    Guidance:

    - Use the relevant data dictionary listed in Section #1 to find the exact definitions for each variable.
    - Available variables may change from year to year. We can assist in variable selection for with complex requests.
    - Depending on the number of variables requested, the data may be provided in multiple tables with a linking ID.
    - Some data elements have multiple entries (i.e., multiple vital sign entries per patient) and this may affect the way in which the data is structured (i.e., long vs wide data format). We will work with each requestor to provide data in a format that is usable.
    - Please be aware that some data elements are protected health information and cannot be released. See the Notes section of each spreadsheet for additional information.
