

ANNUAL REPORT

COUNTY OF LOS ANGELES

FISCAL YEAR ENDING

JUNE 30, 1928

ANNUAL REPORT

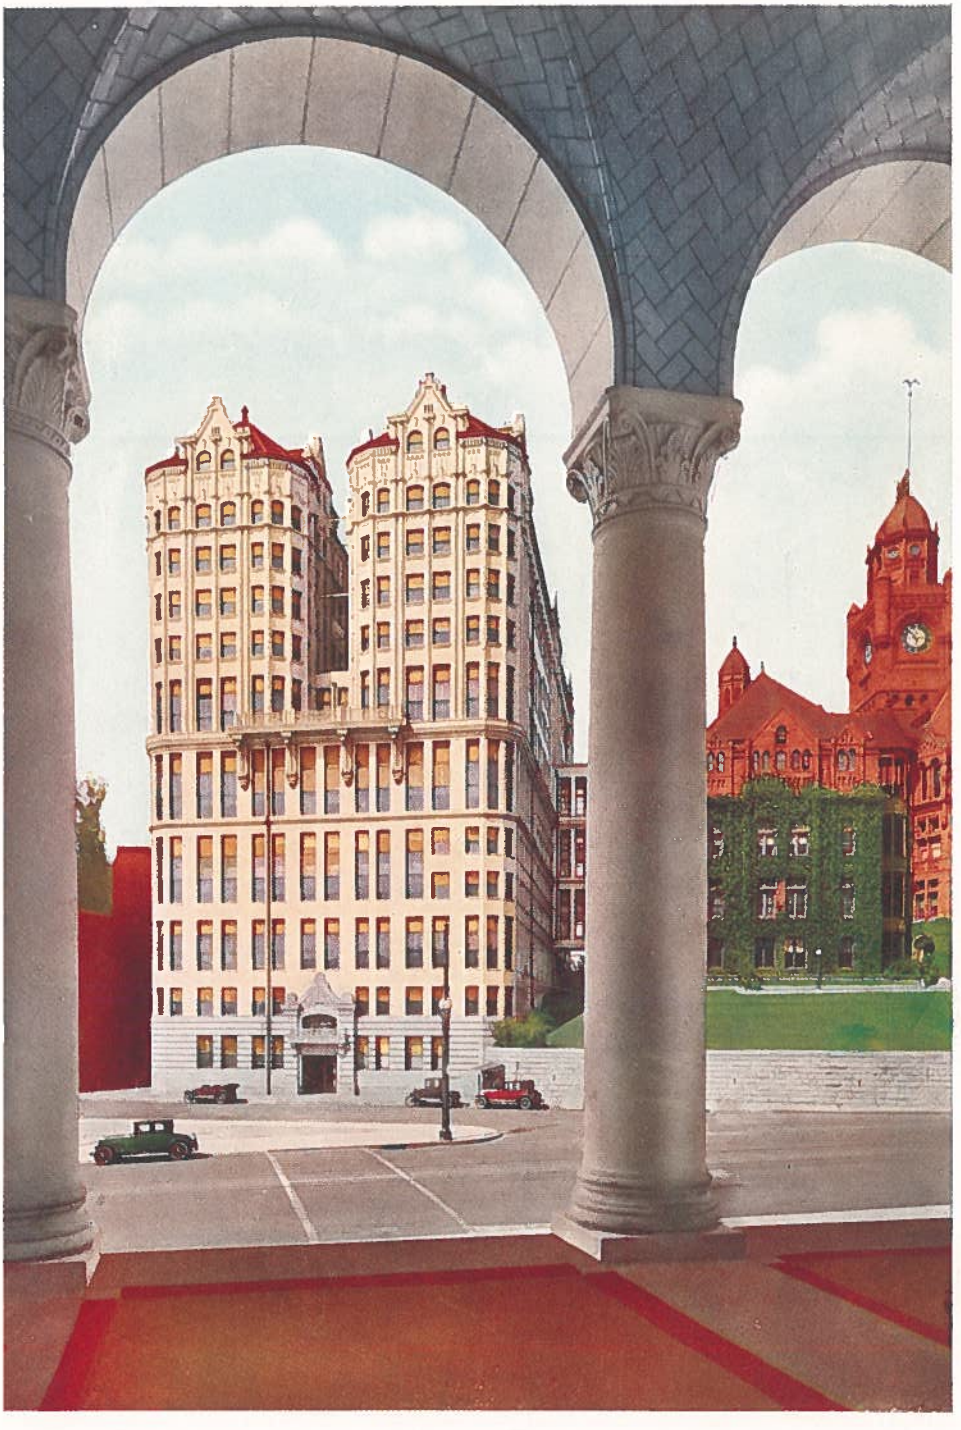

OF THE

BOARD OF SUPERVISORS

COUNTY OF LOS ANGELES

LIBRARY
AGRICULTURAL COMMISSIONER
COUNTY OF LOS ANGELES

TO THE BOARD OF SUPERVISORS
County of Los Angeles,
California.

Pursuant to the provisions of Section 4049-a of the Political Code of the State of California and your instruction, I submit herewith a statistical report of Los Angeles County, showing in compendious form

> "All the Financial Transactions of the County for the last fiscal year, exhibiting separately the receipts and expenditures, by or on account of each office, board, commission, institution, court, road district and school district, and classifying the principal items of income and expenditures so as to show the financial transactions and the financial condition of the county."

Respectfully submitted,

County Auditor.

DIRECTORY OF COUNTY OFFICIALS

JUNE 30, 1928

BOARD OF SUPERVISORS

First District ..... Fred T. Beaty
Second District ..... J. H. Bean
Third District ..... Sidney T. Graves
Fourth District ..... R. F. McClellan, Chairman
Fifth District ..... Henry W. Wright

Committees of Board of Supervisors

General Administration ..... R. F. McClellan, Chairman
Finance and Budget ..... Henry W. Wright, Chairman
Highways and Bridges ..... Fred T. Beaty, Chairman
Public Welfare ..... J. H. Bean, Chairman
Public Works and Safety ..... Sidney T. Graves, Chairman

Board of Education

George C. Bush, President ..... South Pasadena

DEPARTMENTAL REPORTS

To the Taxpayers:

In accordance with the provisions of Section 4049a of the Political Code, the Board of Supervisors herewith presents to the taxpayers of Los Angeles County, its annual financial and statistical report covering the fiscal year ending June 30, 1928.

There are included in this report, in addition to the financial and statistical statements, which reflect the past year's operations and the financial condition of the County at the close of the fiscal year, a number of reports from the various departments of the county government. An examination of the reports made by the various county officers, reveals very clearly the stupendous business which has been transacted by the County and its officers during the past fiscal year. We feel that a presentation in this form will convey to the reader, not only a more comprehensive idea of the variety and magnitude of the business conducted by the County and the gigantic and intricate machinery of the county government through which this volume of business was transacted, but it provides information of practical value to taxpayers in matters pertaining to public service, in a manner more easily understood than a perusal of statistical and financial statements.

Attention is also directed to the photographs contained herein. These show in concrete form some of the improvements completed and under construction, for which capital was expended by the county during the past year.

AUDITOR

During the fiscal year 1927-28, the work of the Auditor's office has continued to increase in volume. In addition to the accounting, auditing and reporting work usually performed by an office of this kind, the Auditor is the custodian of the delinquent tax rolls, and it is through this office that taxpayers must redeem property sold for taxes. The following figures indicate the volume of business transacted through the Auditor's office and the relative increase in this year's business over the previous year.

	1926-27	1927-28
Collections from the State:		
Apportionment of various School Funds	$ 7,444,025.71	$ 7,918,002.51
County's portion Auto License Tax, Motor Vehicle Receipts	1,464,096.56	1,500,610.12
County's portion State Gasoline Tax	3,336,934.11	3,920,438.21
County's portion State Forestry Fund	8,547.92	8,645.22
Outdoor Relief Claims	466,114.13	196,520.54
Operative Bond Claim	39,550.14	112,519.65
Tax Redemptions	2,191,451.21	2,865,903.04
Trust Collections	1,169,393.36	774,065.86
Sanitation District Contractors Adjustments	.....	1,095,636.58
Miscellaneous Collections	378,334.73	379,718.76
Total Collections	$ 16,498,447.87	$ 18,772,060.49

Number of Deposit Permits issued for deposit of money in the County Treasury	32,078	43,738
Total amount of Deposit Permits	$123,250,991.36	$166,679,865.59
Number of Warrants drawn on Treasurer in payment of claims	834,364	883,806
Total amount of Warrants issued	$127,614,798.84	$169,397,654.47

The Auditor keeps a control of the expenditures of the various County Departments through appropriations allowed by the Board of Supervisors, and it is his duty to see that no orders, contracts, payrolls or other claims are passed unless there are appropriations to cover. About 27,000 orders and contracts were certified to the Board of Supervisors during 1927-28. Nearly 1,400 appropriation accounts and about the same number of expenditure ledger accounts were necessary to record the 125,000 documents covering County expenditures of the past fiscal year.

Audits of all payrolls and other claims arising from Contracts, Purchase Orders, Special Authorizations and Statute or Charter Provisions under the jurisdiction of the Board of Supervisors acting for the County as a whole, or as the governing body of Special Districts such as the County Flood Control District, various Fire Protection, Lighting, Sanitation and Waterworks Districts, and also various School Districts for services, material, supplies, etc., are made by this office and the necessary vouchers and warrants in payment thereof prepared.

The Auditor computes the rates and extends the taxes on the assessment roll, which work is becoming increasingly complex, because of the short time allowed by law and the large increase in the number of special districts, with their many assessment items and separate tax rates. For the fiscal year 1927-28, the tax roll consisted of 192 volumes, an increase over the preceding year of 7 volumes. There were 575 different combinations of county, school and municipal tax rates, and 237 special district tax rates. As certain taxes are levied on land, others on land and improvements, and others on all taxable property, several million computations resulted. In some instances, as many as eleven different extensions were made against a single property, while those with five or six extensions were quite numerous. These conditions are imposed by state law and not by local authority.

The Auditor is also custodian of the delinquent tax roll which consists of 39 volumes for the fiscal year 1927-28, an increase of 4 volumes over the preceding year. The records show an increase of 1157 in the number of redemptions for this year. The cancellations for this period have increased to 766, which is a record. A large part of these cancellations came as a result of the "Mattoon Opinion" allowing cancellation of general tax after payment of special benefit assessments by municipalities, Veterans' Welfare Board, and other State units. Several thousand estimates of amount to redeem were mailed by request.

This office, in addition to numerous audits, surveys and special reports undertaken, keeps records and makes verifications of deposits of County Funds in various banks; makes a monthly count of the money in the County Treasury, together with the chairman of the Board of Supervisors and a representative of the District Attorney's office; keeps a control record of receipts issued by various departments for money collected and makes a reconciliation with deposits in the County Treasury; and compiles and publishes the following reports for distribution to the public—The County Budget, The Taxpayers' Guide, The Annual Report of the Board of Supervisors, and The Statement of Bonded Indebtedness.

TREASURER

For the fiscal year ending June 30, 1928, this office showed some increase in the number of deposits made and warrants paid, while our cash received and disbursed increased about one-third, principally through the handling of tax money collected for the City of Los Angeles. Prior to this year tax money collected for the City of Los Angeles was paid daily to the City Treasurer by the County Tax Collector. Beginning July 1, 1927, all tax money was deposited with the County Treasurer by the Tax Collector and disbursed to the City by warrant each day.

There were 78,176 deposits made totaling $166,679,866.09 and 874,037 warrants paid amounting to $168,653,563.80 as compared with 65,628 deposits and receipts of $123,250,991.36 and 839,020 warrants paid totaling $127,282,-826.75 for the year 1926-27.

There were as of June 30, 1928, 176 banks in which we had deposited an amount of $59,056,376.94 as compared with 300 banks and an amount of $59,640,827.46 as of June 30, 1927. The reduction in the number of banks was caused principally by a great number of mergers and consolidations.

Large Amount of Interest Earned

The amount of interest earned on public deposits for the past fiscal year was $1,723,800.05 as compared with $1,761,382.03 for the year 1926-27. This reduction of approximately $38,000.00 in interest earned is readily explained by the marked decrease in our average daily cash balance. For the year 1926-27 the average daily cash balance was $60,815,526.00 which was reduced nearly $2,000,000.00 during 1927-28 to a daily average of $58,845,011.00. Applying our lowest inactive account rate of 3% against this $2,000,000.00 decrease, our interest earnings normally should have been approximately $60,-000.00, whereas the decrease was slightly less than $38,000.00. This would indicate that through more closely depositing our funds and practically eliminating our cash reserve in the vault, we have been able to show a gain in interest earned on relative amounts of over $20,000.00 for the year.

There has been some decrease in the number of bonds issued under the County Improvement Act of 1921 during the past fiscal year covering assessments made on account of paving, sidewalks, sanitary sewers, ornamental street lights and water works in unincorporated territory. The reason for this decrease seems to be that public opinion appears more in favor of an assessment which will be collected with the regular county taxes and which is not a direct lien on the property and cannot be foreclosed.

Under the County Street Opening Act of 1923, there was some increase in the number of bonds issued during the past year, principally due to the fact that the owners of Florence Avenue property, after two years of waiting, have finally adjusted their differences, there being issued in this district, known as Street Opening District No. 5, over 423 bonds. The Board of Supervisors appropriated funds and purchased this issue, as well as several other issues under this act. This investment has returned to the County of Los Angeles approximately twice the yield received from our funds placed as public deposits.

Under the provisions of the Acquisition and Improvement Act of 1925, bonds were issued in eleven districts during the past year, the largest single issue being for the acquisition of lands for Alondra Park, amounting to $1,014,961.20. This issue brought a premium of $32,581.50, which, in a measure, indicated the increased popularity of this type of bond.

The 1925 amendment to the County Improvement Act provides that notices be mailed semi-annually to property owners, showing the amount, as well as the date, when each payment is due. While this procedure would only apply to bonds issued after the effective date of the 1925 amendment, we

BIG PINES RECREATION CAMP

Views of different sections of the camp during the winter months. This camp is located in the mountainous northeastern part of the county, 106 miles from Los Angeles via Saugus, and 96 miles via San Bernardino. Some idea of the popularity of this all-year camp may be gained from attendance statistics covering the fiscal year 1927-28, as follows: People, 176,434; Automobiles, 47,455; Horses, 11; Motorcycles, 60, Hikers, 107.

Typical
Big Pines Recreation
CAMP
Winter Scenes

have made it a practice to mail these notices semi-annually on all bonds outstanding. In cases of delinquency, we make every possible effort to get in touch with the property owners in order that they may have the opportunity of protecting their property from foreclosure.

Street Bond Assessments

The number of street bonds issued during the past year were as follows:

Kind of Bonds	No. of Districts	No. of Bonds	Amount
County Improvement	97	11,942	$1,914,221.69
Street Opening	19	711	509,884.34
Road District Improvement	4	530	498,618.29
Acquisition and Improvement	11	1,699	1,536,666.06
Total			$4,459,390.38
On account of delinquency in payments, foreclosures ordered and Certificates of Sale issued		164	25,875.35
Certificates of Sale redeemed		144	26,332.19
On account of the non-redemption of Certificates outstanding for over twelve months, deeds issued		14	2,312.94

ASSESSOR

The larger portion of the County revenues is derived from the work of the Assessor's Office. During the year, real estate and buildings are inspected and values established for the same. During the active portion of the assessment year from the first Monday in March to the first Monday in July, deputies canvass the entire County and secure signed statements from the taxpayers as to their particular holdings both of real estate and personal property. The statements when received must be checked by the records and entered on the assessment roll with all special districts indicated for the same. Personal property unsecured by real estate must be collected by the Assessor during the assessment season. The following details will indicate some of the activities of the office during the fiscal year 1927-28.

740,073 Total real estate and personal property statements filed and all property appraised.
Above comprises—
- 331,309 Real Estate statements—districted, checked, entered and indexed. (9,000 to 11,000 statements checked per day during height of season.)
- 408,764 Unsecured personal property assessments—taxes computed, statements indexed and notices mailed.

12,679 Greatest number mailed in any one day.
64,484 Statements of business firms taken from book accounts.
59,118 Veterans' exemption claims filed, service and ownership records checked and affidavits taken.
3,681 Hotel, apartment house and theatre furnishings appraised and assed.
2,507 Oil wells, of which a similar number of estimates were made to determine value of underground reserved for assessment purposes.
256 Water companies, listed and appraised.
131 Banks listed and appraised.

160	Highway transportation companies listed and appraised.
186	Insurance companies listed and appraised.
42	Miscellaneous utilities listed and appraised.
115,197	New improvement items, measured and valued.
214	Tax roll volumes compiled, containing complete listing of all property in County and comprising more than one and one-half million separate assessments.
643	Map books prepared, consisting of 133 new books written and 510 recised by changes in maps and descriptions, to provide for new divisions of property.
643	Field books checked, to completely agree with map books, for use by fiel d and valuation deputies.
19,150	New divisions of property filed.
288,372	Taxpayers served thru correspondence.
$5,545,231.96	Personal property tax paid thru correspondence.
2,446,778.42	Personal property tax paid to counter and field deputies.
$7,992,010.38	Total tax collected.
1,065	Greatest number of persons employed in handling assessments at height of season.

TAX COLLECTOR

The County Tax Office was charged during the year 1927-28 with the collection of taxes, penalties and costs to the amount of $107,197,544.25, which, together with the collection of occupational licenses of $66,086.50, tax sales amounting to $16,826.17 and various other charges, totaling $107,456,395.63, of which $103,759,476.51 was collected, leaving $3,696,919.12 uncollected, including penalty and cost charges.

Of the original tax charge, 3.35% was uncollected at the end of the fiscal year.

The 1927-28 tax roll consisted of 1,115,464 parcels of real estate, an increase of 81,490 parcels or 8.11%.

There were 846,659 tax bills, an increase of 8.18% over the previous year. 44,900 second installment bills were issued, an increase of 21.3%.

583,492 tax bills were premailed, of which 22,719 were mailed from our permanent non-resident owner mailing list.

18,300 statements were filed with the assessor for non-resident owners.

There were 127,107 properties published in the delinquent list, of which 37,975 were paid before the close of the tax year, leaving 89,132 properties finally delinquent. Of 1954 properties delinquent for the period of five years, 1457 were redeemed before the sale and 397 were auctioned off.

493,389 pieces of mail were received and 904,403 pieces of mail despatched during the year.

COUNTY COUNSEL

The office of the County Counsel is one of the three legal departments of the County, and the County Counsel transacts all civil legal business and litigation of the County and its numerous officers and districts. The other two legal departments are the District Attorney's office, which handles the prosecution of crime, and the Public Defender's office, which represents accused persons and those involved in civil litigation who are unable to afford private attorneys. The office of the County Counsel is created by the County Charter. Under its provisions the County Counsel is required to represent

and advise the Board of Supervisors and all county, township and school district officers in all matters of law pertaining to their duties, and to have exclusive charge and control of all civil actions and proceedings in which the County or any officer thereof is concerned or is a party. By the charter, the County Counsel is also required to act as attorney for the Public Administrator in all estates administered by that officer, for which he is required to collect attorney's fees and pay them into the county treasury.

School Districts

Over one-third of the school children of the State of California are attending schools within Los Angeles County. A trifle over 35% of the elementary pupils, and 38% of the high school pupils are within the schools of Los Angeles County. These schools are maintained by approximately 160 school districts. By reason of the fact that each school district is a political subdivision of the state and that the legislature has seen fit to impose the performance of certain functions of the school districts upon the various county officers, including the County Counsel, the latter is charged with the duty of advising the officers of these districts. The school department of the County Counsel's office therefore advises the boards of trustees, superintendents and principals of the various school districts, as well as the various county officers who are charged with duties pertaining to school districts. In addition to general advice, the office of the County Counsel prepares all proceedings for school bond issues, defends all cases brought against the school districts, and institutes legal proceedings at the request of the various school boards. This litigation includes the bringing of condemnation actions to acquire school sites, suits arising out of the performance of contracts for the construction of school buildings and the purchase of materials and supplies, and the defense of the school districts in actions on account of injuries received by pupils or third persons as a result of the defective condition of school premises or property or the negligence of school employees. There are also certain other actions which involve the validity of the organization and existence of school districts themselves; the establishment of their boundary lines and the determination of the scope of the authority and functions of various school officers. In all, during the preceding year, the office of the County Counsel has handled 31 new litigated cases pertaining to school districts and school matters. In the last six months the school department has answered approximately 250 written inquiries for opinions pertaining to legal questions arising in the course of the maintenance of the schools.

During the fiscal year there have been prepared for the various school districts the necessary legal papers for thirty bond elections, involving bond issues amounting to $6,013,000. There have also been approved during the fiscal year 255 contracts for the Los Angeles Board of Education, involving a total consideration of $3,590,569. At the end of the fiscal year there were outstanding bonds of these various school districts as follows: Elementary School Districts $59,371,670, High School Districts $43,952,000, a total of $103,323,670, all of which were passed upon by the County Counsel's office.

Recoveries Under the Pauper Act

During the past fiscal year the County Counsel's office has filed numerous suits against relatives of indigent persons who were discovered to have sufficient funds to take care of pauper relatives but who refused to do so and who attempted to cast the burden of these paupers upon the county. These suits were brought under the terms of the Pauper Act and so far have resulted in collections of several thousands of dollars, although not all of the actions have been completed. Many persons who attempted to claim relief from the county as paupers and who were granted aid by the county charities have been forced to repay the sums so procured into the County Treasury by the

action of the County Counsel's office when it later was learned that these persons had acquired property.

Escrow of Real Estate Acquired

During the year the County acquired many parcels of real estate for general government purposes and also for library and fire protection districts, and the County Counsel consummated all of these transactions through escrow. Over two thousand deeds given to the County for road purposes were also checked and approved by the County Counsel's office during the year.

Flood Control District Transactions

The County Counsel's office has approved specifications for, and has approved 40 contracts for flood control work done in all parts of the Flood Control District, including the following important dams: Puddingstone, Sierra Madre, Big Dalton and Thompson Creek. Many condemnation suits have been tried and others are pending for acquisition of land for reservoirs and rights of way for the widening of river channels.

The securing of reservoir sites on government land has required extended public hearings before Federal Commissioners appointed by the Secretary of the Interior and the Secretary of Agriculture, and in the case of the San Gabriel reservoir, an appeal was taken to the Secretary of the Interior at Washington, D. C., which appeal terminated in favor of the District.

Advice to Board of Supervisors

A deputy in the County Counsel's office has been present at every meeting of the Board of Supervisors which has been held during the fiscal year actively advising the Board relative to the legal problems presented to that body. During the course of the fiscal year there have been prepared by the County Counsel's office 79 ordinances which have been passed by the Board of Supervisors.

Taxation of Publicly Owned Property

Last year, in conformity with an opinion of this office, the Assessor placed upon the tax roll for special assessment purposes, for the first time, property publicly owned and used which was not so used when the special assessment districts were established. Recently the validity of these assessments was attacked, the opinion of this office was upheld by the superior court, and the matter is now on appeal before the supreme court. If the opinion is finally upheld it will very largely reduce the burden on private property of such assessments, placing the proportionate burden upon the property of public agencies included within such small assessment districts.

The litigation concerning the nature of public utility property exempt from local taxation continues, and recently judgment sustaining the view of this office was rendered by the local superior court and has been followed by appeals to the state supreme court. If successful, the county will be saved approximately a hundred thousand dollars annually in taxes, which are threatened in the event the public utilities should win their fight. This office is now engaged in filing briefs in litigation arising in other counties, involving the assessibility for special assessment purposes of railroad main line rights of way, and the exemption from taxation of property of cemeteries not used for cemetery purposes. If the opinion of this office is sustained in these cases it will retain on the assessment roll property with an assessed value of $31,000,000 under the first category and $16,000,000 under the second, thus relieving the burden on the ordinary taxpayer. During the fiscal year 6,385 claims for refund of taxes totaling $158,276.56 were allowed by the Board of Supervisors upon the recommendation of this office. During the same year

226 claims for refund of taxes aggregating $29,240.98 were disallowed by the Board of Supervisors upon the recommendation of this office.

Litigation concerning the taxability of beneficial interests in solvent credits placed in trusts in foreign states still continues with the matter pending now before the supreme court. This office, however, secured from the special session of the legislature provision in the new constitutional amendment, appearing upon the ballot in November as Amendment 3, of taxation of such beneficial interests upon the same basis as solvent credits, so that in the event of a victory by the county, bona fide holders of such interests will in no wise be penalized, while at the same time they are subjected to the same burden of taxation as ordinary holders of securities.

Approval of Proceedings In Formation of Special Districts

It is the function and duty of the County Counsel to examine and approve the proceedings in the formation of nineteen kinds of special districts that have been organized in the County pursuant to the various procedural statutes and affect public improvements.

The special districts include those formed under the Acquisition and Improvement Act of 1925, water districts, irrigation, drainage, cemetery, library, sanitary, garbage disposal, lighting, fire protection, county improvement, road improvement districts, and various other special districts. Each variety of district is organized under a particular statute and has its own peculiar powers and functions. The formation and organization of each of these districts entails a considerable amount of legal work, all of which is performed by the County Counsel's office. During the last fiscal year there have been formed 112 County Improvement Districts, 28 Acquisition and Improvement Districts, 2 Road Improvement Districts, 10 Lighting Districts, 16 Lighting Maintenance Districts, 3 Water Works Districts, 2 Garbage Disposal Districts, 1 Cemetery District and 3 Fire Protection Districts.

The estimated cost of the acquisitions and improvements initiated during the last fiscal year under the Acquisition and Improvement Act of 1925 amounts in the aggregate to $3,683,719.84. Contracts amounting to $4,064,-321.83 were prepared for proceedings organized under the County Improvement Act of 1921. On behalf of these various districts and the County itself there have been prepared 572 contracts which involved a total consideration of $12,939,503.

Examination of Warrants

A further duty of the County Counsel's office is to examine and approve each County warrant which is issued before its disbursement. During the course of the fiscal year this office has passed upon the legality of 159,107 warrants, involving a total expenditure of $127,001,133.75. By thus carefully checking the county expenditures this office has disapproved as not valid 430 warrants involving a total sum of $145,844.71.

Rail Road Crossings

The County Counsel's office has made appearances before the Railroad Commission of the State of California in many cases during the fiscal year, and orders have been procured from the Commission authorizing the County of Los Angeles to construct 16 grade crossings, 2 overhead crossings, and 1 pedestrian crossing over the rights of way of the various railroad companies operating in the County of Los Angeles. The County Counsel's office has likewise appeared before the Industrial Accident Commission of the State of California with reference to the claims of county employees who were injured. This work involved approximately 20 appearances during the year before that Commission.

Court Litigation

The litigation which has been conducted by the County Counsel's office has very materially increased during the last fiscal year. On June 30, 1927, there were pending 521 cases in our courts which were being handled by this office. During the course of the year 338 new cases were entered upon the docket of the County Counsel's office, of which 111 were cases in which the County was plaintiff and 227 were cases in which the County or some county official or school district was defendant. A total of 202 cases were completed during the fiscal year, so that on June 30, 1928, there were pending 657 litigated cases upon the docket of the County Counsel's office. The amount involved in this litigation exclusive of condemnation suits was approximately $563,785.39. During the fiscal year there have been 56 condemnation proceedings for opening and widening purposes, which involved property to the value of several millions of dollars, while the number of parcels of land included in the proceedings is many thousands.

Bail Bonds

There has been much activity during the past fiscal year on the subject of bail bonds. During thte past year this office has handled a total of 200 bail bond cases amounting to $378,995.00. A total of $62,001.38 has been collected upon these forfeited bonds, in cash, thereby effecting a substantial saving to the people of the County of Los Angeles. A total of $55,610 in bail bonds were exonerated by our courts during the past fiscal year upon the return of the criminal defendants into court, so that the vigorous prosecution of bail bond forefeitures has accomplished also a substantial saving to the people of this county in this manner. A total of 130 cases were concluded during the year, leaving a balance of 90 bail bond cases pending on June 30, 1928.

Advice to County Departments

The County Counsel's office has conducted throughout the fiscal year a weekly conference of all the deputies of the office, at which time the more weighty problems of the various county officers are considered by the entire personnel of the office. The written opinions which have been rendered by this conference during the year have numbered 337.

There is much more that could be said regarding the work of the County Counsel's office. Every county officer and department has his or its individual problems, and each officer and department has had available throughout the year the prompt assistance of this office. The members of the office have engaged in hundreds, if not thousands of conferences with various county officials relative to the duties of those officials and have advised them regarding problems large and small. The work of this office has been handled by the County Counsel and 16 deputies, all of whom are attorneys admitted to practice in all the courts of the state. Each deputy is assigned to a special portion of the work so that the work of the entire office is highly specialized. In addition to the deputies, the volume of business which is transacted through the office requires the assistance of 15 secretaries and stenographers, 1 law clerk, and 2 process servers.

PUBLIC DEFENDER

The office of Public Defender is one of the three legal departments of the County and the business of the department is handled by eleven lawyers, consisting of the Public Defender and ten deputies. He does not, and cannot under the charter, represent people who are financially able to employ counsel.

During the last fiscal year the Public Defender acted as attorney for persons charged with criminal offenses in the Superior Court in 2,042 cases. Of

these, 1,591 were felony cases, 32 were contributing cases in Superior Court, and 410 were consultations in the office and in the county jail. The total appearances in the Superior Court were 5,897.

In addition to the above, the Public Defender was appointed by the court to represent the respondents in 8 insanity trials, and 1 person charged with contempt of court. The Public Defender appeared as attorney for the defendant in 265 trials in the Superior Court in which the charge was a felony, resulting in 80 verdicts of not guilty, 13 verdicts of guilty of less felony offense than that charged in the information and 154 verdicts of guilty. In 18 cases the jury disagreed.

The Public Defender also acted as attorney for the defendant in 16 preliminary examinations in the Superior Court in Contributing cases. Of these, 5 cases were dismissed and the defendant discharged, and 11 of the defendants were held to answer to the Superior Court.

Of the defendants represented by the Public Defender in criminal cases, 1,090 pleaded guilty; 947 pleaded guilty to the offense charged against them, and 143 pleaded guilty to a less offense than that originally charged in the information; 171 were granted probation without jail sentence, 248 were granted probation with a jail sentence and 446 were denied probation; 64 cases were stricken from the calendar and 77 were dismissed. Of defendants sentenced and committed to penal institutions, 417 were sentenced to San Quentin, 153 to Folsom, 103 to the Preston School of Industry at Ione and 159 to the County Jail.

In the Civil Department, 21,092 persons applied to the office for legal assistance and consulted with the attorneys. Of these, 3,813 were refused legal assistance or advice because they were able to pay a private attorney or because the office was without authority to handle their cases, 15,133 were given legal advice, and 2,146 had claims for money due or property detained or injuries suffered which were handled and adjusted by the office.

Most of the above cases were adjusted without suit being filed, the Public Defender having filed only 71 civil suits. Of these 49 were won, 2 lost, 5 settled before trial, and 15 were undisposed of.

The office was instrumental in recovering the sum of $63,066.95 for its clients, divided as follows:

Money Paid into office without suit	$ 2,170.62
Money and chattels collected out of office without suit	28,548.91
Amount of judgments won	2,695.98
Amount of wages released from illegal garnishment	29,651.44
	$63,066.95

CIVIL SERVICE COMMISSION AND BUREAU OF EFFICIENCY

Los Angeles County now has approximately 10,300 employees, exclusive of those in the Flood Control and those hired for special purposes. The County charter has delegated to the Civil Service Commission the duty of recruiting persons to fill positions in the classified service. This task is accomplished by means of competitive examinations in which are tested the relative merit and fitness of the candidates.

During the past year, more than 50,000 persons called at the Commission's office to inquire concerning these examinations. This has resulted in a large increase in the volume of business of this department. Four hundred and twenty-two separate examinations were completed within the year, which is an average of more than one and a half examinations for each working day. This is an increase of 30% over the number of examinations held last year. Ten thousand, five hundred and sixty-two candidates were examined, compared with 7,919 for the previous year, an increase of 33%. A total of 5,492

persons were passed and placed on the eligible lists for employment as compared with 3,652 for the previous year, a gain of 50%. In addition to the above, thirty-nine examinations have been held which are now in the process of completion. These results involved the handling of 13,562 applications, 38% more than last year, of which 1,057 were rejected because the candidates did not meet the requirements as to general qualifications, experience and education.

Only Efficient Aides Are Selected

The constant effort of the Civil Service Commission has been to employ only efficient aides in the work and to make its examinations practical and effective in every way. Words of commendation and appreciation have reached the Commission from the heads of other County departments who note that the employees being certified to them are well qualified to do the work required. A persistent effort has been made to investigate and analyze the qualifications presented by each applicant and to eliminate those who plainly do not meet the requirements. This resulted in saving the expense of examining 1,057 candidates. Medical examinations are required of all prospective employees before appointment, thus preventing much future loss to the County through sickness or incapacity.

Civil Service is the system adopted by the most enlightened and progressive states, cities and counties in recruiting employees into the public service.

Through Civil Service competitive examination, employees gain entrance into public service entirely through their own effort and ability. It takes the government service out of the hands of political spoilsmen.

There is nothing superficial or mysterious about a Civil Service examination. In a businesslike and practical way a test covering the duties and responsibilities of the position to be filled is given and this acts as a measuring instrument to determine the fitness of candidates to fill the position they are seeking. The fact that so many large private corporations make use of tests similar to those used by the Civil Service Commission, gives evidence that this method is generally considered the most successful way of securing those best qualified.

The Bureau of Efficiency

The County charter in Section 34, Paragraph 15, provides for the establishment of a Bureau of Efficiency, consisting of the members of the Civil Service Commission, the Secretary and Chief Examiner thereof, and the County Auditor. The duties of the Bureau consist in "determining the duties of each position in the classified service, fixing standards of efficiency, investigating the methods of operation in various departments and recommending to the Board of Supervisors and department heads measures for increasing individual, group and departmental efficiency—".

It will thus be seen that the Bureau is the research and investigating arm of the County government. Being an impartial and unbiased body, the Bureau may be called upon by the Board of Supervisors, department heads and employees for helpful advice and assistance. The department head may here refer his problems, with the assurance that friendly and honest counsel will be given, counsel prompted by unselfish motives and by concern for the public welfare.

The Bureau of Efficiency has had a very active and successful year. During the twelve months period ending June 30, 1928, 126 separate investigations, surveys and studies were completed. The majority of these matters was referred to the Bureau by the Board of Supervisors for consultation and study but many were initiated by the Bureau itself or upon the request of department heads.

MALIBU LAKE ROAD AND CULVERT

Part of Cornell Road at Malibu Lake which has been recently graveled and oiled and connects with the lately constructed Latigo Canyon Road, making a direct connection between the Ventura State Highway and the Coast State Highway through the Santa Monica mountains.

The old wooden bridge on Lakeside Drive at Malibu Lake was replaced during the year by 7 corrugated culvert pipes, each 60 feet long, one 96 inches and six 60 inches in diameter, making a new road bed with full width of 40 feet. Cost of the job was $8,485.65.

Bureau's Activities Are Varied

From time to time the Bureau conducts surveys of individual positions and of whole departments. It is the intention of the Bureau to make an intensive survey of each County department as rapidly as time and circumstances will permit. Such surveys include a study of the organization and structure of the department and it is believed that lasting benefits will result to the departments concerned in calling attention to more efficient methods of operation and organization which should ultimately produce great savings to the taxpayers.

Among the more important subjects, dealt with by the Bureau during the past year, may be mentioned the following:

Survey of the Outdoor Relief Department.

Survey of the Health Department.

Survey of the Livestock Inspector's Department.

Study of Voting Machines and Advisability of Their Use in Los Angeles County.

Establishment of an Accounting System for the County Repair Shops.

Revision of Classification of Positions in County service.

Survey of Activities of Psychopathic Parole Division of the Superior Court.

Study of Printer-Telegraph System for Sheriff's Department.

Study of Telephone Call System for Motorcycle Officers.

Assisting in the Preparation of the County Salary Ordinance.

THE REGIONAL PLANNING COMMISSION

Regional Planning in the County of Los Angeles can be defined as the scientific study of the problems of physical growth of separate communities which are common and inter-related, and the reduction of such studies to a coordinated, sound, economic plan embracing methods and procedure for carrying the same into execution.

The work of the Los Angeles County Regional Planning Commission covers 4,115 square miles of area. One thousand square miles is improved and occupied territory. The occupied territory includes forty-four incorporated cities, and about the same number of unincorporated towns, in all of which the process of planning must be thoroughly coordinated.

All the cities constituting a metropolitan area have problems which are inter-related, in the solution of which they are often working independently. The obvious answer is scientific Regional Planning.

Official Commission

The Board of Supervisors of the County of Los Angeles in January, 1923, established the first official Regional Planning Commission in the United States. The powers and duties of this Commission, as set forth in the ordinance creating it, are:

(a) To make a study of the problems of the County with respect to residential and industrial districts, traffic conditions, public parks and boulevards, flood control, subdivisions, and, in general, with respect to those matters affecting the orderly growth and development of the county as one large commonwealth and to make to the Board of Supervisors recommendations for the solution of the same.

(b) To advise with the Board of Supervisors and other county officials with respect to their duties affecting any of the above matters.

(c) To seek to interest the various municipalities and other political subdivisions of the county in a joint effort to understand and solve the common problems of development confronting them and the county.

The Commission consists of five appointed members, who serve without compensation, and three members ex-officio; namely, the Director (who is in charge of the staff), the County Surveyor, and the County Road Commissioner.

Divisions of the Plan

The elements which constitute the foundation of Regional Planning, and upon which the superstructure of a comprehensive plan itself is built, can be enumerated as the scientific study of **Highways, Transportation, Subdivision of Land, Use of Property, Recreation Facilities, Utilities and Architecture.**

Coordination

City Engineers' Association: Coordinating the work of planning with official, semi-official and various public agencies is vital in executing the plan. As a step in this direction the Los Angeles County Regional Planning Commission was instrumenal in forming a body of engineers called the "City and County Engineers' Association of California". This Association meets once a month. Quoting from its constitution: "The City and County Engineers' Association was founded July 13, 1923, for the purpose of acting as a body of advisory engineers for the Regional Planning Commission".

City Planners' Association: Formed also under the direction of the Regional Planning Commission in December, 1924, is an organization known as the "Association of City Planners of Los Angeles County", with a membership of 900 persons, composed of members of city planning commissions, city councilmen, city engineers, city attorneys and other persons interested in planning work.

Committees and Other Agencies: The Commission is represented in the League of California Municipalities; the Los Angeles County Grade Crossings Committee, which reviews and passes on all grade separations and crossings in the County; the Los Angeles City Planning Association; the Industrial Trackage Committee of Los Angeles County; and the Chamber of Commerce Committee on Airports and Commercial Aviation. The Commission is also in constant contact with the County Surveyor, the County Road Department, the Los Angeles Major Traffic Commission, the State Railroad Commission, the Greater Harbor Committee of 200, the Citizens' Committee on Parks, Playgrounds and Beaches, the Automobile Club of Southern California, the Los Angeles Realty Board, the Los Angeles County Flood Control District, the Los Angeles County Sanitation Districts, and the Associated Chambers of Commerce. It finds that its cooperation with these organizations, together with its representation upon other committees, greatly fortifies the work of planning as well as affording opportunities to inform technical and administrative bodies in regard to the plans of the Commission and the resulting accomplishments.

In the County Administration itself, matters pertaining to planning and engineering are discussed by a committee composed of the engineering heads of the departments, in order to coordinate the work of planning with that of surveying, finance and construction.

Research and Statistics

The County of Los Angeles is 4,115 square miles in area, being almost as large as the State of Connecticut. Of this vast area, only about one-third is now intensively used. The Santa Monica Mountains on the northwest, and the San Gabriel Mountains in the north center with the plateau beyond them, make up a total of nearly 3,000 square miles now sparsely populated but holding interesting possibilities for the future.

The remaining valley lands which constitute the metropolitan region within the County have an area of about 1,200 square miles. Here are to be

found 44 incorporated cities, varying in size from one to 441 square miles, and having a combined area of over seven hundred square miles. With each, the Commission is in constant contact.

Estimates of future population are necessary as the basis of plans for water supply, sewer systems, highways, and other municipal works. They are, of course, subject to definite limitations, and depend on the assumption that present trends will not be seriously modified by any new factors.

While the whole County has shown a phenomenal increase in population, averaging 14 per cent annually since 1920, the smaller cities within commuting distance of the business districts of the City of Los Angeles have shown the most rapid growth. Many of these have increased their population during that period by more than 20 per cent each year, so that by 1930, they will be roughly five times as large as they were in 1920. Such unprecedented growth requires active and careful guidance.

Surveys

More than 20 per cent of the nation's reserve supply of oil is located, according to expert estimates, in Los Angeles County. In 1927, the citrus crop was worth 120 millions of dollars, and the walnut crop brought six million dollars. Industries are stated by the Federal Census Bureau to have an annual output, as of 1927, amounting to over a billion dollars, (not counting plants whose annual output is less than $5,000).

These few features suffice to show the regional character of the problem, and the vast interests that are involved in a right determination of the proper allocation of lands to these and other fundamental activities.

Surveys have also been made or are being undertaken to determine, for example, existing parks and parkways, population distribution, rail transportation, political boundaries, extent of local planning and zoning, traffic density, location of grade crossings and many others.

The rapid development of aviation is indicated by the fact that there are now 1,387 airports in the United States, 386 of them municipally owned, and nearly 900 more proposed. The Commission has given this matter serious consideration, and aims at the development of a definite plan for the accommodation of this new form of transport.

First, the fullest possible information is being gathered as to existing conditions.

There are now forty-nine landing fields in the County. Maps and index cards in the files give accurate, detailed information concerning each of these, especially as to conditions of lease or ownership, highway plans involved, accessibility, and the utimate uses of adjacent lands.

Studies are now under way covering all other sites suitable for such purposes, in cooperation with the Committee on Aeronautics of the Los Angeles Chamber of Commerce. Passenger service, mail and express lines, student flying, private sport and pleasure flying, military and fire patrol work, are all types of aerial activity having different needs as to location, size and equipment of landing field. The object is to establish a fixed plan and policy as to the proper location, distribution and function of sufficient fields to serve each of these needs, considering their relation to each other and to the other features of the Master Plan.

Highway Plan

An important step in the preparation of the Major Highway Plan, which involves three thousand miles of highways one hundred or more feet in width, is the superimposition of a tentative plan on a set of the County Surveyor's Index Maps. These maps, about seventy in number for the entire County, range in scale from 1″-400′ to 1′-3300″. Some are adequate for local problems, but where a project extends over long distances they are unsatisfactory.

Therefore, base maps were essential which would include large areas of the County, of such scale that studies could be made and plans superimposed on copies of these maps. A scale of 1″-1000′ was chosen and the intensively used portion of the County southwesterly of the San Gabriel Mountains proposed for immediate mapping.

The method of procedure on a highway project usually is: A need for a highway improvement of major significance becomes apparent. This may mean the widening and improvement of an existing route or it may involve an entire new location through open territory. The different Public officials of the various civic units to be affected are apprised of the facts, service clubs and other organizations are enlisted for their support. If the project is a large one, an improvement association is formed which represents and protects the interests of the property owners along the route. At this point the Regional Planning Commission is consulted in order to ascertain if the request conforms to the Regional Plan of Highways. Then starts the technical development of the project through field investigations and the preparation of preliminary plans based on a thorough study of the area to be served. A petition request is filed with the County Road Department. It is in turn referred to a committee of representatives from the County Road Department, the County Surveyors Department and the Regional Planning Commission. Recommendations of this group are made to the Board of Supervisors on the basis of the engineering problem involved, the ability of the proposed assessment district to carry its share of the cost and on the general advisability of circulating the petition. Once a petition has been officially approved it may be in circulation a length of time varying from a few weeks to a year or more. Sometimes it is entirely abandoned for lack of support. However, when a petition has received what is thought to be sufficient signatures, it is returned to the Road Department, checked, and presented to the Board of Supervisors. This governing body, if they deem it advisable in their wider knowledge of the problem, order the preliminary proceedings, including the survey, plans and specifications, following which is the resolution of intention, hearings and the legal phases of acquisition and improvement depending upon which of the California Improvement acts is being used.

There are streets in Los Angeles County which are obviously in need of widening and improvement. They are usually narrow, heavily traveled, with sharp corners and abrupt turns and are dangerous both to the traveler and to those who live along them. The Highway Section has recently been preparing building line ordinances for those streets, regulating the erection of buildings to conform to definite lines suited to modern living conditions and methods of travel. These ordinances are based solely on police power in that they are for the promotion of the public health and safety. Many such ordinances have been passed by the Board of Supervisors and more are being prepared for submission to that governing body.

A scientifically designed highway plan for an area the size of Los Angeles County requires much time and careful effort to bring it to the point where the word "master" may be substituted for "tentative". The few hundreds of dollars spent by this section annually may only be contrasted with the millions of dollars of the taxpayers' money saved through knowing exactly where we are going and why, in the matter of this type of public improvement. Maps of the past show how lacking communities were in this regard. Streets were full of dead ends and jogs. Few, if any, of the highways were continuous or direct. Rates of grade in some instances were excessive. Highways were dedicated along property or section lines without regard to topography or to the direct linking of heavily populated areas. This condition may be excused to some extent because in the days when those surveys were made the sur-

veyor traveled on horseback, and Los Angeles County did not have a registration of three quarters of a million motor vehicles as it now has.

Land Subdivision

Patchwork street planning prevailed throughout the county until the Board of Supervisors created The Regional Planning Commission, whose first step was to establish the framework of a highway plan for the county, and whose second step was to evolve a set of standards for the regulation of land subdivision.

Each proposed subdivision is considered by the Regional Planning Commission through its Subdivision Committee, which is composed of engineers representing the eight county departments vitally interested.

1751 tracts, all in unincorporated territory, have been submitted to the Commission's Subdivision Engineer for consideration during the past six years.

The number of lots placed on the market by subdivision activity in county territory was 9600 in 1928 alone; and during the four preceding years, an even greater number, as shown by the following tabulation:

1924	19,328
1925	17,065
1926	12,006
1927	14,135

The effectiveness and value of this regulation is shown by the fact that one hundred miles of major and secondary highway has been dedicated to public use in these subdivisions. These dedications, obtained in conformity with the master plan, represent an enormous saving to the communities in which they exist. They obviate the necessity for the expenditure of large amounts of public funds which would otherwise have been necessary for elimination of street jogs, openings and widenings and other costly corrective proceedings.

The Subdivision Section is thus seen to be the point of contact for all parties interested in land subdivision. The owner, subdivider, engineer and general public, as represented by the Commission, confer and agree upon a practical plan of subdivision meeting their respective requirements. To be prepared for the present and future subdivision growth of Los Angeles County is ever the problem.

Use of Property Regulation

Zoning includes, among many things, a thorough study of everything relating to housing; not only the dwelling itself, but also the social activities that affect and determine living conditions. Zoning in its final analysis means assured property values, and eliminates to a large degree mistaken judgment in the purchase of land. Sporadic development in any community spells economic loss. Therefore, it would seem perfectly logical to regulate the use of property so that a well-balanced community will be developed instead of a hodge-podge conglomeration of various uses. One can drive through many of our cities and outlying communities, and see clearly the misuse of property; for example, an undertaking establishment, public garage, laundry, etc. being interwoven into the home life environment of many fine residential areas.

The unguided growth of many of our cities has brought about in numerous instances chaotic conditions that have taxed to the limit the best talent of the county, both of city planners and the legal profession, in attempting to undo that which has been done in a haphazard manner.

The County of Los Angeles was the first County in the United States to establish a zoning ordinance, adopted September 12th, 1927.

January 24, 1926, saw the first Use of Property Survey maps started. Since that date, twelve unincorporated communities have been studied. In addition, eight communities are being studied with the same objective. In all, approximately 105 square miles of urban communities are under intensive study. Out of the twenty communities under study, six have already been definitely zoned.

Approximately 85 public meetings have been held throughout the County in the past two years. This, however, does not take into account the many necessary preliminary conferences with small groups, representing improvement associations, chambers of commerce, etc.

Very extensive studies have been made, and are being made at the present time, to determine the correct ratio of business to population, bearing in mind that no set ratio can be laid down for the County as a whole, but can only serve as a guide. The customs and habits of the people, the class of people, the geography, the topography, the proximity to a metropolitan business center, traffic conditions, the buying power of the community, the ultimate use of the property, all have to be taken into consideration in a study of this kind. Measurements were made in forty cities and villages in the region of Chicago to determine how much business property to plat in subdivisions and to zone for commercial uses in the future. They found the average ratio to be 50 feet of business to every 100 people. In the forty cities and villages measured, the lowest ratio they found was 22 feet of busniess to 100 people, and the highest was 90.7 feet to 100 people. It seems that this conclusively proves that a fixed ratio cannot be applied upon all communities alike, and that each community will have to be studied by itself to determine the amount of business frontage that should be set aside for a given population.

Zoning is a mathematical problem. If zoned to an economic ratio as between business and population, it will better protect those who buy hoping to sell for a larger price. If there is an oversupply of business property, the only chance for the speculator is in a false boom that will enable him to unload on some unsuspecting buyer who thinks he has bought a good piece of business property.

The very thing that is being accomplished through zoning regulations is actually taking place in many instances, and that is the establishment of business centers along major highways at strategic points, preferably at major intersections, instead of the usual practice of zoning along so-called shoestring strips that extend for many miles in length, and can never be totally occupied for business purposes due to existing and future uses of the land adjacent thereto. One will find on investigation that the major street intersections are where the substantial business now exists in many instances; the frontage between such points is devoted to a conglomeration of uses, and in many cases, can only be called "frozen" property.

Landscape Design

Parkways: An important part of the Commission's program is the development of a comprehensive park and parkway system. At this time the County has no parkways, although their immeasurable value has long been recognized. In the eastern and midwestern states park and parkway programs come second to none in planning procedure.

Calling a ribbon of pavement with a little planting on either side a "parkway drive", however, does not make it one. A parkway must have design and parklike character with a liberal amount of land reserved for planting. The width may vary from 200 feet upward to where in some instances it may be wide enough for recreational uses.

Community Parks: Equally important are small community parks, such as Morgan Park. In this case, public spirited citizens in an unincorporated

community consulted the Commission for aid and advice. The area, as in most such cases, was small; the features desired were many. By proper design, it was possible to demonstrate that an area even so limited in size (less than eight acres) can be so developed as to serve for both rest and play without sacrificing charm and beauty.

The value of care in design is also evidenced in the treatment of small odd-shaped areas occasionally left over in the process of land subdivision.

Civic Center

Similar thorough methods are used in attacking all problems of design. An example of an entirely different sort is the Los Angeles Civic Center Street Plan produced in this office. This plan was officially adopted by both city and county authorities on December 5, 1927, thus solving a problem which had been a source of much difficulty.

These are but a few of the many problems which arise in Landscape Design.

Visual Presentation

The Staff Artist cooperates with the Forestry Department, Road Department, Bridge Department and local civic bodies in:—Designing and preparing illustrative data concerning County parks and parkways; preparing perspective studies of maps, also of highway alignments and grade separation problems; and supervising the preparation of informational material used at expositions, conferences, and other public meetings.

REGISTRAR OF VOTERS

The exceedingly rapid growth in population in Los Angeles County has resulted in a very substantial increase in the number of registrations handled by this department. For the May Presidential Primary Election 399,805 voters were registered in Los Angeles City and 322,620 were registered outside this city, making a total registration of 722,425 voters in this county. Undoubtedly when registration closes for the General Election in November, there will be more than 900,000 registered voters in Los Angeles County.

Over two thousand field deputies were employed to register these voters, as well as office deputies and a large number of seasonal clerks.

Many Special Elections

In addition to the May Presidential Primary, 101 other elections, such as Annexation, Bond, Consolidation, County Water District, Garbage Disposal District, Improvement District, Incorporation, Library District, Lighting District, Municipal, Recall, and School Bond elections were held in Los Angeles County during this fiscal year. Of these elections thirty-four municipal elections were held on the same day in each of the incorporated cities of the sixth class.

Aside from the registration of voters and the conduct of elections this office also checks all initiative and referendum petitions and nomination papers of candidates. For the August Primary Election, there were 802 candidates whose papers were filed and checked in this office.

In conclusion, there are more registered voters in Los Angeles County than in all the ten next largest counties in the State, which includes San Francisco and Alameda Counties.

MUNICIPAL COURT—CITY OF LOS ANGELES

Since the merger in February, 1926, of the Police Court of Los Angeles and the Justice Court, forming the Municipal Court, City of Los Angeles, the

comparison in the amount of business handled is an interesting study. The personnel has increased to the full quota allowed by the Legislature, and the number of cases filed was almost twice as many this fiscal year as last.

Volume of Business

There were 358,496 cases filed during the fiscal year, of which 301,977 were Criminal and the balance of 56,519 were Civil.

Civil cases consisted of 40,564 regular filings for which the five dollar fee was collected, one dollar for each case going to the support of the County Law Library. There were 874 regular cases filed free, the most of which were on official government business, while a very few were in forma Pauperis. There were 15,081 Small Claims filed, of which 1,295 were filed free. Of this amount, 1,270 were filed free before July 29, 1927, which was the effective date of the Legislative provision of a dollar fee. The total of fees and miscellaneous revenues was $243,720.95, practically all of which came from Civil work, and with the exception of the dollar paid to the Law Library, most of this revenue went to the County Salary Fund.

Criminal cases consisted of 254,097 Traffic and Motor Vehicle; 12,585 Intoxication; 5,652 Wright Act, (a decrease from prior fiscal year); 3,274 Preliminary Felony Examinations; 1,253 Failure to Provide; 81 Contempt of Court, and 25,035 Miscellaneous cases.

Revenues and Receipts

The City of Los Angeles has derived a large revenue from Summary Judgments rendered against Bonding companies where Surety Bonds have been forfeited in Criminal cases. The sum of these and interest during the fiscal year amounted to $26,939.71. Such action was not taken until a good portion of this period had passed and no doubt this will be a great deal larger next fiscal year. The County of Los Angeles also benefited by Summary Judgments in like circumstances, but the settlements were made directly with the County Counsel, satisfactions being filed, and we therefore do not have accounting data on the amount of such to the County.

The City of Los Angeles filed 269,903 cases and received a revenue of $1,317,193.50 from fines and forfeitures thereon, while the County of Los Angeles filed 88,593 cases and received a revenue of $233,733.50, which together with the revenue on Civil work made a total County revenue of $477,-494.45. Various State Boards and Funds received a revenue from fines and forfeitures, the total of which amounted to $2,248.75.

The Trust Fund, holding the bails and civil trusts pending decision, received $1,139,709.61 and disbursed $1,032,876.80. Total cash collections amounted to $2,936,646.31. A large part of this was handled through the Traffic Violations Bureau, established in November, 1927, with whom we work in conjunction and take bail on all petty traffic and vehicle tags issued by the Police Department of Los Angeles. The Traffic Violations Bureau has a swift indexing system to keep track of the number of traffic tags issued to each person, and the amount of bail is increased on second and third tags. At this one point it is necessary to write receipts at the rate of one hundred and fifty thousand yearly.

There is a Deputy Clerk on duty at the Central Police Station, for the purpose of taking bail, at all hours when the Court Clerk's Office is closed, thus making a 24 hour service.

Owing to the ruling that Liberty Bonds, which were posted in lieu of cash for bail, were subject to the rule of taking the fine from the amount posted for bail, there has been a practical stop to the offering of such bonds in lieu of cash.

As before, a Division is located in San Pedro and one in Van Nuys. Also

one division is specializing on cases where the defendant is a female as well as the Failure to Provide cases.

Two more Divisions were added July 29, 1928, thus making 26 Divisions in all. These 26 Divisions have handled nearly double the number of cases which were handled by the 24 Divisions last fiscal year.

COUNTY CLERK

Every division of this department registers a fair increase over the business of the preceding fiscal year. The single item of original filings well illustrates the comparative increase, to-wit:

	1926-1927	1927-1928
Civil actions filed	27,968	29,353
Divorce actions filed	8,625	9,395
Criminal actions filed	2,581	3,175
Probate proceedings filed	8,417	8,718
Juvenile proceedings filed	5,761	6,598
Psychopathic proceedings filed	2,701	3,032
Incorporations filed	3,448	3,733

Fees collected and deposited in the salary fund of the Treasurer's office totaled $402,882.05, an increase of about 5% over the preceding year.

Even contrary to the state-wide falling off of marriages under the operation of the three days notice requirement, indicated by much publicity to that effect, Los Angeles County shows an increase of 379 marriage licenses issued. While the delay necessary under the new law was at first received by many with displeasure, now that people have become well acquainted with the notice provision, there is generally agreeable acquiescence with its terms. It is not believed, so far as this county is concerned, that many are going outside of the state to be married in order to avoid the delay mentioned.

More Floor Space Needed

Need of additional floor space for the operation of the County Clerk's department is imperative. For the past several years the files have been crowded closer and closer together until they can now be crowded no more. The next operation is the removal of the older files or those seldom referred to, such as dismissed actions, to some outside place of storage. Dismissed civil and divorce actions are now being separated for that purpose.

With the large temporary increase in the number of Superior Court departments at the beginning of the year and the consequent increased pressure on the various divisions of the Clerk's office, it was found necessary to engage considerable extra temporary help, court clerks, ordinary clerks, typists, messengers, etc. With the closing of 14 extra Court departments contemplated about November first, 14 court clerks on leave of absence from other County Departments will be applying for reinstatement to their former positions. Several occupying other positions will be similarly affected.

CORONER

During the last fiscal year the Coroner's Department has handled 3,765 cases of sudden and violent deaths. This is the greatest volume of work in the history of the department. The increase over the previous year is about the same ratio as has obtained for the past eight years and is probably due more to the increased population of the county than to the increase in traffic fatalities.

There was a decided increase in the number of deaths from natural causes where there was no attending physician. These cases totaled 1910 and were

largely composed of persons who had sought this climate as a last resort for chronic ailments from which they had suffered many years and had ceased to employ physicians.

There was a total of 101 homicides and 399 suicides during the period. The Coroner and his deputies held 868 inquests, 466 of which occurred in Los Angeles City and 402 in the municipalities outside of Los Angeles City. The Autopsy Surgeons of the department performed 2,549 post mortem examinations and had 2,947 chemical tests made to assist in determinations as to causes of death. They also handled 249 cases in the pathological laboratory. During this period, 6,399 citizens served as jurors and 5,320 witnesses appeared and testified at inquests. The typewritten testimony taken at inquests amounted to 24,947 pages. The Coroner also acted in civil cases where the Sheriff was disqualified in 10 instances.

The scientific work performed by this department far exceeds in extent that of any other Coroner's department in this country and is five times as great as that performed by the Medical Examiner of New York, who claims to have a very superior system.

St. Francis Dam Disaster

The St. Francis Dam disaster occurred during this period, which was the greatest catastrophe ever experienced in this county in number of lives and vast amount of property destroyed. The Coroner's office handled the investigation of this disaster with a jury of expert engineers and geologists who spent more than three weeks reviewing evidence and arriving at a conclusion not only entirely satisfactory, but of vast benefit to everyone interested in dam construction. This whole matter was handled by the Coroner's office without employing experts and without any additional cost to the county. A temporary morgue was established at Newhall early on the morning of the disaster and all the bodies recovered in this county were cared for and thoroughly embalmed at that place and delivered to representatives of relatives promptly and in as good condition as the circumstances would warrant.

In line with the policy of this department, 2,335 bodies were embalmed in the Coroner's mortuary. This practice is followed to insure preservation of the bodies in the interests of relatives and friends and because of delays that are ofttimes necessary because of the scientific processes required to establish causes of death.

The net cost of operating this department for the last year, $65,125.93, is lower by far than that of any Coroner's office, handling a similar amount of work, in this country.

The Coroner's office is open 24 hours of every day and in constant touch with the police departments of every municipality in the county. The Coroner and his deputies are available at all times, day or night, and are prepared to handle any emergency which may require their services.

SHERIFF

During the fiscal year which ended June 30, 1928, the Sheriff's Department continued a general expansion, both as to size and as to the decentralization movement which was started four years ago.

The successful operation of the two sub-stations which were started four years ago, warranted the expansion of the decentralization movement to meet the rapidly growing population conditions being experienced in the County. At the present time, nine sub-stations of the Sheriff's Department have been instituted. The chief function of the sub-station is to meet emergencies with greater expediency than is physically possible in dispatching Deputies on hurried calls from the main office. When sub-station Deputies run into cases

which require more than emergency treatment, such as a serious murder case or any other type of crime that would involve a scientific investigation, such investigation is then continued by specially trained Deputies operating from the details of the main office.

During the year, the general plan of organization established two years ago has remained intact, with the exception of minor changes in the details of the Criminal Division. These details have been reduced in number from fourteen to ten. In the creation of a main office detail, which has absorbed the functions of the Subpoena, Special, Extradition and Female Details, a reduction in the minor sub-divisions of the Criminal Division has been effected, and a concentration of control created thereby. The Main Office Detail now also assumes control of personnel and employment matters, and is directly under the supervision of the Chief Criminal Deputy.

During the year, there was an increase in the personnel of the Department from 657 on the pay-roll as of July 1, 1927 to 700 as of July 1, 1928.

Among the major activities of the Department during the year, should be mentioned the work of the Deputies in the Criminal Division and Constabulary who conducted a total of 48,464 investigations and made 11,662 arrests. These officers also recovered stolen property, and by their prosecutions caused fines to be assessed by the courts, which, together with the net earnings of the Civil Division, totaled a sum of $1,295,366.72, as tangible profits of the Department for the year.

A total of 16,535 prisoners were booked in the Los Angeles County Jail during the year, by the Sheriff's Department, the Los Angeles Police Department, the Federal Government, the County District Attorney, the Probation Department and other policing authorities. This compares with a total of 14,818 prisoners booked during the previous fiscal year, or an increase of 11.6%. Of these prisoners, a total of 18% were less than 20 years of age, and 24% were between the ages of 21 and 25. Approximately seven thousand prisoners, or 42%, were less than 25 years of age. This condition reflects a large amount of crime among youthful people, which, in the general sense, has not been modified materially during the last three years. Respecting the juvenile situation, the picture is not encouraging, in view of the fact that we do not book boys in the County Jail less than 16 years of age, and no girls less than 21, so that altho the figure for juveniles in the county jail is quite high—18% of the total—it does not reflect completely the full amount of juvenile delinquents in the county. Efforts of the Bureau of Public Relations to reduce the amount of juvenile delinquency have proved very effective. For the most part, these efforts have been confined to controlling the number of automobile thefts. The combined efforts of the Bureau of Public Relations in crime prevention work, the expansion of the sub-stations, and the improvements of cooperative efforts with outside institutions, working against the automobile thief, who is largely of juvenile age, have brought about an actual reduction in this prevalent crime, for the first time in thirteen years.

Approximately 7,500 finger print records were made in the Bureau of Records and Identification and forwarded to the Bureau at Sacramento, during the year. There were 793 prisoners assigned to the five Road Camps. The Contact Officer secured 499 jobs for prisoners who had applied for parole, from June 15, 1927, to June 30, 1928.

The average cost of food stuffs for meals in the County Jail was 8.65c, which establishes a new low annual figure, while no reduction in the standard of meals has been permitted.

RECORDER

From the annual report of the Recorder's Office filed with the Board of Supervisors, showing volume of business transacted during the Fiscal Year

ending June 30, 1928, the following items of interest are shown, which, compared with the same transactions of last year, show a substantial increase in this department as well as all others of the County government.

	1926-27	1927-28
Number of documents recorded	549,125	559,336
Number of folios recorded	5,090,557	5,123,110
Number of birth certificates filed	9,054	9,539
Number of death certificates filed	6,230	6,609
Number of marginal releases filed	3,502	3,365
Number of marriage licenses and certificates	16,694	16,722
Total Receipts (Fees Collected)	$ 810,171.00	$ 820,314.49
Total Disbursements	583,419.42	595,836.05
Net Revenue to County	$ 226,751.58	$ 224,478.44

Many documents are recorded free for city and state officials, government liens and discharges of same; but the larger part is for war veterans, such as recording discharges and preparing papers in connection with compensation, pensions, etc.

The number of documents recorded is over ten thousand more than last year, but this does not represent any material increase in the actual business in the realty line.

In a number of late annual reports, attention has been called to the fact that this department needs more room, as there is not sufficient space to arrange the books for the convenience of the public. Valuable records are scattered throughout the two buildings; many of them in a room in the old Court House, the room being without windows or ventilation.

It is respectfully suggested that the board consider erecting a building for the use of the County Recorder, which is absolutely fireproof. Approximately two thousand documents per day are being received, and the records are of such nature that they must be prepared and accessible to the public at all times. The space now occupied is practically filled, with almost no provision to take care of the coming year's expansion.

The comparer's department is divided, a number of sets of comparers being on the first floor and a number on the second floor. This necessitates the copyists carrying their books up and down stairs; and the comparers are working so close together that they are reading against each other. Too much stress cannot be laid upon this matter, as it is not safe to have the comparers working under present conditions.

Land Registration Division

Instruments filed	23,630
Certificates written	5,551
Decrees filed	21

Receipts

Total	$12,818.81

Disbursements

Salaries	$36,717.06
Expense	2,325.73
Outlays	460.52
Total disbursements	$39,503.31

The fees that a Registrar of Land Titles in California is authorized to collect, were fixed by an initiative measure enacted by the people, and not by

an Act passed by the Legislature; and are very much smaller than in other jurisdictions where a similar system is in operation.

In Canada, the Registrar charges $5.00 for writing a Certificate of Title, as compared to $1.00 here; for filing and entering a mortgage on the original certificate, $1.50, while we charge 50 cents. Charges on other instruments are in proportion. If we were allowed to charge as elsewhere, the Land Registration division of the Recorder's Department would show a surplus.

PUBLIC ADMINISTRATOR

It is the duty of persons in whose house any stranger dies, without known heirs, to give immediate notice thereof to the Public Administrator; under the law of California, he has jurisdiction to be appointed administrator in all cases where the decedent dies intestate (without leaving a will), where heirs are unknown, or in case the heirs reside outside the State of California. A non-resident heir, executor or administrator, other than surviving husband or wife, cannot appoint any person administrator of an estate. The Public Administrator is under a $50,000 bond, and all actions taken in estate matters are under the supervision of the Superior Court.

The Public Administrator conducts all business in connection with safeguarding the assets of estates in his hands, including rent collections, interest, wages, dividends; handles notes and mortgages, conducts sales of real and personal property and all court actions necessary in the administration of estates. The office investigates thousands of claims yearly, allowing and paying the legitimate ones, denying the questionable claims and with the assistance of the County Counsel defending the estates in suits by creditors. The office collects miscellaneous insurance from insurance companies and from the government, also death benefits from lodges and other organizations. This necessitates the furnishing of statements from the Health Department, Coroner, undertaker, physician, minister, friend and claimant. The office also takes charge of any business which may be a part of the estate, such as a restaurant, store, or ranch, and conducts the business until such time as advantageous disposition may be made thereof.

One of Most Profitable Departments

The earnings of this office as shown by schedule below indicate that considering its size, the Public Administrator's Office is one of the most profitable of the County offices. There are only nine employees in this office.

	1926-27	1927-28
July	$ 4,588.89	$ 2,926.79
August	4,800.33	5,448.91
September	7,007.48	4,775.12
October	3,855.49	5,583.22
November	3,176.73	3,250.32
December	2,651.55	3,405.47
January	3,858.60	6,077.96
February	5,782.32	5,139.58
March	6,236.18	7,340.66
April	4,920.05	5,728.43
May	4,941.20	7,198.53
June	2,684.17	3,213.98
	$54,502.99	$60,088.97

It is estimated that the earnings of this office for the coming year will be $70,000.00.

During the fiscal year ending June 30, 1928, the Public Administrator

was granted Letters of Administration and administered approximately 920 estates which included 75 wills admitted to probate. There were 450 sales of real and personal property submitted to the Court for confirmation. A representative of this office checks all petitions filed in the County Clerk's Office and a second petition is filed in each case in which the Public Administrator has jurisdiction.

The Public Administrator, and his employees, are on a salary basis and all fees collected on estates paid into the County Treasury. The fees are based on the Court Appraisement of the assets and are figured on the following percentage basis: 7% on the first $1,000; 4% on the next $9,000; 3% on the next $10,000; 2% on the next $30,000; 1% on the next $50,000; and ½ of 1% on all above $100,000. In addition certain extra charges are made for sales of real estate and depositions in proof of heirship, all of which are paid into the County Treasury.

FORESTRY DEPARTMENT

The County Forester is charged with the development and maintenance of County parks, together with the planting and maintenance of County roadsides and administration sites. As Ex-officio County Fire, Fish and Game Warden, it is his duty to deal with all the Fire Prevention and Suppression efforts in unincorporated territory, exclusive of National Forest areas, to form and supervise County Fire Protection Districts and to properly protect the fish and game resources of the County.

The Forester, Fire and Game Warden carries on his activities from appropriations set aside by the Board of Supervisors from the General Fund of the County with the exception that revenues raised to support County Fire Protection Districts are gained through direct taxation with each district having its own separate budget.

To correlate and co-ordinate the various functions of the Forestry Department, it has been divided into two principal divisions known as the Forestry Division and the office of the County Fire Warden. The latter branch has been departmentalized into divisions and bureaus in order to cope efficiently with the diversified details which go to make up the Fire Warden's duties. To clearly show the Forestry Department's activities for the past fiscal year each division's work will be taken up in review form.

Forestry Division

The two outstanding features of the many activities of the Forestry Division, during the last fiscal year, have been the roadside planting program and the forestation policy.

Trees planted by the Division along major highways and residential streets in the unincorporated sections of the County of Los Angeles, exceed by four times, the number planted during 1926-27. Under the supervision of the Division, which is charged with issuing permits for the planting of trees on County highways, over four thousand trees were planted by private parties. This again far surpasses the number planted in this manner last year. During the year, approximately four thousand five hundred trees were removed from the highways of the County, under permit of the Division due, primarily, to necessary street widening and curb alteration. Therefore, the net gain of trees in the County of Los Angeles, excluding State Highways, is about eight thousand. These statements indicate that the economic, health and landscape value of shade trees along the line of travel is being appreciated by the citizens of the County.

The initial building up of an efficient forestation organization is, of necessity, a gradual process. There is the old work to be continued and pioneering to be undertaken. Developments, accomplishments, failures in forest prac-

tice, not only in our own section, but throughout the country, must be investigated and the lessons applied to local conditions. A study of the Fiscal Report of the forestation policy goes to show that this Division has been carrying on its work as outlined above. The report indicates that various types of experimental work are being carried out both as regards nursery and field practice. Numerous other species are being tried for their values in forestation. One will note the increased number of Big Cone Spruce, a native tree of Southern California, in our nurseries which, a few years ago, was thought to be a reforestation impossibility.

The Division has been carrying on its normal policies such as planting, trimming and maintenance, and improvement of seven parks and five parkways amounting to approximately 106 acres, and Department Service for the following County departments:

Hancock Park—administered by the Los Angeles County Museum.

County Health Department, County Hospital, Olive View Sanatorium and other smaller projects.

Parks and Grounds—Development and Maintenance

Court House Grounds: Shrubs and lawn were planted on a plot in the rear of the Hall of Justice Annex. The vines on the Court House received their winter trimming. The regular planting and replacing of stock has been done on the Court House Grounds. The area torn up during construction on Spring Street, has been filled in with soil and new lawn sown.

Belvedere Park: (3 acres)—Reconstruction work is in progress. A sprinkling system has been installed and new soil hauled into the area. Several large Deodars were brought from Michillinda Park and planted here. Approximately 250 new shrubs were set out and other shrubs transplanted. Some shrubs were transferred from here to other parks.

Lawndale Park: (½ acre)—Park was reconstructed. A new lawn was sown, shrubs transplanted and paths built. Some shrubs were transferred to other parks. Nine Palms were moved into the park and 14 Casuarinas moved from the park to the parking. A drinking fountain is yet to be installed and the parking completed.

Michillinda Park and Parkways: (5 acres)—Reconstruction work was continued and completed. Paths were altered to increase beauty and utility of the park. A large area of new lawn was sown and new shrubs added. The water system was altered and renewed. The center lily pond was filled in and sown to lawn. Thirteen additional Deodars were moved to the parkways which had been graded and the surplus soil removed. All the Deodars in the parkways received the necessary care and are in good condition.

Rhoades Park: (⅛ acre)—A small flower bed around the flagpole was established and regular maintenance work carried on.

San Dimas Park: (13 acres)—There are now 1,187 trees planted and being maintained as also are many ornamental shrubs. Approximately eight acres of grass are kept mowed and the weeds cut down. A tool house and shed have been completed. A large number of people now use this park. During one month, there were three picnics, totaling 1,020 people. Space has been graded at the northwest corner of the park for future improvements such as a tennis court, etc. Parking space for sixty cars was graded on the south side of the park. Twelve additional picnic tables and three new fireplaces were constructed. Seven hundred and fifty yards of soil was hauled in to fill old washes. A new drive has been graded and surfaced along the south side of the park.

Santa Rosa Park: (¼ acre)—Construction started on this park in April. A large quantity of soil has been moved and grading done; two Deodars were moved in and approximately 236 shrubs and 65 plants set out.

Savannah Park: (1 4-10 acres)—A water system was installed. Two concrete tables and benches and one fireplace were built for public use. The weeds have been kept down but no other improvements have been given this park.

Temple Park: (3 acres)—Alterations have been made in the plan of the park. Old overgrown shrubs were removed and new ones established. A large quantity of lawn was resown; stock planted and winter pruning done. Three new concrete tables and seats were constructed and the sprinkling system overhauled.

All of the other parks and parkways have received the necessary maintenance and care.

Hancock Park: (24 acres)—The planting of the outside area was completed; 4,983 trees, shrubs and plants were set out and are in good condition; some replacements were also made. The ground was put in shape and lawn planted on all sides of the park. The parkways were planted to Sycamores, Camphors, Black Acacias and Poplars. There were approximately 6,800 square feet of paths established. Weeding, cultivating and general maintenance was carried on in addition to the construction program. The park area was completed and returned to County Museum control July 1, 1928.

Health Centers:

El Retiro: Eighteen large shrubs and eight Arizona Cypress were planted.

Pomona: During December, the grounds were landscaped and lawn established.

The other Health Centers received the necessary attention for their maintenance.

Fire Warden Patrol Stations—Planting advice and approximately 448 shrubs and plants were given the Topango Patrol Station. The Escondido and Big Rock Stations received planting attention as also did several other stations.

Ornamental Nurseries

Altadena—There is a total of 89,357 trees, shrubs and plants in this Nursery, of which approximately 9,000 are trees for use in planting on the County highways. The rest of the stock is for use in the County parks and buildings.

Pacoima—There is a total of 16,296 trees, shrubs and plants in this Nursery of which approximately 3,800 are trees for use in roadside planting. The rest of the stock is for use in the County parks and around County buildings.

Insect Infestation

In February, 1928, an inspection was made of the Crystal Lake area that is being made into a Los Angeles County Recreation Park. Twenty trees in an area of two thousand acres were found to be infected with Pine beetles. Due to the value of this timber, from a recreational standpoint, it was necessary that control measures be taken. Two Sugar Pines, seven Jeffrey Pines and eleven Yellow Pines which were infected, were felled, barked and the bark and limbs burned.

Mistletoe Eradication

One mile of brush and down trees were burned along the Edison Road to eliminate mistletoe. In Cow springs Canyon, three hundred and ninety-one

infected trees were treated, and ninety-two trees were cut down. The area was cleaned up and the brush burned.

Office of County Firewarden

This branch of the Forestry Department experienced one of the most eventful years in its history. Not only was it particularly active along the line of fire prevention and game protection but it encountered an extended and severe fire season which resulted in several disastrous fires occurring in the months of December and February. The light rainfalls in the past several years have produced a serious situation in the brush cover of our mountainous areas and it is universal over the entire country to find the lower portion of practically every species of shrub dying out and the leafmold, a mere shamble of highly inflammable tinder. This condition together with periods of extreme low humidity and winds of high velocity were particularly responsible for the greater majority of this year's major conflagrations. We believe it to be of sufficient interest to briefly review the year's most serious conflagrations as each one had certain factors not usually encountered in the ordinary run of mountainous fires occurring in this county.

In August, a fire originating on the Ridge Route in close proximity to Sandberg's Resort was finally brought to a state of partial control inside of National Forest area through the combined efforts of both federal Forest Service and this Department after a hard battle extending over a period of four days, and up to which time the fire consumed approximately 8,000 acres of Forest Service territory. At 10:00 o'clock on the 5th day, a violent gale came up and within a few hours time, over 8,500 acres of county territory in and around Pine Canyon were denuded and a considerable number of mountain cabins destroyed. This break was unpreventable as there was absolutely no human agency known that could have in any way stopped the force of the fire in its mad run, and until such a time as climatic conditions changed it was not possible to alter the fire's course or to prevent its advance.

During the month of September, a fire of major proportions occurred during a period of extremely low humidity and high wind velocity in Dry Canyon and within several hours, the conflagration had swept over Old Topango Canyon and was within Carapito Creek itself. Many cabins and improvements were destroyed and the fire was only brought under control during the night time after a determined effort upon the part of this Department with the valuable assistance of a force from the L. A. City Fire Department. That this fire was brought under control on the first night has been a great source of satisfaction to this Department as it was conceded by all concerned at mid-night that due to the extreme length and hotness of the line that it would not be possible to effect such a control.

In the early part of December during a violent north wind a fire originated in La Crescenta Valley and swept down the valley toward the Verdugo Hills. At Honolulu Ave., this Department's forces brought the fire to control, but sparks carried by the wind were carried for over a distance of 1200 ft. into Verdugo Mountain and the fire raced on unchecked to the summit of the mountain and down into the cities of Burbank, Glendale and Los Angeles. It also burnt northerly against the wind to within a few feet of the Angeles National Forest Boundary Line. This fire took an exceedingly high toll in structural damage as it almost completely destroyed beautiful Sunset Canyon in the City of Burbank. Due to the fire occurring in not only county territory, but both in the city limits of Burbank, Glendale, Tujunga and Los Angeles, a state of chaos existed in that each municipality and other interested protective associations attempted to combat the conflagration independently. There is no criticism attached to this as it could not be avoided in that a predetermined centralized control had not been established. The worst phase of this confu-

sion was in the promiscuous conscripting and hiring of fire fighting forces and of the resultant difficulty in effecting payment for same. As a result of this fire, this department called a meeting which was attended by all interested municipalities and it is our sincere trust that the result of this conference will bring forth an enabling act in the State Legislature, to make it possible for a comprehensive plan of financial and physical co-operation to be put into effect in order to correlate and co-ordinate fire suppression in territory where under jurisdiction of more than one political sub-division.

In February, well after the fire season should have been at an end, there originated along the County-Glendale City limits line, a fire caused by power trouble on an electric corporation's high voltage transmission line. This fire was handled in an extremely orderly and efficient manner by this department's forces and those of the city of Glendale, showing conclusively that the lesson of the need of centralized control on the fire of December, had been lasting.

The review of the fires above is considered important for the following reasons:

(a). That this County's serious fires occur principally during periods of low humidity and high wind velocity and that no month in the year can be accepted as being a non-fire season period.

(b). That a serious situation is becoming more acute every day due to the tremendous building program of mountain homes being conducted throughout the county and that the situation is one of uncommon gravity in that a burning cabin, built as it is right in the brush, will communicate the fire to the brush itself and a purely brush fire will endanger the cabins within the burning area. Also this combination is of a most perplexing one to a control force, in that it is not possible to use the same methods of suppression in a brush covered area wherein is situated cabins as would ordinarily be brought into operation should the brush covered area be without places of habitation. The problem in such a fire, is whether to stop the main fire by sacrificing places of habitation, or by preserving, if possible, those cabins and allowing the main fire to carry ahead. The aftermath of this class of fire is a flood of bitter criticism directed toward the control organizations and while this criticism in the main is not justified, it will always be given by the sufferers of damage, and who in a greater part are people not having an extensive knowledge of fire conditions.

In the main, fire suppression efforts of the department in mountainous territory are administered to by field division forces. The County has been divided into 6 areas based upon economic and efficiency of supervision ideas. The location and pertinent features of these patrol divisions are briefly as follows:

Los Angeles Headquarters Division: This division includes the Palos Verdes Hills, Santa Catalina Island and that county territory lying in the Santa Monica Mountains easterly of Santa Ynes Canyon. The Palos Verdes Hills are patrolled by a co-operative force under agreement between this Department and the Palos Verdes Estates Corporation. The other sections of the division are administered to by our Voluntary Deputy Fire Warden Personnel under the supervision of the Los Angeles Office.

Malibu Division: This division includes that portion of the Santa Monica Mountains between the Pacific Ocean, Ventura County, San Fernando Valley and Santa Ynes Canyon, together with that portion of the Simi Hills and Santa Susana Mountains from Ventura Boulevard to Devil's Canyon. This division's headquarters is located at Fernwood Park, Topango Canyon, and patrol stations are established at Los Flores Canyon, Escondido Canyon, Decker-Malloy Road, Triumfo Canyon, Bulldog Canyon, Calabasas and Brown Canyon.

Soledad Division: This division includes the northern portion of the

county lying northerly of Newhall Tunnel and a line easterly therefrom to the San Bernardino County line. This division headquarters is located at Newhall and patrol stations are situated at Big Rock Creek, Elizabeth Lake, Mint Canyon, Castaic Canyon and the Ridge Route.

Verdugo Division: This division includes the mountainous area between Devil's Canyon, Santa Susana Mountains to the northwest and Burr Avenue, Flintridge to the east, together with the Verdugo Hills. Division headquarters is located at La Crescenta and patrol stations are situated in Kagel Canyon and on the Cascade Ranch.

Arroyo Seco Division: This division includes the mountainous area between Burr Avenue, Flintridge to the northwest, Fish Canyon at the southwest and includes the San Rafael and Merced Hills. Division headquarters located at Arroyo Seco and patrol station situated at Fish Canyon.

San Jose Division: This division includes the mountainous area between Fish Canyon to the west and San Bernardino County line to the east and embraces the San Jose and Puente Hills.

These divisions are under the supervision of Senior Assistant County Fire Wardens and the personnels are made up of Junior Assistant Fire Wardens, dispatchers, patrolmen and observers. All division and patrol station headquarters are equipped with fire fighting and commissary equipment.

In May there was conducted a 3 day training school and every member of the Department, both permanent and short term patrolmen, was present. Every problem incidental to fire prevention and suppression and game protection was taken up and it is felt that the summer schools are producing not only a more effective personnel in the understanding of routine duties, but are instilling into members of this Department a greater degree of mutual understanding and co-operation with each other and a decidedly better approach in contacting the public.

In the administration of fire suppression measures, all members of the Department working out of the Los Angeles office are assigned to a specific duty, thus enabling every assistant to be fully aware of his status on a going fire. Likewise, all members working out of the Los Angeles office are assigned to a departmental division for routine duty. Each departmental division is headed by an assistant eminently qualified to perform the executive functions of that division and the divisions' personnel is made up of assistant and deputy fire wardens and foresters so chosen as to promote a maximum degree of efficiency for the work in hand. The departmentalizing by divisions has made possible a more expert prosecution of the various subjects with which this department has to do.

The divisions of the Office of the County Fire Warden and their specific duties are:

Construction Division:—Construction and maintenance of firebreaks, trails, roads, telephone lines, lookout towers, division headquarters and patrol station buildings, etc.

Fire Department—Formation and supervision of County Fire Protection Districts.

Fire Prevention Bureau—Structural and Vegetable growth hazard inspections and enforcement of Fire Prevention measures.

Fish and Game Warden—Protection of fish and game in co-operation with the Law Enforcement Division.

Intelligence Division—Preparation of maps for construction and Fire Prevention measures, together with special statistical record work.

Law Enforcement Division—Investigation and enforcement of Forestry, Fire and Game Laws.

Service of Supplies—Ordering and distribution of equipment and supplies, together with supervision of warehouse and fire tool depots.

Transportation Division—Supervision of mechanical transportation equipment and departmental trucknig.

Chief Clerk's Division—Supervision of all finance and account items, together with stenographic and clerical work.

Co-operative agreements were again entered into between the Angeles and Santa Barbara National Forests, California State Board of Forestry, Angeles Forest Protective Association, San Bernardino and Ventura Counties, and the Big Pines Recreation Camp. That these agreements are justified has been amply demonstrated during the year.

Construction Division

This division has accomplished more work during this year than has ever been done before in a like period in the history of the department. This in the face of the handicap of having to throw every member, not only the executive force but every construction camp personnel, onto every going fire of major importance and the loss of time incurred when the entire division personnel was engaged for weeks in active rescue and salvage work in the St. Francis Dam disaster area. In this latter catastrophe, this division installed and maintained two large camps out of which worked hundreds of laborers and some three score of tractors. In firebreaks alone, more mileage was cut during this fiscal year than in any past year and much of this progress can be attributed to the use of tractor machinery, for at least 60% of the year's work of firebreaks was cut by the tractor unit. It also maintained over 40 miles of break. While the mileage of trail construction did not run as high this year as some previous years, yet new and important trails were added to the trail system, with the most important possibly being the trail connecting the Gold Creek and Trail Canyon trails. In telephone lines, again a record has been achieved and construction done has been most systematic with completed sections, either additions to systems already partly constructed or units of proposed systems, to link up the entire forest area of the county with private telephone lines for fire dispatching service. Perhaps one of the most difficult jobs completed was the erection of a lookout tower and cabin on the summit of Mt. Islip at an elevation of 8240 feet. Due to the fact that all steel and material had to be packed by mule and man power for a distance of 9 miles, with a grade of over 7000 feet to be accomplished, this project was by far the hardest job of tower construction work ever undertaken by the Department. A careful study of the new buildings constructed during the past fiscal year will suffice to show that this department has been growing considerably along that line. In fact more buildings have been erected this year than during the two preceding years. Also the maintenance of patrol stations and miscellaneous carpenter and construction work have necessitated a considerable expenditure for money, labor and material. In addition, a light road grader to this division's equipment has aided greatly in reducing the cost and increasing mileage of roadside fire prevention maintenance. The division during the year completely renovated its construction camp houses and equipment, and have placed into operation, improved kitchen structures and sanitary facilities which are consistent with rules and regulations as laid down by the State Housing Commission. A careful perusal of this division's statistical report will plainly show the magnitude of the Department's construction program.

Fire Report

One hundred and eighty fires were responded to by the personnel in the various County Fire Protection Districts to territory in close proximity to the Fire Districts. During the year no new districts have been added and no districts have been lost. However, the city of Bell and the city of Southgate have asked that arrangements be made by the Fire Warden's Office to dissolve the Bell and the Home Gardens Fire Districts, so that the Bell Fire

Department will come under the supervision of the City of Bell and the Home Gardens Fire Department will come under the supervision of the City of Southgate. Almost the entire territory within these two districts, at the present time, is within the City Limits of these two respective municipalities.

Considerable interest has been shown in Willowbrook and at Wilmar with reference to better fire protection and there is a possibility that this coming year both these communities will form into Fire Districts.

The entire loss for all districts combined this year is $381,094. Within the Fire Districts, according to the best available figures, there is a population of 413,291. Using the two above figures the average per capita loss in all Fire Districts is only 92 cents. The average tax rate this year for all County Fire Districts was 46½ cents per $100 assessed valuation, producing a revenue of $639,870.19. With a population of 413,291, the cost per capita for the operation of the Fire Department is approximately $1.50.

When it is realized that the per capita loss during the last five years in the whole of the United States has been on an average of between $5.00 and $6.00 per capita, according to the best statistics available, it can be readily realized that considerable work has been done by each and every Department to reduce the County losses to this extent, as well as having the co-operation of the public in carrying out the proper fire prevention methods. Taking the per capita loss and adding it to the cost per capita for the operation of the Department, the record for this past year will stand as a great achievement, for with these combined figures the amount is far below that of the per capita loss for the whole of the United States, which does not include the cost of operation. The combined assessed valuation of all County Fire Protection Districts is $162,365,400. With a loss this year of $381,094, the loss by fire on this enormous investment is only .0023.

Fire Prevention Bureau

Fire prevention Booths were installed at Norwalk, Downey, Baldwin Park, Puente and Pomona Fairs, for which prizes were awarded this Bureau. Also, Fire Prevention Booths were installed for a period of one week in Altadena and approximately three weeks in Belvedere Gardens, and a Fire Prevention Window Display installed in Sherman for a period of one week.

The extreme importance of educating the Public to the vital necessity of Fire Prevention is constantly being emphasized. Evidence that frightfully disastrous forest fires have been started by a carelessly thrown lighted cigarette stub or match has been given by eye witnesses. As a result of this carelessness not only thousands of acres of valuable timber and watershed have been destroyed, but human lives have been lost. Carelessness is a habit, and such acts as this are due to stupid indifference as to what the results may be. CARE is worth while in a matter involving thousands of human lives and hundreds of millions of dollars a year. The Public can and should learn to acquire habits of Carefulness in regard to Fire. This can only be done by educating them to the grave need for care. With this aim in view, the Bureau has given a great deal of time and effort during the past year to educational features. A very valuable aid in this work was added to our equipment when the Department purchased in April last a projection machine and several reels of films. Shortly after acquiring this machine the Bureau, in cooperation with other Divisions, supervised the production of two reels of film showing the work of the various branches of the Department. Fire Prevention talks, illustrated by these films, have been given to a very large number of civic organizations and other institutions, throughout the Public Schools, and at the County and other fairs. Letters received from many of these organizations and comments made at the time the talks were given show clearly that these talks and pictures have been very effective.

County Ordinance No. 1545, N. S., regulating the construction of cabins and other structures in the brush covered area of the County, and providing for the maintenance of firebreaks around same, went into effect April 2, 1928. Under the supervision of the Bureau, very effective work in enforcing this Ordinance has been done by the Assistants in charge of Divisions. The enforcement of this ordinance requires considerable detail work. In addition to supplying the ownership data, it was found necessary in a number of cases to make special maps showing the location of cabin sites and these maps were made by the member of the Bureau personnel assigned to this work.

The imperative need for legislation regulating the oil industry is generally recognized. This Bureau has in course of construction an ordinance designed to regulate the various branches of this industry, and is also cooperating with the Fire Prevention Committee of the Chamber of Mines and Oil along this line.

In addition to the work mentioned in detail above, the duties of the Bureau in making inspections of apartment houses, hotels and factories for the State Housing and Immigration Commission, of sanitariums, hospitals, maternity homes, dance halls and all places of Public Assemblage for the State Department of Social Welfare and the County Public Welfare Commission, of dry cleaning establishments for the State Fire Marshall, in inspecting theatres, schools, oil fields, and any condition constituting a fire hazard, and in supervising the Fire Prevention work of the Captains of the Fire Protection Districts, have been conscientiously and faithfully discharged.

Law Enforcement Division

The Law Enforcement Division of the Forestry Department has been designated to enforce the county and state laws pertaining to fire, game and forestry in Los Angeles County Territory, but little can be judged by the number of arrests tabulated in the following report.

In our game work some 5,000 hunting and fishing licenses have been checked during the past year and it is gratifying to report that rarely is a man found hunting or fishing without a license. A larger part of this check takes place at the opening of the fishing season and as the deer, dove, duck and quail seasons open. Furthermore, the better hunting and fishing territory is thoroughly protected just prior to the opening of the season to assure the sportsmen of an even break and this direct contact with a large group of outdoor loving people gives our men a splendid opportunity to tactfully "sell" fire prevention and conservation cooperation.

When offenders kill deer out of season or kill illegal deer, the court record will bear out the fact that fines are as a rule from $250 and up. When the deer season of 1927 opened a careful check was made of all hunters leaving the hills. This check is becoming an annual event, and the hunter knows that he cannot get away with an illegal deer. Many hunters expressed their approval of this check for it aids in the enforcement of the deer law that was passed for two purposes: To perpetuate the supply of deer and as a life saver. When the hunter is compelled by law to limit his kill to a buck with at least forked horns, he is not going to shoot until he is positive what he is shooting at. This law and its enforcement has doubtless saved many human lives. When one considers the vast number of hunters and the limited deer territory, it is all but phenomenal that no casualties occurred in this county last season.

In prosecution of fire cases, aside from arson and burning insured property, our dealing has been with the everyday law abiding citizen and not a criminal class. The offences have been usually committed through ignorance. The State Legislature and the County Board of Supervisors have passed these laws to prevent the fires before they start, and only by strict fire laws and

SAN GABRIEL DAM

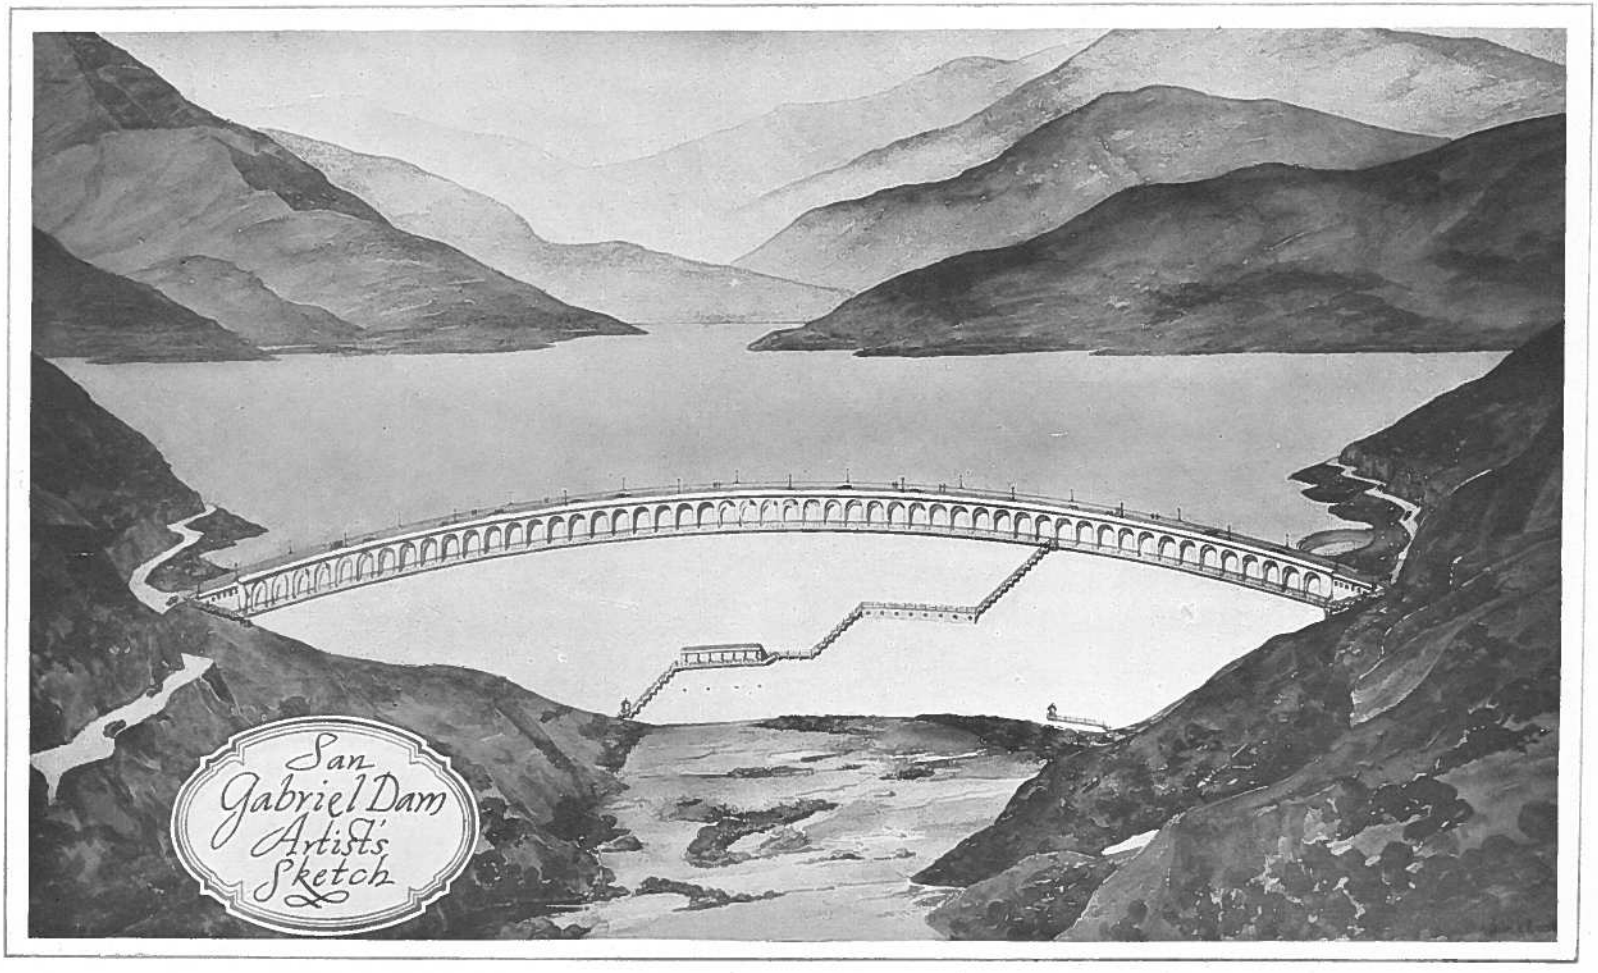

San Gabriel Dam, on which construction work will soon begin, will be the largest dam ever built, both from point of mass of concrete and height. It will contain nearly four times as much concrete as has heretofore been placed in any dam, and its height will be close to 500 feet above bedrock.

The design of the dam includes all features known to best modern engineering practice, including deep cut-off trenches below bedrock, deep grouting to seal the rock, drainage pipes and inspection galleries.

This dam is of gravity type, having a base width of 412 feet, which will be founded on solid granite, the existence of which is known from over 14,000 lineal feet of diamond drill exploration holes.

The dam will cost about $25,000,000, and will hold 240,000 acre feet, or nearly twice the average annual flow of the river above the damsite.

The construction will take from five to six years, and up to 1500 men will be employed. Its completion will assure full flood protection and all feasible conservation.

San
Gabriel Dam

their enforcement and the cooperation of the public can this enormous annual loss that runs into the millions, right here in this county, be stopped. Some 90% of fire cases have been smoking cases. The fines have been small but in most cases the offender has left the court with a greater appreciation of the intense fire hazard; not only will he be careful in the future but he tells his friends, and in this way much is added toward developing a fire conscience in the community.

Therefore, it can be readily seen why no other law enforcement agency in the county has so low an average of fines.

All burning, aside from incinerators and door yard fires where 50 feet or more from inflammable material, in county territory, must be under permit regardless of the season. This law and its enforcement has greatly reduced fires. Another law limits campfires to posted campsites.

Placing smoking on a safe basis, strict regulation of brush burning, and preventing promiscuous campfires, is eliminating the cause of the greater part of the disastrous fires of the past.

HORTICULTURAL DEPARTMENT

Protection of the agricultural industry from the onslaughts of plant pests is the keynote of the work of the County Horticultural Commissioner. The duties of his office are outlined almost entirely by state laws which necessarily make the work of a regulatory nature. The principal divisions of the office are:

(1) **Plant Pest Quarantine,** which is aimed to prevent, through the enforcement of state laws and quarantine regulations, the introduction into the state, or the spread within the state, of diseases and insect or other animal pests of horticulture or agriculture.

(a) Inspection of nursery and bulb plantings within the county to see that they comply with state regulations before stock is allowed to move;

(b) Inspection of any properties within the county for newly introduced pests with the view to eradication, if possible, or enforcement of restrictive measures designed to delay spread.

(2) **Plant Pest Control.** By the authority of State law the Commissioner may require property owners, by service of notice, to satisfactorily control infestations of plant pests. Four groups of pests may be considered: Insect pests of plants, diseases of plants, rodents and noxious weeds.

(a) Rearing of beneficial insects sold at cost to citrus growers for control of mealybug;

(b) The carrying out or directing of special pest control campaigns financed in whole or in part by growers' organizations;

(c) Enforcement of state law and county ordinance providing for licensing and supervision of operations of commercial pest control operators.

(3) **Prevention of the Movement and Sale of Certain Fruits and Vegetables,** which are not up to prescribed standards, and the prevention of the sale of all fruits or vegetables which are deceptively packed.

(4) **Inspection of apiaries,** to prevent the introduction and spread of bee diseases.

Plant Pest Quarantine

County Horticultural Inspectors make inspections at all postoffices, express, and freight stations throughout the county where inspection service is carried on. The only exceptions are in San Pedro and Wilmington, where

the work is carried on by a cooperative agreement with the State Department of Agriculture by which they make the inspections at these places and the county reciprocates in furnishing inspectors to assist the State Department men in the inspection of passengers' baggage on the steamships arriving from the Hawaiian Islands. The purpose of the inspection of baggage is primarily directed against the introduction into this country of plant products which may carry the Mediterranean Fruit Fly.

For the entire county, the number of incoming shipments of nursery stock, plant products, and other commodities subject to inspection because of the risk of importing insects and disease pests, showed somewhat of an increase over the previous season; to-wit, approximately 2%. There was quite a notable increase in the number of shipments treated and released, refused admittance, returned or destroyed as compared to last year, the total number being 3,182 and ten cars of grain diverted for cleaning, or thirty shipments per thousand as compared with twenty-eight per thousand in 1926-27.

Injurious pests not of common occurrence were found in 182 shipments or at the rate of 1.7 per thousand as compared with 2.6 a year ago. These lots were returned to the consignee or destroyed.

Shipments which were infested with other pests and which could safely be released after treatment total 600 or 5.6 per thousand as compared with 10.8 per thousand the year before.

Included in plant pest quarantine work is the carrying out of pest surveys in more than 900 nurseries in the county.

Under the direction of the Quarantine division, 138 bulb plantings were inspected for bulb nematode and bulb flies. Infestations of bulb nematodes were found in various portions of the county. Arrangements were made in most instances for treatment by dipping at the county bulb sterilization plant. Inspections for bulb flies made at the time the bulbs were being dug or as located in storage were handled by district inspectors.

Plant Pest Control

Insect Pest Control. The black scale survey work carried on this past spring has shown the citrus groves in Los Angeles County to be in about the same degree of infestation as during the season 1926-27. This indicates that the groves are generally clean, as last season's control was very successful and very little commercial damage resulted from the black scale infestations as compared with former years.

During the past season 20,238 acres of citrus were fumigated and 25,076 acres sprayed, making a total of approximately 45,300 acres. This represents about the same acreage reported by commercial spray and fumigation operators during the season 1926-27, the total being 45,500 acres. The cost of the pest control treatment amounted to $1,465,000. The slight increase in the cost of treatment over last season, which totaled $1,448,380, on a smaller acreage is accounted for by a small increase in the price of materials used. Although approximately the same acreage was reported as last year, there was a considerable difference in the amount sprayed and fumigated. Last season 24,000 acres were reported as being fumigated as against 20,238 acres during 1927-28. Twenty-one thousand five hundred acres were reported sprayed during 1926-27 and 25,076 sprayed this year.

During the past fiscal year, 98 notices were served on citrus and olive properties for the abatement of scale nuisance. This is more than double the number served last year and is mainly due to the addition of forced work in the olive district at Sylmar, which required 22 notices, and the larger number of notices for the abatement of red scale. It was necessary for the county to do the work on 26 of these properties when the owners did not do so before the expiration of the time allowed after service of notice.

Under the recommendation of this office, the Board of Supervisors issued fumigation licenses to 45 operators and 118 foremen. Sprayers' licenses were issued to 73 operators and 118 foremen. This is approximately the same number of operators that were in the field last season. Spray and fumigation inspectors reported 1,371 inspections of equipment and crew operations during 1927-28.

A greater acreage of walnuts was reported sprayed for the control of the codling moth in this county this year than any previous season. The reported total of 5010 acres exceeds the acreage reported sprayed last year by about 20 acres. Cost of application, due to more thorough methods of treatment, increased considerably, being estimated at $11.00 per acre as compared to last year's figure of $8.50 per acre. The total cost to growers of this work was in the neighborhood of $55,000.

Insectary

June 30, 1928, marked the close of the fifth fiscal year in the operation of the Los Angeles County Insectary as part of the work of this office. These operations are confined to the propagation and distribution of the ladybird beetle Cryptolaemus, now used as the principal factor in control of the citrophilus mealybug, considered one of the major insect pests attacking citrus in Los Angeles County.

This season's records show approximately 15,000 acres or 30% of the total citrus acreage of the county to be infested with this mealybug, representing an increase of 11% over the preceding season. This increase is somewhat under the expected natural spread from old citrus infestations. No new areas of infestation were recorded during the season. The 12,000 acres of citrus in the coast area, representing 20% of the total acreage in the county, is practically 100% infested and it is in this area that practically all of the medium and heavy infestations occur. Of the 38,000 acres lying in the warmer interior valleys, less favorable to mealybug, representing 76% of the total acreage, approximately 18% are infested, with practically all infestations grading from light to trace only.

Facilities for production have been increased each year to keep pace with the expected natural spread of the mealybug and during the past year two laboratories in leased quarters were operated, one at Rivera and one at Downey, each of 10,000 tray or 4,000,000 beetle productive capacity, permitting practically a 100% increase over the preceding season.

During the past fiscal year a total of 1048 citrus properties were served, representing a total acreage of 11,816 acres. The balance of the 15,000 acres recorded as infested were infested to such a light degree as not to warrant attention this season. Of the 11,816 acres served, 8,159 acres were covered using 10 adult Cryptolaemus per tree, or a total of 6,538,000 beetles.

Ground Squirrel Control. The mild winter and lack of heavy rains this last year were responsible for an extremely large crop of rodents that played not a small part in the conduct of agriculture and horticulture.

The ground squirrel eradication program in areas where bubonic plague was found in 1924, was continued throughout the year at an expense of $3,-931.87, a little more than half the cost of the work the previous year. The progress made towards complete eradication in these areas is reflected in the decrease in the annual cost over a period of four years that the program has been in progress. The amounts expended yearly were, 1924-25 (January-June, inclusive), $12,670.34; 1925-26, $25,656.25; 1926-27, $7,181.36; 1927-28, $3,931.87. Another season's work will probably give us complete eradication of the ground squirrel in these areas.

In the regular course of ground squirrel work by this department, 570 rodent control notices were served owners of private property. Over 190,000

acres were treated for ground squirrels. Of these, 58,000 acres were treated by county crews at the owners' expense, after notices had expired; the balance by owners either before or after notices had been served on them. In addition to this, 20 miles of railroad right-of-way were treated by railroad companies and 160 miles of right-of-way by county crews at the expense of the railroad companies. County property treated by rodent control crews at county expense, covered 400 acres of land and 85 miles of county road at an expense of $518.44. On privately owned property 1,350 acres were treated at a county expense of $587.83; the work being authorized by the Board of Supervisors under Section 4041 of the Political Code.

During each month of the year, excepting December and January, from two to seven rodent control crews were at work. The cost to owners of private property for work done by county crews was $10,277.60. The average cost for two treatments by county crews using strychnine poison barley was 16 cents per acre. Cost for two treatments using carbon bisulphide was 95 cents per acre. Cost for one treatment for thallium treated barley was 19 cents per acre. Cash sales for rodent control poisons and materials amounted to $6,243.56. Sales to other county departments amounted to $55.50.

The total county labor, transportation and materials used and sold on rodent control work, amounted to $21,847.34. The materials used and sold were poison barley (Government strychnine formula) 53,640 pounds; poison barley (Government special strychnine formula) 1,538 pounds; poison barley (Government Thallium formula) 26,776 pounds; poison barley (Government special Thallium formula) 410 pounds; carbon bisulphide 3,142½ gallons; jute waste balls, 177,971; gopher poison, 1,290 cans.

In addition to the ground squirrel work this year, we had rather a severe infestation of meadow mice, the first one reported in the county that had possibilities of developing into a mouse plague. During the last week in June, property owners treated 1,000 acres infested with mice and 400 acres had been treated by county crews. The work is to be continued until the entire infested area has been treated. The survey shows approximately a 4,000 acre infestation.

Noxious Weed Control. There has been an increase in the spread of Puncture vine during the past year. There have also been some new infestations of other noxious weeds found in the county. We have had a decrease in the area infested with Johnson Grass. Eight hundred and forty-three notices for weed control were served on property owners. Under county supervision and without service of notice, property owners treated 2,242 acres for Johnson Grass; 1,344 acres for Puncture vine; 264 acres for Russian Knapweed, 5 acres for Hoary Cress; 5 acres for Canada thistle; 80 acres for Milk thistle. Two hundred and ninety-seven miles of highway other than Los Angeles city or county highways and 204 miles of railroad right-of-way were treated for Puncture vine.

As many as ten weed control crews were at work during the busy season. The county operated three power sprayers and thirty compressed air knapsack sprayers in the weed control work.

Fresh Fruit and Vegetable Standardization

Constant surveillance is necessary during the entire year to efficiently inspect the fruits, nuts and vegetables in the wholesale and retail markets throughout the county. Many crops, covered by the Standardization Act, are loaded and shipped from the various growing sections in the county. To protect the State's reputation in other markets much time must necessarily be spent making inspections in the field.

Besides inspections to prevent the sale of packages of fruits and vegetables which carry serious defects, such as immaturity, over-ripeness and

frost injury, worm injury, etc., the Standardization Act of 1927 contains a clause making it unlawful to sell fruits and vegetables from a display which is deceptive. Thirteen violators were brought into court under this provision of the Act and all were found guilty and subsequently fined.

Inspection of wholesalers' stores, auto truck loads, and car lots of produce numbered 473,331 for the fiscal year of 1927-28 as compared with 414,477 the previous year. Eight hundred and twenty-three violations were reported; 45 of these were of a serious enough nature to warrant court action. All were found guilty and the cash fines amounted to $3,400, of which sum $1,780 was collected and $1,620 suspended for various periods of time, the defendants being placed on probation.

Fifty-six thousand, six hundred and eighty-three units of fruits and vegetables were rejected for reconditioning during the year. These lots were either resorted, sent to byproducts plants, remarked where the markings were insufficient or improper. Where reconditioning was impossible or impractical, the produce in question was dumped.

Apiary Inspection

Los Angeles County contains approximately 800 apiaries and 45,000 colonies at the present time.

Eight hundred and fourteen apiary inspections and 30,282 colony inspections were made, necessitating 980 apiary visits and 21,136 miles travel.

Nine hundred and six colonies in 192 apiaries were found to be infected with American foulbrood; 351 colonies in 66 apiaries were found to be infected with European foulbrood; 246 colonies in 51 apiaries were affected with miscellaneous minor disorders, or on immovable combs.

Fifty-two legal notices to eradicate were served during the year. One hundred and seventy colonies were destroyed by the county with owners' consent before legal notice, and one colony after legal notice. Otherwise, cooperation by owners in eradicating disease has been very satisfactory.

The decline in percentage of American foulbrood over 1927 is for apiaries, 4.02%; colonies, .66%.

The occurrence of European foulbrood shows a gain of 2.60% in apiaries affected, but a decline of .20% in colonies affected. This indicates an increased distribution of this disease, but also an increase of vigilance on the part of the owners in applying control measures.

LIVE STOCK INSPECTOR

The County Live Stock Department, under direction of the County Live Stock Inspector, is pleased to report the results of a very full year's work. The Department has reached the full quota of employees, and at times has required additional help on part time. The field work has gained most rapidly of all, since the Division of tuberculosis control has been more active from month to month, over 25,000 tuberculin tests having been made. The actual eradication of tuberculosis has not commenced, but increased efforts have been made to safeguard the purchases of local buyers from reactors amongst the cattle imported into the county. During the early part of the year it became apparent that many shippers were only slightly affected by the branding of reactors that appeared on arrival or when tested by our inspectors. Consequently, an order was issued, based on Section 5 of Ordinance 1415, that all such cattle should be slaughtered or returned to the place of origin, at the option of the owner. This order resulted in almost immediate changes in the character of the shipments, and after December, the number of reactors per shipment was noticeably less. Shippers whose carlots were showing from one to half dozen reactors before that time began to bring in clean lots, showing that they probably knew what they were buying, but

that they were getting nearly as much for reactors—if they were good cows—and were willing to take a chance on having them fail under test on arrival, even though they exposed their clean stock continuously and dangerously en route.

The receipts of dairy cattle for the year lacked but a few of 19,000. The average value of the importation may be placed at $125.00 per head at point of origin, making the sum of $2,375,000.00 invested in cattle to replace those which became unfit for use from many causes, and provide for the rapidly increasing local demands for milk and milk products. Unfortunately only about one-third of the number were available in California, as the counties in the middle portion of the state have failed to produce much of a surplus of dairy stock during the past few years. This is unfortunate from two standpoints: First, in that California breeders are overlooking a splendid market, to their own considerable loss, and second, our buyers are having to go considerable distances at great expense, to secure sufficient cattle for our needs, many of which are not up to the standard of our native born and developed stock. In fact, it may be safely stated that California cattle have proved to be 20 per cent better under our conditions than those brought from out of the state.

Another very unfortunate condition has resulted in this state. Dairymen in the producing counties have been allowing the buyers to take their clean stock, and they have kept their untested and reacting cattle for breeding purposes until they have concentrated the tuberculosis in some sections up to as high as 50 per cent. This will take years to overcome, and is bound to prove a serious handicap to their operations, as well as a barrier to prospective buyers of clean stock.

The percentage of tuberculosis among the cattle in the county is a serious question among breeders, dairy and creamery interests and live stock sanitary officers. No basis for determination has been available to give an answer to the problem. Receipts of dairy stock when this department commenced to function four years ago were averaging 34 per cent infected with tuberculosis, so the percentage among the cattle already present in the county must have been somewhat above that. With this in mind, it was decided to make a complete survey of the county, list each owner of dairy animals and obtain from all reliable sources the condition of the cattle upon which our market is dependent for its milk supply. This survey is based upon the names, addresses and data obtained from last year's tax records and is now about half completed. On account of the rapid development along dairy lines, the tax returns are discarded in favor of a house-to-house canvass in some localities and it is already apparent that there are many more cattle in the county than has been calculated.

The completion of the survey will furnish the basis upon which this Department may determine future activity, and doubtless will prove of considerable value to the dairy industry in many ways in planning their future business.

The county farm herd has been carefully divided by testing for tuberculosis and also blood tested for contagious abortion, so that only those which pass these tests are being placed in the splendid new dairy plant which is now nearly finished.

Perhaps the finest single piece of work from individual standpoint was the completion of a set of models illustrating the various types of reactions to the intradermic tuberculin test. These models are the handiwork of Dr. K. G. McKay, who has presented them before local and state association meetings with explanatory lectures. They were then sent to the American Veterinary Medical Association at its annual meeting and very favorably received as illustrations of the types of reactors that should be recognized. Ver-

bal descriptions and published measuring standards are equally unsatisfactory in conveying the correct impression.

During the fiscal year, it was found necessary to prosecute three local cattle dealers for selling dairy cattle without having subjected them to a test of tuberculosis, or for having brought dairy cattle, affected with tuberculosis, into the county for purposes other than immediate slaughter. Action was also taken against a dealer in hogs for conducting an establishment for the feeding of garbage without a permit from the Board of Supervisors. Each instance being in violation of the provisions of the Ordinance, the cases necessitated court proceedings, which resulted in each defendant entering a plea of guilty, and a fine was imposed.

Poultry Pathological Laboratory Work

Our work on poultry and rabbit ranches and in the Poultry Pathological Laboratory has grown very rapidly during the year, requiring the full time of two men and at times the services of a third. This was not the result of any new development, or serious disease outbreak, but was an indication of the awakening of interest of the poultrymen in their own problems. They had come to take things for granted and regarded a certain amount of disease as inevitable in the business until the establishment of the Poultry Laboratory and the Poultry Division of the Live Stock Department. They are learning the possibility of preventing many of the ailments and diseases of their birds and taking advantage of the services offered them. Four hundred and thirty field investigations were made during the year. These field investigations were made for the purpose of checking up on the ranch conditions causing losses and the possibility of spread in the case of an infection. Advice was given on the control of the diseases and in some cases it was necessary to quarantine the premises and carry out a program of cleaning and disinfection before a release was given.

'Approximately two-thirds of the time of the men detailed to this work was spent in the Poultry Pathological Laboratory, 1451 Mirasol Street, Los Angeles, where 2,145 birds were submitted by owners for examination and autopsy. These represented 970 cases and more than 50 disease and conditions causing losses, in which advice was given in the treatment, control and eradication. Twenty-nine thousand, four hundred and five blood samples from 167 flocks of adults were tested for the detection of Bacillary White Diarrhea in breeding birds.

Five official inspections and tests were made on live poultry shipments to comply with requirements of Washington, Oregon and Idaho.

Fifteen inspections on rabbit and poultry slaughtering establishments were made during the year, also fifteen investigations of conditions on rabbit ranches, covering rabbit disease outbreaks and unsanitary conditions causing same.

In our Division of Meat Inspection, steady progress toward higher standards, greater efficiency and lower costs, sums up the record of the service for 1927-28.

The number of animals slaughtered increased 22.5 per cent. The number of establishments under inspection decreased slightly—a concentration which permitted more efficient inspection at a lower cost per carcass.

A business change in one of our establishments is noted, viz., the considerable enlargement of the newest slaughtering plant and its adaptation to a new use—the slaughtering of horses for the production of fresh meat for poultry and captive wild animals, and canned food for dogs and cats. This marks the inauguration of a new industrty in Los Angeles which is increasing rapidly in volume as it becomes known to poultrymen, zoo and small animal owners. It is also of considerable importance to the men of the ranges from which the horses are procured in carload lots. Supervision of the planning

and sanitation of the plant comes under this service, and we are pleased, with the owners, to invite the attention of poultrymen and others interested in this form of food, to this new industry.

Shifting and turnover of the personnel has been considerable. Five inspectors whose names appear on the roll during last year are no longer connected with the department. The majority of inspectors now assigned to meat inspection have had previous experience in the Federal Bureau of Animal Industry, simplifying the task of securing uniformity.

The percentage of condemnations for disease indicates the purchase and handling of a better grade of cattle by the county slaughterers.

Sewage disposal still presents the most difficult problem in connection with slaughter house sanitation, and with the completion of the County sewerage and drainage system a new era in slaughter house sanitation will begin. The passing of one year more brings the possibility of sewer connections within hailing distance in some localities.

Without the county, and beyond the unincorporated sections of the county where Federal, State and City inspection services divide control, marked changes have taken place in the division of responsibility, showing a strong tendency to preference for inspection based on Federal regulations. It is perhaps unnecessary to remark that Federal rules for the inspection of live animals and carcasses have been enforced by this service since the days of its inauguration, and that Federal rules applicable to sanitation and equipment are being followed more closely each year—a gradual improvement in buildings and equipment being carefully fostered. The unincorporated sections of Los Angeles County now have a better meat inspection service than during any previous year; moreover, the inspection has few, if any, peers in its class throughout the country at large.

Hog Ranches and Garbage Disposal

The work in connection with the supervision of swine husbandry has been very heavy on account of the erection of several new plants, and remodeling and increasing capacity in some of the old ones. Two men are now engaged in this division of the service. At the close of this fiscal year there were thirty-seven hog ranches feeding table waste on thirty-five separate locations. Eleven of these locations were approved and equipment installed during the year, out of a total of fifty-seven locations investigated. Of these, twenty-four required field visits and thorough investigations of the conditions in the districts immediately surrounding them. A new location is approved only when the location is in a section in which real estate development is not likely to occur during a period of from three to five years.

The remaining thirty-three applications for locations were disposed of in our office by considering land descriptions and a knowledge of the localities where located, or by a consideration of the personal qualifications and financial ability of the applicants to establish and maintain plants in accord with the requirements of the Ordinance and regulations applicable to these plants.

Seven localities were approved for grain feeding plants in addition to those mentioned.

The monthly hog census over this period showed an average of 35,850 hogs on these ranches. The total daily pork production running approximately 26,500 pounds at an average price of 10½ cents per pound, or $2,780.00 daily revenue. When it is considered that the yearly returns from pork fed on this material runs around $1,003,750.00 and that this money is nearly all spent in the communities where it is produced, it can be readily seen that this method of disposal is an asset to the community and an efficient and sanitary procedure for handling garbage.

The fertilizer from these plants after being handled in a sanitary manner is being used on numerous orange groves and for the reclaiming of land. The

County Farm Bureau after a careful analysis of this material, has placed its value at about $7.50 per ton. The daily production of fertilizer runs about 120 tons per day at the present time. It can readily be seen that this fertilizer is a valuable asset to the agricultural interests in our county.

Seven garbage feeding plants were closed during the past year, five because of the loss of their feeding contracts and two because of the expiration of their leases. In both of these cases, plants were established at new, approved locations.

There were 605 ranch inspectors, covering the supervision of these plants. Three hundred and fifty-five investigations covering disease outbreaks, feeding conditions, violations of the ordinance and enforcement supervision, and a total of seventy-six special reports on diseases and complaints. Twenty-three railroad yard inspections for the purpose of inspecting shipments of hogs intended for feeding purposes on the ranches under our supervision. Fifteen complaints were handled, two in regard to rabbitries and rabbit killing plants and two on hauling complaints. The remaining eleven were against hog ranches. These complaints were not serious in nature and were easily remedied. Ten garbage hauling investigations were carried out. These covered the inspection of hauling tanks and their approval for licenses. Forty enforcement orders were left with ranchers and rabbit raisers for the correction of conditions on their premises. Out of a total of forty, it was only found necessary to prosecute two ranchers for non-compliance.

All licensed plants in the county are required to install modern equipment for feeding and watering, consisting of rat proof cement platforms and troughs, installed under our supervision. An average of two inspections per month are made on each plant and sanitary conditions are required to be maintained. Score cards showing the rating of each ranch are sent to plant owners with notations where betterment of conditions can be brought about.

Infectious and contagious disease control work aside from that maintained under tuberculosis and poultry disease has been requiring a relatively small amount of attention. The appearance of a condition strongly resembling anaplasmosis among cattle in the southeastern portion of the county caused considerable unrest for a time. Prompt measures for its study and control were instituted, and after the death of possibly a dozen head, no further losses were noted. As its history in other portions of this state where it has been recognized, seems to indicate a seasonal nature, its reappearance will be watched carefully and all available measures applied to prevent its gaining headway.

This report would be very incomplete if no reference was made to the Report of the Bureau of Efficiency. The past year has witnessed an investigation of the Live Stock Department in general, and of the county meat inspection service in particular, by the Bureau. The favorable report of an impartial investigation of such a high character is regarded by every member of the Live Stock Inspector's office as a reward for meritorious service, and as a stimulus to further effort.

SEALER OF WEIGHTS AND MEASURES

The County Department of Weights and Measures is a consolidated City and County department, having the largest jurisdiction west of Chicago. Every place of business in every city, town, or settlement inside of Los Angeles County limits is covered by the work of its inspectors.

This Department is first and foremost a Department of and for the people, protecting each man, woman and child in the purchase of the daily necessities which are purchased by weight or measure. It is the work of this office to insure by regular, systematic inspection service that all scales, gasoline pumps

and other weighing and measuring devices are sealed in correct shape for full measure, and then, after they are sealed correctly, to see that they are used so as to give the public full value for its money.

Inspection work for the fiscal year ending June 30, 1928, revealed 25,717 incorrect scales, pumps, and other devices in use. They were either adjusted by our inspectors, tagged for repairs, or condemned and destroyed. In the majority of cases these inaccuracies came from unavoidable causes and not from willful tampering. These instruments were in busy places where they were used many times a day in the sale of sugar, coffee, gasoline, and other valuable commodities. If they had been allowed to continue in use, the loss would have been tremendous.

A scale is subject to conditions of wear and tear the same as any other piece of delicately adjusted machinery that is given continual hard usage. It may even balance and yet when the test weights are placed on the platform a large error will be revealed. Owing to the nature of the commodity handled, this is especially true of gasoline measuring pumps. Regular, systematic inspection is the only safeguard.

New Records Established

A record was established this year by testing 170,327 weighing and measuring devices in 25,704 places of business. In addition to this, 117,373 package goods and deliveries of ice, groceries, berries, etc., were checked for accuracy; and over eight million milk bottles approved for use.

All complaints are carefully investigated and in case of willful violation, evidence is secured and the offenders prosecuted. The value of these prosecutions does not lie in the amount of the fines paid, but in putting a stop to dishonest practice which otherwise would cost the consumer many thousands of dollars. In the last few years we have prosecuted and convicted nearly 700 persons and firms for giving short weight and violating the Weights and Measures laws, fines, aggregating over $20,000 being paid. These covered every variety of case from false scales and short weight ice, to fertilizer which had been adulterated with dirt to make it weigh more.

The Department also concerns itself with the securing of needed legislation to cover conditions and afford additional protection for the consumer. Among the laws proposed and secured during the last few years are those establishing a standard weight for loaves of bread; standard weight for boxes of berries, requiring all peddlers to submit their scales for inspection twice a year before a license can be obtained.

While most of the work is conducted on the outside, nearly 5,000 people called at the office during the year, with either scales to be tested, or to make inquiries concerning the weights and measures laws.

LOS ANGELES COUNTY FLOOD CONTROL DISTRICT

The year ending June 30, 1928, has been marked by the opening of bids on a low dam for San Gabriel, the rejection of these bids, the settlement by court decision of all legal points and the redesign and issuance of complete plans and specifications for the high dam. The structure as now designed and for which bids will be opened November 14, 1928, will contain about four million yards of concrete and involve one and one-fourth million yards of excavation.

As preparatory to its construction, the District during the past year completed the railroad and roadbed from Azusa to the site; constructed the steel railroad bridge; and built an engineers' camp at the site, involving in all six separate contracts.

Four dams, Thompson Creek, Sierra Madre, Puddingstone and Pudding-

stone Diversion dam, were completed within this period and Pacoima Dam practically finished, as there only remains the lining of the spillway tunnel to finish the work. This brings the total constructed dams up to nine, ready for operation during the next flood season, of the fifteen to be built. These nine dams have an aggregate storage capacity of over 40,000 acre feet and will control the floods from nearly 110 square miles of mountain area.

During this period, construction work was commenced on Big Dalton Multiple Arch dam near Glendora.

In addition to San Gabriel, there remain four dams to be built, Big Tujunga, Eaton Canyon, Pickens Canyon and Haines Canyon, construction work on which is expected to start early in 1929.

Other Activities of the Department

In addition to the construction of dams, the District built 37,000 feet of permanent concrete or protected levee channel work. Practically all this work was let by contract. The Department issued specifications on nearly 50 separate contracts during this period.

Under the Maintenance Department, up to 35 crews of men were used in cleaning and temporary protection work by the District forces on over 200 miles of channel and nearly a hundred wire and rock check dams were built.

The Right-of-Way Department issued maps for over 60 miles of channel besides the mapping of rights-of-way for dams. Rights-of-ways were acquired for over 40 miles of channel and more than 150 right-of-way agreements were signed up.

The Designing Department prepared over 60 sets of plans and specifications besides making the necessary hydraulic studies for channel capacities. Studies of the necessary capacities for our streams have been made for 75% of the streams in the County.

Ten crews of surveyors have been employed on channel surveys.

The Office and Accounting Department has taken care of all payments and payrolls under a revised system and has issued over 1500 requisitions. A work order system is used and a careful accounting kept of actual cost of work done both by contract and by District forces.

A budget system has been introduced under which the District is divided into seven divisions and tax funds apportioned in accordance with the areas.

The Hydrographic Department takes care of stream gauging, the operation and maintenance of dams and the collection of rainfall measurements as an aid to studies of channels and spillway capacities. This department operates 24 stream gauging stations and has installed 30 staff gauges. It also operates 156 standard rain gauges and 26 automatic rain gauge stations.

Seventeen Emergency flood control stations were established at each of which is stationed, during times of dangerous storms, experienced men in charge with emergency repair equipment.

The Testing Department has handled over 2,000 concrete tests alone, besides cement and gravel tests for concrete work.

HEALTH DEPARTMENT

The most notable advance made during the fiscal year 1927-28 has been in the completion of our organization in the building of new Health Centers and the great reduction in infectious diseases. The completed figures for 1927 show that this has been an unusually healthful year. There was no epidemic of major importance and the reduction in deaths from contagious diseases totaled four per cent. Diphtheria cases were markedly reduced in number, amounting to over one hundred fewer cases during the year, and typhoid fever was reduced forty-five per cent. There were only fourteen cases of smallpox

as against 208 of the year previous. No greater illustration of the efficiency of our public health work can be pointed out than this marked reduction in preventable diseases.

Infant Mortality

The most sensitive index of our health work is the number of babies dying during their first year of life. In this respect a most remarkable record has been attained in this County. During the past thirteen years the total mortality rate for infants under one year has been reduced almost one-third. In 1916, one baby out of every nine died before the end of its first birthday. In 1927 only one baby out of sixteen died before the end of its first birthday. The white infant mortality rate was thirty-one points lower than the national figure of seventy-two per thousand and now equals the best rates in this country for rural and small town districts. In spite of the general ignorance of the Mexicans, our work has reduced their infant mortality from one in three in 1915 to one in eleven in 1927. Also the Japanese deaths have decreased nearly twenty-five per cent in spite of the fact that the Japanese births have declined from thirty per cent of the total in 1916 to five per cent of the total in 1927. This reduction has been steadily going on throughout these years.

Prevention of Diphtheria

The Department is making a determined effort to free this County eventually of the disease in the past so frequent among children. During the year nearly 16,000 children between the ages of one to nine years were immunized against diphtheria, which will protect them until they are adults. This service which was given free to the people meant a contribution of nearly $100,000.00 in services returned to the taxpayers on this one item alone.

Health Centers

The Pomona Health Center was open to the public on December 9, 1927. This building occupies two city lots deeded to the County by the City of Pomona; is a two story brick structure containing 10,800 square feet of floor space and cost approximately $64,000.00. The building houses, as do all our major Health Centers, the division of the County Outdoor Relief, a small hospital of six beds, a number of treatment clinics operated mainly by volunteer assistants of the local medical men, besides the rooms for the local branch of the County Health Department.

Construction was commenced during the fiscal year on the Santa Monica Health Center which contains 11,732 square feet of floor space, the building to cost approximately $77,000.00. The land on which the building is located was donated by popular subscription at a cost of $6,000.00.

During the fiscal year, a large Center was planned for Belvedere Gardens, an area now occupied by some 120,000 people, the site being purchased by the County at a cost of $13,000.00. This building will cost approximately $83,000.00, and will contain $16,200 square feet of floor space.

St. Francis Dam Disaster

The wisdom of building district Health Centers was fully exemplified in March, 1928, when on the morning of March 13, 1928, the St. Francis Dam, located in the San Francisquito Canyon, suddenly broke. This Dam, which was part of the Los Angeles City water supply, impounding a large amount of water, caused a major disaster. The San Fernando Health Center, being the nearest emergency station, furnished doctors and nurses to the area without delay and the County Health Department took charge of the sanitation of this area. Altogether about $50,000.00 was expended in this and allied work in the area. It is noteworthy that no epidemic of any kind resulted, although 200 or more people lost their lives in the disaster. Governor Young, in public addresses, commended very highly the great efficiency of this piece of sanitary and public health work.

New Cities

The City of Santa Monica with a population of 45,000 joined the County Health Service by agreement with the Board of Supervisors in May, 1927. This is the largest city so far to join the work of the County. This makes a total of twenty-six cities having their work performed under contract by the County.

General Sanitation

Marked improvement has been made in milk supply in the area under our control during the past year. A total of nearly 5,000 milk samples were taken during the year and carefully checked against the State law. During the year, through the appointment of a new veterinarian, physical examination of cattle was commenced and a total of 5,015 dairy cattle were examined, resulting in 196 being removed from the herds. A total of 364 dairies were approved for permit during this period. It is a fact that the milk supply of this district is of especially high quality.

In the Food Division, we have reorganized under the new local district inspection service provided in the last Legislature. Under this law local hearings can be held, obviating the necessity for the defendant to go to Sacramento or Berkeley. As a result, the Department has actively enforced the State Food Laws relative to mis-branding, mis-labelling and adulteration. During the year also the State Law governing take-back bread from retail stores has been enforced.

In the Division of General Sanitation, much progress has been made in improvement of water supply; in the regulation of disposal of garbage and refuse; and in the maintenance of sanitation in the resort areas. The Belvedere Garbage and Refuse Collection District was organized and put into operation.

Child Hygiene

There are a total of sixty-eight conferences being held in this division at different localities over the County. At eighteen of these the population is entirely Mexican. The purpose of the child hygiene conferences is to educate the mother in the normal growth and development of her child as well as the protection against communicable diseases and general improvement in sanitation of the home. Special activities include the Summer Health School, nutrition programs in public schools and in the Health Centers, special cardiac clinics, physiotherapy and mothers' conferences. Figures in our office show that the mothers who are faithful in attendance have a much better chance of saving their children from infectious diseases and death than those who do not have this care. A total of 2,469 conferences were held with attendance of 7,793 new cases handled and 39,329 old cases.

Physical examination in connection with the public schools was begun during the current year with the result that about 5,000 children were given a careful physical examination in cooperation with the local school boards and with the help of the school nurses.

In the Oral Hygiene Section, 32,945 patients were treated or given advice during the year. This work includes treatment clinics in the Health Centers and educational work in the public schools. A noteworthy advance was made in connection with the Department of Outdoor Relief in the special clinic at the Dental College, organized by the County Health Department for the indigent sick in need of plates or bridge work. Prior to the organization of this clinic, the work had been very unsatisfactory.

The Summer Health School program is carried on in connection with the public schools for two months of the year mainly to improve the health of children from tuberculous homes. Approximately 500 children were taken care of in some nineteen schools during the year.

The Nutrition program and health education work in both the Summer Health School and during the rest of the calendar year is done in cooperation with the Tuberculosis Committee of the Los Angeles County Public Health Association. Articles are furnished fifty-seven newspapers; advice and supervision of school cafeterias and school lunches is carried out and food demonstrations in groups are given to mothers in the Health Centers.

Special attention has been paid the development of the cardiac clinics during the last year, since this disease causes much disability and stands high in the general causes of death. One physician is giving his entire time to the special advice of children in the public schools who are found affected with cardiac disease.

In connection with the child hygiene program, physiotherapy, since it has to do in a very large measure with hygiene, has been added to our program. A survey was made of the ninety cases of infantile paralysis occurring during the last year and remedial measures started on all those needing care and treatment. Work is also under way in relation to the crippled chlidren in the County and the development of orthopaedic clinics and special posture classes for those in need of this work in the public schools.

Laboratory Work

The County laboratory is unique in its field of work in that it gives a service to all the County Departments. Its work is divided into bacteriological, chemical and research sections. It operated not only a central laboratory in the Hall of Justice, but branch laboratories for local work at Pomona, Monrovia, Alhambra, Whittier, Redondo, Compton and San Fernando. Thus our public health work is brought to the family physician, saving a delay from twenty-four to forty-eight hours in making a diagnosis which frequently means a saving of the life of the patient and at least prompt diagnosis and treatment and better control of epidemic diseases.

In the bacteriological section, the work increased during the year over twenty-five per cent, a total of 62,789 tests being made. This work is standardize and approved by the Hygiene Laboratory of the State Department of Public Health, the Dairy Division of the State Department of Agriculture and regularly inspected by officers of these bureaus. The laboratory also cooperates with the Federal Departments on food analyses and the Internal Revenue Department in liquor analyses.

In the chemical section a total of 11,525 tests were run, thirty-three court cases were handled, which showed an increase of nearly thirty per cent over the year 1926. This section earned nearly $5,000.00 by service charges to the departments of the County and saved the County Government many times the total cost of its operation.

The laboratory conducts in its research division experimental work in connection with sewage disposal and various industrial problems in regard to the purchase of supplies and materials. It also cooperates with the bureaus in the Health Department in regard to the deleterious effects of industrial waste products now becoming a serious nuisance in certain districts of the County.

During the year the laboratories of Compton and Pomona were completed and put in operation. The work of the laboratory division is recognized by the State and National authorities as being of an extremely high order and its research reports are being published in national magazines.

Health Education

It is the duty of all health officials to assist in the general dissemination of knowledge of modern hygiene and sanitation. The County Health Officer and his staff have, during the past year, cooperated with the State and National organizations, local clubs and associations in many ways. We assisted

in the organization of the Southern California Public Health Association and have cooperated with the American Public Health Association, the National Tuberculosis Association and similar organizations. Six thousand bulletins were distributed to physicians; 12,000 bulletins to the general public, and weekly news articles distributed to fifty newspapers, resulting in some 28,000 inches of publicity of an educational nature. The Department also distributed nearly 200,000 mimeographed sheets of educational matter to citizens over the entire County without cost to them.

Population and Other Data

The total population served by the Department as of July 1, 1928, was 657,555. The number of live births was 8,111. The population of grade school children was 65,614. The birth rate was 12.4 per thousand population. The death rate 7.9 per thousand. The death rate has shown a constant tendency downards during the past few years, falling from 9.5 per thousand in 1925 to 7.9 per thousand in 1927.

The expenditures for the year 1927 were as follows: $590,245.00 salaries and wages and other expenses exclusive of outlays; operating outlays $35,-879.00; structural outlays $100,061.00, making a total expenditure of $726,-185.00. With the reduction of certain functions which are not strictly chargeable against the public health, the per capita expenditure was $.92. The following table shows the appropriation for similar health services in seven cities of larger population and four cities of smaller population than the area embraced by the Los Angeles Public Health Department in 1927:

City	Population	Per Capita Appropriation
Pittsburg	637,000	$1.18
Boston	793,000	1.06
Newark	467,000	1.02
Cleveland	984,000	1.01
Detroit	1,341,385	1.01
Buffalo	542,060	.92
(Los Angeles County) Health Dept. only	(657,555)	(.92)
Milwaukee	517,000	.89
Baltitmore	813,333	.79
Chicago	3,101,000	.74
New York City	5,970,000	.72
St. Louis	830,000	.65

It will be seen that in spite of the fact that we have a large rural area which increases the cost of transportation tremendously and in addition we are taking care of many functions of the care of the indigent sick, the per capita cost is less than many similar areas. In this connection, comparison of per capita expenditure must always be made in consideration of the activities of other organizations doing health work in the same area. It is impossible to compare the per capita costs of the County area with that of the City of Los Angeles because in this latter city, large appropriations are made for public health purposes by the Community Chest, by the Los Angeles City School Board, by the Police Department through its receiving hospitals and many other organizations. The amount of money thus expended is not actually much greater than that appropriated through the City Government for its health department. The per capita cost therefore of the City Health Department is not comparable to the per capita cost of the County Health Department because in the County Health Department area no such outside appropriations as exist in the City of Los Angeles are available. Likewise owing to the tremendous service rendered the City of Los Angeles by various County

institutions, which service is usually charged in other cities to the Health Department Budget, the per capita cost in Los Angeles for its Health Department is misleading. The truth is that only by the most painstaking analysis of functions can fair comparisons be made. On the attached table these functions are as nearly comparable as it is possible to make them.

Health Department Budget Anlyzed by Divisions and Compared with Standard

Function	Los Angeles County Total	Los Angeles County Cents per Capita	Standard Cents per Capita
Administration, (including Health Education)	$109,173	16.6	17.7
Vital Statistics*	8,737	1.4	4.5
Communicable Disease Control			
Communicable Disease Control (excluding Hospitalization at General Hospital)	190,360	28.9	62.8***
Conservation of Child Life**	213,289	32.4	102.0
Sanitation	80,865	12.3	9.5
Food and Milk Control	47,426	7.2	10.6
Laboratories	37,017	6.1	10.0
Total	$686,867	104.9	217.1

*Under County Recorder. Portion of budget chargeable to ordinary functions of Vital Statistical Bureau, plus $444, the estimated cost of vital statistics tabulation in the Health Department.

**Includes school health nursing and dental expenditures by School Boards, approximately $79,665.00.

***If Hospitalization excluded, 42.8 cents.

ROAD DEPARTMENT

The activities of the Road Department during this fiscal year consisted in the construction of 66.35 miles of paving, 48.33 miles of oil and screenings surfacing, 19.86 miles of sidewalks, curbs and gutters. This work was performed under 35 cash contracts and 84 Improvement District contracts, to which County Aid in the amount of $1,073,220.37 has been extended.

Construction of 89 bridges was either started or completed, while 116 bridges were under repair. The Maintenance Division kept under maintenance 437.67 miles of standard paved highways, 713.38 miles of light paved highways, 379 miles of decomposed granite or gravel roads, 408 miles of oiled and 911 miles of graded highways.

Five detention camps employed about 250 prisoners for road work, located at different points in the county, their wages mainly being paid to their dependent families.

SUPERINTENDENT OF CHARITIES

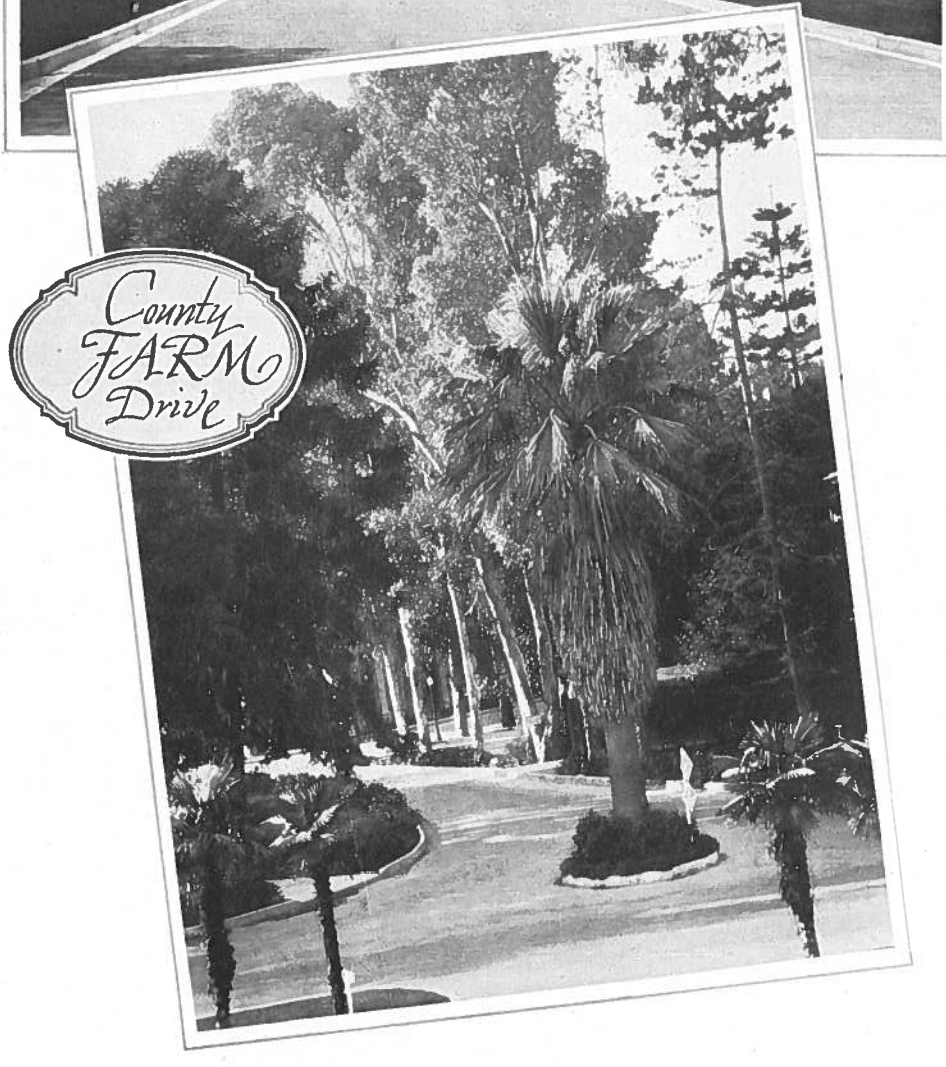

The Superintendent of Charities herewith presents reports of the various Departments under his supervision. In all of these, a great increase in activities is to be noted, and the problems have been extremely hard to solve owing to the rapid increase in population of this county, the slowing up of industries, and the consequent loss of income to a large number of worthy families. There has also been a very marked increase of public interest in the prevention of disease and the study of tuberculosis and other ailments which so greatly affect public health and welfare. Another cause for the increase may be found in the growth of the work of our courts—particularly in the enforce-

COUNTY FARM

The Los Angeles County Farm property, located 15 miles southeast of the city, now comprises 540 acres of land, and buildings and structures valued at more than $2,500,000.00. About 1 mile of new paved roads were built on the grounds during this fiscal year, and 1¼ miles of decomposed granite roads. Several new buildings were completed or under construction during the same period. The patient population at the Farm is about 1,900.

Views show the new Administration Building, completed during the previous fiscal year, and a section of driveway through the Farm grounds.

Drive

ment of the liquor laws which has resulted in sending many men to jail or prison, leaving their families destitute and thereby presenting problems for the Charity Department in one or another of its branches and increasing the load of cases which must be handled in order to meet the needs of the families thus involved.

Owing to the crowded condition of the Los Angeles General Hospital, it has been necessary to remove patients from there at the earliest possible moment—thus placing an additional burden on the Infirmary at the County Farm where all incurable cases are sent immediately upon the termination of their care at the General Hospital, also where many post operative and convalescent cases are sent in order that the hospital may be kept open for the rapidly increasing number of acute disease cases.

The County Farm has three important functions: 1—Care of the dependent poor who have reached the stage of life where they are unable to care for themselves either wholly or in part and must be received at the Farm where they remain the rest of their lives. 2—The Infirmary cases mentioned above who come from the General Hospital and other hospitals and clinics. 3—A large number of people who are pronounced mentally sick or harmlessly insane by the Lunacy Commission and committed to our institution for care and treatment. We are pleased to note, however, that the number of insane cases which should be placed in the State Hospital has decreased materially, and while a year ago there were at least a hundred cases at the Farm who should have been in State Hospitals for the insane, there are now less than twenty of that type remaining at the Farm.

Olive View Sanatorium which deals with pulmonary tuberculosis only has had an overload throughout the year, although a number of new buildings have been erected there—notably the Solarium which houses fifty-six patients and is probably the finest institution of its kind in the United States.

Unfortunately Olive View's capacity is so low that we have not been able to accomplish what a sanatorium should perform, namely, that of caring for early cases of tuberculosis who usually readily respond to scientific treatment and are restored to society within a year entirely cured. Instead of being able to care for these cases, the Sanatorium is forced to give is beds to those people who are so far advanced in tuberculosis that they become a great menace to the public health and are therefore sent first to the General Hospital, but, owing to the overcrowded condition there, they are immediately removed to Olive View. The only thing that can be done for many of them at the Sanatorium is to make them comfortable for the rest of their lives. Many of these patients linger a year or longer before they finally succumb. This fact renders it impossible to give aid to those who, if taken early, would be restored to life and health.

Tuberculosis means poverty and death if neglected, but, if taken in time, can be considered as one of the more easily curable diseases.

The Outdoor Poor Relief Division presents a fine report on their activities. We are yet feeling the benefit of the law passed in 1927 which restricts county aid to only those persons who have been residents of the State one year or more and have not, during that time, applied for aid to any public or private agency. This has prevented a large number of undesirable people from coming into the State to immediately become burdens upon the County.

The average number of cases cared for is about six thousand throughout the year—although some sixteen thousand cases have been opened and handled at various times, making the average length of time any case was cared for approximately three and a half months.

The Salvage Department of Outdoor Relief has been thoroughly reorganized, and industries carried on in that division have been those which would be productive and profitable.

The Employment Department has placed a large number of people in remunerative positions. This has reduced the number of cases who have heretofore relied on county aid until they were able themselves to find jobs.

The Hospital Social Service, which is a branch of Outdoor Relief work, maintains a corps of workers at the General Hospital whose business it is to investigate the financial ability of all patients applying for hospitalization or clinic care, and if it is found that they are able to pay for their care elsewhere, they are not admitted to the General Hospital. One of the principal duties of Outdoor Relief is to prevent imposition on the tax payers of Los Angeles County, and to demand from those who are not able to pay the full hospital fees required in private hospitals that they pay as much as they are able, thereby returning to the County at least a portion of the money which is expended for the patient's care.

The Probation Department, also under the supervision of the Superintendent of Charities who acts in the capacity of Chief Probation Officer, has found a greatly growing burden during the past fiscal year. The Maximum number of cases in Juvenile Court in any one month was reached in February when 504 petitions were filed with the County Clerk. During the same month, 500 petitions of adult cases were filed through the District Attorney's Office, showing that one Juvenile Court and one Referee and a very inadequate staff of probation officers were called upon to handle more cases than all of the Criminal Courts combined.

Attached to the Probation Office there is a Financial Department which collects all reimbursements and restitutions ordered by the Court; also collects certain fines which the Court allows to be paid in installments.

Also attached to the Probation Office is the County Parole Office which takes charge of all cases released by the Parole Board, and they are given supervision during the term of their sentence. This office has been able to put teeth in the Parole law by holding every man strictly to account for his conduct while on parole; and, in case of violation or desertion, he is immediately hailed into Court and made to serve the remainder of his term.

While there has been a rapid increase in the number of cases handled throughout the whole Department, yet, we are pleased to report that the expenses per capita have been greatly reduced during the past year.

The cooperation between this department and various agencies working in the field of charity and correction has been especially fine during the past year. Too much cannot be said in approbation of the Los Angeles City Health Department, the County Health Department, the District Attorney's Office, and the various tuberculosis societies. Without their aid and cooperaation, it would have been impossbile to accomplish what has been done during the past fiscal year.

Work of the Placement Bureau

The Placement Department, which is in the office of the Superintendent of Charities, deals with applicants for the County Farm and Olive View Sanatorium. All cases that are found throughout the County which seem to be eligible for either of these institutions are thoroughly investigated in this office, and are placed only after the investigation shows that nothing else can be done for these patients. Preference is given in the case of Olive View to those people who have families dependent upon them and who would profit by a stay at the Sanatorium.

The Placement Bureau was established October 1, 1925, to handle admissions to Olive View Sanatorium. The work was extended October 1, 1926, to include admissions to the General Wards of the County Farm. The department, which was started more or less as an experiment, has proved that the need for centralizing this phase of the work of the County Charities definitely existed.

Applications to Olive View Sanatorium are made by the Chest Clinics maintained by the City and County Health Departments, and by the doctors on service in the tuberculosis wards and in the tuberculosis clinic of the Outpatient Department of the General Hospital. During the year 1927-1928, 1090 such applications were made; 221 were open cases in the Outdoor Relief Division of the County Charities; the balance of 869 cases were receiving no assistance and were investigated by the Placement Bureau. Seven hundred and fifteen (715) admissions were made. The balance (375) were rejected, the chief reasons being: non-residence, income sufficient to provide care elsewhere, disease too far advanced, or patient too old to receive benefit from Sanatorium care, home care adequate and no special treatment indicated. Admissions are always made according to the urgency of the case, regardless of priority of application, and payments are arranged for according to the financial ability of the applicant or his relatives.

There are no definite sources through which applications for admission to the general wards at the County Farm are made. During the year 1927-28, 765 applications came to the Placement Bureau; 232, or thereabouts, were open cases in Outdoor Relief Division, while the balance came through individuals, organizations, and the General Hospital. It is impossible to state accurately how many of the 515 placed were reported by the General Hospital and the Outdoor Relief Division because, prior to March, 1928, no consideration was given to segregation of cases. Since the establishment of the Placement Bureau, residences are being more accurately checked on, which is resulting in the exclusion of applicants who have no legal claim on Los Angeles County; financial conditions are being more thoroughly investigated which is resulting in those being paid for, who have resources or whose relatives are able to pay, and in those not gaining admission who can provide for themselves; more careful attention is being given to diagnoses so that better distinction is being made between General Ward and Infirmary cases, and better selection of cases is being made, so that practically none but purely institutional types are being admitted. These facts are also borne out by statements made by the business office at the Farm.

The work of the Placement Bureau could be extended to advantage to include admissions to the Infirmary and investigations on cases committed through the Court to the Psychopathic Wards. This would eliminate all differences of opinion, especially in the placement of border line cases, and determine definitely whether or not a psychopathic case should be retained at the Farm after commitment, and on what financial basis.

COUNTY FARM

The County Farm Division of the Department of Charities has continued its growth approximately in proportion to the total population of the county, there being 1886 patients in the institution at the close of the fiscal year, an increase of 143 persons over the previous year and 1201 more than eight years ago. During the year 1927-28 the General and Psychopathic Wards have been slightly less crowded, allowing removal of a few of the emergency beds from corridors and porches, although the Psychopathic Wards were at times as much as 35% over rated capacity. The Infirmary, however, involving the most complicated care at two and one third times the cost in the General Wards, has made a gain of 166 patients, or nearly 50%. This confirms previous estimates of the trend of growth and the necessity of arranging at the earliest possible date for the construction of a separate unit on the County Farm grounds, planned for an ultimate capacity of at least 2500 infirmary type patients, i.e., the helpless chronic sick. By building according to this complete plan as additions are needed, this program should meet the require-

ments for 15 to 18 years and avoid many of the costly changes that are inevitable if plans are made only a year or two in advance. Working drawings are practically complete for the first group of buildings and waiting for the necessary funds.

Many Structural Improvements

The Farm property, which now comprises 540 acres and buildings valued at over two million dollars, is in excellent condition. Buildings and equipment are in an excellent state of repair, land susceptible of farming is making two or three crops a year, and swamp and alkali areas are being reclaimed by the most approved methods. Nearly a mile of additional paved roads were built on the grounds during the year, also one and one-quarter miles of decomposed granite roads, and about one-quarter mile of heavy cast iron sewer mains with leaded joints replaced an old line of tile construction. This will be connected during the coming year with the lines of the County Sanitation District sewers that were recently completed through the Farm property for nearly a mile. The irrigation system has been extended and several acres planted to new lawns and gardens with hundreds of trees.

Five additional infirmary wards and the beautiful new Administration Building, completed the previous fiscal year, were equipped and occupied. Older infirmary buildings were improved with built-in cubicles, giving more privacy to the severe cases, and folding doors for better protection of the sleeping porches in bad weather.

A modern and well designed Service Building was erected, containing kitchens and dining rooms for all employees and the infirmary patients, also an additional general ward building for 112 men. A forty year old brick ward building was razed and replaced by a beautiful Auditorium which will house the Farm branch of the County Free Library and will serve during the daytime as a reading and game room. This is now being equipped and will be occupied early in the new year.

One of the major projects of the past twelve months has been the construction of a new dairy including a completely equipped creamery and employees' quarters at Tract 6, about one and one-half miles north of the old barns. This is one of the most modern and complete dairies in the country, carefully designed for convenience and economy of operation. The cattle are now being transferred to the new location by small groups, and every precaution is being taken to protect their health and guarantee a product of the highest quality. The new plant is centrally located to the ground where feed is raised and manure used, is far removed from the institution buildings or encroaching subdivisions and provides much better protection of the herd against infectious disease. Additional buildings were constructed for the poultry and swine departments, also a new horse barn on Tract 7, and a number of minor improvements.

Near the end of the year construction was begun on a new shop building for the Occupational Therapy Department, and a group of eight small bungalows was started in a court at a quiet, isolated corner of the grounds for the benefit of those employees who are required to work at night and sleep by day. This should improve their comfort, contentment and effectiveness. Bids have also been taken for the erection of a reinforced concrete Women's Ward to house 200 ambulatory patients.

New Equipment

In addition to providing the new buildings with the most modern and convenient furniture and special devices, a considerable amount of new machinery and equipment was purchased. Perhaps the most important item was the 300 K.V.A. electrical generating unit, with its direct connected steam engine. A new high tension transmission line crosses the proposed location of the new

infirmary group and brings the distant pumping and dairy machinery under our own supply. The capacity of the automatic telephone switches was increased from 50 to 100 stations and a system of centrally controlled electric clocks now synchronizes the activities of all departments. The old water softener was removed to the new dairy and a new one of several times the size installed to meet the institution needs. A new power hack-saw and a shaper were added to the shop equipment. Farm employees installed a lawn sprinkling system on over two acres of ground and rebuilt the drains in the exercise yards of all Psychopathic wards.

In the laundry, which handled over 1,800,000 pieces during the year, four new power operated presses of the latest safe and rapid type were added, also a small flatwork ironer and a fixing machine. The Occupational Therapy shops installed a motor driven printing press with the necessary auxiliary equipment. This department also manufactured a great deal of furniture for wards, employees' quarters and other operating departments. Other items are power lawn mowers, power sewing machine, two double tank hand propelled chemical fire engines, pianos, radio sets for the new infirmary receiving wards where head phones are provided at each bed for those who are interested, and loud speaker sets in other wards. Over 55 additional wheel chairs were put in service, and a large number of rocking chairs on various wards.

The mechanical shops produced during the year:

75 bedside tables
28 dining tables
26 park benches
10 radio cabinets
10 steel carts with rubber-tired wheels for conveyance of food and supplies

Twenty-two hundred chairs and over one thousand beds were repainted during the year, in addition to all the new furniture made by the Occupational Therapy Department, and refinishing a large number of buildings inside and out.

Occupational Therapy Extended

During the second year of operation of the Occupational Therapy Department at the Farm, the work has increased in scope and in number of patients employed, although the cramped quarters established a definite maximum that could not be exceeded. This condition will be improved early in the new year with the completion of the new shop building which will combine all the various activities in one large room 40 feet by 140 feet, simplifying the supervision and allowing for additional growth. Here the patients who are crippled, blind or otherwise handicapped may receive instruction in various interesting and profitable crafts. There is no one more miserable than the man who has nothing to do but sit and think of his own misfortunes and ailments, but 90% of happiness in life seems to be dependent on having work to do in which one takes a genuine interest. Work in this department is prescribed by the physician for its therapeutic benefit on both minds and bodies, wasted muscles and stiffened joints improving with suitable exercise; and happiness that comes from interesting and constructive work contributes to mental peace and health. Scores of instances could be cited of marked benefits received by individual workers. A worker who becomes skillful obtains a source of a small income and the institution profits by the beauty and utility of the products. The patient is made to understand the fact that this shop is an opportunity for his employment and profit so that he does not feel under compulsion. The response has been eager and genuine and interest is spreading so rapidly that a second shop building could no doubt be filled with these activities in a short time. The work is confined as far as possible to lines that contribute to the

institution such as the manufacture of all needed mattresses and brushes, knitted shawls for the women patients, and furniture and rugs for the new buildings.

The printing shop installed during the past year has been busy every day with the various forms used by the Department of Charities. During the eight months of its existence, this shop has printed 602,600 copies of which 2200 were booklets of 20 pages or more. All but one of the men engaged in this work have been trained here and the work done is very creditable. In addition to the saving effected, the department benefits by quick action when the need exists, as new forms can usually be ready for use within 48 hours after receiving the order. Another press with an automatic feeder is to be added to this department when the new building is completed.

Some of the handicapped patients also make articles for sale to the general public and offer some excellent bargains in hand tooled leather, crocheted and knitted work, rugs and baskets. Some of these are sold on the grounds and a considerable number are disposed of through the California Crafts and Industries Society at 136 North Broadway. The Navajo rugs, which are made from Navajo yarn obtained in northern Arizona, are especially popular, with rag rugs and those made with cotton roving filler selling nearly as well. The work has been extended to the Psychopathic Department, quite a number of patients having been trained in making of various kinds of brushes and cocoa-fiber door mats. The brushes are becoming increasingly popular with other county departments. Women patients are engaged in various activities in their own wards, such as the making of dolls, artificial flowers, embroidery, crocheted articles, pillow tops, table runners, etc.

Medical and Nursing Departments

Considerable benefit has been received during the year from the assignment of an additional Resident Physician specializing in psychiatry to full time work in the Psychopathic Wards. The employment of a trained dietitian has improved the service to all of the infirmary patients but especially to those suffering with diabetes, nephritis, pellagra, eczema, etc. This is done under a physician's prescription and with frequent laboratory checks on results obtained. The Physiotherapy Department has increased its service practically 50% over the previous year, giving 13,572 treatments with electricity, the utra-violet ray, diathermy, massage, etc., while the X-ray Division has made examinations of 594 patients with a total of 1738 exposures. This eliminates the pain and discomfort, often the serious danger, of a trip to Los Angeles for the purpose. The dentist performed 979 operations, including the manufacture of 54 plates and the repair of 129 plates. In the Eye, Ear, Nose and Throat Clinic which meets weekly, 448 persons have been treated and 103 pairs of glasses provided. One of the infirmary wards has been fitted out especially for the genito-urinary work and provided with a new cystoscope set and electrical treatment unit and other special equipment. The patients in this ward have received a total of 8487 treatments during the year with excellent results in relieving old established conditions. The nursing staff has been increased with the growth of the infirmary ward, maintaining the proportion of approximately one employee to each four patients. The infirmary patients are under the supervision of graduate nurses 24 hours a day, and doctors and nurses are on duty and subject to call from all other wards at any hour.

Ranch Division

Preparations are now being made to move the stable, blacksmith shop and other ranch activities to a new center that is being completed near the new dairy, which will allow further economies in operation and simplify the institutional housekeeping problem by removing the source of dust and flies.

The production of hogs and sheep has been reestablished for the first time since the hoof and mouth disease epidemic. The 55 acre truck garden is also a very profitable department producing during the year $19,839 worth of vegetables for use by the various divisions of the Department of Charities. A large part of the work is done by the more active inmates under supervision of an outside employee. This is the only part of the ranch work using any considerable proportion of inmate labor, as most of them are so disabled as to be unfit for heavy work before admission, although approximately 500 have regular duties in the institutional work from one to six hours per day.

The largest producing department of the Farm is the dairy, which is one of the outstanding industries of its kind in the United States, in spite of the destruction in 1924 of a breeding herd that had required nine years to build up and included, among other high record animals, the greatest butter producing cow west of the Missouri River, with a record that has stood unchallenged for six years. During the past three years the herd has been built up to approximately 400 purebred registered Holstein cattle. The 200 milking cows average over 800 gallons of milk per day, all of which is used in County institutions. During the past year the entire herd, regardless of age or condition, averaged 398.5 pounds of butterfat. Fourteen state records for milk and butterfat production in the different classifications are now held by County Farm cows, including five that are World Records. The new herd sire, King Pietertje Ormsby Piebe 39th, purchased during the year, is from what is probably the greatest strain of show ring winners and high producing animals of the Holstein breed. His own offspring brought home 60 ribbons including 8 championships from last year's show circuit, and his first daughter to be tested for a year broke the California State record for butter production at 2 years age with 1101.46 pounds of butter in a year. His son, from one of our World Record cows, was recently sold in the East for $3500. Sales of high class breeding stock from the County Farm herd are being made in all parts of California and an eager market is already waiting for animals of this particular strain when we have them for sale. There will be a larger surplus than ever before because of the improved health of the herd at the new location, which has never before been used for livestock, while the old corrals had been continuously used for dairy purposes for at least 45 years.

Revenues Increased

By intensive development of every possible source of income, the total revenue of the Farm has increased during the past year to the very considerable total of $290,848.85, an increase of 8½% over the previous year and of 46% over the year 1925-26. This is almost exactly fourteen times the amount of the revenue fourteen years ago. While the amounts expended for the care of infirmary patients have gradually increased due to the improved service given the sick and the increasing helplessness of those who are admitted to this ward, the per capita costs in other departments have been stationary or declining for a number of years. During the past year, the gross amounts expended have been as follows:

Infirmary	$2.070 per patient per day
Psychopathic	1.169 per patient per day
General Ward	.879 per patient per day

while the average net amount provided by the taxpayers was $1.073 per patient per day. The above figures include board, room, clothing, shoes, laundry, medical and nursing care (which has increased 500% in the last few years), maintenance of the property, and all other expenses. On June 30, 1928, the

population of 1886 was made up of 501 patients in the Infirmary Wards, 533 in the Psychopathic Wards, and 852 in the General Wards.

Many of the patients have relatives who are financially able to pay the cost of board and care, but who are not assisting because of lack of interest or because they do not know of the patient's circumstances. Methods of tracing these relatives and friends have been carefully perfected and regularly followed up, using legal pressure where necessary, resulting in the removal of a large number of patients to other homes and in the payment of $55,091.51 for those who remain. Cash collections during the year amounted to $82,444.14, and the remainder of the revenue consisted of credit for supplies produced for various county departments.

Statistics

The average age of all patients at the Farm is approximately sixty-four years, but there is a very wide range from 15 years to 104. There have been as many as five patients at one time, each one over 100 years of age. Of course there is a wide variety of nationalities trades, education, and general background. Approximately 70% of these people are American born, followed in order by English, German, Mexican, Swedish, Italian, French and fifteen other nationalities; those of Mexican birth comprising about 3%. The average stay at the Farm is about two years, a number being deported within the first few weeks to other political subdivisions which should rightfully care for them, or returned to relatives who have been compelled under the law to take up their obligation of care for their less fortunate kinsfolk.

The department of the Farm that makes the greatest saving to the taxpaying public is the Infirmary. For each of the 501 permanently hospitalized patients in this ward, a bed has been vacated in the General Hospital, and as each bed in that institution accommodates an average of eighteen patients during the year, the Farm has in this way enabled at least nine thousand additional persons to be treated for acute disease. In addition to this, there is an actual saving of $2 per capita per day in the cost of care or $1,000 per day, enough to pay for all the Infirmary buildings every year. The number of patients discharged to the Hospital during the past year is smaller than for several years past.

The institution uses over 1,100 pounds of bread per day, with three pounds of baking powder per day for various kinds of hot bread. It also uses 650 pounds of potatoes, 400 pounds of sugar, 80 pounds of coffee per day. The number of meals served is such that if the persons charged with the responsibility should allow the cost per meal to crawl up one cent, the loss to the County at the end of the year would be more than $20,000; so that it is necessary to strike a delicate balance between the interest of the patient and that of the taxpayers who stand the expense. The diet includes over 400 gallons per day of milk produced by the Farm's own dairy; hundreds of pounds of home grown vegetables, and first class meat of which about one-half is produced at the Farm.

A Real Home

For several years this has been the largest County owned institution in the West,—probably in the United States. In spite of the mammoth proportions, we believe that the surroundings are far more pleasant and the actual feeling of "home" more evident than in many smaller institutions. The buildings are well lighted and ventilated (there are no inside rooms) and all are provided with steam heat, hot and cold water service and adequate facilities of every kind. They are located in a park-like setting of flowers and shrubbery, with drives bordered by magnificent 45-year old eucalyptus trees. The

Farm employees are constantly on the alert to improve the comfort and happiness of the sick and unfortunae in their care with a sincere and helpful spirit. Not only are the physical comforts amply provided, but congenial occupation suited to the mental and physical abilities of the subjects, and recreational facilities. The County Free Library maintains a branch at the Farm in which there are over 1100 volumes and 450 persons holding borrowers' cards. The small recreation and reading room of past years is being replaced with a beautiful new Auditorium in a central location through which we will soon be able to take advantage of the many offers of entertainment received from interested friends and organizations. For several years, through the kindness of the film distributors in Los Angeles, we have been able to give weekly motion picture entertainments in the General Wards. There are six portable phonographs, nine pianos—most of them with player attachments, and considerable radio equipment. There are eight loud speakers in the General and Psychopathic Wards and headsets at the beds of all patients in the Receiving Ward and Infirmary Wards, who are interested. Religious services are held in the small chapel on the Farm every day by various denominations who follow a regular monthly program.

At Christmas time the old people are not forgotten, as many generous individuals and organizations throughout the county have interested themselves in providing gifts and entertainment. Through the kindness of many lodges, clubs, and church organizations cooperating in the tremendous task, gifts are assembled so that every patient on the Farm is remembered with at least one article in addition to the usual candy and other treats. As far as possible, the air of home festivity is duplicated for the winter holidays with the traditional turkey dinner and all that goes with it.

Visitors are welcomed at the Farm, and many hundreds of interested friends call each week. Visiting hours are restricted only in the wards where the sick and mentally infirm are cared for, but visitors are allowed there from two to four P. M. any day.

OLIVE VIEW SANATORIUM

The year 1927-28 has been one of great activity along all lines at Olive View Sanatorium. A number of new buildings have been erected, including a Solarium, which houses two wards, the X-Ray, physiotherapy, dental and pneumothorax departments; an Occupational Therapy building and dining room for preventorium girls, five double bungalows for employees, four 5-room bungalows for doctors; and eighteen cubicles for discharged patients, which were moved from El Retiro. Other improvements include concrete roads to some of the more distant wards, another unit added to our water softener, and the connecting of our sewer system with the San Fernando sewer. Fire breaks have been maintained, roads graded and built, and many plants and trees grown in our own greenhouse have beautified the grounds, which are gradually assuming an orderly and systematic appearance in spite of building operations. The various departments of the institution have functioned in an efficient manner, keeping the atmosphere of placidity and contentment so essential in the treatment of tuberculosis. With the addition of a librarian, a physiotherapist, a dietitian, an additional assistant chief resident physician, and other employees needed to round out the organization, a fuller schedule of work has been carried on by all departments. In addition to Olive View patients, our physicians supervise small sanatoria at Lancaster, Newhall and Little Rock, where many of our patients are cared for after they have received the maximum of benefit from this institution. We have had regular church services, weekly moving pictures, and occasional entertain-

ments, which have a beneficial effect in breaking the monotony of sanatorium regime. The instruction given adult patients in various forms of handicraft by our occupational therapy teachers, and the regular school work provided for the children, stimulate their interest and help to expedite their recovery. Our follow-up work for this year has been most encouraging, as there were returned 1031 cards out of 1322 sent out, and most of the replies told us of the practical help received from Olive View instruction. Our capacity for patients was increased to 658, and 97% of our beds have been filled throughout the year. A total of 1336 patients were cared for, with 715 admissions and 702 discharges, which are analysed as follows:

Condition of Patients on Admittance		Condition of Patients on Discharge	
Minimal	48	Arrested	13
Moderately Advanced	105	Apparently Arrested	41
Far Advanced	495	Quiescent	68
Non-clinical Tuberculosis	1	Improved	220
Suspicious	1	Unimproved	165
Juvenile Tuberculosis	65	Died	188
		Untreated	1
Total	715	Non-tuberculous	6
		Total	702

OUTDOOR RELIEF

During the past year the work of the Outdoor Relief has shown satisfactory progress. It was possible to place more definite emphasis on the working out of new cases reported. The results have been most satisfactory, in that these cases were closed before they became permanent problems of long expense. The decentralization of the Department has shown gratifying results, social work of the Department being tied more closely into community life, resulting in better cooperation, more satisfactory investigations and the utilizing of community resources.

In State Aid work, the County collected in reimbursements from the State of California, $316,581.05. These cases have been worked out along the lines of giving adequate care for widows and small children, assisting them in making plans of self-support. Every emphasis has been laid on this money being used in a constructive way, and the Department has discouraged as far as possible the idea that state aid was a pension to be paid as a right and continued over an indefinite period of time.

The convalescent tuberculosis patient has proven, as always, a great problem. Every effort was made to eliminate the batching convalescent, and in place of this method has been developed a more scientific plan of care. The Department also worked diligently to find possible light employment for arrested and quiescent patients. This, however, is one of the most difficult problems we have to solve and demands a great deal of patience and continued effort.

The Labor Camp developed at Olive View Sanatorium proved of great value in handling the problem of the more or less transient aged type of person, who is still able to do some work but finds it extremely difficult to be placed in competitive industrial life.

The Employment Department developed consistently throughout the year and proved a wonderful resource, both in finding employment for the clients of the Department and in providing work tests for those unwilling to make

the effort necessary for self support. Many cases have been closed because of their efforts.

The Salvage Department has also developed, and the plan of the manufacture of garments for distributing among the people the Department is helping, and also making of garments for the County institutions, is of economic benefit to the County. Utilizing the indigent labor available made it possible to train many of the women dependent upon this Department in power machine operation, and they, after training, have been placed in factories.

Special emphasis was laid on the Mexican problem, with the result that, while during the previous fiscal year 27 per cent of our case load were Mexicans, the last fiscal year saw a cut in the Mexican case load to 24 per cent.

The Department made consistent effort to systematize and perfect the details of mechanical operation. At this time mechanics are standardized and meet with the hearty approval of the Efficiency Bureau.

Finally, the work of the year is most gratifying, in that the Department spent $63,960.30 less in actual relief given than during the fiscal year of 1926-27, while it served 1860 more cases than were served during the previous year. For the first time in its history, the Department completed the year's work without asking the Board of Supervisors for additional funds; in fact, returned to the General Fund $174,443.37.

The Los Angeles County General Hospital

Report for the Fiscal Year Ending June 30, 1928

Its Purpose... A county hospital in California is maintained by the taxpayers to care for the indigent sick and injured residents of the County, and also the incapacitated who cannot be supported and relieved otherwise; the law of California (Sections 6 and 7 of Act 2631, Deering's General Laws, and Section 206 of the Civil Code) requiring that they, or their relatives must pay the county what they are able toward the cost of their care at the hospital.

The Los Angeles County General Hospital, however, does only part of the work of such a county hospital, since it is intended to treat only those indigent patients who are acutely ill, who are not able to obtain relief elsewhere and who require nothing less than the best modern hospital care to prevent and relieve the jeopardy of their health, limbs or lives.

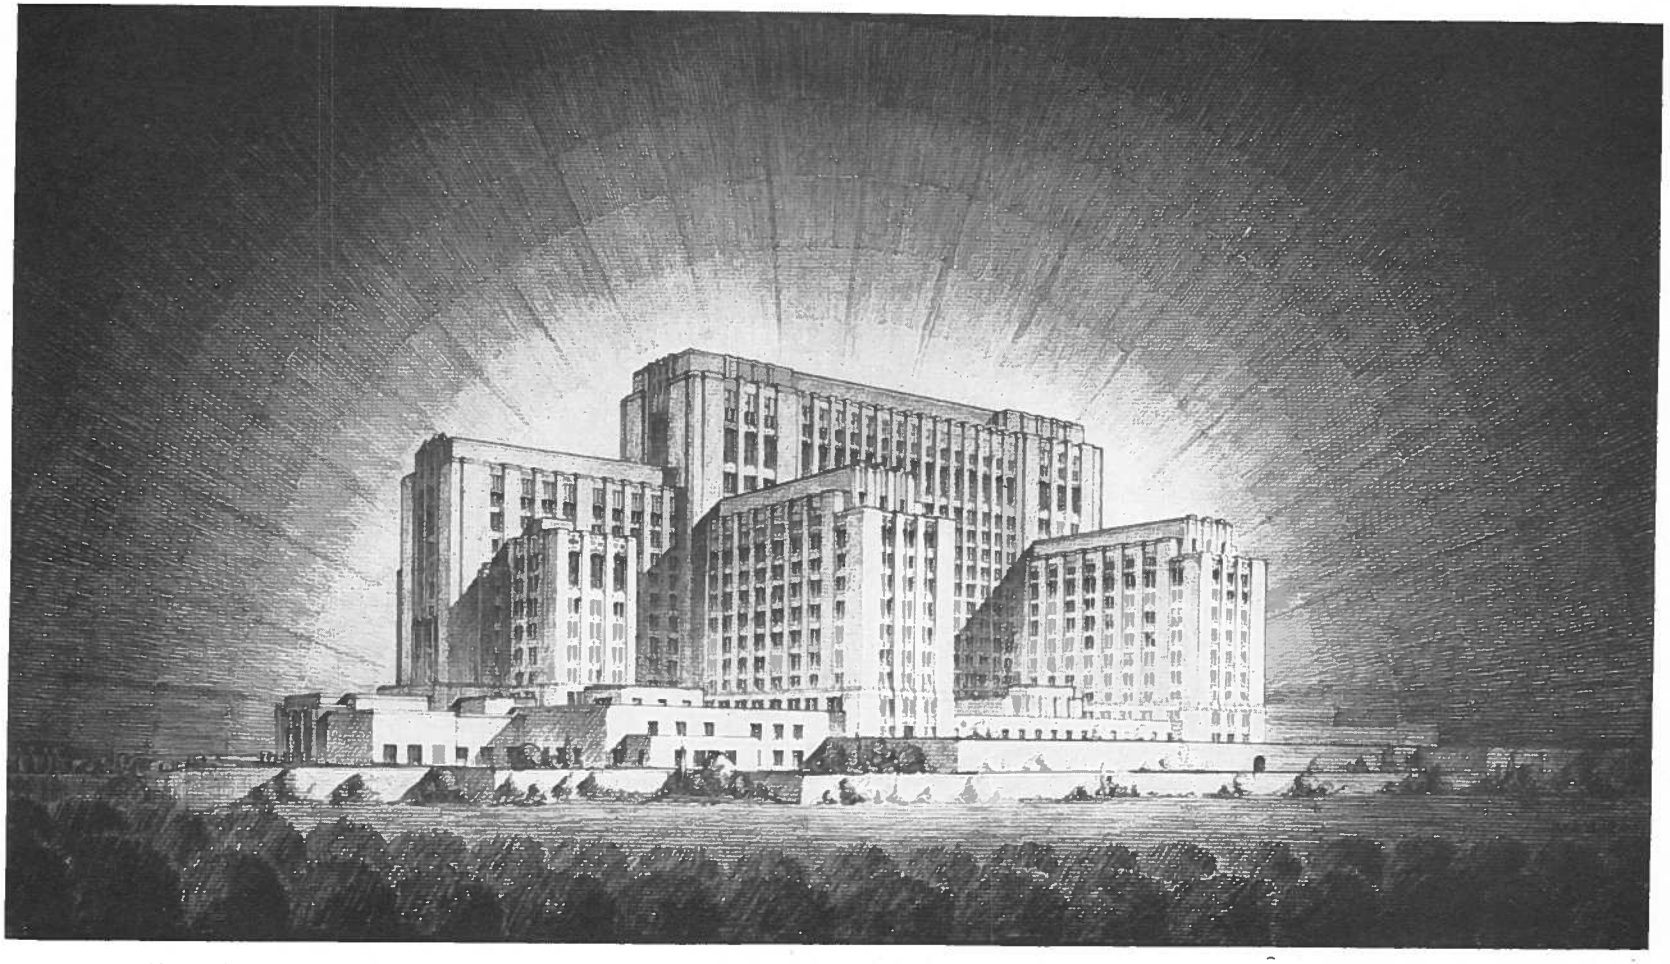

It is planned that this hospital will leave the matter of the less complete and less costly care of the sick, especially the chronic sick who are incurable even by the best and most expensive modern hospital care, to the other branches of the county government; notably to the County Farm, to the Infirmary on the grounds of the County Farm and to the Olive View Sanatorium, institutions which are divisions of the Department of Charities.

These institutions provide a home for those who are partly ill and who are unable to provide their own and provide for the institutional care of the incurable and the tuberculous, not only at less cost, but more suitably and more satisfactorily to the patients themselves than could the General Hospital.

The care of the sick in their homes, including physicians' services, is provided by the Out-door Relief Division of the Department of Charities working in cooperation with the nurses and physicians of the County Health Department and its Health Centers throughout the county, the Los Angeles City Health Department and the other local health departments.

Each city in the county also provides independently of this hospital its own ambulance service and its own emergency and receiving hospital, evacuating therefrom to this hospital, after first aid has been rendered, indigent patients who require further bed care as inpatients. Each such city provides also its own smallpox quarantine hospital and certain clinics for out-patients in connection with its health department.

Industrial accident patients, including those whose care is provided by insurance carriers except county employees sustaining industrial accidents

View of the New Hospital Building, Unit No. 3, as it will appear when completed. (Allied Architects' Association of Los Angeles).

arising out of their employment, are not eligible for admission to this hospital. There is now being discussed the desirability of caring for the latter in private hospitals and of paying their attending physicians as provided in the Workmen's Compensation Act instead of putting them in this hospital as at present and expecting the attending physicians on its staff to treat them here without charge as if they were indigent when as a matter of fact neither they nor the County, which is obligated under the law to provide their medical attendance and hospital care, are indigent, and when every available bed is urgently needed for an indigent patient.

Admissions

Especially, when there is such a shortage of beds, it is very important that no applicants be accepted and admitted to either inpatient service, i.e., to beds, or to out-patient service, who can be relieved elsewhere or in some other way. Carelessness in checking and preventing unnecessary and unsuitable admissions results in increasing the burden already carried by the hospital which is doing its best under an overload twenty per cent greater than the recognized normal working load of such an institution. Further, it reduces the facilities and beds available for those applicants who could not possibly be helped in any other way than by admission to our service, and it both impairs the quality and increases the cost of serving those whom it does admit.

It is helpful in trying to grasp the situation in regard to admissions in its true light to reflect that if the Los Angeles County General Hospital had as many patients in bed in proportion to the population of Los Angeles County as the San Francisco County Hospital has in proportion to the population of San Francisco County, we would today have over 2600 inpatients instead of 1300.

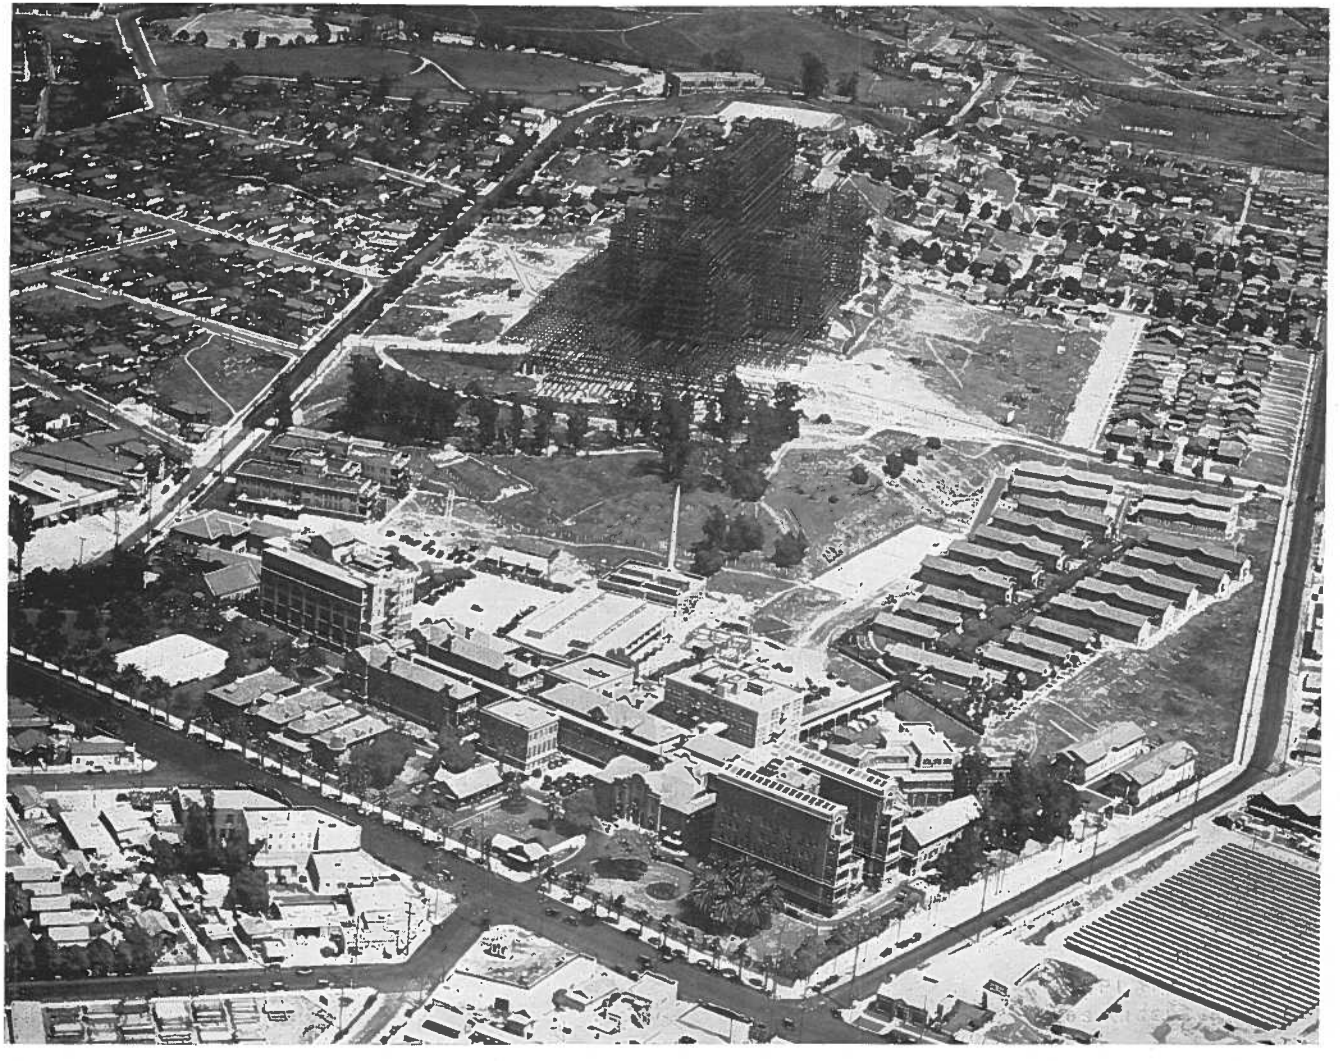

Requirements for Admission

Generally speaking, the requirements for admission are two in number: First, the applicant or would-be patient must be indigent or at least he must be unable to obtain from other sources relief except that which is rendered to all applicants immediately without charge as a first aid emergency measure to stop suffering and to prevent later complications; second, the applicant's medical needs and requirements must be definitely those which can be met only by the service of this hospital and which could not be met reasonably well in some less expensive manner.

Accordingly, the hospital does not admit nor treat any applicant even though he be a citizen and a taxpayer who is not also indigent, except in the case of a county employee suffering from an industrial accident entitling him to the benefits prescribed by the Workmen's Compensation Law at the expense of the county, except in an emergency when immediate treatment is necessary to stop suffering or to prevent complications, except in the cases of contagious diseases treated here in order to safeguard the public health, and except in the cases of prisoners and psychopathic patients treated here in order to prevent their injury or escape while undergoing treatment.

For practical purposes, an indigent is defined as one who is financially unable to pay for the services of a private physician and for hospital care when necessary. County Ordinance No. 929 (New Series) passed June 1, 1925, and as amended by Ordinances 1021, 1022, 1291 and 1535 specifies in detail what constitutes a pauper or poor indigent person entitled to county aid.

After being given, without charge, whatever immediate first aid emergency examination and treatment is necessary, before an applicant who applies in person for medical treatment is accepted for further care, either as an out-patient or as an inpatient, it is necessary: First, that he furnish at the application desk certain general information concerning himself, such as his

Airplane view of the present L. A. County General Hospital with steel skeleton of the New Hospital building.

name, address, occupation, etc.; second, that his medical needs be determined by a consideration of the report and recommendation of the physician under whose care applicant has been, whenever such report is obtainable, and by a preliminary medical examination; and, third, except in an emergency, that the financial investigator in the Social Service Department be satisfied that the applicant is an indigent.

In passing upon the applications of those who would like to receive free or nearly free treatment at the hospital, it is the rule to accept as patients only those who cannot be suitably provided for elsewhere, realizing that the cost of giving adequate physicians' and hospital service to either an inpatient or an out-patient is considerable and that the taxpayers should not be asked to bear this cost if the needs of the patient in question can be reasonably provided for in some other way.

Accordingly, it has been found possible throughout the year to send elsewhere, after careful individual consideration, 33 per cent of all the applicants. Also, it is the rule to give out-patient care to applicants who need only treatments readily given while they live at home, since such out-patient care is less expensive than inpatient care and saves the beds in the hospital for those who cannot possibly get along by taking treatments at the hospital while living at home—that is, by receiving out-patient care.

No effort has been spared to make the care given, whether to an inpatient or to an out-patient, include everything necessary for the conservation of the health, limb or life of the patient.

The treatment is prescribed by and under the direction and supervision of the Attending Staff who give without charge many thousands of dollars worth of service each month to the county and to the indigent patients in this hospital, with the understanding that patients who could themselves pay their own physicians even small fees will not be admitted here.

The Board of Supervisors has on several occasions formally acknowledged their appreciation of this great service to the County rendered by these physicians whose names follow:

Unit No. 1 Staff of Volunteer Physicians and Surgeons Who Give Their Services Without Charge

Medical Board

Fitch C. E. Mattison, M.D.,
Chairman

J. H. Seymour, M.D.,
First Vice Chairman and Chief of the Surgical Service

John V. Barrow, M.D.,
Second Vice Chairman and Chief of the Medical Service

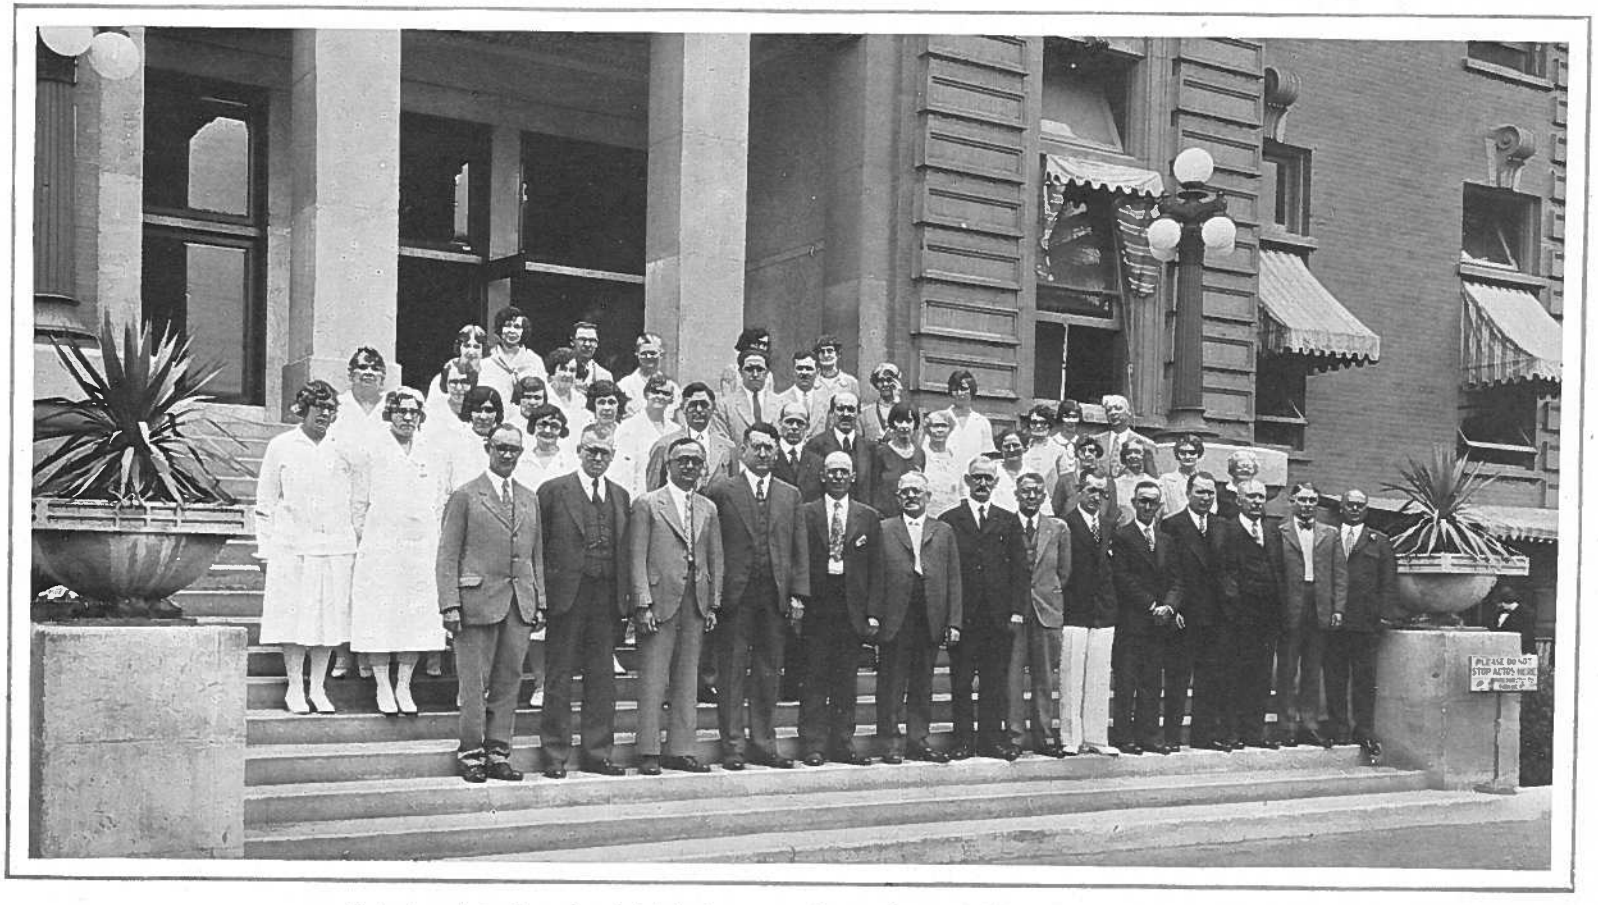

George H. Kress, M.D.,
Dean of the Los Angeles Medical Department of the University of Calif.

Percy T. Magan, M.D.,
Dean of the College of Medical Evangelists

Neal N. Wood, M.D.,
Superintendent of Hospital and Secretary of the Board

Martin G. Carter, M.D.,
Resident Psychiatrist and Assistant Superintendent of Hospital

Phoebus Berman, M.D.,
Instructor of Internes and Assistant Superintendent of Hospital

Department heads and administrative supervisors of over 1400 *hospital employees.*

Statistics for the Fiscal Year Ending June 30, 1928

		This Year	Last Year
1.	Number of Patients Admitted	26,243	23,139
2.	Number Hospital Days	467,460	439,243
3.	Daily Average Number of Patients in Hospital	1,277	1,203
4.	Number Beds, Unit No. 1 and Unit No. 2, (including 68 bassinets)	1,473	1,283

At the beginning of the year the rated bed capacity of the hospital was 1283 (including 40 bassinets); the actual number of beds normally available, however, during improvements and rebuilding operations had been reduced to 1217 (including 40 bassinets).

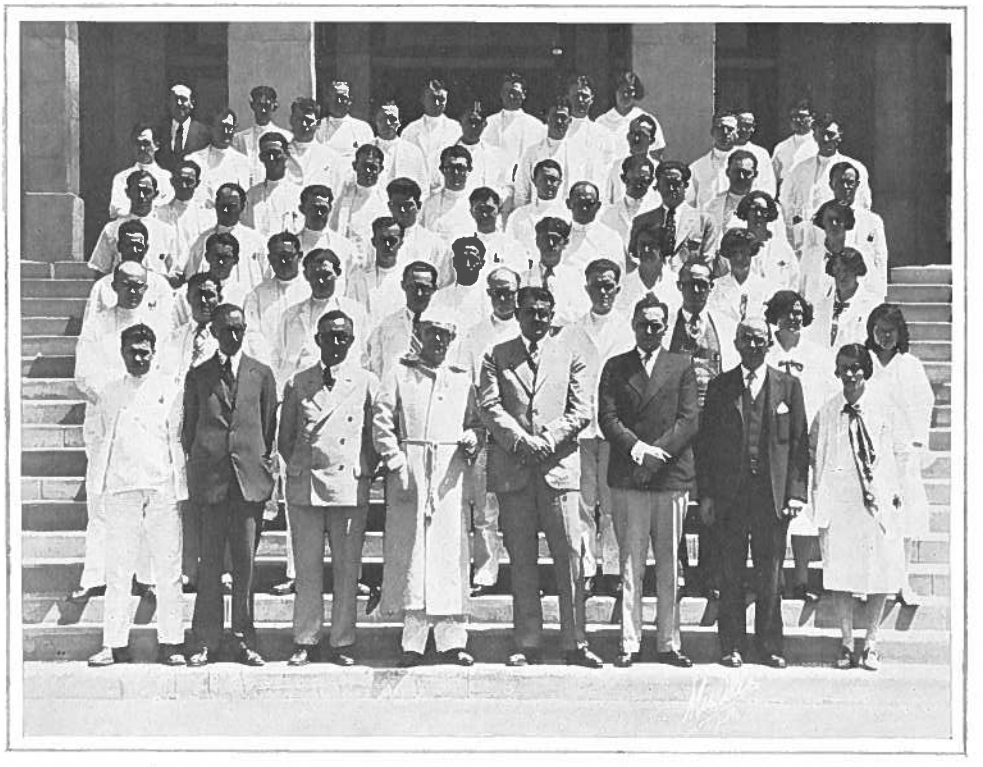

During the year, the bed capacity of Unit No. 1 was increased to 1277 (including 40 bassinets) by the addition of a new roof floor on the surgical building.

Beds began to be available in Unit No. 2 on February 15, 1928. The bed capacity of Unit No. 2 is 164 beds (including 28 bassinets) besides 32 beds on the rear porches, which can be used in ordinary weather if the patients at the time are suitable for open air treatment. This makes a total of 196 beds, including 28 bassinets.

5.	Percentage of Total Number of beds occupied throughout the year; estimated	96	99
6.	Average number of days residence per patient in hospital	17.46	19.57
7.	Number born in Hospital	1,607	1,277
8.	Number Patients died during year	2,777	2,546

9. Number Autopsies by permission of next of kin:

This Year	Last Year
823 (29%)	813 (32%)

Group of the house staff of Unit No. 1, including one attending surgeon and four instructors of internes.

10.	Number Autopsies by Coroner...332 (12%) 289 (11%) Total Number Autopsies	1,155 (41%)	1,102 (43%)
11.	Average number employees, all departments, (Monthly average including sick and vacation relief)	1,487	1,353
12.	Average number employees, Nursing Department	789	727
13.	Cost per inpatient per day;	$4.548	$4.178
	deduction of amounts paid by patients toward the cost of their care and of other incidental revenues gives a net cost to the taxpayer of	$4.366	$3.991
	Similar cost figures per out-patient visit are	$1.266	$1.1349
14.	Percentages of patients according to Nationality:		
	United States	63.6 %	57. %
	Mexico	15.3	18.

Committed to Institutions 38.55% 40.6%
Complaints dismissed or other disposition made 26.63% 25.32%
Daily average population 81 69
Average time spent in the department. 6.88 days 6.85 days

16. The Out-patient Department now supervises all applications for admissions to the hospital, whether for inpatient or out-patient service. The total number of applicants so accepted and admitted during the year was 45,816, not excluding readmittances of the same individual and including besides the 26,243 inpatient admissions, 19,573 new out-patients who registered during this year, 61% of whom had been recently or since became inpatients. The total number of out-patient visits for the year was 167,167 divided among the various clinics as follows:

	This Year	Last Year
Internal Medicine	28,874	18,021
Eye	5,883	5,447
Ear, Nose & Throat	8,485	7,278
Malignant Tumors	1,975	1,758
Skin	3,138	1,864
Neuro Psychiatric	1,816	1,469
Psycho Endocrine	1,307	1,068
Rectal	3,097	2,681

Pasteur Treatment	157	1,001
Surgical Consultation	1,190	559
Oral Surgery	155	56
Employees Clinic	3,420	1,676
Minor Ailments Treated by Admitting Physicians	3,979	3,848
Applicants examined and accepted	19,573	17,176
Applicants examined and referred elsewhere for treatment.	9,463	8,404
Total	167,167	132,446
Number of out-patients examined and treated daily	600.24	475.44

Note: Out-patient clinics, except for emergencies including surgical dressings, are not open Saturday afternoons, Sundays and holidays. The total number of out-patient visits during the year divided by 278.5 which is the number of days exclusive of holidays when the out-patient clinics were held gives the average number of out-patients seen daily as stated above.

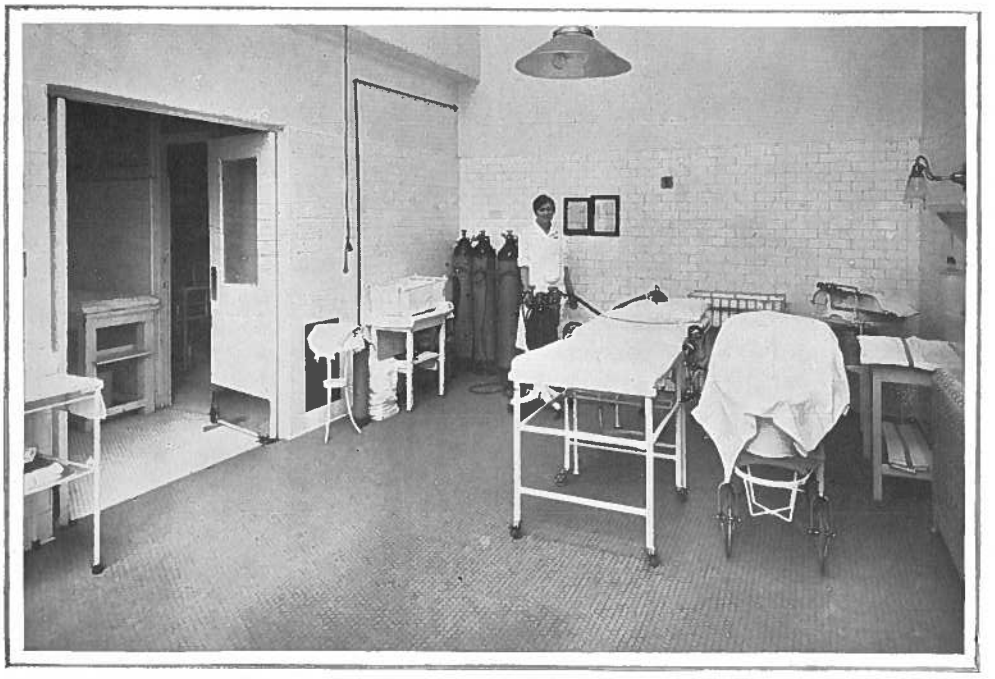

The hospital has daily on its waiting list for beds the names of approximately two hundred patients, all of whom have been carefully studied and recommended for admission by the Out-patient Department. **Notwithstand-**

Internes' Home, Unit No. 1.

ing our large waiting list the hospital has never delayed immediate admission of any patient when it appeared that to do so would endanger the patient's life, health or limb,—room having always been found for such emergencies. The patients whose names are kept on the waiting list are those whose admission is elective or for whom even the best hospital care offers little hope, such as patients approaching death and for whom no substantially greater chance of cure would be gained by admission. About 30% of those on the waiting list do not call again.

View from the corridor in the communicable diseases building looking through glass partitions into the rooms of two patients with contagious diseases, showing how relatives can see their loved ones and assure themselves that they are alive and comfortable without exposing themselves to their diseases.

Showing how many lives of those strangling to death with membranous croup can be saved by an operation known as intubation. The tube shown at the end of the instrument in the doctor's hand when inserted in the larynx between the vocal cords, makes it possible for the patient to breathe once more.

Unit No. 1

Until February 15, 1928, this unit comprised the entire hospital in service. It was known originally as the Los Angeles County Hospital, then on May 21, 1923 the name was changed to "The Los Angeles General Hospital, General Unit" and on September 12, 1927 the Board of Supervisors changed the name to the present form which is, "The Los Angeles County General Hospital, Unit No. 1". Unit No. 1 includes all the present hospital in use for patients except the single seven story building now designated as Unit No. 2.

The buildings of Unit No. 1 now house in addition to Unit No. 1 proper, the Superintendent's office for The Los Angeles County General Hospital including all its units, at present three in number; and also the headquarters of certain departmental services directly under the Superintendent of the entire hospital and working as he may assign in and for all the units as needed. These departmental services include the Nursing Service, including the School of Nursing; the service of business administration under which are accounts, pay, the procurement of food and other supplies through the Purchasing and Stores Department of the County, the preparation and distribution of food, property, pharmacy, the ambulances, buildings and grounds, etc.; the medical record and audit department presided over by the Senior Registrar and in charge of all medical records and statistics; the dental department; the Social Service department supplied from without the hospital organization to do its social service work by another department of the County Government, i. e., by the Department of Charities; the library department which supplies general library service to patients and cares for the medical library of the hospital,—all this library service being provided by a branch in the hospital of the county department known as The County Free Library.

When the new hospital building now designated as Unit No. 3, is completed and ready for occupancy, it is planned to move into it the Superin-

tendent's office for the whole hospital and all these departmental headquarters, and it is expected that the facilities planned for them in the new building will enable them to work both more economicaly and more efficiently than do their present cramped, overcrowded and improvised quarters.

Unit No. 2

This is a building by itself constituting a complete general hospital. It is the enlarged rebuilt old contagious building used for the treatment of contagious diseases prior to the opening of the new Communicable Diseases Building on January 9, 1924. Unit No. 2 was originally known as the Osteopathic Unit and both its Attending and House Staff are composed of Osteopathic physicians and surgeons. It includes an x-ray department, a central laboratory and refrigerated morgue with autopsy room adjoining, smaller floor laboratories, a psychopathic department including hydrotherapy, a communicable diseases department, an eye, ear, nose and throat department, an out-patient department, roof wards and porches for fresh air and sunshine treatment and wards of various sizes for all types of patients. On the operating room floor are three completely equipped modern operating rooms besides two birth rooms each equipped as an operating room, and a plaster room in the x-ray department directly across the main corridor from the operating rooms, which is used also as a cystoscopic room.

The main laboratory is on the same floor with the operating rooms. On the floor above are the offices of the Unit, the entrances to the operating rooms and birth rooms for visiting physicians, students and nurses, and the supply room where the surgical linen and dressings are packed into drums prior to sterilization. This floor above the operating room floor affords space for the physiotherapy department and for the out-patient and admitting service of the Unit, as well as for some of the living rooms including the recreation room assigned to the use of the internes and resident physicians of the Unit who have their dining room on the floor just below the main laboratory.

As stated above, the normal capacity of the Unit is 164 beds including 28 bassinets, in addition to 32 beds on the rear porches.

The Unit was opened very gradually, beginning February 15, 1928, as beds became available. Its daily average number of patients for the remainder of the year was 89.09. There were 95 births in the unit and 65 deaths with 17 autopsies by consent and 2 autopsies in coroner's cases. The number of hospital days was 12,028 and there were 5,769 out-patient visits.

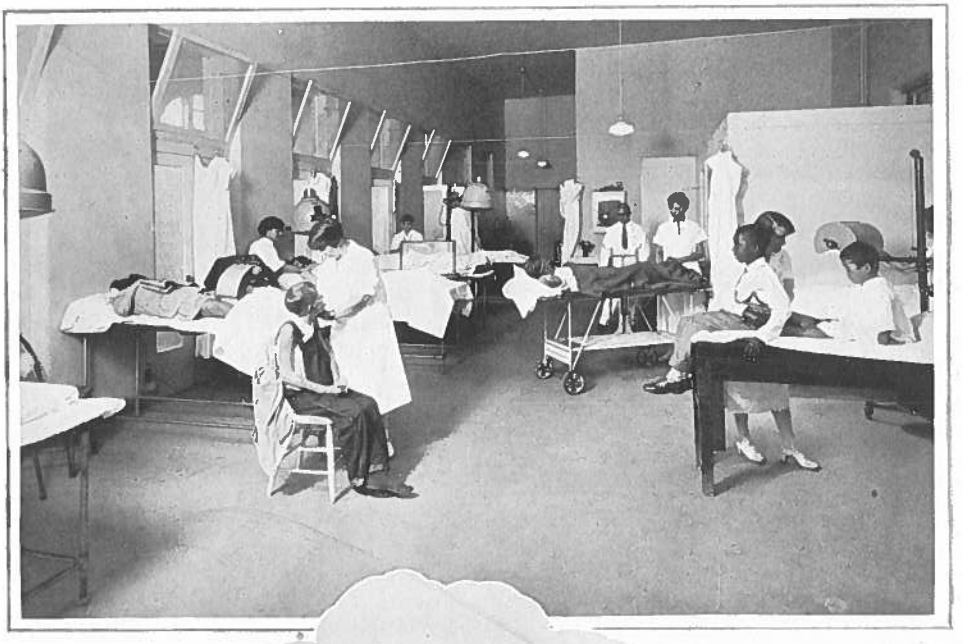

During the partial year there were 2,970 x-ray examinations and treatments to 885 patients, 4,744 laboratory examinations and 230 operations performed.

The administrative supervision of Unit No. 2 is under George W. Woodbury, D.O., as Superintendent of the unit. He is a full time salaried employee of the county with the official title, according to the current County Salary Ordinance No. 1556, N. S., of "Assistant Superintendent of Hospital in charge of Unit No. 2." He has the aid of the Attending Staff and Medical Board of the unit as follows:

Unit No. 2 Staff of Volunteer Physicians and Surgeons Who Give Their Services Without Charge

Medical Board

Dain L. Tasker, D. O., Chairman
Harry W. Forbes, D. O.

Junior ..... Royal Herbert Crist, D. O.
Junior ..... Edward S. Merrill, D. O.
Junior ..... Clarence K. Wells, D. O.

Unit No. 3

Such is to be the official name of the new hospital building when completed. Its planned capacity is 1767 beds and 144 bassinets for the new born. However, in a hospital of this size it was possible to use space on roofs and inclosed porches to develop additional beds as a by-product to a total number of 2444 beds which were deemed good enough to be counted the normal capacity of the building in calculating its cost per bed. There is still greater and additional bed capacity in fair weather, in an emergency or major disaster up to a total of from 3300 to 3600 beds if they should be crowded in as closely as the beds are crowded in many of our present wards.

The contracts now let for this building call for its completion on December 31, 1932. However, it is provided that by December 31, 1930, before the entire building is completed, the T shaped front end of the building will be completed and ready for occupancy. The plan is to admit patients and visitors to this end, to feed them and to give them general service from Unit No. 1 pending the completion two years later of the entire building.

When completed, the building will have 30 acres of floor space in addition to 5 acres of space on its flat roofs.

The basement or first ground floor, will have opening into it a tunnel which is continued as a bridge to Unit No. 1, thus making a connection between the new hospital and the present old hospital, which will permit the movement of supplies, visitors, patients and employees between them. The tunnel has been planned so as to permit the use of electric tram cars. There are also in the basement, store rooms, refrigeration plant, rooms for storage and mending, pressing and sterilization of patients' clothes, switch board room, shops, electrical supply room, transformer vault, etc.

On the second ground floor will be the General Administrative Offices, the Admitting and Out-patient Department, the Discharging Department, the Physiotherapy Department, the School of Nursing and the dining rooms and the kitchens of the Food Department.

On the third ground floor are the Filing Department, the pharmacy, the laboratory and morgue, the library, and the infirmary ward or wing, for slightly sick employees, and the Children's Department.

The latter includes the examination and treatment rooms for out-patients and also 75 beds for inpatients, all intended for children with medical diseases; i.e., for those with pediatric conditions, but not including those with fractures, or diseases of the eye, ear, nose and throat. The 75 beds are arranged in 18 small wards accommodating from one to 6 beds in addition to two inclosed porches and two open roofs and there is also access from this department to the terraces on the ground level at the south-west corner of the building.

The next floor above is known as the first floor and is devoted entirely to the care of inpatients and out-patients suffering from orthopedic conditions including fractures, and to the main plant of the x-ray department, which is located in the center of the floor, making it possible to secure x-ray service for fracture patients without moving them up and down in the elevators.

The next floor, or second floor, is planned to care for out-patients and inpatients assigned to the departments of diseases of the ear, nose and throat,

The lunacy division of the superior court sitting in the psychopathic building. The judge sits at the center of the table and has the assistance of the expert physicians in mental diseases in determining the needs of the alleged insane patients who have the opportunity of sitting across the table from these men and talking with them informally. Other employees and attaches of the court and hospital are grouped about the room.

of oral and dental surgery, of rectal surgery, and of genito-urinary surgery. The dental operating rooms, cystoscopic rooms, protoscopic rooms and electrocardiographic rooms are all on this floor. There is also in the center of the floor a vertical extension upward of the x-ray department from the floor below making it available to the patients on this floor without requiring the use of elevators.

The third floor provides for the departments of internal medicine, of diseases of the eye, one expansion ward for genito-urinary and rectal patients and another expansion ward for ear, nose and throat, oral and dental surgery patients. These expansion wards are intended to provide additional space for such patients in case the wards on the floor below should prove inadequate for either of these types of patients.

The next two floors, the 4th and 5th, are designed entirely for patients of the department of internal medicine, both inpatients and out-patients.

The sixth floor is given over entirely to the maternity service. It has bed facilities for 132 mothers in small wards of 1, 2, 3, or 6 beds, in addition to a maternity birth room, and operating room wing providing for 4 birth rooms, each to be fully equipped as an operating room, and 6 labor rooms in addition to the necessary preparation and service rooms.

The seventh floor is devoted entirely to patients with clean surgical conditions. It has 7 wings or nursing units, wards as they are sometimes called, each of which comprises approximately 7 small wards and 28 beds devoted to the care of inpatients. There are also 2 commodious examination and treatment suites for out-patients on this floor.

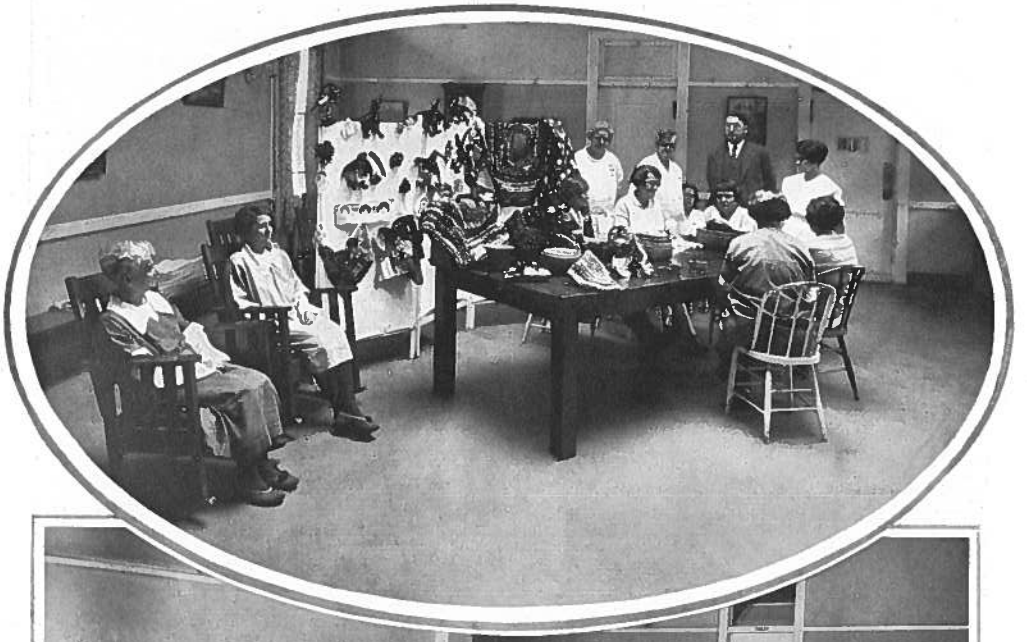

The eighth floor is devoted to infected surgery, such as gas gangrene and gas infections, empyema, burns, streptococcic infections, infected abortions,

etc. It has 6 nursing units, each of approximately 28 beds and 7 small wards, besides 2 examination and treatment suites for out-patients and a complete operating suite consisting of 2 operating rooms, scrub rooms, supply rooms, laboratory, etc., with a view to having all operations upon infected surgical patients done upon this floor in these operating rooms instead of having them taken off the floor and through and about the hospital into an otherwise clean surgery.

Note: besides 9 inclosed porches there are 2 open roofs on this floor,—capacity 20 beds each.

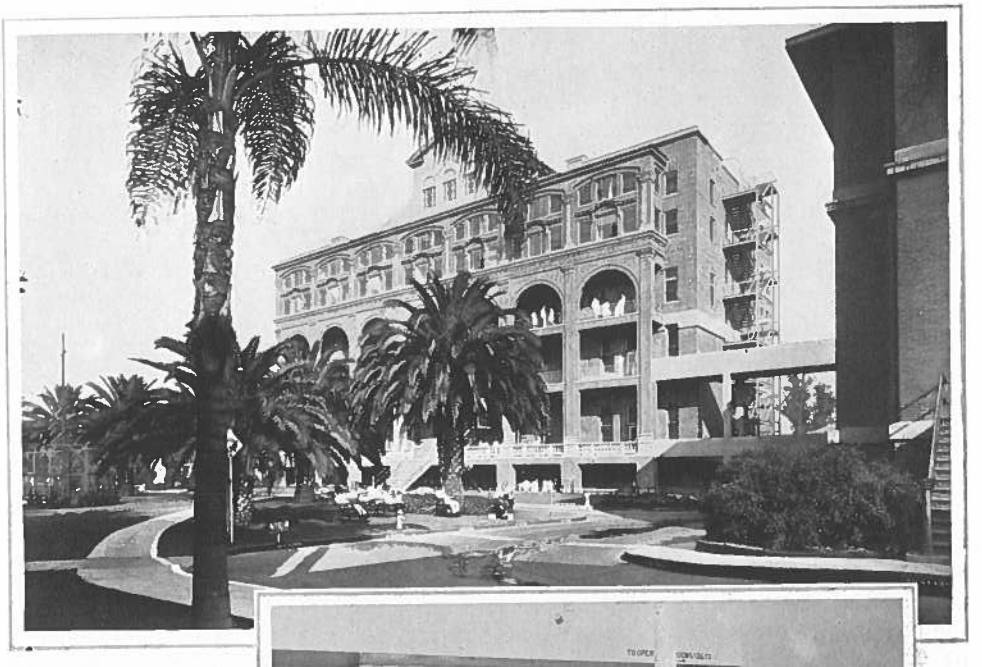

The ninth, tenth, eleventh and twelfth floors are planned for medical pa-

Occupational therapy room and work in the psychopathic building. Most of those shown are patients and the products of their labors, such as baskets, rag rugs, stuffed toy monkeys, etc., are displayed—affords a welcome diversion from their troubles.

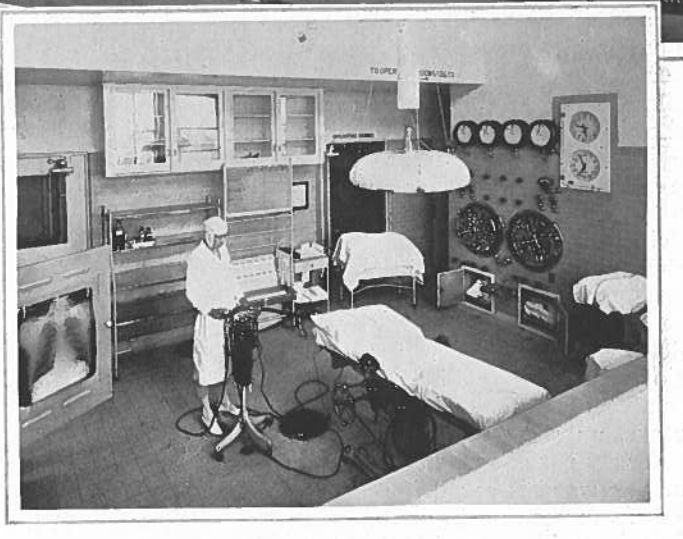

A sitting room in the women's ward in the psychopathic building. Most of those in the picture are patients.

Unit No. 2. Exterior of the building.

Unit No. 2. One of the large, completely equipped modern operating rooms.

tients. There are also on the 9th floor 4 occupational therapy rooms, on the 10th floor 4 open roofs, one roof on the 11th floor and one roof on the 12th floor.

The next floor is the main surgery floor of the hospital which is intended for clean surgery exclusively. On the west half of this floor are 6 operating rooms arranged in pairs, and one operating amphitheatre, in addition to the necessary supply rooms, locker rooms, anesthetic rooms, preparation rooms, laboratory, etc.

The other half of this floor is now planned to be finished as a recovery ward where patients will pass the night preceding operation as well as the first few hours after operation during which they are recovering from their anesthetics. In the possible event that at some future time additional operating rooms might be required, the number of them on this floor could be doubled by dispensing with this recovery ward and using a ward elsewhere for this purpose.

The floor above the operating room floor provides for a second recovery ward, for a supply and work room where sugical dressings will be packed preparatory to their sterilization, for entrances to the operating rooms for visiting physicians, medical students and nurses and for a museum and lecture rooms necessary for their instruction.

The next floor is an emergency isolation floor in two nursing units with wards of 2 beds, 3 beds, 5 beds and 6 beds, having a total normal capacity of 59 beds. This floor has a completely equipped kitchen so that the entire floor could be isolated if necessary.

Above the emergency isolation floor are the pipe gallery floor, and 2 roofs, one above the other, having a total capacity of 218 beds.

The estimated cost of the building according to the architects is $9,534,957 in addition to the cost of the porches and all work outside of the wards of the building proper, making a cubic foot cost of $0.577 per cubic foot.

Communicable Diseases Building Unit No. 1
Capacity 136 Beds

This building is a part of Unit No. 1 where patients with contagious diseases or suspected of having some contagious disease are cared for. Most of these patients are very and often dangerously sick and need a great deal of care and attention from both doctors and nurses. It is also necessary to keep the patients with one contagious disease entirely isolated from those with some other contagious disease that they may not contract other serious diseases while in the hospital. For this reason, this part of the hospital is organized and operated on a different plan from the rest of the unit.

Modern authorities believe that a contagious disease is transmitted from one individual to another only by actual contact directly with the patient who has the disease or indirectly with the clothing, handkerchiefs, bedding, toilet articles, dishes, etc., of such a patient which have been contaminated or infected with the germs of the disease by the patient.

The prevention of the spread of communicable diseases in the hospital is accomplished chiefly by the complete isolation of each patient. This is possible in this building even when patients suffering with several different contagious diseases are being treated in the same room or ward, by using a special technique known as medical asepsis which is rigidly followed by doctors, nurses and attendants.

Every patient from the time of his admission to the time of his discharge from the ward is cared for under a very rigid routine which keeps him absolutely from coming in contact with any other patient unless they are known definitely to be sick with the same disease.

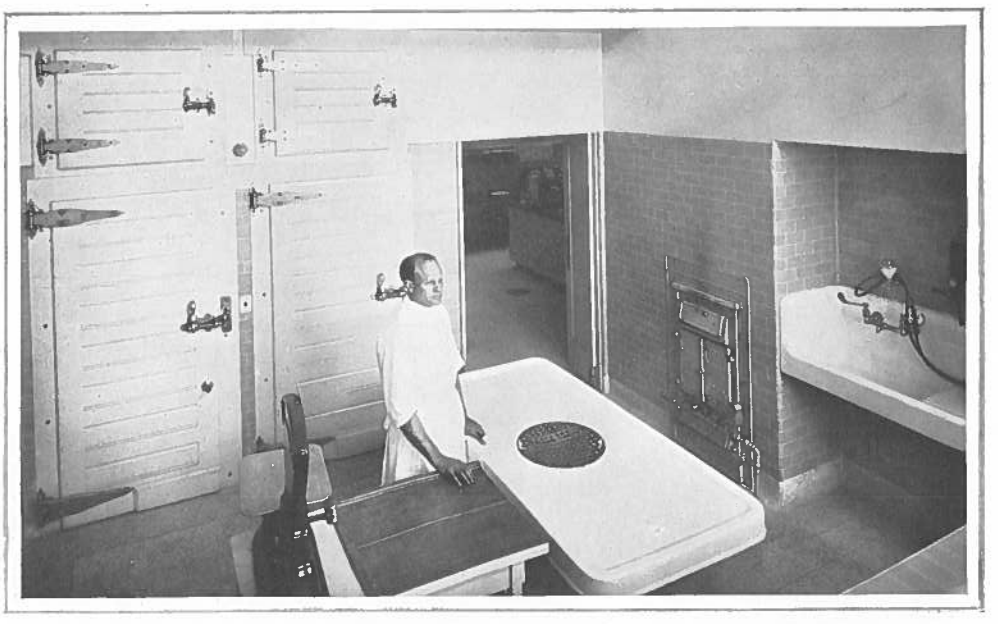

2286 patients were treated in the Communicable Diseases Building during the year. Of these, 719 were adults, 1,567 were children. There were 326 deaths, giving a mortality of 13%. This is a low mortality for this class of patients.

Among the diseases treated in this building were the following:

Diphtheria	473	Pertussis	69
Scarlet fever	236	Tetanus	14
Epidemic Meningitis	56	Mumps	26
Poliomyelitis	97	Smallpox	2
Typhoid Fever	61	Trachoma	18
Measles	28	Gas Bacillus Infection	24

During the last year 185 operations were performed in this building. Most of these were done on patients who developed some acute surgical complication while suffering with a communicable disease.

In order to appreciate the dangerous complications which frequently oc-

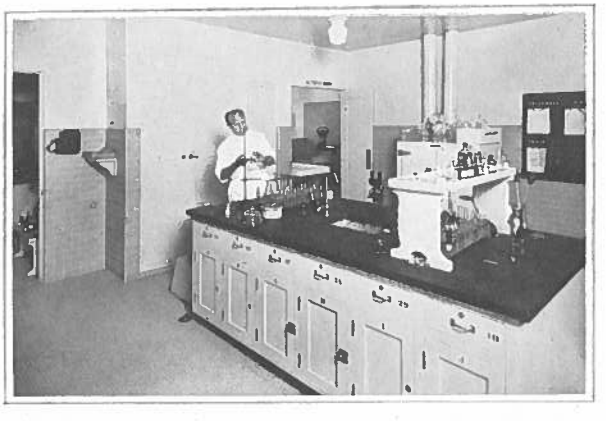

Unit No. 2. The autopsy room looking toward the outer room of the laboratory, showing the door to the refrigerated morgue. The autopsy room is really an operating room in which post mortem examinations are made in the interest of both the deceased and the relatives. Such examinations are made only when special permission has been given by the relatives of the deceased and unless these examinations are made in at least 15 per cent of the deaths in the hospital, the hospital is not regarded as efficient enough to be selected to give young physicians their final training as internes.

cur in patients ill with such diseases it is interesting to mention a few of the operations included in the list:

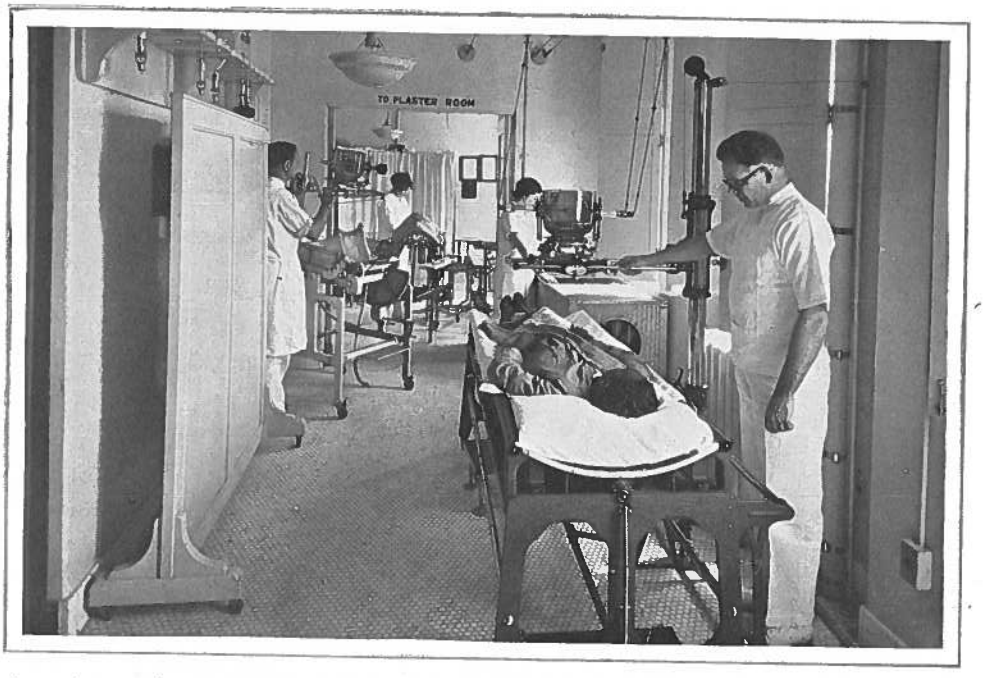

Tracheotomies	12	Exploratory Laparotomy	1
Intubation for Laryngeal Diphtheria (Membraneous Croup)	34	Brain Abcess	2
Appendectomies	2	Mastoid operations	21

There were 9 deaths after intubation for laryngeal diphtheria among the 34 patients, or less than 27%, which is a very low mortality percentage, considering the class of patients and their desperate condition when we first saw them.

Unit No. 2. Outer room of the main laboratory showing entrance to the autopsy room and a second laboratory room.

Our general mortality in diphtheria was 12%, but in analyzing this figure we find that out of 58 patients who died, 37 were considered as greatly neglected before admission. In other words, 37 patients who died were in such a condition when admitted that there was very little hope of saving them. If we omit these 37 patients when calculating the mortality percent-

Unit No. 2. A view of two rooms of the X-Ray department, looking into the plaster room which also serves as a cystoscopic room.

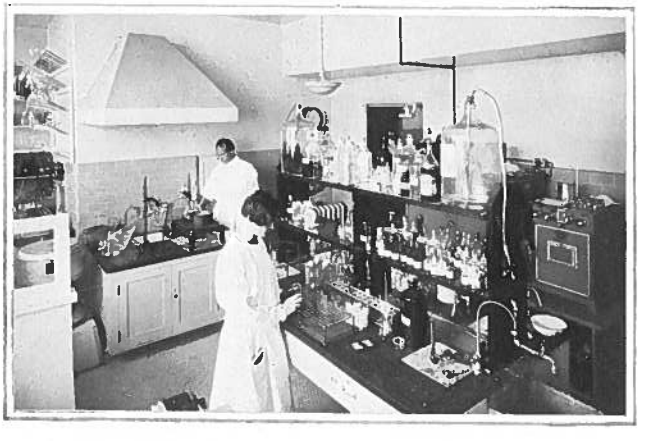

age, we will have a mortality percentage of only 3%. This very low mortality is due in a great measure to the large amount of diphtheria antitoxin used during the year. We have used 14,845,000 units.

The following is a list of other serums used in the hospital which have saved a great many lives during the year:

Anti-meninggococcus serum ..... 10,890 c.c.
Anti-streptococcus (Erysipelas serum) ..... 2,170 c.c.
Tetanus anti-toxin ..... 2,242,500 units

Convalescent serum for poliomyelitis was used extensively. This was obtained mostly from blood of patients who had recovered from the disease and were willing to donate their blood while they were still in the hospital.

Notwithstanding the fact that we had such a large variety of acute communicable diseases at the same time in the building, we had only 5 so-called cross infections, where a patient with one disease has contracted some other disease while on the ward. This is a very small number if we take in consideration the contagiousness of

Unit No. 2. The other work room of the main laboratory.

the conditions treated here.

It is also interesting to note that 364 patients suffering with some non-communicable diseases were sent in from the outside as suspected of having a contagious disease and were found later after admission to this ward to suffer from some non-communicable disease. Our average number of days per patient in the hospital in this department during the last year was 14½ and the average number of nursing hours per patient per day was 4.33.

Research Work

While medical science has grown tremendously, and while the average expectancy of life has lengthened from 43 years in 1848 to 58 years today, death is still the inevitable end for all mankind,—at least in this world. The result is that the county hospital always has among its patients many who realize this fact and both they and their doctors know that they are doomed unless some exceptionally efficacious plan of treatment can be individually designed and fitted to the needs of the particular patient, and under such circumstances the patient of average intelligence usually cooperates most wholeheartedly with the doctor who will take the time and trouble to interest himself particularly in such a patient after most physicians have pronounced him incurable. Such a patient and doctor then sometimes agree together to try something new in the way of treatment which the doctor recommends as hopeful. Often, the patient is more than willing to try anything which the doctor can suggest.

It is a great mistake to refer in a belittling manner and with a sneer to such sincere efforts to help a patient as "experimenting upon him." A physician would expose himself to merited condemnation if he did not try intelligently in the light of all that is known about disease to cure or at least to relieve the patient who is in distress, by palliative treatment.

Then, in due course of time, as the doctor racks his brain to find a solution of the problem, as he consults with other doctors about it, and as in their efforts to assist the patient they probe more deeply into the hidden mysteries of his body and of the diseases which have stricken him, they learn much that will enable them some day to help other patients and thus it is that in a great county hospital like this the greatest physicians can always be found who will give their services without charge as they do here to patients who are down and out and who can't afford to employ private physicians in private hospitals.

But, it is necessary in order to attract such physicians, that this research shall be encouraged and facilities provided for it in the hospital, and moreover that the atmosphere of the place shall be congenial, attractive and inspiring to them in their zeal to learn how to relieve those who otherwise would be left hopeless to suffer until death.

If all these requirements can be provided, the greatest physicians in the community will eagerly seek the opportunities at the hospital, and all the sick in the community will profit by their labors to assist patients in distress in the County Hospital.

All of this means that even in a county hospital with its great need for avoiding unnecessary expenditures, there is a legitimate field for research, and if there be no research it reflects seriously upon the institution and raises the question whether it is really fulfilling its obligation to its patients and to the community.

In such research work, the physicians on the staff of this hospital have contributed the following among other studies which might be mentioned.

A new treatment for the disease known as eclampsia in pregnant women. This is the present well known method of treatment by the intravenous in-

jection of magnesium sulphate. Many lives of young mothers were saved since this treatment was instituted. The mortality was cut down from 36% before this treatment was used to less than 10%. This treatment is at present recognized as one of the most important in many of the leading hospitals in this country and also in Europe.

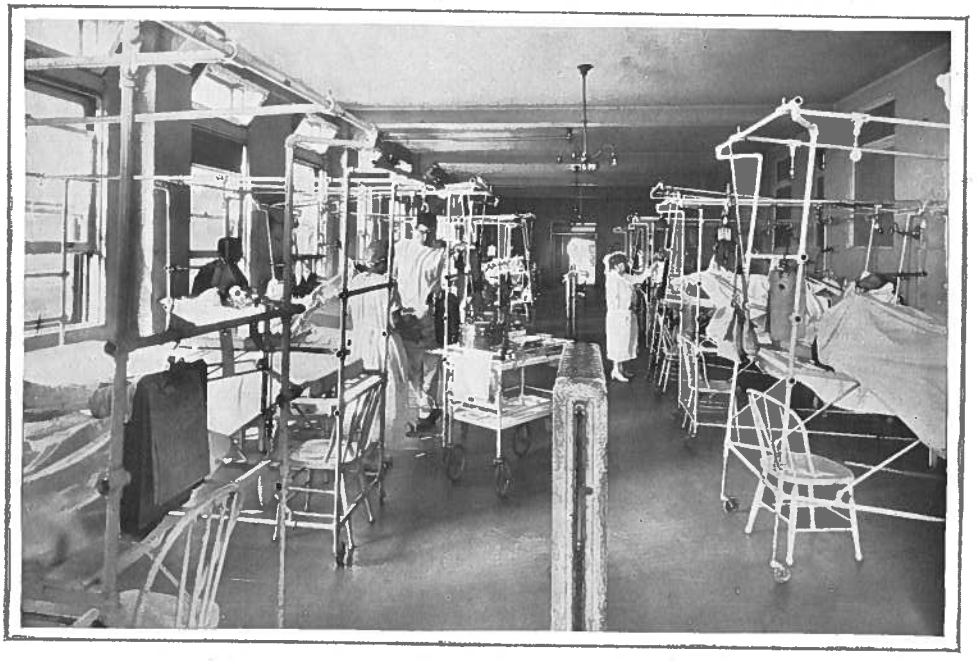

A method of diagnosis and treatment of the usually fatal disease, coccidiosis or San Joaquin Valley disease, as it is sometimes called, was tried out with apparently good results in this hospital. This has helped many unfortunate patients afflicted with this ailment.

An intensive study has been made of the disease caused by the bite of the black spider commonly known as the Black Widow. This disease, the cause and true nature of which are often unrecognized, has caused a great deal of suffering to people especially in this part of the country, and there has been devised a method of treatment which has saved a number of patients from severe and unnecessary suffering.

A method was developed whereby rapid oscillations of the eye-ball (nystagamus), a condition often found as a symptom of brain disease could be accurately recorded by the aid of the electrocardiagraph. This has never been accomplished before by scientific workers in this field. This new method is of great help in the diagnosis of certain diseases of the brain, especially tumors of the cerebellum. On several occasions such tumors were definitely located by the use of this method and operations subsequently have corroborated the accuracy of the findings.

The research work done by our physicians has been recognized by the California State Medical Association which twice during the last three years has awarded its annual research prize of $150.00 to members of our staff for work done in this hospital.

The success of our physicians in developing a method for treating stricture of the rectum and for relieving many patients with advanced and what is generally regarded as hopeless cancer of the rectum, with carbon dioxide snow treatments without operation, has gained national recognition.

One of the crowded fracture wards showing the fracture beds with built-in Balkan frames, etc.

The Staff in the department of brain and neurological surgery, Unit No. 1, has contributed important articles on the diagnosis of brain diseases, brain injuries and other afflictions of the nervous system.

The Chief of the Medical Service in Unit No. 1, has for a number of years been a leader in the study of the diagnosis and treatment of diseases produced by intestinal parasites, and much attention has been given this subject, a number of scientific articles having been published by several of our Staff during the last few years.

These studies in connection with similar ones by some of our surgeons have helped greatly in relieving those who, in common language, are disabled with chronic deforming rheumatism, involving many joints, which no treatment seems to entirely relieve.

The subject of the proper diagnosis and treatment of acute abdominal emergencies has been given a great deal of attention and numerous papers have been written explaining the advanced methods developed and used to save the lives of such patients.

The regular Staff meetings are held, at which many of the papers referred to above have been read and discussed, and thus the entire Staff is informed concerning the improved methods as developed by our physicians.

Cancer

To this hospital falls the difficult duty of caring for many patients with cancer, the larger proportion of whom are in the far advanced stages approaching death, when, after having tried many treatments without avail and exhausted their means, most physicians have concluded that their cases were hopeless, and that nothing could be done except to await death.

Too often the condition of such patients is looked upon as utterly hopeless, but some of these are not dying as much from the cancer as from the inflammation, pain and especially the absorption of pus germs into the general circulation which may accompany an ulcerating form of cancer. If these three things could be corrected, even though the cancer is not completely destroyed in doing so the patient would live much longer and in comfort. In other words, the victim of cancer does not always die, if he dies, from his cancer, but from intercurrent conditions that are amenable to correction by several methods.

There is almost nothing in medicine or surgery so easy to cure as early cancer, if the victim is given the best of what is possible by one of several methods known today. Advanced cancer as described above, is much more of a problem, but it is also by no means hopeless if in a location where it is accessible to treatment, for the reason that even the most desperate appearing cases sometimes do amazingly well in response to treatment that produces the total destruction of the cancerous growth. This is well shown by the results in 134 cases of advanced cancer of the uterus treated at the General Hospital by one of the methods employed there. Twenty per cent of these otherwise doomed patients are alive and well five or more years following their treatment.

Several of our volunteer attending physicians have met together each week as a Malignancy Board to examine patients with cancer and to decide what treatment offered the most hope to each of them, that is, whether radium and x-ray or radical surgery as with the cautery, or inoculation with malaria, or some other treatment seemed to offer a given patient the most hope.

The hospital and this community are very greatly indebted to this Malignancy Board for their noble efforts to do something for these patients, many of whom have been given up by doctors elsewhere.

Open air and sunshine treatment 24 hours of the day on one of the roofs. Most of the patients on this roof are children with tuberculosis of the bones and joints.

Heart Diseases

The electrocardiograph is one of the most interesting examples of delicate modern scientific apparatus which is extensively utilized by the medical profession in determining the diagnosis and prognosis of diseases of the heart. This hospital's electrocardiograph was installed in January, 1926. It has more than justified the expense of installation which totals about $4,000 to date. It has in many instances shortened the average number of days spent by patients in the hospital by enabling our physicians to make prompt and accurate diagnoses and has saved many lives by guiding our physicians in the treatment of some very difficult conditions.

This machine which measures and records on a photographic film the electrical current generated by each heart beat and in so doing gives an accurate picture of the heart action in health and disease, has been used by the hospital about 4,000 times since it was installed. Occasionally, a severe case of heart trouble has been discovered in patients in whom it was not suspected on the ordinary physical examination. Many patients were examined by the electrocardiograph just before a contemplated operation and quite often the operation was postponed when the record taken by the machine showed a severely damaged heart which would make the operation especially dangerous. Many times, the possibility of sudden death due to heart failure has been discovered weeks and months before it happened by using the electrocardiograph on patients known to have heart disease, and quite often it has been possible to warn such patients against overexertion which might cause their sudden death.

A number of patients last year were saved from a contemplated operation when the electrocardiograph revealed that the sickness present at the time which looked very much like a ruptured stomach or intestine necessitating an

immediate operation was actually the result of a sudden blocking of a blood vessel in the heart.

Many patients were repeatedly examined by the electrocardiograph during their stay in the hospital in order to follow-up the result of their treatment, especially to determine when a certain drug had fulfilled its purpose and should be discontinued. Thus, the Quinidine treatment has given marvelous results in many cases but is considered dangerous unless the progress of the patient may be checked carefully while undergoing this treatment with the electrocardiograph.

A very common cardiac disorder is the condition known as auricular fibrillation, of which 659 records are contained in the 4,000 electrocardiograph records now in our files. Accurate records are very important as a guide in the treatment of this disease.

The following is a partial list of records contained in our files, some of which are of diseases which can be diagnosed only by the electrocardiograph:

Auricular Fibrillation	659	Sino-Auricular Block	14
Auricular Flutter	34	Myocardial Damage	1,578
Auricular Premature Beats	150	Normal Electrocardiogram	631
Dextrocardia	10	Coupled Rhythm	36
Delayed AV Conduction	200	Tachycardia, Paroxysmal Auricular	6
Partial Heart Block	26	Tachycardia, Paroxysmal Ventricular	27
Intra-ventricular Block	56	Ventricular Premature Beats	471
Left Bundle Branch Block	5	Ventricular Preponderance (left)	1,189
Right Bundle Branch Block	40	Ventricular Preponderance (right)	360
Heart Block (complete)	30	Coronary Disease	229

Besides being of inestimable benefit to our patients, the electrocardiograph has greatly stimulated the interest of both house and attending staffs, and has contributed greatly in increasing the amount of definite relief which they can give to our many patients suffering from various forms of heart disease.

Medical Record and Audit Department

A large institution caring for many thousands of patients during the year must have a special system of medical bookkeeping. This department deals with a great many figures although they do not represent records of financial transactions. It deals with figures representing numbers of patients with certain diseases, number of operations, examinations, treatments and results. Every physician on the attending staff has a medical account which is carefully kept by this department. This is what we call the Medical Audit Department.

It is designed for the purpose of enabling the Superintendent and his assistants to know the facts about the results of the medical, surgical and other treatments given the patients. It makes it possible to find out at any time whether certain methods of treatment are successful, what results certain physicians are getting in their work; how many deaths follow a given operation; what the average number of days per patient is in each department; in short, it gives the medical information which is necessary to care intelligently for the large number of patients.

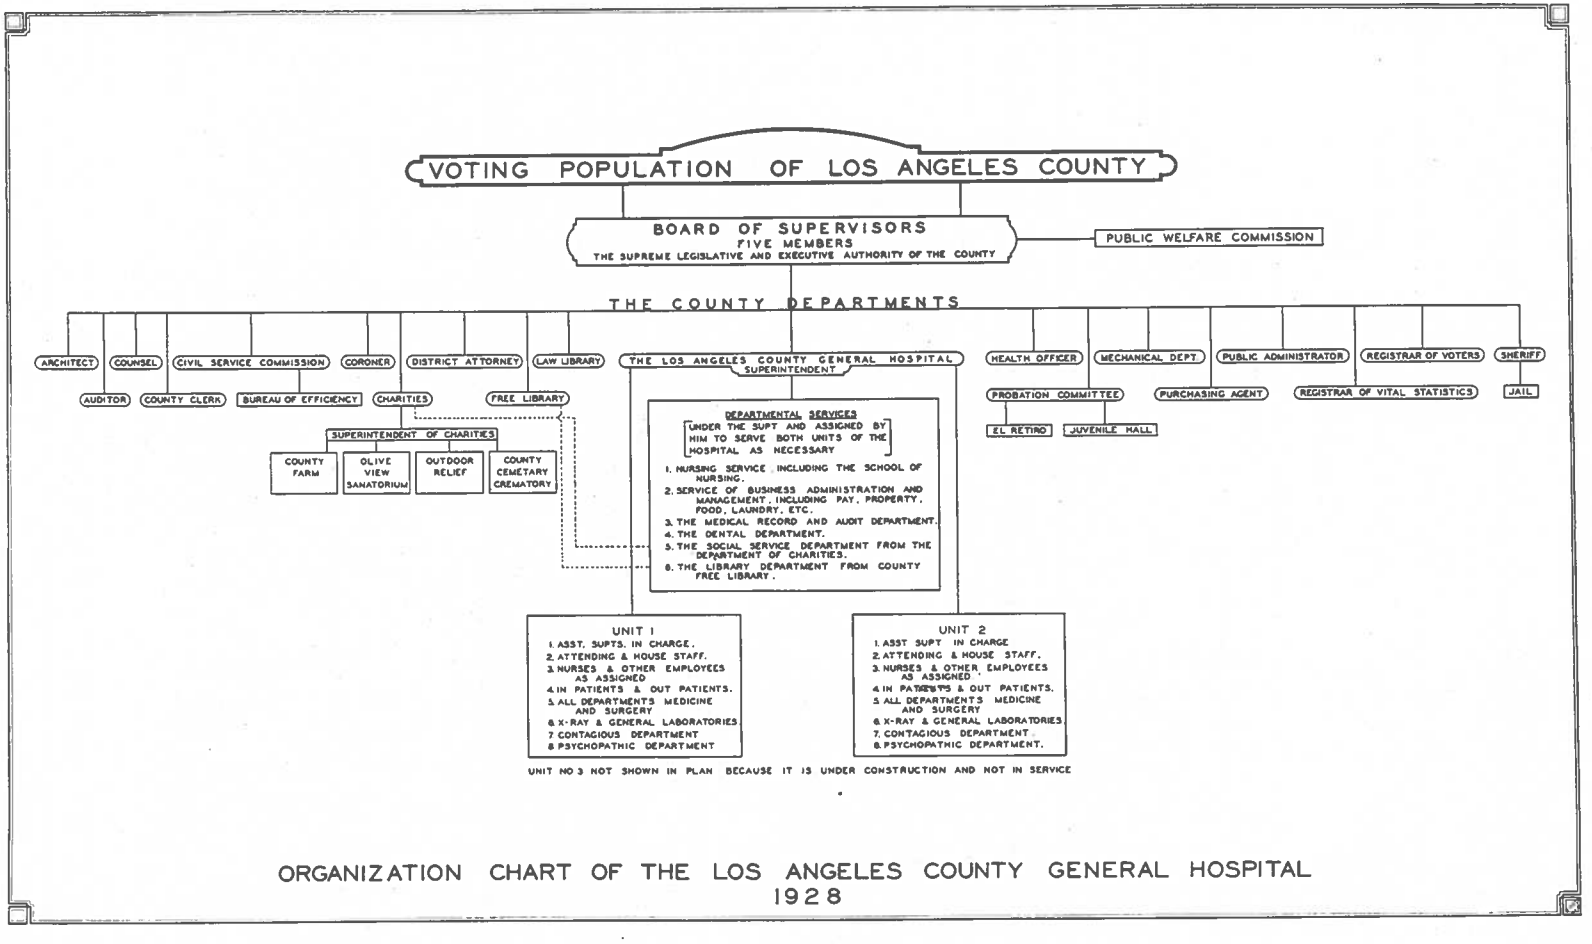

The Medical Audit department compiles a statistical report of every service in the hospital every month and also a comprehensive yearly report. These reports are analyzed and reviewed at length at the monthly staff meetings and have in the last few years contributed greatly to the elevation of the standard of medical work done in the institution.

Every attending physician is given a detailed statistical outline of the record of his own service, including number of patients treated, operations, postoperative infections, mistakes in diagnosis, and results.

We find that our general mortality percentage on our services has gradually decreased during the last few years. The following figures are supplied by the Medical Audit Department in the last yearly surgical report for Unit No. 1:

	1925-1926	1926-1927	1927-1928
Mortality percentage in patients operated upon	8.6%	7.7%	7.5%
Mortality percentage in patients where an operation was not required	8.9%	7.8%	7.3%
Total mortality percentage	8.7%	7.8%	7.4%

It is certain that this department by analyzing and classifying carefully the deaths occurring after operations, together with other accompanying circumstances, has assisted in lessening the mortality in many diseases.

ORGANIZATION CHART OF THE LOS ANGELES COUNTY GENERAL HOSPITAL
1928

PROBATION COMMITTEE

Under the provisions of Section 17b of the Juvenile Court Act, (No. 3966), the "Probation Committee, appointed by the Board of Supervisors, shall have the control and management of any detention home or branch detention home heretofore or hereafter established by the Board of Supervisors." Ordinance 559 (N.S.), of the County of Los Angeles, provides that the detention home shall include, Juvenile Hall, Juvenile Hall Hospital and the property known as El Retiro.

Juvenile Hall

The Probation Committee made careful study and analysis of the needs of juvenile detention for Los Angeles County and, at the request of the Board of Supervisors, outlined and presented a plan for the construction of a group of buildings consisting of four additional units, which will provide for this need. The Board of Supervisors accepted the Committee's recommendations on April 25, 1927, and plans were ordered drawn by the County Architect. Ground-breaking exercises were held March 31, 1928, to celebrate the beginning of actual construction of the first two units.

The hospital contains 110 beds and provides adequate facilities for complete medical diagnosis and treatment for both boys and girls. One entire section is devoted to the diagnostic clinic. This Clinic, under the direction of a Physician-Psychiatriast, will offer facilities for psychiatric, psychological, medical and social diagnosis.

A new feature of this detention program is that all children will be admitted to Juvenile Detention Home through the hospital, at once taking them out of the delinquent class and placing them in the position of children requiring careful study and analysis in order that the problems may be met from a scientific approach.

Under the law a child in detention must be provided with proper schooling. To meet this need a school building is being erected containing eight class rooms, a sloyd room for boys (devoted to work in mechanical arts), a domestic science room for girls, an auditorium with a seating capacity of 250 which is convertible into a gymnasium, and two council rooms. The curriculum is arranged and teachers are provided by the City Board of Education.

A boys' dormitory building containing four wards of twenty beds each, and ten single rooms is in the process of construction. A girls' dormitory consisting of sixty single rooms is near completion. A tunnel connecting the General Hospital and Juvenile Hall will provide water and adequate heating facilities for the group of buildings. A concrete fence to enclose the grounds is now under construction.

The total number of children from July 1, 1927, to June 30, 1928, who passed through Juvenile Hall was 4.343, of which 2,400 were boys and 1,943 were girls. This is an increase of 359 over the previous year. The average daily population was: Boys, 88.599; Girls, 92.505, making a total of 182.064. The average length of stay was as follows: Boys, 13.456 days; Girls 16.726 days. Cost per day per capita $1.88.

El Retiro

During the last fiscal year El Retiro has been re-organized and largely reconstructed. Due to unfortunate circumstances the school was closed for a period of about three months and was re-opened in December, 1927.

Eighteen small bungalows, each housing two girls, were moved to Olive View Sanatorium for the use of tubercular patients. As a substitution for this method of housing the cottage unit plan has been adopted. Two new Spanish type home units have been completed. These are built around a patio, with

single rooms, house mothers' quarters, dining room, kitchen and toilet facilities. A third home unit is about to be commenced.

Plans have been prepared for additional school quarters to provide suitable space for vacation work.

When the present building program is completed El Retiro will have a capacity of about 70 girls, 15 to 17 years of age. Before a girl enters El Retiro she is given a complete psychological and physical examination at Juvenile Hall. While under-nourished girls are accepted those needing any kind of sanatorium care are not taken. The school aims to admit only girls of such mentality as makes it seem possible for them to progress educationally.

The aim of the school is to give educational and vocational training adequate to prepare the girls for social adjustment in the community, so that when they leave the school they will be self-supporting and self-respecting individuals, becoming an asset to society rather than a drain upon it.

PROBATION DEPARTMENT

Juvenile Division

The Juvenile Division of the Probation Department is responsible for the care and supervision of all minors who come to the attention of the Juvenile Court. During the past year, there were 5,354 petitions filed, 4,183 on boys, and 1,171 on girls. Approximately one-fourth of the petitions on boys were for violations of traffic ordinances, while only 24 girls were filed on for like offenses. Petitions are filed under one or more of the thirteen subdivisions of the Juvenile Court Law, and at least one-third of these petitions stated that there was no parent or guardian exercising proper parental control or no parent or guardian capable of exercising such control.

During the year there were 23,127 cases on the Juvenile Court calendar. This is an increase of 4,967 cases over the preceding year. 30,305 calls of investigation were made on these cases.

The Financial Department is checking more closely on the economic status of cases where children are maintained by county funds. In many cases where children are placed in institutions or boarding homes, it is possible to have the parents contribute something toward the support of these children. This action is in accord with the state law.

The situation as it applies to the Divorce Courts remains unchanged from last year. One Probation Officer acts as Referee under the direction of the Judge. Two Officers make investigations to determine the fitness of the parents to have custody of their children. If the Judge orders the children placed in a neutral home, such a home is found for them and the Probation Officer keeps the children under supervision. In this manner many children are carried over a critical period and saved from coming into the Juvenile Court. This particular branch is becoming so heavy that it will very soon demand a larger staff.

Pacific Colony at Spadra is helping out to a great extent with feeble-minded cases, although this Institution is not developing as rapidly as is the need in Southern California. Sonoma State Home and Pacific Colony are unable to take children as rapidly as we wish, and it is still necessary to place low grade children in foster homes and private institutions in this County.

Also at the present time both the Whittier State School and the Preston School of Industry are overcrowded, and cannot handle the boys' problem as rapidly as required.

The Probation Department cooperates with the Child Guidance Clinic by providing one full-time officer for work on difficult cases submitted to the clinic for complete study. This study covers four fields, social, physical,

psychological and psychiatric, each one contributing its part toward making a complete picture of the child and his problem. The Probation Officer prepares a detailed social history including the child's heredity, his environment, development from birth, health, social life, activities, interests, personality traits and reactions to surroundings. After this history is completed, other examinations follow, and when completed a conference reports findings and outlines treatment.

We also have one full-time officer assigned to Dr. Covey, who is the Juvenile Court Psychiatrist.

We also have an officer assigned to the Juvenile Protective Association who covers a good many of the pre-court cases in the County.

Adult Division

The Adult Division of the Probation Department makes investigations and reports to the Judges of the Superior Courts whenever an offender asks for probation. On July 1, 1928, the division had an active file of 1837 cases of men and women being supervised during their probationary periods. This represents an increase of 679 over the previous year.

Due to the fact that this probationary period averages at least three years, the Department is confronted by the problem of desertion. Many of these men because of wanderlust, the desire to return home, indifference or persecution, leave the state or drop from sight and are never heard from again either through the identification bureaus or the Probation Office. It is this group of men that causes an amount of outside field work when the Department endeavors to locate them. Two investigators are constantly in the field making very thorough searches through friends, places of employment and places of residence so that this violation of probation can be kept at the minimum.

It is very evident that the probation system is very successful as practiced in Los Angeles County, in that the Court records reveal that seventy per cent of men placed on probation have their cases dismissed, making good on probation; leaving fifteen per cent who desert, and only ten per cent who are ever brought into Court again charged with having violated their probation and are sentenced to further incarceration as having failed on probation. It is evident that probation is granted only in cases where the opportunity for rehabilitation and adjustment is excellent.

Parole Division

For the past two years and a half the Probation Department has been in charge of paroles from the County Jail and Road Camps. During the past fiscal year a total of 677 paroles have been granted, or an average of 56 a month. There is a very rapid turn-over by reason of the short time they are to serve. The parole system has proven successful, as the records show that less than 6% of the persons to whom parole has been granted have failed.

The financial advantage to Los Angeles County is quite an item. By releasing these men, at least the sum of $1.00 per day, per man, is saved in food and incidental jail overhead expense, hence an average of 275 men monthly on parole instead of in jail is a saving to the County of $8,250.00 a month, or $99,000.00 a year.

The sum of $7,737.00 was collected and turned into the County Treasury as portions of fines, and assessed by the Parole Board as prerequisites to parole in liquor cases.

SUPERINTENDENT OF SCHOOLS

Los Angeles County is divided into 131 elementary school districts, 26 high school districts, and 3 Junior Colleges. The City of Los Angeles consists

of two districts, Los Angeles City School District, and Los Angeles City High School District, and the remainder of the County embraces 155 districts. Owing to the great St. Francis Dam disaster, two of the school districts of the County were entirely wiped out, namely, the Bee School District and the San Francisquito School District. The Bee School District, however, was reorganized during the summer of 1928, and is now operating.

The duties of the County Superintendent of Schools include superintending the educational and financial policies of the County Schools. These duties apply to all schools in Los Angeles County. The intensity of the supervision exercised by the County Superintendent of Schools decreases in proportion to the closeness of the supervision exercised by the governing boards of the school districts.

The supervisory work of the Superintendent during the year 1927-28 was exercised through four assistant superintendents, a county supervisor of attendance, and six visiting teachers, generally called rural supervisors. These six supervisors operated in elementary school districts which had less than 300 average daily attendance. For their work the County was divided into three groups. The Antelope Valley section was under the direction of Mr. W. J. Cagney, who operated from Lancaster; the mountain group was under Mr. Melvin Neel, who operated from Saugus. All of these schools were visited by a teacher of art, a teacher of physical education, a teacher of reading, and a teacher of music.

The County Supervisor of Attendance operated from the County Office by automobile, and the district supervisors of attendance cooperated with him. In the seven years that this division was operating under Mr. John R. Hunt, non-attendance has been greatly reduced, and truancy has been almost eradicated.

Assistant Superintendents Durfee, Lowe and Wheat devoted nearly all of their time to supervision while schools were in session. During May, Assistant Superintendent Wheat left for a European tour, and Superintendent W. O. Lowe attended to the annual reports and text book matters, and Superintendent Durfee to placement work and budget matters.

Assistant Superintendent H. S. Upjohn gave two school days to supervision, and the remainder of the week to the direction of the visual education division of the office until June 20, 1928, when Mr. Upjohn was temporarily appointed to the position of County Superintendent of Schools by the Board of Supervisors, to fill the vacancy occasioned by the death of Superintendent Mark Keppel.

Visual Education Division

The division of Visual Education, which circulates among the schools various types of pictures to illustrate the subject matter of the curriculum, provided service during the year 1927-28 in the following materials:

Wall pictures
Paper prints
Stereographs
Lantern Slides
Motion-picture films

The relative popularity of these types of pictures may be indicated by the following figures:

73 schools took lantern slide service
70 schools took wall picture service
41 schools took motion picture service
38 schools took paper print service
21 schools took stereograph service

In all, 161 schools availed themselves of the loan collections of the Division.

The Division now has a collection of 14,000 photographic negatives on all countries of the world, and supplementing every subject of the course of study except physics and chemistry. From this negative collection the materials for circulation are made in the photographic laboratory of the Division. The Division also prepares texts and study plans to accompany the picture, for all the materials, even wall pictures, are designed for study, and coordinated with class room work.

Certification Division

The Certification Division of the County Office in connection with the County Board of Education issued 5905 certificates to teach to 1428 men and 4477 women in 1927-28. This division keeps the certification records of approximately 32,000 teachers.

Retirement Salary Division

The Retirement Salary Division keeps the record of the Six Dollar payments made in June and December by the teachers of Los Angeles County, and prepares an alphabetical list twice a year of all the teachers of the County and makes reports to the State Board of Education. The collections for the period from July 1, to December 31, 1927, were $85,224.00, and the collections for the period from January 1st, 1928, to June 30th, 1928, were $86,910.00. 14,485 teachers made their payments.

Accounting Division

The Accounting Division cared for the receipts and disbursements of the 157 school districts. The total receipts for the fiscal year 1927-28 were $75,076,215.90, and the total disbursements were $60,915,071.35. More than 412,600 individual warrants were examined and approved by this division and a proper record was made of every transaction.

Purchasing Division

The Purchasing Law which was passed by the Legislature of 1927, authorized County Boards of Education to establish rules and regulations whereby elementary school districts governed by school trustees, shall purchase standard school supplies through the County Superintendent of Schools, and authorized the County Board of Education to adopt a standard list of school supplies. The County Superintendent of Schools shall act as Purchasing Agent for these standard supplies. The Los Angeles County Board of Education adopted its standard list on July 29, 1927. The first order under this law was purchased August 20, 1927. From August 20, 1927, to June 30, 1928, this office served 115 school districts, and purchased supplies amounting to $85,472.63.

The Annual Reports of 15,954 teachers were received, verified, tabulated and combined in an annual report to the State Superintendent of Public Instruction in July.

The budgets of 157 school districts were received, examined, corrected, approved, and filed with the County Auditor and the Board of Supervisors in August. A report in regard to its budget was made to each school district in September. The blanks for the enrollment of minors were sent out in September. The returns were tabulated in November.

The Teachers' Institute was held in December. Changes of school district boundaries received attention in October, November, January and February.

School election supplies were sent out in February, and the returns received and recorded in March and April.

School warrants were printed and supplied to the various school districts in June. Blanks for the annual report to the teachers were sent out in May and June. The Budget blanks were sent out in May.

County Board of Education

The County Board of Education of Los Angeles County is composed of five members, four or whom are paid $10.00 per meeting, and the fifth member is the County Superintendent of Schools, who acts as ex-officio Secretary of the Board, without remuneration.

During the year 1927-28, the Board of Education of Los Angeles County granted certificates on credentials to applicants complying with the Board's requirements, and prepared questions and conducted the semi-annual examinations for General Elementary Certificates, which took place in December and July, 1927-28.

The Board also recommended teachers to the California State Department of Education for the receiving of Life Diplomas.

The Course of Study, for use in the elementary schools of the County, was prescribed and ordered put into book form by the Board of Education. Throughout the year, the Board of Education met the different representatives of publishing houses, and rejected or approved the text books for use in the schools of Los Angeles County. Different types of maps, charts, drawing books and art supplies were also put on the approved list in the Course of Study, after being passed upon by the Board.

OTIS ART INSTITUTE

Otis Art Institute, the school of fine and applied arts which is maintained by the County of Los Angeles as a department of the Los Angeles Museum, was founded in 1918. The school obtained its name from General Harrison Gray Otis, the donor of the property on which it is situated. General Otis presented the property to the County of Los Angeles with the request that it be devoted to the fostering of art in the community, and after careful consideration the County Board of Supervisors decided to establish an art school upon the property. The two spacious residences were transformed into studios and additional buildings were erected to provide the facilities that the rapid growth of the school made necessary. The school when first established had just a few students; now it is the largest art school in Southern California and ranks as one of the best schools of art in the United States.

The men and women composing the faculty are all practicing artists and craftsmen who have been chosen to give instruction a certain number of days each week because of their fine abilities, both as art workers and instructors of art. The Art Spirit which permeates the school is due in a large measure to the fact that its instructors manifest this spirit in both their art and in their teaching.

Institute Almost Self Supporting

About 700 persons were enrolled in the different classes during the year 1927-28. The majority of these are from Southern California communities, but many were from far distant states and foreign lands. The tuition charges in the school are less than half usual art school tuitions, but notwithstanding this fact, they total about $30,000 a year—which amount almost covers the expense of maintaining the school.

The different classes of the school are grouped in the following departments: painting, illustration, commercial art, interior decoration, architecture, stage-craft, decorative design, costume design, metal work, wood carving and museum education. In addition to the day sessions, there are evening classes Monday, Wednesday and Friday evenings; a landscape sketch class for adults Saturday afternoon; and classes for children Saturday mornings.

Art study at Otis Art Institute develops technical skill and, at the same time, it contributes important personality values, making the student more

SANTA MONICA HEALTH CENTER

The Santa Monica Health Center Building, constructed during the fiscal year, is of a Spanish style of architecture, built around the traditional Patio, and containing 11,732 square feet of floor space. The cost of this building is approximately $77,000.00. The land on which the building stands was donated by popular subscription at a cost of $6,000.00. Clinic rooms, hospital rooms, social service department and business offices are provided with quarters in this building.

sensitive to beauty and developing his creativeness and self reliance. For these reasons many persons for whom it is not feasible to become professional artists or designers, choose to work in classes of the school because of their general educational value.

Each year students who have obtained their training at Otis are successful in the execution of professional paintings, sculptures, advertising designs, interior furnishings, illustrations and craftwork. The community's art school is functioning to improve the design of Southland manufactured products, and to develop artists and designers needed by the community.

The school is in operation throughout the year, each day, except Saturday afternoons and Sundays and on Monday, Wednesday and Friday evenings. Persons interested in art study are cordially invited to view the exhibit of students' work and to obtain detailed information concerning the various study possibilities.

FREE LIBRARY

With the completion of the year's work closing June 30th, the Free Library passed a second great milestone in its development, having attained a circulation of 2,103,326 volumes issued for home use, an increase of 23.6% over the previous year. It is a simple task to compute the column of figures representing this measure of the library's use compiled from the monthly reports received regularly from the 160 branch libraries located in various parts of the county. It is a more difficult matter to visualize and understand the amount of work involved, and it requires considerable exercise of the imagination to measure the enjoyment and benefit derived from the use of so many books. It is interesting to note in passing that this use of books is gathered from villages, towns and cities, as varied in pursuits as in population.

Grouping the branches by size of circulation, they now stand as follows:

1	100,964	16	5,000-10,000
2	96,000-97,000	29	2,000- 5,000
5	59,000-65,000	23	1,000- 2,000
14	30,000-44,000	29	300- 1,000
18	20,000-29,000	1	less- 100
21	10,000-20,000	1	Reading Room only

The net number of communities served during the year remained the same as last year, two branches having been closed while two new branches were established. Several other branches should be established, but it is impossible to do this until a larger staff can be acquired, also larger central quarters from which to administer the technical part of the work.

The number of registered borrowers increased from 91,945 to 103,758, a total which indicates that the Library is now reaching 25% of the 415,000 estimated population of the territory served.

The expenditure per capita was $.704, which is almost 30 cents lower than the amount recommended by the American Library Association as the reasonable per capita maintenance. However, the 39.5% of the total expenditures spent for books, periodicals and binding maintains our high record in this respect.

The Los Angeles County Library is giving two kinds of service; one through community branch libraries, and another to schools. The Library is making available to the 160 communities served, which include 27 of the 44 incorporated towns and cities of the county, the best literature to be found in books and magazines of the day as well as in the chronicles of the past. Of the 291,151 volumes owned by the Library, other than supplementary text books, 245,735 are distributed among the various branches. The number of

books delivered by truck and parcel post last year amounted to 98,540, while 67,839 books were returned to the Central Library, leaving a net increase of 30,701 in stock at branches. The remainder of 45,500 volumes represented the average number held at the Central Library for exchange and general reference use. Each branch also holds a small permanent stock of books for reference and constant demand according to the size of its patronage, but a larger part of each collection is involved in the general exchange moving constantly throughout the system. This grand parade of books over routes traversing the county from end to end helps to keep the stock in each branch fresher and more interesting than if all books sent to a place became permanent acquisitions. Sometimes it seems that it might be better if a book for which there is much call could be kept at one place long enough to satisfy all demands. A recent book about India is an example. The plan has been to send such a book as a "short time loan" to serve special requests and thus make it work fast so that it will not be necessary to buy the many copies that will stand idle on the shelves as soon as the curiosity stirred through advertising has been satisfied. Every request filed for a book will be filled eventually if the book is worthy of purchase. It is the insistent demand for the very new books which may have little future value to the library that presents a real problem to the librarian wishing to give more lasting service to the taxpayer who invests money in the library. Few now agree with Emerson who said "no book is worth reading until it is a year old", for "times have changed" and "he who runs must read". Yet it is still true that only a small percentage of the books which pour from the press today. particularly novels, survive a year's test. It is hardly probable that many persons think or realize that library administrators need to consider how many copies of one title should be bought or whether the book should be bought at all. Unfortunately, library budgets are limited. No one goes to a fine art shop to purchase cheap chromos; neither should one expect to find a good library filled up with ephemeral literature. A clearer conception of the higher function of a public library as an educational institution may remedy the present expectation that the library should always have the book wanted whether it is worthwhile or not.

A high percentage of fiction reading, if it be of the better class of novels, no longer appalls the modern librarian, because good fiction reading is recreational and presents a real mirror of life. And yet, a librarian knows that the library is giving a greater service when it not only answers the everyday problems, but also when its books help people find satisfaction and enjoyment in that richer literature which depicts the finer aspects of life as expressed in poetry, painting, music, religion or philosophy through the medium of print.

Of the thousands of requests for special books received from individuals last year, 24,133 to be exact, 2,018 were for subject material which required more or less research work. In analyzing these inquiries, the Reference librarian says, "classified by subject, those on engineering in its many divisions predominated, followed closely by agriculture, industrial chemistry, home economics, and the mechanical trades, with many other requests for material on California law, social service, education and commerce. Though far from being in the lead, there were also many questions relating to modern interpretations of religion, the psychology of crime and certain political problems of the day. Such a tabulated record of reference questions kept over a quarter of a century would provide statistical data from which the history of the County's social interests and economic development might be read".

The Supervisor of work with children made a very special effort to complete the revision of juvenile stock and to place in each branch a collection of books so well selected that every particular parent may feel secure in the kind of books offered to boys and girls through the library.

The School department had an unusually heavy year, having delivered 142,898 volumes to the 105 elementary school districts affiliated with the County Library.

The larger use of the library's resources at many of the branches as well as at the Central Library was quite remarkable, and only a few branches show any loss in circulation. Of the six libraries circulating over 50,000 volumes, the Florence branch advances from eighth to fifth place. The Burbank library showed the largest use of children's books, while the Inglewood library, which is the largest branch, had a larger adult use.

With an increase of over 23%, both in community work through branches and in schools, it becomes imperative that the personnel of branches be increased and that larger and more adequate quarters should be provided for the Central Library as well as for many branches in order to care for the growth in population and library patronage that is bound to come.

In the course of the past year, a continued effort has been made to improve housing conditions. Five branch libraries were moved into larger rooms, the quarters occupied by three had their capacity doubled and considerable shelving was added at twenty-four other branches.

The City of Claremont is to be congratulated on the completion of its beautiful new library, at a cost of $25,000, the site, a quarter of a city block having been donated by Mrs. Renwick, a local resident. This building, which will be occupied early in August, is Spanish in style and its interior plan and furnishings present a most inviting and restful place for reading. Claremont City provided the building through a bond issue and the County Library supplies the books and all equipment except the built-in book shelving. Two other communities which are served by the County Library, Palos Verdes and Altadena are also taking definite steps to secure attractive and more adequate library buildings.

It is with sincere feeling that we express our appreciation of a faithful staff which devotes itself to hard work, both at the Central Library and at Branches, and does this happily in the service of the public.

MUSEUM OF HISTORY, SCIENCE AND ART

At the close of the fiscal year the work on the erection of the second unit of the new museum building has advanced to a point where it is possible to predict that it will be completed before the close of 1928. This addition will more than double the existing facilities of the institution.

During the year all of the various activities of the Museum and its staff have been influenced by the work on the new structure. The temporary release of halls and galleries of the first unit to the requirements of the alterations made necessary by the construction of the new structure has made it difficult to provide storage space for exhibits thus temporarily withdrawn from exhibition and at the same time carry on the established work of the institution. However, much has been accomplished toward the preparation of new exhibits which will be placed when the new structure is finally available, and much material long held in storage or in reserve will then be placed on view. As a result of the foregoing conditions, very little change has been made during the year in the collections on exhibition, it being planned to entirely rearrange and re-install the existing collections when the new facilities are available.

Work has been continued on fossil material from Rancho La Brea looking toward the time when the cataloging, sorting and study of this huge assemblage of fossil material will have been sufficiently advanced to allow the withdrawal of duplicate material that may be loaned to or exchanged with other

important institutions. Habitat groups have been made ready for exhibition and desirable collections acquired by gift or purchase, for addition to the various collections in the departments of history, science and art, while other important collections in various fields of the museum's interests are awaiting the completion of the new building, when they will be turned over to the institution.

Junior Museum an Important Adjunct

The Junior Museum department has been in operation for a full year, during which time it has had opportunity to demonstrate its usefulness in the stimulation of interest among teachers and pupils in the materials and purposes of the museum as a whole. Satisfactory working arrangements have been maintained with the city and county schools to the extent that the Junior Museum and its facilities are generally regarded as important adjuncts of the school system. It is hoped that this department of the Museum and its closely related Extension Department may have room and facilities for their fuller expansion and enlargement in the near future, since these fields are rich in their promise of practical utility to large numbers of persons and communities.

The General J. W. N. Munthe Collection of Chinese Art, entirely occupying one large gallery and rivaling in importance any similar collection in the country, will remain on exhibition throughout the coming year. As usual, the Art Department continues its monthly reinstallation of contemporary art exhibitions showing the work of local and foreign artists.

The Museum Library Department has been enriched and expanded during the year and is proportionately increased in its usefulness to research and special students. Similarly the classified picture collection of prints, etchings, photographs and half tones now assuming worthy proportions is becoming more and more appreciated as a source of study and illustrative material of use to artists, teachers and clubs, as well as to the research departments of our progressive motion picture companies.

The Otis Art Institute, which is operated as a department of the Museum, has had a constructive and satisfactory year, giving instruction to more than seven hundred students during the past twelve months.

Hancock Park, widely known as "Rancho La Brea", also a department of the Museum, has been further developed and improved. During the year the lawn and shrubbery planting about the four sides of the area has been completed and already gives promise of transforming this heretofore unsightly, though scientifically interesting, area into a thoroughly worthy beauty spot.

BIG PINES RECREATION CAMP

The seven departments comprising the organization of Big Pines Recreation Camp are as follows: Administration, Maintenance, Construction, Mechanical, Animal Park, Fire and Police and Recreation.

Maintenance Department:

The activities of this department are numerous, but the principal work consists of maintenance of camping grounds, buildings, cook houses, stock rooms, tree infestation, garbage removal and cleaning of comfort stations, delivery of wood to fire places, care of playgrounds and swimming pool. In this department are included Big Pines, Crystal Lake, Jackson Lake and Prairie Fork Divisions.

Animal Park:

The work of this department includes maintenance of the Animal Park and care and feeding of the animals.

This past year there were five Kaibab Deer from Kaibab National Forest, twelve Reindeer from Al G. Barnes, and one Elk from Buttonwillow, which were given to the Animal Park. One Buffalo, two Reindeer, one Elk and one Kaibab Deer were born. Six Reindeer, one native Deer, two Elk and one Kaibab Deer died during the year. Total attendance at the park for 1927-1928 was approximately 19,771 persons.

Mechanical Department:

Maintenance and operation of power house, ice machine, steam plant, trucks, tractors, automobiles, pumping water, maintenance of electric and telephone lines, operation of machine shop, making all repairs to equipment and the construction of such new equipment as may be needed, blacksmithing, welding and lathe work.

Recreation Department:

If the work of the past year and the expressions of the campers and organizations are any indication of what might be, it is very evident that in the near future, the Recreation Camp Department of Los Angeles County will be the recipient of innumerable requests for space and reservations for campsites within the boundaries of Big Pines Recreation Camp.

In this department are included instructions in swimming and playground work, conducting hikes, dancing programs, publicity gained by representation of Camp at Fairs and Service Clubs, winter sports, etc.

Fire and Police Department:

The activities of this department include the following:

Fire Prevention, patrolling, lectures on fire prevention, etc., sign posting, protection and conservation of same, registration on all who enter camp and issuing of fire permits, traffic control, and weather reports and relative humidity reports as furnished by Smithsonian Institute

The season 1927-1928 was free from brush or forest fires within the boundaries of the camp.

There were forty-two arrests made by the Ranger Department during the year 1927-1928.

Three outside fires were attended by men of Big Pines Recreation Camp.

A fire occurred in the ceiling of the power house, due to faulty insulation around the exhaust pipe. This fire was soon quenched with water and extinguishers.

Construction and Road Maintenance:

The work of this department during the past year included fencing of playground and swimming pool, fencing of Animal Park and construction of hay barn at Animal Park, construction of seats and walk way at swimming pool, rail on porch of Recreation Building, construction of toboggan and skii slides, shelter for motor at incinerator, erection of additional comfort stations, fire circles, playground equipment at Jackson Lake, extension of telephone lines to Camp No. 1, and to Blue Ridge Camp, and the construction of three additional organization camps.

Camp Statistics

Report of Smithsonian Institute on Table Mountain on precipitation is as follows:

	Snow	Preciptation
November, 1927	1.41 inches	2.00 inches
December, 1927	50.00 inches	2.85 inches
January, 1928	6.00 inches	0.38 inches
February, 1928	17.50 inches	1.01 inches
March, 1928	8.00 inches	0.56 inches
April, 1928	1.50 inches	0.16 inches
May, 1928	6.00 inches	0.55 inches
June, 1928	0.00 inches	0.00 inches

Relative humidity reports were phoned the Main Office at 10:00 a.m., 12 m. and 2:00 p.m. daily for the months of May and June, 1928, by Mr. Moore of the Smithsonian Institute.

During the period from July until the first rains of the fall of 1927, any exceptionally low humidity was reported to the office, and in turn reported to the U. S. Forestry Department.

Attendance:

People	176,434
Machines	47,455
Horses	11
Motorcycles	60
Hikers	107

First Aid:

Emergency first aid is given to those who meet with minor or major accidents, which occur more in the winter months, due to unfamiliarity with winter sports. During the past year, this service was rendered to 307 persons.

Expenditures:

	Appropriation	Expenditures
Expense Fund	$114,370.00	$ 98,759.47
Outlay Fund	9,100.00	8,899.01
Structural and Non-structural	109,400.00	102,479.16
Total	$232,870.00	$210,137.64

Revenues:

Miscellaneous Concessions	$ 9,783.49
Meals to Employees	32,271.67

Other Park Activities

In conclusion, there are a few items worthy of special mention: Eighty organizations, with a total of 4,182 boys and girls, participated in the recreation Big Pines Camp affords, either in the summer programs or the winter sports. Seventy per cent of these organizations were charitable or partial charitable organizations, thus affording the under-privileged children of Los Angeles County a vacation otherwise denied them.

For the mothers who visited Camp, a daily program was put on for the children up to twelve years old, thus affording the mothers a few hours a day rest from the care of the children.

On Sunday evenings during the summer months, a program was given by the campers, they furnishing their own talent and the attendance of these programs was very good. The younger kiddies gave outdoor plays one evening per week and the attendance at some of these plays was in excess of 500 persons.

The swimming pool was opened to the public in July and for the season, 4,532 persons used same.

Public Dances were held in the Recreation Building during the summer season and two winter season dances. The attendance at these dances was in excess of 8,000 persons.

Hikes and nature studies were attended by 2,781 persons.

Winter Sports Popular

Our winter sport programs have become the most popular events of the year. Our largest daily attendance was on February 12th, when 11,535 persons visited Camp in one day for the winter snows. Our roads were kept free of snow all through the season and our greatest problem was the parking of the automobiles and avoiding road congestion. Our toboggan slide was well patronized and on busy days, we were sending a toboggan over the slide every four seconds. Only one slight accident occurred during the entire season on this slide.

We wish to express our appreciation to the Honorable Board of Supervisors and to the various County Departments for the splendid cooperation given us to help make Big Pines Recreation Camp the finest recreation camp possible and the increased attendance of the past year shows the public's appreciation of this camp.

PURCHASING AND STORES DEPARTMENT

The benefits of time are becoming apparent in the Purchasing and Stores Department, in that the changes in operation and procedure which have been necessary from time to time in the past few years are now less frequent and the general procedure is now becoming well stabilized.

The establishment of the Stores Division of this Department permitted a change in method of obtaining supplies for departmental uses and it has required the intervening time to so organize and arrange the procedure as to permit utilization of the facilities offered. In doing so it has been necessary to establish an accounting section, and a complete system of handling funds of departments for materials furnished through the Stores, and to so keep these records as to assure balancing with the Auditor's records at the end of each fiscal period. The fact that over 111,000 transactions with departments were passed through the Stores during the past year gives an idea as to the quantity of detail involved. Handling of the actual merchandise has also called for a large amount of planning in receiving, storing and disbursing some 500 or more carloads of material per year, and in accurately accounting for each pound or piece so handled. The groundwork for service to other departments is now felt to be on a solid basis and, while new phases will be added as dictated by conditions, such additions will be extensions to present activities rather than new departures requiring the entire establishment of new methods.

Six Branch Stores in Operation

The Purchasing Division has been in existence for over fifteen years, while the Stores Division was established in 1923, and the two departments were merged in 1924. The purchasing procedure used prior to 1923 had to be considerably altered in order to take care of the Stores and the Stores themselves were started on a conservative basis, taking care of only the requirements of the Outdoor Relief Store in groceries and the Mechanical Shops for hardware. Since that time the scope has been rapidly widened until there are now in operation six branch Stores and the General Store, whose combined issues during the fiscal year 1927-28 were $2,189,223.95, representing an

increase of 5.65 times the amount of business passing through the Stores in 1923-24. During this same period, purchases have increased from $4,000,000.00 to approximately $7,500,000.00 per year, and there has been an increase in the personnel from twenty-seven employees to ninety-four, chiefly due to increased Stores activities. These increases have been accompanied by gradual reduction in costs of handling. A few of the amounts handled during the past year may be of interest:

Gauze	963,000 yards
Miscellaneous yardage	349,000 yards
Shoes and slippers	14,000 pairs
Coffee	98,000 pounds
Condensed milk	232,000 cans
Fresh milk	746,000 quarts
Sugar	645,000 pounds
Potatoes	1,479,450 pounds
Butter and eggs	$56,000.00
Printing and stationery	$386,000.00

These items serve to indicate to some measure the large volume of County requirements. The variety is almost endless, ranging from snowplows to perfumes.

A condensed statement is given below as an accurate aid to comparisons:

Condensed Statement

MECHANICAL DEPARTMENT

The Mechanical Department under the management and supervision of the Chief Mechanical Engineer, is responsible for all construction, maintenance, and repair work, throughout the various General Government and other County buildings.

He has charge of the supervision of the County Shops, located at 1701

Zonal Avenue, and the County Garage, located at 321 New High Street. The function of the Shop and Garage is the maintenance and operation of County cars and trucks and all mechanical repairs to the various power plants equipment.

Supplementing the above, the Mechanical Department is responsible for all expenditures in connection with maintenance and operation of 62 Lighting Districts, formed under the 1909 Act, and 13 Lighting Maintenance Districts, formed under the 1921 C. I. Act, and 5 Water Works Districts, formed under the County Water Works Act of 1913.

The maintenance, alterations and operation of the General Government Buildings, is detailed as follows:

Operation and maintenance of Power Plants, Elevators, Electric Lighting and Power Plants, Plumbing and Steamheating, Painting, Masonry, Sheet Metal, Carpenters, Safes, Locks and Hardware, Typewriters, Adding Machines, and Cabinet furniture repairs.

The Shops and Garage division maintains and keeps in operation 323 automobiles and trucks and 71 motorcycles. During the fiscal year 1927-28, this represented an expenditure of $234,220.46 for maintenance and $155,-120.71 for new equipment.

Supervision of Lighting and Water Works Districts

The Lighting District Act of 1909 provides for the formation of Lighting Districts outside of unincorporated towns and provides that same shall be financed, both for original installation of lighting units and maintenance thereof, by a tax levy. During the fiscal year 1927-28, the Mechanical Department supervised the maintenance and operation of 62 of these districts. This represented an expenditure of $296,000.00.

The 1913 County Water Works District Act provides for the formation of Water Works Districts within the County, for the purpose of furnishing water to residents for domestic and irrigation purposes.

The formation procedure in itself entails considerable work by the Mechanical Department. The districts must be planned as to their geographical outlines; the petitions praying for a hearing before the Board of Supervisors must be checked, and estimates as to the probable cost of the original installation of the operating equipment, including the necessary units, such as pumps, pump houses, tank and towers, mains and piping thereto, must be furnished to the petitioners in order that the elections and amounts of the bonds to be issued may be authorized by the Board of Supervisors.

Subsequent to the election authorizing the formation of the district, and the issuance of the necessary Bonds to finance same, it is the function of the Mechanical Department to prepare plans and specifications in connection with the installation of the operating equipment, which is done by contract, and it is the duty of the Mechanical Department to supervise the work as to its conforming with the plans and specifications. The Mechanical Department is responsible for the maintenance and operation of these districts, and is also responsible for the supervision of the original installation of equipment in all new districts. During the fiscal year 1927-28 the Mechanical Department expended and supervised the expenditure of the following in connection with Water Works Districts:

Maintenance	$18,405.75
Improvements	13,785.18
Original installation	55,000.00
	$87,190.93

Resume of Expenditures

The following is a resume of expenditures for which the Mechanical Department was responsible:

Work done for County Departments	$ 144,619.40
Auto Service for County Departments	234,220.46
Purchase of Automobiles and Accessories	155,120.71
Purchase of Mechanical Department Equipment and Tools	14,458.99
Purchase of Administration Equipment	2,834.01
General Government Buildings Operation Salaries	73,871.87
Maintenance General Government Buildings	82,987.77
Alterations to General Government Buildings	77,332.97
Other Expense to General Government Buildings, Including Light, Water, Power and Fuel	232,063.40
General Government Buildings Equipment, Including Furniture for Court Rooms at City Hall	105,689.59
Maintenance of Water Works Districts	18,405.75
Improvement to Water Works Districts	13,785.18
Purchase and Installation of Equipment for New Water Works Districts, from Bond Issue	55,000.00
Maintenance and Operation of Lighting Districts	296,000.00
Maintenance of Lighting Maintenance Districts, 1921 Act	65,700.00
	$1,572,090.10

COUNTY ARCHITECT

The work of the County Architect during the fiscal year of 1927-28 was increased considerably over that of the previous year. During the past fiscal year, the Department handled one hundred and tweny-five new jobs, eighty-two of which were completed.

The amount expended by this Department during the past fiscal year for salaries and expense amounted to $133,350.58, which covered a total expenditure of $1,467,446.18 for contract work completed during the year, plans and specifications for which were worked upon.

During the past fiscal year, plans and specifications were prepared for contemplated projects amounting approximately to $1,259,605.94.

Several new improvements for the following Institutions in the County were completed during the past fiscal year, the aggregate contract cost of which was $2,727,052.12.

Big Pines Recreation Camp

Several new projects were completed during the year at Big Pines Recreation Camp, among which were a new modern Dormitory Building, a Public Garage, Incinerator, Extension to the Dining Room Building, and several very much needed improvements. Plans are being prepared for additional improvements, the completion of which will make this Park one of the most attractive resorts in the Southwest.

El Retiro

Among the new completed improvements at the El Retiro School for Girls are the Addition to the Administration Building, and several modern Dormitory Buildings; also, an up-to-date system of utilities has been planned and was practically completed on June 30th. Several improvements, including a new fence, sidewalks and roads, as well as the remodeling of the present buildings, have been planned for and will be completed in the early part of the ensuing fiscal year.

County Farm

More new construction work was planned for and completed at the Los Angeles County Farm than during any previous year.

The Dairy group of buildings was completed and among the many buildings and improvements made at this large Institution were the completion of the Sewer System, Unit No. 3, a new Water Softener, Electric Generator and Engine, Poultry Yard Buildings, Pipe Ducts to Old Buildings, several new Bungalows and Cottages for Doctors and Employees, Bungalow Court for Night Employees, and a number of outlying Farm Buildings, Storage Sheds, etc.

Plans have also been prepared and well under way for future development at the County Farm. The plans for the New Infirmary group call for extensive improvements at some future time.

Health Department

The fiscal year of 1927-28 saw the completion and occupation of the New Health Center at Pomona. The new Health Center at Santa Monica was practically completed and should be in the hands of the Health Department early in August.

Construction work was also started upon a new Health Center at Belvedere, which, when completed, will be the finest of all Health Centers that have been constructed for the Health Department.

General Hospital

As has been the custom in past years, considerable new construction work was completed at the Los Angeles County General Hospital, this Department endeavoring to keep in pace with the rapid growth of that Institution.

During the past year the Osteopathic Unit was completed, and turned over to the Hospital for occupation. Several Cottages for Nurses were constructed and the alterations to the two roofs of the Psychopathic Building completed. Several new modern electric devices, such as Nurses' Call Systems, Payroll Time Recorders, etc., have been installed in many of the buildings.

This Department handled for the Board of Supervisors the Plans and Specifications of the New Acute Unit, the cost of said plans being approximately $20,000.00.

Juvenile Hall

The plans for the New School Building and a modern Hospital Building, as well as several other much needed improvements at this Institution, were completed and construction started during the past fiscal year.

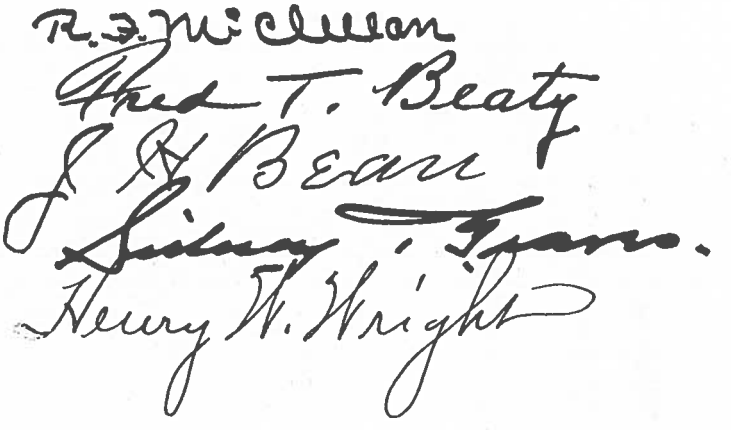

Olive View Sanatorium

During the past fiscal year, the plans were completed and construction started for the following buildings at the above Institution: Solarium, Occupational Therapy Buildings for Boys and Girls, a New Administration Building, Sewing and Linen Room Building, several Buildings for Doctors, and Service Buildings for Cubicles.

Plans were also prepared for a modern and up-to-date Telephone and Fire Alarm System and Utilities for the New Tubercular and Morgue Units.

Miscellaneous

Among the miscellaneous work done for other Departments was the planning of a new wall for the County Cemetery; a new Nursery Building and the construction of a new Fire House for the Forestry Department at Altadena; the planning and completion of the new Superior Courtrooms for the County on the ten floors of the tower in the new City Hall; the planning of new County Offices and Courtrooms in the Jergins Trust Building at Long Beach and the planning of a new reinforced concrete Fair Building for the Los Angeles County Fair at Pomona, which, when completed, will be one of the largest and finest buildings of its type in this section of the country.

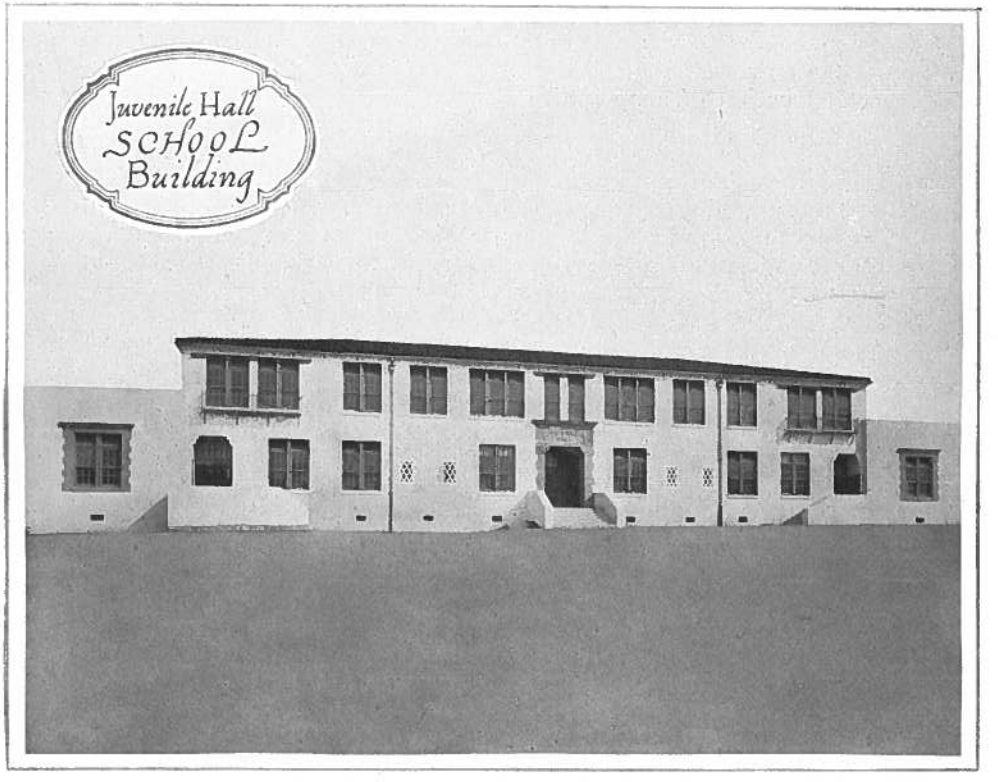

JUVENILE HALL

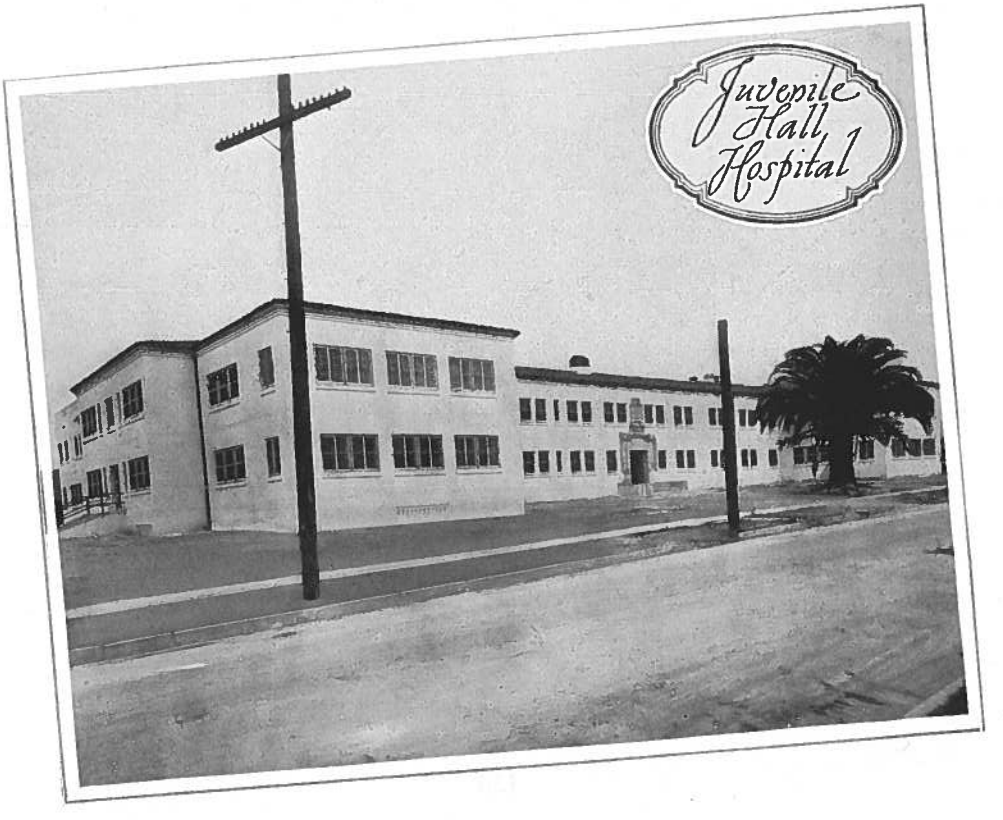

The necessity for additional facilities in the juvenile detention service of the county has resulted in the construction of a group of buildings consisting of 4 additional units, 2 of which are nearing completion.

The Hospital contains 110 beds and provides adequate facilities for complete medical diagnosis and treatment. One entire section is devoted to the diagnostic clinic, which will offer facilities for psychiatric, psychological, medical and social diagnosis.

The School Building contains 8 class rooms, a sloyd room for boys, a domestic science room for girls, an auditorium convertible into a gymnasium, and 2 council rooms. Teachers are provided by the City Board of Education.

A boys' dormitory and a girls' dormitory are also under construction.

INDEPENDENT AUDITORS' CERTIFICATE

We have examined the books, records and accounts maintained by County officers of Los Angeles County for the year ending June 30, 1928. The financial transactions of the various County departments are controlled through the office of the County Auditor who also records the receipt and disbursement of School District Funds. The foregoing balance sheet and statement of revenue and expenditure are in agreement with the books and records of the County Auditor.

The cash on hand, in banks and in transit to Treasury and the securities owned have been satisfactorily verified by actual count, by certificates obtained from depositories or otherwise.

We have had produced to us all contracts, warrants, vouchers and other supporting data called for and have obtained all the information and explanations we have required and

We certify that the foregoing balance sheet and statement of revenue and expenditures, in our opinion, properly reflect the condition of the various funds under the control of the County Auditor as of June 30, 1928, and the transactions for the year ending that date respectively.

PRICE, WATERHOUSE & CO.

Los Angeles, California.

FORESTRY DEPARTMENT

The duties of the County Forestry Department are both varied in nature and broad in scope. In addition to the development and maintenance of county parks, and the planting and maintenance of county roadsides and administration sites; the prevention and suppression of fires in unincorporated territory, and the formation and supervision of county fire protection districts are important phases of the departmental work.

The views serve to illustrate the various activities of this department.

BIG PINES RECREATION CAMP

This camp, situated on the north slope of the Sierra Madre-San Gabriel Range, is only about four hours drive from Los Angeles. An elevation of 6,862 feet assures the winter visitor of real winter sports, such as skiing, ice skating and tobogganing. During the past winter season, the toboggan slide was especially popular, and on busy days a toboggan went over the slide every four seconds. Only one slight accident occurred during the entire season. Roads to the camp are in good condition, and during the winter season are kept free from snow.

MUSEUM OF HISTORY, SCIENCE AND ART

Activities at the Museum of History, Science and Art, located in Exposition Park, have been considerably retarded during the fiscal year by construction work on the second unit of the new museum building.

Alterations to the first unit, made necessary by construction of the second unit, resulted in a temporary shortage of space. However, much has been accomplished toward the preparation of new exhibits, which will be placed when the new structure is completed.

Views show the Rose Garden adjoining the museum building; and a habitat group of the Rocky Mountain Sheep in the exhibition galleries.

SIERRA MADRE AND BIG DALTON DAMS

Sierra Madre Dam, 85 feet in height, is of the arch type and will protect the cities of Sierra Madre and Arcadia from the floods and debris movements which have occurred in the past.

Big Dalton Dam, 150 feet in height, is of the multiple arch type, of a massive design, and is the most conservative design ever made of a dam of this type in California. It will provide flood control and conservation for the area around Glendora.

Both of these dams are now in process of construction.

OLIVE VIEW SANATORIUM

A number of new buildings have been erected at Olive View Sanatorium during the year, including a Solarium which houses two wards, the X-Ray, physiotherapy, dental and pneumothorax departments, and which has a capacity of fifty-six patients.

The new Administration Building, which is nearing completion, is of modified Spanish Renaissance type architecture, built around a Patio, with handmade tile roof, wrought iron grills, balconies and white-washed walls. The building will contain the administrative offices, social service quarters and post office. It covers an area 110x110 feet.

SANTA MONICA HEALTH CENTER

Interior views of the new Santa Monica Health Center Building, showing the Physiotherapy Division, Dental Clinic, Child Hygiene, Operating Room and Laboratory. The modern method of decentralizing hygiene and sanitation service through the general dissemination of information and instruction in these subjects, made possible through the agency of numerous Health Centers established in different localities throughout the county, has resulted in substantial benefit to the community at large. The most sensitive index of such work is the percentage of infant mortality. During the past 13 years, the total mortality rate for infants under 1 year has been reduced almost one-third.

DETENTION CAMP, ROAD AND VIADUCT

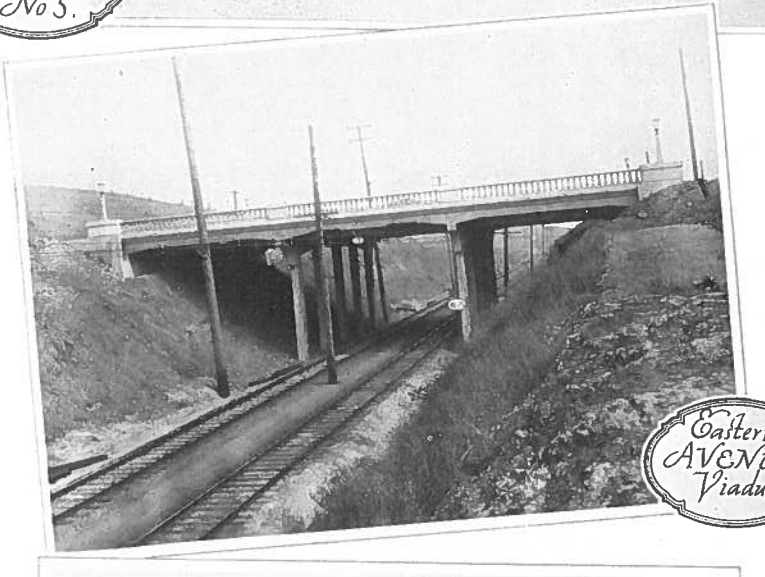

Detention Camp No. 5 is located on Elizabeth Lake Canyon Road where about 70 prisoners are occupied in making a new road under the supervision of the County Road Department. These movable buildings, part of the Road Department equipment, are typical of all Detention Camps.

The Glendora-San Gabriel Canyon Road in Little Dalton Canyon is a scenic mountain road being constructed with assistance of prisoners in Detention Camp. The road is 40 feet in width, with easy grades and is completed for about 5 miles.

Eastern Avenue Viaduct over the Pacific Electric Railroad tracks, was constructed by the Road Department under contract. Total cost $24,794.04, with changes required by the railroad of $1,283.15. 75% of the cost was borne by the County, and 25% by the Pacific Electric Railway Company.

Detention CAMP No 5.

Eastern AVENUE Viaduct

Little Dalton Canyon Road

COUNTY FARM

A very profitable department of the Farm is the 55 acre truck garden, which produced during the year $19,839.00 worth of vegetables for use by the various divisions of the department of charities. A large part of the work is done by the more active inmates under supervision of an outside employee.

The most productive department of the Farm is the dairy, in spite of the destruction in 1924 of a breeding herd that had required nine years to assemble, and which included several high-record animals. During the past year, the entire herd, regardless of age or condition, averaged 398.5 pounds of butterfat.

Vegetable Garden County Farm
Corn Field County Farm
Champion COW County farm

STATEMENT OF BONDED INDEBTEDNESS

HANCOCK AND SAN DIMAS PARKS

Hancock Park, located just north of Wilshire Boulevard, is a part of the original Rancho La Brea, which is widely known for its pre-historic fossil pits. This heretofore unsightly, though scientifically interesting area has vastly improved in appearance during the year through the planting of trees, shrubs and lawns. The park covers an area of 24 acres.

San Dimas Park, located just west of the mouth of San Dimas Canyon, is a recreational park of 13 acres. Picnic tables, fireplaces and playground apparatus are provided, and additional accommodations are being added as the demand requires. Eight acres of lawn, 1,187 trees and numerous shrubs have been planted in this park.

The planting of these parks was done under the supervision of the County Forestry Department.

MISCELLANEOUS TAX DATA

Taxes are levied and become a lien on all taxable property as it exists at noon on the first Monday in March. The tax rates for the ensuing fiscal year are fixed by the Board of Supervisors on the first business day of September. Taxes become due and are payable on the third Monday in October, and may be paid in one or two installments. The first installment (all personal property tax and one-half of the realty tax) becomes due on the third Monday in October and delinquent on the first Monday in December at 6 o'clock P. M. The second installment (remaining one-half of the realty tax) becomes due on the second Monday in January and delinquent on the last Monday in April at 6 o'clock P. M. Unsecured personal property taxes become due on the first Monday in March of each year and are payable on demand to the County Assessor.

FLOOD CONTROL PROTECTION WORK

The Flood Control District, during the year built 37,000 feet of permanent concrete or protected levee channel work. The major portion of this work was done under contract, specifications on about 50 separate contracts being issued. As many as 35 crews of men were used in cleaning and temporary protection work, on over 200 miles of channel, and about 100 wire and rock check dams were built. Maps were issued for over 60 miles of channel, rights-of-way acquired for over 40 miles and more than 150 right-of-way agreements were signed.

NOTE—The municipal taxes of the foregoing incorporated cities are included in County Tax bills and are payable to the County Tax Collector. The valuations are by the County Assessor.

For annexations included in the various Taxation Districts of the City of Los Angeles, see Elementary School District tax rate schedule.

* Tax rates are fixed on valuation of Realty and Secured Personal Property. Levy consists of this amount plus Assessor's collections of Unsecured Personal at last year's rate. (Article XIII, Sec. 9-a California Constitution).

MONROVIA AND WHITTIER HEALTH CENTERS

Views show two of the numerous Health Centers maintained in different sections of the County under supervision of the Health Department. Quarters are provided in these buildings for hospital rooms, clinic rooms, social service department and business offices.

The wisdom of building district Health Centers has been amply proven by the results attained. Statistics show that disease has declined under hygienic and sanitary conditions, marked improvement being noticeable in districts served by these agencies.

COUNTY FAIR GROUNDS AT POMONA

The Los Angeles County Fair, held annually on the Fair Grounds at Pomona, has been a source of interest to many for a number of years. Facilities are provided for the exhibition of live stock, and of agricultural and manufactured products produced throughout the County. Horse races are conducted on the half-mile oval track. The yearly increase in attendance is an indication of the growing popularity of this undertaking.

The chart, prepared by the Regional Planning Commission, shows a plot of the Fair Grounds, indicating the arrangement of the various attractions.
