

Tree #VM-147

Species: *Erythrina caffra* (South African coral tree)

DBH: 27.5

Height: 52

Vigor: Good

Tree Defect Observations

Unbalanced crown; over-extended limbs; root decay; new stress cracks.

Risk Categorization

Likelihood of limb failure is probable with a medium likelihood of impacting the target area. The consequences of the somewhat likely failure would be severe.

Overall tree risk rating: MODERATE

Mitigation Options

1. Reduce all end weight and monitor stress cracks monthly and after wind and storm events.
2. Remove the entire tree.

Overall residual risk after pruning: MODERATE

Overall residual risk after removal: NONE
