improve their individual clinical performance against standardized performance targets and peers' performance. We are helping our clients improve care for these patients by drawing on the information doctors and nurses put into the EMR and comparing the care provided against quality measures from nationally recognized organizations such as the National Center for Quality Assurance.

Advisors (interactive reports) have been developed for VAP, BSI, UTI, and SSI. Much of the content on these advisors are extracted from the Cerner Millennium platform and follow the algorithms as defined by the CDC and NHSN. Infection Control has four Advisors which follow CDC and NHSN guidelines for Urinary tract infections, Blood stream (Central Line) infections, Pneumonia (VAP), and Surgical Site infections. Advisors help guide the clinician by extracting objective data from Cerner Millennium and allow the end user to fill in the subjective data to arrive at a final conclusion. Once completed, the clinical data documented within the Advisor can be saved as a CSV file for upload to agencies such as NHSN.

With our Core Measures solutions, data elements that can be discretely identified within your system will populate based on normal, everyday workflow, eliminating redundant documentation. Outcome measures are then available in real-time at the patient level, within the Quality Measures PowerPlan, or at the population level, within the Quality Measures MPage. Our solutions offer Web-based reporting screens and summary reports within an intuitive graphical interface. Additionally, content and reporting packages are updated in alignment with the CMS/TJC and Meaningful Use versions as mandated by the individual reporting programs.

2.1.9 PHARMACY REQUIREMENTS

Provide Proposer's overall summary description of how its proposed EHR System meets the needs of DHS for Pharmacy, pursuant to Section 1.9 (Pharmacy Requirements) of Appendix H (Functional Requirements). Proposer's response for this Section is limited to 2 pages.

Cerner's Clinical Data Repository (CDR) contains patient demographic and clinical data in a single, consolidated longitudinal electronic medical record. In our PharmNet Inpatient Pharmacy solution, lab values are available automatically in the results tab with integration to our lab solution, or via an HL7 interface to a foreign lab system. You can define how lab values show by flagging them in different colors, or by letters H, L or C (High, Low, or Critical), or both.

Our pharmacy solution stores all medication history from previous encounters, which can be viewed

via a history action. The clinical documentation feature provides for more thorough and complete documentation of clinical notes, task lists, and activities within the pharmacy department. The medication profile is updated real time with medication orders captured by history on admission, as well as outpatient prescriptions and inpatient orders. The medication history is viewable at any point by all authorized users. Our pharmacy solution supports TallMan lettering for look alike, sound alike drugs, using MediSource which has certain medications recommended for TallMan. Dose range checking content is provided by MediSource, and can be customized to meet your unique practice standards. Customization supports adjusting the safe minimum and maximum dosage range at the specific generic drug, age and route of administration context. Cumulative Lifetime dose range checking provides system-automated verification that the dose you are ordering will not result in the patient receiving excessive amounts of meds. Cumulative dosing is calculated based on dispensed doses from PharmNet, documented medication administration from Cerner's electronic medical record, or documented therapy received outside of the Cerner system. Pharmacists have full access to documentation of allergies, which can be viewed in all Cerner Millennium solutions. PharmNet supports allergy checking and notices. When appropriate, a system-generated alert will display on the user screen during order entry. Hard and soft stops built at the orderable level present clinicians with visual notification in our orders solution that the order is reaching its stop date/time. If a hard stop order is not renewed prior to its stop date/time, the order is discontinued. A soft stop continues past its stop date/time. Controlled substances are included in the formulary. There are multiple standard management reports that offer reporting of user-defined parameters to provide data including medication utilization. Also, Discern Analytics reports allow you to create ad hoc reports for medication utilization.

PharmNet's order entry determines if another user is accessing the medication profile. If not, you are granted the record lock when the patient is selected. This is not an order specific lock, as any other orders, if changed, can have a negative clinical impact on the order being acted upon without the clinician's knowledge. In the clinical data repository, you can perform other actions in the chart and place orders for other catalog types. If you initiate an order while the profile is locked by the pharmacy user, you receive a warning and, based on preference, can proceed. If physicians have initiated medications orders, they are granted the medication lock until signed. The pharmacist, upon selection of a patient which is locked, is notified medication orders are being added by another user. The message indicates who the other user is, and the remaining time on a client defined lock expiration setting. Pharmacists can inquire on any details without affecting the lock, or based on security, break the lock to begin entering orders. Pharmacy order entry locks when the patient is selected and releases the lock when leaving the patient record as the workflow in MedManager is related to medications. The clinical data repository does not lock the patient until a medication order is initiated, at which time the lock is attempted to be acquired.

IV charting is provided with the our eMAR. Multiple ingredient IVs are available. TPNs are built as order sets and can be loaded in PharmNet after calculations are done. Our pharmacy solution supports performing an IV compatibility check of the ingredients being added into the same multi-ingredient IV order at the time or order entry. IV compatibility checking is performed as part of the clinical checking and decision support process using King's content. Checking is done on drug/drug and drug/diluents pairs. Interaction information is displayed, along with other reference information pertinent to the medication and administration. Order changes are reflected on the eMAR and activities list in real time. Patient medication leaflets are provided with our MediSource database. You can enter orders as a template non-formulary item, which allows you to free text any item in.

For a medication orderable synonym, you can select a specific Rx mask based on options defined for

the synonym in Order Catalog Tool. Selection of an Rx mask defines its medication type and prevents the front-end application from prompting for this information later. Virtual View settings determine which synonyms are visible in order management. Via Virtual View, Tylenol, for example, can be visible in Facility A, but not Facility B.

Your organization defines when in the life of the order a charge is posted. You can generate a charge on order, and credit the charge if the order is canceled. Charges can be captured upon medication dispense or medication administration.

The medication list contains a patient's current and past med orders. Using headings, columns, symbols, and brief descriptions, the medication profile provides a quick, in-line summary of essential information about each order. The medication list view is divided into three categories, each of which is identified by a heading: pending, medications being given, and prescriptions/home medications. The latter two categories are divided into current and past subcategories. Arranged in a tree format, each category and subcategory can be expanded or collapsed, allowing you to see order details as needed. The orders view is used to place new orders, view existing orders, renew, modify, review, cosign orders and generally work with various types of orders, such as sliding scale orders, weight based orders, medication orders and more. The three main sections of the orders view are the Navigator, the Order Profile, the Order History and Medication Reconciliation area. Our orders solution provides robust medical student order entry functionality. Prior to placing any order, the medical student is prompted to enter a physician's name (who receives the prompt to sign the orders). The orders can then be held in the solution until the physician co-signs the orders. These orders can be seen in the orders profile view as "held pending signature". The orders are automatically routed to the "signing" physician's message center/review queue. Once the orders are signed, they are automatically processed.

Dose calculator functionality and dose range checking provide a safe and effective check for dosing medications. Comments can be defined and presented during an under or overdose alert message. Cerner supports dose range checking based on age, weight, body surface area, and renal function. Dose range checking functionality, validates single dose, daily dose, therapy limit dosing, continuous infusion additive-rate checking, renal dysfunction checking and lifetime burden checking for medications with a literature published lifetime burden. Also, dose range checking parameters include gestational age-based dose range checking, hepatic dysfunction and problem/diagnosis dose range checking. Discern Expert rules validate that patients have a height, weight or allergies entered. The most recent values for height, weight, and serum creatinine are viewable from the order profile, and are used by the system for dose range checking, dose calculations, and calculation of BSA, IBW and CRCL values. Result date, time, and method of calculation are available. Dose range checking supports renal checking against Creatinine Clearance estimated from a Serum Creatinine result. When ordering renally excreted, or nephrotoxic medication for a patient with a recent creatinine result that indicates impaired renal function, a dosage adjustment is recommended. An alert evokes when a renally excreted drug is ordered. Recent lab results are checked for low creatinine clearance levels. This rule is done assuming capturing height in centimeters. The Cockroft/Gault formula is used for patients between the ages of 18 and 92 years, and the Schwartz formula is used for patients between 6 months and 20 years of age. Our pharmacy and rules catalog provides Standard IV/PO WBC Switch. This rule recommends a switch from an expensive IV medication to a more cost effective oral equivalent. Documents such as facesheets, labels, and wristbands can be produced at admission and can include barcoding. Please refer to the Additional Reference Materials section for examples of barcodes.

2.1.10 MEDICATION ADMINISTRATION REQUIREMENTS

Provide Proposer's overall summary description of how its proposed EHR System meets the needs of DHS for Medication Administration, pursuant to Section 1.10 (Medication Administration Requirements) of Appendix H (Functional Requirements). Proposer's response for this Section is limited to 1 page.

Cerner Millennium Medication Reconciliation supports identifying the most accurate list of all medications that a patient is taking - including the name, dosage, frequency, and route- and using this list to provide correct medications for patients anywhere in the health care system. Our reconciliation process involves comparing the patient's current list of medications against the physician's admission, transfer, and or discharge orders. During each transition from one venue to another, clinicians should review previous medication orders alongside new orders and plans for care, and reconcile any differences.

Central to the reconciliation process we provide a single source of up-to-date medications with all necessary order details. An efficient process is also very important. Our tools support reconciliation of current medications and addition of new medication orders within the same screen or user interface. Cerner Millennium supports the medication reconciliation process for all transition types during an encounter; admission, transfer or discharge.

Cerner's medication reconciliation is an enhanced way for physicians and clinicians to document patient medication history and reconciliation. The components include documented medications by history, admission, transfer and discharge medication reconciliation. We provide prescription actions such as convert to inpatient and convert to prescription within the reconciliation window as well as a view of therapeutic alternative selection. Specific functionality includes the ability to:

- Receive automatic notifications (through tasks) when patients' medication histories have not been completed.
- See when and by whom a patient's medication history was last updated for a given encounter and view when a patient's medication history has not been completed for a given encounter from the order profile's medication list.
- Define whether a patient's medication history is considered complete, including active and inactive medications based on documented medications and their respective compliance.
- Document when there are no changes to a patient's medication history and compliance
- Reconcile medications upon admission, transfer, and discharge of patients
- Add orders for medication reconciliation
- Select therapeutic alternatives
- Convert medications to inpatient administration orders (active or inactive)
- Convert inpatient medications to prescription orders (active or inactive)
- Add and search for Care Plans

Our orders display in the reconciliation process with the order status such as ordered, suspended, incomplete, cancelled, discontinued, completed, pending complete, voided with results, and cancelled to easily recognize if the medication needs to be continued upon transfer or discharge.

2.1.11 LABORATORY REQUIREMENTS

Provide Proposer's overall summary description of how its proposed EHR System meets the needs of DHS for Laboratory, pursuant to Section 1.11 (Laboratory Requirements) of Appendix H (Functional Requirements). Proposer's response for this Section is limited to 1 page.

The major components of the PathNet product line address the clinical information needs of the various laboratory sections and include General Laboratory, Microbiology, Blood Bank Transfusion, Anatomic Pathology, HLA and Outreach Services. Since its market introduction, PathNet has attained significant success in the marketplace, and is recognized as the industry's leading LIS. Based on its robust functionality, PathNet provides benefits for integrated health organizations as well as clinics, commercial laboratories, and hospital groups worldwide.

Our clinical solutions continue to evolve with focus on workflow and ease of use functionality, and identified laboratory business process models. The Cerner PathNet laboratory information system offers clinicians comprehensive, fully integrated technology to automate the operational and managerial sides of the laboratory, and because the PathNet family of solutions operates on the unified Cerner Millennium architecture, information links seamlessly with the patient's electronic medical record.

Clinical and laboratory data can be charted in our solutions. With our single data structure, Cerner Millennium provides real-time access to all charted information across multiple applications, such as laboratory, pharmacy, nursing and physicians, to all of those needing such access, regardless of location.

All results are associated to the order set. For example, a CBC can have results for hemoglobin, hematocrit, wbc, rbc, and more. All of these results can be associated to the one order (CBC).

Microbiology results display within Cerner's micro viewer, which includes a susceptibilities grid format view of the organism and related drug susceptibilities. Depending on the types of tests performed by the lab, the results are listed in columns. The result indicators can be defined by your organization. Some examples include these common symbols: R = Resistant, S = Susceptible, and I = Intermediate.

Your organization can define rules that can trigger an order based off of the positive result.

2.1.12 RADIOLOGY REQUIREMENTS

Provide Proposer's overall summary description of how its proposed EHR System meets the needs of DHS for Radiology, pursuant to Section 1.12 (Radiology Requirements) of Appendix H (Functional Requirements). Proposer's response for this Section is limited to 2 pages.

Cerner's RIS system, RadNet, streamlines departmental operations, such as registration, order entry, patient tracking, film tracking, transcription, electronic signatures and report distribution. Pertinent data, such as allergy information or lab values, is available to radiology staff at the click of a mouse. In addition, RadNet provides unparalleled efficiency in exam scheduling and ICD correlation, as well as tools to streamline documentation, optimizing revenues and profitability. Our integrated solutions provide the ability to work with multiple modalities and worklist to enhance the workflow of the technician as well as the provider. We support the work flows as mentioned, CAT SCAN; Ultrasound; Nuclear Medicine; General Radiology; Mammography; Cardiology; and MRI. The scheduling

capabilities include reason for exam as well as cancellation with reason and the ability to schedule/reschedule multiple resources, and exams in the appropriate order and time span. Orders can include reference text as well as links to your specific reference sites. In addition, we support technical comments and the ability to capture that section on reports as well as in our chart search capabilities. Provided adverse reactions are documented in our allergy and adverse reaction module, our system can check radiology orders against the recorded information as well as perform MediSource interaction checking. Your radiology staff can access the allergy/Adverse Reaction module to view, edit , and add reactions depending on assigned security. All medications ordered in the radiology module can appear on the MAR and be documented as administered on the MAR. Our integrated orders provide one source of truth for placing all orders, interaction checking, and integration with the MAR.

Technical comments is an open-ended data collection online form that allows you to define what data is collected and provides control over the formatting of the data. Data entered can be included within the exam report.

Reports providing volume, utilization, and performance statistics are available to department managers to assist in planning and management of the radiology department. These reports provide the means of evaluating the performance statistics within and across the entities of the organization, such as institution, department, and section-level comparisons.

The following is a list of reports you can create easily using the inherent Discern Analytics tool.

Actual turnaround time log, Turnaround time report, Exam activity report, Order activity report, Detail activity report, Transcriptionist activity report, Procedure classification report, Repeat analysis report, Medication documentation report, Technical comments report, Mammography report, Workload report, Canceled Exam Report, Wet Read Report, Peer Review Report

The trending functionality within our reporting tool, allows long or short-term trends to be easily identified and analyzed. Discern Analytics also includes the ability to graph statistical information into numerous graphing styles allowing for quick analysis of volume and turnaround time information. You can save these reports for future use.

In the area of patient outcomes, radiology usually contributes data to a health system-wide plan for evaluating outcomes. Cerner's radiology solution offers mammography statistical reports that give outcome statistics by radiologist, and patient age group. The standard indicators are true/false positive/negatives, accuracy, sensitivity, and specificity.

Mammography management is an integral part of the RadNet solution that prevents patients from being lost to follow up, as well as ensuring the specific data collection requirements are met. Follow-up case records are created in RadNet each time a technologist completes a mammography procedure. This eliminates interfaces or dual maintenance of separate databases that can lead to delayed results or lost cases. Data collection can be performed at the time the procedure is completed, at the time of transcription, and at electronic signature by the radiologist. Historical patient medical information is transferred from one visit to the next to eliminate re-entry. Online breast diagram is available to record annotations and study-specific markings. The technologist only needs to enter the information that has changed since the patient's last visit. RadNet's Mammography application provides for patient notification and follow up, medical outcome reporting and Discern Analytics reporting for all BI-RAD codes as well as any client-defined data elements. Overall Breast Composition information and all Required MQSA data exists in the Study tab of the Mammography Case Maintenance window.

When a patient returns for follow-up exams, the system creates a new follow-up period. Data

exchange is transparent across every institution in a multi-facility setting. Access to all previous results and statistical fields is available to the technologist, transcriptionist, and radiologist.

Number of biopsies recommended, number of biopsies performed, number of cancers found, biopsy yield of malignancy, and cancer detection rate are all statistical report fields that can be reported by individual radiologist, all radiologists, and patient age group.

The following reports are available with mammography management:

Follow-up reports, Assessment by patient age group report, Recommendation by patient age group report, Outcome summary report, Summary report by radiologist report, Follow up reports, Assignment based on Pathology Information, Standard Management Report

The Cerner RIS provides for the scheduling of patients, exam rooms, and equipment, as well as the personnel needed to perform the exam. The scheduling system provides interaction or conflict checking, and procedure sequencing to ensure that all procedures are performed in a safe manner. Online inquiries and reports are provided by department, section, exam room, procedure, and patient

Each appointment type can have a procedure code associated, based on database build. The charges would be generated based on the procedure code associated to the appointment type. The same can also be accomplished via a generic appointment type with orders, the user manually selects the order specific to the need, screening versus actual treatment, as determined by the diagnosis.

Scheduling security allows you to associate specific personnel into groups that have defined privileges concerning what actions can be taken within the appointment book. Scheduling security can also determine override capabilities.

Patient Schedule Inquiry can be restricted to a particular scheduled resource or group of scheduled resources, or you can inquire about all appointments for a patient. For those with scheduling security, Patient Schedule Inquiry can be used to schedule, reschedule, cancel, hold for rescheduling, or modify appointments.

For viewing PACS images with the Rad report an exchange of information between Cerner's radiology solution and the PACS via an interface conforms to HL7 standards. A Cerner integrated solution seamlessly displays information for the order, person history, study history, reports and images within the technicians and physicians workflow.

2.1.13 OPERATING ROOM REQUIREMENTS

Provide Proposer's overall summary description of how its proposed EHR System meets the needs of DHS for the Operating Room, pursuant to Section 1.13 (Radiology Room Requirements) of Appendix H (Functional Requirements). Proposer's response for this Section is limited to 1 page.

Cerner's perioperative solution addresses the complex needs of the surgical service by providing a point-of-care, patient-focused solution that encompasses the surgical and anesthesia records, and integrates clinical patient information throughout the perioperative encounter. You can schedule and document multiple surgical procedures within a single case. Resources needed for the case are checked for conflicts during scheduling and can include surgeons, anesthesia providers, rooms, the patient, and schedulable equipment. You can also assign surgical personnel to rooms or cases.

Preference cards consist of pick list items, multiple comment fields, and documentation. These

preference cards can be generic procedure-based, or surgeon and procedure specific. Our user-friendly preference card wizard helps you build general procedure and surgeon-specific preference cards. The wizard assists you in creating preference card pick lists, procedure-specific documentation forms, procedure comments, and surgeon comments. You can create general procedure-level preference cards as a template for building surgeon-specific cards. If your current system contains up-to-date preference cards that can be extracted, we also provide an upload utility that can be used to create your preference card pick lists and comments. Your organization is responsible for the extraction of data from the historical system. Cerner will provide support to populate the extracted data into standard Cerner Upload Templates in order to facilitate a successful upload.

Unique to Cerner, the configuration of documentation on the preference card filters procedure-relevant fields to the clinician for documentation, thereby streamlining the charting process. Structured data, maintained on the preference card, automatically defaults to the patient's documentation when appropriate, allowing for documentation by exception.

When a case is scheduled, the correct preference card(s) is automatically associated with the surgical case based on the procedure(s) scheduled. At a predetermined point in time prior to the day of surgery, the solution automatically generates patient-specific case pick lists from the associated preference cards. These case pick lists automatically pull into case documentation, where you can document by exception and perform any patient-specific modification for materials used during the case.

We provide flexible, focused, forms-based data collection to support your perioperative documentation needs. Our starter set of documentation includes standard case information, case times, case attendees, surgical procedures, delays, counts, prosthetic devices, patient positioning, skin prep, intake/output, transport, laser data, and many others. If needed, your organization can also create forms and fields to fulfill additional specific requirements. Information obtained at the time of scheduling or available from the preference card defaults to the intraoperative record wherever possible, reducing redundant data entry, while simplifying and speeding the documentation process. All case attendees and times are easily recorded within the perioperative record. Charging is accomplished as a by-product of case documentation and supplies used. The tiering logic in Cerner's charge capture solution contains the rules that bill items pass through in order to attach prices and bill codes.

2.1.14 INTENSIVE CARE UNIT REQUIREMENTS

Provide Proposer's overall summary description of how its proposed EHR System meets the needs of DHS for Intensive Care Unit (ICU), pursuant to Section 1.14 (Intensive Care Unit Requirements) of Appendix H (Functional Requirements). Proposer's response for this Section is limited to 1 page.

Our Critical Care solution provides a complete workflow and documentation solution for the entire team including physicians. With CareAware iBus, we provide a true plug-and-play device connectivity into the electronic health record, including patient beds, vital signs monitors, ventilators, anesthesia machines, infusion pumps, and more. Our interactive flowsheets provide the ability to perform prebuilt simple to complex calculations, store the results as discrete data, and create line graphs using numeric data. In addition, the clinicians can use our clinical calculator accessible from the menu. Our Intake & Output flowsheet shows the entire intake and output information available on

a particular patient divided into time ranges that display subtotals as well as display the balance. Our I&O flowsheet can display in chronological and reverse chronological order.

Patient information drives the delivery of care with alerts, prompts and embedded knowledge all focused on the data entered and received about the patient. Diagnoses and medical problems prompt for specific plans of care; vital signs, height, weight, and lab results drive order selection and prompts for appropriate documentation. Our structured enterprisewide repository, of all clinical information, can originate from numerous sources, such as various labs, and is maintained in an easily accessible, standardized format. You can create views grouping the stored data as desired to record and/or view the continuum of care. Our advanced graphing capabilities support the creation of graphs that can display results from intake and output measurements, bedside medical devices, numeric lab results, assessments, and medication dosages such as vasoactive agents. Our graphing supports comparative data using multiple y- axis lines and unique point indicators. Multiple data items in a graph can be viewed together for identification of trends, copy paste into progress notes, and print on demand.

Our system can integrate with bed side point of care equipment providing immediate results. Our point of care solution supports verification of the correct patient, medication, dose, route, and date/time.

2.1.15 REHABILITATION REQUIREMENTS

Provide Proposer's overall summary description of how its proposed EHR System meets the needs of DHS for Rehabilitation, pursuant to Section 1.15 (Rehabilitation Requirements) of Appendix H (Functional Requirements). Proposer's response for this Section is limited to 1 page.

Cerner's Clinical Data Repository is the foundation for a multitude of Cerner point-of-care-specific solutions, including those for home care, physician offices, clinics, acute patient care, critical care, and long-term and rehabilitation services.

For example, we offer Executable Knowledge for both inpatient and outpatient rehabilitation care. Executable Knowledge for Inpatient Rehabilitation is Cerner's interdisciplinary care documentation solution for the adult and pediatric patient population. The content enabling this solution meets the requirements of submission of Inpatient Rehabilitation-Patient Assessment Instrument (IRF-PAI) data to CMS. We developed this content through a partnership with the Rehabilitation Institute of Chicago (RIC). Our Rehabilitation content provides a number of PowerForms, PowerNotes, PowerPlans, and Patient Care Summary Views, as well as an IRF -PAI Data report. Executable Knowledge for Rehabilitation supports the following services, Physical therapy, Occupational therapy, Speech language pathology, Care management, Physician workflow for orders and documentation, and clinician workflow. Furthermore, our outpatient rehabilitation content also supports the following disciplines: vocational, wheelchair and seating, and psychology.

With our rehabilitation content and work flows IRF-PAI data points are collected as a bi-product of documentation and includes built-in reference and interpretations to assure accurate documentation and calculation of the scores for admission and discharge and creates a .csv file with the scores that can be sent to CMS or a third party system for submission.

Charges are captured at the point of care for timely and accurate billing. Our Interdisciplinary documentation includes team conferences, discharge documentation, and interdisciplinary care plans. Team conference documentation is easily completed and pre-populated from previously

documented information. Current and previously documented information auto populates notes and forms for accurate and rapid completion of documentation. Staff and clinicians have easy and direct access to reference text built in various sections within the system for published definitions and standardized procedures. Our content includes many forms and notes specific to rehabilitation including the documentation and calculation of functional independence measures scoring. The form uses branching logic to arrive at the scores for OT, PT, SLP, and Nursing.

For internal physician approvals, the order/requisition can route to specific inboxes in our message center. The provider can approve the request on a specific form or note and resend the approval to the requesting provider/department inboxes. For external physician approvals (external to our system), the order or requisition can print to selected fax devices. The approver can mail or fax the completed form back to the organization. With our Scanning solution, the scanned document can become a permanent part of the medical record and attach to the patient's electronic medical record and the specific rehabilitation encounter. Cerner offers a scanning solution, Document Imaging, but is has not been proposed at this time. Because sizing can vary significantly among clients depending on their existing page volume and/or transition strategy to an EMR, we will need additional information to provide you an accurate cost proposal and transition strategy.

2.1.16 ENTERPRISE MASTER PATIENT INDEX (EMPI) REQUIREMENTS

Provide Proposer's overall summary description of how its proposed EHR System meets the needs of DHS for Enterprise Master Patient Index, pursuant to Section 1.16 (Enterprise Master Patient Index (EMPI) Requirements) of Appendix H (Functional Requirements). Proposer's response for this Section is limited to 1 page.

Cerner's registration and EMPI solutions generate an EMPI number in real-time. Cerner's EMPI solution provides the ability to correlate identifiers from multiple contributors using advanced matching algorithms. The data model stores all person identifiers coming from all contributing sources.

The Combine Tool is used to eliminate duplicate records by combining persons and encounters in the database. You can separate person and encounter records that were combined in error, or move a single encounter from one record to another. An online work queue includes a percent column that reflects the probability of a match. A safety mechanism exists to prevent accidental combining of encounters for two different persons. Cerner's EMPI provides additional probabilistic suggest logic to the search process and scripts/reporting mechanisms used to identify duplicate records. This logic recommends persons for potential combination due to errors in the key data fields or name changes. Recommendations are assigned linkage proximity, (confidence levels) through the use of SOUNDEX and NYSIIS phonetic encoding of first and last names, nickname pools, birth date range qualifiers, and transposition fuzzy logic. User-defined weight tables can be used to calculate the confidence levels. Duplicate record creation is prevented with the initial search of the database for a person or encounter. Depending upon match criteria defined, the search returns potential matches to the person/encounter entered. Auto-combine capabilities and potential match reports are also provided.

The Phonetic Search option, an advanced search algorithm, includes the ability to perform inexact matching of the data provided from the Cerner Millennium common person search through all Cerner Millennium applications, passively through the inbound ADT interface match and reconcile processes. Errors such as misspellings, complex transpositions, name swapping, extra characters, and

missing characters are all taken into consideration. Thresholds for reconciliation of records or posting to the manual queue can be set by contributor system or a general default.

Passive implementation involves the behind the scenes interfacing in both a real-time and batch interface mode. It contains logic to match on local identifiers and reconcile persons across the enterprise. Probabilistic suggest logic can also be implemented. This is reactive, catching duplicates and exceptions after the registration process is complete.

Eligibility verification allows for a transaction to be sent to registration. Cerner supports clearinghouses/payors that are HIPAA compliant using the ANSI 4010/5010 270/271 transaction set or ANSI 5010 270/71 transaction set. The eligibility request is launched on demand via manual intervention. The response returns to your screen and displays the information retrieved from the clearinghouse/payor. Discrete data elements are posted at the person encounter level. The number of insurance company profiles is unlimited.

Cerner supports the Medical Home/Accountable Care Organization with our integrated, patient-centric, evidence-based solutions designed to enhance the workflow of the provider, improving the ability to provide optimal, safe health care. All information, from the first encounter to the last, resides in our longitudinal relational database. As clinicians, staff, and providers collect information, it becomes a permanent part of the patient‘s medical record and is immediately available to other care providers. We provide clinicians with the necessary, most current and relevant medical decision support at the point of care in views that fit clinician workflows. Components include:

*Health Maintenance: Provides prompts around health maintenance needs and provides a proactive approach for assessing patient needs through the year, based on the patient‘s age, procedure, diagnosis, gender, or documented problem.

*Chronic Condition Management: Includes contextual summaries and evidence-based treatment. Population and provider performance reports aggregate performance metrics, permitting physicians to compare and improve their individual clinical performances against standardized performance targets and peer performance.

Our package of solutions enhances the quality of care, decreases costs, and improves overall patient outcomes. Cerner systems provide you with the means to manage your community‘s health care requirements more effectively, efficiently, and transparently than ever.

2.1.17 HEALTH INFORMATION MANAGEMENT (HIM) REQUIREMENTS

Provide Proposer’s overall summary description of how its proposed EHR System meets the needs of DHS for Health Information Management, pursuant to Section 1.17 (Health Information Management (HIM) Requirements) of Appendix H (Functional Requirements). Proposer’s response for this Section is limited to 1 page.

Cerner’s HIM solution focuses on attaining increased productivity and operational management in the medical records department, whether addressing health information needs locally or across your health care organization. Cerner Millennium's single architecture provides an integrated set of functionality committed to benefiting your organization by eliminating redundant data entry and minimizing manual activities, including task management, chart tracking, deficiency analysis, and comprehensive reporting.

Cerner’s HIM solution’s patient deficiency analysis and physician deficiency analysis application

manages the life cycle of the documents needing chart completion, including chart aging, management assignments, tag color, deficiency slips and pull lists. All types of documents can be managed regardless if they are in paper, electronic or scanned format. You can generate form letters notifying health care providers of deficiencies. Your organization designs the content of the letter and enters the qualifying parameters for its recipients. Notification of document deficiencies can be sent to the clinician's inbox and can be automatically completed through recognition of electronic document capture and signature events within PowerChart.

A variety of ways that deficiencies are assigned is provided. Your system administrator defines the time ranges for the chart and document ages that constitute deficiencies, delinquencies, and suspension.

Cerner's HIM solution's chart tracking application is used to manage the paper chart. Chart tracking provides you with the tools to manage the movement of patient chart media throughout your organization. You can create new chart volumes using a system of filing by patient chart, as well as by unit record. You can perform an inquiry to locate a specific chart volume, or record the movement of a group of charts from one location to another. You can select a patient and view the patient's visits with a list of each visit's corresponding chart media, or you can select a location and view a list of all the chart media from various patients currently at the location.

With the chart abstracting application provided in Cerner's HIM solution, you are provided with a wizard tool that allows you to determine what data elements to collect as well as a forms tool that allows you to design the form on which the data elements are captured. There is no limit to the number of user-defined fields allowed. You can identify timeframes for capturing data elements. Additionally, you can define which fields are required and which are optional.

With the chart coding application provided in Cerner's HIM solution, diagnosis, grouper, procedure codes and related information for a patient visit is captured. Chart Coding is integrated with Cerner's Encoder/Grouper powered by OptumInsight. Chart coding provides the basis for initiating the concurrent coding process by having coders select from working diagnoses and procedures identified and passed in from other Cerner solutions. Additionally, Cerner's HIM solution can be interfaced to a third party encoder.

Cerner's HIM solution provides a release of information (ROI) application that is used to manage your ROI process. Our ROI features include the ability to notate received requests, validate the authorization for the release of information, provide historical documentation of the information released, and support for the management of any associated reimbursement receivables. ROI has the ability to track both paper based and electronic documents that have been requested and mailed and allows for specification for which requests apply to accounting of disclosures. Tracking/reporting can be applied to all requests or just those applicable to accounting of disclosure reporting.

Cerner does not offer a transcription solution. Cerner supports a bidirectional transcription interface between the Cerner system and a foreign transcription system.

2.1.18 EMERGENCY DEPARTMENT REQUIREMENTS

Provide Proposer's overall summary description of how its proposed EHR System meets the needs of DHS for Emergency Department, pursuant to Section 1.18 (Emergency Department Requirements) of Appendix H (Functional Requirements). Proposer's response for this Section is limited to 1 page.

Cerner's Emergency Department solution creates an environment of readily accessible information that allows you to track patients and events in your Emergency Department in a timely fashion, particularly during peak flow periods. In designing your system, you can define any number of Emergency Departments and/or number of areas within an Emergency Department.

Our tracking board provides a detailed view of all emergency patients and can include information such as acuity, length of stay, assigned providers, patient location, results generated by ancillary departments, and other information.

With our quick registration, you can immediately begin patient assessment and treatment. For patients who are en route to your facility, our pre-arrival functionality allows you to document patient information without having to create an encounter. This includes information such as name, gender, reason for visit, DOB, age, pre-arrival mode, estimated arrival, and primary care physician. The patient name, gender, and reason for visit populate the tracking board. You can use free text to collect additional information such as vital signs and required orders/protocols. When the patient arrives, you can easily attach the pre-arrival documentation to the patient encounter during registration.

For trauma situations or mass casualties, you can define a quick registration screen that allows the triage nurse to enter multiple patients into the solution and display them on the electronic tracking board immediately so that care is not delayed. Our solution has a virtually unlimited capacity for the number of patients received and allows you to add beds, stretchers, and chairs to the tracking screen on the fly.

Our Emergency Department nursing documentation includes assessment forms, flowsheets, orders, results viewing, medication administration charting, intake and output worksheets, immunization records, clinical notes, data captured from bedside medical devices, and other documentation formats to support your needs. Clinicians can quickly access the patient's history, such as diagnoses, orders, results, documentation, and disposition. Ready access to the complete patient chart and streamlined communications help decrease length of stay and time to diagnosis.

Our Emergency Department physician documentation addresses more than 700 age- and gender-specific presenting problems. Template documentation enables clinicians to address multiple patient complaints while omitting redundant questions. Previously documented information can pull forward into current documentation if desired. For example, you can pull allergies, past medical history, previous medications, into the current visit. Charting is simple, quick, and customizable.

Our solution provides access to current visit information as well as the complete patient history. With the Cerner Millennium architecture, all patient data is stored within a single electronic medical record and is available to all clinicians with the appropriate security. Because Cerner Millennium solutions share a single database, transfer of patients is simplified.

2.1.19 CARDIOLOGY REQUIREMENTS

Provide Proposer's overall summary description of how its proposed EHR System meets the needs of DHS for Cardiology Department, pursuant to Section 1.19 (Cardiology Requirements) of Appendix H (Functional Requirements). Proposer's response for this Section is limited to 1 page.

With the interfacing capabilities built into the Cerner Millennium architecture, Cerner can help you make your cardiology processes smarter, greatly improving care and managing costs.

Major Features of our Cardiology system include:

- Multi resource scheduling
- Clinical documentation
- Physician documentation
- Template driven procedure reports
- Management reporting
- Inventory management
- Order management
- Charge capturing/generation
- Image management
- Electronic medical record
- FSI interfacing
- MDI interfacing
- National registry certification

Cerner's cardiology system is a knowledge system that enhances outcomes measurement. As data is gathered from multiple departments, the Cerner system transforms this data into knowledge, which is used to give the user informed suggestions and report summaries.

Cerner provides a variety of data entry options. Data may be captured discretely in forms via multiple field options such as numeric, grids, pick lists, combo boxes, alpha responses (single select, multi-select), date/time, yes/no, and so on. A free text field can be built into any form to allow capture of free text information within the form. An unlimited number of templates can be defined by your organization within Clinical Notes. Clinical Notes are free text notes, and Smart Templates allow data to be pulled from the clinical data repository into the note. Documentation on custom flowsheets is also supported, in which data may be captured discretely or as free text. We offer cardiology specific templates that include a coronary arteries graphic to assist with documentation of artery occlusions and collateral circulation.

The Cerner system provides multiple options to support notification of clinicians of results within PowerChart. Rules can be defined to send defined providers a message to a pager, inbox, email or printer based on a test results. Test results can be viewed in the flowsheet. Clinicians can also view all new results in a new results folder of the inbox.

2.1.20 MANAGED CARE REQUIREMENTS (OPTIONAL)

Provide Proposer's overall summary description of how its proposed EHR System meets the needs of DHS for Managed Care, pursuant to Section 1.20 (Managed Care Requirements) of Appendix H (Functional Requirements). Proposer's response for this Section is limited to 1 page.

Benefit Administration Services provides the foundation for a robust health plan benefit administration service for members of the employer's health plan. Plan contracts are managed through Benefits Management solution; maintains terms and conditions of relationships; manages information related to insurance plans, member demographics, EDI eligibility verification, detailed coverage and benefit information, referral and authorization management, initiation and storage of

Electronic Data Interchange related to the health plan. EDI transactions are sent via clearinghouse for eligibility verification; status of verification is displayed and stored. History, audit, and reporting tools are available. Information about members is stored and linked to a community-based provider directory and non-network providers for analysis of physician panels.

Cerner's Eligibility and Benefits Verification Service with Registration provide; current eligibility verification functionality, support third-party clearinghouse or individual payor that is HIPAA compliant using ANSI 4010/5010 270/271 or ANSI 5010 270/71 transaction set. Eligibility request can launch on demand, response returns in a window format and displays the information and can print the response. Returned information posts discrete data elements at the person encounter level. Registration initiates an eligibility request using a proprietary structure with a web service and is converted to an X12(ASC) 270 Eligibility Request (covered HIPAA transaction) before routed to payors. Cerner has connectivity to over 700 payors/health plans through three major healthcare clearinghouses. Cerner's Eligibility & Benefits Verification Service offers enhanced EDI including transaction caching, cascading searches, alter request by add service types, and filter response by limiting service types.

Cerner's medical administration functions comprise a care coordination/management approach and includes utilization management, case management, disease/health/condition management components. Disease Management is patient centric including health management across venues and encounters within Cerner including; Health Maintenance, Condition management, Readmission prevention, Care management. Care Management translates clinical and financial data to improve performance, care coordination, efficiency, and outcomes. Included in Care Management; Utilization Management, Discharge Case Management, Denial Avoidance Management, Document Integrity/Quality and a natural language processing (NLP) engine for automated inpatient criteria and identifying a working DRG. Power Chart functionality enables a work list and patient list view.

Health Maintenance allows for proactive and future directed care based on the patient's specific condition(s), diagnoses, demographics, needs and scheduled screenings. Invitations and scheduling of appointments can be done through the Health Maintenance function.

Condition management allows for specific protocol, orders and plans of care in managing a patient's condition across the continuum and encounters. Summaries provide clinicians with a consolidated view of key information and evidence-based treatment algorithms. The Readmission prevention works with the Care Management, plan of care and discharge functions to assist in managing high cost, high volume readmissions. Case managers in the ambulatory setting can then follow through with the patient post discharge and across visits.

Another component that would assist Managed Care programs would be the Cerner Health functions that include wellness advisors, coaches and the Patient portal that would allow communication to and from the patient/provider directly.

2.1.21 ANESTHESIOLOGY REQUIREMENTS (OPTIONAL)

Provide Proposer's overall summary description of how its proposed EHR System meets the needs of DHS for the Anesthesiology Department, pursuant to Section 1.21 (Anesthesiology Requirements) of Appendix H (Functional Requirements). Proposer's response for this Section is limited to 1 page.

Cerner's Anesthesia Management provides complete access to both inpatient and outpatient data

within the patient's electronic chart to help you adequately prepare for cases, create an anesthesia plan, assess risk, set daily priorities, and accurately complete documentation.

Because it operates on the Cerner Millennium architecture, our solution is the only one that unifies anesthesia care with related nursing documentation, and shares information with other Cerner Millennium solutions. An interface is not required.

With our solution, you can obtain and/or review tests and consultations, past medical history, and current medications – which are all necessary to prepare for administering anesthesia. You can also document the proposed anesthesia plan including invasive monitors and special techniques required. You can review drug therapy, as well as order and/or document administration of preoperative medications. The ASA and anesthesia type, once documented in anesthesia, updates the surgery record with the correct information.

Drug and allergy checking provides the ability to check allergies and current medications against a list of drugs built in anesthesia, and alert the provider to those which may cause a drug/allergy or drug/drug reaction. You can hover on the warning icon, click on the tooltip, and launch the interaction window to display the detailed information.

The anesthesia preop note allows for the documentation of anesthesia history, review of systems, allergies, current meds and problems, medical history, family history, social history, physical exam, pain assessment, airway assessment, results review, ASA classification, anesthesia plan, and others.

You can create an anesthesia record for patients receiving any type of anesthesia. Since Cerner Millennium solutions share a single database, patient identification automatically populates and is uniform across the patient's single electronic medical record. Any personnel, actions, device data, medications, input, output, and times can be easily recorded within the time-based view of the intra-anesthesia record.

Providers can document quickly and accurately throughout the procedure. Bedside medical device interfaces default collected values from the patient monitors onto the anesthesia record. These values can be modified if needed for accurate charting. Charting efficiency is increased with point and click, click and drag, touch screen methods, and macros. Macros allow for several events (such as a medication, fluid, or actions) to be documented with a single execution. As part of the macro, you can select to specify the values associated with each event, or leave them blank to document individual values directly on the case record.

You can also record any complications, adverse reactions, or problems that occur, along with the time and description of symptoms, vital signs, treatments provided, and response to treatment.

2.2 APPENDIX H-1 (FUNCTIONAL REQUIREMENTS ATTACHMENT) AND APPENDIX I-1 (TECHNICAL REQUIREMENTS ATTACHMENT)

Affirmatively confirm whether or not Proposer has responded to all the requirements in the checklist in Appendix H-1 (Functional Requirements Attachment) and Appendix I-1 (Technical Requirements Attachment).

Requirement	Yes	No
Proposer has responded to all the requirements in the checklist in Appendix H-1 (Functional Requirements Attachment)	☒	☐

Requirement	Yes	No
Proposer has responded to all the requirements in the checklist in Appendix I-1 (Technical Requirements Attachment)	☒	☐

2.3 APPENDIX I (TECHNICAL REQUIREMENTS)

2.3.1 ARCHITECTURE

Provide Proposer's architecture for the proposed EHR System, pursuant to Section 1.1 (Architecture) of Appendix I (Technical Requirements). Provide any high-level diagrams showing major system components, their interrelationships, and supporting diagrams and materials in response to this Section as Attachment I (Architecture). Proposer's response for this Section is limited to 8 pages.

Our architecture is a multi-tier, client/server system. Core processing (security, messaging, etc.) is separated from varied application servers, which are separate from client presentation devices. Our architecture is comprised of Presentation Software – using Microsoft Windows and Millennium Application Software, and Data Management Software – using Oracle's relational database management system. Cerner developed our distributed transaction, client/server architecture to provide higher levels of security, data integrity, greater reliability, load balancing, scalability, and better performance than that of distributed or clustered hardware.

With Cerner's system design, rather than the Windows Client application directly accessing the database, it communicates with a Millennium application server, which in turn communicates with the database. Application server communications (sometimes referred to as middleware) is the key to the high performance processing needs of physicians, nurses, and other providers in clinical care settings.

Multi-tiered, client/server systems can support thousands of concurrent users and is therefore scalable to full enterprise or nationwide roll out. Multi-tiered, client/server architecture allows you to both distribute workload across multiple servers, as well as better manage system-wide growth and performance. Additionally, a multi-tiered architecture is a critical component of adapting Web services technology to the broader audience. Application solutions that are not based on an N-tiered model will have to be redesigned to take advantage of this latest advance in technology in a graceful and cost efficient manner.

Our solutions can be deployed on a variety of hardware and operating system platforms. The client component is deployed on a Microsoft Windows 32 bit operating system; for example, Windows XP, Windows Vista, Windows 7 and/or Windows Terminal server with Citrix Presentation Server. The distributed application servers are deployed on Windows Server 2003 or Server 2008 32 bit or 64 bit. The database engine servers are currently deployed on 64 bit IBM AIX, 64 bit HP's HP-UX, or Red Hat Enterprise Linux operating systems.

Cerner assumes all responsibility for hardware in the data center with the Remote Hosting Option (RHO) model. Your institution still owns/manages your desktops and peripherals at your location. For Thin and Fat client requirements, please refer to the Cerner_Workstation_Requirements.pdf located in the Additional Reference Material section. Mobile device support falls under three categories:

Mobile PC [Devices] on rolling carts or wireless laptops. The deployment of Millennium on these

kinds of devices is typically the placement of a shortcut or icon on the desktop or toolbar that launches a Citrix session. Clients can use any technique to place such shortcut/icon that Windows supports.

Fat client with wireless card. Client may use any technique compatible with Windows to place the Cerner code on the device.

For PDA type devices [such as Motorola, Honeywell, Hand Held Products, etc.] that have embedded radios and bar code readers, Cerner offers two applications: one for nursing and meds administration and another for specimen collection. Both of these applications are very different from the Windows versions which offer equivalent and in some cases additional functionality. Cerner mobile solutions are written specifically for the attributes and real estate of the mobile device and the work flow. To manage the software component of the PDA device, Cerner recommends and supports the use of SOTI MobiControl which uses a server to store the code that is eventually pushed to the physical device. http://www.soti.net/

For smart phones, IPhone, Blackberry, IPAD, and other web enabled end user devices, Cerner's strategy is based on HTML and other web standards. Currently, these devices can launch a number of web based Millennium patient summary views and dashboards which are specifically designed for a "single click" view of the patient's current condition.

Currently Cerner supports IBM AIX operating system on Power servers, HP's HP-UX operating system on Integrity servers, Microsoft Windows Server on Intel-based servers, and Linux on Intel and AMD based servers, depending on the solution being utilized. With the remote hosting option Cerner will manage the deployment of the database server on the platform of our choosing.

Our objective is to design a system architecture that meets the needs of your current processing environment while planning for potential growth and expansion requirements. We focus on specific technology attributes, such as performance, availability, scalability, and integration, when determining the best possible system solution. In selecting a technology platform for use with our applications, Cerner evaluates the extent to which it is capable of scaling. We currently configure systems using data center equipment from HP and IBM. Both HP and IBM design and manufacture systems that scale well.

With our Remote Hosted Option (RHO), Cerner will scale the system as needed. A 10% or 20% increase in users will not affect performance. Cerner's multi-tiered, client/server systems can support thousands of concurrent users and is therefore scalable to full enterprise or nationwide roll out.

Cerner builds overhead allowances into production systems through our standard redundancy configurations. We can also take advantage of non-production system resources for utilization in the event of an emergency and usage spikes

Cerner no longer publishes documentation using the old paradigm of writing static documents and distributing these to clients in hard copy or even electronic form. Cerner has adapted social networking technology to communicate and publish all types of solution documentation to clients licensing our various solutions.

You can create meaningful customized views of information from the clinical data repository to support the vast needs of all types of roles, areas and user level preferences. Summary screens, predefined views, flowsheets, patient lists, Message Center, orders, interactive view, structured documentation templates, pathways, problem list, clinical, documentation forms, clinical summary and task list are all examples of views that can be customized by area and/ or role to meet your

needs. For example, your organization can build documentation forms to support the capture of all pertinent data describing the patient event or condition in a clear, easy-to-complete format. Your organization can define the discrete data fields within the forms and the appearance of the forms, including sections of the form and layout of the data fields. Data fields can be defined as required fields

Remote user access to a Cerner Millennium domain can be provided with Windows standard Dial-up Networking utility and third-party products such as Microsoft's Remote Access Server (RAS) or any other technology that provides a TCP/IP network connection between the Cerner client code and the Cerner server code.

Cerner designs high availability into each system using component redundancy. For maximum reliability, we are able to offer clustered solutions that provide extremely high levels of availability and continuous access for critical data and applications. For clients requesting high availability solutions, we take advantage of multi-system clustering technology in combination with software features of Cerner Millennium that allow us to provide the necessary application recovery on a clustered machine. Cerner has selected HP ServiceGuard for HP-UX and IBM PowerHA for AIX to provide the best operating system capabilities for automatically reconfiguring the available replicated resources when hardware failures or outages occur. In the event of a complete failure of a cluster, the failover or restart of the Cerner Millennium applications may be accomplished on a surviving node in the cluster. This failover and recovery/restart is generated through the modifications of supplied scripts to meet our clients' application requirements.

For high availability in the storage farm, Cerner Millennium is able to utilize multiple paths offered in the latest switched fiber channel storage area network and virtual storage arrays. All recorded information can be protected by RAID 1, RAID 0+1, or RAID 5. Cerner uses a combination of these technologies and hot spare disk drives to provide a balance of performance, reliability, and availability.

For the most demanding high availability environments, Cerner also offers solutions that can include standby databases and disaster tolerance.

Cerner uses a variety of monitoring tools such as Cerner Olympus and specific knowledge modules to proactively monitor the system around the clock.

Cerner Millennium is an online, real-time system that is designed for continuous operation. No routine downtime is required for backups, reporting, or other day to day activities. Downtime may be required for major system upgrades such as an Oracle upgrade. The client can schedule upgrades at their convenience.

Telemetry data is available for client viewing via Cerner's Lights On Dashboard Reporting System. Lights On is a systematic approach to improving system stability through collective knowledge and proven practices acquired through the continual monitoring and management of the Cerner Millennium environments by CernerWorks (Cerner's remote hosting organization). This Cerner led engagement will install, configure, and demonstrate the use of a set of tools designed to provide additional information about your production Cerner Millennium technical environment.

Cerner's Response Time Measurement System (RTMS) for Millennium provides the ability to view and trend application response times from the time a user clicks a button in a Millennium application, to the time the transaction is processed and focus returned to the user. These RTMS timers capture the amount of time that transactions are processed by middleware or database components – the user's wait time experience. The RTMS timers are written to flat files on each

application back-end server and can be viewed in several ways:

• A standalone RTMS viewer provided by Cerner to its clients, that allows viewing of the raw RTMS data

• Cerner Olympus, which allows for viewing, trending, sorting, and searching on the raw RTMS data

• Cerner Lights On Network, which is populated nightly for each client and shows the long-term trending statistics for each client's RTMS data.

Cerner has selected HP ServiceGuard for HP-UX and IBM PowerHA for AIX to provide the best operating system capabilities for automatically reconfiguring the available replicated resources when hardware failures or outages occur.

For clients who take advantage of Cerner's Remote Hosting option, Cerner's primary defense against unplanned outages is prevention. Cerner utilizes a state-of-the-art technology center to host Cerner Millennium systems, complete with multiple power feeds from two different power generating sources, backed up by multiple UPSs, backed up by multiple generators with enough fuel storage capacity to run for several days. Likewise, for telecommunications Cerner utilizes redundant carriers and installs redundant circuits (each circuit is sized to carry the full load). Our technology center is fed by 4 different central offices and is fed by 2 different SONET rings. Cerner does not rely on Internet connectivity for any mission-critical functions due to its variations in availability, stability, and performance; however, in the unlikely event the dedicated frame circuits are unavailable, the Internet can be used as a backup.

Also available as an optional service, for an additional fee, are Hot Site Disaster Recovery services. Hot Site Disaster Recovery services add an additional layer of redundancy and protection. With this service, a mirrored system is set up in an alternate data center, constantly being updated by transactions from the primary production database. In the event the primary production system is unavailable for any reason, the Hot Site Disaster Recovery system can be activated quickly as the primary system, providing even greater protection.

Software components are located in Appendix Q (Pricing) document. Cerner's application tier is split across the PC client and host server cluster. The client is programmed in Visual Basic, Visual C, and Java. These languages utilize many Microsoft Foundation classes, COM, and OCX objects. On the host cluster where the application servers and Oracle database resides, Cerner programs in C++, enterprise Java, and Cerner's adhoc report writing tool's scripting language. For our Internet browser development, we use Dynamic HTML, Java Script, and enterprise Java. Cerner uses Oracle 11g as our RDMBS. The Cerner Message Bus (CMB) is our inter-server/inter-nodal communications medium for client/server applications. It is a message passing middleware, which ensures reliable information exchange using a request-reply structure. Our supplied reporting tool is Discern. Discern Explorer is a full-featured, fourth-generation programming language, patterned after Structured Query Language (SQL). All Cerner Millennium applications use Discern Explorer to select, insert, update, and delete data. The planned

With the remote hosted option, clients will connect through Citrix options. Bandwidth Formulas (for network planning purposes only):

• Medical Device Instruments:

The formula listed below is the minimum requirement for instrument interfaces:

Number of Instruments * 1.2 Kilobits/second

Example: 14 instruments * 1.2 = 16.8 Kilobits/second

- Barcode Printers:

The formula listed below is the minimum requirement for bar code printers:

Number of Bar Code Printers * 1.5 Kilobits/second

Example: 10 Bar Code Printers * 1.5 = 15 Kilobits/second

- Laser Printers:

The formula listed below is the minimum requirement for laser printers:

Number of Postscript Pages/minute * 1.3 Kilobits/second

Example: Four 17 page per minute laser printers

Four * 17 pages/minute * 1.3 Kilobits/second = 88.4 Kilobits/second

- Microsoft Windows Devices for thick client PC deployments of Cerner Millennium:

The formula listed below is the minimum requirement for PCs running Cerner solutions on Microsoft Windows:

Number of Microsoft Windows devices * 32 Kilobits/second

Example: 40 Microsoft Windows devices * 32 = 1280 Kilobits/second

- Microsoft Windows Devices: for thin client PC deployments of Cerner Millennium using Citrix:

The formula listed below is the minimum requirement for PCs running Cerner on Microsoft Windows:

Number of Microsoft Windows thin devices * 20 Kilobits/second

Example: 40 Microsoft Windows devices * 20 = 800 Kilobits/second

The formulas above are averages that can be helpful in estimating individual network bandwidth requirements for any Cerner Millennium Microsoft Windows-based application. The client agrees to provide a minimum of 128 Kilobits/second bandwidth per circuit on any given segment end-to-end.

With our optional Application Management Service (AMS) offering, County would submit requested changes to Cerner. Cerner would make the modifications to the system as needed. If the optional offering is not selected, County would be required to make the changes to business rules.

2.3.2 INFORMATION MANAGEMENT

Provide Proposer's proposed information management strategy for the EHR System, pursuant to Section 1.2 (Information Management) of Appendix I (Technical Requirements). Proposer's response for this Section is limited to 2 pages.

Oracle 11g is the current standard

Two levels of storage are supported. The first is the use of the SAN storage configured in an applicable RAID format followed by offline storage as tape, DVD, CD or MOD.

Please refer to section 3.1 of Exhibit N.2-1

Contractor will utilize its own back-up and recovery policy. Policy can be provided upon request.

Three primary environments will be configured to support your Cerner System:

- Certification -- Test changes prior to implementing in production
- Production -- Daily transactions

- Training -- Training is typically a mirror of production

With Cerner's System Design, there is no need to purge or archive patient result data.

Since patient result data is not purged from the Cerner Millennium database, users at your organization have immediate access to the entire patient record, including information from current and past visits. The workflow tables containing data that is no longer required can be purged according to specific selections that the client can make.

Cerner's DM Purge Job Manager is the tool we use to purge that data using user input as criteria. This tool uses purge templates that are created for each Millennium solution that is given client defined criteria to determine what data is to be purged. Cerner Millennium Operations allow clients to schedule when purge templates defined in DM Purge Job Manager will execute. Each and every purge template in the DM Purge Job Manager will have a section in the DM Purge Job Manager help file describing the following:

- High level description of information that will be purged
- Tables impacted by the purge
- Details on criterion that must be configured

Cerner is considered an open system and can readily communicate with foreign systems by either sending or receiving data. Most of the data exchange is accomplished via electronic interfaces, but data can be extracted from the Cerner Millennium database and sent in an agreed upon format to a foreign system or database. Such an example would be data exportation to a comma-separated value file. All data will be transported under encrypted pathways.

Cerner applications utilize an Oracle Relational database system and gain the benefit of Oracle's row level locking capability, which allows multiple users to access and view a patient's chart concurrently. In the event that more than one user attempts to update the same field at the same time, the system will lock the field and allow one user to make their change, and then unlock it for the next user to change. The changes are sequential rather than concurrent, averting the situation of a locked chart. This feature works regardless of the type of change being made.

2.3.3 SYSTEM SECURITY

Provide Proposer's proposed security strategy for the EHR System pursuant to Section 1.3 (System Security) of Appendix I (Technical Requirements). Proposer's response for this Section is limited to 2 pages.

Position-level security logic, sets permission to access an application or a task within an application, or a task group based on a user's position. Positions are defined for every user in the system.

A user is assigned to a position through the user maintenance tool. A user's position is designed to include all the tasks that might be needed to perform his or her job. Multiple users with similar job requirements can be associated with a single position, which aids in the maintenance of security profiles. Only users with appropriate privileges are granted access to the user maintenance tool.

Positions are created as reference data. Employee position assignments within the system may or may not be similar to employee titles within an organization. All positions associated with an application group have the same access to an application, although application groups can be edited to grant/revoke access at any time.

The Cerner Millennium architecture provides access at the individual task level. Each function that a user can perform within a Cerner Millennium application is defined as a task, and each of these tasks can be included or excluded from the application group associated with a user's position. This enables flexibility within the system, as well as improving ease of maintenance.

For applications involved in ancillary departments, access to data is managed through tasks (for the data types accessible) and through the association of users to the organization where patients are registered or admitted for service (for access to visits). Ancillary users can further be limited to access to only certain performing sites where they are assigned to work. Access to specific data elements is further managed through data privileges for direct patient care applications.

Cerner Millennium architecture provides access at the individual task level. Each function that a user can perform within a Cerner Millennium application is defined as a task and each of these tasks can be included or excluded from a user's position. This enables flexibility within the system, as well as improving ease of maintenance. Access to patient information is role based, on a need to know basis. System support and maintenance personnel do not have access to patient information.

With our optional Application Management Service (AMS) offering, County would submit requested changes to Cerner. Cerner would make the modifications to the system as needed. If the optional offering is not selected, County would be required to make the changes to business rules.

2.3.4 HOSTING

Provide Proposer's proposed hosting strategy for the management, security and performance of the computing systems required to operate the EHR System pursuant to Section 1.4 (Hosting) of Appendix I (Technical Requirements). Proposer's response for this Section is limited to 5 pages.

When employing our Remote Hosted Option (RHO), CernerWorks acts as the client's remote IT department, providing the functionality, management, and support of Cerner's solutions while minimizing the client's investment of capital and human resources. RHO is available to all Cerner clients.

An RHO client purchases Cerner software, as well as their desktops and peripherals, and contracts with CernerWorks for customer support and implementation services. The organization also contracts for the use of system hardware and related network services in one of our Cerner Technology Centers (CTC). The CTC provides the hardware, secure hosting, connectivity, and IT expertise that keeps the systems running.

Application processing and data storage is hosted at the CTC and is maintained by a staff of Cerner system experts. CernerWorks takes responsibility for system maintenance, backups, upgrades, and client support. Continuous system monitoring identifies potential issues before they arise and ensures optimum system performance.

RHO provides superior performance, security, reliability, and scalability with a lower up-front financial commitment from the client by combining hardware, networking technologies, and technical expertise. It allows healthcare organizations to leverage the most sophisticated and powerful IT solutions available today. RHO can provide significant cost savings and competitive advantages. It helps avoid depreciation and obsolescence and frees your IT department to focus on core issues.

Cerner's RHO solution provides the following:

- Necessary technology skill sets
- Cold site disaster recovery
- System redundancy
- Rapid addition of clinical sites/scalability
- Allows business focus on "core competency"
- Guaranteed system availability and performance

For remote hosting, Contractor does not calculate support availability; however, system availability is calculated per section 4.3 of Exhibit N.2-1.The Immediate Response Center is available 24x7x365 for critical issues.

Contractor will not agree to an SLA of 99.99%, Contractor will agree to a maximum of 99.9%, reference section 4.3 of Exhibit N.2-1; Contractor does not have information which can be shared as part of an RFP; however, once an NDA is in place, then details are capable of being provided validating Contractor's ability to maintain 99.9% system availability.

Severity levels and commensurate response times related to performance issues, incidents, and loss of service are not determined during the proposal process. These items are discussed during contract negotiations.

Our Monitoring tool, Olympus, provides many functions to monitor the overall health of the system at the different layers. CernerWorks will provide monthly up-time reporting statistics.

Multiple layers of physical security exist, beginning with the off-site location of the alternate data center. The structure has perimeter security, facility security, and biometric authentication security throughout. More advanced whitepapers can be provided that elaborate on physical security. The Cerner database is secured through the Cerner application servers with end users accessing the Cerner application server rather than the database directly. We rely on Oracle security for the central database to provide security to the data in Oracle.

Methodology: All systems not specifically identified in the "Exclusions" portion of the RHO backup policy will be backed up on a daily basis to minimize the exposure to loss of mission critical or project sensitive data.

Systems and Utilities

Open VMS, Windows, and Linux: An appropriate backup solution will be used to perform backup and recovery operations of operating system and non-operating system data.

AIX: AIX backup utilities are used to perform mksysb (image) backup and recovery of AIX Operating Systems. An appropriate backup solution will be used to perform backup and recovery on all systems configuration information and non-operating system data.

HPUX: HPUX backup utility mk_net_recover will be used to perform a backup and recovery of the HPUX Operating Systems. An appropriate backup solution will be used to perform backup and recovery on all systems configuration information and non-operating system data.

Oracle: Oracle RMAN utility will be used to perform database backup and recovery of Oracle databases. The RMAN utility will integrate with an appropriate backup solution to provide a transport to backup media.

Backup Window: Backups (full or incremental) will be conducted daily during off-peak business hours in the client's time zone. Backup jobs will be staggered throughout the window to ensure optimal performance and reliability.

Maintenance Window: A weekly window will be scheduled to perform maintenance on the backup system. Scheduled restores will not take place during this window; however, emergency requests will be evaluated as requested.

Full Backup: Full backups will be conducted a minimum of once per week.

Incremental Backup: Incremental backups will be conducted daily with the exception of the day when a full backup is conducted.

On-Demand Backup: On-demand backups, outside of the normal schedule, can be conducted to support project work with prior approval from the Infrastructure Services team.

Cerner's Kansas City data center is a 113,000 square-foot facility; housing 3 separate 7,500 square foot Data Centers, and is a dual-fed, redundant data operation. Cerner's Lee's Summit data center is a 70,000+ square-foot, dual-fed, redundant data operation. Both facilities operate under supervision 24 hours a day, 365 days a year and are intended to provide uninterrupted power and service for Cerner clients in a secure environment, specifically designed to eliminate client downtime. Contractor ensures redundancy through High Availability of production system servers, also reference section 3.2 of Exhibit N.1-1. Transference/fail-over to Contractor's alternate datacenter is pendant upon County contracting for a Disaster Recovery service. If contracted for DR, Contractor and County will establish the process which will be followed and the circumstances dictating a failover occur.

With our Remote Hosted Option (RHO), your production system is under constant monitoring. Our operations staff is alerted in the event of a problem via an automated toolset. If the issue cannot be resolved promptly, Cerner escalates the issue on your behalf at the 30 minute mark with our internal Immediate Response Center (IRC) and, if appropriate, engages a special escalation team. If you feel you need or warrant additional service than what is being offered, Cerner offers several channels for you to escalate the issue. The Client Relationship Executive (CRE) has ultimate responsibility to your organization. Your CRE is kept abreast of any situations and is your initial point of escalation for you. In addition, there is a geography-based leadership team available to you when needed to handle any service issue you might have, including a Service Delivery Manager who is assigned to your facility.

Cerner installs the service packages in coordination with the client's application management team (or Cerner Consulting). There are several points of monitoring within the hosted solution that we provide. At a high level, both front-end and back-end servers are monitored for utilization, networks are monitored for dropped packet rate and round-trip latency, databases are monitored, interfaces queue depths are monitored, and key aspects of the applications themselves are monitored. Automated response systems and our 24x7 support teams are in place to respond to various alarms.

Cerner publishes major releases every 1-2 years. We offer monthly support updates for our releases. Cerner installs the service packages in coordination with the client's application management team (or Cerner Consulting). Your organization is responsible for testing the new release/update. Typical procedures for moving updated software, such as new service packages, to production require the software to be tested in a non-production domain. Once all software changes have been tested the software is moved from the certification domain to the production domain. Each software package has specific instructions included regarding how the software should be rolled out to the production domain, should the need arise.

Any Change Request that will result in a deviation in the agreed upon design, or additional code to be developed or loaded into the any of the secure BUILD/TRAIN/CERT/PROD environments will be analyzed through the Change Control Process outlined below.

Objectives:

- Ensure consistency in process of documenting change requests

- Define standards for reviewing requests

- Provide mechanism for impact assessment

- Determine necessary approvals needed for sign-off

- To document when change occurred, who executed the change and measures that were taken to ensure the change was successfully applied.

The process steps that will be utilized during the project are provided below.

1. The client identifies an issue or necessary change. They fill out the change request form, which includes an explanation of the need/issue, description/reference number, a proposed solution if known, and suggested integration points, which will be verified by the Cerner Solution Delivery Consultant (SDC).

2. The change request forms are collected and discussed during a weekly team meeting surrounding change control issues. Agenda items for this meeting will include prioritizing issues and discussing any points of integration. This meeting will determine whether these changes will be approved or not approved. It is an internal client meeting with the Cerner Integration Architect in attendance.

3. The approved change requests are tracked on the Change Request Log spreadsheet and then logged as a Service Request to the appropriate Cerner Solution Team via Navigator (our online service request tracking tool). After maintenance training, the Cerner SDC will notify the Client to make the Cerner approved changes.

4. Any additional costs, work effort, scope changes, or timeline impacts will be documented in the Service Request. The Cerner SDC will follow the escalation management process for such issues.

5. The Cerner SDC will communicate to the Client the resolution and the projected implementation timeframe.

6. The Cerner SDC or Client will institute the change in the appropriate environment (BUILD, CERT).

7. The Client Team Leader will be responsible for testing the change according to Unit/System/Integration validation standards laid down in the Test Plan.

8. Once tested, Cerner or Client will move the change to the appropriate domain. The Cerner SDC will follow the Production Environment Change Authorization (PECA) process if the change is needed in the production domain.

9. The Cerner SDC updates the issue/resolution on the SR. The Client updates the issue/resolution on the Change Request Log.

10. The Change Request Log is to be reviewed on a weekly basis by the Cerner Integration Architect and the Client.

11. The Client Team Leader will be responsible for informing the appropriate people regarding training issues, change updates to facility staff, as it relates to the completed change.

12. The Client will retain the paper Change Request forms, along with any supporting documentation, emails, or screen shots (before and after) as a record of change. The Change Request Log will be retained on SharePoint.

Your organization will define needed credentials, and delete specific accounts. Our AMS Service can offer help with any needed additional support.

Discern Explorer can generate output file in many formats including text output that could be imported into Word, and .csv that can be imported into Excel. You can also create .pdf and other types of output.

Should County need to migrate off of the proposed EHR system, we will work with you to establish a data conversion plan. Depending on the other vendor's requirements, Cerner can either send information via HL7 or download table data to .csv that can be imported into Excel.

We have real-time monitoring of the network for intrusion detection. Any breaches or vulnerabilities are acted upon in accordance with their risk and potential impact. Intrusion detection is a core component of the data center infrastructure and data traffic is continually monitored for attacks and anomalies.

Vendor patches are analyzed upon announcement. If the vulnerability is identified as a critical risk factor, and the vulnerability exists within our environment, patch deployment takes place immediately. Otherwise, deployment is deferred until routine distributions are performed.

Information regarding systematic enforcement of access controls is provided in Sections 3.3 and 3.4 of Exhibit N.1-1.

With Cerner's Remote Hosting Option, as opposed to an ASP model, client environments are secured using firewall and router access control layers separating clients into different PVLANS on separate secured systems. Within each system, authorizations to data are managed by application level security. Account information and privileges are stored within the client's database.

P2 Sentinel is our preferred auditing tool for this type of incident.

2.3.5 INTERFACES

Provide Proposer's proposed interface strategy for the EHR System pursuant to Section 1.5 (Interfaces) of Appendix I (Technical Requirements). Proposer's response for this Section is limited to 3 pages.

Our interfaces are based upon the Universal Interface Specifications documents which are designed from the various chapters of the HL7 standard. We do not implement off-the-shelf interfaces for a particular vendor/product, but generic interfaces that are configurable and may require some custom scripting. A specification meeting is held early in the implementation phase to discuss functionality of each specific interface. The main objective of the specification meeting is to create a specification document that can be used as a blueprint by the FSI System Analyst (FSI-SA) and as a site-specific reference for our clients. The meeting will detail configurable settings associated with each interface for the client. In some cases, we will implement an ANSI X.12 interface or perhaps a custom interface, if required.Our previous clients utilize the same formats listed above.

Cerner applications use one or more interfaces to communicate with other foreign (non-Cerner) systems that exist within a healthcare organization or to send or receive data from a foreign entity. A specific area in a healthcare organization such as patient registration generally has a "master system" which collects all the data that is required to admit or register the person, such as demographics, insurance and guarantor data, allergies, and so forth. Other systems in various ancillary areas within this healthcare setting have a need to know this information in a timely manner so they can place orders, perform procedures, administer drugs, and so forth.

Interfaces implemented for a specific client are determined by the mix of Cerner and non-Cerner

systems and the data that needs to be exchanged among these systems.

Cerner has implemented approximately 6,000 Millennium interfaces with the major suppliers in the healthcare marketplace for the following types of systems:

- Admission, Discharge, Transfer, (ADT)
- IT or HIS
- Patient care (including medical devices)
- Scheduling
- Physician office
- Financial
- Eligibility checking (stored at the encounter level)
- Transcription
- Coding/Abstracting
- Dietary
- Radiology
- PACs (via Mitra Broker)
- Laboratory
- Reference labs
- Pharmacy dispensing and robotics
- Laboratory devices (instruments) and robotics
- Supply chain

Our integration engine currently meets basic interface monitoring, routing, and customization requirements. Our monitoring tools enable users to easily start, stop, and troubleshoot interface problems. Messages are saved for investigation and can be replayed as needed.

System Integration Manager is a Cerner GUI tool that provides easy access to build, configure, and troubleshoot interfaces. This includes the ability to view message content, errors, and the timestamp.

Sometimes, the most difficult interface problem Cerner faces is an interface specification language barrier between the Cerner system and the foreign system. Cerner may have different terminology for the same issue, or similar terminology for different issues. Another challenge is insuring client has adequate staffing committed to perform the testing required. Cerner has provided the recommended client staffing that is needed for the project to insure success.

Another issue can occur with the timing of the implementation.Too many times we are asked to make the interfaces work before there is a sufficient build of the database on either side(It is important to insure that there is a sufficient build of the testing databases on both sides of the interfaces to insure that the interfaces can be tested properly in integration testing).

Cerner continually reviews their processes to make them better. We continue to add education training programs, literature, and take client advice into consideration to improve our processes.

Cerner's integration strategy uses the same three-layer architecture structure as the other modules of the Millennium system. Our suite of interface software, known as Open Port, can run on the same server as other Millennium applications, or it can run on a separate server, depending on the

configuration of a client system. No third party software is required, but if the client has a third party interface engine, such as eGate, Cerner's interfaces can communicate with it, by sending and receiving transactions.

Cerner's CareAware iBus is the evolution of BMDI's, creating a continuous available and fault tolerant architecture, to support the complete integration of bedside medical devices.

We designed our device architecture to bridge the gap between medical devices and patient information by connecting information from various monitoring devices to the clinician workflow and electronic medical record. As a result, clients can achieve the following:

- Streamlined nursing workflow by incorporating documentation at the point of care
- Consolidated medical device information to support patient safety
- Platform independent, if the devices push data via a network connection or serial port, we can consume data from the device.
- Two-way communication depends on the monitoring medical devices ability to send and receive data.
- Support at least 1000 device connections at the same time without problems
- True plug-and-play device connectivity into the electronic health record

2.3.6 REPORTING APPROACH

Provide Proposer's proposed reporting and analysis capabilities pursuant to Section 1.6 (Reporting Approach) of Appendix I (Technical Requirements). Proposer's response for this Section is limited to 2 pages.

Discern Explorer is a full-featured, fourth-generation programming language, patterned after Structured Query Language (SQL); therefore, it includes a wide range of powerful commands. Discern Explorer provides over 250 built-in functions and commands specifically written for Cerner Millennium transactions.

All data captured and stored in Cerner Millennium can be accessed using Discern Explorer since all Cerner Millennium solutions use Discern Explorer to write to the Cerner Millennium database. This provides unlimited possibilities for using Discern Explorer to query and report on the Cerner Millennium data. With Discern Explorer you can create anything from simple ad hoc queries, to formatted reports, to complex programs that execute multiple queries, create temporary tables, combine information from multiple queries, flex queries based on user input, create complex expressions, calculate aggregates, and everything in between. The Discern Explorer language is an SQL based language that is proprietary.

Using Discern Explorer, you can extract user-selected information from Cerner Millennium data. You can create extract files in practically any format. Extract files in common formats like comma separated (.csv), fixed column width, and tab or character delimited, are often created using Discern Explorer. The output of Discern Explorer queries can be sent to files such as ASCII, PostScript, .PDF, HTML, as well as label printers such as Zebra and Intermec, and other common file formats. The data then can be imported into other PC applications that use third-party spreadsheet, database, or statistical packages. Discern Explorer allows creation of graphs directly in a report using the Layout Builder. This function eliminates the need to export the data into a third party tool to create graphs.

You can still export the data to third party tools and create graphs if desired.

There are two options to meet the reporting standards required by CCHIT. First, CCL based reports that can be used to meet the reporting needs. These are not very detailed but meet CCHIT requirements. Second, our Audit logging solution, P2Sentinel, provides more detailed reports that meet CCHIT requirements.

Cerner believes that oversight by regulatory agencies is important for ensuring that healthcare environments are reasonably free of risk to patients, visitors, and employees. Cerner is committed to meeting the applicable requirements established by federal law or other applicable regulations. The licensed software will, upon first productive use and during the term of the agreement (so long as your organization is on support), enable your organization to meet the requirements of any applicable federal or state laws in effect on the effective date.

Your organization can use Discern Explorer to write custom reports using any discreet data in the Millennium system.

Cerner has developed a proactive monitoring tool called the Lights On Network. Lights On is a systematic approach to improving system stability through collective knowledge and proven practices acquired through the continual monitoring and management of the Cerner Millennium environments by CernerWorks (Cerner's remote hosting organization).

Our data structure is a relational database, RDBMS. We provide data dictionary information and tools for researching the data models.

The output of Discern Explorer queries can be displayed on the screen and then saved as a comma separated (.csv) file for importing into PC applications. You can create extract files in practically any format using Discern Explorer.

All data in the Cerner Millennium system or custom tables created by your organization can be used in Discern Explorer ad hoc queries. These ad hoc queries can be stored in a file for future use; they also can be created as compiled programs that can be accessed and executed as required.

2.4 APPENDIX J (IMPLEMENTATION REQUIREMENTS)

2.4.1 PROJECT MANAGEMENT

(i) Methodologies and Tools

Provide Proposer's proposed project management methodology for the EHR project, pursuant to Section 1.1(a) (Methodologies and Tools) of Appendix J (Implementation Requirements). Proposer's response for this Section is limited to 4 pages.

Cerner's implementation methodology, MethodM, is our approach to working with clients to deliver value through our Cerner Millennium solutions. MethodM has been used in healthcare organizations ranging in size from single-doctor practices, to health systems, to entire countries. This modular methodology draws upon proven practices from a host of past client experiences. With it, a team is able to deliver the intended outcomes of a project with discipline, predictability and efficiency. But the utility of MethodM goes far beyond your initial deployment. As you maintain, upgrade, and enhance Cerner Millennium, MethodM will continue to improve the quality of outcomes and lower

Proposer Instructions

This Appendix of the RFP contains detailed functional requirements for the EHR System desired by the Los Angeles Department of Health Services (LA DHS). Proposers must respond to all the requirements using one of the code provided below.

Response Code	Definition
O (Out of the Box) **C (Customization)** **D (Developed)** **3 (Supplied by Third Party)** **F (Future)** **N (Not provided)**	The Proposer shall indicate how the requirement will be met by checking either: **O**ut of the box, **C**ustomization, **D**eveloped, Supplied by **3**rd party, **F**uture, or **N**ot provided: **O = Out of the box** - The requirement will be met through available functionality and through changes to setting of tables, switches, and rules without modification to the source code. **C = Customization** - The requirement will be met through changes to the existing reports or programs. This would include custom code developed to perform specific functions or validations outside the standard code. Include the creation of a new report, query or workflow that does not exist within the current application. **D** = **Developed** - The requirement will be met by developing new functionality and software code. **3 = Supplied by Third Party -** Requirement will be met by third-party software package and is included in this proposal. **N** = The functionality identified in the requirement will not be provided. Note: In the "Notes" column, next to this response, indicate the name of the proposed third-party software package and indicate the interface/integration services being proposed. **F = Future** - Requirement will be met by packaged software that is currently under development, in Be Note: In the "Notes" column next to this response, indicate the date when requirement will be available

Note:

1. An omitted response will be assumed to be the same as a response code of “N”.
2. Only one (1) response per requirement will be accepted.
3. Any deviation from the response codes will be re-coded at the discretion of the LA DHS.

Requirement #	Requirement	O, C, D, 3, F,N	Notes
General Requirements			
F-1	The proposed EHR System is an overall integrated solution, including the following components: Scheduling, Registration, Order Entry, Results Viewing, Clinical Documentation (physician and nursing), Computerized Physician Order Entry (CPOE), Radiology, Lab, Pharmacy, OR, ER, ICU, HIM Utilization review, and utilization management.	O	
F-2	The proposed EHR System is integrated across the Inpatient and Outpatient continuum of care through workflows, document types and result displays. If a patient has several Outpatient visits and is admitted as an Inpatient, care teams must be able to access the patient's clinical history. Conversely, if an Inpatient is discharged, Ambulatory teams must be able to access the patient's clinical, demographic history.	O	
F-3	The system has the capability to alert physicians during order entry or clinical documentation to identify adverse conditions or to notify physician of actions that need to be taken as part of a requirement as a designed workflow (e.g., co-sign orders for a resident).	O	
F-4	The system has capability to identify the current physical location of any patient during their stay.	O	
F-5	The system has capability to support a purge cycle to allow database maintenance.	O	
F-6	The system has the capability to have an automated recovery.	O	
F-7	The system has the capability for a single point to view complete medical record for both inpatient and outpatient health records.	O	
F-8	The system supports the workflow solution in a teaching hospital for interdisciplinary documentation and allows for multiple e-signatures / authentication across disciplines (i.e., Co-signature of orders / documentation for Resident physicians by Attending physicians)	O	
F-9	The system has capability to support industry standards for Security and Reliability.	O	

F-10	The system has capability of parameter-specific identification of patient problems and goals.	O	
F-11	The system has capability to have a patient education module that addresses the needs of the LA County population (e.g. multilingual, ADA compliant, etc.).	O	
F-12	The system has capability to have voice recognition.	O	
F-13	The system has capability to capture a picture of the patient at the point of service.	O	
F-14	The system has capability to generate alerts if clinical documentation or orders are altered after initial sign-off by an authorized physician.	O	
F-15	The system has capability to capture the date and time the record was entered into the system or edited.	O	
F-16	The system has capability to capture the user's information, both internal and external, who created and/or edited the record.	O	
F-17	The system has capability to perform nursing assessments.	O	
F-18	The system has capability to perform medical assessments.	O	
F-19	The system has capability to automatically populate demographic fields.	O	
F-20	The system has capability to show the patient's medication history.	O	
F-21	The system has capability to manage, track and report user access to a specific patient's data.	O	
F-22	The system has capability to comply with HIPAA Standards for Electronic Transactions.	O	
F-23	The system has capability to integrate the diagnostics from other systems (e.g., fetal monitoring strips, OB strips, etc.)	O	
F-24	The system has capability of importing and export patient demographic data via HL7 interface from an existing Practice Management System, Patient Registration System, or any such system used for patient registration and/or scheduling.	O	
F-25	The system has capability to import, create, review, and edit non-clinical information from the patient record.	O	
F-26	The system has capability to use visual cues to highlight abnormal results.	O	
F-27	The system has capability to accommodate multiple levels of role-based user access that restrict access to the appropriate role.	O	
F-28	The system has capability to display bed census by nurse station, and Provider.	O	

F-29	The system has capability to support electronic signatures and other identifiers for authorization and consent forms. Please include in your response how the system will prompt for the signature as well as where/how it is used for both internal and external user (e.g., patients, staff, providers, witnesses)	O	Cerner's signature solution supports the ability to allow persons to sign electronic documents with a hand written signature on a signature pad or tablet. This electronic signature solution allows persons signatures to be captured on Consent Forms. Once the signature is captured through a USB attached signature pad or a software-based capture on a tablet PC, the signed electronic document is filed into an image repository. Hospital staff and clinicians have access to the signed documents through the person's electronic medical record. The requirements for person e-signature include: Interlink ePad with software; Lexmark Document Producer; Cerner Registration Management; Cerner ProVision Document Imaging; Professional Services
F-30	The system has capability to support the creation of patient identifying bar code on face sheets, patient labels and identification cards with pictures.	O	Partially supported. Identification cards with pictures is not supported.
F-31	The system has capability to provide the creation of user defined prompts, alerts and fields to capture information.	O	
F-32	The system has capability to identify clinicians for the provision of care.	O	
F-33	The system has capability to display age with no greater specificity than days when time of birth is not recorded.	O	
F-34	The system has capability to use age in hours of life when time of birth is recorded including through the 7th day of life.	O	
F-35	The system has capability to allow the recording of an infant's gestational age including age at the time of birth.	O	
F-36	The system has capability to use pediatric-specific reference ranges for vital signs. (e.g., use of metric and US standard units of measure, such as pounds and kilograms)	O	

F-37	The system has capability to document a patient assent for situations where the patient is legally unable to consent.	O	
F-38	The system has capability to document the name of one or more witness(es) to the patient assent.	O	
F-39	The system has capability to document the names and addresses for patient's personal representatives with contact information for each to include one or more telephone numbers and addresses.	O	
F-40	The system has capability to document the date, time and lack of assent or consent in emergency treatment when a legal guardian is not available or present.	O	
F-41	The system has capability for tracking patient ID changes and merges.	O	
F-42	The system has capability to allow multiple users to enter data for a single encounter simultaneously.	O	
F-43	The system has capability to make changes to complete encounters.	O	
F-44	The system has capability to link consult encounters with consult orders.	O	
F-45	The system has capability to have technical modules that collect medical history.	O	
F-46	The system has capability to automatically check for and warn of duplicate orders, within a user-defined period of time.	O	
F-47	The system has capability to electronically provide patient reports on demand following and allow for hiding private information to comply with HIPAA Privacy and Security requirements. Format of reports should include the following: fax, mobile device, pager, electronic storage devices (e.g. flash drive, CDs).	O	
F-48	The system has capability to send a scheduling confirmation to the requesting system.	N	We do not support requests; however, a scheduling notification is sent unsolicited.
F-49	The system has capability to request a scheduling confirmation.	N	We do not support requests.
F-50	The system has capability to designate a primary clinician.	O	
F-51	The system has capability to have rules-based chemotherapy management component.	O	
F-52	The system has capability to display standard orders sets based on diagnosis (e.g. diabetes), including advising for required lab work per quality indicators (A1c, Lipid panel).	O	
F-53	The system has capability to import patient health history data, including obstetrical history data, from an existing system (e.g., eko ,etc.).	O	
F-54	The system has capability to support the capture, graphic display of, and plotting of "Growth Chart" information.	O	

F-55	The system has capability to provide a mechanism to capture history of current illness.	O	
F-56	The system has capability to capture, track and print referral information including the process to accept a referral and to notify the referring source of the acceptance.	O	
F-57	The system has capability to capture, track and print consultations.	O	
F-58	The system has capability to support remote system monitoring technology, such as network access control, performance monitoring,	O	
F-59	The system has capability to access subspecialty attending on-call lists when transferring and receiving patients between hospitals.	O	
F-60	The system has capability to display results in a customizable, intuitive, flexible format.	O	
F-61	The system has the capability to support real-time or retrospective trending and analysis.	O	
F-62	The system has the capability of charting on-screen view of patient process toward meeting clinical goals.	O	
F-63	The system has the capability to maintain a directory which identifies the physician by multiple unique identifiers.	O	
F-64	The system has the capability to allow vital sign/growth data to be normed against either/both male/female gender with transparency to the user regarding which default is being applied.	O	
F-65	The system has the capability to notify user of ED visits.	O	
F-66	The system has the capability to post a note from the web signoff.	N	
F-67	The system has the ability to plot patient results and trends in graph form.	O	
F-68	The system has the ability to upload historical information from both internal and external sources.	O	
F-69	The system has the ability to track and record infection control data and reporting (statistic and/or patient specific).	O	
F-70	The system has the ability to alert staff of patients with highly sensitive Infection Control alerts (e.g., MRSA).	O	
Registration Requirements			
F-71	The system has an Enterprise Registration Module with automated workflow including the processes of registration, admitting, transfers, and discharges in any clinical domain, including hospitals, physician offices, clinics, Ambulatory settings, and home health agencies.	O	

F-72	The system has the capability to integrate and create a unique Master Person Identifier (MPI) that becomes the basis for coordinating the person's movement across an integrated or disparate health system.	O	
F-73	The system has the capability to accommodate provider and researcher account types.	O	
F-74	The system has a scheduling/registration product that can add a Newborn scenario including during a downtime scenario.	O	
F-75	The system has a scheduling/registration product that can Add/Modify scenarios (e.g., Inpatient, Outpatient, ER, Quick - Registration, Pre-Admit, series account).	O	
F-76	The system has the ability to Add/Modify person scenarios including: 1) Bed Swap 2) Observation beds 3) Change of service 4) Cancel Encounter 5) Cancel Encounter Discharge 6) Cancel Encounter Transfer 7) Cancel Leave of Absence 8) Cancel Pending Encounter Discharge 9) Cancel Pending Encounter Transfer 10) Complete Encounter Discharge 11) Complete Encounter Transfer 12) Discharge Encounter 13) Leave of Absence	O	
F-77	The system has the capability to use rules associated with required prompts that can either be used as warning to the usre or prevent moving to a next step until a specific action has been taken.	C	
F-78	The system has the capability to generate differencing registration reports.	C	
F-79	The system has the capability to generate bar code labels on laser printers for patient identification.	O	
F-80	The system supports pre-built or easily designed Standard Documents for Armband labels, Sheet labels (Admission label), Face sheets, Admit Notice, Discharge Notice, Transfer Notice, Cancel Discharge Notice, MSP Document, Document Routing printed on laser printer.	O	All reports in your requirement are supported as out of the box (O) with the exception of the following custom (C) reports: MSP Document

F-81	The system generates work lists (queues) including: Medicare Secondary Payer (MSP) Follow-up; Pre-Registration; Dirty Beds; Discharge Follow-up; ER Quick Registration Follow-up; Insurance Verification; Past Due Arrival; Pending Arrival; Leave of Absence View; Unauthenticated Employer; Miscellaneous Insurance; Interpreter Required; Privacy Practice; Accommodation Mismatch; Nurse Unit Inquiry; Name Inquiry.	O	All work lists in your requirement are supported as out of the box (O) with the exception of the following custom (C) reports: Unauthenticated Employer, Miscellaneous Insurance, Privacy Practice, Accommodation Mismatch, Nurse Unit Inquiry, Name Inquiry
F-82	The system has the capability to register a large number of patients who arrive at the ER (QuickReg) as a result of a disaster involving casualties (e.g., train accident, earthquake, etc.).	O	
F-83	The system allows to search for and potentially match QuickReg records with existing patient records in the system.	O	
F-84	The system assists matching records created in the quick registration process with existing record for the same patient.	O	
F-85	The system allows authorized users to merge matching records		
F-86	The system supports patient locator functionality such as viewing of patients and their location for information or help desk. Includes the ability to customize so that only those patient classes a facility desires will show up on the locator; also includes the capability to indicate which patients want to opt out of being listed in the patient directory.	O	
F-87	The system supports historical patient lookup functionality such as viewing a patient‘s locations (e.g., where they have been transferred to and from; view of all patients who have historically been in a given location during a time period).	O	
F-88	The system supports bed board functionality such as providing a view of beds including their status and occupancy information at either the nurse unit level or for an entire site.	O	
F-89	The system supports the Bed Board application of transfer and discharge patients, as well as to update the status of a bed.	O	
F-90	The system has the capability to allow multiple addresses, permanent and temporary.	O	
F-91	The system has the capability to import, create, review, edit, and export patient demographic information.	O	
F-92	The system has the capability to conduct eligibility checking and documenting for all commercial health plans and Medicaid.	O	
F-93	The system has the capability to print out medical summary.	O	

F-94	The system has the capability to access insurance information from within the system; and determines proper billing codes including administration codes (i.e., vaccine, shots, etc.).	O	
F-95	The system has the capability to provide a Worklist component to handle list of incoming scheduling requests, including urgency of appointment.	O	
F-96	The system has the capability to send transportation requests.	O	
F-97	The system has the capability to capture and display separate physician names for attending, admitting, consulting, referral, and primary care physician at the visit level.	O	
F-98	The system has the capability to capture and display comments in the form of comment fields (free form text and pre-defined values/notes).	O	
F-99	The system has the capability for notification of IP Admissions.	O	
Scheduling Requirements			
F-100	The system has the capability to optimize the scheduling of persons, staff, and other resources, reducing costs and dramatically increasing efficiency in this key area of access services.	O	
F-101	The system manages multiple resources or other appointment books displayed together.	O	
F-102	The system supports scheduling for Physical Therapy, Occupational Therapy, Rehabilitation Therapy areas and all Radiology modalities.	O	
F-103	The system supports scheduling for the appointment types.	O	
F-104	The system supports scheduling for multiple slot types.	O	
F-105	The system has the capability to support default schedules utilizing more than one slot type that is used to predefine the use of time for a resource. The system will need the support capability of up to and beyond 5000 default schedules.	O	
F-106	The system allows scheduling templates in the future.	O	
F-107	System functionality exists that allows the capture of additional information regarding requested appointment type, such as reason for exam, ICD-9/ICD-10 codes, referring physician, etc.	O	
F-108	The scheduling/registration Module has the capability to flex the details captured for a selected appointment type. There is no limitation to the number of accepted formats.	O	
F-109	Resource roles are logical groupings of resources used primarily to assist with database maintenance. The proposed EHR System is able to manage the resource roles necessary to support the environment similar to LAC DHS.	O	

F-110	Resource Lists is functionality to define a list of resources that are valid to be scheduled to a certain appointment type. The proposed EHR System is able to manage the resource lists necessary to support the environment similar to LAC DHS.	C	
F-111	The system has the capability to upload historical schedules.	N	Cerner can upload active schedules only or those scheduled for the future.
F-112	The system has the functionality to define a list of resources that are valid to be scheduled to a certain appointment type. This will need to include multiple resource lists.	O	
F-113	The system has functionality to indicate if multiple appointments interact when booked too closely together.	O	
F-114	The system addresses Preparations, Guidelines, and Post Appointment Instructions.	O	
F-115	The system has the capability to utilize Action Comments; Booking Notes; Scheduling Comments; Warning Overrides; Resource Comments; Encounter Comments; Person Comments.	O	
F-116	The system utilizes the capability to capture referral info at the time the appointment is being made and the ability to display the information when viewing details of the appointment.	O	
F-117	The system utilizes the capability to capture (at the time of patient discharge) diagnosis codes, procedure codes, caregivers, responsible physician, disposition, and any charges.	O	
F-118	The system integrates the use of registration conversations and conversation flexing logic for Radiology Integration including capability to schedule radiology patient appointments: Surgical Management Integration including capability to assign surgical case numbers; evaluate historical and recent procedure durations; apply preference cards to the scheduling process; perform dynamic and block scheduling.	O	
F-119	The system has functionality for Enterprise Eligibility/Enterprise Benefits Management Integration which includes capability to verify insurance eligibility information during the scheduling process and capability to check for the medical necessity of procedures based on diagnosis combinations.	O	
F-120	The system addresses Orders Integration such as Scheduling to orders.	O	

F-121	The system has the capability to link orderable to scheduling appointments, which can create the order in future status until appointment check-in; Orders to Scheduling: The system has the capability to support Radiology procedures that need to be scheduled and are ordered in Electronic Health Record product.	O	
F-122	The system has functionality for scheduling request queues that prompt user to make registration appointment if any outpatient appointment has expiration prior to next appointment visit.	N	
F-123	The system has the capability to by-pass need for financial assessment appointment based on patient referral type.	N	
F-124	The system has functionality/capability at Patient Arrival that would restrict patient check-in from occurring before the date of the appointment.	N	
F-125	The system has functionality for “View only access/Full Access” including capability to restrict scheduling based upon location.	O	
F-126	The system has the capability and workflow to Schedule Multiple Appointments, Schedule a Recurring Appointment, Add a Patient while entering appointment information, Reschedule an Appointment, Cancel an Appointment, Check In an Appointment, Check Out an Appointment, Record a No Show, and View the History of an Appointment.	O	
F-127	The system has the ability to schedule a referral patient (non-registered) and collect associated documentation for the referral.	N	
F-128	The system has a process for archiving and/or purging of data.	C	
Clinical Documentation Requirements			
F-129	The system has the capability to automate the following processes for Nursing or Ancillary Departments: Admission Process; Ongoing Assessment Process; Intake and Output; Routine Care and Functional activities; Non Scheduled Documentation such as Ad Hoc Charting; Shift Change Report; Patient Assignment; Results Viewing.	O	
F-130	The system has the functionality to facilitate the need to automate the intake and output flow sheet calculations along with fluid balance in a graphic view.	O	
F-131	The system has functionality that addresses Results Viewing and facilitates the need to automate the custom views for clinical modalities such as Nursing, Physician, Administration, and Ancillary Departments.	O	

F-132	The system has the functionality to address Shift Assignment: The product will need to include the functionality to automate the Assignment of patients to a group of care givers or an individual care giver. Provide a high level overview of key information, notification source, for important interval data and a launch pad to vital and related applications.	O	
F-133	The system has the functionality that addresses Task Lists: • Product functionality to facilitate the need to automate the Nursing and departmental documentation tasks including single and multi-patient task lists utilized to support Nursing and departmental processing. • Functionality to include a unique task list for each defined position. • Task list functionality to support forms documentation along with complete/incomplete charting.	O	
F-134	The system has the capability to automate the following reports: Active Order Report; All Task Report; Overdue Task Report; Diet Report; Intake and Output Summary; Report that can flex to utilize 8 and 12 hour versions for Shift Assignment Reporting. Also functionality for Charge Services/Documentation Management to support at the capture of charges based upon the completion of tasks.	O	
F-135	The system has the capability to present to a user condition specific care plans or guidelines based on vital signs outside of a specific range.	O	
F-136	The system has the capability to specify the level of authorization to make decisions on behalf of the patient and to designate primary and secondary caregivers.	O	Partially supported. Clinicians can record the Durable Power Of Attorney, DPOA, and scan the legal DPOA papers into the chart. Our system requires that all caregivers designate their relationship to the patient such as attending provider, admitting provider, primary care provider. While Cerner a Document Imaging solution it has not been proposed at this time. Because sizing can vary significantly among clients depending on their existing page volume and/or transition strategy to an EMR, we will need additional information to provide you an accurate cost proposal and transition strategy.
F-137	The system has the capability to produce adverse-event reporting and documentation.	C	

F-138	The system has the capability to inform the clinician of recommended or required immunizations based on patient risk factors and other criteria as identified in widely accepted immunization schedules and recommendations.	O	
F-139	The system has the capability to record the date and time (if known) of vaccine reaction or allergic occurrence.	O	
F-140	The system has the capability to calculate Body Surface Area and support (BSA)-based dosing when recommended for a medication.	O	
F-141	The system has the capability to resolve dosing based on weight or BSA to a finite dose.	O	
F-142	The system has the capability to use a weight-based or BSA-based dose that is entered ad hoc and subsequently be able to resolve such entered doses to finite doses.	O	
F-143	The system has the capability to document Admission History using documentation templates. The EHR System needs to provide the functionality to carry forward previous visit history into the current visit template.	O	
F-144	The system has the capability to customize template fields to be tied to standard nomenclature.	O	
F-145	The system has the capability for front-end speech recognition integrated into documentation tools.	O	
F-146	The system has the capability to integrate images directly into documentation.	O	
F-147	The system has the capability to select diagnoses, medications, and procedures from pre-defined lists.	O	
F-148	The system has the capability to quickly update care plans.	O	
F-149	The system has the capability to have supervisory review integrated into documentation workflow.	O	
F-150	The system has the capability to track ancillary documentation.	O	
F-151	The system has the capability to have template-driven charting.	O	
F-152	The system has the capability to provide documentation templates to support Anti-coagulation/Coumadin Management.	O	
F-153	The system has the capability to provide documentation templates to support Psychiatry, Orthopedics, Oncology, Pre-Operative Assessment, History and Physical, Physical Exam, Operative Note, Labor and Delivery, Cardiac Resuscitation, Dental Note, Ophthalmology Note, Family Planning, Urology Record, Sickle Cell Record, Neurology Note.	O	
F-154	The system has the capability to support resident/attending signoff relationships and attestation. (Co-signature workflow)	O	

F-155	The system has the capability to provide messaging system for all clinical results. This would include examples like placing a record of result review and acknowledgement in patient's chart.	O	
F-156	The system has the capability to automatically shift results message streams to new caregiver for sign out purposes.	O	
F-157	The system has the capability to Integrate with pager, cell phone, and email technologies to provide critical results reporting in real time.	O	
F-158	The system has the capability for an escalation process for critical results if not acknowledged in a specified time frame.	O	
F-159	The system has the capability to track active and inactive patient problems.	O	
F-160	The system has the capability for automatic problem generation based on diagnoses in medical record.	O	
F-161	The system has the capability to integrate CPT & ICD-9/10 Codes. Solution-provided aids for completing the template based on entry.	O	
F-162	The system has the capability to print clear summary for patients on discharge.	O	
F-163	The system has the capability for consolidated vital signs management across all service areas.	O	
F-164	The system has the capability to provide patient acuity classification score and other scoring tools (e.g., pain scores).	O	
F-165	The system has the capability to have field (entry) level edits and validation checking capability.	O	
F-166	The system has the capability to make nursing assignments.	O	
F-167	The system has the capability to flag the nurse for missing or late documentation.	O	
F-168	The system has the capability to allow multiple users to view and update the same record simultaneously.	O	
F-169	The system has the capability to provide knowledge references.	O	
F-170	The system has the capability to have patient education library.	O	
F-171	The system has the capability to customize handouts from print or email.	O	
F-172	The system has the capability to have immunization registry function.	O	
F-173	The system has the capability to capture & store risk factors for each new patient.	O	
F-174	The system has the capability to capture & store social history elements.	O	

F-175	The system has the capability to prompt clinicians to provide appropriate patient counseling, e.g., counsel patients on behavior, following treatment plans and taking medications.	O	
F-176	The system has the capability to prompt the provider to inform the parent/child that their immunization information will be shared with the registry and Integrated Decision Support.	O	
F-177	The system has the capability to record progress notes utilizing a combination of system default, provider customizable, and provider-defined templates.	O	
F-178	The system has the capability to automatically update other sections of the record with data entered in the progress note.	O	
F-179	The system has the capability to enter performed and planned procedures on the progress note template after an encounter.	O	
F-180	The system has the capability to link the progress note to a diagnosis or a problem number	O	
F-181	The system has the capability to automatically capture the electronic signature and title of the person entering data and date/time stamp each transaction.	O	
F-182	The system has the capability to view progress notes in chronological or reverse chronological order by encounter date in relation to the active care plan.	O	
F-183	The system has the capability that applies security controls to progress notes to ensure that date cannot be deleted or altered except within the current session and by an authorized user.	O	
F-184	The system has the capability to include a medical terminology dictionary within the progress notes data entry module.	O	
F-185	The system has the capability to include a spell checker within the progress notes data entry module.	O	
F-186	The system has the capability to support the automatic collection of data elements defined by the associated clinical practice guideline or order.	O	
F-187	The system has the capability to provide a problem status for each shown problem.	O	
F-188	The system has the capability to separate active from inactive problems.	O	
F-189	The system has the capability that allows clinicians to identify and record new patient problems as well as the current status or existing problems.	O	
F-190	The system has the capability to update the active problem list from relevant data in the progress note.	O	

F-191	The system has the capability to create, review, and edit information regarding a change on the status of a problem to include, but not be limited to, the date the change was first noticed or diagnosed.	O	
F-192	The system has the capability to automatically update the diagnosis/problem lists with the capture of each new piece of patient data in any module.	O	
F-193	The system has the capability to automatically link problems with order and results.	O	
F-194	The system has the capability to automatically update the problem summary using new clinical information.	O	
F-195	The system has the capability of allowing the display of past interventions for review at the option of the provider.	O	
F-196	The system has the capability of allowing the display of past hospitalizations, diagnostic procedures, & past therapies for review at the option of the provider.	O	
F-197	The system has the capability to automatically update the problem summary lists upon detecting changes made to mutli-disciplinary guidelines.	O	
F-198	The system has the capability allow users overriding all or parts of a system provided guideline or protocol and prompt the user to indicate a reason for the override.	O	
F-199	The system has the capability to import/create information about the desired single or multi-disciplinary long/short term goals and objectives that will be accompanied by the care plan.	O	
F-200	The system has the capability to review, edit information about the proposed set of single or multi-disciplinary care plan options that are based upon expected outcomes.	O	
F-201	The system has the capability to use existing documentation templates.	O	
F-202	The system has the capability to integrate all patient forms with electronic capture of the patient's signature.	O	Our patient signature and scanning solution is available from Cerner but more detailed scope information is needed to be properly configured.
F-203	The system has the capability to view assigned patients, utilization trends, on-call schedules on a dashboard.	O	
F-204	The system has the capability for users to create their own preferred display formats.	O	
F-205	The system has the capability to display & print care plan by patient, nurse, physician, treatment type.	C	Your organization can define custom reports to support the printing of care plan data.

F-206	The system has a solution for nursing and physician shift handoff that integrates documentation, results, and progress notes along with workflow sign off to efficiently and safely hand off patients to the next shift.	O	
F-207	The system has the capability for communication that will identify clinical teams and/or individual physicians on the team (Residents and/or Attending) so that if needed, the team/individual physician can be contacted by a covering physician.	O	
F-208	The system has the capability to auto translate based on documentation entered, prompt for additional supporting documentation and prompt for pertinent documentation (e.g., present on admission for optimal Medical Records coding).	O	
F-209	The system has the capability to provide computer aided coding for staff as forms and templates are completed.	O	
F-210	The system has the capability to accept scanned documents and convert to a template to be used by other medical professionals.	O	Cerner ProVision Document Imaging is a distributed application that provides electronic document imaging services and interactive display of textual and other types of documents, as well as scanned images of documents via a variety of Cerner Millennium applications or as a standalone solution. Original documents can be captured from a variety of different media, converted to digital format for viewing and archived for long-term storage. This solution is available from Cerner but more detailed scope information is needed to be properly configured.
F-211	The system has the capability for user-defined patient flow sheets.	O	
F-212	The system has the capability to download branching logic charting methods.	O	
F-213	The system has the capability to provide a detailed outcome reporting to analyze and determine best practice.	C	
Order Management Requirements			
F-214	The system has the capacity of an 'enterprise clinical viewer' for viewing clinical results (e.g., pediatric growth charts, visit lists and others).	O	
F-215	The system has the capability for clinical views of order sets, i.e., by care venues (Inpatient and Ambulatory), specialty or treatment plan.	O	

F-216	The system has the capability to view patient charts including result flowsheets, clinical notes, patient information and demographics, problem lists, pediatric growth charts, visit lists.	O	
F-217	The system has the capability to allow the creation of nursing orders, physician orders and order sets.	O	
F-218	The system has a process flow for Laboratory orders; Radiology orders; Therapy orders and pharmacy orders.	O	
F-219	The system has the capability to address duplicate order checking.	O	
F-220	The system has the capability to provide order status updates during the processing of an order.	O	
F-221	The system has the capability to handle order communication within the integrated modules (Rad/Lab/Rx) along with communication to any potential interfaced modules.	O	
F-222	The system has the capability to have 'write rules' against order entry conditions by users across the unified database, including lab, Radiology, Angio, Respiratory, etc.	O	
F-223	The system has the capability to have exam protocols.	O	
F-224	The system has the capability to automatically notify caregivers if critical value is detected and document who acknowledged the receipt of notification, as well as the date/time.	O	
F-225	The system has the capability to create, fill-in & e-fax customized order forms.	O	
F-226	The system has the capability to accept orders from multiple locations.	O	
F-227	The system has the capability to accept, override, and cancel an order.	O	
F-228	The system has the capability to detect duplicate orders issuing visual and auditory warnings.	O	Partially supported. Visual warnings are available; however, auditory warnings are not supported functionality.
F-229	The system has the capability to download the treatment clock.	O	Orders can include future initiate, default phase status, phase offsets, scheduling integration, and estimated start date/time. Additionally, with our Oncology solution, we have our Treatment Schedule and Copy Forward functionality to minimize the ordering input needed from physicians for multiple days, multiple cycles chemotherapy protocols.
F-230	The system has the capability for a user to create and manage care plans.	O	

F-231	The system has the capability to override the warning after entering a justification for the override.	O	
F-232	The system has the capability to supplement standard order sets with additional information.	O	
F-233	The system has the capability to allow entry of multiple orders or requests for services in one order session without reentry of basic information.	O	
F-234	The system has the capability to notify multiple departments with single order and required equipment support transmitted.	O	
F-235	The system has the capability to support the inclusion of Kardex-type of information.	O	
F-236	The system has the capability to modify care plan/interventions based on newly assigned caregiver or medical orders or new diagnosis.	O	
F-237	The system has the capability to document reason for verbal order.	O	
F-238	The system has the capability to automatically notify providers of outstanding verbal orders needing signature.	O	
F-239	The system has the capability to flag all unsigned orders.	O	
F-240	The system has the capability to periodically remind provider of unsigned orders.	O	
F-241	The system has the capability for an automatic pre-notification to Ordering Clinicians that order will stop.	O	
F-242	The system has the capability for an automatic escalation if notification is not acknowledged prior to stop time.	O	
F-243	The system has the capability to enter an order with more than one occurrence and to specify the number of occurrences and/or dates/times/intervals for the occurrences.	O	
F-244	The system has the capability for integrated results with automatic notification and a single location to view all results.	O	
F-245	The system has the capability to cause an "alert" in performing department for STAT orders and process immediately.	O	
F-246	The system has the capability for automatic escalation if "Abnormal" Alerts are not acknowledged.	O	
F-247	The system has the capability to allow medications to be ordered by brand and generic names.	O	
F-248	The system has the capability for conditional orders that are activated based satisfaction of their conditions.	O	
F-249	The system has the capability to capture orders using pre-define orders sets and "sliding scale orders".	O	

F-250	The system has the capability to generate relevant requisition numbers, registration numbers, etc. to enable closed-loop tracking with relevant source system.	O	
F-251	The system has the capability to require that all orders be digitally signed and date/time stamped at the completion of each order.	O	
F-252	The system has the capability to assign and display an order number for active, hold, and pending orders.	O	
F-253	The system has the capability to require a justification for overriding, changing and canceling an order prior to be allowed to continue.	O	
F-254	The system has the capability to enable selected orders to be recurring orders.	O	
F-255	The system has the capability to look up contact information for providers, departments, pharmacies, and other entities.	O	
F-256	The system has the capability to automatically cancel active orders following discharge.	O	
F-257	The system has the capability to automatically generate notification of cancellation to the appropriate department(s).	O	
F-258	The system has the capability to change order priority after order entry/verification, with prompt for reason.	O	
F-259	The system has the capability to provide an on-line inquiry/display of all or selected patient orders.	O	
F-260	The system has the capability to support suspension of orders upon transfer with selective reactivation and countersignature by the receiving medical care provider.	O	
F-261	The system has the capability to support countersignature of order written or discontinued by a medical student or unauthorized consultant for which activation is held pending the countersignature.	O	
F-262	The system has the capability to enter orders for preadmission and pre-registration patients, including ability to define the activation date for the order and to bill to the future encounter.	O	
F-263	The system has the capability to flag orders if not in compliance with medical necessity (as defined by entity, facility, or department).	O	
F-264	The system has the capability to customize pre-notification lead time.	O	
F-265	The system has the capability to provide automatic notification of integrated results.	O	

F-266	The system has the capability to provide visual user alerts in the form of po-ups, color codes etc. at the point of data entry and when displaying information on the screen.	O	
F-267	The system has the capability that in the event that an order has been made to an incorrect patient that they order could be moved to the correct patient.	O	
F-268	The system has the capability to require medium and high severity alerts due to medication counter indications to be approved by the pharmacist.	O	
F-269	The system has the capability to incorporate institution defined rules into order entry function.	O	
F-270	The system has the capability to support the special needs of order entry in the Emergency & Operating Room.	O	
F-271	The system has the ability to incorporate charging and workload methodology with order entry.	O	
F-272	The system has the ability to display critical relevant data when creating orders. (e.g., CT exam, BUN, Creatinine, liver enzymes)	O	
F-273	The system has the ability to enter multiple orders at the same time without the need to re-select PT from a list or re-enter PT ID information.	O	
Clinical Decision Support Requirements			
F-274	The system has the capability to create algorithm charts for common situations and procedures.	O	
F-275	The system has the capability to provide alerts and reminders based on predefined clinical guidelines	O	
F-276	The system has the capability to have decision support capabilities and alerts that identify the reason for the alert, relevant trigger data, severity/risk, and Integrated Decision Support.	O	
F-277	The system has the capability to queue notification of consultation needed to the consultant and to notify the user of consult completion, including consult note.	O	
F-278	The system has the capability to track and report number of consultations requested and number performed per physician.	C	
F-279	The system has the capability to withhold an encounter from being closed without certain data fields completed.	O	
F-280	The system has the capability to differentiate result notes from other types of visit notes.	O	
F-281	The system has the capability to provide system-wide quality reporting and physician specific performance feedback.	C	
F-282	The system has configurable protocols and alerts for each disease entity.	O	

F-283	The system has the capability to capture the data and the reports available to meet the National Patient Safety Goals. Of specific concern are the patient Safety Goals that address infection control (e.g., central line infections, surgical site infections).	O	
F-284	The system has the ability to flag or identify patients that meet criteria for clinical studies.	O	
F-285	The system has the ability to integrate order sets, pathways or regulatory core measure criteria with prompts to provider for usual practices/expectations and method of documenting a deviation from usual or expected practice.	O	
Pharmacy Requirements			
F-286	The system has the capability to view lab results during the pharmacy order process flow.	O	
F-287	The system has the capability to address verification of order by Pharmacist, as well as address duplicate Therapy checking; drug to drug interaction checking; drug to allergy checking; drug to food interaction checking.	O	
F-288	The system has the capability to address soft and hard stop on orders defined by LAC/DHS policies and procedures.	O	

F-289	The system has the capability to address Chart Lock functionality for medication orderings. • IV Admixture compatibility; o Scoping of Frequencies at the Nursing Unit o Contra-indication checking; • Print outs of patient information in the form of Leaflets. • Capability to enter free text medications. • Capability to modify a medication order when the original order is modified including new parameters applied and a new signature applied to the order. o TPN o Multi-ingredient IV ordering Order Catalog as part of the eMAR o Virtual views o Rx Masks o Rx synonyms o Order Entry Formats • Creation of on-line MAR and IV documentation • Charge on order/administration • Documentation of an on-line MAR o IV Charting o IV rate o Infuse Over Calculations • Capability to view discharge Meds Profile as well as inpatient meds profile o Sliding Scale ordering o Weight Based dosing o Rx order Sentences o Medication orders o Physician co-sign for medications • Capability to handle medical student orders/new orders	O	
F-290	The system has the capability to address pharmacy clinical documentation.	O	

F-291	The system has the capability to address: • Pharmacy Reference Data including dispense Categories • Dosage Forms • Frequencies • Label Comments • Order Alerts • Price Schedules • Reason Codes • Routes of Administration • Units of Measure	O	
F-292	The system has the capability to address departmental Orders for Inpatient medications.	O	
F-293	The system has the capability to support pre-defined defaults for order details.	O	
F-294	The system has the capability to address formulary items.	O	
F-295	The system has the capability to address pharmacy label formats.	O	
F-296	The system has the capability to support Standard IV Label; Standard Medication Label; Standard Self Med/Pass Med Label; Standard Oral Syringe Label; Standard Outpatient Label.	O	All label types listed are supported with the PharmNet solution with the exception of Outpatient labels. Those labels are provided with the Etreby Retail solution, which is currently in the process of being contracted for by the County.
F-297	The system has the capability to address medication administration processing.	O	

F-298	The system has the capability of providing the following reports: • Standard Profile Pharmacy Medication • Standard Stop Order Report • Standard Worklist Report • Standard Checklist Report • Drug Inquiry • Special Status Inquiry for non-formulary meds • Order Action Workload by site and location • Order Action Workload by site and user • Dispense Categories Workload by site and user • Dispense Categories Workload by site and location • Pharmacy Billing Journal • Drug Utilization Report • Formulary Analysis • Interaction Alert Views • Order Action Analysis • Order Dispense Analysis • Product Dispense Analysis	C	

F-299	The system has the capability to utilize pharmacy industry standardized databases that include: • Basic drug information • Drug-drug interactions • Drug-food interactions • Drug allergy/allergic cross-reactivity checks • Therapeutic duplication • Pharmacology Side effects/toxicities • Warnings • Pregnancy hazards • Lactation hazards • Therapeutic categorization • Consumer drug education (English & Spanish) • Warning labels Brand/generic name • Formulations • Routes • Orange book codes • AWP Drug pricing • Pediatric and adult order sentences content • Dose-range checking content based on patient parameters such as age and weight	O	All of these items are available. However, while Orange Book codes are in the database, they are not utilized within the PharmNet solution.
F-300	The system has the capability to address Dose Range Checking including alerts presented to Pharmacy users during Order Entry to ensure medication order doses are within safe and effective ranges; Dose-range checking (age- and weight-specific); Checking performed on medication, PRN, and intermittent orders for single doses, daily doses, and length of therapy on order-by-order basis.	O	

F-301	The system has the capability to support decision support rules for pharmacy orders including: • Validating have data in Height, Weight and Allergy fields • Standard IV/PO switch that can recommend a switch from an expensive IV medication to a more cost effective oral equivalent • Standard IV/PO WBC Switch that recommends a switch from an expensive IV medication to a more cost effective oral equivalent when the White Blood Cells falls within normal ranges • When ordering renally excreted, or nephrotoxic, medication for a patient with a recent creatinine result that indicates impaired renal function, a dosage adjustment is recommended • Alert evokes when renally excreted drug is ordered	O	
F-302	The system has the capability to address the need for an Electronic Medication Administration Record (EMAR).	O	
F-303	The system has the capability to provide a list and description of all fields in the drug record Formulary file.	O	
F-304	The system has the capability to alert the user of any Drug - Drug interaction, Food - Drug interaction, Drug - Disease interaction, Drug - Allergy interaction.	O	
F-305	The system has the capability that provides the user the ability to add and/or edit the interaction alerts.	O	
F-306	The system has the capability that provides the user the ability to delete the interaction alerts on a drug by drug basis.	N	Based on preference settings the severity of alerts seen can be defined. However, there is not a way to turn off or delete an alert on a drug by drug basis. In addition to reducing the amount of alerts through severity settings, once the alert is presented to the clinician it can be ignored and the ordering conversation can continue.
F-307	The system has the capability to capture true allergies and reactions to allergies differently from drug intolerances as discrete data.	O	We support the ability to enter allergy/intolerance descriptions.
F-308	The system has the capability to have pre-notification occurrence prior to order stop time.	O	
F-309	The system has the capability to have automatic notification of customized "abnormal" alerts.	O	
F-310	The system has the capability for to record, manage and report on patient allergies.	O	

F-311	The system has the capability for medication therapy monitoring.	O	
F-312	The system has the capability for order entry form on one screen including unit dose and IV.	O	
F-313	The system has the capability to have order verification for technician order entry.	O	
F-314	The system has the capability to identify floor stock items for each patient care units (such as Pyxis items).	O	
F-315	The system has the capability to re-schedule, suspend, discontinue IV orders.	O	
F-316	The system has the capability to build tapering doses.	O	
F-317	The system has the capability to "lock down" orders that are restricted to specific groups of physicians/services or alerts defined by user.	O	
F-318	The system has the capability to automatically stop and/or hold order.	O	
F-319	The system has the capability to generate cart exchange, fill list, IV picking, IV fill list.	O	
F-320	The system has the capability to provide on-line drug information.	O	
F-321	The system has the capability to have a controlled substance tracking.	O	
F-322	The system has the capability to have drug utilization reporting.	O	
F-323	The system has the capability to add and/or edit medications.	O	
F-324	The system has the capability to add drips.	O	
F-325	The system has the capability to add and/or edit hemodynamic data elements.	O	
F-326	The system has the capability to view on demand the patient's current/active medications.	O	
F-327	The system has the capability of dose and age range checking.	O	Cerner supports dose range checking based on age, weight, body surface area, and renal function.
F-328	The system has the capability to generate patient medication profile for decentralized clinical pharmacist.	O	
F-329	The system has the capability to implement user-defined drug restrictions.	O	
F-330	The system has the capability (at the user/administrative level) to add all new vaccine products and antigens to the system's immunization (tracking) data base.	O	
F-331	The system has the capability to record the date and time (if known) of vaccine reaction or allergic occurrence and display an alert if the user orders a subsequent vaccine type.	O	

F-332	The system has the capability to display an alert if the user orders a subsequent vaccine type recorded under the vaccine reaction or allergic occurrence.	O	
F-333	The system has the capability to present structured Allergy information to support the medication ordering process.	O	
F-334	The system has the capability to automatically alert and receive response back from the provider missing data required to compute a dose (e.g., dose type).	O	
F-335	The system has the capability to automatically alert and receive response back from the provider with invalid data required to compute a dose (e.g., dose type).	O	
F-336	The system has the capability to alert the user when a maximum individual or daily dose would be exceeded.	O	
F-337	The system has the capability to capture and display the approximate date/time of the allergy occurrence as well as capturing allergy symptoms (e.g., rash, fever, chills).	O	
F-338	The system has the capability to capture food/environmental allergies as discrete data.	O	
F-339	The system has the capability to provide tool to facilitate reconciliation of patients' medications (past and present) across the continuum of care.	O	
F-340	The system has the capability to allow automatic addition of medications based on orders and prescriptions.	O	Inpatient pharmacy supports the addition of medications based on orders. Prescriptions will be supported in the future with the Etreby Retail solution. This will be a part of the fill notification message. Etreby is currently in the process of being contracted for by the County.
F-341	The system has the capability to have reminders to clarify similar medications on the active list.	O	
F-342	The system has the capability to view patient Immunization List.	O	
F-343	The system has the capability to display Med List by on-going vs. one-time medications.	O	
F-344	The system has the capability to have the easy closed-loop medication refill process that allows nurse to get online approval from physicians.	O	
F-345	The system has the capability for calculation of common medication dosages by weight.	O	

F-346	The system has the capability for dose range checking against established ranges for weight, age and other conditions.	O	PharmNet provides dose range checking based on patient age, patient weight, frequency of administrations, units of measure (including BSA calculations), and route. Discern Expert alerts can be defined by your organization to place conditional orders based on age, gender, diagnosis, and more.
F-347	The system has the capability for seamless integration with MAR, paper and on-line.	O	
F-348	The system has the capability to alert the user of lookalike and sound alike drugs.	O	
F-349	The system has the capability for automatic volume calculations, flow rates and compounding information.	O	
F-350	The system has the capability to interface with Bar Code medication administration system.	O	
F-351	The system has the capability to interface with Automated Dispensing cabinet.	O	Cerner systems were specifically designed to facilitate and support direct interfaces to a wide range of automated medical devices, cabinets, and dispensing stations. Cerner supports pharmacy device interfaces that meet HL7 standards. In addition, we also have our own automated dispensing devices called RxStation which are integrated with all Cerner Millennium modules.
F-352	The system has the capability to generate 3D or 2D bar-coding labels, recodes, forms and MARs.	O	
F-353	The system has the capability for on-line pharmacy intervention, ADR and ADE documentation.	O	
F-354	The system has the capability to reverse, modify, and resubmit prescription refill claims online.	O	
F-355	The system has the capability for the critical care solution to support IV drip conversions from within the flow sheet view.	O	
F-356	The system has the capability to graph titrated IV drips against blood pressure and heart rate.	O	

F-357	The system has the capability to document patient problems, medications, medication reconciliation, and allergies/ADRs in the EHR, which provides the ability to manage each of these list-types.	O	
F-358	The system has the capability to review patient problems, medications, medication reconciliation, and allergies/ADRs in the EHR, which provides the ability to manage each of these list-types.	O	
F-359	The system has the capability to update patient problems, medications, medication reconciliation, and allergies/ADRs in the EHR, which provides the ability to manage each of these list-types.	O	
F-360	The system has the capability to have ePrescribing capability to document and store physician and patient info and SIG.	O	
F-361	The system has the capability on its medication module to access the National Drug Classification (NDC) database.	O	
F-362	The system has the capability for a use to document the effectiveness or ineffectiveness of a medication in the form of comments, notes or by using a qualitative or quantitative scale.	O	Your organization can create documentation to support discrete and mandatory data fields. There is also a free text field to enter in free text comments if necessary.
F-363	The system has the capability of storing repeat prescription information.	O	
F-364	The system has the capability for a user to retrieve prescription order information that has been previously entered in the system.	O	
F-365	The system has the capability for medication management: Ordering, Acknowledging of order, pharmacy review filling of medication and the documentation of admission.	O	
F-366	The system has the capability for drug monographs.	O	MediSource content as well as patient education leaflets can be accessed from PowerChart.
F-367	The system has the capability to support the IVR process through the Retail Pharmacy solution.	O	This is supported with the Etreby Retail solution. Etreby interfaces to IVR vendors. Clients are able to select the vendor that best meets their needs. Etreby is not proposed in the response. However, Cerner's Etreby solution is currently in the process of being contracted for by the County.

F-368	The system has the capability to support written prescription image capture through the Retail Pharmacy solution.	O	This is supported with the Etreby Retail solution, which is currently in the process of being contracted for by the County.
F-369	The system has the capability to support interfaces to pharmacy automation through the Retail Pharmacy solution.	O	This is supported with the Etreby Retail solution, which is currently in the process of being contracted for by the County.
F-370	The system has the capability to define printer routing for printing missing doses and MAR.	O	This is supported with the Etreby Retail solution, which is currently in the process of being contracted for by the County.
F-371	The system has the capability to monitor adverse drug reaction.	O	
F-372	The system has the capability to batch refill.	O	This is supported with the Etreby Retail solution, which is currently in the process of being contracted for by the County.
F-373	The system has the capability to return to stock processing.	O	This is supported with the Etreby Retail solution, which is currently in the process of being contracted for by the County.
F-374	The system has the capability to support all refills to be processed at a central location.	O	This is supported with the Etreby Retail solution, which is currently in the process of being contracted for by the County.
F-375	The system has the capability to import inpatient medication profile for medication reconciliation.	O	
F-376	The system has the capability to review inpatient medication profile for medication reconciliation.	O	
F-377	The system has the capability to support inventory control through the Retail Pharmacy.	O	This is supported with the Etreby Retail solution, which is currently in the process of being contracted for by the County.
F-378	The system has the capability to support electronic signature through the Retail Pharmacy.	O	This is supported with the Etreby Retail solution, which is currently in the process of being contracted for by the County.
F-379	The system has the ability to maintain an enterprise wide formulary and process to distribute the formulary across the enterprise.	O	
F-380	The system has the ability to determine cost per administration of drug when the purchase of the drug is not in the same increment.	O	
F-381	The system has the ability to receive patient medication information from an external source	N	

F-382	The system has the capability to alert for needed liver enzymes when patient total dosage reaches certain level.	O	Lifetime dose range checking can could be built for a drug. The alert comment is built by your organization to provide instruction on next steps, such as “measure levels”.
F-383	The system has the capability to document for each item the date, time, person, references and next review date.	N	
F-384	The system has the capability to have the ability to review scanned prescriptions.	O	This is supported with the Etreby Retail solution, which is currently in the process of being contracted for by the County.
Medication Administration Requirements			
F-385	The system has the capability to perform and manage Medication Reconciliation including medication prescription, ordering, administration, and reconciliation with the use of bar code-enabled medication dispense.	O	
F-386	The system has the capability to perform medication reconciliation by listing active and inactive prescriptions.	O	
F-387	The system has the ability to indicate order still pending/not completed when transfer or moved or not completed in specific time frame (e.g, antibiotic ordered, pending pharmacy delivery and patient moves from ED to ICU before delivered)	O	
Laboratory Requirements			
F-388	The system has the capability to have technical modules that chart clinical and laboratory data.	O	
F-389	The system has the ability to handle the results of profiled items (e.g. WBC,RBC,Hgb, Hct.), and recognize them as a grouped item but also an individual component.	O	
F-390	The system has the capability to address the unique results of microorganisms and related antibiograms.	O	
F-391	The system has the capability to handle reflexive testing. An example of reflexive testing is when a confirmatory test is automatically ordered after a screening test is positive.	O	
F-392	The system has the capability to handle/enable the user to result a WBC cell differential.	O	
F-393	The system has the ability to archive patient's results and retrieve them when they return to the facility.	O	
F-394	The system has the ability to handle point of care testing and entry and display of results on the patient's MAR (e.g., sliding scale insulin).	O	

F-395	The system has the capability to handle planned orders (future orders) including how to prevent redundant testing by different ordering clinics.	O	
F-396	The system has the capability to generate specimen labels and customize the label.	O	
F-397	The system has the capability to purge or archive lab orders.	N	Cerner does not purge or archive patient records and results.
F-398	The system has the a method for positive identification for patients prior to phlebotomy and point of care testing.	O	
F-399	The system has the ability to document the specimen collection information.	O	
F-400	The system has the ability to integrate specimen tracking for offsite clinics and health centers.	O	
F-401	The system has the capability for the clinician to document review of results.	O	
F-402	The system supports a process for handling critical lab values.	O	
F-403	The system has capability of building manual and automated tests, reports, QA, setting up critical values, delta checks.	O	
F-404	The system has the ability to define delta checks, differential checks and others parameters to meet a specific defined population.	O	
F-405	The system has the ability to have a bidirectional interface with instruments.	O	
F-406	The system has the ability to create rules for specific tests and alert routing to the testing personnel of additional testing or confirmation of abnormal results.	O	
F-407	The system has the ability to build reports that can be customized and queried.	O	
F-408	The system has the ability to export reports in ascidia comma delimited, txt or HL7.	O	
F-409	The system has the ability to authorize non-lab personnel access to specified lab reports.	O	
F-410	The system has the ability to capture the user entry of Source, fixatives, # of tissues submitted.	O	
F-411	The system has the ability to document date/time of collection.	O	
F-412	The system has the ability to generate specimen labels, multiple labels if needed. Information includes patient demographics, type of specimen, date/time collected, order comments in a readable format (no codes).	O	
F-413	The system has the capability to capture and barcode patient demographics, specimen #, collect date/time.	O	
F-414	The system has the capability to capture specimens received using a barcode scanner.	O	

F-415	The system has the ability to print cassette and slides with MRUN# and Spec#	O	
F-416	The system has the ability to add and document additional testing, i.e., histological special stains, immunohistochemical staining with markers.	O	
F-417	The system has the ability to format reports.	O	
F-418	The system have the ability to allow/restrict non-Pathologist to view results based on order/specimen status (e.g., prelim, final).	O	
F-419	The system has the ability to document notification to clinician of abnormal results.	O	
F-420	The system has the ability to select or allow privileges based on position (e.g., Resident, Attending, Dept Head, etc.).	O	
F-421	The system has the ability to create an addendum to a report.	O	
F-422	The system has the ability to electronically sign single and/or multiple signatures for a single report.	O	
F-423	The system has the ability for Pathologist to view all reports pending signature for their own reports.	O	
F-424	The system has ability for Pathologist to assign other Pathologists to sign in place of them.	O	
F-425	The system has the ability to create management and technical reports for QA/QI, workflow, etc.	O	
F-426	The system has capability to enable an user to pull resulted anatomical reports based on Attending, Resident or Diagnosis.	O	
F-427	The system has the ability to track turnaround times for a defined group of physicians.	O	
F-428	The system has the capability to Generate back-reports or view on any patient with a current AP order.	O	
F-429	The system has the capability for a user to associate laboratory orders with a charge code.	O	
F-430	The system has the ability to create accounts for Outside Consultation.	O	
F-431	The system has the ability to store cellular images attached to the case and viewable to Clinicians.	O	
F-432	The system has the capability to have test results linked or cross-referenced to associated clinical reports for correlation studies (i.e., Anatomical Pathology reports and Cytotogy results).	O	
F-433	The system has the capability to utilize standard coding for anatomical pathology.	O	

F-434	The system has the ability to integrate body part diagrams into Anatomical Pathology Reports.	O	
F-435	The system has the ability to report to external agencies (e.g., cancer registry).	O	
F-436	The system has a process of linking local organism codes to the SNOMED and LOINC codes.	O	
F-437	The system has capability for read back and verify of critical labs.	O	
F-438	The system has the ability to order panels of labs (e.g., sepsis panel, trauma panel).	O	
Radiology Requirements			
F-439	The system has the capability to automate and manage processes for the radiology processes, including scheduling, radiology orders, film management, exam management, transcription and result processes.	O	
F-440	The system has the capability to address Radiology Reference Data including the following modules: CAT SCAN; Ultrasound; Nuclear Medicine; General Radiology; Mammography; Cardiology; MRI.	O	
F-441	The system has the capability to support cancel notices; Transcription; delineation of “reason for exam”; Patient packets to include: consent labels; flash cards; film folder labels; transport notice; requisition.	O	
F-442	The system has the capability to support Online Technical Comments which include the ability for the technologist to document technical factors.	O	
F-443	The system has the capability to support Medication Adverse Reaction Tracking including reactions to medications that may happen during radiology exam or contract media and can be documented as well through the common allergy application.	O	
F-444	The system has the capability to support medications documented in Radiology Management display on the MAR or be available for interaction checking.	O	
F-445	The system has the capability to provide the following reports: • Actual TAT Log • Detail Level Activity Report • Exam Activity Report • Order Activity Report • Medication Documentation • Repeat Analysis Report • Transcriptionist Activity Report	O	

F-446	The system has the capability to support Folder/Film Management Tracking to simplify tracking films as they are being checked in and out of the radiology service.	O	
F-447	The system has the capability of tracking release of digital image files to patients or provided to an outside facility.	O	
F-448	The system has inquiry functions for detecting missing folders and delinquent loans, in addition to tracking films that are sent to the radiology service from outside sources (foreign films).	O	
F-449	The system has the capabilities for documenting Radiologists' interpretations of images either through dication or in writing.	O	
F-450	The system has the capability to support role-specific applications for radiologists and other interpreting physicians to access exam, report, and other clinical information, create reports using templates and to electronically sign reports within Radiology.	O	
F-451	The system has the capability to support mammography management as an integrated product option that provides the ability to track and manage mammography procedures to ensure patient follow up and provide statistical outcome reporting.	O	
F-452	The system has the ability to support the tracking of the following: 1) Tracking of Mammography Screening and Diagnostic exams with attachment of ACR BI-RADS coding; please include how the system meets the MWSA (Mammography Quality Standards Act) 2) Patient Letters for Mammography exams 3) Patient Notifications; Patient Reminders 4) Patient Warnings; Physician Survey 5) Physician Reminder; Physician Warning	O	
F-453	The system has the ability to generate the following reports: 1) Patient History Form with Breast Diagram 2) Standard Management Reports 3) Summary Report by Radiologist 4) Outcome Summary Report 5) Assessment and Recommendation by Patient Age Group 6) Follow-Up Report 7) Assignment of Statistical Category based on Pathology Information 8) Reports by Radiology sub-section	O	
F-454	The system has the ability to support Radiology departmental scheduling as an Integrated option providing the ability to schedule appointments for procedures performed for the Radiology Service.	O	

F-455	The system has the ability to support Scheduling of Appointment types as either specific Appointment Types equivalent to orders, or Generic Appointment Types.	O	
F-456	The system has the capability to limit scheduling to View Only, Add and Modify, and/or Database Maintenance.	O	
F-457	The system has the capability to restrict scheduling based upon location of the patient or provider.	O	
F-458	The system has the capability to view PACS images with the Rad report. System will handle orders with multiple image types if the PACS system can only process each image separately.	O	
F-459	The system has the capability to display Radiologist work at sign on.	O	
F-460	The system has the capability to choose their workflow/tasks.	O	
F-461	The system has the capability for user-defined worklist.	O	
F-462	The system has the capability to have messaging capability akin to "post-it notes".	O	
F-463	The system has the capability for standardization of "Normals" across all procedures including Mammography.	O	
F-464	The system has the capability for managing, tracking and archiving films.	O	
F-465	The system has the capability to support Breast Imaging Reporting and Data System Atlas (BIRADS).	O	
F-466	The system has the capability to support BIRADS categories 0-6.	O	
F-467	The system has the capability to reconcile radiology exam (RIS) and image information (PACS) mismatches.	O	
F-468	The system has the capability to be DICOM compliant for images.	O	
F-469	The system has the capability for alerting the Radiology Technician of drug allergies, e.g., contrast media allergies.	O	
F-470	The system has the ability to maintain Radiation exposure per patient records and alerts to users when ordering additional tests when exposure levels are exceeded.	F	Radiation Dose monitoring is future functionality that is currently on the road map for 2012. However, radiation dosages can be captured in the Technical Comments currently.
F-471	The system has a process for identifying various stages of radiology reads including the ED preliminary read, radiology preliminary read, and final read including methods of addressing discrepancy in any of these reads.	O	
F-472	The system has the ability to indicate patients in the queue and triage /prioritization method.	O	

Operating Room Requirements			
F-473	The system has the capability to address: 1) Surgical Procedures 2) Surgical Personnel 3) Surgical Inventory 4) Items and Equipment 5) Preference Cards 6) Pick Lists 7) Preference Card Comments 8) Surgical Charging 9) Bill Item/Price and Bill Code Association 10) Anesthesiology required documentation	O	
F-474	The system has the capability to support case logging including: 1) Documentation of standard case information 2) Scheduled case information defaults into documentation 3) Case Times 4) Case Attendees 5) Surgical Procedures 6) Delays 7) Counts 8) Prosthetic Devices 9) Additional user defined forms and fields 10) Preference Cards including Generic procedure-based preference cards 11) Surgeon-specific preference cards 12) Comprehensive preference cards including Pick Lists 13) Documentation segments and default values	O	
F-475	The system has capability to support: 1) Search Preference Card database based on any of the following criteria 2) Procedure 3) Surgeon 4) Specialty 5) Date created, modified, last used in case 6) Personnel - created by, modified by	O	
F-476	The system has the ability to copy multiple preference cards simultaneously using Copy Wizard functionality. This should include the capability to upload existing Preference Card pick lists and comments.	O	

F-477	The system has the ability to support Case Cart/Pick List Management that allows Pick lists automatically generated for scheduled case(s)/procedure(s) via batch operations.	O	
F-478	The system has the ability to provide reports for the following criteria: 1) Scheduled case analysis 2) Scheduled procedure analysis 3) Cancelled case analysis 4) Completed case analysis 5) Procedure volume analysis 6) Procedure Coding Analysis 7) Implant log analysis 8) Delay reason analysis 9) Case cost analysis 10) Summary case cost analysis 11) Attendee case analysis 12) Attendee procedure analysis 13) Ability to save search criteria and report format through creation of "saved views" 14) Ability to create ad-hoc reports 15) Ability to share reports ("saved views") across users 16) Stoplight rules for highlighting exceptions 17) Export report data to Microsoft Excel	O	
F-479	The system has the ability to support the use of standard utilization reports including: 1) Block Utilization 2) Surgeon Utilization 3) Specialty Utilization 4) Cases with no preference card report 5) Cases with no surgeon-specific preference card report 6) Critical item report 7) Non-stock item report 8) Cases with no charges report	O	
F-480	The system has the ability to support Intraoperative Nursing Documentation including Forms-based nursing documentation of postoperative case information.	O	
F-481	The system has the ability to support Intraoperative Nursing Documentation including scheduled case information defaults into nursing documentation and allow for documentation by exception.	O	

F-482	The system has the ability to support Intraoperative Nursing Documentation including pre-defined values default from preference cards and allow for documentation by exception.	O	
F-483	The system has the ability to support Intraoperative Nursing Documentation including case pick list usage documentation by exception.	O	
F-484	The system has the ability to support Scheduling Appointment Book including: 1) Centralized or decentralized scheduling 2) Block scheduling utilizing flex rule and block expiration logic 3) Appointment shuffling 4) System-calculated total case duration for multiple procedure cases 5) Procedure durations based on surgeon/procedure recent or historical averages 6) Automatic printing of appointment notifications 7) Public and private scheduling comments 8) Scheduling action comments 9) Protocol Scheduling: up to x protocols per facility 10) Personnel conflict checking of up to x personnel resources 11) Equipment / instrumentation conflict checking across multiple surgical areas (from preference card pick list) 12) Surgeon Privilege Checking 13) Scheduling Guidelines (pop-up dialog windows) 14) Total number of Blocks 15) Total number of Appointment Types	O	
F-485	The system has the ability to support preoperative nursing documentation including: 1) Pre-Admission Testing 2) Forms-based nursing documentation of preoperative case information 3) Scheduled case information defaults into nursing documentation and allow for documentation by exception 4) Pre-defined values default from preference cards and allow for documentation by exception 5) Case pick list usage documentation by exception	O	

F-486	The system has the ability to support postoperative nursing documentation including: 1) Forms-based nursing documentation of postoperative case information 2) Scheduled case information defaults into nursing documentation and allow for documentation by exception 3) Pre-defined values default from preference cards and allow for documentation by exception 4) Case pick list usage documentation by exception	O	
F-487	The system has the ability to support bedside medical device interfaces which includes each identified bed being interfaced to a bedside data storage device.	O	
F-488	The system has the ability to support physician InBox functionality including: 1) Notification 2) Signing transcription 3) Forwarding results 4) Cosigning orders	O	
F-489	The system has the ability to support the notification of forwarded items including items that can be proxied individually to selected user(s). Group proxy functionality is also available for Forwarded Items.	O	
F-490	The system has the ability to support Result Notifications to the ordering provider. Areas will include results to endorse within the inbox and notifications of orders that have been placed by non-providers/physicians and that need to be cosigned or approved.	O	
F-491	The system has the capability for scheduling all operative rooms and resources.	O	
F-492	The system has the capability to integrate with hemodynamic monitors.	O	
F-493	The system has the capability to view prenatal record.	O	
F-494	The system has the capability to have intrapartum and postpartum to interface.	O	
F-495	The system has the capability to support all aspects of pre-operative care that is integrated with the electronic patient chart.	O	
F-496	The system has the capability for multi-booking recurring patients.	O	
F-497	The system has the ability to interface data from an external Anesthesiology system (e.g., includes Anesthesia start/stop times, ASA scores.	O	In order for Cerner Millennium to receive data from anesthesia devices, our anesthesia solution must be implemented to post this data.

F-498	The system has the ability to provide user security for surgeons, Anesthesiologist, CRNA, etc. to authorize and/or restrict those awaiting approvals from Med Admin or other credentialing agencies. This should include the ability to gather reports based on sub-divisions of surgery.	O	
F-499	The system has the ability to document surgery information that has 2 or more surgeries being performed simultaneously on the same patient.	O	
F-500	The system has the ability to export OR data to a file for upload to an external site (assumes you are given the receiving systems format).	O	
Intensive Care Unit Requirements			
F-501	The system has the ability to trend vital signs with administration of vasoactive agents.	O	
F-502	The system has the ability to bypass admitting screens to enter emergency treatment upon arrival.	O	
F-503	The system has the ability to link/auto-populate Point of care Testing (POCT) to various relevant sections of the E.H.R.	O	
F-504	The system has the ability for the ICU component to acquire data from physiologic monitors.	O	
F-505	The system has the ability for the ICU component to acquire data from bedside monitors.	O	
F-506	The system has the ability to perform standard physiologic calculations.	O	
F-507	The system has the ability to calculate acuity scores.	O	
F-508	The system has the ability for the ICU component to integrate and present fluid balance.	O	
F-509	The system has the ability to generate user alerts if procedures do not comply with standard protocol.	O	
F-510	The system has the ability to present laboratory data from a variety of sources.	O	
F-511	The system has the ability to support graphing and trending of patient information such as vital signs.	O	
F-512	The system has the capability to interface with beside point of care equipment.	O	
F-513	The system has the capability to interface bedside patient identification technology	O	
F-514	The system has the capability to generate labels for laboratory specimens.	O	
Rehabilitation Requirements			
F-515	The system has the capability to provide all necessary documentation for Rehabilitative Medicine for a large Rehab facility including the calculation and process to determine FIM's score.	O	

F-516	The system has the ability to document rehab services evaluations and obtain approvals for treatment, including support for the underlying routing process.	O	
Enterprise Master Patient Index (EMPI) Requirements			
F-517	The system has the ability to support EMPI maintenance of the integrity of a single person record by co-coordinating and reconciling incoming demographic data created in any proposed vendor system.	O	
F-518	The system has the capability to provide unique identification of persons across an enterprise, regardless of the number and type of registration systems publishing to the EMPI.	O	
F-519	The system has the ability to support advanced search algorithms providing the ability to perform inexact matching of the data provided from the proposed vendor's system common person search through all applications and modules.	O	
F-520	The system has the capability to perform inexact matching of the data for a common person search, passively through the inbound ADT interface match and reconcile processes.	O	
F-521	The system has the capability to include person combine tools to allow users to quickly, accurately, and efficiently define and merge person records.	O	
F-522	The system has the ability to support Content Code Sets including Admission Sources, Admit Mode, Admission Types, Race Codes, Accident Codes, Discharge Dispositions, Hospital Services, Language, Marital Status, Religion, Provider Specialty.	O	
F-523	The system has the ability to support registration flows for: Add/Modify/View Person; Modify/View Encounter; View Person; View Encounter.	O	
F-524	The system has the capability to support Search Criteria Including: MRN, Last Name, first, SSN, DOB, Medicaid number, Medicare number, and CIN.	O	
F-525	The system has the capability to support Probabilistic Match Weights to determine duplicate potential duplicate records during registration and Medical records merging.	O	
F-526	The system has the capability to support EMPI reporting for the following: 1) EMPI Person Combine Report 2) EMPI Person Combine or Duplicate Report 3) EMPI Person Combine Overlap Report 4) EMPI Possible Person Matches 5) EMPI Possible Person Matches-Duplicate Report 6) EMPI ESI Overlay Report; EMPI PM Overlay Report	O	
F-527	The system has the capability to support integrated Medical Necessity Checking using (Advance Beneficiary Notification).	O	

F-528	The system has the capability to support an integrated Enterprise Eligibility Management verification process that provides the ability to perform a single eligibility verification status inquiry for a patient/subscriber/dependent that verifies if insurance will cover the medical service to be rendered prior to performance to ensure reimbursement to respective providers.	O	
F-529	The system has the ability to capture, retain, update the assignment of a Medical Home for each patient. (must have the ability to receive data from external sources like CHP, HWLA, etc and should have the ability to track changes with audits). The system also needs to integrate into clinical systems (ED, Scheduling, etc.).	C	Cerner supports the ability to capture nursing home information within Cerner's Care Management solution. Additionally, Cerner supports standard HL7 interfaces for ADT, scheduling,
F-530	The system has the functionality to assist users in the prevention of generating duplicate patient records for example through matching algorithms for names, address information and other demographic indicators.	O	
F-531	The system has the ability to connect similar such as Gonzalez and Gonzales as possible matches.	O	
F-532	The system has an unmerge process.	O	
Health Information Management (HIM) Requirements			
F-533	The system has an integrated HIM set of functionality committed to the elimination of redundant data entry and the minimization of manual activities.	O	
F-534	The system has the ability to support Patient Data Management, Patient Care Chart Requests/Deliver, Documentation Completion, Coding/Abstracting Management, Release of Information Management, and Chart Location Tracking.	O	
F-535	The system has the ability to support deficiency modules, inter-hospital chart requests, suspension process, and release of information.	O	
F-536	The system has the ability to support Encoding Management/HIM Chart Coding through third party modules like 3M and/or Quantim.	O	
F-537	The system has the ability to support Barcode Labels for chart tracking.	O	
F-538	The system has the ability to support integrated medical transcription management modules that include: 1) Medical transcription 2) Remote transcription 3) Document types that delineate care levels 4) Multiple signature lines 5) Medical dictionaries 6) Document tracking 7) Deficiency tracking	N	

F-539	The system has the capability to support the merging and un-merging of identified duplicate medical records. The EHR System will need to be able to track the changes as well as accommodate moving visit information (e.g., an account) from one medical record to another with associated audit trails.	O	
F-540	The system has the ability to electronically receive from an external source scheduled reports (e.g., lab) and assign them to the appropriate patient records/accounts.	O	
F-541	The system has the ability to electronically route a custom report from your system's document imaging system.	O	While Cerner offers both of these solutions, Document Imaging and Patient eSig have not been proposed at this time. Because sizing can vary significantly among clients depending on their existing page volume and/or transition strategy to an EMR, we will need additional information to provide you an accurate cost proposal and transition strategy.
F-542	The system has the ability to write custom reports for forms query (e.g., list all the CLIP forms for patients seen in the last month).	O	While Cerner offers both of these solutions, Document Imaging and Patient eSig have not been proposed at this time. Because sizing can vary significantly among clients depending on their existing page volume and/or transition strategy to an EMR, we will need additional information to provide you an accurate cost proposal and transition strategy.
F-543	The system has the capability to integrate scanned documents or scanning documents.	O	While Cerner offers both of these solutions, Document Imaging and Patient eSig have not been proposed at this time. Because sizing can vary significantly among clients depending on their existing page volume and/or transition strategy to an EMR, we will need additional information to provide you an accurate cost proposal and transition strategy.

F-544	The system has the capability to code Assisted Software Program for outpatient.	O	For ambulatory settings, Cerner's Computer Assisted Coding system, Discern nCode for Ambulatory, can systematically review and translate physician notes, EMR, and other system data into E&M, ICD-9, CPT, and SNOMED-CT codes for outpatient professional fee billing purposes. Because more detailed information is needed regarding the number of encounter notes annually written, this solution is not proposed at this time.
F-545	The system has the capability to prevent duplication.	O	
F-546	The system has the capability to support Computer Assisted Coding.	F	For inpatient settings, Cerner's Health Information Management computer assisted coding is in development with an anticipated availability in 2012.
F-547	The system has the capability to support/manage work queue for routing records for review, etc.	O	
F-548	The system has the capability to view the complete final record.	O	
F-549	The system has the capability to route reports to designated supervisors and medical records.	O	
F-550	The system has the capability to generate electronic reports on delinquency status.	C	
F-551	The system has the following document imaging capabilities: 1. Forms tracking and assignment to folders 2. Specialized process for routing for deficiency tracking 3. Review an assignment 4. Routing for analysis 5. Annotations 6. Routing to MD's for signature 7. Bar coded forms assignment	O	While Cerner offers both of these solutions, Document Imaging and Patient eSig have not been proposed at this time. Because sizing can vary significantly among clients depending on their existing page volume and/or transition strategy to an EMR, we will need additional information to provide you an accurate cost proposal and transition strategy.
Emergency Department Requirements			
F-552	The Emergency Triage and Tracking application has the capability to automate and manage the processes for the emergency department to enable efficient, comprehensive providing care in a timely fashion.	O	

F-553	The system has the capability to support Multiple views that display all of the beds in the department and one for each area within the department such as Pediatrics, Chest Pain, Fast Track.	O	
F-554	The system has the capability to track patient statuses for patients with an encounter type of emergency or fast track and display other data about the patient.	O	
F-555	The system has the capability to be configured to meet the needs of various disciplines in the ED such as Physician, Nurse, etc .	O	
F-556	The system has the ability to track lists, including, but not limited to: 1) EMS List 2) Nurse List 3) Physician List 4) Triage List that includes all patients requiring Triage assessment 5) Registration List 6) Checkout List including all patients with zero tracking code and placed in checkout location 7) Provider List 8) Bed Tracking List	O	
F-557	The system has the capability to support Tracking Events including: 1) Arrival 2) Bed Assignment 3) RN Exam 4) Dr. Exam 5) Triage 6) Registration 7) Discharge 8) Lab 9) X-ray 10) EKG which include overdue and critical alerts for each event	O	
F-558	The system has the capability to support acuity levels such as I-Resuscitation; II-Emergent; III-Urgent; IV-Less Urgent; V-Non-urgent.	O	

F-559	The system has the capability to support Specialty selections including: 1) Cardiology 2) Orthopedics 3) Pulmonary 4) Ophthalmology 5) Pediatrics 6) ENT 7) Dental 8) Major Trauma 9) Minor Trauma 10) Full Code 11) Neurology 12) Psychiatry 13) Internal Medicine 14) Musculoskeletal 15) Gastrointestinal	O	
F-560	The system has the capability to support Provider Check-in/Check-out through role assignment such as team assignment, and patient reassignment functionality.	O	
F-561	The system has the capability to support Provider Roles such as: 1) ED Physician 2) ED Nurse 3) ED Nurse Management 4) Nurse Supervisor 5) ED Tech 6) ED Unit Secretary 7) ED Registration 8) ED Admin Secretary 9) Radiology Transport 10) DBA	O	
F-562	The system has the capability to support Team Assignments.	O	

F-563	The system has the capability to support ED documentation forms such as: 1) ED Triage Adult 2) ED Triage Pediatrics 3) ED Assessment Adult 4) ED Assessment Pediatrics 5) ED Education and Teaching 6) ED Treatments and Procedures 7) ED Valuables/Belongings 8) ED Vital Signs	O	
F-564	The system has the capability to support Reports such as: 1) Average LOS Report 2) Disposition Log 3) Chart Log 4) Activity Log 5) Patients Events Time Report 6) Patient Returns Log 7) Admits per Shift Report 8) LOS per Shift Report 9) Patient Acuity Report 10) Patients for Selected Care Providers Report 11) Primary Care and Referring Physician Log	C	
F-565	The system has the capability to ED patient education materials including Discharge Instructions in multiple languages and the capability to save patient education selections to the Electronic Health Record.	O	
F-566	The system has the ability to comply with regulatory requirements specific to the ED such as EMTALA.	O	
F-567	The system has the ability to support pre-registration or an patient en-route.	O	
F-568	The system has the ability to postpone or bypass mandatory/sequential entries in order to treat and document based on patient condition.	O	
F-569	The system has the capability of visual cues to notify the provider of established goals or guidelines times exceeded.	O	
F-570	The system has the capability for inter-facility (county and non-county) and intra –enterprise transfers (between county facilities) documentation flows between connected facilities.	O	If all facilities are sharing one Cerner Millennium domain, interfaces are not required; however, if each facility is on its own system or domain, HL7 ADT messaging is required.

F-571	The system has the ability to support non-bed/hallway areas for patient care areas.	O	
F-572	The system has the ability to notify provider of need for call back, and a process of documenting.	O	
F-573	The system has the ability to document trauma/resuscitation and support of a trauma reg.	O	
F-574	The system has the ability to support disaster/mass casualties and disaster triage.	O	
Cardiology Department Requirements			
F-575	The system has the capability to support Cardiology, including: • Problem Lists • Procedure Lists • Order Entry • Charting • Cardiovascular PACS Integration	O	
F-576	The system supports grouping like problems into disease categories (e.g., cerebrovascular disease, congenital heart disease, heart failure, hypertensive heart disease, ischemic heart disease, etc.) and enable one-click search when adding a problem to the list.	O	
F-577	The system supports the ability to define service groups and associate a patient with multiple groups (e.g., adult congenital, general cardiology, heart failure, interventional clinic, or practice A, B, and C).	O	
F-578	The system supports the ability to define clinical trials and assign a patient to one or more clinical trials; this must integrate with patient alerts.	O	
Managed Care Requirements			
F-579	The EHR System has the ability to have a managed care solution as an integrated part of the proposed EHR System or whether a separate solution will be required to which the EHR will interface.	O	

F-580	The system has the ability to provide the following Managed Care functionality: 1. Plan contracts/benefits management 2. Membership, enrollment, and eligibility 3. Provider network administration 4. Provider credentialing 5. Contracting and reimbursement 6. Encounters, claims, and adjudication 7. Capitation 8. Correspondence processing 9. Premium billing 10. Reporting 11. General ledger 12. Claims payable 13. Coordination of benefits 14. Authorizations, denials, modifications, and pending referrals	O	
F-581	The system has the ability to provide managed care medical administration for: 1. Utilization management 2. Case management 3. Disease management	O	
Anesthesiology Requirements			
F-582	The EHR System has the capability to have an anesthesia solution as an integrated part of the proposed EHR System or whether a separate solution will be required to which the EHR will interface.	O	Our anesthesia solution is fully integrated with our surgery solution and the full Cerner Millennium patient record. Interfaces are not needed.
F-583	The system has the capability to allow for a review of the medical history, including anesthesia, drug and allergy history.	O	
F-584	The system has the capability to allow for documenting interview and examination of the patient related to anesthesiology.	O	
F-585	The system has the capability to allow for notation of anesthesia risk according to established standards of practice (e.g,. ASA classification of risk).	O	
F-586	The system has the capability to allow for identification of potential anesthesia problems, particularly those that may suggest potential complications or contraindications to the planned procedure.	O	

F-587	The system has the capability to allow for a development of the plan for the patient's anesthesia care, including the type of medications for induction, maintenance and post-operative care and discussion with the patient of the risks and benefits of the delivery of anesthesia.	O	
F-588	The system has the capability to allow for a review a sample of inpatient and outpatient medical records for patients who had surgery or a procedure requiring administration of anesthesia.	O	Anything stored in the Cerner Millennium patient record is available for viewing by those with appropriate access.
F-589	The system has the capability to provide an intraoperative anesthesia record for each patient who receives general, regional or monitored anesthesia. Information to track, at a minimum, includes: • Name and hospital identification number of the patient; • Name(s) of practitioner who administered anesthesia, and as applicable, the name and profession of the supervising anesthesiologist or operating practitioner; • Name, dosage, route and time of administration of drugs and anesthesia agents; Techniques(s) used and patient position(s), including the insertion/use of any intravascular or airway devices; • Name and amounts of IV fluids, including blood or blood products if applicable; • Timed-based documentation of vital signs as well as oxygenation and ventilation parameters; • Any complications, adverse reactions, or problems occurring during anesthesia, including time and description of symptoms, vital signs, treatments rendered, and patient's response to treatment.	O	
F-590	The system has the capability to allow for a post-anesthesia evaluation be completed and documented no later than 48 hours after surgery or a procedure requiring anesthesia services.	O	

Proposer Instructions

This Appendix of the RFP contains detailed technical requirements for the EHR System desired by the Los Angeles Department of Health Services (LA DHS). Proposers must respond to all the requirements using one of the code provided below.

Response Code	Definition
Yes	The requirement is met.
No	The requirement is **not** met.

Note:

1. An omitted response will be assumed to be the same as a response code of “No".
2. Only one (1) response per requirement will be accepted.

Requirement #	Requirement	Yes / No
Platform		
T-1	The system shall be based upon proven state-of-the-art technologies. This includes browser-based, server-side architectures, configurable, and a range of industry-standard database, operating system, and programming platforms.	Yes
T-2	The Web-enabled portions of the application shall meet state-of-the-art Internet standards for graphics and design and for speed, reliability, and security for dynamic content and user interaction.	Yes
T-3	The system shall provide the ability to maintain multiple operating environments for development, test, training and production.	Yes
Scalability & Flexibility		
T-4	The system, including programs, database, and ancillary hardware and related software systems shall be able to retain its performance levels when adding additional users, functions, and data.	Yes
T-5	The system shall be scalable and adaptable to meet future growth and expansion needs.	Yes
T-6	The solution functionality and associated business rules shall be configured and re-configured (through tools that do not require "code" modifications).	Yes
T-7	The screens shall be highly re-configurable, providing ability to reposition and rename field labels, remove or “turn-off” unused fields, maintain data, and allow addition of custom-defined fields.	Yes
T-8	The system shall provide the ability to create and/or modify edits and business rules which determine The acceptance/correctness of data.	Yes
T-9	The system shall provide the ability for on-line access by any site connected to the organization WAN.	Yes
T-10	The system shall provide the ability for remote access by authorized individuals (i.e. web based VPN access).	Yes
Database Management & Architecture		
T-11	The system shall use an open relational database management system (RDBMS) to store all organization data.	Yes
T-12	The database system shall provide Structured Query Language (SQL) capabilities for database queries.	Yes
T-13	The system shall allow the database information exchange using current commonly accepted industry formats (e.g. HL7, XML).	Yes
T-14	The system shall support common database connectivity protocols such as ODBC.	Yes
T-15	The system shall provide an automated test script to validate the data after modifications or upgrades. The tool will support the ability to customize the script and provide a final report to document the validation.	Yes
T-16	The system shall provide data import functionality to receive standard format data from external parties.	Yes
T-17	The system shall provide data export functionality that creates common export file format (e.g. comma delimited, tab delimited, space delimited, quotation delimited, etc.).	Yes
T-18	The system shall provide the database backup and recovery tools required to support organization database recovery plan and procedures (note: if a DRP is in place).	Yes

T-19	The database system shall provide the following features: - Simultaneous access to data by concurrent users - Row level Locking - Automatic Query Optiomization - Views - Multiprocessor query execution	Yes
T-20	The system shall support an online data dictionary and table relationships that describe and maintain information on each data element including: data element name and type, description of the data element, and the format of each data element.	Yes
T-21	The system shall utilize naming conventions and standards for data elements, entities and tables, programs, report names, etc.	Yes
T-22	The system shall utilize utilities for database performance monitoring and tuning that comply with industry standards, including but not limited to tools for table & file maintenance.	Yes
T-23	The system shall lock database records based on organization parameters (e.g., at row level, field level, or at the application level).	No
T-24	The system shall accommodate separate instances of databases.	Yes
T-25	The system shall support online modifications to database structures with minimal user downtime.	Yes
T-26	The system shall allow for data replication including, but not limited to, copying an instance of any database to other organization specified locations (e.g., SAN).	Yes
T-27	The system shall have the ability to roll back any system, database, or any other component(s) impacted within 15 minute increments up to 24hrs, any day in the month, any month in the year, and any year in 30 years.	No
T-28	The system shall provide the ability for the administrator to track user behavior as well as database utilization.	Yes
T-29	The system shall provide standard data extraction Application Program Interface (API) to allow import and export of data.	Yes
Data Conversion and Interface		
T-30	The proposer shall provide all services needed to transform, standardize, migrate and load external legacy electronic data in order to establish an initial database suitable for live organization operations.	Yes
T-31	The system shall provide the ability to extract required data from organization to produce file(s) that can be sent by FTP to external agencies, including a system automated process of generating, encrypting, and delivering data to external agencies.	Yes
T-32	The system shall provide the ability to load information from standard file(s).	Yes
T-33	The system shall provide the ability to perform real-time updates.	Yes
T-34	The system shall have the capability to queue outbound messages in case a receiving system is down temporarily.	Yes
T-35	The system shall monitor timeliness of messages and alert users if certain time limits have been exceeded.	Yes
T-36	The system shall have the ability to evaluate interface messages for accuracy and completeness, and reject messages that are not constructed properly as well as the capability to generate reports of failed messages.	Yes
T-37	The system shall have the capability to analyze, correct and resend messages that have been rejected.	Yes

System Security Requirements		
System Access		
T-38	The system shall provide ability to use a single user sign-on for all modules with security configured for each module.	Yes
T-39	The system shall have the ability for security module to be maintained by an in-house System Administrator	Yes
T-40	The system shall provide expiration dates for passwords.	Yes
T-41	The system shall automatically notify users and force them to change passwords on a pre-defined frequency.	Yes
T-42	The system shall provide an efficient, flexible way to control and administer multiple levels of user access.	Yes
T-43	The system shall have the ability to support web based client access or other internet based client access technologies, with appropriate security access controls.	Yes
T-44	System must support password complexity that meets the following requirements: - Must contain at least 1 upper and 1 lower case alpha, 1 numeric, and 1 special character each - Minimum password length – 8 characters - Minimum password age – 2 days - Maximum password age – 90 days - Password expire warning – 14 days - Different from the previous 6 passwords used - Must not be an English dictionary word - Disable accounts after 90 days of inactivity	Yes
T-45	System provides the following password change rules for user accounts: - Passwords can only be changed by the authorized County System Administrator or the associated user - Passwords can be changed by the associated user only once in a 2-day period - Passwords can be changed by the associated user only once in a 2-day period - Users are re-authenticated before changing passwords	No
T-46	The system shall provide lock-out capability after a pre-defined number of unsuccessful user sign-on attempts.	Yes
T-47	The password is not displayed as clear text (Password Masking)	Yes
T-48	System provides integrated security managed in a central accounts database	Yes
T-49	System allows viewing of list of Users logged on to System in real-time	Yes
T-50	System allows addition of user-defined messages to logon screen	Yes
T-51	System integrates with Microsoft Active Directory for authentication and has the capability of notifying the end user of near domain account password expiration date as well as the ability to reset the password through the system's user interface	Yes
T-52	System performs secure and seamless logon for all third party integrated systems.	Yes
T-53	System encrypts passwords before being stored or transmitted.	Yes
T-54	System has the ability to disallow more than one active session per sign-on identification.	Yes

T-55	System allows users to re-authenticate and remotely log out of an active user session before logging in at another location.	Yes
T-56	System requires password re-entry before user is allowed to perform functions predefined as "high security".	No
T-57	System encrypts sensitive data transmitted between clients and servers using Secure Socket Layer (SSL) Certificates, Transport Layer Security (TLS), or by other means	Yes
T-58	System provides a web (HTTPS) interface and provides an SSL configuration mechanism.	Yes
T-59	System restricts users from directly accessing the database.	Yes
T-60	System allows secure password resets in case passwords are forgotten.	Yes
T-61	The system shall have the ability to assign application access rights across entire suite of applications at a single point of entry.	Yes
T-62	System provides reminder alerts to users to reset passwords.	Yes
T-63	The time for passwords to be changed is predefined as per user's role and access level. The County standard for users is 90 days.	Yes
T-64	System provides administrative ability to block users' access during pre-defined off-hours.	No
T-65	System provides the option for multi-factor authentication for users with higher security access.	Yes
User Profiles/Administration		
T-66	System provides the ability for users to define and store user profile information, including but not limited to, the user's name, user ID, employee ID, professional designation, etc.	Yes
T-67	The system shall have the ability to link the user logon ID to his/her employee number or contractor social security number, as well as to the location or group of locations to which the user is assigned.	Yes
T-68	The system shall have the ability to identify the type of single enterprise authentication used for system access, e.g. MS Active Directory.	Yes
T-69	System provides the ability to define user roles and user groups and associate these with user accounts.	Yes
T-70	System allows authorized site-specific users to manage site-specific user groups and user accounts up to and including their level of authority.	Yes
T-71	Ability for an administrator to delegate authority, by user group, to reset password	Yes
T-72	Ability for an administrator to delegate authority, by user group, to restore system access of locked out user	Yes
T-73	System provides the ability to restrict access based on users' accounts' privileges	Yes
T-74	System provides the ability to specify roles and privileges based on login locations	Yes
T-75	System allows restriction of rights, privileges or access at the user and group level	Yes
T-76	System allows restricting the rights, privileges or access of processes to the minimum required for authorized tasks	Yes

T-77	System allows authorization of administrators to manage restrictions or privileges associated with Users, groups, and processes including: - Defining levels of access - Assigning levels of access - Modifying a level of access - Removing a level of access - Viewing access levels, privileges and memberships	Yes
T-78	The system shall have the ability to specify roles and control access by role to: - Database - Module - Field - Inquirey - Report - Approval - Transaction - Table - User Site (i.e. location) across all functional areas - Period	Yes
T-79	The system shall have the ability to display the last date and time the user logged onto the system at the time of logon.	Yes
T-80	The system shall have the ability to suspend user access based on a table-driven parameter (i.e., employment status).	Yes
T-81	The system shall have the ability to suspend user access based on a pre-set date or based on hospital policy requiring renewa of access approval on a variable basis for non-County employees.	Yes
T-82	The system shall have the ability to suspend user-access after an organization defined inactivity period (i.e., 90 days).	Yes
T-83	System allows revocation of the access privileges of a user without requiring deletion of the user: - User-based (i.e., access rights assigned to each user) - Role-based (i.e., Users are grouped and access rights assigned to these groups) - Context-based (i.e., role-based with additional access rights assigned or restricted based on the context of the transactions, such as time-of-day, workstation-location, emergency-mode, etc.)	Yes
T-84	The system shall have the ability to limit user functionality based on the following access rights: - Full - Read - Write - Delete - Modify - Delete	Yes
T-85	System shall allow assigning multiple roles to one user.	Yes
Input Validation		

T-86	System insures that input validation is applied whenever input is received through user or external data interfaces. The validation approach is to constrain, reject, and then sanitize input.	Yes
T-87	System does not rely on client-side validation. The System design assumes that user input is malicious.	Yes
T-88	Data is validated for type, length, format, and range. Data validation is consistent across the System.	Yes
T-89	System avoids un-trusted input of file name and file paths. - System does not accept file names or file paths from calling functions. - Security decisions are not made based on user-supplied file names and paths.	Yes
T-90	System does not use parent paths when data within the System is being accessed. Attempts to access resources using parent paths are blocked.	Yes
T-91	The web server always asserts a character set: a locale and a country code, such as en_US.	Yes
Authentication		
T-92	All system and user accounts are identified.	Yes
T-93	Web sites are partitioned into un-restricted and restricted areas using separate folders.	Yes
T-94	System uses least-privileged accounts.	Yes
T-95	System insures that minimum error information is returned in the event of authentication failure.	Yes
T-96	The system shall have the ability to support biometrics and biometrics plus passwords (e.g., fingerprint scan and fingerprint scan plus password).	Yes
T-97	System authenticates the user before any access is allowed to protected resources (e.g., Protected Health Information)	Yes
T-98	System authenticates standalone devices before access is allowed to protected resources.	Yes
T-99	If Structured Query Language (SQL) authentication is used (e.g., communication between the application server and the database server) credentials are secured in storage and over the wire via Secure Socket Layer (SSL) or IP Security (IPSec).	Yes
Authorization		
T-100	Measures are in place to prevent, detect and log unauthorized attempts to access the System.	Yes
T-101	Rights and privileges are assigned based on authorization roles.	Yes
T-102	Database restricts access to stored procedures to authorized accounts only.	Yes
T-103	Direct access to database tables is prohibited.	Yes
T-104	All account IDs that are used by the System are identified and the resources accessed by each account is known.	Yes
T-105	Roles are mapped to user and data interfaces. Role rights and privileges are identified and maintained in an access control list.	Yes
T-106	System resources are mapped to System roles and allowed operations for each role.	Yes
Configuration Management		
T-107	Administration interfaces require strong authentication and authorization.	Yes
T-108	Administrator privileges are separated based on roles (e.g., site content developer, system administrator).	Yes

T-109	Remote administration channels are secured (e.g., SSL, VPN)	Yes
T-110	Configuration stores are secured from unauthorized access and tampering.	Yes
T-111	Configuration credentials and authentication tokens are not held in plain text in configuration files. (e.g., ssh client config file with remote login ID and password.)	Yes
T-112	User accounts and service accounts used for configuration management have only the minimum privileges required for the task.	Yes
Integrity Controls		
T-113	Measures are in place to detect unauthorized changes to information.	Yes
T-114	Measures are in place to protect information from being accidentally overwritten.	Yes
T-115	System supports integrity mechanisms for transmission of both incoming and outgoing files, such as parity checks and cyclic redundancy checks (CRCs).	Yes
T-116	Measures are in place to prevent the upload of unauthorized files (e.g., executable files).	Yes
Sensitive Data (e.g., ePHI, Personally Identifiable Information)		
T-117	Sensitive data and secrets are not incorporated in code.	Yes
T-118	Secrets are stored securely using a one-way hash. Database keys, connections, passwords, or other secrets are not stored in plain text.	Yes
T-119	Sensitive data is not logged in clear text by the System.	Yes
T-120	Database/file encryption for protection of sensitive data fields while the data is at rest (i.e., stored data) is provided.	No
T-121	Protection mechanisms are in place for sensitive data that is sent over the network.	Yes
T-122	Sensitive data is not transmitted using insecure protocols, such as FTP, telnet, tftp etc., unless tunneled through an authenticated encrypted connection (e.g. VPN).	Yes
T-123	Sensitive data is not stored in persistent cookies.	Yes
T-124	Measures are in place to prevent, detect and log unauthorized attempts to access sensitive or confidential data.	Yes
T-125	System restricts transactions involving financial or sensitive data to authorized user sessions originating on the County Intranet WAN only. Access to such transactions from the Internet is blocked.	No
T-126	System restricts access to financial transactions and other sensitive data by authorized users outside the County Intranet to Read Only mode.	No
T-127	All user sessions involving financial transactions or sensitive data are encrypted using SSL/HTTPS.	No
T-128	System provides administrative ability to block users' access to individual patient records for privacy reasons	Yes
Session Management		
T-129	SSL is used to protect authentication cookies.	Yes
T-130	The system shall provide automatic logout of users when there has been no activity for a pre-defined period, maintaining transaction integrity.	Yes
T-131	Session lifetime is limited to a pre-specified and configurable duration.	Yes
T-132	Session state is protected from unauthorized access.	Yes

T-133	Session identifiers are not passed in query strings.	Yes
T-134	Temporary objects are removed from the system, database connections are closed, and memory is released.	Yes
Timeouts		
T-135	System provides an automatic timeout if the session is idle for a pre-specified and configurable duration.	Yes
T-136	System warns the user before the timeout and prompts the user to re-enter their password.	Yes
Encryption		
T-137	The system shall have the ability to support 128-bit SSL encryption, or higher, between the client browser and the application tier for any or all modules or sub-modules at organization discretion. Identify security standard (SSL/FIPS encryption).	Yes
T-138	Encryption capability for certain data transmissions that require security protection.	Yes
T-139	Platform-level cryptography is used with no custom implementations.	Yes
T-140	System provides secure information delivery over the Internet via encryption by using triple-DES (Data Encryption Standard) or the Advanced Encryption Standard (AES)	Yes
T-141	Encrypted data delivered over the Internet is transmitted via open protocols (e.g., SSL, XML encryption)	Yes
T-142	Cryptographic algorithm and key size for the System's data encryption requirements is AES 256 bit or stronger.	No
T-143	Encryption keys are secured.	Yes
T-144	Key management procedure to secure and manage the encryption keys is defined.	Yes
Parameter Manipulation		
T-145	All input parameters are validated (including form fields, query strings, cookies, and HTTP headers).	Yes
T-146	Cookies with sensitive data (e.g. authentication cookies) are encrypted.	Yes
T-147	Sensitive data is not passed in query strings or form fields.	Yes
T-148	Security decisions do not rely on HTTP header information.	Yes
Exception Management/ Error Handling		
T-149	System exception handling minimizes information disclosure in case of an exception.	Yes
T-150	System returns generic error messages to the client, to avoid disclosure of sensitive information.	Yes
T-151	System code does not rely on internal system generated error handling. The System provides error-handling processes.	Yes
T-152	System errors are logged to the error log.	Yes
T-153	Private and sensitive data (for example, passwords) are not logged.	Yes
Audit Trails and Logging		
T-154	Auditing and logging in the System includes, at a minimum, authenticated access, configuration changes, privileged access such as use of administrative rights, and change of rights and privileges. The parameters logged includes user or system account ID, date/time stamp, event source, IP address, error/event code and type.	Yes

T-155	The system shall have the ability to record or capture information about each authorized and/or unauthorized access attempt such as: User ID, workstation, date, time, transaction (menu, screen, file, object), and attempted type of access (read, modify, etc.).	Yes
T-156	System generates an audit record for all activity of a given user (i.e., a trail of all user activity within the System)	Yes
T-157	System generates an audit record for activity associated with a transaction, from creation to completion, including logging of data additions, changes, and deletions	Yes
T-158	System provides an audit trail and viewable history of all transactions including but not limited to, user's login ID, date, and time stamp.	Yes
T-159	System allows selection of transactions to be logged	Yes
T-160	System allows selection of data elements to be logged in audit records	Yes
T-161	System allows logging of all user IDs that has used a given function	Yes
T-162	System allows logging of all user IDs that has updated a given field	Yes
T-163	System logs the following information in each audit record: - Date and time of the event - Component of the System (e.g., software, hardware) where the event occurred - User device or peripheral device involved in transactions - Type or transaction - User Identity - Outcome (success or failure) of the event	Yes
T-164	The System tracks the before and after record of modified data elements	Yes
T-165	The System restrict system administrator from changing log activity	Yes
T-166	The System secures audit records in the following ways: - Allows read access to authorized Users only - Protects stored audit records from unauthorized deletion - Prevents modifications to the audit records	Yes
T-167	System monitors user audit logs via an automated process, and reports on irregular activity. Irregular activities are identified based on County departments' rules and regulations. The irregular activity reports are customizable.	Yes
T-168	System provides the ability to archive records, reports and historic information for predefined timeline based on rules and regulation.	Yes
T-169	System prevents deleted records from being purged until they have been archived.	No
T-170	System maintains an audit trail of errors and exceptions.	Yes
T-171	All changes to the System hosting environment are logged and tracked. Reports are available for significant and critical changes and sent for review by a responsible person.	Yes
Synchronization with Applications or Devices Used in Offline Mode		
T-172	Data collection devices (e.g. – handheld devices, etc.) synchronize with the System securely using authentication, authorization and encryption mechanisms.	Yes

Reporting		
T-173	The system shall provide summarized and detailed reports on user access, usage logs, etc.	Yes
T-174	System provides online reporting capability to authorized County system managers for necessary review and accountability.	Yes
T-175	System provides error and exception reports.	Yes
T-176	System provides usage reports.	Yes
T-177	System provides configuration, user accounts, roles and privileges reports.	Yes
T-178	System provides a listing of privileged account holders within the System hosting environment.	Yes
Reporting and Data Warehouse		
T-179	The system shall generate charts and graphs based on report data within the system.	Yes
T-180	The system shall generate reports directly to MS Office, Hypertext Markup Language (HTML) or PDF formats, Open Doc, Open XML, etc.	Yes
T-181	The system shall provide ad hoc and standard query capabilities (with and without input parameters).	Yes
T-182	The system shall provide ability to create and maintain a report distribution mechanism with predefined reports (e.g., monthly reports that are specific by role, organization, and location via portal or Web).	Yes
T-183	The system shall provide the ability to view previously generated reports by all users or by specific users.	Yes
T-184	The system shall provide capability to schedule reports to run automatically.	Yes
T-185	The system shall allow for reporting by exception.	Yes
T-186	The system shall allow print preview of all reports before printing and have print screen and selective page(s) print functionality	Yes
T-187	The system shall be capable of utilizing MS-Excel to download information from the application and upload information into the application.	Yes
T-188	The system shall allow for user-friendly end-user report creation without requiring technical staff or expertise to create and publish reports within the modules.	Yes
T-189	The proposer shall provide an Ad Hoc reporting tool.	Yes
T-190	The Ad Hoc reporting tool shall be able to access any delivered or added fields in the database.	Yes
End-user Interface		
T-191	The user interface shall integrate information from multiple components into a unified display by business area or work type.	Yes
T-192	The system shall provide:	Yes
T-193	The system shall have a customizable online documentation and training materials such as context-specific help, search capability, organization-specific business process documentation and process maps.	Yes
T-194	The Proposer shall allow for field level edit checks for transactions during data entry and provide immediate user feedback, including error messages and possible corrective actions	Yes

T-195	The system shall have the ability to design a preferred sequence to make data-entry columns and fields match the order of information in organization source documents.	Yes
T-196	The system shall allow for the option of auto-fill capability per transaction/field entry throughout all modules	Yes
T-197	The system shall have the ability to restrict free form entry (e.g., provide drop down calendar for date field)	Yes
T-198	The system shall have the ability to accept mass data entry from an external source	Yes
T-199	On-line, interactive help with support for hyperlink technology and industry standard formats (e.g., HTML file formats)	Yes
T-200	Intelligent spell checking of text fields	Yes
T-201	The system shall have the ability to minimize the necessity of the mouse when user performs data entry tasks	Yes
T-202	The system shall present data to users such that a minimum of navigational effort is required, including:	Yes
T-203	The data elements required to complete a job function, whether to inquire/read only or data entry must be readily available.	Yes
T-204	The user interface shall integrate information from multiple components into a unified display by business area or work type.	Yes
Content and Document Management		
T-204	Capture system-generated documents and store them in virtual property or licensee folders.	Yes
T-205	The system shall store electronic forms.	Yes
T-206	The system shall scan and store imaged documents and electronic files.	Yes
T-207	The system shall enable indexing and searching of documents by a variety of user-defined metadata attributes.	Yes
T-208	The system shall support for full text search	Yes
T-209	The system shall have built-in viewers/converters for a wide variety of file types.	Yes
T-210	The system shall enable attachment of documents to e-mails and e-mail distribution lists.	Yes
T-211	The system shall store location identification of paper documents (attributes shall minimally include folder, box, and physical location).	Yes
Redundancy & Business Continuity		
T-212	The Proposer shall provide a recovery environment to maintain business continuity	Yes
System Capacity & Performance		
T-213	The system shall be able to handle an average transaction load with an average CPU utilization of no more than 35%-40% of the CPU capacity. The peak CPU utilization shall never exceed 70% of CPU capacity at any given time.	Yes
T-214	The system shall have a response time where the average transaction on the server needs to occur on average less than 1 second. The response time for the most common requests to reach a user shall not exceed 3 seconds.	Yes
T-215	The solution shall maintain 99.9% availability — including planned maintenance.	No
T-216	The solution shall track system uptime and transaction response times in order to demonstrate operation within acceptable levels.	Yes
T-217	The solution shall complete 100% of simple, single-screen online inquiry transactions in under one second, during peak usage.	No

T-218	The solution shall complete an average of 99% of all online update transactions in under 5 seconds over any 60-minute period, during peak usage.	Yes
Hosting		
T-219	The Proposer shall provide the facility required to host the computing and network environment, including appropriate physical security, required third-party software, and 24x7 staff support and monitoring environmental conditions (e.g. HVAC, port, fire detection, suppression, moisture, humidity and temperature.	Yes
T-220	The Proposer shall provide and manage all required infrastructure and network equipment within the data center, such as servers, routers, switches, load balancers and consoles.	Yes
T-221	Allow access to the EMH solution over the Internet and provide secure and confidential storage of all information transmitted to and from the LA DHS.	Yes
T-222	The Proposer shall monitor the computing systems (24 x 7) and communications circuits to report and alert on compromised system health, security, availability and capacity.	Yes
T-223	The Proposer shall review security notifications and alerts relevant to the hosting platform (e.g., notifications of bugs, attacks, patches), and apply as appropriate to maintain the highest level of defense.	Yes
T-224	The Proposer shall provide adequate firewall protection in order to secure Personal Data and other Confidential Information users of the EHR from unauthorized access by third parties.	Yes
T-225	The Proposer shall test application enhancements, fixes, and upgrades and assure the integrity of the resulting data.	Yes
T-226	The Proposer shall provide and maintain a method for proper escalation of issues and log all incidents, problems and error corrections as agreed to with LA DHS.	Yes
T-227	The Proposer shall adhere to service levels defined with LA DHS germane to availability, response time based on severity level, credits and other key hosting metrics.	Yes
T-228	The Proposer shall meet performance requirements detailed in System Capacity & Performance (Requirements T-213 through T-218).	No
Systems Operations Support and Error Handling		
T-229	The EHR System shall provide complete audit features for all transactions in all modules of the software solution.	Yes
T-230	The EHR System shall be able to perform real-time data redundancy on independent storage devices	Yes
T-231	simultaneously and switch over to the mirror database(s).	No
T-232	The system shall take advantage of network HA and redundancies and switch over to mirror databases without impact on the user.	Yes
T-233	The system shall provide system failovers or database redundancies.	Yes

Exhibit A.27 (Acceptance Certificate)

to the

Electronic Health Records System and Services Agreement

EXHIBIT A.27

ACCEPTANCE CERTIFICATE

Contractor is submitting this Acceptance Certificate to the County Project Manager and the County Project Director for Approval in connection with the Key Deliverable described below. This Acceptance Certificate must be Approved by the County Project Manager and the County Project Director, as evidenced by the County Project Manager's and the County Project Director's signature below, before Contractor can invoice County for payment in connection with the Key Deliverable.

TO BE COMPLETED BY CONTRACTOR

Exhibit B (EHR System Software Components)

to the

Electronic Health Records System and Services Agreement

EXHIBIT B

EHR SYSTEM SOFTWARE COMPONENTS

This Exhibit B (EHR System Software Components) is an attachment and addition to the Electronic Health Records System and Services Agreement dated December 21, 2012 (the "**Agreement**") entered into by and between the County of Los Angeles ("**County**") and Cerner Corporation ("**Contractor**") and is incorporated into the Agreement by reference hereof. Unless specifically defined in this Exhibit, capitalized terms shall have the meanings set forth in the Agreement.

[2] With Independent Conditions

Exhibit C (Fees; Contractor Professional Services Rates)

to the

Electronic Health Records System and Services Agreement

EXHIBIT C

FEES; CONTRACTOR PROFESSIONAL SERVICES RATES

This Exhibit C (Fees; Contractor Professional Services Rates) is an attachment and addition to the Electronic Health Records System and Services Agreement dated December 21, 2012 (the "**Agreement**") entered into by and between the County of Los Angeles ("**County**") and Cerner Corporation ("**Contractor**") and is incorporated into the Agreement by reference hereof. Unless specifically defined in this Exhibit, capitalized terms shall have the meanings set forth in the Agreement.

1. INTRODUCTION

The fundamental premise of the fee and pricing structure under the Agreement is that all elements of the EHR System, including the Licensed Software, Third-Party Products, Integral Third-Party Software, Hosting Software, Hardware, and Services including, Implementation Services, Hosting Services, Support Services, and any Optional Work are paid for only in the amount, and solely through the contractually specified mechanisms for payment of the fees (the "**Authorized Billing and Payment Mechanisms**") set forth in this Exhibit C (Fees; Contractor Professional Services Rates), regardless of whether or not all costs or expenses to Contractor of providing a specific element of the EHR System can be directly traced to, or are captured by, an Authorized Billing and Payment Mechanism, each described in Section 2 (Authorized Billing And Payment Mechanisms). It is understood and agreed by the Parties that the total amount to be paid by County under the Agreement cannot exceed the Contract Sum unless the Contract Sum is modified pursuant to a duly Approved Amendment to the Agreement by the Board and Contractor's authorized representative(s) pursuant to Section 13 (Changes to Agreement) of the Agreement. The Contract Sum is the maximum amount that could be paid, but is not a commitment to spend sums allocated under the Contract Sum for Optional Work.

As set forth in Section 14.1 (Contract Sum) of the Agreement:

> The Contract Sum under this Agreement shall be the total monetary amount payable by County to Contractor for supplying all the tasks, subtasks, Deliverables, goods, and Services required or requested by County under and during the Term of this Agreement. If County does not Approve work in writing, no payment shall be due Contractor for those Services. The Contract Sum, including all applicable taxes, authorized by County hereunder shall not exceed Three Hundred Sixty-Six Million, Nine Hundred Ninety Thousand, Five Hundred Ninety-Four Dollars ($366,990,594) as further detailed in Exhibit C (Fees; Contractor Professional Services Rates), unless the Contract Sum is modified pursuant to a duly Approved Amendment to this Agreement by the Board and Contractor's authorized representative(s) pursuant to Section 13 (Changes to Agreement). The Contract Sum under this Agreement shall cover the authorized payments for all elements of the EHR System, including the Licensed Software, Third-Party Products, Hosting Software, Hardware, and Services including, Implementation Services, Hosting Services, Support Services, and any Optional Work. The Contract Sum shall not be adjusted for any costs or expenses whatsoever of Contractor.

The amounts to be paid by County under this Agreement through the Authorized Billing and Payment Mechanisms include all Contractor costs, including Contractor overhead, profit margin, and all costs of services, product, and goods delivery within the definition of Services. The Contract Sum is the total amount that is allocated by County for payment under this Agreement, but is not the amount to be paid

to Contractor under this Agreement. In the absence of an Approved Physical Growth Event, any sum attributed to a Use Reconciliation, the Approval by County of Optional Work, and Amendment approving additional EHR capabilities, and assuming no COLA adjustment is required; the maximum amount to be paid to Contractor over the Term under this Agreement is Two Hundred and Seventy-One Million, One Hundred and Seven Thousand, One Hundred and Eleven Dollars ($271,107,111).

Exhibit C.9 (Detailed Pricing Summary) provides the detailed pricing summary by component of the EHR System. Exhibit C.8 (Summary of Licensed Software Pricing by Module) provides a summary of pricing by Module of the EHR System.

2. AUTHORIZED BILLING AND PAYMENT MECHANISMS

There are only six (6) Authorized Billing and Payment Mechanisms for payment of the fees under this Agreement. Each of these is detailed in this Section 2 (Authorized Billing and Payment Mechanisms) of Exhibit C (Fees; Contractor Professional Services Rates) and listed as follows:

1. Milestone Payments

2. Recurring Monthly Fees

3. Approved Physical Growth Event

4. Optional Work

5. Amendment

6. Post-Contract Year 10 Cost of Living Adjustment

Contractor cannot invoice County under the Agreement except as provided under one of the Authorized Billing and Payment Mechanisms, and will not be entitled to, and will not receive, any payment, except as provided under one of the Authorized Billing and Payment Mechanisms set forth in this Section 2 (Authorized Billing And Payment Mechanisms).

2.1 MILESTONE PAYMENTS

This Exhibit C (Fees; Contractor Professional Services Rates) sets forth the Milestone payment structure Exhibit C.6 (Key Milestones and Key Deliverables Table) and amounts ("**Milestone Payments**") set forth in Exhibit C.2 (Milestone Payments Table). The Milestone Payments amount of Sixty-Eight Million, Three Hundred Eighty Nine Thousand, Three Hundred Forty-Seven Dollars ($68,389,347) through the Productive Use of the last Cluster is fixed and is not subject to change except in the event of an Approved Physical Growth Event or Approved Supplemental Travel each described below, and collectively referred to as "**Authorized Modifications to Milestone Payments**". The Milestone Payments were negotiated between Contractor and County as a material condition under this Agreement and for the period from the Effective Date through the payment of the last Milestone Payment are to capture all compensation to Contractor for the Licensed Software (includes Integral Third-Party Software), Third-Party Products, Implementation Services, Support Services prior to its transition to Recurring Monthly Fees, one-time costs as to AMS Services and AMS Services prior to its transition to Recurring Monthly Fees, one-time costs as to Hosting Services, and Hardware. Specified components of the Services (e.g.

Hosting Services), and Licensed Software, and Third Party Products (e.g., clinical content) included in the Milestone Payments will transition from being paid under the Milestone Payments to being paid as Recurring Monthly Fees upon Productive Use of the last Cluster (these items are highlighted on Exhibit C.3 (Pricing Spreadsheet) both individually and collectively as "**Milestone Payments Items That Transition"**).

The Milestone Payments are to be paid in accordance with the Agreement. Sections 14.3 (Implementation Services) and 15 (Invoices and Payments) most directly address the Milestone Payments, though relevant issues such as Acceptance, are addressed throughout the Agreement. Exhibit C.2 (Milestone Payments Table) identifies the Key Milestones; the Key Milestone Allocation; the Key Milestone Scheduled Duration; the Monthly Key Milestone Payment; the Holdback Amount as to each Monthly Key Milestone Payment; the Key Deliverables associated with each Key Milestone; and the Credit Due Date for each Key Deliverable. As to items marked on Exhibit C.2 (Milestone Payments Table) as Milestone Payments Items That Transition, if Productive Use of the last Cluster does not occur on or before November 30, 2015 and County has not provided notice to Contractor of a material breach of the entire Agreement, such items will transition from being paid under the Milestone Payments to being paid as Recurring Monthly Fees. Notwithstanding the payment dates and amounts in the supporting exhibits of this Exhibit C (Fees; Professional Service Rates), the payment dates and amounts are subject to the provisions of the Agreement and the timing may otherwise be adjusted to accommodate Approved modifications to Exhibit A.25.1 (Project Work Plan).

The Parties understand and agree that there is no concept of a financial change order applicable to the Agreement, except as expressly provided for with regard to Optional Work or Pool Dollars that are derived from one of the Authorized Billing and Payment Mechanisms. The limitations on the concept of a financial change order are intentional and are designed to ensure that the fixed fee elements of the Agreement remain unchanged and predictable throughout the Term.

As to Milestone Payments, in the absence of an Approved Physical Growth Event, there can be no change to the Milestone Payments except for Approved Supplemental Travel. For purposes of this Agreement, Approved Supplemental Travel is appropriate only in the event that (1) County Approves Super User training of some or all of the 300 Super Users that Contractor agreed to be provide at County locations; (2) if County elects to have an implementation event take place in California which is planned to occur under the SOWs in Kansas City, Mo., (3) travel to California required by the Contractor Delivery Consultant(s), Contractor Solution Architect(s) or other required resources in connection with the implementation of Infusion Management, or (4) Contractor provides non-standard and additional resources on site at County facilities to work with the County Work Groups to address systemic issues identified relating to completion of Decision Design Matrix or Data Collection Workbook (e.g., time management, complexity, facilities, tools, materials) and its Learning Services Consultant or other non-standard on site resources as determined necessary to support the Project through the governance process defined in Exhibit A.2 (Project Initiation Statement of Work).

Approved Supplemental Travel shall include reimbursement of airfare, parking, mileage, rental cars, taxi, fuel, tolls, lodging, and per diem Approved by County in advance of the expenditures and the reimbursement shall be subject to, and shall not exceed, the expenditure limits set forth for County personnel in the then current Chapter 5.40 (Travel and Other Expenses) of the Los Angeles County Code, and as updated from time to time by the Los Angeles County Auditor-Controller. Contractor will provide

all invoices, receipts, and other documentation reasonably needed to support the request for reimbursement.

2.2 RECURRING MONTHLY FEES

This Exhibit C (Fees; Contractor Professional Services Rates) sets forth the timing and amounts of the Recurring Monthly Fees. The total Recurring Monthly Fees amount of One Hundred Twenty Million, Five Hundred Seventy-One Thousand, Two Hundred Twenty-Six Dollars ($120,571,226) as reflected on Exhibit C.2 (Milestone Payments Table) under Total Recurring Monthly Fees through the Initial Support Term are fixed and are not subject to change except in the event of an Approved Physical Growth Event or a Use Reconciliation after Contract Year 5 and Contract Year 7. The Recurring Monthly Fees amount of Seventy-Nine Million, Six Hundred Forty-One Thousand, Six Hundred Five Dollars ($79,641,605) from the first Renewal Term through the Term are fixed and are not subject to change except in the event of (1) an Approved Physical Growth Event, (2) a Use Reconciliation after Contract Year 10, if applicable, or (3) a Contract Year 10 Cost of Living Adjustment. The Recurring Monthly Fees were negotiated between Contractor and County as a material condition under this Agreement to capture all compensation to Contractor for the Licensed Software (includes Integral Third-Party Software), Third-Party Products, Services (Includes Implementation Services, AMS Services, Support Services, Hosting Services), Hardware, Hosting Software, and Hosting Environment; subject only to the Authorized Billing and Payment Mechanisms and Use Reconciliation.

2.2.1 Use Reconciliation

After the completion of the fifth (5^{th}), seventh (7^{th}), and tenth (10^{th}) Contract Years, and in a Contract Year following an Approved Physical Growth Event, Contractor may request in writing within sixty (60) days of the beginning of the applicable Contract Year, a Use Reconciliation to occur during the first calendar quarter of the applicable Contract Year. The results of the Use Reconciliation will be applied as of the first (1^{st}) day of the Contract Year in which the Use Reconciliation takes place. Notwithstanding the forgoing, due to the potential higher volatility in the County's use of ePrescribe as compared to other Integral Third-Party Software or Third-Party Products, and because the cost of ePrescribe is passed through by Contractor to County without mark-up, County has agreed to a more frequent Use Reconciliation schedule for ePrescribe. County's use of ePrescribe will be evaluated annually after the first Use Reconciliation and throughout the Support Term (and Contractor may request one additional Use Reconciliation in a Contract Year if there is an increase in use by County of twenty percent (20%) or greater that occurs between one annual ePrescribe Use Reconciliation and the next).

The Use Reconciliation is intended to capture additional infrastructure costs to Contractor that arise in connection with expanded use or consumption by County of the EHR System. The Use Reconciliation will be accomplished by comparing the baseline use and consumption metrics as to the EHR System components specified in the table in Section 2.2.2 (Baseline Use Metrics) (the "**Baseline Use Metrics**") against County's actual use and consumption metrics measured in accordance with the table in Section 2.2.2 (Baseline Use Metrics). After the completion of any Use Reconciliation, in the event County's then-current use exceeds the baseline use metrics in an amount that triggers a "**Reconciliation Adjustment**" to the Recurring Monthly Fee as provided below, the then-current use metrics shall become the new baseline use metrics for any subsequent Use Reconciliation.

2.2.2 Baseline Use Metrics

Item subject to Use Reconciliation	Baseline Use Metric	Use Reconciliation Trigger	Additional Use Unit Increment(s)	Additional One-Time Fees	Additional Recurring Monthly Fee
Hosting Services based on Peak Average Concurrent Users	5,500 Peak Average Concurrent Users	Peak Average Concurrent Users in excess of 5,500 for three (3) consecutive months in one (1) Contract Year	Every 10 over 5,500 Peak Average Concurrent Users. Subject to the provisions of Section 2.2.4 (Ratio Protection) the method for calculating the payment adjustment based on a Peak Average Concurrent User increase is illustrated by the following example. Assuming the then current Use Baseline is 5,500 Peak Average Concurrent Users and actual Peak Average Concurrent Users as determined by Contractor's measurement tools, and as reported to County on a monthly basis, is 6,000, and there is no ratio protection issue, the monthly recurring Hosting Services Fee will be increased by ((500 Peak Average Concurrent Users /10) X $850.00) and there will be a one-time charge of (500/10) X $1700.00.	$1,700	$850
Image Aware Virtual Archive Image Storage added every Contract Year	4.8 Terabytes ("**TB**") as of the Effective Date, and 4.8 TB of Image Storage added upon the commencement of each Contract Year. This Use Baseline is cumulative. For example, if in Contract Year 1 County's Image Storage is 3 TB and Contract Year 2 it is 6 TB, the total is 9 TB which is below the 9.6TB cumulative total for the two Contract Years. As a result, exceeding the 4.8 TB increase in Contract Year 2 does not exceed	Image Storage exceeds the cumulative TBs available as of the commencement of the Contract Year in which a Use Reconciliation is to take place.	One Hundred (100) Gigabytes of Images Storage	$800	$400

	the then-applicable Use Baseline for additional storage until the aggregate storage amount for the two (2) Contract Years of 9.6 TB is exceeded.				
CPDI Ascent Capture Server	(7) Ascent Capture Servers (located at Client Site) (6 production and 1 test)	The addition of a CPDI Ascent Capture Server, whether production or test, over the Baseline Use Metric.	(1) Ascent Capture Server	$1,200	$600
CPDI Ascent Capture User Licenses	18.2% of the 5,500 Hosting Services Peak Average Concurrent Users	Concurrent Users in excess of 18.2% of the Hosting Services Peak Average Concurrent Users	10 Concurrent Users	$16,650	$670
CareAware iBus Servers	3,000 Device Connections There are 1,000 Device Connections per production server pair. For the 3,000 device connections, there are (9) CareAware iBus Servers, including (6) Production Servers and (3) Test Server.	Expansion beyond 3,000 device connections will require the addition of 2 CareAware iBus Servers to accommodate an incremental 1,000 device connections.	Two (2) Servers (per 1,000 additional device connections)	$3,200	$1,600
PowerInsight Web/Bus. Objects Servers	100 Peak Concurrent Users of PowerInsight Five (5) Web/Business Objects Servers (4 production and 1 test) (estimated to support up to 100 Peak Concurrent Users of PowerInsight).	Expansion beyond 100 Peak Concurrent Users of PowerInsight will require the addition of 1 Web/Business Objects Servers to accommodate an incremental 25 Peak Concurrent Users of PowerInsight	One (1) Web/Bus. Objects Server per 25 additional Peak Concurrent Users of PowerInsight	$1,600	$800
7x24 Client Site Downtime Viewer Servers	200 Client-owned, on-site workstations that receive updates from 7x24 DT Viewer servers For 200 Client-owned, on-site workstations there are (3) Servers, including (2) Prod Servers and (1) Test	Expansion beyond 200 client-owned on-site workstations that receive updates from 7x24 DT Viewer servers will require the addition of 1 Client Site Downtime Viewer Server to accommodate an incremental 100 workstations.	One (1) Server per 100 additional workstations that receive updates from 7x24 DT Viewer servers	$3,000	$1,500

	Server. Each production server supports up to 100 workstations.				
7x24 Read-Only Concurrent Users	2,250 Peak Concurrent Users of the 7x24 Read-Only System	Use in excess of 2,250 Peak Concurrent Users of the 7x24 Read-Only System	One hundred (100) additional Peak Concurrent Users of the 7x24 Read-Only System	$2,400	$1,200
ePrescribe	2,542 Average number uniquely identified Providers, eprescribing per month, as calculated over a calendar quarter (A health professional who uses ePrescribe to write prescriptions; physicians (M.D., D.O.), physicians' assistants; or other advanced practitioners.)	Use in excess of 2,542 Average number uniquely identified Providers, eprescribing per month, as calculated over a calendar quarter, provided the parties do not attribute such increase to a seasonal aberrancy.	One (1) additional uniquely identified Provider, eprescribing per month	Not Applicable	$11
Restricted Third-Party Pass-Through Bundle The following is a limited list of third-party software that will be subject to Use Reconciliation as an aggregated amount covering each of the Approved third-party items below. Notwithstanding the forgoing, these items will not be considered in a Use Reconciliation that occurs in a Contract Year following an Approved Physical Growth Event because third-party software is otherwise accounted for as Approved Physical Growth Event Expansion Pricing. • Cerner Post Acute Referrals • EK for Rehab – Inpatient • EK for Rehab) – Outpatient • Krames HealthSheets – Inpatient • Krames HealthSheets Physician Office • Krames HealthSheets Outpatient Clinic • Krames ExitWriter ED • ED Coding Subscription	Per the Hosting Services based on Peak Average Concurrent Users described above	Per the Hosting Services based on Peak Average Concurrent Users described above	Per the Hosting Services based on Peak Average Concurrent Users described above	Not Applicable	$187
Provided PS Sentinel is used with the EHR System	Not Applicable	Not Applicable	Not Applicable	Not Applicable	Not Applicable

2.2.3 Concurrent User Definitions

The "**Peak Concurrent Users**" shall mean the highest number of County Users simultaneously logged on through any device to the Hosting Services measured on a daily basis throughout each month. A User connecting a mobile electronic device to the Hosting Services or accessing the Hosting Services via a mobile electronic device or other wireless device will be counted as part of the Peak Concurrent Users. A Concurrent User logon is triggered and counted as part of the Peak Concurrent Users only when a User logs on to the Hosting Services through a device. The only way for a single User to be counted as more than one (1) Concurrent User simultaneous logon is for that User to be logged on to more than one (1) device at the same time. The Peak Average Concurrent Users is calculated by averaging the Peak Concurrent Users for the ten (10) highest days during a given calendar month. "**Peak Concurrent Users of PowerInsight**" shall have same meaning as Peak Concurrent Users, except the measurement is taken separately of users of the PowerInsight application only, and references to "Hosting Services" in the definition shall be deemed to refer to "PowerInsight."

2.2.4 Ratio Protection

As described further below, County has provided Contractor with information reflecting the number of County Users by their role and level of employment (e.g. full time, part time, less than part time). Contractor has used these numbers and its experience providing electronic health records systems to other health care systems to derive the number of County Users against which to apply Contractor's established concurrent use ratios. Contractor ratios typically range from 5:1 to 4:1, with the 4:1 ratio yielding the highest concurrent user count using Contractor's ratios.

Contractor has applied a 4:1 ratio to County Users to derive the five thousand, five hundred (5,500) Peak Average Concurrent Users baseline used in the Agreement. The number of County Users, the roles of the County Users, and the percentage of time worked by the County Users (e.g., full time, part time greater than fifty percent (50%), part time less than fifty percent (50%)) was provided by the County and is summarized in the DHS EHR Users Summary table (Exhibit C.5 (DHS EHR Users Summary)). Contractor used the information in Exhibit C.5 (DHS EHR Users Summary) and determined that based on that information the appropriate number of County Users to utilize to calculate Concurrent Users is twenty-two thousand (22,000).

A. In the event there is a Use Reconciliation and the trigger level of Peak Average Concurrent Users required for a price adjustment is met (actual Peak Average Concurrent Users exceeds the then current Use Baseline for Peak Average Concurrent Users as specified in the table in Section 2.2.2 (Baseline Use Metrics)), and the excess Peak Average Concurrent Users is determined to be primarily caused by County's use of the EHR System at a lower than 4:1 (*e.g.*, 3:1) ratio (and not due to an increase in the number of nominal County Users as determined by the greater of twenty-two thousand (22,000) or the number of presumptive County Users), then no price adjustment will result. The ratio is the number of nominal County Users to the Peak Average Concurrent Users. The number of presumptive County Users is derived, as illustrated in the table below, utilizing the applicable numbers as of the Effective Date, from a sum of the then current numbers of users, weighted by the work effort multiplier associated with each work effort category (i.e., full time, half time, and less than half time.

Work Effort Category	Number of Personnel	Work Effort Multiplier	Presumptive County Users
Full Time Personnel with Access	21,758	0.9	19,582

Half Time Personnel with Access	2,188	0.45	985
Less than Half time Personnel with Access	5,185	0.18	933
Total presumptive County Users			21,500

B. In the event the cause of the excess Peak Average Concurrent Users is determined to be caused both by County's use of the EHR System at a lower than 4:1 (*e.g.*, 3:1) ratio and by an increase in the number of nominal County Users as determined by the greater of twenty-two thousand (22,000) or the number of presumptive County Users (calculated as provided in Section 2.2.4 A above), County will pay one-half (1/2) of any price adjustment triggered by such Peak Average Concurrent Users.

C. In the event the cause of the excess Peak Average Concurrent Users is determined to be caused only by an increase in number of nominal County Users as determined by the greater of twenty-two thousand (22,000) or the number of presumptive County Users (calculated as provided in Section 2.2.4 A above), any price adjustment will be in accordance with this Sections 2.2.1 (Use Reconciliation); 2.2.2 (Baseline Use Metrics); and 2.2.3(Concurrent User Definitions) of this Exhibit C (Fees; Contractor Professional Services Rates).

Notwithstanding the forgoing, if the Contractor ratio is insufficient and the insufficiency is directly attributable to a government mandated change in the use of EHR Systems (excluding changes mandated in connection with Meaningful Use at any stage or by the County); County shall be responsible for such increased Peak Average Concurrent Users attributed to the government mandated change as if the ratios were correct. Further, if Contractor demonstrates to County at the Concurrent Use Management meeting over two (2) or more consecutive months that there is a material number of Extended Timeouts, then County shall be responsible for increased Peak Average Concurrent Users attributed to the number of County Extended Timeouts sessions recorded by Contractor as if the ratios for those Extended Timeout sessions were correct. For purposes of this Section, an "**Extended Timeout**" shall mean a Concurrent User session that is ended automatically by a default setting of thirty-one (31) minutes or more.

2.2.4 Concurrent Use Management

To effectively manage the Peak Average Concurrent Use of the EHR System and minimize the likelihood of a Use Reconciliation payment resulting from Peak Average Concurrent User increases, the Parties agree to jointly manage concurrent use throughout the Term. In each calendar month Contractor shall measure the variance of the Baseline Use Metric and the Peak Concurrent Users on a daily basis. County will have access to daily reports on its Peak Concurrent Users via Contractor's Lights on Network dashboard tool. The parties shall manage concurrent use by utilizing a five thousand (5,000) Peak Concurrent User target. Whenever Peak Concurrent Users exceed five thousand (5,000) more than three (3) times in any calendar month, Contractor will notify County in writing and provide as much detail as to reasons for the Peak Concurrent User spikes as it can discern from its data and County's historical concurrent use patterns. If the Parties cannot identify the cause of the spikes, Contractor will perform a root cause analysis to assess the reason for the variance. Additionally, concurrent use management shall be a standing agenda item for the Quarterly Review Meetings.

2.3 APPROVED PHYSICAL GROWTH EVENT

Except as provided through application of another Authorized Billing and Payment Mechanism there is no additional fee or charge to County for increasing the volume of its use of the EHR System as authorized under the Agreement unless the County: (i) makes the EHR System available for use to another acute care, rehabilitation or mental health hospital that is not included in the Clusters or for which County owns, operates, manages, or subsidizes the operation or costs of the hospital; or (ii) County builds a new Multi-Specialty Ambulatory Care Clinic ("**MACC**") building or community health clinic or buys a new physical structure housing a MACC or community health clinic and registrations in that new MACC or community health clinic exceed five thousand (5,000) visits per month for (3) three consecutive months (individually each, and collectively both are referred to as an "**Approved Physical Growth Event**"). For purposes of this Authorized Billing and Payment Mechanism, if the County makes the EHR System available for another department of the (i) County ("**Department**"), (ii) Affiliate User, (iii) federal, State, and local agencies, or (iv) business partners to use as a primary EHR system in connection with the Department's, Affiliate User's, federal, State, and local agencies', or business partners' day-to-day operations, then that Department, Affiliate User, federal, State, and local agency, or business partner will be deemed to meet the building of new physical structure requirement under this Section 2.3(ii) (Approved Physical Growth Event) and the Approved Physical Growth Event pricing set forth in this Exhibit C (Fees; Professional Service Rates) will apply.

The fees to be paid by County to Contractor for an Approved Physical Growth Event are set forth in Exhibit C.4 (Approved Physical Growth Event Pricing).

2.4 OPTIONAL WORK AND DISCOUNTS

(a) Payment of Optional Work shall be as set forth in Sections 9.8 (Optional Work) and 14.6 (Implementing Optional Work) and, as to Professional Services, at the Professional Service Rates for Optional Work set forth in Exhibit C.7 (Contractor Professional Services Rate Card). Contractor has also provided optional pricing for additional Licensed Software, and related Services, as set forth in Exhibit C.1 (Optional Work).

The discount percentage to be applied to New Software pursuant to Section 14.6.1 (New Software) of the Agreement shall be **Proprietary and Confidential** off of the price for such New Software that would otherwise be applicable to County's use as determined by utilizing Contractor's standard pricing metrics for the applicable New Software.

(b) Contractor agrees that as to the Jail Health Information System Agreement and Probation Electronic Medical Records System Agreement between Contractor and County (individually referred to as an "**Existing Agreement**" and collectively the, "**Existing Agreements**"): (i) the discount percentage to be applied to New Software as set forth in Section 2.4(a) under this Exhibit C (Fees; Contractor Professional Service Rates) shall, at County's option, be applicable to software to be obtained from Contractor under the Existing Agreements which was not acquired as of the effective date of the applicable Existing Agreement and is not otherwise to be provided to County under those Existing Agreements without additional fees; and (ii) the Professional Service Rates for Optional Work set forth in Exhibit C.1 (Optional Work) shall, at County's option, be applicable to professional services or work to be obtained from Contractor utilizing pool dollars or other Board-approved sums under the Existing Agreements. As to Section 2.4(b)(ii), to the extent different descriptions were utilized to identify the categories/roles of Contractor

resources in the Existing Agreement(s) as compared to the categories/roles used in Exhibit C.1 (Optional Work), the Parties will reconcile such categories/roles used in this Agreement with those used in the Existing Agreement.

Contractor also agrees that, in the event the County consolidates remote hosting services it provides under the Existing Agreement(s) under the same EHR System build utilized to provide the Hosting Services under this Agreement, Contractor will work with County in good faith to adjust the pricing for remote hosting services provided under the Existing Agreements to leverage the infrastructure built to support the Hosting Services provided under this Agreement. County understands that in such event there will be additional professional services required for the migration/consolidation onto the EHR System build of the Jail Health Information System and Probation Electronic Medical Records System and their respective data. Such services will be provided utilizing the fees set forth for Professional Services under Exhibit C.1 (Optional Work) under an approved Amendment of one or all of this Agreement and/or the Existing Agreements.

Contractor also agrees that in recognition of its relationship with County and multiple departments, and the need for communication regarding patient care among those departments, that it will make the functionality as specifically set forth in Exhibit EE (Interoperability Functionality) available under the Existing Agreements at no additional charge. It is understood that the functionality provided will be pursuant to modifications, as appropriate, under each of the Existing Agreements, and specifically as limited by Exhibit EE (Interoperability Functionality).

2.5 AMENDMENTS

Amendments to the Agreement are governed by Section 13.3 (Amendments) of the Agreement.

2.6 POST-CONTRACT YEAR 10 COST OF LIVING ADJUSTMENTS

The COLA adjustment, if any, during the Support Renewal Term, shall by governed Section 14.9 (Cost Of Living Adjustment) of the Agreement.

3. HOSTING SERVICES ASSUMPTIONS REGARDING INFRASTRUCTURE DOMAINS

The Hosting Services are provided with the assumption that only the following five (5) infrastructure domains will be provided by Contractor.

Infrastructure Domain	Infrastructure Domain Description
Production Infrastructure Domain	One (1) Production Infrastructure Domain available in accordance with the Implementation Services and Exhibit A.25.1 (Project Work Plan) and continuing through the Support Term.
Certification Infrastructure Domain (Non-Production)	One (1) Certification Infrastructure Domain (Non-Production) available in accordance with the Implementation Services and Exhibit A.25.1 (Project Work Plan) and continuing through the Support Term (this Infrastructure Domain utilizes a reference Data copy of the Production Infrastructure Domain, and does not include a full copy of the Production Infrastructure

	Domain). (Note: The certification domain is used for ongoing testing and end-user training.)
Build Infrastructure Domain (Non-Production)	One (1) Build Infrastructure Domain (Non-Production) available in accordance with the Implementation Services and Exhibit A.25.1 (Project Work Plan) and continuing through the Support Term (this Infrastructure Domain utilizes a reference Data copy of the Production Infrastructure Domain, and does not include a full copy of the Production Infrastructure Domain).
Training Infrastructure Domain (Non-Production)	One (1) Training Infrastructure Domain (Non-Production) available in accordance with the Implementation Services and Exhibit A.25.1 (Project Work Plan) and continuing through the Support Term (this Infrastructure Domain utilizes a reference Data copy of the appropriate source Infrastructure Domain, and does not include a full copy of the Production Infrastructure Domain).
Mock Infrastructure Domain (Non-Production)	One (1) Mock Infrastructure Domain (Non-Production) to support the implementation of Mock Upgrades available in accordance with the Implementation Services and Exhibit A.25.1 (Project Work Plan) and continuing through the Support Term (this Infrastructure Domain utilizes a reference Data copy of the Production Infrastructure Domain, and does not include a full copy of the Production Infrastructure Domain).

Exhibit C.1 (Optional Work)

to the

Electronic Health Records System and Services Agreement

EXHIBIT C.1

OPTIONAL WORK

This Exhibit C.1 (Optional Work) is an attachment and addition to the Electronic Health Records System and Services Agreement dated December 21, 2012 (the "**Agreement**") entered into by and between the County of Los Angeles ("**County**") and Cerner Corporation ("**Contractor**") and is incorporated into the Agreement by reference hereof. This Exhibit C.1 (Optional Work) sets forth the Optional Work, including New Software and Professional Services, provided by Contractor in accordance with the Agreement. Unless specifically defined in this Exhibit, capitalized terms shall have the meanings set forth in the Agreement.

All pricing below is valid for five (5) Contract Years from the Effective Date, excluding Contractor's Cardiology option described below (the valid timeframe for this option is set forth below).

1. ETREBY HOSTING SERVICES (APPLICABLE TO THE ETREBY SOFTWARE ACQUIRED BY THE COUNTY UNDER A SEPARATE AGREEMENT BETWEEN COUNTY, CONTRACTOR, AND/OR A THIRD-PARTY)

Scope of Use Metric	Scope of Use Limit	One Time Fee	Monthly Recurring Fees
Etreby Users	215 Peak Concurrent Users of Etreby	$56,800	$28,400
Pharmacy Orders	4,000,000 per Contract Year		

"**Peak Concurrent Users of Etreby**" shall have same meaning as Peak Concurrent Users as defined in Section 2.2.3 (Concurrent User Definitions) of Exhibit C (Fees; Contractor Professional Services Rates), except the measurement is taken separately of users of the Etreby application only, and references to "Hosting Services" in the definition shall be deemed to refer to "Etreby."

2. EXPANSION FEES FOR ETREBY HOSTING SERVICES

Etreby Use Metric	Additional Use Metric	One Time Fee	Additional Recurring Monthly Fee
Peak Concurrent Users of Etreby	10 Peak Concurrent Users of Etreby	$1,200	$600
Etreby Pharmacy Orders (per Month)	10,000 Pharmacy Orders per Month	$1,000	$500

NOTE: If applicable, this does not include any migration Services fees which may be necessary to transition from a client-hosted environment to Contractor's Hosting Services.

3. EXPANSION FEES FOR CAREAWARE IBUS BEDSIDE MEDICAL DEVICE CONNECTIVITY

Product Description	Additional Use Metric	One Time Fees	Additional Recurring Monthly Fee
Cerner Connectivity Engine	One Additional **room** needing in-room equipment beyond the initial scope	$1,064	$4
Device Adapter	One additional **bedside medical device** needing to be connected to a Cerner Connectivity Engine	$244	$2

4. LIGHTHOUSE SOLUTIONS

County can select up to one (1) optional Lighthouse Continuous Quality Improvement solution Licensed Software (each a "**Lighthouse Offering**") per Contract Year. Once selected, each Lighthouse Offering shall remain available for use by County through the Support Term (e.g., the acquisition of Lighthouse Offering will accumulate over the Support Term.) The cost of each selected Lighthouse Offerings is shown in the table below; except for Hosting Services fees, the fees for multiple Lighthouse Offerings are additive.

Fee Components	Fee
Annual Lighthouse Fee per Lighthouse Offering	$ 45,009
Lighthouse Implementation Services per Lighthouse Offering	$ 154,500
Travel Costs per Lighthouse Offering	$ 27,870
Remote Hosting Annual Fees	$ 18,000
▪ Assumes start date not sooner than the Productive Use of the First Cluster. ▪ Assumes not more than one (1) Lighthouse Offerings implementation per Contract Year, and no more than a total of eight (8) Lighthouse Offerings. ▪ Hosting Services fees do not increase over Eighteen Thousand Dollars ($18,000) annually for additional Lighthouse Offerings.	

5. ENTERPRISE DATA WAREHOUSE*:

One time cost:	$678,604
First 5 Contract Years Ongoing Costs:	$2,015,544
Each Contract Year 6 thru 15:	$403,109
15 YEAR TOTAL:	**$6,725,238**

Travel Costs: **$24,000**

*Includes Hosting Services and Implementation Services. No data conversion Services are included.

6. CLINICAL EXCHANGE PLATFORM (HIE, REPLACEMENT OF LANES):

Product Description	Number of Use Unit Increment(s)	One Time Fee	Monthly Recurring Fees
Use of the entire Clinical Exchange Platform	1	$210,000	$12,000

Note:
This is the base fee for setting up the Clinical Exchange Platform Services and Licensed Software. Adding additional organizations does not change this cost.
Clinical Exchange Platform Services and Licensed Software are delivered remotely through the Contractor's Hosting Services.

A. CLINICAL EXCHANGE PLATFORM – DHS CONNECTION

Product Description	Additional Use Metric	One Time Fee	Monthly Recurring Fees
Admissions + Outpatient Visits: Sum of the annual admissions plus the annual outpatient visits, whereas an outpatient visit is defined as a visit by a patient who either receives ambulatory services or is lodged in the hospital less than 24 hours while receiving medical, dental or other services.	2,775,000	$0	$37,268
EXPANSION to other hospitals/clinics. This cost would be borne by the participating HIE hospital or clinic added and be based upon admission and outpatient visits for the added facility. The pricing listed is for comparison purposes and could vary.	277,500		$3,729

B. CLINICAL EXCHANGE PLATFORM – COMMUNITY PHYSICIAN CONNECTION

Scope of Use Metric	Scope of Use Limit	One Time Fee	Monthly Recurring Fees
Provider - A health professional that is legally able to write prescriptions - physicians (M.D., D.O.), physician's assistants, or other advanced practitioners.	100	$0	$1,000
EXPANSION to additional physicians	10		$100

Professional Services: $12,500
Travel Costs: $ 5,000

7. DOCUMENT IMAGING DATA CONVERSION FEES:

Contractor would convert County's existing document images into Contractor's ProVision Document Imaging Licensed Software for a cost of $.005 cents per image, with a minimum of 2 million images.

Depending upon the scope of the historical upload, additional Professional Services will be required.

8. END USER TRAINING AND TRAVEL:

Description	Number of Trainers	Weeks	Fixed Fee
Costs for trainers to perform training for all End Users at all Clusters	1003	18	$4,814,400
Fixed fee travel expenses for six (6) day, five (5) night trips	1003	18	$1,810,315

9. CARDIOLOGY:

	One-Time Fees	Recurring Yearly Costs
Hemodynamics		
SLSW & Hardware-Merge	$773,200.00	$70,333.33
Implementation	$88,722.22	
Travel	$25,000.00	

NOTE: If County decides to not purchase Merge Hemodynamics, the discreet data will not flow from the non-Merge Hemo system to Merge Cardiovascular system or the Structured Reporting module. Only a PDF report from the non-Merge Hemo system will be stored to Millennium. This will result in a cumbersome and undesirable workflow for the Cardiologists and will not keep the record whole in the EHR System.		
Cardiovascular		
Cerner LSW	$291,150.00	$52,407.12
SLSW & Hardware	$3,596,506.48	$146,666.67
Implementation	$1,409,306.66	
Hosting Services fees	$120,000.00	$540,000.00
Travel	$525,000.00	
NOTE: Pricing is guaranteed for 2 years from the Effective Date.		

Cardiovascular data migration is included for Cath, Echo and Vascular studies.

Quote assumes use of existing ECG carts. New DICOM ECG carts are $13,000 each.

Exhibit E (Service Levels and Performance Standards)

to the

Electronic Health Records System and Services Agreement

EXHIBIT E

SERVICE LEVELS AND PERFORMANCE STANDARDS

This Exhibit E (Service Levels And Performance Standards) is an attachment and addition to the Electronic Health Records System and Services Agreement dated December 21, 2012 (the "**Agreement**") entered into by and between the County of Los Angeles ("**County**") and Cerner Corporation ("**Contractor**") and is incorporated into the Agreement by reference hereof. This Exhibit describes the Service Levels to be achieved by Contractor regarding the Licensed Software and Hosting Services. Except as provided in this Exhibit, capitalized terms shall have the meanings set forth in the body of the Agreement.

1. HOSTING OBLIGATIONS

1.1 GENERAL REQUIREMENTS

In addition to the other obligations set forth in the Agreement and this Exhibit, Contractor shall do the following:

- Operate the Hosting Services on Servers owned and maintained by Contractor or the Hosting Provider on a 24x7x365 basis. "**Server**" shall mean the server(s) on which the Hosting Services will be hosted.

- Allow access to the Hosting Services over a dedicated network connection from the Hosting Environment facilities on a 24x7x365 basis and provide secure and confidential storage of all information transmitted to and from the Hosting Services. Contractor provides redundancy at all necessary infrastructure points including: redundant clustered firewalls with redundant private network connections, running industry standard secure inspection, and analysis software.

- Supply hardware, security protocols, software and communications support structure to facilitate connection to the Contractor private network in accordance with the requirements set forth herein.

- Maintain back-up Servers, at Contractor Secondary Data Center, in a geographically different site from where the Servers at Contractor Primary Data Center are located. Back-up Servers are available through a contracted Disaster Recovery service; otherwise, data only is back-up in accordance with Exhibit CC (Enterprise Back-up Policy) and stored at the Contractor Secondary Data Center.

- Review security notifications and alerts relevant to the Hosting Environment (e.g., Contractor notifications of bugs, attacks, patches), and apply as appropriate to maintain the highest level of defense.

- Contractor shall provide adequate firewall protection in order to secure Personal Data and other Confidential Information of County and users of the Hosting Services from unauthorized access by third-parties.

1.2 HOSTING PROVIDER

Contractor shall ensure the Hosting Provider complies with the terms of the Agreement, including the requirements of Exhibit N.1 (Hosting Services) and this Exhibit E (Service Levels and Performance Standards). Contractor shall be jointly and severally liable for any breach by Hosting Provider of the Agreement, including the requirements of this Exhibit E (Service Levels and Performance Standards) and Exhibit N.1 (Hosting Services). As of the Effective Date, "**Hosting Provider**" shall be Contractor.

1.3 CHANGE OF HOSTING PROVIDER

In the event that, during the term of the Agreement, Contractor desires to transition to a new Hosting Provider, Contractor shall provide County with at least sixty (60) calendar days prior notice of the transition. Contractor shall reasonably cooperate with County in evaluating the security and performance of the proposed hosting service. County shall have thirty (30) calendar days from receipt of notice of the transition to reasonably object to the proposed new Hosting Provider. In the event of such objection, the Parties shall negotiate in good faith regarding alternate Hosting Providers. If the Parties are unable to reach agreement within thirty (30) calendar days of receipt by Contractor of the objection, County may elect to terminate this Agreement without further obligation.

2. SERVICE MONITORING AND MANAGEMENT

Contractor will perform continuous monitoring and management of the Hosting Services to optimize Availability of the Licensed Software and Hosting Services for the production Hosting Environment. All other Hosting Environments will be continuously monitored and managed from 9:00 a.m. to 5:00 p.m. Central Time, Monday through Friday. Included within the scope of this Section 2 (Service Monitoring and Management) is the proactive monitoring of the Servers and all service components of Contractor's production Hosting Environment and firewall for trouble on a seven (7) day by twenty-four (24) hour basis, and the expedient restoration of components when failures occur within the time period set forth in Section 7 (Service Outages). Contractor shall provide County the ability to view the Licensed Software and Hosting Services network connectivity and key performance metrics through a system administration portal provided by Contractor. Contractor will monitor and manage the Hosting Environment using its own tools, methodologies, and specifications and notify County of any issue impacting EHR System performance. Contractor shall maintain redundancy in all key components such that Outages are less likely to occur due to individual component failures. Contractor will monitor "heartbeat" signals of all servers, routers, and leased lines, and HTTP availability of the Licensed Software and Hosting Services, by proactive probing at thirty (30) second intervals twenty-four (24) hours a day using an automated tool. If a facility does not respond to a ping-like stimulus, it shall be immediately checked again. When Contractor receives a "down" signal, or otherwise has knowledge of an Outage or Error (including, without limitation, any failure in the Server or application software and/or hardware used to provide the Service), Contractor personnel will:

- Confirm (or disconfirm) the Outage by a direct check of the facility;

- If confirmed, take such action as may restore the service, or, if determined to be an internet service provider or telecom carrier problem, open a trouble ticket with the relevant companies;

- Notify County by telephone or pager according to mutually agreed upon procedures that an Outage has occurred, providing such details as may be available, including the Contractor trouble ticket number, if appropriate, and time of Outage;

- Work each Error until Resolution, escalating to management or to engineering as required; and

- Notify County of final Resolution, along with any pertinent findings or action taken, and request concurrence to close the trouble ticket.

3. BACKUPS

3.1 REGULAR BACK-UPS

Contractor shall provide for both the regular back-up of standard file systems relating to the Server, Licensed Software, and Hosting Services, and the timely restoral of such data on request by County due to a site failure. In particular, Contractor shall:

- Perform weekly full back-ups;

- Perform daily incremental back-ups;

- Send back-up media to secured, off-site storage facilities with a thirty (30) calendar day rotation of media;

- Fulfill restoral requests as directed by County due to site failures. Restoral will be performed in accordance with this Exhibit E (Service Levels and Performance Standards); and

- Periodically review and validate Contractor's backup and recovery procedures, and periodically validate the accuracy and integrity of the backup data. Upon County's request, Contractor will validate that the back-ups of County Data are free from inaccuracies and inconsistencies.

3.2 DATA REPLICATION ACROSS DATA CENTERS

County Data shall be stored on redundant applications and database hardware in Contractor's Primary Data Center and replicated to Contractor's Secondary Data Center in accordance with Exhibit CC (Enterprise Back-up Policy). Data security shall be provided by SSL encryption, IPsec encryption, multiple levels of virus protection, intrusion prevention systems, multi-factor management authentication, enterprise firewalls, and filtering routers. Hosting Environment shall provide redundancy at all tiers of the environment, redundant clustered firewalls with redundant Internet connections, running industry standard secure inspection, and analysis software. Contractor shall utilize methods to minimize data loss due to environmental failures or catastrophic disk failures, and in no event shall there be data loss in excess of twenty-four (24)

hours. Contractor shall utilize tools to securely optimize data back-ups. In the event of a significant Primary Data Center failure, a failover to the Contractor's Secondary Data Center shall be completed. A restoration to the Primary Data Center shall occur at a mutually agreeable time between the Contractor and County.

4. SERVICE LEVELS

4.1 SERVICE REQUEST TRACKING SYSTEM

(a) For use in responding to County's maintenance and Support Requests, Contractor shall maintain an automated Support Request Tracking System ("**SRTS**") with a description of each Support Request, response, and status. Contractor shall regularly review and update all open Support Requests and follow up on unresolved Support Requests. Contractor will provide County "read only" access to the SRTS for County's separate review of all open and closed County Support Requests. Each Support Request shall be detailed in an Internet accessible Support Request report, in an exportable format agreed upon by County, and shall include the following information.

- Identification Number. An automatically assigned unique identification number, which shall be used to track, document and respond to inquiries relating to a specific Support Request;
- Date and Time. The date and time the Support Request was initiated, which shall be used to document and/or monitor overall response and resolution time;
- Person Initiating Service Request. The name, title, and telephone number of the person initiating the Support Request, who shall be the primary point of contact used for inquiries regarding the request, unless otherwise assigned by the County Project Manager;
- Call Taker. The name of Contractor personnel taking the call or first receiving an electronically submitted Support Request;
- Contractor Employee Currently Assigned. The name and title of the Contractor's employee currently managing the resolution;
- Location. Facility and/or physical location where the problem occurred;
- Problem Priority Level. The problem priority level as indicated by the reporting County personnel and as further defined in Section 4.2 (Support Request Service Levels) of this Exhibit E (Service Levels and Performance Standards);
- Reference Number. The County-assigned reference number, if applicable;
- Service Request Description. A detailed description of the problem or deficiency encountered or Support Requested;

- Attached Documentation. The identification or description of, and, if available, copies of, documentation submitted by County with the Support Request to clarify the request, including screen prints, logs, report samples, etc.;

- Service Request Type. The Support Request type (e.g., software change, deficiency, report request), as assigned by County which categorizes and specifies the type of request;

- Service Request Subtype. The Support Request subtype (e.g., specific function to be changed, specific function that is deficient, type of report change requested), as assigned by County, as a subcategory of the Support Request type defined in Section 4.2(a) (Support Requests) of this Exhibit E (Service Levels and Performance Standards);

- Resolution Description. The Contractor's analysis of the problem, and the proposed resolution (e.g., Update or other Enhancement);

- Resolution Activity. The Contractor's resolution activities and activity dates to monitor resolution time (e.g., description of calls to and from Contractor and County, referrals to Contractor's staff for correction or investigation, referrals to Third Party Software vendor, coordination of Update or Enhancement releases, validation of correction prior to release to County, etc.);

- Estimated Fix Date. The estimated date for Contractor to complete the Support Request;

- Correction Applied Date. The date Contractor applied the correction; and

- Resolution Status. The current status of the Support Request (e.g., open or closed).

(b) Contractor shall maintain a historical knowledge base of Service-related problems to identify patterns and facilitate timely resolution

4.2 SUPPORT REQUEST SERVICE LEVELS

Contractor shall Respond to and Resolve Support Requests as set forth below.

(a) Support Requests. County shall classify its requests for Error Corrections consistent with the descriptions below. Each such request shall be referred to herein as a "**Support Request**." County shall notify Contractor of Support Requests via telephone number, web-based SRTS, or other Contractor-provided mechanisms. All Contractor technical support personnel providing telephone support must do so in a manner such that the communication does not diminish County's ability to effectively utilize the Licensed Software and Hosting Services or negatively impact the satisfaction of the users with the Licensed Software and Hosting Services. Such impacts could arise from technology issues such as delays or jitter in telecommunication lines, or the failure of the Contractor

technical support personnel to provide support in standard American English with understandable accents or otherwise demonstrate sufficient language skills.

Support Request Classification	Description
Critical	Issue affecting entire system or single critical production function; System down or operating in materially degraded state; Potential patient care affected; Data integrity at risk; Material financial impact; Declared a Critical Support Request by the DHS CIO or designee; and/or Widespread access interruptions.
High	Primary workflow module failure that materially impairs system performance; and/or Data entry or access is materially impaired on a limited basis.
Medium	System is operating with minor issues that can be addressed with a work around.
Low	Request for assistance, information, or services that are routine in nature.

(b) Response Time Service Level. Response time shall be measured from the time when Contractor receives the Support Request until the time Contractor has Responded to the Support Request. "**Respond**" means that Contractor has engaged on the Support Request; is working continuously to diagnose the corresponding Errors, formulate a plan to address any such Errors, and execute that plan; and has notified the County user originating the Support Request that such support has begun in the manner requested by the user originating the Support Request (e.g., e-mail, phone) or, if a specific means of communication is not requested, using direct interactive (person to person) method of communication to achieve contact with such user (e.g., no email or automated voicemail).

Support Request Classification	Service Level Metric (Response Time)	Service Level Credits
Critical	100% fifteen (15) minutes measured from the time when Contractor receives the Support Request by telephone from County	Ten Thousand Dollars ($10,000.00) per incident either resulting in or subsequent to a Service Level Failure in a month
High	100% thirty (30) minutes measured	Five Thousand ($5,000.00) per incident either resulting in or subsequent to a

	from the time when Contractor receives the Support Request by telephone from County	Service Level Failure in a month

(c) Resolution Time Service Level. Resolution time shall be measured from the time when Contractor receives the Support Request until the time Contractor has Resolved the Support Request. "**Resolve**" means that, as to Errors, Contractor has provided County the corresponding Error Correction and County has confirmed such Error Correction.

The measurement of time to Resolve shall be suspended during such time as there is a failure by County to provide Contractor information deemed in writing by the Parties to be a Critical Path Item to the resolution at issue at the time of the Contractor request for such information was made to County. For purposes of this Section 4.2(c) (Resolution Time Service Level), a "**Critical Path Item**" is a significant action or item of information which Contractor cannot take or obtain without County's assistance and on which subsequent activities toward the resolution at issue are dependent. In the event Contractor claims a suspension of the measurement of time to Resolve under this Section, it shall notify County, by posting in SRTS the time and reason for such action at the time the suspension determination is made. The suspension of measurement of time to Resolve shall end upon communication by County to Contractor that the Critical Path Item has been completed.

The measurement of time to Resolve Support Requests requiring a change to the Licensed Software (e.g., Revision) will be calculated from the time the request is "opened" in SRTS until the time the request is identified as needing a change to the Licensed Software, provided Contractor has delivered a work-around that has been Approved by County prior to the suspension of the measurement of the time to Resolve.

Support Request Classification	Service Level Metric (Resolution Time)	Service Level Credits
Critical	100% four (4) hours	Ten Thousand ($10,000.00) per incident either resulting in or subsequent to a Service Level Failure in a month
High	100% eight (8) hours	Five Thousand ($5,000.00) per incident either resulting in or subsequent to a Service Level Failure in a month
Medium	95% three (3) business days	Two Thousand Five Hundred ($2,500.00) per incident either resulting in or subsequent to a Service Level Failure in a month
Low	95% five (5) business days	One Thousand ($1,000.00) per incident either resulting in or subsequent to a Service Level Failure in a month

Notwithstanding the foregoing, as to Third-Party Products, the measurement of time to Resolve shall be suspended during such times as Contractor can demonstrate that the: (i) the resolution of the Support Request required correction of an Error in a Third-Party Product; and (ii) the supplier of the Third-Party Product failed to meet the time specified in writing by Contractor for completion of correction of the Error in the Third-Party Product. In any circumstance in which suspension of the time to Resolve is requested under this Section 4.2(c) (Resolution Time Service Level), Contractor must provide a Corrective Action Plan. The determination of whether suspension of the measurement of time to Resolve relating to Third-Party Products is appropriate will be made by the Parties within thirty (30) days of a Resolution Time Service Level Failure attributed by Contractor a Third-Party Product as provided in this paragraph.

(d) Escalation. With respect to any Critical Support Request, until Resolved, Contractor shall escalate that Support Request within sixty (60) minutes of receipt to the appropriate Contractor support personnel (as designated by Contractor), including, as applicable, Contractor's SVP of Client Operations.

4.3 AVAILABILITY SERVICE LEVEL

The Licensed Software and Hosting Services shall be Available for the percentage of the time each month of the Term of the Agreement as set forth below

Service Level Metric	Service Level Credits
At a minimum, Proprietary and Confidential Availability for the Licensed Software provided by the Hosting Services in each calendar month of the Term of the Agreement. "**Availability**" means the actual uptime expressed as a percentage of the Scheduled Uptime for the Licensed Software and Hosting Services (i.e., Availability % = ((Scheduled Uptime – Downtime)/(Scheduled Uptime)) x 100%). "**Scheduled Uptime**" means twenty-four (24) hours each day, seven (7) days per week, excluding regular maintenance windows between the hours of 1:00 a.m. and 5:00 a.m. Pacific Time on Sundays, or as otherwise agreed in writing by the Parties. Notwithstanding anything herein, Contractor shall ensure that the Licensed Software and Hosting Services remain Available for Use during the foregoing maintenance windows to the extent reasonably practicable.	In the event Proprietary and Confidential Availability for the Hosting Services is not achieved, then the credits shall be incurred as follows: 5% of monthly Hosting Services fees for the first (1st) month, and 10% of monthly Hosting Services fees for the second (2nd) consecutive month, and 15% of monthly Hosting Services fees for the third (3rd) consecutive month and each consecutive month thereafter.

"**Downtime**" means the aggregate duration of Outages for the Licensed Software and Hosting Services during the applicable Scheduled Uptime during a calendar month. "**Outage**" means any time during which the Licensed Software and Hosting Services (or any function of the Licensed Software or Hosting Services) are not Available for Use during a calendar month, measured from the time the Outage actually occurred or, when the time the Outage actually occurred cannot be determined, from the earliest point in time that such Outage is or reasonably should be detected by Contractor. An Outage is an Error. The Outage shall end when the Licensed Software or Hosting Services (or the applicable function of the Licensed Software or Hosting Service) is Available for Use. "**Unplanned Downtime**" shall mean an Outage that is not the result of a regularly scheduled or other scheduled maintenance window. "**Available For Use**" shall mean the ability of the Licensed Software and Hosting Services to be utilized or accessed by County as contemplated under the Agreement, including conformance to the Specifications, and without material degradation of performance.	

4.4 [INTENTIONALLY DELETED]

4.5 LICENSED SOFTWARE RESPONSE TIMES

The Parties acknowledge that the quality of the Licensed Software Response Time of the Licensed Software and Hosting Services is a critical factor to the successful operation of the EHR System and County User satisfaction. Contractor warrants that the Licensed Software and Hosting Services together will be provided with function response times that are satisfactory to County Users of the EHR System. Licensed Software Response Time shall be determined to be unsatisfactory to the County Users if the County Project Director (or his or her designee) (a) presents documentation that reflects a negative view of the operation of the Licensed Software and Hosting Services that is or can reasonably be attributed to Licensed Software Response Time issues; or (b) determines that County Users' acceptance and/or use of the EHR System is or is highly likely to be adversely impacted by Licensed Software Response Times.

Upon notification of failure, Contractor shall provide a root cause analysis that includes an assessment of actions required to correct the Licensed Software Response Time failure, and take the actions necessary to implement the corrective actions as they relate to the Licensed Software or Hosting Services.

Contractor will provide Licensed Software and Hosting Services response time measurement reports as requested by County. In addition, Contractor will make available to County tools to enable County to monitor back-end system performance, including response time.

4.6 REPORTING SERVICE LEVEL

Contractor shall be responsible for measuring and monitoring Service Level performance and shall provide County with monthly reports showing Service Level performance during the reporting period at a level of detail sufficient to verify Contractor's compliance with the applicable Service Levels. All monthly reports due under this Agreement are due on the tenth (10^{th}) Business Day of the month following the month for which such report relates; provided, however, that if the tenth (10^{th}) is a weekend or County holiday, such reports shall be due on the first (1^{st}) County Business Day thereafter. The reporting Service Level is set forth below.

Service Level Metric	Service Level Credits
All monthly reports submitted on or before tenth (10^{th}) Business Day of each month	Five Thousand ($5,000.00) for the initial Service Level Failure, and Five Hundred ($500.00) for each additional Business Day late thereafter

4.7 DATA RETURN SERVICE LEVEL

Contractor shall return all County Data in accordance with the requirements of this Agreement not later than thirty (30) calendar days after County's request, or as otherwise agreed to in writing by the Parties. Contractor shall provide access to such County Data by a secure FTP site or provide a copy of County Data in a mutually agreed upon, commercially standard format.

Service Level Metric	Service Level Credits
All County Data returned within thirty (30) calendar days after County's request, or as otherwise agreed to in writing by the Parties	Ten Thousand ($10,000) per calendar day late

4.8 SERVICE LEVEL AUDITS

County or its designee will have the right to audit Contractor's measurement, monitoring, and reporting on all Service Levels, including providing County with access to the complete data used by Contractor to calculate its performance against the Service Levels and the measurement and monitoring procedures utilized by Contractor to generate such data for purposes of audit and verification.

4.9 MEETINGS

Contractor and County shall meet at least once a week, pending availability of both Parties, to review the status of open Support Requests, and discuss trends and issues relating to Support Requests and approaches to reducing the number of Support Requests as well as improving both County and Contractor responses to such Support Requests.

4.10 ADDITIONS, DELETIONS, AND MODIFICATIONS OF SERVICE LEVELS

Beginning in the Contract Year that is six (6) months after the Productive Use of the final Cluster and every three (3) years thereafter, unless otherwise agreed in writing by the Parties, the Parties will meet to discuss the addition, modification, or deletion of the Service Levels to account primarily for changes in technology and ongoing performance related issues. Any changes to Service Levels must be made in accordance with this Agreement.

Service Levels shall be added in accordance with the following:

(a) Where data exists for at least six (6) months from which measurements can be derived, County and Contractor shall review the measurement trends and the levels of quality that were attained during the measurement period and shall work together in good faith to mutually agree, and to establish the Service Level standard that Contractor will be required to meet; or

(b) Where no such data exists, the Parties shall attempt in good faith to mutually agree on a Service Level standard using industry standard measures applicable to the delivery of technology to health care providers or third-party vendor advisory services with experience in the health care industry.

5. SERVICE LEVEL FAILURES AND SERVICE LEVEL CREDITS

5.1 SERVICE LEVEL FAILURES

Failure to achieve any of the Service Levels described in Section 4 (Service Levels) of this Exhibit shall constitute a "**Service Level Failure**" and Contractor shall be liable for the Service Level Credits in the amounts set forth in Section 4 (Service Levels). Contractor shall not be responsible for any Service Level Failure caused by County or its agents. Contractor shall promptly notify County of any Service Level Failure.

5.2 SERVICE LEVEL CREDITS

(a) Credits. Upon the occurrence of any Service Level Failure, Contractor shall issue to County a credit in the amount set forth in Section 4 (Service Levels) ("**Service Level Credit**"). If more than one (1) Service Level Failure has occurred in a single month, the sum of the corresponding Service Level Credits shall be credited to County.

The total amount of Service Level Credits that Contractor will be obligated to pay to County, with respect to Service Level Failure(s), shall be reflected on the monthly

Service Level report to be provided in accordance with Section 4.6 (Reporting Service Level), in the month following the Service Level Failure(s) giving rise to such Service Level Credit(s). The Service Level Credit(s) amounts shall be subject to the earnback in any Contract Year as provided in Section 5.2(b) (Earnback) below. Notwithstanding the foregoing, the calculation of such Service Level Credit(s) shall be based on the credit amounts in effect.

(b) Earnback. Within thirty (30) calendar days after the last day of each Contract Year, Contractor shall provide a report (the "**Annual Service Level Performance Report**") to County that will include, with respect to each Service Level, a summary of Service Level performance by Service Level by month; identify by Service Level of any Service Level Credits accrued; and identify any Service Level changes and/or performance improvement actions taken. Service Level performance will also be reported by Contractor to County on a monthly basis as provided in Section 4.6 (Reporting Service Level).

If County verifies that during the preceding Contract Year:

(1) as to Service Levels that do not require "100% compliance" or delivery "all," or "every" time; Contractor achieved a yearly performance average in that Service Level that was greater than, or equal to, the Service Level in effect for such Service Level during the preceding Contract Year; or

(2) as to Service Levels that require "100% compliance" or delivery "all," or "every" time; Contractor has not had a Service Level Failure in two (2) or more months within the preceding Contract Year; then

Contractor shall be relieved from paying Service Level Credits accrued during the preceding Contract Year for the Service Level Failures for the specific Service Level(s) that meet the criteria in category (1) and/or (2), above, as applicable.

For each Contract Year, any Service Level Credits that are not earned back by Contractor as provided above will be credited to County on the second monthly invoice of each Contract Year. If no further monthly invoices are to be produced, Contractor will pay to County the monetary amount of the remaining Service Level Credits within fifteen (15) calendar days after the last day of the Term of the Agreement.

5.3 [INTENTIONALLY DELETED]

6. CORRECTIVE ACTION PLAN

In the event two (2) or more Critical Support Requests occur in any thirty (30) calendar day period during the Term of the Agreement, Contractor shall promptly investigate the root causes of such support issues and shall provide to County within five (5) Business Days of the occurrence of the second Critical Support Request an analysis of such root causes and a proposed corrective action plan for County's review, comment, and approval (the "**Corrective Action Plan**"). The Corrective Action Plan shall include, at a minimum: (a) a commitment by

Contractor to devote the appropriate time, skilled Contractor Personnel, systems support and equipment, and/or resources to remedy, and prevent any further occurrences of Critical Support Request issues; and (b) time frames for implementation of the Corrective Action Plan. There shall be no additional charge (other than those fees set forth in the Agreement) for Contractor's implementation of such Corrective Action Plan in the time frames and manner set forth in the Corrective Action Plan.

7. SERVICE OUTAGES

7.1 SCHEDULED OUTAGES

Contractor shall notify County of Scheduled Outages at least twenty-four (24) hours in advance, and such Scheduled Outages shall be scheduled between the hours of 1:00 a.m. and 5:00 a.m. Pacific Time on Sundays. Contractor requested Scheduled Outages shall occur no more frequently than once per calendar month. For avoidance of doubt, Scheduled Outages that fall within the above maintenance window timeframes are excluded from the Availability calculation. Contractor may request extensions of Scheduled Outages beyond the aforementioned hours and with Approval by County, which may not be unreasonably withheld or delayed.

7.2 UNSCHEDULED OUTAGES

Unscheduled Outages are caused by loss of connectivity, or by failure of a Contractor Service. In cases where a destination is not available, or unacceptable Hosting Service is reported, Contractor will attempt to determine the source of the Error and report its findings to County.

Unscheduled Outages and extensions of Scheduled Outages as described in Section 7.1 (Scheduled Outages), above, are not excluded from the Availability Service Level set forth above (i.e., an Outage, regardless of its cause, except due to the actions of County and its agents, shall not relieve Contractor of its obligation to achieve the Service Levels set forth herein).

7.3 CORRECTIVE ACTION

Immediately upon notice of an Outage, Contractor personnel shall:

- Confirm (or disconfirm) the Outage by a direct check of the facility;
- If confirmed, take such action as may restore the Service, or, if determined to be a telecommunications company problem, open a trouble ticket with the telecommunications company carrier;
- Notify the person designated by County by telephone or voicemail according to predefined procedures that an Outage has occurred, providing such details as may be available, including the trouble ticket number if appropriate and time of Outage;
- Work the Error until Resolution, escalating to management or to engineering as required; and

- Promptly notify County of final Resolution, along with any pertinent findings or action taken.

8. SECURITY BREACHES

In the event of an attack or threatened or suspected breach of security against the Hosting Services and/or Server impacting County system, Contractor will take whatever reasonable steps are necessary to halt such action, including taking the Hosting Services down. Upon identification of a security incident, Contractor will immediately contact the person designated by County to discuss the security incident. However, if time is critical, action may be required before the contact can be reached. Contractor's actions will include, as appropriate:

- Confirm the threat;
- Deny access from the source of the attack;
- Investigate the extent of the damage, if any;
- Back-up the affected systems and those suspected to be affected;
- Strengthen defenses everywhere, not just the suspected path that the attacker used;
- Contact the ISP where the threat or attack originated and/or law enforcement to work with Contractor's security team;
- Produce an Error report within twenty-four (24) hours detailing Contractor's findings; and
- Re-instate the denial of access after a set time period, but continue to monitor traffic from that source until risk of further attacks is deemed to be minimized.

Exhibit F (Business Associate Agreement)

to the

Electronic Health Records System and Services Agreement

TABLE OF CONTENTS

EXHIBIT F

BUSINESS ASSOCIATE AGREEMENT

Pursuant to the Electronic Health Records System and Services Agreement by and between the County of Los Angeles ("**Covered Entity**" or "**County**") and Cerner Corporation ("**Business Associate**" or "**Contractor**"), dated December 21, 2012, together with all Exhibits, Attachments, and Schedules thereto as may be amended from time to time ("**Agreement**"), Business Associate provides services ("**Services**") to Covered Entity and, in order to provide those Services, receives, has access to or creates Protected Health Information.

Covered Entity is subject to the Administrative Simplification requirements of the Health Insurance Portability and Accountability Act of 1996, Public Law 104-191 ("**HIPAA**"), and regulations promulgated thereunder, including the Standards for Privacy of Individually Identifiable Health Information ("**Privacy Regulations**") and the Health Insurance Reform: Security Standards ("**Security Regulations**") at 45 Code of Federal Regulations (C.F.R.) Parts 160 and 164 (together "**Privacy and Security Regulations**"). The Privacy and Security Regulations require Covered Entity to enter into a contract with Business Associate ("**Business Associate Agreement**") in order to mandate certain protections for the privacy and security of Protected Health Information, and those Regulations prohibit the disclosure to or use of Protected Health Information by Business Associate if such a contract is not in place;

Further, pursuant to the Health Information Technology for Economic and Clinical Health Act, Public Law 111-005 ("**HITECH Act**"), effective February 17, 2010, certain provisions of the HIPAA Privacy and Security Regulations apply to Business Associates in the same manner as they apply to Covered Entity, and such provisions must be incorporated into the Business Associate Agreement.

This Business Associate Agreement and the following provisions are intended to protect the privacy and provide for the security of Protected Health Information disclosed to or used by Business Associate in compliance with HIPAA's Privacy and Security Regulations and the HITECH Act, as they now exist or may hereafter be amended.

Therefore, the parties agree as follows:

1. **DEFINITIONS**

1.1 **"Breach"** has the same meaning as the term "breach" in 45 C.F.R. § 164.402.

1.2 "**Disclose**" and "**Disclosure**" mean, with respect to Protected Health Information, the release, transfer, provision of access to, or divulging in any other manner of Protected Health Information outside Business Associate's internal operations or to other than its employees.

1.3 "**Electronic Health Record**" has the same meaning as the term "electronic health record" in the HITECH Act, 42 U.S.C. Section 17921. Electronic Health Record means an electronic record of health-related information on an individual that is created, gathered, managed, and consulted by authorized health care clinicians and staff.

1.4 "**Electronic Media**" has the same meaning as the term "electronic media" in 45 C.F.R. §160.103. Electronic Media means (1) Electronic storage media including memory devices in computers (hard drives) and any removable/transportable digital memory medium, such as magnetic tape or disk, optical disk, or digital memory card; or (2) Transmission media used to exchange information already in electronic storage media. Transmission media include, for example, the internet (wide-open), extranet (using internet technology to link a business with information accessible only to collaborating parties), leased lines, dial-up lines, private networks, and the physical movement of removable/transportable electronic storage media. Certain transmissions, including of paper, via facsimile, and of voice, via telephone, are not considered to be transmissions via electronic media, because the information being exchanged did not exist in electronic form before the transmission. The term "Electronic Media" draws no distinction between internal and external data at rest (that is, in storage) as well as during transmission.

1.5 "**Electronic Protected Health Information**" has the same meaning as the term "electronic protected health information" in 45 C.F.R. § 160.103. Electronic Protected Health Information means Protected Health Information that is (i) transmitted by electronic media; or (ii) maintained in electronic media.

1.6 **"Individual**" means the person who is the subject of Protected Health Information and shall include a person who qualifies as a personal representative in accordance with 45 C.F.R. § 164.502(g).

1.7 "**Minimum Necessary**" refers to the minimum necessary standard in 45 C.F.R. § 164.502 (b) as in effect or as amended.

1.8 "**Privacy Rule**" means the Standards for Privacy of Individually Identifiable Health Information at 45 Code of Federal Regulations (C.F.R.) Parts 160 and 164, also referred to as the Privacy Regulations.

1.9 "**Protected Health Information**" and "**PHI**" have the same meaning as the term "protected health information" in 45 C.F.R. § 160.103, limited to the information created or received by Business Associate from or on behalf of Covered Entity. Protected Health Information includes information that (i) relates to the past, present or future physical or mental health or condition of an Individual; the provision of health care to an Individual, or the past, present or future payment for the provision of health care to an Individual; (ii) identifies the Individual (or for which there is a reasonable basis for believing that the information can be used to identify the Individual); and (iii) is received by Business Associate from or on behalf of Covered Entity, or is created by Business Associate, or is made accessible to Business Associate by Covered Entity. Protected Health Information includes Electronic Protected Health Information.

1.10 "**Required By Law**" means a mandate contained in law that compels an entity to make a Use or Disclosure of Protected Health Information and that is enforceable in a court of law. Required By Law includes, but is not limited to, court orders and court-ordered warrants; subpoenas or summons issued by a court, grand jury, a governmental or tribal

inspector general, or any administrative body authorized to require the production of information; a civil or an authorized investigative demand; Medicare conditions of participation with respect to health care providers participating in the program; and statutes or regulations that require the production of information, including statutes or regulations that require such information if payment is sought under a government program providing benefits.

1.11 "**Security Incident**" means the attempted or successful unauthorized access, Use, Disclosure, modification or destruction of information in, or interference with system operations of, an Information System, which contains Electronic Protected Health Information. However, Security Incident does not include attempts to access an Information System when those attempts are not reasonably considered by Business Associate to constitute an actual threat to the Information System.

1.12 "**Security Rule**" means the Security Standards for the Protection of Electronic Protected Health Information also referred to as the Security Regulations at 45 Code of Federal Regulations (C.F.R.) Part 160 and 164.

1.13 "**Services**" has the same meaning as in the Agreement.

1.14 "**Unsecured Protected Health Information**" has the same meaning as the term "unsecured protected health information" in 45 C.F.R. § 164.402.

1.15 "**Use**" or "**Uses**" mean, with respect to Protected Health Information, the sharing, employment, application, utilization, examination or analysis of such Information within Business Associate's internal operations.

Terms used, but not otherwise defined, in this Business Associate Agreement or the Agreement shall have the same meaning as those terms in the Privacy and Security Regulations and the HITECH Act.

2. OBLIGATIONS OF BUSINESS ASSOCIATE

2.1 **Permitted Uses and Disclosures of Protected Health Information**. Business Associate:

2.1(a) shall Use and Disclose Protected Health Information only as necessary to perform the Services, and as provided in Sections 2.4, 2.5, 2.6, 2.7, 2.8, 2.9, 2.10, 4.3 and 5.2 of this Business Associate Agreement;

2.1(b) shall Disclose Protected Health Information to Covered Entity upon request;

2.1(c) may, as necessary for the proper management and administration of its business or to carry out its legal responsibilities:

(i) Use Protected Health Information; and

(ii) Disclose Protected Health Information if the Disclosure is Required by Law, or to its agents and/or subcontractors with respect to which the procedures outlined in Section 5.2 of this Business Associate Agreement have been complied.

Business Associate shall not Use or Disclose Protected Health Information for any other purpose or in any manner that would constitute a violation of the Privacy Regulations or the HITECH Act if so Used or Disclosed by Covered Entity.

2.2 **Prohibited Uses and Disclosures of Protected Health Information**. Business Associate:

2.2(a) shall not Use or Disclose Protected Health Information for fundraising or marketing purposes.

2.2(b) shall not disclose Protected Health Information to a health plan for payment or health care operations purposes if the Individual has requested this special restriction and has paid out of pocket in full for the health care item or service to which the Protected Health Information solely relates.

2.2(c) shall not directly or indirectly receive payment in exchange for Protected Health Information, except with the prior written consent of Covered Entity and as permitted by the HITECH Act. This prohibition shall not affect payment by Covered Entity to Business Associate. Covered Entity shall not provide such written consent except upon express approval of the departmental privacy officer and only to the extent permitted by law, including HIPAA and the HITECH Act.

2.3 **Adequate Safeguards for Protected Health Information**. Business Associate:

2.3(a) shall implement and maintain appropriate safeguards to prevent the Use or Disclosure of Protected Health Information in any manner other than as permitted by this Business Associate Agreement. Business Associate agrees to limit the Use and Disclosure of Protected Health Information to the Minimum Necessary in accordance with the Privacy and Security Regulation's minimum necessary standard as in effect or as amended.

2.3(b) as to Electronic Protected Health Information, shall implement and maintain administrative, physical, and technical safeguards that reasonably and appropriately protect the confidentiality, integrity and availability of Electronic Protected Health Information. Effective February 17, 2010, said safeguards shall be in accordance with 45 C.F.R. §§ 164.308, 164.310, and 164.312 and shall comply with the Security Rule's policies and procedure and documentation requirements.

2.4 **Reporting Non-Permitted Use or Disclosure and Security Incidents and Breaches of Unsecured Protected Health Information**. Business Associate:

2.4(a) shall report to Covered Entity each Use or Disclosure of Protected Health Information that is made by Business Associate, its employees, representatives, agents, subcontractors, or other parties under Business Associate's control with Access to Protected Health Information, but which is not specifically permitted by this Business Associate Agreement or otherwise Required By law.

2.4(b) shall report to Covered Entity each Security Incident of which Business Associate becomes aware.

2.4(c) shall notify Covered Entity of each Breach by Business Associate, its employees, representatives, agents or subcontractors of Unsecured Protected Health Information that is known to Business Associate or, by exercising reasonable diligence, would have been known to Business Associate. Business Associate shall be deemed to have knowledge of a Breach of Unsecured Protected Health Information if the Breach is known, or by exercising reasonable diligence would have been known, to any person, other than the person committing the Breach, who is an employee, officer, or other agent of the Business Associate as determined in accordance with the federal common law of agency.

2.4.1 **Immediate Telephonic Report**. Except as provided in Section 2.4.3, notification shall be made immediately upon discovery of the non-permitted Use or Disclosure of Protected Health Information, Security Incident or Breach of Unsecured Protected Health Information by telephone call to (562) 940-3335.

2.4.2 **Written Report**. Except as provided in Section 2.4.3, the initial telephonic notification shall be followed by written notification made without unreasonable delay and in no event later than three (3) business days from the date of discovery of the non-permitted Use or Disclosure of Protected Health Information, Security Incident, or Breach by the Business Associate to the Chief Privacy Officer at:

Chief Privacy Officer

Kenneth Hahn Hall of Administration

500 West Temple Street

Suite 525

Los Angeles, California 90012

HIPAA@auditor.lacounty.gov

(213) 974-2166

2.4.2(a) The notification required by Section 2.4 shall include, to the extent possible, the identification of each Individual whose Unsecured Protected Health Information has been, or is reasonably believed by the Business Associate to have been, accessed, acquired, Used, or Disclosed; and

2.4.2(b) the notification required by Section 2.4 shall include, to the extent possible, all information required to provide notification to the Individual under 45 C.F.R. § 164.404(c), including:

(i) A brief description of what happened, including the date of the Breach and the date of the discovery of the Breach, if known;

(ii) A description of the types of Unsecured Protected Health Information that were involved in the Breach (such as whether full name, social security number, date of birth, home address, account number, diagnosis, disability code, or other types of information were involved);

(iii) Any other details necessary to conduct an assessment of whether there is a risk of harm to the Individual;

(iv) Any steps Business Associate believes that the Individual could take to protect him or herself from potential harm resulting from the Breach;

(v) A brief description of what Business Associate is doing to investigate the Breach, to mitigate harm to the Individual, and to protect against any further Breaches; and

(vi) The name and contact information for the person most knowledgeable regarding the facts and circumstances of the Breach.;

If Business Associate is not able to provide the information specified in Section 2.4.2 (a) or (b) at the time of the notification required by Section 2.4.2, Business Associate shall provide such information promptly thereafter as such information becomes available.

2.4.3 **Request for Delay by Law Enforcement**. Business Associate may delay the notification required by Section 2.4 if a law enforcement official states to Business Associate that notification would impede a criminal investigation or cause damage to national security. If the law enforcement official's statement is in writing and specifies the time for which a delay is required, Business Associate shall delay notification, notice, or posting for the time period specified by the official; if the statement is made orally, Business Associate shall document the statement, including the identity of the official making the

statement, and delay the notification, notice, or posting temporarily and no longer than 30 days from the date of the oral statement, unless a written statement as described in this section is submitted during that time.

2.5 **Mitigation of Harmful Effect**. Business Associate agrees to mitigate, to the extent practicable, any harmful effect that is known to Business Associate of a Use or Disclosure of Protected Health Information by Business Associate in violation of the requirements of this Business Associate Agreement.

2.6 **Breach Notification**. Business Associate shall reimburse Covered Entity for any and all reasonable costs, to the extent required by law, incurred by Covered Entity providing notification to the individual under 45 C.F.R. 164.404(c) and in compliance with Covered Entity's obligations under Subpart D, Notification in the Case of a Breach of Unsecured Protected Health Information, of the Privacy and Security Regulations, internet posting, and/or media publication, and costs of mitigating the harm (which may include the costs of obtaining credit monitoring services and identity theft insurance) for affected individuals whose Protected Health Information has or may have been compromised as a result of Business Associate's Breach of Unsecured Protected Health Information.

2.7 **Availability of Internal Practices, Books and Records to Government Agencies**. Business Associate agrees to make its internal practices, books and records relating to the Use and Disclosure of Protected Health Information available to the Secretary of the federal Department of Health and Human Services for purposes of determining Covered Entity's compliance with the Privacy and Security Regulations. Business Associate shall immediately notify Covered Entity of any requests made by the Secretary and provide Covered Entity with copies of any documents produced in response to such request.

2.8 **Access to Protected Health Information**. Business Associate shall, to the extent Covered Entity determines that any Protected Health Information constitutes a "designated record set" as defined by 45 C.F.R. § 164.501, make the Protected Health Information specified by Covered Entity available to the Individual(s) identified by Covered Entity as being entitled to access and copy that Protected Health Information. Business Associate shall provide such access for inspection of that Protected Health Information within twenty (20) days after receipt of request from Covered Entity, or such longer time (not to exceed ten (10) additional days) as Covered Entity may authorize in writing. Business Associate shall provide copies of that Protected Health Information within twenty (20) days after receipt of request from Covered Entity, or such longer time (not to exceed ten (10) additional days) as Covered Entity may authorize in writing. If Business Associate maintains an Electronic Health Record, Business Associate shall provide such information in electronic format to enable Covered Entity to fulfill its obligations under the HITECH Act.

2.9 **Accounting of Disclosures**. Business Associate shall, to the extent Covered Entity determines that any Protected Health Information constitutes a "designated record set" as defined by 45 C.F.R. § 164.501, make any amendments to Protected Health Information that are requested by Covered Entity. Business Associate shall make such amendment within twenty (20) days after receipt of request from Covered Entity in

order for Covered Entity to meet the requirements under 45 C.F.R. § 164.526, or such longer time (not to exceed ten (10) additional days) as Covered Entity may authorize in writing.

2.10 **Amendment of Protected Health Information**. Upon Covered Entity's request, Business Associate shall provide to Covered Entity an accounting of each Disclosure of Protected Health Information made by Business Associate or its employees, agents, representatives, or subcontractors in order to permit Covered Entity to respond to a request by an Individual for an accounting of Disclosures of Protected Health Information in accordance with 45 C.F.R. § 164.528 and/or the HITECH Act which requires an Accounting of Disclosures of Protected Health Information maintained in an Electronic Health Record for treatment, payment, and health care operations.

Any accounting provided by Business Associate under this Section 2.10 shall include: (a) the date of the Disclosure; (b) the name, and address if known, of the entity or person who received the Protected Health Information; (c) a brief description of the Protected Health Information disclosed; and (d) a brief statement of the purpose of the Disclosure. For each Disclosure that could require an accounting under this Section 2.10, Business Associate shall document the information specified in (a) through (d), above, and shall securely maintain the information for six (6) years from the date of the Disclosure. Business Associate shall provide to Covered Entity, within ten (10) business days after receipt of request from Covered Entity, information collected in accordance with this Section 2.10 to permit Covered Entity to respond to a request by an Individual for an accounting of disclosures of Protected Health Information in accordance with 45 C.F.R. § 164.528. If Business Associate maintains an Electronic Health Record, Business Associate shall provide such information in electronic format to enable Covered Entity to fulfill its obligations under the HITECH Act.

2.11 **Indemnification**. Business Associate shall indemnify, defend, and hold harmless Covered Entity, including its elected and appointed officers, employees, and agents, from and against any and all liability, including but not limited to demands, claims, actions, fees, costs, penalties and fines (including regulatory penalties and/or fines), and expenses (including attorney and expert witness fees) to the extent arising from or connected with Business Associate's acts and/or omissions arising from and/or relating to this Business Associate Agreement; Business Associate's obligations under this provision extend to compliance and/or enforcement actions of Secretary of the federal Department of Health and Human Services and/or Office for Civil Rights.

3. OBLIGATION OF COVERED ENTITY

Covered Entity shall notify Business Associate of any current or future restrictions or limitations on the use of Protected Health Information that would affect Business Associate’s performance of the Services, and Business Associate shall thereafter restrict or limit its own uses and disclosures accordingly.

4. **TERM AND TERMINATION**

4.1 **Term**. The term of this Business Associate Agreement shall be the same as the term of the Services Agreement. Business Associate's obligations under Sections 4.3, and with respect to any Protected Health Information under Section 4.3(b), Sections 2.1 (as modified by Section 4.2), 2.4, 2.5, 2.6, 2.7, 2.8, 2.9, 2.10, 2.11, 4.3 and 5.2 shall survive the termination or expiration of this Agreement, to the extent that return or destruction of Protected Health Information is not feasible.

4.2 **Termination for Cause**. In addition to and notwithstanding the termination provisions set forth in the Agreement, upon either party's knowledge of a material breach of this Business Associate Agreement by the other party, the party with knowledge of the other party's breach shall either:

4.2(a) Provide an opportunity for the breaching party to cure the breach or end the violation and terminate the Agreement if the breaching party does not cure the breach or end the violation within the time specified by the non-breaching party;

4.2(b) Immediately terminate the Agreement if a party has breached a material term of this Business Associate Agreement and cure is not possible; or

4.2(c) If neither termination nor cure is feasible, report the violation to the Secretary of the federal Department of Health and Human Services.

4.3 **Disposition of Protected Health Information upon Termination or Expiration**.

4.3(a) Except as provided in paragraph (b) of this Section 4.3, upon termination for any reason or expiration of the Agreement, Business Associate shall return or destroy all Protected Health Information, received from Covered Entity or created or received by Business Associate on behalf of Covered Entity. This provision shall apply to Protected Health Information that is in the possession of subcontractors or agents of Business Associate. Business Associate shall retain no copies of the Protected Health Information.

4.3(b) In the event that Business Associate determines that returning or destroying the Protected Health Information is infeasible, Business Associate shall provide to Covered Entity notification of the conditions that make return or destruction infeasible. If return or destruction is infeasible, Business Associate shall extend the protections of this Business Associate Agreement to such Protected Health Information and limit further Uses and Disclosures of such Protected Health Information to those purposes that make the return or destruction infeasible, for so long as Business Associate maintains such Protected Health Information.

5. **MISCELLANEOUS**

5.1 **No Third Party Beneficiaries**. Nothing in this Business Associate Agreement shall confer upon any person other than the parties and their respective successors or assigns, any rights, remedies, obligations, or liabilities whatsoever.

5.2 **Use of Subcontractors and Agents**. Business Associate shall require each of its agents and subcontractors that receive Protected Health Information from Business Associate, or create Protected Health Information for Business Associate, on behalf of Covered Entity, to agree to the same restrictions that apply to Business Associate with respect to Protected Health Information.

5.3 **Relationship to Services Agreement Provisions**. In the event that a provision of this Business Associate Agreement is contrary to a provision of the Agreement, the provision of this Business Associate Agreement shall control. Otherwise, this Business Associate Agreement shall be construed under, and in accordance with, the terms of the Agreement.

5.4 **Regulatory References**. A reference in this Business Associate Agreement to a section in the Privacy or Security Regulations means the section as in effect or as amended.

5.5 **Interpretation**. Any ambiguity in this Business Associate Agreement shall be resolved in favor of a meaning that permits Covered Entity to comply with the Privacy and Security Regulations.

5.6 **Amendment**. The parties agree to amend this Business Associate Agreement in accordance with the body of this Agreement, from time to time as is necessary for Covered Entity to comply with the requirements of the Privacy and Security Regulations and other privacy laws governing Protected Health Information.

Exhibit G (Glossary)

to the

Electronic Health Records System and Services Agreement

EXHIBIT G

GLOSSARY

This Exhibit G (Glossary) is attached to and incorporated by reference in that certain Electronic Health Records System and Services Agreement by and between the County of Los Angeles and Cerner Corporation dated for reference purposes as of the Effective Date. Whenever used in the Exhibits, Attachments, or Schedules to the Agreement, the words and phrases listed below shall have the meanings given in this Exhibit G (Glossary). Capitalized terms not otherwise defined in this Exhibit G (Glossary) shall have the meanings ascribed to them in the Agreement or in other Exhibits, Attachments, or Schedules. In the event there is a conflict between how a term is defined in this Exhibit G (Glossary) and any other portion of the Agreement, the order of precedence for understanding the meaning of that term, shall be as follows: (a) how that term is defined in the Agreement; (b) how that term is defined in this Exhibit G (Glossary); and (c) how that term is defined in the other Exhibits, Attachments, and Schedules to the Agreement. Unless otherwise specified herein, all references in this Exhibit G (Glossary) to Sections shall refer to the respective Sections of this Agreement as specified in the main body of the Agreement (rather than the Exhibits, Attachments, or Schedules thereto).

1. 24X7X365

   "**24x7x365**" means 24 hours a day, 7 days a week, 365 days a year.

2. ACCEPTANCE

   "**Acceptance**" shall mean the completion of the Acceptance Certificate by County's Project Director as described in Section 9.13 (Approval Of Key Deliverables).

3. ACCEPTANCE CERTIFICATE

   "**Acceptance Certificate**" shall have the meaning specified in Section 9.13 (Approval of Key Deliverables).

4. ACCEPTANCE CRITERIA

   "**Acceptance Criteria**" shall have the meaning specified in Section 12.1 (Acceptance Criteria).

5. ACCEPTANCE TESTS

   "**Acceptance Tests**" shall have the meaning specified in Section 12.2 (Acceptance Tests).

6. ACCESS CONTROL LIST OR ACL

   "**Access Control List**" or "**ACL**" shall have the meaning specified in Section 3.3(b) (Physical Security Environment) of Exhibit N.1 (Hosting Services).

7. ADDITIONAL TERMS

   "**Additional Terms**" shall have the meaning specified in Section 32.5 (Entire Agreement).

8. ADVANCING CONVERSION EXCELLENCE TEAM OR ACE TEAM

"**Advancing Conversion Excellence Team**" or "**ACE Team**" shall have the meaning specified in task 3.3 (Develop Go-Live Event Staffing and Support Model) of Exhibit A.23 (Deployment Statement of Work) of the Agreement.

9. AFFILIATED USER OR AFFILIATE USERS

"**Affiliated User**" or "**Affiliate Users**" shall have the meaning specified in Section 2.2 (County).

10. AGREEMENT

"**Agreement**" shall have the meaning specified in the Preamble to the Agreement.

11. AMENDMENT

"**Amendment**" shall have the meaning specified in Section 13.4 (Amendments).

12. AMS DELIVERY MODEL

"**AMS Delivery Model**" shall have the meaning specified in task 2.1 (Develop and Maintain Production Support Plan) of Exhibit A.24 (Support Services, Maintenance, and Operations Statement of Work) of the Agreement.

13. AMS SERVICES

"**AMS Services**" shall have the meaning described in Section 9.7 (Support Services).

14. APPROVAL

"**Approve**," "**Approval**," or "**Approved**" shall mean the written acceptance or other required approval by DHS's Chief Information Officer (or his or her designee) or the County Project Director (or his or her designee) of a specifically identified Deliverable or any other item requiring County approval. "**Approval**" as it relates to a Key Deliverables shall mean Approval by County of the Acceptance Certificate for that Deliverable.

15. APPROVED PHYSICAL GROWTH EVENT

"**Approved Physical Growth Event**" shall have the meaning specified in Section 2.3 (Approved Physical Growth Event) of Exhibit C (Fees; Contractor Professional Services Rates) to the Agreement.

16. APPROVED REASSIGNMENTS SECTION 10.1.1

"**Approved Reassignments Section 10.1.1**" shall have the meaning specified in Section 10.1.1 (Project Director).

17. APPROVED REASSIGNMENTS SECTION 10.1.2

"**Approved Reassignments Section 10.1.2**" shall have the meaning specified in Section 10.1.2 (Contractor Project Manager).

18. ARRA

"**ARRA**" shall have the meaning specified in Recital E.

19. ATTACHMENT

"**Attachment**" shall have the meaning specified in the Preamble to the Agreement.

20. AUTHORIZED BILLING AND PAYMENT MECHANISMS

"**Authorized Billing and Payment Mechanisms**" shall have the meaning specified in Section 1 (Introduction) of Exhibit C (Fees; Contractor Professional Services Rates) to the Agreement.

21. AUTHORIZED MODIFICATIONS TO MILESTONE PAYMENTS

"**Authorized Modifications to Milestone Payments**" shall have the meaning specified in Section 2.1 (Milestone Payments) of Exhibit C (Fees; Contractor Professional Services Rates) to the Agreement.

22. AVAILABILITY

"**Availability**" shall have the meaning specified in Section 4.3 (Availability Service Level) of Exhibit E (Service Levels and Performance Standards).

23. AVAILABLE FOR USE

"**Available for Use**" shall have the meaning specified in Section 4.3 (Availability Service Level) of Exhibit E (Service Levels and Performance Standards).

24. BAA OR BUSINESS ASSOCIATE AGREEMENT

"**Business Associate Agreement**" or "**BAA**" shall have the meaning specified in Section 2.1(i)(ii) (Contractor; Subcontracting). The current BAA is attached as Exhibit F (Business Associate Agreement).

25. BACKFILL STAFFING PROCEDURES

"**Backfill Staffing Procedures**" shall have the meaning specified in task 3.2 (Develop Backfill Procedures) of Exhibit A.23 (Deployment Statement of Work) of the Agreement.

26. BANKRUPTCY CODE

"**Bankruptcy Code**" shall mean the United States Bankruptcy Code (15 United States Code ("**U.S.C.**") §101 et seq.).

27. BASE YEAR INDEX

"**Base Year Index**" shall have the meaning specified in Section 14.10 (Cost of Living Adjustment).

28. BASELINE USE METRICS

"**Baseline Use Metrics**" shall have the meaning specified in Section 2.2.1 (Use Reconciliation) of Exhibit C (Fees; Contractor Professional Services Rates) to the Agreement.

29. BENEFITS PRESENTATION

"**Benefits Presentation**" shall have the meaning specified in task 3.1 (Conduct System Review Session) of Exhibits A.4 through A.17 of the Agreement.

30. BEST PRACTICES

"**Best Practices**" means those proven methods and techniques used by Contractor (regardless of whether such Best Practices are Contractor intellectual property) to deliver services similar to the Services across multiple clients of Contractor, that have shown results superior than those achieved by other alternative means, including as such Best Practices are modified or replaced with improved methods and techniques from time to time during the Term of this Agreement.

31. BOARD

"**Board**" shall have the meaning specified in Recital B.

32. BUILD AUDIT REPORT

"**Build Audit Report**" shall have the meaning specified in task 6.1 (System Validation Session) of Exhibits A.4 through A.17 of the Agreement.

33. BUSINESS CONTINUITY PLAN

"**Business Continuity Plan**" shall have the meaning specified in Section 22 (Disaster Recovery/Business Continuity).

34. BUSINESS DAY(S)

"**Business Day(s)**" whether singular or plural, shall mean Monday through Friday, excluding County observed holidays, unless stated otherwise.

35. BUSINESS OBJECTIVES

"**Business Objectives**" shall have the meaning specified in Recital D.

36. CCHIT

"**CCHIT**" shall have the meaning specified in Section 29.3 (Termination for Regulatory Non-Compliance).

37. CERNER COMMAND LANGUAGE OR CCL

"**Cerner Command Language**" or "**CCL**" shall have the meaning specified in task 10.1 (Conduct Dashboards, Custom Reporting, and Data Analytics Training) of Exhibit A.22 (Training and Knowledge Transfer Statement of Work) of the Agreement.

38. CERNER LEARNING MANAGER

"**Cerner Learning Manager**" shall have the meaning specified in task 4.2 (Implement and Deploy the LearningLIVE Environment) of Exhibit A.22 (Training and Knowledge Transfer Statement of Work) of the Agreement.

39. CERTIFICATE

"**Certificate**" shall have the meaning specified in Section 25.2 (Evidence of Coverage and Notice).

40. CERTIFICATION OF PERFORMANCE VERIFICATION AND FINAL ACCEPTANCE

"**Certification of Performance Verification and Final Acceptance**" shall have the meaning described in Section 12.5.3 (Final Acceptance).

41. CERTIFIED EHR TECHNOLOGY

"**Certified EHR Technology**" shall have the meaning ascribed to such term under the ARRA and its implementing rules and regulations.

42. C.F.R.

"**C.F.R.**" shall have the meaning specified in Section 19.10 (Compliance With Federal and State Confidentiality Requirements).

43. CHANGE NOTICE

"**Change Notice**" shall have the meaning specified in Section 13.2 (Change Notices).

44. CHANGE OF CONTROL

"**Change of Control**" shall have the meaning specified in Section 32.17.1(b) (Assignment by Contractor).

45. CHANGE ORDER

"**Change Order**" shall mean the terms of any Optional Work agreed to by County and Contractor applicable to the provision of New Software, Third-Party Products and/or Professional Services by Contractor, as specified in Section 9.8 (Optional Work).

46. CHARGE SERVICES INITIATION SESSION

"**Charge Services Initiation Session**" shall have the meaning specified in task 1.2 (Conduct Initiation Session for Charge Services Workgroup) of Exhibit A.5 (Charge Services Statement of Work) of the Agreement.

47. CLASS 1 WORK PRODUCT

"**Class 1 Work Product**" shall have the meaning specified in Section 18.1(1) (Work Product and Background Intellectual Property).

48. CLASS 2 WORK PRODUCT

"**Class 2 Work Product**" shall have the meaning specified in section 18.1(2) (Work Product and Background Intellectual Property).

49. CLINICAL AND BUSINESS PROCESS ANALYSIS TRAINING

"**Clinical and Business Process Analysis Training**" shall have the meaning specified in task 12.7 (Conduct Clinical and Business Process Analysis Training) of Exhibit A.2 (Project Initiation Statement of Work) of the Agreement.

50. CLINICAL DATA REPOSITORY

"**Clinical Data Repository**" shall have the meaning specified in task 3.1 (Document Functional and Technical Specifications for Interfaces) of Exhibit A.20 (Interfaces Statement of Work) of the Agreement.

51. CLINICAL DATA REPOSITORY AND REPORTING INITIATION SESSION

"**Clinical Data Repository and Reporting Initiation Session**" shall have the meaning specified in task 1.2 (Conduct Initiation Session for Clinical Data Repository and Reporting Workgroup) of Exhibit A.17 (Clinical Data Repository and Reporting Statement of Work) of the Agreement.

52. CLINICAL DOCUMENTATION AND RESULTS INITIATION SESSION

"**Clinical Documentation and Results Initiation Session**" shall have the meaning specified in task 1.2 (Conduct Initiation Session for Clinical Documentation and Results Workgroup) of Exhibit A.7 (Clinical Documentation and Results Statement of Work) of the Agreement.

53. CLINICAL DOCUMENTATION AND RESULTS WORKFLOW WORKSHOP

"**Clinical Documentation and Results Workflow Workshop**" shall have the meaning specified in task 4.4 (Conduct Clinical Documentation Workflow Workshop) of Exhibit A.7 (Clinical Documentation and Results Statement of Work) of the Agreement.

54. CLUSTER OR CLUSTERS

"**Cluster**" or "**Clusters**" shall mean individually each grouping, and collectively all of the groupings, of County facilities as identified in Exhibit U (Clusters).

55. CMS

"**CMS**" shall have the meaning specified in Recital E.

56. COMPLETE BUILD

"**Complete Build**" shall have the meaning specified in task 7 (Complete Build of Clinical Documentation and Results and Conduct System and Unit Testing) of Exhibits A.4 through A.17 of the Agreement.

57. COMPLETE EHR

"**Complete EHR**" shall have the meaning ascribed to such term under the ARRA and its implementing rules and regulations.

58. COMPLIANCE TESTING

"**Compliance Testing**" shall have the meaning specified in task 2.1 (Develop Test Plan) of Exhibit A.21 (EHR System Testing Statement of Work) of the Agreement.

59. COMPUTER ROOM AIR CONDITIONERS OR CRAC

"**Computer Room Air Conditioners**" or "**CRAC**" or shall have the meaning specified in Section 3.2(b) (Physical Environment) of Exhibit N.1 (Hosting Services).

60. CONFIDENTIAL INFORMATION

"**Confidential Information**" shall have the meaning specified in Section 19.2 (Confidential Information Defined).

61. CONFIDENTIALITY AND ASSIGNMENT AGREEMENT

"**Confidentiality and Assignment Agreement**" shall have the meaning specified in Section 2.1(i)(ii) (Contractor; Subcontracting). The current Confidentiality and Assignment Agreement is attached as Exhibit R (Confidentiality and Assignment Agreement).

62. CONFIGURATION AND TECHNOLOGY CHANGE CONTROL BOARD

"**Configuration and Technology Change Control Board**" shall have the meaning specified in task 3.12 (Provide Technology Change Management) of Exhibit A.24 (Support Services, Maintenance, and Operations Statement of Work) of the Agreement.

63. CONFIGURATION AND TECHNOLOGY CHANGE MANAGEMENT PLAN

"**Configuration and Technology Change Management Plan**" shall have the meaning specified in task 4.7 (Develop Configuration and Technology Change Management Plan) of Exhibit A.2 (Project Initiation Statement of Work) of the Agreement.

64. CONFIGURATION MANAGEMENT REPORTS

"**Configuration Management Reports**" shall have the meaning specified in task 3.13 (Provide Configuration Management) of Exhibit A.24 (Support Services, Maintenance, and Operations Statement of Work) of the Agreement.

65. CONFIGURATION WARRANTY PERIOD

"**Configuration Warranty Period**" shall have the meaning specified in Section 17.1.9 (System Configuration Warranty.

66. CONTINUITY COMMITMENT

"**Continuity Commitment**" has the meaning specified in Exhibit J (Contractor Key Employees) of the Agreement.

67. CONTRACTOR

"**Contractor**" shall have the meaning specified in the Preamble to the Agreement.

68. CONTRACTOR CHARGE SERVICES DELIVERY CONSULTANT

"**Contractor Charge Services Delivery Consultant**" shall have the meaning specified in Section 4.1 (Contractor Delivery Consultant Responsibilities) of Exhibit A.5 (Charge Services Statement of Work) of the Agreement.

69. CONTRACTOR CLINICAL DATA REPOSITORY AND REPORTING DELIVERY CONSULTANT

"**Contractor Clinical Data Repository and Reporting Delivery Consultant**" shall have the meaning specified in Section 4.1 (Contractor Delivery Consultant Responsibilities) of Exhibit A.17 (Clinical Data Repository and Reporting Statement of Work) of the Agreement.

70. CONTRACTOR CLINICAL DOCUMENTATION AND RESULTS DELIVERY CONSULTANT

"**Contractor Clinical Documentation and Results Delivery Consultant**" shall have the meaning specified in Section 4.1 (Contractor Delivery Consultant Responsibilities) of Exhibit A.7 (Clinical Documentation and Results Statement of Work) of the Agreement.

71. CONTRACTOR DATA CONVERSION DELIVERY CONSULTANT

"**Contractor Data Conversion Delivery Consultant**" shall have the meaning specified in Section 4.1 (Contractor Delivery Consultant Responsibilities) of Exhibit A.18 (Data Conversion Statement of Work) of the Agreement.

72. CONTRACTOR DELIVERY CONSULTANT

"**Contractor Delivery Consultant**" shall have the meaning specified in each of the Statements of Work of the Agreement.

73. CONTRACTOR EHR SYSTEM TESTING DELIVERY CONSULTANT

"**Contractor EHR System Testing Delivery Consultant**" shall have the meaning specified in Section 4.1 (Contractor Delivery Consultant Responsibilities) of Exhibit A.21 (EHR System Testing Statement of Work) of the Agreement.

74. CONTRACTOR EMERGENCY DEPARTMENT DELIVERY CONSULTANT

"**Contractor Emergency Department Delivery Consultant**" shall have the meaning specified in Section 4.1 (Contractor Delivery Consultant Responsibilities) of Exhibit A.14 (Emergency Department Statement of Work) of the Agreement.

75. CONTRACTOR INTENSIVE CARE UNIT DELIVERY CONSULTANT

"**Contractor Intensive Care Unit Delivery Consultant**" shall have the meaning specified in Section 4.1 (Contractor Delivery Consultant Responsibilities) of Exhibit A.13 (Intensive Care Unit Statement of Work) of the Agreement.

76. CONTRACTOR INTERFACES DELIVERY CONSULTANT

"**Contractor Interfaces Delivery Consultant**" shall have the meaning specified in Section 4.1 (Contractor Delivery Consultant Responsibilities) of Exhibit A.20 (Interfaces Statement of Work) of the Agreement.

77. CONTRACTOR KEY EMPLOYEES

"**Contractor Key Employees**" means the Contractor Project Director and any other individuals employed in the positions identified in Exhibit J (Contractor Key Employees), collectively.

78. CONTRACTOR LABORATORY DELIVERY CONSULTANT

"**Contractor Laboratory Delivery Consultant**" shall have the meaning specified in Section 4.1 (Contractor Delivery Consultant Responsibilities) of Exhibit A.10 (Laboratory Statement of Work) of the Agreement.

79. CONTRACTOR LEAD PARTNER

"**Contractor Lead Partner**" shall have the meaning described in Section 30.2 (Critical Path Escalation Issues).

80. CONTRACTOR MEDICAL RECORDS DELIVERY CONSULTANT

"**Contractor Medical Records Delivery Consultant**" shall have the meaning specified in Section 4.1 (Contractor Delivery Consultant Responsibilities) of Exhibit A.16 (Medical Records Statement of Work) of the Agreement.

81. CONTRACTOR OPERATING ROOM AND ANESTHESIOLOGY DELIVERY CONSULTANT

"**Contractor Operating Room and Anesthesiology Delivery Consultant**" shall have the meaning specified in Section 4.1 (Contractor Delivery Consultant Responsibilities) of Exhibit A.12 (OR and Anesthesiology Statement of Work) of the Agreement.

82. CONTRACTOR ORDER MANAGEMENT, CPOE, AND DECISION SUPPORT DELIVERY CONSULTANT

"**Contractor Order Management, CPOE, and Decision Support Delivery Consultant**" shall have the meaning specified in Section 4.1 (Contractor Delivery Consultant Responsibilities) of Exhibit A.8 (Order Management, CPOE and Decision Support Statement of Work) of the Agreement.

83. CONTRACTOR PERSONNEL

"**Contractor Personnel**" shall mean all of Contractor's employees, agents, and subcontractors who perform services related to the performance of Contractor's obligations under this Agreement.

84. CONTRACTOR PHARMACY AND MEDICATION MANAGEMENT DELIVERY CONSULTANT

"**Contractor Pharmacy and Medication Management Delivery Consultant**" shall have the meaning specified in Section 4.1 (Contractor Delivery Consultant Responsibilities) of Exhibit A.11 (Pharmacy and Medication Management Statement of Work) of the Agreement.

85. CONTRACTOR PRIMARY DATA CENTER

"**Contractor Primary Data Center**" shall mean the principal data center facility in which the Hosting Environment shall operate throughout the Term of the Agreement.

86. CONTRACTOR PROFESSIONAL SERVICES FEE PROJECTION

"**Contractor Professional Services Fee Projection**" shall have the meaning specified in Section 14.7.2(b) (Time and Materials).

87. CONTRACTOR PROJECT DIRECTOR

"**Contractor Project Director**" shall have the meaning specified in Section 10.1.1 (Project Director).

88. CONTRACTOR PROJECT MANAGER

"**Contractor Project Manager**" shall have the meaning specified in Section 10.1.2 (Contractor Project Manager).

89. CONTRACTOR RADIOLOGY DELIVERY CONSULTANT

"**Contractor Radiology Delivery Consultant**" shall have the meaning specified in Section 4.1 (Contractor Delivery Consultant Responsibilities) of Exhibit A.9 (Radiology Statement of Work) of the Agreement.

90. CONTRACTOR REGISTRATION AND EMPI DELIVERY CONSULTANT

"**Contractor Registration and EMPI Delivery Consultant**" shall have the meaning specified in Section 4.1 (Contractor Delivery Consultant Responsibilities) of Exhibit A.4 (Registration and EMPI Statement of Work) of the Agreement.

91. CONTRACTOR REHABILITATION DELIVERY CONSULTANT

"**Contractor Rehabilitation Delivery Consultant**" shall have the meaning specified in Section 4.1 (Contractor Delivery Consultant Responsibilities) of Exhibit A.15 (Rehabilitation Statement of Work) of the Agreement.

92. CONTRACTOR SCHEDULING DELIVERY CONSULTANT

"**Contractor Scheduling Delivery Consultant**" shall have the meaning specified in Section 4.1 (Contractor Delivery Consultant Responsibilities) of Exhibit A.6 (Scheduling Statement of Work) of the Agreement.

93. CONTRACTOR SECONDARY DATA CENTER

"**Contractor Secondary Data Center**" shall mean a fail-over recovery data center facility, in which the Hosting Environment shall operate and provide business continuity Services throughout the Term of the Agreement, in the event of Contractor's inability to provide the Hosting Services from Contractor Primary Data Center.

94. CONTRACTOR SECURITY ISSUES AND INCIDENTS NOTIFICATION PROCESSES

"**Contractor Security Issues and Incidents Notification Processes**" shall have the meaning specified in task 2.3 (Define Contractor Process for Notifying County of Security Issues) of Exhibit A.24 (Support Services, Maintenance, and Operations Statement of Work) of the Agreement.

95. CONTRACTOR'S QUALITY SYSTEM OR CQS

"**Contractor's Quality System**" or "**CQS**" shall have the meaning specified in Section 15.11(a)(ii) (Internal Audit) of the Agreement.

96. CONTRACT SUM

"**Contract Sum**" shall mean the total monetary amount payable by County to Contractor hereunder, as specified in Section 14.1 (Maximum Contract Sum).

97. CONTRACTOR SUPPORT SERVICES, MAINTENANCE AND OPERATIONS DELIVERY CONSULTANT

"**Contractor Support Services, Maintenance and Operations Delivery Consultant**" shall have the meaning specified in Section 4.1 (Contractor Delivery Consultant Responsibilities) of Exhibit A.24 (Support Services, Maintenance and Operations Statement of Work) of the Agreement.

98. CONTRACTOR TRAINING AND KNOWLEDGE TRANSFER DELIVERY CONSULTANT

"**Contractor Training and Knowledge Transfer Delivery Consultant**" shall have the meaning specified in Section 4.1 (Contractor Delivery Consultant Responsibilities) of Exhibit A.22 (Training and Knowledge Transfer Statement of Work) of the Agreement.

99. CONTRACT YEAR

"**Contract Year"** shall mean the twelve (12) month period commencing on the Effective Date, and each subsequent twelve (12) month period thereafter during the Term. For the purposes of determining Contract Years, the period from December 21, 2012 through December 31, 2013 shall be deemed to be Contract Year 1.

100. COO

"**COO**" shall have the meaning specified in Section 31.2 (Executive Team Participation).

101. COOKIE

"**Cookie**" shall have the meaning specified in Section 1.4 (Use of Cookies on the Service) of Exhibit N (Additional Hosting Services Terms and Conditions) to the Agreement.

102. CORRECTIVE ACTION PLAN

"**Corrective Action Plan**" shall have the meaning specified in Section 6 (Corrective Action Plan) of Exhibit E (Service Levels and Performance Standards).

103. COST OF LIVING ADJUSTMENT OR COLA

"**Cost of Living Adjustment**" or "**COLA**" shall have the meaning specified in Section 14.10 (Cost of Living Adjustment).

104. COUNTY

"**County**" shall have the meaning specified in the Preamble to the Agreement.

105. COUNTY AND ITS AGENTS

"**County and its Agents**" shall have the meaning specified in Section 25.3 (Additional Insured Status and Scope of Coverage).

106. COUNTY COUNSEL

"**County Counsel**" shall mean the Office of the County Counsel of the County of Los Angeles.

107. COUNTY DATA

"**County Data**" shall have the meaning specified in Section 19.11 (County Data).

108. COUNTY DESIGNEE

"**County Designee**" shall have the meaning specified in Section 2.3 (County Designee).

109. COUNTY EXECUTIVE SESSION

"**County Executive Session**" shall have the meaning specified in task 11 (Conduct County Executive Session) of Exhibit A.2 (Project Initiation Statement of Work) of the Agreement.

110. COUNTY PROJECT DIRECTOR

"**County Project Director**" shall have the meaning specified in Section 10.1.1 (Project Director).

111. COUNTY PROJECT MANAGER

"**County Project Manager**" shall have the meaning specified in Section 10.1.3 (County Project Manager).

112. COUNTY PROPERTY

"**County Property**" shall have the meaning specified in Section 18.4 (Use of County Property).

113. COUNTY SOW LEAD OR COUNTY [NAME OF EXHIBIT] LEAD

"**County SOW Lead"** or **"County [name of Exhibit] Lead**" shall have the meaning specified in in each of the Statements of Work of the Agreement.

114. COUNTY SYSTEMS

"**County Systems**" shall have the meaning specified in Section 21 (Communication Systems and Access to Information).

115. COUNTY WORKGROUP

"**County Workgroup**" shall have the meaning specified in each of the Statements of Work of the Agreement.

116. COUNTY'S MITIGATION ACTS

"**County's Mitigation Acts**" shall have the meaning specified in Section 23.2(c) (Intellectual Property Indemnification).

117. CP

"**CP**" shall have the meaning specified in Section 2.2 (County).

118. CPI-W

"**CPI-W**" shall have the meaning specified in Section 14.10 (Cost of Living Adjustment).

119. CREDIT DUE DATE

"**Credit Due Date**" shall have the meaning specified in Section 14.3.2 (Credits to County).

120. CRITICAL PATH ESCALATION ISSUES

"**Critical Path Escalation Issues**" are defined as those issues directly and adversely impacting Contractor's or County's ability (as appropriate) to effectively meet such parties duties and obligations as specified in the applicable Statement of Work and which cannot be appropriately resolved or mitigated through adjustments to the Statement of Work without (a) affecting the date of completion of the Services, (b) materially impacting the costs of delivering the Services, or (c) increasing the total project costs.

121. CROSS-OVER ISSUES

"**Cross-Over Issues**" shall have the meaning specified in Section 30.1 (Cross-Over Issues).

122. CROSS COMMUNITY ACCESS OR XCA

"**Cross Community Access**" or "**XCA**" shall have the meaning specified in Exhibit EE (Interoperability Functionality) of the Agreement.

123. DASHBOARDS, CUSTOM REPORTING AND DATA ANALYTICS TRAINING

"**Dashboards, Custom Reporting and Data Analytics Training**" shall have the meaning specified in task 10.1 (Conduct Dashboards, Custom Reporting, and Data Analytics Training) of Exhibit A.22 (Training and Knowledge Transfer Statement of Work) of the Agreement.

124. DATA CONVERSION IMPLEMENTATION STRATEGY DOCUMENT

"**Data Conversion Implementation Strategy Document**" shall have the meaning specified in task 2.2 (Develop Data Conversion Implementation Strategy Document) of Exhibit A.18 (Data Conversion Statement of Work) of the Agreement.

125. DATA CONVERSION INITIATION SESSION

"**Data Conversion Initiation Session**" shall have the meaning specified in task 1.2 (Conduct Initiation Session for Data Conversion Workgroup) of Exhibit A.18 (Data Conversion Statement of Work) of the Agreement.

126. DATA CONVERSION SPECIFICATIONS

"**Data Conversion Specifications**" shall have the meaning specified in task 3.1 (Identify Data Conversion Specifications) of Exhibit A.18 (Data Conversion Statement of Work) of the Agreement.

127. DATA QUALITY ASSESSMENT

"**Data Quality Assessment**" shall have the meaning specified in task 2.1 (Confirm and Validate Data Sources) of Exhibit A.18 (Data Conversion Statement of Work) of the Agreement.

128. DCW

"**DCW**" shall have the meaning specified in the Statements of Work of the Agreement.

129. DDM

"**DDM**" shall have the meaning specified in task 3.1 (Conduct System Review Session) of Exhibits A.4 through A.17 of the Agreement.

130. DED

"**DED**" shall have the meaning specified in each of the Statements of Work of the Agreement.

131. DELIVERABLES

"**Deliverable(s)**", whether singular or plural, shall mean items and/or services provided or to be provided by Contractor under this Agreement identified as a deliverable, by designation, number, or context, in a Statement of Work, Exhibit, Attachment, Schedule, or any document associated with the foregoing, including numbered Deliverable(s) in Exhibit A (Statement of Work).

132. DELIVERABLES MANAGEMENT PLAN

"**Deliverables Management Plan**" shall have the meaning specified in task 4.11 (Develop Deliverables Management Plan) of Exhibit A.2 (Project Initiation Statement of Work) of the Agreement.

133. DEPARTMENT

"**Department**" shall mean County's Department of Health Services. For purposes of Exhibit C (Fees; Contractor Professional Services Rates), "**Department**" shall have the meaning specified in Section 2.3 (Approved Physical Growth Event) of Exhibit C (Fees; Contractor Professional Services Rates) to the Agreement.

134. DEPLOYMENT AND PROJECT CLOSE-OUT CHECKLIST

"**Deployment and Project Close-out Checklist**" shall have the meaning specified in task 3.6 (Develop Deployment and Project Close-out Checklist) of Exhibit A.23 (Deployment Statement of Work).

135. DEPLOYMENT INITIATION SESSION

"**Deployment Initiation Session**" shall have the meaning specified in task 1.2 (Conduct Initiation Session for Deployment Workgroup) of Exhibit A.23 (Deployment Statement of Work) of the Agreement.

136. DEPLOYMENT STRATEGY

"**Deployment Strategy**" shall have the meaning specified in task 2.1 (Validate and Maintain Deployment Strategy) of Exhibit A.23 (Deployment Statement of Work) of the Agreement.

137. DESIGN REVIEW SESSION

"**Design Review Session**" shall have the meaning specified in task 4.1 (Conduct Design Review Session) of Exhibits A.4 through A.17 of the Agreement.

138. DESIGNATED TEST

"**Designated Test**" shall have the meaning specified in Section 12.6(a) (Failed Testing).

139. DESTRUCTIVE MECHANISMS

"**Destructive Mechanisms**" means computer code that: (a) is designed to disrupt, disable, harm, or otherwise impede in any manner, including aesthetic disruptions or distortions, the operation of the Licensed Software, Deliverables, Services, or any other software, firmware, hardware, computer system or network (sometimes referred to as "viruses" or "worms"); (b) would disable or impair the Licensed Software, Deliverables, Services, or any other software, firmware, hardware, computer systems or networks in any way where such disablement or impairment is caused by the passage of time, exceeding an authorized number of copies, advancement to a particular date or other numeral (sometimes referred to as "time bombs," "time locks" or "drop dead" devices); (c) would permit Contractor to access the Licensed Software, Deliverables, Services, or any other software, firmware, hardware, computer systems or networks to cause such disablement or impairment (sometimes referred to as "traps," "access codes" or "trap door" devices); or (d) which contains any other similar harmful, malicious or hidden procedures, routines or mechanisms which would cause such Licensed Software, Deliverables, Services, or other programs to cease functioning or to damage or corrupt data, storage media, programs, equipment or communications or otherwise interfere with operations.

140. DETAILED DESIGN DOCUMENT

"**Detailed Design Document**" shall have the meaning specified in task 4.5 (Develop Final Detailed Design Document) of Exhibits A.4 through A.17 of the Agreement.

141. DHS

"**DHS**" shall have the meaning specified in Recital B.

142. DHS FINANCE

"**DHS Finance**" shall mean the County contact designated to receive and process invoices under this Agreement.

143. DIRECTOR

"**Director**" shall have the meaning specified in Recital B.

144. DISASTER RECOVERY PLAN

"**Disaster Recovery Plan**" shall have the meaning specified in Section 22 (Disaster Recovery/Business Continuity).

145. DISCLOSING PARTY

"**Disclosing Party**" shall have the meaning specified in Section 19.2 (Confidential Information Defined).

146. DISPLACED/RENAMED PRODUCT

"**Displaced/Renamed Product**" shall have the meaning specified in Section 3.2 (Revisions).

147. DISPUTE

"**Dispute**," for purposes of the procedures set forth in Section 27 (Dispute Resolution Procedure), shall have the meaning specified in Section 27 (Dispute Resolution Procedure).

148. DISPUTE RESOLUTION PROCEDURE

"**Dispute Resolution Procedure**" shall have the meaning specified in Section 27(a) (Dispute Resolution Procedure).

149. DOCUMENTATION

"**Documentation**" shall have the meaning specified in Section 3.3 (Documentation).

150. DOMAINS

"**Domains"** shall mean all types of care delivered by County, including clinical activities and supporting services. For illustration, examples include noninvasive cardiology, inpatient pharmacy services, sub-acute rehabilitation, emergency medical services, health information management, hospital/clinic administration, visiting nursing services, social services, pastoral support, respiratory therapy, and physical therapy.

151. DOWNTIME

"**Downtime**" shall have the meaning specified in Section 4.3 (Availability Service Level) of Exhibit E (Service Levels and Performance Standards).

152. DR/BC PLAN

"**DR/BC Plan**" shall have the meaning specified in Section 22 (Disaster Recovery/Business Continuity.

153. EDUCATION TRACKER

"**Education Tracker**" shall have the described in the Statements of Work of the Agreement.

154. EDUCATION TRACKER REPORTS

"**Education Tracker Reports**" shall have the meaning specified in task 1.3 (Conduct Comprehension Exercises) of Exhibits A.4 through A.17 of the Agreement.

155. EFFECTIVE DATE

"**Effective Date**" shall have the meaning specified in the Preamble to the Agreement.

156. EHR

"**EHR**" shall have the meaning specified in Recital C.

157. EHR ARCHITECTURE AND HOSTING SERVICES INITIATION SESSION

"**EHR Architecture and Hosting Services Initiation Session**" shall have the meaning specified in task 1.2 (Initiation Session for Architecture and Hosting Services Workgroup) of Exhibit A.3 (EHR Architecture and Hosting Services Statement of Work) of the Agreement.

158. EHR SYSTEM

"**EHR System**" shall have the meaning specified in Recital C.

159. EHR SYSTEM AND USER DOCUMENTATION

"**EHR System and User Documentation**" shall have the meaning specified in task 2.2 (Compile EHR System and User Documentation for Handover to Production Support) of Exhibit A.24 (Support Services, Maintenance, and Operations Statement of Work) of the Agreement.

160. EHR SYSTEM TESTING INITIATION SESSION

"**EHR System Testing Initiation Session**" shall have the meaning specified in task 1.2 (Conduct Initiation Session for EHR System Testing Workgroup) of Exhibit A.21 (EHR System Testing Statement of Work) of the Agreement.

161. EMERGENCY DEPARTMENT INITIATION SESSION

"**Emergency Department Initiation Session**" shall have the meaning specified in task 1.2 (Conduct Initiation Session for Emergency Department Workgroup) of Exhibit A.14 (Emergency Department Statement of Work) of the Agreement.

162. EMERGENCY ROLL-BACK PLAN

"**Emergency Roll-back Plan**" shall have the meaning specified in task 5.2 (Develop Emergency Roll-back Plan) of Exhibit A.23 (Deployment Statement of Work) of the Agreement.

163. EMPLOYEE

"**Employee**" shall have the meaning specified in Section 32.31.2(b) (Written Employee Jury Service Policy).

164. EMPLOYMENT CLAIM(S)

"**Employment Claim(s)**" shall have the meaning specified in Section 16.2 (Employment Related Claims).

165. END-USER SURVEY

"**End-User Survey**" shall have the meaning specified in task 8.2 (Support End-User Survey and Develop End-User Training Effectiveness Reports) of Exhibit A.22 (Training and Knowledge Transfer Statement of Work) of the Agreement.

166. END-USER TRAINING EFFECTIVENESS REPORT

"**End-User Training Effectiveness Report**" shall have the meaning specified in task 8.2 (Support End-User Survey and Develop End-User Training Effectiveness Reports) of Exhibit A.22 (Training and Knowledge Transfer Statement of Work) of the Agreement.

167. END-USER TRAINING STRATEGY

"**End-User Training Strategy**" shall have the meaning specified in task 8 (Develop End-User Training Strategy) of Exhibit A.2 (Project Initiation Statement of Work) of the Agreement.

168. ENHANCEMENT

"**Enhancement**" means any modification to any Licensed Software designed to improve its operation, usefulness, or completeness that is made generally available by Contractor (excluding Error Corrections) to clients.

169. ENTERPRISE-WIDE USER SECURITY PROFILES DOCUMENT

"**Enterprise-wide User Security Profiles Document**" shall have the meaning specified in task 4.1 (Document User Security Profiles (Roles and Authorizations)) of Exhibit A.19 (Security Statement of Work) of the Agreement.

170. ERISA

"**ERISA**" shall have the meaning specified in Section 16.3 (No Eligibility for Benefits).

171. ERROR

"**Error**" means (i) with respect to Licensed Software, Services, or Deliverables, a failure of the Licensed Software, Services, or Deliverables to conform to its Specifications, or (ii) with respect to the Licensed Software, a failure that creates a material impact on the performance of the Licensed Software when operated in accordance with the Agreement.

172. ERROR CORRECTION

"**Error Correction**" means (i) with respect to Licensed Software, either a modification to the Licensed Software that corrects an Error in all material respects, or a procedure or routine that, when implemented in the regular operation of that Licensed Software, eliminates the adverse effect of the Error in all material respects, and (ii) with respect to Services or Deliverables, modification, workaround, or performance that corrects an Error in all material respects or eliminates the adverse effects of the Error in all material respects.

173. ERROR MANAGEMENT PLAN OR EMP

"**Error Management Plan**" or "**EMP**" shall have the meaning specified in task 4.3 (Develop Error Management Plan) of Exhibit A.2 (Project Initiation Statement of Work) of the Agreement.

174. ESCROW

"**Escrow**" shall have the meaning specified in Section 4.1 (Escrow Agent and Release Conditions).

175. ESCROW AGENT

"**Escrow Agent**" shall have the meaning specified in Section 4.1 (Escrow Agent and Release Conditions).

176. ESCROW AGREEMENT

"**Escrow Agreement**" shall have the meaning specified in Section 4.1 (Escrow Agent and Release Conditions).

177. ESTABLISH AMS DELIVERY MODEL

"**Establish AMS Delivery Model**" shall have the meaning specified in task 3.1 (Establish AMS Delivery Model for County) of Exhibit A.24 (Support Services, Maintenance, and Operations Statement of Work) of the Agreement.

178. EVENT SUMMARY REPORT

"**Event Summary Report**" shall have the meaning specified in each of the Statements of Work of the Agreement.

179. EXECUTIVE PROJECT UPDATES

"**Executive Project Updates**" shall have the meaning specified in task 4.12 (Develop Procedures for Status Meetings/Reporting) of Exhibit A.2 (Project Initiation Statement of Work) of the Agreement.

180. EXHIBIT

"**Exhibit**" shall have the meaning specified in the Preamble to the Agreement.

181. EXISTING AGREEMENT(S)

"**Existing Agreement(s)**" shall have the meaning specified in Section 2.4 (Optional Work and Discounts) of Exhibit C (Fees; Contractor Professional Services Rates) to the Agreement.

182. EXISTING SYSTEM

"**Existing System**" shall have the meaning specified in Section 17.1.9 (System Configuration Warranty).

183. EXTENDED TIMEOUT

"**Extended Timeout**" shall have the meaning specified in Section 2.2.4 (Ratio Protection) of Exhibit C (Fees; Contractor Professional Services Rates) to the Agreement.

184. EXTRACT, TRANSFER AND LOAD TOOLS

"**Extract, Transfer and Load Tools**" shall have the meaning specified in task 4.1 (Execute Data Conversion Pilot) of Exhibit A.18 (Data Conversion Statement of Work) of the Agreement.

185. FINAL ACCEPTANCE

"**Final Acceptance**" shall have the meaning specified in Section 12.5.3 (Final Acceptance).

186. FINALLY DETERMINED

"**Finally Determined**" means when a claim or dispute has been finally determined by a court of competent jurisdiction, arbitration, mediation, or other agreed-upon governing party and either (1) no associated appeal has timely been sought if capable of being sought, or (2) appellate rights properly exercised have otherwise been exhausted.

187. FIXED HOURLY RATE

"**Fixed Hourly Rate**" shall mean the hourly rate, specified in Exhibit C (Fees; Contractor Professional Services Rates), for Professional Services which Contractor may provide following Go-Live upon County's request therefor in the form of Optional Work in accordance with Section 9.8 (Optional Work).

188. FORCE MAJEURE EVENTS

"**Force Majeure Events**" shall have the meaning specified in Section 32.1(a) (Force Majeure).

189. FULL-TIME

"**Full-Time**" shall have the meaning specified in Section 32.31.2(b) (Written Employee Jury Service Policy).

190. FUNCTIONAL READINESS ASSESSMENT

"**Functional Readiness Assessment**" shall have the meaning specified in task 4.2 (Conduct Functional Readiness Assessment) of Exhibit A.23 (Deployment Statement of Work) of the Agreement.

191. FUTURE STATE WORKFLOW DIAGRAMS

"**Future State Workflow Diagrams**" shall have the meaning specified in task 4.3 (Conduct Workflow Localization) of Exhibits A.4 through A.17 of the Agreement.

192. GENERALLY AVAILABLE

"**Generally Available**" shall mean available as a non-development product and licensed, distributed, or available for purchase in the general commercial market place.

193. GLOBAL HARMONIZATION TASK FORCE OR GHTF

"**Global Harmonization Task Force**" or "**GHTF**" shall have the meaning specified in Section 3.4 (Hosting Environment Security) of Exhibit N.1 (Hosting Services).

194. GO-LIVE

"**Go-Live**" shall have the meaning specified in Section 12.3 (Productive Use).

195. GO-LIVE EVENT STAFFING AND SUPPORT MODEL

"**Go-Live Event Staffing and Support Model**" shall have the meaning specified in task 3.3 (Develop Go-Live Event Staffing and Support Model) of Exhibit A.23 (Deployment Statement of Work) of the Agreement.

196. GO-LIVE HELP DESK SCRIPTS

"**Go-Live Help Desk Scripts**" shall have the meaning specified in task 3.4 (Develop Go-Live Help Desk Scripts) of Exhibit A.23 (Deployment Statement of Work) of the Agreement.

197. GO/NO-GO

"**Go/No-Go**" shall have the meaning specified in task 3.1 (Develop Go-Live Go/No-Go Framework and Processes) of Exhibit A.23 (Deployment Statement of Work) of the Agreement.

198. GO/NO-GO DECISION FRAMEWORK AND PROCESSES

"**Go/No-Go Decision Framework and Processes**" shall have the meaning specified in task 3.1 (Develop Go-Live Go/No-Go Framework and Processes) of Exhibit A.23 (Deployment Statement of Work) of the Agreement.

199. HARDWARE

"**Hardware**" shall have the meaning specified in Section 8 (Hardware).

200. HEALTHE INTENT SERVICES"

"**Healthe Intent Services**" shall have the meaning set forth in Section 32.41 (Healthe Intent Services).

201. HHS

"**HHS**" shall have the meaning specified in Recital E.

202. HIE

"**HIE**" shall have the meaning specified in Section 2.2 (County).

203. HIPAA

"**HIPAA**" shall have the meaning specified in Section 19.10 (Compliance With Federal and State Confidentiality Requirements).

204. HIT

"**HIT**" shall have the meaning specified in Recital C.

205. HITECH ACT

"**HITECH Act**" shall have the meaning specified in Section 17.1.17 (HITECH Technical Standards Warranty).

206. HITECH MODIFICATIONS

"**HITECH Modifications**" shall have the meaning specified in Section 17.1.17 (HITECH Technical Standards Warranty).

207. HITECH TECHNICAL STANDARDS

"**HITECH Technical Standards**" means defined technical standards that: (i) are finalized and formally adopted and published ("**Finalized**") by the Secretary of Health and Human Services (the "**Secretary**") under the HITECH Act; (ii) impose requirements with respect to the functionalities and transactions the Licensed Software is designed to include and process; and (iii) define necessary elements of Certified EHR Technology.

208. HOLDBACK AMOUNT

"**Holdback Amount**" shall have the meaning specified in Section 15.6(a) (Holdbacks).

209. HOSTING ENVIRONMENT

"**Hosting Environment**" shall mean Contractor Primary Data Center, the Contractor Secondary Data Center and all facilities, personnel, Hosting Hardware and Hosting Software and all requirements specified in Section 3 (Hosting Environment) of Exhibit N.1 (Hosting Services), Sections 1.1 (General Requirements) and 3.2 (Data Replication Across Data Centers) of Exhibit E (Service Levels and Performance Standards), and Sections 7.5 (Recovery Time Requirement) and 7.6 (Contractor Secondary Data Center) of Exhibit N (Additional Hosting Services Terms and Conditions).

210. HOSTING ERROR CORRECTION

"**Hosting Error Correction**" means (i) with respect to Hosting Environment, either a modification, workaround, or other change to the Hosting Software or Hosting Hardware that corrects an Error in all material respects, or a procedure or routine that, when implemented in the regular operation of the Hosting Environment, eliminates the adverse effect of the Error in all material respects, and (ii) with respect to Hosting Services or Deliverables, a modification, workaround, or other change that corrects an Error in all material respects or eliminates the adverse effects of the Error in all material respects.

211. HOSTING HARDWARE

"**Hosting Hardware**" shall mean hardware and equipment of any nature (e.g., Servers, networking equipment, switches, routers, power infrastructure), utilized in the Hosting Environment to provide the Hosting Services.

212. HOSTING PROVIDER

"**Hosting Provider**" shall have the meaning specified in Section 1.2 (Hosting Provider) of Exhibit E (Service Levels and Performance Standards).

213. HOSTING REVISIONS

"**Hosting Revisions**" shall mean as to the Hosting Software (i) new features, new functionality, and performance improvements, (ii) bug fixes, patches, updates, and any other revisions or

enhancements of any kind that correct an Error or address common functional and performance issues, including Hosting Error Correction; (iii) updates, revisions, or enhancements; (iv) any modification to the Hosting Software designed to improve its operation, usefulness, or completeness that is made generally available by Contractor (excluding Error Corrections) to its clients; and (v) modifications, workarounds, or other changes required in order for the Hosting Software to remain compliant with applicable federal, State and local laws and regulations.

214. HOSTING SERVICES

"**Hosting Services**" shall have the meaning specified in Section 1(a) (Scope of Services) of Exhibit N.1 (Hosting Services).

215. HOSTING SERVICES DELIVERY DOCUMENT

"**Hosting Services Delivery Document**" shall have the meaning specified in task 4.1 (Prepare Hosting Services Delivery Document) of Exhibit A.24 (Support Services, Maintenance, and Operations Statement of Work) of the Agreement.

216. HOSTING SERVICES DELIVERY MODEL

"**Hosting Services Delivery Model**" shall have the meaning specified in task 2.1 (Develop and Maintain Production Support Plan) of Exhibit A.24 (Support Services, Maintenance, and Operations Statement of Work) of the Agreement.

217. HOSTING SERVICES PLAN

"**Hosting Services Plan**" shall have the meaning specified in task 6.1 (Initiate Remote Hosting Services for Production Environment) of Exhibit A.23 (Deployment Statement of Work) of the Agreement.

218. HOSTING SOFTWARE

"**Hosting Software**" shall mean software of any nature (e.g. operating systems, presentation layer software, applications, utilities, tools, firmware and security) utilized in the Hosting Environment to provide the Hosting Services.

219. HVAC OR HEATING, VENTILATION AND AIR CONDITIONING

"**HVAC**" or "heating, ventilation and air conditioning" shall have the meaning specified in Section 3.2(b) (Physical Environment) of Exhibit N.1 (Hosting Services).

220. ID

"**ID**" shall have the meaning specified in Section 9.10 (Contractor Access to County Facilities).

221. IDENTITY ACCESS MANAGEMENT OR IAM

"**Identity Access Management**" or "**IAM**" shall have the meaning specified in task 4.2 (Implement User Roles and Authorizations) of Exhibit A.19 (Security Statement of Work) of the Agreement.

222. IMMEDIATE RESPONSE CENTER OR IRC

"**Immediate Response Center**" or "**IRC**" shall have the meaning specified in Section 7.1 (Disaster Recovery and Business Continuity Plan) of Exhibit N (Additional Hosting Services Terms and Conditions) to the Agreement.

223. IMPLEMENTATION FEES

"**Implementation Fees**" shall have the meaning specified in Section 14.3.1 (Implementation Fees).

224. IMPLEMENTATION SERVICES

"**Implementation Services**" shall mean the Services as set forth in Section 9.4 (Implementation Services and as further specified in Exhibit A (Statements of Work). The Implementation Services are also sometimes referred to as the "**Project**."

225. IMPLEMENTATION TEAM TRAINING

"**Implementation Team Training**" shall have the meaning specified in task 6.1 (Conduct Implementation Team Training) of Exhibit A.22 (Training and Knowledge Transfer Statement of Work) of the Agreement.

226. INCIDENT/PROBLEM MANAGEMENT REPORT

"**Incident/Problem Management Report**" shall have the meaning specified in task 3.8 (Provide Incident/Problem Management and Resolution) of Exhibit A.24 (Support Services, Maintenance, and Operations Statement of Work) of the Agreement.

227. INDEMNIFIED ITEMS

"**Indemnified Items**" shall have the meaning specified in Section 23.2(a) (Intellectual Property Infringement).

228. INFORMATION SECURITY POLICY

"**Information Security Policy**" shall have the meaning specified in Section 1 (Security Policy) of Exhibit K (Information Security Requirements).

229. INFRINGEMENT CLAIM(S)

"**Infringement Claim(s)**" shall have the meaning specified in Section 23.2(a) (Intellectual Property Indemnification).

230. IN-HOUSE SOLUTION

"**In-House Solution**" shall have the meaning specified in Section 2 (In-House Solution) of Exhibit N (Additional Hosting Services Terms and Conditions) to the Agreement.

231. INITIAL PARTIAL SYSTEM BUILD

"**Initial Partial System Build**" shall have the meaning specified in task 5 (Complete Initial Partial System Build) of Exhibits A.4 through A.17 of the Agreement.

232. INITIAL SUPPORT TERM

"**Initial Support Term**" shall have the meaning specified in Section 1.2 (Initial and Renewal Support Terms for Support Services).

233. INSTRUCTOR-LED TRAINING FRAMEWORK AND CURRICULUM

"**Instructor-Led Training Framework and Curriculum**" shall have the meaning specified in task 2.3 (Develop Instructor-Led Training Framework) of Exhibit A.22 (Training and Knowledge Transfer Statement of Work) of the Agreement.

234. INTEGRAL THIRD-PARTY SOFTWARE

"**Integral Third-Party Software**" shall mean all software licensed, leased, or otherwise obtained by Contractor from a third-party which is: (i) embedded in, (ii) incorporated into (excluding Interfacing to), or (iii) essential to the proper operation of, the Contractor-developed Licensed Software, and all other Third-Party Products With Independent Conditions that are not expressly identified in Exhibit B (EHR System Software Components).

235. INTEGRATING THE HEALTHCARE ENTERPRISE OR IHE

"**Integrating The Healthcare Enterprise**" or "**IHE**" shall have the meaning specified in Exhibit EE (Interoperability Functionality) of the Agreement.

236. INTEGRATION TEST

"**Integration Test**" shall have the meaning specified in task 7 (Complete Build of Clinical Documentation and Results and Conduct System and Unit Testing) of Exhibits A.4 through A.17 of the Agreement.

237. INTEGRATION TESTING

"**Integration Testing**" shall have the meaning specified in task 1.2 (Conduct Initiation Session for Data Conversion Workgroup) of Exhibit A.18 (Data Conversion Statement of Work).

238. INTENSIVE CARE UNIT INITIATION SESSION

"**Intensive Care Unit Initiation Session**" shall have the meaning specified in task 1.2 (Conduct Initiation Session for Intensive Care Unit Workgroup) of Exhibit A.13 (Intensive Care Unit Statement of Work) of the Agreement.

239. INTERFACE(S)

"**Interface(s)**" when used as a noun, shall mean either a computer program developed by, or licensed to, County or Contractor to (a) translate or convert data from a County or Contractor format into another format used at County as a standard format, or (b) translate or convert data in a format used by Contractor or a third-party to a format supported at County or vice versa.

"**Interface**" when used as a verb, shall mean to operate as described above.

240. INTERFACE SPECIFICATIONS DOCUMENT

"**Interface Specifications Document**" shall have the meaning specified in task 3.1 (Document Functional and Technical Specifications for Interfaces) of Exhibit A.20 (Interfaces Statement of Work) of the Agreement.

241. INTERFACE TESTING

"**Interface Testing**" shall have the meaning specified in task 2.1 (Develop Test Plan) of Exhibit A.21 (EHR System Testing Statement of Work) of the Agreement.

242. INTERFACE TEST PLAN

"**Interface Test Plan**" shall have the meaning specified in task 3.2 (Develop Interface Test Plan) of Exhibit A.20 (Interfaces Statement of Work) of the Agreement.

243. INTERFACES CURRENT STATE ASSESSMENT

"**Interfaces Current State Assessment**" shall have the meaning specified in task 2.1 (Document Interfaces Current State Assessment) of Exhibit A.20 (Interfaces Statement of Work) of the Agreement.

244. INTERFACES IMPLEMENTATION STRATEGY DOCUMENT

"**Interfaces Implementation Strategy Document**" shall have the meaning specified in task 2.2 (Prepare Implementation Interfaces Strategy Document) of Exhibit A.20 (Interfaces Statement of Work) of the Agreement.

245. INTERFACES INITIATION SESSION

"**Interfaces Initiation Session**" shall have the meaning specified in task 1.2 (Initiation Session for Interfaces Workgroup) of Exhibit A.20 (Interfaces Statement of Work) of the Agreement.

246. INTERNET PROTOCOL SECURITY OR IPSEC

"**Internet Protocol Security**" or "**IPsec**" shall have the meaning specified in Section 3.4(a) (Hosting Environment Security) of Exhibit N.1 (Hosting Services).

247. INTEROPERABLE

"**Interoperable**" shall have the meaning ascribed to the term "interoperable" under 42 C.F.R. §411.351 as follows (and the variations of Interoperable used herein shall have their meanings determined from the following): "Interoperable means able to communicate and exchange data accurately, effectively, securely, and consistently with different information technology systems, software applications, and networks, in various settings; and exchange data such that the clinical or operational purpose and meaning of the data are preserved and unaltered." However, if and to the extent that a different definition of Interoperable is adopted by the Department of Health and Human Services for use in describing information exchange functionality in connection with defining meaningful use of certified EHR technology within the meaning of the HITECH Act, then that different definition shall apply for purposes of this Agreement

248. INTEROPERATE

"**Interoperate**" shall mean to operate as described in the definition of "Interoperable."

249. ISSUE AND RISK LOGS

"**Issue and Risk Logs**" shall have the meaning specified in task 2.1 (Coordination of Project Activities between SOWs) of Exhibit A.1 (Overall Project Management, Planning, Coordination and Integration Statement of Work) of the Agreement.

250. ISSUE MANAGEMENT PLAN

"**Issue Management Plan**" shall have the meaning specified in task 3.6 (Perform Issue Management) of Exhibit A.1 (Overall Project Management, Planning, Coordination and Integration Statement of Work) of the Agreement.

251. ISSUES LOG

"**Issues Log**" shall have the meaning specified in task 4.1 (Conduct Design Review Session) of Exhibits A.4 through A.17 of the Agreement.

252. ISSUES MANAGEMENT PLAN

"**Issues Management Plan**" shall have the meaning specified in task 4.8 (Develop Issues Management Plan) of Exhibit A.2 (Project Initiation Statement of Work) of the Agreement.

253. IT ANALYST PREP SESSION

254. "**IT ANALYST PREP SESSION**" SHALL HAVE THE MEANING SPECIFIED IN TASK 12.8 (CONDUCT IT ANALYST PREP SESSION) OF EXHIBIT A.2 (PROJECT INITIATION STATEMENT OF WORK) OF THE AGREEMENT.JURY SERVICE PROGRAM

"**Jury Service Program**" shall have the meaning specified in Section 32.31.1 (Jury Service Program).

255. KEY DELIVERABLE

"**Key Deliverable**" shall have the meaning specified in Section 14.3.2 (Credits to County).

256. KEY MILESTONE(S)

"**Key Milestone(s)**", whether singular or plural, shall mean Milestones under the Agreement identified as "Key" in a Statement of Work, Exhibit, Attachment, Schedule, or any document associated with the foregoing.

257. KEY MILESTONE ALLOCATION

"**Key Milestone Allocation**" shall have the meaning specified in Section 15.6(a) (Holdbacks).

258. KEY MILESTONE SCHEDULED DURATION

"**Key Milestone Scheduled Duration**" shall have the meaning specified in Section 15.6(a) (Holdbacks).

259. KNOWLEDGE TRANSFER PLAN

"**Knowledge Transfer Plan**" shall have the meaning specified in task 2.4 (Develop Knowledge Transfer Plan) of Exhibit A.22 (Training and Knowledge Transfer Statement of Work) of the Agreement.

260. KNOWLEDGE TRANSFER STRATEGY

"**Knowledge Transfer Strategy**" shall have the meaning specified in task 7 (Develop Knowledge Transfer Strategy) of Exhibit A.2 (Project Initiation Statement of Work) of the Agreement.

261. LABORATORY INITIATION SESSION

"**Laboratory Initiation Session**" shall have the meaning specified in task 1.2 (Conduct Initiation Session for Laboratory Workgroup) of Exhibit A.10 (Laboratory Statement of Work) of the Agreement.

262. LANES

"**LANES**" shall mean the Los Angeles Network for Enhanced Services.

263. LEADING STRATEGIC CHANGE SESSION

"**Leading Strategic Change Session**" shall have the meaning specified in task 5.1 (Conduct Communications Strategy Review) of Exhibit A.1 (Overall Project Management, Planning, Coordination and Integration Statement of Work) of the Agreement.

264. LEADING STRATEGIC CHANGE WORKSHOP

"**Leading Strategic Change Workshop**" shall have the meaning specified in task 6.2 (Develop Organization Change Management Strategy) of Exhibit A.2 (Project Initiation Statement of Work).

265. LEARNINGLIVE

"**LearningLIVE**" shall have the meaning specified in task 4.2 (Implement and Deploy the LearningLIVE Environment) of Exhibit A.22 (Training and Knowledge Transfer Statement of Work) of the Agreement.

266. LEGAL REQUIREMENTS

"**Legal Requirements**" shall have the meaning specified in Section 17.1.11 (Legal and Accreditation/Certification Requirements).

267. LEVEL 1 HELP DESK SCRIPTS

"**Level 1 Help Desk Scripts**" shall have the meaning specified in task 9.1 (Develop Help Desk Scripts) of Exhibit A.22 (Training and Knowledge Transfer Statement of Work) of the Agreement.

268. LEVEL 2 HELP DESK SCRIPTS

"**Level 2 Help Desk Scripts**" shall have the meaning specified in task 9.1 (Develop Help Desk Scripts) of Exhibit A.22 (Training and Knowledge Transfer Statement of Work) of the Agreement.

269. LICENSE

"**License**" shall have the meaning specified in Section 3.1.1 (Licensed Software).

270. LICENSE TERM

"**License Term**" shall have the meaning specified in Section 1.3 (Term of Statements of Work; License Term).

271. LICENSED SOFTWARE

"**Licensed Software**" shall mean individually each, and collectively all, of the computer programs and Modules developed by Contractor and to be provided under this Agreement (including Integral Third-Party Software), including as to each such program or Module, the processes and routines used in the processing of data, the object code, Interfaces to be provided hereunder by Contractor, Documentation, Revisions, and derivative works. All Licensed Software and the components thereof shall be release versions, and shall not be test versions (e.g., alpha or beta test version), unless otherwise agreed to in writing by County.

272. LICENSED SOFTWARE AND THIRD-PARTY PRODUCTS FUNDAMENTALS COURSE

"**Licensed Software and Third-Party Products Fundamentals Course**" shall have the meaning specified in task 12.6 (Licensed Software and Third-Party Products Fundamentals Course) of Exhibit A.2 (Project Initiation Statement of Work) of the Agreement.

273. LICENSED SOFTWARE REQUIREMENTS

"**Licensed Software Requirements**" shall mean the Licensed Software Specifications, requirements and standards set forth in Exhibit A.26 (Licensed Software Requirements).

274. LICENSED SOFTWARE RESPONSE TIME

"**Licensed Software Response Time**" shall be the period from the time the County User depresses the return or function key, clicks the mouse, taps the touch pad, or otherwise engages a device or command in connection with a Licensed Software transaction, until the complete screen of the response for the Licensed Software transaction appears on the County User's screen. "Processing" or similar waiting messages do not constitute responses hereunder.

275. LIGHTHOUSE OFFERING

"**Lighthouse Offering**" shall have the meaning specified in Section 4 (Lighthouse Offering) of Exhibit C.1 (Optional Work) to the Agreement.

276. LOAD TESTING

"**Load Testing**" shall have the meaning specified in task 2.1 (Develop Test Plan) of Exhibit A.21 (EHR System Testing Statement of Work) of the Agreement.

277. LOCATIONS

"**Locations**" shall mean all County physical locations, structures, or location groupings utilized by DHS.

278. LOCATION READINESS ASSESSMENT

"**Location Readiness Assessment**" shall have the meaning specified in task 4.3 (Conduct Location Readiness Assessment) of Exhibit A.23 (Deployment Statement of Work) of the Agreement.

279. LON

"**LON**" shall have the meaning specified in task 5.1 (Develop Remote Hosting Services Plan) of Exhibit A.3 (EHR Architecture and Hosting Services Statement of Work) of the Agreement.

280. MACC

"**MACC**" shall have the meaning specified in Section 2.3 (Approved Physical Growth Event) of Section 2.3 (Approved Physical Growth Event) Exhibit C (Fees; Contractor Professional Services Rates) to the Agreement.

281. MASTER TRAINING PROGRAM

"**Master Training Program**" shall have the meaning specified in task 2.1 (Develop and Maintain Master Training Program) of Exhibit A.22 (Training and Knowledge Transfer Statement of Work) of the Agreement.

282. MAXIMUM FIXED PRICE

"**Maximum Fixed Price**" shall mean the maximum amount to be paid by County to Contractor for any Optional Work approved by County to be provided by Contractor in accordance with Section 9.8 (Optional Work).

283. MEANINGFUL USE

"**Meaningful Use**" shall mean "meaningful use" as defined under the ARRA and its implementing rules and regulations, including but not limited to the Stage 1 meaningful use criteria set forth in Exhibit V (Meaningful Use Criteria).

284. MECHANICAL, ELECTRONIC, AND PLUMBING OR MEP

"**Mechanical, Electronic, and Plumbing**" or "**MEP**" shall have the meaning specified in Section 3.2 (Physical Environment) of Exhibit N.1 (Hosting Services).

285. MEDICAL RECORDS INITIATION SESSION

"**Medical Records Initiation Session**" shall have the meaning specified in task 1.2 (Conduct Initiation Session for Medical Records Workgroup) of Exhibit A.16 (Medical Records Statement of Work) of the Agreement.

286. METHODM

"**MethodM**" shall have the meaning specified in each of the Statements of Work of the Agreement.

287. METHODM ONLINE

"**MethodM Online**" shall have the meaning specified in each of the Statements of Work of the Agreement.

288. MILESTONE(S)

"**Milestone(s)**", whether singular or plural, shall mean the date identified for completion of a specific subset of the Services as specified in a Statement of Work, Exhibit, Attachment, Schedule, or any document associated with the foregoing.

289. MILESTONE PAYMENTS

"**Milestone Payments**" shall have the meaning specified in Section 2.1 (Milestone Payments) of Exhibit C (Fees; Contractor Professional Services Rates) to the Agreement.

290. MILESTONE PAYMENTS ITEMS THAT TRANSITION

"**Milestone Payments Items That Transition**" shall have the meaning specified in Section 2.1 (Milestone Payments) of Exhibit C (Fees; Contractor Professional Services Rates) to the Agreement.

291. MODULE

"**Module**" shall mean a self-contained unit of the Licensed Software that has its own discrete function and may be separately compiled.

292. MONTHLY KEY MILESTONE PAYMENT

"**Monthly Key Milestone Payment**" shall have the meaning specified in Section 15.6(a) (Holdbacks).

293. NATURAL DEGENERATION

"**Natural Degeneration**" shall have the meaning specified in Section 4.2 (Natural Degeneration).

294. NETWORK ADDRESS TRANSLATION OR NAT

"**Network Address Translation**" or "**NAT**" shall have the meaning specified in Section 3.4(b) (Hosting Environment Security) of Exhibit N.1 (Hosting Services).

295. NEW SOFTWARE

"**New Software**" means any function or module of Contractor-developed software that:

(i) is not included in the Licensed Software marketed by Contractor as of the Effective Date;

(ii) fulfills a different primary function or is delivered on a different end-user platform than the Licensed Software; and

(iii) is not otherwise to be provided to County under this Agreement as a Revision to the Licensed Software.

Contractor may provide New Software following First Productive Use upon County's request therefor in the form of Optional Work in accordance with Section 9.8 (Optional Work).

296. OCM STRATEGY

"**OCM Strategy**" shall have the meaning specified in task 6 (Develop Strategic Assessment and Organizational Change Management Strategy) of Exhibit A.2 (Project Initiation Statement of Work) of the Agreement.

297. OCM STRATEGY REPORT

"**OCM Strategy Report**" shall have the meaning specified in task 6.2 (Develop Organization Change Management Strategy) of Exhibit A.2 (Project Initiation Statement of Work) of the Agreement.

298. OIG

"**OIG**" shall have the meaning specified in Recital E.

299. OMISSIONS

"**Omissions**" shall have the meaning specified in task 7.2 (Resolve Defects and Implement County-Approved Change Requests) of Exhibits A.4 through A.17 of the Agreement.

300. ONC

"**ONC**" shall have the meaning specified in Recital E.

301. ONC-ATCB

"**ONC-ATCB**" shall have the meaning specified in Section 17.1.17 (HITECH Technical Standards Warranty).

302. OPEN HOUSE DOMAIN

"**Open House Domain**" shall have the meaning specified in task 1.2 (Conduct Initiation Session for Clinical Documentation and Results Workgroup) of Exhibits A.4 through A.17 of the Agreement.

303. OPEN SOURCE SOFTWARE

"**Open Source Software**" shall mean any software, programming, or other intellectual property that is subject to (a) the GNU General Public License, GNU Library General Public License, Artistic License, BSD license, Mozilla Public License, or any similar license, including, but not limited to, those licenses listed at www.opensource.org/licenses, or (b) any agreement with terms requiring any intellectual property owned or licensed by County to be (i) disclosed or distributed in source code or object code form; (ii) licensed for the purpose of making derivative works; or (iii) redistributable**.** Depending on how Contractor uses or delivers Open Source Software, it may be Integral Third-Party Software or Third-Party Products. Contractor agrees to utilize Open Source Software in accordance with its established open source policies and procedures. Open Source Software need not be separately identified regardless of its classification as Integral Third-Party Software or Third-Party Products.

304. OPERATIONS AND ADMINISTRATION PROCEDURES

"**Operations and Administration Procedures**" shall have the meaning specified in task 3.5 (Develop Operations and Administration Procedures Related to the Deployment) of Exhibit A.23 (Deployment Statement of Work) of the Agreement.

305. OPTIONAL WORK

"**Optional Work**" shall mean New Software (which may include third-party software provided through Contractor), content and/or Professional Services, which may be provided by Contractor to County upon County's request and approval in accordance with Section 9.8 (Optional Work) and identified appropriately in Exhibit C.1 (Optional Work).

306. OR AND ANESTHESIOLOGY INITIATION SESSION

"**OR and Anesthesiology Initiation Session**" shall have the meaning specified in task 1.2 (Conduct Initiation Session for OR and Anesthesiology Workgroup) of Exhibit A.12 (OR and Anesthesiology Statement of Work) of the Agreement.

307. ORDER MANAGEMENT, CPOE AND DECISION SUPPORT INITIATION SESSION

"**Order Management, CPOE and Decision Support Initiation Session**" shall have the meaning specified in task 1.2 (Conduct Initiation Session for Order Management, CPOE and Decision Support Workgroup) of Exhibit A.8 (Order Management, CPOE and Decision Support Statement of Work) of the Agreement.

308. OUTAGE

"**Outage**" shall have the meaning specified in Section 4.3 (Availability Service Level) of Exhibit E (Service Levels and Performance Standards).

309. PARALLEL TESTING

"**Parallel Testing**" shall have the meaning specified in task 2.1 (Develop Test Plan) of Exhibit A.21 (EHR System Testing Statement of Work) of the Agreement.

310. PARTIES

"**Parties**" shall have the meaning specified in the Preamble to the Agreement.

311. PARTY

"**Party**" shall have the meaning specified in the Preamble to the Agreement.

312. PAYMENT CARD INDUSTRY OR PCI

"**Payment Card Industry**" or "**PCI**" shall have the meaning specified in Section 15.11 (Contractor Self-Audit).

313. PC BASICS COURSE

"**PC Basics Course**" shall have the meaning specified in task 12.3 (Conduct PC Basics Course) of Exhibit A.2 (Project Initiation Statement of Work) of the Agreement.

314. PEAK CONCURRENT USERS OF ETREBY

"**Peak Concurrent Users of Etreby**" shall have the meaning specified in Section 1 (Etreby Hosting Services) of Exhibit C.1 (Optional Work) to the Agreement.

315. PEAK CONCURRENT USERS

"**Peak Concurrent Users**" shall have the meaning specified in Section 2.2.3 (Concurrent User Definitions) of Exhibit C (Fees; Contractor Professional Services Rates) to the Agreement.

316. PEAK CONCURRENT USERS OF POWERINSIGHT

"**Peak Concurrent Users of PowerInsight**" shall have the meaning specified in Section 2.2.3 (Concurrent User Definitions) of Exhibit C (Fees; Contractor Professional Services Rates) to the Agreement.

317. PEAK HOURS

"**Peak Hours**" shall have the meaning specified in Section 4.5 (Response Times) of Exhibit E (Service Levels and Performance Standards).

318. PERFORMANCE REQUIREMENTS

"**Performance Requirements**" shall mean the performance requirements for the Licensed Software provided in writing, as updated from time to time, including those requirements specified in Exhibit E (Service Levels and Performance Standards).

319. PERMITTED SUBCONTRACTOR

"**Permitted Subcontractor**" shall have the meaning specified in Section 2.1(b) (Contractor; Subcontracting).

320. PERSONAL DATA

"**Personal Data**" shall mean any information that identifies a person, including, but not limited to, name, address, email address, passwords, account numbers, social security numbers, credit card information, personal financial or healthcare information, personal preferences, demographic data, marketing data, credit data, or any other identification data. For the avoidance of doubt, Personal Data shall include, but not be limited to, all "nonpublic personal information," as defined under the Gramm-Leach-Bliley Act (15 United States Code ("**U.S.C.**") §6801 et seq.), Protected Health Information, and "Personal Data" as that term is defined in EU Data Protection Directive (Directive 95/46/EEC) on the protection of individuals with regard to processing of personal data and the free movement of such data.

321. PHARMACY AND MEDICAL MANAGEMENT INITIATION SESSION

"**Pharmacy and Medical Management Initiation Session**" shall have the meaning specified in task 1.2 (Conduct Initiation Session for Pharmacy and Medication Management Workgroup) of Exhibit A.11 (Pharmacy and Medication Management Statement of Work) of the Agreement.

322. PHYSICIAN AND NURSING (CLINICIAN) SESSIONS

"**Physician and Nursing (Clinician) Sessions**" shall have the meaning specified in task 12.9 (Conduct Physicians and Nursing (Clinician) Sessions) of Exhibit A.2 (Project Initiation Statement of Work) of the Agreement.

323. PILOT DATA CONVERSION PLAN

"**Pilot Data Conversion Plan**" shall have the meaning specified in task 4.1 (Execute Data Conversion Pilot) of Exhibit A.18 (Data Conversion Statement of Work) of the Agreement.

324. PILOT DATA CONVERSION REPORT

"**Pilot Data Conversion Report**" shall have the meaning specified in task 4.1 (Execute Data Conversion Pilot) of Exhibit A.18 (Data Conversion Statement of Work) of the Agreement.

325. POOL DOLLARS

"**Pool Dollars**" shall mean, absent an Amendment in accordance with Section 13 (Changes to Agreement), the maximum amount allocated under this Agreement for the provision by Contractor of Optional Work, including New Software and Professional Services, approved by County in accordance with the terms of this Agreement.

326. POST GO-LIVE ASSESSMENT

"**Post Go-Live Assessment**" shall have the meaning specified in task 9.3 (Conduct Post Go-Live Assessment) of Exhibit A.23 (Deployment Statement of Work) of the Agreement.

327. POST GO-LIVE TRAINING EFFICACY REPORT

"**Post Go-Live Training Efficacy Report**" shall have the meaning specified in task 8.3 (Post Go-Live Evaluation of Training Efficacy) of Exhibit A.22 (Training and Knowledge Transfer Statement of Work) of the Agreement.

328. POWER DISTRIBUTION UNITS OR PDUS

"**Power Distribution Units**" or "**PDUs**" shall have the meaning specified in Section 3.2(a) (Physical Environment) of Exhibit N.1 (Hosting Services).

329. PRIMARY EVENT

"**Primary Event**" shall have the meaning specified in Section 24 (Limitation of Liability and Step Down Limitation of Liability).

330. PRIVACY AND SECURITY LAWS

"**Privacy and Security Laws**" shall have the meaning specified in Section 19.10 (Compliance With Federal and State Confidentiality Requirements).

331. PRIVACY AND SECURITY REGULATIONS

"**Privacy and Security Regulations**" shall have the meaning specified in the Preamble of Exhibit F (Business Associate Agreement).

332. PROBATION ELECTRONIC MEDICAL RECORD SYSTEM OR PEMRS

"**Probation Electronic Medical Record System**" or "**PEMRS**" shall have the meaning specified in Exhibit EE (Interoperability Functionality) of the Agreement.

333. PROCEDURES FOR STATUS MEETINGS/REPORTS

"**Procedures for Status Meetings/Reports**" shall have the meaning specified in task 4.12 (Develop Procedures for Status Meetings/Reporting) of Exhibit A.2 (Project Initiation Statement of Work) of the Agreement.

334. PROCESS OR PROCESSING

"**Process**" or "**Processing**" shall mean any operation or set of operations performed upon the Personal Data, whether or not by automatic means, including collection, recording, organization, use, transfer, disclosure, storage, manipulation, combination and deletion of Personal Data.

335. PRODUCTION CUTOVER PLAN

"**Production Cutover Plan**" shall have the meaning specified in task 5.1 (Develop Production Cutover Plan) of Exhibit A.23 (Deployment Statement of Work) of the Agreement.

336. PRODUCTION ENVIRONMENT

"**Production Environment**" shall mean the Existing System, together with any Hardware purchased hereunder and Contractor's Recommended Configuration, set up for Production Use of the Licensed Software.

337. PRODUCTION ENVIRONMENT CHANGE AUTHORIZATION OR PECA

"**Production Environment Change Authorization**" or "**PECA**" shall have the meaning specified in task 3.12 (Provide Technology Change Management) of Exhibit A.24 (Support Services, Maintenance, and Operations Statement of Work) of the Agreement.

338. PRODUCTION SUPPORT PLAN

"**Production Support Plan**" shall have the meaning specified in task 2.1 (Develop and Maintain Production Support Plan) of Exhibit A.24 (Support Services, Maintenance, and Operations Statement of Work) of the Agreement.

339. PRODUCTIVE USE

"**Productive Use**" shall mean the actual use of the Licensed Software in the Production Environment to process actual data in County's day-to-day operations commencing from the point of Go-Live.

340. PROFESSIONAL SERVICES

"**Professional Services**" shall mean consulting services, additional training and/or customizations, which Contractor may provide upon County's request therefor in the form of Optional Work in accordance with Section 9.8 (Optional Work).

341. PROFICIENCY ASSESSMENT

"**Proficiency Assessment**" shall have the meaning specified in task 12.1 (Conduct Project Management Workshop) of Exhibit A.2 (Project Initiation Statement of Work) of the Agreement.

342. PROJECT CHANGE MANAGEMENT PLAN

"**Project Change Management Plan**" shall have the meaning specified in task 4.9 (Develop Project Change Management Plan) of Exhibit A.2 (Project Initiation Statement of Work) of the Agreement.

343. PROJECT CHARTER

"**Project Charter**" shall have the meaning specified in task 1 (Develop Project Charter) of Exhibit A.2 (Project Initiation Statement of Work) of the Agreement.

344. PROJECT COMMUNICATIONS STRATEGY

"**Project Communications Strategy**" shall have the meaning specified in task 4.4 (Develop Project Communications Strategy) of Exhibit A.2 (Project Initiation Statement of Work) of the Agreement.

345. PROJECT CONTROL DOCUMENT

"**Project Control Document**" shall mean a detailed project plan for the implementation of the Licensed Software provided by Contractor and set forth in Exhibit A.25 (Project Control Document).

346. PROJECT KICKOFF

"**Project Kickoff**" shall have the meaning specified in task 13 (Conduct Project Kickoff) of Exhibit A.2 (Project Initiation Statement of Work) of the Agreement.

347. PROJECT LIBRARY

"**Project Library**" shall have the meaning specified in task 6 (Maintain Project Library on MethodM Online) of Exhibit A.1 (Overall Project Management, Planning, Coordination and Integration Statement of Work) of the Agreement.

348. PROJECT MANAGEMENT WORKSHOP

"**Project Management Workshop**" shall have the meaning specified in task 12.1 (Conduct Project Management Workshop) of Exhibit A.2 (Project Initiation Statement of Work) of the Agreement.

349. PROJECT ORGANIZATIONAL CHART

"**Project Organizational Chart**" shall have the meaning specified in task 4.6 (Develop Project Staffing and Resource Management Plan) of Exhibit A.2 (Project Initiation Statement of Work) of the Agreement.

350. PROJECT OVERRUN

"**Project Overrun**" shall have the meaning specified in Section 14.7.2(b) (Time and Materials).

351. PROJECT PREPARATION SESSIONS

"**Project Preparation Sessions**" shall have the meaning specified in task 12 (Conduct Project Preparation Sessions) of Exhibit A.2 (Project Initiation Statement of Work) of the Agreement.

352. PROJECT SCHEDULE

"**Project Schedule**" shall mean the agreed upon timeline for Implementation Services tasks, subtasks, and Deliverables specified in Exhibit A (Statements of Work).

353. PROJECT STAFFING AND RESOURCE MANAGEMENT PLAN

"**Project Staffing and Resource Management Plan**" shall have the meaning specified in task 4.6 (Develop Project Staffing and Resource Management Plan) of Exhibit A.2 (Project Initiation Statement of Work.

354. PROJECT TEAM WORKSHOP

"**Project Team Workshop**" shall have the meaning specified in task 12.2 (Conduct Project Team Workshop) of Exhibit A.2 (Project Initiation Statement of Work) of the Agreement.

355. PROJECT WORK PLAN

"**Project Work Plan**" shall have the meaning specified in in each of the Statements of Work of the Agreement.

356. PROJECT WORK PLAN MANAGEMENT DOCUMENT

"**Project Work Plan Management Document**" shall have the meaning specified in task 4.13 (Develop Project Control Document) of Exhibit A.2 (Project Initiation Statement of Work) of the Agreement.

357. PROJECT WORK PLAN OR PWP

"**Project Work Plan**" or "**PWP**" shall have the meaning specified in task 4.2 (Develop Project Work Plan) of Exhibit A.2 (Project Initiation Statement of Work) of the Agreement.

358. PROPOSAL

"**Proposal**" means the proposal provided by Contractor in response to the RFP, as supplemented by all written correspondence of Contractor to clarify such proposal, attached collectively as Exhibit W (Contractor Proposal).

359. PROTECTED HEALTH INFORMATION

"**Protected Health Information**" shall have the meaning specified in Exhibit F (Business Associate Agreement).

360. PUBLIC RECORDS ACT

"**Public Records Act**" shall have the meaning specified in Section 32.26 (Public Records Act).

361. QOS

"**QoS**" shall have the meaning specified in Exhibit L (Recommended Configuration) of the Agreement.

362. QUALITY MANAGEMENT PLAN

"**Quality Management Plan**" shall have the meaning specified in task 4.1 (Develop Quality Management Plan) of Exhibit A.2 (Project Initiation Statement of Work) of the Agreement.

363. QUALITY MANAGEMENT SYSTEM

"**Quality Management System**" or "**QMS**" shall have the meaning specified in Section 3.4 (Hosting Environment Security) of Exhibit N.1 (Hosting Services).

364. RADIOLOGY INITIATION SESSION

"**Radiology Initiation Session**" shall have the meaning specified in task 1.2 (Conduct Initiation Session for Radiology Workgroup) of Exhibit A.9 (Radiology Statement of Work) of the Agreement.

365. RECEIVING PARTY

"**Receiving Party**" shall have the meaning specified in Section 19.2 (Confidential Information Defined).

366. RECOMMENDED CONFIGURATION

"**Recommended Configuration**" shall mean the computer platform(s), operating system(s), applications, interface engine, network infrastructure, connectivity, and workstation configurations recommended by Contractor for use with the Licensed Software, as specified in Exhibit O (Recommended Configuration). Solely with respect to the In-House Solution, "**Recommended Configuration**" shall have the meaning specified in Section 2 (In-House Solution) of Exhibit N (Additional Hosting Services Terms and Conditions) to the Agreement.

367. RECONCILIATION ADJUSTMENT

"**Reconciliation Adjustment**" shall have the meaning specified in Section 2.2.1 (Use Reconciliation) of Exhibit C (Fees; Contractor Professional Services Rates) to the Agreement.

368. RED FLAGS

"**Red Flags**" shall have the meaning specified in Section 20.7 (Additional Procedures for the Identification of Possible Instances of Identity Theft).

369. REDUNDANT ARRAY OF INDEPENDENT DISK OR RAID

"**Redundant Array of Independent Disk**" or "**RAID**" shall have the meaning specified in Section 3.1(c) (Technical Environment) of Exhibit N.1 (Hosting Services.

370. REFRESH SERVICES

"**Refresh Services**" shall have the meaning specified in Section 3.6 (Hosting Hardware Refresh Services) of Exhibit N.1 (Hosting Services).

371. REGISTRATION AND EMPI INITIATION SESSION

"**Registration and EMPI Initiation Session**" shall have the meaning specified in task 1.2 (Conduct Initiation Session for Registration and EMPI Workgroup) of Exhibit A.4 (Registration and EMPI Statement of Work) of the Agreement.

372. REGRESSION TESTING

"**Regression Testing**" shall have the meaning specified in task 2.1 (Develop Test Plan) of Exhibit A.21 (EHR System Testing Statement of Work) of the Agreement.

373. REGRESSION TESTING SUMMARY REPORTS

"**Regression Testing Summary Reports**" shall have the meaning specified in task 8.2 (Perform Regression Testing) of Exhibit A.21 (EHR System Testing Statement of Work) of the Agreement.

374. REHABILITATION INITIATION SESSION

"**Rehabilitation Initiation Session**" shall have the meaning specified in task 1.2 (Conduct Initiation Session for Rehabilitation Workgroup) of Exhibit A.15 (Rehabilitation Statement of Work) of the Agreement.

375. RELEASE

"**Release**" shall mean a redistribution of Licensed Software that contains an aggregation of Updates, new features, new functionality, and/or other performance improvements that does not constitute a Version and is made Generally Available to clients.

376. RELEASE CONDITIONS

"**Release Conditions**" shall have the meaning specified in Section 4.1 (Escrow Agent and Release Conditions).

377. RELEASE SCHEDULE

"**Release Schedule**" shall have the meaning described in the Statements of Work of the Agreement.

378. REMEDIAL ACT(S)

"**Remedial Act(s)**" shall have the meaning specified in Section 23.2(b) (Intellectual Property Indemnification).

379. REMOTE HOSTING SERVICES PLAN

"**Remote Hosting Services Plan**" shall have the meaning specified in task 5 (Initiate and Perform Remote Hosting Services) of Exhibit A.3 (EHR Architecture and Hosting Services Statement of Work) of the Agreement.

380. REMOTE REPORT DISTRIBUTION OR RRD

"**Remote Report Distribution**" or "**RRD**" shall have the meaning specified in task 3.2 (Provide Application Monitoring and Management) of Exhibit A.24 (Support Services, Maintenance, and Operations Statement of Work) of the Agreement.

381. REMOVABLE MEDIA

"**Removable Media**" shall have the meaning specified in Section 3 (Removable Media) of Exhibit K (Information Security Requirements).

382. RENEWAL SUPPORT TERM

"**Renewal Support Term**" shall have the meaning specified in Section 1.2 (Initial and Renewal Support Terms for Support Services).

383. REPLACEMENT PRODUCT

"**Replacement Product**" shall have the meaning specified in Section 6 (Continuous Licensed Software Support).

384. REQUIRED INSURANCE

"**Required Insurance**" shall have the meaning specified in Section 25.1 (General Insurance Provisions).

385. REQUIREMENTS FOR SYSTEMS, TOOLS, AND INTERFACES FOR IT SERVICE MANAGEMENT

"**Requirements for Systems, Tools, and Interfaces for IT Service Management**" shall have the meaning specified in task 2.5 (Define Requirements for Systems, Tools, and Interfaces for IT Service Management) of Exhibit A.24 (Support Services, Maintenance, and Operations Statement of Work) of the Agreement.

386. RESOLVE

"**Resolve**" shall have the meaning specified in Section 4.2(c) (Support Request Service Levels) of Exhibit E (Service Levels and Performance Standards).

387. RESPOND

"**Respond**" shall have the meaning specified in Section 4.2(b) (Response Time Service Level) of Exhibit E (Service Levels and Performance Standards).

388. REVISION MANAGEMENT PLAN

"**Revision Management Plan**" shall have the meaning specified in task 3.7 (Develop Solution Readiness Framework) of Exhibit A.23 (Deployment Statement of Work) of the Agreement.

389. REVISIONS

"**Revisions**" shall mean Updates, Enhancements, Releases, Versions, and Displaced/Renamed Product.

390. RFP

"**RFP**" shall have the meaning specified in Recital F.

391. RISK ANALYSIS DOCUMENT

"**Risk Analysis Document**" shall have the meaning specified in task 2.1 (Confirm and Validate Data Sources) of Exhibit A.18 (Data Conversion Statement of Work.

392. RISK AND ISSUE MATRIX

"**Risk and Issue Matrix**" shall have the meaning specified in task 3.2 (Perform Data Collection (System Review Follow-Up)) of Exhibits A.4 through A.17 of the Agreement.

393. RISK AND OPPORTUNITIES DOCUMENTATION

"**Risk and Opportunities Documentation**" shall have the meaning specified in task 2.3 (Review Current DHS Workflows and Processes to Identify Risks and Opportunities) of Exhibits A.4 through A.17 of the Agreement.

394. RISK AND OPPORTUNITIES REPORT

"**Risk and Opportunities Report**" shall have the meaning specified in task 3.1 (Conduct System Review Session) of Exhibits A.4 through A.17 of the Agreement.

395. RISK MANAGEMENT PLAN

"**Risk Management Plan**" shall have the meaning specified in task 4.5 (Develop Risk Management Plan) of Exhibit A.2 (Project Initiation Statement of Work) of the Agreement.

396. RISK MATRIX

"**Risk Matrix**" shall have the meaning specified in task 4.1 (Build and Test Interfaces) of Exhibit A.20 (Interfaces Statement of Work) of the Agreement.

397. SCHEDULE

"**Schedule**" shall have the meaning specified in the Preamble to the Agreement.

398. SCHEDULED DOWNTIME PLAN

"**Scheduled Downtime Plan**" shall have the meaning specified in task 3.7 (Develop Solution Readiness Framework) of Exhibit A.23 (Deployment Statement of Work) of the Agreement.

399. SCHEDULED UPTIME

"**Scheduled Uptime**" shall have the meaning specified in Section 4.3 (Availability Service Level) of Exhibit E (Service Levels and Performance Standards).

400. SCHEDULING INITIATION SESSION

"**Scheduling Initiation Session**" shall have the meaning specified in task 1.2 (Conduct Initiation Session for Scheduling Workgroup) of Exhibit A.6 (Scheduling Statement of Work) of the Agreement.

401. SECURE SOCKET LAYER OR SSL

"**Secure Socket Layer**" or "**SSL**" shall have the meaning specified in Section 3.4(a) (Hosting Environment Security) of Exhibit N.1 (Hosting Services).

402. SECURITY ASSESSMENT

"**Security Assessment**" shall have the meaning specified in task 2.1 (Document Security Objectives and Protection Requirements) of Exhibit A.19 (Security Statement of Work) of the Agreement.

403. SECURITY AUDITING INFRASTRUCTURE DOCUMENTATION

"**Security Auditing Infrastructure Documentation**" shall have the meaning specified in task 3.1 (Set Up and Configure Monitoring and Auditing Infrastructure and Processes) of Exhibit A.19 (Security Statement of Work) of the Agreement.

404. SECURITY AUDITING PROCESS DOCUMENTATION

"**Security Auditing Process Documentation**" shall have the meaning specified in task 3.1 (Set Up and Configure Monitoring and Auditing Infrastructure and Processes) of Exhibit A.19 (Security Statement of Work) of the Agreement.

405. SECURITY INCIDENT

"**Security Incident**" shall have the meaning given to such term in 45 C.F.R. § 164.304, but shall not include: (a) unsuccessful attempts to penetrate computer networks or servers maintained by Contractor and (b) immaterial incidents that occur on a routine basis, such as general "pinging" or "denial of service attacks."

406. SECURITY INITIATION SESSION

"**Security Initiation Session**" shall have the meaning specified in task 1.2 (Conduct Initiation Session for Security Workgroup) of Exhibit A.19 (Security Statement of Work) of the Agreement.

407. SECURITY MONITORING AND AUDITING TOOLS

"**Security Monitoring and Auditing Tools**" shall have the meaning specified in task 3.2 (Deploy Security Monitoring and Auditing Tools) of Exhibit A.19 (Security Statement of Work) of the Agreement.

408. SECURITY MONITORING INFRASTRUCTURE DOCUMENTATION

"**Security Monitoring Infrastructure Documentation**" shall have the meaning specified in task 3.1 (Set Up and Configure Monitoring and Auditing Infrastructure and Processes) of Exhibit A.19 (Security Statement of Work) of the Agreement.

409. SECURITY MONITORING PROCESS DOCUMENTATION

"**Security Monitoring Process Documentation**" shall have the meaning specified in task 3.1 (Set Up and Configure Monitoring and Auditing Infrastructure and Processes) of Exhibit A.19 (Security Statement of Work) of the Agreement.

410. SECURITY PROTECTION REQUIREMENTS DOCUMENT

"**Security Protection Requirements Document**" shall have the meaning specified in task 2.1 (Document Security Objectives and Protection Requirements) of Exhibit A.19 (Security Statement of Work) of the Agreement.

411. SECURITY STRATEGY

"**Security Strategy**" shall have the meaning specified in task 10 (Security Strategy) of Exhibit A.2 (Project Initiation Statement of Work) of the Agreement.

412. SERVER

"**Server**" shall have the meaning specified in Section 1.1 (General Requirements) of Exhibit E (Service Levels and Performance Standards).

413. SERVICE INTERDEPENDENCY

"**Service Interdependency**" shall have the meaning specified in Section 30.2 (Service Interdependencies).

414. SERVICE LEVEL CREDIT

"**Service Level Credit**" shall have the meaning specified in Section 5.2 (Service Level Credits) of Exhibit E (Service Levels and Performance Standards).

415. SERVICE LEVEL FAILURES

"**Service Level Failures**" shall have the meaning specified in Section 5.1 (Service Level Failures) of Exhibit E (Service Levels and Performance Standards).

416. SERVICE LEVEL REPORTS

"**Service Level Reports**" shall have the meaning specified in task 4.3 (Conduct Service Level Monitoring and Reporting) of Exhibit A.24 (Support Services, Maintenance, and Operations Statement of Work) of the Agreement.

417. SERVICE LEVELS

"**Service Levels**" shall have the meaning specified in Section 11 (Service Levels).

418. SERVICE REQUEST TRACKING SYSTEM

"**Service Request Tracking System**" shall have the meaning specified in task 4.4 (Respond to Support Service Requests) of Exhibit A.24 (Support Services, Maintenance, and Operations Statement of Work) of the Agreement.

419. SERVICES

"**Services**" shall mean, collectively, all functions, responsibilities, tasks, subtasks, Deliverables, and other services: (a) identified in the Specifications; (b) identified in this Agreement as being Contractor's responsibility; and (c) otherwise necessary to comply with the terms of this Agreement. Without increasing the scope of the Services, if any component task, subtask,

service, or function is: (i) an inherent or necessary part of the Services defined in subparts (a), (b), or (c) of this Section; or (ii) a customary part of the Services defined in subparts (a), (b), or (c) of this Section, and not in conflict with Contractor's established methods of providing services; and, as to a service(s) within either subpart (i) and (ii) of this sentence above, is not specifically described in this Agreement, then such service or function shall be deemed to be part of the Services. While County utilizes Hosting Services, any hardware and/or software provided to County by Contractor as part of the Hosting Services pursuant to this Agreement shall be deemed part of the Services. There are several subsets of the Services, specifically "Implementation Services," "Hosting Services," and "Support Services" that are included within this definition of "Services," even though they are sometimes referenced by the Service grouping name (e.g., "Implementation Services," "Hosting Services," and "Support Services"). Each of these Service groupings includes both the broad definition of Services above, and the specific Services associated with the Service grouping and described in Exhibits and related documents incorporated into the definition of that Service grouping.

420. SHERRIFF JAIL HEALTH INFORMATION SYSTEM OR JHIS

"**Sherriff Jail Health Information System**" or "**JHIS**" shall have the meaning specified in Exhibit EE (Interoperability Functionality) of the Agreement.

421. SOLUTION AND TOOLS INTRODUCTION WORKSHOP

"**Solution and Tools Introduction Workshop**" shall have the meaning specified in task 12.5 (Conduct Solution and Tools Introduction Workshop) of Exhibit A.2 (Project Initiation Statement of Work) of the Agreement.

422. SOLUTION BUILD AND MAINTAIN COURSE

"**Solution Build and Maintain Course**" shall have the meaning specified in task 12.4 (Conduct Solution Build and Maintain Course) of Exhibit A.2 (Project Initiation Statement of Work) of the Agreement.

423. SOLUTION READINESS ASSESSMENT

"**Solution Readiness Assessment**" shall have the meaning specified in task 4 (Conduct Readiness Assessment) of Exhibit A.23 (Deployment Statement of Work) of the Agreement.

424. SOLUTION READINESS FRAMEWORK

"**Solution Readiness Framework**" shall have the meaning specified in task 3.7 (Develop Solution Readiness Framework) of Exhibit A.23 (Deployment Statement of Work) of the Agreement.

425. SOURCE MATERIAL

"**Source Material**" shall mean, with respect to the Contractor-developed Licensed Software and Work Product, the source code of such software and all related compiler command files, build scripts, scripts relating to the operation and maintenance of such application, application programming interface ("**API**"), graphical user interface ("**GUI**"), object libraries, all relevant instructions on building the object code of such application, and all documentation relating to the foregoing, such that collectively the foregoing will be sufficient to enable a person possessing reasonable skill and expertise in computer software and information technology to

build, load, and operate the machine-executable object code of such application; to maintain and support such application; and to effectively use all functions and features of such software. If any portion of the Source Material is encrypted, Contractor shall include the decryption tools and decryption keys with the Source Material.

426. SPECIFICATIONS

"**Specifications**" shall mean any or all of the following, as applicable:

(a) All specifications, requirements, and standards specified in Exhibit A.2 (Licensed Software Requirements) and Exhibit A (Statement of Work).

(b) All Performance Requirements and standards specified in this Agreement, including, but not limited to, requirements for Licensed Software availability and Licensed Software response time identified in Exhibit E (Service Levels). The requirements for Licensed Software availability and Licensed Software response time identified in Exhibit E (Service Levels) shall only be included in this definition until Twelve (12) months after the date of Productive Use of the last Cluster for which the Licensed Software is planned to be implemented under this Agreement.

(c) The Documentation, to the extent not inconsistent with any of the foregoing in this definition.

(d) All specifications provided or made available by Contractor in writing under this Agreement, but only to the extent: (i) not inconsistent with any of the foregoing in this Section; and (ii) acceptable to County.

(e) All Existing System and Hardware requirements and certifications provided by Contractor in accordance with this Agreement with respect to the Licensed Software, including the Recommended Configuration.

(f) The Proposal, but only to the extent: (i) not inconsistent with any of the foregoing in this Section; and (ii) acceptable to County.

(g) All written and/or electronic materials furnished or made available by or through Contractor regarding the Licensed Software, including functionality, features, capacity, availability, response times, accuracy, or any other performance or other Licensed Software criteria or any element of the Licensed Software or any Licensed Software component.

(h) The Business Objectives and Acceptance Criteria.

(i) All Hosting Services requirements and standards set forth in Exhibit N (Additional Hosting Services Terms and Conditions) and related Exhibits.

427. STAKEHOLDER ANALYSIS

"**Stakeholder Analysis**" shall have the meaning specified in task 3.1 (Identify Stakeholders) of Exhibit A.2 (Project Initiation Statement of Work) of the Agreement.

428. STANDARDS FOR ATTESTATION ENGAGEMENTS OR SSAE

"**Standards for Attestation Engagements**" or "**SSAE**" shall have the meaning specified in Section 3.3(a) (Physical Security Environment) of Exhibit N.1 (Hosting Services).

429. STATE

"**State**" shall mean the State of California.

430. STATEMENT OF WORK

"**Statement of Work**" shall have the meaning specified in Section 9.1 (Services).

431. STATUS MEETING

"**Status Meeting**" shall have the meaning specified in Section 10.2.1 (Reports).

432. STATUS REPORT

"**Status Report**" shall have the meaning specified in Section 10.2.1 (Reports).

433. STORAGE AREA NETWORK OR SAN

"**Storage Area Network**" or "**SAN**" shall have the meaning specified in Section 3.1(c) (Technical Environment) of Exhibit N.1 (Hosting Services).

434. STRATEGIC ASSESSMENT

"**Strategic Assessment**" shall have the meaning specified in task 6 (Develop Strategic Assessment and Organizational Change Management Strategy) of Exhibit A.2 (Project Initiation Statement of Work) of the Agreement.

435. STRATEGIC ASSESSMENT REPORT

"**Strategic Assessment Report**" shall have the meaning specified in task 6.1 (Conduct Strategic Assessment) of Exhibit A.2 (Project Initiation Statement of Work) of the Agreement.

436. STRATEGIC ASSESSMENT SESSION

"**Strategic Assessment Session**" shall have the meaning specified in task 6.1 (Conduct Strategic Assessment) of Exhibit A.2 (Project Initiation Statement of Work) of the Agreement.

437. SUBJECT MATTER EXPERTS OR SMES

"**Subject Matter Experts**" or "**SMEs**" shall have the meaning specified in in each of the Statements of Work of the Agreement.

438. SUCCESSOR EVENT

"**Successor Event**" shall have the meaning specified in Section 6 (Continuous Licensed Software Support).

439. SUPER USER

"**Super User**" shall have the meaning specified in task7.1 (Conduct Train-the-Trainer and Super User Training) of Exhibit A.22 (Training and Knowledge Transfer) of the Agreement.

440. SUPER USER TRAINING

"**Super User Training**" shall have the meaning specified in task 7.1 (Conduct Train-the-Trainer and Super User Training) of Exhibit A.22 (Training and Knowledge Transfer) of the Agreement.

441. SUPPORT REQUEST

"**Support Request**" shall have the meaning specified in Section 4.2(a) (Support Request Service Levels) of Exhibit E (Service Levels and Performance Standards).

442. SUPPORT REQUEST TRACKING SYSTEM OR SRTS

"**Support Request Tracking System**" or "**SRTS**" shall mean the automated support request tracking system as described in Section 4.1 (Service Request Tracking System) of Exhibit E (Service Levels And Performance Standards).

443. SUPPORT SERVICES

"**Support Services**" shall mean the Services as further specified in Section 9.7 (Support Services).

444. SUPPORT SERVICES FEE(S)

"**Support Services Fee(s)**" shall mean fees to be paid by County to Contractor for Support Services, as specified in Exhibit C (Fees; Contractor Professional Services Rates).

445. SUPPORT SERVICES, MAINTENANCE, AND OPERATIONS INITIATION SESSION

"**Support Services, Maintenance, and Operations Initiation Session**" shall have the meaning specified in task 1.2 (Conduct Initiation Session for Support Services, Maintenance, and Operations Workgroup) of Exhibit A.24 (Support Services, Maintenance, and Operations Statement of Work) of the Agreement.

446. SUPPORT TERM

"**Support Term**" shall have the meaning specified in Section 1.2 (Initial and Renewal Support Terms for Support Services).

447. SYSTEM BACKUP/RESTORE PLAN

"**System Backup/Restore Plan**" shall have the meaning specified in task 3.7 (Develop Solution Readiness Framework) of Exhibit A.23 (Deployment Statement of Work) of the Agreement.

448. SYSTEM PERFORMANCE MONITORING PLAN

"**System Performance Monitoring Plan**" shall have the meaning specified in task 3.7 (Develop Solution Readiness Framework) of Exhibit A.23 (Deployment Statement of Work) of the Agreement.

449. SYSTEM REVIEW SESSION

"**System Review Session**" shall have the meaning specified in task 3.1 (Conduct System Review Session) of Exhibits A.4 through A.17 of the Agreement.

450. SYSTEM SECURITY PLAN

"**System Security Plan**" shall have the meaning specified in task 2.2 (Develop System Security Plan) of Exhibit A.19 (Security Statement of Work) of the Agreement.

451. SYSTEM TESTING

"**System Testing**" shall have the meaning specified in task 4.1 (Build and Test Interfaces) of Exhibit A.20 (Interfaces Statement of Work) of the Agreement.

452. SYSTEM VALIDATION SESSION

"**System Validation Session**" shall have the meaning specified in task 6.1 (System Validation Session) of Exhibits A.4 through A.17 of the Agreement.

453. TB

"**TB**" shall have the meaning specified in Section 2.2.2 (Baseline Use Metrics) of Exhibit C (Fees; Contractor Professional Services Rates) to the Agreement.

454. TECHNICAL ASSESSMENT

"**Technical Assessment**" shall have the meaning specified in task 5.1 (Conduct Technical Assessment) of Exhibit A.2 (Project Initiation Statement of Work) of the Agreement.

455. TECHNICAL READINESS ASSESSMENT

"**Technical Readiness Assessment**" shall have the meaning specified in task 4.1 (Conduct Technical Readiness Assessment) of Exhibit A.23 (Deployment Statement of Work) of the Agreement.

456. TECHNOLOGY STRATEGY

"**Technology Strategy**" shall have the meaning specified in task 5 (Develop Technology Strategy) of Exhibit A.2 (Project Initiation Statement of Work) of the Agreement.

457. TERM

"**Term**" shall have the meaning specified in Section 1.1 (Term).

458. TERMINATION TRANSITION PLAN

"**Termination Transition Plan**" shall have the meaning specified in Section 29.8 (Termination Transition Services).

459. TEST PLAN

"**Test Plan**" shall have the meaning specified in task 2 (Develop Test Plan) of Exhibit A.21 (EHR System Testing Statement of Work) of the Agreement.

460. TESTING STRATEGY

"**Testing Strategy**" shall have the meaning specified in task 9 (Develop Testing Strategy) of Exhibit A.2 (Project Initiation Statement of Work) of the Agreement.

461. THIRD-PARTY PRODUCTS

"**Third-Party Products**" shall mean all software and content licensed, leased, or otherwise obtained by Contractor from a third-party, and used with the Licensed Software or used for the performance of the Services and which is expressly identified in the Third-Party Products section of Exhibit B (EHR System Software Components).

462. THIRD-PARTY PRODUCTS WITH INDEPENDENT CONDITIONS

"**Third-Party Products With Independent Conditions**" shall have the meaning specified in Section 7 (Third-Party Products With Independent Conditions).

463. TIME/DATE COMPLIANT

"**Time/Date Compliant**" means such products and services will correctly store, represent, calculate, sort, and process all (a) dates, including single and multi-century formulas and leap year calculations; and (b) times in all relevant time zones, including any local, state, or federal adjustments to Daylight Saving Time (e.g., changes made pursuant to The Energy Policy Act of 2005).

464. TRAINING

"**Training**" shall mean training relating to the Licensed Software to be provided by Contractor pursuant to this Agreement, including training County may acquire in the future as part of Professional Services.

465. TRAINING AND KNOWLEDGE TRANSFER INITIATION SESSION

"**Training and Knowledge Transfer Initiation Session**" shall have the meaning specified in task 1.2 (Conduct Initiation Session for Training and Knowledge Transfer Workgroup) of Exhibit A.22 (Training and Knowledge Transfer Statement of Work) of the Agreement.

466. TRAINING AND KNOWLEDGE TRANSFER SCHEDULE

"**Training and Knowledge Transfer Schedule**" shall have the meaning specified in task 5.1 (Develop Training and Knowledge Transfer Schedule) of Exhibit A.22 (Training and Knowledge Transfer Statement of Work) of the Agreement.

467. TRAINING AND SUPPORT MATERIALS

"**Training and Support Materials**" shall have the meaning specified in task 4 (Develop Training and Support Materials) of Exhibit A.22 (Training and Knowledge Transfer Statement of Work) of the Agreement.

468. TRAINING DEVELOPMENT STANDARDS

"**Training Development Standards**" shall have the meaning specified in task 2.5 (Develop Training Development Standards) of Exhibit A.22 (Training and Knowledge Transfer Statement of Work) of the Agreement.

469. TRAINING ENVIRONMENT PLAN

"**Training Environment Plan**" shall have the meaning specified in task 3.1 (Develop Plan for the Training Environment) of Exhibit A.22 (Training and Knowledge Transfer Statement of Work) of the Agreement.

470. TRAINING ENVIRONMENT SESSION

"**Training Environment Session**" shall have the meaning specified in task 3.1 (Develop Plan for the Training Environment) of Exhibit A.22 (Training and Knowledge Transfer Statement of Work) of the Agreement.

471. TRAIN-THE-TRAINER TRAINING

"**Train-the-Trainer Training**" shall have the meaning specified in task 7 (Conduct Train-the-Trainer and Super User Training) of Exhibit A.22 (Training and Knowledge Transfer Statement of Work) of the Agreement.

472. TRIPLE DATA ENCRYPTION STANDARD OR 3DES

"**Triple Data Encryption Standard**" or "**3DES**"" shall have the meaning specified in Section 3.4(a) (Hosting Environment Security) of Exhibit N.1 (Hosting Services).

473. UCITA

"**UCITA**" shall have the meaning specified in Section 32.2 (UCITA; Self-Help Remedies).

474. UNINTERRUPTIBLE POWER SUPPLY OR UPS

"**Uninterruptible Power Supply**" or "**UPS**" shall have the meaning specified in Section 3.2(a) (Physical Environment) of Exhibit N.1 (Hosting Services).

475. UNIT AND SYSTEM TEST(ING)

"**Unit and System Test(ing)**" shall have the meaning specified in task 7 (Complete Build of Clinical Documentation and Results and Conduct System and Unit Testing) of Exhibits A.4 through A.17 of the Agreement.

476. UNIT TESTING

"**Unit Testing**" shall have the meaning specified in task 2.1 (Develop Test Plan) of Exhibit A.21 (EHR System Testing Statement of Work).

477. UNPLANNED DOWNTIME

"**Unplanned Downtime**" shall have the meaning specified in Section 4.3 (Availability Service Level) of Exhibit E (Service Levels and Performance Standards).

478. UPDATE

"**Update**" shall mean a bug fix, patch, or redistribution of the Licensed Software that corrects an error as well as addresses common functional and performance issues, including Error Corrections.

479. USB

"**USB**" shall have the meaning specified in Section 20.4 (Use of Personal Portable Devices).

480. USE

"**Use**," as it applies to Licensed Software and Third-Party Products, shall have the meaning specified in Section 3.1.1 (Scope of License). "**Use**," as it applies to the In-House Solution, shall have the meaning specified in Section 2 (In-House Solution) of Exhibit N (Additional Hosting Services Terms and Conditions) to the Agreement.

481. USER

"**User**" shall have the meaning specified in Section 3.1.1 (Scope of License).

482. USER ACCEPTANCE TESTING

"**User Acceptance Testing**" shall have the meaning specified in task 2.1 (Develop Test Plan) of Exhibit A.21 (EHR System Testing Statement of Work) of the Agreement.

483. USE RECONCILIATION

"**Use Reconciliation**" shall mean the process described in Section 2.2.1 of Exhibit C (Fees; Contractor Professional Services Rates) to assess whether there are additional infrastructure costs to Contractor that arise in connection with expanded use or consumption by County of the EHR System and, if so, what the appropriate financial adjustment arising from such expanded use or consumption will be.

484. USER ROLE AND AUTHORIZATION TEST PLAN

"**User Role and Authorization Test Plan**" shall have the meaning specified in task 4.2 (Implement User Roles and Authorizations) of Exhibit A.19 (Security Statement of Work) of the Agreement.

485. VENUES

"**Venues**" shall mean all County settings of care, or service delivery. For illustration, examples include inpatient ward, outpatient/ambulatory clinic, in-home, nursing home, jail ward, recuperative care, emergency department, operating room, procedure area, recovery room/post-operative care unit, intensive care unit, and pre-hospital.

486. VERSION

"**Version**" shall mean a redistribution of Licensed Software that Contractor makes Generally Available and that contains an aggregation of Releases or Updates, or significant new (i) features, (ii) functionality, and/or (iii) other performance improvements, and is accompanied by a change in the reference to the Licensed Software, such as a change in the number to the left of the period in the version numbering format X.XX or a change to the name of the software.

487. VPN

"**VPN**" shall have the meaning specified in Section 20.3 (Contractor Systems).

488. WARRANTY PERIOD

"**Warranty Period**" shall have the meaning specified in Section 17.1.3 (Conformance to Specifications).

489. WEB BASED TRAINING OR WBT

"**Web Based Training**" or "**WBT**" shall have the meaning specified in each of the Statements of Work of the Agreement.

490. WORKFLOW LOCALIZATION DOCUMENTS

"**Workflow Localization Documents**" shall have the meaning specified in task 4.3 (Conduct Workflow Localization) of Exhibits A.4 through A.17 of the Agreement.

491. WORKFLOW LOCALIZATION SESSION

"**Workflow Localization Session**" shall have the meaning specified in task 4.3 (Conduct Workflow Localization) of Exhibits A.4 through A.17 of the Agreement.

492. WORK PRODUCT

"**Work Product**" shall have the meaning specified in Section 18.1 (Work Product and Background Intellectual Property).

Exhibit H (EHR Program Strategy)

to the

Electronic Health Records System and Services Agreement

EXHIBIT H

EHR PROGRAM STRATEGY

1. BACKGROUND

The Los Angeles Department of Health Services ("LA DHS") has embarked on an effort to replace its current clinical information system – the Quadramed Affinity suite – with a new Electronic Health Record (EHR) system. As part of this effort LA DHS is developing an EHR Strategic Plan which will enable the organization to successfully select, implement and realize benefits from an EHR in support of the overall clinical and business strategy.

The strategy document will also be used to broadly communicate the opportunities and challenges that face LA DHS. Clinical and business leadership will be able to use the agreements and direction documented here to drive change and achieve the expectations of the EHR project.

The LA DHS EHR Strategy has been created and endorsed by the EHR Executive Steering Committee which is comprised of Clinical and Administrative Leaders from HSA, the Hospitals, ambulatory care, as well as representatives from County CIO, CEO and County Counsel.

2. KEY DRIVERS FOR THE LA DHS ELECTRONIC HEALTH RECORDS PROGRAM

The key drivers that push LA DHS to initiate the EHR project at this time are the following:

- **Improve patient safety and the quality and efficiency of care by**
    - Providing clinicians with access to clinical data and real time decision support at the point of care – the integrated EHR solution will facilitate consistent access to complete patient information across the continuum of care and across the LA DHS distributed environment with multiple care settings and hospitals.
    - Reducing unnecessary practice variation – comprehensive workflow and rule engines will provide support for the development and management of standardized clinical content development (such as order sets or intelligent templates).

- **Support Outpatient Care Restructuring towards Health Care Reform** – LA DHS is in the process of restructuring its current approach to the oversight of Outpatient Care, including reorganizing all primary care and outpatient specialty services delivered within DHS under a cohesive organization. This will be the basis for an integrated, managed delivery system and DHS will provide the new outpatient organization with the leadership and the infrastructure elements needed to organize DHS's outpatient services to most effectively participate in managed care.

- **Improve LA DHS' position in an increasingly competitive environment** – Health Care Reform will provide patients with more choices when it comes to selecting their health care providers. LA DHS will face increased competition from commercial for-profit and not-for-profit care providers. By implementing a fully integrated EHR, LA DHS can improve its position in a more competitive environment. Failing to implement an EHR and standardize the clinical processes may severely disrupt the ability of DHS to compete in the new Health care environment.

- **Meet meaningful use criteria and comply with ARRA requirements to avoid penalties** – The current Affinity suite does not enable LA DHS to meet Meaningful Use criteria and cannot be upgraded to do so.

- **Meet a technical need to replace the current solution** – Quadramed, the vendor of the Affinity system currently in use, has declared that it will cease to support the clinical modules of Affinity within the next two years.

3. VISION FOR THE LA DHS ELECTRONIC HEALTH RECORDS PROGRAM

The EHR Executive Steering Committee has agreed on the following vision statement for the LA DHS EHR Program:

"To procure, deploy, and sustain a uniform, standardized and fully integrated EHR solution that is implemented consistently across care settings, with standardized associated workflow processes and a single, unified data structure."

In this vision, the individual terms are to be understood as follows:

- **Sustain –** The system will require ongoing investment in software, personnel, and infrastructure to provide the support and enhancement necessary to achieve ongoing benefits and continuous availability of EHR functionality
- **Uniform and standardized** – There will be one enterprise-wide solution across all facilities within DHS
- **Fully integrated EHR solution** – The system will be fully integrated to provide clinical decision support and allow clinicians to access and act on all clinical data across all ancillaries, physical locations, and care settings
- **Implemented consistently** – The EHR will be implemented and configured in a virtually identical manner in all DHS facilities.
- **Across all care settings** – Includes In-patient (IP) and Outpatient (OP), Emergency Department (ED), Operating Room (OR), Intensive Care Unit (ICU)
- **Standardized associated workflow processes** – Clinical pathways and care plans are the same across all facilities
- **Single, unified data structure** – One single integrated medical record per patient across the enterprise

The initial deployment of the EHR will not include all aspects of the vision (e.g. it is likely to initially support interfaces to external ancillary systems such as Registration, Laboratory, ED, and ICU). However, the LA DHS EHR Strategy includes an explicit intention and plan to migrate over a 5 year timeframe to the complete standardized, integrated, enterprise-wide vision.*[1]

The EHR vision will be attained with the **wide engagement of DHS clinical stakeholders** and the **ongoing unwavering support of the LA County Board of Supervisors**.

* The description of the deployment strategy in the EHR Program Strategy has been modified and the current deployment strategy is reflected in the Agreement and Statements of Work.

Exhibit J (Contractor Key Employees)

to the

Electronic Health Records System and Services Agreement

EXHIBIT J
CONTRACTOR KEY EMPLOYEES

The following table sets forth the Contractor's Key Employees as of the Effective Date and pursuant to Section 10.1.4 (Contractor Key Employees) of the Agreement. Except as provided in this Exhibit, capitalized terms shall have the meanings set forth in the body of the Agreement and Exhibit G (Glossary).

Key Employee Name	Project Title	Cerner Title	Full Time	On Site	Continuity Commitment	Duration of the Role	Number of Resources
Lisa Lee	Project Director	Senior Engagement Leader	Yes	Yes	36 months	Through the Term, and Upon Final Acceptance of the EHR System this position will be converted to Contractor's Vice Present, General Manager	1
[To be Inserted]	Project Director	Client Results Executive	No	Yes	36 months	Through the Term	1
Katie Daugherty	Project Manager	Senior Engagement Leader	Yes	Yes	36 months	Through the Final Acceptance of the EHR System	1
[To be Inserted]	Practice Manager	Practice Manager	No	No	No	Final Acceptance of the EHR System	1
Debbie Cochran	Integration Architect	Integration Architect	Yes	Yes	36 months	Final Acceptance of the EHR System	1
[To be Inserted]	Healthcare Executive	Healthcare Executive	No	Yes, per Project Work Plan	24 months	Final Acceptance of the EHR System	1
[To be Inserted]	Clinical Strategist	Clinical Strategist	Yes	Yes	36 months	Final Acceptance of the EHR System	1

Key Employee Name	Project Title	Cerner Title	Full Time	On Site	Continuity Commitment	Duration of the Role	Number of Resources
[To be Inserted]	Technical Engagement Leader	Technical Engagement Leader	No	Yes, per Project Work Plan	24 months	Final Acceptance of the EHR System	2
[To be Inserted]	Hosting Technical Engagement Leader	CernerWorks Technical Engagement Leader	No	Yes, per Project Work Plan	24 months	Final Acceptance of the EHR System	1

Exhibit K (Information Security Requirements)

to the

Electronic Health Records System and Services Agreement

EXHIBIT K

INFORMATION SECURITY REQUIREMENTS

This Exhibit K (Information Security Requirements) is an attachment and addition to the Electronic Health Records System and Services Agreement dated December 21, 2012 (the "**Agreement**") entered into by and between the County of Los Angeles ("**County**") and Cerner Corporation ("**Contractor**") and is incorporated into the Agreement by reference hereof. This Exhibit K (Information Security Requirements) sets forth information security procedures to be established by Contractor before the Effective Date of the Agreement and maintained throughout the Term of the Agreement. These procedures are in addition to the requirements of the Agreement and the Business Associate Agreement between the Parties. They present a minimum standard only. However, it is Contractor's sole obligation to: (i) implement appropriate measures to secure its systems and data, including Personal Data, Protected Health Information, and County Confidential Information, against internal and external threats and risks; and (ii) continuously review and revise those measures to address ongoing threats and risks. Failure to comply with the minimum standards set forth in this Exhibit K (Information Security Requirements) will constitute a material, non-curable breach of the Agreement by Contractor, entitling County, in addition to and cumulative of all other remedies available to it at law, in equity, or under the Agreement, to immediately terminate the Agreement. Unless specifically defined in this Exhibit, capitalized terms shall have the meanings set forth in the Agreement.

1. **Security Policy**. Contractor shall establish and maintain a formal, documented, mandated, company-wide information security program, including security policies, standards and procedures (collectively "**Information Security Policy**"). The Information Security Policy will be communicated to all Contractor Personnel and subcontractors in a relevant, accessible, and understandable form and will be regularly reviewed and evaluated to ensure its operational effectiveness, compliance with all applicable laws and regulations, and to address new threats and risks.

2. **Personnel and Contractor Protections**. Contractor shall screen and conduct background checks on all Contractor Personnel and subcontractors contacting County Confidential Information, including Personal Data and Protected Health Information, for potential security risks and require all employees, contractors, and subcontractors to sign an appropriate written confidentiality/non-disclosure agreement. All agreements with third-parties involving access to Contractor's systems and data, including all outsourcing arrangements and maintenance and support agreements (including facilities maintenance), shall specifically address security risks, controls, and procedures for information systems. Contractor shall supply each of its Contractor Personnel and subcontractors with appropriate, ongoing training regarding information security procedures, risks, and threats. Contractor shall have an established set of procedures to ensure Contractor Personnel and subcontractors promptly report actual and/or suspected breaches of security.

3. **Removable Media**. Except in the context of Contractor's routine back-ups or as otherwise specifically authorized by County in writing, Contractor shall institute strict physical and logical security controls to prevent transfer of Personal Data and Protected Health Information to any form of Removable Media. For purposes of this Exhibit K (Information Security Requirements), "**Removable Media**" means portable or removable hard disks, floppy disks, USB memory drives,

zip disks, optical disks, CDs, DVDs, digital film, memory cards (e.g., Secure Digital (SD), Memory Sticks (MS), CompactFlash (CF), SmartMedia (SM), MultiMediaCard (MMC), and xD-Picture Card (xD)), magnetic tape, and all other removable data storage media.

4. **Storage, Transmission, and Destruction of Protected Health Information.** All Protected Health Information shall be rendered unusable, unreadable, or indecipherable to unauthorized individuals in accordance with HIPAA, as amended and supplemented by the HITECH Act. Without limiting the generality of the foregoing, Contractor will encrypt all electronic Protected Health Information (stored and during transmission) in accordance with HIPAA and the HITECH Act, as implemented by the U.S. Department of Health and Human Services. If Protected Health Information is no longer required to be retained by Contractor under the Agreement and applicable law, Contractor shall destroy such Protected Health Information by: (a) shredding or otherwise destroying paper, film, or other hard copy media so that the Protected Health Information cannot be read or otherwise cannot be reconstructed; and (b) clearing, purging, or destroying electronic media containing Protected Health Information consistent with NIST Special Publication 800-88, Guidelines for Media Sanitization[1] such that the Protected Health Information cannot be retrieved.

5. **Data Control; Media Disposal and Servicing**. Subject to and without limiting the requirements under Section 4 (Storage, Transmission and Destruction of Protected Health Information), Personal Data, Protected Health Information, and County Confidential Information: (i) may only be made available and accessible to those parties explicitly authorized under the Agreement or otherwise expressly Approved by County in writing; (ii) if transferred across the Internet, any wireless network (e.g., cellular, 802.11x, or similar technology), or other public or shared networks, must be protected using appropriate encryption technology as designated or Approved by County in writing; and (iii) if transferred using Removable Media (as defined above) must be sent via a bonded courier or protected using encryption technology designated or Approved by County in writing. The foregoing requirements shall apply to back-up data stored by Contractor at off-site facilities. In the event any hardware, storage media, or Removable Media must be disposed of or sent off-site for servicing, Contractor shall ensure all County Confidential Information, including Personal Data and Protected Health Information, has been cleared, purged, or scrubbed from such hardware and/or media using industry best practices (e.g., NIST Special Publication 800-88, Guidelines for Media Sanitization[2]).

6. **Hardware Return**. Upon termination or expiration of the Agreement or at any time upon County's request, Contractor will return all hardware, if any, provided by County containing Personal Data, Protected Health Information, or County Confidential Information to County. The Personal Data, Protected Health Information, and County Confidential Information shall not be removed or altered in any way. The hardware should be physically sealed and returned via a bonded courier or as otherwise directed by County. In the event the hardware is owned by Contractor or a third-party, a notarized statement, detailing the destruction method used and the data sets involved, the date of destruction, and the company or individual who performed the destruction will be sent to a designated County security representative within fifteen (15) days of termination or expiration of the Agreement or at any time upon County's request.

[1] Available at http://www.csrc.nist.gov/

[2] Available at http://www.csrc.nist.gov/

Contractor's destruction or erasure of Personal Data and Protected Health Information pursuant to this Section shall be in compliance with industry Best Practices (*e.g.*, NIST Special Publication 800-88, Guidelines for Media Sanitization[3]).

7. **Physical and Environmental Security**. Contractor facilities that process Personal Data, Protected Health Information, or County Confidential Information will be housed in secure areas and protected by perimeter security such as barrier access controls (e.g., the use of guards and entry badges) that provide a physically secure environment from unauthorized access, damage, and interference.

8. **Communications and Operational Management**. Contractor shall: (i) monitor and manage all of its information processing facilities, including, without limitation, implementing operational procedures, change management and incident response procedures; and (ii) deploy adequate anti-viral software and adequate back-up facilities to ensure essential business information can be promptly recovered in the event of a disaster or media failure; and (iii) ensure its operating procedures will be adequately documented and designed to protect information, computer media, and data from theft and unauthorized access.

9. **Access Control**. Contractor shall implement formal procedures to control access to its systems, services, and data, including, but not limited to, user account management procedures and the following controls:

    - Network access to both internal and external networked services shall be controlled, including, but not limited to, the use of properly configured firewalls;

    - Operating systems will be used to enforce access controls to computer resources including, but not limited to, authentication, authorization, and event logging;

    - Applications will include access control to limit user access to information and application system functions; and

    - All systems will be monitored to detect deviation from access control policies and identify suspicious activity. Contractor shall record, review and act upon all events in accordance with incident response policies set forth below.

10. Contractor will promptly notify (but in no event more than twenty-four (24) hours after the detection of a Security Incident) the designated County security contact by telephone and subsequently via written letter of any potential or actual security attacks or Security Incidents. The notice shall include the approximate date and time of the occurrence and a summary of the relevant facts, including a description of measures being taken to address the occurrence. A Security Incident includes instances in which internal personnel access systems in excess of their user rights or use the systems inappropriately. In addition, Contractor will provide a monthly report of all Security Incidents noting the actions taken. This will be provided via a written letter to the County security representative on or before the first (1st) week of each calendar month.

[3] Available at http://www.csrc.nist.gov/

County or its third-party designee may, but is not obligated, perform audits and security tests of Contractor's environment that may include, but are not limited to, interviews of relevant personnel, review of documentation, or technical inspection of systems, as they relate to the receipt, maintenance, use, retention, and authorized destruction of Personal Data, Protected Health Information, and County Confidential Information. In the event County desires to conduct an unannounced penetration test, County shall provide contemporaneous notice to Contractor's Vice President of Audit, or such equivalent position. Any of County's regulators shall have the same right upon request. Contractor shall provide all information reasonably requested by County in connection with any such audits and shall provide reasonable access and assistance to County or its regulators upon request. Contractor agrees to comply with all reasonable recommendations that result from such inspections, tests, and audits within reasonable timeframes. County reserves the right to view, upon request, any original security reports that Contractor has undertaken on its behalf to assess Contractor's own network security. If requested, copies of these reports will be sent via bonded courier to the County security contact. Contractor will notify County of any new assessments.

Exhibit L (Recommended Configuration)

to the

Electronic Health Records System and Services Agreement

RECOMMENDED CONFIGURATION

The purpose of this Exhibit is to define Contractor's Recommended Configuration for the County's network infrastructure and connectivity/bandwidth so that individually and collectively the network infrastructure and connectivity/bandwidth are sufficient in size, capacity, and processing capability for the use by the County of the EHR System in accordance with this Agreement during the Configuration Warranty Period set forth in Section 17.1.9 (Configuration Warranty) of the Agreement.

WAN Network Infrastructure.

During the term of the Configuration Warranty Period, County shall provide the minimum bandwidth set forth below from the applicable edge device demarcation where the Contractor Hosting Services circuits are terminated to the locations listed below.

	Grand Total incl clinics
	Total kbps
Harbor UCLA	14,210
MLK MACC	2,946
LAC_USC	43,266
High Desert	1,662
Olive View	10,620
Rancho Los Amigos	5,034

Connectivity: Basic LAN Network Infrastructure.

During the Configuration Warranty Period, County shall maintain the LAN and WAN in a manner that is consistent with the LAN and WAN attributes in place when Contractor performed its review in October 2012. County must also actively manage and prioritize its LAN/WAN network traffic.

If County does not actively manage and prioritize its LAN/WAN network traffic and that is the reason the EHR System does not perform as set forth in Section 17.1.9 (Configuration Warranty) of the Agreement, prior to seeking a remedy under Section 17.1.9 (Configuration Warranty), County must implement additional measures to manage and prioritize its LAN/WAN network traffic (e.g. Quality of Service ("**QoS**") disciplines and tools) and the failure must occur again after those measures are implemented.

Exhibit M (Interfaces)

to the

Electronic Health Records System and Services Agreement

EXHIBIT M

INTERFACES

This Exhibit M (Interfaces) is an attachment and addition to the Electronic Health Records System and Services Agreement dated December 21, 2012 (the "**Agreement**") entered into by and between the County of Los Angeles ("**County**") and Cerner Corporation ("**Contractor**") and is incorporated into the Agreement by reference hereof. This Exhibit M (Interfaces) identifies systems in use at County as of the Effective Date and is to be used by Contractor in developing its Current State Assessment of Interfaces pursuant to Exhibit A.20 (Interfaces Statement of Work). Unless specifically defined in this Exhibit, capitalized terms shall have the meanings set forth in the Agreement.

Exhibit N (Additional Hosting Services Terms and Conditions)

to the

Electronic Health Records System and Services Agreement

EXHIBIT N

Additional Hosting Services Terms and Conditions

Cerner Corporation ("**Contractor**") provides Hosting Services, as further described in Section 1(a) (Scope of Services) of Exhibit N.1 (Hosting Services). The County of Los Angeles ("**County**") desires to obtain the Hosting Services from Contractor, on the condition that the provisions of this Exhibit N (Additional Hosting Services Terms and Conditions) are deemed a part of and incorporated by reference into the Electronic Health Records System and Services Agreement dated December 21, 2012 by and between Contractor and County (the "**Agreement**"). Unless specifically defined in this Exhibit, capitalized terms shall have the meanings set forth in the Agreement.

1. SERVICES

1.1 IN GENERAL

During the Term of the Agreement, Contractor shall provide County with the Hosting Services set forth in the Agreement, Exhibit N.1 (Hosting Services), and the Statements of Work. In providing the Hosting Services, Contractor shall achieve the Service Levels and performance standards set forth in Exhibit E (Service Levels and Performance Standards), the relevant Statements of Work, and this Agreement (collectively, the "**Service Levels**").

1.2 ATTRIBUTION AND DISCLOSURES

County may, but is not required to, include such screen credits and/or disclosures for Contractor on the web site as County deems necessary or desirable in its sole discretion to distinguish and disclose Contractor's role under the Agreement and as appropriate under applicable state and federal laws. Otherwise, County will be under no obligation to provide attribution to Contractor unless otherwise stated within an applicable Exhibit to the Agreement or a marking identifying the work as a copyrighted item. The content of any terms and conditions presented to users of the Services shall be controlled solely by County. In the event of a conflict between Contractor's privacy policy, if any, and the Agreement, the provisions of this Agreement shall govern.

1.3 [INTENTIONALLY DELETED]

1.4 USE OF COOKIES ON THE SERVICE

Contractor shall not use "cookies" or any other online tracking technology for purposes of discovering the identity of any users (unless Contractor is specifically authorized hereunder to obtain such information) or tracking the activities of a user after they leave the Hosting Services. Information collected from cookies shall constitute County Confidential Information and shall be subject to the protections provided in Section 4 (Confidentiality) of this Exhibit N (Additional Hosting Services Terms and Conditions) and Section 19 (Confidentiality) of the Agreement. In no event shall such information be sold or otherwise made available to any third-party. Contractor shall use cookies solely for purposes of fulfilling its obligations hereunder. Contractor shall not use cookies from any third-party on its web site. A user's refusal to accept a cookie shall not preclude that user from fully utilizing the functionality of the Hosting Services. For purposes of the Agreement, a "**cookie**" shall mean a block of data that a server on the World Wide Web

stores on a client system. When a user returns to the same web site, the browser sends a copy of the cookie back to the server for administrative purposes.

2. IN-HOUSE SOLUTION

Upon County's election, Contractor agrees to make the Licensed Software, Third-Party Products, and Hardware available to County to utilize from County internal facilities or its designated third-party data center (the "**In-House Solution**"). County shall have three (3) options to elect to transition the Hosting Services to an In-House Solution and terminate the Hosting Services and AMS Services. The options shall be for open for sixty (60) days each beginning on January 1, 2018, January 1, 2020, and upon the expiration of the Initial Term. During such option periods County may elect to convert the Hosting Services to the In-House Solution for no additional license fee as to the Licensed Software. County will notify Contractor in writing of its election to transition concurrently with its notice of termination of the Hosting Services and AMS Services. Upon such notice, Contractor and County will work together to develop a migration plan and Contractor will provide County with the following: (a) the cost of required Hardware and Third-Party Products necessary to operate the In-House Solution; and (b) Optional Work necessary for the transition pursuant to a mutually agreed Statement of Work. Contractor and County will prepare an Amendment for submission to the Board with regard to all applicable In-House Solution transition issues.

In the event of such an election, (i) the license grants will continue as provided in the Agreement; (ii) any recurring fees associated with any Hosted Services and AMS Services shall stop on the date of County's Acceptance of the In-House Solution; and (iii) all other terms of the Agreement shall remain unchanged, provided that Exhibit E (Service Levels and Performance Standards) would require modifications depending on the nature of the Services terminated and/or retained by County.

Acceptance of the In-House Solution shall mean the In-House Solution is operating on the Recommended Configuration in material conformance with the Specifications. Acceptance Testing shall commence, as provided in Section 12 (Acceptance) of the Agreement, upon Contractor's written notification to County that the implementation Services described above have been completed and that the In-House Solution is ready for use by County in a Production Environment. For the purposes of this Section 2 (In-House Solution), the term "**Use**" means to copy, install, access, execute, operate, and run the In-House Solution for test, development, and production purposes. For purposes of this Section, "**Recommended Configuration**" for the In-House Solution developed upon County's election of the In-House Solution option, shall mean the computer platform(s), operating system(s), applications, interface engine, network infrastructure, connectivity, and workstation configurations recommended by Contractor for use with the In-House Solution.

3. ADDITIONAL WARRANTIES

The following language is to be added to Section 17.1 (Contractor's Warranties) of the Agreement in addition to the Warranties requirements in the Agreement.

3.1 NO DELIVERY OF SOFTWARE

Contractor represents and warrants that, in connection with Hosting Services, Contractor shall not deliver for installation on County's systems any software or programming, whether created or developed by Contractor or a third-party, except in connection with Contractor's provision of the Hosting Services or other Services under this Agreement.

3.2 ACCURACY OF RESPONSES TO CONTRACTOR QUESTIONNAIRE FOR DUE DILIGENCE PREPARATION

As of the Effective Date, Contractor represents and warrants all responses to County's Contractor Diligence and Information Security Questionnaire, attached as Exhibit Y (Contractor Diligence and Information Security Questionnaire) are true and correct and shall remain true and correct during the Term of this Agreement. In the event any Contractor response to the Contractor Diligence and Information Security Questionnaire is no longer true and correct, Contractor must, within ten (10) Business Days of learning of such change in circumstance, notify County in writing of the specific response at issue and the details relating to the change in circumstance.

3.3 SERVICES NOT TO BE WITHHELD OR SUSPENDED

Contractor represents and warrants that, provided County continues to timely make all undisputed payments, during the Term of this Agreement, Contractor will not withhold or suspend Hosting Services provided hereunder, for any reason, including but not limited to a Dispute between the Parties arising under this Agreement.

4. CONFIDENTIALITY

The following language is to be added to Section 19 (Confidentiality) of the Agreement in addition to the confidentiality requirements in Agreement.

4.1 SOLICITATION OF COUNTY USERS

During the Term of the Agreement and thereafter in perpetuity, Contractor agrees not to use Personal Data, whether directly or indirectly, to target or solicit County users or those of its subsidiaries, affiliates, and joint ventures, as such, on behalf of itself or any third-party, including but not limited to, on behalf of entities that provide healthcare related services in direct competition with County or commit any other act, or assist others to commit any other act, which might injure the business of County. Contractor agrees that it will not use or sell to others lists containing information obtained in connection with this Agreement about any County users. Nothing contained herein shall preclude Contractor from providing services to any County user who independently contacts Contractor, who is responding to a general solicitation of Contractor, or is contacted by Contractor based on information independently derived by Contractor.

4.2 COUNTY DATA

For the avoidance of doubt, all County Data shall be treated by Contractor as Confidential Information under this Agreement even if such County Data, or portions thereof, would otherwise fall under one or more of the foregoing exceptions.

5. SECURITY

The following language is to be added to Section 20 (Security) of the Agreement in addition to the security requirements in the Agreement.

5.1 STORAGE OF PERSONAL DATA

All Personal Data must be stored in a physically and logically secure environment that protects it from unauthorized access, modification, theft, misuse, and destruction. In addition to the general standards set forth above, Contractor will maintain an adequate level of physical security controls over its facilities including, but not limited to, appropriate alarm systems, fire suppression, access controls (including off-hour controls) which may include visitor access procedures, security guard force, video surveillance, and staff egress searches. Further, Contractor will maintain an adequate level of data security controls, including, but not limited to, logical access controls including user sign-on identification and authentication, data access controls (e.g., password protection of your applications, data files, and libraries), accountability tracking, anti-virus software, secured printers, restricted download to disk capability, and provision for system backup.

6. [INTENTIONALLY DELETED]

7. DISASTER RECOVERY AND BUSINESS CONTINUITY

The following language is to be added to the Section 22 (Disaster Recovery/Business Continuity) of the Agreement.

7.1 DISASTER RECOVERY AND BUSINESS CONTINUITY PLAN

Contractor shall establish, implement, and maintain business continuity, recovery, and disruption avoidance procedures for those facilities where the Hosting Services will be performed and for the personnel performing the Services that conform with the Business Continuity Guidelines as described in Exhibit N.3 (Business Continuity Guidelines). Contractor shall provide County with a written copy of its DR/BC Plan as Exhibit N.2 (Disaster Recovery Plan and Business Continuity Plan) and all updates thereto during the Term of this Agreement. Any future updates or revisions to the DR/BC Plan, processes, and procedures shall be no less protective than the DR/BC Plan in effect as of the Effective Date. In addition to the requirements stated in this Section 7 (Disaster Recovery and Business Continuity), Exhibit N.3 (Business Continuity Guidelines), any recovery-specific addendums provided by County that reference this Agreement or the relevant Statements of Work may provide additional detailed specifications for recovery as appropriate to County's requirements.

The Contractor Primary Data Center and Contractor Secondary Data Center facilities consist of multiple data centers each of which are discrete areas and entirely housed within a larger

facility (buildings within a building). The Contractor Primary Data Center and Contractor Secondary Data Center:

- Are housed in facilities that are designed, built, and maintained according to the FEMA P-361 standard (Design and Construction Guidance for Community Safe Rooms), which defines a safe haven required to survive an EF-5 tornado event;
- Utilize raised floor ventilation systems;
- Utilize hundreds of floor, ceiling, and ventilation duct sensors that trigger fire suppression systems with an HFC125 dry agent and a secondary backup pre-action dry pipe sprinkler system;
- Contain dedicated power utility services necessary to maintain operations of the Hosting Environment, including electrical service and components (e.g., utility transformers serving the building and fuel storage to run emergency generators);
- Contain the telecommunications network cable rooms necessary to maintain operations of the Hosting Environment;
- Contain the Contractor's production support Immediate Response Center ("**IRC**") and Contractor's Critical Facilities Engineering team;
- Utilize exterior walls that are made of steel reinforced concrete (a minimum one (1) foot thick); and
- Utilize system of grating, tested to satisfy the FEMA-P361 standard (Design and Construction Guidance for Community Safe Rooms), to protect the air exchange portions of the roof that cover the chilled water systems and generator farms.

Further facility details regarding the Contractor Primary Data Center and Contractor Secondary Data Center are maintained on Contractor's controlled document entitled, "CTC-KC Facility Summary," which document will be provided by Contractor to County on its request and will be treated by the County as proprietary and Confidential Information. Contractor agrees to refresh and improve the Contractor data centers during the Term of this Agreement in a manner, determined by Contractor that is consistent with recognized and accepted standards for such facilities.

In the event of an unplanned interruption of the Hosting Services, Contractor's alternate data center will be invoked, with production computing systems being recovered first, followed by non-production computing systems. In an unplanned interruption of the Hosting Services, Contractor will use reasonable efforts to recover County systems as quickly as possible.

In the event of an unplanned interruption of the Hosting Services, Contractor's emergency response team will be mobilized. The EHR System backups will be used to recover the production Hosting Services in the Contractor Secondary Data Center, equipment (e.g., servers, storage) will be provisioned as quickly as possible, and recovery of County's production Hosting Services will begin. As the County's recovery processes complete, County will be notified to begin testing the recovered Hosting Services in preparation to return the Hosting Services to the end-users.

7.2 PLAN AUDIT

Contractor shall have an annual audit performed of its DR/BC Plan, and shall provide County with a summary of: (a) the results of the audit report, and (b) the corrective actions or modifications, if any, Contractor will implement in response to the audit.

7.3 PLAN TESTING

On at least an annual basis, Contractor shall test its DR/BC Plan, including activation of its backup facilities and capabilities, and review and update the DR/BC Plan accordingly. Within thirty (30) calendar days of completion of each such test, Contractor shall provide County with a summary of the test results and actions taken in response to the test of the DR/BC Plan.

7.4 ONSITE REVIEW OF CONTRACTOR FACILITIES

Upon reasonable advance written notice, County may, at its option, elect to conduct onsite reviews of Contractors' facilities for, but not limited to:

(a) assessing the viability of recovery processes, procedures, and facilities;

(b) ensuring that Contractor Personnel are fully aware and currently trained on recovery processes and procedures; and

(c) assessing the safety and soundness of primary and recovery facilities.

7.5 RECOVERY TIME REQUIREMENT

The Contractor Hosting Environment (commonly referred to by Contractor as the "Cerner Technology Center") consists of a Contractor Primary Data Center and a Contractor Secondary Data Center. In an unplanned interruption of the Hosting Services, Contractor will use reasonable efforts to recover the Hosting Services as quickly as possible.

7.6 CONTRACTOR SECONDARY DATA CENTER

As of the Effective Date, Contractor shall have a Secondary Data Center in an alternate location deemed to be geographically dispersed. The Contractor Secondary Data Center shall not be located on the same electrical power grid or same telecommunications lines or the same: (a) floodplain, (b) line of prevailing weather patterns, (c) earthquake fault zone, or (d) tsunami susceptible coastal region as the Contractor Primary Data Center. Contractor shall ensure the recovery site will be properly equipped with sufficient backup generators dedicated for the Contractor's use to support all Services, with the amount of fuel on-site that will enable the site to operate for thirty-four (34) hours or whatever the local maximum fuel storage regulations will allow. Contractor shall provide a written confirmation that it has in place written agreements with primary and backup local fuel service providers to ensure uninterrupted replenishment of Contractor's supplies. Contractor shall provide written confirmation that its local fuel suppliers are not dependent on public commercial power in order to fulfill this requirement. Contractor is committed to continuous operation of the Hosting Environment including fuel for its redundant generators, however, the specific generator load capacity in the event of an outage is dependent on the conditions and cannot be specifically identified. Contractor shall ensure that the DR/BC Plan and recovery processes and procedures support relocation of Hosting Services performed to the recovery site to meet the requirements of this Agreement and all applicable Hosting Service Levels.

7.7 [INTENTIONALLY DELETED]

7.8 BACKUP COPIES

Contractor shall create daily backup copies of all County Data and other work related to the Services and shall transmit (either electronically or via physical backup media) such copies to a backup facility each day such that the maximum data loss from the complete loss of the primary facility is no more than twenty-six (26) hours. The backup facility must be in a secured and accessible location that is geographically dispersed from the primary facility.

7.9 ALTERNATE SITES OR STORAGE FACILITIES

Contractor shall ensure that the provisions for information security, physical security, and information privacy specified in this Agreement are implemented at any alternate or backup site or storage facility and for any information transmitted between the primary site and alternate sites or storage facilities.

7.10 RIGHT TO TERMINATE

In the event Contractor fails to develop the foregoing recovery site and continuity practices described within this Section 7 (Disaster Recovery and Business Continuity) within the prescribed time, County may, in its sole discretion, terminate this Agreement without further obligation, including payment of any stranded costs.

7.11 FORCE MAJEURE NOT APPLICABLE

The provisions of Section 32.1 (Force Majeure) of the Agreement relating to events of force majeure shall not relieve Contractor of its obligations under this Section 7 (Disaster Recovery and Business Continuity).

Exhibit N.1 (Hosting Services)

to the

Electronic Health Records System and Services Agreement

EXHIBIT N.1

HOSTING SERVICES

This Exhibit, and any Statements of Work, describe the Hosting Services the Contractor shall provide to County. Except as provided in this Exhibit, capitalized terms shall have the meanings set forth in the body of the Agreement and Exhibit G (Glossary).

1. SCOPE OF SERVICES

(a) Contractor shall provide and maintain all Services necessary to host the Licensed Software from the Hosting Environment such that the EHR System shall perform as defined herein, and in accordance with the Specifications, and otherwise in accordance with this Agreement ("**Hosting Services**").

(b) Contractor shall provide Hosting Services on a 24x7x365 basis. County personnel must have the ability to submit Support Requests on a 24x7x365 basis for Hosting Services.

(c) Contractor shall maintain a Hosting Environment to support the Licensed Software as to the Version(s) being utilized by County in accordance with Section 9.7.2 (Contractor's Revisions) of the Agreement).

2. OPERATIONS AND HOSTING SERVICES

2.1 HOSTING HARDWARE MAINTENANCE

(a) Contractor shall schedule and perform maintenance, including preventive maintenance of Hosting Hardware, including, but not be limited to, the repair or replacement of all (i) non-functioning or under-performing Hosting Hardware or (ii) Hosting Hardware no longer supported by its manufacturer and used by Contractor for hosting the Licensed Software, in order to maintain the Hosting Service Levels and compatibility with the Licensed Software, and any Revisions to the Licensed Software, and/or Interfaces.

(b) Based on Hosting Hardware platforms recommended by Contractor, Contractor shall maintain compatibility of the Hosting Services and Licensed Software with new Hosting Hardware, Hosting Software, including firmware, operating system software versions, database software versions, Third-Party Products, and configurations. Contractor shall provide quality assurance, testing processes, and take corrective action in collaboration with County personnel to ensure any Licensed Software and Revisions to the Licensed Software are suitable for release. Contractor will provide application upgrades, releases, versions, etc., for all Hosting Software.

2.2 PREVENTATIVE MAINTENANCE

Contractor shall create a schedule of required preventative maintenance tasks for the Hosting Environment to ensure that the Hosting Environment and all components thereof are functioning in accordance with this Agreement. Such preventative maintenance tasks include, but are not limited to, the following:

(a) Updates, Releases, Enhancements, and Versions for Licensed Software, Interfaces, and Hosting Revisions for Hosting Software; and

(b) review of Error and other logs to ensure any maintenance required to correct any Errors and restore the Hosting Environment to normal operations is detected and performed in a timely manner and that such information is used to anticipate Errors and make proactive Hosting Error Corrections.

3. HOSTING ENVIRONMENT

Without limiting the Contractor's responsibilities described herein or otherwise in the Agreement, Hosting Services shall include the provision of a Hosting Environment to perform in accordance with the Specifications and Hosting Service Levels and shall include the following:

3.1 TECHNICAL ENVIRONMENT

(a) The Hosting Environment shall include redundant system components, including:

- Network load balancers, web Servers, application Servers, and database Servers in a redundant configuration as applies to all Production domains;
- LAN/WAN infrastructure, including networking equipment for an enterprise class data center LAN, networking equipment for connection to circuits to County facilities, connection cabling, and required peripherals; and
- Storage Area Network ("**SAN**") using Redundant Array of Independent Disk ("**RAID**") and multiple data paths for storing County's data.

(b) The Hosting Environment shall include, and Contractor shall maintain, separate domains for build, test/certification, mock/staging, training, and production. The test/certification environment shall be used to validate all Revisions to the Licensed Software and all Hosting Revisions to the Hosting Software. More than one (1) non-production domain may live on the same hardware server.

3.2 PHYSICAL ENVIRONMENT

The Hosting Environment shall include all necessary facilities and redundant Mechanical, Electronic, and Plumbing ("**MEP**") components:

(a) Electrical power infrastructure, including utility-provided electrical power, diesel generators built to support N+2 availability, an on-site fuel supply adequate to support the critical and essential load for at least thirty-four (34) hours, backup local fuel delivered by service providers to ensure uninterrupted fuel replenishment, Uninterruptible Power Supplies ("**UPS**") designed to support N+1 availability until generators are online in the event of a disruption of utility-provided power, UPS batteries, Power Distribution Units ("**PDUs**"), emergency power off systems, hydrogen sensors, power supplies, transfer switches, load banks, breaker panels, and copper cabling;

(b) Heating, ventilation and air conditioning ("**HVAC**") systems built to support N+1 availability to ensure optimal cooling to building infrastructure and all equipment locations, including ductworks, computer room air conditioners ("**CRAC**") units, condensers, cooling towers, thermostat sensors, hot and cold aisle distribution systems, and humidification systems;

(c) Plumbing systems for the routing of cabling, air, water, and fire suppression gasses;

(d) Fire protection systems, including detection and abatement systems, "cross zoned" heat detectors, fire panels, deluge systems, and gaseous system, designed in accordance with industry best practices and all National Fire Protection Association codes and standards;

(e) Raised floor systems, component racks, and cabinets; and

(f) Internet and other telecommunications connections delivered into secured, separate environments to provide multiple distribution paths.

3.3 PHYSICAL SECURITY ENVIRONMENT

The Hosting Environment shall include all necessary facilities and redundant Mechanical, Electronic, and Plumbing ("**MEP**") components:

(a) Contractor shall maintain County's Hosting Environment in Statement on Standards for Attestation Engagements ("**SSAE**") 16 certified facilities, or facilities of successor certification, with, as to each Data Center:

- Access controlled through documented procedures;
- 24x7x365 security and technical engineering staff;
- Physical access which requires government-issued picture identifications for access validation and multi-factor authentication for floor access;
- Video surveillance monitoring on a 24x7x365 basis; and
- Access monitored through internal management and logging systems.

(b) Contractor's physical environments shall be governed by strict Access Control Lists ("**ACL**") for physical access to the environments. All data and storage cabinets will be contained within Contractor's Data Centers with access only granted to those with a related job responsibility. Both Contractor's Data Centers and the facilities in which they are housed are secured with locks that require proximity cards for physical access.

(c) Contractor shall maintain comprehensive security policies, procedures, and controls to govern, support, and secure the Hosting Environment. Security policies and procedures shall be reviewed and updated on a regular basis. Contractor's security management controls shall be reviewed by an independent third-party firm, on an annual basis, following SSAE 16 or successor certification, guidelines, and format.

3.4 HOSTING ENVIRONMENT SECURITY

Contractor shall use secure technology to protect County Data, Personal Data, and other Confidential Information of County and the users of the Hosting Services in its storage and transmission between the user and the Hosting Environment, which shall include the following:

(a) Entrust Secure Socket Layer ("**SSL**") signed certificates using a minimum 128 bit encryption. Internet Protocol Security ("**IPsec**") VPN Access into the Hosting Environment is controlled either by Contractor's Aventail or Nortel VPN solutions with a minimum of 168 bit Triple Data Encryption Standard ("**3DES**").

(b) A network structure protected by redundant clustered firewalls and monitored with intrusion prevention systems. All security systems shall be from leading security industry vendors, implemented in conjunction with Contractor's third-party security firms, and validated by Contractor's separate third-party vulnerability/penetration testing firms. The firewall logs shall be reviewed weekly and analyzed proactively by enterprise security management systems to identify security threats. The Hosting Environment shall be safeguarded using Network Address Translation ("**NAT**"), Internet Protocol (IP) masquerading, port redirection, non-routable IP addressing and ACL's, multi-factor authentication, and management network segregation.

(c) Background investigations will be performed in accordance with Contractor's policies and procedures for all Contractor Personnel performing work at Contractor's sites under this Agreement. All Contractor's hosting and support staff shall go through security and privacy training prior to being provided physical access to the Contractor Primary Data Center or Contractor Secondary Data Center.

(d) Multi-factor devices to access managerial functionality within the environment for administrative access. All user access shall be monitored and managed by the Contractor's security/compliance department. All Servers, Hosting Hardware devices, software applications, user accounts, security devices, and technical services shall be fully audited and managed in real time by enterprise management and notification systems. Any account, physical, environmental, or security change shall be immediately identified and trigger a notification to all Contractor hosting and security staff. Contractor's enterprise management systems shall immediately provide an ISO compliance dashboard showing full compliance status with all applicable environmental controls.

(e) The maintenance of security by restricting access points to all production environments. Strong password rules shall be enforced and the Hosting Environment shall be constantly updated to the vendor-recommended patch levels for security. The Hosting Environment shall be hardened by disabling any non-critical ports, users, protocols, and processes, following vendor's "best practice" recommendations for security. All environmental operating systems access shall require multi-factor authentication.

(f) As a part of the CQS ("**Cerner Quality Systems**"), each Contractor organization is required to actively participate in business risk management. Risk Management requirements include: identifying and documenting business risks/hazards/threats;

determining cause, effect, probability and impact; identifying one or more mitigating activities; determining residual risks; and assigning a risk index. Contractor's approach to risk management is based on ISO standard 14971:2007, Global Harmonization Task Force ("**GHTF**") Implementation of Risk Management Principles and Activities within a QMS ("**Quality Management System**"), which is a blending of accepted industry best practices.

As per CQS policy, Contractor's organizational leadership is required to review group risk assessments at least semi-annually as part of the standard management review meeting activities. Contractor shall provide a summary of significant findings of the group risk assessments and the actions or modifications, if any, Contractor will implement in response to the assessment.

(g) Extensive change management policies, procedures, and controls. All non-routine environment changes shall require approvals, extensive testing, and full documentation prior to being implemented within the Hosting Environment.

(h) Extensive incident management and monitoring procedures for the Hosting Environment. Contractor shall notify County of any attacks, service interruption, or threatened or suspected breach of security against the Servers and/or Hosting Services in accordance with the requirements of this Agreement, Exhibit E (Service Levels and Performance Standards), and Exhibit F (Business Associate Agreement).

3.5 HOSTING REVISIONS

(a) Contractor shall implement Hosting Revisions in the Hosting Environment on a regular basis, provided Contractor shall not knowingly implement such Hosting Revisions if the Hosting Revisions could adversely impact performance of the EHR System without direct coordination with the County Project Manager.

(b) Other than the Hosting Services fee, there shall be no other change or cost to County associated with Hosting Revisions.

(c) Any Hosting Revisions are expected to comply with federal and state laws and regulations at no additional cost over the monthly Hosting Services fee for Hosting Services under the Agreement.

(d) Contractor shall provide County with Hosting Revisions, revised related Documentation, and, if necessary, modified procedures, to correct any failure of the Hosting Environment to operate in accordance with the Specifications.

3.6 HOSTING HARDWARE REFRESH SERVICES

Throughout the Term, Contractor shall review at least once every twelve (12) calendar months the performance of the Hosting Environment to determine the need for Refresh Services to the Hosting Hardware currently being used to provide the Hosting Services. Contractor shall provide all Hosting Services required to implement this Section 3.6 (Hosting Hardware Refresh Services) at no additional charge to County except to the extent included in Exhibit C (Fees; Contractor Professional Services

Rates) or as otherwise approved in a Statement of Work. Contractor will upgrade and replace all Hosting Hardware in accordance with (a) the technical architecture and standards and timeframes required pursuant to any Statement of Work, and (b) as otherwise required to deliver the Hosting Services in accordance with this Agreement. The Services provided pursuant to this Section 3.6 (Hosting Hardware Refresh Services) are collectively referred to as "**Refresh Services**" and require County Approval prior to implementation.

PROPOSER'S ORGANIZATION QUESTIONNAIRE/AFFIDAVIT

Please complete, date and sign this form and place it as the first page of your proposal. The person signing the form must be authorized to sign on behalf of the Proposer and to bind the applicant in a Contract.

1. If your firm is a corporation or limited liability company (LLC), state its legal name (as found in your Articles of Incorporation) and State of incorporation:

Cerner Corporation	Delaware	1986
Name	State	Year Inc.

2. If your firm is a limited partnership or a sole proprietorship, state the name of the proprietor or managing partner:

Cerner Corporation is a sole proprietorship

3. If your firm is doing business under one or more DBA's, please list all DBA's and the County(s) of registration:

Name	County of Registration	Year became DBA
Not applicable.		

4. Is your firm wholly or majority owned by, or a subsidiary of, another firm? Cerner is a wholly owned. If yes,

Name of parent firm: Not applicable

State of incorporation or registration of parent firm: Not applicable

5. Please list any other names your firm has done business as within the last five (5) years.

Name	Year of Name Change
Cerner has not changed names, not applicable.	

6. Indicate if your firm is involved in any pending acquisition/merger, including the associated company name. If not applicable, so indicate below.

As a public company, Cerner is not permitted to disclose any such information in advance of a public announcement

Proposer acknowledges and certifies that it meets and will comply with all of the Minimum Mandatory Requirements listed in Appendix T (Minimum Mandatory Requirements), of this Request for Proposals.

Check the appropriate boxes:

x **Yes** ☐ **No** _____ years experience, within the last ___ years

Proposer further acknowledges that if any false, misleading, incomplete, or deceptively unresponsive statements in connection with this proposal are made, the proposal may be rejected. The evaluation and determination in this area shall be at the Director's sole judgment and his/her judgment shall be final.

Proposer's Name:

Cerner Corporation

Address: 2800 Rockcreek

North Kansas City

E-mail address: mnaughton@cenrer.com Telephone number: 816-201-1989

Fax number: 816-571-1989

On behalf of Cerner Corporation (Proposer's name), I Marc Naughton (Name of Proposer's authorized representative), certify that the information contained in this Proposer's Organization Questionnaire/Affidavit is true and correct to the best of my information and belief.

PROSPECTIVE CONTRACTOR LIST OF TERMINATED CONTRACTS FOR NON-PERFORMANCE

Proposer's Name: Cerner

List all contracts terminated (not expired) within the last five (5) years with the reason for termination. Use additional sheets if necessary.

Cerner does not keep specific records compiling and documenting the reasons for terminations, but generally a very small percentage of Cerner clients have de-installed a system, or some subpart thereof. These situations have generally involved one of the following scenarios or situations: a change in client information technology strategy; modifications to the Client Project Plan's implementation timetable; an acquisition of the client by another hospital or hospital system (where, for example, the acquiring organization extends its own clinical information management system into the client facility operating a Cerner System); or a deterioration in the client's own business environment or financial situation (for example, where a computerized clinical information management system is no longer needed or affordable).

1. Name of Firm	**Address of Firm**	**Contact Person/Title**	**Telephone #**	**Fax #**
Please see text above.			( )	( )
Name or Contract No.	Reason for Termination:			
2. Name of Firm	**Address of Firm**	**Contact Person/Title**	**Telephone #**	**Fax #**

CERTIFICATION OF NO CONFLICT OF INTEREST

The Los Angeles County Code, Section 2.180.010, provides as follows:

CONTRACTS PROHIBITED

Notwithstanding any other section of this Code, the County shall not contract with, and shall reject any proposals submitted by, the persons or entities specified below, unless the Board of Supervisors finds that special circumstances exist which justify the approval of such contract:

1. Employees of the County or of public agencies for which the Board of Supervisors is the governing body;

2. Profit-making firms or businesses in which employees described in number 1 serve as officers, principals, partners, or major shareholders;

3. Persons who, within the immediately preceding 12 months, came within the provisions of number 1, and who:

    a. Were employed in positions of substantial responsibility in the area of service to be performed by the contract; or

    b. Participated in any way in developing the contract or its service specifications; and

4. Profit-making firms or businesses in which the former employees, described in number 3, serve as officers, principals, partners, or major shareholders.

Contracts submitted to the Board of Supervisors for approval or ratification shall be accompanied by an assurance by the submitting department, district or agency that the provisions of this section have not been violated.

EXHIBIT O-9

ATTESTATION OF WILLINGNESS TO CONSIDER GAIN/GROW PARTICIPANTS

As a threshold requirement for consideration for contract award, Proposer shall demonstrate a proven record for hiring GAIN/GROW participants or shall attest to a willingness to consider GAIN/GROW participants for any future employment opening if they meet the minimum qualifications for that opening. Additionally, Proposer shall attest to a willingness to provide employed GAIN/GROW participants access to the Proposer's employee mentoring program, if available, to assist these individuals in obtaining permanent employment and/or promotional opportunities.

Proposers unable to meet this requirement shall not be considered for contract award.

Proposer shall complete all of the following information, sign where indicated below, and return this form with their proposal.

A. Proposer has a proven record of hiring GAIN/GROW participants.

_____YES (subject to verification by County) _____NO

B. Proposer is willing to consider GAIN/GROW participants for any future employment openings if the GAIN/GROW participant meets the minimum qualifications for the opening. "Consider" means that Proposer is willing to interview qualified GAIN/GROW participants.

___X__YES _____NO

C. Proposer is willing to provide employed GAIN/GROW participants access to its employee-mentoring program, if available.

_____YES _____NO _____N/A (Program not available)

EXHIBIT O-10

COUNTY OF LOS ANGELES CONTRACTOR EMPLOYEE JURY SERVICE PROGRAM CERTIFICATION FORM AND APPLICATION FOR EXCEPTION

The County's solicitation for this Request for Proposals is subject to the County of Los Angeles Contractor Employee Jury Service Program (Program), Los Angeles County Code, Chapter 2.203. All proposers, whether a contractor or subcontractor, must complete this form to either certify compliance or request an exception from the Program requirements. Upon review of the submitted form, the County department will determine, in its sole discretion, whether the proposer is excepted from the Program.

Company Name: Cerner Corporation		
Company Address: 2800 Rockcreek Parkway		
City: North Kansas City	State: MO	Zip Code: 64117
Telephone Number: 816-221-1024		
Solicitation For _____ Services:		

If you believe the Jury Service Program does not apply to your business, check the appropriate box in Part I (attach documentation to support your claim); or, complete Part II to certify compliance with the Program. Whether you complete Part I or Part II, please sign and date this form below.

Part I: Jury Service Program is Not Applicable to My Business

- ☐ My business does not meet the definition of "contractor," as defined in the Program, as it has not received an aggregate sum of $50,000 or more in any 12-month period under one or more County contracts or subcontracts (this exception is not available if the contract itself will exceed $50,000). I understand that the exception will be lost and I must comply with the Program if my revenues from the County exceed an aggregate sum of $50,000 in any 12-month period.

- ☐ My business is a small business as defined in the Program. It 1) has ten or fewer employees; and, 2) has annual gross revenues in the preceding twelve months which, if added to the annual amount of this contract, are $500,000 or less; and, 3) is not an affiliate or subsidiary of a business dominant in its field of operation, as defined below. I understand that the exception will be lost and I must comply with the Program if the number of employees in my business and my gross annual revenues exceed the above limits.

  "Dominant in its field of operation" means having more than ten employees and annual gross revenues in the preceding twelve months, which, if added to the annual amount of the contract awarded, exceed $500,000.

  "Affiliate or subsidiary of a business dominant in its field of operation" means a business which is at least 20 percent owned by a business dominant in its field of operation, or by partners, officers, directors, majority stockholders, or their equivalent, of a business dominant in that field of operation.

- ☐ My business is subject to a Collective Bargaining Agreement (attach agreement) that expressly provides that it supersedes all provisions of the Program.

OR

Part II: Certification of Compliance

- ☒ My business has and adheres to a written policy that provides, on an annual basis, no less than five days of regular pay for actual jury service for full-time employees of the business who are also California residents, **or** my company will have and adhere to such a policy prior to award of the contract.

I declare under penalty of perjury under the laws of the State of California that the information stated above is true and correct.

EXHIBIT O-11

CERTIFICATION OF INDEPENDENT PRICE DETERMINATION AND ACKNOWLEDGEMENT OF RFP RESTRICTIONS

A. By submission of this Proposal, Proposer certifies that the prices quoted herein have been arrived at independently without consultation, communication, or agreement with any other Proposer or competitor for the purpose of restricting competition.

B. List all names and telephone number of person legally authorized to commit the Proposer.

NAME	PHONE NUMBER
Marc Naughton	816-201-1989

NOTE: Persons signing on behalf of the Contractor will be required to warrant that they are authorized to bind the Contractor.

C. List names of all joint ventures, partners, subcontractors, or others having any right or interest in this contract or the proceeds thereof. If not applicable, state "NONE".

D. Proposer acknowledges that it has not participated as a consultant in the development, preparation, or selection process associated with this RFP. Proposer understands that if it is determined by the County that the Proposer did participate as a consultant in this RFP process, the County shall reject this proposal.

CERTIFICATION OF COMPLIANCE WITH THE COUNTY'S DEFAULTED PROPERTY TAX REDUCTION PROGRAM

Company Name: Cerner Corp		
Company Address: 2800 Rockcreek Parkway		
City: North Kansas City	State: MO	Zip Code: 64117
Telephone Number: 816-221-1024	Email address: clientcarecenter@cerner.com	

The Proposer certifies that:

☒ It is familiar with the terms of the County of Los Angeles Defaulted Property Tax Reduction Program, Los Angeles County Code Chapter 2.206; AND

To the best of its knowledge, after a reasonable inquiry, the Proposer is not in default, as that term is defined in Los Angeles County Code Section 2.206.020.E, on any Los Angeles County property tax obligation; AND

The Proposer agrees to comply with the County's Defaulted Property Tax Reduction Program during the term of any awarded contract.

OR

☐ I am exempt from the County of Los Angeles Defaulted Property Tax Reduction Program, Pursuant to Los Angeles County Code Section 2.206.060, for the following reason:

_____

_____

I declare under penalty of perjury under the laws of the State of California that the information stated above is true and correct.

Exhibit P (Form Statement of Work)

to the

Electronic Health Records System and Services Agreement

Exhibit A.[Insert SOW Number] ([Insert SOW Name] Statement of Work)

to the

Electronic Health Records System and Services Agreement

Table of Contents

Revision History

Date	Revision #	Description	Author
[Change date]	*[Revision]*	*[Describe what was changed, added, or deleted]*	*[Who made the changes]*

This Statement of Work ("**SOW**") is an attachment and addition to the Electronic Health Records System and Services Agreement dated December 21, 2012 (hereinafter "**Agreement**") entered into by and between the County of Los Angeles ("**County**") and Cerner Corporation ("**Contractor**") and is incorporated into the Agreement by reference hereof. In the event of conflicting terms between the Agreement and this SOW, the terms of the Agreement shall prevail and nothing in this SOW shall modify or amend any provisions of the Agreement (including all components such as Statements of Work, Service Level Agreements, Exhibits, etc.) unless such modifications or amendments and the provisions of the Agreement which they modify or amend are specifically identified in this SOW and are Approved. This SOW includes any attachments hereto. Any capitalized terms not defined in this SOW shall have the same meanings as used in the Agreement. Changes to this SOW will be processed in accordance with the change management procedures as outlined in the Agreement.

All of the tasks, subtasks, Deliverables, goods, and other services required or requested by County below are included as part of the Services.

This SOW provides a description of the nature of the work required, but does not provide an exhaustive list of every task or subtask necessary for completion of this Exhibit A.[_] ([Insert SOW Name] Statement of Work).

1. Business Case/Business Objectives Supported

[This section should concisely state the business, operational, or other benefits and business objectives supported by this Work Segment.]

2. Project Summary

2.1 Project Summary

[Briefly provide a summary of the project explaining services, timeline, where Services will be performed, and other general requirements.]

2.2 Critical Success Factors

[This section should concisely state the factors that are critical to the success of this project.]

2.3 Commencement Date and Termination Date

[Identify the commencement and termination dates for this Statement of Work, per Section 1.3 (Term of Statements of Work; License Term) of the Agreement.]

2.4 Deliverable Development and Approval Process

This section specifies a repeating process for developing Deliverables for this SOW. Each Deliverable shall be developed in accordance with the following Contractor's obligations, which shall be sub-tasks to each individual task:

(1) All Deliverables must be developed in the form and format agreed to by County and Contractor using a Deliverables Expectations Document (also referred to as a "**DED**") Approved by County. No work will be performed on any Deliverable associated with a payment Milestone until the DED has been Approved by

County. As each Project Deliverable is submitted, the Contractor must include a copy of the Project DED as the cover sheet. A template to be used for each DED during this Project can be found in Attachment 1 (Project Deliverable Expectations Document (DED) Template) to this SOW.

(1) Develop agendas, and coordinate scheduling with County, for all necessary events (e.g., workshops, meetings) for the production of the Deliverable.

(2) Facilitate events (e.g., workshops, meetings) as required for the development of each Deliverable.

(3) Record and analyze the input received from all events (e.g., workshops, meetings) and distribute results or minutes for review to event participants.

(4) Prepare drafts of the Deliverable for County for review.

(5) Provide a structured process for County to provide feedback on drafts, including events, as appropriate.

(6) Compile and incorporate County feedback to the draft Deliverable and prepare a revised Deliverable.

(7) Distribute the revised Deliverable to County for review; obtain and analyze County feedback as above, and repeat if necessary.

(8) Complete a final version of the Deliverable including, prior to distribution for Approval by County, validation by Contractor that the Deliverable conforms to the Specifications and meets the Acceptance Criteria.

(9) Provide both the clinical and workflow subject matter expertise to support the completion of Deliverables.

After receipt of a Deliverable from Contractor, County shall notify Contractor in writing as to any specific changes requested (together with a reasonably detailed explanation of the reasons why the Deliverable should be modified) in as expeditious a time frame as possible given the nature of the Deliverable and the schedule. Unless a change is disputed, Contractor shall make the changes described in a timely manner so as to not adversely impact the schedule under the Project Work Plan. Upon completion of such changes, the Deliverable shall be provided to County with a request for Acceptance. County shall notify Contractor of its Acceptance or rejection in a timeframe that is practical and reasonable given the nature, criticality, and complexity associated with the Acceptance Testing/review.

3. Detail of Services Required

[This section should concisely communicate the Services to be completed by Contractor.]

3.1 Tasks

[Identify and describe the tasks necessary to support the project, including (a) a description of all subtasks and deliverables; (b) resources required for tasks (with names

for the critical resources detailed whenever possible); (c) estimated hours per task; and (d) scheduled beginning and end dates.]

.

3.2 Key Deliverables Table

[Identify the Key Deliverables (see Section 9.3.2 (Key Deliverables) of the Agreement). These are the Deliverable marked as "Key" under the applicable Exhibit A.25 (Project Control Document).]

Number	Key Deliverable	Responsibility	Due Date
[List Key Deliverable number]	*[List the Key Deliverable to be created by Contractor]*	*[Identify the person(s) and role(s) who is/are responsible for the completion of the Key Deliverable]*	*[Identify the end date for completion of the Key Deliverable]*

3.3 Key Milestones

[Identify Key Milestones to be achieved by Contractor (see Section 15.6(a) (Holdbacks) of the Agreement).]

3.4 Support

[Describe any additional support and maintenance services to be provided by Contractor, per Section 9.7 (Support Services) of the Agreement.]

3.5 Service Levels

[Indicate any additional Service Levels requirements for Contractor, per Section 11 (Service Levels) of the Agreement.]

3.6 Training

[Describe training to be provided by Contractor, per Section 9.5.2 (Training) of the Agreement.]

4. Technology

[List both the hardware and software required to develop this Project and any constraints that are imposed by Project hardware and software.]

4.1 Software Requirements

[List all software requirements, including any Licensed Software, identified by Module (including Interfaces to be developed and delivered by Contractor, per Section 9.6 (Interfaces) of the Agreement); Third-Party Products With Independent Conditions to be provided by Contractor, per Section 7 (Third-Party Products With Independent Conditions) of the Agreement; operating systems or other software embedded in any Hardware provided by Contractor; etc.]

4.2 Hardware Requirements

[List all hardware requirements, including any new hardware or other equipment to be purchased from Contractor, per Section 8 (Hardware) of the Agreement. Include (a) all applicable fees and costs, and (b) the delivery date.]

4.3 Sunset Activities

[List software/hardware being sunset as a result of project.]

Software / Hardware Description	Affected End User Community	IT Group Owner	Committed Sunset Date	Write-off or Accelerate Depreciation?	Book Value	Annual Cost of Support/ Maintenance

4.4 Third-Party Intellectual Property

[Identify intellectual property licensed, made, conceived, or developed by a third-party and to be provided by Contractor to County, per Section 7 (Third-Party Products With Independent Conditions) of the Agreement. Include (a) a list that specifically identifies all Third-Party Products With Independent Conditions; (b) the owner of the Third-Party Products With Independent Conditions; (c) Contractor's authority to include the Third-Party Products With Independent Conditions in the Licensed Software, Deliverables, or Services; and (d) any restrictions or royalty terms applicable to the use of the Third-Party Products With Independent Conditions, including a copy of any third-party license agreements that are applicable to County.]

5. Project Control Document

Contractor shall perform the Services and provide the associated Deliverables in accordance with the attached Project Control Document, which at a minimum shall include the following information:

(a) A Project Work Plan ("**PWP**"), developed in County-specified version of Microsoft Project, which shall include:
- (i) Deliverables, Tasks, and Subtasks;
- (ii) Associated dependencies among Deliverables, Tasks, and Subtasks,
- (iii) Resources assigned to each Deliverable, Task, and Subtask,
- (iv) Start date and date of completion for each Deliverable, Task, and Subtask,
- (v) County review period for each Deliverable, and
- (vi) Milestones and Key Milestones;

(b) A comprehensive Error Management Plan ("**EMP**") documenting the approach to Error management, including methodology, recommended tool(s) and escalation process;

(c) Approach to project communications;

(d) A comprehensive Risk Management Plan ("**RMP**") documenting the approach to risk analysis (e.g., the evaluation of risks and risk interactions to assess the range of possible Project outcomes), risk mitigation (e.g., the identification of ways to minimize or eliminate Project risks), a process and frequency for assessing established risk analysis and mitigation approaches, risk tracking/control (e.g., a method to ensure that all steps of the risk management process are being followed and, risks are being mitigated effectively), and a process for risk communication to County and within Contractor's organization and escalation. The RMP shall have a clearly established process for

problem escalation and shall be updated, as needed, through the term of the Agreement;

(e) Project staffing and resource management plan; and

(f) Configuration and Change Management Plan ("**CCMP**"). Changes, in this context, refer to changing the functionality of or adding additional functionality (e.g., changes to the project scope) to any Licensed Software component. The approach shall ensure that the impacts and rationale for each change are analyzed and coordinated prior to being approved. The CCMP may vary from item to item, as determined by the County Project Director.

6. Acceptance

6.1 Acceptance Criteria

Unless explicitly provided in this SOW, the Acceptance Criteria shall be as defined in the Agreement.

[Optional: List any additional Acceptance Criteria that applies.]

6.2 Acceptance Test

[Describe testing at various stages of the implementation of the Licensed Software, specify the timing for testing, and specify County or Contractor responsibility for testing as appropriate, per Section 12.2 (Acceptance Tests) of the Agreement.]

7. Contractor Roles and Responsibilities

[List the roles, name, contact information, and responsibilities of the Contractor Personnel that will be assigned to the project, including the Contractor Project Manager under this Statement of Work, per Section 10.1.2 (Contractor Project Manager) of the Agreement.]

Resource Title	Name	Contact Information	Responsibilities
Contractor Project Manager	*[Enter full name]*	*[Enter business address, phone, and e-mail address]*	*[Enter description of responsibilities]*

…			

8. County Resource Impacts

[Describe, if any, the impact on County resources and what specialized skills and responsibilities will be required for each category below.]

8.1 County Project Manager

The County Project Manager is …

[Identify the County representative under this Statement of Work, per Section 10.1.3 (County Project Manager) of the Agreement.]

8.2 Specialized Skills Required from County IT

[Insert description.]

8.3 Specialized Skills Required from the County Clinical Personnel

[Insert description.]

8.4 Specialized Skills Required from the County Business Personnel

[Insert description.]

8.5 County Responsibilities

[Insert description.]

9. Completion

9.1 Completion Criteria

Contractor has fulfilled its obligations under this SOW when one of the following first occurs:

(a) County provides acceptance pursuant to Section 6 (Acceptance) of this SOW.; or

(b) this SOW or the Agreement is terminated in accordance with Section 29 (Termination) of the Agreement, except for material breach by Contractor.

9.2 Project Closing Sign Off Procedure

[Describe the project closing and sign off procedure.]

10. Payment

[Applicable to Professional Services, as set forth in Section 14.6.2 (Professional Services) of the Agreement.]

10.1 Fees

[Describe the fee arrangement (e.g., fixed fee, not to exceed, time and materials) by selecting one option from below, or describe the applicable customized and/or combination approach.

[Option 1 – Fixed Fee]

*The total fees to be paid by County to Contractor for any Services, Deliverables, or work performed pursuant to this SOW shall be USD $_____.00 (the "**Fixed Fee**"). For the avoidance of doubt, Contractor agrees that this is a fixed fee arrangement in which Contractor, subject to the other limitations in this SOW, will provide all services necessary to perform the Services and provide the Deliverables described in this SOW for the Fixed Fee specified herein, regardless of the actual number of hours required by Contractor to perform such Services or provide the Deliverables. An estimated percentage allocation of the Fixed Fee amount for each milestone is set forth below: …[Include an estimated percentage allocation of the fixed fee amount for each milestone, per Section 14.6.2(a) (Fixed Fee or Not to Exceed) of the Agreement.]*

[Option 2 – Not to Exceed]

*The total fees to be paid by County to Contractor for any Services, Deliverables, or work performed pursuant to this SOW shall not exceed USD $_____.00 (the "**Not To Exceed Price**"), pursuant to the rates set forth in Exhibit C (Fees; Contractor Professional Services Rates). For the avoidance of doubt, County agrees that this is a not to exceed arrangement in which Contractor, subject to the other limitations in this SOW, will perform the Services and provide the Deliverables described in this SOW. An estimated percentage allocation of the Not To Exceed Price amount for each milestone is set forth below: …[Include an estimated percentage allocation of the not to exceed price amount for each milestone, per Section 14.6.2(a) (Fixed Fee or Not to Exceed) of the Agreement.]*

[Option 3 –Time and Materials (T&M)]

County will be billed on a time and materials basis pursuant to the rates set forth in Exhibit C (Fees; Contractor Professional Services Rates) based upon the actual effort expended in providing the Services and in accordance with the payment schedule attached. Pursuant to Section 14.6.2(b) (Time and Materials) of the Agreement, Contractor estimates that the fees to complete the Services under this SOW are USD $_____.00. The foregoing represents Contractor's best, good faith estimate of the fees required to perform the work described in this SOW. In the event it is anticipated that the fee estimate will be exceeded, Contractor will provide written notice to County in advance of incurring such excess cost, as set forth in Section 14.6.2(b) (Time and Materials) of the Agreement.

10.2 Invoices

Invoices will be sent to County in accordance with the invoicing requirements described in Section 15 (Invoices and Payments) of the Agreement.

10.3 Expenses

[Identify any reimbursable expenses, per Section 15.7 (Responsibility for Costs) of the Agreement, and any travel and living expenses, per Section 15.8 (Travel and Living Expenses) of the Agreement.]

Out-of-pocket expenses for travel including airfare parking, mileage, rental cars, taxi, fuel, lodging and per diem will be in addition to the professional fees set forth in Section 10.1 (Fees), will be billed at Contractor's direct cost without mark-up, and will be subject to Section 15.8 (Travel and Living Expenses) of the Agreement.

Based upon a project start date on or before *[Moh DD, YYYY]*, Contractor's "Not to Exceed" expense budget shall be *USD $_____.00*.

11. Changes

No changes to this SOW shall be effective without prior County Approval, and any changes to the terms of this SOW shall be subject to Section 13 (Changes to Agreement) of the Agreement.

12. Dependencies

[List any dependencies outside the Contractor Project Manager's control, both external and internal (e.g., activities to be carried out by a Subcontractor or third party vendor, or a needed resource that will not be available until another project is completed).]

13. Risks and Risk Mitigation

[Identify likely risks that could impact the project, including potential impacts to the project timeline, resources, and costs.]

Potential Risk	Mitigation Strategy/ Contingency Plan	Probability of Risk (%)	Consequence	Amount at Risk
[Enter potential Project risks]	*[Enter the mitigation strategy and/or contingency plans]*	*[Enter the probability of the risk materializing]*	*[Enter the consequence should the risk materialize (timeline extension, additional resource requirements, etc.)]*	*[Enter an estimate for the amount at risk]*

14. Attachments

[Include any attachments to further clarify the work to be completed and include resumes of resources.]

Attachment 1 (Project Delivery Document)

Exhibit Q (Escrow Agreement)

to the

Electronic Health Records System and Services Agreement

MASTER PREFERRED HIGH TECHNOLOGY ESCROW AGREEMENT

Master Number 0305017-00001

This MASTER PREFERRED HIGH TECHNOLOGY ESCROW AGREEMENT ("Escrow Agreement"), made and entered into this 1st day of September, 1996 ("Effective Date"), between CERNER CORPORATION, a Delaware Corporation ("Cerner"), and Data Securities International, Inc., a Delaware Corporation ("DSI"), and any Cerner Client signing the Acceptance Form attached to this Escrow Agreement ("Preferred Beneficiary"), who collectively may be referred to in this Agreement as "The Parties,"

WITNESSETH:

WHEREAS, Cerner and Preferred Beneficiary have entered into an agreement referred to in this Escrow Agreement as the "Cerner System Agreement" pursuant to which Cerner will license to Preferred Beneficiary the use of certain computer software programs for use in the healthcare industry (the "Licensed Software"), and

WHEREAS, a High Technology Escrow Agreement providing a basic level of protection has already been established by Cerner with a third party for the benefit of Cerner's client base, and

WHEREAS, certain clients of Cerner have expressed a desire for an additional escrow arrangement that would provide both a higher level of basic protection and a menu of additional services, both of which could be purchased by such clients at an additional charge, and

WHEREAS, in order to meet the needs of such clients as described in the recital immediately preceding, Cerner desires to deposit in escrow the source codes and documentation (collectively, the "Source Code") for the Licensed Software so that such Source Code will be available to Preferred Beneficiary as set forth in this Escrow Agreement in the event Cerner ceases doing business or supporting the Licensed Software, and

WHEREAS, Cerner desires to establish for the benefit of the Preferred Beneficiary this Escrow Agreement, and

WHEREAS, the parties desire this Escrow Agreement to be supplementary to the Cerner System Agreement pursuant to 11 United States Code, Section 365(n), relating to a licensee's rights against a bankruptcy trustee with respect to executory contracts involving license rights to intellectual property, and

WHEREAS, DSI is willing to act as escrow agent under the terms and conditions hereinafter set forth,

NOW, THEREFORE, in consideration of the premises and the mutual covenants and agreements hereinafter set forth, Cerner and DSI hereby agree as follows:

1. ESCROW DEPOSIT. Cerner hereby deposits with DSI for the benefit of the Preferred Beneficiary the Source Code for the Licensed Software in its current (and, at Cerner's option, certain prior) versions. Cerner further agrees, for the benefit of the Preferred Beneficiary, to deposit within thirty days after their first commercial release, the Source Code of any new versions of the Licensed Software and agrees not less often than once each year to deposit with DSI a complete version of the Source Code

encompassing all error corrections improvements and modifications made by Cerner to the Licensed Software. Cerner and DSI hereby agree that the property escrowed with DSI (the "Escrowed Property") shall be held and disposed of by DSI in accordance with the terms and provisions hereof.

2. LABEL OF ESCROWED PROPERTY. Prior to the delivery of the Escrowed Property to DSI, Cerner shall conspicuously label for identification each document, magnetic tape, disk or other tangible media upon which the Escrowed Property are written or stored. Additionally, Cerner shall complete an Exhibit B, with respect to both the initial and all subsequent deposits, to list each such tangible item of media by the item label description, the type of media and the quantity. The Exhibit B must be signed by Cerner and delivered to DSI with the Escrowed Property. Unless and until Cerner makes the initial deposit of the Escrowed Property with DSI, DSI shall have no obligation with respect to this Agreement, except the obligation to notify the parties regarding the status of the Escrowed Property as required in paragraph 9 below.

3. DEPOSIT INSPECTION. When DSI receives the Escrowed Property and the Exhibit B, DSI will conduct an inspection of the Escrowed Property by visually matching the labeling of the tangible media containing the Escrowed Property to the item descriptions and quantity listed on the Exhibit B. In addition to the inspection of the Escrowed Property, Preferred Beneficiary may elect to cause a verification of the Escrowed Property in accordance with Section 6 below.

4. ACCEPTANCE OF DEPOSIT. At completion of the inspection of the Escrowed Property, if DSI determines that the labeling of the tangible media matches the item descriptions and quantity on Exhibit B, DSI will date and sign the Exhibit B and mail a copy thereof to Cerner and Preferred Beneficiary. If DSI determines that the labeling does not match the item descriptions or quantity on the Exhibit B, DSI will (a) note the discrepancies in writing on the Exhibit B; (b) date and sign the Exhibit B with the exceptions noted, and (c) provide a copy of the Exhibit B to Cerner and Preferred Beneficiary. DSI's acceptance of the Escrowed Property occurs upon the signing of the Exhibit B by DSI. Delivery of the signed Exhibit B to Preferred Beneficiary is Preferred Beneficiary's notice that the Escrowed Property has been received and accepted by DSI.

5. CERNER'S REPRESENTATIONS. Cerner represents as follows:

a. Cerner lawfully possesses all of the Escrowed Property deposited with DSI;

b. With respect to all of the Escrowed Property, Cerner has the right and authority to grant to DSI and Preferred Beneficiary the rights as provided in this Escrow Agreement;

c. The Escrowed Property is not subject to any lien or other encumbrance; and

d. The Escrowed Property consists of the proprietary information and other materials identified either in the Cerner System Agreement or Exhibit A, as the case may be.

6. VERIFICATION. Preferred Beneficiary shall have the right, at Preferred Beneficiary's expense, to cause a verification of any Escrowed Property, as set forth in Exhibit D to this Escrow Agreement. To the extent that Cerner becomes involved in the verification process, the Preferred Beneficiary shall also reimburse Cerner for all costs incurred by Cerner with respect to such verification (including all personnel time). A verification determines, in different levels of detail, the accuracy, completeness, sufficiency and quality of the Escrowed Property. If a verification is elected after the Escrowed Property has been delivered to DSI, then only DSI, or at DSI's election an independent person or company selected and supervised by DSI, may perform the verification.

7. DEPOSIT UPDATES. Unless otherwise provided by the Cerner System Agreement, Cerner shall update the Escrowed Property within 60 days of each commercial release of a new version of the product which is subject to the Cerner System Agreement. Such updates will be added to or shall replace the existing Escrowed Property. All updates to the Escrowed Property shall be listed on a new Exhibit B and the new Exhibit B shall be signed by Cerner. Each Exhibit B will be held and maintained separately within the escrow account. An independent record will be created which will document the activity for each Exhibit B. The processing of all updates to the Escrowed Property shall be in accordance with Sections 3 through 6 above. All references in this Escrow Agreement to the Escrowed Property shall include the initial Escrowed Property and any updates to the Escrowed Property.

8. CONFIDENTIALITY. DSI shall maintain the Escrowed Property in a secure, environmentally safe, locked receptacle which is accessible only to authorized employees of DSI. DSI shall have the obligation to reasonably protect the confidentiality of the Escrowed Property. Except as provided in this Escrow Agreement, DSI shall not disclose, transfer, make available, or use the Escrowed Property. DSI shall not disclose the content of this Escrow Agreement to any third party. If DSI receives a subpoena or other order of a court or other judicial tribunal pertaining to the disclosure or release of the Escrowed Property, DSI will immediately notify the parties to this Escrow Agreement. It shall be the responsibility of Cerner and/or Preferred Beneficiary to challenge any such order, provided, however, that DSI does not waive its rights to present its position with respect to any such order. DSI will not be required to disobey any court or other judicial tribunal order. (See Section 24 below for notices of requested orders.)

9. STATUS REPORTS. DSI will issue to Cerner and Preferred Beneficiary a report profiling the account history at least semi-annually. DSI may provide copies of the account history pertaining to this Escrow Agreement upon the request of any party to this Escrow Agreement.

10. AUDIT RIGHTS. During the term of this Escrow Agreement, Cerner and Preferred Beneficiary shall each have the right to inspect the written records of DSI pertaining to this Escrow Agreement. Any inspection shall be held during normal business hours and following reasonable prior notice.

11. TITLE TO MEDIA. Cerner hereby transfers to DSI the title to the media upon which the proprietary information and materials are written or stored. However, this transfer does not include ownership of the proprietary information and materials contained on the media, such as any copyright, trade secret, patent or other intellectual property rights.

12. RIGHT TO MAKE COPIES. DSI shall have the right to make copies of the Escrowed Property as reasonably necessary to perform with respect to rights and duties under this Escrow Agreement. DSI shall copy all copyright, nondisclosure, and other proprietary notices and titles contained on the Escrowed Property onto any copies made by DSI. With respect to all Escrowed Property submitted to DSI, Cerner shall provide any and all instructions as may be necessary to duplicate the Escrowed Property including but not limited to descriptions of the hardware and/or software needed.

13. RIGHT TO SUBLICENSE UPON RELEASE. As of the Effective Date of this Escrow Agreement, and unless Cerner has not already granted a direct license or other right for use of source code under the Cerner System Agreement between Cerner and the Preferred Beneficiary, Cerner hereby grants to DSI a non-exclusive, irrevocable, perpetual, and royalty-free license to sublicense the Escrowed Property to Preferred Beneficiary upon the release, if any, of the Escrowed Property in accordance with Section 15 below. Except upon such a release, DSI shall not sublicense or otherwise transfer the Escrowed Property.

14. DELIVERY FROM ESCROW TRIGGER EVENTS. If Preferred Beneficiary shall give written notice to DSI of the following:

a. the cessation of business by Cerner, without a successor, or

b. Cerner's cessation of the Support supplied for the Licensed Software pursuant to the Cerner System Agreement without making a provision for continued Support by a qualified third party on substantially the same terms, conditions and pricing, or

c. Cerner and Preferred Beneficiary having entered into an agreement (whether contained in the Cerner System Agreement or in some separate writing) providing other circumstances under which Preferred Beneficiary may be entitled to a copy of the Escrowed Property, and where the existence of such circumstances has been alleged, then:

DSI shall within three business days thereafter provide to Cerner at its address set forth in this Escrow Agreement a copy of said notice by Certified Mail, return receipt requested, or by commercial express mail. Unless, within thirty (30) days after the date of mailing by DSI, Cerner shall file with DSI its affidavit contesting the existence of such circumstances, DSI shall on the thirty-first day after the giving of such notice to Cerner, if such day is a business day (and if not, then on the first business day thereafter), arrange to have a competent data processing service make one copy of the Escrowed Property and deliver such copy in accordance with the Preferred Beneficiary's instructions. If an affidavit is filed by Cerner as aforesaid, then DSI

shall not deliver the Escrowed Property to either Cerner or Preferred Beneficiary until:

a. the dispute has been fully and finally adjudicated by a court of competent jurisdiction, or

b. all differences shall have been resolved by agreement of Cerner and Preferred Beneficiary and DSI shall have been notified thereof by an instrument signed jointly by Cerner and Preferred Beneficiary.

15. USE SUBLICENSE FOLLOWING RELEASE. Unless otherwise provided in the Cerner System Agreement, upon release of the Escrowed Property in accordance with Section 14, Preferred Beneficiary shall have a non-exclusive, non-transferable, irrevocable sublicensed right to use the Escrowed Property for the sole purpose of supporting the Preferred Beneficiary's licensed software as permitted in the Cerner System Agreement and this Escrow Agreement, and for no other purposes whatsoever. Preferred Beneficiary shall be obligated to maintain the confidentiality of the released Escrowed Property.

16. TERM OF AGREEMENT. This Escrow Agreement shall remain in full force and effect until December 31, 2015 unless (a) Cerner and Preferred Beneficiary jointly instruct DSI in writing that this Escrow Agreement is terminated; or (b) this Escrow Agreement is terminated by DSI in accordance with Section 17. Thereafter, this Escrow Agreement shall automatically renew from year-to-year unless (a) Cerner unilaterally instructs DSI in writing that this Escrow Agreement is terminated; or (b) this Escrow Agreement is terminated by DSI for nonpayment in accordance with Section 17. If the Acceptance Form has been signed at a date later than this Escrow Agreement, the initial term of the Acceptance Form will be for one year with subsequent terms to be adjusted to match the anniversary date of this Escrow Agreement. If the Escrowed Property is subject to another escrow agreement with DSI, DSI reserves the right, after the initial one year term, to adjust the anniversary date of this Escrow Agreement to match the then prevailing anniversary date of such other escrow arrangements.

17. TERMINATION FOR NONPAYMENT. In the event of the nonpayment of fees owed to DSI, DSI shall provide written notice of delinquency to all parties to this Escrow Agreement. Any party to this Escrow Agreement shall have the right to make the payment to DSI to cure the default. If the past due payment is not received in full by DSI within one month of the date of such notice, then DSI shall have the right to terminate this Escrow Agreement at any time thereafter by sending written notice of termination to all parties. DSI shall have no obligation to take any action under this Escrow Agreement so long as any payment due to DSI remains unpaid.

18. DISPOSITION OF ESCROWED PROPERTY UPON TERMINATION. Upon termination of this Escrow Agreement by joint instruction of Cerner and Preferred Beneficiary (or by unilateral instruction from Cerner after the initial term), DSI shall destroy, return, or otherwise deliver the Escrowed Property in accordance with such instructions. Upon termination for

nonpayment, DSI may, at its sole discretion, destroy the Escrowed Property or return it to Cerner. DSI shall have no obligation to return or destroy the Escrowed Property if the Escrowed Property is subject to another escrow agreement with DSI.

19. SURVIVAL OF TERMS FOLLOWING TERMINATION. Upon termination of this Escrow Agreement, the following provisions of this Escrow Agreement shall survive:

a. Cerner's Representations (Section 5).

b. The obligations of confidentiality with respect to the Escrowed Property.

c. The licenses granted in the sections entitled Right to Sublicense Upon Release (Section 13) and Use Sublicense Following Release (Section 15), if a release of the Escrowed Property has occurred prior to termination.

d. The obligation to pay DSI any fees and expenses incurred and due as of the termination effective date.

e. The provisions of Sections 22 through 24.

f. The provisions of Sections 18, 19 and 26.

g. Any provisions in this Escrow Agreement which specifically state they survive the termination or expiration of this Escrow Agreement.

20. FEE SCHEDULE. DSI is entitled to be paid its standard fees and expenses applicable to the services provided. DSI shall notify the party responsible for payment of DSI's fees at least 90 days prior to any increase in fees. For any service not listed on DSI's standard fee schedule, DSI will provide a quote prior to rendering the service, if requested. All increases shall take effect on the next anniversary of the Escrow Agreement's Effective Date. Increases are limited to one per year, not to exceed the lesser of 5% per annum or the U.S. Government's Consumer Price Index for Urban Consumers per year. DSI shall never charge separately or extra for services that are part of the basic services described in the Exhibit D to the Escrow Agreement.

21. PAYMENT TERMS. DSI shall not be required to perform any service unless the payment for such service and any outstanding balances owed to DSI are paid in full. All other fees are due upon receipt of invoice. If invoiced fees are not paid, DSI may terminate this Escrow Agreement in accordance with Section 17. Late fees on past due amounts shall accrue at the rate of the lesser of one percent per month (12% per annum) or the U.S. Government's Consumer Price Index for Urban Consumers from the date of the invoice.

22. LIABILITY OF DSI. DSI shall have no obligation or liability hereunder except as a depository to retain the Escrowed Property and to dispose of same in accordance with the terms hereof. DSI shall not be required to ascertain the genuineness of any instruction or signature thereon and may act upon any notice or other document believed to be genuine. DSI shall not be liable for any action taken or omitted in connection with the performance of its duties pursuant to the provisions of this Escrow

Agreement except for its own willful and gross negligence. Provided DSI has acted in the manner stated herein, Cerner and Preferred Beneficiary each agree to indemnify, defend, and hold DSI harmless from any and all liability, damages, cost or expenses, including reasonable attorneys' fees, which may be sustained or incurred by DSI as a result of taking such action, except in the case of the willful default or gross negligence of DSI.

23. GOVERNING LAW. This Escrow Agreement shall be governed and construed under the laws of the State of Missouri.

24. NOTICE OF REQUESTED ORDER. If any party intends to obtain an order from any court of competent jurisdiction which may direct DSI to take or to refrain from taking any action, that party shall:

a. Give DSI at least two business days prior notice of the hearing, to the extent reasonably practicable;

b. Include in any request for such order that, as a precondition to DSI's obligation, DSI be paid in full for any past due fees and be paid for the reasonable value of the services to be rendered pursuant to such order; and

c. Request that DSI not be required to deliver the original (as opposed to a copy) of the Escrowed Property if DSI may need to retain the original in its possession to fulfill any of its other escrow duties.

25. ENTIRE AGREEMENT. This Escrow Agreement, which includes the Acceptance Form and the Exhibits described herein, embodies the entire understanding between all of the parties with respect to its subject matter and supersedes all previous communications, representations or understandings, either oral or written. No amendment or modification of this Escrow Agreement shall be valid or binding unless signed by all the parties hereto, except Exhibit A need not be signed by DSI and Exhibit B, Exhibit C and an Additional Escrow Account Amendment need not be signed by Preferred Beneficiary.

26. NOTICES. All notices, requests, claims, instructions and other documents and communications shall be given to the parties at the addresses specified in the attached Exhibit C and Acceptance Form. It shall be the responsibility of the parties to notify each other as provided in this Section in the event of a change of address. The parties shall have the right to rely on the last known address of the other parties. Unless otherwise provided in this Escrow Agreement, all documents and communications may be delivered by First Class mail.

27. SEVERABILITY. In the event any provision of this Escrow Agreement is found to be invalid, voidable or unenforceable, the parties agree that unless it materially affects the entire intent and purpose of this Escrow Agreement, such invalidity, voidability or unenforceability shall affect neither the validity of this Escrow Agreement nor the remaining provisions herein, and the provision in question shall be deemed to be replaced with a valid and enforceable provision most closely reflecting the intent and purpose of the original provision.

28. SUCCESSORS. This Escrow Agreement shall be binding upon and shall inure to the benefit of the successors and assigns of the parties. However, DSI shall have no obligation in performing this Escrow Agreement to recognize any successor or assign of Cerner or Preferred Beneficiary unless DSI receives clear, authoritative and conclusive written evidence as to the change of parties.

IN WITNESS WHEREOF, Cerner and DSI have entered into this Escrow Agreement as of the day and year first above written.

CONFIDENTIALITY AND ASSIGNMENT AGREEMENT

CONTRACTOR: _____

1. GENERAL INFORMATION

The organization identified above ("**Contractor**") is under contract ("**Agreement**") to provide Services (as such term is defined in the Agreement) to the County of Los Angeles ("**County**"). County requires each employee, agent, consultant, outsourced vendor and independent contractor (in this Exhibit R "staff") of this Contractor performing Services under such Agreement to understand his/her obligations with respect to the personal, proprietary and other confidential material, data or information, with which he/she will be in contact. Contractor, by executing this Confidentiality and Assignment Agreement ("**Confidentiality and Assignment Agreement**"), represents that it shall ensure each such staff member's compliance with the obligations regarding such data and information, as set forth in the Agreement, including this Exhibit R.

2. CONTRACTOR ACKNOWLEDGMENT

Contractor understands and agrees that all of Contractor's, or any subcontractor's, staff that will provide Services pursuant to the above-referenced Agreement are Contractor's, or any subcontractor's, sole responsibility. Contractor understands and agrees that its, or any subcontractor's, staff must rely exclusively upon Contractor, or any subcontractor, for payment of salary and any and all other benefits payable by virtue of such staff's performance of Services under the above-referenced Agreement.

Contractor understands and agrees that its, or any subcontractor's, employees are not employees of County for any purpose whatsoever and that such staff do not have and will not acquire any rights or benefits of any kind from County by virtue of performance of Services under the above-referenced Agreement. Contractor understands and agrees that its, or any subcontractor's, staff do not have and will not acquire any rights or benefits from County pursuant to any agreement between any person or entity and County.

3. CONFIDENTIALITY

Contractor, any subcontractor, and their staff, by virtue of performing Services under the above-referenced Agreement, may come in contact with (i) Confidential Information (as such term is defined in the Agreement), (ii) data and information, which County has an obligation to keep confidential by applicable law or otherwise, and (iii) proprietary information belonging to other organizations, contractors or their subcontractors doing business with County (collectively for the purpose of this Exhibit R "**Confidential Information**"). By signing this Confidentiality and Assignment Agreement, Contractor agrees that, by virtue of involvement in the Services under the Agreement, it, any subcontractor, and their staff shall protect the confidentiality of all such Confidential Information pursuant to the terms of Section 19 (Confidentiality) of the Agreement and as specified below.

Contractor agrees, on behalf of itself, its subcontractors and all staff, (i) to protect from loss and hold in confidence any and all Confidential Information; (ii) not to directly or indirectly reveal, report, publish, transfer, reproduce to, or for the benefit of, any unauthorized person or otherwise disclose any Confidential Information obtained while performing Services under the above-referenced Agreement; and (iii) to utilize the Confidential Information solely for the limited purpose of providing Services pursuant to the Agreement. Contractor's, or any subcontractor's, staff shall forward all requests for disclosure or copying of any such information in their possession or care to the County Project Manager under the Agreement.

Contractor agrees to report to the County Project Manager under the Agreement any and all violations of this Confidentiality and Assignment Agreement, including unauthorized disclosures or copying of Confidential Information, whether accidental or intentional, and whether by Contractor's, or any subcontractor's, staff and/or by any other person, of which such staff become aware. Contractor agrees and shall ensure that its, or any subcontractor's, staff return possession of all Confidential Information to the County Project Manager under the Agreement upon completion of the above-referenced Agreement, or termination of employment with the Contractor, or any subcontractor, whichever occurs first.

Safely Surrendered Baby Law

In Los Angeles County: 1 877 BABY SAFE 1 877 222 9723
www.babysafela.org

What is the Safely Surrendered Baby Law?

California's Safely Surrendered Baby Law allows parents or other persons, with lawful custody, which means anyone to whom the parent has given permission to confidentially surrender a baby. As long as the baby is three days (72 hours) of age or younger and has not been abused or neglected, the baby may be surrendered without fear of arrest or prosecution.

How does it work?

A distressed parent who is unable or unwilling to care for a baby can legally, confidentially, and safely surrender a baby within three days (72 hours) of birth. The baby must be handed to an employee at a hospital or fire station in Los Angeles County. As long as the baby shows no sign of abuse or neglect, no name or other information is required. In case the parent changes his or her mind at a later date and wants the baby back, staff will use bracelets to help connect them to each other. One bracelet will be placed on the baby, and a matching bracelet will be given to the parent or other surrendering adult.

What if a parent wants the baby back?

Parents who change their minds can begin the process of reclaiming their baby within 14 days. These parents should call the Los Angeles County Department of Children and Family Services at **1-800-540-4000.**

Can only a parent bring in the baby?

No. While in most cases a parent will bring in the baby, the Law allows other people to bring in the baby if they have lawful custody.

Does the parent or surrendering adult have to call before bringing in the baby?

No. A parent or surrendering adult can bring in a baby anytime, 24 hours a day, 7 days a week, as long as the parent or surrendering adult surrenders the baby to someone who works at the hospital or fire station.

Does the parent or surrendering adult have to tell anything to the people taking the baby?

No. However, hospital or fire station personnel will ask the surrendering party to fill out a questionnaire designed to gather important medical history information, which is very useful in caring for the baby. The questionnaire includes a stamped return envelope and can be sent in at a later time.

What happens to the baby?

The baby will be examined and given medical treatment. Upon release from the hospital, social workers immediately place the baby in a safe and loving home and begin the adoption process.

What happens to the parent or surrendering adult?

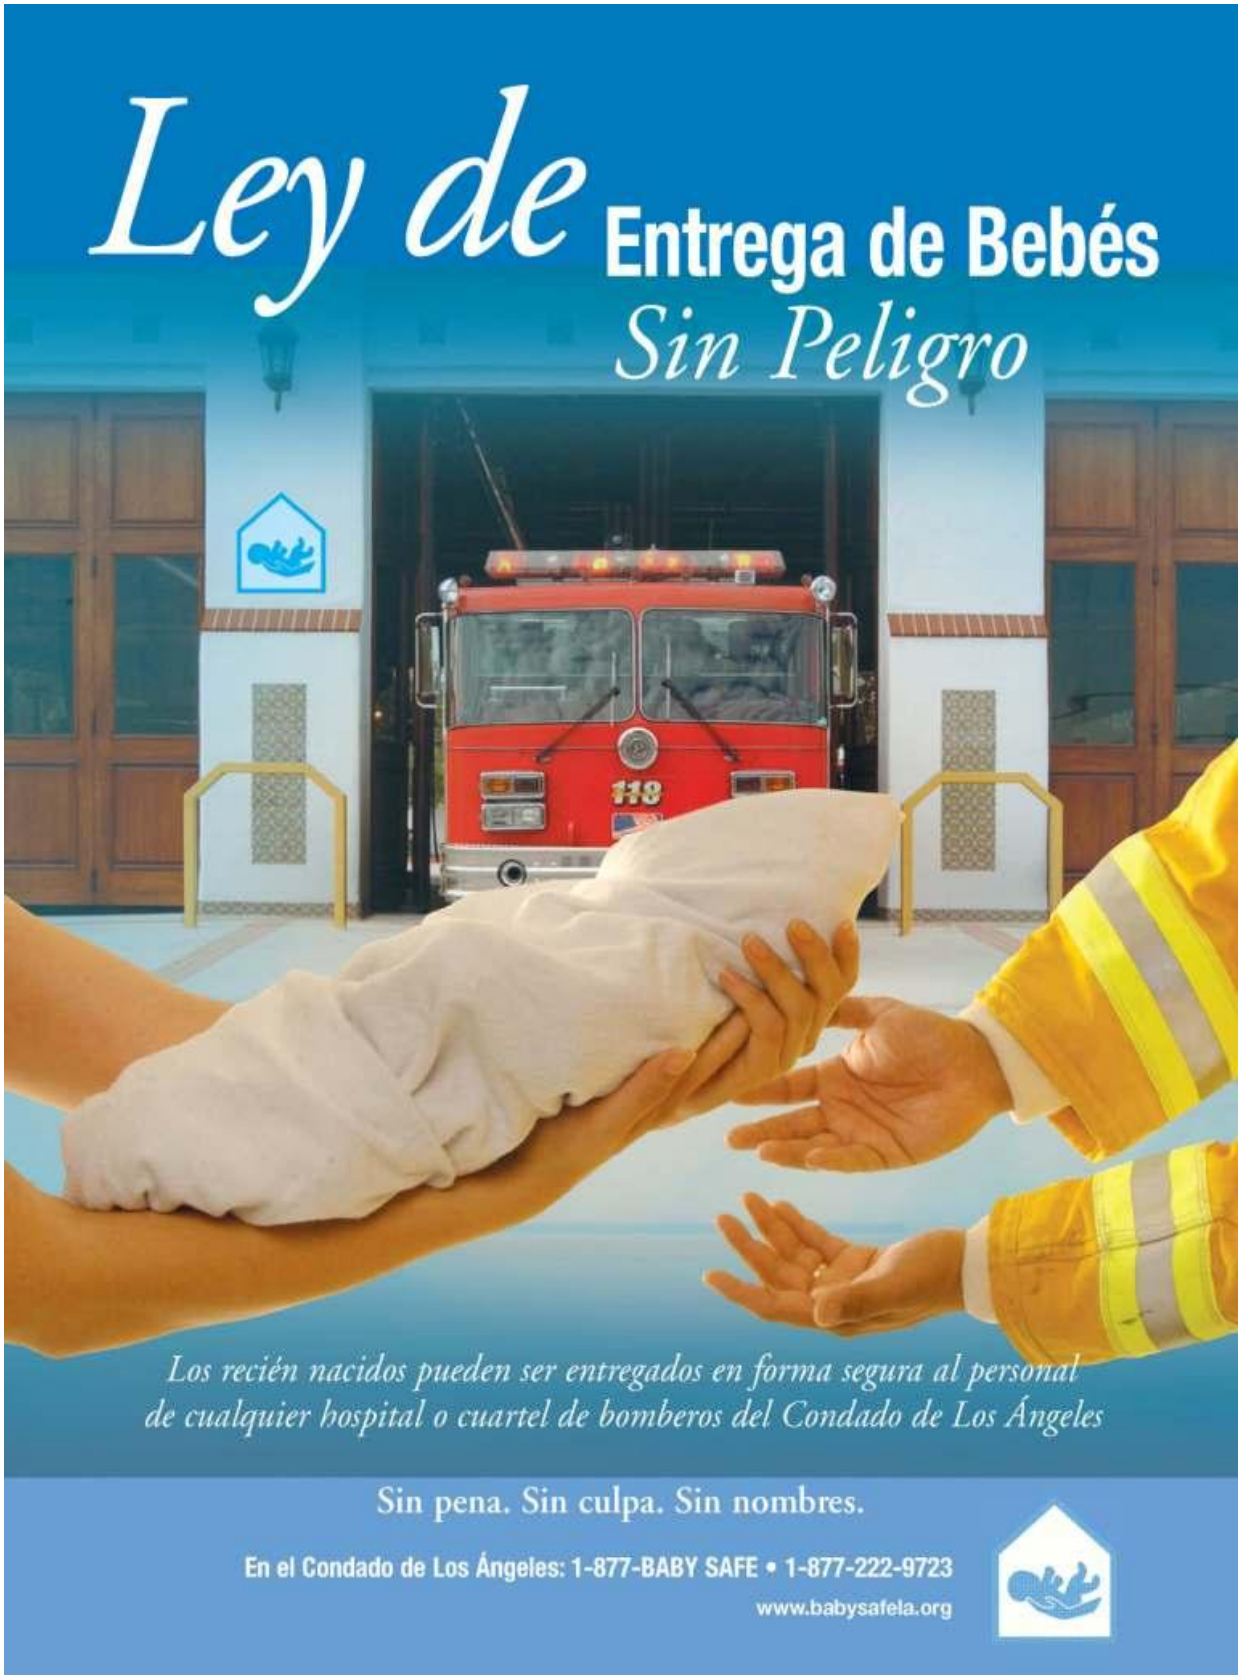
Once the parent or surrendering adult surrenders the baby to hospital or fire station personnel, they may leave at any time.

Why is California doing this?

The purpose of the **Safely Surrendered Baby Law** is to protect babies from being abandoned, hurt or killed by their parents. You may have heard tragic stories of babies left in dumpsters or public bathrooms. Their parents may have been under severe emotional distress. The mothers may have hidden their pregnancies, fearful of what would happen if their families found out. Because they were afraid and had no one or nowhere to turn for help, they abandoned their babies. Abandoning a baby is illegal and places the baby in extreme danger. Too often, it results in the baby's death. The **Safely Surrendered Baby Law** prevents this tragedy from ever happening again in California.

A baby's story

Early in the morning on April 9, 2005, a healthy baby boy was safely surrendered to nurses at Harbor-UCLA Medical Center. The woman who brought the baby to the hospital identified herself as the baby's aunt and stated the baby's mother had asked her to bring the baby to the hospital on her behalf. The aunt was given a bracelet with a number matching the anklet placed on the baby; this would provide some identification in the event the mother changed her mind about surrendering the baby and wished to reclaim the baby in the 14-day period allowed by the Law. The aunt was also provided with a medical questionnaire and said she would have the mother complete and mail back in the stamped return envelope provided. The baby was examined by medical staff and pronounced healthy and full-term. He was placed with a loving family that had been approved to adopt him by the Department of Children and Family Services.



Ley de Entrega de Bebés Sin Peligro
Los recién nacidos pueden ser entregados en forma segura al personal de cualquier hospital o cuartel de bomberos del Condado de Los Ángeles
Sin pena. Sin culpa. Sin nombres.
En el Condado de Los Ángeles: 1-877-BABY SAFE • 1-877-222-9723
www.babysafela.org

En el Condado de Los Ángeles: 1-877-BABY SAFE • 1-877-222-9723
www.babysafela.org

Ley de Entrega de Bebés *Sin Peligro*

¿Qué es la Ley de Entrega de Bebés sin Peligro?

La Ley de Entrega de Bebés sin Peligro de California permite la entrega confidencial de un recién nacido por parte de sus padres u otras personas con custodia legal, es decir cualquier persona a quien los padres le hayan dado permiso. Siempre que el bebé tenga tres días (72 horas) de vida o menos, y no haya sufrido abuso ni negligencia, pueden entregar al recién nacido sin temor de ser arrestados o procesados.

Cada recién nacido se merece la oportunidad de tener una vida saludable. Si alguien que usted conoce está pensando en abandonar a un recién nacido, infórmele que tiene otras opciones. Hasta tres días (72 horas) después del nacimiento, se puede entregar un recién nacido al personal de cualquier hospital o cuartel de bomberos del condado de Los Angeles.

¿Cómo funciona?

El padre/madre con dificultades que no pueda o no quiera cuidar de su recién nacido puede entregarlo en forma legal, confidencial y segura dentro de los tres días (72 horas) del nacimiento. El bebé debe ser entregado a un empleado de cualquier hospital o cuartel de bomberos del Condado de Los Ángeles. Siempre que el bebé no presente signos de abuso o negligencia, no será necesario suministrar nombres ni información alguna. Si el padre/madre cambia de opinión posteriormente y desea recuperar a su bebé, los trabajadores utilizarán brazaletes para poder vincularlos. El bebé llevará un brazalete y el padre/madre o el adulto que lo entregue recibirá un brazalete igual.

¿Qué pasa si el padre/madre desea recuperar a su bebé?

Los padres que cambien de opinión pueden comenzar el proceso de reclamar a su recién nacido dentro de los 14 días. Estos padres deberán llamar al Departamento de Servicios para Niños y Familias (Department of Children and Family Services) del Condado de Los Ángeles al **1-800-540-4000**.

¿Sólo los padres podrán llevar al recién nacido?

No. Si bien en la mayoría de los casos son los padres los que llevan al bebé, la ley permite que otras personas lo hagan *si tienen custodia legal.*

¿Los padres o el adulto que entrega al bebé deben llamar antes de llevar al bebé?

No. El padre/madre o adulto puede llevar al bebé en cualquier momento, las 24 horas del día, los 7 días de la semana, siempre y cuando entreguen a su bebé a un empleado del hospital o cuartel de bomberos.

¿Es necesario que el padre/madre o adulto diga algo a las personas que reciben al bebé?

No. Sin embargo, el personal del hospital o cuartel de bomberos le pedirá a la persona que entregue al bebé que llene un cuestionario con la finalidad de recabar antecedentes médicos importantes, que resultan de gran utilidad para cuidar bien del bebé. El cuestionario incluye un sobre con el sello postal pagado para enviarlo en otro momento.

¿Qué pasará con el bebé?

El bebé será examinado y le brindarán atención médica. Cuando le den el alta del hospital, los trabajadores sociales inmediatamente ubicarán al bebé en un hogar seguro donde estará bien atendido, y se comenzará el proceso de adopción.

¿Qué pasará con el padre/madre o adulto que entregue al bebé?

Una vez que los padres o adulto hayan entregado al bebé al personal del hospital o cuartel de bomberos, pueden irse en cualquier momento.

¿Por qué se está haciendo esto en California? ?

La finalidad de la **Ley de Entrega de Bebés sin Peligro** es proteger a los bebés para que no sean abandonados, lastimados o muertos por sus padres. Usted probablemente haya escuchado historias trágicas sobre bebés abandonados en basureros o en baños públicos. Los padres de esos bebés probablemente hayan estado pasando por dificultades emocionales graves. Las madres pueden haber ocultado su embarazo, por temor a lo que pasaría si sus familias se enteraran. Abandonaron a sus bebés porque tenían miedo y no tenían nadie a quien pedir ayuda. El abandono de un recién nacido es ilegal y pone al bebé en una situación de peligro extremo. Muy a menudo el abandono provoca la muerte del bebé. La **Ley de Entrega de Bebés sin Peligro** impide que vuelva a suceder esta tragedia en California.

Historia de un bebé

A la mañana temprano del día 9 de abril de 2005, se entregó un recién nacido saludable a las enfermeras del Harbor-UCLA Medical Center. La mujer que llevó el recién nacido al hospital se dio a conocer como la tía del bebé, y dijo que la madre le había pedido que llevara al bebé al hospital en su nombre. Le entregaron a la tía un brazalete con un número que coincidía con la pulsera del bebé; esto serviría como identificación en caso de que la madre cambiara de opinión con respecto a la entrega del bebé y decidiera recuperarlo dentro del período de 14 días que permite esta ley. También le dieron a la tía un cuestionario médico, y ella dijo que la madre lo llenaría y lo enviaría de vuelta dentro del sobre con franqueo pagado que le habían dado. El personal médico examinó al bebé y se determinó que estaba saludable y a término. El bebé fue ubicado con una buena familia que ya había sido aprobada para adoptarlo por el Departamento de Servicios para Niños y Familias.

Exhibit T.2 (Jury Service Ordinance)

to the

Electronic Health Records System and Services Agreement

2.203.010 Findings.

The board of supervisors makes the following findings. The county of Los Angeles allows its permanent, full-time employees unlimited jury service at their regular pay. Unfortunately, many businesses do not offer or are reducing or even eliminating compensation to employees who serve on juries. This creates a potential financial hardship for employees who do not receive their pay when called to jury service, and those employees often seek to be excused from having to serve. Although changes in the court rules make it more difficult to excuse a potential juror on grounds of financial hardship, potential jurors continue to be excused on this basis, especially from longer trials. This reduces the number of potential jurors and increases the burden on those employers, such as the county of Los Angeles, who pay their permanent, full-time employees while on juror duty. For these reasons, the county of Los Angeles has determined that it is appropriate to require that the businesses with which the county contracts possess reasonable jury service policies. (Ord. 2002-0015 § 1 (part), 2002)

2.203.020 Definitions.

The following definitions shall be applicable to this chapter:

A. "Contractor" means a person, partnership, corporation or other entity which has a contract with the county or a subcontract with a county contractor and has received or will receive an aggregate sum of $50,000 or more in any 12-month period under one or more such contracts or subcontracts.

B. "Employee" means any California resident who is a full-time employee of a contractor under the laws of California.

C. "Contract" means any agreement to provide goods to, or perform services for or on behalf of, the county but does not include:

1. A contract where the board finds that special circumstances exist that justify a waiver of the requirements of this chapter; or

2. A contract where federal or state law or a condition of a federal or state program mandates the use of a particular contractor; or

3. A purchase made through a state or federal contract; or

4. A monopoly purchase that is exclusive and proprietary to a specific manufacturer, distributor, or reseller, and must match and inter-member with existing supplies, equipment or systems maintained by the county pursuant to the Los Angeles County Purchasing Policy and Procedures Manual, Section P-3700 or a successor provision; or

5. A revolving fund (petty cash) purchase pursuant to the Los Angeles County Fiscal Manual, Section 4.4.0 or a successor provision; or

6. A purchase card purchase pursuant to the Los Angeles County Purchasing Policy and Procedures Manual, Section P-2810 or a successor provision; or

7. A non-agreement purchase with a value of less than $5,000 pursuant to the Los Angeles County Purchasing Policy and Procedures Manual, Section A-0300 or a successor provision; or

8. A bona fide emergency purchase pursuant to the Los Angeles County Purchasing Policy and Procedures Manual, Section PP-1100 or a successor provision.

D. "Full time" means 40 hours or more worked per week, or a lesser number of hours if:

1. The lesser number is a recognized industry standard as determined by the chief administrative officer, or

2. The contractor has a long-standing practice that defines the lesser number of hours as full time.

E. "County" means the county of Los Angeles or any public entities for which the board of supervisors is the governing body. (Ord. 2002-0040 § 1, 2002: Ord. 2002-0015 § 1 (part), 2002)

2.203.030 Applicability.

This chapter shall apply to contractors who enter into contracts that commence after July 11, 2002. This chapter shall also apply to contractors with existing contracts which are extended into option years that commence after July 11, 2002. Contracts that commence after May 28, 2002, but before July 11, 2002, shall be subject to the provisions of this chapter only if the solicitations for such contracts stated that the chapter would be applicable. (Ord. 2002-0040 § 2, 2002: Ord. 2002-0015 § 1 (part), 2002)

2.203.040 Contractor Jury Service Policy.

A contractor shall have and adhere to a written policy that provides that its employees shall receive from the contractor, on an annual basis, no less than five days of regular pay for actual jury service. The policy may provide that employees deposit any fees received for such jury service with the contractor or that the contractor deduct from the employees' regular pay the fees received for jury service. (Ord. 2002-0015 § 1 (part), 2002)

2.203.050 Other Provisions.

A. Administration. The chief administrative officer shall be responsible for the administration of this chapter. The chief administrative officer may, with the advice of county counsel, issue interpretations of the provisions of this chapter and shall issue written instructions on the

implementation and ongoing administration of this chapter. Such instructions may provide for the delegation of functions to other county departments.

B. Compliance Certification. At the time of seeking a contract, a contractor shall certify to the county that it has and adheres to a policy consistent with this chapter or will have and adhere to such a policy prior to award of the contract. (Ord. 2002-0015 § 1 (part), 2002)

2.203.060 Enforcement and Remedies.

For a contractor's violation of any provision of this chapter, the county department head responsible for administering the contract may do one or more of the following:

1. Recommend to the board of supervisors the termination of the contract; and/or,

2. Pursuant to chapter 2.202, seek the debarment of the contractor. (Ord. 2002-0015 § 1 (part), 2002)

2.203.070. Exceptions.

A. Other Laws. This chapter shall not be interpreted or applied to any contractor or to any employee in a manner inconsistent with the laws of the United States or California.

B. Collective Bargaining Agreements. This chapter shall be superseded by a collective bargaining agreement that expressly so provides.

C. Small Business. This chapter shall not be applied to any contractor that meets all of the following:

1. Has ten or fewer employees during the contract period; and,

2. Has annual gross revenues in the preceding twelve months which, if added to the annual amount of the contract awarded, are less than $500,000; and,

3. Is not an affiliate or subsidiary of a business dominant in its field of operation.

"Dominant in its field of operation" means having more than ten employees and annual gross revenues in the preceding twelve months which, if added to the annual amount of the contract awarded, exceed $500,000.

"Affiliate or subsidiary of a business dominant in its field of operation" means a business which is at least 20 percent owned by a business dominant in its field of operation, or by partners, officers, directors, majority stockholders, or their equivalent, of a business dominant in that field of operation. (Ord. 2002-0015 § 1 (part), 2002)

2.203.090. Severability.

If any provision of this chapter is found invalid by a court of competent jurisdiction, the remaining provisions shall remain in full force and effect. (Ord. 2002-0015 § 1 (part), 2002)

Exhibit T.3 (IRS Notice 1015)

to the

Electronic Health Records System and Services Agreement

Department of the Treasury
Internal Revenue Service

Notice 1015

(Rev. December 2010)

Have You Told Your Employees About the Earned Income Credit (EIC)?

What Is the EIC?

The EIC is a refundable tax credit for certain workers.

Which Employees Must I Notify About the EIC?

You must notify each employee who worked for you at any time during the year and from whom you did not withhold income tax. However, you do not have to notify any employee who claimed exemption from withholding on Form W-4, Employee's Withholding Allowance Certificate.

Note. You are encouraged to notify each employee whose wages for 2010 are less than $48,362 that he or she may be eligible for the EIC.

How and When Must I Notify My Employees?

You must give the employee one of the following:

- The IRS Form W-2, Wage and Tax Statement, which has the required information about the EIC on the back of Copy B.
- A substitute Form W-2 with the same EIC information on the back of the employee's copy that is on Copy B of the IRS Form W-2.
- Notice 797, Possible Federal Tax Refund Due to the Earned Income Credit (EIC).
- Your written statement with the same wording as Notice 797.

If you are required to give Form W-2 and do so on time, no further notice is necessary if the Form W-2 has the required information about the EIC on the back of the employee's copy. If a substitute Form W-2 is given on time but does not have the required information, you must notify the employee within 1 week of the date the substitute Form W-2 is given. If Form W-2 is required but is not given on time, you must give the employee Notice 797 or your written statement by the date Form W-2 is required to be given. If Form W-2 is not required, you must notify the employee by February 7, 2011.

You must hand the notice directly to the employee or send it by first-class mail to the employee's last known address. You will not meet the notification requirements by posting Notice 797 on an employee bulletin board or sending it through office mail. However, you may want to post the notice to help inform all employees of the EIC. You can get copies of the notice from IRS.gov or by calling 1-800-829-3676.

How Will My Employees Know If They Can Claim the EIC?

The basic requirements are covered in Notice 797. For more detailed information, the employee needs to see Pub. 596, Earned Income Credit (EIC), or the instructions for Form 1040, 1040A, or 1040EZ.

How Do My Employees Claim the EIC?

Eligible employees claim the EIC on their 2010 tax return. Even employees who have no tax withheld from their pay or owe no tax can claim the EIC and get a refund, but they must file a tax return to do so. For example, if an employee has no tax withheld in 2010 and owes no tax but is eligible for a credit of $829, he or she must file a 2010 tax return to get the $829 refund.

Can My Employees Get Advance EIC Payments?

After 2010, your employees can no longer get advance payments of the credit in their pay during the year as they could in 2010 and earlier years, because the law changed. However, if they are eligible, they will still be able to claim the credit on their 2011 return.

Form W-5, Earned Income Credit Advance Payment Certificate, is no longer in use.

Exhibit V (Meaningful Use Criteria)

to the

Electronic Health Records System and Services Agreement

EXHIBIT V

MEANINGFUL USE CRITERIA

This Exhibit V (Meaningful Use Criteria) is an attachment and addition to the Electronic Health Records System and Services Agreement dated December 21, 2012 (the "**Agreement**") entered into by and between the County of Los Angeles ("**County**") and Cerner Corporation ("**Contractor**") and is incorporated into the Agreement by reference hereof. Unless specifically defined in this Exhibit, capitalized terms shall have the meanings set forth in the Agreement.

1. INTRODUCTION

The tables set forth in Section 2 (Meaningful Use Objectives and Clinical Quality Measures Tables) are the unedited summaries from the final regulations published by the Centers for Medicare and Medicaid Services ("**CMS**") establishing Stage 1 and Stage 2 Meaningful Use criteria and are provided for convenience of reference only. The summary tables are merely illustrative, not exhaustive, of the Meaningful Use criteria established by the final regulations published by CMS establishing Stage 1 and Stage 2 Meaningful User criteria, which are attached as Exhibit V.1 (Stage 1 Meaningful Use Criteria Regulations) and Exhibit V.2 (Stage 2 Meaningful Use Criteria Regulations). In the event of a conflict between this Exhibit V (Meaningful Use Criteria) and such regulations, the regulations, including any revisions, shall govern.

2. MEANINGFUL USE OBJECTIVES AND CLINICAL QUALITY MEASURES TABLES

2.1 STAGE 1 MEANINGFUL USE OBJECTIVES

Table 2: Stage 1 Meaningful Use Objectives and Associated Measures Sorted by Core and Menu Set

CORE SET			
Health Outcomes Policy Priority	**Stage 1 Objectives**		**Stage 1 Measures**
	Eligible Professionals	**Eligible Hospitals and CAHs**	
Improving quality, safety, efficiency, and reducing health	Use CPOE for medication orders directly entered by any licensed healthcare professional who can enter	Use CPOE for medication orders directly entered by any licensed healthcare professional who can enter orders into the medical	More than 30% of unique patients with at least one medication in their medication list seen by the EP or admitted to the eligible hospital's or CAR's inpatient or emergency

CORE SET			
Health Outcomes Policy Priority	**Stage 1 Objectives**		**Stage 1 Measures**
	Eligible Professionals	**Eligible Hospitals and CAHs**	
disparities	orders into the medical record per state, local and professional guidelines	record per state, local and professional guidelines	department (POS 21 or 23) have at least one medication order entered using CPOE
	Implement drug-drug and drug-allergy interaction checks	Implement drug-drug and drug-allergy interaction checks	The EP/eligible hospital/CAR has enabled this functionality for the entire ERR reporting period
	Generate and transmit permissible prescriptions electronically (eRx)		More than 40% of all permissible prescriptions written by the EP are transmitted electronically using certified ERR technology
	Record demographics ○ preferred language ○ gender ○ race ○ ethnicity ○ date of birth	Record demographics ○ preferred language ○ gender ○ race ○ ethnicity ○ date of birth ○ date and preliminary cause of death in the event of mortality in the eligible hospital or CAH	More than 50% of all unique patients seen by the EP or admitted to the eligible hospital's or CAH's inpatient or emergency department (POS 21 or 23) have demographics recorded as structured data
	Maintain an up-to-date problem list of current and active diagnoses	Maintain an up-to-date problem list of current and active diagnoses	More than 80% of all unique patients seen by the EP or admitted to the eligible hospital's or CAR's inpatient or emergency department (POS 21 or 23) have at least one entry or an indication that no problems are known for the patient recorded as structured data

CORE SET			
Health Outcomes Policy Priority	**Stage 1 Objectives**		**Stage 1 Measures**
	Eligible Professionals	**Eligible Hospitals and CAHs**	
	Maintain active medication list	Maintain active medication list	More than 80% of all unique patients seen by the EP or admitted to the eligible hospital's or CAH's inpatient or emergency department (POS 21 or 23) have at least one entry (or an indication that the patient is not currently prescribed any medication) recorded as structured data
	Maintain active medication allergy list	Maintain active medication allergy list	More than 80% of all unique patients seen by the EP or admitted to the eligible hospital's or CAH's inpatient or emergency department (POS 21 or 23) have at least one entry (or an indication that the patient is not currently prescribed any medication) recorded as structured data
	Record and chart changes in vital signs: ○ Height ○ Weight ○ Blood pressure ○ Calculate and display BMI ○ Plot and display growth charts for children 2-20 years, including BMI	Record and chart changes in vital signs: ○ Height ○ Weight ○ Blood pressure ○ Calculate and display BMI ○ Plot and display growth charts for children 2-20 years, including BMI	For more than 50% of all unique patients age 2 and over seen by the EP or admitted to eligible hospital's or CAH's inpatient or emergency department (POS 21 or 23), height, weight and blood pressure are recorded as structured data
	Record smoking status for	Record smoking status for patients	For more than 50% of all unique patients 13 years old or older seen by the EP or admitted

CORE SET			
Health Outcomes Policy Priority	**Stage 1 Objectives**		**Stage 1 Measures**
	Eligible Professionals	**Eligible Hospitals and CAHs**	
	patients 13 years old and older	13 years old and older	to the eligible hospital's or CAH's inpatient or emergency department (POS 21 or 23) have smoking status recorded as structured data
	Implement one clinical decision support rule relevant to specialty or high clinical priority along with the ability to track compliance that rule	Implement one clinical decision support rule related to a high priority hospital condition along with the ability to track compliance with that rule	Implement one clinical decision support rule
	Report ambulatory clinical quality measures to CMS or the States	Report hospital clinical quality measures to CMS or the States	For 2011, provide aggregate numerator, denominator, and exclusions through attestation as discussed in section II(A)(3) of this final rule.
			For 2012, electronically submit the clinical quality measures as discussed in section II(A)(3) of this final rule.
Engage patients and families in their health Care	Provide patients with an electronic copy of their health information (including diagnostic test results, problem list, medication lists, medication allergies), upon request	Provide patients with an electronic copy of their health information (including diagnostic test results, problem list, medication lists, medication allergies, discharge summary, procedures), upon request	More than 50% of all patients of the EP or the inpatient or emergency departments of the eligible hospital or CAH (POS 21 or 23) who request an electronic copy of their health information are provided it within 3 business days.
		Provide patients with an electronic copy of their discharge instructions at time of discharge,	More than 50% of all patients who are discharged from an eligible hospital or CAH's inpatient department or emergency department (POS 21 or 23) and who request

CORE SET			
Health Outcomes Policy Priority	**Stage 1 Objectives**		**Stage 1 Measures**
	Eligible Professionals	**Eligible Hospitals and CAHs**	
		upon request	an electronic copy of their discharge instructions are provided it
	Provide clinical summaries for patients for each office visit		Clinical summaries provided to patients for more than 50% of all office visits within 3 business days
Improve care coordination	Capability to exchange key clinical information (for example, problem list, medication list, medication allergies, diagnostic test results), among providers of care and patient authorized entities electronically	Capability to exchange key clinical information (for example, discharge summary, procedures, problem list, medication list, medication allergies, diagnostic test results), among providers of care and patient authorized entities electronically	Performed at least one test of certified EHR technology's capacity to electronically exchange key clinical information
Ensure adequate privacy and security protections for personal health information	Protect electronic health information created or maintained by the certified EHR technology through the implementation of appropriate technical capabilities	Protect electronic health information created or maintained by the certified EHR technology through the implementation of appropriate technical capabilities	Conduct or review a security risk analysis per 45 CFR 164.308 (a)(I) and implement security updates as necessary and correct identified security deficiencies as part of its risk management process

MENU SET			
Health Outcomes	**Stage 1 Objectives**		**Stage 1 Measures**
Policy Priority	**Eligible Professionals**	**Eligible Hospitals and CAHs**	

Improving quality, safety, efficiency, and reducing health disparities	Implement drug-formulary checks	Implement drug-formulary checks	The EP/eligible hospital/CAH has enabled this functionality and has access to at least one internal or external drug formulary for the entire ERR reporting period
		Record advance directives for patients 65 years old or older	More than 50% of all unique patients 65 years old or older admitted to the eligible hospital's or CAR's inpatient department (POS 21) have an indication of an advance directive status recorded
	Incorporate clinical lab-test results into certified EHR technology as structured data	Incorporate clinical lab-test results into certified EHR technology as structured data	More than 40% of all clinical lab tests results ordered by the EP or by an authorized provider of the eligible hospital or CAR for patients admitted to its inpatient or emergency department (POS 21 or 23) during the EHR reporting period whose results are either in a positive/negative or numerical format are incorporated in certified EHR technology as structured data
	Generate lists of patients by specific conditions to use for quality improvement, reduction of disparities, research or outreach	Generate lists of patients by specific conditions to use for quality improvement, reduction of disparities, research or outreach	Generate at least one report listing patients of the EP, eligible hospital or CAH with a specific condition
	Send reminders to patients per patient preference for preventive/ follow up care		More than 20% of all unique patients 65 years or older or 5 years old or younger were sent an appropriate reminder ·during the EHR reporting period
Engage patients and families in their health	Provide patients with timely electronic access to their health		More than 10% of all unique patients seen by the EP are provided timely (available to the

care	information (including lab results, problem list, medication lists, medication allergies) within. four business days of the information being available to the EP		patient within four business days of being updated in the certified EHR technology) electronic access to their health information subject to the EP's discretion to withhold certain information
	Use certified EHR technology to identify patient-specific education resources and provide those resources to the patient if appropriate	Use certified EHR technology to identify patient-specific education resources and provide those resources to the patient if appropriate	More than 10% of all unique patients seen by the EP or admitted to the eligible hospital's or CAH's inpatient or emergency department (POS 21 or 23) are provided patient-specific education resources
Improve care coordination	The EP, eligible hospital or CAH who receives a patient from another setting of care or provider of care or believes an encounter is relevant should perform medication reconciliation	The EP, eligible hospital or CAH who receives a patient from another setting of care or provider of care or believes an encounter is relevant should perform medication reconciliation	The EP, eligible hospital or CAH performs medication reconciliation for more than 50% of transitions of care in which the patient is transitioned into the care of the EP or admitted to the eligible hospital's or CAH's inpatient or emergency department (POS 21 or 23)
	The EP, eligible hospital or CAH who transitions their patient to another setting of care or provider of care or refers their patient to another provider of care should provide summary of care record for each transition of care or referral	The EP, eligible hospital or CAH who. transitions their patient to another setting of care or provider of care or refers their patient to another provider of care should provide summary of care record for each transition of care or referral	The EP, eligible hospital or CAH who transitions or refers their patient to another setting of care or provider of care provides a summary of care record for more than 50% of transitions of care and referrals

Improve population and public health[2]	Capability to submit electronic data to immunization registries or Immunization Information Systems and actual submission in accordance with applicable law and practice	Capability to submit electronic data to immunization registries or Immunization Information Systems and actual submission in accordance with applicable law and practice	Performed at least one test of certified EHR technology's capacity to submit electronic data to immunization registries and follow up submission if the test is successful (unless none of the immunization registries to which the EP, eligible hospital or CAH submits such information have the capacity to receive the information electronically)
		Capability to submit electronic data on reportable (as required by state or local law) lab results to public health agencies and actual submission in accordance with applicable law and practice	Performed at least one test of certified EHR technology's capacity to provide electronic submission of reportable lab results to public health agencies and follow-up submission if the test is successful (unless none of the public health agencies to which eligible hospital or CAH submits such information have the capacity to receive the information electronically)
	Capability to submit electronic syndromic surveillance data to public health agencies and actual submission in accordance with applicable law and practice	Capability to submit electronic syndromic surveillance data to public health agencies and actual submission in accordance with applicable law and practice	Performed at least one test of certified EHR technology's capacity to provide electronic syndromic surveillance data to public health agencies and follow-up submission if the test is successful (unless none of the public health agencies to which an EP, eligible hospital or CAH submits such information have the capacity to receive the information electronically)

[2] Unless an EP, eligible hospital or CAH has an exception for all of these objectives and measures they must complete at least one as part of their demonstration of the menu set in order to be a meaningful EHR user.

2.3 CLINICAL QUALITY MEASURES

TABLE 10: Clinical Quality Measures for Submission by Eligible Hospitals and CAHs for Payment Year 2011-2012

Measure Number Identifier	Measure Title, Description & Measure Steward	Electronic Measure Specifications Information
Emergency Department (ED)-l NQF 0495	**Title:** Emergency Department Throughput – admitted patients Median time from ED arrival to ED departure for admitted patients **Description:** Median time from emergency department arrival to time of departure from the emergency room for patients admitted to the facility from the emergency department **Measure Developer:** CMS/Oklahoma Foundation for Medical Quality (OFMQ)	http://www.cms.gov/QualityMeasures/03_ElectronicSpecifications.asp#TopOfPage
ED-2 NQF 0497	**Title:** Emergency Department Throughput – admitted patients Admission decision time to ED departure time for admitted patients **Description:** Median time from admit decision time to time of departure from the emergency department of emergency department patients admitted to inpatient status **Measure Developer:** CMS/OFMQ	http://www.cms.gov/QualityMeasures/03_ElectronicSpecifications.asp#TopOfPage
Stroke-2 NQF 0435	**Title:** Ischemic stroke - Discharge on anti-thrombotics **Description:** Ischemic stroke patients prescribed antithrombotic therapy at hospital discharge **Measure Developer:** The Joint Commission	http://www.cms.gov/QualityMeasures/03_ElectronicSpecifications.asp#TopOfPage
Stroke-3 NQF 0435	**Title:** Ischemic stroke - Anticoagulation for A-fib/flutter **Description:** Ischemic stroke patients with atrial fibrillation/flutter who are prescribed anticoagulation therapy at hospital discharge. **Measure Developer:** The Joint Commission	http://www.cms.gov/QualityMeasures/03_ElectronicSpecifications.asp#TopOfPage
Stroke-4 NQF 0437	**Title:** Ischemic stroke - Thrombolytic therapy for patients arriving within 2 hours of symptom onset **Description:** Acute ischemic stroke patients who arrive at this hospital within 2 hours of time last known well and for whom TV t-PA was initiated at this hospital within 3 hours of time last known well. **Measure Developer:** The Joint Commission	http://www.cms.gov/QualityMeasures/03_ElectronicSpecifications.asp#TopOfPage
Stroke-5	**Title:** Ischemic or hemorrhagic stroke – Antithrombotic therapy by day 2 **Description:** Ischemic stroke patients administered antithrombotic therapy by the end of	http://www.cms.gov/QualityMeasures/03_Ele

Measure Number Identifier	Measure Title, Description & Measure Steward	Electronic Measure Specifications Information
NQF 0438	hospital day 2. **Measure Developer:** The Joint Commission	ctronicSpecifications.asp#TopOfPage
Stroke-6 NQF 0439	**Title:** Ischemic stroke - Discharge on statins **Description:** Ischemic stroke patients with LDL ~ 100 mg/dL, or LDL not measured, or, who were on a lipid-lowering medication prior to hospital arrival are prescribed statin medication at hospital discharge. **Measure Developer:** The Joint Commission	http://www.cms.gov/QualityMeasures/03_ElectronicSpecifications.asp#TopOfPage
Stroke-8 NQF 0440	**Title:** Ischemic or hemorrhagic stroke - Stroke education **Description:** Ischemic or hemorrhagic stroke patients or their caregivers who were given educational materials during the hospital stay addressing all of the following: activation of emergency medical system, need for follow-up after discharge, medications prescribed at discharge, risk factors for stroke, and warning signs and symptoms of stroke. **Measure Developer:** The Joint Commission	http://www.cms.gov/QualityMeasures/03_ElectronicSpecifications.asp#TopOfPage
Stroke-10 NQF 0441	**Title:** Ischemic or hemorrhagic stroke – Rehabilitation assessment **Description:** Ischemic or hemorrhagic stroke patients who were assessed for rehabilitation services. **Measure Developer:** The Joint Commission	http://www.cms.gov/QualityMeasures/03_ElectronicSpecifications.asp#TopOfPage
Venous Thromboembolism (VTE)-1 NQF 0371	**Title:** VTE prophylaxis within 24 hours of arrival **Description:** This measure assesses the number of patients who received VTE prophylaxis or have documentation why no VTE prophylaxis was given the day of or the day after hospital admission or surgery end date for surgeries that start the day of or the day after hospital admission. **Measure Developer:** The Joint Commission	http://www.cms.gov/QualityMeasures/03_ElectronicSpecifications.asp#TopOfPage
VTE-2 NQF 0372	**Title:** Intensive Care Unit VTE prophylaxis **Description:** This measure assesses the number of patients who received VTE prophylaxis or have documentation why no VTE prophylaxis was given the day of or the day after the initial admission (or transfer) to the Intensive Care Unit (ICU) or surgery end date for surgeries that start the day of or the day after ICU admission (or transfer). **Measure Developer:** The Joint Commission	http://www.cms.gov/QualityMeasures/03_ElectronicSpecifications.asp#TopOfPage

Measure Number Identifier	Measure Title, Description & Measure Steward	Electronic Measure Specifications Information
VTE-3 NQF 0373	**Title:** Anticoagulation overlap therapy **Description:** This measure assesses the number of patients diagnosed with confirmed VTE who received an overlap of parenteral (intravenous [IV] or subcutaneous [subcu]) anticoagulation and warfarin therapy. For patients who received less than five days of overlap therapy, they must be discharged on both medications. Overlap therapy must be administered for at least five days with an international normalized ratio (INR) ≥ 2 prior to discontinuation of the parenteral anticoagulation therapy or the patient must be discharged on both medications. **Measure Developer:** The Joint Commission	http://www.cms.gov/QualityMeasures/03_ElectronicSpecifications.asp#TopOfPage
VTE-4 NQF 0374	**Title:** Platelet monitoring on unfractionated heparin **Description:** This measure assesses the number of patients diagnosed with confirmed VTE who received intravenous (IV) UFH therapy dosages AND had their platelet counts monitored using defined parameters such as a nomogram or protocol. **Measure Developer:** The Joint Commission	http://www.cms.gov/QualityMeasures/03_ElectronicSpecifications.asp#TopOfPage
VTE-5 NQF 0375	**Title:** VTE discharge instructions **Description:** This measure assesses the number of patients diagnosed with confirmed VTE that are discharged to home, to home with home health, home hospice or discharged/transferred to court/law enforcement on warfarin with written discharge instructions that address all four criteria: compliance issues, dietary advice, follow-up monitoring, and information about the potential for adverse drug reactions/interactions. **Measure Developer:** The Joint Commission	http://www.cms.gov/QualityMeasures/03_ElectronicSpecifications.asp#TopOfPage
VTE-6 NQF 0376	**Title:** Incidence of potentially preventable VTE **Description:** This measure assesses the number of patients diagnosed with confirmed VTE during hospitalization (not present on arrival) who did not receive VTE prophylaxis between hospital admission and the day before the VTE diagnostic testing order date. **Measure Developer:** The Joint Commission	http://www.cms.gov/QualityMeasures/03_ElectronicSpecifications.asp#TopOfPage

TABLE 7: Measure Group: Core for All EPs, Medicare and Medicaid

NQF Measure Number & PQRI Implementation Number	Clinical Quality Measure Title
NQF 0013	**Title:** Hypertension: Blood Pressure Measurement
NQF 0028	**Title:** Preventive Care and Screening Measure Pair: a. Tobacco Use Assessment b. Tobacco Cessation Intervention
NQF 0421 PQRI 128	**Title:** Adult Weight Screening and Follow-up
	Alternate Core Measures
NQF 0024	**Title:** Weight Assessment and Counseling for Children and Adolescents

2.4 CHANGES TO STAGE 1 MEANINGFUL USE OBJECTIVES.

Table 4 – Stage 1 Changes

Stage 1 Objective	Final Changes	Effective year (CY/FY)
Use CPOE for medication orders directly entered by any licensed healthcare professional who can enter	Change: Addition of an alternative measure More than 30 percent of medication orders created by the EP or authorized	2013—Onward (Optional).

Stage 1 Objective	Final Changes	Effective year (CY/FY)
orders into the medical record per state, local and professional guidelines	providers of the eligible hospital's or CAH's inpatient or emergency department (POS 21 or 23) during the EHR reporting period are recorded using CPOE	
Generate and transmit permissible prescriptions electronically (eRx)	Change: Addition of an additional exclusion Any EP who: does not have a pharmacy within their organization and there are no pharmacies that accept electronic prescriptions within 10 miles of the EP's practice location at the start of his/her EHR reporting period	2013—Onward (Required).
Record and chart changes in vital signs	Change: Addition of alternative age limitations More than 50 percent of all unique patients seen by the EP or admitted to the eligible hospital's or CAH's inpatient or emergency department (POS 21 or 23) during the EHR reporting period have blood pressure (for patients age 3 and over only) and height and weight (for all ages) recorded as structured data	2013 Only (Optional).
Record and chart changes in vital signs	Change: Addition of alternative exclusions Any EP who (*1*) Sees no patients 3 years or older is excluded from recording blood pressure; (*2*) Believes that all three vital signs of height, weight, and blood pressure have no relevance to their scope of practice is excluded from recording them; (*3*) Believes that height and weight are relevant to their scope of practice, but blood pressure is not, is excluded from recording blood pressure; or (*4*) Believes that blood pressure is relevant to their scope of practice, but height and weight are not, is excluded from recording height and weight.	

Stage 1 Objective	Final Changes	Effective year (CY/FY)
Record and chart changes in vital signs	Change: Age limitations on height, weight and blood pressure More than 50 percent of all unique patients seen by the EP or admitted to the eligible hospital's or CAH's inpatient or emergency department (POS 21 or 23) during the EHR reporting period have blood pressure (for patients age 3 and over only) and height and weight (for all ages) recorded as structured data.	2014—Onward (Required).
Record and chart changes in vital signs	Change: Changing the age and splitting the EP exclusion Any EP who (*1*) Sees no patients 3 years or older is excluded from recording blood pressure; (*2*) Believes that all three vital signs of height, weight, and blood pressure have no relevance to their scope of practice is excluded from recording them; (*3*) Believes that height and weight are relevant to their scope of practice, but blood pressure is not, is excluded from recording blood pressure; or (*4*) Believes that blood pressure is relevant to their scope of practice, but height and weight are not, is excluded from recording height and weight.	2014—Onward (Required).
Capability to exchange key clinical information (for example, problem list, medication list, medication allergies, and diagnostic test results), among providers of care and patient authorized entities electronically	Change: Objective is no longer required	2013—Onward (Required).
Report ambulatory (hospital) clinical quality measures to CMS or the states	Change: Objective is incorporated directly into the definition of a meaningful EHR user and eliminated as an objective under § 495.6	2013—Onward (Required).

Stage 1 Objective	Final Changes	Effective year (CY/FY)
EP and Hospital Objectives: Provide patients with an electronic copy of their health information (including diagnostics test results, problem list, medication lists, medication allergies, discharge summary, procedures) upon request Hospital Objective: Provide patients with an electronic copy of their discharge instructions at time of discharge, upon request EP Objective: Provide patients with timely electronic access to their health information (including lab results, problem list, medicatiion lists, and allergies) within 4 business days of the information being available to the EP.	Change: Replace these four objectives with the Stage 2 objective and one of the two Stage 2 measures. EP Objective: Provide patients the ability to view online, download, and transmit their health information within 4 business days of the information being available to the EP. EP Measure: More than 50 percent of all unique patients seen by the EP during the EHR reporting period are provided timely (within 4 business days after the information is available to the EP) online access to their health information subject to the EP's discretion to withhold certain information. Hospital Objective: Provide patients the ability to view online, download, and transmit information about a hospital admission. Hospital Measure: More than 50 percent of all patients who are discharged from the inpatient or emergency department (POS 21 or 23) of an eligible hospital or CAH have their information available online within 36 hours of discharge	2014—Onward (Required).
Public Health Objectives:	Change: Addition of “except where prohibited” to the objective regulation text for the public health objectives under § 495.6	2013—Onward (Required).

Stage 1 Policy Changes		
Meeting an exclusion for a menu set objective counts towards the number of menu set objectives that must be satisfied to meet meaningful use	Meeting an exclusion for a menu set objective does not count towards the number of menu set objectives that must be satisfied to meet meaningful use.	2014—Onward (Required).

2.5 STAGE 2 MEANINGFUL USE OBJECTIVES

Table B5 – Stage 2 Objectives and Measures

CORE SET			
Health Outcomes Policy Priority	**Stage 2 Objectives**		**Stage 2 Measures**
	Eligible Professionals	**Eligible Hospitals and CAHs**	
Improving quality, safety, efficiency, and reducing health disparities	Use computerized provider order entry (CPOE) for medication, laboratory and radiology orders directly entered by any licensed healthcare professional who can enter orders into the medical record per state, local and professional guidelines	Use computerized provider order entry (CPOE) for medication, laboratory and radiology orders directly entered by any licensed healthcare professional who can enter orders into the medical record per state, local and professional guidelines	More than 60 percent of medication, 30 percent of laboratory, and 30 percent of radiology orders created by the EP or authorized providers of the eligible hospital's or CAH's inpatient or emergency department (POS 21 or 23) during the EHR reporting period are recorded using CPOE.
	Generate and transmit permissible prescriptions electronically (eRx)		More than 50 percent of all permissible prescriptions, or all prescriptions written by the EP and queried for a drug formulary and transmitted electronically using CEHRT.
	Record the following demographics: • Preferred language • Sex • Race • Ethnicity • Date of birth	Record the following demographics: • Preferred language • Sex • Race • Ethnicity • Date of birth • Date and preliminary cause of death in the event of mortality in the eligible hospital or CAH.	More than 80 percent of all unique patients seen by the EP or admitted to the eligible hospital's or CAH's inpatient or emergency department (POS 21 or 23) during the EHR reporting period have demographics recorded as structured data.
	Record and chart changes in vital signs: • Height/length •	Record and chart changes in vital signs: • Height/length • Weight •	More than 80 percent of all unique patients seen by the EP or admitted to the eligible

CORE SET			
Health Outcomes Policy Priority	**Stage 2 Objectives**		**Stage 2 Measures**
	Eligible Professionals	**Eligible Hospitals and CAHs**	
	Weight • Blood pressure (age 3 and over) • Calculate and display BMI • Plot and display growth charts for patients 0-20 years, including BMI	Blood pressure (age 3 and over) • Calculate and display BMI • Plot and display growth charts for patients 0-20 years, including BMI	hospital's or CAH's inpatient or emergency department (POS 21 or 23) during the EHR reporting period have blood pressure (for patients age 3 and over only) and height/length and weight (for all ages) recorded as structured data.
	Record smoking status for patients 13 years old or older	Record smoking status for patients 13 years old or older	More than 80 percent of all unique patients 13 years old or older seen by the EP or admitted to the eligible hospital's or CAH's inpatient or emergency departments (POS 21 or 23) during the EHR reporting period have smoking status recorded as structured data.
	Use clinical decision support to improve performance on high-priority health conditions	Use clinical decision support to improve performance on high-priority health conditions	1. Implement five clinical decision support interventions related to four or more clinical quality measures at a relevant point in patient care for the entire EHR reporting period. Absent four clinical quality measures related to an EP, eligible hospital or CAH's scope of practice or patient population, the clinical decision support interventions must be related to high-priority health conditions. It is suggested that one of the five clinical decision support interventions be related to improving healthcare efficiency. 2. The EP, eligible hospital, or CAH has enabled and implemented the functionality for drug and drug allergy interaction checks for the entire EHR reporting period.

CORE SET			
Health Outcomes Policy Priority	**Stage 2 Objectives**		**Stage 2 Measures**
	Eligible Professionals	**Eligible Hospitals and CAHs**	
	Incorporate clinical lab-test results into Certified EHR Technology as structured data.	Incorporate clinical lab-test results into Certified EHR Technology as structured data	More than 55 percent of all clinical lab tests results ordered by the EP or by authorized providers of the eligible hospital or CAH for patients admitted to its inpatient or emergency department (POS 21 or 23) during the EHR reporting period whose results are either in a positive/negative affirmation or numerical format are incorporated in Certified EHR Technology as structured data.
	Generate lists of patients by specific conditions to use for quality improvement, reduction of disparities, research, or outreach	Generate lists of patients by specific conditions to use for quality improvement, reduction of disparities, research, or outreach.	Generate at least one report listing patients of the EP, eligible hospital or CAH with a specific condition.
	Use clinically relevant information to identify patients who should receive reminders for preventive/follow-up care and send these patients the reminder, per patient preference		More than 10 percent of all unique patients who have had two or more office visits with the EP within the 24 months before the beginning of the EHR reporting period were sent a reminder, per patient preference when available.
		Automatically track medications from order to administration using assistive technologies in conjunction with an electronic medication administration record (eMAR).	More than 10 percent of medication orders created by authorized providers of the eligible hospital's or CAH's inpatient or emergency department (POS 21 or 23) during the EHR reporting period for which all doses are tracked using eMAR.

CORE SET			
Health Outcomes Policy Priority	**Stage 2 Objectives**		**Stage 2 Measures**
	Eligible Professionals	**Eligible Hospitals and CAHs**	
Engage patients and families in their health care	Provide patients the ability to view online, download, and transmit their health information within 4 business days of the information being available to the EP.		1. More than 50 percent of all unique patients seen by the EP during the EHR reporting period are provided timely (within 4 business days after the information is available to the EP) online access to their health information subject to the EP's discretion to withhold certain information. 2. More than 5 percent of all unique patients seen by the EP during the EHR reporting period (or their authorized representatives) view, download, or transmit to a third party their health information.
		Provide patients the ability to view online, download, and transmit information about a hospital admission.	1. More than 50 percent of all patients who are discharged from the inpatient or emergency department (POS 21 or 23) of an eligible hospital or CAH have their information available online within 36 hours of discharge. 2. More than 5 percent of all patients (or their authorized representatives) who are discharged from the inpatient or emergency department (POS 21 or 23) of an eligible hospital or CAH view, download or transmit to a third party their information during the reporting period.
	Provide clinical summaries for patients for each office visit		Clinical summaries provided to patients or patient-authorized representatives within 1 business day for more than 50 percent of office visits.
	Use Certified EHR Technology	Use Certified EHR Technology to	Patient-specific education resources identified

CORE SET			
Health Outcomes Policy Priority	**Stage 2 Objectives**		**Stage 2 Measures**
	Eligible Professionals	**Eligible Hospitals and CAHs**	
	to identify patient-specific education resources and provide those resources to the patient	identify patient-specific education resources and provide those resources to the patient	by CEHRT are provided to patients for more than 10 percent of all unique patients with office visits seen by the EP during the EHR reporting period. More than 10 percent of all unique patients admitted to the eligible hospital's or CAH's inpatient or emergency departments (POS 21 or 23) are provided patient-specific education resources identified by Certified EHR Technology.
	Use secure electronic messaging to communicate with patients on relevant health information		A secure message was sent using the electronic messaging function of Certified EHR Technology by more than 5 percent of unique patients (or their authorized representatives) seen by the EP during the EHR reporting period.
Improve care coordination	The EP who receives a patient from another setting of care or provider of care or believes an encounter is relevant should perform medication reconciliation.	The eligible hospital or CAH who receives a patient from another setting of care or provider of care or believes an encounter is relevant should perform medication reconciliation	The EP, eligible hospital or CAH performs medication reconciliation for more than 50 percent of transitions of care in which the patient is transitioned into the care of the EP or admitted to the eligible hospital's or CAH's inpatient or emergency department (POS 21 or 23).
	The EP who transitions their patient to another setting of care or provider of care or refers their patient to another provider of care provides a summary care record for each	The eligible hospital or CAH who transitions their patient to another setting of care or provider of care or refers their patient to another provider of care provides a summary care record for each	1. The EP, eligible hospital, or CAH that transitions or refers their patient to another setting of care or provider of care provides a summary of care record for more than 50 percent of transitions of care and referrals. 2. The EP, eligible hospital or CAH that transitions

	prohibited, and in accordance with applicable law and practice	accordance with applicable law and practice	EHR reporting period.
		Capability to submit electronic reportable laboratory results to public health agencies, except where prohibited, and in accordance with applicable law and practice	Successful ongoing submission of electronic reportable laboratory results from Certified EHR Technology to public health agencies for the entire EHR reporting period.
		Capability to submit electronic syndromic surveillance data to public health agencies, except where prohibited, and in accordance with applicable law and practice	Successful ongoing submission of electronic syndromic surveillance data from Certified EHR Technology to a public health agency for the entire EHR reporting period.
Ensure adequate privacy and security protections for personal health information	Protect electronic health information created or maintained by the Certified EHR Technology through the implementation of appropriate technical capabilities	Protect electronic health information created or maintained by the Certified EHR Technology through the implementation of appropriate technical capabilities	Conduct or review a security risk analysis in accordance with the requirements under 45 CFR 164.308(a)(1), including addressing the encryption/security of data stored in CEHRT in accordance with requirements under 45 CFR 164.312(a)(2)(iv) and 45 CFR 164.306(d)(3), and implement security updates as necessary and correct identified security deficiencies as part of the provider's risk management process.

MENU SET			
Health Outcomes Policy Priority	**Stage 2 Objectives**		**Stage 2 Measures**
	Eligible Professionals	**Eligible Hospitals and CAHs**	
Improving quality, safety, efficiency, and reducing health disparities		Record whether a patient 65 years old or older has an advance directive	More than 50 percent of all unique patients 65 years old or older admitted to the eligible hospital's or CAH's inpatient department (POS 21) during the EHR reporting period have an indication of an advance directive status recorded as structured data.
	Imaging results consisting of the image itself and any explanation or other accompanying information are accessible through Certified EHR Technology.	Imaging results consisting of the image itself and any explanation or other accompanying information are accessible through Certified EHR Technology.	More than 10 percent of all tests whose result is one or more images ordered by the EP or by an authorized provider of the eligible hospital or CAH for patients admitted to its inpatient or emergency department (POS 21 and 23) during the EHR reporting period are accessible through Certified EHR Technology.
	Record patient family health history as structured data	Record patient family health history as structured data	More than 20 percent of all unique patients seen by the EP or admitted to the eligible hospital or CAH's inpatient or emergency department (POS 21 or 23) during the EHR reporting period have a structured data entry for one or more first-degree relatives.
		Generate and transmit permissible discharge prescriptions electronically (eRx)	More than 10 percent of hospital discharge medication orders for permissible prescriptions (for new, changed, and refilled prescriptions) are queried for a drug formulary and transmitted electronically using Certified EHR Technology.
	Record electronic notes in patient records	Record electronic notes in patient records	Enter at least one electronic progress note created, edited and signed by an eligible professional for more than 30 percent of unique

0439	Title: Stroke-6 Ischemic stroke—Discharged on Statin Medication Description: Ischemic stroke patients with LDL greater than or equal to 100 mg/dL, or LDL not measured, or, who were on a lipid-lowering medication prior to hospital arrival are prescribed statin medication at hospital discharge.	The Joint Commission www.jointcommission.org and click on “Contact Us”	IQR		Clinical Process/Effectiveness.
0440	Title: Stroke-8 Ischemic or hemorrhagic stroke—Stroke education Description: Ischemic or hemorrhagic stroke patients or their caregivers who were given educational materials during the hospital stay addressing all of the following: activation of emergency medical system, need for follow-up after discharge, medications prescribed at discharge, risk factors for stroke, and warning signs and symptoms of stroke.	The Joint Commission www.jointcommission.org and click on “Contact Us”	IQR		Patient & Family Engagement.
0441	Title: Stroke-10 Ischemic or hemorrhagic stroke—Assessed for Rehabilitation Description: Ischemic or hemorrhagic stroke patients who were assessed for rehabilitation services.	The Joint Commission www.jointcommission.org and click on “Contact Us”	IQR		Care Coordination.
0371	Title: Venous Thromboembolism (VTE)-1 VTE prophylaxis Description: This measure assesses the number of patients who received VTE prophylaxis or	The Joint Commission www.jointcommission.org	IQR		Patient Safety.

NQF No.	Title	Measure steward and contact information	Other quality measure programs that use the same CQM ***	New CQM	Domain
	have documentation why no VTE prophylaxis was given the day of or the day after hospital admission or surgery end date for surgeries that start the day of or the day after hospital admission.	and click on "Contact Us"			
0372	Title: VTE-2 Intensive Care Unit (ICU) VTE prophylaxis Description: This measure assesses the number of patients who received VTE prophylaxis or have documentation why no VTE prophylaxis was given the day of or the day after the initial admission (or transfer) to the Intensive Care Unit (ICU) or surgery end date for surgeries that start the day of or the day after ICU admission (or transfer).	The Joint Commission www.jointcommission.org and click on "Contact Us"	IQR		Patient Safety.
0373	Title: VTE-3 VTE Patients with Anticoagulation OverlapTherapy Description: This measure assesses the number of patients diagnosed with confirmed VTE who received an overlap of parenteral (intravenous [IV] or subcutaneous [subcu]) anticoagulation and warfarin therapy. For patients who received less than five days of overlap therapy, they must be discharged on both medications or have a reason for discontinuation of overlap therapy. Overlap therapy must be administered for at least five days with an international normalized ratio (INR) greater than or equal to 2 prior to discontinuation of the parenteral anticoagulation therapy, discharged on both medications or have a reason for discontinuation of	The Joint Commission www.jointcommission.org and click on "Contact Us"	IQR	New	Clinical Process/Effectiveness.

NQF No.	Title	Measure steward and contact information	Other quality measure programs that use the same CQM ***	New CQM	Domain
	overlap therapy.				
0374	Title: VTE-4 VTE Patients Receiving Unfractionated Heparin (UFH) with Dosages/Platelet Count Monitoring by Protocol (or Nomogram) Description: This measure assesses the number of patients diagnosed with confirmed VTE who received intravenous (IV) UFH therapy dosages AND had their platelet counts monitored using defined parameters such as a nomogram or protocol.	The Joint Commission www.jointcommission.org and click on "Contact Us"	IQR	New	Clinical Process/Effectiveness.
0375	Title: VTE-5 VTE discharge instructions Description: This measure assesses the number of patients diagnosed with confirmed VTE that are discharged to home, home care, court/law enforcement, or home on hospice care on warfarin with written discharge instructions that address all four criteria: compliance issues, dietary advice, follow-up monitoring, and information about the potential for adverse drug reactions/interactions.	The Joint Commission www.jointcommission.org and click on "Contact Us"	IQR	New	Patient and Family Engagement.
0376	Title: VTE-6 Incidence of potentially preventable VTE Description: This measure assesses the number of patients diagnosed with confirmed VTE during hospitalization (not present at admission) who did not receive VTE prophylaxis between hospital admission and the day before the VTE diagnostic testing order	The Joint Commission www.jointcommission.org and click on "Contact Us"	IQR	New	Patient Safety.

NQF No.	Title	Measure steward and contact information	Other quality measure programs that use the same CQM ***	New CQM	Domain
	date.				
0142	Title: AMI-2-Aspirin Prescribed at Discharge for AMI Description: Acute myocardial infarction (AMI) patients who are prescribed aspirin at hospital discharge.	CMS/OFMQ www.qualitynet.org and click on "Questions & Answers"	IQR	New	Clinical Process/Effectiveness.
0469	Title: PC-01 Elective Delivery Prior to 39 Completed Weeks Gestation Description: Patients with elective vaginal deliveries or elective cesarean sections at >= 37 and <39 weeks of gestation completed.	The Joint Commission (TJC) www.jointcommission.org and click on "Contact Us"	TJC		Clinical Process/Effectiveness.
0164	Title: AMI-7a—Fibrinolytic Therapy Received Within 30 minutes of Hospital Arrival Description: Acute myocardial infarction (AMI) patients with ST-segment elevation or LBBB on the ECG closest to arrival time receiving fibrinolytic therapy during the hospital stay and having a time from hospital arrival to fibrinolysis of 30 minutes or less.	CMS/OFMQ www.qualitynet.org and click on "Questions & Answers"	IQR, HVBP	New	Clinical Process/Effectiveness.
0163	Title: AMI-8a—Primary PCI Received Within 90 Minutes of Hospital Arrival Description: Acute myocardial infarction (AMI) patients with ST-segment elevation or LBBB on the ECG closest to arrival time receiving primary PCI during the hospital stay with a time from hospital arrival to PCI of 90 minutes or less.	CMS/OFMQ www.qualitynet.org and click on "Questions & Answers"	IQR, HVBP	New	Clinical Process/Effectiveness.
0639	Title: AMI-10 Statin Prescribed at Discharge	CMS/OFMQ	IQR	New	Clinical

NQF No.	Title	Measure steward and contact information	Other quality measure programs that use the same CQM ***	New CQM	Domain
	Description: Acute Myocardial Infarction (AMI) patients who are prescribed a statin at hospital discharge.	www.qualitynet.org and click on "Questions & Answers"			Process/Effectiveness.
0147	Title: PN-6—Initial Antibiotic Selection for Community-Acquired Pneumonia (CAP) in Immunocompetent Patients Description: Immunocompetent patients with Community-Acquired Pneumonia who receive an initial antibiotic regimen during the first 24 hours that is consistent with current guidelines.	CMS/OFMQ www.qualitynet.org and click on "Questions & Answers"	IQR, HVBP	New	Efficient Use of Healthcare Resources.
0527	Title: SCIP-INF-1 Prophylactic Antibiotic Received within 1 Hour Prior to Surgical Incision Description: Surgical patients with prophylactic antibiotics initiated within one hour prior to surgical incision. Patients who received Vancomycin or a Fluoroquinolone for prophylactic antibiotics should have the antibiotics initiated within 2 hours prior to surgical incision. Due to the longer infusion time required for Vancomycin or a Fluoroquinolone, it is acceptable to start these antibiotics within 2 hours prior to incision time.	CMS/OFMQ www.qualitynet.org and click on "Questions & Answers"	IQR, HVBP	New	Patient Safety.
0528	Title: SCIP-INF-2-Prophylactic Antibiotic Selection for Surgical Patients Description: Surgical patients who received prophylactic antibiotics consistent with current guidelines (specific to each type of surgical	CMS/OFMQ www.qualitynet.org and click on "Questions & Answers"	IQR, HVBP	New	Efficient Use of Healthcare Resources.

[CMS–0033–F]

RIN 0938–AP78

Medicare and Medicaid Programs; Electronic Health Record Incentive Program

AGENCY: Centers for Medicare & Medicaid Services (CMS), HHS.

ACTION: Final rule.

SUMMARY: This final rule implements the provisions of the American Recovery and Reinvestment Act of 2009 (ARRA) (Pub. L. 111–5) that provide incentive payments to eligible professionals (EPs), eligible hospitals and critical access hospitals (CAHs) participating in Medicare and Medicaid programs that adopt and successfully demonstrate meaningful use of certified electronic health record (EHR) technology. This final rule specifies—the initial criteria EPs, eligible hospitals, and CAHs must meet in order to qualify for an incentive payment; calculation of the incentive payment amounts; payment adjustments under Medicare for covered professional services and inpatient hospital services provided by EPs, eligible hospitals and CAHs failing to demonstrate meaningful use of certified EHR technology; and other program participation requirements. Also, the Office of the National Coordinator for Health Information Technology (ONC) will be issuing a closely related final rule that specifies the Secretary's adoption of an initial set of standards, implementation, specifications, and certification criteria for electronic health records. ONC has also issued a separate final rule on the establishment of certification programs for health information technology.

DATES: *Effective Date:* These regulations are effective on September 27, 2010.

I. Background

A. Overview of the HITECH Programs Created by the American Recovery and Reinvestment Act of 2009

The American Recovery and Reinvestment Act of 2009 (ARRA) (Pub. L. 111–5) was enacted on February 17,

2009. Title IV of Division B of ARRA amends Titles XVIII and XIX of the Social Security Act (the Act) by establishing incentive payments to eligible professionals (EPs), eligible hospitals, and critical access hospitals (CAHs), and Medicare Advantage Organizations to promote the adoption and meaningful use of interoperable health information technology (HIT) and qualified electronic health records (EHRs). These provisions, together with Title XIII of Division A of ARRA, may be cited as the "Health Information Technology for Economic and Clinical Health Act" or the "HITECH Act." These incentive payments are part of a broader effort under the HITECH Act to accelerate the adoption of HIT and utilization of qualified EHRs.

On January 13, 2010 we published a proposed rule (75 FR 1844), entitled "Medicare and Medicaid Programs; Electronic Health Record Incentive Program" to implement the provisions of ARRA that provide incentive payments to EPs, eligible hospitals, and CAHs participating in Medicare and Medicaid programs that adopt and successfully demonstrate meaningful use of "certified EHR technology," and incentive payments to certain Medicare Advantage Organizations for their affiliated EPs and eligible hospitals that meaningfully use certified EHR technology. Through this final rule, we are developing the incentive programs which are outlined in Division B, Title IV of the HITECH Act. This final rule sets forth the definition of "meaningful use of certified EHR technology."

Section 13101 of the HITECH Act adds a new section 3000 to the Public Health Service Act (PHSA), which defines "certified EHR technology" as a qualified EHR that has been properly certified as meeting standards adopted under section 3004 of the PHSA. CMS and ONC have been working closely to ensure that the definition of meaningful use of certified EHR technology and the standards for certified EHR technology are coordinated. In the interim final rule published on January 13, 2010 (75 FR 2014) entitled "Health Information Technology: Initial Set of Standards, Implementation Specifications, and Certification Criteria for Electronic Health Record Technology," ONC defined the term "certified EHR technology," identified the initial set of standards and implementation specifications that such EHR technology would need to support the achievement of the proposed meaningful use Stage 1, as well as the certification criteria that will be used to certify EHR technology. ONC is also issuing a final rule on the standards, implementation specifications, and certification criteria elsewhere in this issue of the **Federal Register**.

In a related proposed rule published on March 10, 2010, (75 FR 11328) entitled "Proposed Establishment of Certification Programs for Health Information Technology" ONC proposed the establishment of two certification programs for purpose of testing and certifying health information technology. In the June 24, 2010 **Federal Register** (75 FR 36157), ONC published a final rule to establish a temporary certification program whereby the National Coordinator would authorize organizations to test and certify complete EHRs and EHR Modules, and plans to issue a separate final rule to establish a permanent certification program to replace the temporary certification program. Specifically, this final rule will ensure that the definition of meaningful use of certified EHR technology does not require EPs, eligible hospitals, and CAHs to perform functions for which standards have not been recognized or established. Similarly, the functionality of certified EHR technology should enable and advance the definition of meaningful use.

We urge those interested in this final rule to also review the ONC interim final rule on standards and implementation specifications for certified EHR technology and the related final rule as well as the final rule on the establishment of a temporary certification program. Readers may also visit *http://healthit.hhs.gov* and *http://www.cms.hhs.gov/Recovery/11_HealthIT.asp#TopOfPage* for more information on the efforts at the Department of Health and Human Services (HHS) to advance HIT initiatives.

B. Statutory Basis for the Medicare & Medicaid EHR Incentive Programs

Section 4101(a) of the HITECH Act adds a new subsection (o) to section 1848 of the Act. Section 1848(o) of the Act establishes incentive payments for demonstration of meaningful use of certified EHR technology by EPs participating in the original Medicare program (hereinafter referred to as the Medicare Fee-for-Service (FFS) program) beginning in calendar year (CY) 2011. Section 4101(b) of the HITECH Act also adds a new paragraph (7) to section 1848(a) of the Act. Section 1848(a)(7) of the Act provides that beginning in CY 2015, EPs who do not demonstrate that they are meaningful users of certified EHR technology will receive an adjustment to their fee schedule for their professional services of 99 percent for 2015 (or, in the case of an eligible professional who was subject to the application of the payment adjustment under section 1848(a)(5) of the Act, 98 percent for 2014), 98 percent for 2016, and 97 percent for 2017 and each subsequent year. Section 4101(c) of the HITECH Act adds a new subsection (l) to section 1853 of the Act to provide incentive payments to certain Medicare Advantage (MA) organizations for their affiliated EPs who meaningfully use certified EHR technology and meet certain other requirements, and requires a downward adjustment to Medicare payments to certain MA organizations for professional services provided by any of their affiliated EPs who are not meaningful users of certified EHR technology, beginning in 2015. Section 1853(l) of the Act also requires us to establish a process that ensures that there are no duplicate payments made to MA organizations under section 1853(l) of the Act and to their affiliated EPs under the FFS EHR incentive program established under section 1848(o)(1)(A) of the Act.

Section 4102(a) of the HITECH Act adds a new subsection (n) to section 1886 of the Act. Section 1886(n) of the Act establishes incentives payments for demonstration of meaningful use of certified EHR technology by subsection (d) hospitals, as defined under section 1886(d)(1)(B) of the Act, participating in the Medicare FFS program beginning in Federal fiscal year (FFY) 2011. Section 4102(b)(1) of the HITECH Act amends section 1886(b)(3)(B) of the Act to provide that, beginning in FY 2015, subsection (d) hospitals that are not meaningful users of certified EHR technology will receive a reduced annual payment update for their inpatient hospital services. Section 4102(a)(2) of the HITECH Act amends section 1814(l) of the Act to provide an incentive payment to critical access hospitals (CAHs) who meaningfully use certified EHR technology based on the hospitals' reasonable costs for the purchase of certified EHR technology beginning in FY 2011. In addition, section 4102(b)(2) of the HITECH Act amends section 1814(l) of the Act to provide for a downward payment adjustment for hospital services provided by CAHs that are not meaningful users of certified EHR technology for cost reporting periods beginning in FY 2015. Section 4102(c) of the HITECH Act adds a new subsection (m) to section 1853 of the Act to provide incentive payments to qualifying MA organizations for certain affiliated hospitals that meaningfully

use certified EHR technology to make a downward adjustment to payments to certain MA organizations for inpatient hospital services provided by its affiliated hospitals that are not meaningful users of certified EHR technology beginning in FY 2015. Section 1853(m) of the Act also requires us to establish a process that ensures that there are no duplicate payments made to MA organizations under section 1853(m) of the Act and to their affiliated hospitals under the FFS EHR incentive program established under section 1886(n) of the Act.

Section 4103 of the HITECH Act provides for implementation funding for the EHR incentives program under Medicare.

Section 4201 of the HITECH Act amends section 1903 of the Act to provide 100 percent Federal financial participation (FFP) to States for incentive payments to certain eligible providers participating in the Medicaid program to purchase, implement, operate (including support services and training for staff) and meaningfully use certified EHR technology and 90 percent FFP for State administrative expenses related to the program outlined in 1903(t) of the Act. Section 4201(a)(2) of the HITECH Act adds a new subsection (t) to section 1903 of the Act to establish a program with input from the States to provide incentives for the adoption and subsequent meaningful use of certified EHR technology for providers participating in the Medicaid program.

II. Provisions of the Proposed Rule and Analysis of and Responses to Public Comments

We proposed to add a new part 495 to title 42 of the Code of Federal Regulations to implement the provisions of Title IV of Division B of ARRA providing for incentive payments to EPs, eligible hospitals, CAHs and certain Medicare Advantage organizations for the adoption and demonstration of meaningful use of certified EHR technology under the Medicare program or the Medicaid program.

The HITECH Act creates incentives under the Medicare Fee-for-Service (FFS), Medicare Advantage (MA), and Medicaid programs for EPs, eligible hospitals and CAHs to adopt and demonstrate meaningful use of certified EHR technology, and payment adjustments under the Medicare FFS and MA programs for EPs, eligible hospitals, and CAHs who fail to adopt and demonstrate meaningful use of certified EHR technology. The three incentive programs contain many common elements and certain provisions of the HITECH Act encourage avoiding duplication of payments, reporting, and other requirements, particularly in the area of demonstration of meaningful use of certified EHR technology. Eligible hospitals and CAHs may participate in both the Medicare program and the Medicaid program, assuming they meet each program's eligibility requirements, which vary across the two programs. In certain cases, the HITECH Act has used nearly identical or identical language in defining terms that are used in the Medicare FFS, MA, and Medicaid programs, including such terms as "hospital-based EPs" and "certified EHR technology." For these reasons, we seek to create as much commonality between the three programs as possible and have structured this final rule, as we did the proposed rule, based on the premise by beginning with those provisions that cut across the three programs before moving on to discuss the provisions specific to Medicare FFS, MA and Medicaid.

A. Definitions Across the Medicare FFS, MA, and Medicaid Programs

Title IV, Division B of ARRA establishes incentive payments under the Medicare and Medicaid programs for certain professionals and hospitals that meaningfully use certified EHR technology, and for certain MA organizations whose affiliated EPs and hospitals meaningfully use certified EHR technology. We refer to the incentive payments made under the original Medicare program to EPs, eligible hospitals, and CAHs as the Medicare FFS EHR incentive program, the incentive payments made to qualifying MA organizations as the MA EHR incentive program, and the incentive payments made under Medicaid to eligible professionals and eligible hospitals as the Medicaid EHR incentive program. When referring to the Medicare EHR incentive program, we are generally referring to both the Medicare FFS EHR and the MA EHR incentive programs.

1. Definitions

Sections 4101, 4102, and 4201 of the HITECH Act use many identical or similar terms. In this section of the preamble, we discuss terms for which we are finalizing uniform definitions for the Medicare FFS, MA, and Medicaid EHR incentive programs. These definitions are set forth in part 495 subpart A of the regulations. For definitions specific to an individual program, the definition is set forth and discussed in the applicable EHR incentive program section.

The incentive payments are available to EPs which are non-hospital-based physicians, as defined in section 1861(r) of the Act, who either receive reimbursement for services under the Medicare FFS program or have an employment or contractual relationship with a qualifying MA organization meeting the criteria under section 1853(l)(2) of the Act; or healthcare professionals meeting the definition of "eligible professional" under section 1903(t)(3)(B) of the Act as well as the patient-volume and non-hospital-based criteria of section 1903(t)(2)(A) of the Act and eligible hospitals which are subsection (d) hospitals as defined under subsection 1886(d)(1)(B) of the Act that either receive reimbursement for services under the Medicare FFS program or are affiliated with a qualifying MA organization as described in section 1853(m)(2) of the Act; critical access hospitals (CAHs); or acute care or children's hospitals described under section 1903(t)(2)(B) of the Act.

a. Certified Electronic Health Record (EHR) Technology

Under all three EHR incentive programs, EPs, eligible hospitals, and CAHs must utilize "certified EHR technology" if they are to be considered eligible for the incentive payments. In the Medicare FFS EHR incentive program this requirement for EPs is found in section 1848(o)(2)(A)(i) of the Act, and for eligible hospitals and CAHs in section 1886(n)(3)(A)(i) of the Act. In the MA EHR incentive program this requirement for EPs is found in section 1853(l)(1) of the Act, and for eligible hospitals and CAHs, in section 1853(m)(1) of the Act. In the Medicaid EHR incentive program this requirement for EPs and Medicaid eligible hospitals is found throughout section 1903(t) of the Act, including in section 1903(t)(6)(C) of the Act. Certified EHR technology is a critical component of the EHR incentive programs, and the Secretary has charged ONC, under the authority given to her in the HITECH Act, with developing the criteria and mechanisms for certification of EHR technology. Therefore, we finalize our proposal to use the definition of certified EHR technology adopted by ONC. ONC issued an interim final rule with comment for the standards and certification criteria for certified EHR technology at the same time our proposed rule was issued. After reviewing the comments they received and to address changes made in this final rule, ONC will be issuing a final rule in conjunction with this final rule. When we refer to the ONC final rule, we are referring to this final rule titled

"Health Information Technology: Initial Set of Standards, Implementation Specifications, and Certification Criteria for Electronic Health Record Technology. When we refer to the ONC IFR, we are referring to the interim final rule with comment period published in the **Federal Register** on January 13, 2010.

Comment: Several commenters asked for clarification on the definition of certified EHR technology. Currently, hospitals utilize multiple systems to operate electronically. For example, some electronic operating systems feed EHR data and some systems pull EHR data. Data from the two systems are then extracted and manipulated to create a quality measure calculation. The commenters' inquired as to how these systems can continue to be utilized even though, independently, these systems will not meet all certification standards. Some commenters expressed concern the ONC IFR did not include generation of the data needed to demonstrate meaningful use as a certification requirement and that certified EHR technology requirements should also include compliance with HIPAA standards as well as all relevant state statutes for the state or states where it is installed. Commenters recommended various approaches to defining certified technology especially in the early stages of the program. Some suggestions included, grandfathering existing systems for a period of three years as long as the provider could meet specific meaningful use objectives while requiring all upgrades to existing systems to be certified, allowing all EHR products certified by the Certification Commission for Health Information Technology (CCHIT) at the criteria established for 2008 or later be deemed as meeting Stage 1 certification requirements or alternatively CMS provide a process that can verify compliance of required features at no cost to providers or vendors as is done now with Enterprise Data Interchange (EDI) claims processing. Some commenters also offered other thoughts on potential unintended consequences of defining the EHR certification software process to include certifying agencies that charge for the process. The commenters believed this could result in continued new and revised requirements to justify the certifying entities' existence and increase its revenue.

Response: We have referred those comments to ONC who addresses them in their final rule.

We are adopting the ONC definition of certified EHR technology at 45 CFR 170.102 in this final rule.

b. Qualified Electronic Health Record

In order for an EHR technology to be eligible for certification, it must first meet the definition of a Qualified Electronic Health Record. This term was defined by ONC in its in its IFR and finalized by ONC in their final rule, and we are finalizing our proposal to use the definition of qualified electronic health record adopted by ONC in their final rule to be published concurrently with this rule.

Comment: We received a few comments on the definition of qualified EHR technology. Commenters expressed concerns regarding perceived gaps in defining an EHR as qualified such as a lack of the requirement for a narrative text for physicians (also known as progress note). Another comment requested further clarification regarding the requirement for a qualified EHR to "capture and query information relevant to health care quality" and "exchange electronic health information with and integrate such information from other sources." For example, some might believe that these requirements apply strictly to information contained within the EHR or closed proprietary hospital systems and not to information that would have to be obtained from outside the four walls of the practice or the extended (but closed) system.

Response: We have referred those comments to ONC who addresses them in their final rule.

We are adopting the ONC definition of Qualified Electronic Health Record at 45 CFR 170.102.

c. Payment Year

As discussed in the proposed rule, under section 1848(o)(1)(A)(i) of the Act the Medicare FFS EHR incentive payment is available to EPs for a "payment year." Section 1848(o)(1)(E) of the Act defines the term "payment year" as a year beginning with 2011. While the Act does not use the term, "payment year," for the Medicaid EHR incentive program, it does use the term "year of payment" throughout section 1903(t) of the Act, for example, at sections 1903(t)(3)(C), 1903(t)(4)(A), and 1903(t)(6)(C) of the Act. For all EPs in the Medicare and Medicaid EHR incentive programs, we are proposing a common definition for both "payment year" and "year of payment," as "any calendar year beginning with 2011" at § 495.4. In the proposed rule, we explained that this definition, which is consistent with the statutory definition of "payment year" under Medicare FFS, would simplify the EHR incentive programs for EPs. As discussed later in this preamble, EPs will have the opportunity to participate in either the Medicare or Medicaid incentive programs, and once an EP has selected a program, they are permitted to make a one-time switch from one program to the other. A common definition will allow EPs to more easily understand both incentive programs, and inform their decisions regarding participation in either program.

Under section 1886(n)(1) of the Act, the Medicare FFS EHR incentive payment is available to eligible hospitals and CAHs for a "payment year." Section 1886(n)(2)(G) of the Act defines the term "payment year" as a fiscal year beginning in 2011. As hospitals are paid based on the 12-month Federal fiscal year, we interpret the reference to a "fiscal year" means the fiscal year beginning on October 1 of the prior calendar year and extending to September 30 of the relevant year. Again, for the Medicaid EHR incentive program, the HITECH Act uses the term, "year of payment" (see section 1903(t)(5)(D)(ii) of the Act), rather than "payment year." For the same reasons expressed in the proposed rule and summarized above for proposing a common definition of "payment year" for EPs, and because hospitals will have the opportunity to simultaneously participate in both the Medicare and Medicaid EHR incentive programs, we propose a common definition of "payment year" and "year of payment" for both programs.

For purposes of the incentive payments made to eligible hospitals and CAHs under the Medicare FFS, MA and Medicaid EHR incentive programs, we proposed to define payment year and year of payment at § 495.4, consistent with the statutory definition, as "any fiscal year beginning with 2011."

Comment: A commenter asked CMS to identify the first possible payment year for EPs, and hospitals and CAHs.

Response: The first payment year for EPs is any calendar year (CY) beginning with CY 2011 and for eligible hospitals and CAHs is any fiscal year (FY) beginning with 2011.

Comment: The majority of commenters favored our definition of "payment year" based on the different existing fiscal periods for eligible professionals and hospitals. Additional support was received from some commenters whom explained that they participated in performance-based initiatives, which define a payment year the same as the proposed rule.

Response: After consideration of the public comments received, we are adopting our proposed definition of "payment year" in the Medicare and

Medicaid EHR incentive programs as described above.

Comment: The majority of comments received regarding the definition of a payment year asked whether payment years must be consecutive for an EP or eligible hospital to receive all years of incentive payments.

Response: In the proposed rule, we defined the second, third, fourth, fifth, and sixth payment year, respectively, to mean "the second, third, fourth, fifth, and sixth calendar or Federal fiscal year, respectively, for which an EP or eligible hospital receives an incentive payment." However, section 1848(o)(1)(E) of Act defines the second through fifth payment years for an EP as each successive year immediately following the first payment year for such professional for the Medicare FFS and MA EHR incentive programs. Similarly, section 1886(n)(2)(G)(ii) of the Act defines the second through fourth payment years for an eligible hospital or CAH as requiring the years to be "successive" and "immediately following" the prior year. This requirement, that each payment year "immediately follow" the prior year, means that every year subsequent to the first payment year is a payment year regardless of whether an incentive payment is received by the EP, eligible hospital or CAH. For example, if a Medicare EP receives an incentive in CY 2011, but does not successfully demonstrate meaningful use or otherwise fails to qualify for the incentive in CY 2012, CY 2012 still counts as one of the EP's five payment years and they would only be able to receive an incentive under the Medicare EHR incentive program for three more years as CY 2013 would be there third payment year. In this example, the maximum incentive payment that would apply for this Medicare EP not practicing predominately in a health professional shortage area (HPSA) would be $18,000 in 2011, and $8,000 in 2013 as outlined in section 1848(o)(1)(B) of the Act. The EP would have qualified for a maximum incentive payment of $12,000 in 2012, but did not qualify as a meaningful user for this year. No incentives may be made under the Medicare EHR incentive program after 2016.

The same rule, however, does not apply to the Medicaid EHR incentive program. For that program, payments may generally be non-consecutive. If an EP or eligible hospital does not receive an incentive payment for a given CY or FY then that year would not constitute a payment year. For example, if a Medicaid EP receives incentives in CY 2011 and CY 2012, but fails to qualify for an incentive in CY 2013, they would still be eligible to receive incentives for an additional four payment years. For hospitals, however, starting with FY 2017 payments must be consecutive. This rule is required by section 1903(t)(5)(D) of the Act, which states that after 2016, no Medicaid incentive payment may be made to an eligible hospital unless "the provider has been provided payment * * * for the previous year." As a result, Medicaid eligible hospitals must receive an incentive in FY 2016 to receive an incentive in FY 2017 and later years. Starting in FY 2016, incentive payments must be made every year in order to continue participation in the program. In no case may any Medicaid EP or eligible hospital receive an incentive after 2021. We have revised our regulations at § 495.4 to incorporate these statutory requirements.

Comment: Some commenters requested that CMS clarify the impact on EPs when they change practices in the middle of the incentive payment program; in other words, if an EP leaves a practice in year two of the incentive payment program and goes to another practice, does that EP forfeit the ability to continue collecting incentive payments for years 3 through 5?

Response: A qualifying EP that leaves one practice for another may still be eligible to receive subsequent incentive payments if the EP is a meaningful EHR user in the new practice. The incentive payment is tied to the individual EP, and not to his or her place of practice.

d. First, Second, Third, Fourth, Fifth, and Sixth Payment Year

In accordance with sections 1848(o)(1)(A)(ii), 1886(n)(2)(E), 1814(l)(3)(A), 1903(t)(4)(B), and 1903(t)(5)(A) of the Act, for EPs, eligible hospitals, and CAHs that qualify for EHR incentive payments in a payment year, the amount of the payment will depend in part on whether the EP or hospital previously received an incentive payment and, if so (for the Medicare EHR incentive program) when the EP or hospital received his or her first payment. We proposed to define the first payment year to mean the first CY or Federal fiscal year (FY) for which an EP, eligible hospital, or CAH receives an incentive payment. Likewise, we proposed to define the second, third, fourth, fifth, and sixth payment year, respectively, to mean the second, third, fourth, fifth, and sixth CY or FY, respectively, for which an EP, eligible hospital, or CAH receives an incentive payment.

Comment: As stated above, many commenters requested clarification on non-consecutive payment.

Response: This comment is addressed above.

Comment: A commenter requested CMS to clarify the consequences for a hospital that originally qualified and received incentive payments the first year, but in a subsequent year failed to qualify as a meaningful user of certified EHR technology.

Response: Meaningful use will be assessed on a year-by-year basis as we establish different Stages of meaningful use criteria for different years. If an EP or an eligible hospital including a CAH has failed to demonstrate meaningful use of certified EHR technology for a certain payment year, the EP, eligible hospital, or CAH will not be qualified for incentive payments for that payment year. However, upon successful demonstration as a meaningful EHR user in subsequent years, an EP, eligible hospital or CAH may be eligible to receive an incentive payment. As discussed above, however, for the Medicare program, the failure of the eligible hospital or CAH to demonstrate meaningful use in the subsequent year, will affect the total payments that hospital is eligible to receive, as, pursuant to the statute, the hospital is treated as skipping a payment year. Payment adjustments apply to Medicare providers who are unable to demonstrate meaningful use starting in 2015.

Comment: One commenter asked if CMS could apply the same Medicaid EP's first year incentive eligibility requirements of adopting, implementing or upgrading to certified EHR technology to Medicare physicians instead of demonstration of meaningful use.

Response: The HITECH Act allows Medicaid EPs and eligible hospitals to receive an incentive for the adoption, implementation, or upgrade of certified EHR technology in their first participation year. In subsequent years, these EPs and eligible hospitals must demonstrate that they are meaningful users. There are no parallel provisions under the Medicare EHR incentive program that would authorize us to make payments to Medicare EPs, eligible hospitals, and CAHs for the adoption, implementation or upgrade of certified EHR technology. Rather, in accordance with sections 1848(o)(2), 1886(n)(3)(A), and 1814(l)(3)(A) of the Act, Medicare incentive payments are only made to EPs, eligible hospitals, and CAHs for the demonstration of meaningful use of certified EHR technology.

After consideration of the public comments received, we are finalizing the definitions of First payment year as proposed. For the Medicare EHR incentive programs, we are modifying the definitions of second, third, fourth, fifth payment year to make clear that these years are "each successive year following the first payment year." For the Medicaid EHR incentive program, we included definitions of first, second, third, fourth, fifth and sixth payment year that make clear that these are the years for which payment is received. The regulations can now be found at § 495.4 of our regulations.

e. EHR Reporting Period

In the proposed rule, we proposed a definition of EHR Reporting Period for purposes of the Medicare and Medicaid incentive payments under sections 1848(o), 1853(l)(3), 1886(n), 1853(m)(3), 1814(l) and 1903(t) of the Act. For these sections, we proposed that the EHR reporting period would be any continuous 90-day period within the first payment year and the entire payment year for all subsequent payment years. In our proposed rule, we did not make any proposals regarding the reporting period that will be used for purposes of the payment adjustments that begin in 2015. We intend to address this issue in future rulemaking, for purposes of Medicare incentive payment adjustments under sections 1848(a)(7), 1853(l)(4), 1886(b)(3)(B)(ix), 1853(m)(4), and 1814(l)(4) of the Act.

For the first payment year only, we proposed to define the term EHR reporting period at § 495.4 of our regulations to mean any continuous 90-day period within a payment year in which an EP, eligible hospital or CAH successfully demonstrates meaningful use of certified EHR technology. The EHR reporting period therefore could be any continuous period beginning and ending within the relevant payment year. Starting with the second payment year and any subsequent payment years for a given EP, eligible hospital or CAH, we proposed to define the term EHR reporting period at § 495.4 to mean the entire payment year. In our discussion of considerations in defining meaningful use later in this section we discuss how this policy may be affected by subsequent revisions to the definition of meaningful use.

For the first payment year, we stated in the proposed rule our belief that giving EPs, eligible hospitals and CAHs flexibility as to the start date of the EHR reporting period is important, as unforeseen circumstances, such as delays in implementation, higher than expected training needs and other unexpected hindrances, may cause an EP, eligible hospital, or CAH to potentially miss a target start date.

Comment: Some commenters supported the 90-day reporting period proposed for the first payment year. One commenter requested that exceptions, per the provider request, be considered individually in cases of compliance for less than the 90 days (for example, 85 days). Commenters preferred the 90-day reporting period overall and many suggested it be used for subsequent years as well. We also received comments questioning why Medicaid providers would need to conform to the 90-day reporting period in order to adopt, implement or upgrade certified EHR technology.

Response: We do believe that for program integrity it is crucial to maintain a consistent reporting period. Basing the incentive payments on meaningful use implies a minimum level of use in order to receive the incentive payment. The timeframe is part of the determination of whether use is meaningful and therefore requires a minimum as well. Given the short time period as compared to the entire year, we do not believe an exception process is needed. However, we agree with commenters that an EHR reporting period for demonstrating adoption, implementation or upgrading certified EHR technology by Medicaid EPs and eligible hospitals is unnecessary and are removing it for the final rule in this instance. Similarly, Medicaid EPs and eligible hospitals who are demonstrating meaningful use for the first time in their second payment year, will have a 90-day reporting period to maintain parity with Medicare providers' first meaningful use payment year. We do not believe that after successfully demonstrating meaningful use, a 90-day period is appropriate for subsequent years. The reasons for using the 90-day period instead of the full year are based on potential delays in implementing certifying EHR technology. Once certified EHR technology is implemented these are no longer applicable.

After consideration of the public comments received and with the clarification described above for adopting, implementing or upgrading, we are finalizing the 90-day reporting period for the first payment year based on meaningful use as proposed for Medicare EPs, eligible hospitals and CAHs and full year EHR reporting periods for subsequent payment years. For Medicaid EPs and eligible hospitals, the EHR reporting period will be a 90-day period for the first year a Medicaid EP or eligible hospital demonstrates meaningful use and full year EHR reporting periods for subsequent payment years.

f. Meaningful EHR User

Section 1848(o)(1)(A)(i) of the Act, limits incentive payments under the Medicare FFS EHR incentive program to an EP who is a "meaningful EHR user." Similarly, section 1886(n)(1) and 1814(l) of the Act, limits incentive payments under the Medicare FFS EHR incentive program to an eligible hospital or CAH, respectively, who is a "meaningful EHR user." Section 1903(t)(6)(C)(i)(II) of the Act limits incentive payments for payment years other than the first payment year to a Medicaid EP or eligible hospital who "demonstrates meaningful use of certified EHR technology." We proposed to define at § 495.4 the term "meaningful EHR user" as an EP, eligible hospital, or CAH who, for an EHR reporting period for a payment year, demonstrates meaningful use of certified EHR technology in the form and manner consistent with our standards (discussed below).

Comment: Several commenters indicated there is a need to align measures and programs, to avoid having to report similar measure standards to different Federal, State and other entities.

Response: We concur with the goal of alignment to avoid redundant and duplicative reporting and seek to accomplish this to the extent possible now and in future rulemaking.

Comment: Several commenters suggested that CMS considers EPs, eligible hospitals, and CAHs who are participating in certain existing programs as meaningful EHR users. The commenters contended that the standards followed by participants in these programs are equivalent to those we proposed to adopt for purposes of demonstrating meaningful use. The programs recommended by commenters are—

- Qualified Health Information Exchange Networks; and
- Medicare Electronic Health Record Demonstration Program.

Response: We do not agree that participation in these programs would be the equivalent to demonstrating meaningful use in accordance with the criteria under the EHR incentive programs. Most of these programs place a heavy focus on one of the five priorities of meaningful use discussed in the next section such as reporting clinical quality measures or the exchange of health information, tailored to the individual program's goals. For example, the goal of the Medicare

Electronic Health Record Demonstration Program, for example, which was started in 2009 and pre-dates passage of the HITECH Act, is to reward delivery of high-quality care supported by the adoption and use of electronic health records in physician small to medium-size primary care practices. The purpose of this program is to encourage adoption and increasingly sophisticated use of EHRs by small to medium-sized primary care practices. While this goal is similar to the overall objective of the HITECH Act, the requirements for the demonstration are not as broad-based as that of the HITECH Act, and payment incentives are based on the level of use over the duration of the program, which will vary by practice. Therefore, it is not appropriate to deem practices participating in the EHR Demonstration as meaningful users for purposes of the HITECH Act. The HITECH Act also requires use certified EHR technology as defined by ONC to qualify for incentive payments. While CCHIT has certified EHR technology in the past, the ONC regulation "Establishment of the Temporary Certification Program for Health Information Technology; Final Rule" (see 75 FR 36157) which establishes a temporary certifying body has yet to be established. Where possible, we have aligned the criteria required to demonstrate meaningful use with existing programs like PQRI and RHQDAPU as discussed in section II.A.3 of this final rule. After consideration of the public comments received, we are finalizing our definition of a meaningful EHR user as proposed.

2. Definition of Meaningful Use

a. Considerations in Defining Meaningful Use

In sections 1848(o)(2)(A) and 1886(n)(3)(A) of the Act, the Congress identified the broad goal of expanding the use of EHRs through the term meaningful use. In section 1903(t)(6)(C) of the Act, Congress applies the definition of meaningful use to Medicaid eligible professionals and eligible hospitals as well. Certified EHR technology used in a meaningful way is one piece of a broader HIT infrastructure needed to reform the health care system and improve health care quality, efficiency, and patient safety. HHS believes this ultimate vision of reforming the health care system and improving health care quality, efficiency and patient safety should drive the definition of meaningful use consistent with the applicable provisions of Medicare and Medicaid law.

In the proposed rule we explained that in defining meaningful use we sought to balance the sometimes competing considerations of improving health care quality, encouraging widespread EHR adoption, promoting innovation, and avoiding imposing excessive or unnecessary burdens on health care providers, while at the same time recognizing the short timeframe available under the HITECH Act for providers to begin using certified EHR technology.

Based on public and stakeholder input received prior to publishing the proposed rule, we consider a phased approach to be most appropriate. Such a phased approach encompasses reasonable criteria for meaningful use based on currently available technology capabilities and provider practice experience, and builds up to a more robust definition of meaningful use, based on anticipated technology and capabilities development. The HITECH Act acknowledges the need for this balance by granting the Secretary the discretion to require more stringent measures of meaningful use over time. Ultimately, consistent with other provisions of law, meaningful use of certified EHR technology should result in health care that is patient centered, evidence-based, prevention-oriented, efficient, and equitable.

Under this phased approach to meaningful use, we intend to update the criteria of meaningful use through future rulemaking. We refer to the initial meaningful use criteria as "Stage 1." We currently anticipate two additional updates, which we refer to as Stage 2 and Stage 3, respectively. We expect to update the meaningful use criteria on a biennial basis, with the Stage 2 criteria by the end of 2011 and the Stage 3 criteria by the end of 2013. The stages represent an initial graduated approach to arriving at the ultimate goal.

- *Stage 1:* The Stage 1 meaningful use criteria, consistent with other provisions of Medicare and Medicaid law, focuses on electronically capturing health information in a structured format; using that information to track key clinical conditions and communicating that information for care coordination purposes (whether that information is structured or unstructured, but in structured format whenever feasible); implementing clinical decision support tools to facilitate disease and medication management; using EHRs to engage patients and families and reporting clinical quality measures and public health information. Stage 1 focuses heavily on establishing the functionalities in certified EHR technology that will allow for continuous quality improvement and ease of information exchange. By having these functionalities in certified EHR technology at the onset of the program and requiring that the EP, eligible hospital or CAH become familiar with them through the varying levels of engagement required by Stage 1, we believe we will create a strong foundation to build on in later years. Though some functionalities are optional in Stage 1, as outlined in discussions later in this rule, all of the functionalities are considered crucial to maximize the value to the health care system provided by certified EHR technology. We encourage all EPs, eligible hospitals and CAHs to be proactive in implementing all of the functionalities of Stage 1 in order to prepare for later stages of meaningful use, particularly functionalities that improve patient care, the efficiency of the health care system and public and population health. The specific criteria for Stage 1 of meaningful use are discussed at section II.2.c of this final rule.
- *Stage 2:* Our goals for the Stage 2 meaningful use criteria, consistent with other provisions of Medicare and Medicaid law, expand upon the Stage 1 criteria to encourage the use of health IT for continuous quality improvement at the point of care and the exchange of information in the most structured format possible, such as the electronic transmission of orders entered using computerized provider order entry (CPOE) and the electronic transmission of diagnostic test results (such as blood tests, microbiology, urinalysis, pathology tests, radiology, cardiac imaging, nuclear medicine tests, pulmonary function tests, genetic tests, genomic tests and other such data needed to diagnose and treat disease). For the final rule, we elaborate on our plans for Stage 2. We expect that stage two meaningful use requirements will include rigorous expectations for health information exchange, including more demanding requirements for e-prescribing and incorporating structured laboratory results and the expectation that providers will electronically transmit patient care summaries to support transitions in care across unaffiliated providers, settings and EHR systems. Increasingly robust expectations for health information exchange in stage two and stage three will support and make real the goal that information follows the patient. We expect that Stage 2 will build upon Stage 1 by both altering the expectations of the functionalities in Stage 1 and likely adding new functionalities which

are not yet ready for inclusion in Stage 1, but whose provision is necessary to maximize the potential of EHR technology. As discussed later in this final rule, we are making some objectives of the Stage 1 of meaningful use optional and other required. We will consider every objective that is optional for Stage 1 to be required in Stage 2 as well as revaluate the thresholds and exclusions of all the measures both percentage based and those currently a yes/no attestation. Additionally, we may consider applying the criteria more broadly to all outpatient hospital settings (not just the emergency department).

• *Stage 3:* Our goals for the Stage 3 meaningful use criteria are, consistent with other provisions of Medicare and Medicaid law, to focus on promoting improvements in quality, safety and efficiency leading to improved health outcomes, focusing on decision support for national high priority conditions, patient access to self management tools, access to comprehensive patient data through robust, patient-centered health information exchange and improving population health.

We did not include regulatory provisions for Stage 2 or Stage 3 in our proposal and with one exception discussed under the CPOE objective, we are not finalizing Stage 2 or Stage 3 requirements at this time. However, we plan to build upon Stage 1 by increasing the expectations of the functionalities in Stage 1 and adding new objectives for Stage 2. In our next rulemaking, we currently intend to propose that every objective in the menu set for Stage 1 (as described later in this section) be included in Stage 2 as part of the core set. While allowing providers flexibility in setting priorities for EHR implementation takes into account their unique circumstances, we maintain that all the objectives are crucial to building a strong foundation for health IT and to meeting the statutory objectives of the Act. In addition, as indicated in our proposed rule, we anticipate raising the threshold for these objectives in both Stage 2 and 3 as the capabilities of HIT infrastructure increases. For Stage 2, we intend to review the thresholds and measures associated with all Stage 1 objectives considering advances in technology, changes in standard practice, and changes in the marketplace (for example, wider adoption of information technology by pharmacies) and propose, as appropriate, increases in these requirements.

We recognize that the thresholds included in the final regulation are ambitious for the current state of technology and standards of care. However, we expect the delivery of health care to evolve through the inception of the HITECH incentive programs and implementation of the Affordable Care Act prior to finalizing Stage 2. Furthermore, data collected from the initial attestations of meaningful use will be used to ensure that the thresholds of the measures that accompany the objectives in Stage 2 are continue to aggressively advance the use of certified EHR technology. Finally, we continue to anticipate redefining our objectives to include not only the capturing of data in electronic format but also the exchange (both transmission and receipt) of that data in increasingly structured formats. As appropriate, we intend to propose the addition of new objectives to capture new functions that are necessary to maximize the potential of EHR technology, but were not ready for Stage 1. For instance, we would consider adding measures related to CPOE orders for services beyond medication orders. The intent and policy goal for raising these thresholds and expectations is to ensure that meaningful use encourages patient-centric, interoperable health information exchange across provider organizations.

We will continue to evaluate the progression of the meaningful use definition for consistency with the HITECH ACT and any future statutory requirements relating to quality measurement and administrative simplification. As the purpose of these incentives is to encourage the adoption and meaningful use of certified EHR technology, we believe it is desirable to account for whether an EP, eligible hospital or CAH is in their first, second, third, fourth, fifth, or sixth payment year when deciding which definition of meaningful use to apply in the beginning years of the program. The HIT Policy Committee in its public meeting on July 16, 2009 also voiced its approval of this approach. However, such considerations are dependent on future rulemaking, so for this final rule Stage 1 criteria for meaningful use are valid for all payments years until updated by future rulemaking.

We proposed that Medicare EPs, eligible hospitals, and CAHs whose first payment year is 2011 must satisfy the requirements of the Stage 1 criteria of meaningful use in their first and second payment years (2011 and 2012) to receive the incentive payments. We anticipate updating the criteria of meaningful use to Stage 2 in time for the 2013 payment year and therefore anticipate for their third and fourth payment years (2013 and 2014), an EP, eligible hospital, or CAH whose first payment year is 2011 would have to satisfy the Stage 2 criteria of meaningful use to receive the incentive payments. We proposed that Medicare EPs, eligible hospitals, and CAHs whose first payment year is 2012 must satisfy the Stage 1 criteria of meaningful use in their first and second payment years (2012 and 2013) to receive the incentive payments. We anticipate updating the criteria of meaningful use to Stage 2 in time for the 2013 payment year and anticipate for their third payment year (2014), an EP, eligible hospital, or CAH whose first payment year is 2012 would have to satisfy the Stage 2 criteria of meaningful use to receive the incentive payments. We discussed in the proposed rule that Medicare EPs, eligible hospitals, and CAHs whose first payment year is 2013 must satisfy the Stage 1 criteria of meaningful use in their first payment year (2013) to receive the incentive payments. We anticipate updating the criteria of meaningful use to Stage 2 in time for the 2013 payment year and therefore anticipate for their second payment year (2014), an EP, eligible hospital, or CAH whose first payment year is 2013 would have to satisfy the Stage 2 criteria of meaningful use to receive the incentive payments. We discussed in the proposed rule that Medicare EPs, eligible hospitals, and CAHs whose first payment year is 2014 must satisfy the Stage 1 criteria of meaningful use in their first payment year (2014) to receive the incentive payments. In the proposed rule, we discussed the idea that alignment of stage of meaningful use and payment year should synchronize for all providers in 2015, and requested comment on the need to create such alignment. After reviewing public comment on this issue, our goal remains to align the stages of meaningful use across all providers in 2015. However, we acknowledge the concerns regarding the different Medicare and Medicaid incentive timelines, as well as concerns about whether Stage 3 would be appropriate for an EP's, eligible hospital's or CAH's first payment year at any point in the future and believe the issue needs additional review and discussion before we lay out a clear path forward for 2015 and beyond. Therefore, we have decided to remove language in the final rule discussing our possible directions for any year beyond 2014. We will address the years beyond 2014 in later rulemaking. Table 1 outlines how we anticipate applying the respective criteria of meaningful use in the first years of the program, and how we anticipate applying such criteria for

subsequent payment years, through 2014. Please note that nothing in this discussion restricts us from requiring additional stages of meaningful use (beyond stage 3) through future rulemaking. In addition, as we expect to engage in rulemaking to adopt the criteria that will accompany Stages 2 and 3 of meaningful use, stakeholders should wait for those rulemakings to determine what will be required for those Stages and should not view the discussions in this preamble or final rule as binding the agency to any specific definition for those future stages.

TABLE 1: Stage of Meaningful Use Criteria by Payment Year

First Payment Year	Payment Year				
	2011	2012	2013	2014	2015
2011	Stage 1	Stage 1	Stage 2	Stage 2	TBD
2012		Stage 1	Stage 1	Stage 2	TBD
2013			Stage 1	Stage 1	TBD
2014				Stage 1	TBD

Please note that each of the EHR incentive programs has different rules regarding the number of payment years available, the last year for which incentives may be received, and the last payment year that can be the first payment year for an EP, eligible hospital, or CAH. The applicable payment years and the incentive payments available for each program are also discussed in section II.C. of this final rule for the Medicare FFS EHR incentive program, in section II.D. of this final rule for the MA EHR incentive program, and in section II.E. of this final rule for the Medicaid EHR incentive program.

Comment: Numerous commenters noted that it is inappropriate to align the Medicaid EHR incentive payment program with the Medicare program due to the lack of penalties in the Medicaid program and due to the option for Medicaid providers to participate in their first year by adopting, implementing, or upgrading certified EHR technology.

Response: This was not the only reason for having all EPs, eligible hospitals, and CAHs align by 2015. However, as we are not addressing stages of meaningful use beyond 2014 in this final rule, potential alignment is not discussed. We will reconsider this comment in future rulemaking.

The stages of criteria of meaningful use and how they are demonstrated are described further in this final rule and will be updated in subsequent rulemaking to reflect advances in HIT products and infrastructure. We note that such future rulemaking might also include updates to the Stage 1 criteria.

We invited comment on our alignment between payment year and the criteria of meaningful use particularly in regards to the need to create alignment across all EPs, eligible hospitals, and CAHs in all EHR incentive programs in 2015.

Comment: Many commenters requested that if there continued to be a year where all EPs, eligible hospitals and CAHs must meet the same stage of meaningful use that that year be 2017, rather than 2015 as we had discussed in the proposed rule. These commenters asserted that EPs, eligible hospitals, and CAHs whose first payment year is after 2011 might not have sufficient time to reach the Stage 3 of meaningful use criteria by 2015. Some commenters pointed out that while the HITECH Act states that 2015 is the first year of payment adjustments, it provides for escalation of the payment adjustments so that they do not reach their full levels until 2017.

Response: As we explained in the proposed rule, equity in the level of meaningful use across all EPs, eligible hospitals, and CAHs subject to the payment adjustment was not the only reason for our plan that all EPs, eligible hospitals, and CAHs satisfy the Stage 3 criteria for either the Medicare or Medicaid EHR incentive programs. The achievement of many of the ultimate goals of meaningful use of certified EHR technology are dependent on a critical mass of EPs, eligible hospitals, and CAHs all being meaningful EHR users. Exchange of health information is most valuable when it is so robust that it can be relied upon to provide a complete or nearly complete picture of a patient's health. For example, robust Stage 3 meaningful use by an EP does not assist that EP in avoiding ordering a duplicative test, if the EP with information on the original test is only a Stage 1 meaningful EHR user and is not yet exchanging that information. This dependency is key to the need to get to Stage 3 for all providers. Another reason for alignment at Stage 3 in 2015 is that many of the barriers to functionalities of EHRs that exist today as may no longer exist in 2015. The existence of these barriers today is one of the primary reasons for having a staged approach as opposed to requiring more robust meaningful use at the beginning of the program. Providers, developers of EHRs, government and non-governmental organizations are all working to remove these barriers. We believe it is likely there will be success in removing many of these barriers, which would make many of the compromises made in Stage 1 no longer necessary by 2015. However, due to the many comments on alignment starting in 2015 and our plan to engage in additional more rounds of rulemaking, we are removing discussion of actual alignment between the first payment year of an EP, eligible hospital, or CAH and the Stage of meaningful use they will be expected to meet for all years after 2014. Our policies for 2015 and subsequent years will be determined through future rulemaking.

Comment: Several commenters requested that CMS base the payment adjustments on Stage 1 of meaningful use regardless of the EP, eligible hospital, or CAH's prior participation in the incentive program.

Response: We thank commenters for the thoughtful comments received, and will take their input into consideration when in future rulemaking when we consider whether to require that EPs, eligible hospitals, and CAHs satisfy the stage 3 definition of meaningful use in order to avoid reduced payments under Medicare for their professional services and inpatient hospital services beginning 2015. We reiterate, however, that in this final rule we are only adopting criteria that we expect will

apply in 2011 and 2012. We have also outlined the expected progression of stages of meaningful use criteria until 2014. However, we are not in this rule finalizing regulations that address the meaningful use standards that apply in 2015 and thereafter.

Comment: Numerous commenters requested that we specifically propose objectives and measures for Stage 2 and 3. We also received recommendations on what those objectives and, in rare cases, measures should be. We discussed some of these objectives in the proposed rule and discuss them again in this final rule in section II.d. Others are highly related to existing objectives, while still others were not discussed in any way in the proposed rule. The suggested objectives and measures for Stages 2 and 3 include the following:

- Use of evidence-based order sets.
- Electronic medication administration record (eMAR).
- Bedside medication administration support (barcode/RFID).
- Record nursing assessment in EHR.
- Record nursing plan of care in EHR.
- Record physician assessment in EHR.
- Record physician notes in EHR.
- Multimedia/Imaging integration.
- Generate permissible discharge prescriptions electronically.
- Contribute data to a PHR.
- Record patient preferences (language, etc).
- Provide electronic access to patient-specific educational resources.
- Asking patients about their experience of care.

Response: With one exception discussed under the CPOE objective, we continue to believe that finalizing specific objectives and measures for later stages is inappropriate. One of the greatest benefits of the phased stage approach is the ability to consider the impact and lessons of the prior stage when formulating a new stage. Many commenters supported our discussion of later stages for this very reason. In addition, we do not believe it is appropriate to finalize objectives for any stage of meaningful use that were not specifically discussed in the proposed rule, as doing so would deprive the public the opportunity to comment on the objective in question. Nevertheless, we thank commenters for the thoughtful comments received, and expect to take their input into consideration when in future rulemaking we consider additional or revised criteria and measures to adopt for the stage 2 and stage 3 definitions of meaningful use.

Comment: A commenter indicated that attestation is an insufficient means to hold providers accountable for the expenditure of public funds and to protect against fraud and abuse.

Response: We likewise are concerned with the potential fraud and abuse. However, Congress for the HITECH Act specifically authorized submission of information as to meaningful use through attestation. CMS is developing an audit strategy to ameliorate and address the risk of fraud and abuse.

b. Common Definition of Meaningful Use Under Medicare and Medicaid

Under sections 1848(o)(1)(A)(i), 1814(l)(3)(A), and 1886(n)(1) of the Act, an EP, eligible hospital or CAH must be a meaningful EHR user for the relevant EHR reporting period in order to qualify for the incentive payment for a payment year in the Medicare FFS EHR incentive program. Sections 1848(o)(2)(A) and 1886(n)(3)(A) of the Act provide that an EP and an eligible hospital shall be considered a meaningful EHR user for an EHR reporting period for a payment year if they meet the following three requirements: (1) Demonstrates use of certified EHR technology in a meaningful manner; (2) demonstrates to the satisfaction of the Secretary that certified EHR technology is connected in a manner that provides for the electronic exchange of health information to improve the quality of health care such as promoting care coordination, in accordance with all laws and standards applicable to the exchange of information; and (3) using its certified EHR technology, submits to the Secretary, in a form and manner specified by the Secretary, information on clinical quality measures and other measures specified by the Secretary. The HITECH Act requires that to receive a Medicaid incentive payment in the initial year of payment, an EP or eligible hospital may demonstrate that they have engaged in efforts to "adopt, implement, or upgrade certified EHR technology." Details, including special timeframes, on how we define and implement "adopt, implement, and upgrade" are in section II.D.7.b.2 of this final rule. For subsequent payment years, or the first payment year if an EP or eligible hospital chooses, section 1903(t)(6)(C)(i)(II) of the Act, prohibits receipt of an incentive payment, unless "the Medicaid provider demonstrates meaningful use of certified EHR technology through a means that is approved by the State and acceptable to the Secretary, and that may be based upon the methodologies applied under section 1848(o) or 1886(n)." (Sections 1848(o) and 1886(n) of the Act refer to the Medicare EHR incentive programs for EPs and eligible hospitals/CAHs respectively.) Under section 1903(t)(8) of the Act to the maximum extent practicable, we are directed to avoid duplicative requirements from Federal and State governments to demonstrate meaningful use of certified EHR technology. Provisions included at section 1848(o)(1)(D)(iii) of the Act also contain a Congressional mandate to avoid duplicative requirements for meaningful use, to the extent practicable. Finally, section 1903(t)(8) of the Act allows the Secretary to deem satisfaction of the requirements for meaningful use of certified EHR technology for a payment year under Medicare to qualify as meaningful use under Medicaid.

We stated in the proposed rule that we believe that given the strong level of interaction on meaningful use encouraged by the HITECH Act, there would need to be a compelling reason to create separate definitions for Medicare and Medicaid. We declared in the proposed rule that we had found no such reasons for disparate definitions in our internal or external discussions. To the contrary, stakeholders have expressed strong preferences to link the Medicare and Medicaid EHR incentive programs wherever possible. Hospitals are entitled to participate in both programs, and we proposed to offer EPs an opportunity to switch between the Medicare and Medicaid EHR incentive programs. Therefore, we proposed to create a common definition of meaningful use that would serve as the definition for EPs, eligible hospitals and CAHs participating in the Medicare FFS and MA EHR incentive program, and the minimum standard for EPs and eligible hospitals participating in the Medicaid EHR incentive program. We clarified that under Medicaid this proposed common definition would be the minimum standard. We proposed to allow States to add additional objectives to the definition of meaningful use or modify how the existing objectives are measured; the Secretary would not accept any State alternative that does not further promote the use of EHRs and healthcare quality or that would require additional functionality beyond that of certified EHR technology. See section II.D.8. of this final rule for further details.

For hospitals, we proposed to exercise the option granted under section 1903(t)(8) of the Act and deem any Medicare eligible hospital or CAH who is a meaningful EHR user under the Medicare EHR incentive program and is otherwise eligible for the Medicaid incentive payment to be classified as a meaningful EHR user under the Medicaid EHR incentive program. This

is applicable only to eligible hospitals and CAHs, as EPs cannot simultaneously receive an incentive payment under both Medicare and Medicaid.

We solicited comments as to whether there are compelling reasons to give the States additional flexibility in creating disparate definitions beyond what was proposed. In addition, if commenting in favor of such disparate definitions, we also asked interested parties to comment on whether the proposal of deeming meeting the Medicare definition as sufficient for meeting the Medicaid definition remains appropriate under the disparate definitions. This is applicable only to hospitals eligible for both the Medicare and Medicaid incentive programs. Furthermore, if a State has CMS-approved additional meaningful use requirements, hospitals deemed as meaningful users by Medicare would not have to meet the State-specific additional meaningful use requirements in order to qualify for the Medicaid incentive payment.

Comment: Most commenters believe that States should not be allowed the option to add to or change the meaningful use requirements for the Medicaid EHR incentive program. The commenters' main reason for standardizing the meaningful use requirements for both Medicare and Medicaid is to eliminate administrative burden on both providers and EHR vendors to accommodate programming and reporting using different technical specifications for the same or similar measures.

Response: After consideration of the comments received, we are finalizing the provisions regarding possible differences in the definition of meaningful use between Medicare and Medicaid with the following revisions. We believe that over time the option to add to or change the floor definition of meaningful use might represent an important policy tool for States and therefore CMS plans to review and adjudicate these requests over the duration of the program. For Stage 1 of meaningful use, we have revised the definition of meaningful use in response to the many comments and are requiring an overall lower bar and an approach that is more flexible. On the other hand, we wish to support the ability for States to reinforce their public health priorities and goals based upon their existing public health infrastructure and maturity. For that reason, we, for Stage 1, will only entertain States' requests to tailor the Stage 1 meaningful use definition as it pertains specifically to public health objectives and data registries. For purposes of the Medicaid EHR incentive program during Stage 1 of meaningful use, these are limited to:

Objective: Generate lists of patients by specific conditions to use for quality improvement, reduction of disparities, research, or outreach.

Measure: Generate at least one report listing patients of the EP or eligible hospital with a specific condition.

Example: Generate lists of patients with the following conditions: depression, diabetes, obesity, etc. This would not be for reporting to the State but to draw EPs' or eligible hospitals' attention in order to better manage their patient population. States would also be permitted to request CMS approval to include this in the core set for all EPs and/or eligible hospitals.

Objective: Capability to submit electronic data to immunization registries of Immunization Information Systems and actual submission in accordance with applicable law and practice.

Measure: Performed at least one test of certified EHR technology's capacity to submit electronic data to immunization registries and follow up submission if the test is successful (unless none of the immunization registries to which the EP or eligible hospital submits such information have the capacity to received the information electronically).

Example: State could point to a specific immunization registry that supports standards-based transmission of data and dictate how that information is transmitted. States would also be permitted to request CMS approval to include this objective in the core list for all EPs and eligible hospitals. The justification for this request in their State Medicaid HIT Plan, should address any potential barriers for providers in achieving this objective.

Objective: Capability to submit electronic data on reportable (as required by state or local law) lab results to public health agencies and actual submission in accordance with applicable law and practice.

Measure: Performed at least one test of certified EHR technology's capacity to submit electronic data on reportable lab results to public health agencies and follow-up submission if the test is successful (unless none of the public health agencies to which an eligible hospital submits such information have the capacity to receive the information electronically).

Example: State could specify the standards-based means of transmission and/or the destination of this data. States would also be permitted to request CMS approval to include this objective in the core list for all and eligible hospitals. The justification for this request in their State Medicaid HIT Plan, should address any potential barriers for providers in achieving this objective.

Objective: Capability to submit electronic syndromic surveillance data to public health agencies and actual transmission according to applicable law and practice.

Measure: Performed at least one test of certified EHR technology's capacity to submit electronic syndromic surveillance data to public health agencies and follow-up submission if the test is successful (unless none of the public health agencies to which an EP or eligible hospital submits such information have the capacity to receive the information electronically).

Example: State could specify the standards-based means of transmission and/or the destination of this data. States would also be permitted to request CMS approval to include this objective in the core list for all EPs and eligible hospitals. The justification for this request in their State Medicaid HIT Plan, should address any potential barriers for providers in achieving this objective.

We reiterate that we will not approve any requests that would require EHR functionality above and beyond that included in the ONC EHR certification criteria as finalized for Stage 1 of meaningful use.

Comment: Several commenters requested that CMS affirm the ability of States to require additional meaningful use criteria for all eligible professionals and hospitals (pursuant to §§ 495.316(a), 495.316(d)(2)), regardless of whether those entities were deemed eligible through Medicare.

Response: Section 1903(t)(8) provides authority for the Secretary to "deem satisfaction of requirements for * * * meaningful use for a payment year under title XVIII to be sufficient to qualify as meaningful use under [1903(t)]." We continue to believe that allowing deeming ensures that hospitals eligible for both programs are able to focus on only one set of measures, without requiring duplication of effort or confusion regarding meaningful use standards. Thus, hospitals eligible for both Medicare and Medicaid incentive payments will be deemed for Medicaid if they have met the meaningful use definition through Medicare, even if a State has an approved State-specific definition of meaningful use. States cannot withhold a Medicaid EHR incentive payment from dually eligible hospitals if they have met all the eligibility criteria for Medicaid, and have met the Medicare definition for meaningful use.

Because of this comment, we are revising section § 495.4 of our regulations to indicate that eligible hospitals who are meaningful users under the Medicare EHR incentive payment program are deemed as meaningful users under the Medicaid EHR incentive payment program, and need not meet additional criteria imposed by the State. While this is not a new requirement, it was not previously listed in regulations.

Comment: A commenter asked that CMS adopt and affirm the deeming approach in its final rule and ensure that the regulatory language reflects this approach.

Response: We agree and have included in the final rule regulation language that hospitals that are meaningful users under the Medicare EHR Incentive Program are deemed meaningful users under the Medicaid EHR Program.

Comment: Several commenters requested that CMS not deem hospitals having met the meaningful use requirements for the Medicare EHR Incentive Payment, as having fulfilled the meaningful use requirements for the State's Medicaid EHR Incentive Payment. The commenters noted that if a State sought for acute care hospitals to participate in their statewide health information exchange and yet those hospitals did not have to do so in order to qualify for both the Medicare and Medicaid EHR Incentive Payments, then they would have no motivation to do so. The commenters would like acute care hospitals eligible for both the Medicare and Medicaid EHR Incentive Program to have to comply with any State-specific meaningful use requirements, in addition to the Medicare floor definition.

Response: In consideration of the comments received, CMS adopts its proposed preamble language about deeming hospitals and adds the corresponding regulation text. This is necessary for Stage 1 of meaningful use in particular, where we believe it is crucial to prevent additional burden on providers and foster eligible hospitals' path to successful EHR adoption and meaningful use. In addition, as already noted, for Stage 1, we will not entertain States' requests to alter the floor definition of meaningful use as codified in this final rule except for specific public health objectives. That thereby reduces the possible differences between the Medicare and Medicaid definitions of meaningful use. As part of Stage 2 of meaningful use, CMS might consider States requests to tailor meaningful use as it pertains to health information exchange, for example. Further details about this policy option will be included in future rulemaking and subject to public comment.

c. Stage 1 Criteria for Meaningful Use

In the proposed rule we proposed that to qualify as a meaningful EHR user for 2011, EPs, eligible hospitals or CAHs must demonstrate that they meet all of the objectives and their associated measures as set forth in proposed § 495.6. We further proposed and finalize in this final rule that except where otherwise indicated, each objective and its associated measure must be satisfied by an individual EP as determined by unique National Provider Identifiers (NPIs) and an individual hospital as determined by unique CMS certification numbers (CCN).

Discussion of Whether an EP, Eligible Hospital or CAH Must Meet All Stage 1 Meaningful Use Objectives and Their Associated Measures

Comment: Commenters almost unanimously said that requiring an EP, eligible hospital or CAH to meet all of the objectives and their associated measures in order to qualify as a meaningful EHR user was too ambitious given the current state of EHR technology, adoption levels, the timeline for certification of EHR technologies, the realities of implementing EHR technology and the timeline proposed for Stage 1 of meaningful use in our proposed rule.

Most of the commenters suggested alternatives that they believed would support the health care policy priorities of Stage 1. Several different alternatives were proposed. The first alternative would be to require a specified percentage of the Stage 1 meaningful use objectives and associated measures, with an EP, eligible hospital or CAH free to select which of the objectives and associated measures it would satisfy. For example under our proposed objectives and associated measures, if an EP were required to meet 20 percent, then an EP would be considered a meaningful EHR user if he or she satisfied any five of the proposed twenty–five objectives and associated measures. Most commenters suggesting this alternative envisioned that later stages of meaningful use would require that EPs, eligible hospitals, and CAHs satisfy a higher of the percentage of the objectives and associated measures. For example if 20 percent of the objectives and associated measures were required for Stage 1, then 50 percent might be required in Stage 2.

After a fixed percentage, the suggestion next favored by commenters, including the HIT Policy Committee and MedPAC, was to divide the meaningful use objectives into two categories, a "core set" of objectives and "menu set" of objectives. To be a considered a meaningful user under this approach, an EP, eligible hospital, or CAH would be required to satisfy (1) all core set of objectives, and (2) a specified percentage of the menu set of objectives, with the EP, eligible hospital, or CAH free to select which of the menu set of objectives it would satisfy. For example, if five objectives were in the core set all EPs, eligible hospitals, and CAHs would have to meet those objectives. If twenty objectives were in the menu set, then EPs, eligible hospitals, and CAHs would not have to meet one or more of those objectives. Commenters varied widely as to which objectives should be included in the core set of objectives, as well as the percentage of menu set objectives an EP, eligible hospital, or CAH must satisfy.

Some commenters suggested that we simply reduce the number of objectives required for Stage 1 of meaningful use. Recommendations in this regard varied from reducing the required objectives to only just a few (the lowest number being three), limiting the required objectives to only to those objectives that affect health outcomes of individual patients, to targeted elimination of a few objectives.

Finally, some commenters suggested that we eliminate all of the measures associated with the Stage 1 meaningful use objectives and only require that EPs, eligible hospitals, and CAHs attest that they have attempted to meet each of the objectives.

Response: After reviewing the comments, we agree that requiring that EPs, eligible hospitals, and CAHs satisfy all of the objectives and their associated measures in order to be considered a meaningful EHR user would impose too great a burden and would result in an unacceptably low number of EPs, eligible hospitals, and CAHs being able to qualify as meaningful EHR users in the first two years of the program. In considering an alternative approach, we have sought to develop an alternative that is responsive to some degree to all the concerns raised by the commenters. We have tried to reduce the requirements both in number required and in the thresholds of the associated measures and provide some flexibility as well. At the same time, however, we must be mindful of the relevant statutory requirements. Sections 1848 (o)(2)(A) and 1886(n)(3) of the Act, specify three requirements for meaningful use: (1) Use of certified EHR technology in a meaningful manner (for example, electronic prescribing); (2) that

the certified EHR technology is connected in a manner that provides for the electronic exchange of health information to improve the quality of care; and (3) that, in using certified EHR technology, the provider submits to the Secretary information on clinical quality measures and such other measures selected by the Secretary. We believe that each EP, eligible hospital, and CAH must meet at least one objective within each of the three requirements for meaningful use. We are concerned that if we were to give EPs, eligible hospitals, and CAHs full discretion to select which meaningful use objectives they will satisfy, some providers would not choose one or more objectives within each of the three statutory requirements for meaningful use. Furthermore, we are concerned that affording EPs, eligible hospitals, and CAHs such flexibility as to which meaningful use objectives to meet would delay many of the goals outlined for meaningful use in section II.a.2. of this final rule. If in choosing what objectives to defer, one provider chooses to focus on improving processes to improve healthcare quality, another chooses to focus on being able to exchange health information and yet another on engaging patients and families it is possible that we would fail to accomplish any of these goals at a population level. For these reasons, we do not believe it would be appropriate to afford providers the unlimited flexibility to select which of the meaningful use objectives they will meet. Rather, as explained below, we believe providers at a minimum should have to satisfy a core set of objectives in order to qualify as meaningful EHR users.

Similarly, while we agree that merely reducing the number of objectives would make meaningful use easier to achieve for most providers, we believe that this reduction does not afford the same flexibility to all providers to account for their individual difficulties in meeting meaningful use that some of the other alternatives do as allowing a provider to choose certain objectives to defer. Due to any number of circumstances such as EHR adoption level, availability of health information exchange network, size of practice or hospital, etc., an objective that is easy for one EP to achieve might be very difficult for another EP. Under this alternative, no allowance is made for those differences. Finally, we disagree that meaningful use should be limited to improving the health outcomes of individual patients. There are significant gains that meaningful use can achieve in the areas of public health, privacy and security, engagement of patients and their families and efficiency of care that may not improve health outcomes, but have significant other benefits such as engaging patients more fully in decisions affecting their health and reducing costs through increased efficiency of care. We believe that all of these have a significant impact on health outcome priorities. Therefore, we do not categorically reduce the number of objectives for Stage 1 definition of meaningful use. We consider requests to defer an objective to later stages of the meaningful use criteria or eliminate a specific objective below in our discussion of each objective.

Comment: Another alternative that was recommended by a significant number of commenters was that we base the incentive payment amount on the number of stage 1 meaningful use objectives satisfied by an EP or eligible hospital, with those satisfying more objectives eligible for a higher incentive payment amount. While some commenters varied in the specifics or did not provide specifics, generally we take this to mean that if an EP, eligible hospital, or CAH met half of the objectives then they would receive half of the incentive payment they would have received had they met all the objectives.

Response: The HITECH Act does not give us the authority to award partial payments. As discussed elsewhere in this final rule, sections 1848(o)(1)(A) of the Act specifies the payment incentive amount to which an EP who is a meaningful EHR user is entitled. Similarly, section 1886(n)(2) of the Act sets forth a formula for calculation of incentive payment amount to which an eligible hospital that is a meaningful EHR user is entitled. Similarly, section 1814(l)(3)(A) of the Act sets forth a formula for calculation of incentive payment amount to which an eligible hospital that is a meaningful EHR user is entitled. Similarly, section 1903(t)(4)(B) of the Act sets parameters for determining the Medicaid EHR incentive for Medicaid EP. None of these parameters are related to meaningful use. Similarly, section 1903(t)(5)(A) of the Act sets forth a formula for calculation of the incentive payment amount to which a Medicaid eligible hospital is entitled. As we do not have the authority to alter these statutory formulas for calculating the incentive payment amounts under Medicare and Medicaid, we cannot pro rate the incentive payment amount based on the number of meaningful use objectives satisfied by an EP, eligible hospital, or CAH.

After consideration of the public comments received, we are establishing a core set of objectives with associated measures and a menu set of objectives with associated measures. In order to qualify as a meaningful EHR user, an EP, eligible hospital, or CAH must successfully meet the measure for each objective in the core set and all but five of the objectives in the menu set. With one limitation, an EP, eligible hospital, or CAH may select any five objectives from the menu set to be removed from consideration for the determination of qualifying as a meaningful EHR user. Further discussion of the objectives, including additional details about their inclusion in the core set, can be found at each objective.

We believe that establishing both a core and a menu set adds flexibility and allows the minimum statutory set to be met. In determining the objectives to include in the core set, we looked at all comments, especially those of the HIT Policy Committee and other commenters who recommended some required and optional elements. The HITECH Act requires the use of health information technology in improving the quality of health care, reducing medical errors, reducing health disparities, increasing prevention and improving the continuity of care among health care settings. In defining the core set of meaningful use objective, we believe the most crucial aspect to consider is meeting the three statutory guidelines provided in the HITECH Act and discussed in section II.A.2.a of this final rule. Second is to identify those objectives that are most crucial to laying the foundation for obtaining value from meaningful use of certified EHR technology. Third, we believe that meaningful use should be patient-centered so we focus on getting the most value to the patient. We believe the recommendation of the HIT Policy Committee accomplishes third criteria, but falls short of the first and second. To accomplish the first criteria, we add the objective of submitting clinical quality measures to CMS or the States and the objective of exchanging key clinical information among providers of care and patient authorized entities. To accomplish the second, we add several additional objectives to the core set of measures as critical elements pertinent to the management of patients. We have received a number of comments in support of these particular measures as critical to the management of patients (maintaining an up-to-date problem list, active medication list, active allergy list, smoking history and incorporate clinical

lab tests into EHR as structured data) in comparison to other requirements. The addition of two other functional objectives (drug-drug and drug-allergy features) as core measures are for improved patient-safety. All of the listed elements are integral to the initial or on-going management of a patient's current or future healthcare. While each element is important in the management of patients in and of itself, the aggregate of the elements elevates the importance of clinical information to not only the primary provider but for all members of the interdisciplinary team involved in the patient's care. The HITECH Act statutorily requires the use of health information technology in improving the quality of health care, reducing medical errors, reducing health disparities, increasing prevention, and improving the continuity of care among health care settings. These core set of measures are also foundational and aligned with each other. For example, electronic copies of health information given to patient will be useless if it does not contain basic information such as a problem list, medication list or allergy list. Exchange of information to other members of the health care team across settings will depend on having structured data of these elements. Therefore, in support of the HITECH Act in meeting the statutory requirements, we have expanded the core set of measures to include these fundamental elements to improve patient care. Below we list the objectives included in the core set of meaningful use objectives.

—Use CPOE
—Implement drug to drug and drug allergy interaction checks
—E-Prescribing (EP only)
—Record demographics
—Maintain an up-to-date problem list
—Maintain active medication list
—Maintain active medication allergy list
—Record and chart changes in vital signs
—Record smoking status
—Implement one clinical decision support rule
—Report CQM as specified by the Secretary
—Electronically exchange key clinical information
—Provide patients with an electronic copy of their health information
—Provide patients with an electronic copy of their discharge instructions (Eligible Hospital/CAH Only)
—Provide clinical summaries for patients for each office visit (EP Only)
—Protect electronic health information created or maintained by certified EHR

In addition, achieving Stage 1 meaningful use means demonstration of progress in each of the five healthcare outcome priorities outlined in the proposed rule and discussed again later in this section. Only one of these priorities is not represented in the core set, population and public health. As we have discussed in this section we do not want any priority to be overlooked due to the flexibility we have added to Stage 1 of meaningful use; therefore, all EPs and hospitals must choose at least one of the population and public health measures to demonstrate as part of the menu set. This is the only limitation placed on which five objectives can be deferred from the menu set.

Discussion on Whether Certain EP, Eligible Hospital or CAH Can Meet all Stage 1 Meaningful Use Objectives Given Established Scopes of Practice

In the proposed rule, we specifically encouraged comments on whether certain providers may have difficulty meeting one or more of the objectives due to their provider type or chosen specialties

Comment: We received many comments, both general and specific, that certain providers or specialists may not be able to comply with certain objectives because they are beyond the scope of their licensing authority or because they are outside the scope of their standard of practice. For example, chiropractors do not have prescribing authority and thus may not make use of an EHR technology's e-prescribing function and rheumatologists may not require information on vital signs. While comments on this potential non-applicability primarily focused on EPs, we did receive comments that some objectives may not be relevant to smaller or specialized eligible hospitals as well.

Response: We believe the division of the meaningful use objectives into a core set and a menu set may minimize the impact of including among the meaningful use objectives one or more objectives that certain providers or specialists may be unable to satisfy as the EP, eligible hospital, or CAH can defer five objectives from the menu set. However, if the EP, eligible hospital or CAH has an insurmountable barrier to meeting an objective in the core set or a significant number in the menu set then the problem remains. For example, without any consideration on an EP, eligible hospital or CAH's capability to meet the measure associated with a core objective any EP that could not order medications requiring a prescription would not be able to become a meaningful EHR user as e-prescribing is a core set objective. Similarly, any eligible hospital or CAH that did not have any requests for electronic copy of discharge instructions would not be able to become a meaningful EHR user. In addition, if this were to occur for a significant number of menu set objectives, the flexibility for the EP, eligible hospital, or CAH to use the five objectives to account for other concerns such as implementation struggles or workflow process redesign would be curtailed. To account for this possibility, we have modified each objective and measure to indicate when there is an option for an EP, eligible hospital, or CAH to report that the objective/measure is inapplicable to them, because they have no patients or no or insufficient number of actions that would allow calculation of the meaningful use measure. This will allow an EP, eligible hospital, or CAH to qualify as a meaningful EHR user without being required to meet objectives we have specified as potentially inapplicable. We note that the exclusions to meaningful use objectives/measures are specific to each objective/measure. In our discussion of each specific objective/measure (which occurs later in this preamble), we have identified specific exclusions where they exist. Providers wishing to claim that an objective/measure is inapplicable to them would need to meet the criteria of such an exception.

After consideration of the public comments received, we have identified, for each meaningful use objective, whether the EP, eligible hospital, or CAH may attest that they did not have any patients or insufficient actions on which to base a measurement of a meaningful use for the EHR reporting period. For objectives in the core set, such an attestation would remove the objective from consideration when determining whether an EP, eligible hospital, or CAH is a meaningful EHR user. In other words, the EP, eligible hospital, or CAH could satisfy the core set objectives by satisfying all remaining objectives included in the core set. For objectives in the menu set, such an attestation would also remove the objective from consideration when determining whether an EP, eligible hospital, or CAH is a meaningful EHR user. For example, if for one objective included in the menu set an EP attests that he or she did not have any patients or insufficient actions during the EHR reporting period on which to base a measurement of a meaningful use objective, rather than satisfy 5 of the 10 meaningful use objectives included in the menu set for EPs, the EP need only

satisfy 4 of the 9 remaining meaningful use objectives included in the menu set for EPs

EPs Practicing in Multiple Practices

Another situation where flexibility may be needed in order for an EP to become a meaningful EHR user is the situation where an EP may provide care in multiple practices or multiple locations. We proposed a policy to account for EPs practicing in multiple practices and settings. We discussed in the proposed rule that we believe it is unlikely for an EP to use one record keeping system for one patient population and another system for another patient population at one location. We are concerned about the application of the measures associated with the meaningful use objectives for EPs who see patients in multiple practices or multiple locations. If an EP does not have certified EHR technology available at each location/practice where they see patients it could become impossible for the EP to successfully become a meaningful EHR user based on the measures associated with the meaningful use objectives. We do not seek to exclude EPs who meaningfully use certified EHR technology when it is available because they also provide care in another practice where certified EHR technology is not available. Therefore, we proposed that all measures be limited to actions taken at practices/locations equipped with certified EHR technology. A practice is equipped if certified EHR technology is available at the beginning of the EHR reporting period for a given geographic location. Equipped does not mean the certified EHR technology is functioning on any given day during the EHR reporting period. Allowances for downtime and other technical issues with certified EHR technology are made on an objective-by-objective basis as discussed later in this section. We are concerned that seeing a patient without certified EHR technology available does not advance the health care policy priorities of the definition of meaningful use. We are also concerned about possible inequality of different EPs receiving the same incentive, but using certified EHR technology for different proportions of their patient population. We believe that an EP would have the greatest control of whether certified EHR technology is available in the practice in which they see the greatest proportion of their patients. We proposed that to be a meaningful EHR user an EP must have 50 percent or more of their patient encounters during the EHR reporting period at a practice/location or practices/locations equipped with certified EHR technology. An EP for who does not conduct 50 percent of their patient encounters in any one practice/location would have to meet the 50 percent threshold through a combination of practices/locations equipped with certified EHR technology. For example, if the EP practices at both a Federally Qualified Health Center (FQHC) and within his or her individual practice, we would include in our review both of these locations and certified EHR technology would have to be available at the location where the EP has at least 50 percent of their patient encounters.

Comment: Some commenters recommended that 50 percent or more of the patient encounters must occur at the practice location that receives the incentive payment.

Response: As discussed in section II.A.4 of this final rule, an EP may assign their incentive payment to other practices. We do not believe that limiting practices and EPs to only considering the location that receives an incentive payment provides advantages to the program. The requirement suggested by commenters would potentially cause some EPs not to meet the 50 percent threshold even if through a combination of practices they may use certified EHR technology for far more than 50 percent of their patient encounters.

Comment: Some commenters requested clarification of our proposed statement "Therefore, we proposed that all measures be limited to actions taken at practices/locations equipped with certified EHR technology"

Response: We mean this statement to be that as long as an EP has certified EHR technology available for 50 percent or more of their patient encounters during the EHR reporting period they only have to include those encounters where certified EHR technology is available at the start of the EHR reporting period. We discuss the measures later in this section of the final rule, but an illustrative example would be the objective of maintain an up-to-date problem list. The measure associated with this objective is "More than 80% of all unique patients seen by the EP or admitted to the eligible hospital's or CAH's inpatient or emergency department (POS 21 or 23) have at least one entry or an indication that no problems are known for the patient recorded as structured data." Therefore, if an EP only practices at one location or has certified EHR technology available at all practice locations then the denominator would be all unique patients seen during the EHR reporting period. However, if an EP practices at multiple locations and only has certified EHR technology for 80 percent of their patient encounters, then the denominator is only those unique patients seen at locations where certified EHR technology is available. We reiterate that this is not to account for certified EHR technology downtime, Certified EHR technology is available at a location if it is available at the start of the EHR reporting period regardless of its actual availability for any given day during the EHR reporting period.

After consideration of the comments received, we are finalizing this requirement as proposed.

Discussion of the Burden Created by the Measures Associated With the Stage 1 Meaningful Use Objectives

Comment: Many commenters expressed concerns about the difficulties of capturing the denominators for the measures that are expressed as percentages. They pointed out that the formulas in the proposed rule would require providers to conduct labor-intensive counts of paper documents such as prescriptions or laboratory results in order to compute the denominators of the percentage based measures. Some commenters suggested that we adopt alternative measurement mechanisms, for example establishing simple counts of electronic occurrences, while others proposed that denominators be computed utilizing only data collected in the certified EHR technology.

Response: We acknowledge that the percentage-based measures, as expressed in the proposed rule, would create a reporting burden for EPs, eligible hospitals, and CAHs, and we examined a number of alternatives that potentially reduce the burden of reporting.

In the proposed rule, we discussed the option of counts instead of percentages and due to comments received have reassessed this option in the final rule. This approach clearly has the advantage of simplifying the process. For example, rather than counting the number of prescriptions transmitted electronically and then dividing by the total number of prescriptions, the EP would simply need to count the number of electronically transmitted prescriptions until a benchmark number is passed. If the benchmark number is exceeded, then the provider meets the measure. However, there are several shortcomings to this approach. First, we received little input from commenters as to where the benchmark numbers for the various objectives should be set and any benchmark set now would not benefit

from public comment without significantly delaying the Medicare and Medicaid EHR incentive programs. (One exception was that a number of commenters suggested using the PQRI measure for e-prescribing, which is the generation of at least one eRx associated with a patient visit on 25 or more unique events during the reporting period.) Setting the limit too high would disadvantage small providers, since they would have smaller patient populations, while setting the limit too low would create requirements for larger providers that would be so limited as to be meaningless. A larger provider could implement the functionality for a much shorter period than the EHR reporting period and meet the count. In either case, it would be difficult to establish a trajectory in later stages that would result in meaningful progress being made by both small and large providers.

We then assessed the option of limiting the occurrences counted in the denominator to those included in the provider's certified EHR technology. As an example, if an EP captures 1,000 prescriptions as structured data in certified EHR technology, and electronically transmits 500 of these prescriptions, the EP's certified EHR technology generated score would be 50 percent. This approach does simplify the computation process, since this approach does not have to take into account whether some prescriptions were not included or included as unstructured data in the certified EHR technology. However, it does not demonstrate the extent to which the provider has used the certified EHR technology. For example, a provider that has captured only 10 prescriptions in the certified EHR technology as structured data, but writes 1,000 prescriptions because the provider achieved only a limited use of their certified EHR technology would also score 50 percent by electronically transmitting only 5 prescriptions according to an automatic report from the certified EHR technology. Again, this methodology does not lead providers toward an upward trajectory of both certified EHR technology deployment and accomplishment of meaningful use.

We selected a third option, which we believe addresses the shortcomings of the second option while still preserving much of the simplicity of that approach. In our approach, we focus on those measures whose denominator is not based on all patients, but rather a subset of patients or actions such as the ordering of a lab test or the recording of a patient's request for an electronic copy of their discharge instructions. We believe that it is reasonable to require an EP, eligible hospital, or CAH to know how many unique patients they care for in the EHR reporting period and therefore maintain that denominator where it applies. The maintenance of measures using the patient as the denominator as encompassing all patients ensures a certain level of utilization of certified EHR technology by the EP, eligible hospital, or CAH. If a measure encompassing all patients has a threshold of 80 percent, then at least 80 percent of the patients' records must be maintained using certified EHR technology otherwise the EP, eligible hospital or CAH could not possibly meet the threshold. We note a number of measures included in the core set (such as "Record Demographics" and "Maintain an Up-to-Date Problem List") require an analysis of all unique patients, and not just patients whose records are maintained in certified EHR technology As discussed later the thresholds for maintaining an up-to-date problem list, medication list and medication allergy list are set at 80 percent. We believe these thresholds will create a baseline that ensures that EPs, eligible hospitals and CAHS are maintain a minimum percentage of patient records in certified EHR technology, and allows the provider community to advance toward the longer-term objective of capturing all patient data in certified EHR technology. For those measures that focus on the recording of actions or subset of patients to generate the denominator, we limit the measures to the information for patients whose records are maintained in certified EHR technology. We offer the following examples that relate to the e-prescribing and the provision of electronic copy of a patient's health information:

E-Prescribing Example: An EP orders 1,000 prescriptions for patients whose records are maintained in their certified EHR technology and 500 of those are transmitted electronically. The EP's denominator is 1,000 prescriptions, the numerator is 500 prescriptions, and their score is 50 percent. If the EP captures all 1,000 prescriptions as structured data the calculation could be automated by the certified EHR technology. If the EP does not capture all 1,000 prescriptions as structured data than more manual review may be required. We would define "records maintained in the certified EHR technology" to include any patient for which sufficient data was entered in the certified EHR technology to allow the record to be saved, and not rejected due to incomplete data. This may be a more limited set of data, but an EP, eligible hospital, or CAH would still have to have sufficient information in certified EHR technology to meet the measures associated with Stage 1 of meaningful use. For example, an EP might be able to save a record with just a patient's name, but as the record would lack any information this patient would count in the denominator, but not the numerator for many objectives. *Electronic Copy of a Patient's Health Information Provided upon Request Example:* An EP maintains 1,000 patient records in their certified EHR technology. Of those patients, fifty make requests for electronic copies of their health information. The EP provides all of the electronic copies within three business days. The denominator is 50, the numerator is 50, and the EP's percentage is 100 percent. If the EP captures requests for information as structured data, the calculation could be automated by the certified EHR technology. If the EP does not capture all the requests as structured data then more manual review may be required. We will likely revisit the methodology in Stage 2, where we would expect that at least basic EHR functionality has been implemented throughout the provider enterprise.

After consideration of public comments, we are limiting the following objectives and their associated measures to patients whose records are maintained using certified EHR technology. Specific information on how to determine inclusion in the denominator and numerator is discussed in the full discussion of each objective later in this final rule.

- Use CPOE
- Generate and transmit permissible prescriptions electronically (eRx)
- Record and chart changes in vital signs
- Record smoking status for patients 13 years old or older
- Record advance directives for patients 65 years old or older
- Incorporate clinical lab-test results into certified EHR technology as structured data
- Provide patients with an electronic copy of their health information (including diagnostic test results, problem list, medication lists, medication allergies), upon request
- Provide patients with an electronic copy of their discharge instructions at time of discharge, upon request
- Provide clinical summaries for patients for each office visit
- Send reminders to patients per patient preference for preventive/follow-up care

• Perform medication reconciliation at relevant encounters and each transition of care
• Provide summary care record for each transition of care and referral

Discussion on Meaningful Use Relationship to Certified EHR Technology

Comment: We received several comments requesting more specific information of how certified EHR technology will accomplish meaningful use. Some commenters expressed concern that patient clinical outcome measurement and improvement was not addressed explicitly in the requirements of certified EHR technology, but rather the requirements focused data entry and provision of data electronically.

Response: One of the main purposes of certifying EHR technology is to provide the EP, eligible hospital, or CAH with confidence that the technology will not be the limiting factor in the achievement of meaningful use. As such, all questions of how or will certified EHR technology be able to accomplish meaningful use broadly or at a specific objective level are best answered by ONC. CMS and ONC have worked closely since the enactment of the HITECH Act to ensure certification fully supports meaningful use. We explicitly link each meaningful use objective to certification criteria for certified EHR technology. The capabilities and standards that are certified are those that are used to meet the Stage 1 objectives of meaningful use. This way we ensure that certified EHR technology can accomplish meaningful use and meaningful use has the intended consequences of improving the healthcare priorities that make up meaningful use.

Discussion on the Relationship Between a Stage 1 Meaningful Use Objective and Its Associated Measure

Comment: Many commenters pointed out gaps between what they believed were the anticipated results from an objective and the results that are measured by the associated measure. A particular concern of some of these commenters is cases where the certification criteria supports the measure, but in their view fell short of supporting the objective.

Response: In the proposed rule, we attempted to draw a clear distinction between the objective and the associated measure. The objectives represent a wide range of activities some of which are commonplace for EPs, eligible hospitals, and CAHs using EHRs today, while others are ambitious goals even for the most sophisticated EHR user of today. For some objectives, all aspects of the objective are within the control of the EP, eligible hospital, or CAH. Other objectives rely on electronic exchange with partners or external infrastructure over which EPs, eligible hospitals and CAHs may have little influence and no control. We have attempted to accommodate these differences when we select the Stage 1 measure for a given objective. The measure more accurately reflects our view of what is feasible for Stage 1 than the objective itself. The certification criteria necessarily reflect more on the measure than the objective, as full compliance with an objective is beyond the scope of what can be accomplished for a significant number of EPs, eligible hospitals or CAHs in our timeframe for Stage 1. This rationale was our assertion in the proposed rule as the justification for measures that represent less than full achievement of their objective. This is further supported by some of the comments received although for any given objective the comments addressing that objective were a small fraction of the total number of comments received and views on how much a measure should allow for less than full achievement varied widely among those commenting. Although we received over 2,000 public comments, the number of specific comments addressing an individual objective were relatively small ranging from 40 to 200. We reviewed those comments and made specific changes to measures in the discussion of each objective. We reiterate that achievement of the measure always equates to achievement of the objective for Stage 1 of meaningful use. We also reiterate that certified EHR technology will always be able to support achievement of the measure by including the necessary functionalities. However, as with any technology, certified EHR technology is only as good as the information it contains and getting information into certified EHR technology is heavily dependent on processes developed by the EP, eligible hospital, or CAH. It is for this reason that all measures, even those for objective whose aspects are fully under the control of the EP, eligible hospital, or CAH, represent less than full fulfillment of the objective to varying degrees. As stated, for demonstrating meaningful use and any follow up review by CMS or the States, successfully meeting the associated measure always equates to successfully meeting the objective. Updated information on the associated measures including the numerator, denominator, thresholds and exclusions are as discussed in the following section. More detailed specifications and guidance on calculating the measures will be issued soon after the publication of this final rule.

As we described in the proposed rule, in discussing the objectives that constitute the Stage 1 criteria of meaningful use, we adopted a structure derived from recommendations of the HIT Policy Committee of grouping the objectives under care goals, which are in turn grouped under health outcomes policy priorities. We believe this structural grouping provides context to the individual objectives; however, the grouping is not itself an aspect of meaningful use. The criteria for meaningful use are based on the objectives and their associated measures.

We will now review the comments for each objective and measure and make changes to our original proposal or finalize as proposed.

(1) Objectives and Their Associated Measures

The HIT Policy Committee identified as its first health outcomes policy priority improving quality, safety, efficiency and reducing health disparities. The HIT Policy Committee also identified the following care goals to address this priority:

• Provide access to comprehensive patient health data for patient's healthcare team.
• Use evidence-based order sets and CPOE.
• Apply clinical decision support at the point of care.
• Generate lists of patients who need care and use them to reach out to those patients.
• Report information for quality improvement and public reporting.

As we explained in the proposed rule, for the last care goal, the HIT Policy Committee proposed the goal as "Report to patient registries for quality improvement, public reporting, etc." We have modified this care goal, because we believe that patient registries are too narrow a reporting requirement to accomplish the goals of quality improvement and public reporting. We note that the HIT Policy Committee's recommended objectives include the reporting of quality measures to CMS. We do not believe that CMS would normally be considered a "patient registry". We also removed the phrase "etc." We believe that the level of ambiguity created by "etc" is not appropriate for Federal regulations.

NPRM EP Objective: Use CPOE.

NPRM Eligible Hospital Objective: Use CPOE for orders (any type) directly

entered by the authorizing provider (for example, MD, DO, RN, PA, NP).

In the proposed rule, we described CPOE as entailing the provider's use of computer assistance to directly enter medical orders (for example, medications, consultations with other providers, laboratory services, imaging studies, and other auxiliary services) from a computer or mobile device. The order is also documented or captured in a digital, structured, and computable format for use in improving safety and organization. We said that for Stage 1 criteria, it will not include the electronic transmittal of that order to the pharmacy, laboratory, or diagnostic imaging center.

Comment: A majority of commenters recommended that EPs, eligible hospitals, and CAHs be allowed to defer CPOE for varying lengths of time ranging from 2012 to 2017. The commenters cited various reasons for deferment including that CPOE is an advanced clinical function that typically is the last process to be implemented due to the need to build the entire infrastructure to support the CPOE process. Other commenters noted an increased burden as if the orders cannot be transmitted, then duplicate paper orders will have to be produced which can lead to patient safety risks. Commenters also noted that CPOE appears in the latter stages of the Certification Commission for Healthcare Information Technology (CCHIT) EHR implementation process. A minority, but significant number of comments encouraged CMS to maintain CPOE for 2011. Those commenters in favor of retaining CPOE in 2011 believed that CPOE is a basic EHR feature that should be a standard offering of a certified EHR technology and is critical to improving quality of care through audit trails and alerting of delinquent order and/or delinquent deferred orders.

Response: We have determined that CPOE should be included in the core set of measures for Stage 1 in order to advance meaningful use. CPOE is a foundational element to many of the other objectives of meaningful use including exchange of information and clinical decision support. Many commenters, including several physician associations, the HIT Policy Committee and members of Congress through their endorsement of the HIT Policy Committee's recommendation, recommended that CPOE be required in Stage 1. CPOE has been a major initiative of US hospitals for over a decade and is a foundational functionality to many of the activities that further the health care policy priorities of meaningful use. For example, entering a medication order using CPOE allows the EHR to provide feedback on whether the medication may have adverse reactions with other medications the patient is taking. Another benefit of CPOE is that greatly simplifies the workflow process of inputting information into certified EHR technology in a structured way to populate the patient record.

Comment: Several commenters asked that we further specify who could enter the order using CPOE. Some commenters stated that only the ordering provider should be permitted to enter the order. These commenters stated that the ordering professional needs to be presented with clinical decision support at the time of entry and that the relay of an order to another individual is a source of potential error. Other commenters recommended that any licensed healthcare professional or indeed any individual (licensed or not) who receives the order from the ordering provider be permitted to perform the CPOE. The most common argument presented by these commenters is that this is currently how CPOE is handled in practice and a shift to entry by only the ordering provider would be too disruptive to workflow.

Response: We agree with those commenters who recommend allowing any licensed healthcare professional to enter orders using CPOE. We further refine this recommendation to be that any licensed healthcare professional can enter orders into the medical record per state, local and professional guidelines. While we understand that this policy may decrease opportunities for clinical decision support and adverse interaction, we believe it balances the potential workflow implications of requiring the ordering provider to enter every order directly, especially in the hospital setting. We disagree with commenters that anyone should be allowed to enter orders using CPOE. This potentially removes the possibility of clinical decision support and advance interaction alerts being presented to someone with clinical judgment, which negates many of the benefits of CPOE.

Comment: We received requests for clarification of this objective and what types of orders would meet this requirement.

Response: Our intent in the proposed rule was to capture orders for medications, laboratory or diagnostic imaging.

However, after careful consideration of the comments, we are adopting an incremental approach by only requiring medication orders for Stage 1. First, this supports the objectives of e-prescribing, drug-drug and drug-allergy checks. Second, this requirement will improve patient-safety because of the alignment of ordering medications in a structured data format will enable providers to create registries of patients for potential medical recalls, participate in surveillance for potential sentinel events and life-threatening side effects of new medications. Third, other measures involving transitions of care documents and summary of care document will require the entry of an active medication list. After consideration of the public comments received, we are finalizing the meaningful use objective for EPs at 495.6(d)(1)(i) and for eligible hospitals, and CAHs at 495.6(f)(1)(i) as "Use CPOE for medication orders directly entered by any licensed healthcare professional who can enter orders into the medical record per state, local and professional guidelines".

NPRM EP Measure: CPOE is used for at least 80 percent of all orders.

NPRM Eligible Hospital or CAH Measure: For eligible hospitals, CPOE is used for 10 percent of all orders.

In the proposed rule under CPOE, we discussed several concepts related to any associated measure of any objective that relies on a percentage calculation. These are the use of a percentage versus a count; setting a threshold for measures not requiring the electronic exchange of information; EPs practicing in multiple locations, some of which may not have certified EHR technology available, and the patient population to which the measure would apply. All except the last of these received extensive comments and are addressed in comment and response sections earlier in this section. In the proposed rule, we said that we would base the measures associated with the objectives on both the Medicare/Medicaid patient population and all other patients as well. We said that we believe it is unlikely that an EP would use one record keeping system for one patient population and another system for another patient population at one location and that requiring reporting differences based on payers would actually increase the burden of meeting meaningful use. We received very few comments on this aspect of our proposed rule and those that were received were generally supportive of this proposal. Therefore, we are finalizing the policy that all meaningful use measures be calculated based on the eligible provider's entire patient population (except where otherwise noted).

Comment: Nearly every commenter who commented on CPOE objected to our proposal to limit this measure to the

inpatient department (Place of Service Code 21) for the eligible hospital or CAH. Commenters stated that this limitation was inappropriate given the manner in which hospitals use EHR technology. To account for current practice, the commenters recommended the measures be expanded to include the emergency department (ED) (POS 23). Other reasons cited by commenters were that orders begin in the ED and remain open as the patient transitions to inpatient (for example, infusions), transitioning from paper documentation in the ED to electronic for subsequent care is unsafe as it can result in missed information, and/or transcription errors as the initial allergies and medications are entered into the system, significant data collection occurs in the ED that would not be included in the system, the exclusion of the ED creates disincentives to adoption and that the ED is a hybrid of temporal and functional services that are neither purely ambulatory nor inpatient.

Response: We agree with the commenters, and therefore are expanding this objective and its associated measure to the emergency room (POS 23). More information on place of service codes is available at *http://www.cms.gov/PlaceofServiceCodes/*. Furthermore, given the revision to the HITECH Act that changed hospital based eligible professionals to include only the setting of inpatient and emergency departments and all of the benefits of integration of these two departments spelled out by commenters we will adopt both departments when considering the measure of eligible hospitals or CAHs unless we find there are unique circumstances of an objective and its associated measure that would preclude the inclusion of the emergency department for meaningful use. This change does not affect the incentive payment calculation described in section II.B. of this final rule

Comment: We received several recommendations from commenters that the requirement of a percentage measurement for determining whether an EP, eligible hospital or CAH meets this objective should be replaced with a numerical count for CPOE and many other measures associated with percentage thresholds. The two main reasons given for switching to numerical counts are the burden of calculating the percentage if it cannot be done automatically using certified EHR technology and the assertion that if an EP, eligible hospital, or CAH does something a specific number of times it can be assumed that it is done often enough to constitute meeting the objective for Stage 1 of meaningful use.

Response: We have previously discussed the merits of a percentage based measure over a count based measure earlier in this section under the discussion of the burden created by the measures associated with the Stage 1 meaningful use objectives. However, we do try to seek a balance reducing the burden on providers while still ensuring the progression of meaningful use of certified EHR technology. In the next comment/response, we discuss changes to this measure that respond to concerns regarding burden.

Comment: Many commenters representing EPs as well as other commenters recommended lowering the CPOE threshold for EPs. Those commenters representing EPs generally recommended parity with eligible hospitals at 10 percent, while other commenters recommending a reduction generally recommended 50 percent.

Response: With CPOE, we had a unique situation of disparate thresholds between EPs and hospitals. This was due to recommendations prior to the proposed rule by the HIT Policy Committee. Eligible hospitals were granted an even lower threshold for this particular requirement. The reason given for this recommendation was that CPOE is one of the last functionalities to be implemented in the hospital setting. Commenters point out that holds true for EPs as well. As discussed above, given the limitations we are placing on the numerator and denominator for calculating the CPOE percentage, we no longer see a compelling reason to maintain disparate thresholds for the EPs and the eligible hospital/CAH.

Comment: Commenters have suggested that our proposal to count an action per unique patients could be applied to the measure for CPOE as well through a revised measure of "[a]t least 10% of unique patients seen by the EP or admitted to the eligible hospital or CAH have at least one order entered using CPOE." Commenters also pointed to CPOE as an example of a case where adequate lead time is necessary to implement certified EHR technology.

Response: At the heart of this new basis for this measure is the assumption that every patient would have at least one order that could be entered using CPOE. We believe this is a reasonable assumption for EPs, eligible hospitals and CAHs. According to analysis of 25,665 office-based visits in the 2005 National Ambulatory Medical Care Survey, 31 percent of visits included a new medication order, and 44 percent included at least one refill; 66 percent had any type of medication order. However, whether a medication order is appropriate for every practice could vary significantly by scope of practice; therefore, for the final rule, we are further limiting the denominator to patients with at least one medication listed in their medication list. We believe that this limitation will reduce providers' burden as compared to accounting for all orders. To further reduce the burden on providers, we also will limit the numerator to unique patients with at least one medication order entered using CPOE. Because we have reduced provider burden by limiting the denominator and numerator as discussed above, we believe that a corresponding increase in the CPOE threshold is appropriate for hospitals and CAHs. For stage 1, we are finalizing a threshold for CPOE of 30 percent for EPs, eligible hospitals, and CAHS. We believe this relatively low threshold, in combination with the limitation to only medication orders, will allow hospitals and EPs to gain experience with CPOE. However, as providers gain greater experience with CPOE, we believe it is reasonable to expect greater use of the function. As explained above, we also believe CPOE is foundational to many other objectives of meaningful use. For these reasons, we believe it is reasonable to expect providers to move to a 60 percent threshold at Stage 2 of meaningful use. Thus, for this measure, we are finalizing, for Stage 2 of meaningful use, that EPs, eligible hospitals and CAHs must meet a 60 percent threshold for CPOE. Therefore, we are finalizing a Stage 2 measure for CPOE at § 495.6(h) for EPs and § 495.6(i) for eligible hospitals and CAHs as "More than 60 percent of all unique patients with at least one medication in their medication list seen by the EP or admitted to the eligible hospital's or CAH's inpatient or emergency department (POS 21 or 23) during the EHR reporting period have at least medication one order entered using CPOE".

Comment: We received several comments asking for clarification of the term unique patient in response to various objectives.

Response: In the proposed rule, we state, "the reason we propose to base the measure on unique patients as opposed to every patient encounter, is that a problem list would not necessarily have to be updated at every visit." To further describe the concept of "unique patient" we mean that if a patient is seen by an EP or admitted to an eligible hospital's or CAH's inpatient or emergency department (POS 21 or 23) more than once during the EHR reporting period

then for purposes of measurement they only count once in the denominator for the measure. All the measures relying on the term "unique patient" relate to what is contained in the patient's medical record. Not all of this information will need to be updated or even be needed by the provider at every patient encounter. This is especially true for patients whose encounter frequency is such that they would see the same provider multiple times in the same EHR reporting period. Measuring by every patient encounter places an undue burden on the EPs, eligible hospitals and CAHs and may have unintended consequences of affecting the provision of care to patients merely to comply with meaningful use. Given the emphasis placed on the reporting burden by commenters as described in the beginning of this section, we believe that our concerns about the burden of measurement were well founded. We also continue to believe that the use of patient encounters could have unintended consequences on the provision of care by providers.

Comment: Some commenters asked whether the CPOE objective and associated measure require transmission of the order. Most of these commenters were opposed to such transmission in Stage 1 for various reasons such as the cost of developing interfaces between EHRs and laboratory and radiology service providers, the volume of transmissions would outpace the capacity to connect, HIE infrastructure is not yet mature enough and the lack of the requirement for non-eligible entities to participate (for example, laboratory vendors, pharmacies). Some commenters supported the inclusion of the transmission of the order as they believed this would provide better outcomes than if the transmission was not required.

Response: In the proposed rule, we stated, "For Stage 1 criteria, we propose that it will not include the electronic transmittal of that order to the pharmacy, laboratory, or diagnostic imaging center." While a few commenters recommended that this objective be changed to require transmission, given the large opposition to the objective and measure as proposed and the reasons commenters presented against transmission, it would not be responsive to the vast majority of commenters to expand this objective beyond our proposal. We agree with the commenters that said the HIE infrastructure is still being developed in most parts of the country. Furthermore, we note that in the hospital setting, most medication orders would not require transmission outside of the certified EHR technology of the hospital. For EPs, we already address transmission of the medication order in a separate objective for e-prescribing. Therefore, we finalize the proposal that the transmission of the order is not included in the objective or the associated measure for Stage 1.

After consideration of the public comments received, we are modifying the meaningful use measure for EPs at 495.6(d)(1)(ii) of our regulations and for eligible hospitals, and CAHs at § 495.6(f)(1)(ii) of our regulations to "More than 30 percent of all unique patients with at least one medication in their medication list seen by the EP or admitted to the eligible hospital's or CAH's inpatient or emergency department (POS 21 or 23) during the EHR reporting period have at least medication one order entered using CPOE".

We further specify that in order to meet this objective and measure, an EP, eligible hospital, or CAH must use the capabilities Certified EHR Technology includes as specified and standards at 45 CFR 170.304(a) for EPs and 45 CFR 170.306(a) for eligible hospitals and CAHs. The ability to calculate the measure is included in certified EHR technology. Thus, for example, an EP, eligible hospital or CAH must use a certified functionality in entering the medication order, and could not use a functionality that has been added by the EHR vendor, but that is outside the scope of the certification. We believe this rule is necessary to ensure that the EP, eligible hospital, or CAH is actually making meaningful use of "certified" EHR technology, and is not using non-certified technology. In addition, requiring providers to use functionalities that are certified will ensure the interoperability of information maintained in the EHR as providers will be able to operate according to consistent standards. We believe this standardization and consistency is key to realizing the goal of using EHR technology to improve health care.

As noted previously in this section under our discussion of the burden created by the measures associated with the Stage 1 meaningful use objectives, the only patients that are included in the denominator are those patients whose records are maintained using certified EHR technology.

To calculate the percentage, CMS and ONC have worked together to define the following for this objective:

- *Denominator:* Number of unique patients with at least one medication in their medication list seen by the EP or admitted to an eligible hospital's or CAH's inpatient or emergency department (POS 21 or 23) during the EHR reporting period
- *Numerator:* The number of patients in the denominator that have at least one medication order entered using CPOE.
- *Threshold:* The resulting percentage must be more than 30 percent in order for an EP, eligible hospital or CAH to meet this measure.

Exclusion: If an EP's writes fewer than one hundred prescriptions during the EHR reporting period they would be excluded from this requirement as described previously in this section in our discussion whether certain EP, eligible hospital or CAH can meet all Stage 1 meaningful use objectives given established scopes of practices. We do not believe that any eligible hospital or CAH would have less than one hundred prescriptions written for patients admitted to their inpatient and emergency departments during the EHR reporting period.

NPRM EP/Eligible Hospital Objective: Implement drug-drug, drug-allergy, drug-formulary checks

In the proposed rule, we did not elaborate on this objective.

Comment: Many commenters requested clarification as to what formulary the checks would be conducted against.

Response: Ideally, this check would be performed against any formulary that may affect the patient's welfare, inform the provider as to the best drug to prescribe or provide the patient and provider information on the drug's cost to both the patient and any third party payer. We recognize, however, that not every available third party payer, pharmacy benefit management, preferred drug list is standardized and made available for query through certified EHR technology. As we cannot through this regulation impose such a requirement on every developer of a formulary, we do not require that an EP/eligible hospital/CAH would have to accommodate every formulary in their implementation. However, at a minimum an EP/eligible hospital/CAH must have at least one formulary that can be queried. This may be an internally developed formulary or an external formulary. The formularies should be relevant for patient care during the prescribing process. To further address this, we expect that this measure will be expanded to be counted on a transactional basis for future stages.

Comment: Commenters suggested separating the objective into one objective for the clinical checks (drug-drug and drug-allergy) and a second objective for the administrative check

(drug-formulary). The rationale stated for the division was that clinical measures are focused on preventing medication errors versus encouraging consideration of cost when prescribing medications. In addition, the two types involve connections to different kinds of resources (drug safety information versus formulary information).

Response: We agree that these should be separate objectives for the reasons stated by the commenters and split them accordingly.

Comment: We received comments that these functions were really part of CPOE and electronic prescribing. Commenters most commonly noted that the drug formulary is part of electronic prescribing, as is currently the case under the Medicare e-Prescribing program.

Response: While we agree that the drug-drug, drug-allergy, drug-formulary checks, CPOE, e-prescribing meaningful use objectives all serve the same broader goal of ensuring accurate ordering and prescribing that takes into account all available information about the patient the functions and their readiness for Stage 1 of meaningful use are distinct. In terms of functions, CPOE and e-prescribing could be performed without the drug to drug, drug-allergy or drug-formulary checks. Similarly, it is not necessary for CPOE or e-Prescribing to take place in order for a drug to drug allergy check to occur. In terms of readiness and ability to measure progress for Stage 1 of meaningful use, CPOE and e-prescribing both are percentage based measures of a distinct activity that creates a record even in today's EHR's and paper patient records. The viewing and consideration of information presented to the provider on possible drug interactions is not a similarly distinct activity and does not currently create a record. So while the goal of these functionalities is similar, we believe drug-drug, drug-allergy, drug-formulary checks create unique concerns for implementation and demonstration of meaningful use, and therefore we maintain them as separate objectives.

Comments: Several commenters expressed concern of "alert fatigue" occurring with drug-drug interaction checks. Alert fatigue or otherwise known as "pop-up" fatigue is a commonly perceived occurrence with electronic medical records and clinical decision support tools in which alerts are presented to the user when a potential safety issue is identified by the system (for example, drug to drug interaction). The alerts, while beneficial in some cases, can result in a type of "fatigue" whereby the provider, after receiving too many alerts, begins to ignore and/or override the alerts. Receiving too many alerts can result in slowing the provider down rendering the alert useless. Commenters recommended some changes to the objective and associated measure to mitigate the risk of "alert fatigue" such as limiting the checks for interactions to only the most critical medications or allowing for adjustment of risk levels rather than an on/off functionality.

Response: We recognize "alert fatigue" is a potential occurrence with drug-drug and drug-allergy checks. However, meaningful use seeks to utilize the capabilities of certified EHR technology and any means to address alert fatigue requires a critical evaluation of each alert. We believe this is beyond the scope of the definition of meaningful use. We believe these checks are valuable and improve patient care and therefore do not remove them to address alert fatigue.

Comment: Commenters recommended food allergies be included in the drug-allergy check as some drugs contain ingredients that are contraindicated in individuals with certain allergies.

Response: We certainly agree that some allergies other than drug can interact with drugs; however, as we stated under our discussion of the objective "Medication Allergy List", the ability to identify other types of allergies in a useful way are not yet available to the extent necessary to require them in Stage 1 of meaningful use. This certainly does not preclude any EP, eligible hospital, or CAH from working with the designers of their certified EHR technology to include this functionality.

Comment: A commenter requested clarification as to whether the drug-drug, drug-allergy and drug-formulary checks are required for contrast media and imaging agents used by radiologists.

Response: We do not link the checks to specific drugs or agents. However, we note that is common practice in radiology to identify a patient's past drug and food allergies and take appropriate interventions if necessary. Therefore, the drug-drug, drug-allergy and drug-formulary checks would be appropriate prior to administration of contrast media and imaging agents to patients.

After consideration of the public comments received, we are finalizing the meaningful use objective for EPs at § 495.6(d)(2)(i) and for eligible hospitals and CAHs at § 495.6(f)(2)(i) as "Implement drug-drug and drug-allergy checks." We include this objective in the core set as it is integral to the initial or on-going management of a patient's current or future healthcare and would give providers the necessary information to make informed clinical decisions for improved delivery of patient care.

In addition, we are finalizing the meaningful use objective at for EPs at § 495.6(e)(1)(i) and for eligible hospitals and CAHs at § 495.6(g)(1)(i) of our regulations as "Implement drug-formulary checks."

NPRM EP/Eligible Hospital Measure: The EP/eligible hospital/CAH has enabled the drug-drug, drug-allergy, and drug-formulary check functionality

In the proposed rule we discussed that the capability of conducting automated drug-drug, drug-allergy, and drug-formulary checks is included in the certification criteria for certified EHR technology. This automated check provides information to advise the EP, eligible hospital, or CAH's decisions in prescribing drugs to a patient. The only action taken by the EP, eligible hospital, or CAH is to consider this information. Many current EHR technologies have the option to disable these checks and the certification process does not require the removal of this option. Therefore, in order to meet this objective, an EP, eligible hospital, or CAH would be required to enable this functionality and ensure they have access to at least one drug formulary. While this does not ensure that an EP, eligible hospital or CAH is considering the information provided by the check, it does ensure that the information is available.

After consideration of the public comments received on the objective, we believe the measure as proposed requires more clarity on the length of time for which the functionality must be enabled, which we clarify to be the entire EHR reporting period. Therefore, we are modifying the meaningful use measure for "Implement drug-drug and drug-allergy checks for the entire EHR reporting period" for EPs at § 495.6(d)(2)(ii) and for eligible hospitals and CAHs at § 495.6(f)(2)(ii) of our regulations to "The EP/eligible hospital/CAH has enabled this functionality for the entire EHR reporting period."

We further specify that in order to meet this objective and measure, an EP, eligible hospital, or CAH must use the capabilities Certified EHR Technology includes as specified and standards at 45 CFR 170.302(a). The ability to calculate the measure is included in certified EHR technology.

As this objective only requires that functionalities of certified EHR technology be enabled, we do not believe that any EP, eligible hospital or

CAH would need an exclusion for this objective and its associated measure.

After consideration of the public comments received on the objective, we are modifying the meaningful use measure for "Implement drug-formulary checks" for EPs at § 495.6(e)(1)(ii) and for eligible hospitals and CAHs at § 495.6(g)(1)(ii) of our regulations to "The EP/eligible hospital/CAH has enabled this functionality and has access to at least one internal or external formulary for the entire EHR reporting period."

We further specify that in order to meet this objective and measure, an EP, eligible hospital, or CAH must use the capabilities Certified EHR Technology includes as specified and standards at 45 CFR 170.302(b). The ability to calculate the measure is included in certified EHR technology.

The consideration of whether a drug is in a formulary or not only applies when considering what drug to prescribe. Therefore, we believe that any EP who writes fewer than one hundred prescriptions during the EHR reporting period should be excluded from this objective and associated measure as described previously in our discussion of whether certain EP, eligible hospital or CAH can meet all Stage 1 meaningful use objectives given established scopes of practices.

NPRM EP/Eligible Hospital Objective: Maintain an up-to-date problem list of current and active diagnoses based on ICD–9–CM–CM or SNOMED CT®

In the proposed rule, we described the term "problem list" as a list of current and active diagnoses as well as past diagnoses relevant to the current care of the patient.

Comment: Several commenters noted that the coding of problem lists at the point of care is outside the normal workflow process and would be disruptive.

Response: We did not and do not intend that coding of the diagnosis be done at the point of care. This coding could be done later and by individuals other than the diagnosing provider.

Comment: Commenters suggested including ICD–10–CM, the Diagnostic and Statistical Manual of Mental Disorders and explicitly allowing subsets of SNOMED CT®.

Response: We have removed the references to specific standards, as we believe specifying the relevant standards falls within the purview of ONC. For ONC's discussion of this functionality and the relevant standards including response to the above comment, we refer readers to ONC's final rule.

After consideration of the public comments received, we are modifying the meaningful use objective for EPs at § 495.6(d)(3)(i) and for eligible hospitals at § 495.6(f)(3)(i) of our regulations to "Maintain an up-to-date problem list of current and active diagnoses".

We include this objective in the core set as it is integral to the initial or on-going management of a patient's current or future healthcare and would give providers the necessary information to make informed clinical decisions for improved delivery of patient care.

NPRM EP/Eligible Hospital Measure: At least 80 percent of all unique patients seen by the EP or admitted to the eligible hospital or CAH have at least one entry or an indication of none recorded as structured data.

In the proposed rule, we introduced the concept of "unique patients" in the discussion of this objective. We received many comments requesting clarification of this term and address those in the comment and response section under our discussion of the CPOE measure.

Comment: A few commenters stated that "None" is not a clinically relevant term and should be replaced with no known problem or no problem.

Response: Our intent is not to dictate the exact wording of the specific value. Rather we are focused on the overall goal of making a distinction between a blank list because a patient does not have known problems and a blank list because either no inquiry of the patient has been made, or problems have been recorded through other means. As long as the indication accomplishes this goal and is structured data, we do not believe it is necessary to prescribe the exact terminology, thus leaving that level of detail to the designers and users of certified EHR technology.

Comment: Commenters requested clarification of the term "up-to-date".

Response: The term "up-to-date" means the list is populated with the most recent diagnosis known by the EP, eligible hospital, or CAH. This knowledge could be ascertained from previous records, transfer of information from other providers, or querying the patient. However, not every EP has direct contact with the patient and therefore has the opportunity to update the list. Nor do we believe that an EP, eligible hospital, or CAH should be required through meaningful use to update the list at every contact with the patient. There is also the consideration of the burden that reporting places on the EP, eligible hospital, or CAH. The measure, as finalized, ensures the EP, eligible hospital, or CAH has a problem list for patients seen during the EHR reporting period, and that at least one piece of information is presented to the EP, eligible hospital, or CAH. The EP, eligible hospital, or CAH can then use their judgment in deciding what further probing or updating may be required given the clinical circumstances.

Comment: Commenters stated that this measure should be replaced with either a simple attestation of yes, the problem list exists or the percentage of the measure should be replaced with a count. Alternatively, that the percentage should be maintained, but that the threshold should be lowered. Commenters generally supported this lowering of the threshold for one or all of the following reasons: It may require a change in traditional workflow; implementation and rollout of certified EHR technology creates unforeseeable system downtimes, complications, and the required clinical classification systems are not geared toward clinical information.

Response: For reasons discussed earlier in this section under our discussion of the burden created by the measures associated with the Stage 1 meaningful use objectives, we believe a percentage is a more appropriate measure than those suggested by comments. As this objective relies solely on a capability included as part of certified EHR technology and is not, for purposes of Stage 1 criteria, reliant on the electronic exchange of information, we believe it is appropriate to set a high percentage threshold. In the proposed rule, we set the percentage required for successful demonstration at 80 percent. Though full compliance (that is, 100 percent) is the ultimate goal, 80 percent seemed an appropriate standard for Stage 1 meaningful use as it creates a high standard, while still allowing room for technical hindrances and other barriers to reaching full compliance. We proposed 80 percent for every measure with a percentage that met the criteria of relying solely on a capability included as part of certified EHR technology and are not, for purposes of Stage 1 meaningful use criteria, reliant on the electronic exchange of information. Commenters generally agreed with this alignment; however, they disagreed that 80 percent sufficiently allows for "technical hindrances and other barriers". Commenters have highlighted numerous barriers towards successfully meeting an 80 percent threshold including technical barriers, barriers to implementation, applicability to all patients and all provider types eligible for the EHR incentives, patient requested exclusions and others. We address some of these with specific exclusions from the measure as

discussed previously in this section under our discussion of whether certain EP, eligible hospital or CAH can meet all Stage 1 meaningful use objectives given established scopes of practices. Although some technical issues exist, recording an up-to-date problem list remains largely within the individual provider's control and does not rely to a large degree on some external sender or receiver of structured electronic health data. In addition, there is a standard of practice for collecting the elements required for an up-to-date problem list. Although the commenters may be right that some clinical workflow needs to change, that is an integral part of meaningful use of EHRs. Although we do not expect all clinical workflow to adapt in Stage 1, there is an expectation that the clinical workflow necessary to support the Stage 1 priority of data capture and sharing will be in place in order to effectively advance meaningful use of EHRs. In addition, given the wide range of activities that must occur for meaningful use, we believe that most EPs, eligible hospitals and CAHs will have fully rolled out the capabilities required by this objective and the others with an 80 percent threshold prior to the start of the EHR reporting period thereby reducing the likelihood of unexpected system downtime and other implementation complications.

For situations in which there is an existing standard of practice and complying is fundamentally within the provider's control and where the objective relies solely on a capability included as part of certified EHR technology and is not, for purposes of Stage 1 criteria, reliant on the electronic exchange of information, for the final rule, we adopt, the reasonably high threshold of 80 percent. We believe existing infrastructure and expectations support this relatively high target. This foundational step of structured data capture is a prerequisite for many of the more advanced functionalities (for example, clinical decision support, clinical quality measurement, etc.) for which a solid evidence base exists for improved quality, safety and efficiency of care. Without having most of a provider's up-to-date problem lists in structured, electronic data, that provider will have major challenges in building more advanced clinical processes going forward.

For other situations, where the objective may not be fundamentally within the provider's control and is not an existing standard of practice, but where objective continues to rely solely on a capability that is included as part of certified EHR technology and is not reliant on electronic exchange of information, we are setting the percentage at 50 percent. This was the most commonly recommended percentage for these objectives that rely solely on a capability included as part of certified EHR technology and do not rely on the electronic exchange of information.

After consideration of the public comments received, we are modifying the meaningful use measure for EPs at § 495.6(d)(3)(i) and for eligible hospitals at § 495.6(f)(3)(i) of our regulations to "More than 80 percent of all unique patients seen by the EP or admitted to the eligible hospital's or CAH's inpatient or emergency departments (POS 21 or 23) have at least one entry or an indication that no problems are known for the patient recorded as structured data".

We further specify that in order to meet this objective and measure, an EP, eligible hospital, or CAH must use the capabilities Certified EHR Technology includes as specified and standards at 45 CFR 170.302(c). The ability to calculate the measure is included in certified EHR technology.

To calculate the percentage, CMS and ONC have worked together to define the following for this objective:

- *Denominator:* Number of unique patients seen by the EP or admitted to an eligible hospital's or CAH's inpatient or emergency department (POS 21 or 23) during the EHR reporting period.
- *Numerator:* The number of patients in the denominator who have at least one entry or an indication that no problems are known for the patient recorded as structured data in their problem list.
- *Threshold:* The resulting percentage must be more than 80 percent in order for an EP, eligible hospital, or CAH to meet this measure.

We do not believe that any EP, eligible hospital, or CAH would be in a situation where they would not need to know at least one active diagnosis for a patient they are seeing or admitting to their hospital. Therefore, there are no exclusions for this objective and its associated measure.

NPRM EP Objective: Generate and transmit permissible prescriptions electronically (eRx).

Comment: Some commenters requested clarification of the term "permissible prescription."

Response: As discussed in the proposed rule, the concept of only permissible prescriptions refers to the current restrictions established by the Department of Justice on electronic prescribing for controlled substances in Schedule II. (The substances in Schedule II can be found at *http://www.deadiversion.usdoj.gov/schedules/orangebook/e_cs_sched.pdf*). Any prescription not subject to these restrictions would be permissible. We note that the Department of Justice recently released a notice of proposed rulemaking that would allow the electronic prescribing of these substances; however, given the already tight timeframe for Stage 1 of meaningful use we are unable to incorporate any final changes that may result from that proposed rule. Therefore, the determination of whether a prescription is a "permissible prescription" for purposes of the eRx meaningful use objective should be made based on the guidelines for prescribing Schedule II controlled substances in effect when the notice of proposed rulemaking was published on January 13, 2010. We define a prescription as the authorization by an EP to a pharmacist to dispense a drug that the pharmacist would not dispense to the patient without such authorization. We do not include authorizations for items such as durable medical equipment or other items and services that may require EP authorization before the patient could receive them. These are excluded from the numerator and the denominator of the measure.

Comment: Some commenters recommended combining this objective and measure with other meaningful use objectives such as CPOE or the drug-drug, drug-allergy, drug-formulary checks

Response: We addressed these comments under our discussion of the CPOE objective.

After consideration of the public comments received, we are finalizing the meaningful use objective at 495.6(d)(4)(i) as proposed.

We have also included this objective in the core set. Section 1848(o)(2)(A)(i) of the Act specifically includes electronic prescribing in meaningful use for eligible professionals. This function is the most widely adopted form of electronic exchange occurring and has been proven to reduce medication errors. We included this objective in the core set based on the combination of the maturity of this objective, the proven benefits and its specific mention as the only example provided in the HITECH Act for what is meaningfully using certified EHR technology.

NPRM EP Measure: At least 75 percent of all permissible prescriptions written by the EP are transmitted electronically using certified EHR technology.

In the proposed rule, we said that while this measure does rely on the electronic exchange of information based on the public input previously discussed and our own experiences with e-prescribing programs, we believe this is the most robust electronic exchange currently occurring and proposed 75 percent as an achievable threshold for the Stage 1 criteria of meaningful use. Though full compliance (that is, 100 percent) is the ultimate goal, 75 percent seemed an appropriate standard for Stage 1 meaningful use as it creates a high standard, while still allowing room for technical hindrances and other barriers to reaching full compliance.

Comment: A majority of commenters commenting on this measure believe the 75 percent threshold is too high. Several issues were raised to explain why the commenters believe the threshold is too high. The first is that barriers to e-prescribing exist at the pharmacies and they must be brought into the process to ensure compliance on the receiving end. The second represents the most common barrier cited by commenters and that is patient preference for a paper prescription over e-prescribing. A patient could have this preference for any number of reasons cited by commenters such as the desire to shop for the best price (especially for patients in the Part D "donut hole"), the ability to obtain medications through the VA, lack of finances, indecision to have the prescription filled locally or by mail order and desire to use a manufacturer coupon to obtain a discount. Other barriers mentioned by individual commenters were the limited functionality of current e-prescribing systems such as the inability to distinguish refills from new orders. Suggestions for addressing these difficulties were either to lower the threshold (alternatives recommended ranged from ten to fifty percent) or replacing the percentage with a numerical count of 25 to align with the 2010 Medicare e-Prescribing program. Of the comments received that requested a specific lower threshold, about half of them suggested a 50 percent threshold, and about half suggested a threshold of 25 percent to 30 percent.

Response: We are finalizing the use of a percentage threshold for the reasons discussed previously in this section under our discussion of the burden created by the measures associated with the Stage 1 meaningful use objectives. In the proposed rule, we pointed out that we "believe this is the most robust electronic exchange currently occurring" to justify a high threshold of 75 percent given that this objective relies on electronic exchange. While we continue to believe this is the case, two particular issues raised by commenters caused us to reconsider our threshold. The first is the argument to include pharmacies in the Medicare and Medicaid EHR incentive programs to ensure compliance on the receiving end. Non-participation by pharmacies was presented by commenters as a major barrier to e-Prescribing. The second is patient preference for a paper prescription. In regards to the first argument, we do not have the ability to impose requirements on pharmacies through the HITECH legislation. However, prescriptions transmitted electronically have been growing at an exponential rate. The number of prescriptions sent electronically increased by 181 percent from 2007 to 2008 according to comments received. The number of pharmacies is also increasing rapidly. Yet this growth is uneven across the country and we wish to accommodate all EPs and do lower the threshold based on this argument. In regards to the second argument, we also have neither the ability nor the desire to limit patient preference. We considered allowing an EP to exclude from the denominator those instances where a patient requested a paper prescription. However, the burden of tracking when this occurs, the disincentive it would create for EPs to work with patients on establishing a relationship with a pharmacy and the hindrance to moving forward with e-prescribing lead us to address this through further reduction of the threshold as opposed to an exclusion. To address these concerns we are lowering the threshold for the e-prescribing measure to 40 percent. As pointed out by commenters, e-prescribing it is not yet standard of practice and there may be important external barriers beyond the provider's control. In particular, for e-prescribing, providers are dependent upon an external receiver of electronic health data, and there are significant variations depending on where the provider practices.

After consideration of the public comments received, we are modifying the meaningful use measure at § 495.6(d)(4)(ii) of our regulations to "More than 40 percent of all permissible prescriptions written by the EP are transmitted electronically using certified EHR technology".

We further specify that in order to meet this objective and measure, an EP, eligible hospital, or CAH must use the capabilities Certified EHR Technology includes as specified and standards at 45 CFR 170.304(b). The ability to calculate the measure is included in certified EHR technology.

As noted previously in this section under our discussion of the burden created by the measures associated with the Stage 1 meaningful use objectives, the prescriptions in the denominator are only those for patients whose records are maintained using certified EHR technology.

To calculate the percentage, CMS and ONC have worked together to define the following for this objective:

- *Denominator:* Number of prescriptions written for drugs requiring a prescription in order to be dispensed other than controlled substances during the EHR reporting period.
- *Numerator:* The number of prescriptions in the denominator generated and transmitted electronically.
- *Threshold:* The resulting percentage must be more than 40 percent in order for an EP, eligible hospital, or CAH to meet this measure.

As addressed in other objectives and in comment response, this objective and associated measure do not apply to any EP who writes fewer than one hundred prescriptions during the EHR reporting period, as described previously in this section under our discussion of whether certain EP, eligible hospital or CAH can meet all Stage 1 meaningful use objectives given established scopes of practices.

NPRM EP/Eligible Hospital Objective: Maintain active medication list.

Comment: Commenters requested clarification of the term "active medication list."

Response: We define an active medication list as a list of medications that a given patient is currently taking.

After consideration of the public comments received, we are finalizing this objective for EPs at § 495.6(d)(5)(i) and for eligible hospitals and CAHs at § 495.6(f)(4)(i) of our regulations as proposed.

We include this objective in the core set as it is integral to the initial or on-going management of a patient's current or future healthcare and would give providers the necessary information to make informed clinical decisions for improved delivery of patient care.

NPRM EP/Eligible Hospital Measure: At least 80 percent of all unique patients seen by the EP or admitted by the eligible hospital have at least one entry (or an indication of "none" if the patient is not currently prescribed any medication) recorded as structured data.

As with the objective of maintaining a problem list, we clarify that the indication of "none" should distinguish between a blank list that is blank

because a patient is not on any known medications and a blank list because no inquiry of the patient has been made. As long as the indication accomplishes this goal and is structured data, we do not believe it is necessary to prescribe the exact terminology, preferring to leave that level of detail to the designers and users of certified EHR technology.

Comment: Commenters stated that the measure should be replaced with a numerical count or attestation and that the threshold was too high for reasons including the lack of current electronic exchange of information, difficulty capturing information as structured data and lack of readiness of HIE infrastructure.

Response: We are finalizing the use of a percentage for the reasons discussed previously in this section under our discussion of the burden created by the measures associated with the Stage 1 meaningful use objectives. For the same reasons we explained under the discussion of up-to-date problem list, medication list is a functionality for which there is an existing standard of practice, it is foundational data capture function to make more advanced clinical processes possible, and complying is fundamentally within the provider's control. Therefore, we maintain the reasonably high threshold of 80 percent because the existing infrastructure and expectations support this target.

Comment: Commenters requested clarification as to whether the measure is limited to patients seen during the EHR reporting period.

Response: Yes, the measure applies to all unique patients seen by the EP or admitted to the eligible hospital's or CAH's inpatient or emergency departments (POS 21 or 23) during the EHR reporting period.

Comment: A few commenters expressed concern regarding the requirement that the entry must be recorded as "structured data." The commenters state that there may not be a code for over the counter, homeopathic or herbal products and that would penalize the provider even though the data is collected and recorded.

Response: The distinction between structured data and unstructured data applies to all types of information. Structured data is not fully dependent on an established standard. Established standards facilitate the exchange of the information across providers by ensuring data is structured in the same way. However, structured data within certified EHR technology merely requires the system to be able to identify the data as providing specific information. This is commonly accomplished by creating fixed fields within a record or file, but not solely accomplished in this manner. For example, in this case for it to be structured, if the patient is on aspirin, then that information should be in the system so that it can be automatically identified as a medication and not as an order, note, or anything else. An example of unstructured data would be the word aspirin, but no ability of the system to identify it as a medication.

Comment: A few commenters pointed out their current health information system vendor does not utilize RxNorm as its standard.

Response: This is a certification issue best addressed in the ONC final rule. We therefore have referred these comments to ONC for their consideration.

Comment: We received comments suggesting that this requirement could create additional privacy/security concerns for patients who do not want all physicians and their clinical staff to have access to their entire medication history. Examples provided included antidepressant, antipsychotic or erectile dysfunction medications.

Response: We are only concerned with medications that are known to the provider through querying the patient, their own records and the transfer of records from other providers. Meaningful use cannot address situations where the information is withheld from the EP, eligible hospital, or CAH by the patient or by other providers. We understand that some patients would prefer not to have their entire medical history available to all physicians and clinical staff. We also understand that laws in some states restrict the use and disclosure of information (including that related to medication) that may reveal that a patient has a specific health condition (for example, HIV). Recording data in a structured manner will facilitate the implementation of these preferences and policies in an electronic environment. It is easier to identify and potentially withhold specific data elements that have been recorded in a structured format than information recorded as free text.

After consideration of the public comments received, we are modifying the meaningful use measure for EPs at § 495.6(d)(5)(ii) and for eligible hospitals at § 495.6(f)(4)(ii) of our regulations to "More than 80 percent of all unique patients seen by the EP or admitted to the eligible hospital's or CAH's inpatient or emergency departments (POS 21 or 23) have at least one entry (or an indication that the patient is not currently prescribed any medication) recorded as structured data".

We further specify that in order to meet this objective and measure, an EP, eligible hospital, or CAH must use the capabilities Certified EHR Technology includes as specified and standards at 45 CFR 170.302(d). The ability to calculate the measure is included in certified EHR technology.

To calculate the percentage, CMS and ONC have worked together to define the following for this objective:

- *Denominator:* Number of unique patients seen by the EP or admitted to an eligible hospital's or CAH's inpatient or emergency departments (POS 21 or 23) during the EHR reporting period. A definition of unique patient is discussed under the objective of CPOE.
- *Numerator:* The number of patients in the denominator who have a medication (or an indication that the patient is not currently prescribed any medication) recorded as structured data.
- *Threshold:* The resulting percentage must be more than 80 percent in order for an EP, eligible hospital, or CAH to meet this measure. Detailed discussion of the more than 80 percent threshold can be found under the objective of maintaining an up-to-date problem list. We do not believe that any EP, eligible hospital or CAH would be in a situation where they would not need to know whether their patients are taking any medications. Therefore, there are no exclusions for this objective and its associated measure.

NPRM EP/Eligible Hospital Objective: Maintain active medication allergy list.

Comment: We received comments that limiting this list to medication allergies instead of all allergies was not consistent with efficient workflow and that all allergies should be housed in the same location within the EHR. Commenters also highlighted that lack of knowledge of other allergies such as latex and food allergies could lead to significant harm to the patient.

Response: We agree that information on all allergies, including non-medication allergies, provide relevant clinical quality data. However, while we agree that collecting all allergies would be an improvement, current medication allergy standards exists in a structured data format that may be implemented in Stage 1. We hope to expand this measurement to include all allergies as the standards evolve and expand to include non-medication allergies. We believe EP/eligible hospitals/CAHs should continue to document all allergies, regardless of origin, consistent with standard of care practice for that EP/eligible hospital/CAH. We encourage

them to work with the designers of their certified EHR technology to make this documentation as efficient and structured as possible.

Comment: A commenter inquired why the Substance Registration System Unique Ingredient Identifier (UNII) was not indicated for use until 2013 yet the measure requires the information to be recorded as structured data.

Response: Any standards for the structured vocabulary for medication allergies or other aspects of meaningful use are included in ONC final rule. Structured data does not require an established standard as discussed under the objective of maintaining a medication list.

Comment: We received a few comments requesting a definition of "allergy."

Response: We adopt the commonly held definition of an allergy as an exaggerated immune response or reaction to substances that are generally not harmful. The definition is derived from Medline Plus, a service of the U.S. National Library of Medicine and the National Institutes of Health.

After consideration of the public comments received, we are finalizing the meaningful use objective for EPs at 495.6(d)(6)(i) and for eligible hospitals and CAHs at 495.6(f)(5)(i) as proposed.

We include this objective in the core set as it is integral to the initial or on-going management of a patient's current or future healthcare and would give providers the necessary information to make informed clinical decisions for improved delivery of patient care.

NPRM EP/Eligible Hospital Measure: At least 80 percent of all unique patients seen by the EP or admitted to the eligible hospital have at least one entry (or an indication of "none" if the patient has no medication allergies) recorded as structured data.

Comment: Multiple commenters noted that "none" is not a typical value to describe the absence of allergies in medical documentation and should be replaced with "no known allergies (NKA)," "no known drug allergies (NKDA)" or "no known medication allergies (NKMA)."

Response: Our intent is not to dictate the exact wording of the specific value. Rather we are focused on the overall goal of making a distinction between a blank list that is blank because a patient does not have known allergies and a blank list because no inquiry of the patient has been made or no information is available from other sources. As long as the indication accomplishes this goal and is structured data, we do not believe it is necessary to prescribe the exact terminology, preferring to leave that level of detail to the designers and users of certified EHR technology.

Comment: Given that the measure is only a one time check for a single entry, one commenter questioned whether this measure truly constitutes maintenance of an "active" list.

Response: We agree that this measure does not ensure that every patient under the care of every EP, eligible hospital, or CAH has an active or up-to-date medication list. However, not every EP comes in contact with the patient, and therefore has the opportunity to update the list. Nor do we believe that an EP, eligible hospital, or CAH should be required through meaningful use to update the list at every contact with the patient. There is also the consideration of the burden that reporting places on the EP, eligible hospital, or CAH. The measure as finalized ensures that the EP, eligible hospital, or CAH has not ignored having a medication allergy list for patients seen during the EHR reporting period and that at least one piece of information on medication allergies is presented to the EP, eligible hospital, or CAH. The EP, eligible hospital, or CAH can then use their judgment in deciding what further probing or updating may be required given the clinical circumstances at hand. Therefore, we are maintaining the measure of a one-time check for a single entry.

Comment: Several commenters recommended eliminating the percentage measurement and allowing the provider to attest that active medication lists are maintained in the certified EHR technology.

Response: We are retaining a percentage for the reasons discussed previously in this section under our discussion of the burden created by the measures associated with the Stage 1 meaningful use objectives. For the same reasons we explained under the discussion of up-to-date problem list, medication-allergy list is a functionality for which there is an existing standard of practice, it is foundational data capture function to make more advanced clinical processes possible, and complying is fundamentally within the provider's control. Therefore, we maintain the reasonably high threshold of 80 percent because the existing infrastructure and expectations support this target.

After consideration of the public comments received, we are modifying the meaningful use measure for EPs at § 495.6(d)(6)(ii) and for eligible hospitals at § 495.6(f)(5)(ii) of our regulations to "More than 80 percent of all unique patients seen by the EP or admitted to the eligible hospital's or CAH's inpatient or emergency departments (POS 21 or 23) have at least one entry (or an indication that the patient has no known medication allergies) recorded as structured data".

We further specify that in order to meet this objective and measure, an EP, eligible hospital, or CAH must use the capabilities Certified EHR Technology includes as specified and standards at 45 CFR 170.302(e). The ability to calculate the measure is included in certified EHR technology.

To calculate the percentage, CMS and ONC have worked together to define the following for this objective:

- *Denominator:* Number of unique patients seen by the EP or admitted to an eligible hospital's or CAH's inpatient or emergency departments (POS 21 or 23) during the EHR reporting period. The definition of "a unique patient" is provided under the objective of CPOE.
- *Numerator:* The number of unique patients in the denominator who have at least one entry (or an indication that the patient has no known medication allergies) recorded as structured data in their medication allergy list.
- *Threshold:* The percentage must be more than 80 percent in order for an EP, eligible hospital, or CAH to meet this measure. Detailed discussion of the rationale more than 80 percent threshold can be found at under the objective of maintain an up-to-date problem list.

We do not believe that any EP, eligible hospital or CAH would be in a situation where they would not need to know whether their patients have medication allergies and therefore do not establish an exclusion for this measure.

NPRM EP Objective: Record the following demographics: Preferred language, insurance type, gender, race and ethnicity, and date of birth.

NPRM Eligible Hospital Objective: Record the following demographics: Preferred language, insurance type, gender, race and ethnicity, date of birth, and date and cause of death in the event of mortality.

In the proposed rule, we noted that race and ethnicity codes should follow current federal standards published by the Office of Management and Budget (*http://www.whitehouse.gov/omb/inforeg_statpolicy/#dr*). We maintain that proposal for the final rule.

Comment: Some commenters requested clarification of whether all of the demographics are required and under what circumstances no indication might be acceptable. Examples of acceptable circumstances from commenters include patient unwillingness to report, language

barriers, and requirement to report ethnicity and/or race contrary to some state laws.

Response: In general, we do require that all demographic elements that are listed in the objective be included in a patient's record in certified EHR technology. However, we do not desire, nor could we require, that a patient provide this information if they are otherwise unwilling to do so. Similarly, we do not seek to preempt any state laws prohibiting EPs, eligible hospitals, or CAHs from collecting information on a patient's ethnicity and race. Therefore if a patient declines to provide the information or if capturing a patient's ethnicity or race is prohibited by state law, such a notation entered as structured data would count as an entry for purposes of meeting the measure.

Comment: Several commenters asked for clarity on the definition of preferred language. Commenters also indicated that standards are in development (ISO 639 and ANSIX12N Claim/Reporting Transaction). Some commenters also requested that we include the requirement that the EP, eligible hospital or CAH also communicate with the patient in their preferred language.

Response: Preferred language is the language by which the patient prefers to communicate. This is just a record of the preference. We do not have the authority under the HITECH Act to require providers to actually communicate with the patient in his or her preferred language, and thus do not require EPs, eligible hospitals, and CAHs to do so in order to qualify as a meaningful EHR user as suggested by some commenters. In regards to standards, those would be adopted under the ONC final rule.

Comment: Some commenters also requested clarity on the definition of race and ethnicity. Some commenters noted an Institute of Medicine report entitled "Race, Ethnicity and Language Data: Standardization for Health Care Quality Improvement", which makes recommendations for how to ask questions to collect information and builds on the OMB Standards for language, race and ethnicity. Some commenters were also concerned about situations where the available choices were not granular enough, did not properly account for mixed race and ethnicity, and when the patient did not know their ethnicity.

Response: In the proposed rule, we said that EPs, eligible hospitals and CAHs, should use the race and ethnicity codes that follow current federal standards published by the Office of Management and Budget (*http://www.whitehouse.gov/omb/inforeg_statpolicy/#dr*). We continue to believe that these standards should be applied for purposes of implementing the Stage 1 meaningful use objectives, but will consider whether alternative standards or additional clarification would be appropriate for future stages of meaningful use criteria. We believe it is beyond the scope of the definition of meaningful use to provide additional definitions for race and ethnicity beyond what is established by OMB. In regards to patients who do not know their ethnicity, EPs, eligible hospitals, and CAHs should treat these patients the same way as patients who decline to provide the race or ethnicity, that is, they should identify in the patient record that the patient declined to provide this information.

Comment: Some commenters requested additional clarity on insurance type and others recommended the elimination of insurance type due to the complexity of insurance coverage, the function of the EHR as a medical tool and not a financial one, the volatility of this information due to patients frequently changing plans and concerns that information on a patient's insurance status will have a possible behavioral influence on the providers if this information were presented.

Response: Classifying insurance involves two distinctions—the source of coverage and insurance design. Source of coverage refers to the type of funding, such as public, private or self-pay. The design of the insurance program, such as health maintenance program (HMO), preferred provider organization (PPO), high-deductible consumer directed plan, fee-for-service, etc. Although not specified in the proposed rule, by insurance type we were referring to the first distinction—the source of funding for the insurance. We found two initiatives that could provide clarity on type. The first is the "Source of Payment Typology" developed by the Public Health Data Standards Consortium (*http://www.phdsc.org/standards/payer-typology.asp*). The consortium is currently in the process of working with States to implement this typology. The other initiative is established in the Uniform Data Set (UDS) collected by HRSA (*http://www.hrsa.gov/data-statistics/health-center-data/index.html*). The information in the UDS contains several caveats, however, that make it difficult to be used by all EPs, eligible hospitals and CAHs, and it does not accommodate patients with multiple types of insurance such as those dually eligible for Medicare and Medicaid or for those with both Medicare and MediGap coverage. Many EHRs that currently report on HRSA UDS Insurance Type standards account for multiple types of insurance by maintaining separate Reporting Insurance Groups and deriving the Insurance Type data from the primary insurance company on the encounter and mappings to that Insurance Type Reporting Group. This information is documented at the patient demographic level or the patient encounter/progress note. Given the complexity of defining insurance type and attributing it to patients in an agreed upon way, we are eliminating "insurance type" from this meaningful use objective.

Comment: A minority of commenters commenting on this objective recommended that CMS remove cause of death from the objective for eligible hospitals. The most common rationale is that the coroner or medical examiner officially determines cause of death when the case is referred to them. By law, the hospital cannot declare a cause of death in these cases.

Response: When a patient expires, in the routine hospital workflow, a clinician evaluates the patient to pronounce the patient's death. The clinician typically documents in the patient's chart, the sequence of events leading to the patient's death, conducts the physical exam and makes a preliminary assessment of the cause of death. We are requiring that eligible hospitals record in the patient's EHR the clinical impression and preliminary assessment of the cause of death, and not the cause of death as stated in any death certificate issued by the Department of Health or the coroner's office.

Comment: A few commenters requested inclusion of Advanced Directives under this objective as recommended by the HIT Policy Committee.

Response: We discuss advance directives separately in this final rule under its own objective.

Comment: Several commenters recommended requiring the submission of the demographic data to CMS.

Response: Stage 1 of meaningful use seeks to ensure certified EHR technology has the capability to record demographic information and that those capabilities are utilized. We believe the information recorded for this measure is for provider use in the treatment and care of their patients and therefore should not be submitted to CMS at this time.

Comment: Commenters suggested requiring the use of the demographic data from this measure to stratify clinical quality measure reporting and

the generation of reports for patient outreach and quality initiatives.

Response: While we encourage all providers and EHR developers to work together to develop reporting from the EHR system for use in the improvement of population and public health, for purposes of becoming a meaningful EHR user in Stage 1, we only require the recording of the specified demographics.

After consideration of the public comments received, we are modifying meaningful use objective at § 495.6(d)(7)(i) of our regulations for EPs to "Record the following demographics: Preferred language, gender, race and ethnicity, and date of birth".

After consideration of the public comments received, we are modifying meaningful use objective at § 495.6(f)(6)(i) of our regulations for eligible hospitals and CAHs to "Record the following demographics: Preferred language, gender, race and ethnicity, date of birth, and date and preliminary cause of death in the event of mortality in the eligible hospital or CAH".

We include this objective in the core set as it is integral to the initial or on-going management of a patient's current or future healthcare, recommended by the HIT Policy Committee and would give providers the necessary information to make informed clinical decisions for improved delivery of patient care.

NPRM EP/Eligible Hospital Measure: At least 80 percent of all unique patients seen by the EP or admitted to the eligible hospital have demographics recorded as structured data.

Comment: Commenters said that this should be replaced with a count or attestation or alternatively that the threshold was too high.

Response: We are maintaining a percentage for the reasons discussed previously in this section under our discussion of the burden created by the measures associated with the Stage 1 meaningful use objectives. However, we do reduce the threshold to over 50 percent as this objective meets the criteria of relying solely on a capability included as part of certified EHR technology and is not, for purposes of Stage 1 criteria, reliant on the electronic exchange of information. In contrast to our discussion of maintaining an up-to-date problem list/medication list/medication allergy list, we believe that some demographic elements (especially race, ethnicity and language) are not as straightforward to collect as objective data elements and therefore the standard of practice for demographic data is still evolving. As we believe this measure may not be within current standard of practice, we are adopting the lower threshold of 50 percent (rather than 80 percent).

After consideration of the public comments received, we are modifying the meaningful use measure for EPs at § 495.6(d)(7)(ii) and for eligible hospitals at § 495.6(f)(6)(ii) of our regulations to "More than 50 percent of all unique patients seen by the EP or admitted to the eligible hospital's or CAH's inpatient or emergency department (POS 21 or 23) have demographics recorded as structured data".

We further specify that in order to meet this objective and measure, an EP, eligible hospital, or CAH must use the capabilities Certified EHR Technology includes as specified and standards at 45 CFR 170.304(c) for EPs and 45 CFR 170.304(b) for eligible hospitals and CAHs. The ability to calculate the measure is included in certified EHR technology.

To calculate the percentage, CMS and ONC have worked together to define the following for this objective:

- *Denominator:* Number of unique patients seen by the EP or admitted to an eligible hospital's or CAH's inpatient or emergency departments (POS 21 or 23) during the EHR reporting period. A unique patient is discussed under the objective of CPOE.
- *Numerator:* The number of patients in the denominator who have all the elements of demographics (or a specific exclusion if the patient declined to provide one or more elements or if recording an element is contrary to state law) recorded as structured data.
- *Threshold:* The resulting percentage must be more than 50 percent in order for an EP, eligible hospital or CAH to meet this measure. Most EPs and all eligible hospitals and CAHs would have access to this information through direct patient access. Some EPs without direct patient access would have this information communicated as part of the referral from the EP who identified the service as needed by the patient. Therefore, we did not include an exclusion for this objective and associated measure.

NPRM EP/Eligible Hospital Objective: Record and chart changes in the following vital signs: height, weight and blood pressure and calculate and display body mass index (BMI) for ages 2 and over; plot and display growth charts for children 2–20 years, including BMI.

In the proposed rule, we described why we included growth charts in this objective. The reason given was that BMI was not a sufficient marker for younger children.

Comment: Over two thirds of the commenters commenting on this objective expressed concern about the applicability of the listed vital signs to all provider types and care settings.

Response: While this objective could be met by receiving this information from other providers or non-provider data sources, we recognize that the only guaranteed way for a provider to obtain this information is through direct patient interaction and that this information is not always routinely provided from the EP ordering a service because of a direct patient interaction. EPs who do not see patients 2 years or older would be excluded from this requirement as described previously in this section under our discussion of whether certain EP, eligible hospital or CAH can meet all Stage 1 meaningful use objectives given established scopes of practices. We would also allow an EP who believes that measuring and recording height, weight and blood pressure of their patients has no relevance to their scope of practice to so attest and be excluded.

Comment: Several commenters stated this objective should be removed in favor of clinical quality measures addressing BMI and blood pressure as these measures serve the same purpose and to require both is to require duplicative reporting.

Response: We disagree that these two measures serve the same purpose and therefore that the measure should be eliminated in favor of clinical quality measures addressing BMI and blood pressure. The objective included here seeks to ensure that information on height, weight and blood pressure and the extractions based on them are included in the patient's record. Furthermore, the objective seeks to ensure that the data is stored in a structured format so that it can be automatically identified by certified EHR technology for possible reporting or exchanging. We also note that the clinical quality measure focuses on a smaller subset of the patient population.

After consideration of the public comments received, we are finalizing the objective for EPs at 495.6(d)(8)(i) and for eligible hospitals and CAHs at 495.6(f)(7)(i) as proposed.

We include this objective in the core set as it is integral to the initial or on-going management of a patient's current or future healthcare and would give providers the necessary information to make informed clinical decisions for improved delivery of patient care.

NPRM EP/Eligible Hospital Measure: For at least 80 percent of all unique patients age 2 and over seen by the EP or admitted to the eligible hospital,

record blood pressure and BMI; additionally, plot growth chart for children age 2 to 20.

Comment: Commenters suggested replacement of the percentage measurement with a count or attestation or alternatively that that the threshold was too high.

Response: We are retaining a percentage for the reasons discussed previously in this section under our discussion of the burden created by the measures associated with the Stage 1 meaningful use objectives. However, we did reduce the threshold from 80 percent to greater than 50 percent as this objective meets the criteria of relying solely on a capability included as part of certified EHR technology and is not, for purposes of Stage 1 criteria, reliant on the electronic exchange of information. In addition, in contrast to the measures associated with maintaining an up-to-date problem list, an active medication list, and an active medication-allergy list, we believe that for many specialties, the current practice on vital signs may not be as well-established. We believe there may not be the same level of consensus regarding the relevance to patient care of vital signs for many specialties and the frequency with which such vital signs should be collected. Thus, for this measure, we adopt a percentage of 50 percent, rather than 80 percent.

Comment: Commenters requested clarification of the frequency and methods of recording the vital signs included in the measure.

Response: As discussed in the objective, the EP/eligible hospital/CAH is responsible for height, weight and blood pressure so we will focus our discussion on those items. First, we do not believe that all three must be updated by a provider at every patient encounter nor even once per patient seen during the EHR reporting period. For this objective we are primarily concerned that some information is available to the EP/eligible hospital/CAH, who can then make the determination based on the patient's individual circumstances as to whether height, weight and blood pressure needs to be updated. The information can get into the patient's medical record as structured data in a number of ways. Some examples include entry by the EP/eligible hospital/CAH, entry by someone on the EP/eligible hospital/CAH's staff, transfer of the information electronically or otherwise from another provider or entered directly by the patient through a portal or other means. The measure hinges on access of the information. Therefore, any EP/eligible hospital/CAH that sees/admits the patient and has access to height, weight and blood pressure information on the patient can put that patient in the numerator.

Comment: Some commenters requested clarification regarding the role of both the EP/eligible hospital/CAH and the certified EHR technology for the calculation of BMI and the plotting and displaying of growth charts. Other commenters recommended the exclusion of growth charts for certain patients and care settings. Another commenter also expressed the desire for the exclusion of growth charts for patients over the age of 18, inpatient care settings and more specifically, non-pediatric inpatient care settings.

Response: We believe a clarification is in order about which of the listed vital signs are data inputs to be collected by the EP/eligible hospital/CAH and which are calculations made by the certified EHR technology. The only information required to be inputted by the provider is the height, weight and blood pressure of the patient. The certified EHR technology will calculate BMI and the growth chart if applicable to patient based on age. As this requirement imposes no duty or action on the provider, we see no reason to limit its availability to any EP, eligible hospital, or CAH based on setting or other consideration. Concerns on presentation and interface are best left to designers of certified EHR technology and users. Finally, as certified EHR technology is able to automatically generate BMI and the growth chart if height and weight are entered as structured data we see no reason to include BMI and growth chart in the measure. We therefore will limit the final measure to data requiring provider data entry points.

Comment: A few commenters suggested that "reported height" by the patient should be acceptable when measurement is not appropriate such as in the case of severe illness.

Response: We agree and would allow height self-reported by the patient to be used.

After consideration of the public comments received, we are modifying the meaningful use measure for EPs at 495.6(d)(8)(ii) and for eligible hospitals § 495.6(f)(7)(ii) of our regulations to "For more than 50 percent of all unique patients age 2 and over seen by the EP or admitted to eligible hospital's or CAH's inpatient or emergency department (POS 21 or 23), height, weight and blood pressure are recorded as structured data".

We further specify that in order to meet this objective and measure, an EP, eligible hospital, or CAH must use the capabilities Certified EHR Technology includes as specified and standards at 45 CFR 170.302(f). The ability to calculate the measure is included in certified EHR technology.

As noted previously in this section under our discussion of the burden created by the measures associated with the Stage 1 meaningful use objectives, the percentage is based on patient records that are maintained using certified EHR technology. To calculate the percentage, CMS and ONC have worked together to define the following for this objective:

- *Denominator:* Number of unique patients age 2 or over seen by the EP or admitted to an eligible hospital's or CAH's inpatient or emergency department (POS 21 or 23) during the EHR reporting period. A unique patient is discussed under the objective of CPOE.
- *Numerator:* The number of patients in the denominator who have at least one entry of their height, weight and blood pressure are recorded as structure data.
