34.		<b>Oppose</b>	Monisha Parker	<p>Dear Board of Supervisors,</p> <p>I hope this message finds you well. I am writing to propose some considerations for securing affordable groundwater monitoring services that will be beneficial for government departments such as the Department of Parks and Recreation. Given the importance of ensuring the safety and sustainability of our water resources, it is crucial to engage with companies that possess specific expertise in environmental consulting and water resource management.</p> <p>To aid you in this endeavor, I have outlined several actionable steps that could facilitate the search for cost-effective options:</p> <ol style="list-style-type: none"> <li>1. Request Quotes: It would be prudent to reach out to multiple groundwater monitoring companies to request detailed quotes. Comparing these quotes will provide a comprehensive overview of available pricing options and services.</li> <li>2. Check Local Resources: You may find it beneficial to consult local environmental agencies or the California State Water Resources Control Board. They can offer recommendations on qualified and reputable companies within our area that specialize in groundwater monitoring.</li> <li>3. Consider Nonprofits or Universities: Local universities or nonprofit organizations engaged in environmental studies may provide affordable monitoring services or collaborative opportunities for research. Partnering with these institutions can help reduce costs while enhancing community involvement.</li> <li>4. Review Past Projects: When selecting a company, it is vital to consider their past projects, especially those involving municipal departments or similar organizations. Their experience will ensure they are accustomed to meeting specific needs and working within the constraints of government budgets.</li> <li>5. Look for Grants: I suggest inquiring about any available grants for environmental monitoring services that could help subsidize costs. Leveraging such funding could make the project more economically feasible.</li> </ol> <p>Your commitment to groundwater health and sustainability is greatly appreciated, and I hope these suggestions will assist in your pursuit of affordable monitoring solutions.</p> <p>Thank you for your attention to this important matter. Sincerely, Monisha Parker</p>
