The Honorable Board of Supervisors
County of Los Angeles
383 Kenneth Hahn Hall of Administration
500 West Temple Street
Los Angeles, California 90012

Dear Supervisors:

**PROJECT NO. PRJ2022-004416-(1)
CONDITIONAL USE PERMIT NO. RPPL2022013731
ENVIRONMENTAL ASSESSMENT NO. RPPL2022005113
APPLICANT: EXTERA PUBLIC SCHOOLS
PROJECT LOCATION: 1059 SOUTH GAGE AVENUE
METRO PLANNING AREA
(FIRST SUPERVISORIAL DISTRICT) (3-VOTES)**

SUBJECT

This item is a call for review of the Regional Planning Commission's (Commission) decision to approve a Conditional Use Permit (CUP) authorizing a new charter school (Project), located at 1059 South Gage Avenue (Project Site) in the unincorporated East Los Angeles community (East Los Angeles). The applicant is Extera Public Schools (Extera). The Commission approved the CUP on April 17, 2024. On April 23, 2024, the Board of Supervisors (Board) initiated a call for review, directing the Executive Officer of the Board to schedule a public hearing regarding the Project on September 17, 2024.

IT IS RECOMMENDED THAT THE BOARD AFTER THE PUBLIC HEARING,

1. Close the public hearing for Project No. PRJ2022-004416-(1), consisting of CUP No. RPPL2022013731 and Environmental Assessment No. RPPL2022005113.
2. Indicate its intent to adopt the Mitigated Negative Declaration (MND) and Mitigation Monitoring and Reporting Program (MMRP) associated with Environmental Assessment No. RPPL2022005113,

finding that the Project will not have a significant impact on the environment with the implementation of the proposed mitigation measures.

3. Indicate its intent to uphold the Commission's approval of the Project and instruct County Counsel to prepare the necessary findings to uphold the Commission's approval of the Project.

PURPOSE/JUSTIFICATION OF RECOMMENDED ACTION

The Project Site is currently occupied by an existing church that includes two buildings and a surface parking lot. The CUP will establish a charter school for transitional kindergarten through 8th grade with a total 525 students and 38 employees (teachers and staff). The scope of work includes the demolition of one existing church building and the construction of a new two-story, 35-foot-tall school building with a total floor area of 23,400 square feet that will house 21 classrooms and offices. A new 6,276-square-foot outdoor playground deck will adjoin and take access from the new building's second story, with parking spaces underneath the deck adjoining the new building's first story. The deck will be open to the sky and be enclosed by an eleven-foot-and-seven-inch tall, perforated metal fence. The other existing church building will be repurposed to house a classroom, administrative offices, and a multi-purpose room. A total of 33 vehicle parking spaces and 90 bicycle parking spaces will be provided on-site. Of the 33 vehicle parking spaces, 31 will be reserved for teachers and staff and two will be reserved for parents and guardians.

In its call for review, the Board raised concerns regarding the following Project issues:

- a. Balancing access to educational facilities with the needs of nearby residences;
- b. Recognizing the health and welfare concerns arising from the Project's proximity to the Santa Ana Freeway; and
- c. Managing the potential increases in traffic on local streets resulting from Project implementation.

Public comments regarding the Project are documented in its administrative record (Attachment No. 3 – Commission Staff Report). The basis of opposition to the Project can be categorized into three main concerns: the proximity of the school to the Santa Ana Freeway, which will expose students to unhealthy air quality; impacts on local traffic patterns due to increased traffic on a daily basis to and from the school during peak hours; and ensuring rigorous enforcement of the Project's Conditions of Approval.

Air Quality

The Project Site is located in the South Coast Air Basin (SCAB), which is under the jurisdiction of the South Coast Air Quality Management District and the Southern California Association of Governments (SCAG). Both agencies are responsible for preparing and enforcing the regional Air Quality Management Plan (AQMP) and providing guidance on how the region can reach attainment for federal and state Clean Air Act requirements. The SCAB is in a non-attainment status for federal ozone standards, federal carbon monoxide standards, and state and federal particulate matter standards. In addition, according to the California Communities Environmental Health Screening Tool (CalEnviroScreen 4.0), East Los Angeles is within the 80th to 100th percentile of pollution burdened communities in the State. Therefore, all existing development and any new development located in this community will be subject to varying days of substandard air quality.

The Project's Initial Study states that the Project would contribute to local and regional air pollutant emissions during its construction (short-term) and operations (long-term). However, an analysis and modeling of the Project's emissions during construction and operations demonstrated that these emissions would not exceed the AQMP's daily thresholds for project-specific impacts that could subsequently cause cumulatively considerable increases in the emissions of pollutants for which the SCAB is designated as being in non-attainment. The Project will voluntarily commit to only using off-road construction equipment that complies with California Air Resource Board's Tier 4 Final emissions standards, with Tier 0 being the dirtiest uncontrolled off-road construction equipment and Tier 4 Final being the cleanest off-road construction equipment.

The Project's consolidation of three existing Extera schools that are operating on temporary leases at Los Angeles Unified School District campuses, two of which are located within East Los Angeles and are less than one mile from the Project Site, will result in the conversion of an existing church and its concrete surface parking lot into a new school site. The new school will be constructed in compliance with current building and safety standards, will be landscaped with native trees and drought-tolerant vegetation, and given its limited lot size, will prioritize the school's academic and physical education functions over vehicular parking in compliance with State Assembly Bill (AB) 2097. AB 2097 eliminated vehicular parking requirements for projects within a one-half mile radius of a major transit stop or a high-quality transit corridor. As such, the school would not be required to provide any parking.

Traffic and Transportation

The Project's Initial Study concludes that the Project will have a less than significant impact on the community's existing traffic patterns based on the State's California Environmental Quality Act (CEQA) Guidelines, SCAG's Regional Transportation Plan/Sustainable Communities Strategy, and the County Department of Public Works' Transportation Impact Analysis Guidelines. In addition, the Project's Vehicle Queuing Analysis was reviewed and cleared by the County Department of Public Works and includes an onsite queuing program that is built into the Project's Conditions of Approval.

The start and dismissal times of the Project's middle school and elementary school classes will be staggered in three intervals of 20 minutes each, thereby dispersing the arrival of traffic during drop-off and pick-up times. For example, the staggered start times will be from 7:00 a.m. to 7:20 a.m., from 7:20 a.m. to 7:40 a.m., and from 7:40 a.m. to 8:00 a.m. The onsite one-way driveway will accommodate 20 queued vehicles within two lanes: six vehicles queued in the drop-off/pick-up area and 14 vehicles queued onsite in advance of the drop-off/pick-up area. Based on an analysis using trip generation rates and queueing models, the Project will generate an average queue of 5.02 vehicles and a peak queue of 11 vehicles. This peak queue will be accommodated by the Project's onsite one-way driveway and drop-off/pick-up area, which will accommodate 20 queued vehicles onsite, and this peak queue will not result in a substantial number of vehicles queued along Gage Avenue.

For student drop-off and pick-up operations onsite, motorists will be directed to enter the school's drop-off/pick-up area by making a right turn from Gage Avenue, traveling through the onsite one-way driveway, completing the student drop-off or pick-up, and then exiting onto Eastman Avenue by making a right turn. Signs will be posted at the ingress and egress driveways indicating the turning restrictions, and traffic monitors will be posted at the entrance and exit of the school's vehicular gates to direct motorists at all times during the scheduled drop-off and pick-up hours. In addition, school staff will carpool from Extera's main office at 3626 East 5th Street (less than a one-mile distance) to the new school campus. The implementation of this queuing plan, which is included in the Project's

Conditions of Approval No. 28 through 34, is expected to ensure adequate traffic flow within the school site and on surrounding streets.

Conditions of Approval

If approved, the CUP would be valid for 15 years, after which the Project would undergo a reevaluation to ensure its continued compatibility with the surrounding environment. The following requirements are built into the CUP to ensure that the Project's Conditions of Approval are rigorously enforced:

Community Liaison: Conditions No. 39 and 40 require a designated community liaison to receive and respond to complaints about the school. The community liaison's contact information shall be provided to Staff and shall be published on the school's website no later than 60 days prior to the beginning of the school year. If the designated community liaison changes at any point during the CUP's grant term, the permittee shall update Staff and the school's website no later than seven (7) days after the change. The implementation of a designated community liaison will streamline the handling of community complaints and concerns about the school and will facilitate an expedited response to potential issues.

Annual Community Meeting. Conditions No. 41 through 43 require the school to hold a community meeting no later than 30 days after the conclusion of each school year. No later than 30 days before the community meeting, the school shall provide written notice of the meeting in English and Spanish to all residents occupying properties within a 1,000-foot radius of the Project Site and all community organizations that are active in East Los Angeles. No later than 30 days prior to distribution of the written notice, the school shall consult with Staff and representatives of the County Supervisor who represents East Los Angeles to obtain a list of all community organizations that are active in East Los Angeles. In addition, no later than 30 days prior to distribution of the written notice, a draft written notice shall be submitted to Staff for review and approval.

Prior to each community meeting, the school shall prepare an agenda and a written report in English and Spanish documenting the school's operations during the time prior to the meeting, and the written report shall include but not be limited to complaints submitted to the school. The implementation of annual meetings after each school year will enable community involvement in assessing the school's operations and determining where improvements can be made.

Periodic Reviews: Conditions No. 44 through 50 require Staff to schedule an annual "Discussion and Possible Action" item at a regularly scheduled Commission meeting after the end of every school year. Staff shall submit a written report to the Commission with pertinent information regarding the school's operations, including but not limited to information regarding the effectiveness of the CUP's conditions. The written report may also include a recommendation that the Commission initiate a public hearing to modify the CUP's conditions or revoke the CUP pursuant to County Code Chapter 22.238.

The conditions outlined above ensure rigorous monitoring of the school, facilitate streamlined communications through a dedicated community liaison for swift responses, and emphasize community engagement in school operations, with the goals of enhancing accountability, fostering the school's role as a community asset, and ensuring that it meets the needs and expectations of its neighbors.

Implementation of Strategic Plan Goals

Approval of the Project promotes County's Strategic Plan North Star 2 – Foster Vibrant and Resilient Communities, Focus Area F – Community Connections, Strategy III – School and Early Education Support, by increasing support for student and family school programming and infrastructure. Approval of the Project also supports the County's Board-directed priority on Child Protection. Schools are community-serving uses that provide youth with safe spaces to pursue academics and to also be engaged with their peers and mentors, be challenged, and be healthy. Schools can operate as vital nodes in neighborhoods to foster civic engagement and a sense of belonging, which is important in creating vibrant and resilient communities. Therefore, investing in schools is critical in transforming lives. However, the siting of schools should implement good planning practices and each school should be appropriate for its location.

FISCAL IMPACT/FINANCING

The County may be subject to litigation whether the Project is approved or denied. It is unknown at this time what the potential fiscal impact would be to the Department of Regional Planning, which will have to bear the cost of defending the Board's decision. Any construction costs and operating costs will be incurred by the permittee. Existing infrastructure and public services are adequate to accommodate the proposed Project, as confirmed by the County Departments of Public Works, Fire, Public Health, and Parks and Recreation.

FACTS AND PROVISIONS/LEGAL REQUIREMENTS

A duly noticed public hearing regarding the Project was held before the Commission on April 17, 2024. After the Staff's presentation, Chair O'Connor opened the public hearing and Extera's team provided presentations and answered questions regarding the Project and other Extera school locations. A member of Extera's team provided information regarding Extera's school campus consolidation, air quality and traffic impacts, design concepts, safe access, and community outreach. Extera's team also provided information regarding the school's programming, enrollment, and performance statistics.

A total of thirty-three individuals testified. Twenty-four individuals supported the Project, and nine individuals opposed the Project for various reasons, including the school's proximity to the Santa Ana Freeway, student safety, increases in traffic and noise, lead contamination, disagreement with the school performance statistics, and feedback that other types of land uses, such as grocery stores, green spaces, and small businesses, would be preferred for the Project Site. After public testimony, Extera's team rebutted with several points. First, the applicant stated that the Project is not a new school because Extera has operated in East Los Angeles for over a decade and the Project will consolidate three existing Extera school locations, two of which are located within East Los Angeles and are less than one mile of the Project Site. Second, the Project's footprint is diminutive in comparison to the existing church, which had up to 800 congregants and events that had up to 1,000 attendees. Third, the Project and its traffic analysis were cleared by the County Department of Public Works, which concluded that traffic impacts introduced by the Project are less than significant. Lastly, air quality is an acknowledged concern, and the surrounding area has a non-attainment status when it comes to air quality standards, but the school will have state of the art HVAC systems and will be programmed to have indoor recreation on days when the air quality is below the area's standard.

Commissioner Duarte-White expressed a concern regarding the Project's limited vehicle parking spaces and a lack of confidence in Extera enforcing staff carpooling and overall traffic reduction strategies. The applicant responded that the Project's conditions of approval are robust and include

periodic reviews, annual community meetings, and a community liaison to ensure that complaints are appropriately addressed in real time. The applicant stated that traffic concerns are not new to Extera, as they are familiar with this community and its traffic patterns, which is why they have several ancillary overflow lots, and that the enforcement of staff carpooling is practical and part of staff's employment contract. Lastly, the applicant acknowledged that enforcing traffic reduction strategies with parents and guardians is more complex, but that Extera will have a charter that parents and guardians will have to sign as a condition of student enrollment, and the charter will provide details regarding the agreed upon drop-off and pick-up times and onsite queueing. Commissioner Duarte-White responded that the Project Site is problematic due to it being an interior lot and not a corner lot, its proximity to Salazar Park Senior Center, and its lack of buffering. The Commissioner also expressed concerns about increased calls for service at the Project Site (law enforcement) if the Project were approved, and she made a motion to deny the CUP.

Commissioner Hastings asked Staff to compare the proposed project with the maximum build-out potential of a hypothetical residential infill project on the Project Site pursuant to Senate Bill 35, which allows residential projects to be approved through a streamlined process if they meet specified criteria. Staff responded that the maximum build-out potential of a hypothetical residential infill project would be 42 residential dwelling units, with a 35-foot height limitation similar to the Project, and that no parking would be required for a residential project pursuant to AB 2097. Commissioner Hastings stated he wanted to highlight that a hypothetical residential infill project on the Project Site would have similar parking constraints due to AB 2097. Commissioner Hastings acknowledged Extera's track record in the community and stated that the Project was a good use of the property. Commissioner Louie also applauded Extera's mission with the resources they are providing for the community's children.

Commissioner Duarte-White's motion to deny the CUP did not pass. Without further comments or questions, Commissioner Louie made a motion to adopt the Project's MND and MMRP and to approve the CUP. The vote was 4-1 in favor of the motion, resulting in approval of the Project with the last day to appeal being May 1, 2024.

ENVIRONMENTAL DOCUMENTATION

Staff completed an Initial Study to evaluate the potential environmental impacts of the above-mentioned Project. The Initial Study determined that the Project could potentially result in significant adverse effects on the environment, but those effects will be avoided or reduced to a less than significant level through Project design modifications and/or implementation of the MMRP, which details how compliance with its measures will mitigate or avoid potential adverse impacts to the environment from the Project. Therefore, Staff recommends that an MND is the appropriate environmental documentation under CEQA.

IMPACT ON CURRENT SERVICES (OR PROJECTS)

Action on the CUP is not anticipated to have a negative impact on current services or projects because the utilities onsite are existing and therefore there are no potential impacts on other existing services or projects.

CONCLUSION

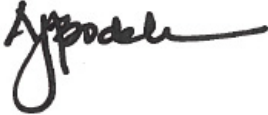

The Honorable Board of Supervisors

9/17/2024

Conditional Use Permit No. RPPL2022013731 for a New Charter School at South Gage Avenue and the Santa Ana (5) Freeway in East Los Angeles.

On April 17, 2024, the Los Angeles County Regional Planning Commission approved Conditional Use Permit (CUP) RPPL2022013731 on a split vote (4-1) which would authorize the construction of a new charter school for 525 students (transitional kindergarten ("TK") through 8th grade) and 38 staff members on a 1.17-acre site known as the Oasis of Mercy Church in East Los Angeles. The Project includes a two-story, 35-foot-tall building containing 21 classrooms with an attached, above-ground playground deck. A separate, existing building will be remodeled to accommodate a transitional kindergarten classroom, play area, teacher's lounge, conference room, offices, multipurpose room, and a new, outdoor lunch patio. The Project includes 33 vehicle parking spaces, 90 bicycle parking spaces, 8,699 square feet of landscaping including the planting of 35 trees. Entrance to the campus is from the east along South Gage Avenue with one-way vehicular traffic traveling west through the campus and exiting on South Eastman Avenue. Given the importance of balancing access to educational facilities with the needs of nearby residences, recognizing the health and welfare concerns arising from the project's proximity to the Santa Ana Freeway, its adjacency to existing residential uses and managing the potential increases in traffic on local streets resulting from project implementation, it is appropriate that the CUP be reviewed by the Board of Supervisors.

I THEREFORE MOVE THAT THE BOARD OF SUPERVISORS:

1. Initiate a call for review relating to Conditional Use Permit No. RPPL2022013731;
2. Direct the Director of Regional Planning to transmit the necessary information to the Executive Officer of the Board of Supervisors (Board); and
3. Direct the Executive Officer of the Board to set September 17, 2024 for public hearing.

###

MOTION

SOLIS

MITCHELL

HORVATH

HAHN

BARGER

LOS ANGELES COUNTY
DEPARTMENT OF REGIONAL PLANNING
FINDINGS OF THE REGIONAL PLANNING COMMISSION
AND ORDER
PROJECT NO. PRJ2022-004416-(1)
CONDITIONAL USE PERMIT NO. RPPL2022013731
ENVIRONMENTAL ASSESSMENT NO. RPPL2022005113

RECITALS

1. **HEARING DATE(S).** The Los Angeles County (“County”) Regional Planning Commission (“Commission”) conducted a duly-noticed public hearing on April 17, 2024, in the matter of Project No. PRJ2022-004416-(1), consisting of Conditional Use Permit No. RPPL2022013731 (“CUP”) and Environmental Assessment No. RPPL2022005113, which consists of an Initial Study (“IS”) and a Mitigated Negative Declaration (“MND”).

2. **HEARING PROCEEDINGS.** The Commission held a duly-noticed public hearing regarding the above mentioned items on April 17, 2024. LA County Planning staff (“Staff”) presented on the proposed charter school, and after, Chair O’Conner opened the public hearing to hear from the Extera Public School’s (“Extera”) team and from the public. From Extera’s Project team, Mr. Alfred Fraijo provided key highlights on Extera’s school campus consolidation, air quality and traffic impacts, design concepts, safe access and community outreach; and Extera’s CEO, Ms. Nicole Duquette expanded on the school’s programing, enrollment, and performance statistics.

In following, Commissioner Duarte-White asked Extera for clarification on school consolidation and which schools were in unincorporated LA County. Ms. Duquette responded that the Eastman and Lorena campuses were the ones in unincorporated areas and that the Project would result in a net loss of one charter school campus. Within a two-mile radius of the Project Site, there is a total of nine charter school and the addition of the Project will bring this number down to eight. Commissioner Duarte-White then asked how Extera will prioritize the students that live near the new campus. Ms. Duquette replied that 350 students will be transferred over from existing campuses, this will leave space for students who want to enroll from this community, and local families can submit an “Intent to Enroll” form to which the school’s administration will follow up and send them enrollment package. Commissioner Duarte-White reiterated her question regarding prioritization, and Ms. Duquette stated that unlike other high-profiled charter schools with waiting lists, Extera has never turned a family away and they do not anticipate this changing with a new campus. Commissioner Hastings then asked about onsite parking and incentives to use mass transit for Extera’s staff. Ms. Duquette clarified that Extera’s office is less than a mile (from the Project Site) away and the lot there already operates as a carpool lot for Extera staff to their rental campuses. Approximately, 70 percent of Extera staff are local to East Los Angeles, many already use public modes of transportation, and bus passes are provided to 100 percent of Extera students.

There was a total of 33 public testimonials in total. Twenty-four were in support of the Project, while 9 were opposed for reasons stemming from proximity to the freeway, student safety, increase in traffic and noise, lead contamination, and disagreement in school performance statistics, and feedback that other type of uses such as grocery stores, green spaces, small businesses would be a preferred land use for the site. After public testimony, Mr. Fraijo rebutted with a few points, stating the Project is not a new school as Extera has operated in this community for over a decade. Secondly, in comparison with the existing church, which had up to 800 congregants and events that had up to 1,000 attendees, the Project's footprint is diminutive. Thirdly, the Project and its traffic analysis was cleared by the Los Angeles County Public Works Land Development Division, concluding that traffic impacts introduced by the Project is less than significant, and lastly air quality is an acknowledged concern and the surrounding area has a non-attainment status when it comes to air quality standards, however the school is designed to have indoor recreation on days where the air quality is below the area's standard and will have state of the art HVAC systems.

Commissioner Duarte-White expressed concern regarding the Project's limited parking spaces and a lack of confidence in Extera enforcing staff carpooling and overall traffic reduction strategies. Mr. Fraijo responded that the Project's conditions of approval is robust and includes periodic reviews, annual community meetings, and a community liaison to ensure that complaints are appropriately addressed in real time. Traffic concerns are not new to Extera, they are familiar with this community and its traffic patterns, which is why they have several ancillary overflow lots. The enforcement of staff carpooling is practical and contractual via staff's employment contract. Mr. Fraijo mentioned the enforcement with parents and guardians is more complex, however Extera will have a charter that guardians will have to sign as a condition of student enrollment, that details an agreed upon drop off and pick up times and onsite queueing. Commissioner Duarte-White responded that the Project Site is problematic and due to it being squeezed into a neighborhood and not a corner, it's proximity to Salazar Park Senior Center, lack of buffering, and increased calls for service (law enforcement), she recommended Project denial.

Commissioner Hastings asked staff what the build out potential of a SB 35 residential project on property, to which Principal Planner, Elsa Rodriguez responded 42-units, with a 35-foot height limitation similar to the Project, with no parking required due to the site's proximity to Whittier Boulevard. One matter to note is that a Project's own lender may not provide financing if a certain amount of onsite parking is not provided. Commissioner Hastings wanted to highlight another potential land use on this site with similar parking constraints due to State Assembly Bill 2097 and this scenario is being observed with other projects. Commissioner Hastings recognized abuses by other charter schools and applauded Extera's track record in the community and finds the Project to be a good use of the property. Vice-Chair Louie, also applauded Extera's mission with the resources that they are providing for the community's children.

In conclusion, Commissioner Duarte-White's motion to deny the Project did not pass and Commissioner Louie lead the motion to adopt the Project's MND and Mitigation Monitoring and Reporting Program and approval of the CUP. Four Commissioners voted in favor and one was voted against for the approval of the Project.

3. **ENTITLEMENT(S) REQUESTED.** The Permittee, Extera Public Schools ("Permittee"), requests the CUP to authorize a new charter school ("Project") on a property located at 1059 South Gage Avenue in the unincorporated community of East Los Angeles ("Project Site"). In addition to day-to-day academic and physical education curriculum, planned special events will include:
 - a. Community and Parent-Teacher Association meetings and events (to occur monthly, during the day);
 - b. Teacher professional development meetings (to occur monthly, during the day)
 - c. Welcome Back Families and Students Event in August (once per year, during the day);
 - d. Heritage Month celebrations (monthly, during the day);
 - e. Academic Competition/Spelling Bee in October (during the evening);
 - f. Winter Showcase in December (once per year, during the evening);
 - g. Open House/Science Fair in April (once per year, during the day);
 - h. Talent Show in June (once per year, during the day); and
 - i. 5th grade and 8th grade promotions in June (once per year, during the day).

4. **ENTITLEMENT(S) REQUIRED.** The CUP is a request to authorize the construction and operation of a new charter school in the R-3 (Limited Density Multiple Residence) Zone pursuant to County Code Section 22.18.030 (Land Use Regulations for Zones R-A, R-1, R-2, R-3, R-4, and R-5).

5. **PREVIOUS ENTITLEMENT(S).** Plot Plan No. 26040, which was approved on March 27, 1973, authorized a church on the Project Site.

6. **LAND USE DESIGNATION.** The Project Site is located within the MD (Medium Density Residential) land use designation of the East Los Angeles Community Plan ("Community Plan") Land Use Policy Map.

7. **ZONING.** The Project Site is located in the East Side Unit No. 1 Zoned District and is currently zoned R-3 (Limited Density Multiple Residence). A CUP is required for a school in the R-3 Zone pursuant to County Code Section 22.18.030 (Land Use Regulations for Zones R-A, R-1, R-2, R-3, R-4, and R-5).

8. SURROUNDING LAND USES AND ZONING

LOCATION	COMMUNITY PLAN LAND USE POLICY	ZONING	EXISTING USES
SUBJECT PROPERTY	MD (Medium Density Residential, maximum density of 30 dwelling units per one net acre)	R-3 (Limited Density Multiple Residence) Zone	Church
NORTH	MD	R-3	Single and multi-family residences

EAST	MD	R-3	Single and multi-family residences
SOUTH	MD and P (Public Use)	R-3 and C-M-DP (Commercial Manufacturing - Development Program)	Single and multi-family residences
WEST	MD	R-3	Single and multi-family residences and the Los Angeles Community Hospital

9. PROJECT AND SITE PLAN DESCRIPTION.

A. Existing Site Conditions

The Project Site is 1.17 gross acres (50,994 square feet) in size and consists of two legal lots, which will be combined into one lot through a Certificate of Compliance that will be approved after the CUP is approved. The Project Site is irregular in shape with flat topography and is developed with an existing church that includes two buildings and a surface parking lot. Building 1 (6,993 square feet) is located at the southeast corner of the site and Building 2 (18,309 square feet) occupies a large area within the northern and central portions of the site. The Project proposes to demolish Building 2 and the surface parking lot to accommodate the proposed charter school.

B. Site Access

The Project Site is accessible via South Gage Avenue to the west and South Eastman Avenue to the east. Vehicular access to the Project will only be via the entrance on South Gage Avenue with a one-way driveway that exits onto South Eastman Avenue. This configuration provides efficient and safe ingress to and egress from the Project Site while maintaining fewer vehicular conflict points on both South Gage Avenue and South Eastman Avenue. There will be clearly posted signage requiring the one-way direction of traffic through the Project Site. As part of the charter school’s operational policy, staff and parents/caregivers will be provided with information regarding Project Site access prior to the start of the school year. Therefore, motorists who travel to the Project Site will be aware of the one-way direction of traffic.

The on-site drop-off/pick-up lane is approximately 26 feet in width, which is sufficient to accommodate two lanes of queued vehicles for a maximum of 20 vehicles at a time. In addition, there will be three staggered start and end times for the elementary grades and middle school grades to help disperse drop-off and pick-up traffic. The start and end times will be in 20-minute increments. For example, the start times will be from 7:00 a.m. to 7:20 a.m., from 7:20 a.m. to 7:40 a.m., and from 7:40 a.m. to 8 a.m. During the charter school’s staggered start and end times, the school’s staff will monitor and direct traffic by the school’s entrance on South

Gage Avenue and through the designated drop-off and pick-up area within the premises to ensure a smooth flow of traffic.

C. Site Plan

The Site Plan depicts a new two-story, 35-foot-tall school building with a total floor area of 23,400 square feet that will house 21 classrooms and offices. A 6,276-square-foot outdoor playground deck will be attached to the new building's second story. The deck will have an open top and will be enclosed by an eleven-foot-and-seven-inch tall perforated metal fence with a concrete base to prevent objects from coming over the fence and onto the abutting residential properties to the north of the Project Site. Building 1 will remain be remodeled to house a transitional kindergarten (TK) classroom, administrative offices, and a multi-purpose room. A 2,265-square-foot outdoor shade canopy providing coverage for an outdoor lunch area will be attached to Building 1.

A total of 33 parking spaces will be provided on-site. 16 of the 33 parking spaces will be provided in a tandem configuration. A total of 90 bicycle parking spaces (88 short-term and two long-term) will be placed in easily accessible areas on the Project Site. The charter school will be enclosed by six-foot-tall textured Concrete Masonry Unit walls along the Project Site's northern and southern property line and six feet tall wrought iron fences along the eastern and western property lines, which adjoin South Gage Avenue and South Eastman Avenue, respectively. In addition, a total of 35 trees (minimum 15-gallon size) and 8,699 square feet of landscaping will be installed throughout the Project Site. The proposed fencing and landscaping will buffer the charter school from the nearby residences, enhance safety for the charter school, and improve the aesthetic qualities of the neighborhood.

D. Parking

The Project will provide a total of 33 on-site parking spaces. 16 of the 33 parking spaces will be provided in a tandem configuration. Pursuant to AB 2097, the Project is not required to meet the County Code's minimum on-site parking requirements because the Project Site is located within one half-mile of a high-quality transit corridor ("HQTC"). Therefore, all 33 on-site parking spaces are being provided voluntarily.

10. CEQA DETERMINATION. Prior to the Commission's public hearing regarding the Project, an IS was prepared for the Project in compliance with the California Environmental Quality Act (Public Resources Code section 21000, et seq.) ("CEQA"), the State CEQA Guidelines, and the Environmental Document Reporting Procedures and Guidelines for the County. Based on the IS, County Department of Regional Planning ("LA County Planning") staff ("Staff") determined that an MND was the appropriate environmental document for the Project. The mitigation measures in the MND are necessary to ensure that the Project will not have a significant effect on the environment and are contained in the Mitigation Monitoring and Reporting Program ("MMRP") prepared for the Project.

11. COMMUNITY OUTREACH. Prior to the Commission’s public hearing regarding the Project, the Permittee conducted community outreach by canvassing the residential properties that immediately surround the Project Site along South Rowan Avenue, South Eastman Avenue, South Gage Avenue, and South Herbert Avenue. The Permittee went out on three separate dates, January 22, 2023, February 4, 2023, and February 24, 2024, and received petition signatures and letters in support of the Project. The petitions in support of the Project are attached to the Report to the Commission dated April 4, 2024, as Exhibit J – Applicant's Public Outreach Summary and Signed Petitions.

On March 16, 2024, the Permittee hosted an on-site open house where neighbors were invited to learn more about the proposed Project. A total of 12 neighbors attended the event and the Permittee reported that they engaged in constructive conversations. A more detailed summary of the public outreach conducted is attached to the Report to the Commission dated April 4, 2024, as Exhibit J – Applicant's Public Outreach Summary and Signed Petitions.

On March 6, 2024, the Permittee presented the Project to the Maravilla Community Advisory Committee (“MCAC”) to facilitate a dialogue and to listen to the community’s concerns about the Project. On April 2, 2024, the Permittee returned to the MCAC to continue the dialogue and address concerns raised during the March 6, 2024, presentation.

Although the MCAC understood that the conditions of Project approval, the one-way traffic circulation pattern, including the drop-off/pick-up lane, and the staggered start time and end times for the elementary grades and middle school grades, are intended to ensure that the Project is compatible with surrounding land uses and will not generate adverse impacts. However, they expressed concerns that these measures may not be effective in practice. In response, conditions of Project approval will require:

- a. A designated community liaison to receive and respond to complaints submitted to the charter school;
- b. Installation of two “Perimeter Identification” signs, one on the Project Site’s South Gage Avenue frontage and the other on the Project Site’s South Eastman Avenue frontage, which will include the name, telephone number, and email address for the designated community liaison as well as instructions for reporting violations to LA County Planning;
- c. Annual Community Meetings; and
- d. At least two Periodic Reviews.

The Periodic Reviews will be “Discussion and Possible Action” items at regularly scheduled Commission meetings. Before the Project Reviews, Staff will compile and review feedback obtained at the Annual Community Meetings as well as all complaints submitted to the charter school and to Staff and information regarding how those complaints were addressed. Staff may also conduct outreach to the surrounding residents, the Permittee, and other parties. During the Periodic Reviews, Staff will

make presentations regarding the information that will be compiled and reviewed and any other pertinent information regarding the effectiveness of the conditions of Project approval, including but not limited to the conditions of Project approval related to the one-way traffic circulation pattern, the drop-off/pick-up lane, and the staggered start time and end times for the elementary grades and middle school grades, to ensure that the Project is compatible with surrounding land uses and has not generated unanticipated adverse impacts. At the conclusion of the presentations, Staff may recommend that the Commission initiate a public hearing to modify the CUP's conditions or revoke the CUP pursuant to County Code Chapter 22.238.

12. PUBLIC COMMENTS. As noted in Finding 11, the Permittee provided Staff with a summary of public outreach conducted in the surrounding neighborhood and with local community organizations in the unincorporated community of East Los Angeles, which includes petitions in support of the Project. Prior to the publication of the Report to the Commission dated April 4, 2024, Staff received a total of two emails in opposition to the Project. The emails are attached to the Report to the Commission dated April 4, 2024, as Exhibit K – Public Correspondence.

1. Carlos Montes, in an email dated April 3, 2024, expressed opposition to the Project due to impacts on traffic and noise to the residential community.
2. The Eastside Padres Contra La Privatization, in an email dated April 3, 2024, expressed opposition to the Project due to an overconcentration of charter schools in a community when there is a decline in student enrollment, and notes that a new school is not a suitable use at the proposed location and is not compatible with the community.

13. AGENCY RECOMMENDATIONS.

County Department Comments and Recommendations

For the CUP:

1. The Department of Public Works, in a letter dated February 21, 2024, recommended that the Project proceed to a public hearing with required conditions of approval.
2. The Fire Department, in a letter dated January 18, 2024, recommended that the Project proceed to a public hearing with required conditions of approval.
3. The Department of Public Health, in a letter dated November 22, 2023, recommended that the Project proceed to a public hearing with required conditions of approval.
4. The Department of Parks and Recreation, in a letter dated February 7, 2024, recommended that the Project proceed to a public hearing.

Although Staff consulted with the Sheriff's Department regarding the IS/MND, they did not consult with the Sheriff's Department regarding the CUP because the Project is a

charter school and Staff does not typically consult with the Sheriff's Department regarding this type of CUP. The conditions required by the other County departments have been incorporated into the Project's conditions of approval.

For the IS/MND:

1. The Department of Public Works, in a letter dated February 21, 2024, cleared the IS/MND.
2. The Fire Department, in a letter dated February 16, 2024, cleared the IS/MND and provided conditions of approval for the CUP. The conditions have been incorporated into the Project's conditions of approval.
3. The Department of Public Health, in a letter dated November 22, 2023, cleared the IS/MND.
4. The Department of Parks and Recreation, in a letter dated November 21, 2024, cleared the IS/MND.
5. The Sheriff's Department, in a letter dated December 5, 2023, provided comments regarding the IS/MND. The comments provided context on the current staffing limitations at the East Los Angeles Sheriff's Station. The Sheriff's Department provided additional comments in a letter dated April 3, 2024. The comments reiterated the current staffing limitations at the East Los Angeles Sheriff's Station and also noted that the applicant needs to coordinate with the Sheriff's Contract Law Enforcement Bureau.

Other Agency Comments and Recommendations

1. The County Sanitation District, in a letter dated April 28, 2024, provided a comment requesting a correction to information in the IS/MND regarding the design capacity of the Joint Water Pollution Control Plant. The IS/MND incorrectly stated that the design capacity is 260 million gallons of wastewater per day, but the actual design capacity is 400 million gallons of wastewater per day.
2. The California Department of Transportation, in a letter dated April 2, 2024, provided recommendations to improve bicycle and road infrastructure in the vicinity of the Project Site.

Comment and recommendation letters received by County and State agencies are attached to this report to the Regional Planning Commission as Exhibit I – Agency Correspondences.

14. **LEGAL NOTIFICATION.** Pursuant to County Code Section 22.222.120, the community was properly notified of the public hearing by mail, newspaper (The East Los Angeles Tribune), and property posting. Additionally, the Project was noticed and case materials were available on LA County Planning's website. On February 22, 2024, a total of 135 Notices of Public Hearing were mailed to all property owners as identified on the County Assessor's record within a 500-foot radius from the Project Site, as well as four notices to those on the courtesy mailing list for the East Side Unit No. 1 Zoned District and to any additional interested parties.

GENERAL PLAN CONSISTENCY FINDINGS

15. **LAND USE POLICY.** The Commission finds that the Project is consistent with the General Plan and Community Plan goals and policies related to land use.

The General Plan sets forth policies for all the County's unincorporated communities regarding land use, urban form, open space, economic development, public services, and other topics related to land use. The Project supports the General Plan's guiding principle and goal to ensure that community services and infrastructure are sufficient to accommodate growth and provide the foundation for a strong and diverse economy.

The Community Plan sets forth additional policies that only apply to the unincorporated community of East Los Angeles. The Community Plan's MD land use designation is intended for single-family to multi-family residences and the Project is compatible with residential uses. The Project will provide a needed service to the surrounding community that will expand access to secondary education in the area and provide employment opportunities.

16. **GOALS AND POLICIES.** The Commission finds that the Project is also consistent with the following specific goals and policies of the General Plan and the Community Plan:

General Plan

Land Use Element

(Policy LU 5.4) Encourage community-serving uses, such as early care and education facilities...to locate near employment centers.

(Policy LU 5.5) Ensure that all households have access to a sufficient supply of quality early care and education and supervised school-age enrichment options for children from birth to age 13.

(Policy LU 10.9) Encourage land uses and design that stimulate positive and productive human relations and foster the achievement of community goals.

Public Services and Facilities Element

(Policy PS/F 7.3) Encourage adequate facilities for early care and education.

The Project involves a charter school, which is a new community-serving use in the unincorporated community of East Los Angeles that is located in proximity to employment centers, such as the commercial corridor along Whittier Boulevard to the north of the Project Site. The benefit of siting educational facilities and early care centers near employment centers is to provide the local workforce with educational options for their families, which will also reduce vehicle miles traveled if parents and caretakers are close to their child/children's or dependent's school facility.

The charter school is designed to have proper site circulation for vehicles, pedestrians, and students. The new charter school building façade is designed with a variety of

materials (painted stucco and metal, terra cotta, tile, glass, and perforated metal) and colors (light gray, teal, green, and orange) that will be replicated on the existing building that will be used for a TK classroom, administrative offices, and a multipurpose room to create a cohesive and attractive learning environment tied together by on-site landscaped open space areas and landscaped property frontages.

Community Plan

Community Plan Goal: To promote a more efficient delivery of services, such as health, public safety, and education, etc.

Community Plan Policy: Education – Encourage a balanced education program for East Los Angeles students and encourage the expansion of school facilities, especially in elementary schools.

The Project will assist in promoting a more efficient delivery of health and educational services in the unincorporated community of East Los Angeles because schools are intended to be safe physical environments where school aged children can pursue academics and physical fitness and wellbeing. The Project is consistent with the Community Plan policy above because it will provide both elementary and middle school educational services up to the 8th grade. The new school facilities are designed to provide a welcoming environment for students, staff, and the community.

ZONING CODE CONSISTENCY FINDINGS

17. **PERMITTED USE IN ZONE.** The Commission finds that the Project is consistent with the R-3 zoning classification because schools are permitted in such zone with an approved CUP pursuant to County Code Section 22.18.030 (Land Use Regulations for Zones R-A, R-1, R-2, R-3, R-4, and R-5).
18. **REQUIRED YARDS.** The Commission finds that the Project is consistent with the R-3 Zone's building setback requirements pursuant to County Code Section 22.18.040 (Development Standards for Residential Zones). The proposed school buildings will be set back from the Project Site's southern property line by nine feet to nine feet and five inches and will be set back from the Project Site's northern property line by five to 15 feet, which complies with the required five-foot side yard setbacks. The proposed school buildings will be set back by 15 feet along both the Project Site's eastern and western property lines adjoining South Gage Avenue and South Eastman Avenue, respectively, which complies with the required 15-foot front yard setbacks for a through-lot.
19. **HEIGHT.** The Commission finds that the Project is consistent with the standard identified in County Code Section 22.18.040. The proposed school building has a maximum height of 35 feet, which is within the 35-foot height limit for buildings in the R-3 Zone.
20. **PARKING.** The Commission finds that the Project is in consistent with the standard identified in County Code Section 22.112.070 (Required Parking Spaces), which

requires one parking space per classroom and one parking space for each five people in the largest assembly room based on the occupant load. The charter school will have a total of 22 classrooms, which requires 22 parking spaces, and the school's assembly room has an occupancy load of 160, which requires 32 parking spaces. Therefore, a total of 54 on-site parking spaces is required. However, under AB 2097, the Project is not required to comply with County Code Section 22.112.070 because the Project Site is located within one half-mile of a HQTTC. Specifically, the Project Site is within 1,000 feet of eastbound and westbound transit stops along the Whittier Boulevard corridor. The Whittier Boulevard corridor is served by Metro Local Line 18 ("Metro 18"). Metro 18 provides eastbound and westbound service from the Wilshire and Western D Line Station in the City of Los Angeles' Koreatown area to the Montebello Metrolink Station in the City of Montebello. Metro 18's current service frequency meets the Southern California Association of Government's threshold for 15 minutes or less in each direction. Therefore, Whittier Boulevard currently qualifies as an HQTTC. The Project will voluntarily provide 33 on-site parking spaces.

21. **SIGN.** The Commission finds that the Project is consistent with the standard identified in County Code Chapter 22.114 (Signs), which allows uses permitted in residential zones with a CUP to have wall signs with up to two square feet of area per each linear foot of building frontage. The new charter school will have a 120-foot-wide building frontage along South Gage Avenue and a 180-foot-wide building frontage along South Eastman Avenue. Therefore, the new charter school is allowed to have a combination of wall signs with up to 240 square feet in size along the South Gage Avenue building frontage and up to 360 square feet in size along the South Eastman Avenue building frontage. The Project proposes two wall signs with up to 94 square feet along the South Gage Avenue building frontage and one wall sign that is 40 square feet facing the South Eastman Avenue building frontage, which are all within the allowable wall sign area. The area of the "Perimeter Identification" signs required by the conditions of Project approval shall not be accounted for in the area permitted for signs in County Code Chapter 22.114 (Signs).
22. **TREE PLANTING.** The Commission finds that the Project is consistent with the standards identified in County Code Chapter 22.126.030 (Tree Requirements), which requires nonresidential projects to provide a minimum of three trees for every 10,000 square feet of newly developed lot area. The new charter school will occupy an area of approximately 50,994 square feet. Therefore, a total of 16 trees must be planted on-site. The Project will comply with these tree planting requirements because it will include a total of 35 new trees (minimum 15-gallon size) on the Project Site.
23. **FENCES AND WALLS.** The Commission finds that the Project is inconsistent with the wall standards identified in County Code Chapter 22.110.070 (Fences and Walls) because a six-foot-wall is proposed within the Project Site's front yard setback and the height limit for wall in this area is three and a half feet. However, County Code Title 22 allows for a modification of the setback requirements ("Yard Modification") to permit an increase in wall height pursuant to County Code Chapter 22.110.190 (Modifications Authorized) and County Code Chapter 22.196 (Yard Modifications). The Permittee will be required to submit a Yard Modification application to the County within one month

after the Project's approval date to satisfy County Code Title 22 requirements for fences and walls.

24. **COMMUNITY STANDARDS DISTRICT.** The Commission finds that the Project is consistent with the standards identified in the East Los Angeles Community Standards District ("CSD") pursuant to County Code Chapter 22.316. The CSD has a building height limitation of 35 feet for properties zoned R-3 and requires that a minimum of 50 percent of the required front yard setback area be landscaped. The Project's new two-story school building will have a maximum height of 35 feet and the Project will provide a total of approximately 8,699 square feet of landscaping throughout the Project Site. Some of this landscaping will be provided in at least 50 percent of the required front yard setbacks.

CONDITIONAL USE PERMIT FINDINGS.

25. **The proposed use will be consistent with the adopted General Plan for the area.** The Project is consistent with the guiding principles of the General Plan. Specifically, the Project supports the guiding principle and goal to ensure that community services and infrastructure are sufficient to accommodate growth and provide the foundation for a strong and diverse economy. The Project is in substantial conformance with the General Plan's goals and policies, as documented in Finding 16, above. The Project will revitalize and optimize an infill property. The Project will enhance the neighborhood with its thoughtful design features that are consistent with the existing residential community. The students' parents, families, and caretakers will live near the Project Site, which will result in a strengthened community.
26. **The Commission finds that the proposed use at the site will not adversely affect the health, peace, comfort, or welfare of persons residing or working in the surrounding area; will not be materially detrimental to the use, enjoyment, or valuation of property of other persons located in the vicinity of the site; and will not jeopardize, endanger, or otherwise constitute a menace to the public health, safety, or general welfare.** The Project is a TK through 8th grade charter school. This type of land use can be found in residential neighborhoods throughout the County that are similar to the neighborhood where the Project Site is located. The proposed Project is expanding the current square footage of buildings on the Project Site by 6,932 square feet and is renovating a currently underutilized church into a well-designed school that will enhance the current community. Residential neighborhoods are common locations for schools and can be viewed as an ideal location because those neighborhoods provide a safe environment that are near the students' families. The Project includes a cohesive building and site plan design, an appropriate vehicular access route with a one way traffic direction through the Project Site, and operational measures, such as staggered school start and end times, that will contribute to the general welfare of the community and ensure that the charter school is a good neighbor. The Project's location, size, height, and operation are not anticipated to adversely affect or diminish the value of neighboring properties.
27. **The Commission finds that the proposed site is adequate in size and shape to accommodate the yards, walls, fences, parking and loading facilities,**

landscaping and other development features prescribed in Title 22, or as is otherwise required in order to integrate said use with the uses in the surrounding area. The Project Site is a through-lot with two street frontages that is approximately 50,994 square feet (1.17 acres) in size, which allows for two separate buildings and sufficient space for play areas and a safe and efficient on-site pick-up/drop-off area, making it an ideal location for a school. As mentioned in the Zoning Code Consistency Findings above, the Project Site is adequate in shape and size to accommodate the applicable development features prescribed in Title 22.

28. **The Commission finds that the proposed site is adequately served by highways or streets of sufficient width and improved as necessary to carry the kind and quantity of traffic such use would generate, and by other public or private service facilities as are required.** The Project Site is located between two residential streets, each of which have two lanes and parking spaces along both sides of the street, and is one block north of Dennison Street, which is a primary thoroughfare that runs parallel to the Santa Ana Freeway (Interstate 5) and provides access to major arterials. The Project's design allows for an efficient drop-off/pick-up system that is anticipated to facilitate a smooth traffic flow that will minimally affect the neighboring residents because motorists will have quick access to Dennison Street.
29. The Commission finds that to ensure continued compatibility between the Project and the surrounding land uses, it is necessary to limit the CUP to 15 years.

ENVIRONMENTAL FINDINGS

30. The Commission finds that the MMRP, prepared in conjunction with the MND, identifies in detail how compliance with its measures will mitigate or avoid potential adverse impacts to the environment from the Project. The Commission further finds that the MMRP's requirements are incorporated into the Project's conditions of approval, and that approval of this Project is conditioned on the Permittee's compliance with the attached conditions of approval and the MMRP.
31. The Commission finds that the Permittee is subject to payment of the California Department of Fish and Wildlife fees related to the Project's effect on wildlife resources pursuant to section 711.4 of the California Fish and Game Code.

ADMINISTRATIVE FINDINGS

32. **LOCATION OF DOCUMENTS.** The location of the documents and other materials constituting the record of proceedings upon which the Commission's decision is based in this matter is at LA County Planning, 13th Floor, Hall of Records, 320 West Temple Street, Los Angeles, California 90012. The custodian of such documents and materials shall be the Section Head of the Metro Development Section, LA County Planning.

BASED ON THE FOREGOING, THE REGIONAL PLANNING COMMISSION CONCLUDES THAT:

- A. The proposed use with the attached conditions will be consistent with the adopted General Plan.
- B. The proposed use at the site will not adversely affect the health, peace, comfort or welfare of persons residing or working in the surrounding area, will not be materially detrimental to the use, enjoyment or valuation of property of other persons located in the vicinity of the site, and will not jeopardize, endanger or otherwise constitute a menace to the public health, safety or general welfare.
- C. The proposed site is adequate in size and shape to accommodate the yards, walls, fences, parking and loading facilities, landscaping and other development features prescribed in Title 22, or as is otherwise required in order to integrate said use with the uses in the surrounding area.
- D. The proposed site is adequately served by highways or streets of sufficient width and improved as necessary to carry the kind and quantity of traffic such use would generate, and by other public or private service facilities as are required.

THEREFORE, THE REGIONAL PLANNING COMMISSION:

- 1. Certifies that the MND for the Project was completed in compliance with CEQA and the State and County CEQA Guidelines related thereto; certifies that it independently reviewed and considered the MND and that the MND reflects the independent judgment and analysis of the Commission as to the environmental consequences of the Project; certifies that it considered the MMRP, finding that it is adequately designed to ensure compliance with the mitigation measures during Project implementation; determined that on the basis of the whole record before the Commission that there is no substantial evidence that the Project will have a significant effect on the environment; adopts the MND and finds that the MMRP is adequately designed to ensure compliance with the mitigation measures during Project implementation; and
- 2. Approves **CONDITIONAL USE PERMIT NO. RPPL2022013731**, subject to the attached conditions.

ACTION DATE: April 17, 2024

MG:CS:CN

March 4, 2024

c: Each Commissioner, Zoning Enforcement, Building and Safety

LOS ANGELES COUNTY
DEPARTMENT OF REGIONAL PLANNING

CONDITIONS OF APPROVAL
PROJECT NO. PRJ2022-004416-(1)
CONDITIONAL USE PERMIT NO. RPPL2022013731
ENVIRONMENTAL PLAN NO. RPPL2022005113

PROJECT DESCRIPTION

The project is a Conditional Use Permit ("CUP") to authorize the construction and operation of a new charter school for transitional kindergarten through eighth grade with a maximum enrollment of 525 students. The new charter school will include a new two-story school building containing 21 classrooms, offices, and an attached outdoor playground deck and an existing one-story building that will be remodeled to contain a classroom, administrative offices and a multi-purpose room, subject to the following conditions of approval:

GENERAL CONDITIONS

1. Unless otherwise apparent from the context, the term "Permittee" shall include the applicant, owner of the property, and any other person, corporation, or other entity making use of this grant.
2. This grant shall not be effective for any purpose until the Permittee, and the owner of the subject property if other than the Permittee, have filed at the office of the Los Angeles County ("County") Department of Regional Planning ("LA County Planning") their affidavit stating that they are aware of and agree to accept all of the conditions of this grant, and that the conditions of the grant have been recorded as required by Condition No. 6, and until all required monies have been paid pursuant to Condition No. 9, 10, and 13. Notwithstanding the foregoing, this Condition No. 2 and Condition Nos. 3, 4, 8, and 11 shall be effective immediately upon the date of final approval of this grant by the County.
3. The Permittee shall defend, indemnify, and hold harmless the County, its agents, officers, and employees from any claim, action, or proceeding against the County or its agents, officers, or employees to attack, set aside, void, or annul this permit approval, which action is brought within the applicable time period of Government Code section 65009 or any other applicable limitations period. The County shall promptly notify the Permittee of any claim, action, or proceeding and the County shall reasonably cooperate in the defense. If the County fails to promptly notify the Permittee of any claim, action, or proceeding, or if the County fails to cooperate reasonably in the defense, the Permittee shall not thereafter be responsible to defend, indemnify, or hold harmless the County.
4. In the event that any claim, action, or proceeding as described above is filed against the County, the Permittee shall within ten days of the filing make an initial deposit with LA County Planning in the amount of up to \$5,000.00, from which actual costs and expenses shall be billed and deducted for the purpose of defraying the costs or expenses involved in LA County Planning's cooperation in the defense, including but

not limited to, depositions, testimony, and other assistance provided to Permittee or Permittee's counsel.

If during the litigation process, actual costs or expenses incurred reach 80 percent of the amount on deposit, the Permittee shall deposit additional funds sufficient to bring the balance up to the amount of \$5,000.00. There is no limit to the number of supplemental deposits that may be required prior to completion of the litigation.

At the sole discretion of the Permittee, the amount of an initial or any supplemental deposit may exceed the minimum amounts defined herein. Additionally, the cost for collection and duplication of records and other related documents shall be paid by the Permittee according to County Code Section 2.170.010.

5. If any material provision of this grant is held or declared to be invalid by a court of competent jurisdiction, the permit shall be void and the privileges granted hereunder shall lapse.
6. Prior to the use of this grant, the Permittee, or the owner of the subject property if other than the Permittee, shall **record the terms and conditions** of the grant in the office of the County Registrar-Recorder/County Clerk (i.e. Recorder Office). In addition, upon any transfer or lease of the property during the term of this grant, the Permittee, or the owner of the subject property if other than the Permittee, shall promptly provide a copy of the grant and its conditions to the transferee or lessee of the subject property.
7. **This grant shall terminate on April 17, 2039.** Entitlement to use of the property thereafter shall be subject to the regulations then in effect. If the Permittee intends to continue operations after such date, whether or not the Permittee proposes any modifications to the use at that time, the Permittee shall file a new CUP application with LA County Planning, or shall otherwise comply with the applicable requirements at that time. Such application shall be filed at least 12 months prior to the expiration date of this grant and shall be accompanied by the required fee. In the event that the Permittee seeks to discontinue or otherwise change the use, notice is hereby given that the use of such property may require additional or different permits and would be subject to the then-applicable regulations.
8. This grant shall expire unless used within two (2) years from the date of final approval of the grant. A single one-year time extension may be requested in writing and with the payment of the applicable fee prior to such expiration date.
9. The subject property shall be maintained and operated in full compliance with the conditions of this grant and any law, statute, ordinance, or other regulation applicable to any development or activity on the subject property. Failure of the Permittee to cease any development or activity not in full compliance shall be a violation of these conditions. No provision of any easement of any other encumbrance on the property shall exempt the Permittee and/or property owner from compliance with these conditions and applicable regulations. Inspections shall be made to ensure compliance with the conditions of this grant as well as to ensure that any

development undertaken on the subject property is in accordance with the approved site plan on file. The Permittee shall deposit with the County the sum of **\$3,528.00**, which shall be placed in a performance fund and be used exclusively to reimburse LA County Planning for all expenses incurred while inspecting the premises to determine the Permittee's compliance with the conditions of this grant. The fund provides for **eight (8)** inspections. Inspections may be unannounced and may be conducted utilizing any available technologies, including, but not limited to, unmanned aircraft systems (UAS).

If additional inspections are required to ensure compliance with the conditions of this grant, or if any inspection discloses that the subject property is being used in violation of any one of the conditions of this grant, the Permittee shall be financially responsible and shall reimburse LA County Planning for all additional enforcement efforts necessary to bring the subject property into compliance. The amount charged for additional inspections shall be \$441.00 per inspection, or the current recovery cost established by LA County Planning at the time any additional inspections are required, whichever is greater.

10. Within five (5) working days from the day after your appeal period ends on **May 1, 2024**, the Permittee shall remit processing fees at the County Registrar-Recorder/County Clerk Office (i.e. County Clerk Office), payable to the County of Los Angeles, in connection with the filing and posting of a Notice of Determination ("NOD") for this project and its entitlements in compliance with section 21152 of the Public Resources Code. Unless a Certificate of Exemption is issued by the California Department of Fish and Wildlife pursuant to section 711.4 of the California Fish and Game Code, the Permittee shall pay the fees in effect at the time of the filing of the NOD, as provided for in section 711.4 of the Fish and Game Code, currently **\$2,991.75** (\$2,916.75 for a Negative Declaration or Mitigated Negative Declaration plus \$75.00 processing fee). No land use project subject to this requirement is final, vested or operative until the fee is paid.
11. The Permittee shall comply with all mitigation measures identified in the Mitigation Monitoring Program ("MMP"), which are incorporated by this reference as if set forth fully herein.
12. Within 30 days of the date of final approval of the grant by the County, the Permittee shall record a covenant and agreement, which attaches the MMP and agrees to comply with the mitigation measures imposed by the Mitigated Negative Declaration for this project, in the Recorder's Office. Prior to recordation of the covenant, the Permittee shall submit a draft copy of the covenant and agreement to LA County Planning for review and approval. As a means of ensuring the effectiveness of the mitigation measures, the Permittee shall submit annual mitigation monitoring reports to LA County Planning for approval or as required. The reports shall describe the status of the Permittee's compliance with the required mitigation measures.
13. The Permittee shall deposit an initial sum of **\$6,000.00** with LA County Planning within thirty (30) days of the date of final approval of this grant in order to defray the cost of reviewing and verifying the information contained in the reports required by

the MMP. The Permittee shall replenish the mitigation monitoring account if necessary until all mitigation measures have been implemented and completed.

14. Notice is hereby given that any person violating a provision of this grant is guilty of a misdemeanor. Notice is further given that the Regional Planning Commission ("Commission") or a Hearing Officer may, after conducting a public hearing, revoke or modify this grant, if the Commission or Hearing Officer finds that these conditions have been violated or that this grant has been exercised so as to be detrimental to the public's health or safety or so as to be a nuisance, or as otherwise authorized pursuant to County Code Chapter 22.238.
15. All development pursuant to this grant must be kept in full compliance with the County Fire Code to the satisfaction of the County Fire Department.
16. All development pursuant to this grant shall conform with the requirements of the County Department of Public Works to the satisfaction of said department.
17. All development pursuant to this grant shall comply with the requirements of Title 22 of the County Code and of the specific zoning of the subject property, unless specifically modified by this grant, as set forth in these conditions, including the approved Exhibit "A," or a revised Exhibit "A" approved by the Director of LA County Planning ("Director").
18. The Permittee shall maintain the subject property in a neat and orderly fashion. The Permittee shall maintain free of litter all areas of the premises over which the Permittee has control.
19. All structures, walls and fences open to public view shall remain free of graffiti or other extraneous markings, drawings, or signage that was not approved by LA County Planning. These shall include any of the above that do not directly relate to the business being operated on the premises or that do not provide pertinent information about said premises. The only exceptions shall be seasonal decorations or signage provided under the auspices of a civic or non-profit organization.

In the event of graffiti or other extraneous markings occurring, the Permittee shall remove or cover said markings, drawings, or signage within 48 hours of such notification, weather permitting. Paint utilized in covering such markings shall be of a color that matches, as closely as possible, the color of the adjacent surfaces.

20. The subject property shall be developed and maintained in substantial conformance with the plans marked Exhibit "A." If changes to any of the plans marked Exhibit "A" are required as a result of instruction given at the public hearing, **one digital copy of a modified Exhibit "A"** shall be submitted to LA County Planning by **June 16, 2024**.
21. In the event that subsequent revisions to the approved Exhibit "A" are submitted, the Permittee shall submit a digital copy of the proposed plans to the Director for review and approval. All revised plans must substantially conform to the originally approved

Exhibit "A." All revised plans must be accompanied by the written authorization of the property owner(s) and applicable fee for such revision.

22. The conditions of this grant shall always be retained on the premises and shall be immediately produced upon request by any County Sheriff or any LA County Planning Zoning Enforcement inspector. The manager and all employees of the facility shall be knowledgeable of the conditions herein. Violation of the conditions herein may subject the use to the provisions of County Code Chapter 22.238 (Modifications and Revocations).

PROJECT SITE-SPECIFIC CONDITIONS

23. This grant shall authorize the construction and operation of a new charter school for grades transitional kindergarten through eighth grade.
24. Exterior lighting shall be directed away from neighboring residences to prevent direct illumination and glare.
25. The Permittee shall submit a Yard Modification application to LA County Planning within one (1) month after the Project's approval date for the purpose of requesting an increase in the maximum wall height in the required side yard setbacks from six (6) feet to eight (8) feet. The existing six-foot-tall solid walls in the required side yard setbacks that adjoin residences along the Project Site's western and eastern property lines shall be increased to eight (8) feet in height.
26. Exterior loudspeakers shall not be pointed towards adjacent residences and shall only be used to mark the beginning and end of class periods and during emergency situations.
27. The Permittee shall install an onsite security camera system to reduce opportunities for criminal activities. The security camera system shall be installed prior to the charter school's opening date. The Permittee shall provide documentation that the security camera system has been installed to the Director and to the East Los Angeles Sheriff's Station no later than seven (7) days after installation.
28. The Permittee shall install two "Perimeter Identification" signs, one on the Project Site's South Gage Avenue frontage and the other on the Project Site's South Eastman Avenue frontage, in compliance with the following requirements:
 - a. Location. The "Perimeter Identification" signs shall be permanently affixed to a building or wall that is visible, and with text that is legible from, the public right-of-way for pedestrians, and no higher than eight (8) feet from the ground measured vertically from the base of the sign. The "Perimeter Identification" sign shall not be a freestanding sign or a portable sign.
 - b. Size. Each "Perimeter Identification" sign shall have a minimum sign area of four (4) square feet and a maximum sign area of nine (9) square feet. The area of the "Perimeter Identification" signs shall not be accounted for in the area permitted for signs in County Code Chapter 22.114 (Signs).

- c. Content. Each "Perimeter Identification" sign shall permanently display the charter school's hours of operation and the name, telephone number, and email address for the designated community liaison, whose role is described in condition 39, below. If the designated community liaison changes at any point during the CUP's grant term, the Permittee shall update the name, telephone number, and email address on the sign no later than seven (7) days after the change. If the Each "Perimeter Identification" sign shall also include the charter school's name unless another sign on the same frontage that is clearly visible from the public right-of-way includes the charter school's name. Each "Perimeter Identification" sign shall also include instructions for reporting violations to LA County Planning. Information for reporting violations shall include the following text in English and translated into Spanish, or updated text subsequently provided by LA County Planning: "To report a violation to the Los Angeles County Department of Regional Planning, call 213-974-6411, Monday – Thursday, 7 a.m. to 6 p.m., call 2-1-1 at any time, or email info@planning.lacounty.gov."
29. Signage shall conform with the approved Exhibit "A."
30. Landscaping shall conform with the approved Exhibit "A."
31. The Permittee shall maintain onsite landscaping and shall not allow hedges to grow tall enough to block the line of sight of building addresses from the public right-of-way.
32. The Permittee shall provide vehicular access to the Project's drop-off/pickup area and on-site parking via a one-way driveway with an entrance from South Gage Avenue and an exit to South Eastman Avenue, as depicted on the approved Exhibit "A." The Permittee shall post signage requiring the one-way direction of traffic through the Project Site. The on-site drop-off/pick-up lane shall be approximately 26 feet in width, as depicted on the approved Exhibit "A," to accommodate two lanes of queued vehicles for a maximum of 20 vehicles at a time.
33. The Permittee shall provide staff and parents/caregivers with information regarding vehicular access to the Project Site prior to the start of the school year to ensure that motorists who travel to the Project Site will be aware of the one-way direction of traffic. The Permittee shall provide this information to the Director, along with documentation that it was provided to staff and parents/caregivers, no later than seven (7) days after it was provided to staff and parents/caregivers.
34. The Permittee shall implement staggered start and end times for the elementary grade students and the middle school grade students who are arriving at, and leaving from, the school premises to help disperse drop-off and pick-up traffic. The staggered start and end times shall be in no less than 20-minute increments. The Permittee shall provide the Director with the staggered start and end times no later than 30 days prior to the beginning of the first school year. If the staggered start and end times change at any point during the CUP's grant term, the Permittee shall

provide the updated start and end times to the Director no later than seven (7) days after making the change.

35. The Permittee shall comply with all conditions set forth in the attached County Department of Public Works letter dated February 21, 2024.
36. The Permittee shall comply with all conditions set forth in the attached County Fire Department letter dated January 18, 2024.
37. The Permittee shall comply with all conditions set forth in the attached County Department of Public Health letter dated January 18, 2024.
38. The Permittee shall comply with all requirements set forth in the attached MMRP.

PROJECT-SPECIFIC CONDITIONS: COMMUNITY LIAISON

39. The Permittee shall designate a community liaison to receive and respond to complaints submitted to the charter school. The Permittee shall provide the name, telephone number, and email address of the designated community liaison to LA County Planning Staff (“Staff”) no later than 60 days prior to the beginning of the first school year. If the designated community liaison changes at any point during the CUP’s grant term, the Permittee shall provide the updated name, telephone number, and email address to Staff no later than seven (7) days after the change.
40. The Permittee shall publish the name, telephone number, and email address of the designated community liaison on the charter school’s website no later than 60 days prior to the beginning of the first school year. If the designated community liaison changes at any point during the CUP’s grant term, the Permittee shall update the charter school’s website no later than seven (7) days after the change.

PROJECT-SPECIFIC CONDITIONS: ANNUAL COMMUNITY MEETING

41. The Permittee shall schedule and coordinate a community meeting no later than 30 days after the conclusion of each school year. No later than 30 days prior to the community meeting, the Permittee shall provide written notice of the meeting in English and Spanish to all residents occupying properties within a 1,000-foot radius of the Project Site and all community organizations that are active in the unincorporated East Los Angeles community. No later than 30 days prior to distribution of the written notice, the Permittee shall consult with Staff and representatives of the County Supervisor who represents the unincorporated East Los Angeles community to obtain a list of all community organizations that are active in the unincorporated East Los Angeles community. In addition, no later than 30 days prior to distribution of the written notice, a draft written notice shall be submitted to Staff for review and approval.
42. The Permittee shall schedule the community meetings at the Project Site or at another nearby location that is convenient to all residents occupying properties within a 1,000-foot radius of the Project Site. Staff shall review and approve the meeting

location before the community meetings are scheduled. The community meetings shall be open to the general public. The Permittee shall designate knowledgeable charter school staff, including but not limited to the designated community liaison required by condition 39, above, to facilitate the community meetings, provide information regarding the charter school's operations, and answer questions, and shall also provide Spanish language interpretation services. Staff and representatives of the County Supervisor who represents the unincorporated East Los Angeles community may attend the community meetings to observe the proceedings.

43. Prior to each community meeting, the Permittee shall prepare a written report in English and Spanish regarding the charter school's operations during the time since the prior meeting, including but not limited to complaints submitted to the charter school. The Permittee shall also prepare a meeting agenda in English and Spanish, and the written report mentioned above shall be attached to the agenda. No later than seven (7) days prior to the meeting, the Permittee shall provide the agenda and attached report to Staff and shall publish the agenda and attached report on the charter school's website. One agenda item shall be a presentation by charter school staff regarding the written report mentioned above. Copies of the meeting agenda and the attached written report in English and Spanish shall also be available at the meeting. The Permittee shall obtain the name and contact information of each community meeting attendee. The Permittee shall prepare meeting minutes in English and Spanish, including a list of follow-up items to be handled by the Permittee with quantifiable metrics such as timeframes for completion. No later than seven (7) days after the meeting, the Permittee shall provide the meeting minutes to all community meeting attendees and Staff and shall publish the meeting minutes on the charter school's website.

PROJECT-SPECIFIC CONDITIONS: PERIODIC REVIEWS

44. The Director shall schedule a Periodic Review of the Project after the first school year ends and after the community meeting that occurs after the conclusion of the first school year, which is required by conditions 41 through 43, above. The Periodic Review will be a "Discussion and Possible Action" item at a regularly scheduled Commission meeting.
45. Prior to the Periodic Review, Staff shall compile and review:
 - a. The community meeting agenda, including the attached written report prepared by the Permittee, and the community meeting minutes, which are required by condition 43, above.
 - b. All complaints submitted to the charter school and to LA County Planning and information regarding how those complaints were addressed.
46. Prior to the Periodic Review, Staff may conduct outreach to surrounding residents, the Permittee, and other parties.
47. No more than 13 days prior to the Periodic Review, Staff shall submit a written report to the Commission that includes the information compiled and reviewed pursuant to

condition 45, above, and any other pertinent information regarding the charter school's operations, including but not limited to information regarding the effectiveness of the CUP's conditions, including but not limited to conditions 32 through 34, above, regarding the one-way traffic circulation pattern, the drop-off/pick-up lane, and the staggered start time and end times for the elementary grades and middle school grades, to ensure that the Project is compatible with surrounding land uses and has not generated unanticipated adverse impacts. The written report may also include a recommendation that the Commission initiate a public hearing to modify the CUP's conditions or revoke the CUP pursuant to County Code Chapter 22.238.

48. During the Periodic Review, Staff shall make a presentation to the Commission related to the written report required by condition 47, above. At the conclusion of the presentation, Staff may recommend that the Commission initiate a public hearing to modify the CUP's conditions or revoke the CUP pursuant to County Code Chapter 22.238.
49. The Director shall schedule a second Periodic Review of the Project after the fifth school year ends, approximately four years after the first Periodic Review, and after the community meeting that occurs after the conclusion of the fifth school year, which is required by conditions 41 through 43, above. The second Periodic Review shall be conducted in the same manner as the first Periodic Review, as described in conditions 44 through 48, above.
50. The Director shall have the discretion to schedule additional Periodic Reviews during the CUP's grant term.

- Exhibit D-4 Mitigation Monitoring Program (pages 1-9)

PROJECT DESCRIPTION

A. Entitlement Requested

- A CUP to establish and operate a new charter school (“Project”) in the R-3 (Limited Density Multiple Residence) Zone pursuant to County Code Section 22.18.030 (Land Use Regulations for Zones R-A, R-1, R-2, R-3, R-4, and R-5).

B. Project

The property is an approximately 50,994-square-foot lot located at 1059 South Gage Avenue (“Project Site”). To the west of the Project Site is South Eastman Avenue, to the north is Whittier Boulevard, to the east is South Gage Avenue, and to the south is Dennison Street and the Santa Ana Freeway (Interstate 5). A church is currently operating on the Project Site, which is developed with two church facility buildings. Building 1 (6,993 square feet) is located at the southeast corner of the site and Building 2 (18,309 square feet) occupies a large area within the northern and central portions of the site. The Project proposes a change of use to a charter school for transitional kindergarten (TK) to 8th grade with a total 525 students and 38 employees (teachers and staff).

The Project proposes to demolish Building 2 and to construct a new two-story, 35-foot-tall, 23,400-square-foot school building to house 21 classrooms and offices. A 6,276-square-foot outdoor playground deck will be attached to the new building’s second story. The deck will have an open top and will be enclosed by an eleven-foot-and-seven-inch tall perforated metal fence with a concrete base to prevent objects from coming over the fence and onto the abutting residential properties to the north of the Project Site. Building 1 will remain and be remodeled to house a TK classroom, administrative offices, and a multi-purpose room. A 2,265-square-foot outdoor shade canopy providing coverage for an outdoor lunch area will be attached to Building 1.

A total of 33 parking spaces will be provided on-site. 16 of the 33 parking spaces will be provided in tandem configuration. A total of 90 bicycle parking spaces (88 short-term and two long-term) will be placed in easily accessible areas on the Project Site. The charter school will be enclosed by six-foot-tall textured Concrete Masonry Unit walls along the Project Site’s northern and southern property lines and by six-foot-tall wrought iron fences along the Project Site’s eastern and western property lines, which face South Gage Avenue and South Eastman Avenue, respectively. In addition, a total of 35 trees (minimum 15-gallon size) and 8,699 square feet of landscaping will be installed throughout the Project Site. The proposed fencing and landscaping will buffer the charter school from the nearby residences, enhance safety for the charter school, and improve the aesthetic qualities of the neighborhood.

In addition to day-to-day academic and physical education curriculum, planned special events will include:

- Community and Parent-Teacher Association meetings and events (to occur monthly, during the day)
- Teacher professional development meetings (to occur monthly, during the day)
- Welcome Back Families and Students Event in August (once per year, during the day)
- Heritage Month celebrations (monthly, during the day)
- Academic Competition/Spelling Bee in October (during the evening)
- Winter Showcase in December (once per year, during the evening)
- Open House/Science Fair in April (once per year, during the day)
- Talent Show in June (once per year, during the day)
- 5th grade and 8th grade promotions in June (once per year, during the day)

Vehicular Access and Queuing

Vehicular access to the Project's drop-off/pickup area and on-site parking will be provided by a one-way driveway with an entrance from South Gage Avenue and an exit to South Eastman Avenue. This configuration will provide efficient and safe ingress to and egress from the Project Site while maintaining fewer vehicular conflict points on both South Gage Avenue and South Eastman Avenue. There will be clearly posted signage requiring the one-way direction of traffic through the Project Site. As part of the charter school's operational policy, staff and parents/caregivers will be provided with information regarding Project Site access prior to the start of the school year. Therefore, motorists who travel to the Project Site will be aware of the one-way direction of traffic.

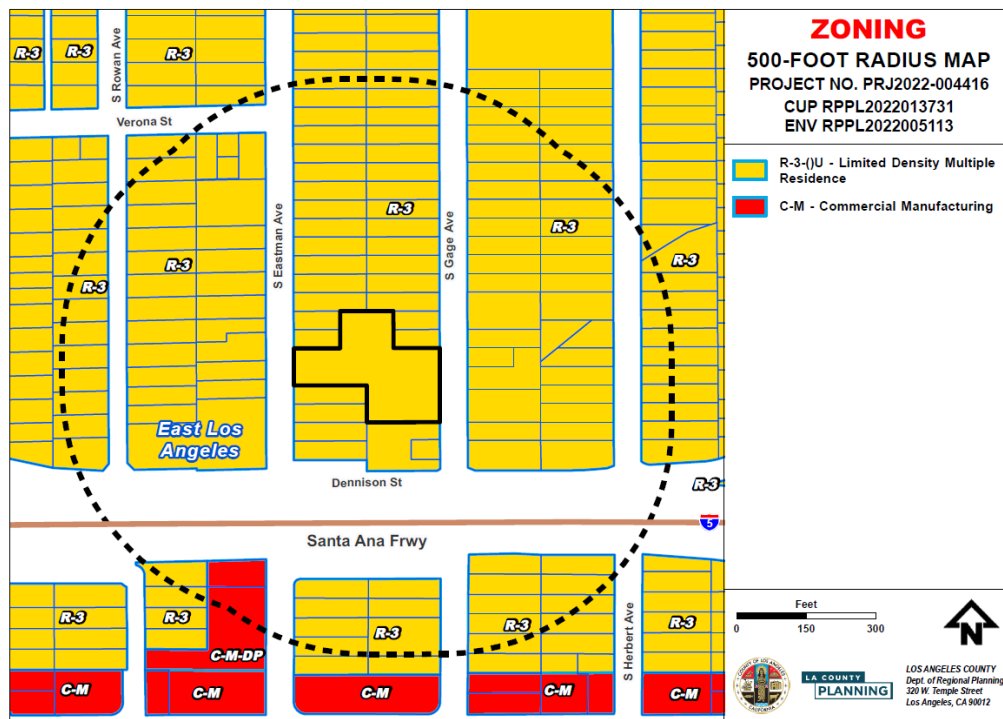

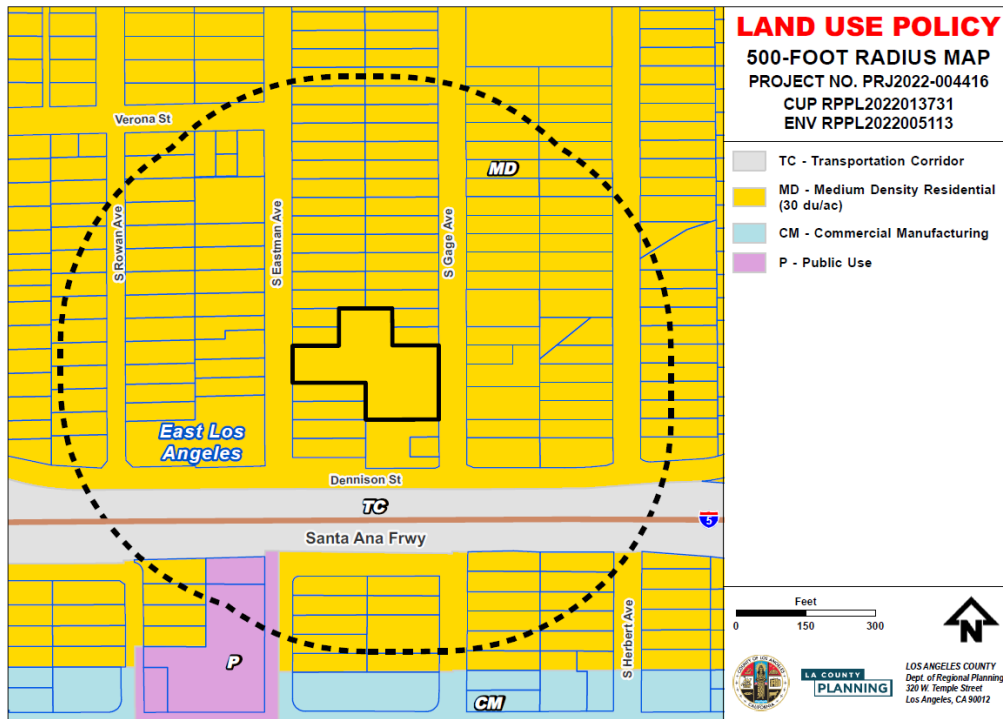

The proposed on-site drop-off/pick-up lane is approximately 26 feet in width, which is sufficient to accommodate two lanes of queued vehicles for a maximum of 20 vehicles at a time. In addition, there will be three staggered start and end times for the elementary grades and middle school grades to help disperse drop-off and pick-up traffic. The start and end times will be in 20-minute increments. For example, the start times will be from 7:00 a.m. to 7:20 a.m., from 7:20 a.m. to 7:40 a.m., and from 7:40 a.m. to 8 a.m. During the charter school's staggered start and end times, the school's staff will monitor and direct traffic by the school's entrance on South Gage Avenue and through the designated drop-off and pick-up area within the premises to ensure a smooth flow of traffic.

SUBJECT PROPERTY AND SURROUNDINGS

The following chart provides property data within a 500-foot radius:

LOCATION	EAST LOS ANGELES COMMUNITY PLAN LAND USE POLICY	ZONING	EXISTING USES
SUBJECT PROPERTY	MD (Medium Density Residential, maximum density of 30 dwelling units per one net acre)	R-3 (Limited Density Multiple Residence) Zone	Church
NORTH	MD	R-3	Single and multi-family residences
EAST	MD	R-3	Single and multi-family residences
SOUTH	MD and P (Public Use)	R-3 and C-M-DP (Commercial Manufacturing - Development Program) Zone	Single and multi-family residences
WEST	MD	R-3	Single and multi-family residences and the Los Angeles Community Hospital

MAPS

PROPERTY HISTORY

A. Zoning History

ORDINANCE NO.	ZONING	DATE OF ADOPTION
Zone Change Ordinance (“ZCO”) 880153z	The Project Site was rezoned to R-3	September 13, 1985
ZCO 1690	The Project Site was zoned R-4 (Unlimited Residential)	June 24, 1929
ZCO 1494_1	Established Zoning Codes in unincorporated Los Angeles County	September 12, 1927

B. Previous Cases

CASE NO.	REQUEST	DATE OF ACTION
Plot Plan 26040	Established a church facility with classrooms, offices, and an assembly room	March 27, 1973

C. Violations

There are no existing zoning violations associated with this Project Site.

ANALYSIS

A. Land Use Compatibility

The proposed charter school on the Project Site is compatible with the surrounding area, which primarily consists of single and multi-family residences, because it is a community serving use and will provide the convenience of having a TK to 8th grade education within walking distance of the residential neighborhoods that immediately surround the Project Site to the north, south, east, and west. School aged children living in neighborhoods south of the Santa Ana Freeway (Interstate 5) can access the charter school by walking across an overpass that ends at the northeast corner of Dennison Street and South Eastman Avenue, which is south of the Project Site.

B. Neighborhood Impact (Need/Convenience Assessment)

The Project will provide a needed educational service to the community, will expand the availability of, and access to, education opportunities, and will create local jobs in East Los Angeles.

The applicant conducted community outreach by canvassing the residential properties that immediately surround the Project Site along South Rowan Avenue, South Eastman Avenue, South Gage Avenue, and South Herbert Avenue. The applicant went out on three separate dates, January 22, 2023, February 4, 2023, and February 24, 2024, and received

signatures and letters in support of the Project. The petitions in support of the Project are available in the attached Exhibit J – Applicant’s Public Outreach Summary Signed Petitions.

On March 16, 2024, the applicant hosted an on-site open house where neighbors were invited to learn more about the proposed Project. A total of 12 neighbors attended the event and the Permittee reported that they engaged in constructive conversations. A more detailed summary of the public outreach conducted is included in Exhibit J – Applicant’s Public Outreach Summary and Signed Petitions.

On March 6, 2024, the Permittee presented the Project to the Maravilla Community Advisory Committee (“MCAC”) to facilitate a dialogue and to listen to the community’s concerns about the Project. On April 2, 2024, the Permittee returned to the MCAC to continue the dialogue and address concerns raised during the March 6, 2024, presentation.

Although the MCAC understood that the conditions of Project approval and the Project components regarding vehicle access and queuing, as described above, are intended to ensure that the Project is compatible with surrounding land uses and will not generate adverse impacts. However, they expressed concerns that these measures may not be effective in practice. In response, Staff is proposing several conditions of Project approval requiring:

- A designated community liaison to receive and respond to complaints submitted to the charter school;
- Installation of two “Perimeter Identification” signs, one on the Project Site’s South Gage Avenue frontage and the other on the Project Site’s South Eastman Avenue frontage, which will include the name, telephone number, and email address for the designated community liaison as well as instructions for reporting violations to LA County Planning;
- Annual Community Meetings; and
- At least two Periodic Reviews.

The Periodic Reviews will be “Discussion and Possible Action” items at regularly scheduled Regional Planning Commission meetings. Before the Periodic Reviews, Staff will compile and review feedback obtained at the Annual Community Meetings as well as all complaints submitted to the charter school and to LA County Planning and information regarding how those complaints were addressed. Staff may also conduct outreach to surrounding residents, the applicant, and other parties. During the Periodic Reviews, Staff will make presentations regarding the information that will be compiled and reviewed and any other pertinent information regarding the effectiveness of the conditions of Project approval and the Project components regarding vehicle access and queuing, as described above, to ensure that the Project is compatible with surrounding land uses and has not

generated unanticipated adverse impacts. At the conclusion of the presentations, Staff may recommend that the Regional Planning Commission initiate a public hearing to modify the CUP's conditions or revoke the CUP pursuant to County Code Chapter 22.238.

C. Design Compatibility

The Project is designed to have the school buildings on the southern portion of the Project Site and to have a one-way driveway providing an ingress and egress route to facilitate on-site pick up and drop off queuing. 33 on-site parking spaces will be located under the outdoor playground deck that will be attached to the second story of the new school building and on the western portion of the Project Site. This design provides a one-way direction of traffic from South Gate Avenue to South Eastman Avenue and reduces the need for students to be in the path of traffic. The new school building will be two stories and 35 feet in height and will have a varying roof line with elevations ranging from 28 to 35 feet in height. The new school building will have a bright and balanced color palette scheme of orange, blue, green, and grey and will utilize a variety of building façade materials including glass, stucco, decorative tile, perforated metal, and painted metal. The same color scheme and mixed materials will also be applied to the existing Building 1 to ensure a uniform appearance.

The buildings will be set back from the Project Site's southern property line by five feet and will be set back from the Project Site's western and eastern property lines by 15 feet, which complies with the setbacks required by County Code Section 22.110.090. The proposed six-foot-tall walls will be constructed along the Project Site's northern and southern perimeters, which are adjacent to the adjoining residential uses. Noise attenuating landscaping will also be installed along the perimeter of the Project Site. The Project's lighting will consist of security lighting and wall lights on the building perimeters that use LED fixtures. All lighting will be designed to avoid light spillage onto the neighboring properties.

During the CUP application review process, Staff provided site design improvement recommendations that included using native drought tolerant plant species, adding a shade structure for the outdoor playground deck, and replacing the coated chain-link fencing used to enclose the outdoor playground deck with a material that is noise dampening. The applicant was amenable to implementing the use of native drought tolerant plants in their landscaping plan and the use of a perforated metal fencing material to enclose the outdoor playground deck that would assist with dampening sound from children's play. The metal wall surrounding the outdoor playground deck will be painted with colors that match the main school building and will still allow for partial visibility outward from the playground. A permanent shade structure for the outdoor playground deck was not feasible due to load calculations. However, the applicant stated that temporary shade equipment can be implemented during the summer or hotter days.

GENERAL PLAN/COMMUNITY PLAN CONSISTENCY

The Project is consistent with applicable goals and policies of the General Plan and the East Los Angeles Community Plan. Consistency findings can be found in the attached Findings (Exhibit C – Findings).

ZONING ORDINANCE CONSISTENCY

The Project complies with all applicable zoning requirements. Consistency findings can be found in the attached Findings (Exhibit C – Findings).

FINDINGS

The applicant is required to substantiate all facts identified by County Code Section 22.158.050 (Conditional Use Permit Findings and Decision Requirements) The Burden of Proof with applicant's responses is attached (Exhibit E – Applicant's Burden of Proof). Staff is of the opinion that the applicant has met the burden of proof.

ENVIRONMENTAL ANALYSIS

Staff recommends that a Mitigated Negative Declaration ("MND") is the appropriate level of environmental documentation under the California Environmental Quality Act ("CEQA") and the County environmental guidelines. The Initial Study ("IS") concluded that there are certain potentially significant environmental impacts associated with the Project that could be reduced to less than significant levels with the implementation of the proposed mitigation measures. The draft Mitigation Monitoring and Reporting Program is included as an attachment (Exhibit F – Environmental Determination) to this report.

The areas of environmental impact found to be less than significant with project mitigation incorporated include the following:

Cultural Resources:

b) Cause a substantial adverse chance in the significance of an archaeological resource pursuant to CEQA Guidelines Section 15064.5?

The South Central Coastal Information Center at the California State University, Fullerton, conducted a records search for the Project area by to identify previously recorded prehistoric and historic resources in and around the Project Site (see Appendix C-1 of the MND). The records search includes a review of all recorded archeological sites within a 0.5-mile radius of the Project Site as well as a review of cultural resource reports on file. The California Points of Historical Interest, California Historical Landmarks, California Register of Historical Resources, National Register of Historic Places, California State Historic Resources Inventory, and City of Los Angeles Historic-Cultural Monuments listings for the Project Site were also reviewed. The records search indicates that there are no historic resources located on-site.

The Project Site is located in an urbanized area, has been previously disturbed by past development activities, and contains existing buildings and a surface parking lot. The Project will require excavation for mechanical uses, utility and foundation work, and

grading up to a depth of five feet. As such, there is a possibility for unknown archaeological resources to be encountered within the underlying alluvium during grading and excavation activities associated with development of the Project.

If archaeological resources are discovered during excavation, grading, or construction activities, work will cease in the area of the find until a qualified archaeologist has evaluated the find in accordance with federal, State, and local guidelines, including those set forth in California Public Resources Code Section 21083.2, as described in Mitigation Measure MM-CUL-1 (see draft Mitigation Monitoring and Reporting Program).

Hazard and Hazardous Materials:

b) Create a significant hazard to the public or the environment through reasonably foreseeable upset and accident conditions involving the release of hazardous materials into the environment?

The Project Site and vicinity are located in an area of past residential development. The Project Site was developed with single-family residences from at least 1923 until approximately 1928. From 1928 until 1952, the Project Site was observed as being undeveloped vacant land. The Project Site was developed with the existing buildings in 1953 and the buildings have operated as various churches until the present. The Project Site vicinity has been developed with single-family residences and apartment buildings. There were no Recognized Environmental Conditions (“RECs”) found from the historic use of the Project Site.

Regarding the existing use on-site, there were no hazardous materials observed in Building 2 (north building) except for household cleaning products. Hazardous materials observed in Building 1 (south building) include the storage of approximately eight five-gallon propane tanks and household cleaning products.

The Project Site is located in an area that has historically had residential and commercial activity. Numerous facilities have experienced releases although none were close enough, or in the correct orientation, to be considered a direct threat or REC to the Project Site, except for the elevated concentrations of lead found in surface soils at the site as a result of the former Exide Technology facility’s release of lead into the air. The former Exide Technologies facility is located nearby (3901 Bandini Boulevard, which is 1.15 miles southwest of the Project Site) and operated as a battery recycling and production facility. As part of their operations, lead was released into the air and has been found to have deposited onto surface soil in the downwind area.

Arcadis and EFI Global conducted soil x-ray fluorescence (“XRF”) scanning and sampling to evaluate lead concentrations in the soil on behalf of the California State Department of Toxic Substances Control. The sampling event occurred on April 6, 2017, and consisted of 20 soil XRF scan samples and 20 soil samples for laboratory analysis. There were no

detections of lead in any of the soil XRF scan samples. Lead was detected in all soil samples at concentrations ranging from 12.9 mg/kg to 352 mg/kg. Nine of the soil samples detected lead above the residential lead screening level of 80 mg/kg. These samples are located along the northern property line adjacent to Building 2 and the southeastern property line fronting Building 1 along South Gage Avenue. The presence of lead in soil at concentrations above the residential screening level would be considered an REC. However, given the limited quantity of soil known to contain elevated concentrations of lead, the soil impacts can be effectively managed with a Soil Management Plan to guide the overall grading activities and are addressed through MM-HAZ-1 (Soil Management Plan) (see draft Mitigation Monitoring and Reporting Program).

Noise:

i) Generation of a substantial temporary or permanent increase in ambient noise levels in the vicinity of the project in excess of standards established in the County General Plan or noise ordinance (Los Angeles County Code, Title 12, Chapter 12.08), or applicable standards of other agencies?

The construction process will generate noise throughout 12 months of demolition, site preparation, grading, utilities trenching, building construction, paving, and application of architectural coatings. During all construction phases, noise-generating activities could occur at the Project Site on Monday through Saturday between 7:00 a.m. and 7:00 p.m. in accordance with County Code Section 12.08.440, which regulates noise.

Noise levels would generally peak during the demolition and grading phases, when diesel-fueled heavy-duty equipment like excavators and dozers are used to move large amounts of debris and dirt, respectively. This equipment is mobile in nature and does not always operate in a steady state full load mode, but instead powers up and down depending on the duty cycle needed to conduct work. As such, equipment is occasionally idle and no noise is generated during that time. During other construction phases (e.g., trenching, building construction, paving, architectural coatings), noise impacts are generally lesser than those during grading because these construction phases are less reliant on using heavy equipment with internal combustion engines. Smaller equipment such as forklifts, generators, and various powered hand tools and pneumatic equipment would generally be utilized. Off-site secondary noises would be generated by construction worker vehicles, vendor deliveries, and haul trucks.

During this period, the applicant shall abide by the requirements contained in County Code Chapter 12.08 (Noise Control Ordinance). The sections in County Code Chapter 12.08 that apply to this Project include but are not limited to 12.08.390 (Exterior Noise Standards), 12.08.440 (Construction Noise), 12.08.520 (Refuse Collection Vehicles), and 12.08.530 (Residential Air-Conditioning).

For all the residential receptors near the Project Site, maximum noise levels would not violate County Code Section 12.08.440(a), which establishes the maximum noise levels allowed during construction. Specifically, it sets an 80 dBA noise limit at multi-family residential properties for construction that lasts less than ten days. The noise limit at commercial uses is 85 dBA. Therefore, the Project's on-site construction noise impact would be significant but mitigatable. Mitigation Measures MM-NOI-1 through MM-NOI-5 (see draft Mitigation Monitoring and Reporting Program) will help the noise generated from construction activities comply with County Code Section 12.08.440.

The Project would utilize noise barriers on the northern perimeter of the Project Site from South Eastman Avenue to South Gage Avenue and on the southern perimeter of the Project Site that fronts the adjacent residential buildings located at 1058 and 1064 South Eastman Avenue.

Tribal Cultural Resources:

a) Would the project cause a substantial adverse change in the significance of a tribal cultural resource, defined in Public Resources Code §21074 as either a site, feature, place, cultural landscape that is geographically defined in terms of the size and scope of the landscape, sacred place, or object with cultural value to a California Native American tribe, and that is:

i) Listed or eligible for listing in the California Register of Historical Resources, or in a local register of historical resources as defined in Public Resources Code § 5020.1(k).

Pursuant to the requirements of Assembly Bill 52, the County sent notification letters about the Project to each Native American tribe on the County's list of tribes requesting consultation. The Native American tribes notified include the following:

- Gabrieleño Band of Mission Indians-Kizh Nation
- Band of Mission Indians Native Chumash
- Fernandeno Tataviam Band of Mission Indians
- Gabrieleno Tongva San Gabriel Band of Mission Indians
- San Manuel Band of Mission Indians
- Tejon Indian Tribe
- The Gabrielino Tongva Indians of California

During the notification period, the Gabrieleño Band of Mission Indians-Kizh Nation responded and requested consultation with the County. The tribe identified potential tribal cultural resources and provided recommended measures that are included in Mitigation Measure MM-TCR-1 (see draft Mitigation Monitoring Program). Consultation with the tribe concluded on November 20, 2023.

In addition to the notification required by Assembly Bill 52, the Local Government Tribal Consultation List Request was sent to the Native American Heritage Commission on September 25, 2023. A response dated November 15, 2023, was received via email, and

it stated that “A search of the SFL (Sacred Lands File) was completed for the project with negative results.” This response is included in Appendix C-3 of the MND. Furthermore, a request for the Project Review/Quick Check was submitted to the South Central Coastal Information Center at the California State University, Fullerton, on September 25, 2023. The results of the Project Review/Quick Check were received on November 15, 2023, and are included in Appendix C-1 of the MND.

All requirements for consultation under CEQA have been satisfied. Therefore, impacts to TCRs would be less than significant with the mitigation incorporated.

COMMENTS RECEIVED

A. County Department Comments and Recommendations

For the CUP:

1. The Department of Public Works, in a letter dated February 21, 2024, recommended that the Project proceed to a public hearing with required conditions of approval.
2. The Fire Department, in a letter dated January 18, 2024, recommended that the Project proceed to a public hearing with required conditions of approval.
3. The Department of Public Health, in a letter dated November 22, 2023, recommended that the Project proceed to a public hearing with required conditions of approval.
4. The Department of Parks and Recreation, in a letter dated February 7, 2024, recommended that the Project proceed to a public hearing.

Although Staff consulted with the Sheriff’s Department regarding the IS/MND, we did not consult with the Sheriff’s Department regarding the CUP because the Project is a charter school and we do not typically consult with the Sheriff’s Department regarding this type of CUP. The conditions required by the other County departments have been incorporated into the Project’s conditions of approval.

For the IS/MND:

1. The Department of Public Works, in a letter dated February 21, 2024, cleared the IS/MND.
2. The Fire Department, in a letter dated February 16, 2024, cleared the IS/MND and provided conditions of approval for the CUP. The conditions have been incorporated into the Project’s conditions of approval.
3. The Department of Public Health, in a letter dated November 22, 2023, cleared the IS/MND.
4. The Department of Parks and Recreation, in a letter dated November 21, 2024, cleared the IS/MND.
5. The Sheriff’s Department, in a letter dated December 5, 2023, provided comments regarding the IS/MND. The comments provided context on the current staffing limitations at the East Los Angeles Sheriff’s Station. The Sheriff’s Department provided additional comments in a letter dated April 3, 2024. The comments reiterated

the current staffing limitations at the East Los Angeles Sheriff's Station and also noted that the applicant needs to coordinate with the Sheriff's Contract Law Enforcement Bureau.

B. Other Agency Comments and Recommendations

1. The County Sanitation District, in a letter dated April 28, 2024, provided a comment requesting a correction to information in the IS/MND regarding the design capacity of the Joint Water Pollution Control Plant. The IS/MND incorrectly stated that the design capacity is 260 million gallons of wastewater per day, but the actual design capacity is 400 million gallons of wastewater per day. The applicant is working on a response to this comment that will be provided to the Regional Planning Commission in a Supplemental Report next week.
2. The California Department of Transportation, in a letter dated April 2, 2024, provided recommendations to improve bicycle and road infrastructure in the vicinity of the Project Site. The applicant is working on a response to this comment that will be provided to the Regional Planning Commission next week.

Comment and recommendation letters received by County and State agencies are attached to this report to the Regional Planning Commission as Exhibit I – Agency Correspondences.

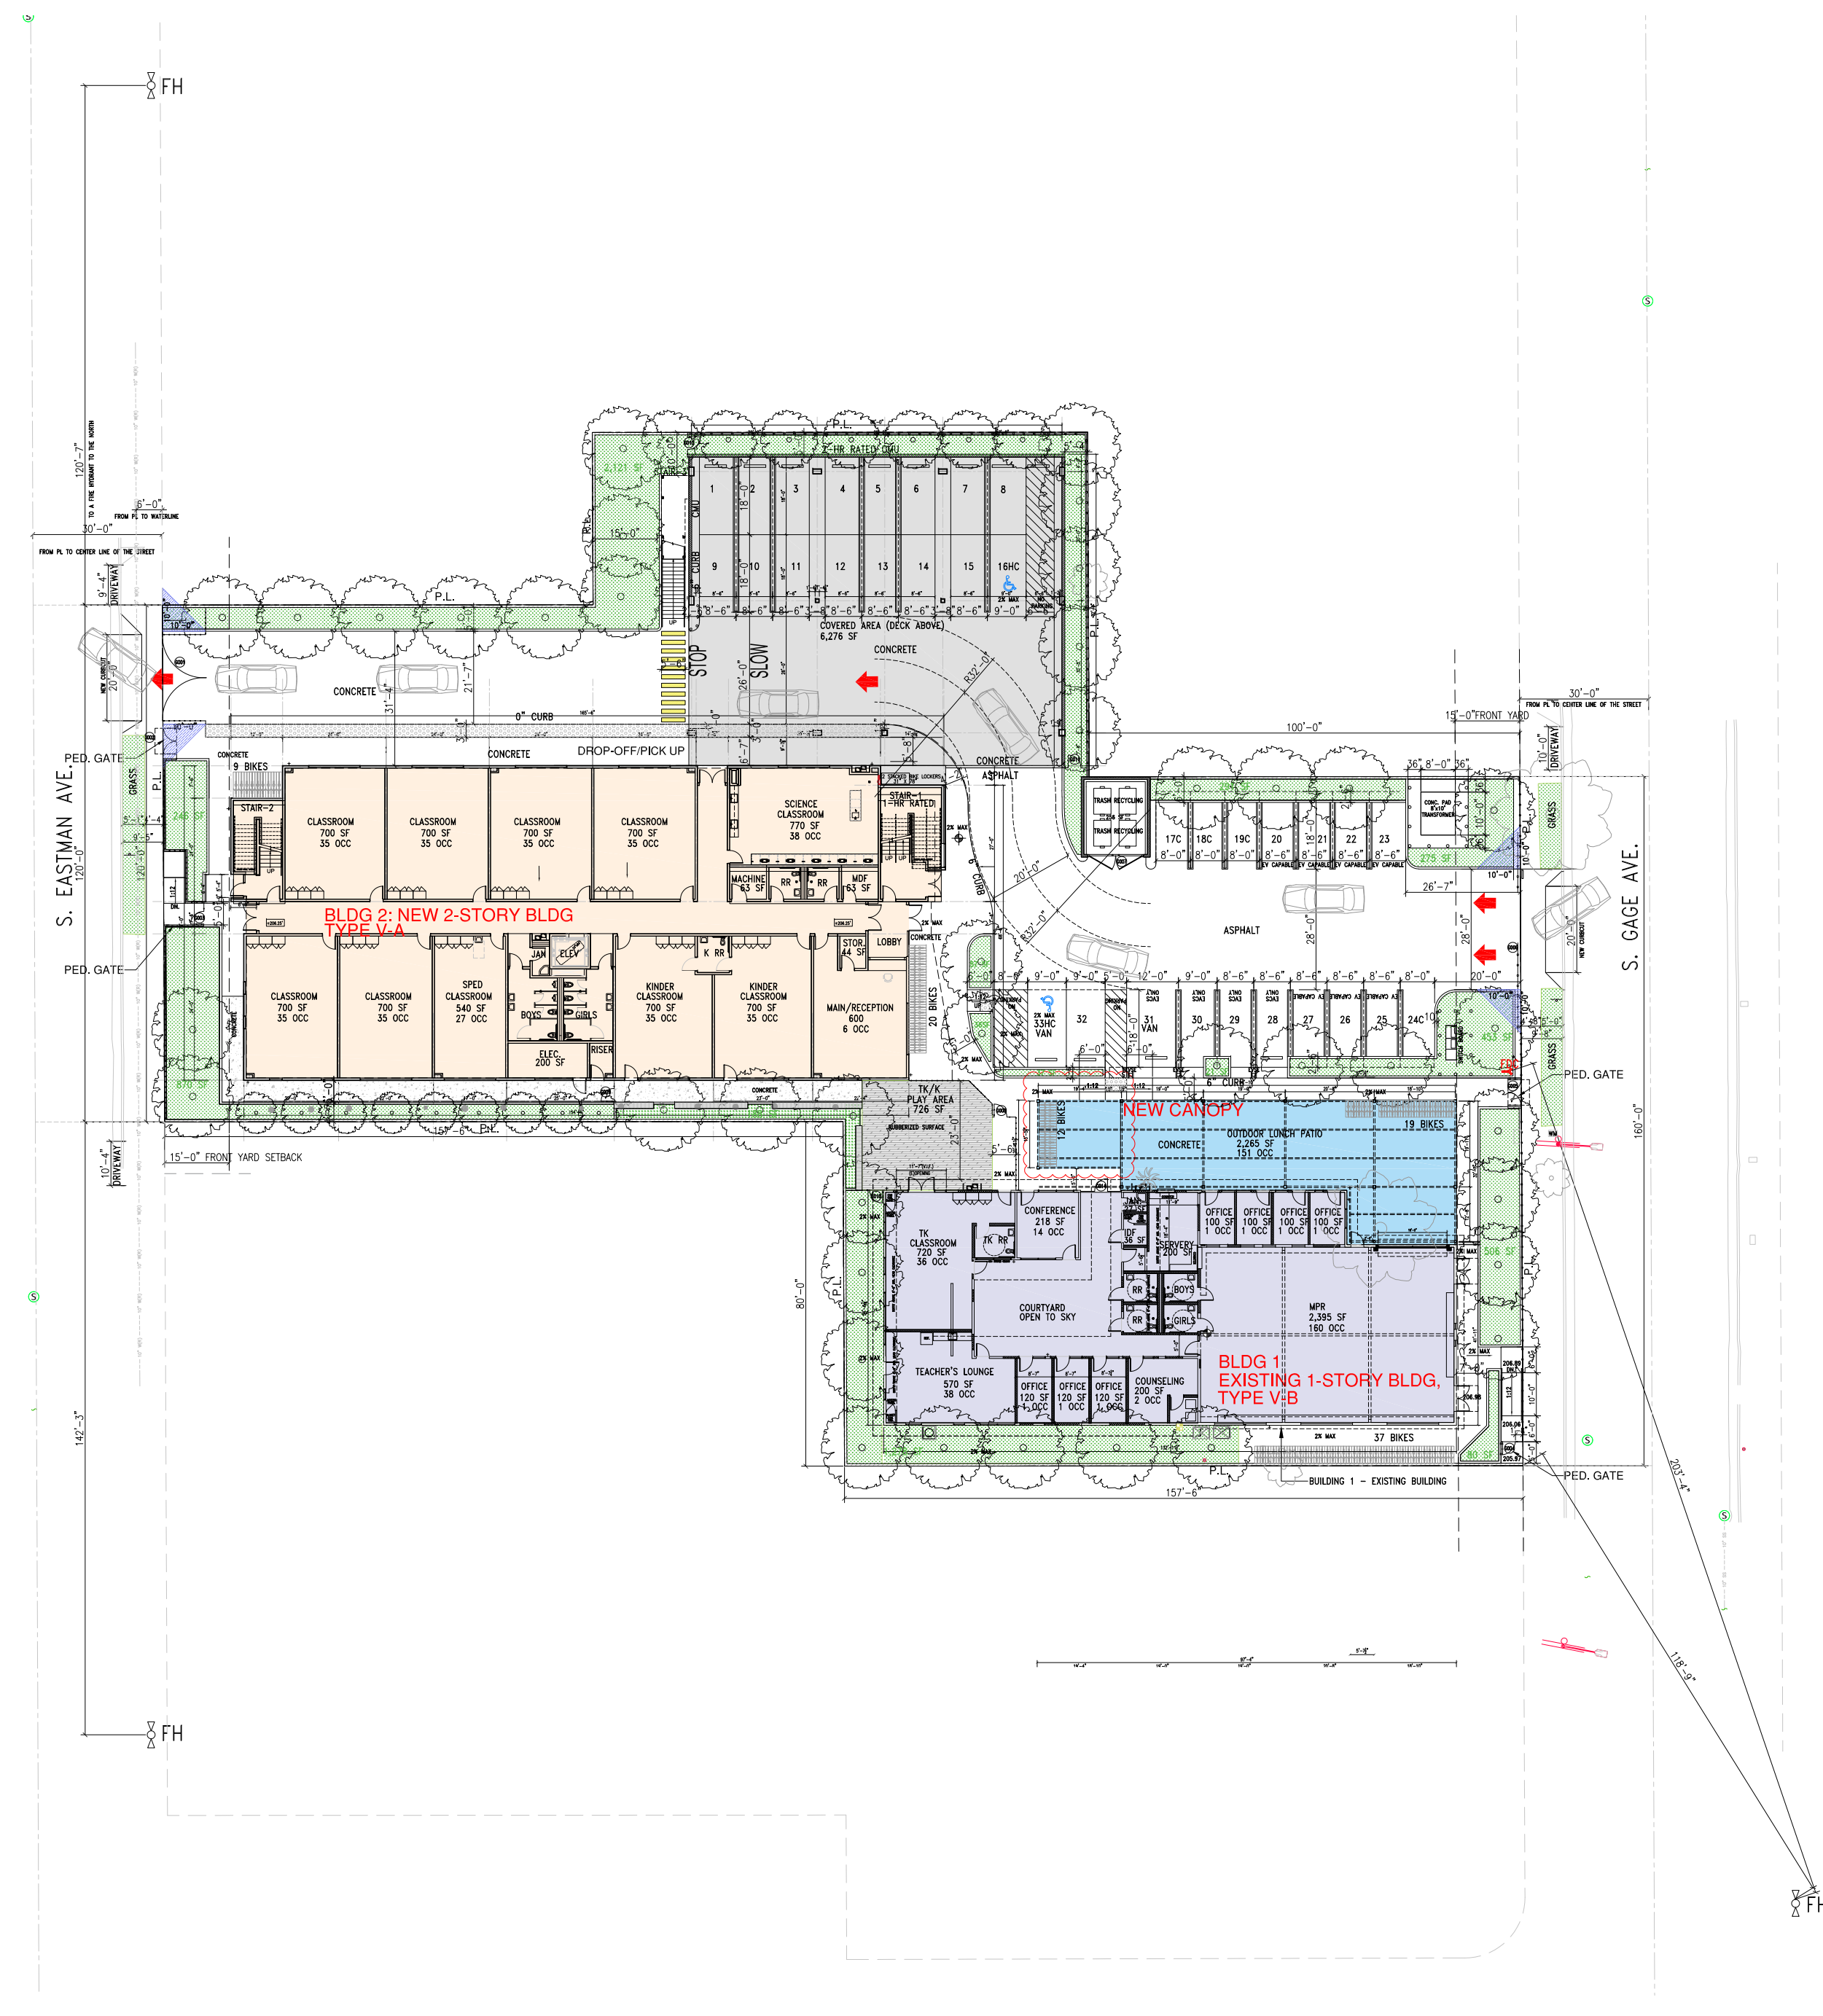

C. Public Comments

1. Carlos Montes, in an email dated April 3, 2024, expressed opposition to the Project due to impacts to the surrounding residential community related to traffic and noise.
2. The Eastside Padres Contra La Privatization, in an email dated April 3, 2024, expressed opposition to the Project due to an overconcentration of charter schools in a community when there is a decline in student enrollment, and stated that a new school is not a suitable use at the proposed location and is not compatible with the community.

LEGAL DESCRIPTION

REFER TO LEGAL DESCRIPTION ON ALTA SURVEY PLAN A0.1.1

SCOPE OF WORK

- DEMOLISH EXISTING CLASSROOM BUILDING ON SITE
- WORK IN EXISTING 1-STORY BLDG (BLDG 1):
DEMOLISH EXISTING ROOF/SKYLIGHT OVER COURTYARD; CONVERT INTERIOR SPACE TO MPR, SPACE FOR STAFF AND ONE TK CLASSROOM; CONSTRUCT A NEW CANOPY FOR STUDENT OUTDOOR LUNCH AREA
- CONSTRUCT THE NEW 2-STORY CLASSROOM BUILDING (BLDG 2) WITH DECK
- SITE DEVELOPMENT

SITE AND BUILDING AREA SUMMARY

TOTAL FLOOR AREA:

NEW CLASSROOM BLDG (BLDG 2): TWO-STORY, 21 CLASSROOMS
FIRST FLOOR: 11,600 SF (INCLUDING ENTRANCE CANOPY) + 6,276 SF (DECK) = 17,876 SF
SECOND FLOOR: 11,366 SF + 434 SF (SHADE) = 11,800 SF
TOTAL: 29,676 SF NEW BLDG 2

EXISTING CHURCH BLDG (BLDG 1): ONE-STORY, TK CLASSROOM/MPR/ADMIN/OFFICES
EXISTING CHURCH: 6,993 SQFT-509 SF (DEMO COVERED COURTYARD)+2,265 SF (NEW CANOPY)=8,749 SF EXISTING BLDG 1

TOTAL BUILDING FLOOR AREA = 38,425 SF

LOT SIZE: 50,994 SQFT
FAR: 38,425 SF / 50,994 SF = 0.754
BUILDING HEIGHT: 35' (HEIGHT LIMIT)

LANDSCAPE SUMMARY

LANDSCAPE PERCENTAGE: 8,699 SF / 50,994 SF = 17%

SITE NOTES

- THE CONSTRUCTION SHALL NOT RESTRICT A FIVE-FOOT CLEAR AND UNOBSTRUCTED ACCESS TO ANY WATER OR POWER DISTRIBUTION FACILITIES (POWER POLES, PULL-BOXES, TRANSFORMERS, VAULTS, PUMPS, VALVES, METERS, APPURTENANCES, ETC.) OR TO THE LOCATION OF THE HOOR-UP. THE CONSTRUCTION SHALL NOT BE WITHIN TEN FEET OF ANY POWER LINES-WHETHER OR NOT THE LINES ARE LOCATED ON THE PROPERTY. FAILURE TO COMPLY MAY CAUSE CONSTRUCTION DELAYS AND/OR ADDITIONAL EXPENSES.
- AN APPROVED SEISMIC GAS SHUTOFF VALVE WILL BE INSTALLED ON THE FUEL GAS LINE ON THE DOWN STREAM SIDE OF THE UTILITY METER AND BE RIGIDLY CONNECTED TO THE EXTERIOR OF THE BUILDING OR STRUCTURE CONTAINING THE FUEL GAS PIPING. (PER ORDINANCE 170.158) (INCLUDES COMMERCIAL ADDITIONS AND TI WORK OVER \$10,000.) SEPARATE PLUMBING PERMIT IS REQUIRED.
- PROVIDE ULTRA FLUSH WATER CLOSETS FOR ALL NEW CONSTRUCTION. EXISTING SHOWER HEADS AND TOILETS MUST BE ADAPTED FOR LOW WATER CONSUMPTION.
- A COPY OF THE EVALUATION REPORT AND/OR CONDITIONS OF LISTING SHALL BE MADE AVAILABLE AT THE JOB SITE.
- ALL TRASH BINS SHALL BE COVERED

FIRE DEPT.

NOTE: THE FIRE ALARM SHALL BE PROVIDED PER SECTION 907.2.3 OF CFC OCCUPANCY. NOTIFICATION SIGNAL SHALL BE VIA EMERGENCY VOICE/ALARM COMMUNICATION SYSTEM, MEETING THE REQUIREMENT OF SECTION 907.5.2.2 CARBON MONOXIDE ALARM REQUIRED PER SEC. 915 CARBON MONOXIDE ALARM SHALL BE INTERCONNECTED IN SUCH A MANNER THAT THE ACTIVATION OF ONE ALARM WILL ACTIVATE ALL THE ALARM IN THE INDIVIDUAL UNIT. REQUIRED CARBON MONOXIDE ALARM SHALL RECEIVE THEIR PRIMARY POWER FROM THE BLDG WIRING SHALL BE EQUIPPED WITH A BATTERY BACKUP (CBC915.4.2/4)

PROVIDE EMERGENCY RESPONDER RADIO COVERAGE IN ACCORDANCE WITH LAFCS10 (CBC 916.1)

- ### LEGENDS
- DROP-OFF/PICK-UP CIRCULATION
20 CARS QUEUING, 10 CARS PER LANE
 - FIRE HYDRANT
 - FLOOR LEVEL EXIT SIGN
 - PATH OF TRAVEL, LESS THAN 5% SLOPE UNLESS PROVIDED A RAMP AND CANNOT BE MORE THAN 2% CROSS SLOPE
 - PATH OF EGRESS
 - FIRE DEPARTMENT ACCESS BOX
BOX SHALL BE KNOX CO. MODEL 3502
COLOR: RED
 - LANDSCAPED AREA
 - PLANTER BOX, SEE CIVIL PLAN

- ### SITE KEY NOTES
- 1 LANDSCAPE AREA WITH 6" CURB, SEE LANDSCAPE PLAN
 - 1A 24" RAISED PLANTER WITH BENCH
 - 2 NEW CONC. DRIVEWAY CURB-CUT, SEE CIVIL PLAN
 - 3 BICYCLE PARKING: EACH BICYCLE PARKING SPACE SHOULD BE MIN. 6" IN LENGTH
SEE BIKE RACK SPEC. ON SHEET 3/A1.0
SHORT-TERM BICYCLE PARKING: ANCHORED BICYCLE RACK W/MINIMUM 2-BIKE CAPACITY NO MORE THAN A WALKING DISTANCE OF 200 FEET FROM THE MAIN/VISITOR'S ENTRANCE SPECS:
PROVIDED 88- SHORT-TERM BICYCLE PARKING SPACES SPECS:
FLOOR MOUNTED: CREATIVE PIPE INC. OR EQUAL
MADRAX U-TWO OR EQUAL
FINISH: GALVANIZED
4 PROVIDED 2- LONG-TERM BICYCLE PARKING PERMANENTLY ANCHORED BIKE RACKS
SEE SPECS SEE 3/A1.0
 - 5 NEW TRANSFORMER WITH BOLLARDS AROUND, SEE ELECTRICAL PLANS
 - 6 FULLY ENCLOSED TRASH ENCLOSURE WITH PERFORATED METAL PANEL ON TOP OF 6" HT. CMU WALL AND CORRUGATED METAL ROOF, SEE 1/A15.0
 - 7 6" HIGH CONCRETE CURB
 - 8 0 CURB WITH 3"-0" MIN. WIDE CAST-IN-PLACE TRUNCATED DOME DETECTABLE WARNING STRIPE
 - 9 6'-0" HT. WROUGHT IRON FENCE, W/PERFORATED PANEL
 - 9A 6'-0" HT. WROUGHT IRON FENCE
 - 10 NEW 6'-0" DOUBLE-SIDES SPLIT FACE PROTO WALL, SEPARATE PERMIT
 - 10A 6'-0" CMU WALL, SEE TRASH ENCLOSURE DETAIL
 - 11 6" HT. METAL FENCE, SEE STRUCTURAL
 - 12 FDC LOCATION
 - 13 NEW W.I. ACCESSIBLE PEDESTRIAN GATE WITH PERFORATED PANEL & PANIC HARDWARE
 - 14 NEW MOTORIZED SLIDING VEHICULAR GATE-SEE DOOR SCHEDULE GATE OPENER ON 6" CONCRETE PAD
GATE REMAIN OPEN DURING DROP-OFF/PICK-UP, CLOSED WHEN NOT IN USE
 - 15 NEW MOTORIZED 16" SWING VEHICULAR GATE, SEE DOOR SCHEDULE GATE REMAIN OPEN DURING DROP-OFF/PICK-UP, CLOSED WHEN NOT IN USE
 - 16 ATTACH SIGN TO FENCE: "WRONG WAY. DO NOT ENTER,"
 - 17 PROVIDE CONDUIT AND JUNCTION BOX FOR VOICE/INTERCOM/VIDEO SYSTEM - HFX-700M AT EXTERIOR ENTRY GATE.
 - 18 STANDARD 31" H STEEL BOLLARD INSTALLED 60" O.C.
MFG: RELIANCE FOUNDRY CO. LTD.
MODEL: R7835, INSTALLED BY ANCHOR CASTING
 - 19 FIRE ALARM ANNUNCIATOR PANEL
 - 20 HOSE BIB
 - 21 ASPHALT
 - 22 DAVIS COLORS (OR EQUAL) COLORED CONCRETE, SEE CIVIL PLAN FOR DRAINAGE. USE COLORED CONCRETE WITH SOLAR REFLECTANCE 0.3 OR ABOVE PER GREEN CODE. GC TO SUBMIT COLOR SAMPLE FOR ARCHITECT'S APPROVAL
10'x10' PEDESTRIAN SIGHT TRIANGLE. NOTHING HIGHER THAN 3'-6"
 - 23 REMOVE THE EXISTING PLANT, SEE LANDSCAPE
 - 24 OUTDOOR DRINKING FOUNTAIN
ELKAY WRTLBSWK, BOTTLE FILLING STATION, REFRIGERATED, FILTERED OPTION, SEE PLUMBING PLAN
 - 26 WATERPROOFING DECK COATING OVER SCORED CONCRETE SLAB/PAVING
 - 27 RUBBERIZED SURFACE MATERIAL AT PLAY GROUND
 - 28 PAINTED CROSSWALK
 - 29 PROVIDE SIGN - RIGHT TURN EGRESS ONLY
 - 30 PROVIDE SIGN - RIGHT TURN INGRESS ONLY DURING DROP-OFF/PICK-UP HOURS
 - 31 EXISTING WATER METER CONNECTION TO BE UTILIZED FOR NEW DOMESTIC WATER LINE
 - 32 PROVIDE ELEC. CAR PARKING STALLS WITH ELECTRICAL CHARGING STATIONS. DEDICATED OUTLETS SHALL BE PROVIDED, ONE FOR EACH PARKING SPACE. SEE ELECTRICAL PLAN.
A SEPARATED ELECTRICAL PLAN CHECK IS REQUIRED TO VERIFY THE RACEWAY METHOD(S), WIRING SCHEMATICS AND ELECTRICAL CALCULATIONS FOR THE ELECTRICAL CHARGING SYSTEM. THE ELECTRICAL SYSTEM SHALL HAVE SUFFICIENT CAPACITY TO SIMULTANEOUSLY CHARGE ALL ELECTRIC VEHICLES AT THEIR FULL RATED AMPERAGE.
 - 33 PROVIDE POWER FOR EV READY FUTURE ELECTRICAL CHARGING STATIONS DEDICATED OUTLETS SHALL BE PROVIDED, ONE FOR EACH PARKING SPACE. SEE ELECTRICAL PLAN.
THE SERVICE PANEL OR SUBPANEL(S) SHALL HAVE SUFFICIENT CAPACITY TO ACCOMMODATE THE REQUIRED NUMBER OF THE DEDICATED 40 AM MIN. BRANCH CIRCUIT(S) FOR THE FUTURE INSTALLATION OF THE EVSE
 - 34 CONCRETE WHEEL STOP, SEE DETAIL ON 1/D1.0
 - 35 STANDARD 31" H STEEL BOLLARD INSTALLED 60" O.C.
MFG: RELIANCE FOUNDRY CO. LTD.
MODEL: R7835, INSTALLED BY ANCHOR CASTING
 - 36 PAINT 48" LETTER ON GROUND: "SLOW"
 - 37 PAINT 48" LETTER ON GROUND: "STOP"
 - 38 SIGN - NO PARKING ANYTIME. UNAUTHORIZED VEHICLES TOWED AT VEHICLE OWNER'S EXPENSE

1 SITE PLAN
SCALE: 1/12" = 1'-0"

1. FIRE DEPARTMENT VEHICULAR ACCESS ROADS MUST BE INSTALLED AND MAINTAINED IN A SERVICEABLE MANNER PRIOR TO AND DURING THE TIME OF CONSTRUCTION. FIRE CODE 501.4
2. THE FIRE ALARM SHALL BE PROVIDED PER SECTION 907.2.3 OF CFC OCCUPANCY. NOTIFICATION SIGNAL SHALL BE VIA EMERGENCY VOICE/ALARM COMMUNICATION SYSTEM, MEETING THE REQUIREMENT OF SECTION 907.5.2.2. CARBON MONOXIDE ALARM REQUIRED PER SEC. 915. CARBON MONOXIDE ALARM SHALL BE INTERCONNECTED IN SUCH A MANNER THAT THE ACTIVATION OF ONE ALARM WILL ACTIVATE ALL THE ALARM IN THE INDIVIDUAL UNIT. REQUIRED CARBON MONOXIDE ALARM SHALL RECEIVE THEIR PRIMARY POWER FROM THE BLDG. WIRING SHALL BE EQUIPPED WITH A BATTERY BACKUP (CBC915.4.2/4). PROVIDE EMERGENCY RESPONDER RADIO COVERAGE IN ACCORDANCE WITH LAFCS10 (CBC 916.1)
3. PROVIDE APPROVED SIGNS OR OTHER APPROVED NOTICES OR MARKINGS THAT INCLUDE THE WORDS NO PARKING - FIRE LANE. SIGNS SHALL HAVE A MINIMUM DIMENSION OF 12 INCHES WIDE BY 18 INCHES HIGH AND HAVE RED LETTERS ON A WHITE REFLECTIVE BACKGROUND. SIGNS SHALL BE PROVIDED FOR FIRE APPARATUS ACCESS ROADS, TO CLEARLY INDICATE THE ENTRANCE TO SUCH ROAD, OR PROHIBIT THE OBSTRUCTION THEREOF AND AT INTERVALS, AS REQUIRED BY THE FIRE INSPECTOR. FIRE CODE 503.3
4. WHEN SECURITY GATES ARE PROVIDED, MAINTAIN A MINIMUM ACCESS WIDTH OF _____ FEET. THE SECURITY GATE SHALL BE PROVIDED WITH AN APPROVED MEANS OF EMERGENCY OPERATION, AND SHALL BE MAINTAINED OPERATIONAL AT ALL TIMES AND REPLACED OR REPAIRED WHEN DEFECTIVE. ELECTRIC GATE OPERATORS, WHERE PROVIDED, SHALL BE LISTED IN ACCORDANCE WITH UL 325. GATES INTENDED FOR AUTOMATIC OPERATION SHALL BE DESIGNED, CONSTRUCTED AND INSTALLED TO COMPLY WITH THE REQUIREMENTS OF ASTM F2200. GATES SHALL BE OF THE SWINGING OR SLIDING TYPE. CONSTRUCTION OF GATES SHALL BE OF MATERIALS THAT ALLOW MANUAL OPERATION BY ONE PERSON. FIRE CODE 503.6
5. APPROVED BUILDING ADDRESS NUMBERS, BUILDING NUMBERS OR APPROVED BUILDING IDENTIFICATION SHALL BE PROVIDED AND MAINTAINED SO AS TO BE PLAINLY VISIBLE AND LEGIBLE FROM THE STREET FRONTING THE PROPERTY. THE NUMBERS SHALL CONTRAST WITH THEIR BACKGROUND, BE ARABIC NUMERALS OR ALPHABET LETTERS, AND BE A MINIMUM OF 4 INCHES HIGH WITH A MINIMUM STROKE WIDTH OF 0.5 INCH. FIRE CODE 505.1
6. FIRE APPARATUS ACCESS ROADS SHALL BE IDENTIFIED WITH APPROVED SIGNS. TEMPORARY SIGNS SHALL BE INSTALLED AT EACH STREET INTERSECTION WHEN CONSTRUCTION OF NEW ROADWAYS ALLOWS PASSAGE BY VEHICLES. SIGNS SHALL BE OF AN APPROVED SIZE, WEATHER RESISTANT AND BE MAINTAINED UNTIL REPLACED BY PERMANENT SIGNS. FIRE CODE 505.2
7. AN APPROVED KEY BOX, LISTED IN ACCORDANCE WITH UL 1037 SHALL BE PROVIDED AS REQUIRED BY FIRE CODE 506. THE LOCATION OF EACH KEY BOX SHALL BE DETERMINED BY THE FIRE INSPECTOR.
8. TYPE OF CONSTRUCTION PER THE BUILDING CODE TYPE VA _____
FIRE-FLOW CALCULATION AREA AREA _____ SQ. FT.
FIRE FLOW BASED ON THE FIRE-FLOW CALCULATION AREA _____ GPM
REDUCTION FOR FIRE SPRINKLERS (MAXIMUM 50%) _____ GPM
TOTAL FIRE FLOW REQUIRED _____ 1,500 _____ GPM
9. ALL FIRE HYDRANTS SHALL MEASURE 6" X 4" X 2-1/2", BRASS OR BRONZE, CONFORMING TO AMERICAN WATER WORKS ASSOCIATION STANDARD C503, OR APPROVED EQUAL.
10. ALL REQUIRED PUBLIC FIRE HYDRANTS SHALL BE INSTALLED, TESTED AND ACCEPTED PRIOR TO BEGINNING CONSTRUCTION. FIRE CODE 501.4
11. PROVIDE AN APPROVED AUTOMATIC FIRE SPRINKLER SYSTEM IN ACCORDANCE WITH PROVISIONS SET FORTH IN BUILDING CODE SECTION 903.3.
REASON: _____ GROUP E OCCUPANCY GREATER THAN 12,000 SQ.FT.
12. FIRE SPRINKLER PLANS SHALL BE SUBMITTED TO THE SPRINKLER PLAN CHECK UNIT FOR REVIEW AND APPROVAL PRIOR TO INSTALLATION IN ACCORDANCE WITH FIRE CODE 901.2
13. PORTABLE FIRE EXTINGUISHERS SHALL BE INSTALLED AND MAINTAINED ALL OCCUPANCY GROUPS AND AT SUCH LOCATIONS AS REQUIRED BY FIRE CODE 906 AND CALIFORNIA CODE OF REGULATIONS, TITLE 19, DIVISION 1, CHAPTER 3. THE FINAL NUMBER AND LOCATION OF ALL EXTINGUISHERS SHALL BE DETERMINED BY THE LOCAL AREA FIRE INSPECTOR.

13. PROVIDE AN APPROVED MANUAL FIRE OR AUTOMATIC SMOKE DETECTION SYSTEM IN ACCORDANCE WITH THE PROVISIONS SET FORTH IN FIRE CODE 907.
FIRE ALARM AND SMOKE DETECTION PLANS SHALL BE SUBMITTED TO THE FIRE ALARM PLAN CHECK UNIT FOR REVIEW AND APPROVAL PRIOR TO INSTALLATION IN ACCORDANCE WITH FIRE CODE 901.2.
14. DUMPSTERS AND CONTAINERS WITH AN INDIVIDUAL CAPACITY OF 1.5 CUBIC YARDS OR MORE SHALL NOT BE STORED IN BUILDINGS OR PLACED WITHIN 5 FEET OF COMBUSTIBLE WALLS, OPENINGS OR COMBUSTIBLE ROOF EAVES, UNLESS AREAS CONTAIN DUMPSTERS OR CONTAINERS OR CONTAINERS ARE PROTECTED BY AN APPROVED AUTOMATIC FIRE SPRINKLER SYSTEM. FIRE CODE 304.3.3.

SITE KEY NOTES

- SEE SHEET A0.5 FOR OTHER SITE KEY NOTES.
- 39** PAINT ON GROUND AS "NO PARKING - FIRE LANE" SIGNS AND STRIPPING PER LA COUNTY FIRE CODE.
- 40** PAINT CURB RED WITH SIGNS AS "NO PARKING - FIRE LANE" PER LA COUNTY FIRE CODE.

- MIN. UNOBSTRUCTED WIDTH OF 26' AND 28' (SEE PLAN) WITH UNOBSTRUCTED CLEARANCE "CLEAR TO SKY" FIRE DEPT. VEHICULAR ACCESS
- 5' (4'-6" MIN.) WIDE APPROVED ACCESS WALKWAY LEADING FROM THE FIRE DEPT. ACCESS ROAD TO ALL REQUIRED OPENINGS IN THE BUILDING'S EXTERIOR WALLS SHALL BE PROVIDED FOR FIRE FIGHTING AND RESCUE PURPOSE. FIRE CODE 504.1
- ALL BUILDINGS ON SITE ARE ACCESSIBLE TO FIRE DEPARTMENT APPARATUS BY WAY OF ACCESS ROADWAYS, WITH AN ALL-WEATHER SURFACE. SEE PLAN FOR FIRE LANE WIDTH PROVIDED.
- ROADWAY EXTENDED TO WITHIN 150 FEET OF ALL PORTIONS OF THE EXTERIOR WALLS WHEN MEASURED BY AN UNOBSTRUCTED ROUTE AROUND THE EXTERIOR OF THE BUILDINGS. THE ROADWAY SHALL PROVIDE APPROVED SIGNS AND /OR STRIPPING STATING "NO PARKING - FIRE LANE" AND SHALL BE MAINTAINED IN ACCORDANCE WITH THE COUNTY OF LOS ANGELES FIRE CODE.

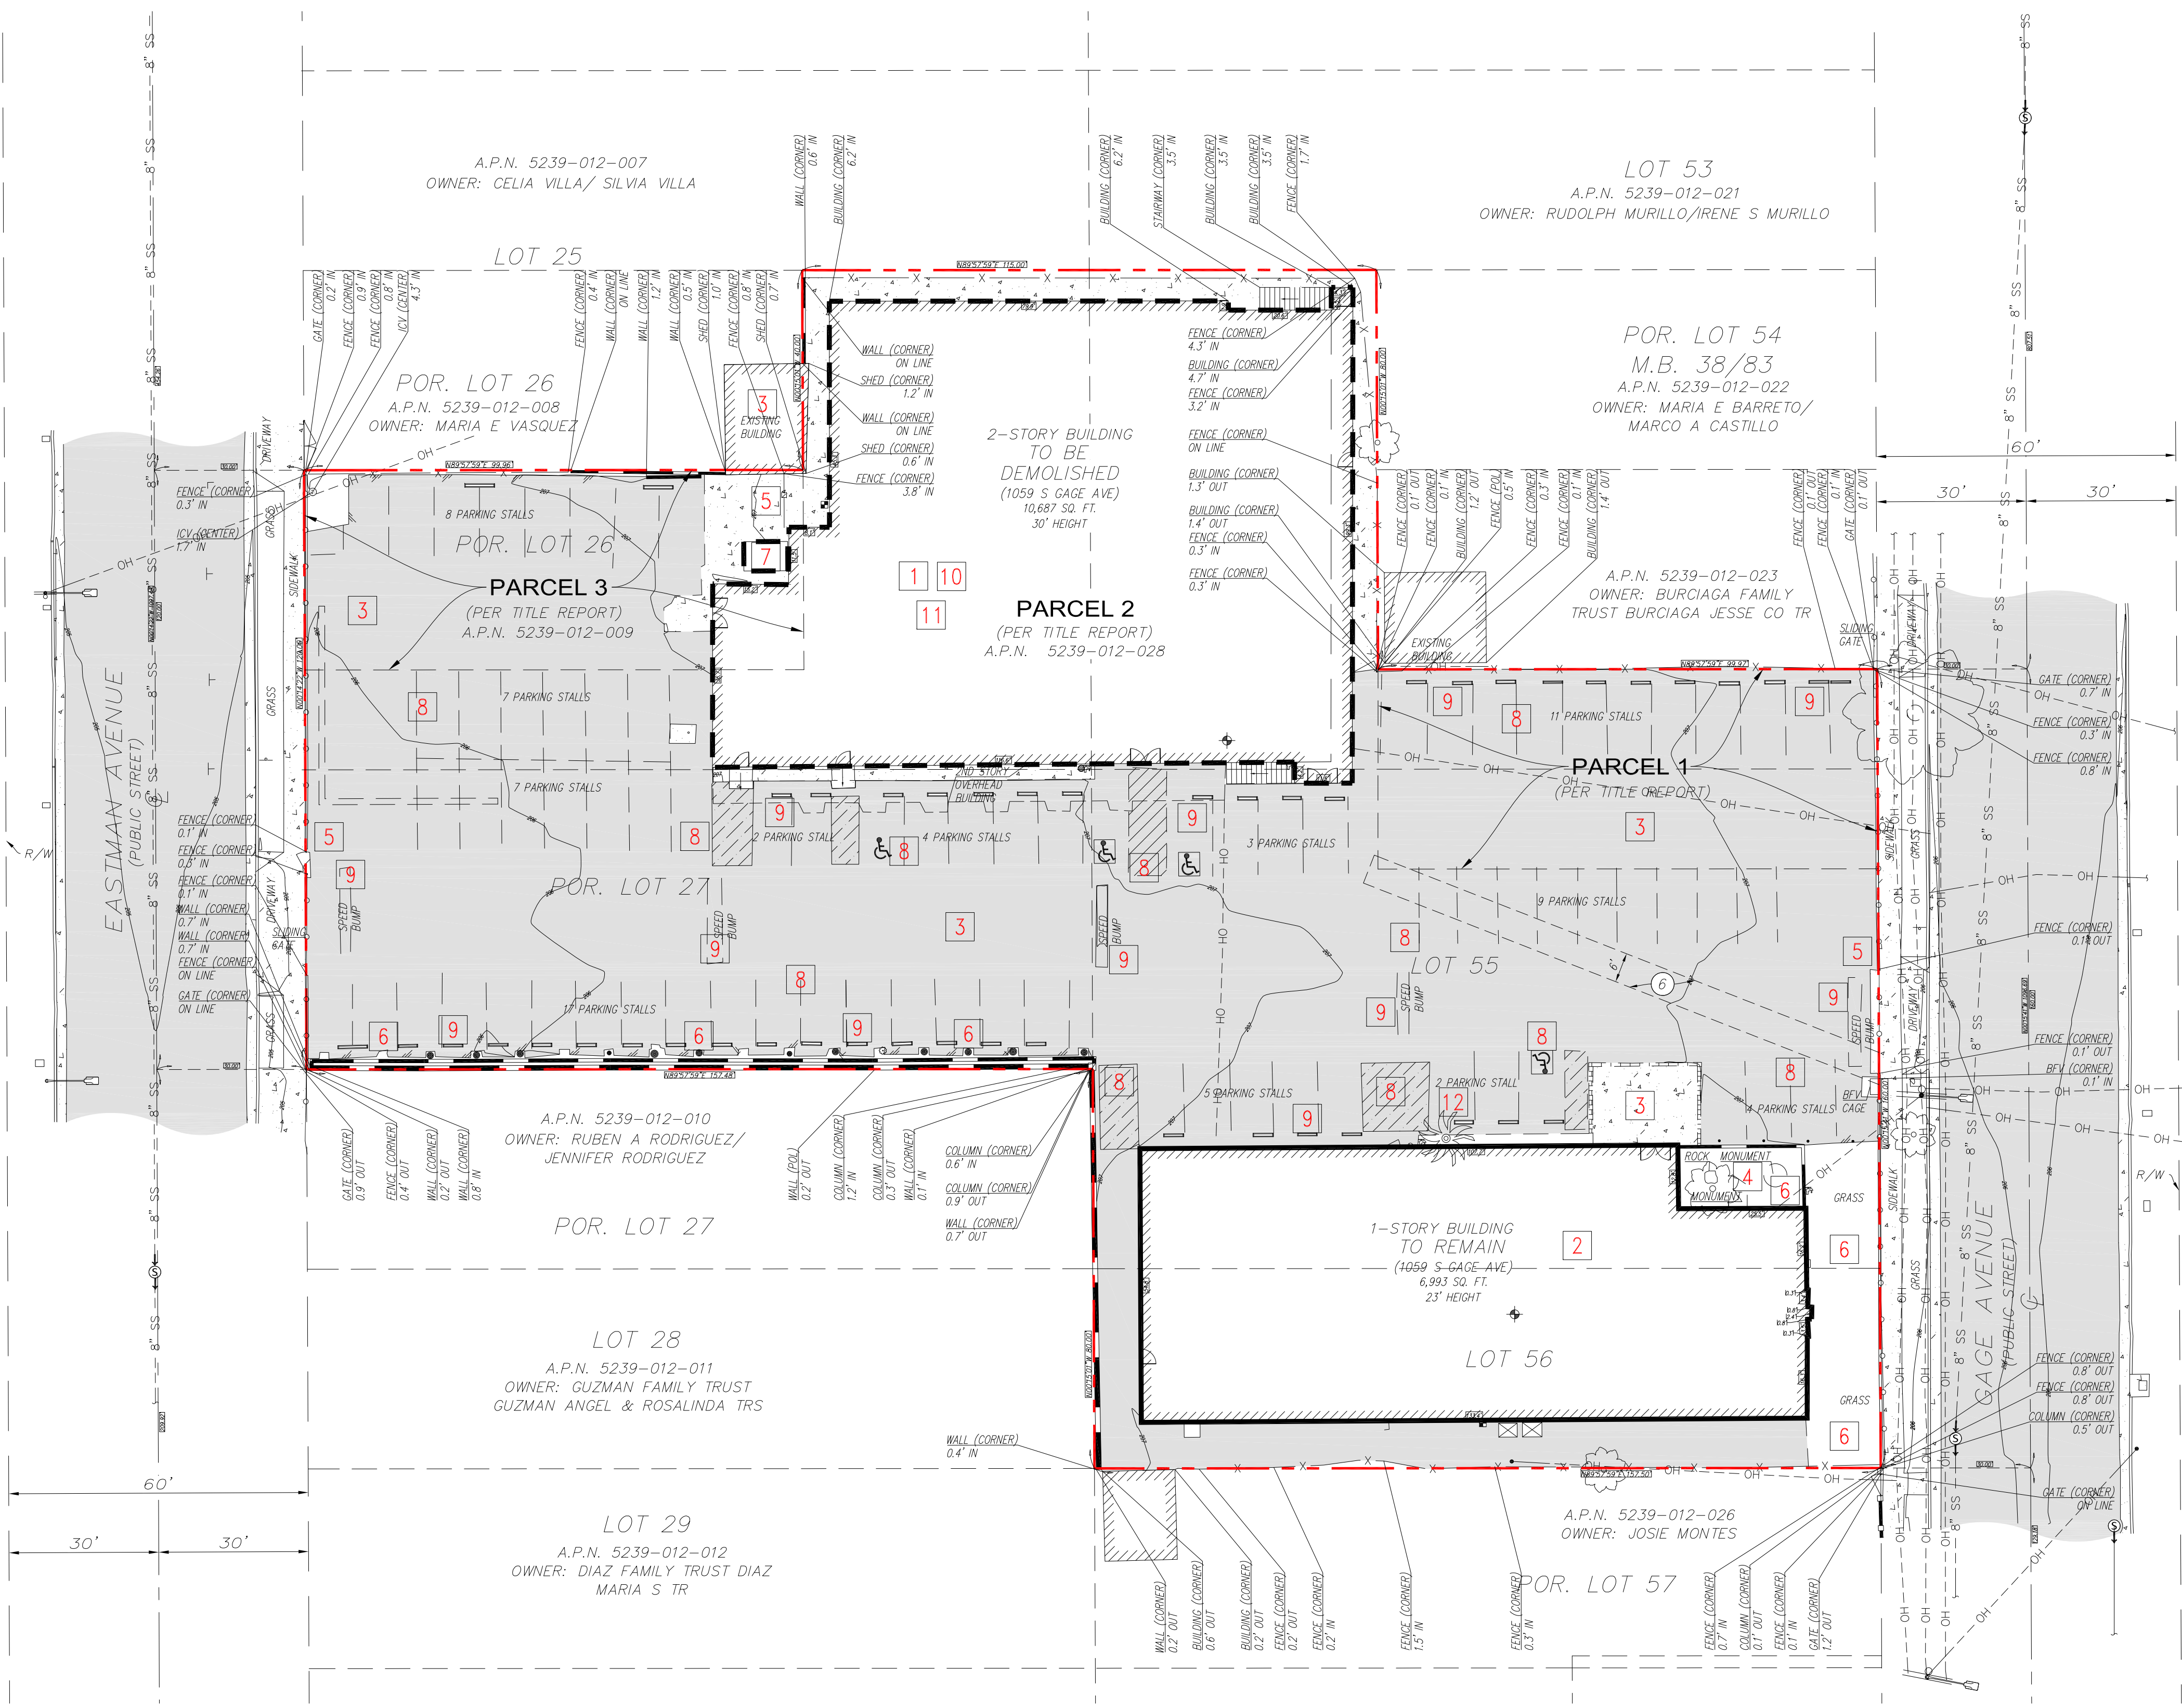

NOTE:
 ALL FIRE HYDRANTS SHALL MEASURE 6"x4"x2-1/2" BRASS OR BRONZE, CONFORMING TO CURRENT AWWA STANDARD C503 OR APPROVED EQUAL, AND SHALL BE INSTALLED IN ACCORDANCE WITH THE COUNTY OF LOS ANGELES FIRE CODE.3.4

SITE INFORMATION

SITE ADDRESS: 1059 S GAGE AVE, LOS ANGELES, CA 90023

PROPERTY AREA: 1.171 AC. OR 50,994 SQ. FT.

TOTAL GROUND FLOOR AREA OF BUILDINGS: 17,680 SQ. FT.

PARKING COUNT: 79 REGULAR PARKING STALLS
4 HANDICAP PARKING STALLS
83 TOTAL PARKING STALLS

ASSESSOR'S PARCEL NOS.: 5239-012-009 & 5239-012-028

DEMOLITION PLAN NOTES

- 1 DEMOLISH EXISTING 2-STORY BUILDING
- 2 PRESERVE EXISTING 1-STORY BUILDING
- 3 DEMOLISH EXISTING CONCRETE HARDSCAPE, ASPHALT
- 4 DEMOLISH EXISTING ROCK AND MONUMENTS
- 5 DEMOLISH EXISTING CHAIN LINK FENCE, WOOD FENCE, GATE, AND CAGE. (MAY KEEP AS TEMP FENCING AS NEEDED)
- 6 DEMOLISH EXISTING PLANTERS, LANDSCAPING AND IRRIGATION LINES.
- 7 REMOVE EXISTING EXISTING SHED
- 8 REMOVE EXISTING PARKING STRIPPING
- 9 REMOVE EXISTING WHEEL STOPS AND SPEED BUMPS
- 10 CAP SEWER LINE, CONTRACTOR TO VERIFY LOCATION IN FIELD.
- 11 CAP ALL UTILITY LINES, CONTRACTOR TO VERIFY LOCATION IN FIELD.
- 12 REMOVE EXISTING KING PALM TREE

GENERAL NOTES

1. CONTRACTOR IS RESPONSIBLE FOR VERIFYING ALL EXISTING CONDITIONS AND DIMENSIONS, AND IS TO REPORT ANY DISCREPANCY TO THE ARCHITECT PRIOR TO COMMENCING ANY WORK.
2. THE PROCEDURES TO BE USED FOR DEMOLITION SHALL PROVIDE FOR SAFE CONDUCT OF THE WORK, CAREFUL REMOVAL AND DISPOSAL OF MATERIALS, PROTECTION OF PROPERTY WHICH IS TO REMAIN UNDISTURBED.
3. CONTRACTOR SHALL BE RESPONSIBLE FOR REPAIRING ANY DAMAGE TO THE EXISTING ADJACENT BUILDING DUE TO DEMOLITION WORK.
4. CONTRACTOR SHALL INSURE THAT THERE IS NO INTERFERENCE WITH ROADS, STREETS, DRIVEWAYS, LOADING DOCKS AND ADJACENT FACILITIES. CONTRACTOR SHALL OBTAIN PERMISSION FROM THE LANDLORD'S REPRESENTATIVE AND CITY BUILDING DEPARTMENT BEFORE OBSTRUCTING ANY STREETS, DRIVEWAYS, LOADING DOCKS, AND ADJACENT FACILITIES.
5. DURING REMOVAL OPERATIONS, ALL PERSONS AND PROPERTY SHALL BE PROTECTED. THE WORK SHALL PROCEED IN SUCH A MANNER AS TO MINIMIZE ANY SPREAD OF DUST, DEBRIS AND FLYING PARTICLES AND SO THAT ANY RELATED EFFECTS OF DEMOLITION DO NOT INTERFERE WITH SURROUNDING EQUIPMENT, PERSONNEL, OR BUILDING.
6. CONTRACTOR SHALL REMOVE ALL DEMOLISHED ITEMS FROM THE SITE UNLESS LANDLORD'S REPRESENTATIVE HAS DIRECTED THE CONTRACTOR TO PROVIDE DEMOLISHED ITEMS. CONTRACTOR SHALL KEEP ALL PUBLIC AREAS CLEAN OF DEBRIS. COORDINATE WITH LANDLORD FOR LOCATION OF TRASH DUMPSTER. CONTRACTOR SHALL PROVIDE BARRICADING, AS REQUIRED TO PROTECT THE PUBLIC FROM DEMOLITION WORK.
7. CONTRACTOR SHALL RECYCLE AND/OR SALVAGE AT LEAST 50% OF NON-HAZARDOUS CONSTRUCTION/DEMOLITION DEBRIS. PRIOR TO DEMOLITION, MATERIALS TO BE DIVERTED FROM DISPOSAL WILL BE IDENTIFIED. DURING DEMOLITION THESE MATERIALS WILL BE SORTED ON SITE. ALL OTHER MATERIALS NOT EXPLICITLY DEMOLISHED TO BE RETURNED TO THE LANDLORD SHALL BE CONSIDERED AS SCRAP & SHALL BE DISPOSED OFF OF THE PREMISES COMPLETELY BY THIS CONTRACTOR.
8. CONTRACTOR SHALL CONTACT ALL UTILITY COMPANIES AND CAP UTILITIES AS NECESSARY PRIOR TO START OF DEMOLITION WORK.
9. CONTRACTOR SHALL OBTAIN REQUIRED NOTICES AND PERMITS FROM THE CITY OF LOS ANGELES BUILDING & SAFETY PRIOR TO COMMENCING DEMOLITION WORK.
10. CONTRACTOR SHALL INSURE PROPER ENVIRONMENTAL ABATEMENT & REMOVAL HAS BEEN CONDUCTED PRIOR TO COMMENCING DEMOLITION WORK.
11. ALL DEBRIS SHALL BE NET AT TIME OF HANDLING TO PREVENT DUST.
12. AN 8' H. CHAIN LINK FENCE MUST BE PROVIDED TO PREVENT UNAUTHORIZED ENTRY TO THE VACANT LOT AFTER DEMOLITION.

LEGAL DESCRIPTION

LEGAL DESCRIPTION

THE LAND REFERRED TO HEREIN BELOW IS SITUATED IN THE COUNTY OF LOS ANGELES, STATE OF CALIFORNIA, AND IS DESCRIBED AS FOLLOWS:

PARCEL 1:
 THE EAST 10 FEET OF THE SOUTH 20 FEET OF LOT 54, AND THE EAST 100 FEET OF THE NORTH 20 FEET OF LOT 55, TRACT NO. 3552, IN THE COUNTY OF LOS ANGELES, STATE OF CALIFORNIA, AS PER MAP RECORDED IN BOOK 38, PAGES 83 AND 84 OF MAPS, IN THE OFFICE OF THE COUNTY RECORDER OF SAID COUNTY, MORE PARTICULARLY DESCRIBED AS FOLLOWS:
 COMMENCING AT A POINT IN THE EAST LINE OF SAID LOT 54, 20 FEET NORTH FROM THE SOUTHWEST CORNER OF SAID LOT, THENCE WEST PARALLEL WITH THE SOUTH LINE OF SAID LOT, 100 FEET; THENCE SOUTH PARALLEL WITH THE EAST LINE OF SAID LOTS 54 AND 55, 40 FEET; THENCE EAST PARALLEL WITH THE NORTH LINE OF SAID 55, 100 FEET TO THE EAST LINE OF SAID LOT 55; THENCE ALONG THE EASTERLY LINE OF SAID LOTS 55 AND 54, 40 FEET TO THE POINT OF BEGINNING.

PARCEL 2:
 THE NORTH 60 FEET OF LOT 27, THE SOUTH 20 FEET OF LOT 26, THE EAST 57 1/2 FEET OF THE NORTH 80 FEET OF SAID LOT 26, THE WEST 57 1/2 FEET OF LOT 54 AND LOTS 55 AND 56, EXCEPT THE EAST 100 FEET OF THE NORTH 20 FEET OF SAID LOTS 55 OF TRACT NO. 3552, IN THE COUNTY OF LOS ANGELES, STATE OF CALIFORNIA, AS PER MAP RECORDED IN BOOK 38, PAGE 83 OF MAPS, IN THE OFFICE OF THE COUNTY RECORDER OF SAID COUNTY.

PARCEL 3:
 THE SOUTH 40 FEET OF THE NORTH 80 FEET OF THE WEST 100 FEET OF LOT 28 OF TRACT NO. 3552, IN THE COUNTY OF LOS ANGELES, STATE OF CALIFORNIA, AS PER MAP RECORDED IN BOOK 348, PAGE 83 OF MAPS, IN THE OFFICE OF THE COUNTY RECORDER OF SAID COUNTY.

VICINITY MAP

The vicinity map shows the site located on Gage Avenue between Eastman Avenue and Herbert Avenue. It also shows the proximity to Olympic Blvd and the city grid.

PROJECT OVERVIEW

A change of use from a church to a charter school serving 525 students from transitional kindergarten (TK) through 8th grade. The Project includes 22 classrooms, offices, outdoor eating areas and play areas, and a multi-purpose room. The Project Site is approximately 50,994 square feet (1.17 acres) and is currently developed with two church buildings: Building 1 (6,993 square feet) and Building 2 (18,309 square feet). The Project proposes to: (i) renovate Building 1 to house a TK classroom, administrative offices, and a multi-purpose room, with an attached 2,265-square-foot outdoor shade canopy providing coverage for an outdoor lunch area, (ii) demolish Building 2 to accommodate a new two-story, 35-foot-tall, 23,400-square-foot school building to house 21 classrooms and offices, with an attached 6,276-square-foot outdoor playground deck, and (iii) provide 33 onsite vehicular surface parking spaces and 90 onsite bicycle parking spaces (88 short-term and two long-term), and (iv) install 35 trees and 8,699 square feet of landscaping, construct six-foot-tall textured Concrete Modular Unit walls along the Project Site’s northern and southern property lines, and construct six-foot-tall wrought iron fences along the Project Site’s eastern and western property lines that face adjoining streets.

LOS ANGELES COUNTY
DEPARTMENT OF REGIONAL PLANNING
FINDINGS OF THE REGIONAL PLANNING COMMISSION
AND ORDER
PROJECT NO. PRJ2022-004416-(1)
CONDITIONAL USE PERMIT NO. RPPL2022013731
ENVIRONMENTAL ASSESSMENT NO. RPPL2022005113

RECITALS

1. **HEARING DATE(S).** The Los Angeles County (“County”) Regional Planning Commission (“Commission”) conducted a duly-noticed public hearing on April 17, 2024, in the matter of Project No. PRJ2022-004416-(1), consisting of Conditional Use Permit No. RPPL2022013731 (“CUP”) and Environmental Assessment No. RPPL2022005113, which consists of an Initial Study (“IS”) and a Mitigated Negative Declaration (“MND”).
2. **HEARING PROCEEDINGS.** *Reserved.*
3. **ENTITLEMENT(S) REQUESTED.** The Permittee, Extera Public Schools (“Permittee”), requests the CUP to authorize a new charter school (“Project”) on a property located at 1059 South Gage Avenue in the unincorporated community of East Los Angeles (“Project Site”). In addition to day-to-day academic and physical education curriculum, planned special events will include:
 - a. Community and Parent-Teacher Association meetings and events (to occur monthly, during the day);
 - b. Teacher professional development meetings (to occur monthly, during the day)
 - c. Welcome Back Families and Students Event in August (once per year, during the day);
 - d. Heritage Month celebrations (monthly, during the day);
 - e. Academic Competition/Spelling Bee in October (during the evening);
 - f. Winter Showcase in December (once per year, during the evening);
 - g. Open House/Science Fair in April (once per year, during the day);
 - h. Talent Show in June (once per year, during the day); and
 - i. 5th grade and 8th grade promotions in June (once per year, during the day).
4. **ENTITLEMENT(S) REQUIRED.** The CUP is a request to authorize the construction and operation of a new charter school in the R-3 (Limited Density Multiple Residence) Zone pursuant to County Code Section 22.18.030 (Land Use Regulations for Zones R-A, R-1, R-2, R-3, R-4, and R-5).
5. **PREVIOUS ENTITLEMENT(S).** Plot Plan No. 26040, which was approved on March 27, 1973, authorized a church on the Project Site.
6. **LAND USE DESIGNATION.** The Project Site is located within the MD (Medium Density Residential) land use designation of the East Los Angeles Community Plan (“Community Plan”) Land Use Policy Map.

7. **ZONING.** The Project Site is located in the East Side Unit No. 1 Zoned District and is currently zoned R-3 (Limited Density Multiple Residence). A CUP is required for a school in the R-3 Zone pursuant to County Code Section 22.18.030 (Land Use Regulations for Zones R-A, R-1, R-2, R-3, R-4, and R-5).

8. SURROUNDING LAND USES AND ZONING

LOCATION	COMMUNITY PLAN LAND USE POLICY	ZONING	EXISTING USES
SUBJECT PROPERTY	MD (Medium Density Residential, maximum density of 30 dwelling units per one net acre)	R-3 (Limited Density Multiple Residence) Zone	Church
NORTH	MD	R-3	Single and multi-family residences
EAST	MD	R-3	Single and multi-family residences
SOUTH	MD and P (Public Use)	R-3 and C-M-DP (Commercial Manufacturing - Development Program)	Single and multi-family residences
WEST	MD	R-3	Single and multi-family residences and the Los Angeles Community Hospital

9. PROJECT AND SITE PLAN DESCRIPTION.

A. Existing Site Conditions

The Project Site is 1.17 gross acres (50,994 square feet) in size and consists of two legal lots, which will be combined into one lot through a Certificate of Compliance that will be approved after the CUP is approved. The Project Site is irregular in shape with flat topography and is developed with an existing church that includes two buildings and a surface parking lot. Building 1 (6,993 square feet) is located at the southeast corner of the site and Building 2 (18,309 square feet) occupies a large area within the northern and central portions of the site. The Project proposes to demolish Building 2 and the surface parking lot to accommodate the proposed charter school.

B. Site Access

The Project Site is accessible via South Gage Avenue to the west and South Eastman Avenue to the east. Vehicular access to the Project will only be via the

entrance on South Gage Avenue with a one-way driveway that exits onto South Eastman Avenue. This configuration provides efficient and safe ingress to and egress from the Project Site while maintaining fewer vehicular conflict points on both South Gage Avenue and South Eastman Avenue. There will be clearly posted signage requiring the one-way direction of traffic through the Project Site. As part of the charter school's operational policy, staff and parents/caregivers will be provided with information regarding Project Site access prior to the start of the school year. Therefore, motorists who travel to the Project Site will be aware of the one-way direction of traffic.

The on-site drop-off/pick-up lane is approximately 26 feet in width, which is sufficient to accommodate two lanes of queued vehicles for a maximum of 20 vehicles at a time. In addition, there will be three staggered start and end times for the elementary grades and middle school grades to help disperse drop-off and pick-up traffic. The start and end times will be in 20-minute increments. For example, the start times will be from 7:00 a.m. to 7:20 a.m., from 7:20 a.m. to 7:40 a.m., and from 7:40 a.m. to 8 a.m. During the charter school's staggered start and end times, the school's staff will monitor and direct traffic by the school's entrance on South Gage Avenue and through the designated drop-off and pick-up area within the premises to ensure a smooth flow of traffic.

C. Site Plan

The Site Plan depicts a new two-story, 35-foot-tall school building with a total floor area of 23,400 square feet that will house 21 classrooms and offices. A 6,276-square-foot outdoor playground deck will be attached to the new building's second story. The deck will have an open top and will be enclosed by an eleven-foot-and-seven-inch tall perforated metal fence with a concrete base to prevent objects from coming over the fence and onto the abutting residential properties to the north of the Project Site. Building 1 will remain to be remodeled to house a transitional kindergarten (TK) classroom, administrative offices, and a multi-purpose room. A 2,265-square-foot outdoor shade canopy providing coverage for an outdoor lunch area will be attached to Building 1.

A total of 33 parking spaces will be provided on-site. 16 of the 33 parking spaces will be provided in a tandem configuration. A total of 90 bicycle parking spaces (88 short-term and two long-term) will be placed in easily accessible areas on the Project Site. The charter school will be enclosed by six-foot-tall textured Concrete Masonry Unit walls along the Project Site's northern and southern property line and six feet tall wrought iron fences along the eastern and western property lines, which adjoin South Gage Avenue and South Eastman Avenue, respectively. In addition, a total of 35 trees (minimum 15-gallon size) and 8,699 square feet of landscaping will be installed throughout the Project Site. The proposed fencing and landscaping will buffer the charter school from the nearby residences, enhance safety for the charter school, and improve the aesthetic qualities of the neighborhood.

D. Parking

The Project will provide a total of 33 on-site parking spaces. 16 of the 33 parking spaces will be provided in a tandem configuration. Pursuant to AB 2097, the Project is not required to meet the County Code's minimum on-site parking requirements because the Project Site is located within one half-mile of a high-quality transit corridor ("HQTC"). Therefore, all 33 on-site parking spaces are being provided voluntarily.

10. CEQA DETERMINATION. Prior to the Commission's public hearing regarding the Project, an IS was prepared for the Project in compliance with the California Environmental Quality Act (Public Resources Code section 21000, et seq.) ("CEQA"), the State CEQA Guidelines, and the Environmental Document Reporting Procedures and Guidelines for the County. Based on the IS, County Department of Regional Planning ("LA County Planning") staff ("Staff") determined that an MND was the appropriate environmental document for the Project. The mitigation measures in the MND are necessary to ensure that the Project will not have a significant effect on the environment and are contained in the Mitigation Monitoring and Reporting Program ("MMRP") prepared for the Project.

11. COMMUNITY OUTREACH. Prior to the Commission's public hearing regarding the Project, the Permittee conducted community outreach by canvassing the residential properties that immediately surround the Project Site along South Rowan Avenue, South Eastman Avenue, South Gage Avenue, and South Herbert Avenue. The Permittee went out on three separate dates, January 22, 2023, February 4, 2023, and February 24, 2024, and received petition signatures and letters in support of the Project. The petitions in support of the Project are attached to the Report to the Commission dated April 4, 2024, as Exhibit J – Applicant's Public Outreach Summary and Signed Petitions.

On March 16, 2024, the Permittee hosted an on-site open house where neighbors were invited to learn more about the proposed Project. A total of 12 neighbors attended the event and the Permittee reported that they engaged in constructive conversations. A more detailed summary of the public outreach conducted is attached to the Report to the Commission dated April 4, 2024, as Exhibit J – Applicant's Public Outreach Summary and Signed Petitions.

On March 6, 2024, the Permittee presented the Project to the Maravilla Community Advisory Committee ("MCAC") to facilitate a dialogue and to listen to the community's concerns about the Project. On April 2, 2024, the Permittee returned to the MCAC to continue the dialogue and address concerns raised during the March 6, 2024, presentation.

Although the MCAC understood that the conditions of Project approval, the one-way traffic circulation pattern, including the drop-off/pick-up lane, and the staggered start time and end times for the elementary grades and middle school grades, are intended to ensure that the Project is compatible with surrounding land uses and will not generate adverse impacts. However, they expressed concerns that these measures

may not be effective in practice. In response, conditions of Project approval will require:

- a. A designated community liaison to receive and respond to complaints submitted to the charter school;
- b. Installation of two “Perimeter Identification” signs, one on the Project Site’s South Gage Avenue frontage and the other on the Project Site’s South Eastman Avenue frontage, which will include the name, telephone number, and email address for the designated community liaison as well as instructions for reporting violations to LA County Planning;
- c. Annual Community Meetings; and
- d. At least two Periodic Reviews.

The Periodic Reviews will be “Discussion and Possible Action” items at regularly scheduled Commission meetings. Before the Project Reviews, Staff will compile and review feedback obtained at the Annual Community Meetings as well as all complaints submitted to the charter school and to Staff and information regarding how those complaints were addressed. Staff may also conduct outreach to the surrounding residents, the Permittee, and other parties. During the Periodic Reviews, Staff will make presentations regarding the information that will be compiled and reviewed and any other pertinent information regarding the effectiveness of the conditions of Project approval, including but not limited to the conditions of Project approval related to the one-way traffic circulation pattern, the drop-off/pick-up lane, and the staggered start time and end times for the elementary grades and middle school grades, to ensure that the Project is compatible with surrounding land uses and has not generated unanticipated adverse impacts. At the conclusion of the presentations, Staff may recommend that the Commission initiate a public hearing to modify the CUP’s conditions or revoke the CUP pursuant to County Code Chapter 22.238.

12. PUBLIC COMMENTS. As noted in Finding 11, the Permittee provided Staff with a summary of public outreach conducted in the surrounding neighborhood and with local community organizations in the unincorporated community of East Los Angeles, which includes petitions in support of the Project. Prior to the publication of the Report to the Commission dated April 4, 2024, Staff received a total of two emails in opposition to the Project. The emails are attached to the Report to the Commission dated April 4, 2024, as Exhibit K – Public Correspondence.

1. Carlos Montes, in an email dated April 3, 2024, expressed opposition to the Project due to impacts on traffic and noise to the residential community.
2. The Eastside Padres Contra La Privatization, in an email dated April 3, 2024, expressed opposition to the Project due to an overconcentration of charter schools in a community when there is a decline in student enrollment, and notes that a new school is not a suitable use at the proposed location and is not compatible with the community.

13. AGENCY RECOMMENDATIONS.

County Department Comments and Recommendations

For the CUP:

1. The Department of Public Works, in a letter dated February 21, 2024, recommended that the Project proceed to a public hearing with required conditions of approval.
2. The Fire Department, in a letter dated January 18, 2024, recommended that the Project proceed to a public hearing with required conditions of approval.
3. The Department of Public Health, in a letter dated November 22, 2023, recommended that the Project proceed to a public hearing with required conditions of approval.
4. The Department of Parks and Recreation, in a letter dated February 7, 2024, recommended that the Project proceed to a public hearing.

Although Staff consulted with the Sheriff's Department regarding the IS/MND, they did not consult with the Sheriff's Department regarding the CUP because the Project is a charter school and Staff does not typically consult with the Sheriff's Department regarding this type of CUP. The conditions required by the other County departments have been incorporated into the Project's conditions of approval.

For the IS/MND:

1. The Department of Public Works, in a letter dated February 21, 2024, cleared the IS/MND.
2. The Fire Department, in a letter dated February 16, 2024, cleared the IS/MND and provided conditions of approval for the CUP. The conditions have been incorporated into the Project's conditions of approval.
3. The Department of Public Health, in a letter dated November 22, 2023, cleared the IS/MND.
4. The Department of Parks and Recreation, in a letter dated November 21, 2024, cleared the IS/MND.
5. The Sheriff's Department, in a letter dated December 5, 2023, provided comments regarding the IS/MND. The comments provided context on the current staffing limitations at the East Los Angeles Sheriff's Station. The Sheriff's Department provided additional comments in a letter dated April 3, 2024. The comments reiterated the current staffing limitations at the East Los Angeles Sheriff's Station and also noted that the applicant needs to coordinate with the Sheriff's Contract Law Enforcement Bureau.

Other Agency Comments and Recommendations

1. The County Sanitation District, in a letter dated April 28, 2024, provided a comment requesting a correction to information in the IS/MND regarding the design capacity of the Joint Water Pollution Control Plant. The IS/MND incorrectly stated that the design capacity is 260 million gallons of wastewater per day, but the actual design capacity is 400 million gallons of wastewater per day.

2. The California Department of Transportation, in a letter dated April 2, 2024, provided recommendations to improve bicycle and road infrastructure in the vicinity of the Project Site.

Comment and recommendation letters received by County and State agencies are attached to this report to the Regional Planning Commission as Exhibit I – Agency Correspondences.

14. **LEGAL NOTIFICATION.** Pursuant to County Code Section 22.222.120, the community was properly notified of the public hearing by mail, newspaper (The East Los Angeles Tribune), and property posting. Additionally, the Project was noticed and case materials were available on LA County Planning’s website. On February 22, 2024, a total of 135 Notices of Public Hearing were mailed to all property owners as identified on the County Assessor’s record within a 500-foot radius from the Project Site, as well as four notices to those on the courtesy mailing list for the East Side Unit No. 1 Zoned District and to any additional interested parties.

GENERAL PLAN CONSISTENCY FINDINGS

15. **LAND USE POLICY.** The Commission finds that the Project is consistent with the General Plan and Community Plan goals and policies related to land use.

The General Plan sets forth policies for all the County’s unincorporated communities regarding land use, urban form, open space, economic development, public services, and other topics related to land use. The Project supports the General Plan’s guiding principle and goal to ensure that community services and infrastructure are sufficient to accommodate growth and provide the foundation for a strong and diverse economy.

The Community Plan sets forth additional policies that only apply to the unincorporated community of East Los Angeles. The Community Plan’s MD land use designation is intended for single-family to multi-family residences and the Project is compatible with residential uses. The Project will provide a needed service to the surrounding community that will expand access to secondary education in the area and provide employment opportunities.

16. **GOALS AND POLICIES.** The Commission finds that the Project is also consistent with the following specific goals and policies of the General Plan and the Community Plan:

General Plan

Land Use Element

(Policy LU 5.4) Encourage community-serving uses, such as early care and education facilities...to locate near employment centers.

(Policy LU 5.5) Ensure that all households have access to a sufficient supply of quality early care and education and supervised school-age enrichment options for children from birth to age 13.

(Policy LU 10.9) Encourage land uses and design that stimulate positive and productive human relations and foster the achievement of community goals.

Public Services and Facilities Element

(Policy PS/F 7.3) Encourage adequate facilities for early care and education.

The Project involves a charter school, which is a new community-serving use in the unincorporated community of East Los Angeles that is located in proximity to employment centers, such as the commercial corridor along Whittier Boulevard to the north of the Project Site. The benefit of siting educational facilities and early care centers near employment centers is to provide the local workforce with educational options for their families, which will also reduce vehicle miles traveled if parents and caretakers are close to their child/children's or dependent's school facility.

The charter school is designed to have proper site circulation for vehicles, pedestrians, and students. The new charter school building façade is designed with a variety of materials (painted stucco and metal, terra cotta, tile, glass, and perforated metal) and colors (light gray, teal, green, and orange) that will be replicated on the existing building that will be used for a TK classroom, administrative offices, and a multipurpose room to create a cohesive and attractive learning environment tied together by on-site landscaped open space areas and landscaped property frontages.

Community Plan

Community Plan Goal: To promote a more efficient delivery of services, such as health, public safety, and education, etc.

Community Plan Policy: Education – Encourage a balanced education program for East Los Angeles students and encourage the expansion of school facilities, especially in elementary schools.

The Project will assist in promoting a more efficient delivery of health and educational services in the unincorporated community of East Los Angeles because schools are intended to be safe physical environments where school aged children can pursue academics and physical fitness and wellbeing. The Project is consistent with the Community Plan policy above because it will provide both elementary and middle school educational services up to the 8th grade. The new school facilities are designed to provide a welcoming environment for students, staff, and the community.

ZONING CODE CONSISTENCY FINDINGS

17. PERMITTED USE IN ZONE. The Commission finds that the Project is consistent with the R-3 zoning classification because schools are permitted in such zone with an

approved CUP pursuant to County Code Section 22.18.030 (Land Use Regulations for Zones R-A, R-1, R-2, R-3, R-4, and R-5).

18. **REQUIRED YARDS.** The Commission finds that the Project is consistent with the R-3 Zone's building setback requirements pursuant to County Code Section 22.18.040 (Development Standards for Residential Zones). The proposed school buildings will be set back from the Project Site's southern property line by nine feet to nine feet and five inches and will be set back from the Project Site's northern property line by five to 15 feet, which complies with the required five-foot side yard setbacks. The proposed school buildings will be set back by 15 feet along both the Project Site's eastern and western property lines adjoining South Gage Avenue and South Eastman Avenue, respectively, which complies with the required 15-foot front yard setbacks for a through-lot.
19. **HEIGHT.** The Commission finds that the Project is consistent with the standard identified in County Code Section 22.18.040. The proposed school building has a maximum height of 35 feet, which is within the 35-foot height limit for buildings in the R-3 Zone.
20. **PARKING.** The Commission finds that the Project is in consistent with the standard identified in County Code Section 22.112.070 (Required Parking Spaces), which requires one parking space per classroom and one parking space for each five people in the largest assembly room based on the occupant load. The charter school will have a total of 22 classrooms, which requires 22 parking spaces, and the school's assembly room has an occupancy load of 160, which requires 32 parking spaces. Therefore, a total of 54 on-site parking spaces is required. However, under AB 2097, the Project is not required to comply with County Code Section 22.112.070 because the Project Site is located within one half-mile of a HQTC. Specifically, the Project Site is within 1,000 feet of eastbound and westbound transit stops along the Whittier Boulevard corridor. The Whittier Boulevard corridor is served by Metro Local Line 18 ("Metro 18"). Metro 18 provides eastbound and westbound service from the Wilshire and Western D Line Station in the City of Los Angeles' Koreatown area to the Montebello Metrolink Station in the City of Montebello. Metro 18's current service frequency meets the Southern California Association of Government's threshold for 15 minutes or less in each direction. Therefore, Whittier Boulevard currently qualifies as an HQTC. The Project will voluntarily provide 33 on-site parking spaces.
21. **SIGN.** The Commission finds that the Project is consistent with the standard identified in County Code Chapter 22.114 (Signs), which allows uses permitted in residential zones with a CUP to have wall signs with up to two square feet of area per each linear foot of building frontage. The new charter school will have a 120-foot-wide building frontage along South Gage Avenue and a 180-foot-wide building frontage along South Eastman Avenue. Therefore, the new charter school is allowed to have a combination of wall signs with up to 240 square feet in size along the South Gage Avenue building frontage and up to 360 square feet in size along the South Eastman Avenue building frontage. The Project proposes two wall signs with up to 94 square feet along the South Gage Avenue building frontage and one wall sign that is 40 square feet facing the South Eastman Avenue building frontage, which are all within the allowable wall sign area.

The area of the “Perimeter Identification” signs required by the conditions of Project approval shall not be accounted for in the area permitted for signs in County Code Chapter 22.114 (Signs).

22. **TREE PLANTING.** The Commission finds that the Project is consistent with the standards identified in County Code Chapter 22.126.030 (Tree Requirements), which requires nonresidential projects to provide a minimum of three trees for every 10,000 square feet of newly developed lot area. The new charter school will occupy an area of approximately 50,994 square feet. Therefore, a total of 16 trees must be planted on-site. The Project will comply with these tree planting requirements because it will include a total of 35 new trees (minimum 15-gallon size) on the Project Site.
23. **FENCES AND WALLS.** The Commission finds that the Project is inconsistent with the wall standards identified in County Code Chapter 22.110.070 (Fences and Walls) because a six-foot-wall is proposed within the Project Site’s front yard setback and the height limit for wall in this area is three and a half feet. However, County Code Title 22 allows for a modification of the setback requirements (“Yard Modification”) to permit an increase in wall height pursuant to County Code Chapter 22.110.190 (Modifications Authorized) and County Code Chapter 22.196 (Yard Modifications). The Permittee will be required to submit a Yard Modification application to the County within one month after the Project’s approval date to satisfy County Code Title 22 requirements for fences and walls.
24. **COMMUNITY STANDARDS DISTRICT.** The Commission finds that the Project is consistent with the standards identified in the East Los Angeles Community Standards District (“CSD”) pursuant to County Code Chapter 22.316. The CSD has a building height limitation of 35 feet for properties zoned R-3 and requires that a minimum of 50 percent of the required front yard setback area be landscaped. The Project’s new two-story school building will have a maximum height of 35 feet and the Project will provide a total of approximately 8,699 square feet of landscaping throughout the Project Site. Some of this landscaping will be provided in at least 50 percent of the required front yard setbacks.

CONDITIONAL USE PERMIT FINDINGS.

25. **The proposed use will be consistent with the adopted General Plan for the area.** The Project is consistent with the guiding principles of the General Plan. Specifically, the Project supports the guiding principle and goal to ensure that community services and infrastructure are sufficient to accommodate growth and provide the foundation for a strong and diverse economy. The Project is in substantial conformance with the General Plan’s goals and policies, as documented in Finding 16, above. The Project will revitalize and optimize an infill property. The Project will enhance the neighborhood with its thoughtful design features that are consistent with the existing residential community. The students’ parents, families, and caretakers will live near the Project Site, which will result in a strengthened community.
26. **The Commission finds that the proposed use at the site will not adversely affect the health, peace, comfort, or welfare of persons residing or working in the**

surrounding area; will not be materially detrimental to the use, enjoyment, or valuation of property of other persons located in the vicinity of the site; and will not jeopardize, endanger, or otherwise constitute a menace to the public health, safety, or general welfare. The Project is a TK through 8th grade charter school. This type of land use can be found in residential neighborhoods throughout the County that are similar to the neighborhood where the Project Site is located. The proposed Project is expanding the current square footage of buildings on the Project Site by 6,932 square feet and is renovating a currently underutilized church into a well-designed school that will enhance the current community. Residential neighborhoods are common locations for schools and can be viewed as an ideal location because those neighborhoods provide a safe environment that are near the students' families. The Project includes a cohesive building and site plan design, an appropriate vehicular access route with a one way traffic direction through the Project Site, and operational measures, such as staggered school start and end times, that will contribute to the general welfare of the community and ensure that the charter school is a good neighbor. The Project's location, size, height, and operation are not anticipated to adversely affect or diminish the value of neighboring properties.

27. **The Commission finds that the proposed site is adequate in size and shape to accommodate the yards, walls, fences, parking and loading facilities, landscaping and other development features prescribed in Title 22, or as is otherwise required in order to integrate said use with the uses in the surrounding area.** The Project Site is a through-lot with two street frontages that is approximately 50,994 square feet (1.17 acres) in size, which allows for two separate buildings and sufficient space for play areas and a safe and efficient on-site pick-up/drop-off area, making it an ideal location for a school. As mentioned in the Zoning Code Consistency Findings above, the Project Site is adequate in shape and size to accommodate the applicable development features prescribed in Title 22.

28. **The Commission finds that the proposed site is adequately served by highways or streets of sufficient width and improved as necessary to carry the kind and quantity of traffic such use would generate, and by other public or private service facilities as are required.** The Project Site is located between two residential streets, each of which have two lanes and parking spaces along both sides of the street, and is one block north of Dennison Street, which is a primary thoroughfare that runs parallel to the Santa Ana Freeway (Interstate 5) and provides access to major arterials. The Project's design allows for an efficient drop-off/pick-up system that is anticipated to facilitate a smooth traffic flow that will minimally affect the neighboring residents because motorists will have quick access to Dennison Street.

29. The Commission finds that to ensure continued compatibility between the Project and the surrounding land uses, it is necessary to limit the CUP to 15 years.

ENVIRONMENTAL FINDINGS

30. The Commission finds that the MMRP, prepared in conjunction with the MND, identifies in detail how compliance with its measures will mitigate or avoid potential

adverse impacts to the environment from the Project. The Commission further finds that the MMRP's requirements are incorporated into the Project's conditions of approval, and that approval of this Project is conditioned on the Permittee's compliance with the attached conditions of approval and the MMRP.

31. The Commission finds that the Permittee is subject to payment of the California Department of Fish and Wildlife fees related to the Project's effect on wildlife resources pursuant to section 711.4 of the California Fish and Game Code.

ADMINISTRATIVE FINDINGS

32. **LOCATION OF DOCUMENTS.** The location of the documents and other materials constituting the record of proceedings upon which the Commission's decision is based in this matter is at LA County Planning, 13th Floor, Hall of Records, 320 West Temple Street, Los Angeles, California 90012. The custodian of such documents and materials shall be the Section Head of the Metro Development Section, LA County Planning.

BASED ON THE FOREGOING, THE REGIONAL PLANNING COMMISSION CONCLUDES THAT:

- A. The proposed use with the attached conditions will be consistent with the adopted General Plan.
- B. The proposed use at the site will not adversely affect the health, peace, comfort or welfare of persons residing or working in the surrounding area, will not be materially detrimental to the use, enjoyment or valuation of property of other persons located in the vicinity of the site, and will not jeopardize, endanger or otherwise constitute a menace to the public health, safety or general welfare.
- C. The proposed site is adequate in size and shape to accommodate the yards, walls, fences, parking and loading facilities, landscaping and other development features prescribed in Title 22, or as is otherwise required in order to integrate said use with the uses in the surrounding area.
- D. The proposed site is adequately served by highways or streets of sufficient width and improved as necessary to carry the kind and quantity of traffic such use would generate, and by other public or private service facilities as are required.

THEREFORE, THE REGIONAL PLANNING COMMISSION:

1. Certifies that the MND for the Project was completed in compliance with CEQA and the State and County CEQA Guidelines related thereto; certifies that it independently reviewed and considered the MND and that the MND reflects the independent judgment and analysis of the Commission as to the environmental consequences of the Project; certifies that it considered the MMRP, finding that it is adequately designed to ensure compliance with the mitigation measures during Project implementation; determined that on the basis of the whole record before the Commission that there is

no substantial evidence that the Project will have a significant effect on the environment; adopts the MND and finds that the MMRP is adequately designed to ensure compliance with the mitigation measures during Project implementation; and

2. Approves **CONDITIONAL USE PERMIT NO. RPPL2022013731**, subject to the attached conditions.

ACTION DATE: April 17, 2024

March 4, 2024

c: Each Commissioner, Zoning Enforcement, Building and Safety

LOS ANGELES COUNTY
DEPARTMENT OF REGIONAL PLANNING

CONDITIONS OF APPROVAL
PROJECT NO. PRJ2022-004416-(1)
CONDITIONAL USE PERMIT NO. RPPL2022013731
ENVIRONMENTAL PLAN NO. RPPL2022005113

PROJECT DESCRIPTION

The project is a Conditional Use Permit ("CUP") to authorize the construction and operation of a new charter school for transitional kindergarten through eighth grade with a maximum enrollment of 525 students. The new charter school will include a new two-story school building containing 21 classrooms, offices, and an attached outdoor playground deck and an existing one-story building that will be remodeled to contain a classroom, administrative offices and a multi-purpose room, subject to the following conditions of approval:

GENERAL CONDITIONS

1. Unless otherwise apparent from the context, the term "Permittee" shall include the applicant, owner of the property, and any other person, corporation, or other entity making use of this grant.
2. This grant shall not be effective for any purpose until the Permittee, and the owner of the subject property if other than the Permittee, have filed at the office of the Los Angeles County ("County") Department of Regional Planning ("LA County Planning") their affidavit stating that they are aware of and agree to accept all of the conditions of this grant, and that the conditions of the grant have been recorded as required by Condition No. 6, and until all required monies have been paid pursuant to Condition No. 9, 10, and 13. Notwithstanding the foregoing, this Condition No. 2 and Condition Nos. 3, 4, 8, and 11 shall be effective immediately upon the date of final approval of this grant by the County.
3. The Permittee shall defend, indemnify, and hold harmless the County, its agents, officers, and employees from any claim, action, or proceeding against the County or its agents, officers, or employees to attack, set aside, void, or annul this permit approval, which action is brought within the applicable time period of Government Code section 65009 or any other applicable limitations period. The County shall promptly notify the Permittee of any claim, action, or proceeding and the County shall reasonably cooperate in the defense. If the County fails to promptly notify the Permittee of any claim, action, or proceeding, or if the County fails to cooperate reasonably in the defense, the Permittee shall not thereafter be responsible to defend, indemnify, or hold harmless the County.
4. In the event that any claim, action, or proceeding as described above is filed against the County, the Permittee shall within ten days of the filing make an initial deposit with LA County Planning in the amount of up to \$5,000.00, from which actual costs and expenses shall be billed and deducted for the purpose of defraying the costs or expenses involved in LA County Planning's cooperation in the defense, including but

not limited to, depositions, testimony, and other assistance provided to Permittee or Permittee's counsel.

If during the litigation process, actual costs or expenses incurred reach 80 percent of the amount on deposit, the Permittee shall deposit additional funds sufficient to bring the balance up to the amount of \$5,000.00. There is no limit to the number of supplemental deposits that may be required prior to completion of the litigation.

At the sole discretion of the Permittee, the amount of an initial or any supplemental deposit may exceed the minimum amounts defined herein. Additionally, the cost for collection and duplication of records and other related documents shall be paid by the Permittee according to County Code Section 2.170.010.

5. If any material provision of this grant is held or declared to be invalid by a court of competent jurisdiction, the permit shall be void and the privileges granted hereunder shall lapse.
6. Prior to the use of this grant, the Permittee, or the owner of the subject property if other than the Permittee, shall **record the terms and conditions** of the grant in the office of the County Registrar-Recorder/County Clerk (i.e. Recorder Office). In addition, upon any transfer or lease of the property during the term of this grant, the Permittee, or the owner of the subject property if other than the Permittee, shall promptly provide a copy of the grant and its conditions to the transferee or lessee of the subject property.
7. **This grant shall terminate on April 17, 2039.** Entitlement to use of the property thereafter shall be subject to the regulations then in effect. If the Permittee intends to continue operations after such date, whether or not the Permittee proposes any modifications to the use at that time, the Permittee shall file a new CUP application with LA County Planning, or shall otherwise comply with the applicable requirements at that time. Such application shall be filed at least 12 months prior to the expiration date of this grant and shall be accompanied by the required fee. In the event that the Permittee seeks to discontinue or otherwise change the use, notice is hereby given that the use of such property may require additional or different permits and would be subject to the then-applicable regulations.
8. This grant shall expire unless used within two (2) years from the date of final approval of the grant. A single one-year time extension may be requested in writing and with the payment of the applicable fee prior to such expiration date.
9. The subject property shall be maintained and operated in full compliance with the conditions of this grant and any law, statute, ordinance, or other regulation applicable to any development or activity on the subject property. Failure of the Permittee to cease any development or activity not in full compliance shall be a violation of these conditions. No provision of any easement of any other encumbrance on the property shall exempt the Permittee and/or property owner from compliance with these conditions and applicable regulations. Inspections shall be made to ensure compliance with the conditions of this grant as well as to ensure that any

development undertaken on the subject property is in accordance with the approved site plan on file. The Permittee shall deposit with the County the sum of **\$3,528.00**, which shall be placed in a performance fund and be used exclusively to reimburse LA County Planning for all expenses incurred while inspecting the premises to determine the Permittee's compliance with the conditions of this grant. The fund provides for **eight (8)** inspections. Inspections may be unannounced and may be conducted utilizing any available technologies, including, but not limited to, unmanned aircraft systems (UAS).

If additional inspections are required to ensure compliance with the conditions of this grant, or if any inspection discloses that the subject property is being used in violation of any one of the conditions of this grant, the Permittee shall be financially responsible and shall reimburse LA County Planning for all additional enforcement efforts necessary to bring the subject property into compliance. The amount charged for additional inspections shall be \$441.00 per inspection, or the current recovery cost established by LA County Planning at the time any additional inspections are required, whichever is greater.

10. Within five (5) working days from the day after your appeal period ends on **May 1, 2024**, the Permittee shall remit processing fees at the County Registrar-Recorder/County Clerk Office (i.e. County Clerk Office), payable to the County of Los Angeles, in connection with the filing and posting of a Notice of Determination ("NOD") for this project and its entitlements in compliance with section 21152 of the Public Resources Code. Unless a Certificate of Exemption is issued by the California Department of Fish and Wildlife pursuant to section 711.4 of the California Fish and Game Code, the Permittee shall pay the fees in effect at the time of the filing of the NOD, as provided for in section 711.4 of the Fish and Game Code, currently **\$2,991.75** (\$2,916.75 for a Negative Declaration or Mitigated Negative Declaration plus \$75.00 processing fee). No land use project subject to this requirement is final, vested or operative until the fee is paid.
11. The Permittee shall comply with all mitigation measures identified in the Mitigation Monitoring Program ("MMP"), which are incorporated by this reference as if set forth fully herein.
12. Within 30 days of the date of final approval of the grant by the County, the Permittee shall record a covenant and agreement, which attaches the MMP and agrees to comply with the mitigation measures imposed by the Mitigated Negative Declaration for this project, in the Recorder's Office. Prior to recordation of the covenant, the Permittee shall submit a draft copy of the covenant and agreement to LA County Planning for review and approval. As a means of ensuring the effectiveness of the mitigation measures, the Permittee shall submit annual mitigation monitoring reports to LA County Planning for approval or as required. The reports shall describe the status of the Permittee's compliance with the required mitigation measures.
13. The Permittee shall deposit an initial sum of **\$6,000.00** with LA County Planning within thirty (30) days of the date of final approval of this grant in order to defray the cost of reviewing and verifying the information contained in the reports required by

the MMP. The Permittee shall replenish the mitigation monitoring account if necessary until all mitigation measures have been implemented and completed.

14. Notice is hereby given that any person violating a provision of this grant is guilty of a misdemeanor. Notice is further given that the Regional Planning Commission (“Commission”) or a Hearing Officer may, after conducting a public hearing, revoke or modify this grant, if the Commission or Hearing Officer finds that these conditions have been violated or that this grant has been exercised so as to be detrimental to the public’s health or safety or so as to be a nuisance, or as otherwise authorized pursuant to County Code Chapter 22.238.
15. All development pursuant to this grant must be kept in full compliance with the County Fire Code to the satisfaction of the County Fire Department.
16. All development pursuant to this grant shall conform with the requirements of the County Department of Public Works to the satisfaction of said department.
17. All development pursuant to this grant shall comply with the requirements of Title 22 of the County Code and of the specific zoning of the subject property, unless specifically modified by this grant, as set forth in these conditions, including the approved Exhibit "A," or a revised Exhibit "A" approved by the Director of LA County Planning (“Director”).
18. The Permittee shall maintain the subject property in a neat and orderly fashion. The Permittee shall maintain free of litter all areas of the premises over which the Permittee has control.
19. All structures, walls and fences open to public view shall remain free of graffiti or other extraneous markings, drawings, or signage that was not approved by LA County Planning. These shall include any of the above that do not directly relate to the business being operated on the premises or that do not provide pertinent information about said premises. The only exceptions shall be seasonal decorations or signage provided under the auspices of a civic or non-profit organization.

In the event of graffiti or other extraneous markings occurring, the Permittee shall remove or cover said markings, drawings, or signage within 48 hours of such notification, weather permitting. Paint utilized in covering such markings shall be of a color that matches, as closely as possible, the color of the adjacent surfaces.

20. The subject property shall be developed and maintained in substantial conformance with the plans marked Exhibit “A.” If changes to any of the plans marked Exhibit “A” are required as a result of instruction given at the public hearing, **one digital copy of a modified Exhibit “A”** shall be submitted to LA County Planning by **June 16, 2024**.
21. In the event that subsequent revisions to the approved Exhibit “A” are submitted, the Permittee shall submit a digital copy of the proposed plans to the Director for review and approval. All revised plans must substantially conform to the originally approved

Exhibit "A." All revised plans must be accompanied by the written authorization of the property owner(s) and applicable fee for such revision.

22. The conditions of this grant shall always be retained on the premises and shall be immediately produced upon request by any County Sheriff or any LA County Planning Zoning Enforcement inspector. The manager and all employees of the facility shall be knowledgeable of the conditions herein. Violation of the conditions herein may subject the use to the provisions of County Code Chapter 22.238 (Modifications and Revocations).

PROJECT SITE-SPECIFIC CONDITIONS

23. This grant shall authorize the construction and operation of a new charter school for grades transitional kindergarten through eighth grade.
24. Exterior lighting shall be directed away from neighboring residences to prevent direct illumination and glare.
25. The Permittee shall submit a Yard Modification application to LA County Planning within one (1) month after the Project's approval date for the purpose of requesting an increase in the maximum wall height in the required side yard setbacks from six (6) feet to eight (8) feet. The existing six-foot-tall solid walls in the required side yard setbacks that adjoin residences along the Project Site's western and eastern property lines shall be increased to eight (8) feet in height.
26. Exterior loudspeakers shall not be pointed towards adjacent residences and shall only be used to mark the beginning and end of class periods and during emergency situations.
27. The Permittee shall install an onsite security camera system to reduce opportunities for criminal activities. The security camera system shall be installed prior to the charter school's opening date. The Permittee shall provide documentation that the security camera system has been installed to the Director and to the East Los Angeles Sheriff's Station no later than seven (7) days after installation.
28. The Permittee shall install two "Perimeter Identification" signs, one on the Project Site's South Gage Avenue frontage and the other on the Project Site's South Eastman Avenue frontage, in compliance with the following requirements:
 - a. Location. The "Perimeter Identification" signs shall be permanently affixed to a building or wall that is visible, and with text that is legible from, the public right-of-way for pedestrians, and no higher than eight (8) feet from the ground measured vertically from the base of the sign. The "Perimeter Identification" sign shall not be a freestanding sign or a portable sign.
 - b. Size. Each "Perimeter Identification" sign shall have a minimum sign area of four (4) square feet and a maximum sign area of nine (9) square feet. The area of the "Perimeter Identification" signs shall not be accounted for in the area permitted for signs in County Code Chapter 22.114 (Signs).

- c. Content. Each "Perimeter Identification" sign shall permanently display the charter school's hours of operation and the name, telephone number, and email address for the designated community liaison, whose role is described in condition 39, below. If the designated community liaison changes at any point during the CUP's grant term, the Permittee shall update the name, telephone number, and email address on the sign no later than seven (7) days after the change. If the Each "Perimeter Identification" sign shall also include the charter school's name unless another sign on the same frontage that is clearly visible from the public right-of-way includes the charter school's name. Each "Perimeter Identification" sign shall also include instructions for reporting violations to LA County Planning. Information for reporting violations shall include the following text in English and translated into Spanish, or updated text subsequently provided by LA County Planning: "To report a violation to the Los Angeles County Department of Regional Planning, call 213-974-6411, Monday – Thursday, 7 a.m. to 6 p.m., call 2-1-1 at any time, or email info@planning.lacounty.gov."
29. Signage shall conform with the approved Exhibit "A."
30. Landscaping shall conform with the approved Exhibit "A."
31. The Permittee shall maintain onsite landscaping and shall not allow hedges to grow tall enough to block the line of sight of building addresses from the public right-of-way.
32. The Permittee shall provide vehicular access to the Project's drop-off/pickup area and on-site parking via a one-way driveway with an entrance from South Gage Avenue and an exit to South Eastman Avenue, as depicted on the approved Exhibit "A." The Permittee shall post signage requiring the one-way direction of traffic through the Project Site. The on-site drop-off/pick-up lane shall be approximately 26 feet in width, as depicted on the approved Exhibit "A," to accommodate two lanes of queued vehicles for a maximum of 20 vehicles at a time.
33. The Permittee shall provide staff and parents/caregivers with information regarding vehicular access to the Project Site prior to the start of the school year to ensure that motorists who travel to the Project Site will be aware of the one-way direction of traffic. The Permittee shall provide this information to the Director, along with documentation that it was provided to staff and parents/caregivers, no later than seven (7) days after it was provided to staff and parents/caregivers.
34. The Permittee shall implement staggered start and end times for the elementary grade students and the middle school grade students who are arriving at, and leaving from, the school premises to help disperse drop-off and pick-up traffic. The staggered start and end times shall be in no less than 20-minute increments. The Permittee shall provide the Director with the staggered start and end times no later than 30 days prior to the beginning of the first school year. If the staggered start and end times change at any point during the CUP's grant term, the Permittee shall

provide the updated start and end times to the Director no later than seven (7) days after making the change.

35. The Permittee shall comply with all conditions set forth in the attached County Department of Public Works letter dated February 21, 2024.
36. The Permittee shall comply with all conditions set forth in the attached County Fire Department letter dated January 18, 2024.
37. The Permittee shall comply with all conditions set forth in the attached County Department of Public Health letter dated January 18, 2024.
38. The Permittee shall comply with all requirements set forth in the attached MMRP.

PROJECT-SPECIFIC CONDITIONS: COMMUNITY LIAISON

39. The Permittee shall designate a community liaison to receive and respond to complaints submitted to the charter school. The Permittee shall provide the name, telephone number, and email address of the designated community liaison to LA County Planning Staff (“Staff”) no later than 60 days prior to the beginning of the first school year. If the designated community liaison changes at any point during the CUP’s grant term, the Permittee shall provide the updated name, telephone number, and email address to Staff no later than seven (7) days after the change.
40. The Permittee shall publish the name, telephone number, and email address of the designated community liaison on the charter school’s website no later than 60 days prior to the beginning of the first school year. If the designated community liaison changes at any point during the CUP’s grant term, the Permittee shall update the charter school’s website no later than seven (7) days after the change.

PROJECT-SPECIFIC CONDITIONS: ANNUAL COMMUNITY MEETING

41. The Permittee shall schedule and coordinate a community meeting no later than 30 days after the conclusion of each school year. No later than 30 days prior to the community meeting, the Permittee shall provide written notice of the meeting in English and Spanish to all residents occupying properties within a 1,000-foot radius of the Project Site and all community organizations that are active in the unincorporated East Los Angeles community. No later than 30 days prior to distribution of the written notice, the Permittee shall consult with Staff and representatives of the County Supervisor who represents the unincorporated East Los Angeles community to obtain a list of all community organizations that are active in the unincorporated East Los Angeles community. In addition, no later than 30 days prior to distribution of the written notice, a draft written notice shall be submitted to Staff for review and approval.
42. The Permittee shall schedule the community meetings at the Project Site or at another nearby location that is convenient to all residents occupying properties within a 1,000-foot radius of the Project Site. Staff shall review and approve the meeting

location before the community meetings are scheduled. The community meetings shall be open to the general public. The Permittee shall designate knowledgeable charter school staff, including but not limited to the designated community liaison required by condition 39, above, to facilitate the community meetings, provide information regarding the charter school's operations, and answer questions, and shall also provide Spanish language interpretation services. Staff and representatives of the County Supervisor who represents the unincorporated East Los Angeles community may attend the community meetings to observe the proceedings.

43. Prior to each community meeting, the Permittee shall prepare a written report in English and Spanish regarding the charter school's operations during the time since the prior meeting, including but not limited to complaints submitted to the charter school. The Permittee shall also prepare a meeting agenda in English and Spanish, and the written report mentioned above shall be attached to the agenda. No later than seven (7) days prior to the meeting, the Permittee shall provide the agenda and attached report to Staff and shall publish the agenda and attached report on the charter school's website. One agenda item shall be a presentation by charter school staff regarding the written report mentioned above. Copies of the meeting agenda and the attached written report in English and Spanish shall also be available at the meeting. The Permittee shall obtain the name and contact information of each community meeting attendee. The Permittee shall prepare meeting minutes in English and Spanish, including a list of follow-up items to be handled by the Permittee with quantifiable metrics such as timeframes for completion. No later than seven (7) days after the meeting, the Permittee shall provide the meeting minutes to all community meeting attendees and Staff and shall publish the meeting minutes on the charter school's website.

PROJECT-SPECIFIC CONDITIONS: PERIODIC REVIEWS

44. The Director shall schedule a Periodic Review of the Project after the first school year ends and after the community meeting that occurs after the conclusion of the first school year, which is required by conditions 41 through 43, above. The Periodic Review will be a "Discussion and Possible Action" item at a regularly scheduled Commission meeting.
45. Prior to the Periodic Review, Staff shall compile and review:
 - a. The community meeting agenda, including the attached written report prepared by the Permittee, and the community meeting minutes, which are required by condition 43, above.
 - b. All complaints submitted to the charter school and to LA County Planning and information regarding how those complaints were addressed.
46. Prior to the Periodic Review, Staff may conduct outreach to surrounding residents, the Permittee, and other parties.
47. No more than 13 days prior to the Periodic Review, Staff shall submit a written report to the Commission that includes the information compiled and reviewed pursuant to

condition 45, above, and any other pertinent information regarding the charter school's operations, including but not limited to information regarding the effectiveness of the CUP's conditions, including but not limited to conditions 32 through 34, above, regarding the one-way traffic circulation pattern, the drop-off/pick-up lane, and the staggered start time and end times for the elementary grades and middle school grades, to ensure that the Project is compatible with surrounding land uses and has not generated unanticipated adverse impacts. The written report may also include a recommendation that the Commission initiate a public hearing to modify the CUP's conditions or revoke the CUP pursuant to County Code Chapter 22.238.

48. During the Periodic Review, Staff shall make a presentation to the Commission related to the written report required by condition 47, above. At the conclusion of the presentation, Staff may recommend that the Commission initiate a public hearing to modify the CUP's conditions or revoke the CUP pursuant to County Code Chapter 22.238.
49. The Director shall schedule a second Periodic Review of the Project after the fifth school year ends, approximately four years after the first Periodic Review, and after the community meeting that occurs after the conclusion of the fifth school year, which is required by conditions 41 through 43, above. The second Periodic Review shall be conducted in the same manner as the first Periodic Review, as described in conditions 44 through 48, above.
50. The Director shall have the discretion to schedule additional Periodic Reviews during the CUP's grant term.

CONDITIONAL USE PERMIT STATEMENT OF FINDINGS

Pursuant to County Code Section [22.158.050](#) (Findings and Decision), the applicant shall substantiate the following:

(Please see [Guidelines for Writing Your Conditional Use Permit Findings Statement](#). Do not repeat the statement or provide Yes/No responses. If necessary, attach additional pages.)

<p>B.1 The proposed use will be consistent with the adopted General Plan for the area.</p>
<p>B.2 The requested use at the location proposed will not:</p> <ul style="list-style-type: none"> a. Adversely affect the health, peace, comfort, or welfare of persons residing or working in the surrounding area; b. Be materially detrimental to the use, enjoyment, or valuation of property of other persons located in the vicinity of the site; and c. Jeopardize, endanger, or otherwise constitute a menace to the public health, safety, or general welfare.
<p>B.3 The proposed site is adequate in size and shape to accommodate the yards, walls, fences, parking and loading facilities, landscaping, and other development features prescribed in this Title 22, or as is otherwise required in order to integrate said use with the uses in the surrounding area.</p>

<p>B.4 The proposed site is adequately served:</p> <ul style="list-style-type: none">a. By highways or streets of sufficient width, and improved as necessary to carry the kind and quantity of traffic such use would generate; andb. By other public or private service facilities as are required.

SUPPLEMENTAL TO LOS ANGELES COUNTY CONDITIONAL USE PERMIT APPLICATION

**1059 South Gage Avenue
Los Angeles, CA 90023**

Conditional Use Permit Findings

Findings for School Use

The Project would benefit the public's convenience and welfare by providing a high-quality educational institution with an attractive design to serve the local community. A school is a complementary use within residential neighborhoods. Local families will benefit from having a school in their neighborhood within easy walking or biking distance. The Project will house students that are currently occupying four different campuses located in East Los Angeles.

Pursuant to LACC Section [22.18.030](#), a Conditional Use Permit is necessary to authorize the use of a school on a property site zoned R-3. A Conditional Use Permit requires the following findings pursuant to LACC Section [22.158.050](#):

a. The proposed use will be consistent with the adopted General Plan for the area.

The Project is subject to the Los Angeles County General Plan – East Los Angeles Community Plan. The school use is generally consistent with the General Plan land use designation of Medium Density Residential and is authorized with approval of a CUP. The General Plan sets forth policies regarding land use, urban form, open space, economic development, public services and more for the unincorporated areas of Los Angeles County. In line with the guiding principles of the General Plan, the Project supports the principle and goal to ensure community services and infrastructures are sufficient to accommodate growth and provide the foundation for a strong and diverse economy. The Project is in substantial conformance with the following goals, objectives and policies in the General Plan:

Goal LU 4: Infill development and redevelopment that strengthens and enhances communities.

Policy LU 4.1: Encourage infill development in urban and suburban areas on vacant and underutilized and/or brownfield sites.

The Project meets this goal and policy by revitalizing and optimizing an underutilized property. Currently, the Site is used as a church that is underused and underimproved. The Project will optimize the use and enhance the neighborhood with its thoughtful design features that is cohesive with the existing residential community. Parents, families and caretakers of the students of the Project live in close proximity to the Site which will result in a strengthened community.

Goal LU 5: Vibrant, livable and healthy communities with a mix of land uses, services and amenities.

Policy LU 5.5: Ensure that all households have access to sufficient supply of quality early care and education and supervised school-age enrichment options for children from birth to age 13.

The Project meets this goal and policy by expanding opportunities for children in East Los Angeles to receive a high-quality education in close proximity to where they live. This will result in reduced commute times to schools for residents and families in the neighborhood. The Project delivers a new, educational use to serve the surrounding community and is designed to be compatible with the adjacent land uses and community character.

For these reasons, the Project substantially conforms with the purpose, intent and provisions of the General Plan, including the Community Plan. The Site is not subject to any specific plan.

b. The requested use at the location proposed will not adversely affect the health, peace, comfort, or welfare of persons residing or working in the surrounding area; be materially detrimental to the use, enjoyment, or valuation of property of other persons located in the vicinity of the site; and jeopardize, endanger, or otherwise constitute a menace to the public health, safety, or general welfare.

The proposed Project is a TK-8th grade school which are commonly found in residential neighborhoods similar to the neighborhood where the Site is located, throughout the County. The proposed Project is expanding the current square footage at the Site by 6,932 square feet and is renovating what is currently an underutilized church into a renovated and well-designed school that will enhance the current community. Residential neighborhoods are common locations for schools and can be viewed as ideal due to it being a safe environment that is in close proximity to the students' families.

The Project's location, size, height, operations and other significant features will be compatible with and will not adversely affect or diminish the value of neighboring properties.

c. The proposed site is adequate in size and shape to accommodate the yards, walls, fences, parking and loading facilities, landscaping, and other development features prescribed in this Title 22, or as is otherwise required in order to integrate said use with the uses in the surrounding area.

The Site is a rare large street-to-street lot that is approximately 50,994 square feet (1.17 acres) which allows for two separate buildings, space for play areas and a safe and efficient pick-up/drop-off area making it an ideal location for a school. The Project is designed to include the number of classrooms and offices to meet the capacity demand while also accommodating a multi-purpose room and multiple outdoor areas.

d. The proposed site is adequately served by highways or streets of sufficient width, and improved as necessary to carry the kind and quantity of traffic such use would generate; and by other public and private service facilities as are required. The Site is located between two double lane residential streets with parking along both sides of the streets and one block north of the main street, Dennison Street, which runs parallel to the 5 freeway. The design of the Project allows for an anticipated smooth and efficient drop-off/pick-up system that will minimally affect the neighboring residents as motorists will have quick access to the main street.

PROPOSED ENVIRONMENTAL DETERMINATION

DETERMINATION DATE: April 17, 2024
PROJECT NUMBER: PRJ2022-004416-(1)
PERMIT NUMBER(S): Conditional Use Permit No. RPPL2022013731
Environmental Assessment No. RPPL2022005113
SUPERVISORIAL DISTRICT: 1
PROJECT LOCATION: 1059 South Gage Avenue, East Los Angeles
OWNER: Oasis of Mercy
APPLICANT: Extera Public Schools
CASE PLANNER: Christina Nguyen, Planner
Cnguyen@planning.lacounty.gov

Los Angeles County (“County”) completed an Initial Study to evaluate the potential environmental impacts of the above-mentioned Project. The Initial Study determined that the Project could potentially result in significant adverse effects on the environment, but those effects will be avoided or reduced to a less than significant level through Project design modification and/or implementation of the recommended feasible mitigation measures. Therefore, the County proposes that a Mitigated Negative Declaration is the appropriate environmental documentation under the California Environmental Quality Act. Accordingly, the enclosed Mitigation Monitoring & Reporting Program (MMRP) will need to be signed by the applicant and returned to the project planner.

Attached: Initial Study – Mitigated Negative Declaration & MMRP

1 INTRODUCTION

An application for the proposed Extera Public Schools Project (Project) has been submitted to the County of Los Angeles Department of Regional Planning (LA County Planning) for discretionary review. The LA County Planning, as Lead Agency, has determined that the Project is subject to the California Environmental Quality Act (CEQA), and the preparation of an Initial Study is required.

This Initial Study/Mitigated Negative Declaration (IS/MND) evaluates potential environmental effects resulting from construction, implementation, and operation of the Project. This Initial Study has been prepared in accordance with CEQA (Public Resources Code §21000 et seq.), the State CEQA Guidelines (Title 14, California Code of Regulations, §15000 et seq.), and the County's environmental review procedures.

Based on the analysis provided within this IS/MND, the County has concluded that the Project will not result in significant impacts on the environment with the incorporation of mitigation measures identified herein. This IS/MND is intended as an informational document, and is ultimately required to be adopted by the decision maker prior to project approval by the County.

1.1 Purpose of an Initial Study

CEQA was enacted in 1970 with several basic purposes: (1) to inform governmental decision makers and the public about the potential significant environmental effects of proposed projects; (2) to identify ways that environmental damage can be avoided or significantly reduced; (3) to prevent significant, avoidable damage to the environment by requiring changes in projects through the use of feasible alternatives or mitigation measures; and (4) to disclose to the public the reasons behind a project's approval even if significant environmental effects are anticipated.

An Initial Study is a preliminary analysis conducted by the Lead Agency, in consultation with other agencies (responsible or trustee agencies, as applicable), to determine whether there is substantial evidence that a project may have a significant effect on the environment. If the Initial Study concludes that the Project, with mitigation, may have a significant effect on the environment, an Environmental Impact Report (EIR) should be prepared; otherwise the Lead Agency may adopt a Negative Declaration (ND) or a Mitigated Negative Declaration (MND).

1.2 Organization of the Initial Study

This Initial Study is organized into four sections as follows:

Section 1. Introduction: This Section provides introductory information on the CEQA process.

Section 2. Environmental Checklist Form: This Section provides Project information, identifies key areas of environmental concern, and includes a determination whether the project may have a significant effect on the environment.

Section 3. Project Description: This Section provides a description of the environmental setting and the Project, including project characteristics, related project information and a list of requested discretionary actions.

Section 4. Evaluation of Environmental Impacts: This Section contains the completed CEQA Initial Study Checklist and discussion of the environmental factors that would be potentially affected by the Project.

1.3 CEQA Process

In compliance with the State CEQA Guidelines, the County as the Lead Agency for the Project, will provide opportunities for the public to participate in the environmental review process. As described below, throughout the CEQA process, an effort will be made to inform, contact, and solicit input on the Project from various government agencies and the general public, including stakeholders and other interested parties.

At the onset of the environmental review process, the County has prepared an IS/MND to identify the preliminary environmental impacts of the project. The Initial Study for the Project determined that the proposed Project would not have significant environmental impacts with the incorporation of mitigation measures identified herein.

If this IS/MND and the Project are approved by the County, then within five days of the action, the County will file a Notice of Determination with the County Clerk. The Notice of Determination is posted by the County Clerk within 24 hours of receipt. This begins a 30-day statute of limitations on legal challenges to the approval under CEQA. The ability to challenge the approval in court may be limited to those persons who objected to the approval of the project, and to issues that were presented to the Lead Agency by any person, either orally or in writing, during the public comment period.

Environmental Checklist Form (Initial Study)

County of Los Angeles, Department of Regional Planning

Project title: “Extera Public Schools” / Project No. PRJ2022-004416-(1) / Conditional Use Permit No. RPPL2022013731 / Environmental Plan No. RPPL2023005113

Lead agency name and address: Los Angeles County, 320 West Temple Street, Los Angeles, CA 90012

Contact Person and phone number: Christina Nguyen, Planner, Metro Development Services, 213-262-1325, cnguyen@planning.lacounty.gov

Project sponsor’s name and address: Extera Public Schools, 3626 E. Fifth Street, Los Angeles, CA 90063

Project location: 1059 S. Gage Avenue, Los Angeles, CA 90023
APN: 5239-012-028 and 5239-012-009 USGS Quad: Los Angeles

Gross Acreage: 1.17

General plan designation: Medium Density Residential (MD)

Community/Area wide Plan designation: East Los Angeles Community Plan

Zoning: R-3

Description of project:

Existing Uses

The Site is currently improved with two buildings totaling approximately 25,302 square feet of building area and a surface parking lot: 1-story, 6,993 square-foot building (Building 1) and 2-story, 18,309 square-foot building (Building 2). The Site is currently used as a church (currently Oasis of Mercy Church).

Proposed Uses

The Project consists of a transitional kindergarten (TK) to 8th grade charter school serving 525 students with 28 employees (teachers and staff), which will include 22 classrooms, offices, outdoor eating areas and play areas, and a multi-purpose room. The Project proposes to: (i) renovate Building 1, including the removal of an existing 509 square-foot covered courtyard and add a new 2,265 square-foot outdoor lunch patio; (ii) demolish and rebuild a new Building 2 in a different location of the Site; and (iii) provide 38 vehicular surface parking spaces and 90 bicycle spaces (88 short-term and two long-term). The renovated Building 1 will provide a total of 8,749 square feet in floor area. The new two-story Building 2 will provide 29,676 square feet of floor area, inclusive of a new 6,276 square-foot concrete deck covering the onsite parking spaces. In total, the Project will provide 38,425 square feet of building floor area or an Floor Area Ratio (“FAR”) of 0.754:1, which increases the existing floor area by 13,123 square feet.

Use Permitted

Pursuant to LACC Section 22.18.030, a school use is permitted in the R-3 zone, subject to approval and issuance of a conditional use permit (“CUP”) under LACC Section 22.158.050. Thus, the Applicant requests a CUP to permit the construction, operation, and maintenance of a school use on the Site.

Parking

Projects located within a half-mile of a major transit stop or high-quality transit corridor (“HQTC”) are generally eligible for the automobile parking reduction by AB 2097, which prohibits local jurisdictions from imposing or enforcing

minimum parking requirements for new development projects, including additions and changes of use. This includes residential, commercial, and industrial projects, but does not include hotels, motels, bed and breakfast inns, or other transient lodging.

While LACC Section 22.112.070 would require the Project to provide 54 vehicular parking spaces, under AB 2097, the Project is not required to meet a minimum parking requirement because it is located within a half-mile of a HQTC. Specifically, the Site is within 1,000 feet of eastbound and westbound transit stops along the Whittier Boulevard corridor. The Whittier Boulevard corridor is served by Metro Local Line 18 (Metro 18). Metro 18 provides eastbound and westbound service from the Wilshire & Western transit stop in the Koreatown area of the City of Los Angeles to the Montebello Metrolink Station in the City of Montebello. Metro 18's current service frequency meets the SCAG threshold for 15 minutes or less in each direction, and therefore, Whittier Boulevard currently qualifies as a HQTC. The Project will voluntarily provide 38 vehicular parking spaces.

Vehicular Access

Vehicular ingress to the Project's drop-off/pickup area and on-site parking will be provided through one-way access from South Gage Avenue to South Eastman Avenue for egress. There will be clear posted signage of the one-way traffic through the Site. Additionally, staff and parents/caregivers will be provided with information regarding Site access prior to the start of the school year. Therefore, motorists destined to the Site will be aware of the one-way flow of traffic. The proposed on-site drop-off/pick-up area lane is approximately 26 feet in width, which is sufficient to accommodate one lane of queued vehicles, plus a bypass lane to allow vehicles to bypass the queue should there be delay related to the passenger loading/unloading of one or more of the queued vehicles as discussed Vehicle Queuing Analysis (LJG, January 3, 2024) included in **Appendix J-2** of this MND.

This configuration will provide efficient and safe ingress and egress from the Property while maintaining less vehicular conflict points to both South Gage Avenue and South Eastman Avenue.

Design and Architecture

The proposed architecture is modern contemporary with bright colors and design elements celebrating Mexican cultural heritage. The modern Mexican architecture of the buildings include vibrant colors, bold shapes, playful lines and angles which embody a playful spirit matching the Project's use. The construction materials includes stucco, terra cotta Spanish and Mexican tile which will serve as accent details. Treatments incorporate a blend of contemporary and traditional architectural forms and details, which include a flat façade, hip style roof, plaster walls, and articulated facades such as inset windows and doors, offset/projected wall features and recessed entryways. Proposed building colors incorporate a neutral earth-tone palette with bright accents and a smooth stucco finish.

The buildings would be set back from the southern side of the Site by five feet, the rear setback by 15 feet, and a front yard setback of 15 feet required by LACC Section 22.110.090. Walls will be constructed along the northern and southern perimeters of the Site adjacent to the neighboring lots. Noise attenuating landscaping will be installed along the perimeter of the Site. A landscape plan has been submitted showing landscape areas on the perimeter of the Site and in the interior open spaces areas and within the front yard setback. Project lighting would consist of security lighting and wall lights on the building perimeters, using LED fixtures. All lighting would be designed to avoid light spillage to the neighboring properties.

Construction and Phasing

Construction activities would include demolition of the existing structures, fine grading; utility and infrastructure installation; building construction; roadway pavement; and architectural coatings. Grading is expected to result in 971 cubic yards of export (including 15 percent swell factor for topsoil). Overall, grading would balance onsite.

Construction activities are anticipated to last 12 months, with demolition, grading, and infrastructure development lasting 3) months and home construction lasting 9 months. Construction activities would be coordinated with all adjacent property owners.

Project construction would occur within the hours allowed by Los Angeles County Code Title 12, Environmental Protection, Section 12.08.440, which states that construction shall occur only between the hours of 7:00 a.m. and 7:00 p.m. Monday through Saturday, with no construction allowed on Sundays and holidays.

General Plan and Zoning

The Project is consistent with the existing County General Plan land use and zoning designations and no changes are proposed. The Project is subject to the Los Angeles County General Plan – East Los Angeles Community Plan. The school use is generally consistent with the General Plan land use designation of Medium Density Residential and is authorized with approval of a CUP. The General Plan sets forth policies regarding land use, urban form, open space, economic development, public services and more for the unincorporated areas of Los Angeles County. In line with the guiding principles of the General Plan, the Project supports the principle and goal to ensure community services and infrastructures are sufficient to accommodate growth and provide the foundation for a strong and diverse economy.

Discretionary Approvals and Permits

Pursuant to Los Angeles County Code (the "Code" or "LACC") the Applicant hereby requests the following entitlement to permit the proposed Project:

- Pursuant to LACC Section 22.18.030, a Conditional Use Permit to permit a school use on the Site, subject to LACC Section 22.158.050.

Surrounding land uses and setting:

The Project site is located within a developed, residential area within unincorporated Los Angeles County as described below:

North: Directly adjacent to the north of the Project Site are single-family homes (1044 Eastman Avenue and 1049 Gage Avenue), designated as Medium Density Residential (MD in the General Plan and zoned R-3.

West: Directly across Eastman Avenue are multi-family buildings (1047-1059 Eastman Avenue), designated as Medium Density Residential (MD in the General Plan and zoned R-3.

South: Directly adjacent to the south of the Project Site are single-family homes and multi-family buildings (1058 Eastman Avenue and 1067 Gage Avenue), designated as Medium Density Residential (MD in the General Plan and zoned R-3.

East: Directly across Gage Avenue are multi-family buildings (1052-1066 Gage Avenue), designated as Medium Density Residential (MD in the General Plan and zoned R-3.

Have California Native American tribes traditionally and culturally affiliated with the project area requested consultation pursuant to Public Resources Code § 21080.3.1? If so, is there a plan for consultation that includes, for example, the determination of significance of impacts to tribal cultural resources, procedures regarding confidentiality, etc.?

Note: Conducting consultation early in the CEQA process allows tribal governments, lead agencies, and project proponents to discuss the level of environmental review, identify and address potential adverse impacts to tribal cultural resources, and reduce the potential for delay and conflict in the environmental review process. (See Public Resources Code section 21080.3.2.) Information may also be available from the California Native American Heritage Commission's Sacred Lands File per Public Resources Code section 5097.96 and the California Historical Resources Information System administered by the California Office of Historic Preservation. Please also note that Public Resources Code section 21082.3(c) contains provisions specific to confidentiality.

Pursuant to the requirements of Assembly Bill 52, the County sent informational letters about the proposed project and requests for consultation to each tribe on the County's list of tribes requesting consultation. A formal notification of the proposed project was sent to the following Native American tribes and groups:

- Gabrieleño Band of Mission Indians-Kizh Nation.

- The Local Government Tribal Consultation List Request was sent to the Native American Heritage Commission on September 25, 2023. A response dated November 15, 2023 was received via email and included in Appendix C-3 of this MND and stated the following, “A search of the SFL (Sacred Lands File) was completed for the project with negative results.”

- A request for the Project Review/Quick Check was submitted to the South Central Coastal Information Center (California State University, Fullerton-Department of Anthropology) on September 25, 2023. The results of the Project Review/Quick Check was received on November 15, 2023, and included in Appendix C-1 of this MND.

During the notification period, the Gabrieleño Band of Mission Indians-Kizh Nation responded and requested consultation with the County. The tribe identified potential tribal cultural resources and provided recommended mitigation measures that are included within this Initial Study. Consultation with the tribe concluded on November 20, 2023.

Other public agencies whose approval may be required (e.g., permits, financing approval, or participation agreement):

ENVIRONMENTAL FACTORS POTENTIALLY AFFECTED:

The environmental factors checked below would be potentially significant impacts affected by this project.

- Aesthetics Greenhouse Gas Emissions Public Services
- Agriculture/Forestry Hazards/Hazardous Materials Recreation
- Air Quality Hydrology/Water Quality Transportation
- Biological Resources Land Use/Planning Tribal Cultural Resources
- Cultural Resources Mineral Resources Utilities/Services
- Energy Noise Wildfire
- Geology/Soils Population/Housing Mandatory Findings of Significance

DETERMINATION: (To be completed by the Lead Department.)

On the basis of this initial evaluation:

- I find that the proposed project COULD NOT have a significant effect on the environment, and a NEGATIVE DECLARATION will be prepared.
- I find that although the proposed project could have a significant effect on the environment, there will not be a significant effect in this case because revisions in the project have been made by or agreed to by the project proponent. A MITIGATED NEGATIVE DECLARATION will be prepared.
- I find that the proposed project MAY have a significant effect on the environment, and an ENVIRONMENTAL IMPACT REPORT is required.
- I find that the proposed project MAY have a "potentially significant impact" or "potentially significant unless mitigated" impact on the environment, but at least one effect 1) has been adequately analyzed in an earlier document pursuant to applicable legal standards, and 2) has been addressed by mitigation measures based on the earlier analysis as described on attached sheets. An ENVIRONMENTAL IMPACT REPORT is required, but it must analyze only the effects that remain to be addressed.
- I find that although the proposed project could have a significant effect on the environment, because all potentially significant effects (a) have been analyzed adequately in an earlier EIR or NEGATIVE DECLARATION pursuant to applicable standards, and (b) have been avoided or mitigated pursuant to that earlier EIR or NEGATIVE DECLARATION, including revisions or mitigation measures that are imposed upon the proposed project, nothing further is required.

EVALUATION OF ENVIRONMENTAL IMPACTS:

- 1) A brief explanation is required for all answers except "No Impact" answers that are adequately supported by the information sources the Lead Department cites in the parentheses following each question. A "No Impact" answer is adequately supported if the referenced information sources show that the impact simply does not apply to projects like the one involved (e.g., the project falls outside a fault rupture zone). A "No Impact" answer should be explained where it is based on project-specific factors as well as general standards (e.g., the project will not expose sensitive receptors to pollutants, based on a project-specific screening analysis).
- 2) All answers must take account of the whole action involved, including off-site as well as on-site, cumulative as well as project-level, indirect as well as direct, and construction as well as operational impacts.
- 3) Once the Lead Department has determined that a particular physical impact may occur, then the checklist answers must indicate whether the impact is potentially significant, less than significant with mitigation, or less than significant. "Potentially Significant Impact" is appropriate if there is substantial evidence that an effect may be significant. If there are one or more "Potentially Significant Impact" entries when the determination is made, an EIR is required.
- 4) "Negative Declaration: Less Than Significant With Mitigation Incorporated" applies where the incorporation of mitigation measures has reduced an effect from "Potentially Significant Impact" to a "Less Than Significant Impact." The lead agency must describe the mitigation measures, and briefly explain how they reduce the effect to a less than significant level. (Mitigation measures from Section XVII, "Earlier Analyses," may be cross-referenced.)
- 5) Earlier analyses may be used where, pursuant to the tiering, program EIR, or other CEQA processes, an effect has been adequately analyzed in an earlier EIR or negative declaration. (State CEQA Guidelines § 15063(c)(3)(D).) In this case, a brief discussion should identify the following:
 - a) Earlier Analysis Used. Identify and state where they are available for review.
 - b) Impacts Adequately Addressed. Identify which effects from the above checklist were within the scope of, and adequately analyzed in, an earlier document pursuant to applicable legal standards, and state whether such effects were addressed by mitigation measures based on the earlier analysis.
 - c) Mitigation Measures. For effects that are "Less than Significant with Mitigation Measures Incorporated," describe the mitigation measures which were incorporated or refined from the earlier document and the extent to which they address site-specific conditions for the project.
- 6) Supporting Information Sources: A source list should be attached, and other sources used or individuals contacted should be cited in the discussion.
- 7) The explanation of each issue should identify: The significance threshold, if any, used to evaluate each question, and; mitigation measures identified, if any, to reduce the impact to less than significant. Sources of thresholds include the County General Plan, other County planning documents, and County ordinances. Some thresholds are unique to geographical locations.

3 PROJECT DESCRIPTION

This section is based on the following item, which is included as **Appendix A** to this ND:

A Plans, Franco Architects, November 17, 2023

3.1 Project Summary

The Project consists of a transitional kindergarten (TK) to 8th grade charter school serving 525 students with 28 employees (teachers and staff), which would include 22 classrooms, offices, outdoor eating areas and play areas, and a multi-purpose room. The Site is approximately 50,994 square feet (1.17 acres), which currently includes Building 1 (south portion of the Site) and Building 2 (north portion of the Site), which total 25,302 square feet. The Project proposes to (i) renovate Building 1, including the removal of an existing 509 square-foot covered courtyard and add a new 2,265 square-foot outdoor lunch patio, (ii) demolish and rebuild a new Building 2 in a different location of the Site, and (iii) provide 38 vehicular surface parking spaces and 90 bicycle spaces (88 short-term and two long-term). The renovated Building 1 will provide a total of 8,749 square feet in floor area. The new two-story Building 2 will provide 29,676 square feet of floor area, inclusive of a new 6,276 square-foot concrete deck covering the onsite parking spaces. In total, the Project will provide 38,425 square feet of building floor area or an Floor Area Ratio (“FAR”) of 0.754:1, which increases the existing floor area by 13,123 square feet. **Table 3-1**, below, provides a comparison of the existing and proposed uses.

**Table 3-1
Comparison of Existing and Proposed Project**

	Existing	Project			Change
		Demo	New	Proposed	
Building 1 (south)	6,993 sf	- 509 sf	+ 2,265 sf	8,749 sf	+ 1,756 sf
Building 2 (north)	18,309 sf	- 18,309 sf	+ 29,676 sf	29,676 sf	+ 11,367 sf
Total	25,302 sf	- 18,818 sf	+ 31,941 sf	38,425 sf	+ 13,123 sf
Plans, Franco Architects, November 17, 2023.					

3.2 Environmental Setting

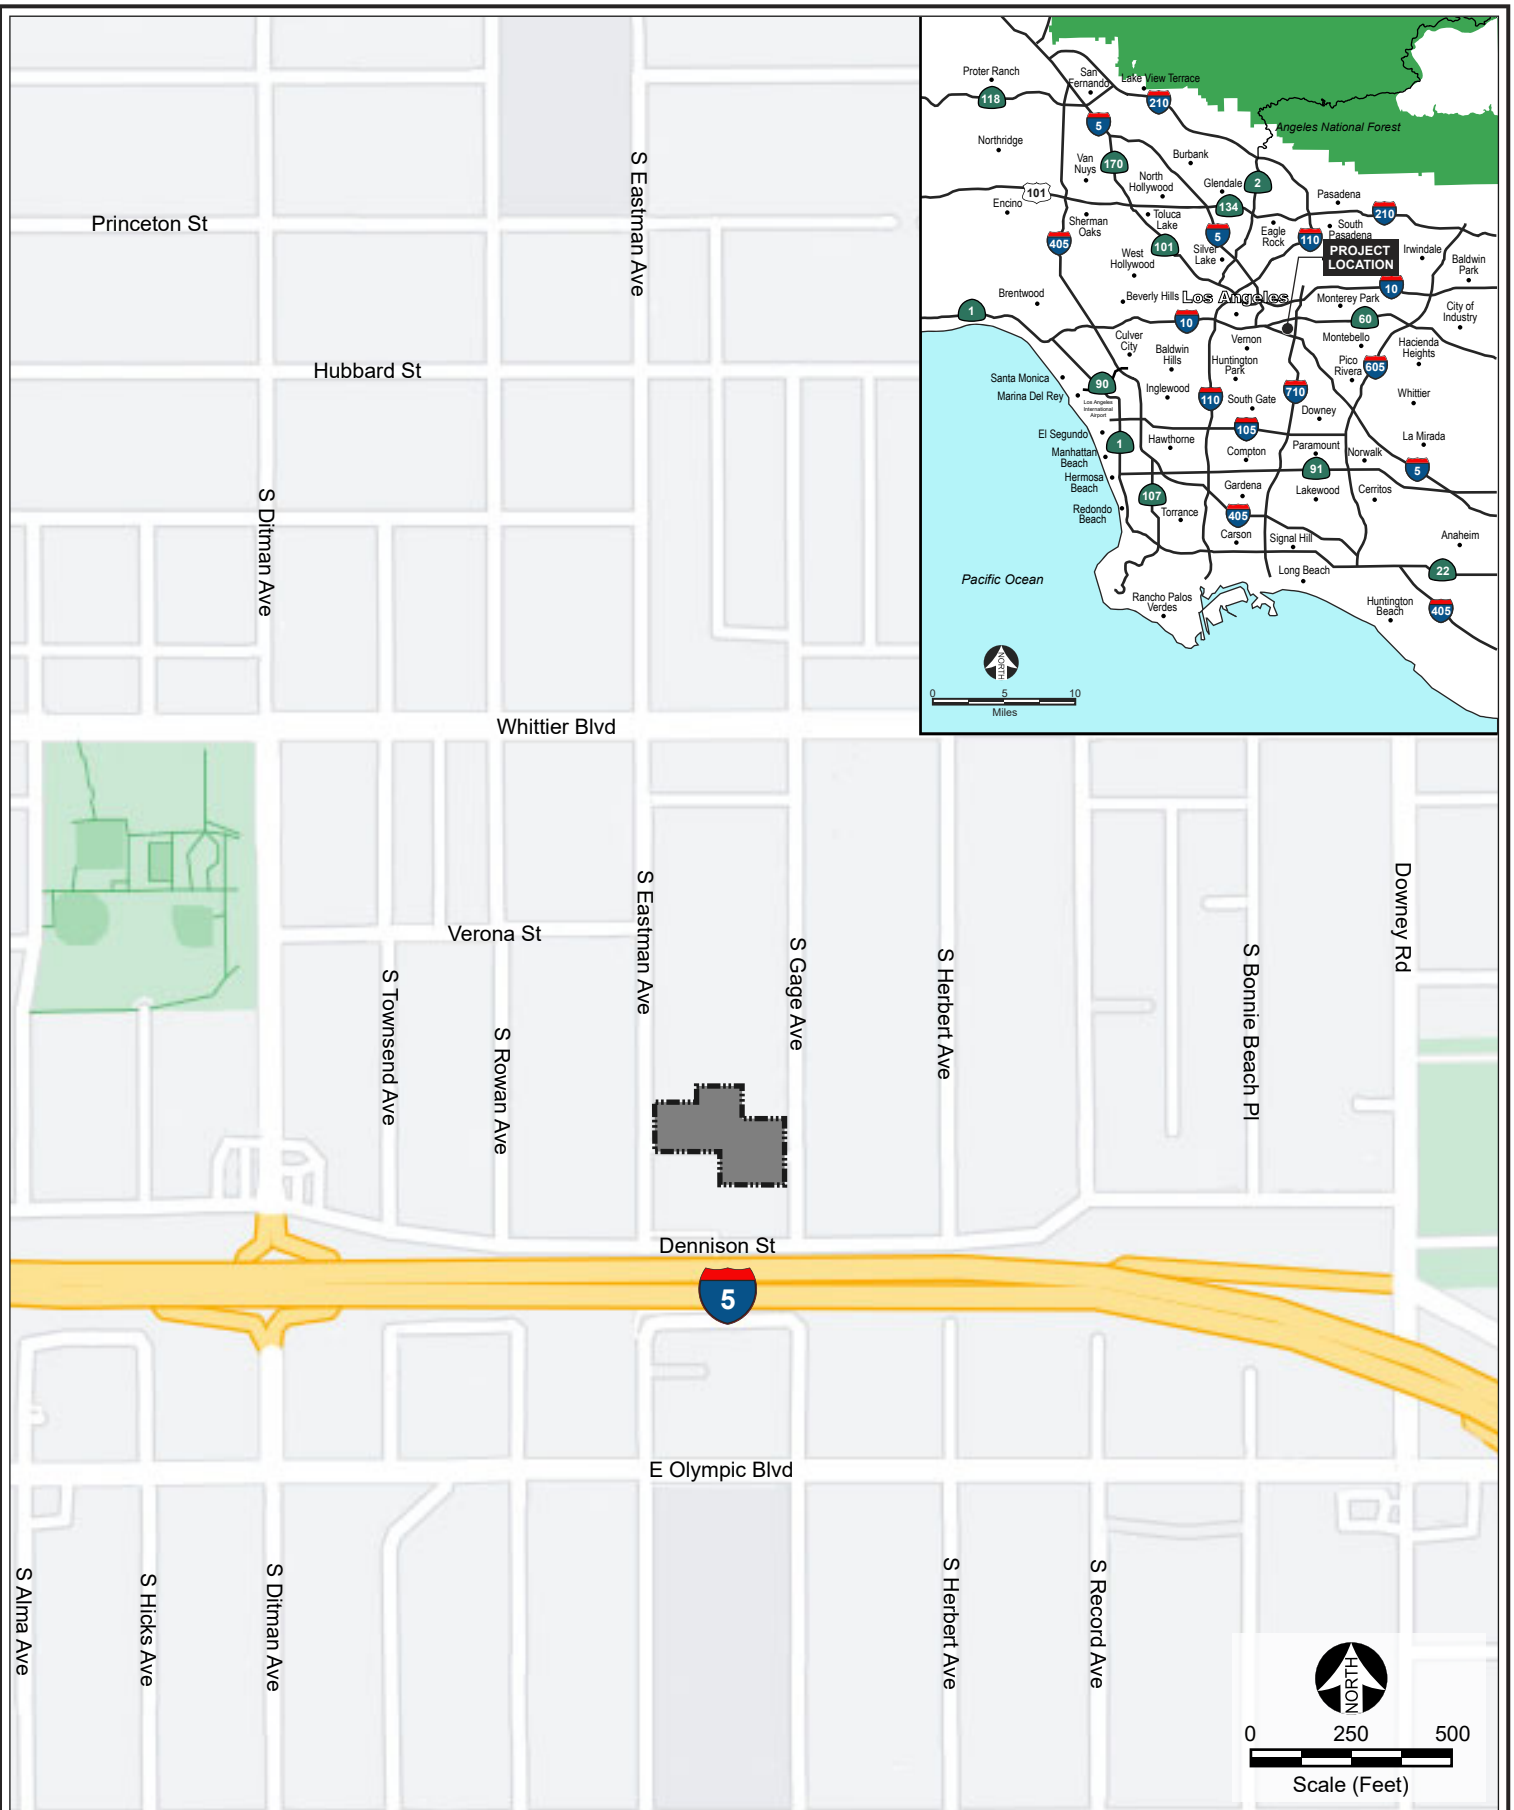

3.2.1 Project Location

The Project Site is located at 1059 South Gage Avenue, spanning between Gage Avenue and Eastman Avenue, in the unincorporated community of East Los Angeles of the County of Los Angeles (County), in zip code 90023.

The Site is 3.5 miles east of Downtown Los Angeles and 17 miles east of the Pacific Ocean.

See **Figure 3-1, Regional Map**, for the location of the Project within the context of the City.

See **Figure 3-2, Aerial Map**, for an aerial view of the Site and the immediate surrounding area.

Legend

Source: Google Maps 2022.

Figure 3-1
Regional Location Map

Legend

-  Project Site
-  Existing Buildings Onsite

Source: Google Maps 2022.

Figure 3-2
Aerial Map

3.2.2 Surrounding Land Uses

The Site's vicinity is urbanized with a mixture of housing, commercial, and medical uses nearby. As described below, housing is located adjacent to the Site. Commercial uses are located along Whittier Boulevard, 915 feet north of the Site. Medical uses are located at the Los Angeles Community Hospital (4081 Olympic Boulevard), 400 feet south of the Site, across the I-5 Freeway, and the East Los Angeles Doctors Hospital (4060 Whittier Boulevard), 600 feet north of the Site. The existing adjacent surrounding uses include:

North: Directly adjacent to the north of the Project Site are single-family homes (1044 Eastman Avenue and 1049 Gage Avenue), designated as Medium Density Residential (MD in the General Plan and zoned R-3.

West: Directly across Eastman Avenue are multi-family buildings (1047-1059 Eastman Avenue), designated as Medium Density Residential (MD) in the General Plan and zoned R-3.

South: Directly adjacent to the south of the Project Site are single-family homes and multi-family buildings (1058 Eastman Avenue and 1067 Gage Avenue), designated as MD in the General Plan and zoned R-3.

East: Directly across Gage Avenue are multi-family buildings (1052-1066 Gage Avenue), designated as MD in the General Plan and zoned R-3.

3.2.3 Regional and Local Access

Regional access is provided by:

- Santa Ana Freeway (I-5), 150 feet south of the Site
- Long Beach Freeway (I-710), 3,450 feet east of the Site
- Pomona Freeway (SR-60), 3,750 feet north of the Site

Local access is provided by:

- Gage Avenue, adjacent to the east
- Eastman Avenue, adjacent to the west
- Dennison Street, 100 feet south of the Site
- Verona Street, 450 feet north of the Site
- Whittier Boulevard, 915 feet north of the Site

3.2.4 Pedestrian Facilities

There are sidewalks along the entire east boundary on Gage Avenue and west boundary on Eastman Avenue of the Project Site. Crosswalks are provided at the nearest signalized intersections:

- Whittier Boulevard / Gage Avenue, 955 feet north of the Site
- Whittier Boulevard / Eastman Avenue, 915 feet north of the Site

3.2.5 Bicycle Facilities

The following bicycle facilities are nearby:¹

- Rowan Avenue (north of Whittier Boulevard), 1,000 feet northwest the Site is a Bike Boulevard²
- Downey Road, 1,500 feet east of the Site, is a Bike Route³

3.2.6 Public Transit

Los Angeles County Metropolitan Transportation Authority (Metro)⁴ and Los Angeles County Department of Public Works (LADPW)⁵ operate public transit in the area, as shown in **Table 3-2, Public Transit**.

**Table 3-2
Public Transit**

Line	Type	Direction	Stop	Distance to Site	Frequency of Service
Metro					
18	Bus	East-west on Whittier	Eastman	915 feet north	6 minutes
665	Bus	North-south on Indiana	Whittier	2,150 feet northwest	50 minutes
E	Train	North-south on Indiana	3rd	4,850 feet northwest	10 minutes

⁴ Metro System Map: <https://www.metro.net/riding/guide/system-maps/>, accessed September 10, 2023.

⁵ LA County Public Works: https://pw.lacounty.gov/transit/ELASW_upsp.aspx, accessed September 10, 2023.

The Site is within a High-Quality Transit Area (HQTA),⁶ which are areas within one-half mile of a high-quality transit corridor. A high-quality transit corridor is a corridor with fixed route bus service with service intervals no longer than 15 minutes during peak commute hours.⁷

3.2.7 Planning and Zoning

Table 3-3, Project Site, lists the Site’s APNs, zoning, and General Plan land use designation as⁸ R-3 (Limited Multiple Residence) and Medium Density Residential designation. The Project Site has the following zoning classifications:

**Table 3-3
Project Site**

Address	APN	Size (sf)	Zone	Land Use
1059 S. Gage Avenue	5239-012-028	50,994	R-3	Medium Density Residential
1048 S. Eastman Avenue	5239-012-009			
https://lacounty.maps.arcgis.com/apps/webappviewer/index.html?id=7700eea9d54d46b18efb615f86cba25c				

3.3 Existing Conditions

The Site is currently improved with two buildings totaling approximately 25,302 square feet of building area and a surface parking lot:

- One-story, 6,993 square-foot building on the south portion of the Site (Building 1)
- Two-story, 18,309 square-foot building on the north portion of the Site (Building 2)

The Site is currently used as a church (currently Oasis of Mercy Church). The Church is used for various religious services and ceremonies, including religious education, religious services and ceremonies, overnight/weekend retreats, gospel concerts, Mass celebrations, vigils, twice yearly carnivals, and other special events. These activities are held throughout the week and weekend. Pre-Covid, between 185 and 750 people attended events, classes, and meetings at the church per day. In addition to church events and activities, there are an average of 54 leased and donated events per year, including baptisms, weddings, and events for other religious entities. Between 20-500 people attended each of these events.

There is ornamental vegetation and one tree (Howea palm) on the Project Site. There are two street trees (Ficus Microcarpa Nitida and Cupaniopsis Anacardioides) on Gage Avenue.⁹

⁹ Landscape Plan, Carter Romanek, November 2, 2023, included in **Appendix A** of this IS/MND.

3.4 Description Of Project

3.4.1 Project Overview

The Project consists of a transitional kindergarten (TK) to 8th grade charter school serving a maximum enrollment of 525 students, which would include 22 classrooms, offices, outdoor eating areas and play areas, and a multi-purpose room. The Project proposes to:

- (i) renovate Building 1, including the removal of an existing 509 square-foot covered courtyard and add a new 2,265 square-foot outdoor lunch patio canopy;
- (ii) demolish and rebuild Building 2 in a different location of the Site; and
- (iii) provide 38 vehicular surface parking spaces and 90 bicycle spaces (88 short-term and 2 long-term).

The new two-story Building 2 would provide 23,400 square feet of classroom area and a new 6,276 square-foot concrete deck covering the onsite parking spaces, for a total of 29,676 square feet of new building. The renovated Building 1 would provide a total of 8,749 square feet in floor area. The Project would result in a net increase of 13,123 square feet for a total floor area¹⁰ at the Site of 38,425 square feet.

The proposed school use would consolidate three existing school locations to this Site:

- Breed Street campus (2226 E. 3rd Street, 2.1 miles northwest of the Site), with 110 students
- Lorena Street campus (1015 S. Lorena Street, 0.9 miles west of the Site), with 109 students
- Eastman campus (4112 E. Olympic Boulevard, 1,300 feet south of the Site), with 108 students

The total number of students would not result in a net increase. Thus, the 327 students that currently attend these three school locations would instead attend the proposed school location.

In addition, students from 2nd Street Campus (1942 E. 2nd Street, 2.45 miles northwest of the Site) can also enroll at the proposed school location, though that will be on an optional basis (although it is unpredictable how many students will exercise this option).

Special events include typical-school related events, such as:

- Community and PTA meetings and events (monthly, during the day)
- Teacher professional development meetings (monthly, during the day)

¹⁰ Los Angeles County Code: Division 1 - INTRODUCTORY PROVISIONS | Code of Ordinances | Los Angeles County, CA | Municode Library. LACC Sec. 22.04.050.E – Rules for Measurement. Gross Floor Area includes the total building area, measured from the exterior of the building walls, of all floors of a building expressed in square feet. Gross Floor Area shall exclude designated parking areas and unenclosed exterior decks.

- Welcome Back Families and Students in August (once per year, during the day)
- Back to School Night in September/October (once per year, during the evening)
- Heritage Month celebrations (monthly, during the day)
- Academic competition/Spelling Bee in October (during the evening)
- Winter Showcase in December (once per year, during the evening)
- Open House/Science Fair in April (once per year, during the day)
- Talent Show in June (once per year, during the day)
- 5th grade and 8th grade promotions in June (once per year, during the day)

See **Appendix A** of this MND for floor plans, elevations, sections, and renderings.

See **Figure 3-3, Site Plan**, for the ground level of the Project.

3.4.2 Floor Area

See **Table 3-4** for the floor area and FAR. The Project proposes a total floor area of 38,425 square feet (0.754:1 FAR), an increase of 13,123 square feet from the existing 25,302 square feet of uses.

Building 1 (Existing Building) would remain. The existing 6,993 square foot building would have a 509 square foot covered courtyard removed and a new 2,265 square foot canopy added. The total would be 8,749 square feet, a net increase of 1,756 square feet compared to the existing 6,993 square-foot building that will be renovated.

Building 2 (New Building) would include 23,400 square feet classroom area and 6,276 square feet deck, for a total of 29,676 square feet, an increase of 11,367 square feet compared to the existing 18,309 square-foot building that will be removed.

Table 3-4
Floor Area

Lot Area	Existing		Provided		Change	
	FAR	Floor Area	FAR	Floor Area	FAR	Floor Area
50,994 sf	0.50:1	25,302 sf	0.754:1	38,425 sf	+ 0.254	+ 13,123 sf
Plans, Franco Architects, November 17, 2023.						

3.4.3 Design and Architecture

The proposed architecture is modern contemporary with bright colors and design elements celebrating Mexican cultural heritage. The modern Mexican architecture of the buildings would include vibrant colors, bold shapes, playful lines and angles which embody a playful spirit matching the Project's use. The construction materials would include stucco, glass windows, terra cotta Spanish and Mexican tile which would serve as accent details. Treatments incorporate a blend of contemporary and traditional architectural forms and details, which would include a flat façade, hip style roof, plaster walls, and articulated facades such as inset windows and doors, offset/projected wall features and recessed entryways. Proposed building colors incorporate a neutral earth-tone palette with bright accents and a smooth stucco finish.

The Site is a large street-to-street lot that is approximately 50,994 square feet (1.17 acres), which allows for two separate buildings, space for play areas and a safe and efficient pick-up/drop-off area making it an ideal location for a school. The Project is designed to include the number of classrooms and offices to meet the capacity demand while also accommodating a multi-purpose room and multiple outdoor areas.

The main entrance of the building is at the east elevation, facing Gage Avenue. The playfulness brought out by the angled canopies and roof lines, the openness induced by large glass areas in the façade, Spanish tile detail at the main entrance, as well as the strategic location of the school signs all serve the purpose of creating a focal point to draw people in, once they arrive on campus.

North elevation is the long elevation facing the campus. Patterns of windows, sunshades, various of shapes and colors all contribute to a rhythmic fabric that defines the image of spirited and disciplined educational facility. Many shapes and colors follow a dynamic pattern, not a uniform rule. Visually they are in harmony, but still unique in every bay.

On the west elevation, a pattern of slim windows to minimize the heat gain in the afternoon, with vertical color blocks to accentuate the pattern fills the need to mitigate lower-angled sun in the afternoon to avoid heat gain, and to create an interesting façade, looking from Eastman Avenue. The vertical patterns are carried around onto the south elevation, to give the southwest corner the same dynamic design.

The south elevation would have Project buildings (the existing Building 2 to remain and the new Building 1) nearest to adjacent neighboring residences. To be sensitive to the neighbor's privacy, there are 4 foot high windows on the 2nd floor, with windowsills being 6 feet above the floor. There are large windows to give natural light to those classrooms and to take advantage of the south facing daylighting opportunities.

The existing one-story administration and multi-purpose room building with simpler color design and lower massing are all consistent with a lower profile building compared to the new classroom building. It incorporates the three theme colors into the elevations, to echo the new building's vibrant style, but avoid visually compete with the new building.

3.4.4 Setbacks

The buildings would be set back from the southern side of the Site by five feet, the rear setback by 15 feet, and a front yard setback of 15 feet required by LACC Section 22.110.090. Walls would be constructed along the northern and southern perimeters of the Site adjacent to the neighboring lots. Noise attenuating landscaping would be installed along the perimeter of the Site.

3.4.5 Lighting

Project lighting would consist of security lighting and wall lights on the building perimeters, using LED fixtures. All lighting would be designed to avoid light spillage to the neighboring properties.

3.4.6 Landscaping

A landscape plan has been submitted showing landscape areas on the perimeter of the Site and in the interior open spaces areas and within the front yard setback.

The existing onsite tree (*Howea palm*) would be removed. The two street trees (*Ficus Microcarpa Nitida* and *Cupaniopsis Anacardioides*) on Gage Avenue would be preserved. The Project would plant 32 additional trees.¹¹

LACC Section 22.126.030.A.1.b, for projects that are non-residential or mixed-use, a minimum of three trees shall be planted for every 10,000 square feet of developed lot area. With a 50,994

¹¹ [Landscape Plan](#), Carter Romanek, November 2, 2023, included in **Appendix A** of this IS/MND.

square-foot Site, the Project would require 16 trees. The Project would plant 32 trees to join the two existing trees to be preserved, for a total of 34 trees.

The Project would include 8,699 square feet of landscaping on the Site. With a Site area of 50,994 square feet, landscaping would cover approximately 17% of the Site.¹²

3.4.7 Access and Circulation

There is one existing curb cut on Gage Avenue and one on Eastman Avenue that provides access to the existing surface parking lot. These curb cuts would be closed with the Project and replaced with landscaping and a pedestrian gate.

The school would not offer any bus service.

Vehicular ingress to the Project's drop-off/pickup area and on-site parking will be provided through one-way access from South Gage Avenue to South Eastman Avenue for egress. There will be clear posted signage of the one-way traffic through the Site. Additionally, staff and parents/caregivers will be provided with information regarding Site access prior to the start of the school year. Therefore, motorists destined to the Site will be aware of the one-way flow of traffic. The proposed on-site drop-off/pick-up area lane is approximately 26 feet in width, which is sufficient to accommodate one lane of queued vehicles, plus a bypass lane to allow vehicles to bypass the queue should there be delay related to the passenger loading/unloading of one or more of the queued vehicles as discussed Vehicle Queuing Analysis (LLG, January 3, 2024) included in **Appendix J-2** of this MND.

The start and dismissal times of the Project's middle school and elementary school components would be staggered by a minimum of 20 minutes, thereby dispersing the arrival of traffic over a longer period of time.

Onsite traffic monitors will also assist with indicating turning restrictions to motorists.

For student drop-off and pick-up operations, motorists would be instructed to make a right-turn into the Site's drop-off/pick-up area, travel within the proposed onsite drop-off/pick-up lane, complete the student drop-off or pick-up, and then exit from the proposed driveway along the east side of Eastman Avenue via a right-turn movement.

This configuration will provide efficient and safe ingress and egress from the Property while maintaining less vehicular conflict points to both South Gage Avenue and South Eastman Avenue.

Pedestrian access would be provided from Gage Avenue and from Eastman Avenue.

3.4.8 Vehicle Parking

Projects located within a half-mile of a major transit stop or high-quality transit corridor ("HQTC") are generally eligible for the automobile parking reduction by AB 2097, which prohibits local

¹² Plans, Franco Architects, November 17, 2023, included in **Appendix A** of this IS/MND.

jurisdictions from imposing or enforcing minimum parking requirements for new development projects, including additions and changes of use. This includes residential, commercial, and industrial projects, but does not include hotels, motels, bed and breakfast inns, or other transient lodging.

While LACC Section 22.112.070 would require the Project to provide 54 vehicular parking spaces, under AB 2097, the Project is not required to meet a minimum parking requirement because it is located within a half-mile of a HQTC. Specifically, the Site is within 1,000 feet of eastbound and westbound transit stops along the Whittier Boulevard corridor. The Whittier Boulevard corridor is served by Metro Local Line 18 (Metro 18). Metro 18 provides eastbound and westbound service from the Wilshire & Western transit stop in the Koreatown area of the City of Los Angeles to the Montebello Metrolink Station in the City of Montebello. Metro 18’s current service frequency meets the SCAG threshold for 15 minutes or less in each direction, and therefore, Whittier Boulevard currently qualifies as a HQTC.

The Project will voluntarily provide 38 vehicular parking spaces. Staff would occupy the large majority of spaces, with a few designated non-exclusive spaces for visitors and other members of the public.

Table 3-5, Electric Vehicle Parking, provides the amount of required and provided electric vehicle parking. The Project would provide 9 electric vehicle supply equipment (EVSE) spaces and 2 electric vehicle charging stations (EVCS).

**Table 3-5
Electric Vehicle Parking**

Parking Provided	Required		Provided	
	EVSE	EVCS	EVSE	EVCS
38	9	2	9	2
EVSE - electric vehicle supply equipment (space) EVCS – electric vehicle charging stations Plans, Franco Architects, November 17, 2023.				

3.4.9 Bicycle Parking

Notwithstanding AB 2097, the Project is required to provide 8=8 bicycle parking spaces, pursuant to LACC Section 22.112.100, which requires four bicycle parking spaces for every one classroom, with a minimum of 4 spaces and 1 long-term space for every 10 classrooms. As shown in **Table 3-6, Bicycle Parking Spaces**, the Project would provide 90 bicycle parking spaces (88 short-term and 2 long-term).

**Table 3-6
Bicycle Parking**

Quantity	Short-Term Spaces			Long-Term Spaces		
	Rate	Required	Provided	Rate	Required	Provided
22 classrooms	4 / classroom	88	88	1/10 classrooms	2	2
LACC Section 22.112.100. Plans, Franco Architects, November 17, 2023.						

3.4.10 Site Security

Security features to assist in crime prevention efforts and to reduce the demand for police protection services would include secured building access/design; lighting of building entryways and areas. The security program would include a monitored security alarm system, a closed campus during operating hours; controlling access; monitoring entrances and exits of buildings; monitoring fire/life/safety systems; and security lighting.

The vehicle access points would be secured with a new motorized slide gate on Gage Avenue and a swing gate on Eastman Avenue. During drop off and pickup times, the vehicular gates will be monitored by school personnel.

3.4.11 Wall and Fence

The pedestrian and vehicle access points to the Site would be secured with a gate at both Eastman Avenue and Gage Avenue.

A cement block wall would surround the adjoining property lines and a fence would surround the Eastman Avenue and Gage Avenue frontages.

3.5 Sustainability Features

The Project would comply with the applicable Los Angeles County Building Code (LACBC, 2023 version effective January 1, 2023)¹³ and the applicable California Green Building Standards Code (CalGreen, 2022 version effective January 1, 2023).¹⁴ The applicability is determined when the Project is submitted and accepted by plan check.

All building systems would meet applicable Title 24 Energy Standards. These standards would reduce energy and water usage and waste and, thereby, reduce associated greenhouse gas emissions and help minimize the impact on natural resources and infrastructure. The sustainability features to be incorporated into the Project would include, but not be limited to WaterSense-labeled plumbing fixtures and Energy Star-labeled appliances, reduction of indoor and outdoor water use, weather-based controller and drip irrigation systems, and water-efficient landscape design. In addition, the landscaping on the outdoor decks would serve to help reduce solar heat gain and facilitate possible stormwater retention on-site.

The Project would recycle and reuse building and construction materials to the maximum extent feasible.

The Project would provide EV spaces as required by the LACC.

The Project would be all-electric, with no natural gas in the building.

¹³ Los Angeles County Department of Public Works, Building Codes: <https://dpw.lacounty.gov/building-and-safety/general>, accessed on September 10, 2023.

¹⁴ California Building Codes: <https://www.dgs.ca.gov/BSC/Codes>, accessed on September 10, 2023.

The Project's infill location would promote the concentration of development in an urban location with extensive infrastructure and access to public transit facilities. The Project's proximity to public transportation would reduce vehicle trips and vehicle miles traveled for students, employees, and visitors. In addition, the consolidation of three existing Extera school locations to the proposed Project Site would concentrate approximately 327 students at one location, which could also contribute to a reduction in trips across multiple sites.

3.5.1 Solar Ready Roof

The 2022 Building Energy Efficiency Standards took effect on January 1, 2023. Nonresidential buildings with three habitable stories or fewer, other than healthcare facilities, shall comply with the requirements of Section 110.10(b) through 110.10(d).

The solar zone shall be located on the roof or overhang of the building or on the roof or overhang of another structure located within 250 feet of the building or on covered parking installed with the building project, and shall have a total area no less than 15 percent of the total roof area of the building excluding any skylight area. The solar zone requirement is applicable to the entire building, including mixed occupancy.

The roof area on Building 2 is approximately 11,100 square feet. The Project is required to provide 15 percent of its roof area, or approximately 1,665 square feet, for solar zone area. The Project would provide 1,670 square feet of solar area.

3.6 Anticipated Construction Schedule

The estimated construction schedule is shown in **Table 3-7, Construction Schedule**. The summary of the construction process are:

- The demolition includes removal of 509 square feet of covered courtyard at Building 1, 18,309 square feet of Building 2 floor area¹⁵, and 26,000 square feet of asphalt/concrete parking lot hauled 25 miles to landfill in 10-cubic yard capacity trucks.
- The site preparation includes grubbing and removal of trees, plants, landscaping, weeds.
- The maximum depth of excavation would be 5 feet and grading includes fine grading, with approximately 971 cubic yards of soil (including 15 percent swell factor for topsoil)¹⁶ hauled 25 miles to landfill in 10-cubic yard capacity trucks.
- The trenching includes connections for utilities, including gas, water, electricity, and telecommunications.
- The construction includes footings and foundation work (e.g., pouring concrete pads), framing, welding; installing mechanical, electrical, and plumbing. Floor assembly, cabinetry and

¹⁵ For a conservative worst case approach, the air quality modeling assumed demolition of the full 25,302 square feet of existing buildings and the asphalt area noted above.

¹⁶ [Conceptual Grading Plan](#), Trittech Engineering Association, November 4, 2022.

carpentry, elevator installations, low voltage systems, trash management.

- The paving includes flatwork, including paving of driveways and walkways.
- The architectural coatings include application of interior and exterior coatings and sealants.

**Table 3-7
Anticipated Construction Schedule**

Phase	Schedule	Duration
Demolition	November 1, 2024 – November 30, 2024	1 month
Site Preparation	December 1, 2024 – December 4, 2024	1 week
Grading	December 5, 2024 – December 16, 2024	2 weeks
Trenching	December 18, 2024 – March 16, 2025	3 months
Construction	December 18, 2024 – November 30, 2025	10 months
Paving	September 15, 2025 – September 29, 2025	2 weeks
Architectural Coatings	August 1, 2025 – November 30, 2025	4 months

Demolition involves removing buildings or structures.

Site Preparation involves clearing vegetation (grubbing and tree/stump removal) and removing stones and other unwanted material or debris prior to grading.

Grading involves the cut and fill of land to ensure that the proper base and slope is created for the foundation.

Building Construction involves the construction of the foundation, structures, and buildings.)

Trenching is associated with underground utilities, including gas, water, electricity, telecommunications.

Paving involves the laying of concrete or asphalt such as in parking lots, roads, driveways, or sidewalks.

Architectural Coating involves the application of coatings to both the interior and exterior of buildings or structures, the painting of parking lot or parking garage striping, associated signage and curbs, and the painting of the walls or other components such as stair railings inside parking structures.

The analysis assumes that construction would start in 2024. In practice, construction could begin at a later time. However, using an earlier start date represents a worst-case scenario for the analysis of construction emissions, because equipment and vehicle emission factors for later years would be slightly less due to more stringent standards for in-use off-road equipment and heavy-duty trucks, as well as fleet turnover replacing older equipment and vehicles in later years.

Estimates provided by the Applicant, November 2022, modified in September 2023, and CalEEMod sheets, September 2023.

Truck routes are expected to utilize the most convenient access to freeway ramps. The truck routes would comply with the approved truck routes designated within the County and/or adjacent jurisdictions. Trucks traveling to and from the Project Site must travel along the designated routes. These streets are part of different approved haul routes. The haul route would be approximately 25 miles one-way and could include the following:

- Full trucks: Exit Site on Gage Avenue to Dennison Street to Downey Road to Olympic Boulevard to I-710 Freeway North to SR-60 East to I-605 (San Gabriel River Freeway) to Arrow Highway to destination at 1245 Arrowhead Highway, Irwindale, 91706.
- Empty trucks would travel in the reverse to the Site and exit I-710 at Whittier/Olympic to Whittier Boulevard to Downey Road to Dennison Street to Gage Avenue to the Site.

3.7 Discretionary Requests

Pursuant to Los Angeles County Code (the Code or LACC) the Applicant hereby requests the following entitlement to permit the Project:¹⁷

- Pursuant to LACC Section 22.18.030, a Conditional Use Permit to permit a school use on the Site, subject to LACC Section 22.158.050.

As required by various sections of the LACC, the Applicant would request the necessary administrative approvals and permits for Project construction actions, including but not limited to the following: demolition, excavation, shoring, grading, foundation, building, haul route, street tree removal, and tenant improvements, as applicable.

3.8 Related Projects

There are no current construction projects or reasonably foreseeable related projects within 1,000 feet of the Project Site, which is located in a developed residential area near the Santa Ana Freeway. Any potential related projects would likely be located on Whittier Boulevard, nearly 900 feet north of the Project Site or south of the Santa Ana Freeway in commercially-zoned arterials.

¹⁷ [Supplemental To Los Angeles County Conditional Use Permit Application](#). September 2023.

4 ENVIRONMENTAL IMPACT ANALYSIS

4.1 AESTHETICS

Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
--------------------------------	--	------------------------------	-----------

Except as provided in Public Resources Code Section 21099 would the project:

- a) Have a substantial adverse effect on a scenic vista?

Less than Significant Impact. Scenic vistas consist of expansive, panoramic views of important, unique, or highly valued visual features that are seen from public viewing areas. A scenic vista can be impacted in two (2) ways: a development project can have visual impacts by either directly diminishing the scenic quality of the vista or by blocking the view corridors or “vista” of the scenic resource. Important factors in determining whether the proposed project would block scenic vistas include the project’s proposed height, mass, and location relative to surrounding land uses and travel corridors.

Minimal scenic or natural setting views are visible due to the urban uses. In addition, CEQA is only concerned with public views with broad access by persons in general, not private views that will affect particular persons.¹ Urban features that may contribute to a valued aesthetic character or image include: structures of architectural or historic significance or visual prominence; public plazas, art or gardens; heritage oaks or other trees or plants protected by the County; consistent design elements (such as setbacks, massing, height, and signage) along a street or district; pedestrian amenities; landscaped medians or park areas; etc. There are no tall features on the Project Site from which scenic vistas may be obtained or which make up part of the scenic landscape of the surrounding community. Views in the vicinity of the Project Site are largely constrained by the existing structures on the Project Site and structures on adjacent parcels.

As discussed in the Conservation and Natural Resources Element (2015, Chapter 9) of the County’s General Plan, the San Gabriel Mountains, Verdugo Hills, Santa Susana Mountains, Simi Hills, Santa Monica Mountains and Puente Hills play a major role in physically defining the topographically and aesthetically diverse communities in the project area. These landforms not only create dramatic backdrops against developed communities, but also provide extensive environmental and public benefits to residents.² However, while the existing General Plan

¹ Obstruction of a few private views in a project’s immediate vicinity is not generally regarded as a significant environmental impact. (See Ocean View Estates Homeowners Assn., Inc. v. Montecito Water Dist., supra, 116 Cal.App.4th at p. 402 [that a project affects “only a few private views” suggests that its impact is insignificant]; Mira Mar Mobile Community v. City of Oceanside, supra, 119 Cal.App.4th at pp. 492-493 [distinguishing public and private views; “[u]nder CEQA, the question is whether a project will affect the environment of persons in general, not whether a project will affect particular persons”].

² Los Angeles County General Plan, Chapter 9, Conservation and Natural Resources Element, page 160: https://planning.lacounty.gov/assets/upl/project/gp_final-general-plan-ch9.pdf

recognizes the importance of scenic resources in the project area, there are no specific views or corridors that are identified for conservation purposes. The hills and mountains identified above are not visible from the Project Site due to intervening buildings and trees.

The Project Site is located within an urbanized residential area of unincorporated Los Angeles County. The Project Site includes 1.17 acres currently zoned R-3. The school use is generally consistent with the General Plan land use designation of Medium Density Residential and is authorized with approval of a CUP. The General Plan sets forth policies regarding land use, urban form, open space, economic development, public services and more for the unincorporated areas of Los Angeles County. In line with the guiding principles of the General Plan, the Project supports the principle and goal to ensure community services and infrastructures are sufficient to accommodate growth and provide the foundation for a strong and diverse economy.

Therefore, the Project would not result in a substantial adverse effect on a scenic vista. Impacts to scenic vistas would be less than significant.

b) Be visible from or obstruct views from a regional riding, hiking, or multi-use trail?

No Impact. The Project Site is located within a fully developed urban area and is not located in the vicinity of a County regional riding or hiking trail.³ The Project would not result in impacts related to regional riding or hiking trails and scenic views. Therefore, no impacts to regional riding or hiking trails and scenic views would occur.

c) Substantially damage scenic resources, including, but not limited to, trees, rock outcroppings, and historic buildings within a state scenic highway?

No Impact. The Project is not located within view of a state scenic highway, as there are no designated scenic highways within the vicinity. The closest officially designated state scenic highway is:⁴

- State Route 2, Angeles Crest Highway, from 3 miles north of I-210 in La Canada to the San Bernardino County Line. This is 14 miles north of the Site.

The Project would not result in impacts to trees, rock outcroppings, or historic buildings within a state scenic highway. Therefore, no impacts to scenic resources within a state scenic highway would occur.

³ Los Angeles County General Plan, Figure 10.1, Regional Trail System: https://planning.lacounty.gov/assets/upl/project/gp_2035_2018-FIG_10-1_regional_trail_system.pdf

⁴ Caltrans State Scenic Highways Map: <https://caltrans.maps.arcgis.com/apps/webappviewer/index.html?id=465dfd3d807c46cc8e8057116f1aaca>, accessed November 4, 2022.

- d) **Substantially degrade the existing visual character or quality of public views of the site and its surroundings because of height, bulk, pattern, scale, character or other features and/or conflict with applicable zoning and other regulations governing scenic quality? (Public views are those that are experienced from publicly accessible vantage point)**

Less than Significant Impact. The Project Site is located within an urbanized area and is surrounded by roadways and residential uses. The existing character of the Site and surrounding area is neither unique nor of special aesthetic value or quality. The proposed school development would replace and relocate an existing church building and convert another church building into school buildings.

The Project Site is located within an urbanized residential area of unincorporated Los Angeles County. The Project Site includes 1.17 acres currently zoned R-3. The school use is generally consistent with the General Plan land use designation of Medium Density Residential and is authorized with approval of a CUP. The General Plan sets forth policies regarding land use, urban form, open space, economic development, public services and more for the unincorporated areas of Los Angeles County. In line with the guiding principles of the General Plan, the Project supports the principle and goal to ensure community services and infrastructures are sufficient to accommodate growth and provide the foundation for a strong and diverse economy.

In addition, the project would be consistent with the General Plan Conservation and Natural Resources Element goals and policies related to scenic quality, as shown in **Table 4.1-1**.

**Table 4.1-1
Conservation and Natural Resources Elements Consistency**

Goal or Policy	Project Consistency
Policy C/NR 13.1: Protect scenic resources through land use regulations that mitigate development impacts.	Consistent. The school use is generally consistent with the General Plan land use designation of Medium Density Residential and is authorized with approval of a CUP. Therefore, the Project is consistent with land use regulations governing density in order to mitigate development impacts.
Policy C/NR 13.2: Protect ridgelines from incompatible development that diminishes their scenic value.	Consistent. The Project Site is located in an urban area in unincorporated LA County. The Project Site is not located on a ridgeline; therefore, implementation of the Project would not impact ridgelines.
Policy C/NR 13.3: Reduce light trespass, light pollution and other threats to scenic resources.	Consistent. The Project would comply with the County Green Building Code, as adopted in the Los Angeles County Code Title 31. As such, the Project would comply with regulations regarding exterior lighting in order to reduce light pollution from the Project. The Project is not

	located in a Rural Outdoor Lighting District per Title 22, Chapter 22, Section 80, and therefore, would not be required to implement further dark skies measures.
Policy C/NR 13.4: Encourage developments to be designed to create a consistent visual relationship with the natural terrain and vegetation.	Consistent. There is currently no natural terrain or vegetation on the Project Site as it is developed with ornamental landscaping and trees. The Project would incorporate the use of California native and drought tolerant plants in landscaping in order to improve site conditions in relation to the natural vegetation found throughout the County.
Policy C/NR 13.5: Encourage required grading to be compatible with the existing terrain	Consistent. The Project Site is relatively flat. Therefore, there are no significant terrain features and project grading will be compatible with the existing terrain.
Policy C/NR 13.6: Prohibit outdoor advertising and billboards along scenic routes, corridors, waterways, and other scenic areas.	Consistent. The Project Site is not located along any scenic routes, corridors, waterways, or in other scenic areas.
Policy C/NR 13.7: Encourage the incorporation of roadside rest stops, vista points, and interpretive displays into projects in scenic areas.	Consistent. The Project Site is located in a highly urbanized area in unincorporated LA County. The project's frontages do not feature any significant scenic vistas as the Project Site is developed with a church the surrounding areas are developed with residential uses. Therefore, the Project would not need to encourage the incorporation of roadside rest stops, vista points, and interpretive displays into development as it is not in a scenic area.
Policy C/NR 13.8: Manage development in HMAs (Hillside Management Areas) to protect their natural and scenic character and minimize risks from natural hazards, such as fire, flood, erosion, and landslides.	Consistent. The Project Site is located in an urban area in unincorporated LA County. The Project Site is not located in a hillside management area; therefore, the project would not need to comply with standards or requirements set for hillside management areas.
https://planning.lacounty.gov/assets/upl/project/gp_final-general-plan-ch9.pdf	

In addition, as part of the entitlement process, the County conducts a review of all building and site plans. The purpose of this review is to ensure that the design of a proposed development is consistent with all applicable requirements, standards, and regulations set forth by the County Code, as well as other relevant local, State, and federal regulations.

The Site has a land use designation of MD, or Medium Density Residential, and a zoning designation of R-3, or limited density multiple residence. Pursuant to LACC Section 22.18.030, a school use is permitted in the R-3 zone, subject to approval and issuance of a conditional use permit ("CUP") under LACC Section 22.158.050. Thus, the Applicant requests a CUP to permit the construction, operation, and maintenance of a school use on the Site. The Project's location, size, height, operations and other significant features will be compatible with and will not adversely affect or diminish the value of neighboring properties. The Project would not conflict with applicable zoning and other regulations governing scenic quality. As the Project Applicant would develop the Site with school buildings, which is consistent with the land uses adjacent to the Site, the Project would be visually compatible with the surrounding residential uses.

Therefore, the Project would not degrade the visual character of the project site and surrounding area. Impacts to visual character would be less than significant.

- e) **Create a new source of substantial shadows, light, or glare which would adversely affect day or nighttime views in the area?**

Less Than Significant Impact. A significant impact may occur if a project were to introduce new sources of light or glare on or from the Project Site which would be incompatible with the area surrounding the Project Site, or which pose a safety hazard to motorists utilizing adjacent streets or freeways. The Project Site and surrounding area are highly urbanized and contain numerous sources of nighttime lighting, including streetlights, security lighting, illuminated signage, indoor building illumination (light emanating from the interior of structures that passes through windows), and automobile headlights. In addition, glare is a common phenomenon in the Southern California area due mainly to the occurrence of a high number of days per year with direct sunlight and the highly urbanized nature of the region, which results in a large concentration of potentially reflective surfaces. Potentially reflective surfaces introduced by the Project include new windows at the Project Site and automobiles traveling and parked on streets in the vicinity of the Project Site.

Spill light occurs when lighting fixtures such as streetlights, parking lot lighting, exterior building lighting, and landscape lighting are not properly aimed or shielded to direct light to the desired location and light escapes and partially illuminates a surrounding location. Sensitive uses (e.g., residential uses) surrounding the project site could be impacted by the light from development within the boundaries of the Project Site if light spill occurs.

Glare is the result of improperly aimed or blocked lighting sources that are visible against a dark background such as the night sky. Glare may also refer to the sensation experienced looking into an excessively bright light source that causes a reduction in the ability to see or causes discomfort. Glare generally does not result in illumination of off-site locations but results in a visible source of light viewable from a distance. Glare could also occur from building materials of the new structures, including glass and other reflective materials.

The Project Site is currently developed with two church buildings. The Project would introduce additional sources of light from new building security lighting, interior lights shining through building windows, and headlights from nighttime vehicular trips generated from the Project. However, the Project would only slightly increase lighting and glare compared to the existing condition and new landscaping would be provided throughout the Project Site that would limit impacts from new sources of light and glare. Landscaping, including trees, would limit spill of light to adjacent properties. As a standard condition of project approval, the Project would be required to comply with lighting standards detailed in the County’s Code, which would require project lighting to be shielded, diffused or indirect to avoid glare to both on and offsite residents, pedestrians, and motorists.

Therefore, the Project would not create new substantial sources of shadows, light, or glare. Impacts associated with new lighting would be less than significant.

Cumulative Impacts

There are no current construction projects or reasonably foreseeable related projects within 1,000 feet of the Project Site, which is located in a mature residential area near the Santa Ana Freeway. Any potential related projects would likely be located on Whittier Boulevard, nearly 900 feet north of the Project Site or south of the Santa Ana Freeway in commercially-zoned arterials.

The geographic context for the analysis of cumulative impacts related to visual character of the surrounding area and its aesthetic image would include related projects located within view of the Project Site. Related projects located in such a position that they would not be visible from the Project Site or to which the Project would not be visible would not normally have a potential to combine with the Project to create a cumulative aesthetics impact.

No potential related projects would not be visible from the Project Site area, due to distance and intervening structures. No scenic vistas are available from the Project Site area and as such, development of related projects in the vicinity of the Project Site would not result in any cumulative impacts related to scenic vistas. The degree to which each of the related project sites contain scenic resources that could be affected by the related projects would be considered on a case-by-case basis.

The Project Site does not contain any scenic resources that are shared by or common to any of the related project sites. Related projects within the Project Site area would be required to undergo review and approval by the County to ensure compliance with applicable design guidelines, which would ensure continuity of these projects with the County's visual character/quality standards.

Further, development of the Project in combination with the related projects could result in an intensification of land uses in an already urbanized area of the area, which currently maintains an elevated level of ambient light and glare, typical of a densely developed area. As such, the Project and related projects could contribute to increased ambient light levels within the surrounding area. However, the Project Site area is highly urbanized, and the presence of additional nighttime illumination resulting from the Proposed and related projects would not represent a significant, adverse alteration to the existing nighttime visual environment. Additionally, the potential increase in nighttime light resulting from the Project would not be bright enough to substantially affect nearby sensitive uses. For these reasons, cumulative aesthetics impacts would be less than significant.

4.2 AGRICULTURE AND FORESTRY RESOURCES

In determining whether impacts to agricultural resources are significant environmental effects, lead agencies may refer to the California Agricultural Land Evaluation and Site Assessment Model (1997) prepared by the California Department of Conservation as an optional model to use in assessing impacts on agriculture and farmland. In determining whether impacts to forest resources, including timberland, are significant environmental effects, lead agencies may refer to information compiled by the California Department of Forestry and Fire Protection regarding the state’s inventory of forest land, including the Forest and Range Assessment Project and the Forest Legacy Assessment project; and forest carbon measurement methodology provided in Forest Protocols adopted by the California Air Resources Board.

Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
--------------------------------	--	------------------------------	-----------

Would the project:

- a) **Convert Prime Farmland, Unique Farmland, or Farmland of Statewide Importance (Farmland), as shown on the maps prepared pursuant to the Farmland Mapping and Monitoring Program of the California Resources Agency, to non-agricultural use?**

<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
--------------------------	--------------------------	--------------------------	-------------------------------------

No Impact. The Project Site is currently developed with church buildings and located in an urbanized area of unincorporated Los Angeles County that is predominantly developed with educational, commercial, and residential uses. The Project Site has a zoning designation of R-3. The Site is designated Urban and Built-up Land and is not included in the Prime Farmland, Unique Farmland, or Farmland of Statewide Importance category.⁵ The Site is not designated as Prime, Unique, or Farmland of Statewide Importance. Therefore, no impacts would occur.

- b) **Conflict with existing zoning for agricultural use, with a designated Agricultural Resource Area, or with a Williamson Act contract?**

<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
--------------------------	--------------------------	--------------------------	-------------------------------------

No Impact. The Williamson Act of 1965 allows local governments to enter into agreements with local landowners with the purpose of trying to limit specific parcels of land to agricultural or other related open space use.⁶ The Project Site will not result in the conversion of land zoned for agricultural use to non-agricultural use. Further, the Project will not result in the conversion of land

⁵ State of California Department of Conservation, Farmland Mapping and Monitoring Program, Los Angeles County Important Farmland 2018, Map, website: <https://maps.conservation.ca.gov/DLRP/CIFF/> and <https://www.conservation.ca.gov/dlrp/fmmp/Pages/LosAngeles.aspx>, accessed September 14, 2023.

⁶ State of California Department of Conservation, Williamson Act Program, website: <https://www.conservation.ca.gov/dlrp/wa>, accessed September 14, 2023.

under a Williamson Act Contract from agricultural use to non-agricultural use because the Site is not subject to a Williamson Act contract. Therefore, no impact would occur.

- c) **Conflict with existing zoning for, or cause rezoning of, forest land (as defined in Public Resources Code section 12220(g)), timberland (as defined by Public Resources Code section 4526), or timberland zoned Timberland Production (as defined by Government Code section 51104(g))?**

No Impact. Neither the Project Site nor surrounding parcels are zoned for forest land or timberland. Therefore, no impact would occur.

- d) **Result in the loss of forest land or conversion of forest land to non-forest use?**

No Impact. The Project Site is completely surrounded by urban uses and infrastructure and is not forest land. Therefore, no impact would occur.

- e) **Involve other changes in the existing environment which, due to their location or nature, could result in conversion of Farmland, to non-agricultural use or conversion of forest land to non-forest use?**

No Impact. A significant impact may occur if a project involves changes to the existing environment that could result in the conversion of farmland to another non-agricultural use or conversion of forest land to non-forest use. The Project Site is in an area of the County that is highly urbanized. Neither the Project Site nor surrounding parcels are utilized for agricultural uses or forest land and such uses are not in proximity to the Project Site. Therefore, no impact would occur.

Cumulative Impacts

Neither the Project Site nor any of the possible related projects' sites are used or designated as agricultural land or forest land. Therefore, no cumulative impacts related to agricultural resources would occur.

4.3 AIR QUALITY

Where available, the significance criteria established by the South Coast Air Quality Management District (SCAQMD) may be relied upon to make the following determinations.

This section is based on the following item, which is included as **Appendix B** to this MND:

B Air Quality Technical Report and Modeling, DKA Planning, September 2023

	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
Would the project:				
a) Conflict with or obstruct implementation of the applicable air quality plans of either the South Coast AQMD (SCAQMD) or the Antelope Valley AQMD (AVAQMD)?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>

Less Than Significant Impact. The Project Site is located in the South Coast Air Basin (SCAB) and is under the jurisdiction of the South Coast Air Quality Management District (SCAQMD). The SCAQMD and the Southern California Association of Governments (SCAG) are responsible for preparing the Air Quality Management Plan (AQMP), which addresses federal and state Clean Air Act (CAA) requirements. The AQMP details goals, policies, and programs for improving air quality in the SCAB. In preparation of the AQMP, SCAQMD and SCAG uses regional growth projections to forecast, inventory, and allocate regional emissions from land use and development-related sources.

For purposes of analyzing consistency with the AQMP, if a proposed project would result in growth that is substantially greater than what was anticipated, then the project would conflict with the AQMP per Consistency Criterion No. 1.

On the other hand, if a project’s density is within the anticipated growth of a jurisdiction, its emissions would be consistent with the assumptions in the AQMP, and the project would not conflict with SCAQMD’s attainment plans. In addition, the SCAQMD considers a project consistent with the AQMP if the project would not result in an increase in the frequency or severity of existing air quality violations or cause a new violation per Consistency Criterion No. 2.

Furthermore, SCAB is in a non-attainment status for federal ozone standards, federal carbon monoxide standards, and state and federal particulate matter standards. Any development in the SCAB, including the Project, could cumulatively contribute to these pollutant violations. Should construction or operation of the Project exceed these thresholds a significant impact could occur; however, if estimated emissions are less than the thresholds, impacts would be considered less than significant.

The Project Site is zoned as an R-3 parcel, a classification that conditionally allows schools such as that proposed by the Project. As such, the Connect SoCal or RTP/SCS' assumptions about growth in the County accommodate the projected jobs on the Project Site. As a result, the Project would be consistent with the growth assumptions in the County's General Plan. Because the AQMP accommodates growth forecasts from local General Plans, the emissions associated with this Project are accounted for and mitigated in the region's air quality attainment plans. The air quality impacts of development on the Project Site are accommodated in the region's emissions inventory for the RTP/SCS and 2022 AQMP.

SCAQMD adopted the 2022 Air Quality Management Plan (AQMP) on December 2, 2022, updating the region's air quality attainment plan to address the "extreme" ozone non-attainment status for the Basin and the severe ozone non-attainment for the Coachella Valley Basin by laying a path for attainment by 2037. This includes reducing NOx emissions by 67 percent more than required by adopted rules and regulations in 2037. The AQMP calls on strengthening many stationary source controls and addressing new sources like wildfires, but still concludes that the region will not meet air quality standards without a significant shift to zero emission technologies and significant federal action. The 2022 AQMP relies on the growth assumptions in SCAG's 2020-2045 RTP/SCS.

The County's General Plan Air Quality Element identifies eight policies with specific strategies for advancing the County's clean air goals. As shown in **Table 4.3-1**, the Project is consistent with the applicable policies in the Air Quality Element, as the Project would implement sustainability features that would reduce vehicular trips, reduce VMT, and encourage the use of alternative modes of transportation. Therefore, the Project would result in a less than significant impact related to consistency with the Air Quality Element.

The Project would support AQMP objectives to promote infill/redevelopment and balance jobs and housing for Los Angeles County, and would not conflict with implementation of the AQMP. As a result, the Project would comply with Consistency Criterion No. 1 listed above.

As detailed below in Impact 3b and 3c, operation of the Project would not exceed the thresholds of significance. Therefore, the Project would result in an impact related to Consistency Criterion No. 2 of the AQMP. Therefore, Project impacts with respect to AQMP consistency would be less than significant.

Table 4.3-1
Project Consistency with County of Los Angeles General Plan Air Quality Element

Strategy	Project Consistency
Policy AQ 1.1: Minimize health risks to people from industrial toxic or hazardous air pollutant emissions, with an emphasis on local hot spots, such as existing point sources affecting immediate sensitive receptors.	Consistent. The Project Site is located in a residential neighborhood, with health care and school facilities nearby. As such, there are no major toxic hot spots or point sources that would adversely impact human health.
Policy AQ 1.2: Encourage the use of low or no volatile organic compound (VOC) emitting materials.	Consistent. The Project would comply with SCAQMD Rule 1113, which limits the VOC content of architectural coatings.

**Table 4.3-1
Project Consistency with County of Los Angeles General Plan Air Quality Element**

Strategy	Project Consistency
<p>Policy AQ 1.3: Reduce particulate inorganic and biological emissions from construction, grading, excavation, and demolition to the maximum extent feasible.</p>	<p>Consistent. The construction activities that involve earthmoving (i.e., demolition, site preparation, grading) would be regulated by SCAQMD Rule 403, which controls fugitive dust emissions through best practices measures that address on-site and off-site particulate emissions and entrainment of inhalable particulates.</p>
<p>Policy AQ 1.4: Work with local air quality management districts to publicize air quality warnings, and to track potential sources of airborne toxics from identified mobile and stationary sources.</p>	<p>Not Applicable. This policy calls for the County to work with SCAQMD to publicize smog alert days, wildfire events, and to help track facilities that emit toxic air contaminants through the entitlement process. Nevertheless, the Project would not interfere with the implementation of this policy.</p>
<p>Policy AQ 2.1: Encourage the application of design and other appropriate measures when siting sensitive uses, such as residences, schools, senior centers, daycare centers, medical facilities, or parks with active recreational facilities within proximity to major sources of air pollution, such as freeways.</p>	<p>Consistent. While the Project Site is 150 feet north of the Santa Ana Freeway, the project's design has sited the outdoor lunch patio and play area north of the existing Building 1, where particulate matter from the freeway would be shielded in large part by the presence of this structure. In addition, all classrooms would comply with the California Energy Commission's requirements to protect indoor air quality. This would include mechanical ventilation that includes MERV-13 filters to reduce indoor exposure of students to inhalable particulates.</p>
<p>Policy AQ 2.2: Participate in, and effectively coordinate the development and implementation of community and regional air quality programs.</p>	<p>Not Applicable. This policy calls for the County to work with SCAQMD to develop education and outreach programs to advance clean air objectives. Nevertheless, the Project would not interfere with the implementation of this policy.</p>
<p>Policy AQ 2.3: Support the conservation of natural resources and vegetation to reduce and mitigate air pollution impacts.</p>	<p>Consistent. The Project would replace a site that is largely a paved parking lot with minimal ground cover and trees with a landscaped facility. This would include trees and shrubs that line the project boundaries, as well as groundcover and permeable surfaces in the play area.</p>
<p>Policy AQ 2.4: Coordinate with different agencies to minimize fugitive dust from different sources, activities, and uses.</p>	<p>Consistent. The Project's construction activities that involve earthmoving (i.e., demolition, site preparation, grading) would be regulated by SCAQMD Rule 403, which controls fugitive dust emissions through best practices measures that address on-site and off-site particulate emissions and entrainment of inhalable particulates. During operation of the school, paved parking lots and common areas would reduce fugitive dust emissions and entrainment of particulates in cars that enter and leave the Project Site.</p>
<p>Source: DKA Planning, 2022.</p>	

- b) **Result in a cumulatively considerable net increase of any criteria pollutant for which the project region is non-attainment under an applicable federal or state ambient air quality standard?**

Less Than Significant Impact. The Project would contribute to local and regional air pollutant emissions during its construction (short-term) and operations (long-term). However, as discussed in the following analysis, construction and operations of the Project would not result in exceedances of SCAQMD daily thresholds for project-specific impacts that could subsequently cause cumulatively considerable increases in emissions of pollutants for which the Basin is designated as non-attainment.

SCAB is in a non-attainment status for federal ozone standards, federal carbon monoxide standards, and state and federal particulate matter standards. Any development in the SCAB, including the Project, could cumulatively contribute to these pollutant violations. Evaluation of cumulative air quality impacts of the Project has been completed pursuant to SCAQMD’s cumulative air quality impact methodology, SCAQMD states that if an individual project results in air emissions of criteria pollutants (ROG, CO, NO_x, SO_x, PM₁₀, and PM_{2.5}) that exceed the SCAQMD’s recommended daily thresholds for project-specific impacts, then it would also result in a cumulatively considerable net increase of the criteria pollutant(s) for which the project region is in non-attainment under an applicable federal or state ambient air quality standard.

SCAQMD published its Final Localized Significance Threshold Methodology in July 2008, recommending that all air quality analyses include an assessment of both construction and operational impacts on the air quality of nearby sensitive receptors from emissions of CO, NO_x, PM₁₀, and PM_{2.5}. The methodologies from the SCAQMD California Environmental Quality Act (CEQA) Air Quality Handbook are used in evaluating project impacts. SCAQMD has established daily mass thresholds for regional pollutant emissions, which are shown in **Table 4.3-2**.

**Table 4.3-2
SCAQMD Emissions Thresholds**

Criteria Pollutant	Construction Emissions		Operation Emissions	
	Regional	Localized /a/	Regional	Localized /a/
Volatile Organic Compounds (VOC)	75	--	55	--
Nitrogen Oxides (NO _x)	100	74	55	74
Carbon Monoxide (CO)	550	680	550	680
Sulfur Oxides (SO _x)	150	--	150	--

Fine Particulates (PM _{2.5})	55	3	55	1

/a/ Localized significance thresholds assumed a 1-acre and 25-meter (82-foot) receptor distance in the Central LA source receptor area. The SCAQMD has not developed LST values for VOC or SO_x. Pursuant to SCAQMD guidance, sensitive receptors closer than 25 meters to a construction site are to use the LSTs for receptors at 25 meters (SCAQMD Final Localized Significance Threshold Methodology, June 2008).

Source: SCAQMD, South Coast AQMD Air Quality Significance Thresholds, 2019.

Construction

Construction-related emissions were estimated using the SCAQMD's CalEEMod 2022.1.1.18 model and a projected construction schedule of approximately twelve months. The Project would be required to comply with the following regulations, as applicable:

- SCAQMD Rule 403, would reduce the amount of particulate matter entrained in ambient air as a result of anthropogenic fugitive dust sources by requiring actions to prevent, reduce or mitigate fugitive dust emissions.
- SCAQMD Rule 1113, which limits the VOC content of architectural coatings.
- SCAQMD Rule 402, which states that a person shall not discharge from any source whatsoever such quantities of air contaminants or other materials which cause injury, detriment, nuisance, or annoyance to any considerable number of persons or to the public, or which endanger the comfort, repose, health, or safety of any such persons or the public, or which cause, or have a natural tendency to cause, injury or damage to business or property.
- In accordance with Section 2485 in Title 13 of the California Code of Regulations, the idling of all diesel-fueled commercial vehicles (with gross vehicle weight over 10,000 pounds) during construction would be limited to five minutes at any location.
- In accordance with Section 93115 in Title 17 of the California Code of Regulations, operation of any stationary, diesel-fueled, compression-ignition engines would meet specific fuel and fuel additive requirements and emissions standards.

Regional Emissions

Construction activity creates air quality impacts through the use of heavy-duty construction equipment on site and through haul truck trips and vehicle trips generated by construction workers traveling to and from the Project Site. NO_x emissions would primarily result from the use of construction equipment and truck trips.

Fugitive dust emissions would peak during grading activities, where approximately 971 cubic yards of soil (including 15 percent swell factor for topsoil) would be exported from the Project Site for foundation work, footings, and utilities. All construction projects in the Basin must comply with SCAQMD Rule 403 for fugitive dust. Rule 403 control requirements include measures to prevent the generation of visible dust plumes. Measures include, but are not limited to, applying water and/or soil binders to uncovered areas, reestablishing ground cover as quickly as possible, utilizing a wheel washing system or other control measures to remove bulk material from tires and vehicle undercarriages before vehicles exit the Project Site, and maintaining effective cover over exposed areas. Compliance with Rule 403 would reduce regional PM_{2.5} and PM₁₀ emissions associated with construction activities by approximately 61 percent.

During the building finishing phase, the application of architectural coatings (e.g., paints) would potentially release VOCs (regulated by SCAQMD Rule 1113). The assessment of construction air quality impacts considers each of these potential sources. Construction emissions can vary substantially from day to day, depending on the level of activity, the specific type of operation and, for dust, the prevailing weather conditions.

As shown in **Table 4.3-3**, construction of the Project would produce VOC, NO_x, CO, SO_x, PM₁₀ and PM_{2.5} emissions that would not exceed the SCAQMD’s regional thresholds. This is a conservative analysis, as it assumes that the entirety of structures on the Project Site would be demolished. However, the existing 6,993 square-foot structure (Building 1) would be retained (except for the removal of an existing 509 square-foot covered courtyard) while the interior is demolished and remodeled, demolition emissions is conservative. Similarly, the analysis conservatively overstates building construction emissions by assuming the erection of a new 8,749 square-foot building, which includes a covered courtyard and canopy. As the existing building would be retained, the emissions analysis is conservative of the building construction phase. Nevertheless, construction of the Project would not contribute substantially to an existing violation of air quality standards for regional pollutants (e.g., ozone). This impact is considered less than significant.

**Table 4.3-3
Daily Construction Emissions**

Construction Phase Year	Daily Emissions (Pounds Per Day)					
	VOC	NO _x	CO	SO _x	PM ₁₀	PM _{2.5}
2024	1.7	18.9	18.0	<0.1	3.9	2.1
2025	5.0	10.6	12.7	<0.1	0.7	0.4
Maximum Regional Total	5.0	18.9	18.0	<0.1	3.9	2.1
Regional Threshold	75	100	550	150	150	55
Exceed Threshold?	No	No	No	No	No	No

Maximum Localized Total	4.8	15.9	15.4	<0.1	3.5	2.0
Localized Threshold	N/A	74	680	N/A	5	3
Exceed Threshold?	N/A	No	No	N/A	No	No

The construction dates are used for the modeling of air quality emissions in the CalEEMod software. If construction activities commence later than what is assumed in the environmental analysis, the actual emissions would be lower than analyzed because of the increasing penetration of newer equipment with lower certified emission levels. Assumes implementation of SCAQMD Rule 403 (Fugitive Dust Emissions)

Source: DKA Planning, 2023 based on CalEEMod 2022.1.1.18 model runs. LST analyses based on 1-acre site with 25-meter distances to receptors in Central LA source receptor area. Estimates reflect the peak summer or winter season, whichever is higher. Totals may not add up due to rounding. Modeling sheets included in the Technical Appendix.

Localized Emissions

In addition to maximum daily regional emissions, maximum localized (on-site) emissions were quantified for each construction activity. The localized construction air quality analysis was conducted using the methodology promulgated by the SCAQMD. Look-up tables provided by the SCAQMD were used to determine localized construction emissions thresholds for the Project.⁷ LSTs represent the maximum emissions from a project that are not expected to cause or contribute to an exceedance of the most stringent applicable federal or state ambient air quality standard and are based on the most recent background ambient air quality monitoring data (2018-2020) for the Project area.

Maximum on-site daily construction emissions for NO_x, CO, PM₁₀, and PM_{2.5} were calculated using CalEEMod and compared to the applicable SCAQMD LSTs for the Central Los Angeles SRA based on construction site acreage that is less than or equal to one acre. Potential impacts were evaluated at the closest off-site sensitive receptor, which are the residences that flank the Project Site. The closest receptor distance on the SCAQMD mass rate LST look-up tables is 25 meters.

As shown in **Table 4.3-3**, above, the Project would produce emissions that do not exceed the SCAQMD's recommended localized standards of significance for NO₂ and CO during the construction phase. Similarly, construction activities would not produce PM₁₀ and PM_{2.5} emissions that exceed localized thresholds recommended by the SCAQMD. These estimates assume the use of Best Available Control Measures (BACMs) that address fugitive dust emissions of PM₁₀ and PM_{2.5} through SCAQMD Rule 403. BACMs are fugitive dust control actions that are listed in Table 1 of SCAQMD Rule 403 and include stabilizing backfill material, maintaining soil stability, using water, sweeping, and vacuuming debris and piles.⁸ This would include watering portions of the site that are disturbed during grading activities and minimizing tracking of dirt onto local

⁷ South Coast Air Quality Management District, LST Methodology Appendix C-Mass Rate LST Look-up Table, revised October 2009.

⁸ SCAQMD Rule 403, Table 1: <https://www.aqmd.gov/docs/default-source/rule-book/rule-iv/rule-403.pdf?sfvrsn=4>

streets. Therefore, construction impacts on localized air quality are considered less than significant.

Although not required since there was no construction impact identified, the Project would voluntarily commit to the use off-road construction equipment with engines over 25 horsepower (hp) that comply with Tier 4 Final emissions standards and are registered in the CARB off-road registration inventory.

Voluntary Condition of Approval (COA)

AIR-COA-1 The Project would voluntarily commit to the use of off-road construction equipment with engines over 25 horsepower (hp) that comply with Tier 4 Final emissions standards and are registered in the CARB off-road registration inventory.

Operation

Operational emissions of criteria pollutants would come from area, energy, and mobile sources. Area sources include consumer products such as cleaners, architectural coatings for routine maintenance, and landscaping equipment. Energy sources include electricity and natural gas use for space heating and water heating. The CalEEMod program generates estimates of emissions from energy use based on the land use type and size. The Project would also produce long-term air quality impacts to the region primarily from motor vehicles that access the Project Site. The Project could add up to 827 net vehicle trips to the local roadway network on a weekday at the start of operations in late 2025.⁹

As shown in **Table 4.3-4**, the Project's emissions would not exceed the SCAQMD's regional or localized significance thresholds. Therefore, the operational impacts of the Project on regional and localized air quality are considered less than significant.

In addition to regular daytime school activities, there would be a number of intermittent special events that would be held throughout the school year that would generate additional emissions. These could occur both during the day (e.g., parent celebrations, holiday parades, orientations) and the evening (e.g., Back to School Night, spelling bee). While these events would generate more emissions than those summarized in **Table 4.3-4**, they would incrementally add emissions from parents traveling to and from these events and would not approach regional or localized thresholds of significance. Moreover, because these events would only occur during the academic school year, these emissions would occur outside the summer season, when conditions are more conducive to smog formation.

c) **Expose sensitive receptors to substantial pollutant concentrations?**

Less Than Significant Impact. There are several sensitive receptors within 0.25 miles of the Project Site that could be exposed to air pollution from construction and operation of the Project, including, but are not limited to, the following representative sampling (see **Figure 4.13-1**):

- Residences, 1075 Gage Avenue; five feet south of the Project Site.
- Residences, 1049 Gage Avenue; five feet north and east of the Project Site.
- Residences, Eastman Avenue (east side); five feet north and south of the Project Site.
- Residences, Gage Avenue (east side); 70 feet east of the Project Site.
- Residences, 1142 Eastman Avenue; 320 feet south of the Project Site.
- LA Community Hospital, 400 feet southwest of the Project Site.
- Eastman Avenue Elementary School, 740 feet south of the Project Site.

Construction

Construction of the Project could expose sensitive receptors to substantial pollutant concentrations if maximum daily emissions of regulated pollutants generated by sources located on and/or near the Project Site exceeded the applicable LST values presented in **Table 4.3-2**, or if construction activities generated significant emissions of TACs that could result in carcinogenic risks or non-carcinogenic hazards exceeding the SCAQMD Air Quality Significance Thresholds of 10 excess cancers per million or non-carcinogenic Hazard Index greater than 1.0, respectively. As discussed above, the LST values

were derived by the SCAQMD for the criteria pollutants NO_x, CO, PM₁₀, and PM_{2.5} to prevent the occurrence of concentrations exceeding the air quality standards at sensitive receptor locations based on proximity and construction site size.

As shown in **Table 4.3-3**, during construction of the Project, maximum daily localized unmitigated emissions of NO_x, CO, PM₁₀, and PM_{2.5} from sources on the Project Site would remain below each of the respective LST values. Unmitigated maximum daily localized emissions would not exceed any of the localized standards for receptors that are within 25 meters of the Project's construction activities. Therefore, based on SCAQMD guidance, localized emissions of criteria pollutants would not have the potential to expose sensitive receptors to substantial concentrations that would present a public health concern.

The primary TAC that would be generated by construction activities is diesel PM, which would be released from the exhaust stacks of construction equipment. The construction emissions modeling conservatively assumed that all equipment present on the Project Site would be operating simultaneously throughout most of the day, while in all likelihood this would rarely be the case. Average daily emissions of diesel PM would be less than one pound per day throughout the course of Project construction. Therefore, the magnitude of daily diesel PM emissions, would not be sufficient to result in substantial pollutant concentrations at off-site locations nearby.

Furthermore, according to SCAQMD methodology, health risks from carcinogenic air toxics are usually described in terms of individual cancer risk. "Individual Cancer Risk" is the likelihood that a person exposed to concentrations of TACs over a 30-year period will contract cancer based on the use of standard risk-assessment methodology. The entire duration of construction activities associated with implementation of the Project is anticipated to be approximately twelve months, and the magnitude of daily diesel PM emissions will vary over this time period. No residual emissions and corresponding individual cancer risk are anticipated after construction. Because there is such a short-term exposure period, construction TAC emissions would result in a less than significant impact. Therefore, construction of the Project would not expose sensitive receptors to substantial diesel PM concentrations, and this impact would be less than significant.

Operation

The Project Site would be redeveloped with an elementary and middle school, a land use that is not typically associated with TAC emissions. Typical sources of acutely and chronically hazardous TACs include industrial manufacturing processes (e.g., chrome plating, electrical manufacturing, petroleum refinery). The Project would not include these types of potential industrial manufacturing process sources. It is expected that quantities of hazardous TACs generated on-site (e.g., cleaning solvents, paints, landscape pesticides) for the types of proposed land uses would be below thresholds warranting further study under California Accidental Release Program.

When considering potential air quality impacts under CEQA, consideration is given to the location of sensitive receptors within close proximity of land uses that emit TACs. CARB has published and adopted the Air Quality and Land Use Handbook: A Community Health Perspective, which provides recommendations regarding the siting of new sensitive land uses near potential sources of air toxic emissions (e.g., freeways, distribution centers, rail yards, ports, refineries, chrome

plating facilities, dry cleaners, and gasoline dispensing facilities).¹⁰ The SCAQMD adopted similar recommendations in its Guidance Document for Addressing Air Quality Issues in General Plans and Local Planning.¹¹ Together, the CARB and SCAQMD guidelines recommend siting distances for both the development of sensitive land uses in proximity to TAC sources and the addition of new TAC sources in proximity to existing sensitive land uses.

The primary sources of potential air toxics associated with Project operations include diesel PM from delivery trucks (e.g., truck traffic on local streets and idling on adjacent streets) and to a lesser extent, facility operations (e.g., natural gas fired boilers). However, these activities, and the land uses associated with the Project, are not considered land uses that generate substantial TAC emissions. It should be noted that the SCAQMD recommends that health risk assessments (HRAs) be conducted for substantial individual sources of DPM (e.g., truck stops and warehouse distribution facilities that generate more than 100 trucks per day or more than 40 trucks with operating transport refrigeration units) and has provided guidance for analyzing mobile source diesel emissions.¹²

Based on this guidance, the Project would not include these types of land uses and is not considered to be a substantial source of DPM warranting a refined HRA since daily truck trips to the Project Site would not exceed 100 trucks per day or more than 40 trucks with operating transport refrigeration units. In addition, the CARB-mandated airborne toxic control measures (ATCM) limits diesel-fueled commercial vehicles (delivery trucks) to idle for no more than five minutes at any given time, which would further limit diesel particulate emissions. As the Project would not contain substantial TAC sources and is consistent with the CARB and SCAQMD guidelines, the Project would not result in the exposure of off-site sensitive receptors to carcinogenic or toxic air contaminants that exceed the maximum incremental cancer risk of 10 in one million or an acute or chronic hazard index of 1.0, and potential TAC impacts would be less than significant.

The Project would generate long-term emissions on-site from area and energy sources that would generate negligible pollutant concentrations of CO, NO₂, PM_{2.5}, or PM₁₀ at nearby sensitive receptors. While long-term operations of the Project would add traffic to local roads that produces off-site emissions, these would not result in exceedances of CO air quality standards at roadways in the area due to three key factors. First, CO hotspots are extremely rare and only occur in the presence of unusual atmospheric conditions and extremely cold conditions, neither of which applies to this Project area. Second, auto-related emissions of CO continue to decline because of advances in fuel combustion technology in the vehicle fleet. Finally, the Project would not contribute to the levels of congestion that would be needed to produce emissions concentrations needed to trigger a CO hotspot.

¹⁰ California Air Resources Board, Air Quality and Land Use Handbook, a Community Health Perspective, April 2005.

¹¹ South Coast Air Quality Management District, Guidance Document for Addressing Air Quality Issues in General Plans and Local Planning, May 6, 2005.

¹² South Coast Air Quality Management District, Health Risk Assessment Guidance for Analyzing Cancer Risks from Mobile Source Diesel Idling Emissions for CEQA Air Quality Analysis, 2002.

Finally, the Project would not result in any substantial emissions of TACs during the construction or operations phase. During the construction phase, the primary air quality impacts would be associated with the combustion of diesel fuels, which produce exhaust-related particulate matter that is considered a toxic air contaminant by CARB based on chronic exposure to these emissions.¹³ However, construction activities would not produce chronic, long-term exposure to diesel particulate matter. During long-term project operations, the Project does not include typical sources of acutely and chronically hazardous TACs such as industrial manufacturing processes and automotive repair facilities. As a result, the Project would not create substantial concentrations of TACs.

In addition, the SCAQMD recommends that health risk assessments be conducted for substantial sources of diesel particulate emissions (e.g., truck stops and warehouse distribution facilities) and has provided guidance for analyzing mobile source diesel emissions.¹⁴ The Project would not generate a substantial number of truck trips. Based on the limited activity of TAC sources, the Project would not warrant the need for a health risk assessment associated with on-site activities. Therefore, the Project’s operational impacts on local sensitive receptors would be less than significant.

- d) **Result in other emissions (such as those leading to odors) adversely affecting a substantial number of people?**

No Impact. The Project would not result in activities that create objectionable odors. The Project is a school campus that would not include any activities typically associated with unpleasant odors and local nuisances (e.g., rendering facilities, dry cleaners). SCAQMD regulations that govern nuisances (i.e., Rule 402, Nuisances) would regulate any occasional odors associated with the elementary and middle schools. As a result, any odor impacts from the Project would be considered less than significant.

Cumulative Impacts

While the Project would generate short- and long-term emissions during the construction and operations phases, respectively, the presence of any other development projects could produce cumulative impacts. The U.S. EPA finds that in the context of roadway pollutants, “...concentrations generally decrease to background levels within 500-600 feet.”¹⁵ CARB also finds that air pollution levels can be significantly higher within 500 feet of freeways or other major sources.¹⁶

¹⁵ U.S. EPA. Near Roadway Air Pollution and Health: Frequently Asked Questions. August 2014.

¹⁶ South Coast Air Quality Management District. Guidance Document: Air Quality Issues Regarding Land Use.

AQMP Consistency

Cumulative development is not expected to result in a significant impact in terms of conflicting with, or obstructing implementation of the 2022 AQMP. As discussed previously, growth considered to be consistent with the AQMP would not interfere with attainment because this growth is included in the projections utilized in the formulation of the AQMP. Consequently, as long as growth in the Basin is within the projections for growth identified in the 2020-2045 RTP/SCS, implementation of the AQMP will not be obstructed by such growth. In addition, as discussed previously, the population growth resulting from the Project would be consistent with the growth projections of the AQMP. Any related project would implement feasible air quality mitigation measures to reduce the criteria air pollutants, if required due to any significant emissions impacts. In addition, each related project would be evaluated for its consistency with the land use policies set forth in the AQMP. Therefore, the Project's contribution to the cumulative impact would not be cumulatively considerable and, therefore, would be less than significant.

Construction

SCAQMD recommends that any construction-related emissions and operational emissions from individual development projects that exceed the project-specific mass daily emissions thresholds identified above also be considered cumulatively considerable.¹⁷ Individual projects that generate emissions not in excess of SCAQMD's significance thresholds would not contribute considerably to any potential cumulative impact. SCAQMD neither recommends quantified analyses of the emissions generated by a set of cumulative development projects nor provides thresholds of significance to be used to assess the impacts associated with these emissions.

As summarized in **Table 4.3-3**, the Project would not exceed the SCAQMD's mass emissions thresholds and would not contribute to any potential cumulative impact. If any related project was projected to exceed LST thresholds (after mitigation), it could perform dispersion modeling to confirm whether health-based air quality standards would be violated. The SCAQMD's LST thresholds recognize the influence of a receptor's proximity, setting mass emissions thresholds for PM₁₀ and PM_{2.5} that generally double with every doubling of distance.

The Project would comply with regulatory requirements, including the SCAQMD Rule 403 requirements listed above. Based on SCAQMD guidance, individual construction projects that exceed the SCAQMD's recommended daily thresholds for project-specific impacts would cause a cumulatively considerable increase in emissions for those pollutants for which the Air Basin is in non-attainment. As shown above, construction-related daily emissions at the Project Site would not exceed any of the SCAQMD's regional or localized significance thresholds. Therefore, the Project's contribution to cumulative air quality impacts would not be cumulatively considerable and, therefore, would be less than significant.

Similar to the Project, the greatest potential for TAC emissions at any related project would generally involve diesel particulate emissions associated with heavy equipment operations during

¹⁷ White Paper on Regulatory Options for Addressing Cumulative Impacts from Air Pollution Emissions, SCAQMD Board Meeting, September 5, 2003, Agenda No. 29, Appendix D, p. D-3.

grading and excavation activities. According to SCAQMD methodology, health effects from carcinogenic air toxics are usually described in terms of individual cancer risk. “Individual Cancer Risk” is the likelihood that a person exposed to concentrations of TACs over a 30-year period will contract cancer, based on the use of standard risk-assessment methodology. Construction activities are temporary and short-term events, thus construction activities at each related project would not result in a long-term substantial source of TAC emissions. Additionally, the SCAQMD CEQA guidance does not require a health risk assessment for short-term construction emissions. It is therefore not meaningful to evaluate long-term cancer impacts from construction activities, which occur over relatively short durations. As such, given the short-term nature of these activities, cumulative toxic emission impacts during construction would be less than significant.

Operation

As discussed above, the Project’s operational air quality emissions and cumulative impacts would be less than significant. According to the SCAQMD, if an individual project results in air emissions of criteria pollutants that exceed the SCAQMD’s recommended daily thresholds for project-specific impacts, then the project would also result in a cumulatively considerable net increase of these criteria pollutants. As operational emissions would not exceed any of the SCAQMD’s regional or localized significance thresholds, the emissions of non-attainment pollutants and precursors generated by Project operations would not be cumulatively considerable.

With respect to TAC emissions, neither the Project nor any likely related projects (which are largely residential, retail/commercial in nature), would represent a substantial source of TAC emissions, which are typically associated with large-scale industrial, manufacturing, and transportation hub facilities. The Project and related projects would be consistent with the recommended screening level siting distances for TAC sources, as set forth in CARB’s Land Use Guidelines, and the Project and related projects would not result in a cumulative impact requiring further evaluation. However, any related projects could generate minimal TAC emissions related to the use of consumer products and landscape maintenance activities, among other things. Pursuant to AB 1807, which directs the CARB to identify substances as TACs and adopt airborne toxic control measures to control such substances, the SCAQMD has adopted numerous rules (primarily in Regulation XIV) that specifically address TAC emissions. These SCAQMD rules have resulted in and will continue to result in substantial Basin-wide TAC emissions reductions.

As such, cumulative TAC emissions during long-term operations would be less than significant. Therefore, the Project would not result in any substantial sources of TACs that have been identified by the CARB’s Land Use Guidelines, and thus, would not contribute to a cumulative impact.

4.4 BIOLOGICAL RESOURCES

	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
Would the project:				
a) Have a substantial adverse effect, either directly or through habitat modifications, on any species identified as a candidate, sensitive, or special status species in local or regional plans, policies, or regulations, or by the California Department of Fish and Wildlife (CDFW) or U.S. Fish and Wildlife Service (USFWS)?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>

Less Than Significant Impact. The Project Site is located in an urbanized and developed area of the County and is developed with two church buildings with largely impermeable surfaces, and a surface parking. The Project Site has been subject to substantial disturbance associated with the original construction of the buildings and ongoing regular maintenance of the landscaping and nearby surrounding areas are entirely developed. No native oak trees have also been identified on the Project Site. The Project Site is not located or adjacent to a designated Significant Ecological Area as mapped by the County. As such, the Project Site does not exhibit potential to support endangered, rare, or threatened plant species.

The Project Site is disturbed, relative to the presence of natural habitats, and surrounding areas are entirely developed; therefore, the Site does not provide suitable habitat for endangered, rare, or threatened animal species. Some examples of these disturbances that deter animals include complete absence of native habitats or vegetation, substantial vehicular traffic, artificial lighting, routine vegetation maintenance, domesticated and feral dogs and cats, and pest management.

There is ornamental vegetation and one tree (Howea palm) on the Project Site, which would be removed. There are two street trees (Ficus Microcarpa Nitida and Cupaniopsis Anacardioides) on Gage Avenue, which would remain.¹⁸ These trees could potentially provide nesting sites for migratory birds. The Project would be required to comply with the Migratory Bird Treaty Act (MBTA) (Title 33, United States Code, Section 703 et seq., see also Title 50, Code of Federal Regulation, Part 10) and Section 3503 of the California Department of Fish and Wildlife Code, which regulates vegetation removal during the nesting season (February 15 to August 15) to ensure that significant impacts to migratory birds would not occur.

Compliance with these existing regulations would ensure that that Project would not have a substantial adverse effect, either directly or through habitat modifications, on any species

¹⁸ [Landscape Plan](#), Carter Romanek, November 2, 2023, included in **Appendix A** of this IS/MND.

identified as a candidate, sensitive, or special status species in local or regional plans, policies, or regulations, or by the California Department of Fish and Wildlife or U.S. Fish and Wildlife Service. Therefore, Project impacts related to nesting birds would be less than significant.

- b) **Have a substantial adverse effect on any riparian habitat or other sensitive natural community identified in local or regional plans, policies, regulations or by the CDFW or USFWS?**

No Impact. The Project Site is located in an urbanized and developed area of the County and is developed with two church buildings and surface parking. No riparian or other sensitive habitat areas are located on or adjacent to the Project Site.¹⁹ Due to the highly urbanized nature of the Project Site and surrounding area, the lack of a major water body, and the lack of trees on the Site, the Project Site is not a habitat for native resident or migratory species or contain native nurseries. Thus, implementation of the Project would not result in any adverse effect on riparian habitat or other sensitive natural communities. Therefore, no impacts related to this issue would occur as a result of the Project.

- c) **Have a substantial adverse effect on state or federally protected wetlands (including, but not limited to, marsh, vernal pool, coastal, etc.) through direct removal, filling, hydrological interruption, or other means?**

No Impact. The Project Site is located in an urbanized and developed area of the County and is developed with two church buildings and surface parking. No federally protected wetlands (e.g., estuarine and marine deepwater, estuarine and marine, freshwater pond, lake, riverine) occur on or in the immediate vicinity of the Project Site. The nearest wetland habitat is the Los Angeles River channel, which classified as a Riverine and located approximately 1.25 miles south of the Project Site.²⁰ Thus, implementation of the Project would not result in any adverse effect on wetlands. Therefore, no impacts related to this issue would occur as a result of the Project.

- d) **Interfere substantially with the movement of any native resident or migratory fish or wildlife species or with established native resident or migratory wildlife corridors, or impede the use of native wildlife nursery sites?**

¹⁹ U. S. Fish & Wildlife Service, National Wetlands Inventory, Wetlands Mapper, website: <http://www.fws.gov/wetlands/Data/Mapper.html>, accessed September 14, 2023.

²⁰ U. S. Fish & Wildlife Service, National Wetlands Inventory, Wetlands Layer: <http://www.fws.gov/wetlands/Data/Mapper.html>, accessed September 14, 2023.

No Impact. The Project Site is located in an urbanized and developed area of the County and is developed with two church buildings and surface parking. The Site is not part of a significant wildlife corridor or regional habitat linkage area.²¹ Additionally, there are no waterways located in the vicinity of the Project Site that are used by migratory fish, and there are no wildlife nursery sites in the area.

Migratory nongame native bird species are protected by international treaty under the Federal Migratory Bird Treaty Act of 1918 (50 C.F.R. Section 10.13). Sections 3503, 3503.5, and 3513 of the California Fish and Game Code prohibit take of all birds and their active nests including raptors and other migratory nongame birds (as listed under the Federal MBTA). Bats are considered non-game mammals and are afforded protection by state law from take and/or harassment, (Fish and Game Code Section 4150, California Code of Regulations (CCR), Section 251.1).

The Project would be required to comply with all regulatory requirements, to reduce potential impacts to migratory bird and bat species that could potentially nest in trees that would be removed as part of the Project. Thus, the Project would not interfere substantially with the movement of any native resident or migratory fish, wildlife species, or with established native resident or migratory wildlife corridors, and/or impede the use of native wildlife nursery sites. Therefore, no impact would occur.

- e) **Convert oak woodlands (as defined by the state, oak woodlands are oak stands with greater than 10% canopy cover with oaks at least 5 inch in diameter measured at 4.5 feet above mean natural grade) or other unique native woodlands (juniper, Joshua, southern California black walnut, etc.)?**

No Impact. The trees existing on the Project Site and surrounding street trees are not native. No oak woodlands or other unique native trees exist within the Project Site. There is ornamental vegetation and one tree (Howea palm) on the Project Site. There are two street trees (Ficus Microcarpa Nitida and Cupaniopsis Anacardioides) on Gage Avenue.²²

The California Natural Diversity Database (CNDDDB) identifies the following special-status community terrestrial habitats as occurring within the Los Angeles quadrangle²³: California

²¹ Los Angeles County General Plan, Figure 9.2, Regional Habitat Linkages: https://planning.lacounty.gov/assets/upl/project/gp_2035_2014-FIG_9-2_Regional_Wildlife_Linkages.pdf

²² Landscape Plan, Carter Romanek, November 2, 2023, included in **Appendix A** of this IS/MND.

²³ US Geological Survey, Topographic Maps, Los Angeles, 2022: <https://apps.nationalmap.gov/viewer/>

Walnut Woodland and Southern Sycamore Alder Riparian Woodland.²⁴ No oak woodlands or unique native trees are present on the Project Site. Therefore, no impact would occur.

- f) **Conflict with any local policies or ordinances protecting biological resources, including Wildflower Reserve Areas (L.A. County Code, Title 12, Ch. 12.36), the Los Angeles County Oak Tree Ordinance (L.A. County Code, Title 22, Ch. 22.174), the Significant Ecological Areas (SEAs) (L.A. County Code, Title 22, Ch. 102), Specific Plans (L.A. County Code, Title 22, Ch. 22.46), Community Standards Districts (L.A. County Code, Title 22, Ch. 22.300 et seq.), and/or Coastal Resource Areas (L.A. County General Plan, Figure 9.3)?**

No Impact. Chapter 22.174 of the County’s Code regulates oak tree permits. As discussed in the County Code, the intent of an Oak Tree Permit is to maintain and enhance the general health, safety, and welfare of oak trees, which assist in counteracting air pollution, minimizing soil erosion, and other related environmental damage. The Oak Tree Permit is also intended to preserve and enhance property by conserving and adding to the distinctive and unique aesthetic character of many areas of the County in which oak trees are indigenous. The stated objective of the Oak Tree Permit is to preserve and maintain healthy oak trees in the development process.

There is ornamental vegetation and one tree (Howea palm) on the Project Site. There are two street trees (Ficus Microcarpa Nitida and Cupaniopsis Anacardioides) on Gage Avenue.²⁵ No protected oak trees are on the Site or within 50 feet of the property boundaries. Therefore, the Project would not impact the County’s oak tree ordinance.

Overall, the Project would include the removal of ornamental trees and shrubs within the Project Site. However, none of the existing trees and shrubs on site have been determined to be significant biological resources. Furthermore, the Project Site is not located in a Wildflower Reserve Area, Significant Ecological Area, Specific Plan, Community Standards District, or Coastal Resource Area.²⁶ Implementation of the Project would not conflict with any local policies or ordinances protecting biological resources (e.g., a tree preservation policy or ordinance). Therefore, no impacts would occur.

²⁴ California Department of Fish and Wildlife, BIOS Map: <https://wildlife.ca.gov/Data/CNDDB/Maps-and-Data#43018410-cnddb-quickview-tool>

²⁵ Landscape Plan, Carter Romanek, November 2, 2023, included in **Appendix A** of this IS/MND.

²⁶ Los Angeles County General Plan, Figure 9.3, Significant Ecological Areas and Coastal Resource Areas Policy Map: https://planning.lacounty.gov/assets/upl/project/gp_2035_2019-FIG_9-3_significant_ecological_areas.pdf

- g) Conflict with the provisions of an adopted Habitat Conservation Plan, Natural Community Conservation Plan, or other approved state, regional, or local habitat conservation plan?

No Impact. The Project Site and immediately surrounding areas are not located within a Habitat Conservation Plan, Natural Community Conservation Plan, or other habitat conservation plan.²⁷ As such, implementation of the Project would have no potential to conflict with a conservation plan. Therefore, the Project would not conflict with any conservation plan, no impact would occur.

Cumulative Impacts

Any nearby related projects would be located in highly urban areas and likely do not contain significant biological resources, such as special status species, riparian habitat, sensitive natural communities, and wetlands, and are not part of a wildlife corridor or SEA or subject to a Habitat Conservation Plan, a Natural Community Conservation Plan, or other such plan. Because the Project would not result in any impacts related to biological resources, the Project does not have the potential to contribute to any cumulative biological resources impacts. Therefore, cumulative impacts related to biological resources would be less than significant.

²⁷ Los Angeles County General Plan, Figure 9.3, Significant Ecological Areas and Coastal Resource Areas Policy Map: https://planning.lacounty.gov/assets/upl/project/gp_2035_2019-FIG_9-3_significant_ecological_areas.pdf

4.5 CULTURAL RESOURCES

This section is based on the following items, which are included as **Appendix C** to this MND:

- C-1 Archaeology Response, South Central Coastal Information Center, November 15, 2023
- C-2 Paleontological Response, Natural History Museum, October 1, 2023
- C-3 Sacred Lands File Search, Native American Heritage Commission, November 15, 2023

	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
Would the project:				
a) Cause a substantial adverse change in the significance of a historical resource pursuant to § 15064.5?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>

No Significant. According to the State CEQA Guidelines, a historical resource is defined as something that meets one or more of the following criteria:

- 1) Listed in, or determined eligible for listing in, the California Register of Historical Resources (CRHR);
- 2) Listed in a local register of historical resources as defined in Public Resources Code (PRC) Section 5020.1(k);
- 3) Identified as significant in a historical resources survey meeting the requirements of PRC Section 5024.1(g); or
- 4) Determined to be a historical resource by the project’s Lead Agency.

PRC Section 5024.1 directs evaluation of historical resources to determine their eligibility for listing on the CRHR. The criteria for listing resources on the CRHR were expressly developed to be in accordance with previously established criteria developed for listing on the National Register of Historic Places (NRHP), enumerated above, and require similar protection to what National Historic Preservation Act (NHPA) Section 106 mandates for historic properties. According to PRC Section 5024.1(c)(1-4), a resource is considered historically significant if it meets at least one of the following criteria: 1) Associated with events that have made a significant contribution to the broad patterns of local or regional history or the cultural heritage of California or the United States; 2) Associated with the lives of persons important to local, California or national history; 3) Embodies the distinctive characteristics of a type, period, region or method of construction or represents the work of a master or possesses high artistic values; or 4) Has yielded, or has the potential to yield, information important to the prehistory or history of the local area, California or the nation.

The Project Site is located in an urbanized and developed area of the County and is developed with two church buildings and surface parking. According to the Los Angeles County General Plan, there are no historic resources on the Site.²⁸ According to the Los Angeles Conservancy there are no potential historic resources on the Site.²⁹

The existing structures do not meet the definition of a historical resource and are not determined to be a significant historical resource; therefore, impact is less than significant. No historic resources are known to exist on the Site. Therefore, no impact would occur.

- b) Cause a substantial adverse change in the significance of an archaeological resource pursuant to § 15064.5?

Less Than Significant Impact with Mitigation Incorporated. A significant impact would occur if a known or unknown archaeological resource would be removed, altered, or destroyed as a result of the proposed development. State CEQA Guidelines Section 15064.5 defines significant archaeological resources as resources that meet the criteria for historical resources or resources that constitute unique archaeological resources. A project-related significant impact could occur if a project would significantly affect archaeological resources that fall under either of these categories.

A records search was conducted for the Project area by the South Central Coastal Information Center (SCCIC) at California State University, Fullerton to identify previously recorded prehistoric and historic resources in and around the Project Site (see **Appendix C-1** of this MND). The records search includes a review of all recorded archeological sites within a 0.5-mile radius of the Project Site as well as a review of cultural resource reports on file. The California Points of Historical Interest, California Historical Landmarks, California Register of Historical Resources, National Register of Historic Places, California State Historic Resources Inventory, and City of Los Angeles Historic-Cultural Monuments (HCM) listings were also reviewed for the Project Site. The records search indicates that there are no historic resources located on-site.

The Project Site is located in an urbanized area and has been previously disturbed by past development activities and contains existing buildings and surface parking lot. The Project would require excavation for mechanical uses, utility and foundation work, and grading up to a depth of 5 feet. As such, there is a possibility for unknown archaeological resources to be encountered within the underlying alluvium during grading and excavation activities associated with development of the Project.

If archaeological resources are discovered during excavation, grading, or construction activities, work will cease in the area of the find until a qualified archaeologist has evaluated the find in

²⁸ Los Angeles County General Plan, Figure 9.9, Historic Resource Sites Policy Map: https://planning.lacounty.gov/assets/upl/project/gp_2035_2014-FIG_9-9_historic_resources.pdf

²⁹ Los Angeles Conservancy, Historic Places: <https://www.laconservancy.org/explore-la/historic-places>

accordance with federal, State, and local guidelines, including those set forth in California Public Resources Code Section 21083.2 as described in **Mitigation Measure MM-CUL-1**.

Mitigation Measure

MM-CUL-1 Archaeological Resources Monitor

- If archaeological resources are encountered during construction and the Tribal Monitor (required in MM-TCR-1) has determined that the find is not Native American in origin, all ground disturbance activities within 25 feet of the find shall stop until a qualified archaeologist can evaluate the significance of the find.
- Upon receiving notification of the find, the Applicant shall retain a qualified archaeologist to evaluate the significance of the find. Thereafter, the qualified archaeologist or a trained archeological monitor, under the supervision of the qualified archaeologist, shall monitor all remaining ground disturbance activities along with the Tribal Monitor (required in MM-TCR-1). A qualified archaeologist is defined as an archaeologist who meets the Secretary of the Interior's Professional Qualifications Standards for Archaeology.
- If the find is determined significant, the qualified archaeologist shall recommend appropriate measures, subject to County approval, to mitigate potential impacts to cultural resources to less than significant. Such measures may include, but are not limited to, avoidance, preservation in place and data recovery.
- Where preservation in place is not feasible, treatment may include archaeological data recovery. The qualified archaeologist shall record all recovered archaeological resources on the appropriate California Department of Parks and Recreation Site Forms to be filed with the California Historical Resources Information System–South Central Coastal Information Center (SCCIC). Recovered resources that are determined to be significant shall be curated at an appropriate facility that will ensure their long-term preservation and will allow access to interested scholars. If no institution accepts the archaeological resource(s), they shall be offered to a local school or historical society in the area for educational purposes. Within 90 days after monitoring has ended, the qualified archaeologist shall prepare and submit a final monitoring report documenting all encountered archaeological resources, the significance of the resources, and the treatment of the resources to the County and SCCIC.
- Personnel of the Project will not collect or move any archaeological materials and associated materials. Construction activity may continue unimpeded on other portions of the Project Site. The found deposits would be treated in

accordance with federal, State, and local guidelines, including those set forth in California Public Resources Code Section 21083.2.

Therefore, impacts would be less than significant with mitigation incorporated.

- c) **Directly or indirectly destroy a unique paleontological resource or site or unique geologic feature?**

Less Than Significant Impact. The Project Site and surrounding area are flat and are currently developed. No unique geologic features are located on or near the Project Site.

Paleontological resources are the fossilized remains of organisms that have lived in a region in the geologic past and whose remains are found in the accompanying geologic strata. This type of fossil record represents the primary source of information on ancient life forms, since the majority of species that have existed on earth from this era are extinct. Section 5097.5 of the California Public Resources Code specifies that any unauthorized removal of paleontological remains is a misdemeanor. Furthermore, California Penal Code Section 622.5 includes penalties for damage or removal of paleontological resources.

A Project-specific paleontological records search for the Project Site was conducted by the Natural History Museum of Los Angeles County on October 1, 2023, which is included as **Appendix C-2** of this MND. As outlined therein, there are no previously encountered fossil vertebrate finds located within the Project Site. However, according to the records search, vertebrate fossil localities have been discovered nearby from the same sedimentary deposits that occur on the Project Site either at the surface or at depth.

The Project Site is located in an urbanized area and has been previously disturbed by past development activities and contains existing buildings and surface parking lot. The Project would require excavation for mechanical uses, utility and foundation work, and grading. As such, there is a possibility for unknown paleontological resources to be encountered within the underlying alluvium during grading and excavation activities associated with development of the Project.

Prior to Project construction, the prime contractor and any subcontractor(s) shall be advised of the legal and/or regulatory implications of knowingly destroying paleontological or unique geologic resources or sites from the Project Site.

In addition, if paleontological resources or sites, or unique geologic features are exposed during Project construction, work within 50 feet of the find shall stop until a qualified paleontologist, can identify and evaluate the significance of the discovery and develop recommendations for treatment. Construction activities could continue in other areas of the Project Site. Recommendations could include a preparation of a Treatment Plan, which could require recordation, collection, and analysis of the discovery; preparation of a technical report; and curation of the collection and supporting documentation in an appropriate depository. Any

paleontological resources or sites, or unique geologic features shall be treated in accordance with state law. Therefore, impacts would be less than significant.

d) Disturb any human remains, including those interred outside of dedicated cemeteries?

Less Than Significant Impact. The Project Site does not contain a cemetery, and no known formal cemeteries are located within the immediate vicinity of the Project Site.

A Project-specific Sacred Lands File Search (SLF) for the Project Site was conducted by the Native American Heritage Commission on November 15, 2023, which is included as **Appendix C-3** of this MND. The result of SLF check was negative.

The Project Site is located in an urbanized area and has been previously disturbed by past development activities and contains existing buildings and surface parking lot.

Nevertheless, should human remains be unearthed during grading and excavation activities associated with project development, the construction contractor would be required by California law to comply with California Health and Safety Code Section 7050.5 and Public Resources Code Section 5097.98. According to Section 7050.5(b) and (c), if human remains are discovered, the County Coroner must be contacted and if the Coroner recognizes the human remains to be those of a Native American or has reason to believe that they are those of a Native American, the Coroner is required to contact the Native American Heritage Commission (NAHC) by telephone within 24 hours.

Pursuant to California Public Resources Code Section 5097.98, whenever the NAHC receives notification of a discovery of Native American human remains from a county coroner, the NAHC is required to immediately notify those persons it believes to be most likely descended from the deceased Native American. The descendants may, with the permission of the owner of the land, or his or her authorized representative, inspect the site of discovery of the Native American human remains and may recommend to the owner or the person responsible for the excavation work means for treatment or disposition, with appropriate dignity, of the human remains and any associated grave goods. The descendants shall complete their inspection and make recommendations or preferences for treatment within 48 hours of being granted access to the site. According to Public Resources Code Section 5097.98(k), the NAHC is authorized to mediate disputes arising between landowners and known descendants relating to the treatment and disposition of Native American human burials, skeletal remains, and items associated with Native American burials. There is no record of human remains on the project site.

In the event that human remains are encountered on the project site, the project applicant would be required to halt all development activities and comply with California Health and Safety Code Section 7050.5 and Public Resources Code Section 5097.98 and contact the Los Angeles County Coroner. If it is determined that the human remains are of Native American descent, the Native American Heritage Commission should be contacted, who will in turn contact the likely descendants. They will be informed of the encounter and in consultation with the property owner,

a decision will be made on how to proceed. Only after this decision and all necessary actions occur can development activities recommence.

Through mandatory compliance with California Health and Safety Code Section 7050.5 and Public Resources Code Section 5097.98, any potential impacts to disturbing human remains, including remains of Native American ancestry, would be less than significant.

Cumulative Impacts

It is possible that some of the related projects could result in significant impacts on historical resources. However, as discussed above, the Project would not result in impacts to any significant historical resource. Thus, the Project would not have the potential to contribute toward any significant cumulative impacts related to historical resources. Impacts related to archaeological resources, paleontological resources, and human remains are site-specific and are assessed on a site-by-site basis. All development in the County (including the Project and any related project) that involves ground-disturbing activities is required to comply with existing state regulations related to discovery of resources and human remains. For these reasons, cumulative impacts related to cultural resources would be less than significant.

4.6 ENERGY

	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
Would the project:				
a) Result in potentially significant environmental impact due to wasteful, inefficient, or unnecessary consumption of energy resources, during project construction or operation?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>

Less Than Significant.

Construction

The Project would have energy impacts related to short-term construction impacts, but these impacts would be relatively minor in nature due to the limited construction period, only 12 months.

Construction activities, including the construction of the new buildings, typically do not involve the consumption of natural gas. Accordingly, natural gas would not be supplied to support Project construction activities; thus, there would be no demand generated by construction.

Electricity would be used during construction to provide temporary power for lighting electronic equipment inside temporary construction trailers and within the proposed structure would be consumed during Project construction activities. This electricity would be supplied to the Project Site by the Southern California Edison (SCE) and would be obtained from the existing electrical lines that connect to the Project Site overhead and underground along Gage Avenue.

Electricity consumed during Project construction would be temporary and would cease upon the completion of construction, as well as vary, depending on site-specific operations and the amount of construction occurring at any given time. Overall, construction activities associated with the Project would require limited electricity supply that would not have an adverse impact on available electricity supplies. Therefore, electricity impacts during construction would be less than significant.

Construction equipment fuels, primarily gasoline and diesel, would be provided by local or regional suppliers and vendors. Project-related vehicles would require a negligible fraction of the total state’s transportation fuel consumption. Based on EMFAC data compiled by CARB, the statewide average fuel economy for all vehicle types (automobiles, trucks, and motorcycles) in 2019 was 23.68 miles per gallon (mpg) for gasoline and 9.43 mpg for diesel.³⁰ In 2018, California

³⁰ CARB, <https://arb.ca.gov/emfac/emissions-inventory>.

consumed a total of 3.4 billion barrels of gasoline for transportation, which is equivalent to a total annual consumption of 143 billion gallons by the transportation sector.³¹

Further, while construction activities would consume petroleum-based fuels, consumption of such resources would be temporary and cease upon the completion of construction. Therefore, construction-related impacts to petroleum fuel consumption would be less than significant.

Energy Conservation

The Project would utilize construction contractors who demonstrate compliance with applicable CARB regulations governing the accelerated retrofitting, repowering, or replacement of heavy-duty diesel on- and off-road equipment. CARB has adopted an Airborne Toxic Control Measure to limit heavy-duty diesel motor vehicle idling in order to reduce public exposure to diesel particulate matter and other Toxic Air Contaminants. This measure prohibits diesel-fueled commercial vehicles greater than 10,000 pounds from idling for more than five minutes at any given time. CARB has also approved the Truck and Bus regulation (CARB Rules Division 3, Chapter 1, Section 2025, subsection (h)) to reduce NO_x, PM₁₀, and PM_{2.5} emissions from existing diesel vehicles operating in California; this regulation will be phased in with full implementation by 2023.³²

In addition to limiting exhaust from idling trucks, CARB promulgated emission standards for off-road diesel construction equipment of greater than 25 horsepower. The regulation aims to reduce emissions by requiring the installation of diesel soot filters and encouraging the retirement, replacement, or repower of older, dirtier engines with newer emission-controlled models. Implementation began January 1, 2014, and the compliance schedule requires that best available control technology turnovers or retrofits be fully implemented by 2023 for large and medium equipment fleets and by 2028 for small fleets.

Compliance with the above anti-idling and emissions regulations would result in efficient use of construction-related energy and the minimization or elimination of wasteful and unnecessary consumption of energy. Idling restrictions and the use of newer engines and equipment would result in less fuel combustion and energy consumption, as would use of haul trucks with larger capacities.

Operation

Electricity Demand

As shown in **Table 4.6-1**, the Project estimates a net increase of approximately 10,200 kWh/year of electricity would be used per year at the Project Site (refer to **Table VI-1**). This is due to the greatly reduced electricity usage rates assumed for the existing church uses as compared to

³¹ EPA, State Energy Data System, Table F-3: http://www.eia.gov/state/seds/sep_fuel/html/pdf/fuel_mg.pdf, November 2022. One barrel of oil has 42 gallons of oil.

³² California Air Resources Board, Final Regulation Order, Amendments to the Regulation to Reduce Emissions of Diesel Particulate Matter, Oxides of Nitrogen and Other Criteria Pollutants from In-Use On-Road Diesel-Fueled Vehicles, <http://www.arb.ca.gov/msprog/onrdiesel/documents/tbfinalreg.pdf>.

school uses.³³ Electrical conduits, wiring, and associated infrastructure would be conveyed to the Project Site from existing SCE lines adjacent to the Site.

The Project would not require the acquisition of additional electricity supplies beyond those that exist or anticipated by the SCE and what exists currently at the Project Site for the existing uses. The Project would be in compliance with Title 24 of the CCR (CalGreen) requiring building energy efficiency standards and would also be in compliance with the County's Building Code. Electrical service would be provided in accordance with the SCE Electrical Service Requirements.³⁴ For the reasons discussed here, the Project's operational impacts related to electricity would be less than significant.

**Table 4.6-1
Estimated Project Electricity Demand**

Land Use	Total (kw-h/yr) ¹
Existing Uses (to be removed)	
Church	(242,715)
Proposed Uses	
School	252,915
Net Total	10,200
du = dwelling unit sf =square feet kw-h = kilowatt-hour yr = year	
¹ Calculated via CalEEMod. Refer to Appendix B to this MND.	
Note: SCE does not provide or comment on generation rates to provide an estimate of demand.	

Natural Gas Demand

As shown in **Table 4.6-2**, the Project would consume a net decrease of approximately 406,709 kBtu per year or 465,068 cubic feet of natural gas per year.³⁵ The decrease is due to the greatly reduced natural gas usage rates assumed for existing church uses as compared to school uses.³⁶ Natural gas is provided to the Project Site by Southern California Gas Company (SoCalGas). Natural gas distribution lines in the vicinity of the Project Site.

**Table 4.6-2
Estimated Project Natural Gas Demand**

Land Use	Total (kBtu/yr) ¹
Existing Uses (to be removed)	
Church	(1,082,975)
Proposed Uses	
School	806,152
Net Total	-276,823

³³ CalEEMod, User Guide, Appendix D Default Data Tables, Table 8.1 (Energy Use by Climate Zone and Land Use Type).

³⁴ SCE, Electrical Service Requirements: <https://www.sce.com/regulatory/distribution-manuals/electrical-service-requirements>.

³⁵ One kBtu = 0.98 cubic foot.

³⁶ CalEEMod, User Guide, Appendix D Default Data Tables, Table 8.1 (Energy Use by Climate Zone and Land Use Type).

**Table 4.6-2
Estimated Project Natural Gas Demand**

Land Use	Total (kBTU/yr) ¹
du = dwelling unit sf =square feet kBTU = 1,000 British Thermal Units yr = year ¹ Calculated via CalEEMod. Refer to Appendix B to this MND. Note: SCG does not provide or comment on generation rates to provide an estimate of demand.	

Natural gas service is provided in accordance with the SoCalGas’s policies and extension rules on file with the California Public Utilities Commission (CPUC) at the time contractual agreements are made. The availability of natural gas is based on current conditions of gas supply and regulatory policies. As a public utility, SoCalGas is under the jurisdiction of the CPUC but can also be affected by actions of federal regulatory agencies. Should these agencies take any action that affects gas supply or the conditions under which service is available, gas service would be provided in accordance with those revised conditions.

Based on the 2022 California Gas Report, the California Energy and Electric Utilities estimates natural gas consumption within SoCalGas’s planning area will be approximately 2,735 million cf per day in 2025 (the Project’s buildout year).³⁷ The Project would account for a fraction of a percent of the forecasted 2025 consumption in SoCalGas’s planning area. In addition, the Project would incorporate a variety of energy conservation measures as required under the County’s Green Building Code to reduce energy usage.

The Project would be responsible for paying connection costs to connect its on-site service meters to existing infrastructure. SoCalGas undertakes expansion and/or modification of the natural gas infrastructure to serve future growth within its service area as part of the normal process of providing service. There would be no disruption of service to other consumers during the installation of these improvements. The Project would not result in the construction of natural gas facilities (i.e., distribution lines) that would cause significant environmental impacts.

Project operation would result in the irreversible consumption use of non-renewable natural gas and would thus limit the availability of this resource. However, the continued use of natural gas would be on a relatively small scale and consistent with regional and local growth expectations for the area. The Project would be in compliance with the County’s Building Code, which requires building energy efficiency measures. Therefore, the Project’s operational impacts related to natural gas supply would be less than significant.

Transportation Energy Demand

The Project Site’s location takes advantage of existing transportation alternatives in the vicinity that could reduce energy (gasoline, electric, or natural gas, depending on the mode of travel) consumption for transportation needs.

³⁷ 2022 California Gas Report, Table 28: https://www.socalgas.com/sites/default/files/Joint_Utility_Biennial_Comprehensive_California_Gas_Report_2022.pdf

Bus routes are within reasonable walking distance (less than one-half mile) of the Project Site, including Metro bus lines 18, 665, and LA County’s El Sol shuttle.

As such, the Project Site would provide access for students, employees, and visitors of the Project Site. These transit services, in addition to long-term bicycle parking spaces and short-term bicycle parking spaces, would provide alternatives to driving individual vehicles both to the Project Site from the surrounding areas as well as for employees and patrons at the Project Site to travel to surrounding areas. The change in land use diversity and mix of uses on the Project Site would reduce vehicle trips and VMT by encouraging walking, bicycling, and other non-automotive forms of transportation, which would result in corresponding reductions in energy demand.

The National Highway Traffic Safety Administration (NHTSA) and CARB have implemented several policies, rules, and regulations, such as Corporate Average Fuel Economy (CAFE) Standards and the Advanced Clean Cars Program, to improve vehicle efficiency, increase the use of alternative fuels, and decrease the reliance on fossil fuels. It is anticipated that the future Project-related and related projects’ vehicle trips are expected to comply with CAFE standards and CARB’s Advanced Clean Cars Program, which would ultimately reduce non-renewable transportation fuel consumption.

CalEEMod estimated the Project would generate 2,038 vehicle miles traveled per day. Assuming 23.68 mpg, this would demand 86 gallons per day of gasoline. Project-related vehicles would require a negligible fraction of the total state’s transportation fuel consumption. Alternative-fueled, electric, and hybrid vehicles, to the extent these types of vehicles would be utilized by visitors to the Project Site would reduce the Project’s consumption of gasoline and diesel. With compliance with regulatory measures, the Project operations would not result in wasteful, inefficient, and unnecessary consumption of energy.

Criterion 2: *The effects of the project on local and regional energy supplies and on requirements for additional capacity.*

Electricity

As shown in **Table 4.6-1**, the Project would consume a net decrease of approximately 48,747 kWh/year of electricity. Since the Project is located in an area already served by existing electricity infrastructure, the Project would not require extensive infrastructure improvement to serve the Project Site. It is not anticipated that any new lines or infrastructure facilities would be constructed or expanded as a result of the Project. However, the Project would require Project-specific infrastructure improvements to connect to the existing infrastructure serving the Project Site area. As future projected electricity supplies from SCE are adequate to serve the Project, impacts on local and regional electricity supplies would be less than significant.

Natural Gas

As shown in **Table 4.6-2**, the Project would consume a net decrease of approximately 474,558 kBtu per year or 465,068 cubic feet of natural gas per year. Since the Project is located in an area already served by existing natural gas infrastructure, the Project would not require extensive

infrastructure improvement to serve the Project Site. It is not anticipated that any new natural gas distribution pipelines or infrastructure facilities would be constructed or expanded as a result of the Project. However, the Project would require Project-specific infrastructure improvements to connect to the existing infrastructure serving the Project Site area. As future projected natural gas supplies from SoCalGas are adequate to serve the Project, impacts on local and regional natural gas supplies would be less than significant.

Criterion 3: *The effects of the project on peak and base period demands for electricity and other forms of energy.*

As discussed above, the Project's net reduction in demand for electricity and natural gas supply would be well within the available regional supplies of SCE and SoCalGas, respectively. The Project's energy demand and consumption would be relatively negligible compared to available supplies. The electricity and natural gas supplies would be sufficient to serve the Project's peak energy consumptions, and impacts would be less than significant.

Criterion 4: *The degree to which the project complies with existing energy standards.*

The Project would be required to comply with Title 24 requirements, CalGreen requirements, and the County's Building Code. Overall, the Project would be required to comply with the mandatory provisions of the Los Angeles County Title 31 Green Building Standards Code and all other applicable requirements to achieve the objective of improving public health, safety, and general welfare by enhancing the design and construction of buildings through the use of building concepts having a reduced negative impact, or positive environmental impact, and encouraging sustainable construction practices. Title 31 which is based on the California Green Building Standards Code (CALGreen), for residential construction. Title 31 addresses green building, energy efficiency, water efficiency and conservation, low-impact development, and landscape design.

The Project would be reviewed by the County Department of Public Works to ensure that the building construction techniques, building materials, and landscape design are consistent with the principles of sustainability and green design in the Los Angeles County Green Buildings Standard Code. Thus, the Project would comply with energy standards, and impacts would be less than significant.

Criterion 5: *The effects of the project on energy resources.*

Electricity

In accordance with Senate Bill 350 (SB 350) (Clean Energy and Pollution Reduction Act), which establishes clean energy, clean air, and GHG emissions reduction goals, SCE is required to procure eligible renewable energy resources of 50 percent by 2030. It is expected that solar and wind will provide most of the new renewable electric generation in the years ahead. The Project would adhere to the required building code standards, such as Title 24 standards and the County's Green Building Code, to ensure energy efficiency within the Project building. Compliance with

energy standards is expected to result in more efficient use of electricity in future years. As such, the Project would not impact electricity resources, and impacts would be less than significant.

Natural Gas

Sources of Southern California's natural gas are primarily obtained from western United States and Canada with a small portion from in-state. As stated in the 2022 California Gas Report, SoCalGas's storage fields attain a combined theoretical storage working inventory capacity of 137.1 billion cf; of that, 112.5 billion cf is allocated to residential, small industrial, and commercial customers. Compliance with energy standards are expected to result in more efficient use of natural gas in future years. Therefore, the Project would not impact natural gas resources, and impacts would be less than significant.

Criterion 6: *The project's projected transportation energy use requirements and its overall use of efficient transportation alternatives.*

Approximately 523,779 thousand barrels of crude oil (were supplied to California refineries in 2021.³⁸ Assuming the same supply of crude oil is provided to California, the Project's estimated consumption would be a small fraction of one percent of available fuel reserves.

Additionally, the Project Site's location takes advantage of existing transportation alternatives in the vicinity that could reduce energy (gasoline, electric, or natural gas, depending on the mode of travel) consumption for transportation needs.

Bus routes are within reasonable walking distance (less than one-half mile) of the Project Site, including Metro bus lines 18, 665 and LA County's El Sol shuttle.

As such, the Project Site would provide access for students, employees, and visitors of the Project Site. These transit services, in addition to long-term bicycle parking spaces and short-term bicycle parking spaces, would provide alternatives to driving individual vehicles both to the Project Site from the surrounding areas and the Project Site to travel to surrounding areas. The changes in land use diversity and mix of uses on the Project Site would reduce vehicle trips and VMT by encouraging walking, bicycling, and other non-automotive forms of transportation, which would result in corresponding reductions in energy demand. As such, the Project's transportation energy consumption would have a negligible impact to California's oil supplies, and impacts on energy resources would be less than significant.

Conclusion

As discussed above, the Project would not result in potentially significant environmental impacts due to wasteful, inefficient, or unnecessary consumption of energy resources during project construction or operation. Additionally, the Project would not conflict with or obstruct a state or

³⁸ California Energy Commission, Oil Supply Sources to California Refineries, <https://www.energy.ca.gov/data-reports/energy-almanac/californias-petroleum-market/oil-supply-sources-california-refineries>, accessed November 10, 2022.

local plan for renewable energy efficiency. Therefore, impacts related to energy would be less than significant.

b) Conflict with or obstruct a state or local plan for renewable energy or energy efficiency?

No Impact. Energy conservation policies and plans relevant to the Project include the California Title 24 energy standards, the CALGreen building code, and the County’s Green Building Code. As these conservation policies are mandatory, the Project would not conflict with applicable plans for renewable energy or energy efficiency.

The Green Building Standards Code requirements which must be complied with include Green Building, Low-Impact Development, and Drought Tolerant Landscaping.

The Green Building Standards Code, Title 31, states that the purpose of the County’s Green Building Standards Code is to improve public health, safety, and general welfare by enhancing the design and construction of buildings through the use of building concepts having a reduced negative impact, or positive environmental impact, and encouraging sustainable construction practices.

As such, the Project would be designed to meet all applicable State building energy efficiency standards as well as to meet the County’s energy efficiency standards. Development of the Site would not result in obstruction of opportunities for use of renewable energy due to the addition of PV panels on each home.

For these reasons, the Project would not conflict with or obstruct a state or local plan for renewable energy or energy efficiency. No impact would occur.

Cumulative Impacts

Electricity

The Project, in conjunction with any related projects, could result in a net increased demand for electricity supplies. SCE can meet the future demands of cumulative growth within its service area with implementation of regulatory and reliability initiatives and strategic initiatives. SCE will continue to pursue and implement energy efficiency programs per SB 350, which has an adopted goal of achieving 50 percent renewable energy sources by 2030. Furthermore, in accordance with current building codes and construction standards, each of the related projects would be required to comply with the energy conservation standards established in Title 24 of the California Administrative Code and the County’s Green Building Code. Compliance will further reduce cumulative energy demands. As such, cumulative development would not result in related to potentially significant environmental impacts due to wasteful, inefficient and unnecessary use of electricity. Therefore, cumulative impacts related to electricity would be less than significant.

Natural Gas

The Project, in conjunction with the related projects, could result in a net increased demand for natural gas supplies. As a public utility provider, SoCalGas continuously analyzes increases in natural gas demands resulting from projected population and employment growth in its service area and it is anticipated that it would be able to meet the needs of future development within the region. Each of the related projects would be reviewed on a case-by-case basis to determine SoCalGas's ability to serve each related project. Additionally, compliance with energy conservation standards pursuant to Title 24 would reduce cumulative demand for natural gas resources. As such, cumulative development would not result in related to potentially significant environmental impacts due to wasteful, inefficient and unnecessary use of natural gas. Therefore, cumulative impacts related to natural gas would be less than significant.

Transportation Energy

The Project, in conjunction with the related projects, could result in a net increased demand for transportation energy. As discussed previously, the NHTSA and CARB have implemented several policies, rules, and regulations to improve vehicle efficiency, increase the use of alternative fuels, and decrease the reliance on fossil fuels. It is anticipated that the future Project-related and related projects' vehicle trips are expected to comply with CAFE standards and CARB's Advanced Clean Cars Program, which would ultimately reduce non-renewable transportation fuel consumption. Also, all of the related projects are located in a transit-rich area of the County and as such, provide opportunities for alternative sources of transportation. Thus, cumulative development would not result in related to potentially significant environmental impacts due to wasteful, inefficient and unnecessary use of transportation energy. Therefore, cumulative impacts related to transportation energy would be less than significant.

4.7 GEOLOGY AND SOILS

This section is based on the following item, which is included as **Appendix D** to this MND:

D Geotechnical Engineering Investigation, Geotechnologies Inc., September 23, 2022

Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
--------------------------------	--	------------------------------	-----------

Would the project:

a) **Directly or indirectly cause substantial adverse effects, including the risk of loss, injury, or death involving:**

- | | | | | |
|---|--------------------------|--------------------------|--------------------------|-------------------------------------|
| i) Rupture of a known earthquake fault, as delineated on the most recent Alquist-Priolo Earthquake Fault Zoning Map issued by the State Geologist for the area or based on other substantial evidence of a known fault? Refer to Division of Mines and Geology Special Publication 42. | <input type="checkbox"/> | <input type="checkbox"/> | <input type="checkbox"/> | <input checked="" type="checkbox"/> |
|---|--------------------------|--------------------------|--------------------------|-------------------------------------|

No Impact. The Project Site is located in the seismically active region of Southern California. Numerous active and potentially active faults with surface expressions (fault traces) have been mapped adjacent to, within, and beneath Los Angeles. California faults are classified as active, potentially active or inactive. Faults from past geologic periods of mountain building, but do not display any evidence of recent offset are considered “inactive” or “potentially active.” Faults that have historically produced earthquakes or show evidence of movement within the Holocene (past 11,000 years) are considered “active faults.” Active faults that are capable of causing large earthquakes may also cause ground rupture. The Alquist-Priolo Act of 1971 was enacted to protect structures from hazards associated with fault ground rupture.

The Site is not located within an Alquist-Priolo Earthquake Fault Zone. Based on these considerations, the potential for surface ground rupture at the Project Site is considered low.³⁹ Therefore, no impact would occur.

- | | | | | |
|---|--------------------------|--------------------------|-------------------------------------|--------------------------|
| ii) Strong seismic ground shaking? | <input type="checkbox"/> | <input type="checkbox"/> | <input checked="" type="checkbox"/> | <input type="checkbox"/> |
|---|--------------------------|--------------------------|-------------------------------------|--------------------------|

Less Than Significant Impact. The principal seismic hazard to the Project Site and Project is strong ground shaking from earthquakes produced by local faults. Modern, well-constructed buildings are designed to resist ground shaking through the use of shear panels, moment-resisting frames and reinforcement. Additional precautions may be taken to protect personal

³⁹ Geotechnical Engineering Investigation, Geotechnologies Inc., September 23, 2022, page 6.

property and reduce the chance of injury, including strapping water heaters and securing furniture and appliances. It is likely that the Project Site will be shaken by future earthquakes produced in southern California.

The California State Legislature enacted the Seismic Hazards Mapping Act of 1990, which was prompted by damaging earthquakes in California, and was intended to protect public safety from the effects of strong ground shaking, liquefaction, landslides, and other earthquake-related hazards. The Seismic Hazards Mapping Act requires that the State Geologist delineate various “seismic hazards zones.” The maps depicting the zones are released by the California Geological Survey. The Seismic Hazards Mapping Act does not require mitigation to a level of no ground failure and/or no structural damage.

As with most locations in southern California, there is a considerable potential for strong seismic shaking at the Project Site. The Project structures would be designed in accordance with seismic parameters contained in the California Building Code (CBC). The design and construction of the Project is required to comply with the most current codes regulating seismic risk, including County Code Title 26, which regulates all building and construction projects within the County and implements a minimum standard for or building design and construction that includes specific requirements for seismic safety, excavation, foundations, retaining walls and site demolition. Structures built in the County are required to be built in compliance with the CBC, which incorporates the International Building Code (IBC). Compliance with current California Building Code requirements will minimize the potential to expose people or structures to substantial risk or loss or injury.

The Site is not within an earthquake fault zone or seismic hazards zone.⁴⁰ The Project will comply with site-specific ground motion values and seismic design criteria provided in the Geotechnical Engineering Investigation. Therefore, impacts would be less than significant.

iii) Seismic-related ground failure, including liquefaction and lateral spreading?

No Impact. Liquefaction is a phenomenon in which saturated silty to cohesion-less soils below the groundwater table are subject to temporary loss of strength due to buildup of excess pore pressure during cyclic loading conditions such as those induced by an earthquake. Liquefaction-related effects include loss of bearing strength, amplified ground oscillations, lateral spreading, and flow failures. Regulations include design criteria provided in the Geotechnical Site Investigation including the Uniform Building Code Section 1804.5 (Liquefaction Potential and Soil Strength Loss).

The Site is not within a liquefaction zone.⁴¹ The Seismic Hazards Maps of the State of California does not classify the site as part of the potentially “Liquefiable” area. This determination is based on groundwater depth records, soil type and distance to a fault capable of producing a substantial

⁴⁰ CA Department of Conservation: <https://maps.conservation.ca.gov/cgs/EQZApp/app/>, accessed November 10, 2022.

⁴¹ CA Department of Conservation: <https://maps.conservation.ca.gov/cgs/EQZApp/app/>, accessed November 10, 2022.

earthquake. Based on the dense nature of the underlying soils, the lack of groundwater to 50 feet, and the depth to historic highest groundwater level, the potential for liquefaction occurring at the site is considered to be remote.⁴² Therefore, no impact would occur.

iv) Landslides?

No Impact. A project-related significant adverse effect may occur if the project is located in a hillside area with soil conditions that would suggest a high potential for sliding. A landslide area is land identified by the State of California that is located in the general area of sites that possess the potential for earthquake-induced rock falls, slope failure, and debris flow.

The Project Site is not located within a mapped landslide area. No significant slopes are located near the Project Site. The Site is not within a landslide zone.⁴³ The probability of seismically-induced landslides occurring on the site is considered to be low due to the general lack of elevation difference slope geometry across or adjacent to the Site.⁴⁴ Therefore, no impacts would occur.

b) Result in substantial soil erosion or the loss of topsoil?

Less Than Significant Impact. The Project Site is currently completely developed with approximately 98 percent impervious surfaces⁴⁵ (buildings and surface parking paving) and does not contain any topsoil. During the Project’s construction phase, activities such as grading and site preparation could leave soils at the Project Site susceptible to soil erosion. The Project Applicant would be required to comply with SCAQMD Rule 403 – Fugitive Dust to minimize wind and water-borne erosion at the site, as well as prepare and implement a Stormwater Pollution Prevention Plan (SWPPP), in accordance with the National Pollutant Discharge Elimination System (NPDES) General Permit for Discharges of Storm Water Associated with Construction Activity and Land Disturbance Activities.

The site-specific SWPPP would be prepared prior to earthwork activities and would be implemented during Project construction. The SWPPP would include best management practices (BMPs) and erosion control measures to prevent pollution in storm water discharge. Typical BMPs that could be used during construction include good-housekeeping practices (e.g., street sweeping, proper waste disposal, vehicle and equipment maintenance, concrete washout area, materials storage, minimization of hazardous materials, proper handling and storage of hazardous materials, etc.) and erosion/sediment control measures (e.g., silt fences, fiber rolls, gravel bags, storm water inlet protection, and soil stabilization measures, etc.).

⁴² Geotechnical Engineering Investigation, Geotechnologies Inc., September 23, 2022, page 7.

⁴³ CA Department of Conservation: <https://maps.conservation.ca.gov/cgs/EQZApp/app/>, accessed November 10, 2022.

⁴⁴ Geotechnical Engineering Investigation, Geotechnologies Inc., September 23, 2022, page 8.

⁴⁵ Hydrology Report, Trittech Engineering Group, February 8, 2024, included as Appendix G to this MND.

The SWPPP would be subject to review and approval by the County for compliance with the County’s Low Impact Development (LID) Manuel (County Code Section 12.84.440).⁴⁶ Additionally, all Project construction activities would comply with the County’s grading permit regulations, which require the implementation of grading and dust control measures, including a wet weather erosion control plan if construction occurs during rainy season, as well as inspections to ensure that sedimentation and erosion is minimized. Through compliance with these existing regulations, the Project would not result in any significant impacts related to soil erosion during the construction phase.

Additionally, during the Project’s operational phase, most of the Project Site would be developed with 89 percent impervious surfaces⁴⁷ (compared to existing conditions of 98 percent), and all stormwater flows would be directed to storm drainage features including drains on Eastman Avenue and would not come into contact with bare soil surfaces. Therefore, with compliance with applicable regulatory requirements, development of the Project would not cause or exacerbate soil erosion or loss of topsoil and impacts regarding soil erosion or the loss of topsoil would be less than significant.

- c) **Be located on a geologic unit that is unstable, or that would become unstable as a result of the project, and potentially result in on- or off-site landslide, lateral spreading, subsidence, liquefaction, or collapse?**

Less Than Significant Impact. As discussed previously, liquefaction potential at the Project Site is considered low. Seismically-induced settlement or compaction of dry or moist, cohesionless soils can also be a secondary effect of earthquake ground motion. Such settlements are typically most damaging when the settlements are differential in nature across the length of structures. Some seismically-induced settlement of the proposed structures should be expected as a result of strong ground shaking. However, due to the relatively dense and uniform nature of the soils at the Project Site, excessive differential settlements are not anticipated. The Project Site is not located within an area of known ground subsidence. No large-scale extraction of groundwater, gas, oil, or geothermal energy is occurring or planned at the Project Site or in the general Site vicinity.

The Project Applicant would be required by the County, as part of the permitting process, to prepare (or have prepared) a Final Geotechnical Investigation that would address the building standards and recommendations that shall be followed in order to construct the proposed structure in accordance with building standards that apply to building within the types of soils found at the Project Site, including areas prone to geologic or soil instability. Through compliance with the County Building Code and recommendations included in the Final Geotechnical Reports, impacts related to geologic and soil instability would be less than significant.

⁴⁶ Los Angeles County, Low Impact Development: https://pw.lacounty.gov/wmd/dsp_LowImpactDevelopment.cfm

⁴⁷ [Hydrology Report](#), Trittech Engineering Group, February 8, 2024, included as Appendix G to this MND.

- d) **Be located on expansive soil, as defined in Table 18-1-B of the Uniform Building Code (1994), creating substantial direct or indirect risks to life or property?**

Less Than Significant Impact. Expansive soils contain significant amounts of clay particles that swell considerably when wetted and shrink when dried. Foundations constructed on these soils are subject to uplifting forces caused by the swelling. Grading would occur to create building pads that are in compliance with the applicable requirements related to expansive soil of the California Building Code and the County Building Code.

The onsite geologic materials are in the very low to moderate expansion range.⁴⁸ Prior to approval of construction, an engineering level design geotechnical report is required to be prepared and submitted to the County that details the project designs that have been included to address soil conditions pursuant to the CBC requirements, that are included in the County Code Chapter in Title 26. Compliance with the CBC, through design level geotechnical specifications that would be reviewed and approved by the County Engineer, would ensure that potential impacts related to expansive soils would be less than significant.

- e) **Have soils incapable of adequately supporting the use of septic tanks or alternative wastewater disposal systems where sewers are not available for the disposal of waste water?**

No Impact. The Project Site is located within a community served by existing sewage infrastructure. The Project would connect to the County's existing sewer system and would not require the use of septic tanks or alternative wastewater disposal systems. Thus, the Project would not result in any impacts related to soils that are incapable of adequately supporting the use of septic tanks or alternative wastewater disposal systems where sewers are not available for the disposal of wastewater. Therefore, no impact would occur.

- f) **Conflict with the Hillside Management Area Ordinance (L.A. County Code, Title 22, Ch.22.104)?**

No Impact. The Project Site is not located within any Hillside Management Area as specified in Los Angeles County Code, Title 22, Chapter 22.104.⁴⁹ The Project Site is relatively flat. As such,

⁴⁸ [Geotechnical Engineering Investigation](#), Geotechnologies Inc., September 23, 2022, page 10.

⁴⁹ Los Angeles County General Plan, Figure 9.8, Hillside Management Areas and Ridgeline Management Map: https://planning.lacounty.gov/assets/upl/project/gp_2035_2021-FIG_9-8_hillside_management_areas.pdf

the Project would not conflict with the Hillside Management Area Ordinance. Therefore, no impact would occur.

Cumulative Impacts

Geotechnical impacts related to future development involve hazards related to site-specific soil conditions, erosion, and ground-shaking during earthquakes. The impacts on each related site are specific to that site and its users and would not be in common or contribute to (or shared with, in an additive sense) the impacts on other sites. In addition, development on each site is subject to uniform site development and construction standards that are designed to protect public safety. Therefore, Project cumulative geotechnical impacts would be less than significant.

4.8 GREENHOUSE GAS EMISSIONS

This section is based on the following item, which is included as **Appendix E** to this MND:

E Greenhouse Gas Technical Report and Modeling, DKA Planning, September 2023

	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
Would the project:				
a) Generate greenhouse gas (GHG) emissions, either directly or indirectly, that may have a significant impact on the environment?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>

Less Than Significant Impact.

CEQA Guidelines Section 15064.4(a) assist lead agencies in determining the significance of the impacts of GHG emissions, giving them discretion to determine whether to assess impacts quantitatively or qualitatively. It calls for a good-faith effort to describe and calculate emissions. This emissions inventory also demonstrates the reduction in a project’s incremental contribution of GHG emissions that results from regulations and requirements adopted as implementation efforts for these plans for the reduction or mitigation of GHG emissions. As such, it provides further justification that a project is consistent with plans adopted for the purpose of reducing and/or mitigating GHG emissions by a project and over time. The significance of a project’s GHG emissions impacts is not based on the amount of GHG emissions resulting from that project.

The County, SCAQMD, Office of Planning and Research (OPR), California Air Resources Board (CARB), California Air Pollution Control Officers Association (CAPCOA), and other applicable agencies have not adopted a numerical threshold of significance for assessing impacts related to GHG emissions. As a result, the methodology for evaluating a project’s impacts related to GHG emissions focuses on its consistency with statewide, regional, and local plans adopted for the purpose of reducing and/or mitigating GHG emissions.⁵⁰ This evaluation is the sole basis pursuant to CEQA for determining the significance of a project’s GHG-related impacts on the environment.

The analysis also calculates the amount of GHG emissions from the Project using recommended air quality models. The primary purpose of quantifying the Project’s GHG emissions is to satisfy CEQA Guidelines Section 15064.4(a). The estimated emissions inventory is also used to determine if there would be a reduction in the Project’s incremental contribution of GHG emissions as a result of compliance with regulations requirements adopted to implement plans for reducing

⁵⁰ CEQA Guidelines, Section 14 CCR 15064.4.

or mitigating GHG emissions. However, the significance of the Project's GHG emissions is not based on the amount of emissions from the Project.

Project Emissions

In support of the consistency analysis below that describes the Project's compliance with, or exceedance of performance-based standards included in the regulations and policies outlined in the applicable portions of the *Climate Change Scoping Plan*, the 2020-2045 RTP/SCS, the County's General Plan 2035 Air Quality Element, quantitative calculations are provided below.

The Project would generate direct and indirect GHG emissions as a result of different types of emissions sources, including the following:

- Construction: emissions associated with demolition of the existing church and parking lot, grading, and construction-related equipment and vehicular activity;
- Area source: emissions associated with landscape equipment;
- Energy source (building operations): emissions associated with electricity and natural gas use for space heating and cooling, water heating, energy consumption, and lighting;
- Mobile source: emissions associated with vehicles accessing the Project Site;
- Solid Waste: emissions associated with the decomposition of the waste, which generates methane based on the total amount of degradable organic carbon; and
- Water/Wastewater: emissions associated with energy used to pump, convey, deliver, and treat water.
- Refrigerants: These are substances used in equipment for air conditioning and refrigeration. Most refrigerants are HFCs or blends of them, which can have high GWP values.

The Project would generate an incremental contribution to and a cumulative increase in GHG emissions. A specific discussion regarding potential GHG emissions associated with the construction and operational phases of the Project is provided below.

Construction

Project construction is anticipated to be completed in 2025 with occupancy in late 2025 and early 2026. A summary of construction details (e.g., schedule, equipment mix, and vehicular trips) and CalEEMod modeling output files are provided in the Technical Appendix. The GHG emissions associated with construction of the Project were calculated for each year of construction activity.

As shown in **Table 4.8-1**, construction of the Project is estimated to generate a total of 151 MTCO₂e. As recommended by the SCAQMD, the total GHG construction emissions were amortized over the 30-year lifetime of the Project (i.e., total construction GHG emissions were divided by 30 to determine an annual construction emissions estimate that can be added to the

Project's operational emissions) in order to determine the Project's annual GHG emissions inventory.⁵¹ This results in annual Project construction emissions of 5 MTCO₂e. A complete listing of the construction equipment by on-site and off-site activities, duration, and emissions estimation model input assumptions used in this analysis is included within the emissions calculation worksheets that are provided in the Technical Appendix (**Appendix E** to this MND).

**Table 4.8-1
Combined Construction-Related Emissions**

Year	MTCO ₂ e ^a
2024	78
2025	73
Total	151
Amortized Over 30 Years	5

Metric tons of carbon dioxide equivalent = MTCO₂e
a CO₂e was calculated using CalEEMod version 2022.1.1.18. Detailed results are provided in the Technical Appendix.
Source: DKA Planning, 2023.

Operation

Area Source Emissions

Area source emissions were calculated using the CalEEMod emissions inventory model, which includes landscape maintenance equipment, use of consumer products, and other everyday sources. As shown in **Table 4.8-2**, the Project would result in one MTCO₂e per year from area sources.

**Table 4.8-2
Annual GHG Emissions Summary (Buildout)^a**

Year	MTCO ₂ e ^a
Area ^b	1
Energy ^c (electricity and natural gas)	83
Mobile	205
Solid Waste ^d	30
Water/Wastewater ^e	3
Refrigerants	<1
Construction	5
Total Emissions	327

Metric tons of carbon dioxide equivalent = MTCO₂e
a CO₂e was calculated using CalEEMod and the results are provided in the Technical Appendix.
b Area source emissions are from landscape equipment and other operational equipment only; hearths omitted.
c Energy source emissions are based on CalEEMod default electricity and natural gas usage rates.
d Solid waste emissions are calculated based on CalEEMod default solid waste generation rates.
e Water/Wastewater emissions are calculated based on CalEEMod default water consumption rates.

⁵¹ SCAQMD Governing Board Agenda Item 31, December 5, 2008.

Source: DKA Planning, 2023.

Electricity and Natural Gas Generation Emissions

GHG emissions are emitted as a result of activities in buildings when electricity and natural gas are used as energy sources. Combustion of any type of fuel emits CO₂ and other GHG emissions directly into the atmosphere; when this occurs in a building, it is a direct emission source associated with that building. GHG emissions are also emitted during the generation of electricity from fossil fuels. When electricity is used in a building, the electricity generation typically takes place off-site at the power plant; electricity use in a building generally causes emissions in an indirect manner.

Electricity and natural gas emissions were calculated for the Project using the CalEEMod emissions inventory model, which multiplies an estimate of the energy usage by applicable emissions factors chosen by the utility company. GHG emissions from electricity use are directly dependent on the electricity utility provider. In this case, GHG emissions intensity factors for SCE were selected in CalEEMod. The carbon intensity (pounds per megawatt an hour (lbs/MWh)) for electricity generation was calculated for the Project buildout year based on SCE projections. A straight-line interpolation was performed to estimate the SCE carbon intensity factor for the Project buildout year. SCE's carbon intensity projections also take into account SB 350 RPS requirements for renewable energy.

This approach is conservative, given the 2018 chaptering of SB 100 (De Leon), which requires electricity providers to provide renewable energy for at least 60 percent of their delivered power by 2030 and 100 percent use of renewable energy and zero-carbon resources by 2045. SB 100 also increases existing renewable energy targets, called Renewables Portfolio Standard (RPS), to 44 percent by 2024 and 52 percent by 2027.

The 2019 Title 24 standards contain more substantial energy efficiency requirements for new construction, emphasizing the importance of building design and construction flexibility to establish performance standards that substantially reduce energy consumption for water heating, lighting, and insulation for attics and walls.

Energy use in buildings is divided into energy consumed by the built environment and energy consumed by uses that are independent of the construction of the building, such as in plug-in appliances. CalEEMod calculates energy use from systems covered by Title 24 (e.g., HVAC system, water heating system, and lighting system); energy use from lighting; and energy use from office equipment, appliances, plug-ins, and other sources not covered by Title 24 or lighting.

CalEEMod electricity and natural gas usage rates are based on the CEC-sponsored California Commercial End-Use Survey (CEUS) and the California Residential Appliance Saturation Survey

(RASS) studies.⁵² The data are specific for climate zones; therefore, Zone 11 was selected for the Project Site based on the zip code tool.

As shown in **Table 4.8-2**, Project GHG emissions from electricity and natural gas usage would result in a total of 83 MTCO_{2e} per year.

Mobile Source Emissions

Mobile-source emissions were calculated using the SCAQMD-recommended CalEEMod emissions inventory model. CalEEMod calculates the emissions associated with on-road mobile sources associated with students, residents, employees, visitors, and delivery vehicles visiting the Project Site based on the number of daily trips generated and VMT.

Mobile source operational GHG emissions were calculated using CalEEMod and are based on the Project trip-generation estimates. To calculate daily trips, the number of students for both schools were multiplied by the applicable trip-generation rates based on the Institute of Transportation Engineers (ITE)'s *Trip Generation, 11th Edition*.

The Project represents an infill development within an urbanized area that would concentrate new schools within an HQTAs.⁵³ The Project is geared toward local families and children and would also incorporate characteristics that would reduce trips and VMT as compared to standard ITE trip generation rates. The Project characteristics listed below are consistent with the CAPCOA guidance document, *Quantifying Greenhouse Gas Mitigation Measures*, which provides emission reduction values for transportation related design techniques.⁵⁴ Techniques applicable to the Project include the following (a brief description of the Project's relevance to the measure is also provided):

- **CAPCOA Measure LUT-1 – Increase Density:** Increased density, measured in terms of persons, jobs, or dwelling units per unit area, reduces emissions associated with transportation as it reduces the distance students travel for school and provides a foundation for the implementation of other strategies, such as enhanced transit services.
- **CAPCOA Measure LUT-3 – Increase Diversity of Urban and Suburban Developments (Mixed-Use):** The Project would introduce new uses on the Project Site, including new schools that support local residents. The changes in land uses on the Project Site would reduce vehicle trips and VMT by encouraging students and families to walk and use non-

⁵² California Energy Commission, Commercial End-Use Survey, March 2006, and California Residential Appliance Saturation Survey, October 2010.

⁵³ The Project Site is also located in Transit Priority Area as defined by Public Resources Code Section 20199. Public Resources Code Section 21099 defines a "transit priority area" as an area within 0.5 miles of a major transit stop that is "existing or planned, if the planned stop is scheduled to be completed within the planning horizon included in a Transportation Improvement Program adopted pursuant to Section 450.216 or 450.322 of Title 23 of the Code of Federal Regulations." Public Resources Code Section 21064.3 defines "major transit stop" as "a site containing an existing rail transit station, a ferry terminal served by either a bus or rail transit service, or the intersection of two or more major bus routes with a frequency of service interval of 15 minutes or less during the morning and afternoon peak commute periods."

⁵⁴ CAPCOA, *Quantifying Greenhouse Gas Mitigation Measures*, 2010.

automotive forms of transportation (i.e., public transit, biking), which would result in corresponding reductions in transportation-related emissions.

- **CAPCOA Measure LUT-4 – Increase Destination Accessibility:** The Project Site is located in the dense Whittier Boulevard corridor and is accessible by public transportation. Access to multiple destinations would reduce vehicle trips and VMT compared to the statewide average and encourage walking and non-automotive forms of transportation and would result in corresponding reductions in transportation-related emissions as a result of the Project.
- **CAPCOA Measure LUT-5 – Increase Transit Accessibility:** The Project would be located near Metro bus route Line 18. The Project would also provide bicycle parking spaces to encourage children to cycle to school.

CalEEMod calculates VMT based on the type of land use, trip purpose, and trip type percentages for each land use subtype in the project (primary, diverted, and pass-by). As shown in **Table 4.8-2**, the Project GHG emissions from mobile sources would result in a total of 205 MTCO₂e per year. This estimate reflects reductions attributable to the Project's characteristics (e.g., infill project near transit that supports multi-modal transportation options), as described above.

Solid Waste Generation Emissions

Emissions related to solid waste were calculated using the CalEEMod emissions inventory model, which multiplies an estimate of the waste generated by applicable emissions factors provided in Section 2.4 of the USEPA's AP-42, Compilation of Air Pollutant Emission Factors. CalEEMod solid waste generation rates for each applicable land use were selected for this analysis. As shown in **Table 4.8-2**, the Project scenario is expected to result in a total of 30 MTCO₂e per year from solid waste that accounts for a 50-percent recycling/diversion rate.⁵⁵

Water Usage and Wastewater Generation Emissions

GHG emissions are related to the energy used to convey, treat, and distribute water, and treat wastewater. Thus, these emissions are generally indirect emissions from the production of electricity to power these systems. Three processes are necessary to supply potable water; these include (1) supply and conveyance of the water from the source; (2) treatment of the water to potable standards; and (3) distribution of the water to individual users. After use, energy is used as the wastewater is treated and reused as reclaimed water.

Emissions related to water usage and wastewater generation were calculated for the Project using the CalEEMod emissions inventory model, which multiplies an estimate of the water usage by the applicable energy intensity factor to determine the embodied energy necessary to supply potable water.⁵⁶ GHG emissions are then calculated based on the amount of electricity consumed

⁵⁵ AB 341 (2012) increased the Statewide waste diversion goal from 50 to 75 percent from baseline rates established by CalRecycle by 2020 and beyond. Further, SB 1383 (2016) requires jurisdictions to reduce 75 percent of organic waste disposal in landfills by 2030.

⁵⁶ The intensity factor reflects the average pounds of CO₂e per megawatt generated by a utility company.

multiplied by the GHG emissions intensity factors for the utility provider. In this case, embodied energy for Southern California supplied water and GHG emissions intensity factors for SCE were selected in CalEEMod.

SCE's programs includes programs designed to reduce indoor water consumption and wastewater generation by 20 percent. These include the 2019 requirements for installation of the latest ultra-high efficiency plumbing fixtures, the 2016 standards that promote increasing water-resistant turf and incorporating rainfall capture techniques in project designs, aggressive outdoor water consumption programs through its Landscape ordinance, and water recycling programs designed to increase recycled water to 59,000 acre-feet by 2035.

As shown in **Table 4.8-2**, Project GHG emissions from water/wastewater usage would result in a total of 3 MTCO_{2e} per year, which reflects a 20-percent reduction in water/wastewater emissions consistent with building code requirements as compared to the Project without sustainability features related to water conservation.

Refrigerants

Emissions related to cooling structures and refrigeration needs were calculated using the CalEEMod emissions inventory model. As shown in **Table 4.8-2**, the Project scenario is expected to result in less than one MTCO_{2e} per year from use of refrigerants that used HFCs and have high GWP values.

Combined Construction and Operational Emissions

As shown in **Table 4.8-2**, when taking into consideration implementation of project design features, including the requirements set forth in the County's regulations and codes and the full implementation of current state mandates, the GHG emissions for the Project would equal 327 MTCO_{2e} annually (as amortized over 30 years) during construction.

Estimated Reduction of Project Related GHG Emissions Resulting from Consistency with Plans

As noted earlier, one approach to demonstrating a project's consistency with GHG plans is to show how a project will reduce its incremental contribution through a Project Without Reduction Features comparison. The analysis in this section includes potential emissions under a Project Without Reduction Features scenario and from the Project at build-out based on actions and mandates in force in 2024.

As shown in **Table 4.8-3**, the emissions for the Project and its associated CARB 2024 Project Without Reduction Features scenario are estimated to be 327 and 474 MTCO_{2e} per year, respectively, which shows the Project would reduce emissions by 31.0 percent from CARB's 2024 Project Without Reduction Features scenario.

**Table 4.8-3
Estimated Reduction of Project-Related GHG Emissions**

Scenario and Source	Project Without Reduction Features *	As Proposed	Reduction from Project Without Reduction Features	Change from Project Without Reduction Features
Area Sources	1	1	-	0%
Energy Sources	143	83	-60	-42%
Mobile Sources	292	205	-87	-30%
Waste Sources	30	30	-	0%
Water Sources	3	3	-	0%
Refrigerants	<1	<1	-	0%
Construction	5	5	-	0%
Total Emissions	474	327	-147	-31.0%
Daily construction emissions amortized over 30-year period pursuant to SCAQMD guidance. Annual construction emissions derived by taking total emissions over duration of activities and dividing by construction period. * Project Without Reduction Features scenario does not assume 30% reduction in in mobile source emissions from Pavley emission standards (19.8%), low carbon fuel standards (7.2%), vehicle efficiency measures 2.8%); does not assume 42% reduction in energy production emissions from the State’s renewables portfolio standard (33%), natural gas extraction efficiency measures (1.6%), and natural gas transmission and distribution efficiency measures (7.4%). Source: DKA Planning, 2023.				

The analysis in this section uses the 2022 Scoping Plan's statewide goals as one approach to evaluate the Project’s incremental contribution to climate change. The methodology is to compare the Project’s emissions as proposed to the Project’s emissions as if the Project were built using a Project Without Reduction Features approach in terms of design, methodology, and technology. This means the Project's emissions were calculated as if the Project was constructed with project design features to reduce GHG emissions that are not required by state or local code and with several regulatory measures adopted in furtherance of AB 32.

While the AB 32 Scoping Plan’s cumulative statewide objectives were not intended to serve as the basis for project-level assessments, this analysis finds that its Project Without Reduction Features comparison based on the Scoping Plan is appropriate, because the Project would contribute to statewide GHG emissions reduction goals. Specifically, the Project’s focus on attracting local students and families in an existing urban setting provide opportunities to reduce transportation-related emissions.

Post-2030 Analysis

Recent studies show that the state’s existing and proposed regulatory framework will put the state on a pathway to reduce its GHG emissions level to 40 percent below 1990 levels by 2030, and to

80 percent below 1990 levels by 2050 if additional appropriate reduction measures are adopted.⁵⁷ Even though these studies did not provide an exact regulatory and technological roadmap to achieve the 2030 and 2050 goals, they demonstrated that various combinations of policies could allow the statewide emissions level to remain very low through 2050, suggesting that the combination of new technologies and other regulations not analyzed in the studies could allow the state to meet the 2050 target. Subsequent to the findings of these studies, SB 32 was passed on September 8, 2016, and would require the state board to ensure that statewide GHG emissions are reduced to 40 percent below the 1990 level by 2030. As discussed above, the new plan, outlined in SB 32, involves increasing renewable energy use, imposing tighter limits on the carbon content of gasoline and diesel fuel, putting more electric cars on the road, improving energy efficiency, and curbing emissions from key industries.

As discussed above, SCAG's 2020-2045 RTP/SCS establishes a regulatory framework for achieving GHG reductions from the land use and transportation sectors pursuant to SB 375 and the state's long-term climate policies. The 2020-2045 RTP/SCS ensures VMT reductions and other measures that reduce regional emissions from the land use and transportation sectors.

The Project is the type of land use development that is encouraged by the RTP/SCS to reduce VMT and expand multi-modal transportation options in order for the region to achieve the GHG reductions from the land use and transportation sectors required by SB 375, which, in turn, advances the state's long-term climate policies. By furthering implementation of SB 375, the Project supports regional land use and transportation GHG reductions consistent with state climate targets for 2020 and beyond. In addition, the Project would be consistent with the Actions and Strategies set forth in the 2020-2045 RTP/SCS. Therefore, the Project would be consistent with the 2020-2045 RTP/SCS.

Conclusion

Given the Project's consistency with state, SCAG, and County GHG emissions reduction goals and objectives, the Project is consistent with applicable plans, policies, and regulations adopted for the purpose of reducing the emissions of GHGs. In the absence of adopted standards and established significance thresholds, and given this consistency, it is concluded that the Project's incremental contribution to greenhouse gas emissions and their effects on climate change would not be cumulatively considerable.

⁵⁷ Energy and Environmental Economics (E3). "Summary of the California State Agencies' PATHWAYS Project: Long-term Greenhouse Gas Reduction Scenarios" (April 2015); Greenblatt, Jeffrey, Energy Policy, "Modeling California Impacts on Greenhouse Gas Emissions" (Vol. 78, pp. 158–172). The California Air Resources Board, California Energy Commission, California Public Utilities Commission, and the California Independent System Operator engaged E3 to evaluate the feasibility and cost of a range of potential 2030 targets along the way to the state's goal of reducing GHG emissions to 80 percent below 1990 levels by 2050. With input from the agencies, E3 developed scenarios that explore the potential pace at which emission reductions can be achieved, as well as the mix of technologies and practices deployed. E3 conducted the analysis using its California PATHWAYS model. Enhanced specifically for this study, the model encompasses the entire California economy with detailed representations of the buildings, industry, transportation and electricity sectors.

- b) Conflict with an applicable plan, policy or regulation adopted for the purpose of reducing the emissions of greenhouse gases?

Consistency with Applicable Plans and Policies

The discussion below describes how the Project complies with or exceeds the performance-based standards in the 2022 *Climate Change Scoping Plan* and the 2020-2045 RTP/SCS, each of which identifies GHG-reducing measures that directly and indirectly apply to the Project. This analysis also evaluates the Project’s consistency with the County’s General Plan 2035 Air Quality Element. This analysis also evaluates the Project’s consistency with the County’s 2045 Climate Action Plan, which is not effective yet. This is intended to be informational and for disclosure purposes. As shown here, the Project would be consistent with the applicable GHG reduction plans and policies.

Statewide: Climate Change Scoping Plan

Table 4.8-4 evaluates the Project’s consistency with applicable reduction actions/strategies by emissions source category outlined in the *2022 Climate Change Scoping Plan Update*. When compared to SB 32, the Proposed Project would be consistent with its objectives and the GHG reduction-related actions and strategies of the 2022 Scoping Plan. **Table 4.8-4** confirms that the Proposed Project is consistent with the Scoping Plan’s focus on increasing renewable energy use, imposing tighter limits on the carbon content of gasoline and diesel fuel, putting more electric cars on the road, improving energy efficiency, and curbing emissions from key industries. Although a number of these strategies are currently promulgated, some have not yet been formally proposed or adopted. It is expected that these measures or similar actions to reduce GHG emissions will be adopted as required to achieve statewide GHG emissions targets. Based on the following analysis, the Project would be consistent with the State’s Climate Change Scoping Plan’s objective of reducing 2030 GHG emissions in accord with SB 32. As such, impacts related to consistency with the Scoping Plan would be less than significant impact.

**Table 4.8-4
Consistency Analysis—2022 Scoping Plan Update**

Sector	Actions and Strategies	Statutes, Executive Orders, Other Direction	Project Consistency Analysis
Smart Growth / Vehicle Miles Traveled (VMT)	VMT per capita reduced 25% below 2019 levels by 2030, and 30% below 2019 levels by 2045	SB 375: Reduce demand for fossil transportation fuels and GHG	No Conflict. The Project represents an infill development within an urbanized area that would concentrate new elementary and middle schools within an HQTAs and reduce per capita VMT and GHG emissions. The Project would be consistent with SB 375 and its VMT reduction goals, as well as the GHG and transportation goals of the 2020-2045 RTP/SCS.
Light-duty Vehicle (LDV) Zero Emission Vehicles (ZEVs)	100% of Light Duty Vehicle sales are ZEV by 2035	EO N-79-20: Reduce demand for fossil transportation fuels and GHGs, and improve air quality. In November 2022, the Advanced Clean Cars II regulations took effect, setting ZEV and plug-in hybrid vehicle sales requirements for model years 2026 to 2035 (ZEV program) and increasingly stringent emission standards (LEV program) to ensure automakers phase out sales of internal combustion engine vehicles.	No Conflict. Emissions from vehicle engines from the Project would be regulated by State regulations governing technology and cleaner emissions.
Truck ZEVs	100% of medium-duty (MDV)/HDV sales are ZEV by 2040 (AB 74 University of California Institute of Transportation Studies [ITS] report)	EO N-79-20: Reduce demand for fossil transportation fuels and GHGs, and improve air quality. CARB's Advanced Clean Truck Regulation accelerates the transition	No Conflict. While the Project would not generate substantial medium- and heavy-duty truck traffic, it would not impede the advancement of cleaner trucks over time.

		<p>of zero-emission medium- and heavy-duty vehicles from 2024 to 2035.</p> <p>CARB also adopted the Innovative Clean Transit measure in 2018 that requires all public transit agencies to transition to zero emission fleets.</p>	
Aviation	<p>20% of aviation fuel demand is met by electricity (batteries) or hydrogen (fuel cells) in 2045. Sustainable aviation fuel meets most or the rest of the aviation fuel demand that has not already transitioned to hydrogen or batteries.</p>	<p>CARB focuses on reducing emissions from ground support equipment and airport transit vehicles. It is also working with national and international entities to tighten aircraft emission standards.</p> <p>AB 197: direct emissions reductions for sources covered by the AB 32 Inventory</p>	<p>No Conflict. While the Project would not directly impact aviation industry, it would not impede the advancement of a cleaner aviation industry over time.</p>
Ocean-going Vessels (OGVs)	<p>2020 OGV At-Berth regulation fully implemented, with most OGVs utilizing shore power by 2027. 25% of OGVs utilize hydrogen fuel cell electric technology by 2045.</p>	<p>AB 197: direct emissions reductions for sources covered by the AB 32 Inventory</p> <p>In 2015, Executive Order B-32-15 called. For a less polluting freight transport system that addressed OGVs, transport refrigeration units, and clean trucks.</p>	<p>No Conflict. While the Project would not directly impact trade or OGVs, it would not impede the advancement of a cleaner on- or off-shore sources over time.</p>
Port Operations	<p>100% of cargo handling equipment is zero-emission by 2037. 100% of drayage trucks are zero emission by 2035.</p>	<p>Executive Order N-79-20: Reduce demand for petroleum fuels and GHGs, and improve air quality. AB 197: direct emissions reductions for sources covered by the AB 32 Inventory.</p> <p>In 2015, Executive Order B-32-15 called. For a less polluting freight transport system that addressed OGVs,</p>	<p>No Conflict. While the Project would not directly impact trade or port operations, it would not impede the advancement of a cleaner on-shore sources over time.</p>

		transport refrigeration units, and clean trucks.	
Freight and Passenger rail	100% of passenger and other locomotive sales are ZEV by 2030. 100% of line haul locomotive sales are ZEV by 2035. Line haul and passenger rail rely primarily on hydrogen fuel cell technology, and others primarily utilize electricity.	AB 197: direct emissions reductions for sources covered by the AB 32 Inventory In 2015, Executive Order B-32-15 called. For a less polluting freight transport system that addressed OGVs, transport refrigeration units, and clean trucks.	No Conflict. While the Project would not directly impact freight or passenger rail, it would not impede the advancement of a cleaner locomotives over time. The Project’s land uses would not include freight transportation or warehousing that would be subject to the California Sustainable Freight Action Plan. Therefore, the Project would not interfere or impede the implementation of the Sustainable Freight Action Plan.
Oil and Gas Extraction	Reduce oil and gas extraction operations in line with petroleum demand by 2045.	AB 197: direct emissions reductions for sources covered by the AB 32 Inventory	No Conflict. While the Project would not directly impact oil extraction, it would help reduce demand for petroleum products from energy, area, and mobile sources.
Petroleum Refining	CCS on majority of operations by 2030, beginning in 2028 Production reduced in line with petroleum demand.	AB 197: direct emissions reductions for sources covered by the AB 32 Inventory	No Conflict. While the Project would not directly impact oil extraction, it would help reduce demand for petroleum products that require refining.
Electricity Generation	Sector GHG target of 38 MMTCO _{2e} in 2030 and 30 MMTCO _{2e} in 2035. Retail sales load coverage 20 gigawatts (GW) of offshore wind by 2045. Meet increased demand for electrification without new fossil gas-fired resources.	SB 350 and SB 100: Reduce GHGs and improve air quality. AB 197: direct emissions reductions for sources covered by the AB 32 Inventory	No Conflict. The Project would not directly impact the sources of electricity generation.
New Residential and Commercial Buildings	All electric appliances beginning 2026 (residential) and 2029 (commercial), contributing to 6	AB 197: direct emissions reductions for sources covered by the AB 32 Inventory	No Conflict. The Project would incorporate appliances that are consistent with Title 24 and Green Building requirements and consistent

	million heat pumps installed statewide by 2030.		with the reduction of residential energy use.
Existing Residential Buildings	80% of appliance sales are electric by 2030 and 100% of appliance sales are electric by 2035. Appliances are replaced at end of life such that by 2030 there are 3 million all-electric and electric-ready homes—and by 2035, 7 million homes—as well as contributing to 6 million heat pumps installed statewide by 2030.	AB 197: direct emissions reductions for sources covered by the AB 32 Inventory	No Conflict. The Project would comply with Title 24 and Green Building requirements during construction and any future retrofit or appliance replacement requirements.
Existing Commercial Buildings	80% of appliance sales are electric by 2030, and 100% of appliance sales are electric by 2045. Appliances are replaced at end of life, contributing to 6 million heat pumps installed statewide by 2030.	AB 197: direct emissions reductions for sources covered by the AB 32 Inventory	No Conflict. While the Project is not a commercial development, it would not interfere with any future requirements to retrofit commercial appliances.
Food Products	7.5% of energy demand electrified directly and/or indirectly by 2030; 75% by 2045	AB 197: direct emissions reductions for sources covered by the AB 32 Inventory	No Conflict. The Project would not directly impact the sources of energy for food production.
Construction Equipment	25% of energy demand electrified by 2030 and 75% electrified by 2045	AB 197: direct emissions reductions for sources covered by the AB 32 Inventory	No Conflict. The Project would not directly impact the sources of energy for construction equipment.
Chemicals and Allied Products; Pulp and Paper	Electrify 0% of boilers by 2030 and 100% of boilers by 2045. Hydrogen for 25% of process heat by 2035 and 100% by 2045 Electrify 100% of other energy demand by 2045.	AB 197: direct emissions reductions for sources covered by the AB 32 Inventory	No Conflict. The Project would not directly impact the sources of energy for boilers.
Stone, Clay, Glass, and Cement	CCS on 40% of operations by 2035 and on all facilities by 2045 Process emissions reduced through alternative materials and CCS	SB 596: Reduce demand for fossil energy, process emissions, and GHGs, and improve air quality.	No Conflict. The Project would not directly impact the sources of energy for stone, clay, glass, and cement facilities.

		AB 197: direct emissions reductions for sources covered by the AB 32 Inventory	
Other Industrial Manufacturing	0% energy demand electrified by 2030 and 50% by 2045	AB 197: direct emissions reductions for sources covered by the AB 32 Inventory	No Conflict. The Project would not directly impact the sources of energy for industrial facilities.
Combined Heat and Power	Facilities retire by 2040.	AB 197: direct emissions reductions for sources covered by the AB 32 Inventory	No Conflict. The Project would not affect facilities that produced heat and power.
Agriculture Energy Use	25% energy demand electrified by 2030 and 75% by 2045	AB 197: direct emissions reductions for sources covered by the AB 32 Inventory	No Conflict. The Project would not affect directly agricultural sources of energy.
Low Carbon Fuels for Transportation	Biomass supply is used to produce conventional and advanced biofuels, as well as hydrogen.	<p>AB 197: direct emissions reductions for sources covered by the AB 32 Inventory</p> <p>In November 2022, the Advanced Clean Cars II regulations took effect, setting low emission standards for transportation.</p>	<p>No Conflict. This regulatory program applies to fuel suppliers, not directly to land use development. GHG emissions related to vehicular travel associated with the Project would benefit from this regulation because fuel used by Project-related vehicles would be required to comply with the LCFS. Mobile source GHG emissions estimates were calculated using CalEEMod that includes implementation of the LCFS into mobile source emission factors. The current LCFS targets a 20% reduction in CI from a 2010 baseline by 2030.</p> <p>GHG emissions generated by Project-related vehicular travel would benefit from the Advanced Clean Cars Program.</p>
Low Carbon Fuels for Buildings and Industry	In 2030s biomethane blended in pipeline Renewable hydrogen blended in fossil gas pipeline at 7% energy (~20% by volume), ramping	SB 350: The Clean Energy and Pollution Reduction Act of 2015 increases the standards of the California RPS program by requiring	No Conflict. The Project would comply with this this action/strategy being located within the Southern California Gas (SCG) service area and would

	<p>up between 2030 and 2040 In 2030s, dedicated hydrogen pipelines constructed to serve certain industrial clusters</p>	<p>that the amount of electricity generated and sold to retail customers per year from eligible renewable energy resources be increased to 50 percent by 2030. Required measures include increasing RPS to 50 percent of retail sales by 2030, establishing annual targets for statewide energy efficiency that achieve a cumulative doubling of statewide energy efficiency savings in electricity and natural gas end uses by 2030.</p> <p>SB 100: The California Renewables Portfolio Standard Program (2018) requires retail sellers to procure renewable energy that is at least 50 percent by December 31, 2026 and 60 percent by December 31, 2030. It requires local publicly owned electric utilities to procure a minimum quantity of electricity from renewable energy resources of 44 percent of retail sales by December 31, 2024 and 60 percent by December 31, 2030.</p>	<p>comply with CalGreen and Title 24 energy efficiency standards. Southern California Edison (SCE) must generate electricity that would increase renewable energy resources to 33 percent by 2020 and 50 percent by 2030. As SCE would provide electricity service to the Project Site, by 2030 the Project would use electricity consistent with the requirements of SB 350.</p> <p>As required under SB 350, doubling of the energy efficiency savings from retail customers by 2030 would primarily rely on the existing suite of building energy efficiency standards under CCR Title 24, Part 6 (consistency with this regulation is discussed below) and utility-sponsored programs such as rebates for high-efficiency appliances, HVAC systems, and insulation.</p>
<p>Non-combustion Methane Emissions</p>	<p>Increase landfill and dairy digester methane capture. Some alternative manure management deployed for smaller dairies Moderate adoption of enteric strategies by 2030 Divert 75% of organic waste from landfills by 2025. Oil and gas fugitive methane emissions reduced 50% by 2030 and further reductions as</p>	<p>SB 1383 (2016) requires CARB to set 2030 emission reduction targets of 40 percent for methane and hydrofluorocarbons and 50 percent black carbon emissions below 2013 levels. The Project would comply with the CARB SLCP Reduction Strategy by using HVAC equipment with lower GWP refrigerants.</p>	<p>No Conflict. This program applies to State regulators looking to reduce methane emissions from landfill and dairy facilities and is not directly related to development of the Project. However, the Project would not interfere or impede efforts to reduce such pollutants.</p>

	infrastructure components retire in line with reduced fossil gas demand		
High GWP Potential Emissions	Low GWP refrigerants introduced as building electrification increases, mitigating HFC emissions	SB 605 (2014) directed CARB to develop a comprehensive Short-Lived Climate Pollutant (SLCP) strategy.	No Conflict. This program applies to State regulators looking to reduce high GWP refrigerants and is not directly related to development of the Project. However, the Project would not interfere or impede efforts to reduce such pollutants.
Natural and Working Lands	Conserve 30% of the state’s NWL and coastal waters by 2030. Implement near- and long-term actions to accelerate natural removal of carbon and build climate resilience in our forests, wetlands, urban greenspaces, agricultural soils, and land conservation activities in ways that serve all communities—and in particular low-income, disadvantaged, and vulnerable communities.	EO N-82-20 and SB 27: CARB to include an NWL target in the Scoping Plan. AB 1757: Establish targets for carbon sequestration and nature-based climate solutions. SB 1386: NWL are an important strategy in meeting GHG reduction goals.	No Conflict. This program applies to State regulators governing Natural and Working Lands and is not directly related to development of the Project. However, the Project would not interfere or impede implementation of the Integrated Natural and Working Lands Implementation Plan, EO N-82-20, SB 27, or SB 1386.
Forests and Shrublands	At least 2.3 million acres treated statewide annually in forests, shrublands/chaparral, and grasslands, comprised of regionally specific management strategies that include prescribed fire, thinning, harvesting, and other management actions. No land conversion of forests, shrublands/chaparral, or grasslands.	Restore health and resilience to overstocked forests and prevent carbon losses from severe wildfire, disease, and pests. Improve air quality and reduce health costs related to wildfire emissions. Improve water quantity and quality and improve rural economies. Provide forest biomass for resource utilization. EO B-52-18: CARB to increase the opportunity for using prescribed fire.	No Conflict. This program applies to State regulators governing forest and shrubland management and is not directly related to development of the Project. However, the Project would not interfere or impede implementation of EO B-52-18, AB 1504, or the Forest Carbon Plan.

		AB 1504 (Skinner, Chapter 534, Statutes of 2010): CARB to recognize the role forests play in carbon sequestration and climate mitigation.	
Grasslands	At least 2.3 million acres treated includes increased management of grasslands interspersed in forests to reduce fuels surrounding communities using management strategies appropriate for grasslands. No land conversion of forests, shrublands/chaparral, or grasslands.		No Conflict. This program applies to State regulators of grasslands and is not directly related to development of the Project. However, the Project would not interfere or impede efforts to reduce fuels in grasslands surrounding communities.
Croplands	Implement climate smart practices for annual and perennial crops on ~80,000 acres annually. Land easements/ conservation on annual crops at ~5,500 acres annually. Increase organic agriculture to 20% of all cultivated acres by 2045 (~65,000 acres annually).	SB 859: Recognizes the ability of healthy soils practices to reduce GHG emissions from agricultural lands.	No Conflict. This program applies to State regulators overseeing croplands and is not directly related to development of the Project. However, the Project would not interfere or impede SB 859 and efforts to increase organic agriculture and conserve croplands.
Developed Lands	Increase urban forestry investment by 200% above current levels and utilize tree watering that is 30% less sensitive to drought. Establish defensible space that accounts for property boundaries.	AB 2251 (Calderon, Chapter 186, Statutes of 2022): Increase urban tree canopy 10% by 2035.	No Conflict. This program applies to State regulators addressing urban forestry and is not directly related to development of the Project. However, the Project would not interfere or impede implementation of AB 2251 and efforts to increase the urban canopy.
Wetlands	Restore 60,000 acres of Delta wetlands		No Conflict. This program applies to State regulators restoring Delta wetlands and is not directly related to development of the Project. However, the Project would not interfere or impede efforts to restore wetland ecologies.

Sparsely Vegetated Lands	Land conversion at 50% of the Reference Scenario land conversion rate.		No Conflict. This program applies to State regulators slowing the conversion of sparsely vegetated lands and is not directly related to development of the Project. However, the Project would not interfere or impede efforts to slow urban conversion of such lands.
Cap-and-Trade Program	Implement the post-2020 Cap-and-Trade Program with declining annual caps.	AB 398 was enacted in 2017 to extend and clarify the role of the state’s Cap-and-Trade Program from January 1, 2021, through December 31, 2030. As part of AB 398, refinements were made to the Cap-and-Trade program to establish updated protocols and allocation of proceeds to reduce GHG emissions.	Not Applicable. This applies to the market-based program to reduce GHG emissions over time and is not applicable to a development project.
Source: DKA Planning, 2023 based on California Air Resources Board, 2022 Scoping Plan for Achieving Carbon Neutrality, Scoping Plan Scenario.			

Regional: 2020-2045 RTP/SCS

As discussed earlier, the 2020-2045 RTP/SCS is expected to help the SCAG region, and in turn California, reach its latest GHG reduction goals. Implementation of the 2020-2045 RTP/SCS is projected to reduce per capita transportation emissions 8 percent by 2020 and by 19 percent by 2035, thus enabling the region to fulfill its portion of SB 375 compliance.

Generally, projects are considered consistent with the provisions and policies of applicable County and regional land use plans and regulations if they are compatible with the general intent of the plans and would not preclude the attainment of their primary goals. The land use pattern emphasized by the 2020-2045 RTP/SCS (as well as its previous iteration) involves concentrating new, dense housing and/or job growth in infill locations and HQTAs in an effort to facilitate alternative transportation modes and reduce vehicle trips and VMT.

Table 4.8-5 provides a comparison of the Project against the GHG-related performance measures of the 2020-2045 RTP/SCS.

**Table 4.8-5
Consistency with the 2020 RTP/SCS**

Objectives	Consistency Analysis ^a
Increase percentage of region’s total household growth occurring within HQTAs.	Not Applicable. The Project does not include residential uses. Nevertheless, it would not reduce housing stock in the County and would not inhibit the County’s efforts to add to the supply and diversity of housing in metropolitan Los Angeles County.
Increase percent of the region’s total employment growth occurring within HQTAs.	Consistent. The Project is an infill development that would create more school- and service-related jobs, consistent with the 2020 RTP/SCS policies and would focus on job growth on Whittier Boulevard and an HQTA.
Decrease total acreage of greenfield or otherwise rural land uses converted to urban use.	Consistent. The Project is an infill development that would reduce the demand for sprawl development in greenfield or rural areas on the fringes of Southern California.
Decrease daily vehicle miles driven per person.	Consistent. The Project is an infill development that would reduce daily VMT per capita. Local elementary and middle schools are geared toward neighborhood children that involve short trips that can be made with bicycling and walking. This would reduce potential driving distances for some parents as well. This includes access to Metro local bus Line 18 which operates east-west service on Whittier Boulevard approximately 880 feet north of the Project Site.
Decrease average daily distance traveled for work and non-work trips (in miles)	Consistent. The Project is an infill development that would reduce trip distances for students and parents. Local elementary and middle schools are geared toward neighborhood children that involve short trips that can be made with bicycling and walking. This would reduce potential driving distances for some parents as well. This includes access to Metro local bus Line 18 which operates

Objectives	Consistency Analysis ^a
	east-west service on Whittier Boulevard approximately 880 feet north of the Project Site.
Increase percentage of work and non-work trips which are less than 3 miles in length.	Consistent. The would substantially increase all trips that are less than three miles in length. Local elementary and middle schools are geared toward neighborhood children that involve short trips that can be made with bicycling and walking. This would reduce potential driving distances for some parents as well. This includes access to Metro local bus Line 18 which operates east-west service on Whittier Boulevard approximately 880 feet north of the Project Site.
Increase share of short trip lengths for commute purposes.	Consistent. The Project is an infill development that could reduce trip lengths for faculty and other staff. Local elementary and middle schools are geared toward neighborhood children that involve short trips but often attract local teachers and staff that would have shorter commute trips than working at more remote schools.
Decrease average minutes of delay experienced per capita due to traffic congestion.	Consistent. The Project is an infill development in the dense Whittier Boulevard corridor that will reduce the rate of growth in auto traffic and congestion by virtue of its transit and active transportation mode share.
Decrease excess travel time resulting from the difference between a reference speed and actual speed.	Consistent. The Project is an elementary and middle school geared toward neighborhood children that involve short trips that can be made with bicycling and walking. When combined with bus and shuttle service on Whittier Boulevard, this would reduce car trips on local roads that could reduce congestion and help improve travel speeds on this arterial.
Decrease excess travel time for heavy-duty trucks result from the difference between reference speed and actual speed.	Consistent. The Project is an elementary and middle school geared toward neighborhood children that involve short trips that can be made with bicycling and walking. This would reduce potential car trips on Whittier Boulevard and local roads that could reduce truck congestion and help improve travel speeds on this arterial.
Increase percentage of PM peak period trips completed within 45 minutes by travel mode.	Consistent. The Project is an elementary and middle school geared toward neighborhood children that involve short trips that can be made with bicycling and walking. As such, trips to school would not exceed 45 minutes in duration. Moreover, school bell times would ensure that most vehicle traffic in the afternoon occur soon after the student dismissal time at 3:15 P.M.
Increase percentage of trips that use transit (work and all trips)	Consistent. The Project is an elementary and middle school geared toward neighborhood children that involve short trips that can be made with bicycling and walking. Students living further away from school could use Metro local bus Line 18 which operates east-west service on Whittier Boulevard approximately 880 feet north of the Project Site.

Objectives	Consistency Analysis ^a
Decrease average travel time to work (all modes)	Consistent. The Project is an infill development that could reduce trip lengths for faculty and other staff. Local elementary and middle schools are geared toward neighborhood children that involve short trips but often attract local teachers and staff that would have shorter commute trips than working at more remote schools.
Increase percentage of trips using either walking or biking (by trip type)	Consistent. The Project is an elementary and middle school geared toward neighborhood children that involve short trips that can be made with bicycling and walking.
Reduce per capita GHG emissions (from 2005 levels)	Consistent. The Project is an elementary and middle school geared toward neighborhood children that involve short trips that can be made with bicycling and walking. Students living further away from school could use Metro local bus Line 18 which operates east-west service on Whittier Boulevard approximately 880 feet north of the Project Site. As such, it is consistent with AB 32, SB 32, SB 375, and other initiatives designed to reduce per capita GHG emissions from 2005 levels.
Increase percentage of trips using a travel mode other than single occupancy vehicle (SOV)	Consistent. The Project is an elementary and middle school geared toward neighborhood children that involve short trips that can be made with bicycling and walking. Students living further away from school could use Metro local bus Line 18 which operates east-west service on Whittier Boulevard approximately 880 feet north of the Project Site.

Local: County of Los Angeles General Plan 2035 Air Quality Element

While Goal AQ 3 of the Air Quality Element calls for the County to implement plans and programs to address the impacts of climate change, the Project would be consistent with the spirit of this goal. The Project would be geared toward local middle neighborhood children that would involve short trips that can be made with bicycling and walking. Students living further away from school could use Metro local bus Line 18 which operates east-west service on Whittier Boulevard approximately 880 feet north of the Project Site. As such, the Project would accommodate population growth while minimizing GHG emissions from mobile sources associated with transporting children to and from school.

Local: County of Los Angeles 2045 Climate Action Plan (draft)

The following is intended to be informational and for disclosure purposes.

The Revised Draft 2045 Los Angeles County Climate Action Plan (2045 CAP) is LA County’s path toward meeting the goals of the Paris Agreement and striving towards carbon neutrality for unincorporated areas of the County. The Revised Draft 2045 CAP builds on previous climate action work from the Unincorporated Los Angeles County Community Climate Action Plan 2020, adopted in October 2015 as a subcomponent of the Air Quality Element of the Los Angeles County

General Plan 2035. The Revised Draft 2045 CAP identifies strategies, measures, and actions to mitigate emissions from community activities, which may include some municipal operations.⁵⁸

To reduce emissions across all sectors, the 2045 CAP establishes three GHG emissions reduction targets and one long-term aspirational goal:

- Target: By 2030, reduce GHG emissions by 40 percent below 2015 levels.
- Target: By 2035, reduce GHG emissions by 50 percent below 2015 levels.
- Target: By 2045, reduce GHG emissions by 83 percent below 2015 levels.
- Aspirational Goal: By 2045, achieve carbon neutrality in unincorporated Los Angeles County.

The 2045 CAP includes 10 strategies, 25 measures, and almost 90 actions that shall be implemented by the County to achieve its proportional share of state GHG emissions reductions for the target year 2030.

To demonstrate consistency with the 2045 CAP, all projects that do not screen out of the 2045 CAP consistency review process must implement either (1) all feasible applicable checklist measures or (2) for infeasible checklist measures, alternative project emissions reduction measures. The project review checklist will be used in one two ways: (1) For projects consistent with the 2045 CAP, to demonstrate CAP consistency that allows for a streamlined project-specific CEQA GHG analysis; or (2) for projects required or electing to prepare project-specific CEQA GHG analyses, to demonstrate that all feasible applicable checklist measures or alternative project emissions reduction measures have nevertheless been implemented, either as project features or as GHG mitigation measures. Projects that do not implement all feasible applicable checklist measures or alternative project emissions reduction measures may have significant GHG impacts because they could conflict with an applicable GHG reduction plan per CEQA Guidelines Appendix G, Section VII.

The Project is an infill development that could reduce trip lengths for faculty and other staff. Local elementary and middle schools are geared toward neighborhood children that involve short trips but often attract local teachers and staff that would have shorter commute trips than working at more remote schools. The Project is an elementary and middle school geared toward neighborhood children that involve short trips that can be made with bicycling and walking. Students living further away from school could use Metro local bus Line 18 which operates east-west service on Whittier Boulevard approximately 880 feet north of the Project Site. This would reduce dependency on automobiles and reduce GHG emissions from mobile sources.

To demonstrate conformance with the 2045 CAP, a project must demonstrate consistency with the General Plan 2035 and meet the 2045 CAP Consistency Screening Criteria.

⁵⁸ Los Angeles County 2045 Climate Action Plan (draft): <https://planning.lacounty.gov/long-range-planning/climate-action-plan/documents/>

Step 1 is to demonstrate consistency with the Los Angeles County General Plan 2035. As discussed in **Table 4.11-1** (Land Use Planning section) of this MND, the Project is consistent with the General Plan.

Step 2 is to determine whether the project screens out of using the 2045 CAP Checklist.

Does the project achieve zero GHG emissions compared to the existing on-site development at the project site? As shown in **Table 4.8-2** (Greenhouse Gas section) of this MND, when taking into consideration implementation of project design features, including the requirements set forth in the County's regulations and codes and the full implementation of current state mandates, the GHG emissions for the Project would equal 327 MTCO₂e annually (as amortized over 30 years) during construction. Thus, the project does not achieve zero GHG emissions compared to the existing on-site development at the project site. If not, proceed to step 3.

Step 3 is to demonstrate consistency with the 2045 CAP GHG Emissions Reduction Measures and Actions.

The Project would provide 1,670 square feet of solar area to support on-site renewable energy systems, and the Project could participate in Southern California Edison at the Green Rate level (i.e. 100% carbon-free electricity) until SCE provides 100% carbon-free electricity by default.

Based on the Project's proximity to public transit and satisfying the related screening criteria provided in the County's Transportation Impact Analysis Guidelines, the Project meets the transportation screening criteria.

The project would comply with any CALGreen Code requirement, County ordinance, building code, or condition of approval that requires a certain amount of electric vehicle (EV) charging infrastructure (EVCSs) and readiness. The Project would provide 9 electric vehicle supply equipment (EVSE) spaces and 2 electric vehicle charging stations (EVCS).

The County's goal is to achieve a job density of 300 jobs per acre. The Project is a school project serving 525 students with 28 employees (teachers and staff) on 1.17 acres but a majority of the population would be school children. This is not the nonresidential-type of development that the County's goal was made for.

The Project includes reduced parking requirement per AB 2097. While LACC Section 22.112.070 would require the Project to provide 54 vehicular parking spaces, under AB 2097, the Project is not required to meet a minimum parking requirement because it is located within a half-mile of a HQTIC.

The Project would comply with all County and State water use efficiency and water conservation requirements.

Conclusion

In summary, the plan consistency analysis provided above demonstrates that the Project complies with the applicable plans, policies, regulations and GHG emissions reduction actions/strategies outlined in the *Climate Change Scoping Plan and Update*, the 2020-2045 RTP/SCS, the County's General Plan 2035 Air Quality Element, and the County's 2045 Climate Action Plan (draft). Consistency with the above plans, policies, regulations, and GHG emissions reduction actions/strategies would reduce the Project's incremental contribution of GHG emissions. Thus, the Project would not conflict with any applicable plan, policy, or regulation of an agency adopted for the purpose of reducing emissions of GHG emissions. Furthermore, because the Project is consistent and does not conflict with these plans, policies, and regulations, the Project's incremental increase in GHG emissions as described above would not result in a significant impact on the environment. Therefore, Project-specific impacts with regard to climate change would be less than significant.

Cumulative Impacts

As explained above, the analysis of a project's GHG emissions is inherently a cumulative impacts analysis, because climate change is a global problem, and the emissions from any single project alone would be negligible. Accordingly, the analysis above took into account the potential for the Project to contribute to the cumulative impact of global climate change.

The analysis shows that the Project is consistent with CARB's *Climate Change Scoping Plan*, particularly its emphasis on the identification of emission reduction opportunities that promote economic growth while achieving greater energy efficiency and accelerating the transition to a low-carbon economy. The analysis also shows that the Project would be consistent with the 2020-2045 RTP/SCS, which would serve to reduce regional GHG emissions from the land use and transportation sectors by 2020 and 2035.

In addition, the Project would comply with the General Plan 2035 Air Quality Element, which identifies the need for countywide plans and programs that reduce GHG. Given the Project's consistency with statewide, regional, and local plans adopted for the reduction of GHG emissions, it is concluded that the Project's incremental contribution to greenhouse gas emissions and their effects on climate change would not be cumulatively considerable. For these reasons, the Project's cumulative contribution to global climate change is less than significant.

4.9 HAZARDS AND HAZARDOUS MATERIALS

This section is based on the following item, which is included as **Appendix F** to this MND:

- F Phase I Environmental Site Assessment, Hazard Management Consulting, October 4, 2022

	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
Would the project:				
a) Create a significant hazard to the public or the environment through the routine transport, use, or disposal of hazardous materials?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>

Less Than Significant Impact. A significant impact may occur if a project would involve the use or disposal of hazardous materials as part of its routine operations or would have the potential to generate toxic or otherwise hazardous emissions that could adversely affect sensitive receptors.

Hazardous materials are generally defined as any material that because of its quantity, concentration, or physical or chemical characteristics, poses a significant present or future hazard to human health and safety or to the environment, if released into the workplace or the environment (Health and Safety Code §25501(o)). The California Department of Toxic Substances (DTSC) is responsible for classifying hazardous materials in the state of California. Hazardous materials are commonly stored and used by a variety of businesses and are commonly encountered during construction activities.

Construction of the Project would involve the temporary transport, use, and disposal of potentially hazardous materials. These materials include paints, adhesives, surface coatings, cleaning agents, fuels, and oils that are typically associated with development of any urban infill project such as a school. All of these materials would be used temporarily during construction. Thus, construction of the Project does not involve the routine transport, use, or disposal of hazardous materials.

Additionally, all potentially hazardous materials associated with construction activities would be used and stored in accordance with manufacturers’ instructions and handled in compliance with applicable standards and regulations, which further minimizes the potential risk associated with construction-related hazardous materials. Finally, the construction activities are contained on the Project Site and, thus, any emissions from the use of such materials would be minimal and localized to the Project Site. Therefore, construction of the Project would not expose persons or the environment to a substantial risk resulting from the release of hazardous materials or exposure to health hazards in excess of regulatory standards.

Similarly, from an operational perspective, the Project does not involve the routine use, transport, or disposal of hazardous materials. The Project includes the development of a school. This typical urban use does not involve the routine use of hazardous materials. For example, the proposed use would involve the use and storage of small quantities of potentially hazardous materials such as cleaning solvents, paints, and pesticides for landscaping. Likewise, the Project cleaning and maintenance program could include commercial-grade cleaning solvents, waxes, dyes, toners, paints, bleach, grease, and petroleum products that are typically associated with urban land uses. The Project generally would not produce significant amounts of hazardous waste, use or transport hazardous waste beyond those materials typically used in an urban development. Thus, none of the Project’s operational features, or the type of hazardous materials used on the Project Site, creates a significant hazard to the environment or public.

Moreover, the Project would adhere to regulatory requirements for source hazardous waste reduction measures (e.g., recycling of used batteries, recycling of elemental mercury, etc.) that would further minimize the generation of hazardous waste. In addition, the Project will comply with the applicable regulations regarding implementation of hazardous waste reduction efforts on-site. The applicable regulatory requirements further ensure that the minimal number of hazardous materials associated with the Project are properly treated and disposed of at licensed resource recovery facilities or hazardous waste landfills.

The potential transport of any hazardous materials and wastes, i.e., paints, adhesives, surface coatings, cleaning agents, fuels, and oils, if it occurs, would occur in accordance with federal and state regulations that govern the handling and transport of such materials. In accordance with such regulations, the transport of hazardous materials and wastes would only occur with transporters who have received training and appropriate licensing. Therefore, impacts would be less than significant.

- b) **Create a significant hazard to the public or the environment through reasonably foreseeable upset and accident conditions involving the release of hazardous materials into the environment?**

Less Than Significant Impact With Mitigation Incorporated. A significant impact may occur if a project utilizes hazardous materials as part of its routine operations and could potentially pose a hazard to nearby sensitive receptors under accident or upset conditions.

Historic Uses

The Site and Site vicinity are located in an area of historic residential development. The Site was developed with single-family residences from at least 1923 until approximately 1928. From 1928 until 1952, the Site was observed as being undeveloped vacant land. The Site was developed with the existing buildings in 1953 and has operated as various churches until the present. The

Site vicinity has been developed with single-family residences and apartment buildings. There were no Recognized Environmental Conditions (RECs) found from the historic use of the Site.

Existing Uses

There were no hazardous materials observed in Building 2 (north building) with the exception of household cleaning products.

Hazardous materials observed in Building 1 (south building) include storage of approximately 8 5-gallon propane tanks and household cleaning products.

Surrounding Uses

The Site is located in an area that has historically had residential and commercial activity and numerous facilities have experienced releases though none were close enough or in the correct orientation to be considered a direct threat or REC to the Site with the exception of the elevated concentrations of lead found in surface soils at the Site as a result of the release of lead into the air from the former Exide Technologies Facility. The Exide Technologies Facility is located nearby (3901 Bandini Boulevard, 1.15 miles southwest) and operated as a battery recycling and production facility. As part of their operations, lead was released into the air and has been found to have deposited onto surface soil in the downwind area. Arcadis and EFI Global conducted soil x-ray fluorescence (XRF) scanning and sampling to evaluate lead concentrations in soil on behalf of the DTSC. The sampling event occurred on April 6, 2017, which consisted of 20 soil XRF scan samples and 20 soil samples for laboratory analysis. There were no detections of lead in any of the soil XRF scan samples. Lead was detected in all soil samples at concentrations ranging from 12.9 mg/kg to 352 mg/kg. Nine of the soil samples detected lead above the residential lead screening level of 80 mg/kg. These samples are located along the north property line adjacent to Building 2 and the southeast property line fronting Building 1 along Gage Avenue.⁵⁹

The presence of lead in soil at concentrations above the residential screening level would be considered an REC. However, given the limited quantity of soil known to contain elevated concentrations of lead, the soil impacts can be effectively managed with a Soil Management Plan (SMP) to guide the overall grading activities. (See **Mitigation Measure MM-HAZ-1**, below.) See also, Phase I Environmental Site Assessment, Hazard Management Consulting, October 4, 2022, page 7 of the PDF.)

Mitigation Measure

MM-HAZ-1 Soil Management Plan

During future development of the Site, a Soil Management Plan (SMP) shall be developed for the proposed construction activities. The SMP shall describe the management of impacted soils which may be encountered during Site

⁵⁹ Phase I Environmental Site Assessment, Hazard Management Consulting, October 4, 2022, page 1,645 of the PDF.

development, and outline health and safety procedures to minimize risk to onsite workers and personnel.

In addition, the SMP shall describe the procedures for export of inert soil for offsite reuse.

It is anticipated that data collected during additional confirmation samples collected during construction shall be used to facilitate the export of inert soil for offsite reuse.

The SMP shall be developed by a qualified environmental consultant, consistent with SCAQMD Rule 1166 (Site Specific and Various Locations Soil Mitigation Plan) for the site and implemented during site grading and excavation.

The SMP shall be reviewed by the Los Angeles County Fire Department Site Mitigation Unit of the Health Hazardous Materials Division (LACFD SMU) as follows:

First, a draft version of a complete SMP prepared by a qualified environmental consultant shall be submitted to the LACFD SMU. Additional comments may be provided by the LACFD SMU, and the determination that comments are warranted.

All such comments, to the extent warranted, shall be incorporated into the final draft SMP. The SMP shall then be implemented during the soil disturbance and site grading phases of Project construction.

The objective of the SMP is to establish policy and requirements for the management and disposal of soils generated during excavation and redevelopment, and other activities that may disturb potentially contaminated soil.

Implementation of the **Mitigation Measure MM-HAZ-1** requiring an SMP would ensure that impacts during construction are less than significant.

Asbestos-Containing Materials and Lead-Based Paint

The use of asbestos-containing materials (a known carcinogen) and lead paint (a known toxin) was common in building construction prior to 1978 (the use of asbestos-containing materials in concrete products was common through the 1950s). Asbestos is a carcinogen and is categorized as a hazardous air pollutant by the federal Environmental Protection Agency (EPA). Federal asbestos requirements are found in the Code of Federal Regulations (CFR) Title 40, Part 61, Subpart M, and are enforced in the project area by the SCAQMD.

The Site was developed with the existing buildings in 1953. Given the age of the buildings on Site, asbestos containing materials and lead-based paints are likely to be present in building materials.

SCAQMD Rule 1403 requires notification of the SCAQMD prior to commencing any demolition or renovation activities that involve asbestos containing materials. Rule 1403 also sets forth specific

- Residential communities surrounding the Project Site
- Eastman Avenue Elementary School (4112 Olympic Boulevards) is located 800 feet south of the Site, separated by the I-5 Freeway
- Los Angeles Community Hospital (4081 Olympic Boulevard) is located 400 feet south of the Site, past the I-5 Freeway
- East Los Angeles Doctors Hospital (4060 Whittier Boulevard) is located 600 feet north of the Site
- The Site itself is proposed to become a school

As discussed previously, the types of hazardous materials that would be found on the Project Site during the Project’s operational phase would be typically associated with school land uses – paints, cleaning supplies, small amounts of petroleum products. The Project would not require routine transport, use, or disposal of hazardous materials that would create a significant hazard to the public or the environment.

To the extent there would be any such transport, use, or disposal, compliance with existing local, state, and federal regulations would ensure the transport, storage, and use of these materials would not pose a significant hazard to the public or the environment. Additionally, no RECs were identified on the Project Site, except for limited quantity of soil known to contain elevated concentrations of lead which will be resolved with a regulatory compliant Soil Management Plan. Any potential ACMs and/or mold found would be remediated in accordance with existing regulations. Thus, the Project would not emit hazardous emissions or handle hazardous or acutely hazardous materials, substances, or waste within one-quarter mile of an existing or proposed school. Therefore, Project impacts related to this issue would be less than significant.

d) Be located on a site which is included on a list of hazardous materials sites compiled pursuant to Government Code Section 65962.5 and, as a result, would it create a significant hazard to the public or the environment?

No Impact. California Government Code Section 65962.5 requires various state agencies, including but not limited to, the Department of Toxic Substances Control (DTSC) and SWRCB, to compile lists of hazardous waste disposal facilities, unauthorized releases from underground storage tanks, contaminated drinking water wells and solid waste facilities where there is known migration of hazardous waste and submit such information to the Secretary for Environmental Protection on at least an annual basis.

The Project Site is not included on any list compiled pursuant to Government Code Section 65962.5.⁶¹ Based on this, development of the Project would not cause or exacerbate a significant hazard to the public or the environment. Therefore, no impacts related to this issue would occur as a result of the Project.

- e) For a project located within an airport land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport, would the project result in a safety hazard or excessive noise for people residing or working in the project area?

No Impact. The Project Site is not located within two miles of a public airport. San Gabriel Valley Airport is 9.5 miles northeast of the Site. Los Angeles International Airport is 13 miles southwest. Santa Monica Airport is 15 miles west. Hollywood Burbank Airport is 15.5 miles northwest.

Additionally, the school development would not be of a sufficient height to require modifications to the existing air traffic patterns at the airport and, therefore, would not affect aviation traffic levels or otherwise result in substantial aviation-related safety risks.

Thus, implementation of the Project would not have the potential to exacerbate current environmental conditions as to result in a safety hazard or excessive noise for people residing or working in the area of the Project Site. Therefore, no impacts would occur.

- f) Impair implementation of or physically interfere with an adopted emergency response plan or emergency evacuation plan?

Less Than Significant Impact.

Construction

The Project would not physically interfere with an adopted emergency response plan or emergency evacuation plan. The County’s General Plan Safety Element outlines goals and policies aimed at reducing the potential risk of death, injuries, and economic damage resulting from natural and man-made hazards. Additionally, the County’s General Plan Safety Element works in conjunction with the Operational Area Emergency Response Plan, which is prepared by County’s Chief Executive Office - Office of Emergency Management. The Operational Area Emergency Response Plan strengthens short and long-term emergency response and recovery capability and identifies emergency procedures, as well as emergency management routes in Los Angeles County.

⁶¹ Department of Toxic Substances Control, Envirostor, <https://www.envirostor.dtsc.ca.gov/public/>, accessed November 10, 2022.

The Project Site is near the I-5 Freeway, which is identified as one of the County’s Freeway Disaster Routes.⁶² The Project would not affect access to the freeway or the route itself.

The Office of Emergency Management prepares the All-Hazard Mitigation Plan, which provides policy guidance for minimizing threats from natural and man-made hazards in Los Angeles County. The All-Hazard Mitigation Plan includes a compilation of known and projected hazards in Los Angeles County. The All-Hazard Mitigation Plan also includes information on historical disasters in Los Angeles County.

The Project does not include any characteristics (e.g., permanent road closures or long-term blocking of road access) that would physically impair or otherwise conflict with an emergency response plan or emergency evacuation plan. During short-term construction activities, the Project is not anticipated to result in any substantial traffic queuing on nearby streets, and all construction equipment would be staged within the Project Site. Therefore, impacts related to emergency response and evacuation plans associated with construction of the Project would be less than significant.

Operation

The Project does not include any changes to public or private roadways that would physically impair or otherwise conflict with an emergency response plan or emergency evacuation plan. Further, the Project would not obstruct or alter any transportation routes that could be used as evacuation routes during emergency events.

During the operational phase of the Project, onsite access would be required to comply with standards established by the County. The size and location of fire suppression facilities (e.g., hydrants) and fire access routes would be required to conform to County’s fire standards. The Project would provide adequate emergency access to the Site from Gage Avenue and Eastman Avenue. Further, access to and from the Site for emergency vehicles would be reviewed and approved by the County as part of the approval process to ensure the Project is compliant with all applicable codes and ordinances for emergency vehicle access. Therefore, impacts related to interference with an emergency response plan would be less than significant.

g) Expose people or structures, either directly or indirectly, to a significant risk of loss, injury or death involving fires because the project is located:

i) within a high fire hazard area with inadequate access?

⁶² Los Angeles County General Plan, Figure 12.6, Disaster Routes Map:
https://planning.lacounty.gov/assets/upl/project/gp_2035_2014-FIG_12-6_Disaster_Routes.pdf

No Impact. The Project Site is located in an urbanized area of the County and is completely developed. The Project Site is not within an area identified as a Fire Hazard Area that may contain substantial fire risk or a Very High Fire Hazard Severity Zone.⁶³ Furthermore, The Project Site would include adequate access, as discussed above in response 9(f). Therefore, impacts related to wildland fires would not occur.

ii) within an area with inadequate water and pressure to meet fire flow standards?

Less Than Significant Impact. The Project Site is located within an urban developed area and is not located within an identified wildland fire hazard area and is not an area where residences are intermixed with wildlands. The Project would include onsite water pipes that connect to the existing water line in Gage Avenue and Eastman Avenue. Furthermore, the Project is required to comply with Los Angeles County Code Sections 20.16.050 and 20.16.060, which set water flow requirements for non-residential developments, onsite water lines, and fire hydrants. Therefore, the Project would not expose people or structures to a significant risk involving fires because the Project is located within an area with inadequate water and pressure to meet fire flow standards. Impacts would be less than significant.

iii) within proximity to land uses that have the potential for dangerous fire hazard?

Less Than Significant Impact. The Project Site is not within proximity to land uses that have the potential for a dangerous fire hazard. The area surrounding the Project Site is developed with residential uses and is not in an area with excessive amounts of dry brush that pose significant fire risks. The Project consists of school land uses. This land use would not generate potential impacts related to a dangerous fire hazard. Therefore, impacts related to proximity to potential fire hazard would not occur.

h) Does the proposed use constitute a potentially dangerous fire hazard?

No Impact. The Project would develop school land uses. None of the uses related to the Project would constitute a potentially dangerous fire hazard and impacts would not occur.

Cumulative Impacts

The geographic extent of the Project’s environmental impacts is limited to the Project Site and would not contribute to any other potential environmental impact that may occur beyond the

⁶³ Los Angeles County General Plan, Figure 12.5, Fire Hazard Severity Zones Policy Map: https://planning.lacounty.gov/assets/upl/project/gp_2035_2021-FIG_12-5_Fire_Hazard_Severity_Zones_Policy_Map_Responsibility.pdf

Project Site boundaries. All related projects would be subject to discretionary or ministerial review by their respective jurisdictions, which would be responsible for assessing potential hazards risks associated with those related projects, and if necessary, the applicants of those projects would be required to implement measures appropriate for the type and extent of hazardous materials present and the land use proposed to reduce the risk associated with the hazardous materials to an acceptable level. As stated previously, the Project would not result in any significant impacts related to hazards and hazardous materials. Therefore, cumulative impacts related to hazards and hazardous materials would be less than significant.

4.10 HYDROLOGY AND WATER QUALITY

This section is based on the following item, which is included as **Appendix G** to this MND:

- G** Hydrology Report, Trittech Engineering Group, February 8, 2024

	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
Would the project:				
a) Violate any water quality standards or waste discharge requirements or otherwise substantially degrade surface or ground water quality?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>

Less Than Significant Impact. A significant impact may occur if a project discharges water that does not meet the quality standards of agencies that regulate surface water quality and water discharge into stormwater drainage systems. The National Pollutant Discharge Elimination System (NPDES) program establishes a comprehensive stormwater quality program to manage urban stormwater and minimize pollution of the environment to the maximum extent practicable. Pursuant to the NPDES, the Project is subject to the requirements set forth in the County’s Standard Urban Stormwater Mitigation Plan (SUSMP). The goals and objectives of the SUSMP are achieved through the use of Best Management Practices (BMPs) to help manage runoff water quality.

The County of Los Angeles has adopted the regulatory requirements set forth in the SUSMP of the Los Angeles Regional Water Quality Control Board (LARWQCB). BMPs typically include controlling roadway and parking lot contaminants by installing oil and grease separators at storm drain inlets; cleaning parking lots on a regular basis; incorporating peak-flow reduction and infiltration features (such as grass swales, infiltration trenches, and grass filter strips) into landscaping; and implementing education programs. The SUSMP identifies the types and sizes of private development projects that are subject to its requirements.⁶⁴ The Project is subject to the requirements of the SUSMP, which are enforced through the County’s plan approval and permit process.

⁶⁴ Project applicants are required to prepare and implement a Standard Urban Stormwater Mitigation Plan when their projects fall into any of these categories: Single-family hillside residential developments; Housing developments of 10 or more dwelling units (including single family tract developments); Industrial /Commercial developments with one acre or more of impervious surface area; Automotive service facilities*; Retail gasoline outlets*; Restaurants* Parking lots of 5,000 square feet or more of surface area or with 25 or more parking spaces; Projects with 2,500 square feet or more of impervious area that are located in, adjacent to, or draining directly to designated Environmentally Sensitive Areas (ESA). <http://www.lastormwater.org/green-la/standard-urban-stormwater-mitigation-plan/>.

Low Impact Development (LID) is a stormwater management strategy that seeks to prevent impacts of runoff and stormwater pollution as close to its source as possible. A project must comply with the LID Best Management Practices (LID BMPs), and if that is not feasible only then do SUSMP BMPs apply. Possible BMPs include site design, source control, and treatment control.

Construction

Demolition and construction activities at the Project Site have the potential to affect the quality of storm water runoff. Typically, runoff picks up pollutants as it flows over the ground or paved areas and carries these pollutants into the storm drain system or directly into natural drainages. There are three general sources of short-term construction-related stormwater pollution associated with the Project: 1) the handling, storage, and disposal of construction materials containing pollutants; 2) the maintenance and operation of construction equipment; and 3) earth moving activities which, when not controlled, may generate soil erosion.

During construction, the Project Site would contain a variety of construction materials that are potential sources of stormwater pollution, such as adhesives, cleaning agents, landscaping, plumbing, painting, heat/cooling, masonry materials, floor and wall coverings, and demolition debris. Construction material spills can also be a source of stormwater pollution and/or soil contamination.

Compliance with the General Construction Activity Stormwater Permit requirements would ensure that project impacts related to construction activities resulting in a degradation of water quality would be less than significant.

Operation

The Project will not include industrial discharge to any public water system. Under existing conditions, runoff at the Project Site may contain typical urban pollutants such as automotive fluids (including oil and grease) from parked cars and commercial cleaning and landscaping pollutants discharged into the storm drainage system. Because there would be no substantial change in the type of runoff as a result of the Project (which would continue to have automobiles, cleaning supplies, and similar elements), urban contaminants that may be present in urban runoff from the Project Site would not differ substantially in type than that which currently exists.

In compliance with the NPDES Permit and Los Angeles County Code, development projects are required to prepare a Low Impact Development (LID) report. The LID report identifies non-structural, structural, and source control and treatment control BMPs to protect surface water quality. The LID report is required to be approved prior to the issuance of a building or grading permit. Pursuant to County Code Section 12.84.450, the LID report is required to be approved which would ensure it complies with the Los Angeles County RWQCB Municipal Separate Storm Sewer System (MS4) Permit regulations.

The LID Design includes an infiltration trench for the Site with a volume of 3,498 cubic feet, which exceeds the required 3,151.80 cubic feet, or as described in the final approved LID design.⁶⁵

Overall, implementation of the LID report pursuant to the existing regulations would ensure that implementation of the Project would not violate any water quality standards, waste discharge requirements, or otherwise degrade water quality; and impacts would be less than significant.

- b) **Substantially decrease groundwater supplies or interfere substantially with groundwater recharge such that the project may impede sustainable groundwater management of the basin?**

No Impact. A significant impact may occur if a project includes deep excavations resulting in the potential to interfere with groundwater movement or includes withdrawal of groundwater or paving of existing permeable surfaces important to groundwater recharge.

The Project Site is in the Coastal Plan of Los Angeles – Central Groundwater Basin.⁶⁶ Groundwater was not encountered during exploration to 50 feet in depth. The historic high groundwater level was established by review of California Geological Survey Seismic Hazard Evaluation Report 029 Plate 1.2 entitled “Historically Highest Ground Water Contours”. Review of this plate indicates that the historically highest groundwater level is on the order of 85 feet below site grade.⁶⁷ The nearest surface water in the vicinity is the Los Angeles River channel, which classified as a Riverine and located approximately 1.25 miles south of the Project Site.⁶⁸ No settling ponds, lagoons, surface impoundments, wetlands or natural catch basins are on the Project Site.

The Project Site is located in an urbanized area of the County. The Project Site is primarily covered with hardscape and is approximately 98 percent impervious.⁶⁹ The Project will similarly occupy the entire Project Site with a new building and renovated building but with added landscaping to reduce impervious surfaces to 89 percent.⁷⁰ Thus, the Project would decrease the amount of impervious surface that affects groundwater recharge, which would be a net benefit for groundwater recharge opportunity.

⁶⁵ [Hydrology Report](#), Trittech Engineering Group, February 8, 2024, included as Appendix G to this MND.

⁶⁶ Groundwater Basins: <https://dwr.maps.arcgis.com/apps/Style/index.html?appid=740d10eefd6148579321a3abcd065a36>

⁶⁷ [Geotechnical Engineering Investigation](#), Geotechnologies Inc., September 23, 2022, page 3.

⁶⁸ U. S. Fish & Wildlife Service, National Wetlands Inventory, Wetlands Layer: <http://www.fws.gov/wetlands/Data/Mapper.html>, accessed November 10, 2022.

⁶⁹ [Hydrology Report](#), Trittech Engineering Group, February 8, 2024, included as Appendix G to this MND.

⁷⁰ [Hydrology Report](#), Trittech Engineering Group, February 8, 2024, included as Appendix G to this MND.

The development of the Project will not involve direct groundwater withdrawal, and therefore, it will not deplete groundwater supplies. Therefore, no impact would occur.

c) Substantially alter the existing drainage pattern of the site or area, including through the alteration of a Federal 100-year flood hazard area or County Capital Floor floodplain; the alternation of the course of a stream or river; or through the addition of impervious surfaces, in a manner which would:

- i) Result in substantial erosion or siltation on- or off-site?**

Less Than Significant Impact. The Project Site is located in a highly urbanized area of the County. There are no natural watercourses on the Project Site or in the vicinity of the site. The Project Site is completely developed and is considered 98 percent impervious. Current stormwater runoff flows to the local storm drain system. Under the developed-Project condition, the Project Site also would be considered 89 percent impervious.⁷¹

Since the runoff from the Project Site discharges to public stormdrain system and the post-developed runoff is less than pre-developed runoff, the Project is exempted from hydromodification. The Project is not adversely impacted to the downstream properties.⁷²

The Project Applicant would be required to prepare a SWPPP and implement BMPs to reduce runoff and preserve water quality during construction of the Project. While grading and construction activities may temporarily alter the existing drainage patterns of the site, BMPs would be implemented to minimize soil erosion impacts during Project grading and construction activities. In addition, the Project Applicant would be required to implement a LID Plan (during operation), which would control the amount of surface water runoff leaving the Project Site during a storm event. Specifically, the LID Plan would require the implementation of stormwater BMPs to retain or treat the runoff from a storm event producing 3/4-inch of rainfall in a 24-hour rain event or the 85th percentile, 24-hour rain event as determined from the Los Angeles County 85th percentile precipitation isohyetal map.⁷³ The Project would not result in substantial erosion or siltation on- or off-site, and impacts would be less than significant.

- ii) Substantially increase the rate, amount, or depth of surface runoff in a manner which would result in flooding on- or off-site?**

⁷¹ [Hydrology Report](#), Trittech Engineering Group, February 8, 2024, included as Appendix G to this MND.

⁷² [Hydrology Report](#), Trittech Engineering Group, February 8, 2024, included as Appendix G to this MND.

⁷³ Los Angeles County LID Manual: https://pw.lacounty.gov/wmd/dsp_LowImpactDevelopment.cfm

Less Than Significant Impact. Grading and construction activities on the Project Site may temporarily alter the existing drainage patterns and change off-site flows. However, construction and operation of the Project would not result in a significant increase in site runoff or any changes in the local drainage patterns that would result in flooding on- or off-site.

The Project Site is completely developed and is considered 98 percent impervious. Current stormwater runoff flows to the local storm drain system. Under the developed-Project condition, the Project Site also would be considered 89 percent impervious.⁷⁴

The Project would be required to prepare a SWPPP and implement BMPs to reduce runoff and preserve water quality during construction of the Project. Compliance with the LID Ordinance would also reduce the amount of surface water runoff leaving the Project Site as compared to the current conditions. Therefore, impacts would related to this issue would be less than significant.

- iii) **Create or contribute runoff water which would exceed the capacity of existing or planned stormwater drainage systems or provide substantial additional sources of polluted runoff?**

Less Than Significant Impact. The project is covered by the requirements of the County’s MS4 Permit to control and minimize potentially polluted runoff. Per the County’s LID Ordinance and Stormwater Ordinance, the Project may not result in an excessive amount of runoff which would exceed the capacity of stormwater drainage systems or substantially increase polluted runoff. The County’s LID Ordinance and Stormwater Ordinance would require design requirements to promote and improve the County’s watersheds and prevent potential polluted runoffs from the Project to drain into natural water bodies.

Prior to issuance of a grading permit, the Project is required to obtain approval from the DPW Land Development Division for a LID/drainage plan, and conduct appropriate infiltration tests in the LID reports to ensure the design of any flood control facilities meet the standards set in the LID Ordinance. Therefore, impacts would be less than significant.

- iv) **Impede or redirect flood flows which would expose existing housing or other insurable structures in a Federal 100-year floor hazard area or County Capital Flood floodplain to a significant risk of loss or damage involving flooding?**

⁷⁴ [Hydrology Report](#), Trittech Engineering Group, February 8, 2024, included as Appendix G to this MND.

No Impact. The Project Site is not located within a 100-year zone, as mapped by the Federal Emergency Management Agency (FEMA) flood map 06037C1643F, September 26, 2008.⁷⁵ Also, the Project Site is not located near any bodies of water. The Site is not within a County-identified flood hazard zone.⁷⁶ Thus, the Project would not have the potential to impede or redirect flood flows. Therefore, no impacts related to this issue would occur.

- d) **Otherwise place structures in Federal 100-year flood hazard or County Capital Flood floodplain areas which would require additional flood proofing and flood insurance requirements?**

No Impact. The Project Site is not within a flood hazard zone and would not place structures in a Federal 100-year flood hazard zone or County Capital Flood Severe Flood Hazard Area. Therefore, impacts relating to flood hazards would not occur.

- e) **Conflict with the Los Angeles County Low Impact Development Ordinance (L.A. County Code, Title 12, Ch. 12.84)?**

Less Than Significant Impact. The Los Angeles County LID ordinance was designed to manage rainfall and stormwater runoff in urban areas through the distribution of small, cost-effective landscape features throughout project sites. Such features include bio-retention/filtration landscape areas, reduced impervious surfaces, and functional landscaping and grading.

Pursuant to Chapter 12.84 of the County’s Code (Low-Impact Development Standards), construction, and operation BMPs would be implemented as a standard condition of the Project, which would reduce impacts to water quality during construction and operation, including those impacts associated with soil erosion and siltation. The LID Standards require that new development (1) mimics undeveloped stormwater runoff rates and volumes in any storm event up to and including the Capital Flood (2) prevents pollutants of concern from leaving the development site in stormwater as the result of storms, up to and including a Water Quality Design Storm Event, and (3) minimizes hydromodification impacts to natural drainage systems. The Project is subject to Chapter 12.48 of the County’s Code.

Development of the Project would be subject to the Los Angeles County’s LID and would incorporate BMPs that are consistent with LID. With implementation of LID BMPs, stormwater

⁷⁵ FEMA, <https://msc.fema.gov/portal/search?>, accessed November 10, 2022.
⁷⁶ Los Angeles County General Plan, Figure 12.2a, FEMA Flood Hazard Zones Policy Map: https://planning.lacounty.gov/assets/upl/project/gp_2035_2021-FIG_12-2_flood_zones.pdf

runoff from the Site would decrease compared to existing runoff flow. Therefore, impacts would be less than significant.

- f) **Use onsite wastewater treatment systems in areas with known geological limitations (e.g. high groundwater) or in close proximity to surface water (including, but not limited to, streams, lakes, and drainage course)?**

No Impact. Wastewater from the Project Site is conveyed via County sewer infrastructure to the Joint Water Pollution Control Plant which currently provides primary, secondary, and tertiary treatment for a design capacity of 260 million gallons of wastewater per day within a portion of the Los Angeles County Sanitation Districts.⁷⁷ No wastewater treatment systems are proposed as part of the Project. The Project would not include an onsite wastewater treatment system. Therefore, no impacts would occur.

- g) **In flood hazard, tsunami, or seiche zones, risk release of pollutants due to project inundation?**

No Impact. Tsunamis are tidal waves generally caused by earthquakes, sea floor landslides, rock falls, and exploding volcanic islands. The Project is located approximately 17 miles east of the Pacific Ocean and based on the inland location, not within a tsunami zone.

Seiches are oscillations generated in enclosed bodies of water that can be caused by ground shaking associated with an earthquake. Mitigation of potential seiche action has been implemented through regulation of the level of water in storage facilities and providing walls of extra height to contain seiches and prevent overflows. Dams and reservoirs are monitored during storms and measures are instituted in the event of potential overflow. There are no major water-retaining structures located immediately upgradient from the Project Site.

The project site is not located within a flood hazard, tsunami hazard, or seiche zone and is not at risk of release of pollutants due to inundation. Therefore, no impacts would occur.

- h) **Conflict with or obstruct implementation of a water quality control plan or sustainable groundwater management plan?**

Less Than Significant Impact. Use of BMPs during construction implemented as part of a SWPPP as required by the NPDES Construction General Permit and PPP WQ-1 would serve to ensure that construction activities do not result in a degradation of water quality, and impacts

⁷⁷ Los Angeles County Sanitation Districts: <https://www.app.lacsd.org/facilities/?tab=2&number=1>

would be less than significant. Thus, construction associated with the Project would not conflict or obstruct implementation of a water quality control plan.

Also, new development projects are required to implement LID (per the Regional MS4 Permit). The LID specifications and BMPs and construction plans would be required to demonstrate compliance with these regulations. Therefore, operation of the Project would not conflict with or obstruct implementation of a water quality control plan.

The Project will provide for infiltration through landscaping areas and other LID BMPs that provides for infiltration of stormwater. Thus, impacts related to water quality control plan or sustainable groundwater management plan would be less than significant.

Cumulative Impacts

The sites of the Project and the related projects are located in an urbanized area where the surrounding properties are already developed. The existing storm drainage system serving this area has been designed to accommodate runoff from an urban built-out environment. When new construction occurs, it generally does not lead to substantial additional runoff, since new developments is required to control the amount and quality of stormwater runoff coming from their respective sites. Additionally, all new development in the County is required to comply with the LID Manuel and incorporate appropriate stormwater pollution control measures into the design plans to ensure that water quality impacts are minimized. Therefore, Project cumulative impacts related to hydrology and water quality would be less than significant.

4.11 LAND USE AND PLANNING

Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
--------------------------------------	--	------------------------------------	-----------

Would the project:

- a) Physically divide an established community?

No Impact. A significant impact may occur if a project were sufficiently large enough or otherwise configured in such a way as to create a physical barrier within an established community. A typical example would be a project that involved a continuous right-of-way such as a roadway, which would divide a community and impede access between parts of the community.

The Project conforms to the existing land use patterns of the East Los Angeles community which is residential since a school is a complementary use. The Project would not cause any permanent street closures, block access to any surrounding land use, or cause any change in the existing street grid system. The Project is not of a scale or nature that would physically divide an established community. The Project is not affecting any right-of-ways. The Project will be built on an existing urban infill site and is contiguous and bounded by streets. In addition, the Site is not large enough to encompass an established community.

The Project does not propose a new construction of highways, freeways, rails or flood control channel that are generally associated with the physical division of an established community. It will conform to the existing street grid and continues with the existing pattern of residential-related and amenity development and would not create barriers within an existing community or otherwise physically divide an established community. Therefore, no impact would occur.

- b) Cause a significant environmental impact due to a conflict with any County land use plan, policy, or regulation adopted for the purpose of avoiding or mitigating an environmental effect?

No Impact. The main documents regulating land use for the Project and immediate vicinity are the County’s General Plan and Zoning Code. In addition, SCAG’s RTP/SCS provides guidance on a regional level. The Project’s relationship to these planning documents is described below.

General Plan

The County’s General Plan is the principal land use document guiding development within unincorporated Los Angeles County. The General Plan is a comprehensive plan that establishes goals and policies intended to guide growth and development in the County. The Project is subject to the Los Angeles County General Plan – East Los Angeles Community Plan. The school use is

generally consistent with the General Plan land use designation of Medium Density Residential and is authorized with approval of a CUP. The General Plan sets forth policies regarding land use, urban form, open space, economic development, public services and more for the unincorporated areas of Los Angeles County. In line with the guiding principles of the General Plan, the Project supports the principle and goal to ensure community services and infrastructures are sufficient to accommodate growth and provide the foundation for a strong and diverse economy.

As shown in **Table 4.11-1**, the Project is in substantial conformance with the applicable land use element goals and policies in the General Plan. For these reasons, the Project substantially conforms with the purpose, intent and provisions of the General Plan, including the Community Plan. The Site is not subject to any specific plan.

**Table 4.11-1
Consistency with the County General Plan Land Use Element**

Goals and Policies	Consistency Discussion
<p>Goal LU 4: Infill development and redevelopment that strengthens and enhances communities.</p> <p>Policy LU 4.1: Encourage infill development in urban and suburban areas on vacant and underutilized and/or brownfield sites.</p> <p>Policy LU 4.2: Encourage the adaptive reuse of underutilized structures and the revitalization of older, economically distressed neighborhoods.</p>	<p>Consistent. The Project meets this goal and policy by revitalizing and optimizing an underutilized property. Currently, the Site is used as a church that is underused and underimproved. The Project will optimize the use and enhance the neighborhood with its thoughtful design features that is cohesive with the existing residential community. Parents, families and caretakers of the students of the Project live in close proximity to the Site which will result in a strengthened community. The Project proposes to renovate Building 2 for the new school-related uses.</p>
<p>Goal LU 5: Vibrant, livable and healthy communities with a mix of land uses, services and amenities.</p> <p>Policy LU 5.5: Ensure that all households have access to sufficient supply of quality early care and education and supervised school-age enrichment options for children from birth to age 13.</p>	<p>Consistent. The Project meets this goal and policy by expanding opportunities for children in East Los Angeles to receive a high-quality education in close proximity to where they live. This will result in reduced commute times to schools for residents and families in the neighborhood. The Project delivers a new, educational use to serve the surrounding community and is designed to be compatible with the adjacent land uses and community character.</p>
<p>Los Angeles County General Plan: https://planning.lacounty.gov/assets/upl/project/gp_final-general-plan-ch6.pdf</p>	

Zoning Code

Title 22 of the Los Angeles County Codes describes and elaborates on permitted land uses and contains more specific information related to permitted uses and development standards.

School Use CUP

Pursuant to LACC Section 22.18.030, a school use is permitted in the R-3 zone, subject to approval and issuance of a conditional use permit (CUP) under LACC Section 22.158.050. Thus, the Applicant requests a CUP to permit the construction, operation, and maintenance of a school use on the Site. The Project is a TK-8th grade school which are commonly found in residential neighborhoods similar to the neighborhood where the Site is located, throughout the County. The Project is expanding the current square footage at the Site by 12,948 square feet and is renovating what is currently an underutilized church into a renovated and well-designed school that will enhance the current community. Residential neighborhoods are common locations for schools and can be viewed as ideal due to it being a safe environment that is in close proximity to the students' families. The Project's location, size, height, operations and other significant features will be compatible with and will not adversely affect or diminish the value of neighboring properties.

Conclusion

The Project would comply with the requirement set forth in Title 22 of the Los Angeles County Code, and the Project would not conflict with the land use plan, policies, or regulations. Impacts would be less than significant.

SCAG 2020-2045 RTP/SCS

SB 375 requires MPOs such as SCAG to revise and update their RTPs and SCS' periodically, and SCAG has created a 2020-2045 updated RTP/SCS called Connect SoCal. On May 7, 2020, SCAG's Regional Council adopted Connect SoCal for federal transportation conformity purposes only. Connect SoCal is a long-range visioning plan that builds upon and expands land use and transportation strategies established over several planning cycles to increase mobility options and achieve a more sustainable growth pattern. It charts a path toward a more mobile, sustainable, and prosperous region by making connections between transportation networks, between planning strategies and between the people whose collaboration can improve the quality of life for Southern Californians.

The 2020-2045 RTP/SCS outlines more than \$638 billion in transportation system investments through 2045 and was prepared through a collaborative, continuous, and comprehensive process with input from local governments, county transportation commissions, tribal governments, non-profit organizations, businesses and local stakeholders within the counties of Imperial, Los Angeles, Orange, Riverside, San Bernardino and Ventura. The 2020-2045 RTP/SCS includes strategies for accommodating projected population, household and employment growth in the SCAG region by 2045 as well as a transportation investment strategy for the region. These land use strategies are directly tied to supporting related GHG emissions reductions through increasing transportation choices with a reduced dependence on automobiles and an increase growth in walkable, mixed-use communities and HQTAs and by encouraging growth near destinations and mobility options, promoting diverse housing choices, leveraging technology innovations, supporting implementation of sustainability policies, and promoting a green region.

As discussed on **Table 4.11-2**, the Project would be consistent with the applicable goals of the 2020-2045 RTP/SCS.

**Table 4.11-2
Consistency with the 2020-2045 RTP/SCS**

Goals and Guiding Principles	Consistency Discussion
<p>Goal 1 Encourage regional economic prosperity and global competitiveness.</p>	<p>Not Applicable/Consistent. This goal is directed towards SCAG and the County and does not apply to the Project. However, the Project would develop a new school within an urbanized residential community in, supporting the area’s educational needs, and ensuring economic prosperity and global competitiveness of Southern California.</p>
<p>Goal 2 Improve mobility, accessibility, reliability, and travel safety for people and goods.</p>	<p>Consistent. The Project Site is located in a highly urbanized area in the County. The Project includes development of a new school within an HQTAs and a Living Corridor, as defined by SCAG, and also in close proximity to existing residential uses.</p> <p>During construction, safety measures will be implemented to ensure the safety of pedestrians and other vehicles in general, as the construction area could create hazards of incompatible/slow-moving construction and haul vehicles. The Project will coordinate with LADPW on construction and best management practices, including but not limited to: install appropriate construction related traffic signs around the site to ensure pedestrian and vehicle safety. Sidewalks could be closed adjacent to the Project Site and pedestrians will be directed across the streets prior to the Project Site. Sidewalk will be reopened as soon as reasonably feasible taking construction and construction staging into account.</p> <p>For student drop-off and pick-up operations, signs will be posted at the ingress and egress driveways indicating turning restrictions. Traffic monitors will also assist in directing vehicles through the drop-off/pick-up area.</p> <p>Also, the Project’s operations would ensure safe travel at and near the Project Site by ensuring safe vehicular and pedestrian access since the Project would be subject to the site plan review requirements of the County and would be required to coordinate with the Department of Public Works and the Los Angeles County Fire Department to ensure that all access points, driveways, and parking areas would not create a design hazard to local roadways. Therefore, the Project would allow for mobility, accessibility, reliability, and travel safety for people and goods.</p>

**Table 4.11-2
Consistency with the 2020-2045 RTP/SCS**

Goals and Guiding Principles	Consistency Discussion
Goal 3 Enhance the preservation, security, and resilience of the regional transportation system.	Not Applicable. This goal is directed toward SCAG and other jurisdictions that are responsible for developing, maintaining, and improving the regional transportation system.
Goal 4 Increase person and goods movement and travel choices within the transportation system.	Consistent. The Project includes development of a new school in an urbanized residential community. The Project would include bicycle parking spaces, which would support bicycle use as a mode of transportation to and from the Project Site. In addition, the Project Site’s location near transit opportunities would further reduce dependence on automobile travel, reducing VMT.
Goal 5 Reduce greenhouse gas emissions and improve air quality.	Consistent. The Project includes development of a new school in an urbanized residential community. The Project would include bicycle parking spaces, which would support bicycle use as a mode of transportation to and from the Project Site. In addition, the Project Site’s location near robust transit opportunities would further reduce dependence on automobile travel, reducing VMT and associated GHG emissions and other pollutant emissions.
Goal 6 Support healthy and equitable communities.	Consistent. The Project includes development of a new school in an urbanized residential community. Given the urban nature of the Project Site area, Project employees would be able to walk and bike to/from work. In addition, the Project Site’s location near robust transit opportunities would further reduce dependence on automobile travel, reducing the need to own an automobile and pay for parking.
Goal 7 Adapt to a changing climate and support an integrated regional development pattern and transportation network.	Consistent. The Project includes development of a new school in an urbanized residential community. Also, the Project includes bicycle parking spaces. The Project Site’s proximity to transit and the Project’s inclusion of bicycle parking and pedestrian amenities help to reduce dependence on automobile travel and to reduce mobile-source GHG emissions.
Goal 8 Leverage new transportation technologies and data-driven solutions that result in more efficient travel.	Not Applicable. This goal is directed toward SCAG and other jurisdictions that are responsible for developing, maintaining, and improving the regional transportation system.
Goal 10 Promote conservation of natural and agricultural lands and restoration of habitats.	Consistent. The Project is an infill development that would not affect any natural or agricultural lands or restoration of habitats.
Guiding Principle 1 Base transportation investments on adopted regional performance	Not Applicable. This principle is directed toward SCAG and other jurisdictions/agencies that are

**Table 4.11-2
Consistency with the 2020-2045 RTP/SCS**

Goals and Guiding Principles	Consistency Discussion
indicators and MAP-21/FAST Act regional targets.	responsible for developing, maintaining, and improving the regional transportation system.
Guiding Principle 2 Place high priority for transportation funding in the region on projects and programs that improve mobility, accessibility, reliability and safety, and that preserve the existing transportation system.	Not Applicable. This principle is directed toward SCAG and other jurisdictions/agencies that are responsible for developing, maintaining, and improving the regional transportation system.
Guiding Principle 3 Assure that land use and growth strategies recognize local input, promote sustainable transportation options, and support equitable and adaptable communities.	Not Applicable. This principle is directed toward SCAG and other jurisdictions/agencies that are responsible for developing and implementing growth strategies.
Guiding Principle 4 Encourage RTP/SCS investments and strategies that collectively result in reduced non-recurrent congestion and demand for single occupancy vehicle use, by leveraging new transportation technologies and expanding travel choices.	Not Applicable. This principle is directed toward SCAG and other jurisdictions/agencies that are responsible for developing, maintaining, and improving the regional transportation system.
Guiding Principle 5 Encourage transportation investments that will result in improved air quality and public health, and reduced greenhouse gas emissions.	Not Applicable. This principle is directed toward SCAG and other jurisdictions/agencies that have control over transportation investments.
Guiding Principle 6 Monitor progress on all aspects of the Plan, including the timely implementation of projects, programs, and strategies.	Not Applicable. This principle is directed toward SCAG that has the responsibility of monitoring the progress of Connect SoCal.
Guiding Principle 7 Regionally, transportation investments should reflect best-known science regarding climate change vulnerability, in order to design for long term resilience.	Not Applicable. This principle is directed toward SCAG and other jurisdictions/agencies that have control over transportation investments.
Source: 2020-2045 RTP/SCS, adopted May 2020.	

c) **Conflict with the goals and policies of the General Plan related to Hillside Management Areas or Significant Ecological Areas?**

No Impact. The Project Site is not located in a Hillside Management Area⁷⁸ or Significant Ecological Area.⁷⁹ Therefore, no impact would occur.

⁷⁸ Los Angeles County General Plan, Figure 9.8, Hillside Management Areas and Ridgeline Management Map: https://planning.lacounty.gov/assets/upl/project/gp_2035_2021-FIG_9-8_hillside_management_areas.pdf

⁷⁹ Los Angeles County General Plan, Figure 9.3, Significant Ecological Areas and Coastal Resource Areas Policy Map: https://planning.lacounty.gov/assets/upl/project/gp_2035_2019-FIG_9-3_significant_ecological_areas.pdf

Cumulative Impacts

As discussed previously, the Project would not result in any inconsistencies with any of the applicable plans, policies, or regulations associated with development of the Project Site. The County would assess the consistency of the related projects with all applicable plans, policies, and regulations associated with those sites, individually. Regardless of any potentially inconsistencies the related projects may result in, because the Project would not result in any inconsistencies, the Project would not have the potential to contribute to any cumulative inconsistency impacts.

4.12 MINERAL RESOURCES

	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
Would the project:				
a) Result in the loss of availability of a known mineral resource that would be of value to the region and the residents of the state?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>

No Impact. A significant impact may occur if the Project Site is located in an area used or available for extraction of a regionally-important mineral resource, or if the Project would convert an existing or future regionally-important mineral extraction use to another use, or if the Project would affect access to a site used or potentially available for regionally-important mineral resource extraction.

California’s Geological Survey (State Department of Conservation, Division of Mines and Geology) identifies deposits of regionally- significant aggregate resources. These clusters or belts of mineral deposits are designated as Mineral Resources Zones (MRZ-2). MRZ-2 sites contain potentially significant sand and gravel deposits, which are to be conserved. Any proposed development plan must consider access to the deposits for purposes of extraction. Much of the area within the MRZ-2 zone in Los Angeles was developed with structures prior to the MRZ-2 classification and, therefore, are unavailable for extraction.

The Project Site is not located in a Mineral Resources area.⁸⁰ Neither the Project Site nor the surrounding area is in an MRZ-2 zone, nor identified as an area containing mineral deposits of regional or statewide significance. Therefore, no impact to known mineral deposits would occur.

The California Geologic Energy Management Division (CalGEM) online mapping of wells shows there is no oil and gas well on the Site.⁸¹ Therefore, no impact would occur.

b) Result in the loss of availability of a locally-important mineral resource recovery site delineated on a local general plan, specific plan or other land use plan?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
--	--------------------------	--------------------------	--------------------------	-------------------------------------

No Impact. A significant impact would occur if a project were located in an area used or available for extraction of a locally-important mineral resource and the Project converted an existing or

⁸⁰ Los Angeles County General Plan, Figure 9.6, Mineral Resources:
https://planning.lacounty.gov/assets/upl/project/gp_2035_2014-FIG_9-6_mineral_resources.pdf

⁸¹ California Department of Conservation, Division of Oil, Gas & Geothermal Resources (DOGGR), Online Mapping System, District 1, <https://maps.conservation.ca.gov/doggr/wellfinder/#close/>, accessed November 10, 2022.

potential future locally-important mineral extraction use to another use or if the Project affected access to a site in use or potentially available for locally-important mineral resource extraction.

No mineral extraction activities occur on the Site currently, or historically. As such, the proposed project would not result in the loss of availability of a known mineral resource as the mineral resource was not previously available for extraction. Additionally, as stated in the response to Question 12(a), no oil wells exist on the Project Site. Furthermore, the Project Site is surrounded by dense urban uses. Thus, the Project Site would not be an adequate candidate for mineral extraction. Therefore, no impact would occur.

Cumulative Impacts

As discussed previously, the Project would not result in any impacts related to mineral resources. Regardless to what degree the related projects could result in impacts related to mineral resources, because the Project would not result in any impacts related to mineral resources, the Project would not have the potential to contribute to any cumulative impacts.

4.13 NOISE

This section is based on the following items, which are included as **Appendix H** to this MND:

H-1 Noise Technical Report and Modeling, DKA Planning, December 2023

H-2 Vibration Technical Report and Modeling, DKA Planning, September 2023

	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
Would the project result in:				
a. Generation of a substantial temporary or permanent increase in ambient noise levels in the vicinity of the project in excess of standards established in the County General Plan or noise ordinance (Los Angeles County Code, Title 12, Chapter 12.08), or applicable standards of other agencies?	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>

Less Than Significant Impact With Mitigation Incorporated.

County of Los Angeles General Plan Noise Element

The County of Los Angeles General Plan includes a Noise Element that includes policies and standards to guide the control of noise to protect residents, workers, and visitors. The noise standards identified in the Noise Element serve as guidelines to evaluate the acceptability of the transportation noise level impacts. These standards are used to assess the long-term traffic noise impacts on land uses. The following is a summary of General Plan policies that are relevant to the Project.

Policy N 1.3: *Minimize impacts to noise-sensitive land uses by ensuring adequate site design, acoustical construction, and use of barriers, berms, or additional engineering controls through Best Available Technologies (BAT).*

Policy N 1.4: *Enhance and promote noise abatement programs in an effort to maintain acceptable levels of noise as defined by the Los Angeles County Exterior Noise Standards and other applicable noise standards.*

Policy N 1.5: *Ensure compliance with the jurisdictions of State Noise Insulation Standards (Title 24, California Code of Regulations and Chapter 35 of the Uniform Building Code), such as noise insulation of new multifamily dwellings constructed within the 60 dB (CNEL or Ldn) noise exposure contours.*

Policy N 1.9: *Require construction of suitable noise attenuation barriers on noise sensitive uses that would be exposed to exterior noise levels of 65 dBA CNEL and above, when unavoidable impacts are identified.*

Policy N 1.12: *Decisions on land adjacent to transportation facilities, such as the airports, freeways and other major highways, must consider both existing and future noise levels of these transportation facilities to assure the compatibility of proposed uses.*

Based on these guidelines, an exterior noise level of 65 dBA CNEL is generally considered the maximum exterior noise level for noise-sensitive receptors.

County of Los Angeles Code

The County of Los Angeles noise control ordinance restricts unnecessary, excessive, and annoying noise. Examples of violations cited in the Noise Ordinance that would pertain to the Project include:

12.08.390. Exterior Noise Standards. Citations for violations are authorized when:

A. *Unless otherwise herein provided, the following exterior noise levels shall apply to all receptor properties within a designated noise zone:*

Noise Zone	Designated Noise Zone Land Use (Receptor Property)	Time Interval	Exterior Noise Level (dB)
I	Noise Sensitive	Anytime	45
II	Residential	10:00 P.M. to 7:00 A.M.	45
		7:00 A.M. to 10:00 P.M.	50
III	Commercial	10:00 P.M. to 7:00 A.M.	55
		7:00 A.M. to 10:00 P.M.	60
IV	Industrial	Anytime	70
LACC 12.08.390.			

B. *Unless otherwise herein provided, no person shall operate or cause to be operated, any source of sound at any location within the unincorporated County, or allow the creation of any noise on property owned, leased, occupied or otherwise controlled by such person which causes the noise level, when measured on any other property either incorporated or unincorporated, to exceed any of the following exterior noise standards:*⁸²

82 Ambient noise levels were measured at the Project Site on November 1, 2023 from 1:55 P.M.-2:55 P.M. using a Larson Davis Sound Advisor 831C unit. This showed that while ambient noise levels for the area were consistent with exterior standards set by the County, noise levels for Standard 1 were slightly higher than the recommended standard.

Standard No. 1 shall be the exterior noise level which may not be exceeded for a cumulative period of more than 30 minutes in any hour. Standard No. 1 shall be the applicable noise level from subsection A of this section; or, if the ambient L50 exceeds the foregoing level, then the ambient L50 becomes the exterior noise level for Standard No. 1.

Standard No. 2 shall be the exterior noise level which may not be exceeded for a cumulative period of more than 15 minutes in any hour. Standard No. 2 shall be the applicable noise level from subsection A of this section plus 5 dB; or, if the ambient L25 exceeds the foregoing level, then the ambient L25 becomes the exterior noise level for Standard No. 2.

Standard No. 3 shall be the exterior noise level which may not be exceeded for a cumulative period of more than five minutes in any hour. Standard No. 3 shall be the applicable noise level from subsection A of this section plus 10 dB; or, if the ambient L8.3 exceeds the foregoing level, then the ambient L8.3 becomes exterior noise level for Standard No. 3.

Standard No. 4 shall be the exterior noise level which may not be exceeded for a cumulative period of more than one minute in any hour. Standard No. 4 shall be the applicable noise level from subsection A of this section plus 15 dB; or, if the ambient L1.7 exceeds the foregoing level, then the ambient L1.7 becomes the exterior noise level for Standard No. 4.

Standard No. 5 shall be the exterior noise level which may not be exceeded for any period of time. Standard No. 5 shall be the applicable noise level from subsection A of this section plus 20 dB; or, if the ambient L0 exceeds the foregoing level then the ambient L0 becomes the exterior noise level for Standard No. 5.

C. If the measurement location is on a boundary property between two different zones, the exterior noise level utilized in subsection B of this section to determine the exterior standard shall be the arithmetic mean of the exterior noise levels in subsection A of the subject zones. Except as provided for above in this subsection C, when an intruding noise source originates on an industrial property and is impacting another noise zone, the applicable exterior noise level as designated in subsection A shall be the daytime exterior noise level for the subject receptor property.

Exterior Noise Levels at Project Site (1059 S. Gage Avenue)

Exterior Noise Standards dBA - Industrial										
Duration	Std #1 = L50		Std #2 = L25		Std #3 = L8.3		Std #4 = L1.7		Std #5 = L0	
	30 min/hr	Result	15 min/hr	Result	5 min/hr	Result	1 min/hr	Result	At no time	Result
One hour	50.0	51.3	55.0	53.0	60.0	54.7	65.0	57.9	70.0	69.5
Shaded measurement represents standard dB exceedance for the cumulative period. Measurements taken November 1, 2023 from 1:55 P.M.-2:55 P.M.										

D. The ambient noise histogram shall be measured at the same location along the property line utilized in subsection B of this section, with the alleged intruding noise source inoperative. If for any reason the alleged intruding noise source cannot be turned off, the ambient noise histogram will be estimated by performing a measurement in the same general area of the alleged intruding noise source but at a sufficient distance such that the noise from the alleged intruding noise source is at least 10 dB below the ambient noise histogram in order that only the actual ambient noise histogram be measured. If the difference between the ambient noise histogram and the alleged intruding noise source is 5 to 10 dB, then the level of the ambient noise histogram itself can be reasonably determined by subtracting a one- decibel correction to account for the contribution of the alleged intruding noise source.

E. In the event the intrusive exceeds the exterior noise standards as set forth in subsections B and C of this section at a specific receptor property and the health officer has reason to believe that this violation at said specific receptor property was unanticipated and due to abnormal atmospheric conditions, the health officer shall issue an abatement notice in lieu of a citation. If the specific violation is abated, no citation shall be issued therefor. If, however, the specific violation is not abated, the health officer may issue a citation.

12.08.440 - Construction noise.

A. Operating or causing the operation of any tools or equipment used in construction, drilling, repair, alteration or demolition work between weekday hours of 7:00 p.m. and 7:00 a.m., or at any time on Sundays or holidays, such that the sound therefrom creates a noise disturbance across a residential or commercial real-property line, except for emergency work of public service utilities or by variance issued by the health officer is prohibited.

B. Noise Restrictions at Affected Structures. The contractor shall conduct construction activities in such a manner that the maximum noise levels at the affected buildings will not exceed those listed in the following schedule:

1. At Residential Structures.

a. Mobile Equipment. Maximum noise levels for nonscheduled, intermittent, short-term operation (less than 10 days) of mobile equipment:

	Single-Family Residential	Multi-Family Residential	Semi-Residential/ Commercial
Daily, except Sundays and legal holidays, 7:00 A.M. to 8:00 P.M.	75 dBA	80 dBA	85 dBA
Daily, 8:00 P.M. to 7:00 A.M. and all day Sunday and legal holidays	60 dBA	64 dBA	70 dBA
LACC 12.08.440.			

b. *Stationary Equipment. Maximum noise level for repetitively scheduled and relatively long-term operation (periods of 10 days or more) of stationary equipment:*

	Single-Family Residential	Multi-Family Residential	Semi-Residential/ Commercial
Daily, except Sundays and legal holidays, 7:00 A.M. to 8:00 P.M.	60 dBA	65 dBA	70 dBA
Daily, 8:00 P.M. to 7:00 A.M. and all day Sunday and legal holidays	50 dBA	55 dBA	60 dBA
LACC 12.08.440.			

2. *At Business Structures.*

a. *Mobile equipment. Maximum noise levels for nonscheduled, intermittent, short-term operation of mobile equipment:*

Daily, including Sunday and legal holidays, all hours: maximum of 85dBA.

C. *All mobile or stationary internal-combustion-engine powered equipment or machinery shall be equipped with suitable exhaust and air-intake silencers in proper working order.*

D. *In case of a conflict between this chapter and any other ordinance regulating construction activities, provisions of any specific ordinance regulating construction activities shall control.*

12.08.530 - Residential air conditioning or refrigeration equipment.

Operating or permitting the operation of any air conditioning or refrigeration equipment in such a manner as to exceed any of the following sound levels is prohibited.

Measurement Location	Units Installed Before 1-1-80 (dBA)	Units Installed On or After 1-1-80 (dBA)
Any point on neighboring property line, 5 ft above grade level, no closer than 3 ft from any wall.	60	55
Center of neighboring patio, 5 ft above grade level, no closer than 3 ft from any wall.	55	50
Outside the neighboring living area window nearest the equipment location, not more than 3 ft from the window opening, but at least 3 ft from any other surface.	55	50
LACC 12.08.530.		

Existing Conditions

Noise Sensitive Receptors

The Project Site is located in a residential area within East Los Angeles. Sensitive receptors within 0.25 miles of the Project Site include, but are not limited to, the following representative sampling (see **Figure 4.13-1**):

- Residences (multi- and single-family), 1075 Gage Avenue; five feet south of the Project Site.
- Residences (multi-family), 1049 Gage Avenue; five feet north and east of the Project Site.
- Residences (single-family to the north and multi-family to the south), Eastman Avenue (east side); five feet north and south of the Project Site.
- Residences (multi-family), Gage Avenue (east side); 70 feet east of the Project Site.
- Residences (multi-family), 1142 Eastman Avenue; 320 feet south of the Project Site.
- LA Community Hospital, 400 feet southwest of the Project Site.
- Eastman Avenue Elementary School, 740 feet south of the Project Site.

Existing Ambient Noise Levels

The Project Site is improved with two church-related buildings totaling 25,302 square-feet with a surface parking lot. Operational noise from the Project Site includes six roof-top units providing air conditioning for the two main buildings on-site that occasionally generate minor levels of noise (approximately 81.9 dBA at one foot of distance).⁸³

There is also minor noise from the operation of the church's parking lot, including tire friction as vehicles navigate to and from parking spaces, minor engine acceleration, doors slamming, and occasional car alarms. Most of these sources are instantaneous (e.g., car alarm chirp, door slam) while others may last a few seconds. Intermittent noise from solid waste management and collection activities are of short duration, as are occasional loading of goods, and landscape maintenance using leaf blowers and other equipment.

Existing development also produces noise off-site, as 192 daily vehicle trips travel to and from the Project Site,⁸⁴ as traffic is the primary source of noise near the Project Site, largely from the operation of vehicles with internal combustion engines and frictional contact with the ground and air.⁸⁵

⁸³ County of Pomona, Pomona Ranch Plaza WalMart Expansion Project, Table 4.4-5; August 2014. Source was cluster of mechanical rooftop condensers including two Krack MXE-04 four-fan units and one MXE-02 two-fan unit. Reference noise level based on 30 minutes per hour of activity.

⁸⁴ Transportation Impact Analysis Screen-Out, Linscott, Law & Greenspan, August 23, 2023.

⁸⁵ World Health Organization, <https://www.who.int/docstore/peh/noise/Comnoise-2.pdf> accessed March 18, 2021.

In October 2022 (on a Wednesday during morning rush hour non-holiday week with schools in session), DKA Planning took 15 minute short-term noise measurements near the Project site to determine the ambient noise conditions of the neighborhood near sensitive receptors.⁸⁶ These locations were chosen to assess the ambient noise (in this case from mobile sources) at the nearest sensitive receptors, and at a location south of the I-5 Freeway. As shown in **Table 4.13-1**, noise levels along roadways near the Project Site ranged from 53.6 to 68.1 dBA L_{eq} , which was generally consistent with the traffic volumes on the applicable street(s) and exposure to freeway traffic on the I-5 freeway, despite the presence of ten-foot high soundwalls on both the north- and southbound lanes of the freeway.

Figure 4.13-1 illustrates where ambient noise levels were measured near the Project Site to establish the noise environment and their relationship to the applicable sensitive receptor(s). 24-hour CNEL noise levels are generally considered “Normally Acceptable” and “Conditionally Acceptable” for the types of land uses near the Project Site.

**Table 4.13-1
Existing Noise Levels**

Noise Measurement Locations	Primary Noise Source	Sound Levels		Nearest Sensitive Receptor(s)	Noise/Land Use Compatibility ^b
		dBA (L_{eq})	dBA (CNEL) ^a		
A. 1142 Eastman Ave.	Traffic on I-5 Freeway	61.8	59.8	LA Community Hospital; Residences-1142 Eastman Ave.	Normally Acceptable
B. 1044 Eastman Ave.	Traffic on Eastman Ave.	57.5	55.5	Residences-Eastman Ave.	Normally Acceptable
C. 1075 Gage Ave.	Traffic on I-5 Freeway	68.1	66.1	Residences-1075 Gage Ave, Gage Ave (east side)	Conditionally Acceptable
D. 1049 Gage Ave.	Traffic on Gage Ave.	53.6	51.6	Residences – 1049 Gage Ave.	Normally Acceptable

^a Estimated based on short-term (15-minute) noise measurement using Federal Transit Administration procedures from 2018 Transit Noise and Vibration Impact Assessment Manual, Appendix E, Option 4.
^b Pursuant to California Office of Planning and Research “General Plan Guidelines, Noise Element Guidelines, 2017. When noise measurements apply to two or more land use categories, the more noise-sensitive land use category is used. See compatibility considerations between land uses and exterior noise levels in the appendix for definition of compatibility designations.
 Source: DKA Planning, 2022.

⁸⁶ Noise measurements were taken using a Quest Technologies Sound Examiner SE-400 Meter. The Sound Examiner meter complies with the American National Standards Institute (ANSI) and International Electrotechnical Commission (IEC) for general environmental measurement instrumentation. The meter was equipped with an omni-directional microphone, calibrated before the day’s measurements, and set at approximately five feet above the ground.

**Figure 4.13-1
Noise Measurement Locations**

Construction

On-Site Construction Activities

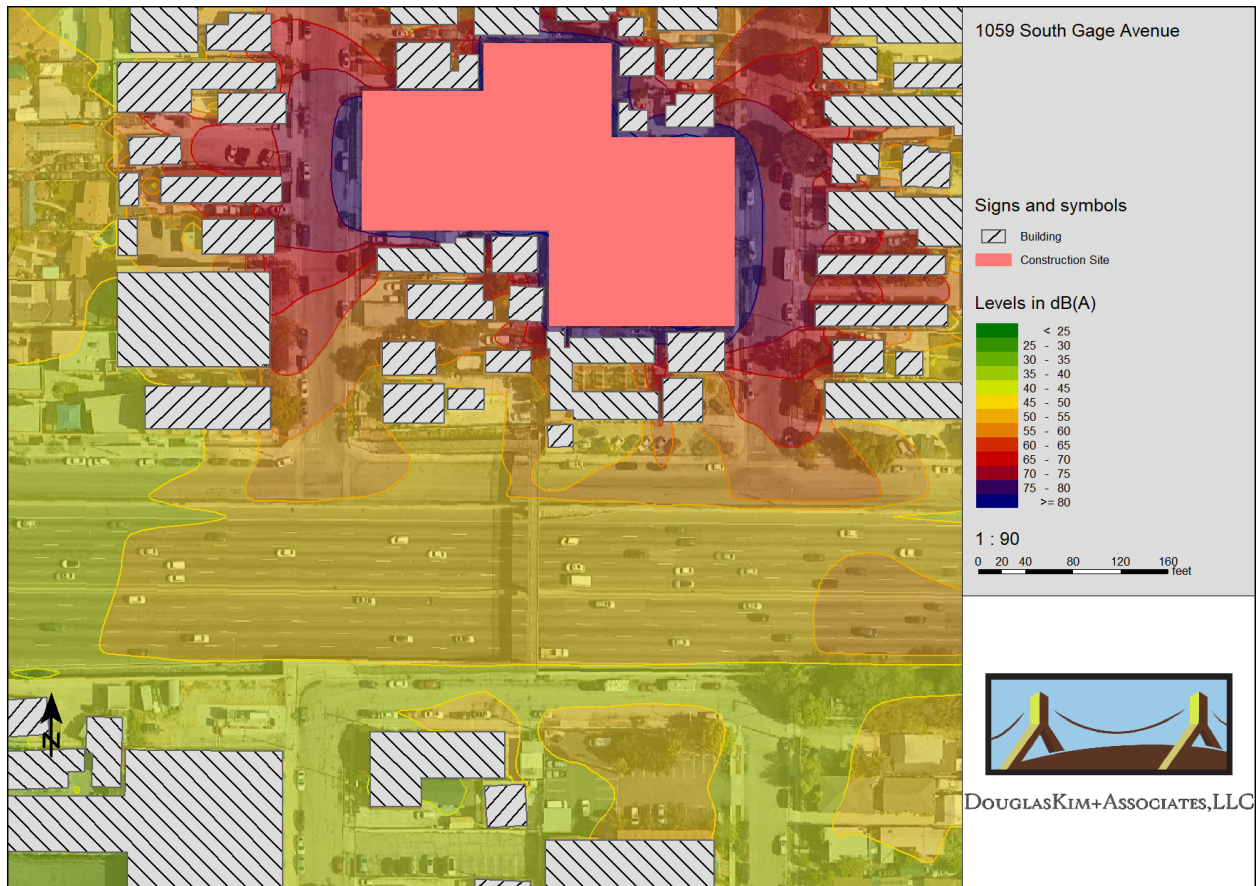

Construction would generate noise during the construction process that would span twelve months of demolition, site preparation, grading, utilities trenching, building construction, paving, and application of architectural coatings. During all construction phases, noise-generating activities could occur at the Project Site Monday through Saturday between 7:00 A.M. and 7:00 P.M. in accordance with Section 12.08.440 of the County’s noise ordinance.

Noise levels would generally peak during the demolition and grading phases, when diesel-fueled heavy-duty equipment like excavators and dozers are used to move large amounts of debris and dirt, respectively. This equipment is mobile in nature and does not always operate at in a steady-

state mode full load, but rather powers up and down depending on the duty cycle needed to conduct work. As such, equipment is occasionally idle during which time no noise is generated.

During other phases of construction (e.g., trenching, building construction, paving, architectural coatings), noise impacts are generally lesser than during grading because they are less reliant on using heavy equipment with internal combustion engines. Smaller equipment such as forklifts, generators, and various powered hand tools and pneumatic equipment would generally be utilized. Off-site secondary noises would be generated by construction worker vehicles, vendor deliveries, and haul trucks. **Figure 4.13-2** illustrates how noise would propagate from the construction site during the demolition and grading phase.

**Figure 4.13-2
Construction Noise Sound Contours (without Mitigation)**

For purposes of this analysis, the threshold of significance for the Project’s construction noise impacts is an increase of 5 dBA over existing ambient noise levels. As shown in **Table 4.13-2**, when considering ambient noise levels, the use of multiple pieces of powered equipment simultaneously would elevate ambient noise more than 5 dBA at two of the six analyzed sensitive

receptors. Therefore, the Project’s on-site construction noise impact would be less than significant.

**Table 4.13-2
Construction Noise Impacts at Off-Site Sensitive Receptors (Without Mitigation)**

Receptor	Absolute Noise Threshold*	Maximum Construction Noise Level (dBA Leq)	Existing Ambient Noise Level (dBA Leq)	New Ambient Noise Level (dBA Leq)	Increase (dBA Leq)	Potentially Significant ?
1. LA Community Hospital	85.0	44.3	61.8	61.9	0.1	No
2. Residences – 1049 Gage Ave.	80.0	69.0	53.6	69.1	15.5	Yes
3. Residences – 1075 Gage Ave.	80.0	67.2	68.1	70.7	2.6	No
4. Residences – 1142 Eastman Ave.	80.0	44.5	61.8	61.9	0.1	No
5. Residences – Eastman Ave.	80.0	65.0	57.5	65.7	8.2	Yes
6. Residences – Gage Ave. (east side)	75.0/80.0	70.9	68.1	72.7	4.6	No
* Pursuant to LA County Code Section 12.08.440 for daytime construction between 7:00 A.M. and 8:00 P.M. ** Threshold for single-family and multi-family residential Source: DKA Planning, 2022.						

The applicant shall abide by the requirements contained in Title 12, Section 12.08, Noise Control Ordinance for the County of Los Angeles. The sections in Title 12 that apply to this Project include but are not limited to: 12.08.390 Exterior Noise Standards, 12.08.440 Construction Noise, 12.08.520 Refuse Collection Vehicles, and 12.08.530 Residential Air-Conditioning.

For all the residential receptors near the Project Site, maximum noise levels would not violate County Noise Ordinance Section 12.08.440(a), which establishes maximum noise levels allowable during construction. Specifically, it sets an 80 dBA limit at multi-family residential for construction that lasts less than ten days.⁸⁷ The limit for commercial uses is 85 dBA. Therefore, the Project’s on-site construction noise impact would be significant, but mitigable. **Mitigation Measures MM-NOI-1** through **MM-NOI-5** would help comply with Title 12, Section 12.08.440.

The Project would utilize noise barriers on the northern perimeter of the Project Site from Eastman Avenue to Gage Avenue and southern perimeter of the Project Site that fronts the adjacent residential buildings on 1058 and 1064 Eastman Avenue.

⁸⁷ The County’s noise ordinance does not have standards for noise from mobile equipment lasting ten days or more. As a result, the standards for mobile source noise less than ten days (LA County Code Section 12.08.440) is used for longer construction activities.

Federal Transportation Administration (FTA) provides some general guidance on noise barriers in its Transit Noise and Vibration Impact Assessment Manual, September 2018:⁸⁸

Noise barriers can be made of any outdoor weather-resistant solid material that meets the minimum sound transmission loss required by the project. Materials that are commonly used for noise barriers include 16-gauge steel, 1-inch thick plywood, and any reasonable thickness of concrete. Typically, a surface density of 4 pounds per square foot is required. Areas with strong winds may require more stringent structural requirements. It is critical to seal any gaps between barrier panels and between the barrier and the ground or elevated guideway deck for maximum performance.

California Department of Transportation also provides some general guidance on noise barriers in its Technical Noise Supplement to the Traffic Noise Analysis Protocol, September 2013:⁸⁹

As a general rule, any material weighing 4 pounds per square foot or more has a transmission loss of at least 20 dBA. Such material would be adequate for a noise reduction of at least 10 dBA due to diffraction. Please note that this weight can be attained by a variety of material types. The denser a material is, the thinner it may be.

Table 5-1 of the Technical Noise Supplement to the Traffic Noise Analysis Protocol, shows the effectiveness of Plexiglas, plywood, fir wood, aluminum, steel, concrete. Typical construction barriers are plywood, and a 1-inch thick plywood has a transmission loss of 23 dBA (there is a 10 dBA gap due to diffusion, which would result in a 13 dBA reduction), and a 0.5-inch plywood has a transmission loss of 20 dBA (and a 10 dBA reduction). Both of these plywood options would be adequate for achieving the necessary 10.6 dBA reduction on the northern perimeter and 3.3 dBA reduction on the southern perimeter.

Mitigation Measures

MM-NOI-1 A temporary noise barrier shall be installed along the northern perimeter of the Project Site from Eastman Avenue to Gage Avenue. The barrier shall be at least four meters in height, made of at least 1-inch thick plywood or other equivalent material shown by Caltrans to provide a transmission loss of 23 dBA (which would be adequate for a noise reduction of at least 13 dBA), and be capable of reducing construction-related noise levels at the adjacent residences by at least 10.6 dBA and not have any gaps or holes between the panels or at the bottom.

MM-NOI-2 A temporary noise barrier shall be installed along the southern perimeter of the Project Site that fronts the adjacent residential buildings on 1058 and 1064

⁸⁸ Federal Transportation Administration (FTA), Transit Noise and Vibration Impact Assessment Manual, September 2018, page 105: https://www.transit.dot.gov/sites/fta.dot.gov/files/docs/research-innovation/118131/transit-noise-and-vibration-impact-assessment-manual-fta-report-no-0123_0.pdf

⁸⁹ California Department of Transportation, Technical Noise Supplement to the Traffic Noise Analysis Protocol, September 2013, Section 5.1.1 (Barrier Material and Transmission Loss): <https://dot.ca.gov/-/media/dot-media/programs/environmental-analysis/documents/env/tens-sep2013-a11y.pdf>

Eastman Avenue. The barrier shall be at least three meters in height, made of at least 0.5-inch thick plywood or other equivalent material shown by Caltrans to provide a transmission loss of at least 20 dBA (which would be adequate for a noise reduction of at least 10 dBA), and be capable of reducing construction-related noise levels at the adjacent residences by at least 3.3 dBA and not have any gaps or holes between the panels or at the bottom.

MM-NOI-3 All construction equipment shall be equipped with the manufacturers’ recommended noise suppression devices, such as mufflers and engine covers. These devices shall be kept in good working condition throughout the construction process.

MM-NOI-4 All construction equipment shall be properly maintained and tuned to minimize noise emissions.

MM-NOI-5 Stationary noise sources (e.g., generators and compressors) shall be located as far from residential receptor location as is feasible.

Construction Noise Impacts After Mitigation

As summarized in **Table 4.13-3**, construction noise impacts at all sensitive receptors would be less than significant following implementation of **Mitigation Measures MM-NOI-1** through **MM-NOI-5**.

**Table 4.13-3
Construction Noise Impacts at Off-Site Sensitive Receptors (With Mitigation)**

Receptor	Maximum Construction Noise Level (dBA L _{eq})	Absolute Noise Threshold*	Existing Ambient Noise Level (dBA L _{eq})	New Ambient Noise Level (dBA L _{eq})	Increase (dBA L _{eq})	Potentially Significant ?
1. LA Community Hospital	41.2	85.0	61.8	61.8	0.0	No
2. Multi-Family Residences – 1049 Gage Ave.	56.5	80.0	53.6	58.3	4.7	No
3. Multi-Family Residences – 1067-1075 Gage Ave.	57.5	80.0	68.1	68.5	0.4	No
4. Multi-Family Residences – 1142 Eastman Ave.	41.6	80.0	61.8	61.8	0.0	No
5. Multi-Family Residences – Eastman Ave.	60.0	80.0	57.5	61.9	4.4	No
6. Multi-Family Residences – Gage Ave. (east side)	68.2	75.0/80.0	68.1	71.2	3.1	No

* Pursuant to LA County Code Section 12.08.440 for daytime construction between 7:00 A.M. and 8:00 P.M.

** Threshold for single-family and multi-family residential

Source: DKA Planning, 2023.

Off-Site Construction Activities

The Project would also generate noise at off-site locations from haul trucks moving debris and soil from the Project Site during demolition and grading activities, respectively; vendor and contractor trips; and worker commute trips. These activities would generate up to an estimated 116 peak hourly PCE vehicle trips, as summarized in **Table 4.13-4**, during the demolition phase, assuming all workers travel to the worksite at the same time and that all worker trips, vendor trips, and haul trips use the same route (Whittier Boulevard) to travel to and from the Project Site. This includes converting noise from heavy-duty truck trips to an equivalent number of passenger vehicle trips. During this phase, construction vehicle trips would represent 10.9 percent of the 1,068 vehicles that travel east-west on Whittier Boulevard at Ditman Avenue during the A.M. peak hour.⁹⁰

Whittier Boulevard would serve as part of the haul route for any soil and debris exported from the Project Site given its connection to the Santa Ana Freeway via Ditman Avenue to the west or Downey Road to the east. Because the Project’s construction-related trips would not cause a doubling in traffic volumes (i.e., 100 percent increase) on Whittier Boulevard, the Project’s construction-related traffic would not increase existing noise levels by 3 dBA or more. Therefore, the Project’s noise impacts from construction-related traffic would be less than significant.

**Table 4.13-4
Construction Vehicle Trips (Maximum Hourly)**

Construction Phase	Worker Trips^a	Vendor Trips	Haul Trips	Total Trips	Percent of Peak A.M. Hour Trips on Whittier Blvd.^e
Demolition	13	0	104 ^b	117	10.9
Site Preparation	8	0	0	8	0.7
Grading	10	0	59 ^c	69	6.4
Trenching	5	0	0	5	0.5
Building Construction	14	14 ^d	0	28	2.6
Grading	13	0	0	13	1.2
Architectural Coating	3	0	0	3	0.3

^a Assumes all worker trips occur in the peak hour of construction activity.
^b The project would generate 838 haul trips over a 22-day period with seven-hour work days. Because haul trucks emit more noise than passenger vehicles, a 19.1 passenger car equivalency (PCE) was used to convert haul truck trips to a passenger car equivalent
^c The project would generate 194 haul trips over a ten-day period with seven-hour work days. Assumes a 19.1 PCE.
^d This phase would generate about five vendor truck trips daily over a seven-hour work day. Assumes a blend of vehicle types and a 9.55 PCE.
^e Percent of existing traffic volumes on Whittier Boulevard east of Ditman Avenue.

⁹⁰ County of Los Angeles Public Works. Machine Count Traffic Volumes <https://pw.lacounty.gov/tnl/trafficcounnts/?street=Whittier&cross=Ditman>. 2020 traffic counts adjusted by one percent annually to reflect 2022 baseline conditions.

Operation

On-Site Operational Noise

During long-term operations, the proposed elementary and middle schools would produce noise from both on- and off-site sources. As discussed below, the Project would not result in an exposure of persons to or a generation of noise levels in excess of standards established in the local general plan or noise ordinance, or applicable standards of other agencies. The Project would also not increase surrounding noise levels by more than 5 dBA CNEL, the minimum threshold of significance based on the noise/land use category of sensitive receptors near the Project Site. As a result, the Project's on-site operational noise impacts would be considered less than significant.

Mechanical Equipment

The Project would operate mechanical equipment on the roof that would generate incremental long-term noise impacts. HVAC equipment in the form of large rooftop units suitable for cooling large volumes of a building would be located on the rooftop. This equipment would include a number of sound sources, including compressors, condenser fans, supply fans, return fans, and exhaust fans that could generate a sound pressure level of up to 81.9 dBA at one foot.⁹¹

However, noise impacts from rooftop mechanical equipment on nearby sensitive receptors would be negligible for several reasons. First, there would be no line-of-sight from these rooftop units to the sensitive receptors, which are almost exclusively one-story in height. The setback of these rooftop units combined with the setbacks of the building from common property lines, the edge of the roof, and height of the building would ensure that noise impacts are substantially attenuated at the nearby residences. As a result, noise from HVAC units would negligibly elevate ambient noise levels, far less than the 5 dBA CNEL threshold of significance for operational impacts.

All equipment would be fully enclosed within the new school structure, shielded from outside sources, and would therefore produce minimal noise impacts for off-site sensitive receptors. This includes any electrical or mechanical room.

Auto-Related Activities

The majority of vehicle-related noise impacts at the Project Site would come from vehicles entering and exiting the two schools from a driveway off Gage Avenue. During the peak A.M. hour (i.e., 7:00 A.M. to 8:00 A.M), about 250 vehicles would generate noise entering onto the property for child drop-offs.⁹² This is a conservative assumption assuming the elementary and middle school bell times are not staggered. Nearly all incoming vehicles would queue along the drop-off line along the north side of the new school building before approximately 226 vehicles exit onto

⁹¹ County of Pomona, Pomona Ranch Plaza WalMart Expansion Project, Table 4.4-5; August 2014. Source was cluster of mechanical rooftop condensers including two Krack MXE-04 four-fan units and one MXE-02 two-fan unit. Reference noise level based on 30 minutes per hour of activity.

⁹² Transportation Impact Analysis Screen-Out, Linscott, Law & Greenspan, August 23, 2023.

Eastman Avenue. Noise would be generated by vehicles as engines idle, doors open and close, and children and staff talk during the drop-off process. While noise levels during this hour of student drop-off will be audible at off-site receptors, they will not result in substantial noise impacts over a 24-hour day.

Nearby residences across Gage Avenue and Eastman Avenue would have a direct line of sight to the driveway, approximately 80 feet away. As shown in **Table 4.13-5**, the peak use of the parking lot for vehicle drop-offs would elevate ambient noise levels by 0.6 dBA L_{eq} at residences on Gage Avenue and 0.2 dBA L_{eq} at residences on Eastman Avenue. Twenty-four hour CNEL levels would be well below the 5 dBA threshold of significance for operational sources of noise.

**Table 4.13-5
Parking Lot-Related Impacts at Off-Site Sensitive Receptors**

Receptor	Maximum Noise Level (dBA L_{eq})	Existing Ambient Noise Level (dBA L_{eq})	New Ambient Noise Level (dBA L_{eq})	Increase (dBA L_{eq})	Significant ?
Residences – Gage Avenue (east side)	45.3	53.6	54.2	0.6	No
Residences – Eastman Avenue (east side)	44.8	57.5	57.7	0.2	No
Source: DKA Planning, 2022, using FTA Noise Impact Assessment Spreadsheet.					

In the P.M. peak hour, about 32 vehicles would enter the Project Site and 50 would exit after bell times, resulting in less noise impacts than the morning peak hour.

Parking lot noise for vehicles parking throughout the day would include tire friction as vehicles navigate to and from parking spaces, doors slamming, car alarms, and minor engine acceleration. Most of these sources are instantaneous (e.g., car alarm chirp, door slam) while others may last a few seconds. As such, the Project’s parking lot activities would not have a significant impact on the surrounding noise environment.

Outdoor Uses

While most operations would be conducted inside the development, outdoor activities could generate noise that could impact local sensitive receptors. This would include human conversation, special events, trash collection, landscape maintenance, and commercial loading. These are discussed below:

Human conversation and recreation

Noise associated with everyday residential activities would largely be contained internally within the school buildings. Noise could include passive activities such as human conversation and

socializing in outdoor spaces, including lunchtime activities in the outdoor lunch patio and the play area for transitional and kindergarten students.

During the lunch period, up to 157 middle school or elementary school students would socialize, generating noise from the 2,350 square-foot outdoor patio. These activities would produce noise from human speech, which would generally be a function of the Lombard effect. This phenomenon recognizes that voice noise levels in face-to-face conversations generally increase proportionally to background ambient noise levels, but only up to approximately 67 dBA at a reference distance of one meter. Specifically, vocal intensity increases about 0.38 dB for every 1.0 dB increase in noise levels above 55 dB, meaning people talk slightly above ambient noise levels in order to communicate.⁹³ Residents to the south of the Project Site would be partially shielded by the existing building along the south boundary of the Project Site, while residences along Eastman Avenue would be partially shielded from lunch patio noise by the new school building. Nevertheless, noise levels would be elevated from students eating and socializing on the patio.

During the play period, transitional kindergarten and kindergarten children would play in the 1,200 square-foot outdoor play area between the existing and new school buildings. This would result in elevated noise levels during that limited play period that would be audible at residences along both Eastman Avenue and Gage Avenue, particularly residences west of the play area along Eastman Avenue.

Regardless, noise from socializing and recreation at the outdoor lunch patio and play area, respectively, would not result in significant noise impacts, as noise standards for the operation of the school are based on 24-hour CNEL levels. Any noise at these outdoor spaces would be intermittent and would not elevate noise levels at the adjacent residences over a 24-hour period by 5 dBA CNEL or more.

The Project would include a cement block wall along the property lines adjacent to residential uses and the buildings themselves would physically attenuate noise toward adjacent properties. There would be no outdoor public address (PA) system.

Moreover, operational noise impacts would not violate exterior noise standards outlined in County ordinance 12.08.390. Specifically, the ordinance sets a standard that the exterior noise level of 70 dBA at residential receptors from 7:00 A.M. to 10:00 P.M.

Special events

Throughout the course of the academic school year, there would be 10-20 events held at the school for a variety of academic and cultural events. Most of these events would be held during the day, either during school or afterward. These events could involve parents and/or students. Like the regular school activities, most of these special events would occur inside the two school buildings. Occasional events would be held in the late afternoon (e.g., spelling bee and Back to School Night from 4:00 P.M. to 6:00 P.M.). No activities are planned in the evenings or at night.

⁹³ Acoustical Society of America, Volume 134; Evidence that the Lombard effect is frequency-specific in humans, Stowe and Golob, July 2013.

While some of these events could use outdoor spaces, noise impacts would be similar to and likely less than those associated with lunchtime activities and use of the outdoor play area.

Trash collection

On-site trash and recyclable materials for the school would be managed from the waste collection area. Haul trucks would access solid waste from Gage or Eastman Avenue, where solid waste activities would include use of trash compactors and hydraulics associated with the refuse trucks themselves. Noise levels of approximately 71 dBA L_{eq} and 66 dBA L_{eq} could be generated by collection trucks and trash compactors, respectively, at 50 feet of distance.⁹⁴ Intermittent solid waste management activities would operate during the day, similar to current service for the church facility. Trash collection activities would not substantially elevate 24-hour noise levels at off-site locations by 5 dBA CNEL or more.

Landscape maintenance

Noise from gas-powered leaf blowers, lawnmowers, and other landscape equipment can generate substantial bursts of noise during regular maintenance. For example, gas-powered leaf blowers and other equipment with two-stroke engines can generate 100 dBA L_{eq} and cause nuisance or potential noise impacts for nearby receptors.⁹⁵ The landscape plan focuses on a modest palette of accent trees and raised planters that will minimize the need for powered landscaping equipment, as some of this can be managed by hand. Any intermittent landscape equipment would operate during the day and would represent a negligible impact that would not increase 24-hour noise levels at off-site locations by 5 dBA CNEL or more.⁹⁶

Commercial loading. On-site loading and unloading activities would be managed in the surface parking lot and would be similar to current deliveries to the church facility. As a result, there would be negligible noise impacts on off-site receptors and impacts would not substantially increase CNEL noise levels at off-site locations.

Based on an assessment of these on-site sources, the impact of on-site operational noise sources would be considered less than significant.

Off-Site Operational Noise

The majority of the Project's operational noise impacts would be off-site from vehicles traveling to and from the school. The Project would add up to 827 net vehicle trips to the local roadway network on a peak weekday at the start of operations in late 2025, including up to 498 net hourly

⁹⁴ RK Engineering Group, Inc. Wal-Mart/Sam's Club reference noise level, 2003.

⁹⁵ Erica Walker et al, Harvard School of Public Health; Characteristics of Lawn and Garden Equipment Sound; 2017

⁹⁶ While AB 1346 (Berman, 2021) bans the sale of new gas-powered leaf blowers by 2024, existing equipment can continue to operate indefinitely.

vehicle trips.⁹⁷ This would represent 47 percent of the 1,068 vehicles that travel east-west on Whittier Boulevard at Ditman Avenue during the A.M. peak hour.⁹⁸

Because it takes a doubling of traffic volumes (i.e., 100 percent) to increase ambient noise levels by 3 dBA L_{eq} , the Project’s traffic would neither increase ambient noise levels 3 dBA or more into “normally unacceptable” or “clearly unacceptable” noise/land use compatibility categories, nor increase ambient noise levels 5 dBA or more. Twenty-four hour CNEL impacts would similarly be minimal, far below criterion for significant operational noise impacts, which begin at 3 dBA. As such, this impact would be less than significant.

b) Generation of excessive groundborne vibration or groundborne noise levels?

Less Than Significant Impact. Construction activities would include demolition, excavation, and grading activities, which have the potential to generate low levels of groundborne vibration. People working in close proximity to the construction could be exposed to the generation of excessive groundborne vibration or groundborne noise levels related to construction activities. The results from vibration can range from no perceptible effects at the lowest vibration levels, to low rumbling sounds and perceptible vibrations at moderate levels, to slight structural damage at the highest levels. Site ground vibrations from construction activities very rarely reach the levels that can damage structures, but they can be perceived in the audible range and be felt in buildings very close to a construction site.

Federal Transit Administration (FTA)

In 2018, the FTA published the Transit Noise and Vibration Impact Assessment Manual to aid in the estimation and analysis of vibration impacts. Typically, potential building and structural damages are the foremost concern when evaluating the impacts of construction-related vibrations. **Table 4.13-6** summarizes FTA’s vibration guidelines for building and structural damage. While these are reference values for vibration levels at 25 feet of distance, this analysis uses logarithmic equations to determine whether building damage would occur regardless of actual distance between construction activity and nearby buildings.

The FTA Assessment Manual also cites criteria for cases where more detailed analysis may be required. For buildings consisting of concrete wall and floor foundations, masonry or concrete walls, or stone masonry retaining walls, continuous vibrations of 0.3 inches per second PPV can be damaging. For buildings consisting of steel or reinforced concrete, such as factories, retaining walls, bridges, steel towers, open channels, underground chambers and tunnels with and without concrete alignment, continuous vibrations of 0.5 inches per second PPV can be damaging.

State

California’s Civil Code Section 832 protects adjacent properties when excavation of a site occurs.

Each coterminous owner is entitled to the lateral and subjacent support which his land receives from the adjoining land, subject to the right of the owner of the adjoining land to make proper and usual excavations on the same for purposes of construction or improvement, under the following conditions:

- 1. Any owner of land or his lessee intending to make or to permit an excavation shall give reasonable notice to the owner or owners of adjoining lands and of buildings or other structures, stating the depth to which such excavation is intended to be made, and when the excavating will begin.*
- 2. In making any excavation, ordinary care and skill shall be used, and reasonable precautions taken to sustain the adjoining land as such, without regard to any building or other structure which may be thereon, and there shall be no liability for damage done to any such building or other structure by reason of the excavation, except as otherwise provided or allowed by law.*
- 3. If at any time it appears that the excavation is to be of a greater depth than are the walls or foundations of any adjoining building or other structure, and is to be so close as to endanger the building or other structure in any way, then the owner of the building or other structure must be allowed at least 30 days, if he so desires, in which to take measures to protect the same from any damage, or in which to extend the foundations thereof, and he must be given for the same purposes reasonable license to enter on the land on which the excavation is to be or is being made.*
- 4. If the excavation is intended to be or is deeper than the standard depth of foundations, which depth is defined to be a depth of nine feet below the adjacent curb level, at the point where the joint property line intersects the curb and if on the land of the coterminous owner there is any building or other structure the wall or foundation of which goes to standard depth or deeper than the owner of the land on which the excavation is being made shall, if given the necessary license to enter on the adjoining land, protect the said adjoining*

land and any such building or other structure thereon without cost to the owner thereof, from any damage by reason of the excavation, and shall be liable to the owner of such property for any such damage, excepting only for minor settlement cracks in buildings or other structures.

Caltrans has identified building damage significance guidance that provides thresholds for different categories of structures, including historic buildings that may not be considered extremely fragile (Table 4.13-7).

County of Los Angeles

The Los Angeles County Municipal Code does not include criteria for assessing vibration impacts; therefore, for the purpose of determining the significance of vibration impacts experienced at buildings and structures near the project, the FTA’s guidelines are used to determine vibration impacts.

**Table 4.13-7
Caltrans Vibration Damage Potential Threshold Criteria**

Structure and Condition	Significance Thresholds (in/sec PPV)	
	Transient Sources	Continuous/ Frequent/ Intermittent Sources
Extremely fragile historic buildings, ruins, ancient monuments	0.12	0.08
Fragile buildings	0.2	0.1
Historic and some old buildings	0.5	0.25
Older residential structures	0.5	0.3
New residential structures	1.0	0.5
Modern industrial/commercial buildings	2.0	0.5
Source: California Department of Transportation, 2013.		

Existing Ambient Vibration Levels

The Project Site is improved with a 25,302 square-foot church with a surface parking lot. Intermittent vibration from solid waste management and collection activities are of short duration and use Gage or Eastman Avenue. These activities occur intermittently for the residences nearby as well. Occasional loading activities generate negligible vibration from trucks that load and unload goods. None of these activities involve use of equipment or heavy-duty vehicles that generate substantive groundborne vibration.

The primary source of groundborne vibration near the Project Site is vehicle travel, including the 192 daily vehicle trips traveling to and from the Project Site.⁹⁹ The blend of passenger vehicles, trucks, delivery trucks, and other vehicles generate minimal levels of vibration. As noted by federal guidance, “[i]t is unusual for vibration from sources such as buses and trucks to be

⁹⁹ Transportation Impact Analysis Screen-Out, Linscott, Law & Greenspan, August 23, 2023.

perceptible...¹⁰⁰ As such, vehicle movement generates imperceptible ground vibration, with the occasional exception of heavy-duty vehicles that travel over speed bumps, potholes, and other street irregularities.

There are several residences adjacent to the Project Site that could be exposed to groundborne vibration during construction and operation of the proposed development that include:

- Residences, 1075 Gage Avenue; five feet south of the Project Site.
- Residences, 1049 Gage Avenue; five feet north and east of the Project Site.
- Residences, Eastman Avenue (east side); five feet north and south of the Project Site.

Construction

Building Damage Vibration Impact – On-Site Sources

Construction equipment can produce groundborne vibration based on equipment and methods employed. While this spreads through the ground and diminishes in strength with distance, buildings on nearby soil can be affected. This ranges from no perceptible effects at the lowest levels, low rumbling sounds and perceptible vibration at moderate levels, and slight damage at the highest levels. **Table 4.13-8** summarizes vibratory levels for common construction equipment.

Table 4.13-8
Vibration Source Levels for Construction Equipment

Equipment	Approximate PPV at 25 feet (in/sec)
Pile Driver (impact)	0.644
Pile Drive (sonic)	0.170
Clam shovel drop (slurry wall)	0.202
Hydromill (slurry wall)	0.008
Vibratory Roller	0.210
Hoe Ram	0.089
Large Bulldozer	0.089
Caisson Drilling	0.089
Loaded Truck	0.076
Jackhammer	0.035
Small Bulldozer	0.003
Source: Federal Transit Administration, Transit Noise and Vibration Impact Assessment Manual, 2018.	

Groundborne vibration would be generated by a number of construction activities at the Project site. As a result of equipment that could include on-site bulldozer operations or the vibrational equivalent, vibration velocities of up to 0.148 inches per second PPV are projected to occur at any of the residences nearest the Project Site.

¹⁰⁰ Federal Transit Administration, Transit Noise and Vibration Impact Assessment Manual, September 2018.

As shown in **Table 4.13-9**, this impact is below the 0.20 inches per second PPV threshold from FTA that is considered potentially harmful to non-engineered timber and masonry buildings. More distant receptors would experience even lower levels of groundborne vibration. Other potential construction activities would produce less vibration and have lesser potential impacts on nearby sensitive receptors. As a result, construction-related structural vibration impacts would be less than significant.

**Table 4.13-9
Building Damage Vibration Levels – On-Site Sources**

Off-Site Receptor Location	Distance to Project Site (feet) ^a	Vibration Velocity Levels at Off-Site Sensitive Receptors from Construction Equipment (in/sec PPV)					Significance Criterion (PPV)	Potentially Significant Impact?
		Large Bulldozer	Caisson Drilling	Loaded Trucks	Jackhammer	Small Bulldozer		
FTA Reference Vibration Level (25 Feet)	N/A	0.089	0.089	0.076	0.035	0.003	--	--
1075 Gage Ave.	15	0.148	0.148	0.127	0.058	0.005	0.20 ^b	No

Includes ten-foot buffer for equipment maneuverability FTA criterion for Category III (non-engineered timber and masonry buildings) Source: DKA Planning, 2022.								

Building Damage Vibration Impact – Off-Site Sources

Construction of the Project would generate trips from large trucks including haul trucks, concrete mixing trucks, concrete pumping trucks, and vendor delivery trucks. Regarding building damage, based on FTA data, the vibration generated by a typical heavy-duty truck would be approximately 63 VdB (0.006 PPV) at a distance of 50 feet from the truck.¹⁰¹ According to the FTA “[i]t is unusual for vibration from sources such as buses and trucks to be perceptible, even in locations close to major roads.” Nonetheless, there are buildings along the Project’s haul route on Whittier Boulevard that are situated away from the right-of-way and would be exposed to groundborne vibration levels of approximately 0.006 PPV. This estimated vibration generated by construction trucks traveling along the anticipated haul route(s) would be well below the most stringent building damage criteria of 0.12 PPV for buildings extremely susceptible to vibration. The Project’s potential to damage roadside buildings and structures as the result of groundborne vibration generated by its truck trips would therefore be considered less than significant.

¹⁰¹ Federal Transit Administration, “Transit Noise and Vibration Impact Assessment,” May 2006, Figure 7-3.

Operation

During operation of the elementary and middle schools, there would be no significant stationary sources of groundborne vibration, such as heavy equipment or industrial operations. Operational groundborne vibration in the Project Site’s vicinity would be generated by its related vehicle travel on local roadways. Road vehicles rarely create vibration levels perceptible to humans unless road surfaces are poorly maintained and have potholes or bumps. As a result, the Project’s long-term vibration impacts would be less than significant.

- c) For a project located within the vicinity of a private airstrip or an airport land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport, would the project expose people residing or working in the project area to excessive noise levels?

No Impact. The Project Site is not located within two miles of a public airport. San Gabriel Valley Airport is 9.5 miles northeast of the Site. Los Angeles International Airport is 13 miles southwest. Santa Monica Airport is 15 miles west. Hollywood Burbank Airport is 15.5 miles northwest. Thus, implementation of the Project would not have the potential to expose people residing or working in the project area to excessive noise levels. Therefore, no impacts would occur.

Cumulative Impacts

Noise

Construction

On-Site Construction Noise

Noise from construction of development projects is localized and can affect noise-sensitive uses within 500 feet, based on the screening criteria. As such, noise from two construction sites within 1,000 feet of each other can contribute to cumulative noise impacts for receptors located between.

There are no current construction projects or reasonably foreseeable related projects within 1,000 feet of the Project Site, which is located in a mature residential area near the Santa Ana Freeway. Any potential related projects would likely be located on Whittier Boulevard, nearly 900 feet north of the Project Site or south of the Santa Ana Freeway in commercially-zoned arterials. During construction of the Project, it is not anticipated that other construction activity in the area would contribute to cumulative noise impacts at sensitive receptors. As a result, there are no reasonably foreseeable related projects that could contribute to cumulative noise impacts at the analyzed sensitive receptors. Based on this, there would not be cumulative noise impacts at any nearby sensitive uses located near the Project Site and related projects in the event of concurrent construction activities.

Construction-related noise levels from any related project would be intermittent and temporary. As with the Project, any related projects would comply with the County's restrictions, including restrictions on construction hours and noise from powered equipment. Noise associated with cumulative construction activities would be reduced to the degree reasonably and technically feasible for any individual related project and compliance with the noise ordinance.

Off-Site Construction Noise

Other concurrent construction activities from related projects can contribute to cumulative off-site impacts if haul trucks, vendor trucks, or worker trips for any related project(s) were to utilize the same roadways. Distributing trips to and from each related project construction site substantially reduces the potential that cumulative development could more than double traffic volumes on existing streets, which would be necessary to increase ambient noise levels by 3 dBA. The Proposed Project would contribute up to 116 peak hourly PCE vehicle trips, which would represent 10.9 percent of the 1,068 vehicles that travel east-west on Whittier Boulevard at Ditman Avenue during the A.M. peak hour.¹⁰² Any related projects would have to add 952 peak hour vehicles trips to double volumes on Whittier Boulevard. As there are no known related projects within 1,000 feet of the Project Site, cumulative noise due to construction truck traffic from the Project and related projects do not have the potential to exceed the ambient noise levels along the haul route by 5 dBA. As such, cumulative noise impacts from off-site construction would be less than significant.

Operation

The Project Site and East Los Angeles has been developed with residential and commercial land uses that have previously generated, and will continue to generate, noise from a number of operational noise sources, including mechanical equipment (e.g., HVAC systems), outdoor activity areas, and vehicle travel. As there are no known related projects within 1,000 feet of the Project Site, cumulative noise due to operational traffic from the Project and related projects do not have the potential to exceed the ambient noise levels along the haul route by 5 dBA. As such, cumulative noise impacts from operations of new projects would be less than significant.

On-Site Stationary Noise Sources

Noise from on-site mechanical equipment (e.g., HVAC units) and any other human activities from related projects would not be typically associated with excessive noise generation that could result in increases of 5 dBA or more in ambient noise levels at sensitive receptors when combined with operational noise from the Proposed Project. As there are no known related projects within 1,000 feet of the Project Site, cumulative stationary source noise impacts associated with operation of the Project and related projects would be less than significant.

¹⁰² County of Los Angeles Public Works. Machine Count Traffic Volumes
<https://pw.lacounty.gov/tnl/trafficcunts/?street=Whittier&cross=Ditman>. 2020 traffic counts adjusted by one percent annually to reflect 2022 baseline conditions.

Off-Site Mobile Noise Sources

The Project would add up to 827 net vehicle trips to the local roadway network on a peak weekday at the start of operations in late 2025, including up to 498 net hourly vehicle trips.¹⁰³ This would represent 47 percent of the 1,068 vehicles that travel east-west on Whittier Boulevard at Ditman Avenue during the A.M. peak hour.¹⁰⁴ As there are known related projects within 1,000 feet of the Project Site, cumulative traffic associated with operation of the Project and related projects would not double traffic volumes on Whittier Boulevard that could increase ambient noise levels by 3 dBA to or within their respective “Normally Unacceptable” or “Clearly Unacceptable” noise categories. Further, such cumulative traffic would not elevate traffic noise levels by 5 dBA or greater overall. Additionally, the Project would not result in an exposure of persons to or a generation of noise levels in excess of standards established in the local general plan or noise ordinance, or applicable standards of other agencies.

Vibration

Construction

On-Site Construction Vibration

During construction of the Project, vibration impacts are generally limited to buildings and structures located near the construction site (i.e., within 15 feet as related to building damage). As noted earlier, the Project’s potential to damage nearby buildings is less than significant. However, nearby structures could be subject to cumulative vibration impacts if concurrent construction and vibration activities were to occur within close proximity. Any such projects would need to limit or avoid use of pile drivers or other impacting equipment for any shoring of structures. There are no identified or reasonably foreseeable related projects that could generate cumulative vibration impacts when the Project begins construction in 2023. As such, there is no potential for a cumulative construction vibration impact that subjects nearby buildings to vibration levels that exceed the FTA’s vibration damage criteria.

Off-Site Construction Vibration

While haul trucks from any related projects and other concurrent construction projects could generate additional vibration along haul routes, the potential to damage buildings is extremely low. The FTA finds that “[i]t is unusual for vibration from sources such as buses and trucks to be perceptible, even in locations close to major roads.” The vibration generated by a typical heavy truck would be approximately 0.00566 in/sec PPV at a distance of 50 feet.

As discussed above, there are buildings near the right- of-way of the anticipated haul route for the Project (i.e., Whittier Boulevard). These buildings would be exposed to groundborne vibration

¹⁰³ [Transportation Impact Analysis Screen-Out](#), Linscott, Law & Greenspan, August 23, 2023.

¹⁰⁴ County of Los Angeles Public Works. Machine Count Traffic Volumes <https://pw.lacounty.gov/tnl/trafficcounnts/?street=Whittier&cross=Ditman>. 2020 traffic counts adjusted by one percent annually to reflect 2022 baseline conditions.

levels that are far less than the levels identified by FTA as potential thresholds for building damage. Trucks from any related projects are expected to generate similar groundborne vibration levels. Therefore, the vibration levels generated from off-site construction trucks associated with the Project and other related projects along the anticipated haul route(s) would be below the most stringent building damage threshold of 0.12 PPV for buildings extremely susceptible to vibration. Therefore, potential cumulative vibration impacts with respect to building damage from off-site construction would be less than significant.

Summary of Cumulative Construction Vibration Impacts

Due to the rapid attenuation characteristics of groundborne vibration and the proximity of major development proposed in this part of the Whittier Boulevard corridor, there is no potential for a cumulative construction vibration impact with respect to building damage associated with groundborne vibration from on-site sources. In addition, potential cumulative vibration impacts with respect to building damage from off-site construction would be less than significant. Therefore, on-site and off-site construction activities associated with the Project and one or more potential related projects would not generate excessive groundborne vibration levels with respect to building damage.

Operation

The Project Site and surrounding Whittier Boulevard corridor have been developed with commercial, residential, medical, and other uses that will continue to generate minimal groundborne vibration. Similar to the Project, any related projects in the vicinity of the Project Site could generate vibration from ongoing day-to-day operations. However, given the commercial and residential zoning along Whittier Boulevard and adjacent residential neighborhoods, any related projects would not be typically associated with excessive groundborne vibration from on-site sources. However, each project would produce traffic volumes that are capable of generating roadway vibration impacts. The potential cumulative noise impacts associated with on-site and off-site vibration sources are addressed below.

On-Site Operation Vibration

During operation of the Project, vibration impacts are generally limited to buildings and structures located near the construction site (i.e., within 15 feet as related to building damage). In general, related projects in this corridor would be commercial retail, medical, or residential land uses that do not operate impact equipment and operations and would not generate substantial vibration. As a result, operation of new cumulative development in the area would have no potential to exceed FTA vibration damage standards at off-site receptors.

Off-Site Operation Vibration

Like the Project, any concurrent development near the Project Site would contribute typical passenger vehicle traffic that would generate negligible changes to roadway vibration. Use of larger heavy-duty trucks for delivery of goods and materials would be intermittent and not result

in significant, cumulative increases in groundborne vibration on Whittier Boulevard and other local roadways. Therefore, potential cumulative vibration impacts with respect to building damage from off-site operations would be less than significant.

Summary of Operational Construction Vibration Impacts

Due to the rapid attenuation characteristics of groundborne vibration and the proximity of major development proposed in this part of the Whittier Boulevard corridor, there is no potential for a cumulative operations vibration impact with respect to building damage associated with groundborne vibration from on-site sources. In addition, potential cumulative vibration impacts with respect to building damage from off-site construction would be less than significant. Therefore, on-site and off-site operations activities associated with the Project and one or more potential related projects would not generate excessive groundborne vibration levels with respect to building damage.

4.14 POPULATION AND HOUSING

	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
Would the project:				
a) Induce substantial unplanned population growth in an area, either directly (for example, by proposing new homes and businesses) or indirectly (for example, through extension of roads or other infrastructure)?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>

No Impact.

Construction

The construction activities associated with the Project would create temporary construction-related jobs. Nevertheless, the work requirements of most construction activities are highly specialized, so that construction workers remain at a job site only for the time in which their specific skills are needed to complete a particular phase of the construction process. Thus, construction workers would not be anticipated to relocate their residence to the Project Site area and would not induce unplanned population growth and/or require permanent housing. Therefore, the Project’s indirect unplanned population growth impacts associated with construction activities would be less than significant.

Operation

The Project is located in an urbanized residential area of unincorporated Los Angeles County and is surrounded by residential uses. The Project does not propose to expand surrounding utility infrastructure (e.g., water, electricity, cell tower, gas, sanitary sewer, and stormwater drains) in the project vicinity that would induce substantial unplanned population growth in the area.. The Project would be served by onsite sewer main lines that would be maintained by the Los Angeles County Consolidated Sewer Maintenance District. Furthermore, because the Project proposes development in an already built-out neighborhood, it would not indirectly induce population growth through the extension of roads or other infrastructure.

The existing church use would be removed and a new school use would be developed. There will be 22 teachers and 6 full-time administrative members of the staff. These school jobs could be filled via the existing workforce from within the Los Angeles region. The school would not create the types of employment opportunities that would compel numerous people to move to the area from outside regions. Thus, employment associated with the Project Site development would not induce substantial unplanned population growth in the County. Therefore, no impacts would occur.

- b) Displace substantial numbers of existing people or housing, necessitating the construction of replacement housing elsewhere?

No Impact. The Project Site is currently developed with a church and parking uses. No housing is on the Project Site, and no people live at the Site. Thus, the Project would not displace substantial numbers of existing people or housing, necessitating the construction of replacement housing elsewhere. Therefore, no impacts would occur.

Cumulative Impacts

Growth in the region could result in a net increase in the number of housing units and associated population and the amount of employment in the Project Site area and would contribute to growth in the County. However, as discussed previously, the Project includes development that would accommodate the existing workforce in the County. The Project would not result in unplanned growth. Thus, the Project would not have the potential to contribute to any cumulative impacts related to unplanned growth. Therefore, cumulative impacts related to unplanned growth would be less than significant.

4.15 PUBLIC SERVICES

This section is based on the following item, which are included as **Appendix I** to this MND:

- I-1 School Response, Los Angeles Unified School District, October 17, 2023
- I-2 Parks Response, Los Angeles County Department of Parks and Recreation, October 11, 2023
- I-3 Library Response, Los Angeles County Library, November 20, 2023

Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
--------------------------------	--	------------------------------	-----------

Would the project:

- a) **Would the project create capacity or service level problems, or result in substantial adverse physical impacts associated with the provision of new or physically, altered governmental facilities, the construction of which could cause significant environmental impacts, in order to maintain acceptable service ratios, response times or other performance objectives for any of the public services:**

Fire protection?

Less Than Significant Impact. Fire protection and emergency medical services in the County of Los Angeles are provided by the Los Angeles County Fire Department (LACoFD) from 177 Fire Stations in 60 cities and the unincorporated areas of the County.¹⁰⁵ The Project Site and East Los Angeles is served by LACoFD Station No. 3, located at 930 Eastern Avenue, 4,600 feet driving distance from the Project Site.¹⁰⁶ The location, distance, and equipment, of the fire station near the Project Site are provided in **Table 4.15-1**. LACoFD’s average response time for on-scene services is approximately five minutes and their standard is to arrive on scene within 30 minutes.

¹⁰⁵ Los Angeles County Fire Department: <https://fire.lacounty.gov/about-us-2/>

¹⁰⁶ Los Angeles County General Plan, Figure 12.7, Fire Department Battalions and Stations: https://planning.lacounty.gov/assets/upl/project/gp_2035_2021-FIG_12-7_Fire_Department_Battalions_and_Stations.pdf

**Table 4.15-1
Fire Station**

No.	Address	Distance	Equipment
3	930 Eastern Avenue	4,600 feet	Engine Quint Squad
Quint is a fire-fighting apparatus that serves the dual purpose of an engine and a ladder truck. "Quintuple" refers to the five functions that a quint provides - pump, water tank, fire hose, aerial device, and ground ladders https://www.lacountyfiremuseum.com/stations-and-apparatus/			

Construction of the Project would increase demands for fire protection and emergency medical services. The Project would have 525 students and 28 teachers and staff. This daytime population is expected to create the typical range of service calls to LACoFD that are largely related to medical emergencies, which consist of 77 percent of service calls, while fire calls consisted of 3 percent of service calls, and other incidents (false alarms, mutual aid, haz-mat) consisted of 20 percent.¹⁰⁷ The calls for service from the additional population at the Project Site could result in an increase in response times if the calls coincide with other calls for service. Because the project site is within 1 mile of an existing fire station and the Project Site is within a developed area that is currently served by this station, the Project would not result in the requirement to construct a new fire station.

Additionally, the Project would remove the existing church building and renovate another building, which was constructed pursuant to fire code standards of 1953, and develop new building structures pursuant to the most recent California building and fire codes, which would improve the structural fire safety over the existing buildings.

As all projects within the County, the Project would be required to comply with existing regulations within the Los Angeles County Fire Code (Title 32). The Project would require the installation of various fire protection systems, including sprinkler systems. Therefore, with implementation of the California building and fire codes, impacts related to fire protection services would be less than significant.

Sheriff protection?

Less Than Significant Impact. The Los Angeles County Sheriff Department (LASD) provides law enforcement and protection services in unincorporated Los Angeles County, including the project area.¹⁰⁸ The Project Site is served by LASD East Los Angeles Station, located at 5019 Third Street, 2.25 miles driving distance from the Project Site.¹⁰⁹ The Station serves the cities of

¹⁰⁷ Los Angeles County Fire Department, 2021 Statistical Summary: <https://fire.lacounty.gov/wp-content/uploads/2022/06/2021-Statistical-Summary.pdf>

¹⁰⁸ Los Angeles Sheriff's Department: <https://lasd.org/east-los-angeles/>

¹⁰⁹ Los Angeles County General Plan, Figure 12.8, Sheriffs Department Service Areas: https://planning.lacounty.gov/assets/upl/project/gp_2035_2021-FIG_12-8_Sheriffs_Department_Service_Areas.pdf

Commerce, Cudahy, Maywood, and the unincorporated areas of City Terrace and East Los Angeles. LASD generally adheres to the following, widely accepted industry standard among law enforcement agencies for responding to emergent, priority, and routine calls for service: ten minutes, twenty minutes, and sixty minutes, respectively.

Construction

If temporary lane closures are necessary for installation of utilities, emergency access would be maintained at all times. Flag persons would be provided as needed to ensure safe vehicle movements and pedestrian walkways, with signs posted to advise motorists and pedestrians of reduced speed and access.

Construction sites can be sources of attractive nuisances, providing hazards, and inviting theft and vandalism. Therefore, when not properly secured, construction sites can become a distraction for local law enforcement from more pressing matters that require their attention. Consequently, developers typically take precautions to prevent trespassing through construction sites. Most commonly, temporary fencing is installed around the construction site.

The Project Site is generally open around its boundaries. The boundaries will need to be secured during construction. The Project Applicant will employ construction security features, such as fencing, which would serve to minimize the need for sheriff services. Temporary construction fencing will be placed along the periphery of the active construction areas to screen as much of the construction activity from view at the local street level and to keep unpermitted persons from entering the construction area. These security measures would ensure that valuable materials (e.g., building supplies, metals such as copper wiring) and construction equipment are not easily stolen or abused. Therefore, construction impacts would be less than significant.

Operation

The Project will have students, teachers, and staff during the day. As such, the Project could potentially increase the number of police service calls due to an increase in onsite persons as compared to the existing church use.

The potential for crime can be reduced with site-specific designs and features. The Project will be designed with the principles of Crime Prevention Through Environmental Design (CPTED), which focuses on defensible space, territoriality, surveillance, lighting, landscaping, and physical security. The Project will include standard security measures such as adequate security lighting, monitoring system, and secure key access to that offers a visual deterrent and human surveillance feature. The Project's landscaping will be maintained to minimize hiding areas and have appropriate hedge heights to allow visibility from the street. The Project will have visible numerical addresses on each building that can be easily viewed from the street.

The LASD will be provided a diagram of each portion of the property showing access routes, and any additional information that might facilitate sheriff's response. The potential for crime can be reduced with site-specific designs and features. The Project would include standard security

measures such as adequate security lighting, secure access to non-public areas and storage use access points.

Emergency access to the Project Site would be provided by the existing street system. The Project’s direct minimal population increase and associated demand for police services, along with the provision of on-site security features, coordination with LASD, and incorporation of crime prevention features, would not require the provision of new or physically altered police stations in order to maintain acceptable service ratios or other performance objectives for police protection. Additionally, the Project would also contribute to the General Fund, a portion of which is allocated to the LASD and other public services.

The Project would not require any additional officers. Furthermore, the Project Site is part of an existing patrol area covered by the Los Angeles County Sheriff’s Department. Therefore, with existing personnel, law enforcement personnel are anticipated to be able to respond in a timely manner, and within set standard response times, to emergency calls in the Project area. Therefore, the Project should not result in the need for, new or expansion of police protection facilities. Thus, substantial adverse physical impacts associated with the provision of new or expanded facilities would not occur. Therefore, impacts related to sheriff protection services would be less than significant.

Schools?

No Impact. The Project includes development school. Thus, the Project would not result in a direct demand for school services. Additionally, pursuant to the California Government Code Section 65995, the Project would be required to pay school fees established by the Los Angeles Unified School District (LAUSD), payment of which in accordance with existing rules and regulations regarding the calculation and payment of such fees would, by law, provide full and complete mitigation for any potential direct and indirect impacts to schools as a result of the Project. Therefore, no impacts would occur.

Parks?

No Impact. A significant impact to parks would occur if implementation of a project includes a new or physically altered park or creates the need for a new or physically altered park, the construction of which could cause substantial adverse physical impacts. Parks facilities are provided by the Los Angeles County Department of Parks and Recreation. The Project includes a 6,276 square feet outdoor play area. With provision of onsite recreational amenities, the Project would not result in significant environmental impacts related to parks. Therefore, no impacts would occur.

Libraries?

No Impact. The Los Angeles County Library would provide library services to the project via the El Camino Real Library, located at 4264 Whittier Boulevard, 3,100 feet southwest of the Project Site.¹¹⁰ The Project is the development of a new school which provides its own research and reading tools. The County recognizes that only residential projects add new residents which affect library service. Therefore, only residential development projects are subject to the library facilities mitigation fees set forth in County Code Section 22.264. Therefore, no impacts would occur.

Other public facilities?

No Impact. The Project is not expected to result in significant demand for other public facilities or services. The Project is not perceived to create capacity or service level problems or result in substantial adverse physical impacts for any other public facility. As such, the Project would not significantly adversely affect other public facilities or services, and therefore would not require the construction of new or modified public facilities. Therefore, no impacts would occur.

Cumulative Impacts

Fire Department

Implementation of the related projects could result in a net increase in the number of residents and employees in the Project area and could further increase the demand for fire protection services. Cumulative development requires the LACoFD to continually evaluate the need for new or physically altered facilities in order to maintain adequate service ratios. Similar to the proposed Project, the related projects would be subject to the Fire Code and other applicable regulations of the LACC including, but not limited to, automatic fire sprinkler systems for high-rise buildings and/or residential projects located farther from the nearest Station to compensate for additional response time, and other recommendations made by the LACoFD to ensure fire protection safety. Through the process of compliance, the ability of the LACoFD to provide adequate facilities to accommodate future growth and maintain acceptable levels of service would be ensured. Furthermore, the increased demands for additional LACoFD staffing, equipment, and facilities would be funded via existing mechanisms (e.g., property taxes and government funding) to which the Project and related projects would contribute. Therefore, cumulative impacts related to fire protection services would be less than significant.

Sherriff's Department

Implementation of the related projects could result in a net increase in the number of residents and employees in the area of the Project Site and could further increase the demand for police protection services. Cumulative development requires the LASD to continually evaluate the need for new or physically altered facilities in order to maintain adequate service ratios. Similar to the proposed Project, the related projects would be subject to the site plan review and approval requirements, recommendations of the LASD related to crime prevention features, and other

¹¹⁰ Los Angeles County Library: <https://lacountylibrary.org/library-locator/>

applicable regulations of the LACC. Through the process of compliance, the ability of the LASD to provide adequate facilities to accommodate future growth and maintain acceptable levels of service would be ensured. Furthermore, the increased demands for additional LASD staffing, equipment, and facilities would be funded via existing mechanisms (e.g., property taxes and government funding) to which the Project and related projects would contribute. Therefore, cumulative impacts related to police protection services would be less than significant.

Schools

The Project is a school use, which would not contribute to other school-related impacts. The related projects could result in an increase in the number students in the Project Site area. However, similar to the Project, the applicants of all the related projects would be required to pay the applicable school fees to the LAUSD to ensure that no significant impacts to school services would occur. Therefore, cumulative impacts to school services would be less than significant.

Parks

The related projects listed could result in an increase demand for parks and recreational services. The extent to which the related residential projects include parks/recreational amenities is unknown. However, the applicants of the related projects that consist of residential dwelling units would be required to meet LACC open space requirements and would be subject to the park fees pursuant to LACC Section 21.24.340, ensuring that any potential impacts to parks and recreational facilities would be less than significant. As stated previously, the Project would not result in any significant impacts related to parks and recreational facilities. Therefore, cumulative impacts to park and recreational facilities would be less than significant.

Library

Implementation of the related projects could increase the demand for library services in the Project area. The related residential projects would be subject to the standards to determine demand for library facilities used by the County and would likely be required to implement mitigation where applicable. As such, the demand for library services created by these residential projects could be accommodated, and impacts would be less than significant. As stated previously, the Project would not result in any significant impacts related to library services. Therefore, cumulative impacts to library services would be less than significant.

4.16 RECREATION

	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
a) Would the project increase the use of existing neighborhood and regional parks or other recreational facilities such that substantial physical deterioration of the facility would occur or be accelerated?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>

No Impact. The Project is a school use which would not increase the population in the area. It would not increase the use of existing parks in the area. As discussed in response to Checklist Question 15(d) (Public Services – Parks), no impact would occur.

b) Does the project include neighborhood and regional parks or other recreational facilities or require the construction or expansion of recreational facilities which might have an adverse physical effect on the environment?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
---	--------------------------	--------------------------	--------------------------	-------------------------------------

No Impact. The Project is a school use which would not increase the population in the area. It would not increase the use of existing parks in the area. As discussed in response to Checklist Question 15(d) (Public Services – Parks), no impact would occur.

c) Would the project interfere with regional trail connectivity?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
---	--------------------------	--------------------------	--------------------------	-------------------------------------

No Impact. The Project Site is located within a fully developed urban area and is not located in the vicinity of a County regional riding or hiking trail.¹¹¹ The Project would not interfere with regional open space connectivity. There are no regional trails within the Project vicinity. The recreational areas for the school would not interfere with any regional open space connectivity. Therefore, no impact would occur.

¹¹¹ Los Angeles County General Plan, Figure 10.1, Regional Trail System: https://planning.lacounty.gov/assets/upl/project/gp_2035_2018-FIG_10-1_regional_trail_system.pdf

Cumulative Impacts

Refer to discussion of cumulative impacts related to parks and recreational facilities under response to Checklist Question 15(d) (Public Services – Parks). As discussed there, cumulative impacts related to parks and recreational facilities would be less than significant.

4.17 TRANSPORTATION

This section is based on the following items, which are included as **Appendix J** to this MND:

- J-1 Transportation Impact Analysis Screen-Out, Linscott, Law & Greenspan, January 3, 2024
- J-2 Vehicle Queuing Analysis, Linscott, Law & Greenspan, January 3, 2024
- J-3 Queuing Analysis Approval Letter, Los Angeles County Public Works, January 10, 2024

	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
Would the project:				
a) Conflict with an applicable program, plan, ordinance, or policy addressing the circulation system, including transit, roadway, bicycle and pedestrian facilities?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>

Less Than Significant Impact. The Project is a school use that will provide pedestrian walk-up access through sidewalks and pedestrian gates on Gage Avenue and Eastman Avenue. The sidewalks and crosswalks would not be affected. The Project Site is accessed by Metro bus line 18 on Whittier Boulevard. The Project would not affect this line or any stops.

The Project would provide short-term and long-term bicycle parking in accordance with the LACC. The Project would not affect any bike paths.

The County’s Transportation Impact Analysis (TIA) Guidelines provide screening criteria for purposes of assessing whether a vehicles miles traveled (VMT) analysis is required to evaluate potential transportation impacts related to development projects. Based on the Project’s proximity to public transit and satisfying the related screening criteria provided in the County’s TIA Guidelines, it is determined that the Project is presumed to have a less than significant transportation impact.

The Project would not conflict with a program, plan, ordinance, or policy addressing the circulation system, including transit, roadway, bicycle, and pedestrian facilities. Therefore, impact would be less than significant.

b) Conflict or be inconsistent with Guidelines for California Environmental Quality Act Section 15064.3(b)?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
--	--------------------------	--------------------------	-------------------------------------	--------------------------

Less Than Significant Impact. This question was revised to address consistency with CEQA Guidelines Section 15064.3, subdivision (b), which relates to use of vehicle miles traveled (VMT) as the methodology for evaluating traffic impacts. The Project screens out from a Transportation Impact Analysis (TIA) per Section 3.1.2.3 of the Los Angeles County Public Works Transportation Impact Analysis Guidelines¹¹² (the TIA Guidelines).

Project Trip Generation

In conjunction with the County’s TIA Guidelines, a vehicular trip generation forecast has been prepared using trip rates provided in the Institute of Transportation Engineers’ (ITE) Trip Generation Manual.¹¹³ The following trip generation rates were used to forecast the traffic volumes expected to be generated by the Project land use components:

- Charter Elementary School: ITE Land Use Code 536 (Charter Elementary School) trip generation average rates were used to forecast the traffic volumes expected to be generated by the charter elementary school component of the Project.
- Charter Middle School: ITE Land Use Code 522 (Middle School/Junior High School) trip generation average rates were used to forecast the traffic volumes expected to be generated by the charter middle school component of the Project.
- Charter Middle School: ITE Land Use Code 538 (Charter School K-12) trip generation average rates were used to forecast the traffic volumes expected to be generated by the charter middle school component of the Project.

In addition to the trip generation forecasts for the Project (which are essentially an estimate of the number of vehicles that could be expected to enter and exit the Project Site access points), an adjustment was made to the trip generation forecast based on the Project Site’s existing land use. The existing land use to be removed is 25,302 square feet of church floor area. ITE Land Use Code 560 (Church) trip generation average rates were used to estimate the trip reduction related to the existing use from the Project Site. While it is anticipated that some students and employees will utilize public transportation for travel to and from the Project Site, a transit adjustment was not made to provide a conservative forecast of the Project’s trip generation.

Table 4.17-1 attached to this memorandum provides the trip generation forecast for the Project. As shown, the Project on a typical weekday is forecast to result in 827 net new daily trips (e.g., 414 inbound trips, 413 outbound trips), 530 net new AM peak hour trips (280 inbound trips and 250 outbound trips), and 368 net new PM peak hour trips (183 inbound trips and 185 outbound trips).

¹¹² Los Angeles County Public Works Transportation Impact Analysis Guidelines, Los Angeles County Public Works, July 2020.

¹¹³ Institute of Transportation Engineers, Trip Generation Manual, 11th Edition, Washington, D.C., 2021.

**Table 4.17-1

Vehicle Miles Traveled Analysis

The State of California Governor’s Office of Planning and Research (OPR) issued proposed updates to the CEQA Guidelines in November 2017 and an accompanying technical advisory guidance in April 2018 (OPR Technical Advisory) that amends the Appendix G question for transportation impacts to delete reference to vehicle delay and level of service and instead refer to Section 15064.3, subdivision (b)(1) of the CEQA Guidelines asking if the project will result in a substantial increase in vehicle miles traveled (VMT). Section 15064.3, subdivision (b)(1) states the following:

- **Development Projects.** Vehicle miles traveled exceeding an applicable threshold of significance may indicate a significant impact. Generally, projects within one-half mile of either an existing major transit stop or a stop along an existing high-quality transit corridor should be presumed to cause a less than significant transportation impact. Projects that decrease vehicle miles traveled in the project area compared to existing conditions should be considered to have a less than significant transportation impact.

The California Natural Resources Agency certified and adopted the CEQA Guidelines in December 2018, which are now in effect. Accordingly, Los Angeles County Public Works (LACPW) has adopted significance criteria for transportation impacts based on VMT for land use projects and plans in accordance with the amended Appendix G question:

- For a development project, would the project conflict or be inconsistent with CEQA Guidelines section 15064.3, subdivision (b)(1)?

For development projects, the intent of this question is to assess whether a proposed project or plan adequately reduces total VMT. LACPW provides the following guidance regarding screening and impact criteria to address this question. The following screening criteria and impact criteria are only meant to serve as guidance for projects to determine whether a TIA should be performed, and the criteria to determine if a project generates a significant transportation impact. The criteria shall be determined on a project-by project basis as approved by LACPW.

Proximity to Transit Based Screening Criteria

Per Section 3.1.2.3 of the TIA Guidelines, if a project is located near a Major Transit Stop or HQTC, the following question should be answered:

- Is the project located within a one-half mile radius of a Major Transit Stop or an existing stop along a HQTC?

Per the California Public Resources Code Section 21155(b), a HQTC is defined as a corridor with fixed route bus service with service intervals no longer than 15 minutes during peak commute hours. The Project is located within 1,000 feet of eastbound and westbound transit stops along the Whittier Boulevard corridor. The Whittier Boulevard corridor is served by Metro Local Line 18 (Metro 18). Metro 18 provides eastbound and westbound service from the Wilshire & Western transit stop in the Koreatown area of the City of Los Angeles to the Montebello Metrolink Station in the City of Montebello.

Page 83 of the Connect SoCal Transit Technical Appendix¹¹⁴ describes the relevant methodology for determining peak period bus service intervals (also called frequency). SCAG utilized the peak commute periods defined within the SCAG regional travel demand model (i.e., the weekday morning peak period is from 6:00 AM to 9:00 AM, and the afternoon peak period is from 3:00 PM to 7:00 PM). The peak frequency is calculated by dividing 420 minutes (i.e., the total seven-hour

¹¹⁴ https://scag.ca.gov/sites/main/files/file-attachments/0903fconnectsocial_transit.pdf?1606002122

peak commute period converted to minutes) by the total population of bus trips occurring during the combined peak periods. Bus lines must have an average service frequency of 15 minutes or less over the seven-hour period to meet the HQTC criteria.

To identify the number of bus trips occurring during the peak commute hours, the total number of trips from the line’s point of origin is looked at, and a trip is included if its median time falls within the AM or PM peak period. To calculate the median time, the time at the trip origin is subtracted from the arrival time at the final station, divided by two, and then added to the origin time. For example, for a westbound Metro 18 trip departing the Montebello Metrolink Station at 6:16 PM and arriving at Wilshire & Western at 7:38 PM, the total trip time is 82 minutes, therefore the median time would be 6:57 PM. This sample would therefore be included as occurring within the PM peak period.

An analysis for Metro 18 has been provided based on the current schedule provided on Metro’s website. The peak hour headways and service frequency (in minutes), are summarized in **Table 4.17-2**. As shown, the average service frequency during the peak periods is 6.7 minutes for the eastbound direction and 6.8 minutes for the westbound direction. Therefore, Metro 18’s current service frequency meets the SCAG threshold of 15 minutes or less in each direction. As a result, Whittier Boulevard currently qualifies as a HQTC.

**Table 4.17-2
High-Quality Transit Corridor Analysis [1]**

Route	No. of buses during peak hours [2]			Average Frequency in Peak Hours (minutes)	Eligible Line [3]
	Direction	AM	PM		
Metro Line 18 [4]	EB	25	38	6.7	Yes
	WB	28	34	6.8	

[1] Source: Southern California Association of Governments
 [2] AM Peak Hours: 6:00 AM - 9:00 AM / PM Peak Hours: 3:00 PM - 7:00 PM
 [3] Bus routes must have an average service frequency of 15 minutes or less over the seven-hour period.
 the seven-hour peak period.
 [4] Source: Los Angeles County Metropolitan Transportation Authority (Metro) website, 2023.
 Transportation Impact Analysis Screen-Out, Linscott, Law & Greenspan, January 3, 2024

It is noted that while the Wilshire & Western transit stop and the Montebello Metrolink Station are the start and end points for Metro 18, not all trips start or end at these stations. However, all Metro 18 trips serve the eastbound and westbound stops within the half-mile radius of the Project Site, and therefore, the peak hour headways and average service frequencies shown in **Table 4.17-2** are applicable.

According to the TIA Guidelines, if the answer to the question above is yes, then the following subsequent questions should be considered. If the answer to all four questions is no, further analysis is not required, and a less than significant determination can be made, and a Traffic Impact Analysis does not have to be prepared.

- Does the project have a Floor Area Ratio less than 0.75?

The Project's overall lot area is 50,994 square feet. Per Section 22.04.050(E) of the Los Angeles County Code (LACC), the first floor of the new Building 1 will provide 17,876 square feet of floor area and the second floor will provide 11,800 square feet of floor area. Building 2 will provide 8,749 square feet of floor area. The overall gross floor area of the building is 38,425 square feet, which results in a Floor Area Ratio (FAR) of 0.754.

- Does the project provide more parking than required by the LACC?

While LACC Section 22.112.070-A would require the Project to provide 54 vehicular parking spaces, under AB 2097, the Project is not required to meet a minimum parking requirement because it is located within a half-mile of a HQTC. Specifically, the Site is within 1,000 feet of eastbound and westbound transit stops along the Whittier Boulevard corridor. The Whittier Boulevard corridor is served by Metro Local Line 18 (Metro 18). Metro 18 provides eastbound and westbound service from the Wilshire & Western transit stop in the Koreatown area of the City of Los Angeles to the Montebello Metrolink Station in the City of Montebello. Metro 18's current service frequency meets the SCAG threshold for 15 minutes or less in each direction, and therefore, Whittier Boulevard currently qualifies as a HQTC. The Project will voluntarily provide 38 vehicular parking spaces.

Per Table 22.112.100-A of the LACC, the bicycle parking requirements for the Project is required to provide 88 short-term bicycle parking spaces and two long-term bicycle parking spaces. The Project will provide bicycle parking onsite in accordance with Table 22.112.100-A of the LACC.

- Is the project inconsistent with the SCAG Regional Transportation Plan/Sustainable Communities Strategy (RTP/SCS)?

The 2020-2045 SCAG RTP/SCS entitled Connect SoCal, was adopted by SCAG in September 2020. "Connect SoCal is a long-range visioning plan that builds upon and expands land use and transportation strategies established over several planning cycles to increase mobility options and achieve a more sustainable growth pattern. It charts a path toward a more mobile, sustainable and prosperous region by making connections between transportation networks, between planning strategies and between the people whose collaboration can improve the quality of life for Southern Californians."

The Project is consistent with the SCAG RTP/SCS. Connect SoCal prioritizes growth near destinations and mobility options that facilitate multimodal access to work, educational and other destinations. Additionally, Connect SoCal encourages infill development, and development in Priority Growth Areas, such as HQTAs. As the Project is an infill development located within one-half mile of transit stops along a HQTC, it will facilitate multimodal transportation. Additionally, the Project will provide bicycle parking facilities onsite, and is located within an area with excellent pedestrian infrastructure. Therefore, the Project is consistent with SCAG's greenhouse gas reduction goals, and the overall goals of Connect SoCal. Chapter 3 of Connect SoCal provides the goals and visions of the plan.

The County’s TIA Guidelines provide screening criteria for purposes of assessing whether a VMT analysis is required to evaluate potential transportation impacts related to development projects. Based on the Project’s proximity to public transit and satisfying the related screening criteria provided in the County’s TIA Guidelines, it is determined that the Project is presumed to have a less than significant transportation impact.

Therefore, the Project would not conflict or be inconsistent with CEQA Guidelines Section 15064.3, subdivision (b).

Cumulative Impacts

Pursuant to the TIA, each of the plans, programs, ordinances, and policies to assess potential conflicts with proposed projects should be reviewed to assess cumulative impacts that may result from the Project in combination with other nearby development projects. A cumulative impact could occur if the Project, with other future development projects located on the same block were to cumulatively preclude the County’s ability to serve transportation user needs as defined by the County’s transportation policy framework. No cumulative impact has been identified with the Project that would preclude the implementation of any transportation related policies, programs, or standards. Therefore, cumulative impacts would be less than significant.

Cumulative VMT impacts are evaluated through a consistency check with SCAG’s RTP/SCS, which is the regional plan that demonstrates compliance with air quality conformity requirements and GHG reduction targets. Per the County’s TIA, projects that are consistent with the RTP/SCS in terms of development location and density are part of the regional solution for meeting air pollution and GHG emissions reduction goals. Projects that have less-than-significant VMT impact are deemed to be consistent with the SCAG’s RTP/SCS and would have a less-than-significant cumulative impact on VMT.

- c) **Substantially increase hazards due to a road design feature (e.g., sharp curves) or incompatible uses (e.g., farm equipment)?**

Less Than Significant Impact. A significant impact may occur if a project were to include a new roadway design, introduce a new land use or project features into an area with specific transportation requirements and characteristics that have not been previously experienced in that area, or if project access or other features were designed in such a way as to create hazardous conditions.

Driveway location and design will be subject to LA County Public Works (LACPW) review, which will ensure that County standards regarding sight lines and turning movements are in compliance. Therefore, a less than significant impact would occur.

Pedestrian Safety

Temporary impacts to pedestrian safety could occur during construction. Safety measures will be implemented to ensure the safety of pedestrians and other vehicles in general, as the construction area could create hazards of incompatible/slow-moving construction and haul vehicles. The Project will coordinate with LADPW on construction and best management practices, including but not limited to: install appropriate construction related traffic signs around the site to ensure pedestrian and vehicle safety. Sidewalks could be closed adjacent to the Project Site and pedestrians will be directed across the streets prior to the Project Site. Sidewalk will be reopened as soon as reasonably feasible taking construction and construction staging into account. Therefore, impacts would be less than significant.

Pedestrian access to the Project would be provided at entrances along Gage Avenue and Eastman Avenue which would lead to the school buildings or designated walkways adjacent to the parking and circulation areas. Access to the outdoor play area above the parking area is accessed from the classroom building. The Project would not mix pedestrian and automobile traffic. Therefore, a less than significant impact would occur.

Queuing Analysis Summary¹¹⁵

For student drop-off and pick-up operations, motorists will be directed to enter the site's drop-off/pick-up area by making a right-turn from Gage Avenue, travel through the onsite drop-off/pick-up lane, complete the student drop-off or pick-up, and then exit onto Eastman Avenue via a right-turn movement. Signs will be posted at the ingress and egress driveways indicating turning restrictions. Traffic monitors will also assist in directing vehicles through the drop-off/pick-up area.

The site shall restrict left turn ingress on Gage Avenue and left turn egress onto Eastman Avenue at all times.¹¹⁶

The Project Applicant, Extera Public Schools, has provided a letter describing its commitment to stagger the student start and dismissal times, implement two lines of onsite vehicle queuing during the drop-off and pick-up periods, and to utilize traffic monitors to facilitate safe and efficient student drop-off and pick-up operations at the Project.

The start and dismissal times of the Project's middle school and elementary school components will be staggered by a minimum of 20 minutes, thereby dispersing the arrival of traffic over a longer period of time.

The Project's onsite drop-off/pick-up area can accommodate 20 queued vehicles within two lanes of queuing: six vehicles in the drop-off/pick-up zone and 14 vehicles queued onsite in advance of the drop-off/pick-up zone.

Using trip generation rates published by ITE and based on the M/M/s queuing model, it is forecast that during the morning student drop-off period, the Project will generate an average queue of

¹¹⁵ [Vehicle Queuing Analysis](#), Linscott, Law & Greenspan, January 3, 2024.

¹¹⁶ [Queuing Analysis Approval Letter](#), Los Angeles County Public Works, January 10, 2024.

5.02 vehicles and a peak queue of eleven vehicles. This peak queue can be accommodated by the Project’s drop-off/pick-up area which can accommodate 20 queued vehicles onsite. The Project will not cause vehicles to queue onto Gage Avenue.

Other Hazards

The Project does not include any sharp curves, dangerous intersections, or incompatible uses. No off-site traffic improvements are proposed or warranted in the area surrounding the Project Site. Therefore, a less than significant impact would occur.

d) Result in inadequate emergency access?

Less Than Significant Impact. Project development would not result in inadequate emergency access. Direct access to the project site would be provided by a new private driveways from Gage Avenue and Eastman Avenue. The Project would also be required to construct internal access and provide fire suppression facilities, including fire hydrants, in conformance with the County Code Title 32, Fire Code. The Project will be subject to all requirements of the Fire Department and shall comply pursuant to the requirements of the Uniform Code and Section 503 of the California Fire Code (Title 24, California Code of Regulations, Part 9). Therefore, a less than significant impact would occur.

4.18 TRIBAL CULTURAL RESOURCES

Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
--------------------------------------	---	------------------------------------	-----------

Would the project:

a) Would the project cause a substantial adverse change in the significance of a tribal cultural resource, defined in Public Resources Code §21074 as either a site, feature, place, cultural landscape that is geographically defined in terms of the size and scope of the landscape, sacred place, or object with cultural value to a California Native American tribe, and that is:

- | | | | | |
|--|--------------------------|-------------------------------------|--------------------------|--------------------------|
| i) Listed or eligible for listing in the California Register of Historical Resources, or in a local register of historical resources as defined in Public Resources Code § 5020.1(k), or | <input type="checkbox"/> | <input checked="" type="checkbox"/> | <input type="checkbox"/> | <input type="checkbox"/> |
|--|--------------------------|-------------------------------------|--------------------------|--------------------------|

This section is based on the following item, which is included as **Appendix K** to this MND:

K AB 52 Formal Notification, Los Angeles County, November 20, 2023

Less Than Significant Impact with Mitigation Incorporated. Assembly Bill 52 (AB 52) established a formal consultation process for California Native American tribes to identify potential significant impacts to tribal cultural resources, as defined in PRC Section 21074, as part of CEQA. As specified in AB 52, lead agencies must provide notice inviting consultation to California Native American tribes that are traditionally and culturally affiliated with the geographic area of a proposed project if the tribe has submitted a request in writing to be notified of proposed projects. The tribe must respond in writing within 30 days of the AB 52 notice. AB 52 also gives Lead Agencies the discretion to determine, supported by substantial evidence, whether a resource falling outside the definition stated above nonetheless qualifies as a “tribal cultural resource.” If a tribe does not request consultation in writing within 30 days of the date of the AB 52 Project Notice, then the County has met its requirements under AB 52, and no AB 52 consultation is required.

Pursuant to the requirements of Assembly Bill 52, the County sent informational letters about the Project and requests for consultation to each tribe on the County’s list of tribes requesting consultation. A formal notification of the Project was sent to the following Native American tribes and groups:

- Gabrieleño Band of Mission Indians-Kizh Nation.

The Local Government Tribal Consultation List Request was sent to the Native American Heritage Commission on September 25, 2023. A response dated November 15, 2023 was received via email and included in Appendix C-3 of this MND and stated the following, “A search of the SFL (Sacred Lands File) was completed for the project with negative results.”

A request for the Project Review/Quick Check was submitted to the South Central Coastal Information Center (California State University, Fullerton-Department of Anthropology) on September 25, 2023. The results of the Project Review/Quick Check was received on November 15, 2023 and included in Appendix C-1 of this MND.

During the notification period, the Gabrieleño Band of Mission Indians-Kizh Nation responded and requested consultation with the County. The tribe identified potential tribal cultural resources and provided recommended measures as included in **Mitigation Measure MM-TCR-1** below. Consultation with the tribe concluded on November 20, 2023. Requirements for consultation under CEQA have been satisfied. Therefore, impacts to TCRs would be less than significant with mitigation incorporated.

Mitigation Measure

MM-TCR-1 Tribal Cultural Resources Monitoring

- **Tribal Monitor.** Prior to the commencement of any ground disturbance activities, the Applicant shall retain a qualified Tribal monitor (Tribal Monitor) or 3rd Party Monitor who is approved by the Gabrieleño Band of Mission Indians-Kizh Nation Tribal Government to provide tribal monitoring/consulting services. The term “ground disturbance activities”, as found in these project mitigation measures, refer to activities that may include clearing vegetation, pavement removal, grading, excavation, trenching, drilling, and potholing/auguring within the project site. The Applicant shall submit a letter to the County of Los Angeles (County) to confirm the name and contact information of the Tribal Monitor or 3rd Party Monitor who is retained for the project.
- **Tribal Cultural Resources Monitoring Plan.** Prior to the commencement of any ground disturbance activities, the Tribal Monitor or 3rd Party Monitor shall prepare and submit a Tribal Cultural Resources Monitoring Plan (Monitoring Plan) to the County for review and approval at least 30 days before those activities commence. The Monitoring Plan shall include methods for monitoring ground disturbance activities; procedures to follow when resources are discovered; protocol for identifying and evaluating tribal cultural resources; and proposed measures to mitigate potential impacts to tribal cultural resources to less than significant levels.
- **Worker Environmental Awareness Program (WEAP).** Prior to the commencement of any ground disturbance activities, the Tribal Monitor or 3rd Party Monitor, will provide a WEAP training to construction crews that provides

information on regulatory requirements for the protection of tribal cultural resources. As part of the WEAP training, construction crews shall be briefed on proper procedures to follow should unanticipated tribal cultural resources discoveries be made during construction. In addition, workers will be shown examples of the types of resources that would require notification of the Tribal Monitor or 3rd Party Monitor.

- **Discovery of Tribal Cultural Resources.** If tribal cultural resources are encountered during construction, all ground disturbance activities within 25 feet of the find shall stop until the Tribal Monitor can evaluate the significance of the find. Construction activities may continue in other areas of the project site. If the discovery proves significant, the Tribal Monitor or 3rd Party Monitor shall recommend appropriate measures, subject to County approval, to mitigate potential impacts to tribal cultural resources to less than significant. Such measures may include but are not limited to resource avoidance, reburial, and preservation for educational purposes. The Tribal Monitor shall coordinate with the project Applicant to ensure that all measures approved by the County are implemented.
- Within 90 days after monitoring has ended, the Tribal Monitor shall prepare and submit a final monitoring report documenting all encountered tribal cultural resources, the significance of the resources, and the treatment of the resources to the County and the California Native American Heritage Commission.
- If the Applicant does not accept a particular recommendation determined to be reasonable and feasible by the Tribal Monitor, the Applicant may request mediation by a mediator agreed to by the Applicant and the County who has the requisite professional qualifications and experience to mediate such a dispute. The Applicant shall pay any costs associated with the mediation.
- The Applicant may recommence ground disturbance activities outside of a specified radius of the discovery site, so long as this radius has been reviewed by the Tribal Monitor and determined to be reasonable and appropriate.

ii) A resource determined by the lead agency, in its discretion and supported by substantial evidence, to be significant pursuant to criteria set forth in subdivision (c) of Public Resources Code § 5024.1. In applying the criteria set forth in subdivision (c) of Public Resources Code § 5024.1, the lead agency shall consider the significance of the resource to a California Native American tribe.

Less Than Significant Impact with Mitigation Incorporated. To avoid potential adverse effects to tribal cultural resources (TCRs), **Mitigation Measure MM-TCR-1** has been included to provide for monitoring of excavation and grading activities to avoid potential impacts to tribal cultural resources that may be unearthed by project construction activities. There are no known tribal cultural resources on or adjacent to the Project Site, and no potentially significant impacts are anticipated. The following conditions are included in the event of any inadvertent discoveries during grading and construction activities:

Additionally, as described previously, California Health and Safety Code, Section 7050.5 requires that if human remains are discovered in the project site, disturbance of the site shall halt and remain halted until the coroner has conducted an investigation. If the coroner determines that the remains are those of a Native American, they shall contact the Native American Heritage Commission. Therefore, impacts to TCRs would be less than significant with mitigation incorporated.

Cumulative Impacts

Impacts related to tribal cultural resources tend to be site-specific and are assessed on a site-by-site basis. The County would require the applicants of each of the related projects to assess, determine, and mitigate any potential impacts related to tribal cultural resources that could occur as a result of development, as necessary. As discussed previously, through compliance with existing laws, Project impacts associated with historic, archaeological, and paleontological resources would be less than significant. However, the occurrence of these impacts would be limited to the Project Site and would not contribute to any potentially significant cultural resources impacts that could occur at the sites of the related projects. In addition, all other projects would be subject to separate environmental review as applicable, and other mitigation measures regarding discovery and handling of tribal resources would be implemented as necessary to mitigate any potential impacts. As such, the Project would not contribute to any potential cumulative impacts related to cultural resources. Therefore, cumulative impacts related to cultural resources would be less than significant.

4.19 UTILITIES AND SERVICE SYSTEMS

This section is based on the following items, which are included as **Appendix L** to this MND:

- L-1 Wastewater Response, Los Angeles Sanitation Districts, September 29, 2023
- L-2 Sewer Area Study, Trittech Engineering Group, November 6, 2023

	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
Would the project:				
a) Require or result in the relocation or construction of new or expanded water, wastewater treatment or storm water drainage, electric power, natural gas, or telecommunications facilities, the construction or relocation of which could cause significant environmental effects?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>

Less Than Significant Impact.

Water

Domestic water services are provided to the Project Site by California Water Service Company’s East Los Angeles District (Cal Water), which uses a combination of local groundwater and purchased water from the Metropolitan Water District of Southern California (MWD), which is imported from the Colorado River and the State Water Project in northern California. The East Los Angeles water system currently includes 10 active wells, 26 booster pumps, 16 storage tanks, and three MWD connections.¹¹⁷

As shown on **Table 4.19-1**, the Project would consume a net increase of approximately 9,235 gallons of water per day (or 0.009 mgd). It should be noted that this amount does not take into account the effectiveness of water conservation measures required in accordance with the County’s Green Building Code, which would likely reduce the Project’s water consumption (and wastewater generation).

¹¹⁷ California Water Service East Los Angeles District: <https://www.calwater.com/district-information/?dist=ela>

**Table 4.19-1
Estimated Wastewater Generation and Water Consumption**

Land Use	Size	Water Consumption Rate	Total (gallons/day)
Existing Uses (to be Removed)			
Church	25,302 sf	50 gpd / 1,000 sf	(1,265)
Proposed Uses			
School	525 students	20 gpd / student	10,500
Net Total			9,235
sf = square feet gpd = gallons per day Conservatively assumes that all water converts to wastewater. Rates: Los Angeles County Public Works (LACPW) factors: https://www.lacsd.org/home/showpublisheddocument/3644/637644575489800000 .			

LACPW has determined the sewer infrastructure has the capacity to accommodate the Project.

For these reasons, the Project would not require or result in relocation or the construction of new or expanded water facilities, the construction or relocation of which could cause significant environmental effects. Therefore, Project impacts related to water facilities would be less than significant.

Wastewater

Wastewater from the Project Site is conveyed via County sewer infrastructure to the Joint Water Pollution Control Plant which currently provides primary, secondary, and tertiary treatment for a design capacity of 260 million gallons of wastewater per day within a portion of the Los Angeles County Sanitation Districts (LACSD).¹¹⁸

As identified on **Table 4.19-1**, the Project would generate approximately 9,235 gallons of wastewater per day (or 0.009 mgd). With a remaining daily capacity of 260 mgd, the LACSD would have adequate capacity to serve the Project. Therefore, Project impacts related to wastewater treatment would be less than significant.

The sewer lines consist of local and trunk sewers. LACPW owns the local sewers and Los Angeles County Sanitation District owns the trunk sewers. Since the local sewer lines belong to LACPW, a sewer area study was done to determine the capacity of the sewer lines. The calculated Project flow compared to the pipe capacity is less than 100% (55.2%), which means the Project will not adversely impact the existing sewer capacity.¹¹⁹ The point of connection to the local sewer system shall be proposed by the applicant.

Therefore, Project impacts related to wastewater treatment would be less than significant.

¹¹⁸ Los Angeles County Sanitation Districts: <https://www.app.lacsd.org/facilities/?tab=2&number=1>

¹¹⁹ Sewer Area Study, Trittech Engineering Group, November 6, 2023.

Storm Water Drainage Facilities

As discussed in response to Checklist Question 10(c)(iii), Project impacts related to storm drainage facilities would be less than significant.

Electric Power Facilities

As discussed in response to Checklist Question 6(a), Project impact related to electric power facilities would be less than significant.

Natural Gas Facilities

As discussed in response to Checklist Question VI(a), Project impact related to natural gas facilities would be less than significant.

Telecommunications Facilities

The Project Site could be served by existing telecommunications facilities that are available in the Project Site area and would not require new or expanded facilities. Therefore, Project impacts related to telecommunications facilities would be less than significant.

- b) **Have sufficient water supplies available to serve the project and reasonably foreseeable future development during normal, dry and multiple dry years?**

Less Than Significant Impact. California Water Service Company (Cal Water) is an investor-owned public utility supplying water service to approximately 1.8 million Californians through over 481,000 connections. Cal Water incorporated in 1926 and has provided water service to communities served by the East Los Angeles District since 1928. The 2020 Urban Water Management Plan (UWMP) is a foundational document and source of information about the East Los Angeles District’s historical and projected water demands, water supplies, supply reliability and potential vulnerabilities, water shortage contingency planning, and demand management programs.

Water use in 2020 was 14,230 acre-feet (AF). Residential customers accounted for most of the District’s service connections and 52 percent of its water uses. Non-residential water uses accounted for 42 percent of total demand, while distribution system losses accounted for 6 percent. Water use is projected to be 3,833 AF in 2025 and 13,514 AF in 2030, with reductions due to efficiencies in water fixtures and other conservation requirements. Cal Water will meet its projected demand through 2045 and accounts for normal, single dry-year, and multiple dry-year

hydrologic conditions.¹²⁰ As such, the Project would not require new or additional water supply or entitlements. Therefore, Project impacts related to water supply would be less than significant.

- c) **Result in a determination by the wastewater treatment provider which serves or may serve the project that it has adequate capacity to serve the project’s projected demand in addition to the provider’s existing commitments?**

Less Than Significant Impact. As discussed in response to comment 19(a), Project impacts related to wastewater treatment would be less than significant.

- d) **Generate solid waste in excess of State or local standards, or in excess of the capacity of local infrastructure, or otherwise impair the attainment of solid waste reduction goals?**

Less Than Significant Impact. In 2019, a majority of the solid waste from the unincorporated area of Los Angeles County, where the Project Site is located, that was disposed of in landfills, went to the Mid-Valley Sanitary Landfill. The Mid-Valley Sanitary Landfill is permitted to accept 7,500 tons per day of solid waste and is permitted to operate through April 2033. In December 2019, the facility received an average of 5,000 tons per day. Thus, the facility had additional capacity of 2,500 tons per day (CalRecycle).

Project construction would generate solid waste for landfill disposal in the form of demolition debris from the existing building and infrastructure that would be removed from the site. Construction waste in the form of packaging and discarded materials would also be generated by the proposed project. Section 5.408.1 of the California Green Building Standards Code requires demolition and construction activities to recycle or reuse a minimum of 65 percent of the nonhazardous construction and demolition waste. As the Mid-Valley Sanitary Landfill had additional capacity, the facility would be able to accommodate the addition of solid waste during construction of the Project.

The Project includes development of a school serving 525 students. Based on the CalRecycle solid waste generation rate of 1 pound per student per day¹²¹, the Project would generate

resident, the 204 residents are estimated to generate 96 tons of solid waste per year. However, pursuant to AB 341, at least 75 percent of the solid waste is required to be recycled, which would reduce the volume of landfilled solid waste to approximately 24 tons per year (or 0.6 tons per day). As the Mid-Valley Sanitary Landfill had additional capacity of 2,500 tons per day tons per

¹²⁰ Cal Water 2020 UWMP: https://www.calwater.com/docs/uwmp2020/ELA_2020_UWMP_FINAL.pdf

¹²¹ CalRecycle: <https://www2.calrecycle.ca.gov/WasteCharacterization/General/Rates>

day, the facility would be able to accommodate the addition of 0.06 tons of solid waste per day from the Project. Thus, impacts related to solid waste generation and landfill capacity would be less than significant

e) **Comply with federal, state, and local management and reduction statutes and regulations related to solid waste?**

No Impact. State regulation AB 939 required every city and county to divert 50 percent of its waste from landfills by the year 2000 through such means as recycling, source reduction, and composting. In addition, AB 939 requires each county to prepare a countywide siting element for a 15-year period, specifying areas for transformation or disposal sites to provide capacity for solid waste generated in the county that cannot be reduced or recycled. Further, AB 1327, the California Solid Waste Reuse and Recycling Access Act of 1991, requires local agencies to adopt ordinances mandating the use of recyclable materials in development projects. All solid waste-generating activities within the County are subject to the requirements set forth in Section 5.408.1 of the California Green Building Standards Code that requires demolition and construction activities to recycle or reuse a minimum of 65 percent of the nonhazardous construction and demolition waste. The Project would be required to comply with all applicable federal, state, and local statutes. Therefore no impact would occur.

Cumulative Impacts

Water

Implementation of the Project in conjunction with the related projects could result in an increased cumulative on water conveyance infrastructure. It should be noted that any amount does not take into account the net decrease in water consumption (and wastewater generation) that would occur as a result of removal of existing uses or the effectiveness of water conservation measures required in accordance with the County’s Green Building Code, both of which would likely substantially reduce the cumulative water consumption (and wastewater generation).

Cal Water (through its UWMP) anticipates that its projected water supplies will meet demand through the year 2045. In terms of Cal Water’s overall water supply condition, any related project that is consistent with the County’s General Plan has been taken into account in the planned growth of the water system. In addition, any related project that conforms to the demographic projections from SCAG’s RTP/SCS and is located in the service area is considered to have been included in Cal Water’s water supply planning efforts so that projected water supplies would meet projected demands. Similar to the Project, each related project would be required to comply with County and State water code and conservation programs for both water supply and infrastructure.

Related projects that propose changing the zoning or other characteristics beyond what is within the General Plan would be required to evaluate the change under CEQA review process. The CEQA analysis would compare the existing to the proposed uses and the ability of Cal Water’s supplies and infrastructure to provide a sufficient level of water service. Future development

projects within the service area of the Cal Water would be subject to the water conservation measures outlined in the County's Green Building Code, which would partially offset the cumulative demand for water. Cal Water' undertakes expansion or modification of water service infrastructure to serve future growth in the County as required in the normal process of providing water service. For these reasons, cumulative impacts related to water would be less than significant.

As with the Project, the applicants of the related projects would be subject to review by Cal Water to ensure that existing infrastructure would be adequate to meet the water demand requirements for each project. All development in this area of the County is subject to Cal Water and requirements regarding potential infrastructure improvements need to meet respective water infrastructure needs. Additionally, all development in the County is required to comply with Fire Code requirement for fire flow and other fire protection requirements and are subject to ongoing evaluations by Cal Water, the LACDPW, and the Los Angeles County Fire Department to ensure water conveyance infrastructure is adequate. Compliance with existing regulations would ensure that cumulative impacts related to water infrastructure would be less than significant.

Wastewater

Implementation of the related projects could increase the need for wastewater treatment. It should be noted that any amount does not take into account the net decrease in wastewater generation (and water consumption) that would occur as a result of removal of existing uses or the effectiveness of water conservation measures required in accordance with the County's Green Building Code, both of which would likely substantially reduce the cumulative water consumption and wastewater generation. With a remaining treatment capacity of approximately 270 mgd, the LACSD would have adequate capacity to accommodate the wastewater treatment requirements of cumulative development. No new or upgraded treatment facilities would be required. Therefore, the cumulative wastewater treatment impacts would be less than significant.

All of the related projects represent infill development and are served by existing utilities, including telecommunications infrastructure. As with the Project, the related projects would likely require project- or site-specific infrastructure to connect to the existing infrastructure, but the related projects would not require new or expanded facilities. Therefore, cumulative impacts related to telecommunications infrastructure would be less than significant.

Stormwater

Refer to the cumulative impact discussion provided in response to Checklist Topic 10 (Hydrology and Water Quality).

Electricity and Natural Gas

Refer to the cumulative impact discussion provided in response to Checklist Topic 6 (Energy).As with the Project, all of the related projects would be required by the County to comply with all applicable federal, state, and local statutes and regulations, including the Construction and

Demolition Waste Recycling, the Curbside Recycling Program, and Zero Waste Plan, and no impacts related to this issue would occur as a result of cumulative development.

4.20 WILDFIRE

Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
--------------------------------	--	------------------------------	-----------

If located in or near state responsibility areas or lands classified as very high fire hazard severity zones would the project:

- a) **Substantially impair an adopted emergency response plan or emergency evacuation plan?**

No Impact. The Project Site does not contain any emergency facilities, nor does it serve as an emergency evacuation route. During construction, the Project would be required to maintain adequate emergency access for emergency vehicles via project roadways as required by the County. Furthermore, the Project would not result in a substantial alteration to the design or capacity of any public road that would impair or interfere with the implementation of evacuation procedures. Therefore, the project would not impact an adopted emergency plan or emergency evacuation plan within or near a very high fire hazard severity zone. Therefore, no impact would occur.

- b) **Due to slope, prevailing winds, and other factors, exacerbate wildfire risks, and thereby expose project occupants to, pollutant concentrations from a wildfire or the uncontrolled spread of a wildfire?**

No Impact. The Project Site is not within an area identified as a Fire Hazard Area that may contain substantial fire risk or a Very High Fire Hazard Severity Zone.¹²² Adjacent areas to the Project Site are urbanized and do not contain hillsides or other factors that could exacerbate wildfire risks and result in exposure of persons to pollutant concentrations from a wildfire. Therefore, no impact would occur.

- c) **Require the installation or maintenance of associated infrastructure (such as roads, fuel breaks, emergency water sources, power lines or other utilities) that may exacerbate fire risk or that may result in temporary or ongoing impacts to the environment?**

¹²² Los Angeles County General Plan, Figure 12.5, Fire Hazard Severity Zones Policy Map: https://planning.lacounty.gov/assets/upl/project/gp_2035_2021-FIG_12-5_Fire_Hazard_Severity_Zones_Policy_Map_Responsibility.pdf

No Impact. The Project Site is not within an area identified as a Fire Hazard Area that may contain substantial fire risk or a Very High Fire Hazard Severity Zone.¹²³ Adjacent areas to the Project Site are urbanized and do not contain hillsides or other factors that could exacerbate wildfire risks and result in exposure of persons to pollutant concentrations from a wildfire. Therefore, no impact would occur.

- d) **Expose people or structures to significant risks, including downslope or downstream flooding or landslides, as a result of runoff, post-fire slope instability, or drainage changes?**

No Impact. Implementation of the Project would not introduce people or structures to a fire hazard severity zone. Therefore, the project would not expose people or structures, either directly or indirectly, to a significant risk of loss, injury, or death involving wildland fires. Therefore, no impact would occur.

Cumulative Impacts

None of the related projects is located near lands that are classified as very high fire hazard severity zones. Therefore, no impacts related to this issue would occur as a result of cumulative development.

¹²³ Los Angeles County General Plan, Figure 12.5, Fire Hazard Severity Zones Policy Map: https://planning.lacounty.gov/assets/upl/project/gp_2035_2021-FIG_12-5_Fire_Hazard_Severity_Zones_Policy_Map_Responsibility.pdf

4.21 MANDATORY FINDINGS OF SIGNIFICANCE

	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
a) Does the project have the potential to substantially degrade the quality of the environment, substantially reduce the habitat of a fish or wildlife species, cause a fish or wildlife population to drop below self-sustaining levels, threaten to eliminate a plant or animal community, substantially reduce the number or restrict the range of a rare or endangered plant or animal or eliminate important examples of the major periods of California history or prehistory?	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>

Less Than Significant Impact with Mitigation Incorporated. As discussed under Checklist Topics 4 (Biological Resources) the Project would not have the potential to substantially degrade the quality of the environment, substantially reduce the habitat of a fish or wildlife species, cause a fish or wildlife population to drop below self-sustaining levels, threaten to eliminate a plant or animal community, substantially reduce the number or restrict the range of a rare or endangered plant or animal and V (Cultural Resources), or eliminate important examples of the major periods of California history or prehistory.

As discussed under Checklist Topic 18 (Tribal Cultural Resources), the Project would not have the potential to eliminate important examples of the major periods of California history or prehistory related to tribal cultural resources with **Mitigation Measure MM-TCR-1**.

b) Does the project have impacts that are individually limited, but cumulatively considerable? (“Cumulatively considerable” means that the incremental effects of a project are considerable when viewed in connection with the effects of past projects, the effects of other current projects, and the effects of probable future projects)?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
--	--------------------------	--------------------------	-------------------------------------	--------------------------

Less Than Significant Impact. As discussed throughout this IS/MND, the Project’s contribution to cumulative impacts would not be considerable.

c) Does the project have environmental effects which will cause substantial adverse effects on human beings, either directly or indirectly?

Less Than Significant Impact. As discussed throughout this IS/MND, the Project would not result in any direct or indirect adverse effects on human beings.

DOUGLASKIM+ASSOCIATES,LLC

AIR QUALITY ANALYSIS ASSUMPTIONS

Construction Schedule

- Construction Duration (11/1/2024-11/30/2025)
- Demolition (11/1/2024-11/30/2024)
- Site Preparation (12/1/2024-12/4/2024)
- Grading (12/5/2024-12/16/2024)
- Trenching (12/18/2024-3/16/2025)
- Building Construction (12/18/2024-3/18/2025)
- Paving (9/15/2025-9/29/2025)
- Architectural Coatings (8/1/2025-11/30/2025)

Days/Week of Construction: 5

Grading: 971 cubic yards of soil removal

- Assumes 10 cubic yard capacity for haul truck
- Assumes 25-mile distance to landfill
- Assumes grading of entire site on a given day

Demolition: 2,433 tons of debris

- Assumes 25,302 square feet of buildings @ 12' height = 3,711 CY @ 1,000 lb/CY
- Assumes 26,000 square feet of asphalt parking lot @ 6" depth = 481 CY @ 2,400 lb/CY
- Assumes 25-mile distance to landfill

Off-Site Construction

- Assumes 838 haul truck trips during demolition
- Assumes 194 haul truck trips during grading
- Worker Trips (Daily)
 - Demolition – 12.5
 - Site Preparation – 7.5
 - Grading – 10
 - Trenching – 5
 - Building Construction – 13.5
 - Paving – 12.5
 - Architectural Coatings 2.7
- Vendor Trips 5.28

Operational Trip Generation for Existing Church (Source: Linscott, Law & Greenspan)

- 192 average daily trips
- 8 A.M. peak hour trips, 12 P.M. peak hour trips

Operational Trip Generation for Proposed Project (Source: Linscott, Law & Greenspan)

- 1,019 average daily trips
- 506 A.M. peak hour trips, 192 P.M. peak hour trips

AIR QUALITY TECHNICAL REPORT

Introduction

This technical report addresses the air quality impacts generated by construction and operation of the Proposed Project at 1059 South Gage Avenue in the County of Los Angeles. The analysis evaluates the consistency of the Project with the air quality policies set forth within the South Coast Air Quality Management District's (SCAQMD) Air Quality Management Plan (AQMP) and the County's General Plan 2035 General Plan. The analysis of Project-generated air emissions focuses on whether the Project would cause an exceedance of an ambient air quality standard or SCAQMD significance threshold. Calculation worksheets, assumptions, and model outputs used in the analysis are included in the Technical Appendix to this analysis.

Regulatory Framework

Federal

The Federal Clean Air Act (CAA) was first enacted in 1955 and has been amended numerous times in subsequent years, with the most recent amendments in 1990. At the federal level, the United States Environmental Protection Agency (USEPA) is responsible for implementation of some portions of the CAA (e.g., certain mobile source and other requirements). Other portions of the CAA (e.g., stationary source requirements) are implemented by state and local agencies. In California, the CCAA is administered by the California Air Resources Board (CARB) at the state level and by the air quality management districts and air pollution control districts at the regional and local levels.

The 1990 amendments to the CAA identify specific emission reduction goals for areas not meeting the National Ambient Air Quality Standard (NAAQS). These amendments require both a demonstration of reasonable further progress toward attainment and incorporation of additional sanctions for failure to attain or to meet interim milestones. The sections of the CAA which are most applicable to the Project include Title I (Nonattainment Provisions) and Title II (Mobile Source Provisions).

NAAQS have been established for seven major air pollutants: CO (carbon monoxide), NO₂ (nitrogen dioxide), O₃ (ozone), PM_{2.5} (particulate matter, 2.5 microns), PM₁₀ (particulate matter, 10 microns), SO₂ (sulfur dioxide), and Pb (lead).

The Clean Air Act (CAA) requires the USEPA to designate areas as attainment, nonattainment, or maintenance (previously nonattainment and currently attainment) for each criteria pollutant based on whether the National Ambient Air Quality Standards (NAAQS) have been achieved. Title I provisions are implemented for the purpose of attaining NAAQS. The federal standards are summarized in Table 1. The USEPA has classified the Los Angeles County portion of the South Coast Air Basin (Basin) as a nonattainment area for O₃, PM_{2.5}, and Pb.

**Table 1
State and National Ambient Air Quality Standards and Attainment Status for LA County**

Pollutant	Averaging Period	California		Federal	
		Standards	Attainment Status	Standards	Attainment Status
Ozone (O ₃)	1-hour	0.09 ppm (180 µg/m ³)	Non-attainment	--	--
	8-hour	0.070 ppm (137 µg/m ³)	N/A ¹	0.070 ppm (137 µg/m ³)	Non-attainment
Respirable Particulate Matter (PM ₁₀)	24-hour	50 µg/m ³	Non-attainment	150 µg/m ³	Maintenance
	Annual Arithmetic Mean	20 µg/m ³	Non-attainment	--	--
Fine Particulate Matter (PM _{2.5})	24-hour	--	--	35 µg/m ³	Non-attainment
	Annual Arithmetic Mean	12 µg/m ³	Non-attainment	12 µg/m ³	Non-attainment
Carbon Monoxide (CO)	1-hour	20 ppm (23 mg/m ³)	Attainment	35 ppm (40 mg/m ³)	Maintenance
	8-hour	9.0 ppm (10 mg/m ³)	Attainment	9 ppm (10 mg/m ³)	Maintenance
Nitrogen Dioxide (NO ₂)	1-hour	0.18 ppm (338 µg/m ³)	Attainment	100 ppb (188 µg/m ³)	Maintenance
	Annual Arithmetic Mean	0.030 ppm (57 µg/m ³)	Attainment	53 ppb (100 µg/m ³)	Maintenance
Sulfur Dioxide (SO ₂)	1-hour	0.25 ppm (655 µg/m ³)	Attainment	75 ppb (196 µg/m ³)	Attainment
	24-hour	0.04 ppm (105 µg/m ³)	Attainment	--	--
Lead (Pb)	30-day average	1.5 µg/m ³	Attainment	--	--
	Calendar Quarter	--	--	0.15 µg/m ³	Non-attainment
Visibility Reducing Particles	8-hour	Extinction of 0.07 per kilometer	N/A	No Federal Standards	
Sulfates	24-hour	25 µg/m ³	Attainment	No Federal Standards	
Hydrogen Sulfide (H ₂ S)	1-hour	0.03 ppm (42 µg/m ³)	Unclassified	No Federal Standards	
Vinyl Chloride	24-hour	0.01 ppm (26 µg/m ³)	N/A	No Federal Standards	

¹N/A = not available

Source: CARB, Ambient Air Quality Standards, and attainment status, 2020 (www.arb.ca.gov/desig/adm/adm.htm).

CAA Title II pertains to mobile sources, such as cars, trucks, buses, and planes. Reformulated gasoline and automobile pollution control devices are examples of the mechanisms the USEPA uses to regulate mobile air emission sources. The provisions of Title II have resulted in tailpipe emission standards for vehicles, which have been strengthened in recent years to improve air quality. For example, the standards for NO_x emissions have been lowered substantially and the specification requirements for cleaner burning gasoline are more stringent.

The USEPA regulates emission sources that are under the exclusive authority of the federal government, such as aircraft, ships, and certain types of locomotives. USEPA has jurisdiction over emission sources outside state waters (e.g., beyond the outer continental shelf) and establishes various emission standards, including those for vehicles sold in states other than California. Automobiles sold in California must meet stricter emission standards established by CARB. USEPA adopted multiple tiers of emission standards to reduce emissions from non-road diesel engines (e.g., diesel-powered construction equipment) by integrating engine and fuel controls as a system to gain the greatest emission reductions. The first federal standards (Tier 1) for new non-road (or off-road) diesel engines were adopted in 1994 for engines over 50 horsepower, to be phased-in from 1996 to 2000. On August 27, 1998, USEPA introduced Tier 1 standards for equipment under 37 kW (50 horsepower) and increasingly more stringent Tier 2 and Tier 3 standards for all equipment with phase-in schedules from 2000 to 2008. The Tier 1 through 3 standards were met through advanced engine design, with no or only limited use of exhaust gas after-treatment (oxidation catalysts). Tier 3 standards for NO_x and hydrocarbon are similar in stringency to the 2004 standards for highway engines. However, Tier 3 standards for particulate matter were never adopted. On May 11, 2004, USEPA signed the final rule introducing Tier 4 emission standards, which were phased-in between 2008 and 2015. The Tier 4 standards require that emissions of particulate matter and NO_x be further reduced by about 90 percent. Such emission reductions are achieved through the use of control technologies—including advanced exhaust gas after-treatment.

State

California Clean Air Act. In addition to being subject to the requirements of CAA, air quality in California is also governed by more stringent regulations under the California Clean Air Act (CCAA). In California, CCAA is administered by CARB at the state level and by the air quality management districts and air pollution control districts at the regional and local levels. CARB, which became part of the California Environmental Protection Agency in 1991, is responsible for meeting the state requirements of the CAA, administering the CCAA, and establishing the California Ambient Air Quality Standards (CAAQS). The CCAA, as amended in 1992, requires all air districts in the State to endeavor to achieve and maintain the CAAQS. CAAQS are generally more stringent than the corresponding federal standards and incorporate additional standards for sulfates, hydrogen sulfide, vinyl chloride, and visibility-reducing particles.

CARB regulates mobile air pollution sources, such as motor vehicles. CARB is responsible for setting emission standards for vehicles sold in California and for other emission sources, such as consumer products and certain off-road equipment. CARB established passenger vehicle fuel specifications in March 1996. CARB oversees the functions of local air pollution control districts and air quality management districts, which, in turn, administer air quality activities at the regional and county levels. The State standards are summarized in Table 1.

The CCAA requires CARB to designate areas within California as either attainment or nonattainment for each criteria pollutant based on whether the CAAQS thresholds have been achieved. Under the CCAA,

areas are designated as nonattainment for a pollutant if air quality data shows that a state standard for the pollutant was violated at least once during the previous three calendar years. Exceedances that are affected by highly irregular or infrequent events are not considered violations of a state standard and are not used as a basis for designating areas as nonattainment. Under the CCAA, the non-desert Los Angeles County portion of the Basin is designated as a nonattainment area for O₃, PM₁₀, and PM_{2.5}.

In August 2022, CARB approved regulations to ban new gasoline-powered cars beginning with 2035 models. Automakers will gradually electrify their fleet of new vehicles, beginning with 35 percent of 2026 models sold. In September 2022, CARB proposes regulations that mandate that all new medium- and heavy-duty trucks would be zero emissions in 2040. Trucking companies would also have to gradually convert their existing fleets to zero emission vehicles, buying more over time until all are zero emissions by 2042.

Toxic Air Contaminant Identification and Control Act. The public's exposure to toxic air contaminants (TACs) is a significant public health issue in California. CARB's statewide comprehensive air toxics program was established in the early 1980s. The Toxic Air Contaminant Identification and Control Act created California's program to reduce exposure to air toxics. Under the Toxic Air Contaminant Identification and Control Act, CARB is required to use certain criteria in the prioritization for the identification and control of air toxics. In selecting substances for review, CARB must consider criteria relating to "the risk of harm to public health, amount or potential amount of emissions, manner of, and exposure to, usage of the substance in California, persistence in the atmosphere, and ambient concentrations in the community" [Health and Safety Code Section 39666(f)].

The Toxic Air Contaminant Identification and Control Act also requires CARB to use available information gathered from the Air Toxics "Hot Spots" Information and Assessment Act program to include in the prioritization of compounds. CARB identified particulate emissions from diesel-fueled engines (diesel PM) TACs in August 1998. Following the identification process, CARB was required by law to determine if there is a need for further control, which led to the risk management phase of the program. For the risk management phase, CARB formed the Diesel Advisory Committee to assist in the development of a risk management guidance document and a risk reduction plan. With the assistance of the Diesel Advisory Committee and its subcommittees, CARB developed the Risk Reduction Plan to Reduce Particulate Matter Emissions from Diesel-Fueled Engines and Vehicles and the Risk Management Guidance for the Permitting of New Stationary Diesel-Fueled Engines. The Board approved these documents on September 28, 2000, paving the way for the next step in the regulatory process: the control measure phase. During the control measure phase, specific Statewide regulations designed to further reduce diesel PM emissions from diesel-fueled engines and vehicles have and continue to be evaluated and developed. The goal of each regulation is to make diesel engines as clean as possible by establishing state-of-the-art technology requirements or emission standards to reduce diesel PM emissions. Breathing H₂S at levels above the state standard could result in exposure to a disagreeable rotten eggs odor. The State does not regulate other odors.

California Air Toxics Program. The California Air Toxics Program was established in 1983, when the California Legislature adopted Assembly Bill (AB) 1807 to establish a two-step process of risk identification and risk management to address potential health effects from exposure to toxic substances in the air.¹ In the risk identification step, CARB and the Office of Environmental Health Hazard

¹ California Air Resources Board, California Air Toxics Program, www.arb.ca.gov/toxics/toxics.htm, last reviewed by CARB September 24, 2015.

Assessment (OEHHA) determine if a substance should be formally identified, or “listed,” as a TAC in California. Since inception of the program, a number of such substances have been listed, including benzene, chloroform, formaldehyde, and particulate emissions from diesel-fueled engines, among others.² In 1993, the California Legislature amended the program to identify the 189 federal hazardous air pollutants as TACs.

In the risk management step, CARB reviews emission sources of an identified TAC to determine whether regulatory action is needed to reduce risk. Based on results of that review, CARB has promulgated a number of airborne toxic control measures (ATCMs), both for mobile and stationary sources. In 2004, CARB adopted an ATCM to limit heavy-duty diesel motor vehicle idling in order to reduce public exposure to diesel PM and other TACs. The measure applies to diesel-fueled commercial vehicles with gross vehicle weight ratings greater than 10,000 pounds that are licensed to operate on highways, regardless of where they are registered. This measure does not allow diesel-fueled commercial vehicles to idle for more than five minutes at any given time.

In addition to limiting exhaust from idling trucks, CARB adopted regulations on July 26, 2007 for off-road diesel construction equipment such as bulldozers, loaders, backhoes, and forklifts, as well as many other self-propelled off-road diesel vehicles to reduce emissions by installation of diesel particulate filters and encouraging the replacement of older, dirtier engines with newer emission-controlled models. In April 2021, CARB proposed a 2020 Mobile Source Strategy that seeks to move California to 100 percent zero-emission off-road equipment by 2035.

Assembly Bill 2588 Air Toxics “Hot Spots” Program. The AB 1807 program is supplemented by the AB 2588 Air Toxics “Hot Spots” program, which was established by the California Legislature in 1987. Under this program, facilities are required to report their air toxics emissions, assess health risks, and notify nearby residents and workers of significant risks if present. In 1992, the AB 2588 program was amended by Senate Bill (SB) 1731 to require facilities that pose a significant health risk to the community to reduce their risk through implementation of a risk management plan.

Air Quality and Land Use Handbook: A Community Health Perspective. The *Air Quality and Land Use Handbook: A Community Health Perspective* provides important air quality information about certain types of facilities (e.g., freeways, refineries, rail yards, ports) that should be considered when siting sensitive land uses such as residences.³ CARB provides recommended site distances from certain types of facilities when considering siting new sensitive land uses. The recommendations are advisory and should not be interpreted as defined “buffer zones.” If a project is within the siting distance, CARB recommends further analysis. Where possible, CARB recommends a minimum separation between new sensitive land uses and existing sources.

Air Quality and Land Use Handbook. CARB published the *Air Quality and Land Use Handbook* (CARB Handbook) on April 28, 2005 to serve as a general guide for considering health effects associated with siting sensitive receptors proximate to sources of TAC emissions. The recommendations provided therein are voluntary and do not constitute a requirement or mandate for either land use agencies or

² California Air Resources Board, Toxic Air Contaminant Identification List, www.arb.ca.gov/toxics/id/taclist.htm, last reviewed by CARB July 18, 2011.

³ California Air Resources Board, *Air Quality and Land Use Handbook, a Community Health Perspective*, April 2005.

local air districts. The goal of the guidance document is to protect sensitive receptors, such as children, the elderly, acutely ill, and chronically ill persons, from exposure to TAC emissions. Some examples of CARB's siting recommendations include the following: (1) avoid siting sensitive receptors within 500 feet of a freeway, urban road with 100,000 vehicles per day, or rural roads with 50,000 vehicles per day; (2) avoid siting sensitive receptors within 1,000 feet of a distribution center (that accommodates more than 100 trucks per day, more than 40 trucks with operating transport refrigeration units per day, or where transport refrigeration unit operations exceed 300 hours per week); and (3) avoid siting sensitive receptors within 300 feet of any dry cleaning operation using perchloroethylene and within 500 feet of operations with two or more machines.

California Code of Regulations. The California Code of Regulations (CCR) is the official compilation and publication of regulations adopted, amended or repealed by the state agencies pursuant to the Administrative Procedure Act. The CCR includes regulations that pertain to air quality emissions. Specifically, Section 2485 in CCR Title 13 states that the idling of all diesel-fueled commercial vehicles (weighing over 10,000 pounds) used during construction shall be limited to five minutes at any location. In addition, Section 93115 in CCR Title 17 states that operation of any stationary, diesel-fueled, compression-ignition engines shall meet specified fuel and fuel additive requirements and emission standards.

Regional (South Coast Air Quality Management District)

The SCAQMD was created in 1977 to coordinate air quality planning efforts throughout Southern California. SCAQMD is the agency principally responsible for comprehensive air pollution control in the region. Specifically, SCAQMD is responsible for monitoring air quality, as well as planning, implementing, and enforcing programs designed to attain and maintain the CAAQS and NAAQS in the district. SCAQMD has jurisdiction over an area of 10,743 square miles consisting of Orange County; the non-desert portions of Los Angeles, Riverside, and San Bernardino counties; and the Riverside County portion of the Salton Sea Air Basin and Mojave Desert Air Basin. The Basin portion of SCAQMD's jurisdiction covers an area of 6,745 square miles. The Basin includes all of Orange County and the non-desert portions of Los Angeles (including the Project Area), Riverside, and San Bernardino counties. The Basin is bounded by the Pacific Ocean to the west; the San Gabriel, San Bernardino and San Jacinto Mountains to the north and east; and the San Diego County line to the south.

Programs that were developed by SCAQMD to attain and maintain the CAAQS and NAAQS include air quality rules and regulations that regulate stationary sources, area sources, point sources, and certain mobile source emissions. SCAQMD is also responsible for establishing stationary source permitting requirements and for ensuring that new, modified, or relocated stationary sources do not create net emission increases. All projects in the SCAQMD jurisdiction are subject to SCAQMD rules and regulations, including, but not limited to the following:

- Rule 401 Visible Emissions – This rule prohibits an air discharge that results in a plume that is as dark or darker than what is designated as No. 1 Ringelmann Chart by the United States Bureau of Mines for an aggregate of three minutes in any one hour.
- Rule 402 Nuisance – This rule prohibits the discharge of “such quantities of air contaminants or other material which cause injury, detriment, nuisance, or annoyance to any considerable number of people or the public, or which endanger the comfort, repose, health or safety of any such persons or

the public, or which cause, or have a natural tendency to cause, injury or damage to business or property.”

- Rule 403 Fugitive Dust – This rule requires that future projects reduce the amount of particulate matter entrained in the ambient air as a result of fugitive dust sources by requiring actions to prevent, reduce, or mitigate fugitive dust emissions from any active operation, open storage pile, or disturbed surface area.

Air Quality Management Plan. SCAQMD adopted the 2022 Air Quality Management Plan (AQMP) on December 2, 2022, updating the region’s air quality attainment plan to address the “extreme” ozone non-attainment status for the Basin and the severe ozone non-attainment for the Coachella Valley Basin by laying a path for attainment by 2037. This includes reducing NOx emissions by 67 percent more than required by adopted rules and regulations in 2037. The AQMP calls on strengthening many stationary source controls and addressing new sources like wildfires, but still concludes that the region will not meet air quality standards without a significant shift to zero emission technologies and significant federal action. The 2022 AQMP relies on the growth assumptions in SCAG’s 2020-2045 RTP/SCS.

Multiple Air Toxics Exposure Study V. To date, the most comprehensive study on air toxics in the Basin is the Multiple Air Toxics Exposure Study V, released in August 2021.⁴ The report included refinements in aircraft and recreational boating emissions and diesel conversion factors. It finds a Basin average cancer risk of 455 in a million (population-weighted, multi-pathway), which represents a decrease of 54 percent compared to the estimate in MATES IV (page ES-13). The monitoring program measured more than 30 air pollutants, including both gases and particulates. The monitoring study was accompanied by computer modeling that estimated the risk of cancer from breathing toxic air pollution based on emissions and weather data. About 88 percent of the risk is attributed to emissions associated with mobile sources, with the remainder attributed to toxics emitted from stationary sources, which include large industrial operations, such as refineries and metal processing facilities, as well as smaller businesses such as gas stations and chrome plating facilities (page ES-12). The results indicate that diesel PM is the largest contributor to air toxics risk, accounting on average for about 50 percent of the total risk (Figure ES-2).

Regional (Southern California Association of Governments)

SCAG is the regional planning agency for Los Angeles, Orange, Ventura, Riverside, San Bernardino, and Imperial Counties, and addresses regional issues relating to transportation, the economy, community development and the environment. SCAG coordinates with various air quality and transportation stakeholders in Southern California to ensure compliance with the federal and state air quality requirements, including the Transportation Conformity Rule and other applicable federal, state, and air district laws and regulations. As the federally designated Metropolitan Planning Organization (MPO) for the six-county Southern California region, SCAG is required by law to ensure that transportation activities “conform” to, and are supportive of, the goals of regional and state air quality plans to attain the NAAQS. In addition, SCAG is a co-producer, with the SCAQMD, of the transportation strategy and transportation control measure sections of the AQMP for the Air Basin.

⁴ South Coast Air Quality Management District, MATES-V Study. <https://www.aqmd.gov/home/air-quality/air-quality-studies/health-studies/mates-v>

SCAG adopted the 2020–2045 Regional Transportation Plan/Sustainable Communities Strategy (RTP/SCS) on September 23, 2020. The RTP/SCS aims to address the transportation and air quality impacts of 3.7 million additional residents, 1.6 additional households, and 1.6 million additional jobs from 2016 to 2045. The Plan calls for \$639 billion in transportation investments and reducing VMT by 19 percent per capita from 2005 to 2035. The updated plan accommodates 21.3 percent growth in population from 2016 (3,933,800) to 2045 (4,771,300) and a 15.6 percent growth in jobs from 2016 (1,848,300) to 2045 (2,135,900). The regional plan projects several benefits:

- Decreasing drive-along work commutes by three percent
- Reducing per capita VMT by five percent and vehicle hours traveled per capita by nine percent
- Increasing transit commuting by two percent
- Reducing travel delay per capita by 26 percent
- Creating 264,500 new jobs annually
- Reducing greenfield development by 29 percent by focusing on smart growth
- Locating six more percent household growth in High Quality Transit Areas (HQTAs), which concentrate roadway repair investments, leverage transit and active transportation investments, reduce regional life cycle infrastructure costs, improve accessibility, create local jobs, and have the potential to improve public health and housing affordability.
- Locating 15 percent more jobs in HQTAs
- Reducing PM_{2.5} emissions by 4.1 percent
- Reducing GHG emissions by 19 percent by 2035

Local (County of Los Angeles)

County of Los Angeles General Plan 2035 Air Quality Element. As part of its General Plan 2035, the Air Quality Element sets forth goals and policies to improve air quality. Policies listed under the Air Quality, Climate Change, Energy Conservation, and Green Building Practices in the County’s General Plan Air Quality Element include the following goals and policies applicable to the proposed project:

GOAL AQ 1: Protection from exposure to harmful air pollutants.

Policy AQ 1.1: Minimize health risks to people from industrial toxic or hazardous air pollutant emissions, with an emphasis on local hot spots, such as existing point sources affecting immediate sensitive receptors.

Policy AQ 1.2: Encourage the use of low or no volatile organic compound (VOC) emitting materials.

Policy AQ 1.3: Reduce particulate inorganic and biological emissions from construction, grading, excavation, and demolition to the maximum extent feasible.

Policy AQ 1.4: Work with local air quality management districts to publicize air quality warnings, and to track potential sources of airborne toxics from identified mobile and stationary sources.

GOAL AQ 2: The reduction of air pollution and mobile-source emissions through coordinated land use, transportation and air quality planning.

Policy AQ 2.1: Encourage the application of design and other appropriate measures when siting sensitive uses, such as residences, schools, senior centers, daycare centers, medical facilities, or parks with active recreational facilities within proximity to major sources of air pollution, such as freeways.

Policy AQ 2.2: Participate in, and effectively coordinate the development and implementation of community and regional air quality programs.

Policy AQ 2.4: Coordinate with different agencies to minimize fugitive dust from different sources, activities, and uses.

As the County is preparing a 2045 Climate Action Plan to address greenhouse gases (GHG), it is also updating its Air Quality Element. However, new goals and policies have not been formally adopted as of October 2022.

California Environmental Quality Act. In accordance with CEQA requirements, the County assesses the air quality impacts of new development projects, requires mitigation of potentially significant air quality impacts by conditioning discretionary permits, and monitors and enforces implementation of such mitigation. The County uses the SCAQMD's *CEQA Air Quality Handbook* and SCAQMD's supplemental online guidance/information for the environmental review of development proposals within its jurisdiction.

Existing Conditions

Pollutants and Effects

Air quality is defined by ambient air concentrations of seven specific pollutants identified by the USEPA to be of concern with respect to health and welfare of the general public. These specific pollutants, known as "criteria air pollutants," are defined as pollutants for which the federal and State governments have established ambient air quality standards, or criteria, for outdoor concentrations to protect public health. Criteria air pollutants include carbon monoxide (CO), ground-level ozone (O₃), nitrogen oxides (NO_x), sulfur oxides (SO_x), particulate matter ten microns or less in diameter (PM₁₀), particulate matter 2.5 microns or less in diameter (PM_{2.5}), and lead (Pb). The following descriptions of each criteria air pollutant and their health effects are based on information provided by the SCAQMD.⁵

Carbon Monoxide (CO). CO is primarily emitted from combustion processes and motor vehicles due to incomplete combustion of fuel. Elevated concentrations of CO weaken the heart's contractions and lower the amount of oxygen carried by the blood. It is especially dangerous for people with chronic heart disease. Inhalation of CO can cause nausea, dizziness, and headaches at moderate concentrations and can be fatal at high concentrations.

Ozone (O₃). O₃ is a gas that is formed when volatile organic compounds (VOCs) and nitrogen oxides (NO_x)—both byproducts of internal combustion engine exhaust—undergo slow photochemical reactions in the presence of sunlight. O₃ concentrations are generally highest during the summer months when direct sunlight, light wind, and warm temperature conditions are favorable. An elevated level of O₃ irritates the lungs and breathing passages, causing coughing and pain in the chest and throat, thereby

⁵ South Coast Air Quality Management District, Final Program Environmental Impact Report for the 2012 AQMP, December 7, 2012.

increasing susceptibility to respiratory infections and reducing the ability to exercise. Effects are more severe in people with asthma and other respiratory ailments. Long-term exposure may lead to scarring of lung tissue and may lower lung efficiency.

Nitrogen Dioxide (NO₂). NO₂ is a byproduct of fuel combustion and major sources include power plants, large industrial facilities, and motor vehicles. The principal form of nitrogen oxide produced by combustion is nitric oxide (NO), which reacts quickly to form NO₂, creating the mixture of NO and NO₂ commonly called NO_x. NO₂ absorbs blue light and results in a brownish-red cast to the atmosphere and reduced visibility. NO₂ also contributes to the formation of PM₁₀. Nitrogen oxides irritate the nose and throat, and increase one's susceptibility to respiratory infections, especially in people with asthma. The principal concern of NO_x is as a precursor to the formation of ozone.

Sulfur Dioxide (SO₂). Sulfur oxides (SO_x) are compounds of sulfur and oxygen molecules. SO₂ is the pre-dominant form found in the lower atmosphere and is a product of burning sulfur or burning materials that contain sulfur. Major sources of SO₂ include power plants, large industrial facilities, diesel vehicles, and oil-burning residential heaters. Emissions of sulfur dioxide aggravate lung diseases, especially bronchitis. It also constricts the breathing passages, especially in asthmatics and people involved in moderate to heavy exercise. SO₂ potentially causes wheezing, shortness of breath, and coughing. High levels of particulates appear to worsen the effect of sulfur dioxide, and long-term exposures to both pollutants leads to higher rates of respiratory illness.

Particulate Matter (PM₁₀ and PM_{2.5}). The human body naturally prevents the entry of larger particles into the body. However, small particles, with an aerodynamic diameter equal to or less than 10 microns (PM₁₀), and even smaller particles with an aerodynamic diameter equal to or less than 2.5 microns (PM_{2.5}), can enter the body and become trapped in the nose, throat, and upper respiratory tract. These small particulates can potentially aggravate existing heart and lung diseases, change the body's defenses against inhaled materials, and damage lung tissue. The elderly, children, and those with chronic lung or heart disease are most sensitive to PM₁₀ and PM_{2.5}. Lung impairment can persist for two to three weeks after exposure to high levels of particulate matter. Some types of particulates can become toxic after inhalation due to the presence of certain chemicals and their reaction with internal body fluids.

Lead (Pb). Lead is emitted from industrial facilities and from the sanding or removal of old lead-based paint. Smelting or processing the metal is the primary source of lead emissions, which is primarily a regional pollutant. Lead affects the brain and other parts of the body's nervous system. Exposure to lead in very young children impairs the development of the nervous system, kidneys, and blood forming processes in the body.

State-Only Criteria Pollutants

Visibility-Reducing Particles. Deterioration of visibility is one of the most obvious manifestations of air pollution and plays a major role in the public's perception of air quality. Visibility reduction from air pollution is often due to the presence of sulfur and NO_x, as well as PM.

Sulfates (SO₄²⁻). Sulfates are the fully oxidized ionic form of sulfur. Sulfates occur in combination with metal and/or hydrogen ions. In California, emissions of sulfur compounds occur primarily from the combustion of petroleum-derived fuels (e.g., gasoline and diesel fuel) that contain sulfur. This sulfur is

oxidized during the combustion process and subsequently converted to sulfate compounds in the atmosphere. Effects of sulfate exposure at levels above the standard include a decrease in ventilatory function, aggravation of asthmatic symptoms, and an increased risk of cardio-pulmonary disease. Sulfates are particularly effective in degrading visibility, and, due to fact that they are usually acidic, can harm ecosystems and damage materials and property.

Hydrogen Sulfide (H₂S). H₂S is a colorless gas with the odor of rotten eggs. It is formed during bacterial decomposition of sulfur-containing organic substances. Also, it can be present in sewer gas and some natural gas and can be emitted as the result of geothermal energy exploitation. Breathing H₂S at levels above the state standard could result in exposure to a very disagreeable odor.

Vinyl Chloride. Vinyl chloride is a colorless, flammable gas at ambient temperature and pressure. It is also highly toxic and is classified as a known carcinogen by the American Conference of Governmental Industrial Hygienists and the International Agency for Research on Cancer. At room temperature, vinyl chloride is a gas with a sickly-sweet odor that is easily condensed. However, it is stored at cooler temperatures as a liquid. Due to the hazardous nature of vinyl chloride to human health, there are no end products that use vinyl chloride in its monomer form. Vinyl chloride is a chemical intermediate, not a final product. It is an important industrial chemical chiefly used to produce polyvinyl chloride (PVC). The process involves vinyl chloride liquid fed to polymerization reactors where it is converted from a monomer to a polymer PVC. The final product of the polymerization process is PVC in either a flake or pellet form. Billions of pounds of PVC are sold on the global market each year. From its flake or pellet form, PVC is sold to companies that heat and mold the PVC into end products such as PVC pipe and bottles. Vinyl chloride emissions are historically associated primarily with landfills.

Toxic Air Contaminants (TACs)

TACs refer to a diverse group of “non-criteria” air pollutants that can affect human health but have not had ambient air quality standards established for them. This is not because they are fundamentally different from the pollutants discussed above but because their effects tend to be local rather than regional. TACs are classified as carcinogenic and noncarcinogenic, where carcinogenic TACs can cause cancer and noncarcinogenic TAC can cause acute and chronic impacts to different target organ systems (e.g., eyes, respiratory, reproductive, developmental, nervous, and cardiovascular). CARB and OEHHA determine if a substance should be formally identified, or “listed,” as a TAC in California. A complete list of these substances is maintained on CARB’s website.⁶

Diesel particulate matter (DPM), which is emitted in the exhaust from diesel engines, was listed by the state as a TAC in 1998. DPM has historically been used as a surrogate measure of exposure for all diesel exhaust emissions. DPM consists of fine particles (fine particles have a diameter less than 2.5 micrometer (µm)), including a subgroup of ultrafine particles (ultrafine particles have a diameter less than 0.1 µm). Collectively, these particles have a large surface area which makes them an excellent medium for absorbing organics. The visible emissions in diesel exhaust include carbon particles or “soot.” Diesel exhaust also contains a variety of harmful gases and cancer-causing substances.

⁶ California Air Resources Board, Toxic Air Contaminant Identification List, www.arb.ca.gov/toxics/id/taclist.htm, last reviewed by CARB July 18, 2011.

Exposure to DPM may be a health hazard, particularly to children whose lungs are still developing and the elderly who may have other serious health problems. DPM levels and resultant potential health effects may be higher in close proximity to heavily traveled roadways with substantial truck traffic or near industrial facilities. According to CARB, DPM exposure may lead to the following adverse health effects: (1) aggravated asthma; (2) chronic bronchitis; (3) increased respiratory and cardiovascular hospitalizations; (4) decreased lung function in children; (5) lung cancer; and (6) premature deaths for people with heart or lung disease.^{7,8}

Project Site

The Project Site is located within the South Coast Air Basin (the Basin); named so because of its geographical formation is that of a basin, with the surrounding mountains trapping the air and its pollutants in the valleys or basins below. The 6,745-square-mile Basin includes all of Orange County and the non-desert portions of Los Angeles, Riverside, and San Bernardino Counties. It is bounded by the Pacific Ocean to the west; the San Gabriel, San Bernardino and San Jacinto Mountains to the north and east; and the San Diego County line to the south. Ambient pollution concentrations recorded in Los Angeles County portion of the Basin are among the highest in the four counties comprising the Basin. USEPA has classified Los Angeles County as nonattainment areas for O₃, PM_{2.5}, and lead. This classification denotes that the Basin does not meet the NAAQS for these pollutants. In addition, under the CCAA, the Los Angeles County portion of the Basin is designated as a nonattainment area for O₃, PM₁₀, and PM_{2.5}. The air quality within the Basin is primarily influenced by a wide range of emissions sources, such as dense population centers, heavy vehicular traffic, industry, and meteorology.

Air pollutant emissions are generated in the local vicinity by stationary and area-wide sources, such as commercial activity, space and water heating, landscaping maintenance, consumer products, and mobile sources primarily consisting of automobile traffic.

Air Pollution Climatology. The topography and climate of Southern California combine to make the Basin an area of high air pollution potential. During the summer months, a warm air mass frequently descends over the cool, moist marine layer produced by the interaction between the ocean's surface and the lowest layer of the atmosphere. The warm upper layer forms a cap over the cooler surface layer which inhibits the pollutants from dispersing upward. Light winds during the summer further limit ventilation. Additionally, abundant sunlight triggers photochemical reactions which produce O₃ and the majority of particulate matter.

Air Monitoring Data. The SCAQMD monitors air quality conditions at 38 source receptor areas (SRA) throughout the Basin. The Project Site is located in SCAQMD's Central Los Angeles receptor area. Historical data from the area was used to characterize existing conditions in the vicinity of the Project area. Table 2 shows pollutant levels, State and federal standards, and the number of exceedances recorded in the area from 2019 through 2021. The one-hour State standard for O₃ was exceeded 16 times during this three-year period, including fourteen times in 2020. The federal standard was exceeded 26 times in that same period. In addition, the daily State standard for PM₁₀ was exceeded 203 times.

⁷ California Air Resources Board, Overview: Diesel Exhaust and Health, www.arb.ca.gov/research/diesel/diesel-health.htm, last reviewed by CARB April 12, 2016.

⁸ California Air Resources Board, Fact Sheet: Diesel Particulate Matter Health Risk Assessment Study for the West Oakland Community: Preliminary Summary of Results, March 2008.

The daily federal standard for PM_{2.5} was exceeded 15 times. CO and NO₂ levels did not exceed the CAAQS from 2019 to 2021 for 1-hour (and 8-hour for CO).

**Table 2
Ambient Air Quality Data**

Pollutants and State and Federal Standards	Maximum Concentrations and Frequencies of Exceedance Standards		
	2019	2020	2021
Ozone (O₃)			
Maximum 1-hour Concentration (ppm)	0.080	0.185	0.099
Days > 0.09 ppm (State 1-hour standard)	0	14	1
Days > 0.070 ppm (Federal 8-hour standard)	2	22	2
Carbon Monoxide (CO₂)			
Maximum 1-hour Concentration (ppm)	2.0	1.9	2.0
Days > 20 ppm (State 1-hour standard)	0	0	0
Maximum 8-hour Concentration (ppm)	1.6	1.5	1.6
Days > 9.0 ppm (State 8-hour standard)	0	0	0
Nitrogen Dioxide (NO₂)			
Maximum 1-hour Concentration (ppm)	0.0697	0.0618	0.0778
Days > 0.18 ppm (State 1-hour standard)	0	0	0
PM₁₀			
Maximum 24-hour Concentration (µg/m ³)	62	77	64
Days > 50 µg/m ³ (State 24-hour standard)	3	24	3
PM_{2.5}			
Maximum 24-hour Concentration (µg/m ³)	43.5	47.3	61.0
Days > 35 µg/m ³ (Federal 24-hour standard)	1	2	12
Sulfur Dioxide (SO₂)			
Maximum 24-hour Concentration (ppb)	10.0	3.8	2.2
Days > 0.04 ppm (State 24-hour standard)	0	0	0
ppm = parts by volume per million of air. µg/m ³ = micrograms per cubic meter. N/A = not available at this monitoring station. Existing Health Risk in the Surrounding Area. Based on the MATES-V model, the calculated cancer risk in the Project area (zip code 90023) is approximately 695 in a million.⁹ The cancer risk in this area is predominately related to nearby sources of diesel particulate matter (e.g., diesel trucks and traffic on the Santa Ana Freeway 170 feet to the south). In general, the risk at the Project Site is higher than 99 percent of the population across the South Coast Air Basin.

⁹ South Coast Air Quality Management District, Multiple Air Toxics Exposure Study in the South Coast Air Basin (MATES-V), MATES V Interactive Carcinogenicity Map, 2021, https://experience.arcgis.com/experience/79d3b6304912414bb21ebdde80100b23/page/home/?data_id=data_Source_105-a5ba9580e3aa43508a793fac819a5a4d%3A26&views=view_39%2Cview_1, accessed October 25, 2022.

The Office of Environmental Health Hazard Assessment, on behalf of the California Environmental Protection Agency (CalEPA), provides a screening tool called CalEnviroScreen that can be used to help identify California communities disproportionately burdened by multiple sources of pollution. According to CalEnviroScreen, the Project Site (Census tract 6037531301) is located in the 99th percentile, which means the Project Site has an overall environmental pollution burden higher than at least 99 percent of other communities within California.¹⁰

Sensitive Receptors. Some land uses are considered more sensitive to changes in air quality than others, depending on the population groups and the activities involved. The California Air Resources Board (CARB) has identified the following groups who are most likely to be affected by air pollution: children less than 14 years of age, the elderly over 65 years of age, athletes, and people with cardiovascular and chronic respiratory diseases. According to the SCAQMD, sensitive receptors include residences, schools, playgrounds, childcare centers, athletic facilities, long-term health care facilities, rehabilitation centers, convalescent centers, and retirement homes.

The Project Site is located in a residential area within East Los Angeles. Sensitive receptors within 0.25 miles of the Project Site include, but are not limited to, the following representative sampling:

- Residences, 1075 Gage Avenue; five feet south of the Project Site.
- Residences, 1049 Gage Avenue; five feet north and east of the Project Site.
- Residences, Eastman Avenue (east side); five feet north and south of the Project Site.
- Residences, Gage Avenue (east side); 70 feet east of the Project Site.
- Residences, 1142 Eastman Avenue; 320 feet south of the Project Site.
- LA Community Hospital, 400 feet southwest of the Project Site.
- Eastman Avenue Elementary School, 740 feet south of the Project Site.

Existing Project Site Emissions. The Project Site is improved with two church-related buildings totaling 25,302 square feet with a surface parking lot. As summarized in Table 3, most existing air quality emissions are associated with the 192 daily vehicle trips traveling to and from the Project Site.¹¹

Table 3
Existing Daily Operations Emissions

Emissions Source	Daily Emissions (Pounds Per Day)					
	VOC	NO _x	CO	SO _x	PM ₁₀	PM _{2.5}
Area Sources	0.8	<0.1	1.1	<0.1	<0.1	<0.1
Energy Sources	<0.1	0.3	0.2	<0.1	<0.1	<0.1
Mobile Sources	0.8	0.7	7.3	<0.1	1.4	0.4
Regional Total	1.6	1.0	8.6	<0.1	1.4	0.4

Project Impacts

Methodology

The air quality analysis conducted for the Project is consistent with the methods described in the SCAQMD CEQA Air Quality Handbook (1993 edition), as well as the updates to the CEQA Air Quality Handbook, as provided on the SCAQMD website. The SCAQMD recommends the use of the California Emissions Estimator Model (CalEEMod, version 2022.1.1.18) as a tool for quantifying emissions of air pollutants that will be generated by constructing and operating development projects. The analyses focus on the potential change in air quality conditions due to Project implementation. Air pollutant emissions would result from both construction and operation of the Project. Specific methodologies used to evaluate these emissions are discussed below.

Construction. Sources of air pollutant emissions associated with construction activities include heavy-duty off-road diesel equipment and vehicular traffic to and from the Project construction site. Project-specific information was provided describing the schedule of construction activities and the equipment inventory required from the Applicant. Details pertaining to the schedule and equipment can be found in the Technical Appendix to this analysis. The CalEEMod model provides default values for daily equipment usage rates and worker trip lengths, as well as emission factors for heavy-duty equipment, passenger vehicles, and haul trucks that have been derived by the CARB. Maximum daily emissions were quantified for each construction activity based on the number of equipment and daily hours of use, in addition to vehicle trips to and from the Project Site.

The SCAQMD recommends that air pollutant emissions be assessed for both regional scale and localized impacts. The regional emissions analysis includes both on-site and off-site sources of emissions, while the localized emissions analysis focuses only on sources of emissions that would be located on the Project Site.

Localized impacts were analyzed in accordance with the SCAQMD Localized Significance Threshold (LST) methodology.¹² The localized effects from on-site portion of daily emissions were evaluated at sensitive receptor locations potentially impacted by the Project according to the SCAQMD's LST methodology, which uses on-site mass emission look-up tables and Project-specific modeling, where appropriate.¹³ SCAQMD provides LSTs applicable to the following criteria pollutants: NO_x, CO, PM₁₀, and PM_{2.5}. SCAQMD does not provide an LST for SO₂ since land use development projects typically result in negligible construction and long-term operation emissions of this pollutant. Since VOCs are not a criteria pollutant, there is no ambient standard or SCAQMD LST for VOCs. Due to the role VOCs play in O₃ formation, it is classified as a precursor pollutant, and only a regional emissions threshold has been established.

LSTs represent the maximum emissions from a project that are not expected to cause or contribute to an exceedance of the most stringent applicable federal or state ambient air quality standard and are developed based on the ambient concentrations of that pollutant for each source receptor area and distance to the nearest sensitive receptor. The mass rate look-up tables were developed for each source receptor area and can be used to determine whether or not a project may generate significant adverse localized air quality impacts. SCAQMD provides LST mass rate look-up tables for projects with active

¹² South Coast Air Quality Management District, Final Localized Significance Methodology, revised July 2008.

¹³ South Coast Air Quality Management District, LST Methodology Appendix C-Mass Rate LST Look-Up Table, October 2009.

construction areas that are less than or equal to five acres. If the project exceeds the LST look-up values, then the SCAQMD recommends that project-specific air quality modeling must be performed. Please refer to **Threshold b** below, for the analysis of localized impacts from on-site construction activities. In accordance with SCAQMD guidance, maximum daily emissions of NO_x, CO, PM₁₀, and PM_{2.5} from on-site sources during each construction activity were compared to LST values for a one-acre site having sensitive receptors within 25 meters (82 feet).¹⁴ This is appropriate given the 1.17-acre site and the proximity of sensitive receptors as close as five feet from the Project Site.

The Basin is divided into 38 SRAs, each with its own set of maximum allowable LST values for on-site emissions sources during construction and operations based on locally monitored air quality. Maximum on-site emissions resulting from construction activities were quantified and assessed against the applicable LST values.

The significance criteria and analysis methodologies in the SCAQMD's CEQA Air Quality Handbook were used in evaluating impacts in the context of the CEQA significance criteria listed below. The SCAQMD localized significance thresholds (LSTs) for NO₂, CO, and PM₁₀ were initially published in June 2003 and revised in July 2008.¹⁵ The LSTs for PM_{2.5} were established in October 2006.¹⁶ Updated LSTs were published on the SCAQMD website on October 21, 2009.¹⁷ Table 4 presents the significance criteria for both construction and operational emissions.

Table 4
SCAQMD Emissions Thresholds

Criteria Pollutant	Construction Emissions		Operation Emissions	
	Regional	Localized /a/	Regional	Localized /a/
Volatile Organic Compounds (VOC)	75	--	55	--
Nitrogen Oxides (NO _x)	100	74	55	74
Carbon Monoxide (CO)	550	680	550	680
Sulfur Oxides (SO _x)	150	--	150	--
Respirable Particulates (PM ₁₀)	150	5	150	2
Fine Particulates (PM _{2.5})	55	3	55	1

/a/ Localized significance thresholds assumed a 1-acre and 25-meter (82-foot) receptor distance in the Central LA source receptor area. The SCAQMD has not developed LST values for VOC or SO_x. Pursuant to SCAQMD guidance, sensitive receptors closer than 25 meters to a construction site are to use the LSTs for receptors at 25 meters (SCAQMD Final Localized Significance Threshold Methodology, June 2008).

¹⁷ South Coast Air Quality Management District, Final Localized Significance Threshold Methodology Appendix C – Mass Rate LST Look-Up Tables, October 21, 2009.

Operations. CalEEMod also generates estimates of daily and annual emissions of air pollutants resulting from future operation of a project. Operational emissions of air pollutants are produced by mobile sources (vehicular travel) and stationary sources (utilities demand). Utilities for the Project Site are provided by Southern California Edison (SCE) for electricity and Southern California Gas for natural gas. CalEEMod has derived default emissions factors for electricity and natural gas usage that are applied to the size and land use type of the Project in question. CalEEMod also generates estimated operational emissions associated water use, wastewater generation, and solid waste disposal.

Similar to construction, SCAQMD's CalEEMod software was used for the evaluation of Project emissions during operation. CalEEMod was used to calculate on-road fugitive dust, architectural coatings, landscape equipment, energy use, mobile source, and stationary source emissions. To determine if a significant air quality impact would occur, the net increase in regional and local operational emissions generated by the Project was compared against the SCAQMD's significance thresholds.¹⁸ Details describing the operational emissions of the Project can be found in in the Technical Appendix.

Toxic Air Contaminants Impacts (Construction and Operations). Potential TAC impacts are evaluated by conducting a qualitative analysis consistent with the CARB Handbook followed by a more detailed analysis (i.e., dispersion modeling), as necessary. The qualitative analysis consists of reviewing the Project to identify any new or modified TAC emissions sources. If the qualitative evaluation does not rule out significant impacts from a new source, or modification of an existing TAC emissions source, a more detailed analysis is conducted.

Thresholds of Significance

State CEQA Guidelines Appendix G

Would the Project:

- a) *Conflict with or obstruct implementation of the applicable air quality plan;*
- b) *Result in a cumulatively considerable net increase of any criteria pollutant for which the project region is non-attainment under an applicable federal or State ambient air quality standard;*
- c) *Expose sensitive receptors to substantial pollutant concentrations; or*
- d) *Result in other emissions (such as those leading to odors) adversely affecting a substantial number of people?*

County and SCAQMD Thresholds

For this analysis the Appendix G Thresholds are relied upon. The analysis utilizes factors and considerations recommended by the County of Los Angeles and SCAQMD Thresholds, as appropriate, to assist in answering the Appendix G Threshold questions.

¹⁸ South Coast Air Quality Management District, Air Quality Significance Thresholds, revised March 2015. SCAQMD based these thresholds, in part on the federal Clean Air Act and, to enable defining "significant" for CEQA purposes, defined the setting as the South Coast Air Basin. (See SCAQMD, CEQA Air Quality Handbook, April 1993, pp. 6-1-6-2).

(a) *Construction*

The County recommends that determination of significance be made on a case-by-case basis, considering the following criteria to evaluate construction-related air emissions:

(i) *Combustion Emissions from Construction Equipment*

- Type, number of pieces and usage for each type of construction equipment;
- Estimated fuel usage and type of fuel (diesel, natural gas) for each type of equipment; and
- Emission factors for each type of equipment.

(ii) *Fugitive Dust—Grading, Excavation and Hauling*

- Amount of soil to be disturbed on-site or moved off-site;
- Emission factors for disturbed soil;
- Duration of grading, excavation and hauling activities;
- Type and number of pieces of equipment to be used; and
- Projected haul route.

(iii) *Fugitive Dust—Heavy-Duty Equipment Travel on Unpaved Road*

- Length and type of road;
- Type, number of pieces, weight and usage of equipment; and
- Type of soil.

(iv) *Other Mobile Source Emissions*

- Number and average length of construction worker trips to Project Site, per day; and
- Duration of construction activities.

In addition, the following criteria set forth in the SCAQMD's *CEQA Air Quality Handbook* serve as quantitative air quality standards to be used to evaluate project impacts under the Appendix G Thresholds. Under these thresholds, a significant threshold would occur when:¹⁹

- Regional emissions from both direct and indirect sources would exceed any of the following SCAQMD prescribed threshold levels: (1) 100 pounds per day for NO_x; (2) 75 pounds a day for VOC; (3) 150 pounds per day for PM₁₀ or SO_x; (4) 55 pounds per day for PM_{2.5}; and (5) 550 pounds per day for CO.
- Maximum on-site daily localized emissions exceed the LST, resulting in predicted ambient concentrations in the vicinity of the Project Site greater than the most stringent ambient air quality standards for CO (20 ppm [23,000 µg/m³] over a 1-hour period or 9.0 ppm [10,350 µg/m³] averaged over an 8-hour period) and NO₂ (0.18 ppm [339 µg/m³] over a 1-hour period, 0.1 ppm

¹⁹ South Coast Air Quality Management District, Air Quality Significance Thresholds, revised March 2015.

[188 $\mu\text{g}/\text{m}^3$] over a three-year average of the 98th percentile of the daily maximum 1-hour average, or 0.03 ppm [57 $\mu\text{g}/\text{m}^3$] averaged over an annual period).

- Maximum on-site localized PM_{10} or $\text{PM}_{2.5}$ emissions during construction exceed the applicable LSTs, resulting in predicted ambient concentrations in the vicinity of the Project Site to exceed the incremental 24-hour threshold of 10.4 $\mu\text{g}/\text{m}^3$ or 1.0 $\mu\text{g}/\text{m}^3$ PM_{10} averaged over an annual period.

(b) Operation

The County bases the determination of significance of operational air quality impacts on criteria set forth in the SCAQMD's *CEQA Air Quality Handbook*.²⁰ As discussed above, the County uses Appendix G as the thresholds of significance for this analysis. Accordingly, the following serve as quantitative air quality standards to be used to evaluate project impacts under the Appendix G thresholds. Under these thresholds, a significant threshold would occur when:

- Operational emissions exceed 10 tons per year of volatile organic gases or any of the following SCAQMD prescribed threshold levels: (1) 55 pounds a day for VOC;²¹ (2) 55 pounds per day for NO_x ; (3) 550 pounds per day for CO; (4) 150 pounds per day for SO_x ; (5) 150 pounds per day for PM_{10} ; and (6) 55 pounds per day for $\text{PM}_{2.5}$.²²
- Maximum on-site daily localized emissions exceed the LST, resulting in predicted ambient concentrations in the vicinity of the Project Site greater than the most stringent ambient air quality standards for CO (20 parts per million (ppm) over a 1-hour period or 9.0 ppm averaged over an 8-hour period) and NO_2 (0.18 ppm over a 1-hour period, 0.1 ppm over a 3-year average of the 98th percentile of the daily maximum 1-hour average, or 0.03 ppm averaged over an annual period).²³
- Maximum on-site localized operational PM_{10} and $\text{PM}_{2.5}$ emissions exceed the incremental 24-hour threshold of 2.5 $\mu\text{g}/\text{m}^3$ or 1.0 $\mu\text{g}/\text{m}^3$ PM_{10} averaged over an annual period.²⁴
- The Project causes or contributes to an exceedance of the California 1-hour or 8-hour CO standards of 20 or 9.0 ppm, respectively; or
- The Project creates an odor nuisance pursuant to SCAQMD Rule 402.

(c) Toxic Air Contaminants

²⁰ South Coast Air Quality Management District, Air Quality Significance Thresholds, revised March 2015.

²¹ For purposes of this analysis, emissions of VOC and reactive organic compounds (ROG) are used interchangeably since ROG represents approximately 99.9 percent of VOC emissions.

²² South Coast Air Quality Management District, Quality Significance Thresholds, www.aqmd.gov/docs/default-source/ceqa/handbook/scaqmd-air-quality-significance-thresholds.pdf, last updated March 2015.

²³ South Coast Air Quality Management District, Final Localized Significance Threshold Methodology, revised July 2008.

²⁴ South Coast Air Quality Management District, Final—Methodology to Calculate Particulate Matter (PM) 2.5 and $\text{PM}_{2.5}$ Significance Thresholds, October 2006.

The County recommends that the determination of significance shall be made on a case-by-case basis, considering the following criteria to evaluate TACs:

- Would the project use, store, or process carcinogenic or non-carcinogenic toxic air contaminants which could result in airborne emissions?

In assessing impacts related to TACs in this section, the County uses Appendix G as the thresholds of significance. The criteria identified above will be used where applicable and relevant to assist in analyzing the Appendix G thresholds. In addition, the following criteria set forth in the SCAQMD's *CEQA Air Quality Handbook* serve as quantitative air quality standards to be used to evaluate project impacts under Appendix G thresholds. Under these thresholds, a significant threshold would occur when:²⁵

- The Project results in the exposure of sensitive receptors to carcinogenic or toxic air contaminants that exceed the maximum incremental cancer risk of 10 in one million or an acute or chronic hazard index of 1.0.²⁶ For projects with a maximum incremental cancer risk between 1 in one million and 10 in one million, a project would result in a significant impact if the cancer burden exceeds 0.5 excess cancer cases.

(d) *Consistency with Applicable Air Quality Plans*

CEQA Guidelines Section 15125 requires an analysis of project consistency with applicable governmental plans and policies. This analysis is conducted to assess potential project impacts against Threshold (a) from the Appendix G thresholds. In accordance with the SCAQMD's *CEQA Air Quality Handbook*, the following criteria are used to evaluate a project's consistency with the AQMP:²⁷

- Will the Project result in any of the following:
 - An increase in the frequency or severity of existing air quality violations;
 - Cause or contribute to new air quality violations; or
 - Delay timely attainment of air quality standards or the interim emission reductions specified in the AQMP?
- Will the Project exceed the assumptions utilized in preparing the AQMP?
 - Is the Project consistent with the population and employment growth projections upon which AQMP forecasted emission levels are based;
 - Does the Project include air quality mitigation measures; or
 - To what extent is Project development consistent with the AQMP land use policies?

²⁵ South Coast Air Quality Management District, *CEQA Air Quality Handbook*, April 1993, Chapter 6 (Determining the Air Quality Significance of a Project) and Chapter 10 (Assessing Toxic Air Pollutants).

²⁶ Hazard index is the ratio of a toxic air contaminant's concentration divided by its Reference Concentration, or safe exposure level. If the hazard index exceeds one, people are exposed to levels of TACs that may pose noncancer health risks.

²⁷ South Coast Air Quality Management District, *CEQA Air Quality Handbook*, April 1993, p. 12-3.

The Project's impacts with respect to these criteria are discussed to assess the consistency with the SCAQMD's AQMP and SCAG regional plans and policies. In addition, the Project's consistency with the County of Los Angeles General Plan Air Quality Element is discussed.

Project Design Features. The Project would comply with the update to the 2020 County of Los Angeles Building Code (Title 26), Green Building Standards Code (Title 31), and other appropriate codes,²⁸ which will build upon and set higher standards than those in the 2022 California Green Building Standards Code (CalGreen, effective January 1, 2023).²⁹ Further energy efficiency and sustainability features would include native plants and drip/subsurface irrigation systems, individual metering or sub metering for water use, leak detection systems, and electric vehicle charging capacity.

The Project's infill location would promote the concentration of development in an urban location with extensive infrastructure and access to public transit facilities. The Project's proximity to public transportation would reduce vehicle miles traveled for students, parents, staff, and visitors who want options to driving cars.

Analysis of Project Impacts

a. Would the Project conflict with or obstruct implementation of the applicable air quality plan?

Less Than Significant Impact. The Project's air quality emissions would not exceed any state or federal standards. Therefore, the Project would not increase the frequency or severity of an existing violation or cause or contribute to new violations for these pollutants. As the Project would not exceed any of the state and federal standards, the Project would also not delay timely attainment of air quality standards or interim emission reductions specified in the AQMP.

With respect to the determination of consistency with AQMP growth assumptions, the projections in the AQMP for achieving air quality goals are based on assumptions in SCAG's 2020–2045 RTP/SCS regarding population, housing, and growth trends. Determining whether or not a project exceeds the assumptions reflected in the AQMP involves the evaluation of three criteria: (1) consistency with applicable population, housing, and employment growth projections; (2) project mitigation measures; and (3) appropriate incorporation of AQMP land use planning strategies. The following discussion provides an analysis with respect to each of these three criteria.

- Is the project consistent with the population, housing, and employment growth projections upon which AQMP forecasted emission levels are based?

A project is consistent with the AQMP, in part, if it is consistent with the population, housing, and employment assumptions that were used in the development of the AQMP. In the case of the 2022 AQMP, two sources of data form the basis for the projections of air pollutant emissions: the County of Los Angeles General Plan and SCAG's RTP. The General Plan serves as a comprehensive, long-term plan for future development of the County.

The 2020-2045 RTP/SCS provides socioeconomic forecast projections of regional population growth. The population, housing, and employment forecasts, which are adopted by SCAG's Regional Council,

²⁸ County of Los Angeles Department of Public Works <https://dpw.lacounty.gov/building-and-safety/general>

²⁹ California Building Codes: <http://www.bsc.ca.gov/Codes.aspx>.

are based on local plans and policies applicable to the specific area; these are used by SCAG in all phases of implementation and review. The Proposed Project would develop a school that would serve 525 students and would not result in population growth; rather, it would accommodate projected growth.

Development of the Project also would result in several employment positions on-site, including administrative, faculty, and maintenance positions. However, the removal of the existing church would eliminate some jobs, resulting in a negligible change of jobs on-site. Thus, the Project's estimated employment impact would not help produce job growth that exceeds the capacity that is accommodated in the 2022 AQMP. As a result, the Project would be consistent with the projections in the AQMP.

- Does the project implement feasible air quality mitigation measures?

As discussed below under Thresholds (b), (c), and (d), the Project would not result in any significant air quality impacts and therefore would not require mitigation. In addition, the Project would comply with all applicable regulatory standards as required by SCAQMD. Furthermore, with compliance with the regulatory requirements identified above, no significant air quality impacts would occur. As such, the proposed Project meets this AQMP consistency criterion.

- To what extent is project development consistent with the land use policies set forth in the AQMP?

With regard to land use developments such as the Project, the AQMP's air quality policies focus on the reduction of vehicle trips and vehicle miles traveled (VMT). The Project would serve to implement a number of land use policies of the County of Los Angeles, SCAQMD, and SCAG. The Project would be designed and constructed to support and promote environmental sustainability. The Project represents an infill development within an existing urbanized area that would concentrate more housing and population within a high quality transit area (HQT A). "Green" principles are incorporated throughout the Project to comply with the County of Los Angeles Green Building Code and the California Green Building Standards Code (CALGreen) through energy conservation, water conservation, and waste reduction features.

The air quality plan applicable to the Project area is the 2022 AQMP. The 2022 AQMP is the SCAQMD plan for improving regional air quality in the Basin. The 2022 AQMP is the current management plan for continued progression toward clean air and compliance with State and federal requirements. It includes a comprehensive strategy aimed at controlling pollution from all sources, including stationary sources, on- and off-road mobile sources, and area sources. The 2022 AQMP also incorporates current scientific information and meteorological air quality models. It also updates the federally approved 8-hour O₃ control plan with new commitments for short-term NO_x and VOC reductions. The 2022 AQMP includes short-term control measures related to facility modernization, energy efficiency, good management practices, market incentives, and emissions growth management.

As demonstrated in the following analyses, the Project would not result in significant regional emissions. The 2022 AQMP adapts previously conducted regional air quality analyses to account for the recent unexpected drought conditions and presents a revised approach to demonstrated attainment of the 24-hour PM_{2.5} NAAQS for the Basin. The Project would be required to comply with all new and existing regulatory measures set forth by the SCAQMD. Implementation of the Project would not interfere with air pollution control measures listed in the 2022 AQMP.

The Project Site is zoned as an R-3 parcel, a classification that conditionally allows schools such as that proposed by the Project. As such, the RTP/SCS' assumptions about growth in the County accommodate the projected jobs on the Project Site. As a result, the Project would be consistent with the growth assumptions in the County's General Plan. Because the AQMP accommodates growth forecasts from local General Plans, the emissions associated with this Project are accounted for and mitigated in the region's air quality attainment plans. The air quality impacts of development on the Project Site are accommodated in the region's emissions inventory for the 2020 RTP/SCS and 2022 AQMP. Therefore, Project impacts with respect to AQMP consistency would be less than significant.

County of Los Angeles Policies

The Project would offer convenient access to public transit and opportunities for walking and biking (including the provision of bicycle parking), thereby facilitating a reduction in VMT. In addition, the Project would be consistent with the existing land use pattern in the vicinity that concentrates urban density along major arterials and near transit options based on the following:

- The Project Site is within a HQTA, which reflects areas with rail transit service or bus service where lines have peak headways of less than 15 minutes.³⁰
- There is substantial public transit service in the area, including:
 - Metro Line 18 which provides east-west service along Whittier Boulevard with a bus stop at Eastman Avenue 920 feet north of the Project Site.
 - Metro Line 66 with east-west service along Olympic Boulevard with a bus stop at Rowan Avenue 870 feet southwest of the Project Site.
 - LA Go Bus (Union Pacific/Salazar) shuttle service providing circulator service in East Los Angeles along Whittier Boulevard with a bus stop at Eastman Avenue 920 feet north of the Project Site.
- The project will provide 88 short- and two long-term bicycle parking spaces on campus.

The County's General Plan Air Quality Element identifies eight policies with specific strategies for advancing the County's clean air goals. As illustrated in Table 5, the Project is consistent with the applicable policies in the Air Quality Element, as the Project would implement sustainability features that would reduce vehicular trips, reduce VMT, and encourage the use of alternative modes of transportation. Therefore, the Project would result in a less than significant impact related to consistency with the Air Quality Element.

**Table 5
Project Consistency with County of Los Angeles General Plan Air Quality Element**

Strategy	Project Consistency
Policy AQ 1.1: Minimize health risks to people from industrial toxic or hazardous air pollutant emissions, with an emphasis on local hot spots, such as existing point sources affecting immediate sensitive receptors.	Consistent. The Project Site is located in a residential neighborhood, with health care and school facilities nearby. As such, there are no major toxic hot spots or point sources that would adversely impact human health.

³⁰ Southern California Association of Governments Data Portal https://scag.ca.gov/sites/main/files/file-attachments/0903fconnectsocial_active-transportation.pdf?1606001530,

Table 5
Project Consistency with County of Los Angeles General Plan Air Quality Element

Strategy	Project Consistency
Policy AQ 1.2: Encourage the use of low or no volatile organic compound (VOC) emitting materials.	Consistent. The Project would comply with SCAQMD Rule 1113, which limits the VOC content of architectural coatings.
Policy AQ 1.3: Reduce particulate inorganic and biological emissions from construction, grading, excavation, and demolition to the maximum extent feasible.	Consistent. The construction activities that involve earthmoving (i.e., demolition, site preparation, grading) would be regulated by SCAQMD Rule 403, which controls fugitive dust emissions through best practices measures that address on-site and off-site particulate emissions and entrainment of inhalable particulates.
Policy AQ 1.4: Work with local air quality management districts to publicize air quality warnings, and to track potential sources of airborne toxics from identified mobile and stationary sources.	Not Applicable. This policy calls for the County to work with SCAQMD to publicize smog alert days, wildfire events, and to help track facilities that emit toxic air contaminants through the entitlement process. Nevertheless, the Proposed Project would not interfere with the implementation of this citywide policy.
Policy AQ 2.1: Encourage the application of design and other appropriate measures when siting sensitive uses, such as residences, schools, senior centers, daycare centers, medical facilities, or parks with active recreational facilities within proximity to major sources of air pollution, such as freeways.	Consistent. While the Project Site is 170 north of the Santa Ana Freeway, the project's design has sited the outdoor lunch patio and play area north of the existing Building 1, where particulate matter from the freeway would be shielded in large part by the presence of this structure. In addition, all classrooms would comply with the California Energy Commission's requirements to protect indoor air quality. This would include mechanical ventilation that includes MERV-13 filters to reduce indoor exposure of students to inhalable particulates.
Policy AQ 2.2: Participate in, and effectively coordinate the development and implementation of community and regional air quality programs.	Not Applicable. This policy calls for the County to work with SCAQMD to develop education and outreach programs to advance clean air objectives. Nevertheless, the Proposed Project would not interfere with the implementation of this citywide policy.
Policy AQ 2.3: Support the conservation of natural resources and vegetation to reduce and mitigate air pollution impacts.	Consistent. The Project would replace a site that is largely a paved parking lot with minimal ground cover and trees with a landscaped facility. This would include trees and shrubs that line the project boundaries, as well as groundcover and permeable surfaces in the play area.
Policy AQ 2.4: Coordinate with different agencies to minimize fugitive dust from different sources, activities, and uses.	Consistent. The Project's construction activities that involve earthmoving (i.e., demolition, site preparation, grading) would be regulated by SCAQMD Rule 403, which controls fugitive dust emissions through best practices measures that address on-site and off-site particulate emissions and entrainment of inhalable particulates. During operation of the school, paved parking lots and common areas would reduce fugitive dust emissions and entrainment of particulates in cars that enter and leave the Project Site.

b. Result in a cumulatively considerable net increase of any criteria pollutant for which the project region is non-attainment under an applicable federal or state ambient air quality standard?

Less Than Significant Impact.

Construction

A cumulatively considerable net increase would occur if the project’s construction impacts substantially contribute to air quality violations when considering other projects that may undertake construction activities at the same time. Individual projects that generate emissions that do not exceed SCAQMD’s significance thresholds would not contribute considerably to any potential cumulative impact. SCAQMD neither recommends quantified analyses of the emissions generated by a set of cumulative development projects nor provides thresholds of significance to assess the impacts associated with these emissions.³¹

Construction-related emissions were estimated using the SCAQMD’s CalEEMod 2022.1.1.18 model and a projected construction schedule of approximately twelve months. Table 6 summarizes the estimated construction schedule that was modeled for air quality impacts.

**Table 6
Construction Schedule Assumptions**

Phase	Duration	Notes
Demolition	Month 1	Removal of 25,302 square feet of building floor area and 26,000 square feet of asphalt/concrete parking lot hauled 25 miles to landfill in 10-cubic yard capacity trucks.
Site Preparation	Month 2 (one week)	Grubbing and removal of trees, plants, landscaping, weeds
Grading	Month 2 (two weeks)	Fine grading, with approximately 971 cubic yards of soil (including 15 percent swell factor for topsoil) hauled 25 miles to landfill in 10-cubic yard capacity trucks.
Trenching	Months 3-6	Trenching for utilities, including gas, water, electricity, and telecommunications.
Building Construction	Months 3-12	Footings and Foundation work (e.g., pouring concrete pads), framing, welding; installing mechanical, electrical, and plumbing. Floor assembly, cabinetry and carpentry, elevator installations, low voltage systems, trash management.
Paving	Month 10	Flatwork, including paving of driveways and walkways
Architectural Coatings	Months 9-12	Application of interior and exterior coatings and sealants.

³¹ South Coast Air Quality Management District, 2003 White Paper on Potential Control Strategies to Address Cumulative Impacts from Air Pollution: “As Lead Agency, the AQMD uses the same significance thresholds for project specific and cumulative impacts for all environmental topics analyzed in an Environmental Assessment or EIR...Projects that exceed the project-specific significance threshold are considered by the SCAQMD to be cumulatively considerable. This is the reason project-specific and cumulative thresholds are the same. Conversely, projects that do not exceed the project-specific thresholds are not considered to be cumulatively significant.

Table 6
Construction Schedule Assumptions

Source: DKA Planning, 2022.

The Project would be required to comply with the following regulations, as applicable:

- SCAQMD Rule 403, would reduce the amount of particulate matter entrained in ambient air as a result of anthropogenic fugitive dust sources by requiring actions to prevent, reduce or mitigate fugitive dust emissions.
- SCAQMD Rule 1113, which limits the VOC content of architectural coatings.
- SCAQMD Rule 402, which states that a person shall not discharge from any source whatsoever such quantities of air contaminants or other materials which cause injury, detriment, nuisance, or annoyance to any considerable number of persons or to the public, or which endanger the comfort, repose, health, or safety of any such persons or the public, or which cause, or have a natural tendency to cause, injury or damage to business or property.
- In accordance with Section 2485 in Title 13 of the California Code of Regulations, the idling of all diesel-fueled commercial vehicles (with gross vehicle weight over 10,000 pounds) during construction would be limited to five minutes at any location.
- In accordance with Section 93115 in Title 17 of the California Code of Regulations, operation of any stationary, diesel-fueled, compression-ignition engines would meet specific fuel and fuel additive requirements and emissions standards.

Regional Emissions

Construction activity creates air quality impacts through the use of heavy-duty construction equipment and through vehicle trips generated by construction workers traveling to and from the Project Site. NO_x emissions would primarily result from the use of construction equipment and truck trips.

Fugitive dust emissions would peak during grading activities, where approximately 971 cubic yards of soil (including 15 percent swell factor for topsoil) would be exported from the Project Site to accommodate a one-level subterranean structure. All construction projects in the Basin must comply with SCAQMD Rule 403 for fugitive dust. Rule 403 control requirements include measures to prevent the generation of visible dust plumes. Measures include, but are not limited to, applying water and/or soil binders to uncovered areas, reestablishing ground cover as quickly as possible, utilizing a wheel washing system or other control measures to remove bulk material from tires and vehicle undercarriages before vehicles exit the Project Site, and maintaining effective cover over exposed areas. Compliance with Rule 403 would reduce regional PM_{2.5} and PM₁₀ emissions associated with construction activities by approximately 61 percent.

During the building finishing phase, the application of architectural coatings (e.g., paints) would potentially release VOCs (regulated by SCAQMD Rule 1113). The assessment of construction air quality impacts considers each of these potential sources. Construction emissions can vary substantially from day to day, depending on the level of activity, the specific type of operation and, for dust, the prevailing weather conditions.

As shown in Table 7, construction of the Project would produce VOC, NO_x, CO, SO_x, PM₁₀ and PM_{2.5} emissions that do not exceed the SCAQMD's regional thresholds. This is a conservative analysis, as it assumes that the entirety of structures on the Project Site would be scraped, though the existing Building 1 would be retained (save the demolition of a 509 square-foot courtyard). Similarly, the analysis conservatively overstates building construction emissions by assuming the erection of a new 8,749 square-foot building, though there would be the addition would be limited to a 2,265 square-foot canopy. Nevertheless, construction of the Project would not contribute substantially to an existing violation of air quality standards for regional pollutants (e.g., ozone). This impact is considered less than significant.

Localized Emissions

In addition to maximum daily regional emissions, maximum localized (on-site) emissions were quantified for each construction activity. The localized construction air quality analysis was conducted using the methodology promulgated by the SCAQMD. Look-up tables provided by the SCAQMD were used to determine localized construction emissions thresholds for the Project.³² LSTs represent the maximum emissions from a project that are not expected to cause or contribute to an exceedance of the most stringent applicable federal or state ambient air quality standard and are based on the most recent background ambient air quality monitoring data (2019-2021) for the Project area.

**Table 7
Daily Construction Emissions**

Construction Phase Year	Daily Emissions (Pounds Per Day)					
	VOC	NO _x	CO	SO _x	PM ₁₀	PM _{2.5}
2024	1.7	18.9	18.0	<0.1	3.9	2.1
2025	5.0	10.6	12.7	<0.1	0.7	0.4
Maximum Regional Total	5.0	18.9	18.0	<0.1	3.9	2.1
Regional Threshold	75	100	550	150	150	55
Exceed Threshold?	No	No	No	No	No	No
Maximum Localized Total	4.8	15.9	15.4	<0.1	3.5	2.0
Localized Threshold	N/A	74	680	N/A	5	3
Exceed Threshold?	N/A	No	No	N/A	No	No
<p><i>The construction dates are used for the modeling of air quality emissions in the CalEEMod software. If construction activities commence later than what is assumed in the environmental analysis, the actual emissions would be lower than analyzed because of the increasing penetration of newer equipment with lower certified emission levels. Assumes implementation of SCAQMD Rule 403 (Fugitive Dust Emissions)</i></p> <p><i>Source: DKA Planning, 2023 based on CalEEMod 2022.1.1.18 model runs. LST analyses based on 1-acre site with 25-meter distances to receptors in Central LA source receptor area. Estimates reflect the peak summer or winter season, whichever is higher. Totals may not add up due to rounding. Modeling sheets included in the Technical Appendix.</i></p>						

Maximum on-site daily construction emissions for NO_x, CO, PM₁₀, and PM_{2.5} were calculated using CalEEMod and compared to the applicable SCAQMD LSTs for the Central Los Angeles SRA based on

³² South Coast Air Quality Management District, LST Methodology Appendix C-Mass Rate LST Look-up Table, revised October 2009.

construction site acreage that is less than or equal to one acre. Potential impacts were evaluated at the closest off-site sensitive receptor, which are the residences that flank the Project Site. The closest receptor distance on the SCAQMD mass rate LST look-up tables is 25 meters.

As shown in Table 7, above, the Project would produce emissions that do not exceed the SCAQMD’s recommended localized standards of significance for NO₂ and CO during the construction phase. Similarly, construction activities would not produce PM₁₀ and PM_{2.5} emissions that exceed localized thresholds recommended by the SCAQMD. These estimates assume the use of Best Available Control Measures (BACMs) that address fugitive dust emissions of PM₁₀ and PM_{2.5} through SCAQMD Rule 403. This would include watering portions of the site that are disturbed during grading activities and minimizing tracking of dirt onto local streets. Therefore, construction impacts on localized air quality are considered less than significant.

Operation

Operational emissions of criteria pollutants would come from area, energy, and mobile sources. Area sources include consumer products such as cleaners, architectural coatings for routine maintenance, and landscaping equipment. Energy sources include electricity and natural gas use for space heating and water heating. The CalEEMod program generates estimates of emissions from energy use based on the land use type and size. The Project would also produce long-term air quality impacts to the region primarily from motor vehicles that access the Project Site. The Project could add up to 827 net vehicle trips to the local roadway network on a weekday at the start of operations in late 2025.³³

As shown in Table 8, the Project’s emissions would not exceed the SCAQMD’s regional or localized significance thresholds. Therefore, the operational impacts of the Project on regional and localized air quality are considered less than significant.

**Table 8
Daily Operations Emissions**

Emissions Source	Daily Emissions (Pounds Per Day)					
	VOC	NO _x	CO	SO _x	PM ₁₀	PM _{2.5}
Area Sources	1.2	<0.1	1.7	<0.1	<0.1	<0.1

³³ Linscott, Law & Greenspan, Project Trip Generation, Extera Public School; September 2022.

Table 8
Daily Operations Emissions

LST analyses based on 1-acre site with 25-meter distances to receptors in Central Los Angeles SRA
Source: DKA Planning, 2022 based on CalEEMod 2022.1.1.18 model runs (included in the Technical Appendix). Totals reflect the summer season maximum and may not add up due to rounding.

In addition to regular daytime school activities, there would be a number of intermittent special events that would be held throughout the school year that would generate additional emissions. These could occur both during the day (e.g., parent celebrations, holiday parades, orientations) and the evening (e.g., Back to School Night, spelling bee). While these events would generate more emissions than those summarized in Table 7, they would incrementally add emissions from parents traveling to and from these events and would not approach regional or localized thresholds of significance. Moreover, because these events would only occur during the academic school year, these emissions would occur outside the summer season, when conditions are more conducive to smog formation.

c. Expose sensitive receptors to substantial pollutant concentrations?

Less Than Significant Impact. There are several sensitive receptors within 0.25 miles of the Project Site that could be exposed to air pollution from construction and operation of the Project, including, but are not limited to, the following representative sampling:

- Residences, 1075 Gage Avenue; five feet south of the Project Site.
- Residences, 1049 Gage Avenue; five feet north and east of the Project Site.
- Residences, Eastman Avenue (east side); five feet north and south of the Project Site.
- Residences, Gage Avenue (east side); 70 feet east of the Project Site.
- Residences, 1142 Eastman Avenue; 320 feet south of the Project Site.
- LA Community Hospital, 400 feet southwest of the Project Site.
- Eastman Avenue Elementary School, 740 feet south of the Project Site.

Construction

Construction of the Project could expose sensitive receptors to substantial pollutant concentrations if maximum daily emissions of regulated pollutants generated by sources located on and/or near the Project Site exceeded the applicable LST values presented in Table 4, or if construction activities generated significant emissions of TACs that could result in carcinogenic risks or non-carcinogenic hazards exceeding the SCAQMD Air Quality Significance Thresholds of 10 excess cancers per million or non-carcinogenic Hazard Index greater than 1.0, respectively. As discussed above, the LST values were derived by the SCAQMD for the criteria pollutants NO_x, CO, PM₁₀, and PM_{2.5} to prevent the occurrence of concentrations exceeding the air quality standards at sensitive receptor locations based on proximity and construction site size.

As shown in Table 7, during construction of the Project, maximum daily localized unmitigated emissions of NO₂, CO, PM₁₀, and PM_{2.5} from sources on the Project Site would remain below each of the respective LST values. Unmitigated maximum daily localized emissions would not exceed any of the localized standards for receptors that are within 25 meters of the Project's construction activities. Therefore, based

on SCAQMD guidance, localized emissions of criteria pollutants would not have the potential to expose sensitive receptors to substantial concentrations that would present a public health concern.

The primary TAC that would be generated by construction activities is diesel PM, which would be released from the exhaust stacks of construction equipment. The construction emissions modeling conservatively assumed that all equipment present on the Project Site would be operating simultaneously throughout most of the day, while in all likelihood this would rarely be the case. Average daily emissions of diesel PM would be less than one pound per day throughout the course of Project construction. Therefore, the magnitude of daily diesel PM emissions, would not be sufficient to result in substantial pollutant concentrations at off-site locations nearby.

Furthermore, according to SCAQMD methodology, health risks from carcinogenic air toxics are usually described in terms of individual cancer risk. "Individual Cancer Risk" is the likelihood that a person exposed to concentrations of TACs over a 30-year period will contract cancer based on the use of standard risk-assessment methodology. The entire duration of construction activities associated with implementation of the Project is anticipated to be approximately twelve months, and the magnitude of daily diesel PM emissions will vary over this time period. No residual emissions and corresponding individual cancer risk are anticipated after construction. Because there is such a short-term exposure period, construction TAC emissions would result in a less than significant impact. Therefore, construction of the Project would not expose sensitive receptors to substantial diesel PM concentrations, and this impact would be less than significant.

Operation

The Project Site would be redeveloped with an elementary and middle school, land uses that are not typically associated with TAC emissions. Typical sources of acutely and chronically hazardous TACs include industrial manufacturing processes (e.g., chrome plating, electrical manufacturing, petroleum refinery). The Project would not include these types of potential industrial manufacturing process sources. It is expected that quantities of hazardous TACs generated on-site (e.g., cleaning solvents, paints, landscape pesticides) for the types of proposed land uses would be below thresholds warranting further study under California Accidental Release Program.

When considering potential air quality impacts under CEQA, consideration is given to the location of sensitive receptors within close proximity of land uses that emit TACs. CARB has published and adopted the Air Quality and Land Use Handbook: A Community Health Perspective, which provides recommendations regarding the siting of new sensitive land uses near potential sources of air toxic emissions (e.g., freeways, distribution centers, rail yards, ports, refineries, chrome plating facilities, dry cleaners, and gasoline dispensing facilities).³⁴ The SCAQMD adopted similar recommendations in its Guidance Document for Addressing Air Quality Issues in General Plans and Local Planning.³⁵ Together, the CARB and SCAQMD guidelines recommend siting distances for both the development of sensitive land uses in proximity to TAC sources and the addition of new TAC sources in proximity to existing sensitive land uses.

The primary sources of potential air toxics associated with Project operations include DPM from delivery trucks (e.g., truck traffic on local streets and idling on adjacent streets) and to a lesser extent, facility

³⁴ California Air Resources Board, Air Quality and Land Use Handbook, a Community Health Perspective, April 2005.

³⁵ South Coast Air Quality Management District, Guidance Document for Addressing Air Quality Issues in General Plans and Local Planning, May 6, 2005.

operations (e.g., natural gas fired boilers). However, these activities, and the land uses associated with the Project, are not considered land uses that generate substantial TAC emissions. It should be noted that the SCAQMD recommends that health risk assessments (HRAs) be conducted for substantial individual sources of DPM (e.g., truck stops and warehouse distribution facilities that generate more than 100 trucks per day or more than 40 trucks with operating transport refrigeration units) and has provided guidance for analyzing mobile source diesel emissions.³⁶ Based on this guidance, the Project would not include these types of land uses and is not considered to be a substantial source of DPM warranting a refined HRA since daily truck trips to the Project Site would not exceed 100 trucks per day or more than 40 trucks with operating transport refrigeration units. In addition, the CARB-mandated airborne toxic control measures (ATCM) limits diesel-fueled commercial vehicles (delivery trucks) to idle for no more than five minutes at any given time, which would further limit diesel particulate emissions.

As the Project would not contain substantial TAC sources and is consistent with the CARB and SCAQMD guidelines, the Project would not result in the exposure of off-site sensitive receptors to carcinogenic or toxic air contaminants that exceed the maximum incremental cancer risk of 10 in one million or an acute or chronic hazard index of 1.0, and potential TAC impacts would be less than significant.

The Project would generate long-term emissions on-site from area and energy sources that would generate negligible pollutant concentrations of CO, NO₂, PM_{2.5}, or PM₁₀ at nearby sensitive receptors. While long-term operations of the Project would add traffic to local roads that produces off-site emissions, these would not result in exceedances of CO air quality standards at roadways in the area due to three key factors. First, CO hotspots are extremely rare and only occur in the presence of unusual atmospheric conditions and extremely cold conditions, neither of which applies to this Project area. Second, auto-related emissions of CO continue to decline because of advances in fuel combustion technology in the vehicle fleet. Finally, the Project would not contribute to the levels of congestion that would be needed to produce emissions concentrations needed to trigger a CO hotspot.

Finally, the Project would not result in any substantial emissions of TACs during the construction or operations phase. During the construction phase, the primary air quality impacts would be associated with the combustion of diesel fuels, which produce exhaust-related particulate matter that is considered a toxic air contaminant by CARB based on chronic exposure to these emissions.³⁷ However, construction activities would not produce chronic, long-term exposure to diesel particulate matter. During long-term project operations, the Project does not include typical sources of acutely and chronically hazardous TACs such as industrial manufacturing processes and automotive repair facilities. As a result, the Project would not create substantial concentrations of TACs.

In addition, the SCAQMD recommends that health risk assessments be conducted for substantial sources of diesel particulate emissions (e.g., truck stops and warehouse distribution facilities) and has provided guidance for analyzing mobile source diesel emissions.³⁸ The Project would not generate a substantial number of truck trips. Based on the limited activity of TAC sources, the Project would not

³⁸ South Coast Air Quality Management District, Health Risk Assessment Guidance for Analyzing Cancer Risks from Mobile Source Diesel Emissions, December 2002.

warrant the need for a health risk assessment associated with on-site activities. Therefore, the Project's operational impacts on local sensitive receptors would be less than significant.

d. Result in other emissions (such as those leading to odors) adversely affecting a substantial number of people?

Less Than Significant Impact. The Project would not result in activities that create objectionable odors. The Project is a school campus that would not include any activities typically associated with unpleasant odors and local nuisances (e.g., rendering facilities, dry cleaners). SCAQMD regulations that govern nuisances (i.e., Rule 402, Nuisances) would regulate any occasional odors associated with the elementary and middle schools. As a result, any odor impacts from the Project would be considered less than significant.

Cumulative Impacts

While the Proposed Project would generate short- and long-term emissions during the construction and operations phases, respectively, the presence of any other development projects could produce cumulative impacts. The U.S. EPA finds that in the context of roadway pollutants, "...concentrations generally decrease to background levels within 500-600 feet."³⁹ CARB also finds that air pollution levels can be significantly higher within 500 feet of freeways or other major sources.⁴⁰

AQMP Consistency

Cumulative development is not expected to result in a significant impact in terms of conflicting with, or obstructing implementation of the 2022 AQMP. As discussed previously, growth considered to be consistent with the AQMP would not interfere with attainment because this growth is included in the projections utilized in the formulation of the AQMP. Consequently, as long as growth in the Basin is within the projections for growth identified in the 2020 RTP/SCS, implementation of the AQMP will not be obstructed by such growth. In addition, as discussed previously, the population growth resulting from the Project would be consistent with the growth projections of the AQMP. Any related project would implement feasible air quality mitigation measures to reduce the criteria air pollutants, if required due to any significant emissions impacts. In addition, each related project would be evaluated for its consistency with the land use policies set forth in the AQMP. Therefore, the Project's contribution to the cumulative impact would not be cumulatively considerable and, therefore, would be less than significant.

Construction

SCAQMD recommends that any construction-related emissions and operational emissions from individual development projects that exceed the project-specific mass daily emissions thresholds identified above also be considered cumulatively considerable.⁴¹ Individual projects that generate emissions not in excess of SCAQMD's significance thresholds would not contribute considerably to any potential cumulative impact. SCAQMD neither recommends quantified analyses of the emissions generated by a set of cumulative development projects nor provides thresholds of significance to be used to assess the impacts associated with these emissions.

³⁹ U.S. EPA. Near Roadway Air Pollution and Health: Frequently Asked Questions. August 2014.

⁴⁰ South Coast Air Quality Management District. Guidance Document: Air Quality Issues Regarding Land Use.

⁴¹ White Paper on Regulatory Options for Addressing Cumulative Impacts from Air Pollution Emissions, SCAQMD Board Meeting, September 5, 2003, Agenda No. 29, Appendix D, p. D-3.

As summarized in Table 7, the Proposed Project would not exceed the SCAQMD's mass emissions thresholds and would not contribute to any potential cumulative impact. If any related project was projected to exceed LST thresholds (after mitigation), it could perform dispersion modeling to confirm whether health-based air quality standards would be violated. The SCAQMD's LST thresholds recognize the influence of a receptor's proximity, setting mass emissions thresholds for PM₁₀ and PM_{2.5} that generally double with every doubling of distance.

The Project would comply with regulatory requirements, including the SCAQMD Rule 403 requirements listed above. Based on SCAQMD guidance, individual construction projects that exceed the SCAQMD's recommended daily thresholds for project-specific impacts would cause a cumulatively considerable increase in emissions for those pollutants for which the Air Basin is in non-attainment. As shown above, construction-related daily emissions at the Project Site would not exceed any of the SCAQMD's regional or localized significance thresholds. Therefore, the Project's contribution to cumulative air quality impacts would not be cumulatively considerable and, therefore, would be less than significant.

Similar to the Project, the greatest potential for TAC emissions at each related project would generally involve diesel particulate emissions associated with heavy equipment operations during grading and excavation activities. According to SCAQMD methodology, health effects from carcinogenic air toxics are usually described in terms of individual cancer risk. "Individual Cancer Risk" is the likelihood that a person exposed to concentrations of TACs over a 30-year period will contract cancer, based on the use of standard risk-assessment methodology. Construction activities are temporary and short-term events, thus construction activities at each related project would not result in a long-term substantial source of TAC emissions. Additionally, the SCAQMD CEQA guidance does not require a health risk assessment for short-term construction emissions. It is therefore not meaningful to evaluate long-term cancer impacts from construction activities, which occur over relatively short durations. As such, given the short-term nature of these activities, cumulative toxic emission impacts during construction would be less than significant.

Operation

As discussed above, the Project's operational air quality emissions and cumulative impacts would be less than significant. According to the SCAQMD, if an individual project results in air emissions of criteria pollutants that exceed the SCAQMD's recommended daily thresholds for project-specific impacts, then the project would also result in a cumulatively considerable net increase of these criteria pollutants. As operational emissions would not exceed any of the SCAQMD's regional or localized significance thresholds, the emissions of non-attainment pollutants and precursors generated by Project operations would not be cumulatively considerable.

With respect to TAC emissions, neither the Project nor any likely related projects (which are largely residential, retail/commercial in nature), would represent a substantial source of TAC emissions, which are typically associated with large-scale industrial, manufacturing, and transportation hub facilities. The Project and related projects would be consistent with the recommended screening level siting distances for TAC sources, as set forth in CARB's Land Use Guidelines, and the Project and related projects would not result in a cumulative impact requiring further evaluation. However, any related projects could generate minimal TAC emissions related to the use of consumer products and landscape maintenance activities, among other things. Pursuant to AB 1807, which directs the CARB to identify substances as TACs and adopt airborne toxic control measures to control such substances, the SCAQMD has adopted numerous rules (primarily in Regulation XIV) that specifically address TAC emissions. These SCAQMD

rules have resulted in and will continue to result in substantial Basin-wide TAC emissions reductions. As such, cumulative TAC emissions during long-term operations would be less than significant. Therefore, the Project would not result in any substantial sources of TACs that have been identified by the CARB's Land Use Guidelines, and thus, would not contribute to a cumulative impact.

6. Climate Risk Detailed Report

6.1. Climate Risk Summary

Cal-Adapt midcentury 2040–2059 average projections for four hazards are reported below for your project location. These are under Representation Concentration Pathway (RCP) 8.5 which assumes GHG emissions will continue to rise strongly through 2050 and then plateau around 2100.

Climate Hazard	Result for Project Location	Unit
Temperature and Extreme Heat	13.9	annual days of extreme heat
Extreme Precipitation	5.80	annual days with precipitation above 20 mm
Sea Level Rise	0.00	meters of inundation depth
Wildfire	0.00	annual hectares burned

Temperature and Extreme Heat data are for grid cell in which your project are located. The projection is based on the 98th historical percentile of daily maximum/minimum temperatures from observed historical data (32 climate model ensemble from Cal-Adapt, 2040–2059 average under RCP 8.5). Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.

Extreme Precipitation data are for the grid cell in which your project are located. The threshold of 20 mm is equivalent to about $\frac{3}{4}$ an inch of rain, which would be light to moderate rainfall if received over a full day or heavy rain if received over a period of 2 to 4 hours. Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.

Sea Level Rise data are for the grid cell in which your project are located. The projections are from Radke et al. (2017), as reported in Cal-Adapt (2040–2059 average under RCP 8.5), and consider different increments of sea level rise coupled with extreme storm events. Users may select from four model simulations to view the range in potential inundation depth for the grid cell. The four simulations make different assumptions about expected rainfall and temperature are: Warmer/drier (HadGEM2-ES), Cooler/wetter (CNRM-CM5), Average conditions (CanESM2), Range of different rainfall and temperature possibilities (MIROC5). Each grid cell is 50 meters (m) by 50 m, or about 164 feet (ft) by 164 ft.

Wildfire data are for the grid cell in which your project are located. The projections are from UC Davis, as reported in Cal-Adapt (2040–2059 average under RCP 8.5), and consider historical data of climate, vegetation, population density, and large (> 400 ha) fire history. Users may select from four model simulations to view the range in potential wildfire probabilities for the grid cell. The four simulations make different assumptions about expected rainfall and temperature are: Warmer/drier (HadGEM2-ES), Cooler/wetter (CNRM-CM5), Average conditions (CanESM2), Range of different rainfall and temperature possibilities (MIROC5). Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.

6.2. Initial Climate Risk Scores

Climate Hazard	Exposure Score	Sensitivity Score	Adaptive Capacity Score	Vulnerability Score
Temperature and Extreme Heat	1	0	0	N/A
Extreme Precipitation	N/A	N/A	N/A	N/A
Sea Level Rise	1	0	0	N/A
Wildfire	1	0	0	N/A
Flooding	N/A	N/A	N/A	N/A
Drought	N/A	N/A	N/A	N/A
Snowpack Reduction	N/A	N/A	N/A	N/A
Air Quality Degradation	0	0	0	N/A

The sensitivity score reflects the extent to which a project would be adversely affected by exposure to a climate hazard. Exposure is rated on a scale of 1 to 5, with a score of 5 representing the greatest exposure.

The adaptive capacity of a project refers to its ability to manage and reduce vulnerabilities from projected climate hazards. Adaptive capacity is rated on a scale of 1 to 5, with a score of 5 representing the greatest ability to adapt.

The overall vulnerability scores are calculated based on the potential impacts and adaptive capacity assessments for each hazard. Scores do not include implementation of climate risk reduction measures.

6.3. Adjusted Climate Risk Scores

Climate Hazard	Exposure Score	Sensitivity Score	Adaptive Capacity Score	Vulnerability Score
Temperature and Extreme Heat	1	1	1	2
Extreme Precipitation	N/A	N/A	N/A	N/A
Sea Level Rise	1	1	1	2
Wildfire	1	1	1	2
Flooding	N/A	N/A	N/A	N/A
Drought	N/A	N/A	N/A	N/A
Snowpack Reduction	N/A	N/A	N/A	N/A
Air Quality Degradation	1	1	1	2

The sensitivity score reflects the extent to which a project would be adversely affected by exposure to a climate hazard. Exposure is rated on a scale of 1 to 5, with a score of 5 representing the greatest exposure.

The adaptive capacity of a project refers to its ability to manage and reduce vulnerabilities from projected climate hazards. Adaptive capacity is rated on a scale of 1 to 5, with a score of 5 representing the greatest ability to adapt.

The overall vulnerability scores are calculated based on the potential impacts and adaptive capacity assessments for each hazard. Scores include implementation of climate risk reduction measures.

6.4. Climate Risk Reduction Measures

7. Health and Equity Details

7.1. CalEnviroScreen 4.0 Scores

The maximum CalEnviroScreen score is 100. A high score (i.e., greater than 50) reflects a higher pollution burden compared to other census tracts in the state.

Indicator	Result for Project Census Tract
Exposure Indicators	–
AQ-Ozone	57.0

AQ-PM	88.0
AQ-DPM	95.4
Drinking Water	74.5
Lead Risk Housing	95.1
Pesticides	0.00
Toxic Releases	84.8
Traffic	96.4
Effect Indicators	—
CleanUp Sites	77.7
Groundwater	22.1
Haz Waste Facilities/Generators	89.7
Impaired Water Bodies	66.7
Solid Waste	22.1
Sensitive Population	—
Asthma	69.7
Cardio-vascular	73.0
Low Birth Weights	60.3
Socioeconomic Factor Indicators	—
Education	97.8
Housing	89.7
Linguistic	92.5
Poverty	91.7
Unemployment	80.4

7.2. Healthy Places Index Scores

The maximum Health Places Index score is 100. A high score (i.e., greater than 50) reflects healthier community conditions compared to other census tracts in the state.

Indicator	Result for Project Census Tract
-----------	---------------------------------

Economic	—
Above Poverty	4.478378032
Employed	16.43782882
Median HI	8.327986655
Education	—
Bachelor's or higher	6.236365969
High school enrollment	100

6. Climate Risk Detailed Report			
6.1. Climate Risk Summary			

Cal-Adapt midcentury 2040–2059 average projections for four hazards are reported below for your project location. These are under Representation Concentration Pathway (RCP) 8.5 which assumes GHG emissions will continue to rise strongly through 2050 and then plateau around 2100.

Climate Hazard	Result for Project Location	Unit
Temperature and Extreme Heat	13.9	annual days of extreme heat
Extreme Precipitation	5.80	annual days with precipitation above 20 mm
Sea Level Rise	0.00	meters of inundation depth
Wildfire	0.00	annual hectares burned

Temperature and Extreme Heat data are for grid cell in which your project are located. The projection is based on the 98th historical percentile of daily maximum/minimum temperatures from observed historical data (32 climate model ensemble from Cal-Adapt, 2040–2059 average under RCP 8.5). Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi. Extreme Precipitation data are for the grid cell in which your project are located. The threshold of 20 mm is equivalent to about $\frac{3}{4}$ an inch of rain, which would be light to moderate rainfall if received over a full day or heavy rain if received over a period of 2 to 4 hours. Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi. Sea Level Rise data are for the grid cell in which your project are located. The projections are from Radke et al. (2017), as reported in Cal-Adapt (2040–2059 average under RCP 8.5), and consider different increments of sea level rise coupled with extreme storm events. Users may select from four model simulations to view the range in potential inundation depth for the grid cell. The four simulations make different assumptions about expected rainfall and temperature are: Warmer/drier (HadGEM2-ES), Cooler/wetter (CNRM-CM5), Average conditions (CanESM2), Range of different rainfall and temperature possibilities (MIROC5). Each grid cell is 50 meters (m) by 50 m, or about 164 feet (ft) by 164 ft. Wildfire data are for the grid cell in which your project are located. The projections are from UC Davis, as reported in Cal-Adapt (2040–2059 average under RCP 8.5), and consider historical data of climate, vegetation, population density, and large (> 400 ha) fire history. Users may select from four model simulations to view the range in potential wildfire probabilities for the grid cell. The four simulations make different assumptions about expected rainfall and temperature are: Warmer/drier (HadGEM2-ES), Cooler/wetter (CNRM-CM5), Average conditions (CanESM2), Range of different rainfall and temperature possibilities (MIROC5). Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.

6.2. Initial Climate Risk Scores

Climate Hazard	Exposure Score	Sensitivity Score	Adaptive Capacity Score	Vulnerability Score
Temperature and Extreme Heat	1	0	0	N/A
Extreme Precipitation	N/A	N/A	N/A	N/A
Sea Level Rise	1	0	0	N/A
Wildfire	1	0	0	N/A
Flooding	N/A	N/A	N/A	N/A
Drought	N/A	N/A	N/A	N/A
Snowpack Reduction	N/A	N/A	N/A	N/A
Air Quality Degradation	0	0	0	N/A

The sensitivity score reflects the extent to which a project would be adversely affected by exposure to a climate hazard. Exposure is rated on a scale of 1 to 5, with a score of 5 representing the greatest exposure.

The adaptive capacity of a project refers to its ability to manage and reduce vulnerabilities from projected climate hazards. Adaptive capacity is rated on a scale of 1 to 5, with a score of 5 representing the greatest ability to adapt.

The overall vulnerability scores are calculated based on the potential impacts and adaptive capacity assessments for each hazard. Scores do not include implementation of climate risk reduction measures.

6.3. Adjusted Climate Risk Scores

Climate Hazard	Exposure Score	Sensitivity Score	Adaptive Capacity Score	Vulnerability Score
Temperature and Extreme Heat	1	1	1	2
Extreme Precipitation	N/A	N/A	N/A	N/A

Sea Level Rise	1	1	1	2
Wildfire	1	1	1	2
Flooding	N/A	N/A	N/A	N/A
Drought	N/A	N/A	N/A	N/A
Snowpack Reduction	N/A	N/A	N/A	N/A
Air Quality Degradation	1	1	1	2

The sensitivity score reflects the extent to which a project would be adversely affected by exposure to a climate hazard. Exposure is rated on a scale of 1 to 5, with a score of 5 representing the greatest exposure.

The adaptive capacity of a project refers to its ability to manage and reduce vulnerabilities from projected climate hazards. Adaptive capacity is rated on a scale of 1 to 5, with a score of 5 representing the greatest ability to adapt.

The overall vulnerability scores are calculated based on the potential impacts and adaptive capacity assessments for each hazard. Scores include implementation of climate risk reduction measures.

6.4. Climate Risk Reduction Measures

7. Health and Equity Details

7.1. CalEnviroScreen 4.0 Scores

The maximum CalEnviroScreen score is 100. A high score (i.e., greater than 50) reflects a higher pollution burden compared to other census tracts in the state.

Indicator	Result for Project Census Tract			
Exposure Indicators	—			
AQ-Ozone	57.0			
AQ-PM	88.0			
AQ-DPM	95.4			
Drinking Water	74.5			
Lead Risk Housing	95.1			
Pesticides	0.00			
Toxic Releases	84.8			
Traffic	96.4			
Effect Indicators	—			

CleanUp Sites	77.7

CALENVIROSCREEN 4.0 OUTPUT

The CalEnviroScreen 4.0 tool shows cumulative impacts in California communities by census tract.

How to use this map

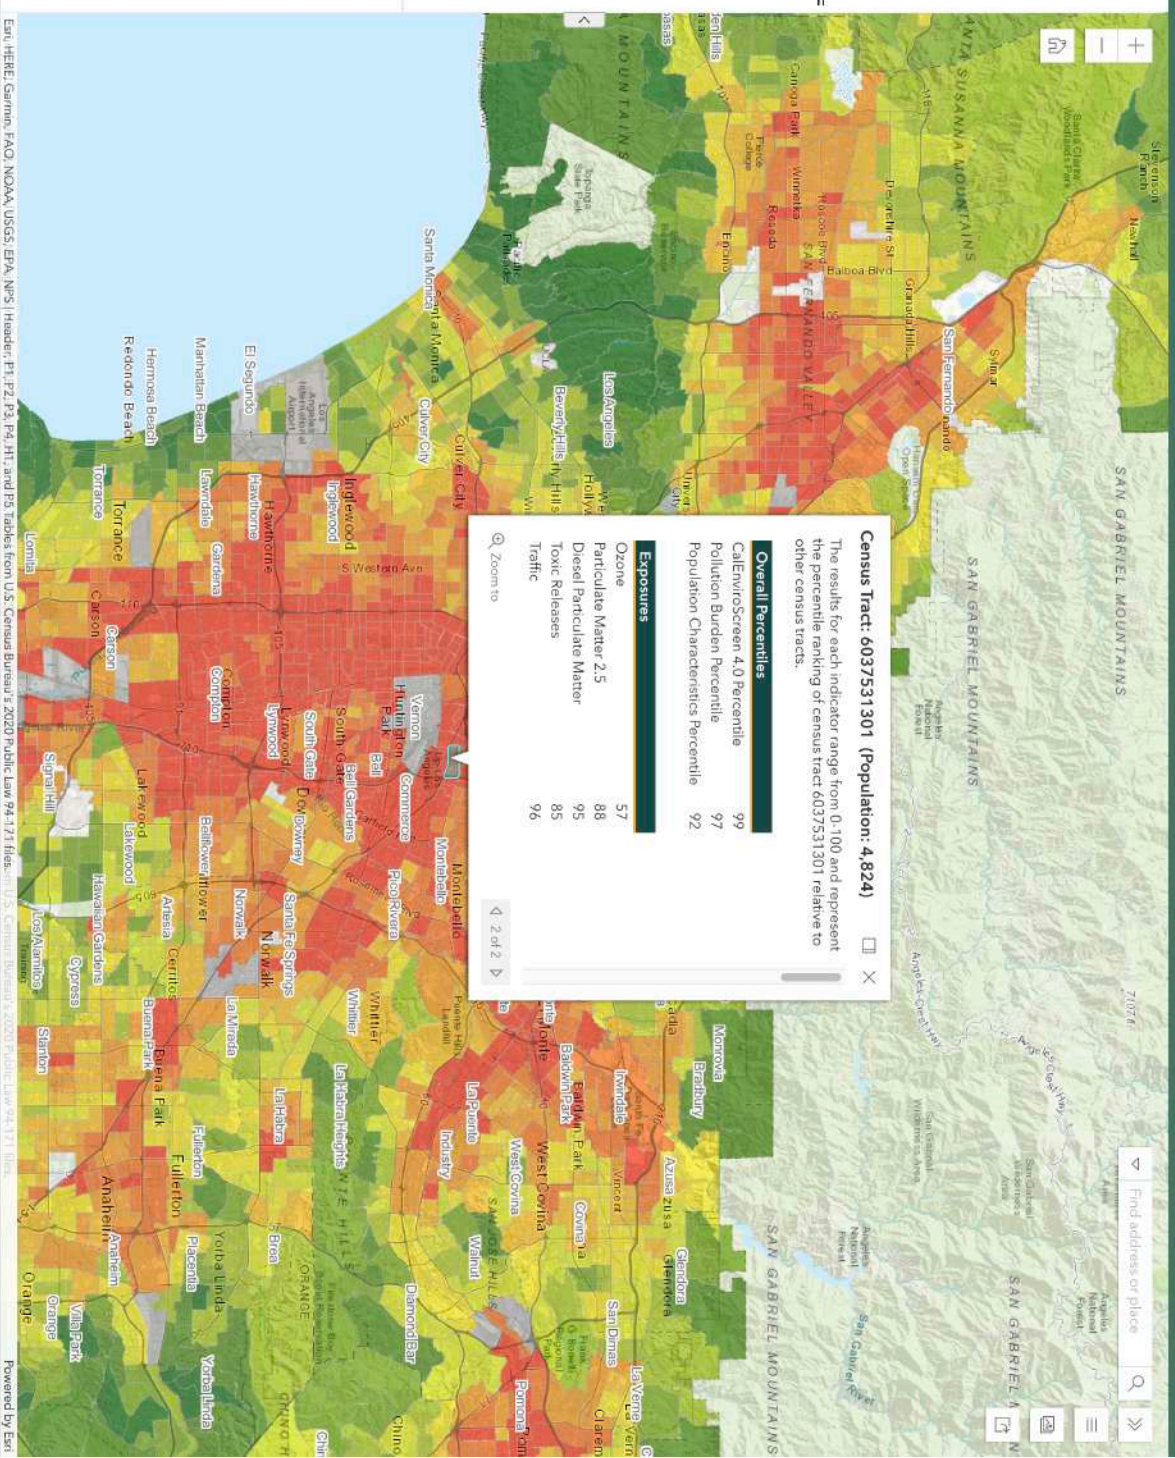

- Use your mouse or touchpad to pan around.
- Zoom in/out with a mouse wheel or the +/- icons.
- Search by location or census tract number with the search icon.
- Click on a census tract to view additional information in the pop-up window.
- Dock the pop-up window to the side of the screen by clicking the dock icon.
- Export a map view that includes the legend and popup using the screenshot widget.
- Learn more about CalEnviroScreen 4.0 and how this map was created here

CAJA Environmental Services
Attn: Sherrie Cruz

re: Paleontological resources for the Extera Public Schools Project

Dear Sherrie:

I have conducted a thorough search of our paleontology collection records for the locality and specimen data for proposed development at the Extera Public Schools Project area as outlined on the portion of the Los Angeles USGS topographic quadrangle map that you sent to me via e-mail on September 25, 2023. We do not have any fossil localities that lie directly within the proposed project area, but we do have fossil localities nearby from the same sedimentary deposits that occur in the proposed project area, either at the surface or at depth.

The following table shows the closest known localities in the collection of the Natural History Museum of Los Angeles County (NHMLA).

Locality Number	Location	Formation	Taxa	Depth
LACM VP 7702	Intersection of 26th St and Atlantic Blvd, Bell Gardens	Unknown Formation (Pleistocene; silt)	Fish (<i>Gasterosteus</i>); Snake (Colubridae), Rodents (<i>Thomomys</i> , <i>Microtus</i> , <i>Reithrodontomys</i>); Rabbit (<i>Sylvilagus</i>)	30 feet bgs
LACM VP 3363	W of Monterey Pass Road in Coyote Pass; E of the Long Beach Freeway & S of the N boundary of Section 32; Monterey Park	Unknown Formation (Pleistocene; sand and silt)	Horse (<i>Equus</i>)	unknown
LACM VP 1023	Workman & Alhambra Sts	Unknown Formation (Pleistocene)	sabertooth cat (<i>Smilodon</i>), horse (<i>Equus</i>), deer (<i>Odocoileus</i>), Turkey (<i>Meleagris</i>)	Unknown (excavations for storm drains)
LACM VP 2032	Los Angeles Brickyard Mission Rd. & Daly St.	Unknown Formation (Pleistocene, silt & clay)	Mastodon (<i>Mammot</i>)	20-35 feet bgs
LACM VP 1755	Near 12th & Hill Streets	Unknown Formation (Pleistocene)	Horse (<i>Equus</i>)	43 feet bgs

VP, Vertebrate Paleontology; IP, Invertebrate Paleontology; bgs, below ground surface

This records search covers only the records of the NHMLA. It is not intended as a paleontological assessment of the project area for the purposes of CEQA or NEPA. Potentially fossil-bearing units are present in the project area, either at the surface or in the subsurface. As such, NHMLA recommends that a full paleontological assessment of the project area be conducted by a paleontologist meeting Bureau of Land Management or Society of Vertebrate Paleontology standards.

Sincerely,

A handwritten signature in black ink that reads "Alyssa Bell". The signature is written in a cursive style and is centered on a light yellow rectangular background.

Re: Native American Tribal Consultation, Pursuant to the Assembly Bill 52 (AB 52), Amendments to the California Environmental Quality Act (CEQA) (Chapter 532, Statutes of 2014), Public Resources Code Sections 5097.94 (m), 21073, 21074, 21080.3.1, 21080.3.2, 21082.3, 21083.09, 21084.2 and 21084.3, Extera Public Schools Project, Los Angeles County

Dear Ms. Cruz:

Pursuant to Public Resources Code section 21080.3.1 (c), attached is a consultation list of tribes that are traditionally and culturally affiliated with the geographic area of the above-listed project. Please note that the intent of the AB 52 amendments to CEQA is to avoid and/or mitigate impacts to tribal cultural resources, (Pub. Resources Code §21084.3 (a)) ("Public agencies shall, when feasible, avoid damaging effects to any tribal cultural resource.")

Public Resources Code sections 21080.3.1 and 21084.3(c) require CEQA lead agencies to consult with California Native American tribes that have requested notice from such agencies of proposed projects in the geographic area that are traditionally and culturally affiliated with the tribes on projects for which a Notice of Preparation or Notice of Negative Declaration or Mitigated Negative Declaration has been filed on or after July 1, 2015. Specifically, Public Resources Code section 21080.3.1 (d) provides:

Within 14 days of determining that an application for a project is complete or a decision by a public agency to undertake a project, the lead agency shall provide formal notification to the designated contact of, or a tribal representative of, traditionally and culturally affiliated California Native American tribes that have requested notice, which shall be accomplished by means of at least one written notification that includes a brief description of the proposed project and its location, the lead agency contact information, and a notification that the California Native American tribe has 30 days to request consultation pursuant to this section.

The AB 52 amendments to CEQA law does not preclude initiating consultation with the tribes that are culturally and traditionally affiliated within your jurisdiction prior to receiving requests for notification of projects in the tribe's areas of traditional and cultural affiliation. The Native American Heritage Commission (NAHC) recommends, but does not require, early consultation as a best practice to ensure that lead agencies receive sufficient information about cultural resources in a project area to avoid damaging effects to tribal cultural resources.

The NAHC also recommends, but does not require that agencies should also include with their notification letters, information regarding any cultural resources assessment that has been completed on the area of potential effect (APE), such as:

1. The results of any record search that may have been conducted at an Information Center of the California Historical Resources Information System (CHRIS), including, but not limited to:

- A listing of any and all known cultural resources that have already been recorded on or adjacent to the APE, such as known archaeological sites;
- Copies of any and all cultural resource records and study reports that may have been provided by the Information Center as part of the records search response;
- Whether the records search indicates a low, moderate, or high probability that unrecorded cultural resources are located in the APE; and
- If a survey is recommended by the Information Center to determine whether previously unrecorded cultural resources are present.

2. The results of any archaeological inventory survey that was conducted, including:

- Any report that may contain site forms, site significance, and suggested mitigation measures.

All information regarding site locations, Native American human remains, and associated funerary objects should be in a separate confidential addendum, and not be made available for public disclosure in accordance with Government Code section 6254.10.

3. The result of any Sacred Lands File (SLF) check conducted through the Native American Heritage Commission was negative.

4. Any ethnographic studies conducted for any area including all or part of the APE; and

5. Any geotechnical reports regarding all or part of the APE.

Lead agencies should be aware that records maintained by the NAHC and CHRIS are not exhaustive and a negative response to these searches does not preclude the existence of a tribal cultural resource. A tribe may be the only source of information regarding the existence of a tribal cultural resource.

This information will aid tribes in determining whether to request formal consultation. In the event that they do, having the information beforehand will help to facilitate the consultation process.

If you receive notification of change of addresses and phone numbers from tribes, please notify the NAHC. With your assistance, we can assure that our consultation list remains current.

If you have any questions, please contact me at my email address: Andrew.Green@nahc.ca.gov.

Sincerely,

Andrew Green
Cultural Resources Analyst

Subject: Geotechnical Engineering Investigation
Proposed Charter School
1059 South Gage Avenue
Los Angeles, California

Ladies and Gentlemen:

This letter transmits the Geotechnical Engineering Investigation for the subject property prepared by Geotechnologies, Inc. This report provides geotechnical recommendations for the development of the site, including earthwork, seismic design, retaining walls, excavations, and foundation design. Engineering for the proposed project should not begin until approval of the geotechnical investigation is granted by the local building official. Significant changes in the geotechnical recommendations may result due to the building department review process.

The validity of the recommendations presented herein is dependent upon review of the geotechnical aspects of the project during construction by this firm. The subsurface conditions described herein have been projected from limited subsurface exploration and laboratory testing. The exploration and testing presented in this report should in no way be construed to reflect any variations which may occur between the exploration locations, or which may result from changes in subsurface conditions.

Should you have any questions please contact this office.

Respectfully submitted,
GEOTECHNOLOGIES, INC.

GEOTECHNICAL ENGINEERING INVESTIGATION
PROPOSED CHARTER SCHOOL
1059 SOUTH GAGE AVENUE
LOS ANGELES, CALIFORNIA

INTRODUCTION

This report presents the results of the geotechnical engineering investigation performed on the subject property. The purpose of this investigation was to identify the distribution and engineering properties of the earth materials underlying the site, and to provide geotechnical recommendations for the design of the proposed development.

This investigation included six exploratory excavations, collection of representative samples, laboratory testing, engineering analysis, review of published geologic data, review of available geotechnical engineering information and the preparation of this report. The exploratory excavation locations are shown on the enclosed Plot Plan. The results of the exploration and the laboratory testing are presented in the Appendix of this report.

PROPOSED DEVELOPMENT

Information concerning the proposed development was furnished by the design team. The proposed project consists of a charter school. The site is currently occupied by several structures. The larger structure on the north side of the site will be demolished and a new structure will be built. The structure is proposed to be two stories built at existing site grades. Structural loading is expected to be light. Grading will consist of removal and recompaction of existing unsuitable soils. It is the understanding of this office that the structures on the south side of the site are to remain and be remodeled.

Any changes in the design of the project or location of any structure, as outlined in this report, should be reviewed by this office. The recommendations contained in this report should not be considered valid until reviewed and modified or reaffirmed, in writing, subsequent to such review.

SITE CONDITIONS

The property is located at 1059 South Gage Avenue in the City Terrace area of the County of Los Angeles, California. The site is relatively level with very little elevation change. The ALTA survey shows about 1-1/2 feet of elevation change falling generally to the west. Drainage across the site is by sheetflow to the improved streets.

The site is currently developed with several building associated with a church. The buildings on the north side of the property will be demolished and replaced with a new structure. The building on the south side of the property will remain and be remodeled. Vegetation on the site consists of small trees and shrubs in planters generally on the periphery of the property.

The neighboring development consists of a mixture of single-story single-family homes as well as one to two story commercial structures.

GEOTECHNICAL EXPLORATION

FIELD EXPLORATION

The site was explored on August 23 and 24, 2022 by excavating six exploratory excavations. The exploratory excavations varied in depth from 20 to 50 feet. The exploration was prosecuted with the aid of a truck-mounted drilling machine using 8-inch diameter hollowstem augers. The exploration locations are shown on the Plot Plan and the geologic materials encountered are logged on Plates A-1 through A-6.

The location of exploratory excavations was determined by information furnished by the client. Elevations of the exploratory excavations were determined by hand level or interpolation from data provided. The location and elevation of the exploratory excavations should be considered accurate only to the degree implied by the method used.

Geologic Materials

Fill earth materials were encountered in each of the exploratory excavations. The fill was found to be three to eight feet in depth and consists of silty sands to sandy silts which are dark brown and yellowish brown, moist, medium dense, fine grained and stiff. Debris was observed in the fill materials. The native soils underlying the site consist of silty sands and sandy silts. The soils are dark and yellowish brown, moist, medium dense to very dense and fine grained. With depth occasional clay and silt layers were observed which are dark brown, moist and stiff to very stiff.

The geologic materials consist of detrital sediments deposited by river and stream action typical to this area of Los Angeles County. More detailed descriptions of the earth materials encountered may be obtained from individual logs of the subsurface excavations.

Groundwater

Groundwater was not encountered during exploration to 50 feet in depth. The historic high groundwater level was established by review of California Geological Survey Seismic Hazard Evaluation Report 029 Plate 1.2 entitled "Historically Highest Ground Water Contours". Review of this plate indicates that the historically highest groundwater level is on the order of 85 feet below site grade.

Fluctuations in the level of groundwater may occur due to variations in rainfall, temperature, and other factors not evident at the time of the measurements reported herein. Fluctuations also may occur across the site. High groundwater levels can result in changed conditions.

Caving

Caving could not be directly observed during exploration due to the type of excavation equipment utilized. Based on the experience of this firm, large diameter excavations, excavations that encounter granular, cohesionless soils and excavations below the groundwater table will most likely experience caving.

SEISMIC EVALUATION

REGIONAL GEOLOGIC SETTING

The subject property is located in the northern portion of the Peninsular Ranges Geomorphic Province. The Peninsular Ranges are characterized by northwest-trending blocks of mountain ridges and sediment-floored valleys. The dominant geologic structural features are northwest trending fault zones that either die out to the northwest or terminate at east-trending reverse faults that form the southern margin of the Transverse Ranges.

The Los Angeles Basin is located at the northern end of the Peninsular Ranges Geomorphic Province. The basin is bounded by the east and southeast by the Santa Ana Mountains and San Joaquin Hills, to the northwest by the Santa Monica Mountains. Over 22 million years ago the Los Angeles basin was a deep marine basin formed by tectonic forces between the North American and Pacific plates. Since that time, over 5 miles of marine and non-marine sedimentary rock as well as intrusive and extrusive igneous rocks have filled the basin. During the last 2 million years, defined by the Pleistocene and Holocene epochs, the Los Angeles basin and surrounding mountain ranges have been uplifted to form the present-day landscape. Erosion of

the surrounding mountains has resulted in deposition of unconsolidated sediments in low-lying areas by rivers such as the Los Angeles River. Areas that have experienced subtle uplift have been eroded with gullies.

The site is underlain by unconsolidated alluvial sediments deposited by river and stream action that are deeper than 200 feet.

REGIONAL FAULTING

Based on criteria established by the California Division of Mines and Geology (CDMG) now called California Geologic Survey (CGS), Faults may be categorized as Holocene-active, Pre-Holocene faults, and Age-undetermined faults. Holocene-active faults are those which show evidence of surface displacement within the last 11,700 years. Pre-Holocene faults are those that have not moved in the past 11,700 years. Age-undetermined faults are faults where the recency of fault movement has not been determined.

Buried thrust faults are faults without a surface expression but are a significant source of seismic activity. They are typically broadly defined based on the analysis of seismic wave recordings of hundreds of small and large earthquakes in the southern California area. Due to the buried nature of these thrust faults, their existence is usually not known until they produce an earthquake. The risk for surface rupture potential of these buried thrust faults is inferred to be low (Leighton, 1990). However, the seismic risk of these buried structures in terms of recurrence and maximum potential magnitude is not well established. Therefore, the potential for surface rupture on these surface-verging splays at magnitudes higher than 6.0 cannot be precluded.

SEISMIC HAZARDS AND DESIGN CONSIDERATIONS

The primary geologic hazard at the site is moderate to strong ground motion (acceleration) caused by an earthquake on any of the local or regional faults. The potential for other earthquake-induced hazards was also evaluated including surface rupture, liquefaction, dynamic settlement, inundation and landsliding.

Surface Rupture

In 1972, the Alquist-Priolo Special Studies Zones Act (now known as the Alquist-Priolo Earthquake Fault Zoning Act) was passed into law. As revised in 2018, The Act defines “Holocene-active” Faults utilizing the same aging criteria as that used by California Geological Survey (CGS). However, established state policy has been to zone only those faults which have direct evidence of movement within the last 11,700 years. It is this recency of fault movement that the CGS considers as a characteristic for faults that have a relatively high potential for ground rupture in the future.

CGS policy is to delineate a boundary from 200 to 500 feet wide on each side of the Holocene-Active fault trace based on the location precision, the complexity, or the regional significance of the fault. If a site lies within an Earthquake Fault Zone, a geologic fault rupture investigation must be performed that demonstrates that the proposed building site is not threatened by surface displacement from the fault before development permits may be issued.

Ground rupture is defined as surface displacement which occurs along the surface trace of the causative fault during an earthquake. Based on research of available literature and results of site reconnaissance, no known Holocene-active or Pre-Holocene faults underlie the subject site. In addition, the subject site is not located within an Alquist-Priolo Earthquake Fault Zone. Based on these considerations, the potential for surface ground rupture at the subject site is considered low.

Liquefaction

Liquefaction is a phenomenon in which saturated silty to cohesionless soils below the groundwater table are subject to a temporary loss of strength due to the buildup of excess pore pressure during cyclic loading conditions such as those induced by an earthquake. Liquefaction-related effects include loss of bearing strength, amplified ground oscillations, lateral spreading, and flow failures.

The Seismic Hazards Maps of the State of California (CDMG, 1999), does not classify the site as part of the potentially “Liquefiable” area. This determination is based on groundwater depth records, soil type and distance to a fault capable of producing a substantial earthquake.

Based on the dense nature of the underlying soils, the lack of groundwater to 50 feet, and the depth to historic highest groundwater level, the potential for liquefaction occurring at the site is considered to be remote.

Dynamic Dry Settlement

Seismically-induced settlement or compaction of dry or moist, cohesionless soils can be an effect related to earthquake ground motion. Such settlements are typically most damaging when the settlements are differential in nature across the length of structures.

Calculations indicate that the seismically induced dry sands settlement could be on the order of 0.23 inches. This is considered to be within the tolerance of a well-designed structure.

Tsunamis, Seiches and Flooding

Tsunamis are large ocean waves generated by sudden water displacement caused by a submarine earthquake, landslide, or volcanic eruption. Review of the City of Los Angeles Inundation and Tsunami Hazard Areas map indicates the site does not lie within the mapped tsunami inundation boundaries.

Seiches are oscillations generated in enclosed bodies of water which can be caused by ground shaking associated with an earthquake. Review of the County of Los Angeles Flood and Inundation Hazards Map, Leighton (1990) indicates the site does not appear to not lie within mapped inundation boundaries due to a seiche or a breached upgradient reservoir.

Landsliding

The probability of seismically-induced landslides occurring on the site is considered to be low due to the general lack of elevation difference slope geometry across or adjacent to the site.

CONCLUSIONS AND RECOMMENDATIONS

Based upon the exploration, laboratory testing, and research, it is the finding of Geotechnologies, Inc. that construction of the proposed charter school is considered feasible from a geotechnical engineering standpoint provided the advice and recommendations presented herein are followed and implemented during construction.

The existing fill materials are not suitable for support of the proposed foundations, floor slabs or additional fill. Existing fill materials should be completely removed within the building area and recompacted. In addition, earth materials should be removed to a minimum depth of three feet below proposed foundations and recompacted as controlled fill prior to foundation excavation. Conventional foundations bearing in newly placed controlled fill are recommended for foundation support. For the structures which are to be remodeled, any new foundations which are necessary should penetrate existing fill materials to bear in competent native soils.

The following statement is made in regard to Los Angeles County Code Sections 110 and 111: It is the opinion of the undersigned based on the findings of this investigation that provided the recommendations presented in this report are followed, the proposed development will be safe

for its intended use against hazard from landsliding, settlement or slippage. The proposed development will have no adverse effect on the stability of the site of adjoining properties.

Foundations for small outlying structures, such as property line walls, which will not be tied-in to the proposed school building may be supported on conventional foundations bearing in native geologic materials.

SEISMIC DESIGN CONSIDERATIONS

California Building Code Seismic Parameters

Based on information derived from the subsurface investigation, the subject site is classified as Site Class D, which corresponds to a “Stiff Soil” Profile, according to Table 20.3-1 of ASCE 7-16. This information and the site coordinates were input into the OSHPD seismic utility program in order to calculate ground motion parameters for the site.

CALIFORNIA BUILDING CODE SEISMIC PARAMETERS	
California Building Code	2019
ASCE Design Standard	7-16
Risk Category	II
Site Class	D
Mapped Spectral Acceleration at Short Periods (S_S)	1.884g
Site Coefficient (F_a)	1.0
Maximum Considered Earthquake Spectral Response for Short Periods (S_{MS})	1.884g
Five-Percent Damped Design Spectral Response Acceleration at Short Periods (S_{DS})	1.256g
Mapped Spectral Acceleration at One-Second Period (S_1)	0.673g
Site Coefficient (F_v)	1.7*
Maximum Considered Earthquake Spectral Response for One-Second Period (S_{M1})	1.144g*
Five-Percent Damped Design Spectral Response Acceleration for One-Second Period (S_{D1})	0.767g*

** According to ASCE 7-16, a Long Period Site Coefficient (F_v) of 1.7 may be utilized provided that the value of the Seismic Response Coefficient (C_s) is determined by Equation 12.8-2 for values of $T \leq 1.5T_s$ and taken as equal to 1.5 times the value computed in accordance with either Equation 12.8-3 for $T_L \geq T > 1.5T_s$ or equation 12.8-4 for $T > T_L$. Alternatively, a site-specific ground motion hazard analysis may be performed in accordance with ASCE 7-16 Section 21.1 and/or a ground motion hazard analysis in accordance with ASCE 7-16 Section 21.2 to determine ground motions for any structure.*

FILL SOILS

The maximum depth of fill encountered on the site was eight feet. This material and any fill generated during demolition should be removed and recompacted as controlled fill prior to foundation excavation.

EXPANSIVE SOILS

The onsite geologic materials are in the very low to moderate expansion range. The Expansion Index was found to be between 20 and 58 for bulk samples remolded to 90 percent of the laboratory maximum density. Additional reinforcing is required as noted in the "Foundation Design" and "Slabs-On-Grade" sections of this report.

WATER-SOLUBLE SULFATES

The Portland cement portion of concrete is subject to attack when exposed to water-soluble sulfates. Usually the two most common sources of exposure are from soil and marine environments.

The sources of natural sulfate minerals in soils include the sulfates of calcium, magnesium, sodium, and potassium. When these minerals interact and dissolve in subsurface water, a sulfate concentration is created, which will react with exposed concrete. Over time sulfate attack will destroy improperly proportioned concrete well before the end of its intended service life.

The water-soluble sulfate content of the onsite geologic materials was tested by California Test 417. The water-soluble sulfate content was determined to be less than 0.1% percentage by weight for the soils tested. Based on the most recent revision to American Concrete Institute (ACI) Standard 318, the sulfate exposure is considered to be negligible for geologic materials with less than 0.1% and Type I cement may be utilized for concrete foundations in contact with the site soils.

GRADING GUIDELINES

Site Preparation

- A thorough search should be made for possible underground utilities and/or structures. Any existing or abandoned utilities or structures located within the footprint of the proposed grading should be removed or relocated as appropriate.
- All vegetation, existing fill, and soft or disturbed geologic materials should be removed from the areas to receive controlled fill. All existing fill materials and any disturbed geologic materials resulting from grading operations shall be completely removed and properly recompacted prior to foundation excavation.
- Any vegetation or associated root system located within the footprint of the proposed structures should be removed during grading.
- Subsequent to the indicated removals, the exposed grade shall be scarified to a depth of six inches, moistened to optimum moisture content, and recompacted in excess of the minimum required comparative density.
- The excavated areas shall be observed by the geotechnical engineer prior to placing compacted fill.

Recommended Overexcavation

The proposed building area shall be excavated to a minimum depth of three feet below the bottom of all foundations. The excavation shall extend at least three feet beyond the edge of foundations or for a distance equal to the depth of fill below the foundations, whichever is greater. It is very important that the position of the proposed structure is accurately located so that the limits of the graded area are accurate and the grading operation proceeds efficiently.

Compaction

Comparative compaction is defined, for purposes of these guidelines, as the ratio of the in-place density to the maximum density as determined by applicable ASTM testing.

All fill should be mechanically compacted in layers not more than 8 inches thick. The materials placed should be moisture conditions to within 3 percent of the optimum moisture content of the particular material placed. All fill shall be compacted to at least 90 percent of the maximum laboratory density for the materials used. The maximum density shall be determined by the laboratory operated by Geotechnologies, Inc. in general accordance with the most recent revision of ASTM D 1557.

Field observation and testing shall be performed by a representative of the geotechnical engineer during grading to assist the contractor in obtaining the required degree of compaction and the proper moisture content. Where compaction is less than required, additional compactive effort shall be made with adjustment of the moisture content, as necessary, until a minimum of 90 percent compaction is obtained.

Acceptable Materials

The excavated onsite materials are considered satisfactory for reuse in the controlled fills as long as any debris and/or organic matter is removed.

Any imported materials shall be observed and tested by the representative of the geotechnical engineer prior to use in fill areas. Imported materials should contain sufficient fines so as to be relatively impermeable and result in a stable subgrade when compacted. Any required import materials should consist of geologic materials with an expansion index of less than 20. The water-soluble sulfate content of the import materials should be less than 0.1% percentage by weight.

Imported materials should be free from chemical or organic substances which could affect the proposed development. A competent professional should be retained in order to test imported materials and address environmental issues and organic substances which might affect the proposed development.

Utility Trench Backfill

Utility trenches should be backfilled with controlled fill. The utility should be bedded with clean sands at least one foot over the crown. The remainder of the backfill may be onsite soil compacted to 90 percent of the laboratory maximum density. Utility trench backfill should be tested by representatives of this firm in general accordance with the most recent revision of ASTM D 1557.

Wet Soils

At the time of exploration the soils which will be exposed during grading were above optimum moisture content. It is anticipated that the excavated material to be placed as compacted fill, and the materials exposed at the bottom of excavated plane may require significant drying and aeration prior to recompaction.

Pumping (yielding or vertical deflection) of the high-moisture content soils at the bottom of the excavation may occur during operation of heavy equipment. Where pumping is encountered, angular minimum $\frac{3}{4}$ -inch gravel and/or crushed concrete should be placed and worked into the subgrade. The exact thickness of the gravel would be a trial and error procedure, and would be determined in the field. It would likely be on the order of 1 to 2 feet thick.

The gravel will help to densify the subgrade as well as function as a stabilization material upon which heavy equipment may operate. It is not recommended that rubber tire construction equipment attempt to operate directly on the pumping subgrade soils prior to placing the gravel.

Direct operation of rubber tire equipment on the soft subgrade soils will likely result in excessive disturbance to the soils, which in turn will result in a delay to the construction schedule since those disturbed soils would then have to be removed and properly recompacted. Extreme care should be utilized to place gravel as the subgrade becomes exposed.

Shrinkage

Shrinkage results when a volume of soil removed at one density is compacted to a higher density. A shrinkage factor between 5 and 15 percent should be anticipated when excavating and recompacting the existing fill and underlying native geologic materials on the site to an average comparative compaction of 92 percent.

Weather Related Grading Considerations

When rain is forecast all fill that has been spread and awaits compaction shall be properly compacted prior to stopping work for the day or prior to stopping due to inclement weather. These fills, once compacted, shall have the surface sloped to drain to an area where water can be removed.

Temporary drainage devices should be installed to collect and transfer excess water to the street in non-erosive drainage devices. Drainage should not be allowed to pond anywhere on the site, and especially not against any foundation or retaining wall. Drainage should not be allowed to flow uncontrolled over any descending slope.

Work may start again, after a period of rainfall, once the site has been reviewed by a representative of this office. Any soils saturated by the rain shall be removed and aerated so that the moisture content will fall within three percent of the optimum moisture content.

Surface materials previously compacted before the rain shall be scarified, brought to the proper moisture content and recompact prior to placing additional fill, if considered necessary by a representative of this firm.

Abandoned Seepage Pits

No abandoned seepage pits were encountered during exploration and none are known to exist on the site. However, should such a structure be encountered during grading, options to permanently abandon seepage pits include complete removal and backfill of the excavation with compacted fill, or drilling out the loose materials and backfilling to within a few feet of grade with slurry, followed by a compacted fill cap.

If the subsurface structures are to be removed by grading, the entire structure should be demolished. The resulting void may be refilled with compacted soil. Concrete and brick generated during the seepage pit removal may be reused in the fill as long as all fragments are less than 6 inches in longest dimension and the debris comprise less than 15 percent of the fill by volume. All grading should comply with the recommendations of this report.

Where the seepage pit structure is to be left in place, the seepage pits should be cleaned of all soil and debris. This may be accomplished by drilling. The pits should be filled with minimum 1-1/2 sack concrete slurry to within 5 feet of the bottom of the proposed foundations. In order to provide a more uniform foundation condition, the remainder of the void should be filled with controlled fill.

Geotechnical Observations and Testing During Grading

Geotechnical observations and testing during grading are considered to be a continuation of the geotechnical investigation. It is critical that the geotechnical aspects of the project be reviewed by representatives of Geotechnologies, Inc. during the construction process. Compliance with the

design concepts, specifications or recommendations during construction requires review by this firm during the course of construction. Any fill which is placed should be observed, tested, and verified if used for engineered purposes. Please advise this office at least twenty-four hours prior to any required site visit.

Proper compaction is necessary to reduce settlement of overlying improvements. Some settlement of compacted fill should be anticipated. Any utilities supported therein should be designed to accept differential settlement. Differential settlement should also be considered at the points of entry to the structure.

LEED Considerations

The Leadership in Energy and Environmental Design (LEED) Green Building Rating System encourages adoption of sustainable green building and development practices. Credit for LEED Certification can be assigned for reuse of construction waste and diversion of materials from landfills in new construction.

In an effort to provide the design team with a viable option in this regard, demolition debris could be crushed onsite in order to use it in the ongoing grading operations. The environmental ramifications of this option, if any, should be considered by the team.

The demolition debris should be limited to concrete, asphalt and other non-deleterious materials. All deleterious materials should be removed including, but not limited to, paper, garbage, ceramic materials and wood.

For structural fill applications, the materials should be crushed to 2 inches in maximum dimension or smaller. The crushed materials should be thoroughly blended and mixed with onsite soils prior to placement as compacted fill. The amount of crushed material should not exceed 20 percent. The blended and mixed materials should be tested by this office prior to

placement to ensure it is suitable for compaction purposes. The blended and mixed materials should be tested by Geotechnologies, Inc. during placement to ensure that it has been compacted in a suitable manner.

FOUNDATION DESIGN

Conventional

Conventional foundations for the new structures may bear in newly placed controlled fill. Where additional foundations are necessary for the proposed structures which are to be remodeled, conventional foundations should be deepened to penetrate any existing fill and bear in competent native soils. All conventional foundations for a structure should bear in the same material.

Continuous foundations may be designed for a bearing capacity of 2,500 pounds per square foot, and should be a minimum of 12 inches in width, 18 inches in depth below the lowest adjacent grade and 18 inches into the recommended bearing material.

Column foundations may be designed for a bearing capacity of 3,000 pounds per square foot, and should be a minimum of 24 inches in width, 18 inches in depth below the lowest adjacent grade and 18 inches into the recommended bearing material.

The bearing capacity increase for each additional foot of width is 200 pounds per square foot. The bearing capacity increase for each additional foot of depth is 600 pounds per square foot. The maximum recommended bearing capacity is 5,000 pounds per square foot.

The bearing capacities indicated above are for the total of dead and frequently applied live loads and may be increased by one third for short duration loading, which includes the effects of wind or seismic forces.

Miscellaneous Foundations

Conventional foundations for structures such as privacy walls or trash enclosures which will not be rigidly connected to the proposed school structures may bear in native soils. Continuous footings may be designed for a bearing capacity of 2,000 pounds per square foot, and should be a minimum of 12 inches in width, 18 inches in depth below the lowest adjacent grade and 18 inches into the recommended bearing material. No bearing capacity increases are recommended.

Since the recommended bearing capacity is a net value, the weight of concrete in the foundations may be taken as 50 pounds per cubic foot and the weight of the soil backfill may be neglected when determining the downward load on the foundations.

Foundation Reinforcement

All continuous foundations should be reinforced with a minimum of four #4 steel bars. Two should be placed near the top of the foundation, and two should be placed near the bottom.

Lateral Design

Resistance to lateral loading may be provided by friction acting at the base of foundations and by passive earth pressure. An allowable coefficient of friction of 0.37 may be used with the dead load forces.

Passive geologic pressure for the sides of foundations poured against undisturbed or recompacted soil may be computed as an equivalent fluid having a density of 300 pounds per cubic foot with a maximum earth pressure of 3,000 pounds per square foot.

The passive and friction components may be combined for lateral resistance without reduction. A one-third increase in the passive value may be used for short duration loading such as wind or seismic forces.

Foundation Settlement

Settlement of the foundation system is expected to occur on initial application of loading. The maximum settlement is expected to be 1/2 inch and occur below the heaviest loaded columns. Differential settlement is not expected to exceed 1/4 inch.

Modulus of Subgrade Reaction

A unit modulus of subgrade reaction of 300 pounds per cubic inch (518 kcf) may be utilized for design of foundations. This value is a unit value for use with a one-foot square footing. The modulus should be reduced in accordance with the following equation when used with the larger footings:

$$K = K_1 * [(B+1)/(2*B)]^2$$

Where:

K = Reduced Subgrade Modulus

K₁ = Unit Subgrade Modulus

B = Foundation Width (feet)

Foundation Observations

It is critical that all foundation excavations are observed by a representative of this firm to verify penetration into the recommended bearing materials. The observation should be performed prior to the placement of reinforcement. Foundations should be deepened to extend into satisfactory geologic materials, if necessary.

Foundation excavations should be cleaned of all loose soils prior to placing steel and concrete. Any required foundation backfill should be mechanically compacted, flooding is not permitted.

RETAINING WALL DESIGN

Cantilever Retaining Walls

Retaining walls supporting a level backslope may be designed utilizing a triangular distribution of pressure. Cantilever retaining walls may be designed for 30 pounds per cubic foot for walls retaining up to 6 feet of earth.

For this equivalent fluid pressure to be valid, walls which are to be restrained at the top should be backfilled prior to the upper connection being made. Additional active pressure should be added for a surcharge condition due to sloping ground, vehicular traffic or adjacent structures.

Retaining Wall Drainage

Subdrains may consist of 4-inch diameter perforated pipes, placed with perforations facing down. The pipe shall be encased in at least one foot of gravel around the pipe. The gravel shall be wrapped in filter fabric. The gravel may consist of three-quarter inch to one-inch crushed rock. As an alternative, the use of gravel pockets and weepholes is an acceptable drainage method. Weepholes shall be a minimum of 2 inches in diameter, placed at 8 feet on center along the base of the wall. Gravel pockets shall be a minimum of 1 cubic foot in dimension and may consist of three-quarter inch to once inch crushed rock, wrapped in filter fabric.

Certain types of subdrain pipe are not acceptable to the various municipal agencies, it is recommended that prior to purchasing subdrainage pipe, the type and brand is cleared with the proper municipal agencies. Subdrainage pipes should outlet to an acceptable location.

Where retaining walls are to be constructed adjacent to property lines there is usually not enough space for emplacement of a standard pipe and gravel drainage system. Under these circumstances, the use of a flat drainage product is acceptable. Some municipalities do not allow the use of flat-drainage products. The use of such a product should be researched with the building official.

Dynamic (Seismic) Earth Pressure

The maximum dynamic active pressure is equal to the sum of the initial static pressure and the dynamic (seismic) pressure increment. Under the most recent building code, as interpreted by most building departments, seismic earth pressure is required in the design of restraining walls which support over 6 feet of earth. The proposed walls are less than 6 feet in height therefore the dynamic earth pressure may be omitted.

Waterproofing

Moisture effecting retaining walls is one of the most common post construction complaints. Poorly applied or omitted waterproofing can lead to efflorescence or standing water inside the building. Efflorescence is a process in which a powdery substance is produced on the surface of the concrete by the evaporation of water. The white powder usually consists of soluble salts such as gypsum, calcite, or common salt. Efflorescence is common to retaining walls and does not affect their strength or integrity.

Waterproofing is recommended for retaining walls. Waterproofing design and inspection of its installation is not the responsibility of the geotechnical engineer. A qualified waterproofing consultant should be retained in order to recommend a product or method which would provide protection to below grade walls.

Retaining Wall Backfill

Any required backfill should be mechanically compacted in layers not more than 8 inches thick, to at least 90 percent of the maximum density in general accordance with the most recent revision of ASTM D 1557 method of compaction. Flooding should not be permitted. Compaction within 5 feet, measured horizontally, behind a retaining structure should be achieved by use of light weight, hand operated compaction equipment.

Proper compaction of the backfill will be necessary to reduce settlement of overlying walks and paving. Some settlement of required backfill should be anticipated, and any utilities supported therein should be designed to accept differential settlement, particularly at the points of entry to the structure.

TEMPORARY EXCAVATIONS

Excavations on the order of 3 to 8 feet in vertical height will be required for the recommended recompaction. The excavations are expected to expose fill and dense native soils, which are suitable for vertical excavations up to 5 feet where not surcharged by adjacent traffic or structures. Excavations which will be surcharged by adjacent traffic or structures should be shored.

Where sufficient space is available, temporary unsurcharged embankments could be cut at a uniform 1:1 slope gradient. A uniform sloped excavation is sloped from bottom to top and does not have a vertical component.

Where sloped embankments are utilized, the tops of the slopes should be barricaded to prevent vehicles and storage loads near the top of slope within a horizontal distance equal to the depth of the excavation. If the temporary construction embankments are to be maintained during the rainy season, berms are strongly recommended along the tops of the slopes to prevent runoff water from entering the excavation and eroding the slope faces. Water should not be allowed to pond on top of the excavation or to flow towards it.

Excavations Adjacent to Buildings or Property Lines

Where excavations necessary for the recommended grading will leave an adjacent foundation unsupported the foundation excavation should be slot cut. The slot cutting method employs the earth as a buttress and allows the earth excavation to proceed in phases. The initial excavation is made at a uniform 1:1 slope. Alternate "A" slots of 8 feet may be worked. The wall, foundation or backfill should proceed to a point where support for any offsite property and/or existing structure is restored before the "B" slots are excavated. The remaining earth buttresses ("B" and "C" slots) should each be 8 feet in width for a combined intervening length of 16 feet. The grading should be prosecuted in the "A" slots before the "B" slots are excavated. After completing the grading in the "B" slots, finally the "C" slots may be excavated.

Excavation Observations

It is critical that the soils exposed in the cut slopes are observed by a representative of Geotechnologies, Inc. during excavation so that modifications of the slopes can be made if variations in the geologic material conditions occur. Many building officials require that temporary excavations should be made during the continuous observations of the geotechnical engineer. All excavations should be stabilized within 30 days of initial excavation.

SLABS ON GRADE

Concrete Slabs-on Grade

Concrete floor slabs should be a minimum of 4 inches in thickness. Slabs-on-grade should be cast over undisturbed natural geologic materials or properly controlled fill materials. Any geologic materials loosened or over-excavated should be wasted from the site or properly compacted to 90 percent of the maximum dry density.

Outdoor concrete flatwork should be a minimum of 4 inches in thickness. Outdoor concrete flatwork should be cast over undisturbed natural geologic materials or properly controlled fill materials. Any geologic materials loosened or over-excavated should be wasted from the site or properly compacted to 90 percent of the maximum dry density.

Design of Slabs That Receive Moisture-Sensitive Floor Coverings

Geotechnologies, Inc. does not practice in the field of moisture vapor transmission evaluation and mitigation. Therefore, where necessary, it is recommended that a qualified consultant should be engaged to evaluate the general and specific moisture vapor transmission paths and any impact on the proposed construction. The qualified consultant should provide recommendations for mitigation of potential adverse impacts of moisture vapor on various components of the structure.

Where any dampness would be objectionable or where the slab will be cast below the historic high groundwater level, it is recommended that floor slabs should be waterproofed. A qualified waterproofing consultant should be engaged in order to recommend a product and/or method which would provide protection from unwanted moisture.

Based on ACI 302.2R-30, Chapter 7, for projects which do not have vapor sensitive coverings or humidity-controlled areas, a vapor retarder/barrier is not necessary. Where a vapor retarder/barrier is considered necessary, the design of the slab and the installation of the vapor retarder/barrier should comply with the most recent revisions of ASTM E 1643 and ASTM E 1745. The vapor retarder/barrier should comply with ASTM E 1745 Class A requirements. The necessity of a vapor retarder/barrier is not a geotechnical issue and should be confirmed by qualified members of the design team.

Based on ACI 302.2R-30, Chapter 7, for projects with vapor sensitive coverings, a vapor retarder/ barrier should be provided. Figure 7.1 shows that the slab should be poured on the vapor retarder/barrier. The ACI guide notes in 5.2.3.2 that the decision to locate the vapor retarder/barrier in direct contact with the slab's underside had long been debated. Experience has shown, however, that the greatest level of protection for floor coverings, coating, or building environments is provided when the vapor retarder/barrier is placed in direct contact with the slab. The necessity of a vapor retarder as well as the use of dry granular material, as discussed above are not a geotechnical issue and should be confirmed by qualified members of the design team.

Where a vapor retarder/barrier is used, it should be placed on a level and compact subgrade. Precautions should be taken to protect the vapor retarder/barrier from damage during installation of reinforcing, utilities and concrete. The use of stakes driven through the vapor retarder/barrier should be avoided. Repair any damaged areas of the vapor retarder/barrier prior to concrete placement.

Groundwater was not encountered on the subject site at to a depth of 50 feet. Proposed concrete slabs-on-grade do not need to be supported on a layer of compacted aggregate to provide a capillary break.

Concrete Crack Control

The recommendations presented in this report are intended to reduce the potential for cracking of concrete slabs-on-grade due to settlement. However even where these recommendations have been implemented, foundations, stucco walls and concrete slabs-on-grade may display some cracking due to minor soil movement and/or concrete shrinkage. The occurrence of concrete cracking may be reduced and/or controlled by limiting the slump of the concrete used, proper concrete placement and curing, and by placement of crack control joints at reasonable intervals, in particular, where re-entrant slab corners occur.

For standard control of concrete cracking, a maximum crack control joint spacing of 12 feet should not be exceeded. Lesser spacings would provide greater crack control. Joints at curves and angle points are recommended. The crack control joints should be installed as soon as practical following concrete placement. Crack control joints should extend a minimum depth of one-fourth the slab thickness. Construction joints should be designed by a structural engineer.

Complete removal of the existing fill soils beneath outdoor flatwork such as walkways or patio areas, is not required, however, due to the rigid nature of concrete, some cracking, a shorter design life and increased maintenance costs should be anticipated. In order to provide uniform support beneath the flatwork it is recommended that a minimum of 12 inches of the exposed subgrade beneath the flatwork be scarified and recompact to 90 percent relative compaction.

Slab Reinforcing

Concrete slabs-on-grade should be reinforced with a minimum of #3 steel bars on 18-inch centers each way.

Outdoor flatwork should be reinforced with a minimum of #3 steel bars on 18-inch centers each way.

PAVEMENTS

Prior to placing paving, the existing grade should be scarified to a depth of 12 inches, moistened as required to obtain optimum moisture content, and recompact to 90 percent of the maximum density as determined by the most recent revision of ASTM D 1557. The design team should be aware that removal of all existing fill in the area of new paving is not required, however, pavement constructed in this manner will most likely have a shorter design life and increased maintenance costs. The following pavement sections are recommended:

Service	Asphalt Pavement Thickness Inches	Base Course Inches
Passenger Cars	3	4
Moderate Truck	4	6

Aggregate base should be compacted to a minimum of 95 percent of the most recent revision of ASTM D 1557 laboratory maximum dry density. Base materials should consist of Crushed Aggregate Base which conforms with Section 200-2.2 of the most recent edition of “Standard Specifications for Public Works Construction”, (Green Book).

The performance of pavement is highly dependent upon providing positive surface drainage away from the edges. Ponding of water on or adjacent to pavement can result in saturation of the subgrade materials and subsequent pavement distress. If planter islands are planned, the perimeter curb should extend a minimum of 12 inches below the bottom of the aggregate base. In addition where landscaping is planned adjacent to pavement, it is recommended that a cutoff wall should be provided along the edge of the pavement. The cutoff wall should extend at least 12 inches below the depth of the base course.

The management of pavement wear primarily is focused on the distress caused by vertical loads. The reduction of vertical loading from large vehicles is assisted by increasing the number of axles. Multi-axle groups reduce the peak vertical loading and, when closely spaced, reduce the magnitude of the strain cycles to which the pavement is subjected. However, where tight low-speed turns are executed, non-steering axle groups lead to transverse shear forces (scuffing) at the pavement-tire interface.

With asphaltic concrete pavements, tensile shear stresses from tires can cause surface cracking and raveling, thus, the increased use of non-steering axle groups results in increased pavement wear in the vicinity of intersections and turnarounds where tight low speed turns are executed.

When designing intersections and turnarounds the turn radius should be as large as possible. This will lead to reduced “scuffing” forces. Where tight radius turns are unavoidable, the pavement surface design should take into account the high level of “scuffing” forces that will occur and thickened pavement and subgrade and base course keyways should be considered to assist in the reduction of lateral deflection.

SITE DRAINAGE

Proper surface drainage is critical to the future performance of the project. Saturation of a soil can cause it to lose internal shear strength and increase its compressibility, resulting in a change in the designed engineering properties. Proper site drainage should be maintained at all times.

All site drainage, with the exception of any required to be disposed of onsite by stormwater regulations, should be collected and transferred to the street in non-erosive drainage devices. The proposed structure should be provided with roof drainage. Discharge from downspouts, roof drains and scuppers should not be permitted on unprotected soils within five feet of the building perimeter. Drainage should not be allowed to pond anywhere on the site, and especially not against any foundation or retaining wall. Drainage should not be allowed to flow uncontrolled over any descending slope. Planters which are located within a distance equal to the depth of a retaining wall should be sealed to prevent moisture adversely affecting the wall. Planters which are located within five feet of a foundation should be sealed to prevent moisture affecting the earth materials supporting the foundation.

STORMWATER DISPOSAL

Introduction

Recently regulatory agencies have been requiring the disposal of a certain amount of stormwater generated on a site by infiltration into the site soils. Increasing the moisture content of a soil can cause it to lose internal shear strength and increase its compressibility, resulting in a change in the designed engineering properties. This means that any overlying structure, including

buildings, pavements and concrete flatwork, could sustain damage due to saturation of the subgrade soils. Structures serviced by subterranean levels could be adversely impacted by stormwater disposal by increasing the design fluid pressures on retaining walls and causing leaks in the walls. Proper site drainage is critical to the performance of any structure in the built environment.

Percolation Testing

Percolation testing was conducted following the excavation percolation test procedure provided in the Guidelines for Design, Investigation and Reporting Low Impact Development Stormwater Infiltration (GS200.1), dated June 30, 2017, presented in the Administrative Manual for the County of Los Angeles, Department of Public Works, Geotechnical and Material Engineering Division.

Boring 3 was drilled to a depth of 20 feet below the existing site grade with the aid of a truck-mounted drilling machine, equipped with 8-inch diameter hollowstem augers. The geologic materials encountered during excavation are presented on Plate A-3.

At the completion of drilling, a 2-inch diameter casing was placed within the center of the boreholes for the purpose of conducting percolation testing. The casing consisted of solid PVC pipes from the ground surface to a depth of 10 feet, and perforated PVC pipes between depths of 10 and 20 feet. A sand pack consisting of #3 Monterey Sand was poured into the annular space around the perforated portion of the casing. A 1-foot thick hydrated bentonite seal was placed over the sand.

After the casing was installed, the borehole was filled with water for the purpose of pre-soaking for a minimum of 3 hours. After presoaking, the borehole was refilled with water, and the rate of drop in the water level was measured. The percolation test readings were recorded a minimum of

8 times or until a stabilized rate of drop was obtained, whichever occurred first. The percolation testing was performed within the native alluvial soils.

After a representative percolation rate was obtained from the testing, the Reduction Factor (Rf) required by the County of Los Angeles procedure to account for non-vertical flow was applied to obtain an infiltration rate. Based on the enclosed analyses, an infiltration rate of 0.72 inches per hour may be utilized for the design of an infiltration system. No other factors of safety or correction factors have been applied to this rate. The Civil Engineer must determine and apply any additional factors of safety, or correction factors, required for the design.

The Proposed System

The location(s) for potential stormwater disposal have not been specifically addressed on this site. It is the opinion of this office that stormwater infiltration is possible on this site, however until the plan achieves more definition, and this office can address the impacts, stormwater infiltration is not recommended.

Recommendations

The design and construction of stormwater infiltration facilities is not the responsibility of the geotechnical engineer. However, based on the experience of this firm, it is recommended that several aspects of the use of such facilities should be considered by the design and construction team:

- Open infiltration basins have many negative associated issues. Such a design must consider attractive nuisance, impacts to growing vegetation, impacts to air quality and vector control.
- All infiltration devices should be provided with overflow protection. Once the device is full of water, additional water flowing to the device should be diverted to another acceptable disposal area, or disposed offsite in an acceptable manner.

- All connections associated with stormwater infiltration devices should be sealed and water-tight. Water leaking into the subgrade soils can lead to loss of strength, piping, erosion, settlement and/or expansion of the effected earth materials.
- Excavations proposed for the installation of stormwater facilities should comply with the “Temporary Excavations” sections of this (the referenced) reports well as CalOSHA Regulations where applicable.

DESIGN REVIEW

Engineering of the proposed project should not begin until approval of the geotechnical report by the Building Official is obtained in writing. Significant changes in the geotechnical recommendations may result during the building department review process.

It is recommended that the geotechnical aspects of the project be reviewed by this firm during the design process. This review provides assistance to the design team by providing specific recommendations for particular cases, as well as review of the proposed construction to evaluate whether the intent of the recommendations presented herein are satisfied.

CONSTRUCTION MONITORING

Geotechnical observations and testing during construction are considered to be a continuation of the geotechnical investigation. It is critical that this firm review the geotechnical aspects of the project during the construction process. Compliance with the design concepts, specifications or recommendations during construction requires review by this firm during the course of construction. All foundations should be observed by a representative of this firm prior to placing concrete or steel. Any fill which is placed should be observed, tested, and verified if used for engineered purposes. Please advise Geotechnologies, Inc. at least twenty-four hours prior to any required site visit.

If conditions encountered during construction appear to differ from those disclosed herein, notify Geotechnologies, Inc. immediately so the need for modifications may be considered in a timely manner.

It is the responsibility of the contractor to ensure that all excavations and trenches are properly sloped or shored. All temporary excavations should be cut and maintained in accordance with applicable OSHA rules and regulations.

EXCAVATION CHARACTERISTICS

The exploration performed for this investigation is limited to the geotechnical excavations described. Direct exploration of the entire site would not be economically feasible. The owner, design team and contractor must understand that differing excavation and drilling conditions may be encountered based on boulders, gravel, oversize materials, groundwater and many other conditions. Fill materials, especially when they were placed without benefit of modern grading codes, regularly contain materials which could impede efficient grading and drilling. Southern California sedimentary bedrock is known to contain variable layers which reflect differences in depositional environment. Such layers may include abundant gravel, cobbles and boulders. Similarly bedrock can contain concretions. Concretions are typically lenticular and follow the bedding. They are formed by mineral deposits. Concretions can be very hard. Excavation and drilling in these areas may require full size equipment and coring capability. The contractor should be familiar with the site and the geologic materials in the vicinity.

CLOSURE AND LIMITATIONS

The purpose of this report is to aid in the design and completion of the described project. Implementation of the advice presented in this report is intended to reduce certain risks associated with construction projects. The professional opinions and geotechnical advice contained in this report are sought because of special skill in engineering and geology and were prepared in accordance with generally accepted geotechnical engineering practice.

Geotechnologies, Inc. has a duty to exercise the ordinary skill and competence of members of the engineering profession. Those who hire Geotechnologies, Inc. are not justified in expecting infallibility, but can expect reasonable professional care and competence.

The recommendations of this report pertain only to the site investigated and are based upon the assumption that the geologic conditions do not deviate from those disclosed in the investigation. If any variations are encountered during construction, or if the proposed construction will differ from that anticipated herein, Geotechnologies, Inc. should be notified so that supplemental recommendations can be prepared.

This report is issued with the understanding that it is the responsibility of the owner, or the owner's representatives, to ensure that the information and recommendations contained herein are brought to the attention of the project architect and engineer and are incorporated into the plans. The owner is also responsible to see that the contractor and subcontractors carry out the geotechnical recommendations during construction.

The findings of this report are valid as of the date of this report. However, changes in the conditions of a property can occur with the passage of time, whether they are due to natural processes or the works of man on this or adjacent properties. In addition, changes in applicable or appropriate standards may occur, whether they result from legislation or the broadening of knowledge. Accordingly, the findings of this report may be invalidated wholly or partially by changes outside control of this firm. Therefore, this report is subject to review and should not be relied upon after a period of three years.

Geotechnical observations and testing during construction is considered to be a continuation of the geotechnical investigation. It is, therefore, most prudent to employ the consultant performing the initial investigative work to provide observation and testing services during construction. This practice enables the project to flow smoothly from the planning stages through to completion.

Should another geotechnical firm be selected to provide the testing and observation services during construction, that firm should prepare a letter indicating their assumption of the responsibilities of geotechnical engineer of record. A copy of the letter should be provided to the regulatory agency for review. The letter should acknowledge the concurrence of the new geotechnical engineer with the recommendations presented in this report.

EXCLUSIONS

Geotechnologies, Inc. does not practice in the fields of methane gas, radon gas, environmental engineering, waterproofing, dewatering organic substances or the presence of corrosive soils or wetlands which could affect the proposed development including mold and toxic mold. Nothing in this report is intended to address these issues and/or their potential effect on the proposed development. A competent professional consultant should be retained in order to address environmental issues, waterproofing, organic substances and wetlands which might affect the proposed development.

GEOTECHNICAL TESTING

Classification and Sampling

The soil is continuously logged by a representative of this firm and classified by visual examination in accordance with the Unified Soil Classification system. The field classification is verified in the laboratory, also in accordance with the Unified Soil Classification System. Laboratory classification may include visual examination, Atterberg Limit Tests and grain size distribution. The final classification is shown on the excavation logs.

Samples of the geologic materials encountered in the exploratory excavations were collected and transported to the laboratory. Undisturbed samples of soil are obtained at frequent intervals. Unless noted on the excavation logs as an SPT sample, samples acquired while utilizing a hollow-stem auger drill rig are obtained by driving a thin-walled, California Modified Sampler

with successive 30-inch drops of a 140-pound hammer. Samples from bucket-auger drilling are obtained utilizing a California Modified Sampler with successive 12-inch drops of a kelly bar, whose weight is noted on the excavation logs. The soil is retained in brass rings of 2.50 inches outside diameter and 1.00 inch in height. The central portion of the samples are stored in close fitting, waterproof containers for transportation to the laboratory. Samples noted on the excavation logs as SPT samples are obtained in general accordance with the most recent revision of ASTM D 1586. Samples are retained for 30 days after the date of the geotechnical report.

Grain Size Distribution

These tests cover the quantitative determination of the distribution of particle sizes in soils. Sieve analysis is used to determine the grain size distribution of the soil larger than the Number 200 sieve.

General accordance with the most recent revision of ASTM D 422 is used to determine particle sizes smaller than the Number 200 sieve. A hydrometer is used to determine the distribution of particle sizes by a sedimentation process.

The grain size distributions are plotted on the E-Plates presented in the Appendix of this report.

Moisture and Density Relationships

The field moisture content and dry unit weight are determined for each of the undisturbed soil samples, and the moisture content is determined for SPT samples in general accordance with the most recent revision of ASTM D 4959 or ASTM D 4643. This information is useful in providing a gross picture of the soil consistency between exploration locations and any local variations. The dry unit weight is determined in pounds per cubic foot and shown on the “Excavation Logs”, A-Plates. The field moisture content is determined as a percentage of the dry unit weight.

Direct Shear Testing

Shear tests are performed in general accordance with the most recent revision of ASTM D 3080 with a strain controlled, direct shear machine manufactured by Soil Test, Inc. or a Direct Shear Apparatus manufactured by GeoMatic, Inc. The rate of deformation is approximately 0.025 inches per minute. Each sample is sheared under varying confining pressures in order to determine the Mohr-Coulomb shear strength parameters of the cohesion intercept and the angle of internal friction. Samples are generally tested in an artificially saturated condition. Depending upon the sample location and future site conditions, samples may be tested at field moisture content. The results are plotted on the "Shear Test Diagram," B-Plates.

The most recent revision of ASTM 3080 limits the particle size to 10 percent of the diameter of the direct shear test specimen. The sheared sample is inspected by the laboratory technician running the test. The inspection is performed by splitting the sample along the sheared plane and observing the soils exposed on both sides. Where oversize particles are observed in the shear plane, the results are discarded and the test run again with a fresh sample.

Consolidation Testing

Settlement predictions of the soil's behavior under load are made on the basis of the consolidation tests in general accordance with the most recent revision of ASTM D 2435. The consolidation apparatus is designed to receive a single one-inch high ring. Loads are applied in several increments in a geometric progression, and the resulting deformations are recorded at selected time intervals. Porous stones are placed in contact with the top and bottom of each specimen to permit addition and release of pore fluid. Samples are generally tested at increased moisture content to determine the effects of water on the bearing soil. The normal pressure at which the water is added is noted on the drawing. Results are plotted on the "Consolidation Test," C-Plates.

Expansion Index Testing

The expansion tests performed on the remolded samples are in accordance with the Expansion Index testing procedures, as described in the most recent revision of ASTM D 4829. The soil sample is compacted into a metal ring at a saturation degree of 50 percent. The ring sample is then placed in a consolidometer, under a vertical confining pressure of 1 lbf/square inch and inundated with distilled water. The deformation of the specimen is recorded for a period of 24 hour or until the rate of deformation becomes less than 0.0002 inches/hour, whichever occurs first. The expansion index, EI, is determined by dividing the difference between final and initial height of the ring sample by the initial height, and multiplied by 1,000.

Laboratory Compaction Characteristics

The maximum dry unit weight and optimum moisture content of a soil are determined in general accordance with the most recent revision of ASTM D 1557. A soil at a selected moisture content is placed in five layers into a mold of given dimensions, with each layer compacted by 25 blows of a 10 pound hammer dropped from a distance of 18 inches subjecting the soil to a total compactive effort of about 56,000 pounds per cubic foot. The resulting dry unit weight is determined. The procedure is repeated for a sufficient number of moisture contents to establish a relationship between the dry unit weight and the water content of the soil. The data when plotted represent a curvilinear relationship known as the compaction curve. The values of optimum moisture content and modified maximum dry unit weight are determined from the compaction curve.

LEGAL DESCRIPTION

THE LAND REFERRED TO HEREIN BELOW IS SITUATED IN THE COUNTY OF LOS ANGELES, STATE OF CALIFORNIA, AND IS DESCRIBED AS FOLLOWS:

PARCEL 1:
THE EAST 100 FEET OF THE SOUTH 20 FEET OF LOT 54, AND THE EAST 100 FEET OF THE NORTH 20 FEET OF LOT 55, TRACT NO. 3552, IN THE COUNTY OF LOS ANGELES, STATE OF CALIFORNIA, AS PER MAP RECORDED IN BOOK 38, PAGES 83 AND 84 OF MAPS, IN THE OFFICE OF THE COUNTY RECORDER OF SAID COUNTY, MORE PARTICULARLY DESCRIBED AS FOLLOWS:

COMMENCING AT A POINT IN THE EAST LINE OF SAID LOT 54, 20 FEET NORTH FROM THE SOUTHWEST CORNER OF SAID LOT 26; THENCE WEST PARALLEL WITH THE SOUTH LINE OF SAID LOT 100 FEET; THENCE SOUTH PARALLEL WITH THE EAST LINE OF SAID LOTS 54 AND 55, 40 FEET; THENCE EAST PARALLEL WITH THE NORTH LINE OF SAID 55, 100 FEET TO THE EAST LINE OF SAID LOT 55; THENCE ALONG THE EASTERLY LINE OF SAID LOTS 55 AND 54, 40 FEET TO THE POINT OF BEGINNING.

PARCEL 2:
THE NORTH 60 FEET OF LOT 27, THE SOUTH 20 FEET OF LOT 26, THE EAST 57 1/2 FEET OF THE NORTH 80 FEET OF SAID LOT 26, THE WEST 57 1/2 FEET OF LOT 54 AND LOTS 55 AND 56, EXCEPT THE EAST 100 FEET OF THE NORTH 20 FEET OF SAID LOTS 54 OF TRACT NO. 3552, IN THE COUNTY OF LOS ANGELES, STATE OF CALIFORNIA, AS PER MAP RECORDED IN BOOK 38, PAGE 83 OF MAPS, IN THE OFFICE OF THE COUNTY RECORDER OF SAID COUNTY.

PARCEL 3:
THE SOUTH 40 FEET OF THE NORTH 80 FEET OF THE WEST 100 FEET OF LOT 26 OF TRACT NO. 3552, IN THE COUNTY OF LOS ANGELES, STATE OF CALIFORNIA, AS PER MAP RECORDED IN BOOK 348, PAGE 83 OF MAPS, IN THE OFFICE OF THE COUNTY RECORDER OF SAID COUNTY.

GREENHOUSE GAS TECHNICAL REPORT

Introduction

This technical report examines the direct and indirect impacts of the Proposed Project at 1059 South Gage Avenue related to greenhouse gas (GHG) emissions and global climate change by disclosing GHG emissions generation and by addressing the Project's consistency with applicable GHG emission reduction plans, policies, and regulations. Calculation worksheets and documentation are included in the Technical Appendix to this analysis.

Environmental Setting

Global climate change refers to changes in average climatic conditions on Earth as a whole, including changes in temperature, wind patterns, precipitation, and storms. Global warming, a related concept, is the observed increase in average temperature of Earth's surface and atmosphere. One identified cause of global warming is an increase of GHG emissions in the atmosphere. GHG emissions are those compounds in Earth's atmosphere that play a critical role in determining Earth's surface temperature.

Earth's natural warming process is known as the "greenhouse effect." It is called the greenhouse effect because Earth and the atmosphere surrounding it are similar to a greenhouse with glass panes in that the glass allows solar radiation (sunlight) into Earth's atmosphere but prevents radiative heat from escaping, thus warming Earth's atmosphere. Some levels of GHG emissions keep the average surface temperature of Earth close to a hospitable 60 degrees Fahrenheit. However, it is believed that excessive concentrations of anthropogenic GHG emissions in the atmosphere can result in increased global mean temperatures, with associated adverse climatic and ecological consequences.¹

Scientists studying the particularly rapid rise in global temperatures have determined that human activity has resulted in increased emissions of GHG emissions, primarily from the burning of fossil fuels (from motor vehicle travel, electricity generation, consumption of natural gas, industrial activity, manufacturing), deforestation, agricultural activity, and the decomposition of solid waste. Scientists refer to the global warming context of the past century as the "enhanced greenhouse effect" to distinguish it from the natural greenhouse effect.²

Global GHG emissions due to human activities have grown since pre-industrial times. As reported by the United States Environmental Protection Agency (USEPA), global carbon emissions from fossil

¹ Intergovernmental Panel on Climate Change, 2014: Climate Change 2014: Synthesis Report. Contribution of Working Groups I, II and III to the Fifth Assessment Report of the Intergovernmental Panel on Climate Change [Core Writing Team, R.K. Pachauri and L.A. Meyer (eds.)].

² Center for Climate and Energy Solutions, Climate Change 101: Understanding and Responding to Global Climate Change.

fuels increased by over 16 times between 1900 and 2008 and by about 1.5 times between 1990 and 2008. In addition, in the Global Carbon Budget 2014 report, published in September 2014, atmospheric carbon dioxide (CO₂) concentrations in 2013 were found to be 43 percent above the concentration at the start of the Industrial Revolution, and the present concentration is the highest during at least the last 800,000 years.³ Global increases in CO₂ concentrations are due primarily to fossil fuel use, with land use change providing another significant but smaller contribution. With regard to emissions of non-CO₂ GHG, these have also increased significantly since 1990. In particular, studies have concluded that it is very likely that the observed increase in methane (CH₄) concentration is predominantly due to agriculture and fossil fuel use.⁴

In August 2007, international climate talks held under the auspices of the United Nations Framework Convention on Climate Change (UNFCCC) led to the official recognition by the participating nations that global emissions of GHG must be reduced. According to the “Ad Hoc Working Group on Further Commitments of Annex I Parties under the Kyoto Protocol,” avoiding the most catastrophic events forecast by the United Nations Intergovernmental Panel on Climate Change (IPCC) would entail emissions reductions by industrialized countries in the range of 25 to 40 percent below 1990 levels. Because of the Kyoto Protocol’s Clean Development Mechanism, which gives industrialized countries credit for financing emission-reducing projects in developing countries, such an emissions goal in industrialized countries could ultimately spur efforts to cut emissions in developing countries as well.⁵

With regard to the adverse effects of global warming, as reported by the Southern California Association of Governments (SCAG), “Global warming poses a serious threat to the economic well-being, public health and natural environment in southern California and beyond. The potential adverse impacts of global warming include, among others, a reduction in the quantity and quality of water supply, a rise in sea level, damage to marine and other ecosystems, and an increase in the incidences of infectious diseases. Over the past few decades, energy intensity of the national and state economy has been declining due to the shift to a more service-oriented economy. California ranked fifth lowest among the states in CO₂ emissions from fossil fuel consumption per unit of Gross State Product. However, in terms of total CO₂ emissions, California is second only to Texas in the nation and is the 12th largest source of climate change emissions in the world, exceeding most nations. The SCAG region, with close to half of the state’s population and economic activities, is also a major contributor to the global warming problem.”

GHG Emissions Background. GHG emissions include CO₂, CH₄, nitrous oxide (N₂O), hydrofluorocarbons (HFCs), perfluorocarbons (PFCs), sulfur hexafluoride (SF₆), and nitrogen trifluoride (NF₃).⁶ Carbon dioxide is the most abundant GHG. Other GHG emissions are less

⁶ As defined by California Assembly Bill (AB) 32 and Senate Bill (SB) 104.

abundant but have higher global warming potential than CO₂. Thus, emissions of other GHG emissions are frequently expressed in the equivalent mass of CO₂, denoted as CO₂e. Forest fires, decomposition, industrial processes, landfills, and consumption of fossil fuels for power generation, transportation, heating, and cooking are the primary sources of GHG emissions. A general description of the GHG emissions is provided in **Table 1**.

Global Warming Potential (GWP) is one type of simplified index based upon radiative properties used to estimate the potential future impacts of emissions of different gases upon the climate system. The GWP is based on a number of factors, including the radiative efficiency (heat-absorbing ability) of each gas relative to that of CO₂, as well as the decay rate of each gas (the amount removed from the atmosphere over a given number of years) relative to that of CO₂. The larger the GWP, the more that a given gas warms the Earth compared to CO₂ over that time period. A summary of the atmospheric lifetime and GWP of selected gases is presented in **Table 2**.⁷ As indicated on the table, the GWP ranges from 1 to 22,800.

Projected Impacts of Global Warming in California. The scientific community's understanding of the fundamental processes responsible for global climate change has improved over the past decade, and its predictive capabilities are advancing. However, there remain significant scientific uncertainties in, for example, predictions of local effects of climate change, occurrence, frequency, and magnitude of extreme weather events, effects of aerosols, changes in clouds, shifts in the intensity and distribution of precipitation, and changes in oceanic circulation. Due to the complexity of the Earth's climate system and inability to accurately model it, the uncertainty surrounding climate change may never be completely eliminated. Nonetheless, the IPCC's Fifth Assessment Report, Summary for Policy Makers states that, "it is extremely likely that more than half of the observed increase in global average surface temperature from 1951 to 2010 was caused by the anthropogenic increase in greenhouse gas concentrations and other anthropogenic forces together."⁸ A report from the National Academy of Sciences concluded that 97 to 98 percent of the climate researchers most actively publishing in the field support the tenets of the IPCC in that climate change is very likely caused by human (i.e., anthropogenic) activity.⁹

According to CARB, the potential impacts in California due to global climate change may include: loss in snow pack; sea level rise; more extreme heat days per year; more high ozone days; more large forest fires; more drought years; increased erosion of California's coastlines and sea water intrusion into the Sacramento and San Joaquin Deltas and associated levee systems; and increased

⁷ Atmospheric lifetime is defined as the time required to turn over the global Atmospheric burden. Source: Intergovernmental Panel on Climate Change, IPCC Third Assessment Report: Climate Change 2001 (TAR), Chapter 4: Atmospheric Chemistry and Greenhouse Gases, 2001, p. 247.

pest infestation. Below is a summary of some of the potential effects that could be experienced in California as a result of global warming and climate change.

Air Quality. Higher temperatures, conducive to air pollution formation, could worsen air quality in California. Climate change may increase the concentration of ground-level ozone, but the magnitude of the effect and, therefore, its indirect effects, are uncertain. If higher temperatures are accompanied by drier conditions, the potential for large wildfires could increase, which, in turn, would exacerbate air quality. Additionally, severe heat accompanied by drier conditions and poor air quality could increase the number of heat-related deaths, illnesses, and asthma attacks throughout the state.¹⁰ However, if higher temperatures are accompanied by wetter, rather than drier conditions, the rains would temporarily clear the air of particulate pollution and reduce the incidence of large wildfires, thus ameliorating the pollution associated with wildfires.

In 2009, the California Natural Resources Agency (CNRA) published the *California Climate Adaptation Strategy* as a response to the Governor's Executive Order S-13-2008.¹¹ The CNRA report lists specific recommendations for state and local agencies to best adapt to the anticipated risks posed by a changing climate. In accordance with the *California Climate Adaptation Strategy*, the California Energy Commission (CEC) was directed to develop a website on climate change scenarios and impacts that would be beneficial for local decision makers.¹² The website, known as Cal-Adapt, became operational in 2011.¹³ The information provided on the Cal-Adapt website represents a projection of potential future climate scenarios. The data are comprised of the average values (i.e., temperature, sea-level rise, snowpack) from a variety of scenarios and models and are meant to illustrate how the climate may change based on a variety of different potential social and economic factors. According to the Cal-Adapt website, the Project Site is located could result in an average increase in temperature of approximately 5.4 to 8.0°F by 2070–2099, compared to the baseline 1961–1990 period.

Water Supply. Uncertainty remains with respect to the overall impact of global climate change on future water supplies in California. Studies have found that, “[c]onsiderable uncertainty about precise impacts of climate change on California hydrology and water resources will remain until we have more precise and consistent information about how precipitation patterns, timing, and intensity will change.”¹⁴ For example, some studies identify little change in total annual precipitation in projections

for California while others show significantly more precipitation.¹⁵ Warmer, wetter winters would increase the amount of runoff available for groundwater recharge; however, this additional runoff would occur at a time when some basins are either being recharged at their maximum capacity or are already full. Conversely, reductions in spring runoff and higher evapotranspiration because of higher temperatures could reduce the amount of water available for recharge.¹⁶

The California Department of Water Resources report on climate change and effects on the State Water Project (SWP), the Central Valley Project, and the Sacramento-San Joaquin Delta, concludes that “climate change will likely have a significant effect on California’s future water resources...[and] future water demand.” It also reports that “much uncertainty about future water demand [remains], especially [for] those aspects of future demand that will be directly affected by climate change and warming. While climate change is expected to continue through at least the end of this century, the magnitude and, in some cases, the nature of future changes is uncertain.”¹⁷ It also reports that the relationship between climate change and its potential effect on water demand is not well understood, but “[i]t is unlikely that this level of uncertainty will diminish significantly in the foreseeable future.” Still, changes in water supply are expected to occur, and many regional studies have shown that large changes in the reliability of water yields from reservoirs could result from only small changes in inflows.¹⁸ In its *Fifth Assessment Report*, the IPCC states “Changes in the global water cycle in response to the warming over the 21st century will not be uniform. The contrast in precipitation between wet and dry regions and between wet and dry seasons will increase, although there may be regional exceptions.”¹⁹

Hydrology and Sea Level Rise. As discussed above, climate change could potentially affect: the amount of snowfall, rainfall and snow pack; the intensity and frequency of storms; flood hydrographs (flash floods, rain or snow events, coincidental high tide and high runoff events); sea level rise and coastal flooding; coastal erosion; and the potential for salt water intrusion. Sea level rise can be a product of global warming through two main processes: expansion of seawater as the oceans warm, and melting of ice over land. A rise in sea levels could result in coastal flooding and erosion and could jeopardize California’s water supply. Increased storm intensity and frequency could affect the ability of flood-control facilities, including levees, to handle storm events.

Agriculture. California has a \$30 billion agricultural industry that produces half the country’s fruits and vegetables. Higher CO₂ levels can stimulate plant production and increase plant water-use efficiency. However, if temperatures rise and drier conditions prevail, water demand could increase; crop-yield could be threatened by a less reliable water supply; and greater ozone pollution could render plants more susceptible to pest and disease outbreaks. In addition, temperature increases could change the time of year certain crops, such as wine grapes, bloom or ripen, and thus affect their quality.²⁰

Ecosystems and Wildlife. Increases in global temperatures and the potential resulting changes in weather patterns could have ecological effects on a global and local scale. Increasing concentrations of GHGs are likely to accelerate the rate of climate change. Scientists expect that the average global surface temperature could rise by 2-11.5°F (1.1-6.4°C) by 2100, with significant regional variation.²¹ Soil moisture is likely to decline in many regions, and intense rainstorms are likely to become more frequent. Sea level could rise as much as 2 feet along most of the United States coastline. Rising temperatures could have four major impacts on plants and animals: (1) timing of ecological events; (2) geographic range; (3) species’ composition within communities; and (4) ecosystem processes such as carbon cycling and storage.²²

Table 1
Description of Identified GHG Emissions^a

Greenhouse Gas	General Description
Carbon Dioxide (CO₂)	An odorless, colorless GHG, which has both natural and anthropogenic sources. Natural sources include the following: decomposition of dead organic matter; respiration of bacteria, plants, animals, and fungus; evaporation from oceans; and volcanic outgassing. Anthropogenic (human caused) sources of CO ₂ are burning coal, oil, natural gas, and wood.
Methane (CH₄)	A flammable gas and is the main component of natural gas. When one molecule of CH ₄ is burned in the presence of oxygen, one molecule of CO ₂ and two molecules of water are released. A natural source of CH ₄ is the anaerobic decay of organic matter. Geological deposits, known as natural gas fields, also contain CH ₄ , which is extracted for fuel. Other sources are from landfills, fermentation of manure, and cattle.
Nitrous Oxide (N₂O)	A colorless GHG. High concentrations can cause dizziness, euphoria, and sometimes slight hallucinations. N ₂ O is produced by microbial processes in soil and water, including those reactions which occur in fertilizer containing nitrogen. In addition to agricultural sources, some industrial processes (fossil

Description of Identified GHG Emissions^a

Greenhouse Gas	General Description
	fuel-fired power plants, nylon production, nitric acid production, and vehicle emissions) also contribute to its atmospheric load. It is used in rocket engines, racecars, and as an aerosol spray propellant.
Hydrofluorocarbons (HFCs)	Chlorofluorocarbons (CFCs) are gases formed synthetically by replacing all hydrogen atoms in CH ₄ or ethane (C ₂ H ₆) with chlorine and/or fluorine atoms. CFCs are non-toxic, non-flammable, insoluble, and chemically unreactive in the troposphere (the level of air at Earth's surface). CFCs were first synthesized in 1928 for use as refrigerants, aerosol propellants, and cleaning solvents. Because they destroy stratospheric ozone, the production of CFCs was stopped as required by the Montreal Protocol in 1987. HFCs are synthetic man-made chemicals that are used as a substitute for CFCs as refrigerants. HFCs deplete stratospheric ozone, but to a much lesser extent than CFCs.
Perfluorocarbons (PFCs)	PFCs have stable molecular structures and do not break down through the chemical processes in the lower atmosphere. High-energy ultraviolet rays about 60 kilometers above Earth's surface are able to destroy the compounds. PFCs have very long lifetimes, between 10,000 and 50,000 years. Two common PFCs are tetrafluoromethane and hexafluoroethane. The two main sources of PFCs are primary aluminum production and semi-conductor manufacturing.
Sulfur Hexafluoride (SF₆)	An inorganic, odorless, colorless, non-toxic, and non-flammable gas. SF ₆ is used for insulation in electric power transmission and distribution equipment, in the magnesium industry, in semi-conductor manufacturing, and as a tracer gas for leak detection.
Nitrogen Trifluoride (NF₃)	An inorganic, non-toxic, odorless, non-flammable gas. NF ₃ is used in the manufacture of semi-conductors, as an oxidizer of high-energy fuels, for the preparation of tetrafluorohydrazine, as an etchant gas in the electronic industry, and as a fluorine source in high power chemical lasers.
<i>GHG emissions identified in this table are ones identified in the Kyoto Protocol and other synthetic gases recently added to the IPCC's Fifth Assessment Report.</i>

Regulatory Framework

In response to growing scientific and political concern with global climate change, federal and state entities have adopted a series of laws to reduce emissions of GHG emissions to the atmosphere.

Federal Clean Air Act. The U.S. Supreme Court ruled in *Massachusetts v. Environmental Protection Agency*, 127 S.Ct. 1438 (2007), that CO₂ and other GHG emissions are pollutants under the federal Clean Air Act (CAA), which the USEPA must regulate if it determines they pose an endangerment to public health or welfare. The U.S. Supreme Court did not mandate that the USEPA enact regulations to reduce GHG emissions. Instead, the Court found that the USEPA could avoid taking action if it found that GHG emissions do not contribute to climate change or if it offered a “reasonable explanation” for not determining that GHG emissions contribute to climate change.

On April 17, 2009, the USEPA issued a proposed finding that GHG emissions contribute to air pollution that may endanger public health or welfare. On April 24, 2009, the proposed rule was published in the Federal Register under Docket ID No. EPA-HQ-OAR-2009-0171. The USEPA stated that high atmospheric levels of GHG emissions “are the unambiguous result of human emissions and are very likely the cause of the observed increase in average temperatures and other climatic changes.” The USEPA further found that “atmospheric concentrations of greenhouse gases endanger public health and welfare within the meaning of Section 202 of the Clean Air Act.” The findings were signed by the USEPA Administrator on December 7, 2009. The final findings were published in the Federal Register on December 15, 2009. The final rule was effective on January 14, 2010.²³ While these findings alone do not impose any requirements on industry or other entities, this action is a prerequisite to regulatory actions by the USEPA, including, but not limited to, GHG emissions standards for light-duty vehicles.

On April 4, 2012, the USEPA published a proposed rule to establish, for the first time, a new source performance standard for GHG emissions. Under the proposed rule, new fossil fuel-fired electric generating units larger than 25 megawatts (MW) are required to limit emissions to 1,000 pounds of CO₂ per MW-hour (CO₂/MWh) on an average annual basis, subject to certain exceptions. Subsequently, on April 23, 2018, the USEPA issued a policy stating that CO₂ emissions from biomass-fired and other biogenic sources would be considered carbon neutral when used for energy production at stationary sources.

²³ USEPA, Endangerment and Cause or Contribute Findings for Greenhouse Gases Under Section 202(a) of the Clean Air Act, Final Rule.

On April 17, 2012, the USEPA issued emission rules for oil production and natural gas production and processing operations, which are required by the CAA under Title 40 of the Code of Federal Regulations, Parts 60 and 63. The final rules include the first federal air standards for natural gas wells that are hydraulically fractured, along with requirements for several other sources of pollution in the oil and gas industry that currently are not regulated at the federal level.²⁴

Corporate Average Fuel Economy (CAFE) Standards. In response to the *Massachusetts v. Environmental Protection Agency* ruling, the George W. Bush Administration issued Executive Order 13432 in 2007, directing the USEPA, the United States Department of Transportation (USDOT), and the United States Department of Energy (USDOE) to establish regulations that reduce GHG emissions from motor vehicles, non-road vehicles, and non-road engines by 2008. In 2009, the National Highway Traffic Safety Administration (NHTSA) issued a final rule regulating fuel efficiency for and GHG emissions from cars and light-duty trucks for model year 2011; in 2010, the USEPA and the NHTSA issued a final rule regulating cars and light-duty trucks for model years 2012–2016.

In 2010, President Obama issued a memorandum directing the USEPA, USDOT, USDOE, and NHTSA to establish additional standards regarding fuel efficiency and GHG emissions reduction, clean fuels, and advanced vehicle infrastructure. In response to this directive, the USEPA and NHTSA proposed stringent, coordinated federal GHG emissions and fuel economy standards for model years 2017–2025 light-duty vehicles. The proposed standards are projected to achieve 163 grams/mile of CO₂ in model year 2025, on an average industry fleet-wide basis, which is equivalent to 54.5 miles per gallon (mpg) if the standards were achieved solely through fuel efficiency. The final rule was adopted in 2012 for model years 2017–2021. In March 2020, NHTSA and USEPA adopted new less stringent standards covering model years 2021 through 2026.

In addition to the regulations applicable to cars and light-duty trucks described above, in 2011 the USEPA and the NHTSA announced fuel economy and GHG standards for medium- and heavy-duty trucks for model years 2014–2018. The standards for CO₂ emissions and fuel consumption are tailored to three main vehicle categories: combination tractors, heavy-duty pickup trucks and vans, and vocational vehicles. According to the USEPA, this regulatory program would reduce GHG emissions and fuel consumption for the affected vehicles by 6 to 23 percent over the 2010 baselines.²⁵

Building on the success of the first phase of standards, in August 2016, the USEPA and the NHTSA finalized Phase 2 standards for medium and heavy-duty vehicles through model year 2027 that will improve fuel efficiency and cut carbon pollution. The Phase 2 standards were to lower CO₂ emissions

²⁴ USEPA, 2012 Final Rules for Oil and Natural Gas Industry, April 17, 2012, <https://www.epa.gov/controlling-air-pollution-oil-and-natural-gas-industry/2012-final-rules-oil-and-natural-gas-industry>, accessed April 2020.

²⁵ The emission reductions attributable to the regulations for medium- and heavy-duty trucks were not included in the Project's emissions inventory due to the difficulty in quantifying the reductions. Excluding these reductions results in a more conservative (i.e., higher) estimate of emissions for the Project.

by approximately 1.1 billion metric tons and save vehicle owners fuel costs of about \$170 billion.²⁶ On August 10, 2021, NHTA proposed new CAFE standards for 2024-2026 that would increase the stringency of standards by 8 percent per year rather than the previous 1.5 percent.

On September 19, 2019, the U.S. Department of Transportation's National Highway Traffic Safety Administration (NHTSA) and USEPA issued a final action entitled the "One National Program Rules" to enable the federal government to provide nationwide uniform fuel economy and greenhouse gas (GHG) emission standards for automobile and light duty trucks. This action finalizes the Safe Affordable Fuel Efficient (SAFE) Vehicles Rule and clarifies that federal law preempts state and local tailpipe GHG emissions standards as well as zero emission vehicle (ZEV) mandates. The SAFE Vehicle Rule also withdraws the CAA waiver granted to the State of California that allowed the state to enforce its own Low Emission Vehicle program.²⁷ On March 31, 2020, Part II of the SAFE Vehicles was issued and sets carbon dioxide emissions and CAFE standards for passenger vehicles and light duty trucks, covering model years 2021-2026.²⁸ On December 21, 2021, NHTA repealed the SAFE I Rule.

Energy Independence and Security Act. The Energy Independence and Security Act of 2007 (EISA) facilitates the reduction of national GHG emissions by requiring the following:

- Increasing the supply of alternative fuel sources by setting a mandatory Renewable Fuel Standard (RFS) that requires fuel producers to use at least 36 billion gallons of biofuel in 2022;
- Prescribing or revising standards affecting regional efficiency for heating and cooling products, procedures for new or amended standards, energy conservation, energy efficiency labeling for consumer electronic products, residential boiler efficiency, electric motor efficiency, and home appliances;
- Requiring approximately 25 percent greater efficiency for light bulbs by phasing out incandescent light bulbs between 2012 and 2014; requiring approximately 200 percent greater efficiency for light bulbs, or similar energy savings, by 2020; and
- While superseded by the USEPA and the NHTSA actions described above, (i) establishing miles per gallon targets for cars and light trucks, and (ii) directing the NHTSA to establish a

²⁸ U.S. Department of Transportation. 2020. *The Safer Affordable Fuel-Efficient (SAFE) Vehicles Rule for Model Years 2021-2026 Passenger Cars and Light Trucks*, https://www.nhtsa.gov/sites/nhtsa.dot.gov/files/documents/final_safe_preamble_web_version_200330.pdf.

fuel economy program for medium- and heavy-duty trucks and create a separate fuel economy standard for trucks.

Additional provisions of the EISA address energy savings in government and public institutions, promote research for alternative energy, additional research in carbon capture, international energy programs, and the creation of “green jobs.”²⁹

California Executive Order S-3-05. This Executive Order, issued by Governor Schwarzenegger in June 2005, established GHG emissions targets for the state, as well as a process to ensure the targets are met. The order directed the Secretary for the California Environmental Protection Agency (CalEPA) to report every two years on the state’s progress toward meeting the Governor’s GHG emission reduction targets. The statewide GHG emissions reduction targets are as follows:

- By 2010, reduce to 2000 emission levels;³⁰
- By 2020, reduce to 1990 emission levels;
- By 2030, reduce to 40 percent below 1990 levels; and
- By 2050, reduce to 80 percent below 1990 levels.

The State Legislature adopted equivalent 2020 and 2030 statewide targets in the California Global Warming Solutions Act of 2006 (also known as Assembly Bill [AB] 32) and Senate Bill 32, respectively, both of which are discussed below. However, the Legislature has not yet adopted a target for the 2050 horizon year.

As a result of Executive Order S-3-05, the California CAT, led by the Secretary of CalEPA, was formed. The CAT is made up of representatives from a number of state agencies and was formed to implement global warming emission reduction programs and to report on the progress made toward meeting statewide targets established under the Executive Order. The CAT reported several recommendations and strategies for reducing GHG emissions and reaching the targets established in the Executive Order.³¹ The CAT stated that smart land use is an umbrella term for strategies that integrate transportation and land-use decisions. Such strategies generally encourage jobs/housing proximity, promote transit-oriented development (TOD), and encourage high-density residential/commercial development along transit corridors. These strategies develop more efficient land-use patterns within each jurisdiction or region to match population increases, workforce, and socioeconomic needs for the full spectrum of the population. “Intelligent transportation systems” is

²⁹ A green job, as defined by the United States Department of Labor, is a job in business that produces goods or provides services that benefit the environment or conserve natural resources.

³⁰ The 2010 target to reduce GHG emissions to 2000 levels was not met. Source: Rubin, Thomas A., “Does California Really Need Major Land Use and Transportation Changes to Meet Greenhouse Gas Emissions Targets?,” July 3, 2013.

³¹ CalEPA, Climate Action Team Report to Governor Schwarzenegger and the Legislature, March 2006.

the application of advanced technology systems and management strategies to improve operational efficiency of transportation systems and the movement of people, goods, and service.³²

Executive Order B-30-15. Issued by Governor Brown in April 2015, established an additional statewide policy goal to reduce GHG emissions 40 percent below their 1990 levels by 2030. Reducing GHG emissions by 40 percent below 1990 levels in 2030 and by 80 percent below 1990 levels by 2050 (consistent with Executive Order S-3-05) aligns with scientifically established levels needed in the U.S. to limit global warming below 2 degrees Celsius.³³

Executive Order B-55-18. Issued by Governor Jerry Brown in September 2018, this establishes a statewide goal to achieve carbon neutrality as soon as possible, but no later than 2045, and achieve and maintain net negative emissions thereafter. Based on this executive order, CARB would work with relevant state agencies to develop a framework for implementation and accounting that tracks progress towards this goal, as well as ensuring future scoping plans identify and recommend measures to achieve the carbon neutrality goal.

California Assembly Bill 32 (California Global Warming Solutions Act of 2006) and Senate Bill 32. The California Global Warming Solutions Act of 2006 (also known as AB 32) commits the state to achieving the following:

- By 2010, reduce to 2000 GHG emission levels;³⁴ and
- By 2020, reduce to 1990 levels.

To achieve these goals, which are consistent with the California CAT GHG emissions reduction targets for 2010 and 2020, AB 32 mandates that the California Air Resources Board (CARB) establish a quantified emissions cap, institute a schedule to meet the cap, implement regulations to reduce statewide GHG emissions from stationary sources consistent with the CAT strategies, and develop tracking, reporting, and enforcement mechanisms to ensure that reductions are achieved. In order to achieve the reduction targets, AB 32 requires CARB to adopt rules and regulations in an open public process that achieve the maximum technologically feasible and cost-effective GHG emissions reductions.³⁵

³² CalEPA, Climate Action Team Report to Governor Schwarzenegger and the Legislature, March 2006, p. 58.

³³ California Air Resources Board, Frequently Asked Questions about Executive Order B-30-15, 2030 Carbon Target and Adaptation FAQs, April 29, 2015.

³⁴ The 2010 target to reduce GHG emissions to 2000 levels was not met. Source: Rubin, Thomas A., "Does California Really Need Major Land Use and Transportation Changes to Meet Greenhouse Gas Emissions Targets?", July 3, 2013.

³⁵ CARB's list of discrete early action measures that could be adopted and implemented before January 1, 2010, was approved on June 21, 2007. The three adopted discrete early action measures are: (1) a low- carbon fuel standard, which reduces carbon intensity in fuels statewide; (2) reduction of refrigerant losses from motor vehicle air conditioning system maintenance; and (3) increased methane capture from landfills, which includes requiring the use of state-of-the-art capture technologies.

Senate Bill (SB) 32, signed September 8, 2016, updates AB 32 (the Global Warming Solutions Act) to include an emissions reductions goal for 2030. Specifically, SB 32 requires the state board to ensure that statewide GHG emissions are reduced to 40 percent below the 1990 level by 2030. The new plan, outlined in SB 32, involves increasing renewable energy use, imposing tighter limits on the carbon content of gasoline and diesel fuel, putting more electric cars on the road, improving energy efficiency, and curbing emissions from key industries.

Climate Change Scoping Plan.

The Scoping Plan is a GHG emission reduction roadmap developed and updated by CARB at least once every five years, as required by AB 32. It lays out the transformations needed across various sectors to reduce GHG emissions and reach the State's climate targets. CARB published the Final 2022 Scoping Plan for Achieving Carbon Neutrality (2022 Scoping Plan Update) in November 2022, as the third update to the initial plan that was adopted in 2008. The initial 2008 Scoping Plan laid out a path to achieve the AB 32 target of returning to 1990 levels of GHG emissions by 2020, a reduction of approximately 15 percent below business as usual activities.³⁶ The 2008 Scoping Plan included a mix of incentives, regulations, and carbon pricing, laying out the portfolio approach to addressing climate change and clearly making the case for using multiple tools to meet California's GHG targets. The 2013 Scoping Plan Update (adopted in 2014) assessed progress toward achieving the 2020 target and made the case for addressing short-lived climate pollutants (SLCPs).³⁷ The 2022 Scoping Plan Update,³⁸ shifted focus to the newer Senate Bill (SB) 32 goal of a 40 percent reduction below 1990 levels by 2030 by laying out a detailed cost-effective and technologically feasible path to this target, and also assessed progress towards achieving the AB 32 goal of returning to 1990 GHG levels by 2020. The 2020 goal was ultimately reached in 2016, four years ahead of the schedule called for under AB 32.

The 2022 Scoping Plan Update is the most comprehensive and far-reaching Scoping Plan developed to date. It identifies a technologically feasible, cost-effective, and equity-focused path to achieve new targets for carbon neutrality by 2045 and to reduce anthropogenic GHG emissions to at least 85 percent below 1990 levels, while also assessing the progress California is making toward reducing its GHG emissions by at least 40 percent below 1990 levels by 2030, as called for in SB 32 and laid out in the 2022 Scoping Plan.³⁹ The 2030 target is an interim but important stepping stone along the critical path to the broader goal of deep decarbonization by 2045. The relatively longer path assessed in the 2022 Scoping Plan Update incorporates, coordinates, and leverages many existing and ongoing efforts to reduce GHGs and air pollution, while identifying new clean technologies and

energy. Given the focus on carbon neutrality, the 2022 Scoping Plan Update also includes discussion for the first time of the natural and working lands sectors as sources for both sequestration and carbon storage, and as sources of emissions as a result of wildfires. Table 3 summarizes the potential scenarios to reduce emissions through 2045.

Table 3
Estimated Statewide Greenhouse Gas Emissions Reductions in the 2022 Scoping Plan

Emissions Scenario	GHG Emissions (MMTCO _{2e})
2019	
2019 State GHG Emissions	404
2030	
2030 BAU Forecast	312
2030 GHG Emissions without Carbon Removal and Capture	233
2030 GHG Emissions with Carbon Removal and Capture	226
2030 Emissions Target Set by AB 32 (i.e., 1990 level by 2030)	260
Reduction below Business-As-Usual necessary to achieve 1990 levels by 2030	52 (16.7%) ^a
2045	
2045 BAU Forecast	266
2045 GHG Emissions without Carbon Removal and Capture	72
2045 GHG Emissions with Carbon Removal and Capture	(3)
<i>MMTCO_{2e} = million metric tons of carbon dioxide equivalents; parenthetical numbers represent negative values.</i>	
<i>^a 312 – 260 = 52. 52 / 312 = 16.7%</i>	
<i>Source: CARB, Final 2022 Climate Change Scoping Plan, November 2022.</i>	

The 2022 Scoping Plan Update reflects existing and recent direction in the Governor’s Executive Orders and State Statutes, which identify policies, strategies, and regulations in support of and implementation of the Scoping Plan. Among these include Executive Order B-55-18 and AB 1279 (The California Climate Crisis Act), which identify the 2045 carbon neutrality and GHG reduction targets required for the Scoping Plan. The 2022 Scoping Plan Scenario identifies the need to accelerate AB32’s 2030 target, from 40 percent to 48 percent below 1990 levels. Cap-and-Trade regulation continues to play a large factor in the reduction of near-term emissions for meeting the 2030 reduction target. Every sector of the economy will need to begin to transition in this decade to meet these GHG reduction goals and achieve carbon neutrality no later than 2045. The 2022 Scoping Plan Update approaches decarbonization from two perspectives, managing a phasedown of existing energy sources and technologies, as well as increasing, developing, and deploying alternative clean energy sources and technology.

Achieving the targets described in the 2022 Scoping Plan Update will require continued commitment to and successful implementation of existing policies and programs, and identification of new policy tools and technical solutions to go further, faster. California’s Legislature and state agencies will continue to collaborate to achieve the state’s climate, clean air, equity, and broader economic and environmental protection goals. It will be necessary to maintain and strengthen this collaborative effort, and to draw upon the assistance of the federal government, regional and local governments, tribes, communities, academic institutions, and the private sector to achieve the state’s near-term and longer-term emission reduction goals and a more equitable future for all Californians. The Scoping Plan acknowledges that the path forward is not dependent on one agency, one state, or even one country. However, the State can lead by engaging Californians and demonstrating how actions at the state, regional, and local levels of governments, as well as action at community and individual levels, can contribute to addressing the challenge.

Aligning local jurisdiction action with state-level priorities to tackle climate change and the outcomes called for in the 2022 Scoping Plan Update is identified as critical to achieving the statutory targets for 2030 and 2045. The 2022 Scoping Plan Update discusses the role of local governments in meeting the State’s GHG reductions goals. Local governments have the primary authority to plan, zone, approve, and permit how and where land is developed to accommodate population growth, economic growth, and the changing needs of their jurisdictions. They also make critical decisions on how and when to deploy transportation infrastructure, and can choose to support transit, walking, bicycling, and neighborhoods that do not force people into cars. Local governments also have the option to adopt building ordinances that exceed statewide building code requirements, and play a critical role in facilitating the rollout of ZEV infrastructure. As a result, local government decisions play a critical role in supporting state-level measures to contain the growth of GHG emissions associated with the transportation system and the built environment—the two largest GHG emissions sectors over which local governments have authority.

Assembly Bill 197. Assembly Bill (AB) 197, signed September 8, 2016, is a bill linked to SB 32 that prioritizes efforts to cut GHG emissions in low-income or minority communities. AB 197 requires CARB to make available, and update at least annually, on its Internet Web site the emissions of greenhouse gases, criteria pollutants, and toxic air contaminants for each facility that reports to CARB and air districts. In addition, AB 197 adds two Members of the Legislature to the CARB board as ex officio, non-voting members and also creates the Joint Legislative Committee on Climate Change Policies to ascertain facts and make recommendations to the Legislature and the houses of the Legislature concerning the state’s programs, policies, and investments related to climate change.

Cap-and-Trade Program. The original *Climate Change Scoping Plan* identified a cap-and-trade program as one of the strategies for California to reduce GHG emissions. Under cap-and-trade, an overall limit on GHG emissions from capped sectors is established, and facilities subject to the cap are able to trade permits to emit GHG emissions within the overall limit. According to CARB, a cap-and-

trade program will help put California on the path to meet its goal of reducing GHG emissions to 1990 levels by the year 2020.⁴⁰

CARB adopted a California Cap-and-Trade Program pursuant to its authority under AB 32 and the State Legislature extended the Program through 2030 with the adoption of Assembly Bill 398. The Cap-and-Trade Program is designed to reduce GHG emissions from major sources, such as refineries and power plants, (deemed “covered entities”). “Covered entities” subject to the Cap-and-Trade Program are sources that emit more than 25,000 metric tons CO₂e (MTCO₂e) per year. Triggering of the 25,000 MTCO₂e per year “inclusion threshold” is measured against a subset of emissions reported and verified under the California Regulation for the Mandatory Reporting of Greenhouse Gas Emissions (Mandatory Reporting Rule or MRR).

Under the Cap-and-Trade Program, CARB issues allowances equal to the total amount of allowable emissions over a given compliance period and distributes these to regulated entities. Covered entities are allocated free allowances in whole or in part (if eligible) and may buy allowances at auction, purchase allowances from others, or purchase offset credits. Each covered entity with a compliance obligation is required to surrender an allowance for each metric ton CO₂e of GHG they emit.

The Cap-and-Trade Program provides a firm cap, ensuring that the 2030 statewide emission limit will not be exceeded. An inherent feature of the Cap-and-Trade program is that it does not guarantee GHG emissions reductions in any discrete location or by any particular source. Rather, GHG emissions reductions are only guaranteed on a cumulative basis. As summarized by CARB in the First Update:

The Cap-and-Trade Regulation gives companies the flexibility to trade allowances with others or take steps to cost-effectively reduce emissions at their own facilities. Companies that emit more have to turn in more allowances or other compliance instruments. Companies that can cut their GHG emissions have to turn in fewer allowances. But as the cap declines, aggregate emissions must be reduced.

For example, a covered entity theoretically could increase its GHG emissions every year and still comply with the Cap-and-Trade Program if there is a commensurate reduction in GHG emissions from other covered entities. Such a focus on aggregate GHG emissions is considered appropriate because climate change is a global phenomenon, and the effects of GHG emissions are considered cumulative.

The Cap-and-Trade Program works with other direct regulatory measures and provides an economic incentive to reduce emissions. If California’s direct regulatory measures reduce GHG emissions more than expected, then the Cap-and-Trade Program will be responsible for relatively fewer emissions reductions. If California’s direct regulatory measures reduce GHG emissions less than expected, then

⁴⁰ With continuation of the Cap-and-Trade Program, the State can achieve a 40-percent reduction target by 2030.

the Cap-and-Trade Program will be responsible for relatively more emissions reductions. Thus, the Cap-and-Trade Program assures that California will meet its 2030 GHG emissions reduction mandate.

*The Cap-and-Trade Program establishes an overall limit on GHG emissions from most of the California economy—the “capped sectors.” Within the capped sectors, some of the reductions are being accomplished through direct regulations, such as improved building and appliance efficiency standards, the [Low Carbon Fuel Standard] LCFS, and the 33 percent [Renewables Portfolio Standard] RPS. Whatever additional reductions are needed to bring emissions within the cap is accomplished through price incentives posed by emissions allowance prices. Together, direct regulation and price incentives assure that emissions are brought down cost-effectively to the level of the overall cap. [...]*⁴¹

*[T]he Cap-and-Trade Regulation provides assurance that California’s 2020 limit will be met because the regulation sets a firm limit on 85 percent of California’s GHG emissions.*⁴²

Overall, the Cap-and-Trade Program will achieve aggregate, rather than site-specific or project-level, GHG emissions reductions. Also, due to the regulatory framework adopted by CARB in AB 32, the reductions attributed to the Cap-and-Trade Program can change over time depending on the state’s emissions forecasts and the effectiveness of direct regulatory measures. The Cap-and-Trade Program covered approximately 450 businesses responsible for about 85 percent of California’s GHG emissions.⁴³

The Cap-and-Trade Program covers the GHG emissions associated with electricity consumed in California, whether generated in-state or imported. Accordingly, GHG emissions associated with CEQA projects’ electricity usage are covered by the Cap-and-Trade Program. The Cap-and-Trade Program also covers fuel suppliers (natural gas and propane fuel providers and transportation fuel providers) to address emissions from such fuels and from combustion of other fossil fuels not directly covered at large sources in the Program’s first compliance period.⁴⁴ Furthermore, the Cap-and-Trade Program also covers the GHG emissions associated with the combustion of transportation fuels in California, whether refined in state or imported. The point of regulation for transportation fuels is when they are “supplied” (i.e., delivered into commerce). Accordingly, as with stationary source GHG emissions and GHG emissions attributable to electricity use, virtually all, if not all, of GHG emissions from CEQA projects associated with vehicle-miles traveled (VMT) are covered by the Cap-and-Trade Program.

California Renewables Portfolio Standard. The California RPS program (2002, SB 1078) required that 20 percent of the available energy supplies are from renewable energy sources by 2017. In 2006,

⁴¹ California Air Resources Board, First Update, May 2014, p. 88.

⁴² California Air Resources Board, First Update, May 2014, pp. 86–87.

⁴³ Center for Climate and Energy Solutions, California Cap-and-Trade, <https://www.c2es.org/content/california-cap-and-trade/>, accessed April 2020.

⁴⁴ While the Cap-and-Trade Program technically covered fuel suppliers as early as 2012, fuel suppliers did not have a compliance obligation (i.e., they were not fully regulated) until 2015.

SB 107 accelerated the 20 percent mandate to 2010. These mandates apply directly to investor-owned utilities. On April 12, 2011, California Governor Jerry Brown signed into law SB 2X, which modified California's RPS program to require that both public and investor-owned utilities in California receive at least 33 percent of their electricity from renewable sources by the year 2020. California SB 2X also requires regulated sellers of electricity to meet an interim milestone of procuring 25 percent of their energy supply from certified renewable resources by 2016. These levels of reduction are consistent with Southern California Edison's (SCE) commitment to achieve 35 percent renewables by 2020.

SCE indicates that 31 percent of its electricity came from renewable resources in Year 2018. Therefore, under SB 2X, SCE is required to increase its electricity from renewable resources by an additional two percent to comply with the RPS of 33 percent.⁴⁵

Senate Bill 350. Senate Bill (SB) 350, signed October 7, 2015, is the Clean Energy and Pollution Reduction Act of 2015. SB 350 is the implementation of some of the goals of Executive Order B-30-15. The objectives of SB 350 are: (1) to increase the procurement of electricity from renewable sources from 33 percent to 50 percent by December 31, 2030; and (2) to double the energy efficiency savings in electricity and natural gas final end uses of retail customers through energy efficiency and conservation.⁴⁶

Assembly Bill 398. AB 398 was enacted in 2017 to extend and clarify the role of the State's Cap-and-Trade Program from January 1, 2021, through December 31, 2030. As part of AB 398, refinements were made to the Cap-and-Trade program to establish updated protocols and allocation of proceeds to reduce GHG emissions.

Senate Bill 1368. Senate Bill (SB) 1368, signed September 29, 2006, is a companion bill to AB 32 that requires the CPUC and the CEC to establish GHG emission performance standards for the generation of electricity. These standards also generally apply to power that is generated outside of California and imported into the state. SB 1368 provides a mechanism for reducing the emissions of electricity providers, thereby assisting CARB to meet its mandate under AB32. On January 25, 2007, the CPUC adopted an interim GHG Emissions Performance Standard, which is a facility-based emissions standard requiring that all new long-term commitments for baseload generation to serve California consumers be with power plants that have GHG emissions no greater than a combined cycle gas turbine plant. That level is established at 1,100 pounds of CO₂ per MWh. Furthermore, on May 23, 2007, the CEC adopted regulations that establish and implement an identical Emissions Performance Standard of 1,100 pounds of CO₂ per MWh (see CEC Order No. 07-523-7).

⁴⁵ SCE, 2018 Power Content Label update, https://www.SCE.com/SCE/faces/SCE/aboutus/a-power/a-p-powercontentlabel;jsessionid=dJLKft5pp6lLZJlZtvTTIVVItXW1VPLLqnnKXLLSpkTGLbn6nh6n!56480797?_afLoop=49111251050871&_afWindowMode=0&_afWindowId=null#%40%3F_afWindowId%3Dnull%26_afLoop%3D49111251050871%26_afWindowMode%3D0%26_adf.ctrl-state%3Ddmbiw8w82_4.

⁴⁶ Senate Bill 350 (2015–2016 Reg, Session) Stats 2015, ch. 547.

Assembly Bill 1493 (Pavley I). Assembly Bill (AB) 1493, passed in 2002, requires the development and adoption of regulations to achieve “the maximum feasible reduction of greenhouse gases” emitted by noncommercial passenger vehicles, light-duty trucks, and other vehicles used primarily for personal transportation in the state. CARB originally approved regulations to reduce GHG emissions from passenger vehicles in September 2004, with the regulations to take effect in 2009. On September 24, 2009, CARB adopted amendments to these “Pavley” regulations that reduce GHG emissions in new passenger vehicles from 2009 through 2016.⁴⁷ Although setting emission standards on automobiles is solely the responsibility of the USEPA, the federal CAA allows California to set state-specific emission standards on automobiles if the state first obtains a waiver from the USEPA. The USEPA granted California that waiver on July 1, 2009. A comparison between the AB 1493 standards and the Federal CAFE standards was completed by CARB and the analysis determined that California emission standards are 16 percent more stringent through the 2016 model year and 18 percent more stringent for 2020 model year.⁴⁸ California is also committed to further strengthening these standards beginning with 2020 model year vehicles to obtain a 45-percent GHG reduction in comparison to the 2009 model year.

Executive Order S-1-07 (California Low Carbon Fuel Standard). Executive Order S-1-07, the LCFS (issued on January 18, 2007), requires a reduction of at least 10 percent in the carbon intensity of California’s transportation fuels by 2020. Regulatory proceedings and implementation of the LCFS were directed to CARB. The LCFS has been identified by CARB as a discrete early action item in the adopted Climate Change Scoping Plan. The LCFS program was re-adopted in 2015 and will continue to complement other AB 32 measures, transform and diversify the fuel pool, and is a key part of the State’s petroleum reduction goals for 2030.

Advanced Clean Cars Regulations. In 2012, CARB approved the Advanced Clean Cars (ACC) program, a new emissions-control program for model years 2015–2025.⁴⁹ The components of the Advance Clean Car program include the Low-Emission Vehicle (LEV) regulations that reduce criteria pollutants and GHG emissions from light- and medium-duty vehicles, and the Zero- Emission Vehicle (ZEV) regulation, which requires manufacturers to produce an increasing number of pure ZEVs (meaning battery electric and fuel cell electric vehicles), with provisions to also produce plug-in hybrid electric vehicles (PHEV) in the 2018 through 2025 model years.⁵⁰ In March 2017, CARB voted

⁴⁷ California Air Resources Board, Clean Car Standards—Pavley, Assembly Bill 1493, www.arb.ca.gov/cc/ccms/ccms.htm, accessed April 2020.

⁴⁸ California Air Resources Board, “Comparison of Greenhouse Gas Reductions for all Fifty United States under CAFE Standards and ARB Regulations Adopted Pursuant to AB 1493”, January 23, 2008.

⁴⁹ California Air Resources Board, California’s Advanced Clean Cars Program, www.arb.ca.gov/msprog/acc/acc.htm, accessed April 2020.

⁵⁰ Ibid.

unanimously to continue with the vehicle greenhouse gas emission standards and the ZEV program for cars and light trucks sold in California through 2025.⁵¹

In addition, Governor Gavin Newsom signed an executive order (Executive Order No. N-79-20) on September 23, 2020, that would phase out sales of new gas-powered passenger cars by 2035 in California with an additional 10-year transition period for heavy vehicles. The state would not restrict used car sales, nor forbid residents from owning gas-powered vehicles. In accordance with the Executive Order, CARB is developing a 2020 Mobile Source Strategy, a comprehensive analysis that presents scenarios for possible strategies to reduce the carbon, toxic and unhealthy pollution from cars, trucks, equipment, and ships. The strategies will provide important information for numerous regulations and incentive programs going forward by conveying what is necessary to address the aggressive emission reduction requirements.

The primary mechanism for achieving the ZEV target for passenger cars and light trucks is CARB's Advanced Clean Cars II (ACC II) Program. The ACC II regulations will focus on post-2025 model year light-duty vehicles, as requirements are already in place for new vehicles through the 2025 model year. A rulemaking package was approved by CARB in August 2022 and rule implementation is pending.

Senate Bill 375. Acknowledging the relationship between land use planning and transportation sector GHG emissions, Senate Bill (SB) 375 was passed by the State Assembly on August 25, 2008 and signed by the Governor on September 30, 2008. This legislation links regional planning for housing and transportation with the GHG reduction goals outlined in AB 32. Reductions in GHG emissions would be achieved by, for example, locating employment opportunities close to transit. Under SB 375, each Metropolitan Planning Organization (MPO) would be required to adopt a Sustainable Community Strategy (SCS) to encourage compact development that reduce passenger VMT and trips so that the region will meet a target, created by CARB, for reducing GHG emissions. If the SCS is unable to achieve the regional GHG emissions reduction targets, then the MPO is required to prepare an alternative planning strategy that shows how the GHG emissions reduction target could be achieved through alternative development patterns, infrastructure, and/or transportation measures.

Assembly Bill 1279. This 2022 legislation creates a legally binding goal that California achieve carbon neutrality by 2045. It would also require the State to reduce GHG emissions by 85 percent below 1990 levels by 2045.

California Appliance Efficiency Regulations (Title 20, Sections 1601 through 1608). The 2014 Appliance Efficiency Regulations, adopted by the CEC, include standards for new appliances (e.g., refrigerators) and lighting, if they are sold or offered for sale in California. These standards include

⁵¹ California Air Resources Board, News Release: ZEV Regulation Fact Sheet https://ww2.arb.ca.gov/sites/default/files/2019-06/zev_regulation_factsheet_082418_0.pdf, accessed October 2020.

minimum levels of operating efficiency, and other cost-effective measures, to promote the use of energy- and water-efficient appliances.

California Building Energy Efficiency Standards (Title 24, Part 6). California’s Energy Efficiency Standards for Residential and Nonresidential Buildings, located at Title 24, Part 6 of the California Code of Regulations and commonly referred to as “Title 24,” were established in 1978 in response to a legislative mandate to reduce California’s energy consumption. Title 24 requires the design of building shells and building components to conserve energy. The standards are updated periodically to allow consideration and possible incorporation of new energy efficiency technologies and methods.⁵² The CEC adopted the 2016 Title 24 standards, which became effective on January 1, 2017.⁵³ The 2019 standards continue to improve upon the 2013 Title 24 standards for new construction of, and additions and alterations to, residential and non-residential buildings and became effective January 1, 2020.⁵⁴ Compliance with Title 24 is enforced through the building permit process.

California Green Building Standards (CALGreen Code). The California Green Building Standards Code (California Code of Regulations, Title 24, Part 11), commonly referred to as the CALGreen Code, went into effect on January 1, 2017. CALGreen promotes additional energy efficiency measures targeting energy source that complement Title 24 standards. For new multi-family dwelling units, the residential mandatory measures were revised to provide additional electric vehicle charging space requirements, including quantity, location, size, single EV space, multiple EV spaces, and identification.⁵⁵ For nonresidential mandatory measures, the table (Table 5.106.5.3.3) identifying the number of required EV charging spaces has been revised in its entirety.⁵⁶ Compliance with Title 24 is enforced through the building permit process. The 2019 CalGreen code updates were published July 1, 2019 with an effective date of January 1, 2020. The 2022 updates will take effect January 1, 2023.

Senate Bill 97. SB 97, passed in August 2007, is designed to work in conjunction with CEQA and AB 32. SB 97 requires the Office of Planning and Rules (OPR) to prepare and develop guidelines for the mitigation of GHG emissions or the effects thereof, including, but not limited to, the effects associated with transportation and energy consumption. The Draft Guidelines Amendments for Greenhouse Gas Emissions (Guidelines Amendments) were adopted on December 30, 2009 and address the specific

⁵² California Energy Commission, 2019 Building Energy Efficiency Standards, <https://www.energy.ca.gov/programs-and-topics/programs/building-energy-efficiency-standards/2019-building-energy-efficiency>, accessed April 2020 **Error! Hyperlink reference not valid.**

⁵³ Ibid.

⁵⁴ Ibid.

⁵⁵ California Building Standards Commission, 2016 California Green Building Standards Code, California Code of Regulations, Title 24, Part 11, Chapter 4—Residential Mandatory Measures, effective January 1, 2017.

⁵⁶ California Building Standards Commission, 2016 California Green Building Standards Code, California Code of Regulations, Title 24, Part 11, Chapter 5—Nonresidential Mandatory Measures, effective January 1, 2017.

obligations of public agencies when analyzing GHG emissions under CEQA to determine a project's effects on the environment.

However, neither a threshold of significance nor any specific mitigation measures are included or provided in the Guidelines Amendments.⁵⁷ The Guidelines Amendments require a lead agency to make a good-faith effort, based on the extent possible on scientific and factual data, to describe, calculate, or estimate the amount of GHG emissions resulting from a project. The Guidelines Amendments give discretion to the lead agency whether to: (1) use a model or methodology to quantify GHG emissions resulting from a project, and which model or methodology to use; or (2) rely on a qualitative analysis or performance-based standards. Furthermore, the Guidelines Amendments identify the following three factors that should be considered in the evaluation of the significance of GHG emissions:

1. The extent to which a project may increase or reduce GHG emissions as compared to the existing environmental setting;
2. Whether the project emissions exceed a threshold of significance that the lead agency determines applies to the project; and
3. The extent to which the project complies with regulations or requirements adopted to implement a statewide, regional, or local plan for the reduction or mitigation of GHG emissions.⁵⁸

The administrative record for the Guidelines Amendments also clarifies “that the effects of greenhouse gas emissions are cumulative and should be analyzed in the context of CEQA’s requirements for cumulative impact analysis.”⁵⁹

In December 2018, the Governor’s Office of Planning and Research (OPR) released a CEQA and Climate Change Advisory (Discussion Draft) updates the 2009 guidance for project-level analyses. It reaffirms the discretion that lead agencies have in establishing an appropriate methodology and determining significance.

Senate Bill 743. This 2013 legislation updates the way transportation impacts are measured in California, focusing on vehicle miles traveled (VMT) rather than level of service as the main measure of transportation impacts. It calls on decisionmakers throughout the State to focus on reducing overall VMT and the GHG emissions from such vehicle activity. Traffic studies in the County of Los Angeles began formally analyzing projects in this fashion effective July 1, 2020.

⁵⁷ See 14 Cal. Code Regs. §§ 15064.7 (generally giving discretion to lead agencies to develop and publish thresholds of significance for use in the determination of the significance of environmental effects), 15064.4 (giving discretion to lead agencies to determine the significance of impacts from GHG emissions).

⁵⁸ 14 Cal. Code Regs. § 15064.4(b).

⁵⁹ Letter from Cynthia Bryant, Director of the Governor’s Office of Planning and Research to Mike Chrisman, California Secretary for Natural Resources, dated April 13, 2009.

South Coast Air Quality Management District. The South Coast Air Quality Management District (SCAQMD) adopted a “Policy on Global Warming and Stratospheric Ozone Depletion” on April 6, 1990. The policy commits the SCAQMD to consider global impacts in rulemaking and in drafting revisions to the Air Quality Management Plan. In March 1992, the SCAQMD Governing Board reaffirmed this policy and adopted amendments to the policy to include the following directives:

- Phase out the use and corresponding emissions of chlorofluorocarbons, methyl chloroform (1,1,1-trichloroethane or TCA), carbon tetrachloride, and halons by December 1995;
- Phase out the large quantity use and corresponding emissions of hydrochlorofluorocarbons by the year 2000;
- Develop recycling regulations for hydrochlorofluorocarbons (e.g., SCAQMD Rules 1411 and 1415);
- Develop an emissions inventory and control strategy for methyl bromide; and
- Support the adoption of a California GHG emission reduction goal.

Southern California Association of Governments. To implement SB 375 and reduce GHG emissions by correlating land use and transportation planning, SCAG adopted the 2020-2045 RTP/SCS on September 3, 2020, calling for \$639 billion in transportation investments and reducing VMT by 19 percent per capita from 2005 to 2035. The updated plan accommodates 21.3 percent growth in population from 2016 (3,933,800) to 2045 (4,771,300) and a 15.6 percent growth in jobs from 2016 (1,848,300) to 2045 (2,135,900). The updated RTP/SCS calls for a number of land use-based strategies to accommodate growth, minimize criteria pollutant emissions, and achieve climate change objectives:

- Decreasing drive-along work commutes by three percent
- Reducing per capita VMT by five percent and vehicle hours traveled per capita by nine percent
- Increasing transit commuting by two percent
- Reducing travel delay per capita by 26 percent
- Creating 264,500 new jobs annually
- Reducing greenfield development by 29 percent by focusing on smart growth
- Locating six more percent household growth in High Quality Transit Areas (HQTAs), which concentrate roadway repair investments, leverage transit and active transportation investments, reduce regional life cycle infrastructure costs, improve accessibility, create local jobs, and have the potential to improve public health and housing affordability.
- Locating 15 percent more jobs in HQTAs

The 2020-2045 RTP/SCS calls for a 19 percent reduction in per capita GHG emissions by 2035 from 2005 levels. This is intended to be consistent with CARB’s performance targets during this same period. The bulk of these reductions are to come from transportation investments, pricing strategies, TDM strategies, and land use programs. On October 30, 2020, CARB accepted the RTP/SCS quantification

of GHG emissions on October 30, 2020 (Executive Order G-20-239, SCAG 2020 SCS ARB Acceptance of GHG Quantification Determination).

County of Los Angeles General Plan 2035 Air Quality Element. As part of its General Plan 2035, the Air Quality Element sets forth goals and policies to address global climate change. Policies listed under the Air Quality, Climate Change, Energy Conservation, and Green Building Practices in the County's General Plan Air Quality Element include the following goal and policy applicable to the proposed project:

GOAL AQ 3: Implementation of plans and programs to address the impacts of climate change.

Policy AQ 3.1: Facilitate the implementation and maintenance of the Community Climate Action Plan to ensure that the County reaches its climate change and greenhouse gas emission reduction goals.

The County is preparing a 2045 Climate Action Plan (CAP) to address greenhouse gases, it is also updating its Air Quality Element. In 2020, the County released a Discussion Draft of the CAP; however, it substantially broadened the analysis and scope of the CAP based on public input and recent legislation calling for climate neutral policies and programs. While new policies are proposed that would move the County toward carbon neutral objectives, new goals and policies have not been formally adopted as of October 2022.

County of Los Angeles Building Codes. The County of Los Angeles Building Code (Title 26), Green Building Standards Code (Title 31), and other appropriate codes⁶⁰⁶¹ govern standards for new development. These include energy efficiency and sustainability features that would be incorporated into new projects, including native plants and drip/subsurface irrigation systems, individual metering or sub metering for water use, leak detection systems, and electric vehicle charging capacity.

⁶⁰ County of Los Angeles Department of Public Works <https://dpw.lacounty.gov/building-and-safety/general>

⁶¹ California Building Codes: <http://www.bsc.ca.gov/Codes.aspx>.

Existing Conditions

Existing Statewide GHG Emissions. GHG emissions are the result of both natural and human-influenced activities. Regarding human-influenced activities, motor vehicle travel, consumption of fossil fuels for power generation, industrial processes, heating and cooling, landfills, agriculture, and wildfires are the primary sources of GHG emissions. Without human intervention, Earth maintains an approximate balance between the emission of GHG emissions into the atmosphere and the storage of GHG emissions in oceans and terrestrial ecosystems. Events and activities, such as the industrial revolution and the increased combustion of fossil fuels (e.g., gasoline, diesel, coal), have contributed to the rapid increase in atmospheric levels of GHG emissions over the last 150 years.

As reported by the CEC, California contributes approximately one percent of global and 8.2 percent of national GHG emissions.⁶² California represents approximately 12 percent of the national population. Approximately 80 percent of GHGs in California are CO₂ produced from fossil fuel combustion. The current California GHG inventory compiles statewide anthropogenic GHG emissions and carbon sinks/storage from years 2000 through 2019.⁶³ It includes estimates for CO₂, CH₄, N₂O, HFCs, PFCs, and SF₆. The GHG inventory for California for years 2010 through 2019 is presented in Table 4. As shown therein, the GHG inventory for California in 2019 was 418.2 million MTCO₂e.

Table 4
California GHG Inventory

⁶³ A carbon inventory identifies and quantifies sources and sinks of greenhouse gases. Sinks are defined as a natural or artificial reservoir that accumulates and stores some carbon-containing chemical compound for an indefinite period.

mitigating GHG emissions.⁶⁵ This evaluation is the sole basis pursuant to CEQA for determining the significance of a project's GHG-related impacts on the environment.

The analysis also calculates the amount of GHG emissions from the Project using recommended air quality models. The primary purpose of quantifying the Project's GHG emissions is to satisfy CEQA Guidelines Section 15064.4(a). The estimated emissions inventory is also used to determine if there would be a reduction in the Project's incremental contribution of GHG emissions as a result of compliance with regulations requirements adopted to implement plans for reducing or mitigating GHG emissions. However, the significance of the Project's GHG emissions is not based on the amount of emissions from the Project.

Consistency with Applicable Plans and Policies

A consistency analysis has been provided that describes the Project's conflict with applicable plans and policies adopted for the purpose of reducing GHG emissions, included in the applicable portions of CARB's *Climate Change Scoping Plan* and the 2020-2045 RTP/SCS. In addition, this analysis assesses the Project's consistency with the General Plan 2035 Air Quality Element for informational purposes.

OPR encourages lead agencies to make use of programmatic mitigation plans and programs from which to tier when they perform project analyses. Statewide, the Climate Change Scoping Plan provides measures to achieve AB 32 and SB 32 targets. On a regional level, SCAG's 2020-2045 RTP/SCS contains measures to achieve VMT reduction required by SB 375. The County does not have a programmatic mitigation plan from which to tier from.

As noted in CEQA Guidelines Section 15064.4(b)(3), consistency with such plans and policies "must reduce or mitigate the project's incremental contribution of greenhouse gas emissions." To demonstrate such incremental reductions, this chapter estimates reductions of project-related GHG emissions resulting from consistency with plans. Consistent with evolving scientific knowledge, approaches to GHG quantification may continue to evolve in the future.

A consistency analysis is provided below that describes the Project's consistency with performance-based standards in the applicable parts of CARB's *Climate Change Scoping Plan*, SCAG's 2020-2045 RTP/SCS, and the General Plan 2035 Air Quality Element.

Quantification of Emissions

This analysis quantifies the Project's GHG emissions for information purposes, taking into account the GHG reduction features that would be incorporated into the Project's design. It relies on the California Emissions Estimator Model® (CalEEMod) is a statewide land use emissions computer model designed to provide a uniform platform for government agencies, land use planners, and environmental

⁶⁵ CEQA Guidelines, Section 14 CCR 15064.4.

professionals to quantify potential criteria pollutant and GHG emissions associated with both construction and operations from a variety of land use projects. CalEEMod was developed in collaboration with the air districts of California, who provided data (e.g., emission factors, trip lengths, meteorology, source inventory) to account for local requirements and conditions. The model is considered by SCAQMD to be an accurate and comprehensive tool for quantifying air quality and GHG impacts from land use projects throughout California.⁶⁶

This analysis quantifies the Project's emissions and compares them to a Project without Reduction Features scenario, as defined by CARB's most updated projections for AB 32 and SB 32. This comparison is included for informational purposes to disclose the relative carbon efficiency of the Project and to determine if there would be a reduction in the Project's incremental contribution of GHG emissions based on compliance with regulations and requirements adopted to implement plans for reducing GHG emissions. The Project Without Reduction Features scenario does not consider site-specific conditions, Project design features, or prescribed mitigation measures. This approach is consistent with the concepts used in the CARB's *Climate Change Scoping Plan* for the implementation of AB 32. This methodology is used to analyze consistency with applicable GHG reduction plans and policies and demonstrate the efficacy of the measures contained therein, but it is not a threshold of significance. The Project Without Reduction Features scenario is similar to the approach currently used by the County with respect to evaluating a proposed development project's consistency with CARB's Scoping Plans. Currently, the County evaluates the proposed project under two scenarios—one scenario without GHG reduction measures (akin to the Project Without Reduction Features scenario) and a second scenario with GHG reduction measures.

The Project without Reduction Features scenario also does not account for energy efficiency measures that would go beyond Title 24 building standards or trip reductions from the co-location of uses and availability of public transit. However, the Project without Reduction Features does take into account regulatory measures included in CARB's *Climate Change Scoping Plan*, SCAG's 2020-2045 RTP/SCS, and the General Plan 2035 Air Quality Element. However, as predicted by the 2022 Scoping Plan and other studies, additional regulatory programs have been developed since the adoption of SB 32 and the 2022 Scoping Plan. These include a 20 percent reduction in GHG emissions attributable to energy sources due to compliance with Title 24 Energy Conservation Measures and a 20 percent reduction in GHG emissions attributable to water sources due to compliance with advanced water consumption standards.

Project GHG Emissions

The California Climate Action Registry (Climate Registry) General Reporting Protocol provides basic procedures and guidelines for calculating and reporting GHG emissions from a number of general and

⁶⁶ California Air Pollution Control Officers Association, California Emissions Estimator Model, CalEEMod™, www.caleemod.com, accessed May 25, 2016.

industry-specific activities.⁶⁷ The General Reporting Protocol is based on the “Greenhouse Gas Protocol: A Corporate Accounting and Reporting Standard” developed by the World Business Council for Sustainable Development and the World Resources Institute through “a multi-stakeholder effort to develop a standardized approach to the voluntary reporting of GHG emissions.”⁶⁸ Although no numerical thresholds of significance have been developed, and no specific protocols are available for land use projects, the General Reporting Protocol provides a basic framework for calculating and reporting GHG emissions from the project. The information provided in this section is consistent with the General Reporting Protocol’s reporting requirements.

The General Reporting Protocol recommends the separation of GHG emissions into three categories that reflect different aspects of ownership or control over emissions. They include the following:

- Scope 1: Direct, onsite combustion of fossil fuels (e.g., natural gas, propane, gasoline, and diesel).
- Scope 2: Indirect, offsite emissions associated with purchased electricity or purchased steam.
- Scope 3: Indirect emissions associated with other emissions sources, such as third-party vehicles and embodied energy (e.g., energy used to convey, treat, and distribute water and wastewater).⁶⁹

The General Reporting Protocol provides a range of basic calculations methods. However, the General Reporting Protocol calculations are typically designed for existing buildings or facilities. These retrospective calculation methods are not directly applicable to planning and development situations where buildings do not yet exist.

CARB recommends consideration of indirect emissions to provide a more complete picture of the GHG emissions footprint of a facility. Annually reported indirect energy usage aids the conservation awareness of a facility and provides information to CARB to be considered for future strategies.⁷⁰ For example, CARB has proposed requiring the calculation of direct and indirect GHG emissions as part of the AB 32 reporting requirements. Additionally, OPR has noted that lead agencies “should make a good-faith effort, based on available information, to calculate, model, or estimate... GHG emissions from a project, including the emissions associated with vehicular traffic, energy consumption, water usage and construction activities.”⁷¹ Therefore, direct and indirect emissions have been calculated for the Project.

⁶⁷ California Climate Action Registry, General Reporting Protocol Version 3.1, January 2009.

⁶⁸ Ibid.

⁶⁹ Embodied energy is a scientific term that refers to the quantity of energy required to manufacture and supply to the point of use a product, material, or service.

⁷⁰ California Air Resources Board, Initial Statement of Reasons for Rulemaking, Proposed Regulation for Mandatory Reporting of Greenhouse Gas Emissions Pursuant to the California Global Warming Solutions Act of 2006 (AB 32), Planning and Technical Support Division Emission Inventory Branch, October 19, 2007.

⁷¹ OPR Technical Advisory, p. 5.

A fundamental difficulty in the analysis of GHG emissions is the global nature of the existing and cumulative future conditions. Changes in GHG emissions can be difficult to attribute to a particular planning program or project because the planning effort or project may cause a shift in the locale for some type of GHG emissions, rather than causing “new” GHG emissions. As a result, there is an inability to conclude whether a project’s GHG emissions represent a net global increase, reduction, or no change in GHG emissions that would exist if the project were not implemented. The analysis of the Project’s GHG emissions is particularly conservative in that it assumes all of the GHG emissions are new additions to the atmosphere.

The California Emissions Estimator Model® (CalEEMod) is a statewide land use emissions computer model designed to provide a uniform platform for government agencies, land use planners, and environmental professionals to quantify potential criteria pollutant and GHG emissions associated with both construction and operations from a variety of land use projects. CalEEMod was developed in collaboration with the air districts of California, who provided data (e.g., emission factors, trip lengths, meteorology, source inventory) to account for local requirements and conditions. The model is considered by SCAQMD to be an accurate and comprehensive tool for quantifying air quality and GHG impacts from land use projects throughout California.⁷²

Construction

The Project’s construction emissions were calculated using CalEEMod Version 2022.1.1.18.1.18. Details of the modeling assumptions and emission factors are provided in the Technical Appendix. CalEEMod calculates emissions from off-road equipment usage and on-road vehicle travel associated with haul, delivery, and construction worker trips. GHG emissions during construction were forecast based on the proposed construction schedule and included the mobile- source and fugitive dust emissions factors derived from CalEEMod.

The calculations of the emissions generated during Project construction activities reflect the types and quantities of construction equipment that would be used to remove existing pavement, grade, and excavate the Project Site; construct the proposed building and related improvements; and plant new landscaping within the Project Site.

In accordance with SCAQMD’s guidance, GHG emissions from construction were amortized (i.e., averaged annually) over the lifetime of the Project. Because emissions from construction activities occur over a relatively short-term period of time, they contribute a relatively small portion of the overall lifetime GHG emissions for the Project. In addition, GHG emissions reduction measures for construction equipment are relatively limited. Thus, SCAQMD recommends that construction emissions be amortized over a 30-year project lifetime, so that GHG emissions reduction measures will address construction GHG emissions as part of the operational GHG reduction strategies.⁷³ As a result, the Project’s total

⁷² California Air Pollution Control Officers Association, California Emissions Estimator Model, CalEEMod™, www.caleemod.com, accessed May 25, 2016.

⁷³ SCAQMD Governing Board Agenda Item 31, December 5, 2008.

construction GHG emissions were divided by 30 to determine an approximate annual construction emissions estimate comparable to operational emissions.

Operation

Similar to construction, CalEEMod is used to calculate GHG emissions generated by new land uses on the Project Site, including area sources, electricity, natural gas, mobile sources, stationary sources (i.e., emergency generators), solid waste generation and disposal, and water usage/wastewater generation.

Area source emissions include landscaping equipment that are based on the size of the land uses (e.g., square footage or dwelling unit), the GHG emission factors for fuel combustion, and the global warming potential (GWP) values for the GHG emissions emitted.

GHG emissions associated with electricity demand are based on the size of the land uses, the electrical demand factors for the land uses, the GHG emission factors for the electricity utility provider, and the GWP values for the GHG emissions emitted. As with electricity, the emissions of GHG emissions associated with natural gas combustion are based on the size of the land uses, the natural gas combustion factors for the land uses in units of million British thermal units (MMBtu), the GHG emission factors for natural gas combustion, and the GWP values for the GHG emissions emitted.

Mobile source GHG emissions are calculated based on an estimate of the Project's annual vehicle tripmaking and vehicle miles traveled, which is derived using CalEEMod based on the trip generation table prepared for the Project. The CalEEMod-derived VMT values account for the daily and seasonal variations in trip frequency and length associated with new employee and visitor trips to and from the Project Site and other activities that generate a vehicle trip.

GHG emissions associated with solid waste disposal are based on the size of the Project's proposed land uses, the waste disposal rate for the land uses, the waste diversion rate, the GHG emission factors for solid waste decomposition, and the GWP values for the GHG emissions emitted.

GHG emissions related to water usage and wastewater generation are based on the size of the land uses, the water demand factors, the electrical intensity factors for water supply, treatment, and distribution, electrical intensity factors for wastewater treatment, the GHG emission factors for the electricity utility provider, and the GWP values for the GHG emissions emitted.

The analysis of Project GHG emissions at buildout uses assumptions in CARB's EMFAC2021 model (1.0.1) and also takes into account actions and mandates expected to be in force in 2024 (e.g., Pavley I Standards, full implementation of California's 33 percent RPS by 2030 and 50 percent by 2050 and the California LCFS). In addition, because mobile source GHG emissions are directly dependent on the number of vehicle trips, a decrease in the number of project-generated trips as a result of project features (e.g., close proximity to transit) would provide a proportional reduction in mobile source GHG emissions compared to a generic project without such locational benefits. Calculation of Project GHG emissions conservatively did not include actions and mandates that are not already in place but are expected to be enforced in 2024 (e.g., Pavley II, which could further reduce GHG emissions from use of light-duty vehicles by 2.5 percent). Similarly, emissions reductions regarding Cap-and-Trade were not included in this analysis as they applied to other future reductions in non-transportation sectors. The analysis utilizes

CARB's assumptions in EMFAC2021 for any short-term reductions in GHG emissions. By not speculating on potential regulatory conditions, the analysis takes a conservative approach that likely overestimates the Project's GHG emissions at buildout, because the state is expected to implement a number of policies and programs aimed at reducing GHG emissions from the land use and transportation sectors to meet the state's long-term climate goals.

There are no GHG emissions thresholds adopted by SCAQMD that are applicable to the Project. In 2008, SCAQMD released draft guidance regarding interim CEQA GHG significance thresholds.⁷⁴ Within its October 2008 document, the SCAQMD proposed the use of an emission reduction target to determine significance for commercial/residential projects that emit greater than 3,000 MTCO_{2e} per year. Under this proposal, such commercial and residential projects would have been assumed to have a less than significant impact on climate change. However, this proposal was not adopted by the SCAQMD.

Consistency with Applicable Plans and Policies

A consistency analysis has been provided that describes the Project's compliance with or exceedance of performance-based standards, and consistency with applicable plans and policies adopted for the purpose of reducing GHG emissions, including the *Climate Change Scoping Plan*, the 2020-2045 RTP/SCS, and the County's General Plan Air Quality Element.

As part of the *Climate Change Scoping Plan*, a statewide emissions inventory was developed as required by AB 32 which directs CARB to develop and track GHG emissions reductions to document progress towards state targets. The inventory also takes into account GHG emissions reduction measures developed by CARB to achieve state targets. Consistency with the *Climate Change Scoping Plan* is evaluated by comparing the Project's GHG reduction measures to those contained in the Scoping Plan. As noted in CEQA Guidelines Section 15064.4(b)(3), consistency with such plans and policies "must reduce or mitigate the project's incremental contribution of greenhouse gas emissions." To demonstrate such reductions, this chapter estimates reductions of project-related GHG emissions resulting from consistency with plans.

While there are many ways to quantify the efficiency of GHG reduction measures in the plans and policies, this analysis compares the Project's GHG emissions to those that would be generated by the Project in the absence of any GHG reduction measures (i.e., the Project Without Reduction Features scenario). This approach is consistent with the concepts used in CARB's 2017 Climate Change Scoping Plan. This methodology is used to analyze consistency with applicable GHG reduction plans and policies and demonstrate the efficacy of the measures contained therein, but it is not a threshold of significance.

The analysis in this section includes potential emissions under a Project Without Reduction Features scenarios and from the Project at build-out based on actions and mandates expected to be in force in 2024. Early-action measures identified in the Climate Change Scoping Plan that have not been approved

were not credited in this analysis. By not speculating on potential regulatory conditions, the analysis takes a conservative approach that likely overestimates the Project's GHG emissions at build-out. The Project Without Reduction Features scenario is used to establish a comparison with project-generated GHG emissions. The Project Without Reduction Features scenario does not consider site-specific conditions, project design features, or prescribed mitigation measures.

Thresholds of Significance

State CEQA Guidelines Appendix G

In accordance with Appendix G of the State CEQA Guidelines (Appendix G), a project would have a significant impact related to GHG emissions if the project would do the following:

- a) **Generate GHG emissions, either directly or indirectly, that may have a significant impact on the environment;**
- b) **Conflict with any applicable plan, policy or regulation of an agency adopted for the purpose of reducing the emissions of GHG emissions.**

Project Impacts

Consistency with Applicable Plans and Policies

The discussion below describes how the Project complies with or exceeds the performance-based standards in the *Climate Change Scoping Plan* and the 2020-2045 RTP/SCS, each of which identifies GHG-reducing measures that directly and indirectly apply to the Proposed Project. This analysis also evaluates the Project's consistency with the County's General Plan 2035 Air Quality Element. As shown here, the Project would be consistent with the applicable GHG reduction plans and policies.

Statewide: Climate Change Scoping Plan

Table 5 evaluates the Project's consistency with applicable reduction actions/strategies by emissions source category outlined in the *2022 Climate Change Scoping Plan Update*. When compared to SB 32, the Proposed Project would be consistent with its objectives and the GHG reduction-related actions and strategies of the 2022 Scoping Plan. Table 6 confirms that the Proposed Project is consistent with the Scoping Plan's focus on increasing renewable energy use, imposing tighter limits on the carbon content of gasoline and diesel fuel, putting more electric cars on the road, improving energy efficiency, and curbing emissions from key industries. Although a number of these strategies are currently promulgated, some have not yet been formally proposed or adopted. It is expected that these measures or similar actions to reduce GHG emissions will be adopted as required to achieve statewide GHG emissions targets. Based on the following analysis, the Project would be consistent with the State's Climate Change Scoping Plan's objective of reducing 2030 GHG emissions in accord with SB 32. As such, impacts related to consistency with the Scoping Plan would be less than significant impact.

Table 6
Consistency Analysis—2022 Scoping Plan Update

Sector	Actions and Strategies	Statutes, Executive Orders, Other Direction	Project Consistency Analysis
Smart Growth / Vehicle Miles Traveled (VMT)	VMT per capita reduced 25% below 2019 levels by 2030, and 30% below 2019 levels by 2045	SB 375: Reduce demand for fossil transportation fuels and GHG	No Conflict. The Project represents an infill development within an urbanized area that would concentrate new elementary and middle schools within an HQTAs and reduce per capita VMT and GHG emissions. The Project would be consistent with SB 375 and its VMT reduction goals, as well as the GHG and transportation goals of the 2020-2045 RTP/SCS.
Light-duty Vehicle (LDV) Zero Emission Vehicles (ZEVs)	100% of Light Duty Vehicle sales are ZEV by 2035	EO N-79-20: Reduce demand for fossil transportation fuels and GHGs, and improve air quality. In November 2022, the Advanced Clean Cars II regulations took effect, setting ZEV and plug-in hybrid vehicle sales requirements for model years 2026 to 2035 (ZEV program) and increasingly stringent emission standards (LEV program) to ensure automakers phase out sales of internal combustion engine vehicles.	No Conflict. Emissions from vehicle engines from the Project would be regulated by State regulations governing technology and cleaner emissions.
Truck ZEVs	100% of medium-duty (MDV)/HDV sales are ZEV by 2040 (AB 74 University of California Institute of Transportation Studies [ITS] report)	EO N-79-20: Reduce demand for fossil transportation fuels and GHGs, and improve air quality. CARB's Advanced Clean Truck Regulation accelerates the transition of zero-emission medium- and heavy-duty vehicles from 2024 to 2035. CARB also adopted the Innovative Clean Transit measure in 2018 that requires all public transit agencies to transition to zero emission fleets.	No Conflict. While the Project would not generate substantial medium- and heavy-duty truck traffic, it would not impede the advancement of cleaner trucks over time.

Table 6
Consistency Analysis—2022 Scoping Plan Update

Sector	Actions and Strategies	Statutes, Executive Orders, Other Direction	Project Consistency Analysis
Aviation	20% of aviation fuel demand is met by electricity (batteries) or hydrogen (fuel cells) in 2045. Sustainable aviation fuel meets most or the rest of the aviation fuel demand that has not already transitioned to hydrogen or batteries.	CARB focuses on reducing emissions from ground support equipment and airport transit vehicles. It is also working with national and international entities to tighten aircraft emission standards. AB 197: direct emissions reductions for sources covered by the AB 32 Inventory	No Conflict. While the Project would not directly impact aviation industry, it would not impede the advancement of a cleaner aviation industry over time.
Ocean-going Vessels (OGVs)	2020 OGV At-Berth regulation fully implemented, with most OGVs utilizing shore power by 2027. 25% of OGVs utilize hydrogen fuel cell electric technology by 2045.	AB 197: direct emissions reductions for sources covered by the AB 32 Inventory In 2015, Executive Order B-32-15 called. For a less polluting freight transport system that addressed OGVs, transport refrigeration units, and clean trucks.	No Conflict. While the Project would not directly impact trade or OGVs, it would not impede the advancement of a cleaner on- or off-shore sources over time.
Port Operations	100% of cargo handling equipment is zero-emission by 2037. 100% of drayage trucks are zero emission by 2035.	Executive Order N-79-20: Reduce demand for petroleum fuels and GHGs, and improve air quality. AB 197: direct emissions reductions for sources covered by the AB 32 Inventory. In 2015, Executive Order B-32-15 called. For a less polluting freight transport system that addressed OGVs, transport refrigeration units, and clean trucks.	No Conflict. While the Project would not directly impact trade or port operations, it would not impede the advancement of a cleaner on-shore sources over time.
Freight and Passenger rail	100% of passenger and other locomotive sales are ZEV by 2030. 100% of line haul locomotive sales are ZEV by 2035. Line haul and passenger rail rely primarily on hydrogen fuel cell technology, and others primarily utilize electricity.	AB 197: direct emissions reductions for sources covered by the AB 32 Inventory In 2015, Executive Order B-32-15 called. For a less polluting freight transport system that addressed OGVs, transport refrigeration units, and clean trucks.	No Conflict. While the Project would not directly impact freight or passenger rail, it would not impede the advancement of a cleaner locomotives over time. The Project's land uses would not include freight transportation or warehousing that would be subject to the California Sustainable Freight

Table 6
Consistency Analysis—2022 Scoping Plan Update

Sector	Actions and Strategies	Statutes, Executive Orders, Other Direction	Project Consistency Analysis
			Action Plan. Therefore, the Project would not interfere or impede the implementation of the Sustainable Freight Action Plan.
Oil and Gas Extraction	Reduce oil and gas extraction operations in line with petroleum demand by 2045.	AB 197: direct emissions reductions for sources covered by the AB 32 Inventory	No Conflict. While the Project would not directly impact oil extraction, it would help reduce demand for petroleum products from energy, area, and mobile sources.
Petroleum Refining	CCS on majority of operations by 2030, beginning in 2028 Production reduced in line with petroleum demand.	AB 197: direct emissions reductions for sources covered by the AB 32 Inventory	No Conflict. While the Project would not directly impact oil extraction, it would help reduce demand for petroleum products that require refining.
Electricity Generation	Sector GHG target of 38 MMTCO _{2e} in 2030 and 30 MMTCO _{2e} in 2035. Retail sales load coverage 20 gigawatts (GW) of offshore wind by 2045. Meet increased demand for electrification without new fossil gas-fired resources.	SB 350 and SB 100: Reduce GHGs and improve air quality. AB 197: direct emissions reductions for sources covered by the AB 32 Inventory	No Conflict. The Project would not directly impact the sources of electricity generation.
New Residential and Commercial Buildings	All electric appliances beginning 2026 (residential) and 2029 (commercial), contributing to 6 million heat pumps installed statewide by 2030.	AB 197: direct emissions reductions for sources covered by the AB 32 Inventory	No Conflict. The Project would incorporate appliances that are consistent with Title 24 and Green Building requirements and consistent with the reduction of residential energy use.
Existing Residential Buildings	80% of appliance sales are electric by 2030 and 100% of appliance sales are electric by 2035. Appliances are replaced at end of life such that by 2030 there are 3 million all-electric and	AB 197: direct emissions reductions for sources covered by the AB 32 Inventory	No Conflict. The Project would comply with Title 24 and Green Building requirements during construction and any future retrofit or appliance replacement requirements.

Table 6
Consistency Analysis—2022 Scoping Plan Update

Sector	Actions and Strategies	Statutes, Executive Orders, Other Direction	Project Consistency Analysis
	electric-ready homes—and by 2035, 7 million homes—as well as contributing to 6 million heat pumps installed statewide by 2030.		
Existing Commercial Buildings	80% of appliance sales are electric by 2030, and 100% of appliance sales are electric by 2045. Appliances are replaced at end of life, contributing to 6 million heat pumps installed statewide by 2030.	AB 197: direct emissions reductions for sources covered by the AB 32 Inventory	No Conflict. While the Project is not a commercial development, it would not interfere with any future requirements to retrofit commercial appliances.
Food Products	7.5% of energy demand electrified directly and/or indirectly by 2030; 75% by 2045	AB 197: direct emissions reductions for sources covered by the AB 32 Inventory	No Conflict. The Project would not directly impact the sources of energy for food production.
Construction Equipment	25% of energy demand electrified by 2030 and 75% electrified by 2045	AB 197: direct emissions reductions for sources covered by the AB 32 Inventory	No Conflict. The Project would not directly impact the sources of energy for construction equipment.
Chemicals and Allied Products; Pulp and Paper	Electrify 0% of boilers by 2030 and 100% of boilers by 2045. Hydrogen for 25% of process heat by 2035 and 100% by 2045 Electrify 100% of other energy demand by 2045.	AB 197: direct emissions reductions for sources covered by the AB 32 Inventory	No Conflict. The Project would not directly impact the sources of energy for boilers.
Stone, Clay, Glass, and Cement	CCS on 40% of operations by 2035 and on all facilities by 2045 Process emissions reduced through alternative materials and CCS	SB 596: Reduce demand for fossil energy, process emissions, and GHGs, and improve air quality. AB 197: direct emissions reductions for sources covered by the AB 32 Inventory	No Conflict. The Project would not directly impact the sources of energy for stone, clay, glass, and cement facilities.
Other Industrial Manufacturing	0% energy demand electrified by 2030 and 50% by 2045	AB 197: direct emissions reductions for sources covered by the AB 32 Inventory	No Conflict. The Project would not directly impact the sources of energy for industrial facilities.

Table 6
Consistency Analysis—2022 Scoping Plan Update

Sector	Actions and Strategies	Statutes, Executive Orders, Other Direction	Project Consistency Analysis
Combined Heat and Power	Facilities retire by 2040.	AB 197: direct emissions reductions for sources covered by the AB 32 Inventory	No Conflict. The Project would not affect facilities that produced heat and power.
Agriculture Energy Use	25% energy demand electrified by 2030 and 75% by 2045	AB 197: direct emissions reductions for sources covered by the AB 32 Inventory	No Conflict. The Project would not affect directly agricultural sources of energy.
Low Carbon Fuels for Transportation	Biomass supply is used to produce conventional and advanced biofuels, as well as hydrogen.	<p>AB 197: direct emissions reductions for sources covered by the AB 32 Inventory</p> <p>In November 2022, the Advanced Clean Cars II regulations took effect, setting low emission standards for transportation.</p>	<p>No Conflict. This regulatory program applies to fuel suppliers, not directly to land use development. GHG emissions related to vehicular travel associated with the Project would benefit from this regulation because fuel used by Project-related vehicles would be required to comply with the LCFS. Mobile source GHG emissions estimates were calculated using CalEEMod that includes implementation of the LCFS into mobile source emission factors. The current LCFS targets a 20% reduction in CI from a 2010 baseline by 2030.</p> <p>GHG emissions generated by Project-related vehicular travel would benefit from the Advanced Clean Cars Program.</p>
Low Carbon Fuels for Buildings and Industry	In 2030s biomethane blended in pipeline Renewable hydrogen blended in fossil gas pipeline at 7% energy (~20% by volume), ramping up between 2030 and 2040 In 2030s, dedicated hydrogen pipelines constructed	SB 350: The Clean Energy and Pollution Reduction Act of 2015 increases the standards of the California RPS program by requiring that the amount of electricity generated and sold to retail customers per year from eligible renewable energy resources be increased to 50 percent by 2030. Required measures include increasing RPS to 50 percent of retail sales by 2030, establishing	No Conflict. The Project would comply with this this action/strategy being located within the Southern California Gas (SCG) service area and would comply with CalGreen and Title 24 energy efficiency standards. Southern California Edison (SCE) must generate electricity that would

Table 6
Consistency Analysis—2022 Scoping Plan Update

Sector	Actions and Strategies	Statutes, Executive Orders, Other Direction	Project Consistency Analysis
	to serve certain industrial clusters	<p>annual targets for statewide energy efficiency that achieve a cumulative doubling of statewide energy efficiency savings in electricity and natural gas end uses by 2030.</p> <p>SB 100: The California Renewables Portfolio Standard Program (2018) requires retail sellers to procure renewable energy that is at least 50 percent by December 31, 2026 and 60 percent by December 31, 2030. It requires local publicly owned electric utilities to procure a minimum quantity of electricity from renewable energy resources of 44 percent of retail sales by December 31, 2024 and 60 percent by December 31, 2030.</p>	<p>increase renewable energy resources to 33 percent by 2020 and 50 percent by 2030. As SCE would provide electricity service to the Project Site, by 2030 the Project would use electricity consistent with the requirements of SB 350.</p> <p>As required under SB 350, doubling of the energy efficiency savings from retail customers by 2030 would primarily rely on the existing suite of building energy efficiency standards under CCR Title 24, Part 6 (consistency with this regulation is discussed below) and utility-sponsored programs such as rebates for high-efficiency appliances, HVAC systems, and insulation.</p>
Non-combustion Methane Emissions	Increase landfill and dairy digester methane capture. Some alternative manure management deployed for smaller dairies Moderate adoption of enteric strategies by 2030 Divert 75% of organic waste from landfills by 2025. Oil and gas fugitive methane emissions reduced 50% by 2030 and further reductions as infrastructure components retire in line with reduced fossil gas demand	SB 1383 (2016) requires CARB to set 2030 emission reduction targets of 40 percent for methane and hydrofluorocarbons and 50 percent black carbon emissions below 2013 levels. The Project would comply with the CARB SLCP Reduction Strategy by using HVAC equipment with lower GWP refrigerants.	No Conflict. This program applies to State regulators looking to reduce methane emissions from landfill and dairy facilities and is not directly related to development of the Project. However, the Project would not interfere or impede efforts to reduce such pollutants.

Table 6
Consistency Analysis—2022 Scoping Plan Update

Sector	Actions and Strategies	Statutes, Executive Orders, Other Direction	Project Consistency Analysis
High GWP Potential Emissions	Low GWP refrigerants introduced as building electrification increases, mitigating HFC emissions	SB 605 (2014) directed CARB to develop a comprehensive Short-Lived Climate Pollutant (SLCP) strategy.	No Conflict. This program applies to State regulators looking to reduce high GWP refrigerants and is not directly related to development of the Project. However, the Project would not interfere or impede efforts to reduce such pollutants.
Natural and Working Lands	Conserve 30% of the state’s NWL and coastal waters by 2030. Implement near- and long-term actions to accelerate natural removal of carbon and build climate resilience in our forests, wetlands, urban greenspaces, agricultural soils, and land conservation activities in ways that serve all communities—and in particular low-income, disadvantaged, and vulnerable communities.	EO N-82-20 and SB 27: CARB to include an NWL target in the Scoping Plan. AB 1757: Establish targets for carbon sequestration and nature-based climate solutions. SB 1386: NWL are an important strategy in meeting GHG reduction goals.	No Conflict. This program applies to State regulators governing Natural and Working Lands and is not directly related to development of the Project. However, the Project would not interfere or impede implementation of the Integrated Natural and Working Lands Implementation Plan, EO N-82-20, SB 27, or SB 1386.
Forests and Shrublands	At least 2.3 million acres treated statewide annually in forests, shrublands/chaparral, and grasslands, comprised of regionally specific management strategies that include prescribed fire, thinning, harvesting, and other management actions. No land conversion of forests, shrublands/chaparral, or grasslands.	Restore health and resilience to overstocked forests and prevent carbon losses from severe wildfire, disease, and pests. Improve air quality and reduce health costs related to wildfire emissions. Improve water quantity and quality and improve rural economies. Provide forest biomass for resource utilization. EO B-52-18: CARB to increase the opportunity for using prescribed fire. AB 1504 (Skinner, Chapter 534, Statutes of 2010): CARB to recognize the role forests play in carbon sequestration and climate mitigation.	No Conflict. This program applies to State regulators governing forest and shrubland management and is not directly related to development of the Project. However, the Project would not interfere or impede implementation of EO B-52-18, AB 1504, or the Forest Carbon Plan.

Table 6
Consistency Analysis—2022 Scoping Plan Update

Sector	Actions and Strategies	Statutes, Executive Orders, Other Direction	Project Consistency Analysis
Grasslands	At least 2.3 million acres treated includes increased management of grasslands interspersed in forests to reduce fuels surrounding communities using management strategies appropriate for grasslands. No land conversion of forests, shrublands/chaparral, or grasslands.		No Conflict. This program applies to State regulators of grasslands and is not directly related to development of the Project. However, the Project would not interfere or impede efforts to reduce fuels in grasslands surrounding communities.
Croplands	Implement climate smart practices for annual and perennial crops on ~80,000 acres annually. Land easements/ conservation on annual crops at ~5,500 acres annually. Increase organic agriculture to 20% of all cultivated acres by 2045 (~65,000 acres annually).	SB 859: Recognizes the ability of healthy soils practices to reduce GHG emissions from agricultural lands.	No Conflict. This program applies to State regulators overseeing croplands and is not directly related to development of the Project. However, the Project would not interfere or impede SB 859 and efforts to increase organic agriculture and conserve croplands.
Developed Lands	Increase urban forestry investment by 200% above current levels and utilize tree watering that is 30% less sensitive to drought. Establish defensible space that accounts for property boundaries.	AB 2251 (Calderon, Chapter 186, Statutes of 2022): Increase urban tree canopy 10% by 2035.	No Conflict. This program applies to State regulators addressing urban forestry and is not directly related to development of the Project. However, the Project would not interfere or impede implementation of AB 2251 and efforts to increase the urban canopy.
Wetlands	Restore 60,000 acres of Delta wetlands		No Conflict. This program applies to State regulators restoring Delta wetlands and is not directly related to development of the Project. However, the Project would not interfere or

Table 6
Consistency Analysis—2022 Scoping Plan Update

Sector	Actions and Strategies	Statutes, Executive Orders, Other Direction	Project Consistency Analysis
			impede efforts to restore wetland ecologies.
Sparsely Vegetated Lands	Land conversion at 50% of the Reference Scenario land conversion rate.		No Conflict. This program applies to State regulators slowing the conversion of sparsely vegetated lands and is not directly related to development of the Project. However, the Project would not interfere or impede efforts to slow urban conversion of such lands.
Cap-and-Trade Program	Implement the post-2020 Cap-and-Trade Program with declining annual caps.	AB 398 was enacted in 2017 to extend and clarify the role of the state’s Cap-and-Trade Program from January 1, 2021, through December 31, 2030. As part of AB 398, refinements were made to the Cap-and-Trade program to establish updated protocols and allocation of proceeds to reduce GHG emissions.	Not Applicable. This applies to the market-based program to reduce GHG emissions over time and is not applicable to a development project.
Source: DKA Planning, 2023 based on California Air Resources Board, 2022 Scoping Plan for Achieving Carbon Neutrality, Scoping Plan Scenario.			

Table 7 provides a comparison of the Project against the GHG-related performance measures of the 2020-2045 RTP/SCS.

**Table 7
Consistency with the 2020 RTP/SCS**

Objectives	Consistency Analysis ^a
Increase percentage of region's total household growth occurring within HQTAs.	Not Applicable. The Project does not include residential uses. Nevertheless, it would not reduce housing stock in the County and would not inhibit the County's efforts to add to the supply and diversity of housing in metropolitan Los Angeles County.
Increase percent of the region's total employment growth occurring within HQTAs.	Consistent. The Project is an infill development that would create more school- and service-related jobs, consistent with the 2020 RTP/SCS policies and would focus on job growth on Whittier Boulevard and an HQTAs.
Decrease total acreage of greenfield or otherwise rural land uses converted to urban use.	Consistent. The Project is an infill development that would reduce the demand for sprawl development in greenfield or rural areas on the fringes of Southern California.
Decrease daily vehicle miles driven per person.	Consistent. The Project is an infill development that would reduce daily VMT per capita. Local elementary and middle schools are geared toward neighborhood children that involve short trips that can be made with bicycling and walking. This would reduce potential driving distances for some parents as well. This includes access to Metro local bus Line 18 which operates east-west service on Whittier Boulevard approximately 880 feet north of the Project Site.
Decrease average daily distance traveled for work and non-work trips (in miles)	Consistent. The Project is an infill development that would reduce trip distances for students and parents. Local elementary and middle schools are geared toward neighborhood children that involve short trips that can be made with bicycling and walking. This would reduce potential driving distances for some parents as well. This includes access to Metro local bus Line 18 which operates east-west service on Whittier Boulevard approximately 880 feet north of the Project Site.
Increase percentage of work and non-work trips which are less than 3 miles in length.	Consistent. The Project would substantially increase all trips that are less than three miles in length. Local elementary and middle schools are geared toward neighborhood children that involve short trips that can be made with bicycling and walking. This would reduce potential driving distances for some parents as well. This includes access to Metro local bus Line 18 which

Objectives	Consistency Analysis ^a
	operates east-west service on Whittier Boulevard approximately 880 feet north of the Project Site.
Increase share of short trip lengths for commute purposes.	Consistent. The Project is an infill development that could reduce trip lengths for faculty and other staff. Local elementary and middle schools are geared toward neighborhood children that involve short trips but often attract local teachers and staff that would have shorter commute trips than working at more remote schools.
Decrease average minutes of delay experienced per capita due to traffic congestion.	Consistent. The Project is an infill development in the dense Whittier Boulevard corridor that will reduce the rate of growth in auto traffic and congestion by virtue of its transit and active transportation mode share.
Decrease excess travel time resulting from the difference between a reference speed and actual speed.	Consistent. The Project is an elementary and middle school geared toward neighborhood children that involve short trips that can be made with bicycling and walking. When combined with bus and shuttle service on Whittier Boulevard, this would reduce car trips on local roads that could reduce congestion and help improve travel speeds on this arterial.
Decrease excess travel time for heavy-duty trucks result from the difference between reference speed and actual speed.	Consistent. The Project is an elementary and middle school geared toward neighborhood children that involve short trips that can be made with bicycling and walking. This would reduce potential car trips on Whittier Boulevard and local roads that could reduce truck congestion and help improve travel speeds on this arterial.
Increase percentage of PM peak period trips completed within 45 minutes by travel mode.	Consistent. The Project is an elementary and middle school geared toward neighborhood children that involve short trips that can be made with bicycling and walking. As such, trips to school would not exceed 45 minutes in duration. Moreover, school bell times would ensure that most vehicle traffic in the afternoon occur soonafter the student dismissal time at 3:15 P.M.
Increase percentage of trips that use transit (work and all trips)	Consistent. The Project is an elementary and middle school geared toward neighborhood children that involve short trips that can be made with bicycling and walking. Students living further away from school could use Metro local bus Line 18 which operates east-west service on Whittier Boulevard approximately 880 feet north of the Project Site.
Decrease average travel time to work (all modes)	Consistent. The Project is an infill development that could reduce trip lengths for faculty and other staff. Local elementary and middle schools are geared toward neighborhood children that involve short trips but often attract local teachers and staff that would have shorter commute trips than working at more remote schools.

Objectives	Consistency Analysis ^a
Increase percentage of trips using either walking or biking (by trip type)	Consistent. The Project is an elementary and middle school geared toward neighborhood children that involve short trips that can be made with bicycling and walking.
Reduce per capita GHG emissions (from 2005 levels)	Consistent. The Project is an elementary and middle school geared toward neighborhood children that involve short trips that can be made with bicycling and walking. Students living further away from school could use Metro local bus Line 18 which operates east-west service on Whittier Boulevard approximately 880 feet north of the Project Site. As such, it is consistent with AB 32, SB 32, SB 375, and other initiatives designed to reduce per capita GHG emissions from 2005 levels.
Increase percentage of trips using a travel mode other than single occupancy vehicle (SOV)	Consistent. The Project is an elementary and middle school geared toward neighborhood children that involve short trips that can be made with bicycling and walking. Students living further away from school could use Metro local bus Line 18 which operates east-west service on Whittier Boulevard approximately 880 feet north of the Project Site.

Local: County of Los Angeles General Plan 2035 Air Quality Element

While Goal AQ 3 of the Air Quality Element calls for the County to implement plans and programs to address the impacts of climate change, the Project would be consistent with the spirit of this goal. The Project would be geared toward local middle neighborhood children that would involve short trips that can be made with bicycling and walking. Students living further away from school could use Metro local bus Line 18 which operates east-west service on Whittier Boulevard approximately 880 feet north of the Project Site. As such, the Project would accommodate population growth while minimizing GHG emissions from mobile sources associated with transporting children to and from school.

Conclusion

In summary, the plan consistency analysis provided above demonstrates that the Project complies with the applicable plans, policies, regulations and GHG emissions reduction actions/strategies outlined in the *Climate Change Scoping Plan and Update*, the 2020-2045 RTP/SCS, the County’s General Plan 2035 Air Quality Element. Consistency with the above plans, policies, regulations, and GHG emissions reduction actions/strategies would reduce the Project’s incremental contribution of GHG emissions. Thus, the Project would not conflict with any applicable plan, policy, or regulation of an agency adopted for the purpose of reducing emissions of GHG emissions. Furthermore, because the Project is consistent and does not conflict with these plans, policies, and regulations, the Project’s incremental increase in GHG emissions as

described above would not result in a significant impact on the environment. Therefore, Project-specific impacts with regard to climate change would be less than significant.

Project Emissions

In support of the consistency analysis above that describes the Project's compliance with, or exceedance of performance-based standards included in the regulations and policies outlined in the applicable portions of the *Climate Change Scoping Plan*, the 2020-2045 RTP/SCS, the County's General Plan 2035 Air Quality Element, quantitative calculations are provided below.

The Project would generate direct and indirect GHG emissions as a result of different types of emissions sources, including the following:

- Construction: emissions associated with demolition of the existing church and parking lot, grading, and construction-related equipment and vehicular activity;
- Area source: emissions associated with landscape equipment;
- Energy source (building operations): emissions associated with electricity and natural gas use for space heating and cooling, water heating, energy consumption, and lighting;
- Mobile source: emissions associated with vehicles accessing the Project Site;
- Solid Waste: emissions associated with the decomposition of the waste, which generates methane based on the total amount of degradable organic carbon; and
- Water/Wastewater: emissions associated with energy used to pump, convey, deliver, and treat water.
- Refrigerants: These are substances used in equipment for air conditioning and refrigeration. Most refrigerants are HFCs or blends of them, which can have high GWP values.

The Project would generate an incremental contribution to and a cumulative increase in GHG emissions. A specific discussion regarding potential GHG emissions associated with the construction and operational phases of the Project is provided below.

Construction

Project construction is anticipated to be completed in 2025 with occupancy in late 2025 and 2026. A summary of construction details (e.g., schedule, equipment mix, and vehicular trips) and CalEEMod modeling output files are provided in the Technical Appendix. The GHG emissions associated with construction of the Project were calculated for each year of construction activity.

Construction of the Project is estimated to generate a total of 151 MTCO₂e (Table 8). As recommended by the SCAQMD, the total GHG construction emissions were amortized over the 30-year lifetime of the Project (i.e., total construction GHG emissions were divided by 30 to determine an annual construction emissions estimate that can be added to the Project's operational emissions) in order to determine the Project's annual GHG emissions inventory.⁷⁵ This results in annual Project construction emissions of 5 MTCO₂e. A complete listing of the construction equipment by on-site and off-site activities, duration, and emissions estimation model input assumptions used in this analysis is included within the emissions calculation worksheets that are provided in the Technical Appendix.

**Table 8
Combined Construction-Related Emissions (MTCO₂e)**

Year	MTCO₂e^a

Operation

Area Source Emissions

Area source emissions were calculated using the CalEEMod emissions inventory model, which includes landscape maintenance equipment, use of consumer products, and other everyday sources. As shown in Table 9, the Project would result in one MTCO₂e per year from area sources.

**Table 9
Annual GHG Emissions Summary (Buildout)^a

Source: DKA Planning, 2023.	

Electricity and Natural Gas Generation Emissions

GHG emissions are emitted as a result of activities in buildings when electricity and natural gas are used as energy sources. Combustion of any type of fuel emits CO₂ and other GHG emissions directly into the atmosphere; when this occurs in a building, it is a direct emission source associated with that building. GHG emissions are also emitted during the generation of electricity from fossil fuels. When electricity is used in a building, the electricity generation typically takes place off-site at the power plant; electricity use in a building generally causes emissions in an indirect manner.

Electricity and natural gas emissions were calculated for the Project using the CalEEMod emissions inventory model, which multiplies an estimate of the energy usage by applicable emissions factors chosen by the utility company. GHG emissions from electricity use are directly dependent on the electricity utility provider. In this case, GHG emissions intensity factors for SCE were selected in CalEEMod. The carbon intensity (pounds per megawatt an hour (lbs/MWh)) for electricity generation was calculated for the Project buildout year based on SCE projections. A straight-line interpolation was performed to estimate the SCE carbon intensity factor for the Project buildout year. SCE’s carbon intensity projections also take into account SB 350 RPS requirements for renewable energy.

This approach is conservative, given the 2018 chaptering of SB 100 (De Leon), which requires electricity providers to provide renewable energy for at least 60 percent of their delivered power by 2030 and 100 percent use of renewable energy and zero-carbon resources by 2045. SB 100 also increases existing renewable energy targets, called Renewables Portfolio Standard (RPS), to 44 percent by 2024 and 52 percent by 2027.

The Title 24 standards contain more substantial energy efficiency requirements for new construction, emphasizing the importance of building design and construction flexibility to

establish performance standards that substantially reduce energy consumption for water heating, lighting, and insulation for attics and walls.

Energy use in buildings is divided into energy consumed by the built environment and energy consumed by uses that are independent of the construction of the building, such as in plug-in appliances. CalEEMod calculates energy use from systems covered by Title 24 (e.g., HVAC system, water heating system, and lighting system); energy use from lighting; and energy use from office equipment, appliances, plug-ins, and other sources not covered by Title 24 or lighting.

CalEEMod electricity and natural gas usage rates are based on the CEC-sponsored California Commercial End-Use Survey (CEUS) and the California Residential Appliance Saturation Survey (RASS) studies.⁷⁶ The data are specific for climate zones; therefore, Zone 11 was selected for the Project Site based on the zip code tool.

As shown in Table 9, Project GHG emissions from electricity and natural gas usage would result in a total of 83 MTCO_{2e} per year.

Mobile Source Emissions

Mobile-source emissions were calculated using the SCAQMD-recommended CalEEMod emissions inventory model. CalEEMod calculates the emissions associated with on-road mobile sources associated with students, residents, employees, visitors, and delivery vehicles visiting the Project Site based on the number of daily trips generated and VMT.

Mobile source operational GHG emissions were calculated using CalEEMod and are based on the Project trip-generation estimates. To calculate daily trips, the number of students for both schools were multiplied by the applicable trip-generation rates based on the Institute of Transportation Engineers (ITE)'s *Trip Generation, 11th Edition*.

The Project represents an infill development within an urbanized area that would concentrate new schools within an HQTAs.⁷⁷ The Project is geared toward local families and children and would

⁷⁶ California Energy Commission, Commercial End-Use Survey, March 2006, and California Residential Appliance Saturation Survey, October 2010.

⁷⁷ The Project Site is also located in Transit Priority Area as defined by Public Resources Code Section 20199. Public Resources Code Section 21099 defines a "transit priority area" as an area within 0.5 miles of a major transit stop that is "existing or planned, if the planned stop is scheduled to be completed within the planning horizon included in a Transportation Improvement Program adopted pursuant to Section 450.216 or 450.322 of Title 23 of the Code of Federal Regulations." Public

also incorporate characteristics that would reduce trips and VMT as compared to standard ITE trip generation rates. The Project characteristics listed below are consistent with the CAPCOA guidance document, *Quantifying Greenhouse Gas Mitigation Measures*, which provides emission reduction values for transportation related design techniques.⁷⁸ Techniques applicable to the Project include the following (a brief description of the Project’s relevance to the measure is also provided):

- **CAPCOA Measure LUT-1 – Increase Density:** Increased density, measured in terms of persons, jobs, or dwelling units per unit area, reduces emissions associated with transportation as it reduces the distance students travel for school and provides a foundation for the implementation of other strategies, such as enhanced transit services.
- **CAPCOA Measure LUT-3 – Increase Diversity of Urban and Suburban Developments (Mixed-Use):** The Project would introduce new uses on the Project Site, including new schools that support local residents. The changes in land uses on the Project Site would reduce vehicle trips and VMT by encouraging students and families to walk and use non-automotive forms of transportation (i.e., public transit, biking), which would result in corresponding reductions in transportation-related emissions.
- **CAPCOA Measure LUT-4 – Increase Destination Accessibility:** The Project Site is located in the dense Whittier Boulevard corridor and is accessible by public transportation. Access to multiple destinations would reduce vehicle trips and VMT compared to the statewide average and encourage walking and non-automotive forms of transportation and would result in corresponding reductions in transportation-related emissions as a result of the Project.
- **CAPCOA Measure LUT-5 – Increase Transit Accessibility:** The Project would be located near several Metro bus route Line 18. The Project would also provide bicycle parking spaces to encourage children to cycle to school.

CalEEMod calculates VMT based on the type of land use, trip purpose, and trip type percentages for each land use subtype in the project (primary, diverted, and pass-by). As shown in Table 9, the Project GHG emissions from mobile sources would result in a total of 205 MTCO_{2e} per year.

Resources Code Section 21064.3 defines “major transit stop” as “a site containing an existing rail transit station, a ferry terminal served by either a bus or rail transit service, or the intersection of two or more major bus routes with a frequency of service interval of 15 minutes or less during the morning and afternoon peak commute periods.”

⁷⁸ CAPCOA, *Quantifying Greenhouse Gas Mitigation Measures*, 2010.

This estimate reflects reductions attributable to the Project's characteristics (e.g., infill project near transit that supports multi-modal transportation options), as described above.

Solid Waste Generation Emissions

Emissions related to solid waste were calculated using the CalEEMod emissions inventory model, which multiplies an estimate of the waste generated by applicable emissions factors provided in Section 2.4 of the USEPA's AP-42, Compilation of Air Pollutant Emission Factors. CalEEMod solid waste generation rates for each applicable land use were selected for this analysis. As shown in Table 9, the Project scenario is expected to result in a total of 30 MTCO₂e per year from solid waste that accounts for a 50-percent recycling/diversion rate.⁷⁹

Water Usage and Wastewater Generation Emissions

GHG emissions are related to the energy used to convey, treat, and distribute water, and treat wastewater. Thus, these emissions are generally indirect emissions from the production of electricity to power these systems. Three processes are necessary to supply potable water; these include (1) supply and conveyance of the water from the source; (2) treatment of the water to potable standards; and (3) distribution of the water to individual users. After use, energy is used as the wastewater is treated and reused as reclaimed water.

Emissions related to water usage and wastewater generation were calculated for the Project using the CalEEMod emissions inventory model, which multiplies an estimate of the water usage by the applicable energy intensity factor to determine the embodied energy necessary to supply potable water.⁸⁰ GHG emissions are then calculated based on the amount of electricity consumed multiplied by the GHG emissions intensity factors for the utility provider. In this case, embodied energy for Southern California supplied water and GHG emissions intensity factors for SCE were selected in CalEEMod.

SCE's programs includes programs designed to reduce indoor water consumption and wastewater generation by 20 percent. These include the 2019 requirements for installation of the latest ultra-high efficiency plumbing fixtures, the 2016 standards that promote increasing water-resistant turf and incorporating rainfall capture techniques in project designs, aggressive outdoor water consumption programs through its Landscape ordinance, and water recycling programs designed to increase recycled water to 59,000 acre-feet by 2035

⁷⁹ AB 341 (2012) increased the Statewide waste diversion goal from 50 to 75 percent from baseline rates established by CalRecycle by 2020 and beyond. Further, SB 1383 (2016) requires jurisdictions to reduce 75 percent of organic waste disposal in landfills by 2030.

⁸⁰ The intensity factor reflects the average pounds of CO₂e per megawatt generated by a utility company.

As shown in Table 9, Project GHG emissions from water/wastewater usage would result in a total of 5 MTCO₂e per year, which reflects a 20-percent reduction in water/wastewater emissions consistent with building code requirements as compared to the Project without sustainability features related to water conservation.

Refrigerants

Emissions related to cooling structures and refrigeration needs were calculated using the CalEEMod emissions inventory model. As shown in Table 9, the Project scenario is expected to result in less than one MTCO₂e per year from use of refrigerants that used HFCs and have high GWP values.

Combined Construction and Operational Emissions

As shown in Table 9, when taking into consideration implementation of project design features, including the requirements set forth in the County’s regulations and codes and the full implementation of current state mandates, the GHG emissions for the Project would equal 327 MTCO₂e annually (as amortized over 30 years) during construction.

Estimated Reduction of Project Related GHG Emissions Resulting from Consistency with Plans

As noted earlier, one approach to demonstrating a project’s consistency with GHG plans is to show how a project will reduce its incremental contribution through a Project Without Reduction Features comparison. The analysis in this section includes potential emissions under a Project Without Reduction Features scenario and from the Project at build-out based on actions and mandates in force in 2025.

As shown in Table 10, the emissions for the Project and its associated CARB Project Without Reduction Features scenario are estimated to be 327 and 474 MTCO₂e per year, respectively, which shows the Project would reduce emissions by 31.0 percent from CARB’s Project Without Reduction Features scenario.

**Table 10
Estimated Reduction of Project-Related GHG Emissions**

Scenario and Source	Project Without Reduction Features Scenario*	As Proposed Scenario	Reduction from Project Without Reduction Features Scenario	Change from Project Without Reduction Features Scenario
Area Sources	1	1	-	0%
Energy Sources	143	83	-60	-42%
Mobile Sources	292	205	-87	-30%

Waste Sources	30	30	-	0%
Water Sources	3	3	-	0%
Refrigerants	<1	<1	-	0%
Construction	5	5	-	0%
Total Emissions	474	327	-147	-31.0%
<i>Daily construction emissions amortized over 30-year period pursuant to SCAQMD guidance. Annual construction emissions derived by taking total emissions over duration of activities and dividing by construction period.</i> <i>* Project Without Reduction Features scenario does not assume 30% reduction in in mobile source emissions from Pavley emission standards (19.8%), low carbon fuel standards (7.2%), vehicle efficiency measures 2.8%); does not assume 42% reduction in energy production emissions from the State's renewables portfolio standard (33%), natural gas extraction efficiency measures (1.6%), and natural gas transmission and distribution efficiency measures (7.4%).</i> <i>Source: DKA Planning, 2023.</i>				

The analysis in this section uses the 2022 Scoping Plan's statewide goals as one approach to evaluate the Project's incremental contribution to climate change. The methodology is to compare the Project's emissions as proposed to the Project's emissions as if the Project were built using a Project Without Reduction Features approach in terms of design, methodology, and technology. This means the Project's emissions were calculated as if the Project was constructed with project design features to reduce GHG emissions that are not required by state or local code and with several regulatory measures adopted in furtherance of AB 32.

While the AB 32 Scoping Plan's cumulative statewide objectives were not intended to serve as the basis for project-level assessments, this analysis finds that its Project Without Reduction Features comparison based on the Scoping Plan is appropriate, because the Project would contribute to statewide GHG emissions reduction goals. Specifically, the Project's focus on attracting local students and families in an existing urban setting provide opportunities to reduce transportation-related emissions.

Post-2030 Analysis

Recent studies show that the state's existing and proposed regulatory framework will put the state on a pathway to reduce its GHG emissions level to 40 percent below 1990 levels by 2030, and to 80 percent below 1990 levels by 2050 if additional appropriate reduction measures are adopted.⁸¹

⁸¹ Energy and Environmental Economics (E3). "Summary of the California State Agencies' PATHWAYS Project: Long-term Greenhouse Gas Reduction Scenarios" (April 2015); Greenblatt, Jeffrey, Energy Policy, "Modeling California Impacts on Greenhouse Gas Emissions" (Vol. 78, pp. 158–172). The California Air Resources Board, California Energy Commission, California Public Utilities

Even though these studies did not provide an exact regulatory and technological roadmap to achieve the 2030 and 2050 goals, they demonstrated that various combinations of policies could allow the statewide emissions level to remain very low through 2050, suggesting that the combination of new technologies and other regulations not analyzed in the studies could allow the state to meet the 2050 target. Subsequent to the findings of these studies, SB 32 was passed on September 8, 2016, and would require the state board to ensure that statewide GHG emissions are reduced to 40 percent below the 1990 level by 2030. As discussed above, the new plan, outlined in SB 32, involves increasing renewable energy use, imposing tighter limits on the carbon content of gasoline and diesel fuel, putting more electric cars on the road, improving energy efficiency, and curbing emissions from key industries.

As discussed above, SCAG's 2020-2045 RTP/SCS establishes a regulatory framework for achieving GHG reductions from the land use and transportation sectors pursuant to SB 375 and the state's long-term climate policies. The 2020-2045 RTP/SCS ensures VMT reductions and other measures that reduce regional emissions from the land use and transportation sectors.

The Project is the type of land use development that is encouraged by the RTP/SCS to reduce VMT and expand multi-modal transportation options in order for the region to achieve the GHG reductions from the land use and transportation sectors required by SB 375, which, in turn, advances the state's long-term climate policies. By furthering implementation of SB 375, the Project supports regional land use and transportation GHG reductions consistent with state climate targets for 2030 and beyond. In addition, the Project would be consistent with the Actions and Strategies set forth in the 2020-2045 RTP/SCS. Therefore, the Project would be consistent with the 2020-2045 RTP/SCS.

Conclusion

Given the Project's consistency with state, SCAG, and County GHG emissions reduction goals and objectives, the Project is consistent with applicable plans, policies, and regulations adopted for the purpose of reducing the emissions of GHGs. In the absence of adopted standards and established significance thresholds, and given this consistency, it is concluded that the Project's

Commission, and the California Independent System Operator engaged E3 to evaluate the feasibility and cost of a range of potential 2030 targets along the way to the state's goal of reducing GHG emissions to 80 percent below 1990 levels by 2050. With input from the agencies, E3 developed scenarios that explore the potential pace at which emission reductions can be achieved, as well as the mix of technologies and practices deployed. E3 conducted the analysis using its California PATHWAYS model. Enhanced specifically for this study, the model encompasses the entire California economy with detailed representations of the buildings, industry, transportation and electricity sectors.

incremental contribution to greenhouse gas emissions and their effects on climate change would not be cumulatively considerable.

Cumulative Impacts

As explained above, the analysis of a project's GHG emissions is inherently a cumulative impacts analysis, because climate change is a global problem, and the emissions from any single project alone would be negligible. Accordingly, the analysis above took into account the potential for the Project to contribute to the cumulative impact of global climate change.

The analysis shows that the Project is consistent with CARB's *Climate Change Scoping Plan*, particularly its emphasis on the identification of emission reduction opportunities that promote economic growth while achieving greater energy efficiency and accelerating the transition to a low-carbon economy. The analysis also shows that the Project would be consistent with the 2020-2045 RTP/SCS, which would serve to reduce regional GHG emissions from the land use and transportation sectors by 2020 and 2035. In addition, the Project would comply with the General Plan 2035 Air Quality Element, which identifies the need for countywide plans and programs that reduce GHG. Given the Project's consistency with statewide, regional, and local plans adopted for the reduction of GHG emissions, it is concluded that the Project's incremental contribution to greenhouse gas emissions and their effects on climate change would not be cumulatively considerable. For these reasons, the Project's cumulative contribution to global climate change is less than significant.

6. Climate Risk Detailed Report

6.1. Climate Risk Summary

Cal-Adapt midcentury 2040–2059 average projections for four hazards are reported below for your project location. These are under Representation Concentration Pathway (RCP) 8.5 which assumes GHG emissions will continue to rise strongly through 2050 and then plateau around 2100.

Climate Hazard	Result for Project Location	Unit
Temperature and Extreme Heat	13.9	annual days of extreme heat
Extreme Precipitation	5.80	annual days with precipitation above 20 mm
Sea Level Rise	0.00	meters of inundation depth
Wildfire	0.00	annual hectares burned

Temperature and Extreme Heat data are for grid cell in which your project are located. The projection is based on the 98th historical percentile of daily maximum/minimum temperatures from observed historical data (32 climate model ensemble from Cal-Adapt, 2040–2059 average under RCP 8.5). Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.

Extreme Precipitation data are for the grid cell in which your project are located. The threshold of 20 mm is equivalent to about $\frac{3}{4}$ an inch of rain, which would be light to moderate rainfall if received over a full day or heavy rain if received over a period of 2 to 4 hours. Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.

Sea Level Rise data are for the grid cell in which your project are located. The projections are from Radke et al. (2017), as reported in Cal-Adapt (2040–2059 average under RCP 8.5), and consider different increments of sea level rise coupled with extreme storm events. Users may select from four model simulations to view the range in potential inundation depth for the grid cell. The four simulations make different assumptions about expected rainfall and temperature are: Warmer/drier (HadGEM2-ES), Cooler/wetter (CNRM-CM5), Average conditions (CanESM2), Range of different rainfall and temperature possibilities (MIROC5). Each grid cell is 50 meters (m) by 50 m, or about 164 feet (ft) by 164 ft.

Wildfire data are for the grid cell in which your project are located. The projections are from UC Davis, as reported in Cal-Adapt (2040–2059 average under RCP 8.5), and consider historical data of climate, vegetation, population density, and large (> 400 ha) fire history. Users may select from four model simulations to view the range in potential wildfire probabilities for the grid cell. The four simulations make different assumptions about expected rainfall and temperature are: Warmer/drier (HadGEM2-ES), Cooler/wetter (CNRM-CM5), Average conditions (CanESM2), Range of different rainfall and temperature possibilities (MIROC5). Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.

6.2. Initial Climate Risk Scores

Climate Hazard	Exposure Score	Sensitivity Score	Adaptive Capacity Score	Vulnerability Score
Temperature and Extreme Heat	1	0	0	N/A
Extreme Precipitation	N/A	N/A	N/A	N/A
Sea Level Rise	1	0	0	N/A
Wildfire	1	0	0	N/A
Flooding	N/A	N/A	N/A	N/A
Drought	N/A	N/A	N/A	N/A
Snowpack Reduction	N/A	N/A	N/A	N/A
Air Quality Degradation	0	0	0	N/A

The sensitivity score reflects the extent to which a project would be adversely affected by exposure to a climate hazard. Exposure is rated on a scale of 1 to 5, with a score of 5 representing the greatest exposure.

The adaptive capacity of a project refers to its ability to manage and reduce vulnerabilities from projected climate hazards. Adaptive capacity is rated on a scale of 1 to 5, with a score of 5 representing the greatest ability to adapt.

The overall vulnerability scores are calculated based on the potential impacts and adaptive capacity assessments for each hazard. Scores do not include implementation of climate risk reduction measures.

6.3. Adjusted Climate Risk Scores

Climate Hazard	Exposure Score	Sensitivity Score	Adaptive Capacity Score	Vulnerability Score
Temperature and Extreme Heat	1	1	1	2
Extreme Precipitation	N/A	N/A	N/A	N/A
Sea Level Rise	1	1	1	2
Wildfire	1	1	1	2
Flooding	N/A	N/A	N/A	N/A
Drought	N/A	N/A	N/A	N/A
Snowpack Reduction	N/A	N/A	N/A	N/A
Air Quality Degradation	1	1	1	2

The sensitivity score reflects the extent to which a project would be adversely affected by exposure to a climate hazard. Exposure is rated on a scale of 1 to 5, with a score of 5 representing the greatest exposure.

The adaptive capacity of a project refers to its ability to manage and reduce vulnerabilities from projected climate hazards. Adaptive capacity is rated on a scale of 1 to 5, with a score of 5 representing the greatest ability to adapt.

The overall vulnerability scores are calculated based on the potential impacts and adaptive capacity assessments for each hazard. Scores include implementation of climate risk reduction measures.

6.4. Climate Risk Reduction Measures

7. Health and Equity Details

7.1. CalEnviroScreen 4.0 Scores

The maximum CalEnviroScreen score is 100. A high score (i.e., greater than 50) reflects a higher pollution burden compared to other census tracts in the state.

Indicator	Result for Project Census Tract
Exposure Indicators	—
AQ-Ozone	57.0

AQ-PM	88.0
AQ-DPM	95.4
Drinking Water	74.5
Lead Risk Housing	95.1
Pesticides	0.00
Toxic Releases	84.8
Traffic	96.4
Effect Indicators	—
CleanUp Sites	77.7
Groundwater	22.1
Haz Waste Facilities/Generators	89.7
Impaired Water Bodies	66.7
Solid Waste	22.1
Sensitive Population	—
Asthma	69.7
Cardio-vascular	73.0
Low Birth Weights	60.3
Socioeconomic Factor Indicators	—
Education	97.8
Housing	89.7
Linguistic	92.5
Poverty	91.7
Unemployment	80.4

7.2. Healthy Places Index Scores

The maximum Health Places Index score is 100. A high score (i.e., greater than 50) reflects healthier community conditions compared to other census tracts in the state.

Indicator	Result for Project Census Tract
-----------	---------------------------------

Economic	—
Above Poverty	4.478378032
Employed	16.43782882
Median HI	8.327986655
Education	—
Bachelor's or higher	6.236365969

3. Construction Emissions Details

3.1. Demolition (2024) - Unmitigated

Criteria Pollutants (lb/day for daily, ton/yr for annual) and GHGs (lb/day for daily, MT/yr for annual)

Location	BCO2	NBCO2	CO2T	CH4	N2O	R	CO2e
Onsite	—	—	—	—	—	—	—
Daily, Summer (Max)	—	—	—	—	—	—	—
Daily, Winter (Max)	—	—	—	—	—	—	—
Off-Road Equipment	—	2,494	2,494	0.10	0.02	—	2,502
Demolition	—	—	—	—	—	—	—
Onsite truck	—	0.00	0.00	0.00	0.00	0.00	—
Average Daily	—	—	—	—	—	—	—
Off-Road Equipment	—	143	143	0.01	< 0.005	—	144
Demolition	—	—	—	—	—	—	—
Onsite truck	—	0.00	0.00	0.00	0.00	0.00	—
Annual	—	—	—	—	—	—	—
Off-Road Equipment	—	23.8	23.8	< 0.005	< 0.005	—	23.8
Demolition	—	—	—	—	—	—	—
Onsite truck	—	0.00	0.00	0.00	0.00	0.00	—
Offsite	—	—	—	—	—	—	—
Daily, Summer (Max)	—	—	—	—	—	—	—
Daily, Winter (Max)	—	—	—	—	—	—	—
Worker	—	167	167	0.01	0.01	0.02	—
Vendor	—	0.00	0.00	0.00	0.00	0.00	—
Hauling	—	2,544	2,544	0.13	0.41	0.15	—

Average Daily	—	—	—	—	—	—
Worker	—	9.77	9.77	< 0.005	< 0.005	0.02
Vendor	—	0.00	0.00	0.00	0.00	—
Hauling	—	146	146	0.01	0.02	0.15
Annual	—	—	—	—	—	—
Worker	—	1.62	1.62	< 0.005	< 0.005	< 0.005
Vendor	—	0.00	0.00	0.00	0.00	0.00
Hauling	—	24.2	24.2	< 0.005	< 0.005	0.02

3.3. Site Preparation (2024) - Unmitigated

Criteria Pollutants (lb/day for daily, ton/yr for annual) and GHGs (lb/day for daily, MTYr for annual)

Location	BCO2	NBCO2	CO2T	CH4	N2O	R	CO2e
Onsite	—	—	—	—	—	—	—
Daily, Summer (Max)	—	—	—	—	—	—	—
Daily, Winter (Max)	—	—	—	—	—	—	—
Off-Road Equipment	—	2.064	2.064	0.08	0.02	—	2,071
Dust From Material Movement	—	—	—	—	—	—	—
Onsite truck	—	0.00	0.00	0.00	0.00	0.00	—
Average Daily	—	—	—	—	—	—	—
Off-Road Equipment	—	17.0	17.0	< 0.005	< 0.005	—	17.0
Dust From Material Movement	—	—	—	—	—	—	—
Onsite truck	—	0.00	0.00	0.00	0.00	0.00	—
Annual	—	—	—	—	—	—	—
Off-Road Equipment	—	2.81	2.81	< 0.005	< 0.005	—	2.82
Dust From Material Movement	—	—	—	—	—	—	—

Onsite truck	—	0.00	0.00	0.00	0.00	0.00	0.00	—
Offsite	—	—	—	—	—	—	—	—
Daily, Summer (Max)	—	—	—	—	—	—	—	—
Daily, Winter (Max)	—	—	—	—	—	—	—	—
Worker	—	100	100	< 0.005	< 0.005	0.01	—	—
Vendor	—	0.00	0.00	0.00	0.00	0.00	—	—
Hauling	—	0.00	0.00	0.00	0.00	0.00	—	—
Average Daily	—	—	—	—	—	—	—	—
Worker	—	0.84	0.84	< 0.005	< 0.005	< 0.005	—	—
Vendor	—	0.00	0.00	0.00	0.00	0.00	—	—
Hauling	—	0.00	0.00	0.00	0.00	0.00	—	—
Annual	—	—	—	—	—	—	—	—
Worker	—	0.14	0.14	< 0.005	< 0.005	< 0.005	—	—
Vendor	—	0.00	0.00	0.00	0.00	0.00	—	—
Hauling	—	0.00	0.00	0.00	0.00	0.00	—	—

3.5. Grading (2024) - Unmitigated

Criteria Pollutants (lb/day for daily, ton/yr for annual) and GHGs (lb/day for daily, MT/yr for annual)

Location	BCO2	NBCO2	CO2T	CH4	N2O	R	CO2e
Onsite	—	—	—	—	—	—	—
Daily, Summer (Max)	—	—	—	—	—	—	—
Daily, Winter (Max)	—	—	—	—	—	—	—
Off-Road Equipment	—	2,454	2,454	0.10	0.02	—	2,462
Dust From Material Movement	—	—	—	—	—	—	—
Onsite truck	—	0.00	0.00	0.00	0.00	0.00	—
Average Daily	—	—	—	—	—	—	—

Off-Road Equipment	—	53.8	53.8	< 0.005	< 0.005	—	54.0
Dust From Material Movement	—	—	—	—	—	—	—
Onsite truck	—	0.00	0.00	0.00	0.00	0.00	—
Annual	—	—	—	—	—	—	—
Off-Road Equipment	—	8.90	8.90	< 0.005	< 0.005	—	8.93
Dust From Material Movement	—	—	—	—	—	—	—
Onsite truck	—	0.00	0.00	0.00	0.00	0.00	—
Offsite	—	—	—	—	—	—	—
Daily, Summer (Max)	—	—	—	—	—	—	—
Daily, Winter (Max)	—	—	—	—	—	—	—
Worker	—	134	134	0.01	< 0.005	0.01	—
Vendor	—	0.00	0.00	0.00	0.00	0.00	—
Hauling	—	959	959	0.05	0.15	0.06	—
Average Daily	—	—	—	—	—	—	—
Worker	—	2.98	2.98	< 0.005	< 0.005	0.01	—
Vendor	—	0.00	0.00	0.00	0.00	0.00	—
Hauling	—	21.0	21.0	< 0.005	< 0.005	0.02	—
Annual	—	—	—	—	—	—	—
Worker	—	0.49	0.49	< 0.005	< 0.005	< 0.005	—
Vendor	—	0.00	0.00	0.00	0.00	0.00	—
Hauling	—	3.48	3.48	< 0.005	< 0.005	< 0.005	—

3.7. Building Construction (2024) - Unmitigated

Criteria Pollutants (lb/day for daily, ton/yr for annual) and GHGs (lb/day for daily, MT/yr for annual)

Location	BCO2	NBCO2	CO2T	CH4	N2O	R	CO2e
Onsite	—	—	—	—	—	—	—

Daily, Summer (Max)	—	—	—	—	—	—	—	—
Daily, Winter (Max)	—	—	—	—	—	—	—	—

4. Operations Emissions Details

4.1. Mobile Emissions by Land Use

4.1.1. Unmitigated

Mobile source emissions results are presented in Sections 2.6. No further detailed breakdown of emissions is available.

4.2. Energy

4.2.1. Electricity Emissions By Land Use - Unmitigated

Criteria Pollutants (lb/day for daily, ton/yr for annual) and GHGs (lb/day for daily, MT/yr for annual)

Land Use	BCO2	NBCO2	CO2T	CH4	N2O	R	CO2e
Daily, Summer (Max)	—	—	—	—	—	—	—
Junior High School	—	228	228	0.02	< 0.005	—	229
Parking Lot	—	11.9	11.9	< 0.005	< 0.005	—	12.0
Total	—	240	240	0.02	< 0.005	—	241
Daily, Winter (Max)	—	—	—	—	—	—	—

6. Climate Risk Detailed Report

6.1. Climate Risk Summary

Cal-Adapt midcentury 2040–2059 average projections for four hazards are reported below for your project location. These are under Representation Concentration Pathway (RCP) 8.5 which assumes GHG emissions will continue to rise strongly through 2050 and then plateau around 2100.

Climate Hazard	Result for Project Location	Unit
Temperature and Extreme Heat	13.9	annual days of extreme heat
Extreme Precipitation	5.80	annual days with precipitation above 20 mm
Sea Level Rise	0.00	meters of inundation depth
Wildfire	0.00	annual hectares burned

Temperature and Extreme Heat data are for grid cell in which your project are located. The projection is based on the 98th historical percentile of daily maximum/minimum temperatures from observed historical data (32 climate model ensemble from Cal-Adapt, 2040–2059 average under RCP 8.5). Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi. Extreme Precipitation data are for the grid cell in which your project are located. The threshold of 20 mm is equivalent to about $\frac{3}{4}$ an inch of rain, which would be light to moderate rainfall if received over a full day or heavy rain if received over a period of 2 to 4 hours. Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi. Sea Level Rise data are for the grid cell in which your project are located. The projections are from Radke et al. (2017), as reported in Cal-Adapt (2040–2059 average under RCP 8.5), and consider different increments of sea level rise coupled with extreme storm events. Users may select from four model simulations to view the range in potential inundation depth for the grid cell. The four simulations make different assumptions about expected rainfall and temperature are: Warmer/drier (HadGEM2-ES), Cooler/wetter (CNRM-CM5), Average conditions (CanESM2), Range of different rainfall and temperature possibilities (MIROC5). Each grid cell is 50 meters (m) by 50 m, or about 164 feet (ft) by 164 ft. Wildfire data are for the grid cell in which your project are located. The projections are from UC Davis, as reported in Cal-Adapt (2040–2059 average under RCP 8.5), and consider historical data of climate, vegetation, population density, and large (> 400 ha) fire history. Users may select from four model simulations to view the range in potential wildfire probabilities for the grid cell. The four simulations make different assumptions about expected rainfall and temperature are: Warmer/drier (HadGEM2-ES), Cooler/wetter (CNRM-CM5), Average conditions (CanESM2), Range of different rainfall and temperature possibilities (MIROC5). Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.

6.2. Initial Climate Risk Scores

Climate Hazard	Exposure Score	Sensitivity Score	Adaptive Capacity Score	Vulnerability Score
Temperature and Extreme Heat	1	0	0	N/A
Extreme Precipitation	N/A	N/A	N/A	N/A
Sea Level Rise	1	0	0	N/A
Wildfire	1	0	0	N/A
Flooding	N/A	N/A	N/A	N/A
Drought	N/A	N/A	N/A	N/A
Snowpack Reduction	N/A	N/A	N/A	N/A
Air Quality Degradation	0	0	0	N/A

The sensitivity score reflects the extent to which a project would be adversely affected by exposure to a climate hazard. Exposure is rated on a scale of 1 to 5, with a score of 5 representing the greatest exposure.

The adaptive capacity of a project refers to its ability to manage and reduce vulnerabilities from projected climate hazards. Adaptive capacity is rated on a scale of 1 to 5, with a score of 5 representing the greatest ability to adapt.

The overall vulnerability scores are calculated based on the potential impacts and adaptive capacity assessments for each hazard. Scores do not include implementation of climate risk reduction measures.

6.3. Adjusted Climate Risk Scores

Climate Hazard	Exposure Score	Sensitivity Score	Adaptive Capacity Score	Vulnerability Score
Temperature and Extreme Heat	1	1	1	2
Extreme Precipitation	N/A	N/A	N/A	N/A

Sea Level Rise	1	1	1	2
Wildfire	1	1	1	2
Flooding	N/A	N/A	N/A	N/A
Drought	N/A	N/A	N/A	N/A
Snowpack Reduction	N/A	N/A	N/A	N/A
Air Quality Degradation	1	1	1	2

The sensitivity score reflects the extent to which a project would be adversely affected by exposure to a climate hazard. Exposure is rated on a scale of 1 to 5, with a score of 5 representing the greatest exposure.

The adaptive capacity of a project refers to its ability to manage and reduce vulnerabilities from projected climate hazards. Adaptive capacity is rated on a scale of 1 to 5, with a score of 5 representing the greatest ability to adapt.

The overall vulnerability scores are calculated based on the potential impacts and adaptive capacity assessments for each hazard. Scores include implementation of climate risk reduction measures.

6.4. Climate Risk Reduction Measures

7. Health and Equity Details

7.1. CalEnviroScreen 4.0 Scores

The maximum CalEnviroScreen score is 100. A high score (i.e., greater than 50) reflects a higher pollution burden compared to other census tracts in the state.

Indicator	Result for Project Census Tract			
Exposure Indicators	—			
AQ-Ozone	57.0			
AQ-PM	88.0			
AQ-DPM	95.4			
Drinking Water	74.5			
Lead Risk Housing	95.1			
Pesticides	0.00			
Toxic Releases	84.8			
Traffic	96.4			
Effect Indicators	—			

CleanUp Sites	77.7
Groundwater	22.1
Haz Waste Facilities/Generators	89.7
Impaired Water Bodies	66.7

Executive Summary

Hazard Management Consulting, Inc. (HMC) is pleased to submit this Environmental Site Assessment (ESA) for the property referenced above in an unincorporated portion of Los Angeles County, California (Site) (Figures 1 & 2). This ESA was prepared to evaluate the Site for potential Recognized Environmental Conditions (RECs) that may be present and was conducted as part of your due diligence efforts to acquire the Site. It is our understanding you plan to acquire the Site for redevelopment into a school. The Site is located on the west side of S. Gage Ave. and comprises approximately 1.08 acres. The Site is relatively flat with an elevation of approximately 210 feet above mean sea level (msl) and a slight slope to the south. The Site consists of one two-story and one one-story building connected by a paved parking area. The Site is currently occupied by Oasis de Misericordia, which operates as a church.

The Site is located within the County of Los Angeles and is in an area zoned for Residential-3 (multiple-family housing) and is bound:

- on the north by residential structures;
- on the south by an apartment complex and residential structures, followed by Dennison St. and the I-5 Santa Ana Freeway;
- on the east by S. Gage Ave., followed by residential structures; and,
- on the west by S. Eastman Ave., followed by residential structures.

Key findings of this Phase I ESA are as follows:

- The Site and Site vicinity are located in an area of historic residential development. The Site was developed with single-family residences from at least 1923 until approximately 1928. From 1928 until 1952, the Site was observed as being undeveloped vacant land. The Site was developed with the existing buildings in 1953 and has operated as various churches until the present. The Site vicinity has been developed with single-family residences and apartment buildings. There were no RECs found from the historic use of the Site;
- The Site is located on the west side of S. Gage Ave. and consists of a one-story building and two-story building with a paved parking lot that adjoins the two buildings. The Site is currently occupied by Oasis de Misericordia, which operates as a church. The Site is located in an area that is developed for residential uses and is bordered in all directions by residential structures. The parking area is paved with asphalt and was observed to be in poor condition. Light oil staining was observed throughout the parking area.

The northern building on-Site was observed as a two-story building. The first floor of this building was observed to have a cafeteria area, kitchen, two restrooms with showers, storage closets, and a church. The cafeteria area is occupied with tables and chairs and a window and door that leads to the kitchen. The kitchen consists of four fridges, two gas grills, two sinks, and cabinet storage for dry food goods and janitorial supplies. The church area consists of rows of pews, an altar, and electrical sound equipment. The second floor of this buildings consists of office spaces and living quarters. The living quarters are no longer occupied and are currently used for storage of donated clothing and furniture. The majority of the office spaces were observed to be used for storage of donated goods, files, and sound equipment. There were no hazardous materials observed in this building with the exception of household cleaning products.

The southern building on-Site was observed as a one-story building. This building was observed to have a kitchen, two restrooms, a greeting area, and a church. The kitchen was observed to have gas stoves, three fridges, and cabinet storage for dry food goods, as well as storage of approximately 8 5-gallon propane tanks. The propane tanks are used for outdoor grilling during events at the church. The church area consists of an altar, rows of fold-up chairs, and electrical sound equipment. Hazardous materials observed in this building include the propane tanks and household cleaning products;

- The Site is located in an area that has historically had residential and commercial activity and numerous facilities have experienced releases though none were close enough or in the correct orientation to be considered a direct threat or REC to the Site with the exception of the Exide Facility. The Exide Technologies Facility is located nearby and operated as a battery recycling and production facility. As part of their operations, lead was released into the air and has been found to have deposited onto surface soil in the downwind area. Arcadis and EFI Global conducted soil x-ray fluorescence (XRF) scanning and sampling to evaluate lead concentrations in soil on behalf of the DTSC. The sampling event occurred on April 6, 2017, which consisted of 20 soil XRF scan samples and 20 soil samples for laboratory analysis. There were no detections of lead in any of the soil XRF scan samples. Lead was detected in all soil samples at concentrations ranging from 12.9 mg/kg to 352 mg/kg. Nine of the soil samples detected lead above the residential lead screening level of 80 mg/kg. The presence of lead in soil at concentrations above the residential screening level would be considered an REC; and,
- The Site was developed with the existing buildings in 1953. Given the age of the buildings on Site, asbestos containing materials are likely to be present in building materials.

Conclusions

HMC conducted a Phase I ESA for the Site in accordance with the ASTM E1527-13 guidelines. Based on this investigation, HMC found the following:

- There were no RECs found as a part of this assessment with the exception of the elevated concentrations of lead found in surface soils at the Site as a result of the release of lead into the air from the former Exide Technologies Facility.
- There were no HRECs or CRECs found as a part of this assessment.

While not an REC per ASTM definitions, based on the construction dates of the structures at the Site, it is likely that asbestos containing materials are present.

Recommendations

Given the findings of this ESA we give the following recommendations:

- During future development of the Site, a Soil Management Plan should be developed to guide the overall grading effort. Given the limited quantity of soil known to contain elevated concentrations of lead, consideration should be given to the removal and disposal of the lead impacted soil at the Site.
- An asbestos survey be conducted for the structures on Site prior to any demolition activities.

PHASE I ENVIRONMENTAL SITE ASSESSMENT

1059 South Gage Avenue, Los Angeles, CA 90023

1. INTRODUCTION

Hazard Management Consulting, Inc. (HMC) is pleased to submit this Environmental Site Assessment (ESA) for the property referenced above in an unincorporated portion of Los Angeles, County California (Site) (Figures 1 & 2). This ESA was prepared to evaluate the Site for potential Recognized Environmental Conditions (RECs) that may be present and was conducted as part of your due diligence efforts to acquire the Site. It is our understanding you plan to acquire the Site for redevelopment into a school. The Site is located on the west side of S. Gage Ave. and comprises approximately 1.08 acres. The Site is relatively flat with an elevation of approximately 210 feet above mean sea level (msl) and a slight slope to the south. The Site consists of one two-story and one one-story building connected by a paved parking area. The Site is currently occupied by Oasis de Misericordia, which operates as a church.

1.1. Objective

In accordance with the ASTM E 1527-13 Standard Practice for Environmental Site Assessments, the objective of the ESA is to assess, to the extent feasible under the standard, the likelihood that Recognized Environmental Conditions (RECs), as defined by ASTM, are present at the Site.

A Recognized Environmental Condition “means the presence or likely presence of any hazardous substances or petroleum products on a property under conditions that indicate an existing release, a past release, or a material threat of a release of any hazardous substances or petroleum products into structures on the property or into the ground, groundwater, or surface water of the property. The term is not intended to include *de minimis* conditions that generally do not present a material risk of harm to public health or the environment and that generally would not be the subject of an enforcement action if brought to the attention of appropriate governmental agencies” (ASTM Standard Practice E1527-13). Performance of a Phase I ESA is intended to reduce, but not eliminate, uncertainty regarding the potential for Recognized Environmental Conditions in connection with a property, within reasonable limits of time and cost.

All Appropriate Inquiries (AAI) as defined in the Final Rule (40 CFR, Part 312), must be conducted by persons seeking the landowner liability protections under the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA) prior to acquiring a property or seeking or receiving federal brownfields grants under the authorities of CERCLA. The purpose of AAI, as defined in the AAI Final Rule, is to identify releases and threatened releases of hazardous substances, which cause or threaten to cause the incurrence of response costs. The U.S.

Environmental Protection Agency (EPA) has stated that ASTM Standard E-1527-13 is consistent with the Standards and Practices for AAI, and is compliant with the statutory criteria for AAI.

1.2. Scope Of Services, Methodology and Limitations

The findings of this ESA must be viewed in recognition of certain limiting conditions. The scope of work commissioned for this project does not represent an exhaustive study, but rather a reasonable inquiry, consistent with good commercial practice, in general accordance with ASTM Practice E-1527-13.

The scope of work for this ESA included the following activities:

- A site walk to document the current condition of the Site and neighboring facilities.
- Review of a regulatory database report.
- Interviews with the current Owner and purchaser of the Site.
- Review of historical references including aerial photographs, city directories, Sanborn Maps and topographic maps.
- On-line research and file review requests concerning the Site and suspect off site sources at the State of California Regional Water Quality Control Board (RWQCB) and Department of Toxic Substances Control (DTSC) websites.
- Review of prior reports prepared for the Site.
- Review of files maintained by the County of Los Angeles.
- Preparation of this report of findings.

In the course of this assessment, HMC has relied on information provided by outside parties, such as regulatory agencies, previous reports and interview sources. For the purpose of this assessment, such third-party information is assumed to be accurate unless contradictory evidence is noted, and HMC does not express or imply any warranty regarding information provided by third-party sources.

2. SITE DESCRIPTION

2.1. Site Setting

The Site is located on the west side of S. Gage Ave. and comprises approximately 1.08 acres. The Site is relatively flat with an elevation of approximately 210 feet above mean sea level (msl) and

a slight slope to the south. The Site is located within the County of Los Angeles and is in an area zoned for Residential-3 (multiple-family housing) and is bound by:

- on the north by residential structures;
- on the south by an apartment complex and residential structures, followed by Dennison St. and the I-5 Santa Ana Freeway;
- on the east by S. Gage Ave., followed by residential structures; and,
- on the west by S. Eastman Ave., followed by residential structures.

Southern California Edison Company (SCE) provides electrical services to the Site. Water is provided by California Water Service. Natural gas is provided to the Site by The Gas Company.

2.2. Regional Geology and Hydrogeology

The Site is located in the Central Subbasin which occupies a large portion of the southeastern part of the Coastal Plain of Los Angeles Groundwater Basin. This subbasin is commonly referred to as the “Central Basin” and is bounded on the north by a surface divide called the La Brea high, and on the northeast and east by emergent less permeable Tertiary rocks of the Elysian, Repetto, Merced and Puente Hills. The southeast boundary between Central Basin and Orange County Groundwater Basin roughly follows Coyote Creek, which is a regional drainage province boundary. The southwest boundary is formed by the Newport Inglewood fault system and the associated folded rocks of the Newport Inglewood uplift. The Los Angeles and San Gabriel Rivers drain inland basins and pass across the surface of the Central Basin on their way to the Pacific Ocean. Average precipitation throughout the subbasin ranges from 11 to 13 inches with an average of around 12 inches.

Throughout the Central Basin, groundwater occurs in Holocene and Pleistocene age sediments at relatively shallow depths. The Central Basin is historically divided into forebay and pressure areas. The Los Angeles forebay is located in the northern part of the Central Basin where the Los Angeles River enters the Central Basin through the Los Angeles Narrows from the San Fernando Groundwater Basin. The Montebello forebay extends southward from the Whittier Narrows where the San Gabriel River encounters the Central Basin and is the most important area of recharge in the subbasin. Both forebays have unconfined groundwater conditions and relatively interconnected aquifers that extend up to 1,600 feet deep to provide recharge to the aquifer system of this subbasin (DWR 1961). The Whittier area extends from the Puente Hills south and southwest to the axis of the Santa Fe Springs-Coyote Hills uplift and contains up to 1,000 feet of freshwater-bearing sediments. The Central Basin pressure area is the largest of the four divisions and contains many aquifers of permeable sands and gravels separated by semi-permeable to impermeable sandy clay to clay, which extend to about 2,200 feet below the surface (DWR 1961). The estimated average specific yield of these sediments is around 18 percent. Throughout much

of the subbasin, the aquifers are confined, but areas with semipermeable aquicludes allow some interaction between the aquifers (DWR 1961).

Groundwater in this area is estimated to be approximately 120 feet below surface with a general south southwest flow direction. However perched groundwater may be encountered at shallower depths.

3. USER PROVIDED INFORMATION

The User of this report is Educational Facilities Group, Inc. (EFG) and their investors and lenders. We were able to interview Mrs. Kathy Dominguez of EFG regarding their knowledge and information regarding the Site. Mrs. Dominguez indicated that her firm had no prior knowledge or unique information regarding the Site and was unaware of any litigation, or remedial actions at the Site or any Land Use Restrictions. Mrs. Dominguez indicated that previous reports were not prepared for the Site. Mrs. Dominguez indicated that they are paying fair market value for the Site.

3.1. Title Records

A Preliminary Title report prepared by Ticor Title dated May 10, 2022, was provided to HMC for review. According to the report, the Site was vested in Oasis of Mercy, a California Corporation. No environmental-related issues pertaining to the Site were included in the report.

3.2. Owner/Occupant Knowledge

We were able to interview the owner of the Mr. Rigo F. Santa Cruz, CEO of Oasis of Mercy Church. Mr. Santa Cruz provided information regarding utilities provided to the Site, as well as the historical uses of the Site. Mr. Santa Cruz indicated that the Site has been historically operated as a church since at least the 1960's. Mr. Santa Cruz indicated that he had no prior knowledge or unique information regarding the Site and was unaware of any litigation, or remedial actions at the Site or any Land Use Restrictions. Mr. Santa Cruz indicated that previous reports were not prepared for the Site.

3.3. Environmental Liens or Activity and Use Limitations

We are not aware of any land use restrictions regarding the Site.

4. SITE USE AND HISTORY

Past usage of the subject site was assessed through a review of historical aerial photographs, topographic maps and an EDR search of city directories and prior reports. Review of the Sanborn Map collection indicates that Sanborn Maps were produced for the Site. We also reviewed previous environmental assessments as described in Section 5.

4.1. Aerial Photograph Review

Aerial photographs covering the Site were obtained from Environmental Data Resources, Inc. (EDR). Photographs were available from the period 1923 through 2016. Copies of the aerial photographs are included in Appendix B. A summary of the observations noted from the aerial photography is as follows:

- | | |
|-----------|---|
| 1923 | The photograph from this period shows the Site as being developed with single-family residential structures. The Site vicinity is observed as being developed with residential structures and vacant land. |
| 1928-1952 | The photographs from this time period show the Site as vacant undeveloped land. The Site vicinity is developed with residential structures. The I-5 freeway was constructed south of the Site between 1948 and 1952. |
| 1964-2016 | The photographs from this time period show the Site as being developed with the existing two buildings on-Site and the adjoining parking lot. The Site vicinity remains in use for residential purposes and no significant changes were observed. |

4.2. Topographic Maps

Historical topographic maps were also reviewed as part of this effort and aided in interpreting the overall site history. No specific information was obtained beyond that seen in the aerial photographs for the Site.

4.3. Sanborn Maps

Sanborn maps are maps that were created for the insurance industry to document site activities in metropolitan areas of the country and were used in underwriting. They often times contain detailed information about a site. While they were prepared for insurance underwriting and were not environmental maps per se, they often times contain information that is useful in evaluating the historical use of a Site. No specific information was obtained beyond that seen in the aerial photographs for the Site.

4.4. EDR City Directory Review

EDR performed a search of the City Directory records for the Site address at approximately five-year intervals. The City Directory lists United Moloken Christian Association, a Christian church, as the occupant in 1976, and Charisma Mission, a catholic church, as the occupant from 1986 to 2009.

4.5. Los Angeles County Department of Public Works

A review of the Los Angeles County Department of Public Works (LACDPW) Planning Department files indicated that the Site is located in Los Angeles County, in an area zoned for multi-family residences (R-3). Records show that the Site was developed with the existing buildings in 1953. The LACDPW maintained records including building permits for the connection of sewage disposal, electrical upgrades, and a back flow prevention device. There were no records of subsurface features at the Site and no records pertaining to environmental concerns.

4.6. Summary

The Site and Site vicinity are located in an area of historic residential development. The Site was developed with single-family residences from at least 1923 until approximately 1928. From 1928 until 1952, the Site was observed as being undeveloped vacant land. The Site was developed with the existing buildings in 1953 and has operated as various churches until the present. The Site vicinity has been developed with single-family residences and apartment buildings. There were no RECs found from the historic use of the Site.

5. PRIOR INVESTIGATIONS

Previous Environmental Site Assessments were not prepared for the Site.

6. SITE RECONNAISSANCE

Mr. Gage Costales of HMC conducted a Site and Site Vicinity reconnaissance on August 26, 2022, in order to identify visible evidence of RECs of concern at the Site and to assess possible conditions off Site that may impact the Site. Mr. Costales was unaccompanied during the Site reconnaissance.

The Site is located on the west side of S. Gage Ave. and consists of a one-story building and two-story building with a paved parking lot that adjoins the two buildings. The Site is currently occupied by Oasis de Misericordia, which operates as a church. The Site is located in an area that is developed for residential uses and is bordered in all directions by residential structures. The parking area is paved with asphalt and was observed to be in poor condition. Light oil staining was observed throughout the parking area.

The northern building on-Site was observed as a two-story building. The first floor of this building was observed to have a cafeteria area, kitchen, two restrooms with showers, storage closets, and a church. The cafeteria area is occupied with tables and chairs and a window and door that leads to the kitchen. The kitchen consists of four fridges, two gas grills, two sinks, and cabinet storage for dry food goods and janitorial supplies. The church area consists of rows of pews, an altar, and

electrical sound equipment. The second floor of this buildings consists of office spaces and living quarters. The living quarters are no longer occupied and are currently used for storage of donated clothing and furniture. The majority of the office spaces were observed to be used for storage of donated goods, files, and sound equipment. There were no hazardous materials observed in this building with the exception of household cleaning products.

The southern building on-Site was observed as a one-story building. This building was observed to have a kitchen, two restrooms, a greeting area, and a church. The kitchen was observed to have gas stoves, three fridges, and cabinet storage for dry food goods, as well as storage of approximately 8 5-gallon propane tanks. The propane tanks are used for outdoor grilling during events at the church. The church area consists of an altar, rows of fold-up chairs, and electrical sound equipment. Hazardous materials observed in this building include the propane tanks and household cleaning products.

Selected photographs illustrating the Site and nearby off-site conditions are included in Appendix A. Summaries of the Site and observations are detailed below.

Description and Use of Site:	The Site is currently occupied by Oasis de Misericordia, which operates as a church. The Site consists of a one-story and two-story building. The buildings are developed with church areas, kitchens, a cafeteria, office space, and living quarters. The two buildings are adjoined by an asphalt-paved parking area.
Underground and Aboveground Storage Tanks:	There was no evidence of USTs or ASTs observed at the Site.
Hazardous Materials, Hazardous Wastes or Petroleum Products:	Hazardous materials observed at the Site include 8 5-gallon propane tanks and household cleaning products.
Drains, Drain lines and Sumps:	There were no drains, drain lines, or sumps observed at the Site.
Pits, Ponds, Lagoons	No ponds, pits or lagoons were observed at the Site.
Industrial Wastewater:	Industrial wastewater is not produced at the Site.
Stains:	Light oil staining was observed throughout the parking area of the Site. The oil staining would not rise to the level of an REC.
Wells:	There are currently no groundwater wells, monitoring wells or oil/gas wells were identified at the Site.

Transformers:	There were no transformers observed at the Site.
Other Features:	No other features of concern were noted at the Site.

The light oil staining observed in the parking area of the Site would be considered a sign of poor housekeeping and would not rise to the level of an REC. There were no RECs noted from the current use of the Site.

6.1. Site Vicinity

The Site is located within the County of Los Angeles and is in an area zoned for Residential-3 (multiple-family housing) and is bound:

- on the north by residential structures;
- on the south by an apartment complex and residential structures, followed by Dennison St. and the I-5 Santa Ana Freeway;
- on the east by S. Gage Ave., followed by residential structures; and,
- on the west by S. Eastman Ave., followed by residential structures.

The Site vicinity was observed to be used for residential use and no nearby properties were identified that appeared to pose a concern to the Site from a visual basis.

7. REGULATORY AGENCY DATABASE RESEARCH

Regulatory agency database information was obtained from a standard radius Site Assessment (ASTM) report by Environmental Data Resources, Inc. The center of the search was in the approximate center of the Site. Search distances for specific databases were one-quarter to one mile as specified in the ASTM 1527-13 standard. The database search includes over 70 federal, state, local, and proprietary records.

A complete copy of this report is included in Appendix B.

7.1. Database Records Concerning the Target Property

The Site is listed in the HWTS database. According to the Department of Toxic Substances Control (DTSC) Hazardous Waste Tracking System (HWTS) database, the Site is listed as having an inactive generator permit. The permit was issued to Charisma Missions in April of 1995 and expired in July of 1998. There are no records of waste manifests for this Site. There are no records of spills or releases of hazardous substances at the Site.

7.2. Database Records Concerning the Site Vicinity

A review of the EDR Radius Map database search was conducted to assess potential off-Site facilities that could be contributing hazardous substances to the Site and represent an REC. In review of the many entries on the database, we reviewed the following factors that affect the ability of a facility to affect the Site:

- Distance from the Site,
- Location from the Site with regard to the direction of groundwater flow,
- Nature of the release and whether the release has affected soil, groundwater or both,
- Status of the investigation (e.g. open or closed)

Thrifty Oil Station #032, 3981 E. Whittier Blvd. (992 ft N)

The Thrifty Oil Station site is located 992 ft. north of the Site and is listed in the LUST, CORTESE, CERS, HIST CORTESE, HWTS, HIST UST, and HAZNET databases. The Site was a former gas station that was developed with three 12,000-gallon gasoline USTs. From 1986 to 1988, soil borings were collected from the site to a depth of up to 50 feet bgs. Soil results detected elevated levels of TPHg at concentrations as high as 13,000 mg/kg. The three USTs and associated piping were removed from the Site in October of 1988 and approximately 470 tons of petroleum impacted soils were removed. From October 1991 to June 1997, soil samples were collected at the Site at depths of up to 80 feet bgs. Soil test results detected maximum concentrations of TPHg at 7,000 mg/kg. In September of 2000, three 10,000-gallon gasoline USTs and associated piping were removed from the Site. Confirmation samples were collected near the dispensers and beneath the tanks and soil sample results detected maximum concentrations of TPHg at 390 mg/kg. Groundwater was not affected by the release of gasoline at the Site. The LARWQCB issued a “No Further Action” letter to the site on February 9, 2010, and the LUST case was determined closed as of February 24, 2010.

Salgado Automotive, 3975 E. Whittier Blvd. (1060 ft. N)

Salgado Automotive is located 1060 feet north of the Site and is listed in the CERS HAZ WASTE, CERS, HWTS, RCRA-SQG, FINDS, ECHO, HAZNET, and Los Angeles Co. HMS databases. The site is listed as being issued notices of violation for failure to submit a business plan, failure to obtain an EPA ID number, and failure to properly label hazardous materials containers. These notices of violation have since returned to compliance. There are no records of spills or releases of hazardous materials at the site.

East Los Angeles Doctors Hospital, 4060 E. Whittier Blvd. (985 ft. N)

The East Los Angeles Doctors Hospital is located 985 feet north of the Site and is listed in the HWTS, CERS HAZ WASTE, HAZNET, and CERS databases. This site is listed as a hazardous waste generator. The site is listed as being issued notices of violation for failure to submit a business plan, failure to maintain copies of hazardous waste manifests for a minimum of three years, failure to obtain an EPA ID number, and failure to properly label hazardous materials containers. These notices of violation have since returned to compliance. There are no records of spills or releases of hazardous materials at the site.

Whittier Place Apartments II, 4101 E. Whittier Blvd. (1328 ft. NE)

Whittier Place Apartments is located 1328 feet northwest of the Site and is listed in the HWTS, LUST, and Los Angeles Co. HMS databases. The property is a commercial parcel where auto repair had previously been conducted. Three previously unidentified USTs were encountered during the demolition and construction of the site. Two 6,000-gallon gasoline USTs and one 300-gallon oil UST were removed from the Site. In October 2020, soil sampling was conducted after the removal of the USTs, and results of the soil sampling revealed no detectable concentrations of TPHg or VOCs. One sample had detectable concentrations of TRPH with 158 mg/kg, and one sample had detectable concentrations of lead with 1.08 mg/kg. Based on the results of the sampling, a “No Further Action” letter was issued to the site and the case was closed as of September 23, 2022.

Exide Technologies, Inc.

Exide Technologies, Inc. (Exide) is a former battery recycling facility. Lead was released into the air from the former Exide Facility as a part of their operations and may have been deposited onto surface soil. Thus, lead attributed to aerial and other fugitive releases from the former Exide Facility is a chemical of concern (COC) in soil. Low levels of other chemicals associated with battery recycling, or even naturally occurring metals, may also be present in the soil, including arsenic, zinc, antimony, copper, and cadmium. Lead may have also resulted from deposition from leaded fuel combustion (e.g., from gasoline combustion prior to phase out of leaded gasoline) and from lead-based paint that was historically used to coat many of the residences, nearby buildings and structures, as well as historical industrial operations at other area facilities. The DTSC is conducting ongoing investigation and has implemented a cleanup plan for the Preliminary Investigation Area (PIA). The Project is being undertaken by DTSC under the authority and funding granted by AB 118 and SB 93. DTSC has prepared a Cleanup Plan for the cleanup of lead-impacted soil in communities surrounding the former Exide Facility, located in Vernon, California, also known as the PIA. The Cleanup Plan addresses lead-impacted soils in the PIA that resulted from the deposition of lead dust emanating from the Facility’s past manufacturing activities. This is the latest and most significant step that DTSC has taken to protect the people who live in the communities around

the former Exide Facility, especially sensitive populations. DTSC has worked with and listened to the public in affected communities, local and federal government officials, public health officials, cleanup experts for other lead-impacted residential properties across the country, and others in implementing protections for people in these communities. DTSC used its experience, legal authorities, and input from the public and others in deciding to shut down the former Exide Facility, ordering Exide to cleanup residential areas closest to its facility, and directing Exide to conduct additional sampling in areas further away from the facility to support cleanup decisions. About 250 residential properties have already been cleaned up and more than 8,000 properties have been sampled as of May 31, 2017. With the \$176.6 million in state funds requested by Governor Brown and provided by the legislature to DTSC for this Project, the department can now move forward with issuing the Final Cleanup Plan as the next step in expediting the cleanup of lead-impacted soil on sensitive land use properties around the former Exide facility.

Arcadis and EFI Global conducted soil x-ray fluorescence (XRF) scanning and sampling to evaluate lead concentrations in soil on behalf of the DTSC. The sampling event occurred on April 6, 2017, which consisted of 20 soil XRF scan samples and 20 soil samples for laboratory analysis. There were no detections of lead in any of the soil XRF scan samples. Lead was detected in all soil samples at concentrations ranging from 12.9 mg/kg to 352 mg/kg. Nine of the soil samples were detected lead above the residential lead screening level of 80 mg/kg. The presence of lead in soil at concentrations above the residential screening level would be considered an REC.

While there are numerous facilities located within the Site vicinity that use / generate hazardous substances, and experienced releases, there were none that posed a direct or specific risk to the Site, and none rose to the level of an REC with the exception of the Exide Facility. The Exide facility release of lead into the air has contributed to elevated levels of lead in soil at the Site and would be considered an REC in our opinion.

7.3. Orphan Sites

Orphan Sites are those properties that are included on various agency lists, but for which the records do not have sufficient address information for the database program to map the site. None of the addresses listed were close enough to be of concern.

7.4. Summary of Off-Site Issues

The Site is located in an area that has historically had residential and commercial activity and numerous facilities have experienced releases though none were close enough or in the correct orientation to be considered a direct threat or REC to the Site with the exception of the Exide Facility. The Exide Technologies Facility is located nearby and operated as a battery recycling and production facility. As part of their operations, lead was released into the air and has been found to have deposited onto surface soil in the downwind area. Arcadis and EFI Global conducted soil x-ray fluorescence (XRF) scanning and sampling to evaluate lead concentrations in soil on behalf

of the DTSC. The sampling event occurred on April 6, 2017, which consisted of 20 soil XRF scan samples and 20 soil samples for laboratory analysis. There were no detections of lead in any of the soil XRF scan samples. Lead was detected in all soil samples at concentrations ranging from 12.9 mg/kg to 352 mg/kg. Nine of the soil samples were detected lead above the residential lead screening level of 80 mg/kg. The presence of lead in soil at concentrations above the residential screening level would be considered an REC.

7.5. Tribal Records

The Site is not located in a tribal area so there were no tribal records to review.

7.6. Oil and Gas Wells

The State of California Department of Conservation, Division of Oil, Gas, and Geothermal Resources online mapping website was reviewed for the location of active, plugged, or abandoned oil wells in the vicinity of the Site. There was no record of oil wells on Site or in the immediate Site vicinity.

7.7. State of California

The State of California Geotracker and EnviroStor websites were also reviewed for information on potential on or off-site facilities that are being investigated or remediated under either RWQCB or DTSC oversight. The Site was not listed in the Geotracker and EnviroStor databases. There were no other listings present in these databases that were not presented in the Radius Map reviewed as part of this assessment.

7.8. Los Angeles County Fire Department

A review of the Los Angeles County Fire Department records has revealed there are no records for the Site.

7.9. Department of Toxic Substances Control

A review of the Department of Toxic Substances Control (DTSC) Hazardous Waste Tracking System (HWTS) database, the Site is listed as having an inactive generator permit. The permit was issued to Charisma Missions in April of 1995 and expired in July of 1998. There are no records of waste manifests for this Site. There are no records of spills or releases of hazardous substances at the Site.

The DTSC provided records for the Site relating to the Exide Technologies, Inc. facility. Exide Technologies, Inc. (Exide) is a former battery recycling facility. Lead was released into the air from the former Exide Facility as a part of their operations and may have been deposited onto surface soil. Thus, lead attributed to aerial and other fugitive releases from the former Exide Facility is a chemical of concern (COC) in soil. The DTSC is conducting ongoing investigation and has

implemented a cleanup plan for the Preliminary Investigation Area (PIA). The Project is being undertaken by DTSC under the authority and funding granted by AB 118 and SB 93. DTSC has prepared a Cleanup Plan for the cleanup of lead-impacted soil in communities surrounding the former Exide Facility, located in Vernon, California, also known as the PIA. Arcadis and EFI Global conducted soil x-ray fluorescence (XRF) scanning and sampling to evaluate lead concentrations in soil on behalf of the DTSC. The sampling event occurred on April 6, 2017, which consisted of 20 soil XRF scan samples and 20 soil samples for laboratory analysis. There were no detections of lead in any of the soil XRF scan samples. Lead was detected in all soil samples at concentrations ranging from 12.9 mg/kg to 352 mg/kg. Nine of the soil samples were detected lead above the residential lead screening level of 80 mg/kg. The presence of lead in soil at concentrations above the residential screening level would be considered an REC.

8. VAPOR INTRUSION, ASBESTOS AND OTHER MATERIALS

8.1. Vapor Intrusion

Based on the findings of this ESA, we believe that the likelihood of a vapor intrusion concern at the Site is low.

8.2. Asbestos

The Site was developed with the existing buildings in 1953. Given the age of the buildings on Site, asbestos containing materials are likely to be present in building materials.

8.3. Radon

The Site is listed as being located in Zone 2 with regards to radon indicating that radon maybe present at concentrations less than 4 pico curies / liter which is below EPA's level of concern.

8.4. Mold

No evidence of water damage or mold growth was observed.

9. SUMMARY OF FINDINGS

Key findings of this Phase I ESA are as follows:

- The Site and Site vicinity are located in an area of historic residential development. The Site was developed with single-family residences from at least 1923 until approximately 1928. From 1928 until 1952, the Site was observed as being undeveloped vacant land. The Site was developed with the existing buildings in 1953 and has operated as various churches until the present. The Site vicinity has been developed with single-family residences and apartment buildings. There were no RECs found from the historic use of

the Site;

- The Site is located on the west side of S. Gage Ave. and consists of a one-story building and two-story building with a paved parking lot that adjoins the two buildings. The Site is currently occupied by Oasis de Misericordia, which operates as a church. The Site is located in an area that is developed for residential uses and is bordered in all directions by residential structures. The parking area is paved with asphalt and was observed to be in poor condition. Light oil staining was observed throughout the parking area.

The northern building on-Site was observed as a two-story building. The first floor of this building was observed to have a cafeteria area, kitchen, two restrooms with showers, storage closets, and a church. The cafeteria area is occupied with tables and chairs and a window and door that leads to the kitchen. The kitchen consists of four fridges, two gas grills, two sinks, and cabinet storage for dry food goods and janitorial supplies. The church area consists of rows of pews, an altar, and electrical sound equipment. The second floor of this buildings consists of office spaces and living quarters. The living quarters are no longer occupied and are currently used for storage of donated clothing and furniture. The majority of the office spaces were observed to be used for storage of donated goods, files, and sound equipment. There were no hazardous materials observed in this building with the exception of household cleaning products.

The southern building on-Site was observed as a one-story building. This building was observed to have a kitchen, two restrooms, a greeting area, and a church. The kitchen was observed to have gas stoves, three fridges, and cabinet storage for dry food goods, as well as storage of approximately 8 5-gallon propane tanks. The propane tanks are used for outdoor grilling during events at the church. The church area consists of an altar, rows of fold-up chairs, and electrical sound equipment. Hazardous materials observed in this building include the propane tanks and household cleaning products;

- The Site is located in an area that has historically had residential and commercial activity and numerous facilities have experienced releases though none were close enough or in the correct orientation to be considered a direct threat or REC to the Site with the exception of the Exide Facility. The Exide Technologies Facility is located nearby and operated as a battery recycling and production facility. As part of their operations, lead was released into the air and has been found to have deposited onto surface soil in the downwind area. Arcadis and EFI Global conducted soil x-ray fluorescence (XRF) scanning and sampling to evaluate lead concentrations in soil on behalf of the DTSC. The sampling event occurred on April 6, 2017, which consisted of 20 soil XRF scan samples and 20 soil samples for laboratory analysis. There were no detections of lead in any of the soil XRF scan samples. Lead was detected in all soil samples at concentrations ranging from 12.9

mg/kg to 352 mg/kg. Nine of the soil samples were detected lead above the residential lead screening level of 80 mg/kg. The presence of lead in soil at concentrations above the residential screening level would be considered an REC; and,

- The Site was developed with the existing buildings in 1953. Given the age of the buildings on Site, asbestos containing materials are likely to be present in building materials.

10. DATA GAPS

We did not encounter any data gaps as a part of this assessment.

11. CONCLUSIONS

HMC conducted a Phase I ESA for the Site in accordance with the ASTM E1527-13 guidelines. Based on this investigation, HMC found the following:

- There were no RECs found as a part of this assessment with the exception of the elevated concentrations of lead found in surface soils at the Site as a result of the release of lead into the air from the former Exide Technologies Facility.
- There were no HRECs or CRECs found as a part of this assessment.

While not an REC per ASTM definitions, based on the construction dates of the structures at the Site, it is likely that asbestos containing materials are present.

12. RECOMMENDATIONS

Given the findings of this ESA we give the following recommendations:

- During future development of the Site, a Soil Management Plan should be developed to guide the overall grading effort. Given the limited quantity of soil known to contain elevated concentrations of lead, consideration should be given to the removal and disposal of the lead impacted soil at the Site.
- An asbestos survey be conducted for the structures on Site prior to any demolition activities.

13. QUALIFICATIONS

Mark S. Cousineau, NREP

Mr. Mark S. Cousineau, principal with HMC, has a diverse professional background in environmental management, which includes working as a generator, regulator, consultant, and corporate advisor in hazardous waste and other environmental issues.

Mr. Cousineau's technical background is focused in the area of overseeing large-scale environmental investigations and regulatory compliance management related to site assessments, subsurface investigations, facility surveys, and site remediation. To projects such as these, Mr. Cousineau brings expertise in evaluating complex sites and developing solutions to solve the technical, operational, regulatory, financial and timing issues. In addition, Mr. Cousineau routinely assists clients in developing environmental business plans for single assets and multi-site real estate portfolios and has designed and implemented several tenant audit programs involving the proactive management of environmental risk caused by on-site commercial and industrial tenant activities.

Mr. Cousineau has provided litigation support and has served, as a court-appointed expert on environmental issues, is a member of the National Registry of Environmental Professionals, holds a M.S. in Environmental Sciences from California State University Fullerton and a B.S. in Chemistry from University California San Diego.

As signatory to this report, I declare that, to the best of my professional knowledge and belief, I meet the definition of Environmental Professional as defined in § 312.10 of this part. I have the specific qualifications based on education, training, and experience to assess the property of the nature, history, and setting of the subject property. I have developed and performed all appropriate inquiries in conformance with the standards and practices set forth in 40 CFR Part 312.”

A handwritten signature in black ink, appearing to read 'Mark S. Cousineau', written in a cursive style.

Mark Cousineau, NREP
Principal

The Sanborn Library has been searched by EDR and maps covering the target property location as provided by Hazard Management Consulting were identified for the years listed below. The Sanborn Library is the largest, most complete collection of fire insurance maps. The collection includes maps from Sanborn, Bromley, Perris & Browne, Hopkins, Barlow, and others. Only Environmental Data Resources Inc. (EDR) is authorized to grant rights for commercial reproduction of maps by the Sanborn Library LLC, the copyright holder for the collection. Results can be authenticated by visiting www.edrnet.com/sanborn.

The Sanborn Library is continually enhanced with newly identified map archives. This report accesses all maps in the collection as of the day this report was generated.

Contact: Gage Costales

EDR Topographic Map Library has been searched by EDR and maps covering the target property location as provided by Hazard Management Consulting were identified for the years listed below. EDR's Historical Topo Map Report is designed to assist professionals in evaluating potential liability on a target property resulting from past activities. EDR's Historical Topo Map Report includes a search of a collection of public and private color historical topographic maps, dating back to the late 1800s.

Search Results:**Coordinates:**

Environmental Data Resources, Inc. (EDR) Aerial Photo Decade Package is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's professional researchers provide digitally reproduced historical aerial photographs, and when available, provide one photo per decade.

EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E1527-21), the ASTM Standard Practice for Environmental Site Assessments for Forestland or Rural Property (E 2247-16), the ASTM Standard Practice for Limited Environmental Due Diligence: Transaction Screen Process (E 1528-14) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.

Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

EXECUTIVE SUMMARY

STANDARD ENVIRONMENTAL RECORDS

Lists of Federal RCRA facilities undergoing Corrective Action

CORRACTS: CORRACTS is a list of handlers with RCRA Corrective Action Activity. This report shows which nationally-defined corrective action core events have occurred for every handler that has had corrective action activity.

A review of the CORRACTS list, as provided by EDR, and dated 06/20/2022 has revealed that there are 7 CORRACTS sites within approximately 1 mile of the target property.

Lists of Federal RCRA generators

RCRA-LQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

A review of the RCRA-LQG list, as provided by EDR, and dated 06/20/2022 has revealed that there are 4 RCRA-LQG sites within approximately 0.25 miles of the target property.

RCRA-SQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

A review of the RCRA-SQG list, as provided by EDR, and dated 06/20/2022 has revealed that there are 3 RCRA-SQG sites within approximately 0.25 miles of the target property.

Lists of state- and tribal (Superfund) equivalent sites

RESPONSE: Identifies confirmed release sites where DTSC is involved in remediation, either in a lead or oversight capacity. These confirmed release sites are generally high-priority and high potential risk.

A review of the RESPONSE list, as provided by EDR, has revealed that there is 1 RESPONSE site within approximately 1 mile of the target property.

<u>Lower Elevation</u>	<u>Address</u>	<u>Direction / Distance</u>	<u>Map ID</u>	<u>Page</u>

Lists of state- and tribal hazardous waste facilities

ENVIROSTOR: The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifies sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to,

EXECUTIVE SUMMARY

identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

A review of the ENVIROSTOR list, as provided by EDR, and dated 04/25/2022 has revealed that there are 28 ENVIROSTOR sites within approximately 1 mile of the target property.

EXECUTIVE SUMMARY

Lists of state and tribal leaking storage tanks

LUST: Leaking Underground Storage Tank (LUST) Sites included in GeoTracker. GeoTracker is the Water Boards data management system for sites that impact, or have the potential to impact, water quality in California, with emphasis on groundwater.

A review of the LUST list, as provided by EDR, has revealed that there are 22 LUST sites within approximately 0.5 miles of the target property.

EXECUTIVE SUMMARY

Lists of state and tribal registered storage tanks

UST: The Underground Storage Tank database contains registered USTs. USTs are regulated under Subtitle I of the Resource Conservation and Recovery Act (RCRA). The data come from the State Water Resources Control Board's Hazardous Substance Storage Container Database.

A review of the UST list, as provided by EDR, has revealed that there are 6 UST sites within approximately 0.25 miles of the target property.

EXECUTIVE SUMMARY

Local Lists of Hazardous waste / Contaminated Sites

AOCONCERN: San Gabriel Valley areas where VOC contamination is at or above the MCL as designated by region 9 EPA office. Date of Government Version: 3/30/2009 Exide Site area is a cleanup plan of lead-impacted soil surrounding the former Exide Facility as designated by the DTSC. Date of Government Version: 7/17/2017

A review of the AOCONCERN list, as provided by EDR, has revealed that there is 1 AOCONCERN site within approximately 1 mile of the target property.

<u>Equal/Higher Elevation</u>	<u>Address</u>	<u>Direction / Distance</u>	<u>Map ID</u>	<u>Page</u>
FORMER EXIDE FACILIT		0 - 1/8 (0.000 mi.)	0	9

HIST Cal-Sites: Formerly known as ASPIS, this database contains both known and potential hazardous substance sites. The source is the California Department of Toxic Substance Control. No longer updated by the state agency. It has been replaced by ENVIROSTOR.

A review of the HIST Cal-Sites list, as provided by EDR, and dated 08/08/2005 has revealed that there is 1 HIST Cal-Sites site within approximately 1 mile of the target property.

Local Lists of Registered Storage Tanks

SWEEPS UST: Statewide Environmental Evaluation and Planning System. This underground storage tank listing was updated and maintained by a company contacted by the SWRCB in the early 1990's. The listing is no longer updated or maintained. The local agency is the contact for more information on a site on the SWEEPS list.

A review of the SWEEPS UST list, as provided by EDR, and dated 06/01/1994 has revealed that there are 4 SWEEPS UST sites within approximately 0.25 miles of the target property.

Other Ascertainable Records

RCRA NonGen / NLR: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

A review of the RCRA NonGen / NLR list, as provided by EDR, and dated 06/20/2022 has revealed that there are 22 RCRA NonGen / NLR sites within approximately 0.25 miles of the target property.

EXECUTIVE SUMMARY

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR Hist Auto: EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR Hist Auto list, as provided by EDR, has revealed that there is 1 EDR Hist Auto site within approximately 0.125 miles of the target property.

<u>Lower Elevation</u>	<u>Address</u>	<u>Direction / Distance</u>	<u>Map ID</u>	<u>Page</u>
NICK BLACKIES	4141 E OLYMPIC BLVD	SSE 0 - 1/8 (0.118 mi.)	B7	26

EDR Hist Cleaner: EDR has searched selected national collections of business directories and has collected listings of potential dry cleaner sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include dry cleaning establishments. The categories reviewed included, but were not limited to dry cleaners, cleaners, laundry, laundromat, cleaning/laundry, wash & dry etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR Hist Cleaner list, as provided by EDR, has revealed that there is 1 EDR Hist Cleaner site within approximately 0.125 miles of the target property.

capacity; or Provide positive shut-off of flow to the tank so that none of the fittings located on the top of the tank are exposed to product due to overfilling. Install/retrofit overfill prevention equipment that does not use flow restrictors on vent piping to meet overfill prevention equipment requirements when the overfill prevention equipment is installed, repaired, or replaced on and after October 1, 2018. For USTs installed before October 1, 2018, perform an inspection by October 13, 2018 and every 36 months thereafter. For USTs installed on and after October 1, 2018, perform an inspection at installation and every 36 months thereafter. Inspected within 30 days after a repair to the overfill prevention equipment. Inspected using an applicable manufacturer guidelines, industry codes, engineering standards, or a method approved by a professional engineer. Inspected by a certified UST service technician. Maintain records of overfill prevention equipment inspection for 36 months.

Environmental Interest/Information System:

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Citation: 22 CCR 12 66262.40(a) - California Code of Regulations, Title 22, Chapter 12, Section(s) 66262.40(a)
Violation Description: Failure to keep a copy of each properly signed manifest for at least three years from the date the waste was accepted by the initial transporter. The manifest signed at the time the waste was accepted for transport shall be kept until receiving a signed copy from the designated facility which received the waste.
Violation Notes: Returned to compliance on 01/10/2020. OBSERVATION: Copies of hazardous waste disposal records for 2013, 2014 and 2015 were not found on site. Hazardous waste generators shall retain copies of all manifests signed off by the disposal facility and all receipts used in a consolidated manifesting procedure on site for three years and have them readily available for review. No hazardous waste manifests available for 2013, 2014 and 2015 for disposal of RCRA hazardous wastes. CORRECTIVE ACTION: Immediately locate a copy of all manifests and receipts for the last three years, maintain them on site, and submit copies to the CUPA by 9-4-16.

Citation: HSC 6.5 25123.3(h)(1) - California Health and Safety Code, Chapter 6.5, Section(s) 25123.3(h)(1)

Violation Description: Failure to send hazardous waste offsite for treatment, storage, or disposal within 180 days (or 270 days if waste is transported over 200 miles) for a generator who generates less than 1000 kilogram per month if all of the following conditions are met: (1) The quantity of hazardous waste accumulated onsite never exceeds 6,000 kilograms. (2) The generator complies with the requirements of 40 Code of Federal Regulations section 262.34(d), (e) and (f). (3) The generator does not hold acutely hazardous waste or extremely hazardous waste in an amount greater than one kilogram for more than 90 days.

Violation Notes: Returned to compliance on 04/30/2019. OBSERVATION: Owner/Operator is a small quantity generator and failed to send hazardous waste offsite for treatment, storage, or disposal within 180 days (or 270 days if waste is transported over 200 miles), or has failed to comply with the conditions of CCR 66262.34(d) and has stored hazardous waste over 90 days. The following materials were observed without accumulation start dates and manifests demonstrating disposal within 180 days were not available at time of the inspection: 1 x 55-gallon drum of used oil filters (metal & paper mix) 1 x 55-gallon of waste test water (phase separation observed through white container) 1 x 55-gallon empty drum used for waste absorbent 1 x 55-gallon drum with approximately 5 gallons of an unknown liquid CORRECTIVE ACTION: Dispose of hazardous

Violation Date: 01-21-2022
Citation: HSC 6.95 25508.1(a)-(f) - California Health and Safety Code, Chapter 6.95, Section(s) 25508.1(a)-(f)
Violation Description: Failure to electronically update business plan within 30 days of any one of the following events: A 100 percent or more increase in the quantity of a previously disclosed material. Any handling of a previously undisclosed hazardous materials at or above reportable quantities. A change of business address, business ownership, or business name. A substantial change in the handler's operations that requires modification to any portion of the business plan.
Violation Notes: Returned to compliance on 01/21/2022. OBSERVATION: The business failed to update business plan within 30 days when one of the following occurs: a 100 percent or more increase in the quantity of a previously disclosed material; any handling of a previously undisclosed hazardous material; a change of business address, business ownership, or business name; or a substantial change in the handler's operations that requires modification to any portion of the business plan. Observed Maximum daily amount submitted for waste oil was underreported. Corrected onsite. CORRECTIVE ACTION: Update all submittal elements effected by the change(s) and electronically submit the update within 30 days.

Violation Source:

Site ID: 64143
Site Name: SALGADO AUTOMOTIVE
Violation Date: 06-06-2016
Citation: 22 CCR 12 66262.34(f) - California Code of Regulations, Title 22, Chapter 12, Section(s) 66262.34(f)
Violation Description: Failure to properly label hazardous waste accumulation containers and portable tanks with the following requirements: "Hazardous Waste", name and address of the generator, physical and chemical characteristics of the Hazardous Waste, and starting accumulation date.
Violation Notes: Returned to compliance on 10/05/2017. OBSERVATION: All hazardous waste containers shall be marked with the following information: 1) the words Hazardous Waste ; 2) name and address of generator; 3) hazardous properties; 4) physical state; 5) composition (contents); 6) accumulation start date. Observed 1 x 250 gallon tote and 1 x 5 gallon container used to store used oil without all the required information on hazardous waste label. CORRECTIVE ACTION: Immediately label these containers and ensure that all hazardous waste containers are marked with all the required information.

Violation Division: Los Angeles County Fire Department

Violation Date: 01-21-2022
Citation: 22 CCR 12 66262.11 - California Code of Regulations, Title 22, Chapter 12, Section(s) 66262.11
Violation Description: Failure to determine if wastes generated are hazardous waste by using generator knowledge or applying testing method.
Violation Notes: Returned to compliance on 03/17/2022. OBSERVATION: The steel sand blaster waste located in the container under the sand blaster was observed being accumulated and a proper waste determination has not been made. CORRECTIVE ACTION: Submit documentation to the CUPA demonstrating that the steel sand blaster waste has been properly characterized to determine if it is a hazardous waste. If determined to be hazardous submit a manifest/receipt documenting proper disposal and a statement demonstrating how you will manage it in the future.

Site ID: 420629
Site Name: RAMON & SON AUTO MECHANIC
Violation Date: 03-06-2017
Citation: 22 CCR 12 66262.34(f) - California Code of Regulations, Title 22, Chapter 12, Section(s) 66262.34(f)
Violation Description: Failure to properly label hazardous waste accumulation containers and portable tanks with the following requirements: "Hazardous Waste", name and address of the generator, physical and chemical characteristics of the Hazardous Waste, and starting accumulation date.
Violation Notes: Returned to compliance on 03/06/2017. OBSERVATION: All hazardous waste containers shall be marked with the following information: 1) the words Hazardous Waste ; 2) name and address of generator; 3) hazardous properties; 4) physical state; 5) composition (contents); 6) accumulation start date. Observed the following hazardous waste storage containers without all the required information on hazardous waste labels - 1) 1 x 275 gallon used oil tote. 2) 1 x 55 gallon drum for used antifreeze. 3) 1 x 55 gallon drum for used oil. 4) 1 x 55 gallon drum for oil mixed with water. CORRECTIVE ACTION: Immediately label these containers and ensure that all hazardous waste containers are marked with all the required information. All containers were properly labeled with all required information by end of inspection. Violation corrected on-site.

Site Name: RAMON & SON AUTO MECHANIC
Violation Date: 02-28-2014
Citation: HSC 6.95 Multiple - California Health and Safety Code, Chapter 6.95, Section(s) Multiple
Violation Description: Business Plan Program - Administration/Documentation - General
Violation Notes: Returned to compliance on 03/06/2017. A review of the California Environmental Report System (CERS) records indicated the facility has not report their business plan. Properly report your business plans on CERS within 30 days. 25508. (a) (1) A handler shall electronically submit its business plan to the statewide information management system in accordance with the requirements of this article and certify that the business plan meets the requirements of this article. (2) If, after review, the unified program agency determines that the handler's business plan is deficient in satisfying the requirements of this article or the regulations adopted pursuant to Section 25503, the unified program agency shall notify the handler of those deficiencies. The handler shall electronically submit a corrected business plan within 30 days from the date of the notice.

Environmental Interest/Information System:

California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

CERS HAZ WASTE:
 Name: PROGRESSIVE A&B GENERAL REPAIR
 Address: 4249 E OLYMPIC BLVD
 City,State,Zip: LOS ANGELES, CA 90023
 Site ID: 519254
 CERS ID: 10784002
 CERS Description: Hazardous Waste Generator

Violations:
 Site ID: 519254
 Site Name: Progressive A&B General Repair
 Violation Date: 01-12-2017
 Citation: 22 CCR 12 66262.34(f) - California Code of Regulations, Title 22, Chapter 12, Section(s) 66262.34(f)
 Violation Description: Failure to properly label hazardous waste accumulation containers and portable tanks with the following requirements: "Hazardous Waste", name and address of the generator, physical and chemical characteristics of the Hazardous Waste, and starting accumulation date.
 Violation Notes: Returned to compliance on 01/12/2017. OBSERVATION: All hazardous waste containers shall be marked with the following information: 1) the words Hazardous Waste ; 2) name and address of generator; 3) hazardous properties; 4) physical state; 5) composition (contents); 6) accumulation start date. Observed 1 x 55 gallon drum containing used antifreeze without the required hazardous waste label. CORRECTIVE ACTION: Immediately label these containers and ensure that all hazardous waste containers are marked with all the required information. Wast antifreeze was labeled by end of inspection. Violation corrected on-site.
 Violation Division: Los Angeles County Fire Department
 Violation Program: HW
 Violation Source: CERS,

Site ID: 519254
 Site Name: Progressive A&B General Repair
 Violation Date: 01-12-2017
 Citation: HSC 6.95 25508(a)(1) - California Health and Safety Code, Chapter 6.95, Section(s) 25508(a)(1)
 Violation Description: Failure to establish and electronically submit an adequate emergency response plan and procedures for a release or threatened release of a hazardous material.

[Click Here for FRS Facility Detail Report:](#)

Environmental Interest/Information System:
 California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.
 RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.
