

Meeting #1

Applying the Life Course Problem Framework to Identify Prevention Metrics

Arnold Chandler
Forward Change

7.22.22

Overview

- Review of Board Motion Guidance for Metrics Task
- Process for Identifying Prevention Metrics
- What a Problem Framework needs to Help Us Do
- Applying the Life Course Problem Framework
- Thinking in Terms of Trajectories
- Brainstorm North Star Candidate Outcomes

Board Motion Guidance

Key Board Motion Excerpts

By definition, **the purpose of prevention services is to avoid negative outcomes and interactions to achieve a specific targeted outcome.** To achieve this goal, primary prevention focuses on the **reduction of modifiable risk factors.**

Research findings are clear; a deeper, more coordinated, Countywide prevention plan, guided by the social determinants of health and well-being, not only **reduces the racial disproportionality laden within our systems,** but positions adults, children, youth and families to thrive.

The strategy must be aligned in a manner that addresses specific issues that brings adults, children, youth and families to the attention of County systems; issues such as **unaffordable housing, lack of employment, food insecurity, the need for access to culturally responsive, trauma- and healing-informed and sometimes specialized mental health, domestic violence, and substance use and addiction services.** The vision for a better County, post pandemic, includes a primary prevention strategy, that at its core, is designed to inherently address **the disproportionality laden within our systems.** **Programming and services** must be **consistently delivered upstream to residents** to improve well-being and strengthen adults, children, youth and families.

Core Metrics Task with Forward Change

Develop "A set of **guiding prevention metrics, principally informed by an equity centered framework (i.e., life course, racial equity, or social determinants of health)** which reflect how County **residents' lives were made better as result of receipt of prevention services.**"

Process for Identifying Prevention Metrics

The Prevention & Promotion Framework

A Framework of Frameworks

Frameworks

Models

Helps identify the long-term outcomes to be prevented or promoted and earlier factors that might cause them

1

The Life Course Framework

LCF Working Problem Model

Reflects choices made about which long-term outcomes are to be prevented or promoted and which factors will be targeted

Helps identify which interventions should be targeted to which populations based on their characteristics

2

Intervention Framework

Intervention Working Model

Reflects choices made about which interventions will be implemented for which populations with what risk and protective factor profiles

Helps identify what factors are necessary to consider in ensuring interventions are implemented effectively

3

Implementation Framework

Implementation Model

Reflects choices made about what components will be included to effectively implement and manage interventions

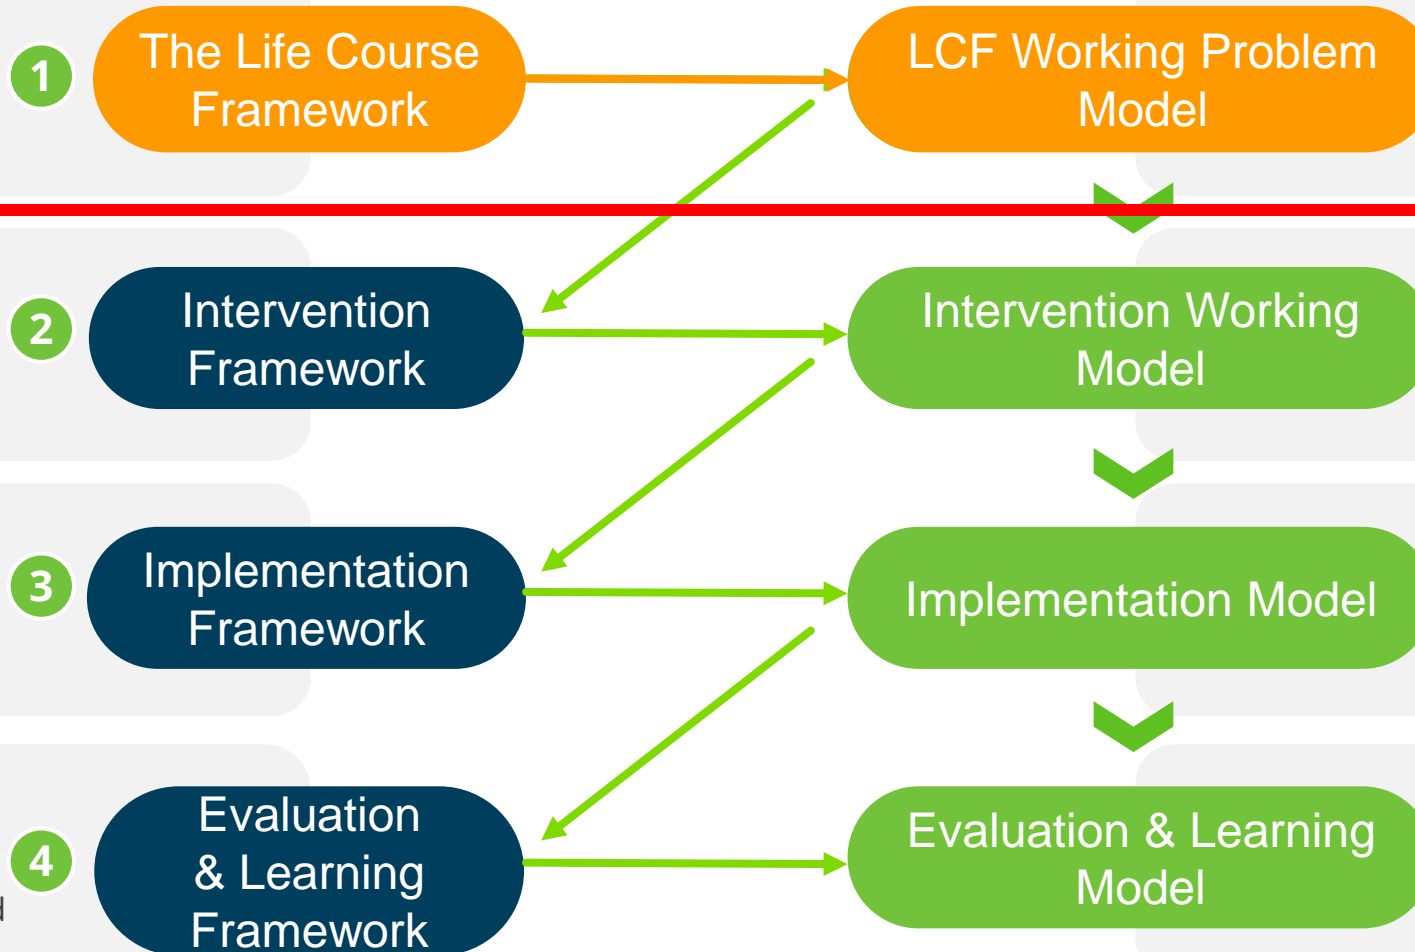

Helps identify what interventions were effectively implemented, whether they worked, and what they helped learn about the problem.

4

Evaluation & Learning Framework

Evaluation & Learning Model

Reflects choices made about what questions to answer and how to answer them

Process for Identifying Prevention Metrics

Process Step

1 Step 1

Identify Long-Term Population Outcomes

2 Step 2

Identify Contributing Outcomes

3 Step 3

Identify Ecological-Institutional Factors

4 Step 4

Develop Metrics

Detail

Identify 4-6 Long-Term Population Outcomes we want to Prevent or Promote

Identify earlier life course outcomes that contribute to Long-Term Population Outcomes

Identify Ecological (e.g. neighborhood) and Institutional (e.g. government) Factors that shape Contributing Outcomes and Long-Term Population Outcomes

Develop potential measures and identify data sources (where possible) for Population Outcomes, Contributing Outcomes and Ecological-Institutional Factors

Example

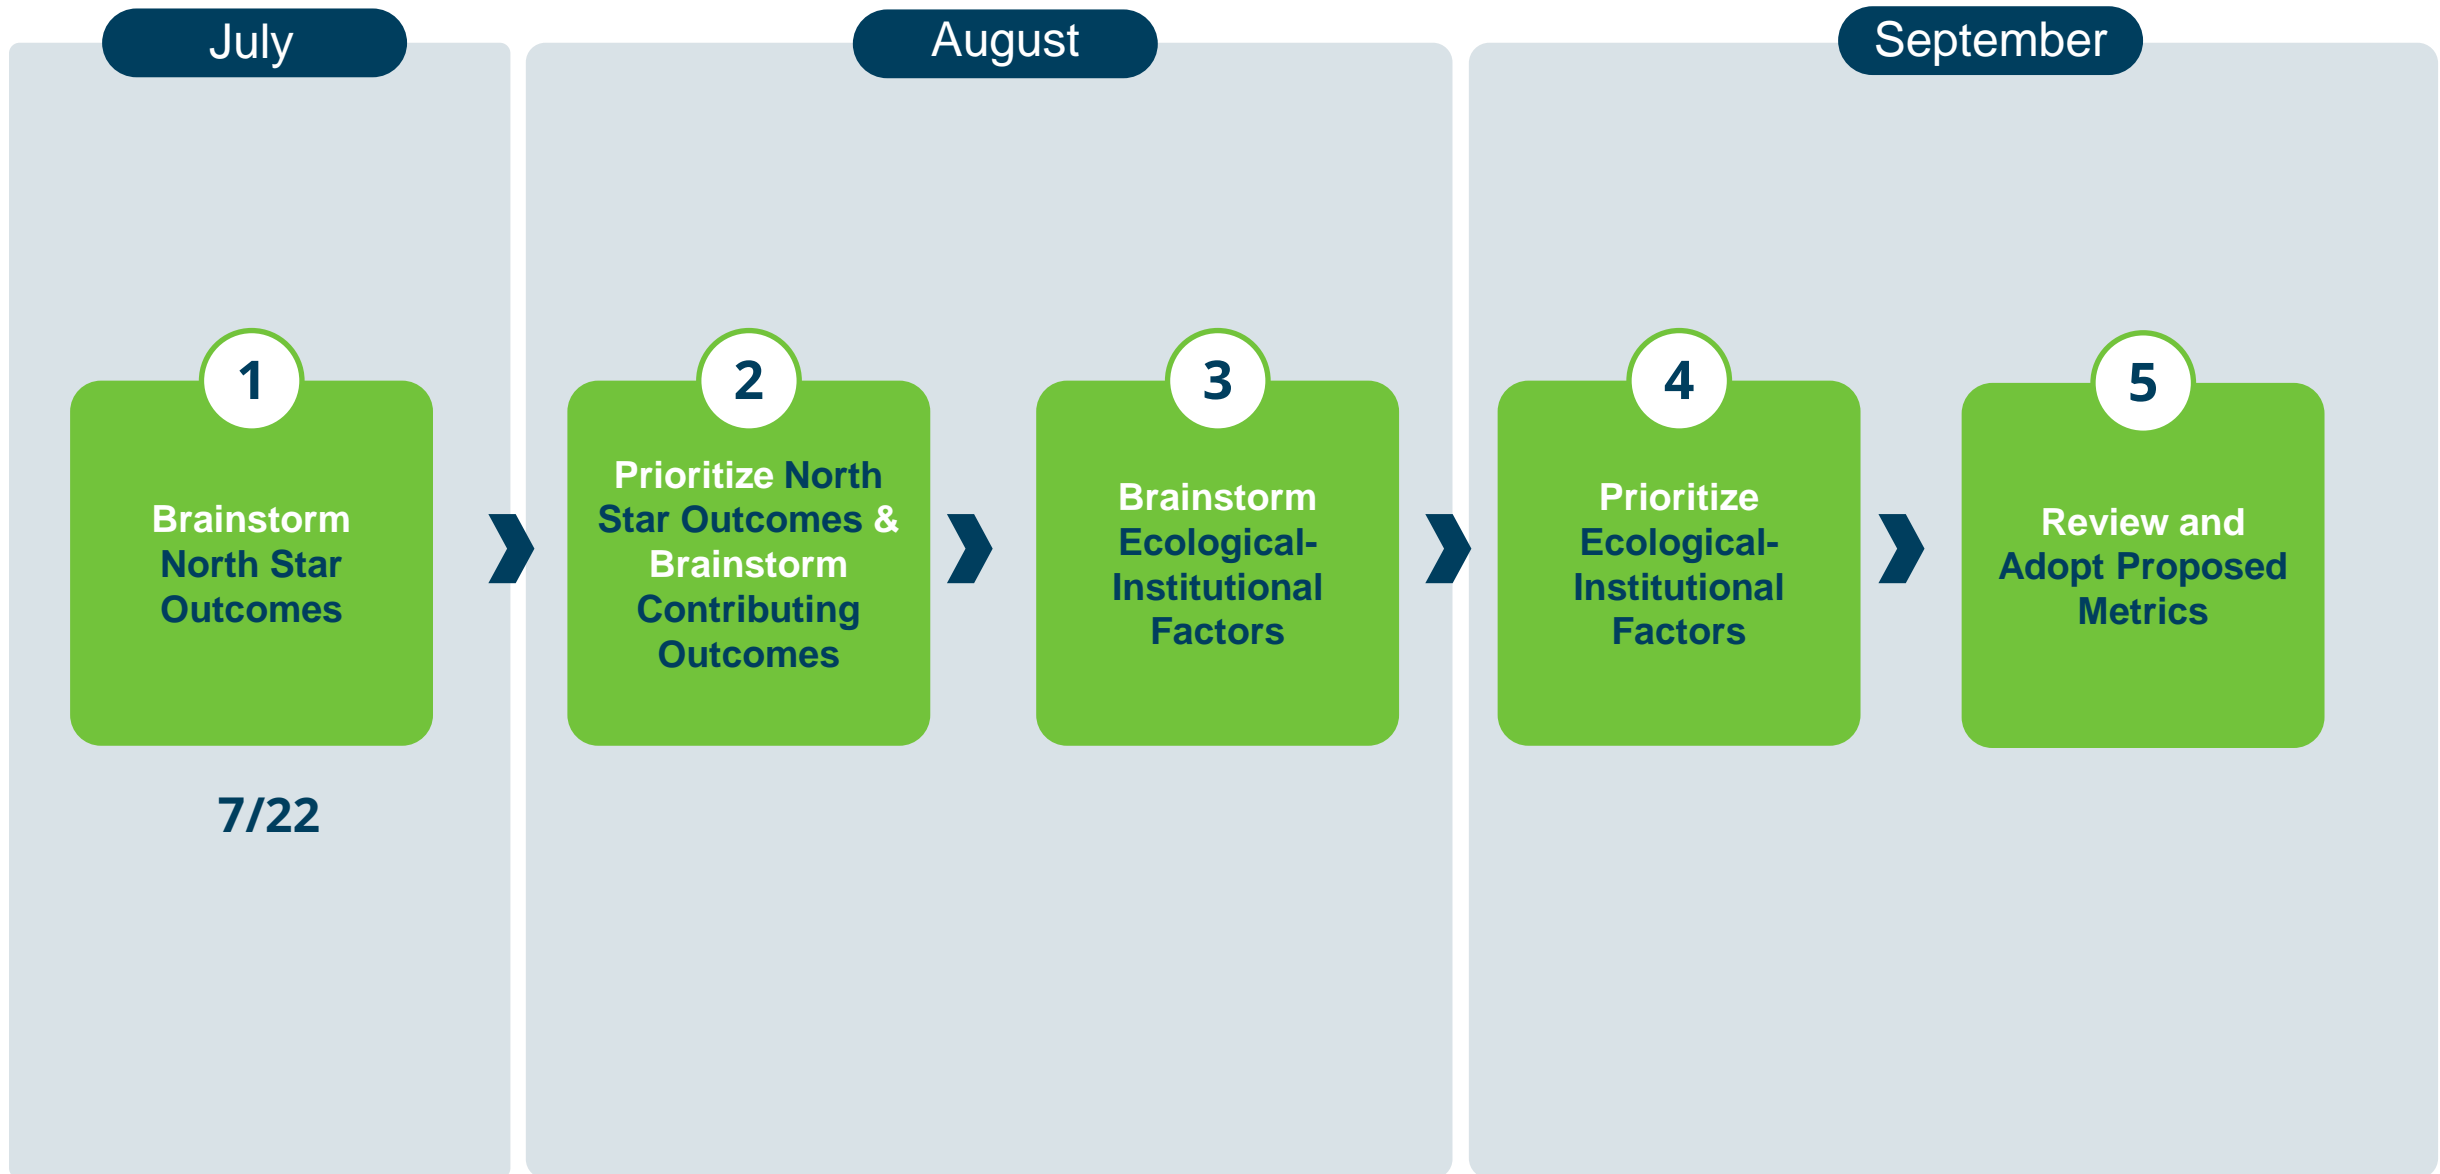

High School Dropout/ Graduation

School Absences

High School Suspensions

- Adjusted Cohort Grad Rate
- % of School Days Missed per year
- % Out-of-School and In-School Suspensions

Process for Applying the Life Course Framework

**What does a
Problem
Framework
need to help
us do?**

What does a Problem Framework need to help us do?

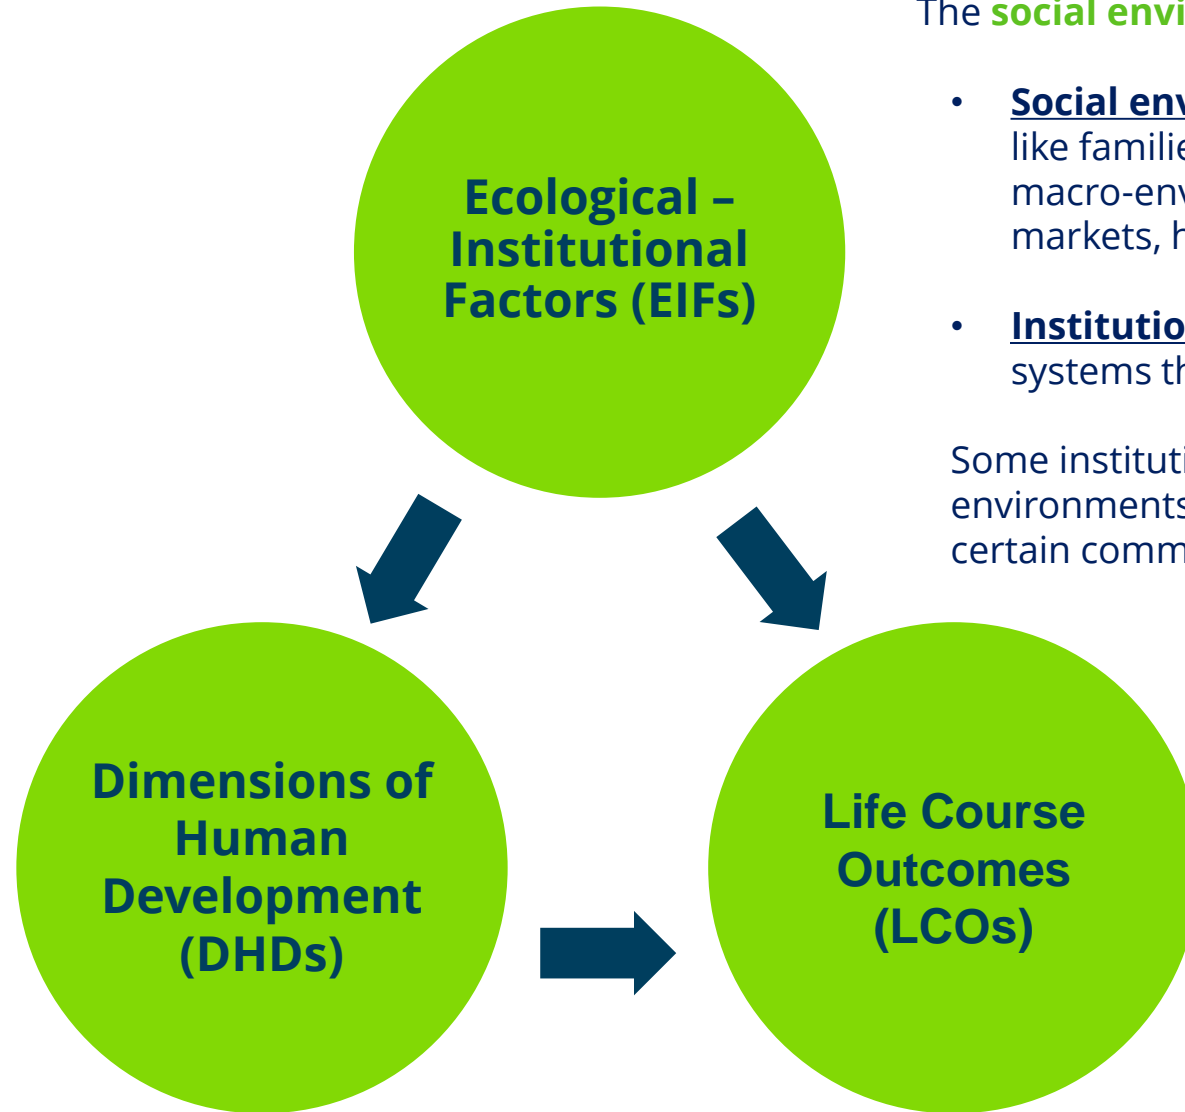

- 1** Identify the **long-term life outcomes** we want to **prevent** or **promote**
- 2** Identify **earlier outcomes that contribute** to those long-term outcomes (e.g. **risk, promotive and protective factors**)
- 3** Identify aspects of both the **ecological environments** (e.g. neighborhoods) and **institutional systems** (e.g. county government, businesses) that **shape life outcomes**

Applying the Life Course Problem Framework

Life Course Framework Core Concepts

The **genetic, biological, physiological and psychological** attributes of individuals

The **social environments** and **institutions**:

- **Social environments**: from micro-environments like families, schools, neighborhoods, peers to macro-environments like school systems, job markets, housing markets, healthcare markets,
- **Institutions**: Public and private organizational systems that shape our social environments

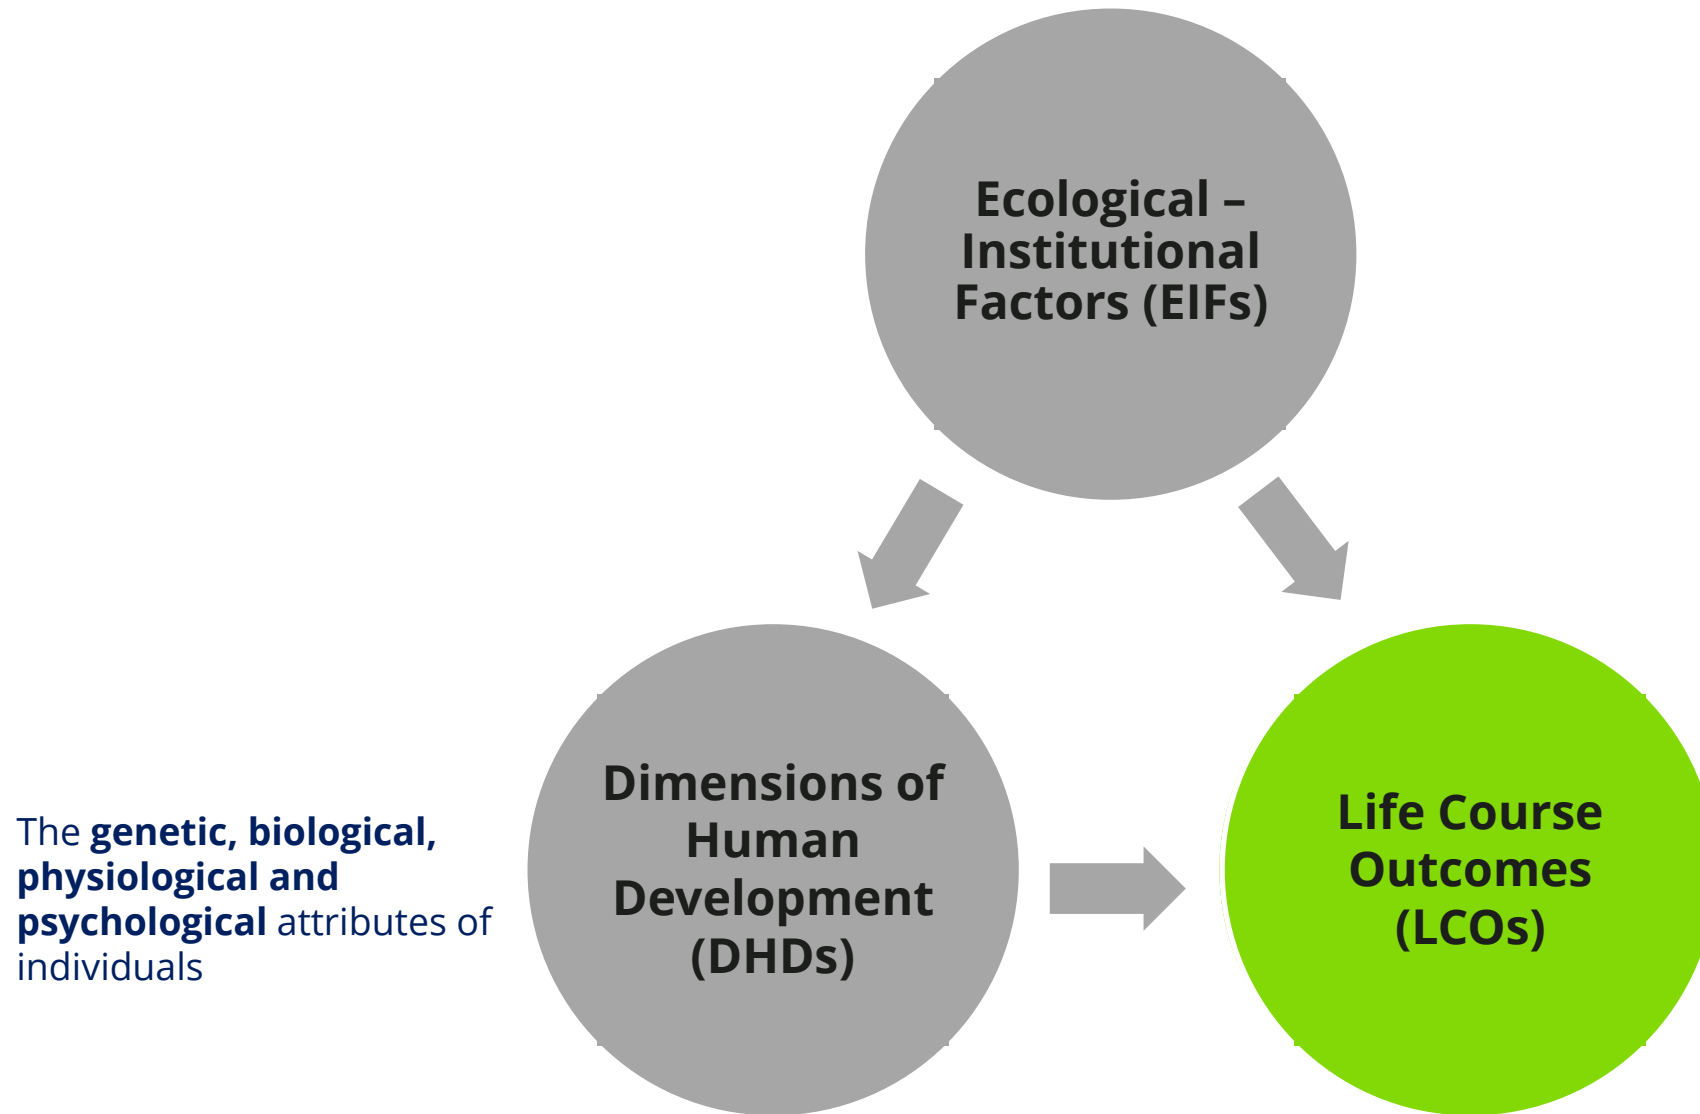

Some institutional behavior and the social environments they affect result in “**active harm**” to certain communities

- Are **population outcomes** produced by the **interaction of social structure (EIFs) and human development (DHDs)**
- **Examples**: school ready, juvenile delinquency, high school graduation, college completion, adult incarceration

Thinking in terms of Trajectories

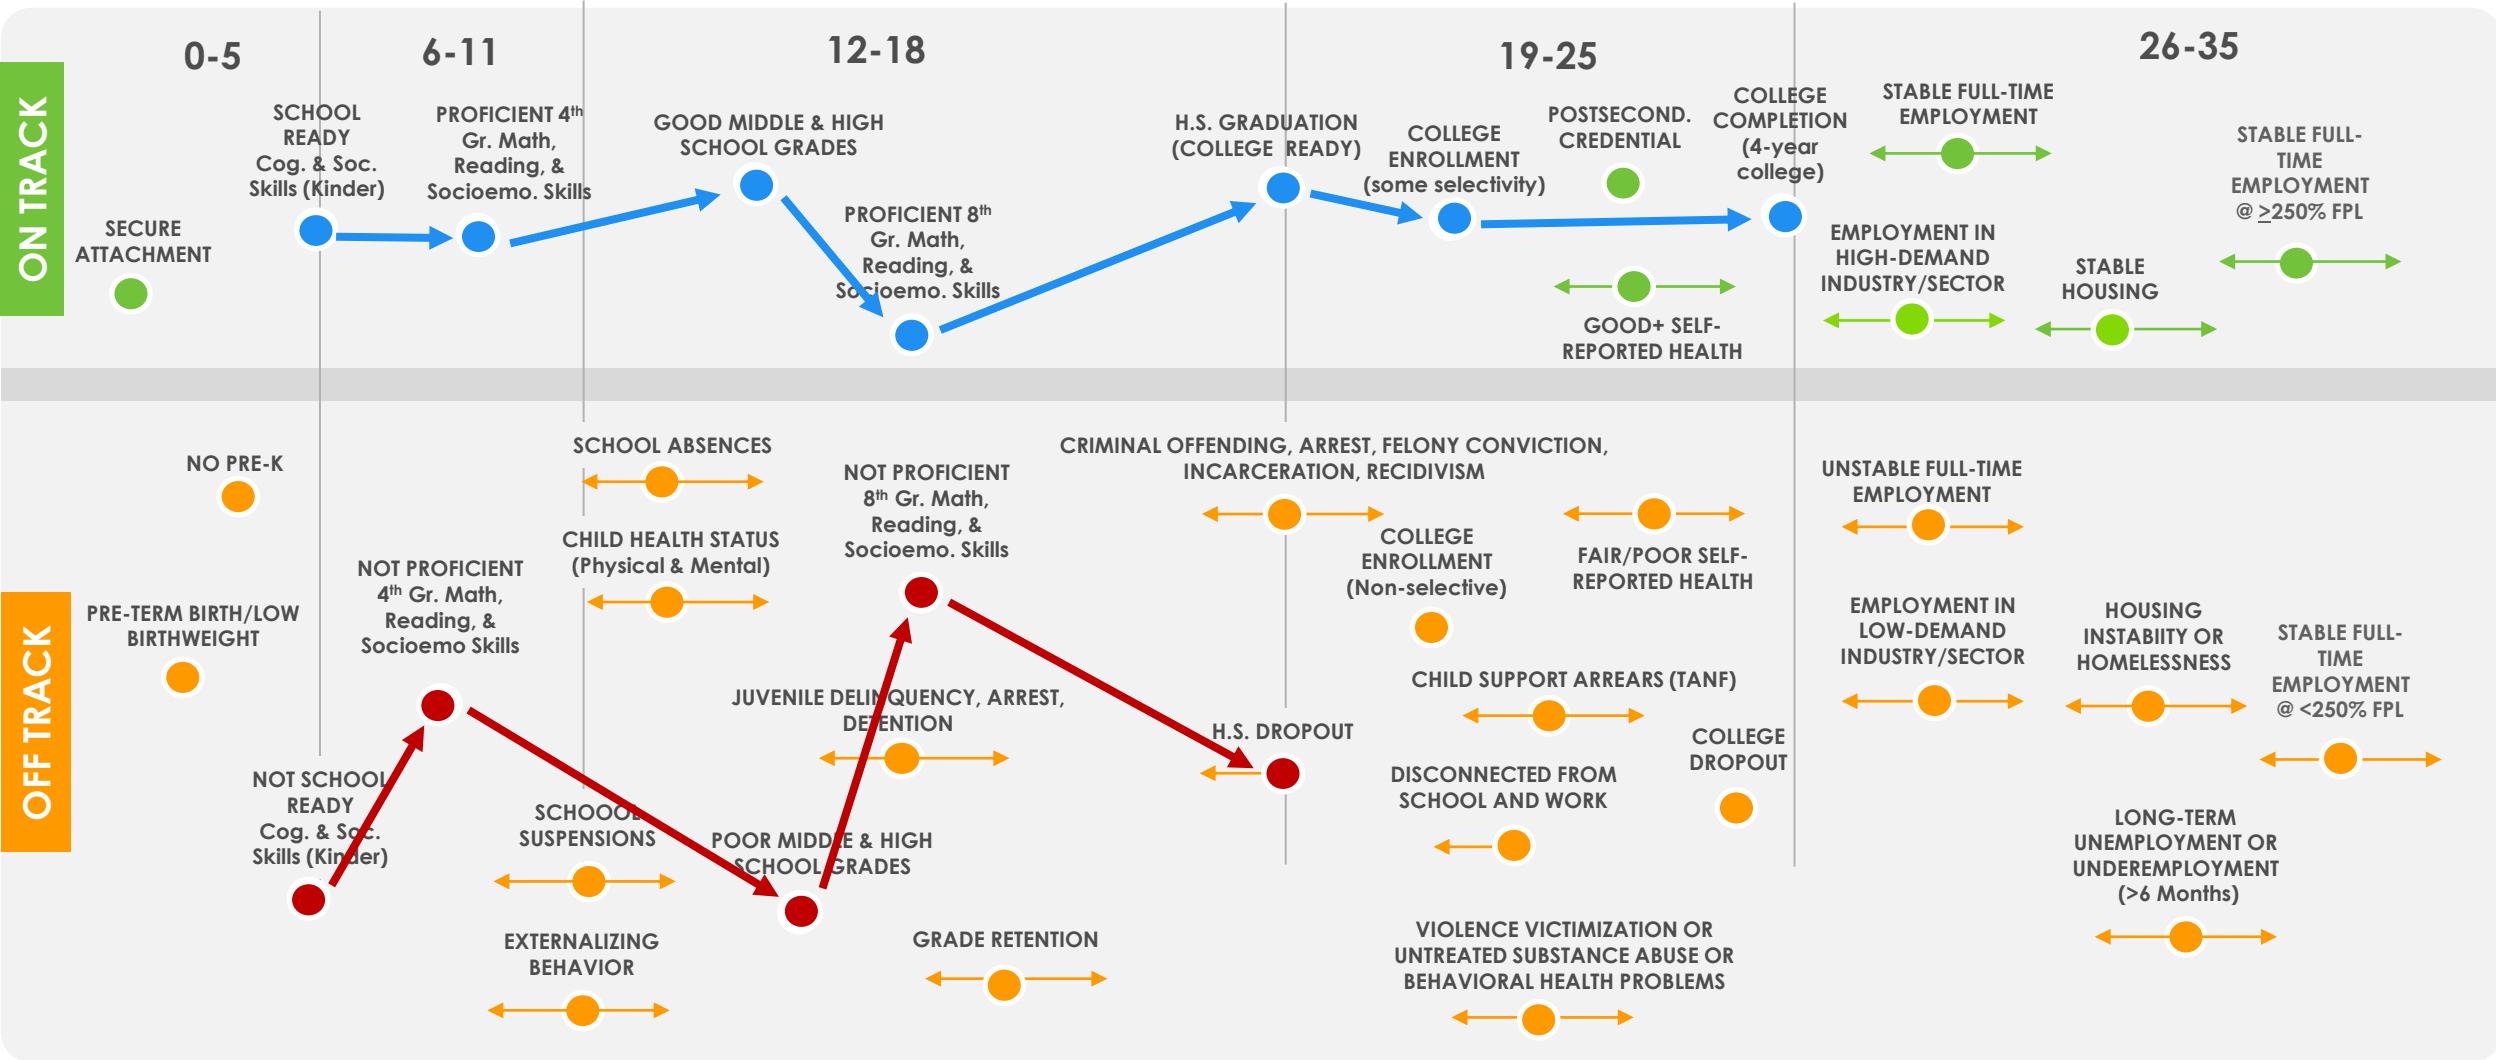

Thinking in terms of Trajectories

- 1 Trajectories:** a trajectory is a path. Within the life course framework, it describes a series of life course outcomes that lead to a **long-term outcome**.
- 2 Earlier outcomes cause later ones:** Earlier outcomes are important steppingstones to achieving or avoiding later outcomes
- 3 Path-dependency:** Once a person is on a trajectory, it can be difficult to change that trajectory without significant intervention

Potential North Star Outcome Candidates

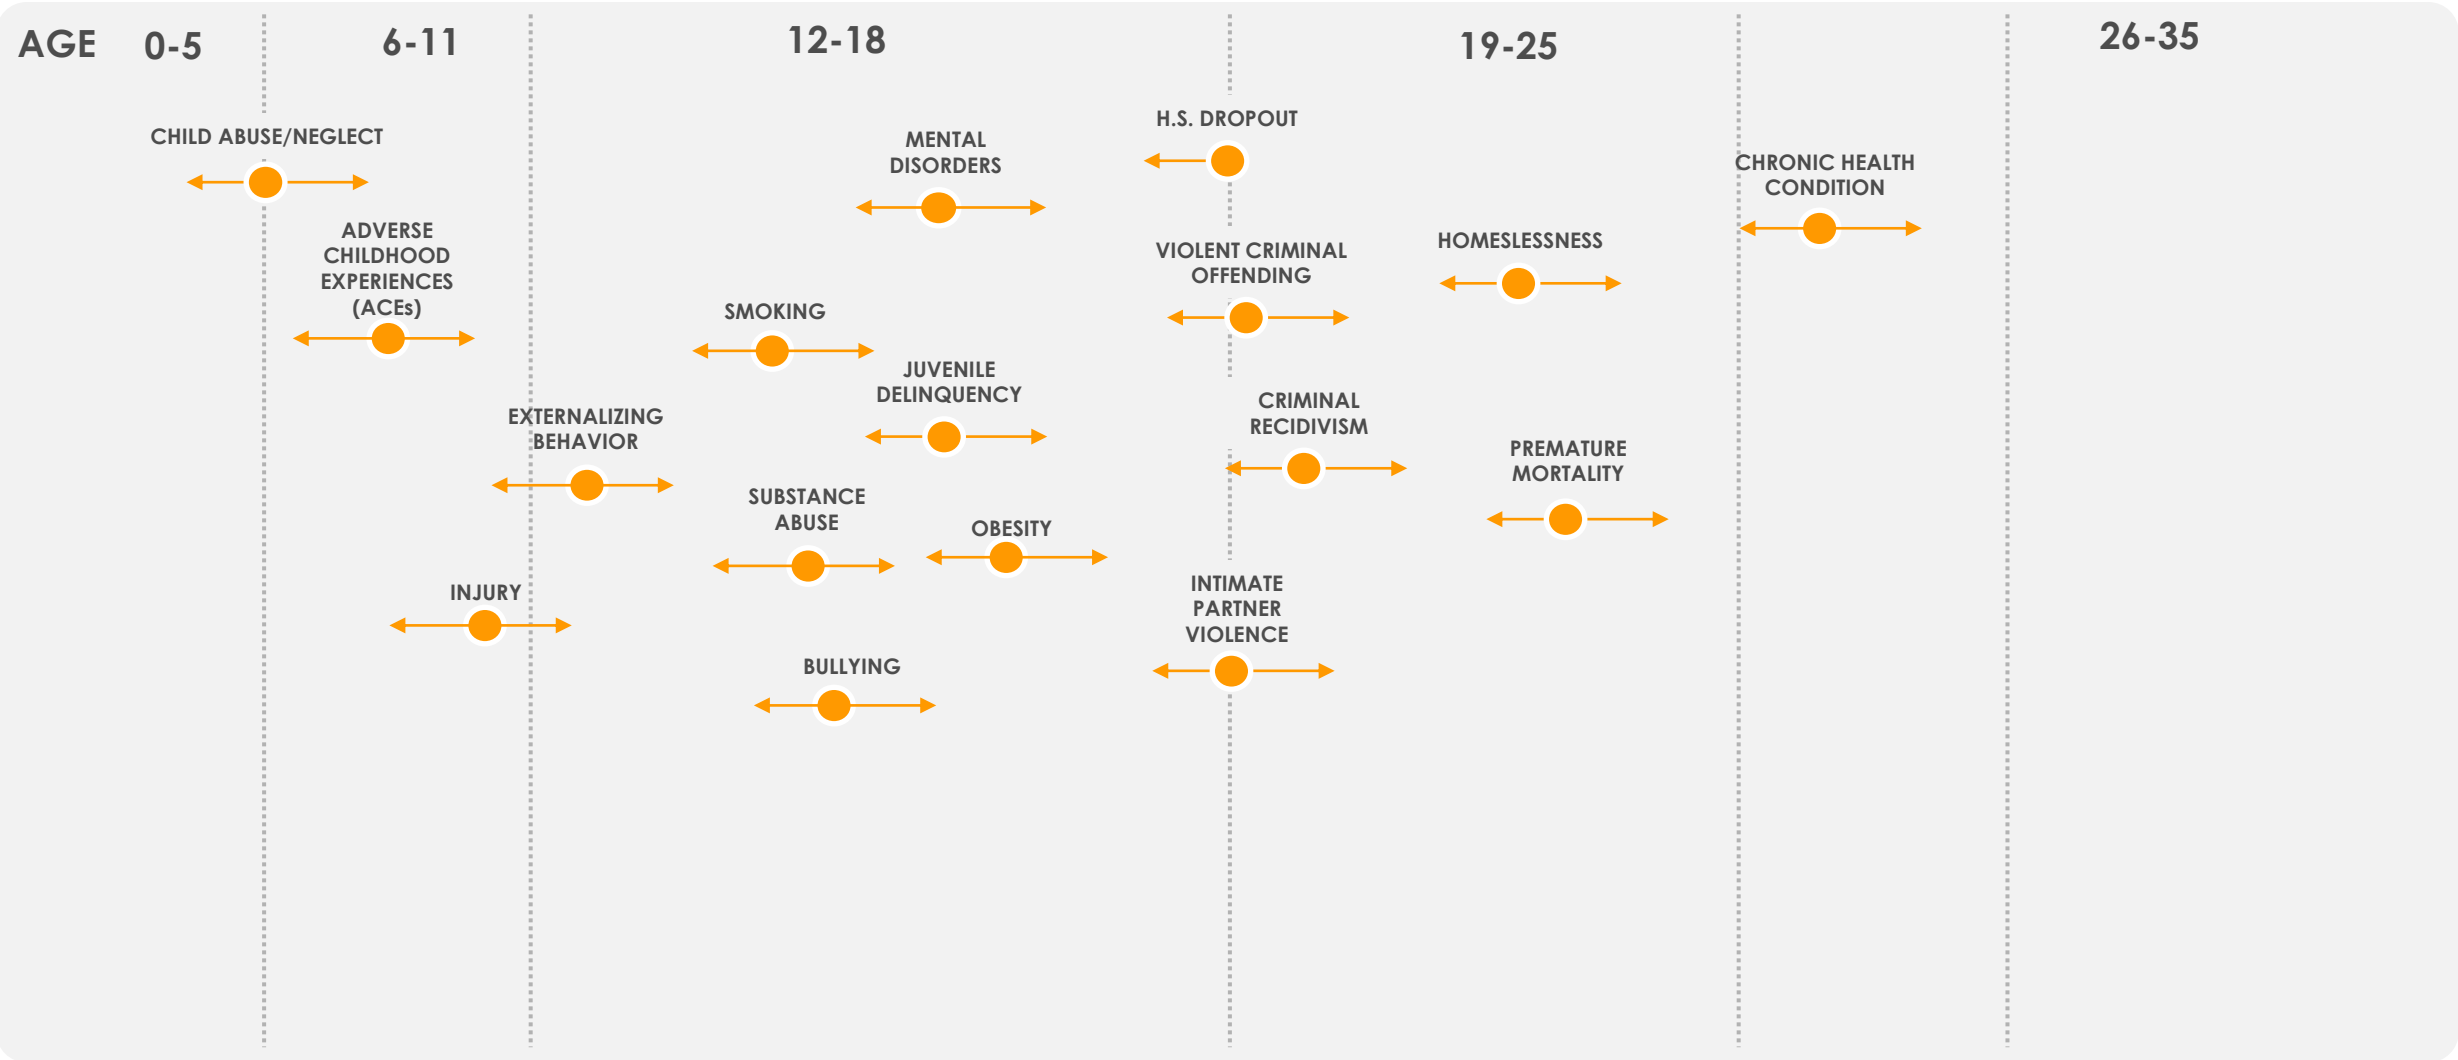

What makes a good “North Star” population outcome

- An “inherent good”
- Broad prevalence within the population
- Equitable: ensuring movement across the advantage/disadvantage spectrum
- High leverage: reflects a lot of important outcomes achieved earlier in life, or will affect a lot of important outcomes later in life
- Substantially within the sphere of county influence. County has the levers to influence outcome.

Outcomes targeted by Prevention Efforts Nationally and in Los Angeles County
