

## Minimal Clutter

A well-maintained and organized home. Living spaces are tidy, easily accessible, and free from obstructions. Exits are clear, and there are no plumbing or electrical issues. The home appears clean and orderly, with proper ventilation and an appropriate number of pets. No signs of excessive belongings or disarray.

## Mild Clutter

A generally clean and safe home with some visible mess. Small piles of clutter may be present, but living spaces remain functional and accessible. Exits are clear, and all appliances are in working order. No plumbing or electrical issues. The home has sufficient ventilation, no signs of mold, and an appropriate number of pets.

## Moderate Clutter

Some areas of the home are becoming difficult to navigate due to clutter. At least one major appliance is out of order. One exit (door or window) is blocked. There may be pet feces inside, overflowing garbage, and mold growth. The ventilation system may not be functioning properly. Essential rooms such as the kitchen, bedroom, or living room may be partially or entirely unusable due to clutter and disrepair.

## Severe Clutter

Living spaces are largely inaccessible due to excessive clutter. Mildew is present on walls and other surfaces. Piles of belongings block paths, leaving only narrow trails for movement between rooms. Household functions are significantly impaired. Exits may be obstructed, making it difficult to leave in case of emergency. The environment is unsanitary and potentially hazardous to health.

## Extreme Clutter

The home is unlivable and poses severe health and safety risks. Mold and mildew are widespread. Multiple fire hazards exist due to excessive clutter and blocked exits. Animal waste and human feces may be present due to plumbing failures. Infestations of rodents, bed bugs, or other pests are likely. Structural damage is apparent, and running water may be unavailable. Climbing or crawling may be necessary to move through the space. Most, if not all, appliances are nonfunctional, and emergency exits are severely obstructed.
